siderably larger than the country of Middlesex into which siderably larger than the county of Middlesex into which the postman never enters. Mr. Hill adverts to the lateness of the morning general-post delivery in London as a point of great importance to mercantile men. In some parts of the town it is generally ten or eleven o' clock, and In the immediate suburbs eleven or tweive oclock. Occasionally it happens that all the letters are detained by the late arrival of a single mail ; and Mr. Hill says, generally "the time occupied in sorting and delivering a letter frequently exceeds that required in bringing it from Bristol. It happens, in many cases, that an early delivery is of the greatest importance, and in order to secure it letters are sent as parcels by the very trains which convey the mails. To meet these defects, Mr. Hill proposes the following remedies :-"By uniting the letter-carriers of both the general and district posts in one corps, the force employed in the delivery under consideration might be doubled; and as there are very few district-post letters at this early hour (not a twelfth of the combined numbers), this first general delivery, by far the most important of the day, would be accomplished in about half the present time. A similar union of the two corps of sorters, with some other improvements, would effect a similar saving of time in doubt that under the combined olerations of these improvemen with little or no additional expenditare, and provem incous the la the men, the delivery might be comples eren in the remote parts of London, by nio 'rlot The striking adrantoges of this union by nine chack. The strikno adkaget or in anition are to the fact of che district-post lettrs belag he least nume rous when the gencral-post lul greatest pressure in the district department is precisely that at por the gen day. Nor does this unioninvolo since the present division is peculiar to London, not ex tending even to the suburbs, and is for certain parpose already set aside every day. With hourly deliveries the present general detention of the letters, in case of a siagl regard to the London district-post, formerly the twopennypost, it is well known that the interchange of letters by this post is now so slow that special messengers are frequently employed by the public. "The time," says Mr . Hill, "ordinarily required to send and receive a reply between one part of London and another, is between seven and eight hours, and between London and the suburbs ten or eieven hours, even when night does not intervene." When night interveues the time between sending a letter and receiving an answer is greater, amounting, in some cases, to 21 hours. Mr. Hill's remedies are these :-"In London make the collection and delivery of letters once an hour, instead of once in two hours ; and establish district offices, so as to avoid the necessity of naking ant In the principal quency of delivery of letters, and much more in their receipt and transmission to London, where comparative frequency of delivery is already provided for. As regards the compact parts of those suburbs which can be reached by the night mails, effect a delivery the same night instead of the following morning st present This would be much more conpenient established, and would cost nothing (except perhaps a trifing increase of salary to the letter-carriers), whereas the recent additional delivery costs $4,000 \%$. per annum." Mr. Hill calculates that these arrangements would reduce, by one-lant, the time tecessary an lin ge of letters ; and the improvemen ondital with ollers, might be effected with little or no additional expense, and without adding to the labour of the men. The postage in the London district on packets exceeding an ounce is now higher than before the general reduction, and checks the transmission of larger packets which formerly went through the Twopenny post. The higher rate of postage in this case was no part of Mr. Hill's original plan. He recommended that the rate for all district posts should be fixed at $1 d$. for two ounces, and $2 d$. for four ounces; and he now repeats the same proposal, with the adaitional reasons in its favour furnished by experience of the existing system.

## fforcian.

Franee.-The Paris papers are mostly taken up with extracts from the London journals relative to the progress of the agitation in Ireland, and with the report of the committee of the Chamber of Deputies on the budget of 1843. This voluminous document, which contains 335 quarto pages, gives anything but a favourable picture of the state of the finances. By the Government plan the ordinary expenses were estimated at 1 milliard, $281,013,710$ francs. The committee proposes to reduce this sum to milliard, 262,064,633f. Economy indeed appears to be the order of the day in the resolutions of the Chamber On Monday and Tuesday it refused some augmentation in the expenses of the French establishment at Pondicherry, which no longer pays its expenses. The Minister asked for $8,000 l$. for the charitable part of the Jêtes of July, which, in consequence of the melancholy fate of the late Duc d'Orleans, are to be solemnised this year merely by alms and funeral services. Grants to the Italian opera and to other theatres have been rejected by the commis-
sion, with a hint that so fashionably attended a place of amusement ought, at least, to pay its expenses. Increased millions of francs demanded for works on the Stras burg and Paris railroad line have been rejected, on the ground that the company has offered to take the line when completed. The commission also objected to Government holding and working any railroad, even the small lines joining Lille and Valenciennes to the Belgian frontier. But all these reductions and questions will come before the Chamber during the discussion of the budget the effect that the Sandwich Islands had been take possession of in the name of her Majesty, caused a great possession of in the name of her Majesty, caused a great from Messrs. Timoteo Haalilio and William Richards calling themselves Envoys of his Majesty King Kannehamcha IIX. to his Majesty the King of the French, who protested against this wanton aggression of England, and threaten her with the consequences! They state that
the Sandwich Islands are civilized, Christian, and indethe Sandwich Islands are civilized, Christian, and indeby the United States on the 19 th December, 1842, and by the British Government itself on the lst of April lastA letter from Tarbes, in the Mémorial Bordelais of the 28 th ult., contains the following strange account :Tuesday last, at 6 in the evening, a luminous n having its direction from east to west, passed thro
village of St Martin, on the road to Bagneres. instant all the houses, with the exception of three
entirely destroyed, and the materials were scattered the fields. Fortunately, no person was killed, but several were injured, After laving levelled houses, barns, \&c., by an impetuous wind, took its course towards the village of Bernac-Debat, Barbagan-Debat, and Angos, destroyin everything on its passage." The Abrille des Hautes Pyrenees gives the following additional particulars of the was unaccompanied by any rain. At St. Martin 50 houses were overturned, and a part of the roof of the church taken off. A windmill near the village was totally destroyed. At Bernac-de-Bois 3 houses were blown down and 12 more or lese injured. At Allier nearly every house was unroofed; and at Angos, not only were several houses
much injured, but, for a distance of 2 miles, almost every tree was pulled up or shattered. Oaks of great age, which had hitherto escaped unhurt in all attacks of the elements,
were uprooted. The crops were much injured, and large hailstones of a flat form, with chesnut leaves in their centre, were found in some places
Spain.- The Madrid journals of the 29 th ult. con tain details of an attempted insurrection at Malaga. On the arrival on the 23d of the news of the resignation of the Lopez Cabinet, the National Guard and Municipality a proclamation, urging the inhabitants not to acknowledge the Regent's Government until the restoration of the Lopez Administration, and the accomplishment of their programme. This movement was fortunately checked by was dissolved, and the authorities recovered their sant ancy. A movement took place in the morning of the he deputies, Colonel Prym and Cant Milams, wher a proclamation calling upon the people to take arms in defence of "the innocent Isabella, who was in the parricidal bands of those who had violated the constitution and who maintained themselves in vower by means noney received from an ally who coveted the possessio of Cuba and the Philipine Islands,
Great Brita Prym had presented himserf at the head of 3,000 militia and volunteers before Tarragona, but that the gates
having been closed, he was obliged to retrace his steps. having been closed, he was obliged to retrace his steps Barcelona, in the direction of Tarragona, a regiment of nfantry, with some cavalry, and ordered General Zurban to organize a second brigude, and take command of the forces sent against the insurgents. The garison of Mont Principe. It was repted that the tocsin had been sounded in the villages adjoining Barcelona, and that the insurrection had spread all over the province. Barcelona, however, was tranquil. Letters from Bayonne of the 3 inst. state that the news of an alleged outbreak at Grenada and the formation of a Junta presided over by Captain General Santa Cruz, had filled with hopes the Christino refugees residing along the Spanish frontier. All their attempts, however, to create insurrectionary movement proved unavailing. The Gazelte of the 30th contains an prder from M. Mendizabal directing the chief of Treasury to forward in bills on London 50,0002 . out of the proceeds of the third instalment paid by the house of Rothschild on account of the quicksilver contract, to be applied to the payment of the half-yearly interest of the

May. It had been determined at a Ministerial Counci to keep the Cortes assembled for a full month longer, the object being to give full discussion to the Finance
Minister's important measures. The Deputies had at Minister's important measures. The Deputies had at passed the item raising the Custom House emolument for the foreign dividends from 6 to 10 per cent. They had likewise passed, in substance, the tax on fresh fish or the same purpose. A bill had passed the Deputies There re-erection of the lately burnt College of Nobles. There was no intimation as yet of any proposition for
renewing the tariff negotiations. The law reducing by ne-half the Customs' duties at the Island of Madeira had Pluton with the Princess Clementine of Orleans and the family of Saxe-Cobourg, but they were hourly expected The Grande Antille, alias Gloria, a Spanish slave-vessel, taken under Portuguese colours at $\dagger$ Mosambique, about which so much dispute has prevailed, had been amicably disposed of to the Spanish Government, who pay the fine and liabilities, and make her a vessel of war. She had taken her Spanish crew on board and sailed for Cadiz. Belgivm. - We learn from Brussels that Mr. Gachard keeper of the Royal archives in that city, and Mr. Hanssen, first clerk of the Home Department, have gone to Spain, oy command of King Leopold, for the purpose of examin-
ing the archives there, and to procure copies of all im portant documents which can throw new light upon Belgian bistory. The Spanish Government having granted all possible facilities, this mission promises highly inteHoriand - Letters from Utrecht
that on the evening of a meteoric stone fell in the commune of Blaanwkapel about a league from the city. After a violent explosion, repeated three or four times, resenbling a discharge of artillery, a whistling and howling noise was heard, which excited much anxiety and alarm among the villagers. The servant of a farmer, who was bringing some borses home the ground with such violence that the sand boay fall to a considerable height in the air. Having procured a spade, he returned to the place, and found the stone at the depth of 3 feet in the stratum of sand which extends below the clay. It weighs seven pounds, is of a longish irregular
shape, and covered with the bodies, which is broken off only in one place, where the internal grey matter of the stone appears.
of the Imperial family, wim Princa mention the return presbe imperial family, Po Prince Hungarian Among the Posiulates submitted by th Hungarian Diet, just opened by the Emperor in person are the following important bills :-To limit the Royal ado, so far as to give the force of law to any measure twice vania with Hungary; to give additional securities fo liberty of speech and liberty of the press; to establish an official Gazette for registering the proceedings of the Diet to incorporate Galicia with Hungary; to exclude all perdirect thangarians from the Hungarian army, and to ordinary circumstances, shall not be required to ter extraown country; to abolish entailments of property; and to promote and encourage the native Hungarian language. d aim chiefly at an improved criminal code, the prevention of the excesses that have so frequently occurred at the elections of deputies, to redress cities, and several bills of a financial chanstituencies of the bills remaining from former sessions, and likely to be again brought forward, are-one to confer on individuals, not of noble birth, the power of holding landed property and another intended to place the different religious pro fessions on a footing of greater equality.-The Prussian introduced in the steam navigation between Hamburg and Magdeburg. The boats now leave each city twice a week,
and perform the voyage up the Elbe in 32 hours, and ano perform The voyage up the the in 32 hours, and from Hamburg up the river and taking the railroad from Magdeburg, are able to arrive at Berlin in several hours
less time than by the Schnellpost, or mail diligence. The steamers have also been altered so as to draw much les water than formeriy, and the company express a confident beief that even will ine driest summers the navigation on King of Prussia left Berlin on the 30th ult. for Stettin and probably for Konigsberg and Dantzic. His journey will take several weeks, and her Majesty the Queen intends to pay ${ }^{2}$
ister at Dresden
Italy.-Letters from Rome under date of the 20th Douglas with his bride, the Princess Mary of They also state that the Pope has given anthority to a rom excitement produced at Rome by the appearance of Lord Chesterfield's foxhounds on the Campagna. We now by a match of cricket, played ha ve been no less astouished of English gentlemen, who, having indulged themselve in a short practice at this truly English game, made a match for 500 scudi aside-Oxford and Cambridge agains il the world. The match was played in the ground o course of spectators. Letters from Naples of the 28th It. amnounce the arrival in that harbour of the Brazilian squadron, sent under the command of Rear-Admiral
Porpeire to convey the future Empress of the Brazils to Rio Janeiro. The squadron made the passage from Rio Greeck.-Letters from Athens of the 20th ult, state that the poverty of the country had never been so great, that property was every day falling in value, and that specie being scarce, trade was carried on by barter, even disbanding some of the Greek troops, and reduced the pay of others, whilst the Bavarians were left in the enjoy-
culated for some days in that capital. A successor fo King Otho was talked of, as if the latter had abdicated and three candidates for the throne were mentioned-list Russ Russia; 2d, the Duke of Cambridge; and 3d, Prince Clementine, of Orleans It is added that Clementine, of Onco fis added the agents Kins sentative Government, and that he will be compelled to abdicate.-A statue larger than life, and executed in th Egyptian style, has been found near Marathon, and brought to the Museum of Athens. The figure has an iron dise in each hand. Some assert that it is a rep Sentation of Antinous; Others consider it an Apollo. nounce the complete pacification of Bosnia. The insu rection was, however, only put down by the Pacha yielding to the demands of the insurgents, sending awa the Aruauts, and placing the contributions on the old footing. They also state that Prince Alexander of Servia had succeeded in procuring 30,000 siguatures to a petition解 favour, which has been forwarded to Constantinople, Resdas generally believed that he would be re-elected appointed Governor of Adrianople.
2acrpi-Letters from Alexandria of the 17th ult vailed thro martality amongst the oxen still pre more than 5000 gyp. OR parue like seanaa pa, and at Alexandria a few cases had appeared. They also speak in very sanguine terms of the probability of junction between the Red Sea and the Mediterranean, by means of a canal cut through the Istlmms of Suez. The the To the ject. Prince Mustrian Consul has been especially charged and the general belief in accomplishing the work will soon be adopted - Among th miscellaneous cargo carried out to Egypt last week by the Great Liverpool, was a case of six saimon, caught in the river Iert, near Southampton. They were well packed in ice, and there is little doubt of their arriving at the destination in good condition. As this description of fish has never yet been seen in Egypt, it will indeed be a rarity. 1st of Mar despatches by the Overiand Mail of the portant details arrived this week. They bring the ina Napier, on the 24 th March, near the River Fullalie, in which their last effort was made by the A meers, who durin 60 years have ruled the fertile districts along the Indus. These details are of high interest, and the militar bound in the extracts from the despatches under our Miscellaneous paragraph. It appears that Sir C. Napier, having learned that the enemy had taken up a strong position on the River Fullalie, four miles from Hyderabad, moved out on the 24th March to attack them. His force consisted of about $5,000 \mathrm{men}$, with 17 guns and howsitzers. He was for three hour closely engaged in a hand-to-hand fight with a body of 20,000 Beloochees, and after a gallant and severe struggle defeated and dispersed them, 11 guns and 19 standard were captured, and 1,000 men are supposed to have been killed: probably 4,000 more were wounded. Shere Mahomed, the leader of the force, escaped. Our loss amounted to 39 killed, and 231 wounded; amongst the former are Captain Garrett, of the Bengal 9th Cavarry and Lieut. Smith, of the Bombay Horse Artillery; Lieut F. Burr, 21st Native Infantry, has since died of his als. The to na the Meerpore was soon taken, an its Ameer, Shere Mahomed, who made this last attempt a rese, arount position, in the direction of the Britisi territoris enterprise osa, was taken on the ath April by Sir C Napier. The conduct of this officer has called forth niversal praise. Sir C. Napier, who was employed as regulating the conquered districts, considers scinde of completely subdued for the present. The Beloocheopt at the termination of, he is thought, make some atitish, but there is nothingserious apprehended. The Ameers of Scinde arrived at Bombay on the 19th April, where they were re ceived with distinction, and sent to reside under a strong guard at Malabar-point, Government-house. One of hem, who is represented as a diangerous character, asd in the min C 保 British Enor Wapla in, Fort Geore. The place of their Eavoy, was confined in Fort George. Pholshair, old an old palace of the Peishwa, 17 miles from Poona, only poken of. Of 200 ladies, composing their Zenana, onl 30 have volunteered to follow the future fortunes of masters.-The insurrectionary movement sirmeek noticed in the announcement which we published at witory ppears to have been of some importance. The terne of Khytul being about to lapse to the British Governoep orse death of the chier, the widow resol panis Khytul, were attacke 72 d Native infantry, stationed to retreat rapidly on Kurnaul, with the loss of 30 or 40 men. Lieutenants Whistler and Farre were severely wounde Heavy reinforcements were immediately sent out, and the insurrection, it is supposed, will be suppressed with difficulty.- In the interior of India tranquinty prevails the mountainous districts of Bundelkund or 1 directed ception; but the attention of the Goverament was directed
to the necessity of establishing peace there. The news from Affghanistan represents Akhbar Khan as having lost much of his popularity. He had come about the middle of March to Jellalabad to meet his father, Dost Mahomed,
who was going from Peshawur toward who was going from Peshawur towards Casul, -The re-
mains of the late SirW. Macnaghten have been recovered by his widow. The body had been recognised by the absence of the head and the armo, which had been cut off by his assassins. The body is now on its way to Calcutta for interment, having been recovered, by the payment of a
large price, from the well into which it had been cast Several smart shocks of an earthquake have been felt in the Deccan, but attended with nothing serious. The Governor-General continues at Agra, and has expressed a Lordship, who was said to capital of Scinde His elevation to an earldom, had become a favourite with the army. His rule in India had become remarkable for the abolition of slavery in every part of this country within the British rule. The following paragraph relating authority of a Loodianah Jetter, and though it certainly forms a striking contrast to the information sent home by Government some months ago, on the authority of our Persian Envoy, to the friends of these unfortunate gentlemen, still too much reliance is not placed on it by the Indian papers. It corresponds, however, in a remarkable paanner with the account quoted by us from the Dubin
papers last week: :-"Loodianal, March 23, 1843.-The report last month was, that Col. Stoddart and Capt. Connolly had been murdered, but there is a Jew here who
declares that they are still alive, and that he heard from a declares that they are still alive, and that he heard from a
brother of his at Bokhara, who told him a Greek inter brother of his at Bokhara, who told him a Greek inter--
preter and a slave, who had been for months confined in preter and a slave, who had been for months confined in and the populace made to believe that they were Colone Stoddart and Captain Connolly. The man has very good testimonials of character, and has offered (without reward) the coursey a chit to them
Chrns. - The news from China, which comes down to the 12th March, states that, in consequence of the sudden at Cof Elepoo, the Imperial Commissioner, after a feas ment of the treaty and commercial tariff being considerably delayed. The most singular stories were afloat among the Chinese regarding the death of the Commisothers even said that so onerous were poisoned, and his office, that in a moment of disgust he broke his own head with his inkstone the stone on which the Chinese prepare their ink. Keying, a cousin of the Emperor, was and Sir H. Pottinger had declared his the Commissioner ; and Sir H. Pottinger had declared his intention to pro
ceed to the northern ports, in order to carry on the nego tiation there. Many of the difficulties that interpose the arrangement of the business are supposed to arise the arrangement of the business are supposed to aris
from the intrigues of the Hong merchants at Canton, who fom the intrigues of the Hong merchants at Canton, who do not wish that the other ports should be opened. At
all the other places the inhabitants showed the most friendly feelings towards the British. The Vizen steamer pected at Hong Kong about the middle of March
Cape Of Good Hope. - The expedition against the rebellious Boers has at length terminated without bloodAhed, and the Lieutenant-Governor has returned with the greater part of the troops, leaving a garrison of about 300 men at Colesberg, which may protect the native inhablreapect to the port and conntry of Natal, the rumours are that the British Government will take full possession either as a separate Government or a dependency of the Cape. The colony has been desolated by immense warms of locusts, which left their eggs in the earth; and them, hopping about for several weeks until they get wings, and destroying every blade of grass. It is said to be impossible to form an idea of the enormous quantity without seeing them. It is, however, hoped they may leaveas soon as they can fly, but others would probably
supply their places. If the locusts were away, there would be a chance of grass for the winter, but it was feared that they will destroy everything
United States.-The Great Western steam-ship arrived at Liverpool on Thursday morning, after a rough Voygge, which has occupied thisteen days and a half, winds a great part of which she experienced strong head winds and squally weather. She has brought 128 passengers. Sir Charles Bagot died at Kingston on the 19th
ult. ; his sufferings tracted, but although a martyr to bodily ailment, his mantal faculties remained clear and unclouded to the last. A public dinner was given to Mr. Webster at Baltimore on the 19th alto, at which he delivered a speech Suich has excited very considerable attention, as it is Government as regards Great Britain. He is in faven of a considerable reduction of duties in the American tariff, and expresses a strong wish to see a low scale of fixed duties adopted by this country for the admission of Wheat and flour produce of the United States. As regards that principle , he seems to think it futile to expect that Ministry; but we bearried out at present by the British tobacco, and Indian ase a reduction of daties on rice, Which is producedian corn-more especially the latter, Wheat-growing States, and which is little known and less used in England. This speech has naturally excited great interest-the result of Mr. Webster's late official position, and the high rank on the score of talent and character
which he holds amongst bis countrymen. Although no I and-half per Cent. Reduced, $100 \frac{5}{8}$ to $\frac{9}{4}$; Bank Stock, 179 longer connected with the Cabinet he is believed to speak but also the sentiments of President Tyler himself, chants of the New England States. The American embassy to China is to consist of Mr. Cushing, "Grand Mr. John Tyler, jun., Private Secretary ; and Mr. J. R. Feters, jun., as Agent of the American Institute. A missions connected with the principal families and leading public institutions of the United States. The Mexican forces, amounting to 2,400 , had been captured by the Yucatans, provisions is stated to invade, near Morida. The want of Au action at sea between a Mexican steamer and the Yucatanese, ended in the defeat of the former and the capture of the steamer. By the articles of eapitulation
the Mexican force was to embark for Tampico within eight days, leaving their arms behind. Mr. Louis Bourbon, who was one of the Canadian patriots of 1839
sent into exile in New South Wales, made his escape from that place, and arrived in New York on Monday by the brig Russian, from Rio Janeiro. He declines to state the manner of his escape, as it might possibly implicate
other persons concerned. During the first two years his exile he acted in the capacity of clerk to the Govern ment, closely confined, however; but at the end of that He proceeds immediately to the frontier, where be pects to meet his family, from whom he has been absent about four years, after which he goes to France. Mr.
Bourbon is son-in-law of Speaker Papineau, 80 well in Canada.- The project of transporting the cotton from the upper settlements on the Brazos to the mouth of the
 arrival at Columbir of between 400 and 500 bales, the greater part of which was floated down the river in gum bags from any point where 6 inches of water can be found, and the cost is not greater than if it were tramported on lat or keel boats.-Intelligence has been received of the loss of the fine packet-ship the Great Britain on her lat
outward passage to New York, together with the whole her cargo. She was frigate-rigged, of 404 tons burden and was built at Quebec in 1839. On the 30th March she experienced a terrific hurricane, carried away her
foremast, and sprung a leak, which the greatest exertions could not keep under. The leak increased so fast that al hands abandoned all hopes of being saved; happily, how
ever, the ship Philadelphia, bound to Boston, hove in sight just before the packet sank, and was the means saving the livesiof both crew and passengers.

## 据和íament.

Friday.-Their Lordhhips met this daris. for the first time after the House a messaye from the Crown, containing her Majesty's gracious permission to the nuptials of the Princess Augusta rad the Heredi-
tary Grand Duke of Mecklenburgh Strelitz, and trusting to their
Lordshin the Lordships taking into consideratton the proppriety of make ting a suit-
abbe provision for the illustrious Princess. On the motion of the Duke
of tion on Tuesday. - The Duke of WEILINNGTON, in answer to observa-
tions by the Mircuis cellor of Ireland had given his opinion in writing that the meetings and in Ireland for a repeal of the Union had a tendency to outrage,
and might be dangerous to the State. It appeared ovvious to him
the Duke of Wellingtou) that rhe Duke or Weliungton) that outrage and bloodshed miight be the
result to such meetings and it was equaly clear that Lords Leute-
nants of counties attending suthe the Government of Ireland to confide in in consenquently the Lord
Chancellor liad taken steps to remove certain parties from the commanceelior had taken steps to remove certain parties from the com-
mision of the paece. There could be eno objection to meeting for
the repeni of an Act Par Parliament, but the peace of the country Could not be permitted to be broken.
HOUSE OF COMMONS.
Thurpsayy. - The Commons assembled this day, pursuant to
 of the Nottingham Election Committee, reported to the House that
the committee had resolved that Thomas Gisbone, the younger,
Esq., had been duly elected to serve in the present
 her Mayesty's Goverument to bring forward a measure relatmg to

 provision would be made for her Royal Highness on her nuputials.-
Sir RosmRT PExit then moved that her Majesty's Message be talen intio consideration on Monday next. - In reply to a question by
Mr. FwART as to what numbers constituted an illegal meetina
 any individual Member of Parriament would be justified in answering.
The hon. Member himself belonged to the legal profesion, nd
therefore ought to know the law himself. He (Sii, therefore ought to know the low himsolf. He (Sir J. Graham) did
not say that numbers constituted iliegal meetings, hut he considered
that numbers was a most iniportant inuredulutit

 Member whether Dr. Macfarlane, or any other member, had seceded

$V^{\prime}$ sit of Her Majesty to Scotl's Stables, near LeatherClaremont for Buckingham the day before the court left in an opent for Buckingham Palace, her Majesty proceeded Edgecumbe, to Scott's stables by the Countess of Mount Lugecumbe, to scott's stables, near Leatherhead, for the purpose or witnessing the gallops of Cotherstone, the Derby favourite, and the other horses engaged in the race Prince Albert accompanied her Majesty on horseback attended by the Earl of Hardwicke, the Hon. Colonel Grey, and Colonel Wylde. Immediately after the anexpected arrival of her Majesty, the whole of the borses
entered for the Derby in the stables were taken to bead Downs, where they performed their gallops, Cotherstone taking the lead. The horses having returned to the stables, her Majesty and the Prince passed through and inspected the extensive training establishment of Mr Scott, and afterwards tnok their departure for Claremont. sent Court grooms and others connected with the stables. Alderm of Aldermen.-On Saturday the Committee of of hringingembled, for the purpose, it was understood, o Alderg to a close the long-protracted inquiry relative pany, Mr Al Wood and the I alacre Coal and Iron Comwhole of the proceedingewn read a report relative to the his connection with the Talacre Coal and Iron Company which in a great measure went to re-open the case, being founded principally on the affidavits exhibited in the Court of Queen's Bench relative to the Brinn mines Alderman $T$. Wood complained of the manner in which the report had been drawn up, and requested to be allowed a copy of it, for the purpose of correcting the was agreed to contained, before it was sent round, which was agreed to. An angry discussion, partaking, in \%
great measure, of a personal nature, ensued, and was great measure, of a personal nature, ensued, and was fortnight; the announcement prise, as the proceedings had already extended orer The Polish Banth.-
The Polish Ball,-On Monday night a grand fancy and full-dress ball for the relief of the distressed Polish Rooms resident in this country was given at Willis's tumes of the Duchess of Sutherously attended. The cos the Duchess of Bedford, Lady Seymour, Marchioness Aylesbury, \&c., were among the most splendid; being The ball was very well sustained and masque last year. guadrilles were dauced in the nea, and complete sets of The proceeds of the ball have not been announced, but here is no doubt that they were considerable.
The Derby Lotteries.-On Saturday an information was laid before the Croydon police-court against Mrs. for having a Derby club at her house. The information was stated to be laid by William Kerrod, soda-water manufacturer, St. John's, Fulham. The information, which extended to considerable length, charged the defendant with having set up a certain mischievous and unlawful Dame, under the denomination of "The King's Arms Dished a certain proposal and scheme theref, made and pubished a certain proposal and scheme for advancing small sums of money by several persons, amounting in the whole winners at such, to be divided and shared among the winners at such mischievous and unlawful game, and that certain tickets were delivered out, entitling parties to a
share of such money so advanced according to the ssid proposal and scheme, against the form of the the said proposal und scheme, against the form of the statute in
sucl cases made and provided, and for which offence she such cases made and provided, and for which offence she Mr. Kirke, of London, applied on behalf of the informer counsel postponement of the case, on the ground that day fendant, objected, of Croydon, as counsel for the demagistrates havi postponement of the case. The information being read the informer was called, but did not appear. Half-an-hour was allowed for the purpose of making his appearance, when , not answering to his name the case was dismissed. The informer shorty sterwards entered the court, but the magistrates refused to allow the lise to be re-opened. The informer was consequently liable for the costs.
he Whitsun Holidays.-The usual Whitsun festivities of Greenwich fair, Hampton Court, Wandsworth, and other places in the suburbs, drew large crowds of holiday folks from the metropolis on Monday. Notwithstanding thronged. At the British Museum the number generally thros 13 , when whe those who dered lan when the decrease on war ourable state well behaved, on the groud The number of visitors and the F , main sur 14, Mear . The Museum Nation Gil Last week 38 , was visited by 1200 visitors on Monday. Thames Tunnel, and on Sunday alone there were 17513 visitors. But the most numday alisplay on Monday was The of the teatotallers, who met on Hampstead Heath. The number of persons who took part in the cavalcade could not have been less than 15,000 , and the line extended completely across the heath, a distance of more than

The Southwark Park.-A numerous meeting of the inhabitants of Southwark was held this week in the vestry room of the church of St. George the Martyr, to take wardens for petitioning Parliament and the Government for a grant of a suitable piece of ground for the formation for a grant of a suitable piece of ground for the formatio The churchwarden submitted a resolution, stating that it was of the first importance to the moral and physical condition of the people that they slould have open walks for healthful recreation, which would tend least alleviate disease. He mentioned a very eligible site for the projected park, a large plot of ground near Walpole-place, Kent-road, which extends all the way to were not secured in time for such an object. Several letters were read from a great number of Peers and Members of the House of Commons, all promising their cooperation to e

The Enclosure of Hampstead Heath. -The excite ment created throughout Hampstead and the northern suburbs of the Metropolis at the projected enclosure o Hampstead the instigation Sir T. M. Wilson, and entitled the "Wilson Estate Bill," still continues to increase, and petitions against it are the bill, a copy of which it is intended to place in the hands of every Member of the Legislature, were finally arranged on the part of the copyholders, and it is their in sistance to preserve to the Metropolis this favourite place of recreation.
Kensington.-At a meeting of the rate-payers of $S$ Mary Abbots' on Monday, after a long discussion respect ing Col. Fox's recent diversion of the north end of the Addison-road, it was resolved that the churchwardens pro per measures for the restoration of the road. Col. Fox having offered, as a compensation, $z 20$ towards the pav ing or the road, , Col. Fox that the vestry are willing to accept the indem nification he offers for the alteration of the line of th church path in the Addison-road, if Col. Fox will tak the proper steps to make such an agreement a legal one amendment. Only two hands, those of the mover and seconder, were held up for the amendment; and the original motion was carried with acclamation.
Hampton Court.-On Friday, at the Feltham pett essions, a young man, named Williana Bennet Watkin who stated himself to be gardener to Mr. B. Watkins, o Hammersmith, was brought before Messrs. Devon an constable with having stolen a quantity of plants and cuttings from the Royal Gardens at Hampton Court Palace. The charge having been clearly proved, he was hard labour in the House of Correction
Mortality of the Metropolis.-The following is the May 27 . West districe 155 . North districts 156 Central districts, 163 ; East districts, 175 ; South die tricts, 210. Total, 859-(457 males, 402 females) Weekly average for the last five years, 903 - ( 461 males 442 females,) and for the last five springs, 854.

## 根robinctal Nelos

Incendiary Fires.-The provincial papers give account of incendiary fires in different parts of the agricultural districts. The Maidstone papers state that as two gentlemen were riding last week past Tyland-farm, on the Rochester-road, they saw a sainfoin stack burst in the Warren They immediately galloped in pursuit and overtaking the man, apprehended him. He prove to be a stranger in the district, knowing nothing whatever of Mr . Mills, the owner of the stack. He confessed that as he was starving, and could not obtain employment He was taken to Boxley cage, where he is now in custody. His name is George Brown, a gardener, from Bradford, Essex.

Alnwick.-The following account of the Drainingplough is extracted from the Newcastle Journal:-س"An 'Green's Patent, pas made at Alnwoick on Saturday last, in a field called Stamp's-close, adjoining Alnwick-moor, belonging to his Grace the Duke of Northumberland. The draining took place on the market-day, to give the The draning took place on the market-day, to give the iarmers and neighbouring gentry an opportunity of formof about 8 acres. The drain lines had been laid out, and the turf thrown aside by the common plough on the pre-
vious day. The draining-plough commenced operations at the usual hour on Saturday morning, and the whole of the drains, one between each ridge, to the depth of 18
inches, were completed by the evening. The plough was drawn by 8 horses, attended by 4 men. Mr. Patten, his Grace's park and farm steward, superintended the work. One decided advantage that the draining-plough has is, that it can be used when the farmer has hittle or nothing else to do. The work was unanimously approved of; and, among other suggestions that were thrown out by the gentlemen and farmers on the ground, the following may not be unworthy of consideration, viz, -that a townthip or parish might purchase a plough for their common
use, or one might be kept in each bailiwick for the use of the soil 'was more impregnated with clay, the draining was more perfectly done. This would indicate its superior applicability to the soils of Northumberland

Birmingham. -Last week the western neighbourhood f Birmingham was considerably alarmed by rumours of disturbances amongst the turn-out nailors of Bromsgrove and the adjoining mining districts of Cradley, Stourbridge, \&c. For some years past various reductions have taken place in the manufacture of nails, amounting in the aggregate to 20 per cent.; and about a fortnight ago a further reduccould, under the old prices some years ago, earn about 20 s , per week; but since the reduction first took place, the price has reduced the rate of remuneration to $16 s$. The attempt recently made would reduce it still further to $14 s$. The strike became general last week, ia consequence of these reductions. The magistrates endeavoured to effect a com-
promise between the operatives and their masters, but the
men refused to return to their work without an increase of wages. A public meeting was also held, without effect-
ing any satisfactory settlement. The following statistics ing any satisfactory settlement. The following statistics hood:-The population of the parish is 9,671; the number of houses assessed to the poor 2,016-of these 1,763 180 occupations are void, and the tenants of 619 are from poverty excused paying rates. The number of permanent Friday week, in addition, 360 heads of families, comprising about 1,500 people, received temporary assistance at the Union workhouse
Bristol. - A determined burglary and attempt at murder was committed on Saturday night at Conham, a small retired village on the banks of the Avon, about six uncle and the nephews, broke into the cottage of an ald nole of money ; after robbing it of all the property they could carry, they stabbed Mrs. Hunt, and left her, as they suposed, dead, having covered her with a bed and a heavy however in releasing herself, and is likely to recover. The prisoner's have been apprehended, and committed to take ir trials.
Carmarthen.-The outrages of "Rebecca and her prehension that the magistracy of this and the adjoining counties of Pembroke and Cardigan will be obliged to place the whole district under military surveiliance. From attacking and destroying turnpike gates in remote and unfrequented parts of the country, they have proceeded to attacked and completely destroyed one of the gates of the county town, Carmarthen. It appears by the statement of the toll-collector, that at about one o' clock on gate, and immediately placed sentinels in Water-street and about Greenhall, the residence of Capt. Davies, borough magistrate. Their leader, attired in female clothing, and proceeded with a sort o body-guard to enter the toll-house. He then gave direc The windows were instantly beaten down, and they wer proceeding to urroof the house, when the wife of the the coliector rushed forward to this mysterious leader of sake of her dying child, who lay ill up stairg. The man seemed moved by this appeal, and proceeded to the bed mother to be correct, he gave orders "to stay proceed ings," as far as the toll-house was concerned, but the They also stated their determination to raze the Car marthen workhouse to the ground in August nex
Liverpool.-The many fires which have occurred mastra of the justices have been held during the week. It is understood that several witnesses were examined, and that the result of the investigation was a strong suspicion warehouses, have been produced by incendiaries. The evidence was transmitted to the Secretary of State, and the Home-offce has determinea to co-operate with the magistrates and corporation of the town in the endeavor out the town and suburbs on Saturday, offering 5002 reward, namely, $300 l$. by the council of the borough, and offenders, and announcing, for the discovery of the granted to any accomplice, who will give such information as shall lead to the discovery of the actual offenders.

Manchester.- A fatal accident, occasioned by the Dyeworks, the property of Messrs. Hulme and Sons Dyeworks, the property of Messrs. Hulme and Sons, from this town The ere in full operation, and it is remarkable that it did not prove extensively fatal. One man was killed on the spot, and others are 80 severely injured as to render their
recovery a matter of great doubt. The explosion filled the whole of the dyehouse and narrow passages around with a dense volume of steam and dust, and so great was the expansive power of the steam that the whole of the roof was blown from the dyehouse, the windows shattered, inquiries into the origin of the late outrage between the
military and police are still in progress, and are not likely to be concluded for some days.
Oxford.-We announced last week that Dr. Pusey, the Regius Professor of Hebrew, had been suspended from preaching in the University for two years. The subjoined recapitulation of the case wil not be uninteresting:-On the firn sunday after Easter, Dr. Pusey being called on Church, took for his subject the doctrine of the Eucharist. An impression was made on some of his audience that the doctrine of Transubstantiation and of the Mass were advanced and defended in a tone altogether dissonant from that of the standards of the Church of England, and the result was that an official demand was made on the ViceChancelior to appoint a board to examine the sermon. In compliance with this call, a board was constituted of the six Members of Convocation mentioned in our last. Each of these divines sent in a separate report, as three of them are said to have found little fault with the sermon. but the Vice-Chancellor thought proper to suspend the Regius Professor of Hebrew from preaching within the precincts of the University for two years. Against this sentence Dr. Pusey has addressed a protest to the Vice-Chancellor, from which the following is an extract:-"' I have stated to you, on different occasions, as opportunity offered, that I was at a loss to conceive what in my sermon could be construed into discordance with the Formularies of our Church; I have requested you to adopt that alternative in the Statutes, which allows the accused a hearing; I have again and again requested that definite propositions, which were thought to be at variance with our Formularies, should, according to the alternative in the Statute, be proposed to me; I have declared repeatedly my entire assent ex animo to all the doctrinal statements of our Church on this subject, and have, as far as I. had opportunity, declared 'my sincere and entire consent to them ndividualy, I have ground to think, that, as no propositions out of my sermon have been exhibited to me as at variance with the doctrine of our Church, so neither can they, but that I have been condemned either on a mistaken construction of my words, founded upon the doctrinal opinions of my judges, or on grounds distinct from the Formularies of our Cburch. Under these circumstances, since the Statute manifestly contemplates certain grave and definite instances of discordance from the Formularies of our Church, I feel it my duty to protest against the late sentence against me as unstatutable as well as unjust.'
Portsmouth.-The Victoria and Albert royal stean acht will be brought round here next month sit pected she will be fully equipped and ready for sea in bout six weeks. Whatever intention Her Majesty might have had of visiting Ireland in the course of the summer, here is now no probability of such a visit taking place, at east until that country is in a more settled state. It is understood to be Her Majesty's intention to take repeated he 'principal ports ane the const and amone others he pricipal por the and that of pymoure, of is stated that the Drince of pub and the Princesses will be brought down to the coast dur
ing the summer for the benefit of the sea breeze. ten oclock, smoke was seen to issue from the hold of the brig Tartar, lying in the new docks at this place, and laden with a quantity of war stores, consisting of a arge number of Congreve rockets and above twelve humdred shells. The crew, who had only arrived from London tan the prevous night, immediately left the vessel to her fate, it being currently reported she had fifty tons of gunpowder on board. This fortunately was not the case, or great mischief must have happened to the railway terminus and that part of the town situated near the docks. quantities, until a minut to issue, but in very smal it burst out into flames. It now became quite apparent that any attempt to scuttle her would be unavailing, from the dancer of her situation. At twelve oclock s party of Sappers and Miners arrived, and with the aid of sis horses brought one of the lurge guns from the platform into the dockyard, where six shots were fired into her bottom, but without effect, and in an instant a tremendous explosion took place, rockets and shells flying in all direcdions. J.he scene as this time was very grand, the or fou minutes fresh explosions took place which lasted until paster 's in of past two combustible parts of the cargo had entirely exploded Isle of Wight were thea made to obtain one oessel to the Isle of Wight steamers to haul the burning vensel to but mud banks, as was quite certain sue must aon suddenly the wind, which had been previously very high, sudd in a abated, when the flames took another direction, and which moment another series of explosions took place, whent continued for about twenty minutes, when the vessel wons down head foremost. She had twenty long brass can the and their carriages, destined, with the war stores, for was Mexican goverament. The value of tbe cars arat $25,000 l$. The consternation in the town was so gral from the report that there was a large quanticy streets powder on board, that all the lnhabiand in and left near the Docks shut up their houses and shops, and left the town; even in the High Street, many families ler their dwellngs, and proceeded to the country. porere with the luggage of passengers, and passengers who worn on their way to the tailway station, might be seen remina rigg in all drections to get out of the cown. An ex on tion of the crew took place before the magis hom Saturday morning, but nothing was elicited was an extra-
ordinary affair, but they could proceed no further in their investigation unless the captain had other witnesses to pranace.
Ruilways.-The following are the returns for the past week:- London and Birmingham, 16,162l. ; Great Western, 13,7017. ; South Western, 5,877l. ; South Midland, 3,957l. ; York and ditto, 1,503l.; Greenwich, 768l. ; Hull and Selby, 1,110l.; Grand Junction, 7,024l.; Midland Counties, 2,427l.-A special general meeting Midland Counties, 2,427l.-A special general meeting
of the Sheffield and Manchester Company was held last of the Sheffield and Manchester Company was held last
week at Manchester, Mr. Parker, M.P. for Sheffield, in the chair, when ten new directors were appointed for the forfeiture of certain unpaid shares was formally confirmed. It was announced that the works were proceeding rapidly and that the line would be opened from end to end by the beginning of 1845.-The inhabitants of Liverpool came bp in large numbers on Thursday week from Lancashire by the annual cheap train. By this conveyance the fare
is only $30 s$. from Liverpool and Manchester to the metropolis and back. There was another excursion o the same kind on Monday last. Upwards of 1,000 persons have availed themselves of this opportunity of mail-train from Bristol to London conveyed an unusual cargo of passengers, in the shape of a hive of bees, which had swarmed that day at Clifton, where they were safely glass windows. Thus secured they arrived at their destination in perfect safety. - It has been compused that the amount obtained by the Government in the shape of Income-tax from the various railway companies throughout the country will very nearly reach ncome and Property-Tax Act expires, it will, by the now gradual extension of the several lines, considerably exceed that amount. It was stated by Mr. Saunders, the secretary to the Great Western Company, in his examination lately at the Oxford sessions (in an appeal by the company against its being assessed to the poor at $3,000 l$. for Goring), that the amount of income-tax paid by that conapany alone was $10,450 \mathrm{l}$. for one year, ending Apr. 5,1842 . The inhabitants of many small parishes through which the lines of railway pass have been materially relieved by
the various companies being assessed to the relief of the poor, according to the estimated profit upon those porons of railways lying within their respective boundaries. In the comparatively small agricultural parish of Goring, upon each shilling rate made in the course of the year the sum of shilling rate made in the course of the year the sum of $118 l$. $18 s$, thus relieving the ratepay
three or four times a year to this large amount.

## IRELAND.

Dublin,--The following magistrates have been dismissed since our last, for taking part in the Repeal agitaFfrench, Mr. De Vernon, and Mr. Roche, M.P. and French, Mr. De Vernon, and Mr. Roche, M.P. and
Deputy-Lieatenant for the County of Cork. The following gentlemen have resigned their commissions:- Mr . O'Connell, Mr. Kean Mahontig, Cork, Mr. Charles Member for the County of Wexford, and Deputy-LieuMember for the County of Wexford, and Deputy-Lieu-
tenant, Mr. Patrick Ternan, Mr.J. Mathews, and Mr. T. Ennis, magistrates for the County of Louth; and Mr. T. H. Talbot, of Wexford.-Rear-Admiral Bowles hoisted his flag on Sunday at Kingston, on board H.M.'s steamer Lightning, under the usual salutes. On the previous day the Rhadamanthus, steam-frigate, landed at the Pigeonhouse 6000 stand of arms and one million rounds of ball 6000 stand of arms, soon afterwards for Waterford, with 6000 stand of arms, and four companies of the 61st Regiment. Two frigates have also been sent to Waterford, One to cruise along the coast, the other to be stationed at
Dunmore.-The weekly meeting of the Repeal Association took place on Monday, Various sums from the provinces were handed in, and numerous members were admitted. Notwithstanding the absence of Mr . $\mathrm{O}^{3}$ Connell, the meeting, was densely crowded from the opening Repeal rent was announced to be 904 l . 11s. $4 d$. With the exception of the last week, when the extraordinary perary were from the North and South Ridings of Tipreturn yet received. The previous week's return, on
Monday an amount, was 7091 , nearly considered so very large announced on Monday.
Dungannon.-A serious conflict between the Repealers Carland, Protestants took place last week in the village of had assembled, near wore A meeting of Anti-Repealers the town, to meet some of their party on the Carland road, had been received intelligence that about 18 Protestants passing through the village of Carland, and that several this information beenerely maltreated. Upon receipt of of Carland, but as its procession moved on in the direction large number but as its progress was comparatively slow,
 When commenced the wrecking of the Repealers' houses gistiate arrived at the place was going on, a Iocal madispersed the rioters, but place with a party of police. and has offered entire furniture destroyed. The Lord-Lieuten cerned in this outrage for the aprehension of the persons con

Edinbrargh.On SCOTLAND.
ceded to deliver his address on the Moderator procharacterising it as one that would be long memorable in portant measures they had passed. His Grace the Commissioner spoke as follows :-" Right Reverend and Right Honourable, I enter into the feelings under which you will return to your homes from this Assembly. You will be cheered, however, by the happy reflection that you
have attended faithfully to the many matters of momentous and offed fainful interest which came before you, and you will obtain, I am sure, the gratitude of your Sover-
eign and of your country. I congratulate you upon the eign and of your country. I congratulate you upon the schemes of your church, and to provide for the efficient supply of those charges which have been vacated by your
seceding bretbren; and I shall humbly pray that the Spirit of your Great Master, the God of neace and love, may guide and strengthen you." The Assembly Thursday, the 16 th of May 1844 . terian Assembly on the same day, Dr. M'Farlark, of Greenock, moved an address to the Queen, explaining Church, and took occasion to go over the grounds of difference which existed between them and the general assembly. Dr. Buchannan, in seconding the motion, rean impassable wall of separation had been raised up between this church and the State, and that the Residuary Assembly by their decisions had raised up a still more mpassable wall of separation between the two. It might
be possible, from the return to sound principles by the legislature, to reunite themselves with the. State; but they never could be again incorporated with an Erastian from the committee for interin. supplies, furnishing defails of the proceedings taey were to pursue, the number of labourers at their command, and the number that
would be required. He enforced the views of the committee in a lengthened speech, in which, towards the close, he adverted to a question that had more than
once been put to him- how far a person located in a district where there was no church of the Free Assembly, nor of any other which the Assembly would cordially ac-knowledge-how far it would be the duty of such a person Assembly of the Established Church had decided the question for them, by reverting to the old anti-Christian law of 1799 against ministerial communion, and thus had virtually excommunicated all Christendom. He doubted if such a body could be called a Church of Christ, and it ministrutions. Mr. Sheriff Monteath and Dr. Welsh expressed some doubts respecting this doctrine; but the general feeling was evidently with Dr. Candlish. A conand it was agreed to hold another Assembly in Glaggow on the 17 th of October of this year, when they would prothe Assembly in a speech of preat lerth Amon topics, he adverted to the position which they were to how with reference to the Establishment, and spoke of its not deter them from going forward. If their principles fore worth sacrificing their place in the Establishment for, they were worth the Establishment itself. They had no pleasure in seeing them lose their stipends; but if the assertion of their principles caused them to lose their own hivings, surely they would not now give up those prin-
ciples simply because it risked the loss of the livings of but a that would be to love their neighbours-not as, exhor areat deal better than themselves. After many exhortations to zeal, and a fervent recommendation Perth.-On Thursday evening last week the streets of Perth presented a scene of complete insubordination and 68th Regiment, which has been stationed here for some time, left tue barracks and paraded about the streets. Their object appeared to be to pick a quarrel with the be too many for them they hurried back to the barrack and soon after sallied forth wath greatly increased num bers. Upwards of 100 men , armed with bludgeons rushed a body torough the principal streets, maltreat number of ing down, without regard to age or sex, their way. The greatest confusion and alarm prevailed for a short time ; but the magistrates were promptly a and after the provost had read the Riot Act the soldiers, work to disperse the rioters. A contest ensued, and number of individuals were severely injured; but the and putting the rest of the soldiers to flight. Next forenoon an attempt was made on the part of the military to got outside the barracks armed with firelocks and bayonets, but they were repressed and turned back by their Officers The magistrates, on Friday, despatched an express to Si Neil Douglas, Commander of the Forces in Scotland night the bearer of the express returned, bearing Sir Neil's orders, that the 68 th Regiment should be removed from Perth to Stirling on Monday morning.

## THEATLLLALS.

Dhury-Lane.-The season at this theatre, according to the public advertisements, will terminate on Wednes
day next; on which night Mr. Macready will relinquish London audience and make his last appearance before a London audience for a very considerable period. The Queen has signified her pleasure to command a performance at this theatre on Monday next, the first state visit since 1... Macready has been the lessee. A communicaffice that theatre from the office of the Lord Chamberlain on Thursday, and a list of pieces was sent for her Majesty's selection. The appearance of the Sovereign at the theatre will, it is expected, Lane, and cause an additional number of nights to be added to the season.
daily pank.-An advertisement has appeared in the heatre, offers 5002 , Webster, the lessee of this author of the best modern comedy illustrative of British manners and customs. The question of merit is to be next January.

## deliscellaneous.

The Harvest.-The anxiety prevailing throughout England on the subject of the harvest appears to be felt almost equally in France and Spain, where the continued rains give rise to serious apprehensions. "Observing," uneasiness is correspondent of the Times, "that some crops, I have consulted the highest authority on the Conppinion the crops by the wet and cold of the month just erpired, but that an unsatisfactory predisposition was beginning to manifest itself. The rain and cold during last month were general throughout Europe. The sonth and the northSpain, France, Germany, and England, are alike menaced. If, however, the weather take up, and become warm, the harvest will be magnificent; and it is consoling to observe, Mon from the moment when the new moon came in (last ing, and the temnerature the weather has been improvwith 80 demperature rising. This is as fine a day, desired. I am obliged to add, however, that the meteorological observations and deductions made by those who study that science are said to lead to the expectation that this summer will be moist and stormy. There are upon an average 11 days of rain in May. This month there were 28 or 29 . Still it would be unfair to anticipate from this fact that we shall have a wet summer; for in the month of May in the deplorable year 1816, there were only 18 wet days. It results, therefore, that the superabundance of rain in last month does not justify unfaa predisposition to injury, and a consequentincrease in the price of wheat and flour;
The Victory in Scinde.-The following is an extract from an article in the Bombay Times, giving, from the victory in Scinde :-" General Napier having learned that the Beloochees had posted themselves in a strong position four and a half miles from Hyderabad, with a view of attacking or annoying him, moved out from his intrenched camp on the Indus at daybreak on the 24 th of March, in order to engage them. About half-past 8 o'clock they descried the enemy's force, above 20,000 strong, under the immediate command of Shere Mahomed. They were posted in nearly a straight line behind one of the large nullahs, or dry water-courses, with which the country abounds. This was formed by two parallel ditches, one 8 had for a by 20 wide--the other 17 by 42 wide. These quette raised behind expressly freshly scarped, and a banvillape of Dubban expresly in ocar . The Fulltal extreme rieht win could buly have been desired Our troops, position 1200 . rer of ormed in order of battle, and then advanced in echellon of regiments, at distances of about 20 yards. After a further advance of 400 yards they again paused for a little, to per-
mit a slight change of arrangements. The Scindians' mit a slight change of arrangements. The Scindians guns, 11 in number, had some time before this begun to fore the main bular horse sent forward to reconnoitre befficers of the force excited the admiration of the whole army. Just before the commencement of the action, Major Waddington of the Engineers, with Lieutenants Brown and Hill of the Artillery, galloped from end to end of the enemy's line, on purpose to draw on themselves the fire of the guns and matchlocks, and so ascertain their enced, whie they looked out for accessible or undeThough bullets and round shot whistled around them, they escaped unharmed. The left of the enemy's force appeared to be unsatisfactorily defined, being concealed by the brushwood of a shikargah; but, perceiving that in commenced moving from the right, so wealsening the best defended portion of his position which was desired to be attacked. Major Leslie's troop of Horse Artillery was ordered forward to endequin to rake the nullah ; Cavalry and Poonah Horse advancing to the left of the Artillery, which was supported on the right by her Majesty's 22d, retired considerably at first, so as to admit of the oblique fire of the guns. About $90^{\circ}$ 'clock the whole of our guns opened, and the British line advanced from the left of the 22 d . This brave battalion marched up the nullah under a heavy fire of matchlocks Without returning a shot till within 40 yards of the intrenchment, when they stormed the work like British
soldierg. General Napier at this time rode in amongot the
men，a perfect storm of shot whistling past him，and
waving his hat，called out，＂22d，charge！＂when all waving his hat，called out，＂22d，charge！＂when all resistance was instantly swept away．On gaining the even
ground they came right shoulders forward，and directed a terrific fire on the enemy．The second brigade，consisting of the 25 th， 21 st，and 12 th Native Infantry，commanded by Major Woodburn，bore down with admirable coolness， firing heavy volleys as they advanced．The Sepoys became mixed up with the European Grenadiers，who gave them a bearty cheer as they fearlessly rushed on．The line thus supported by Captain Whitly＇s battery，whose practice like that of the other Artillery，was magnificent．On the （Grenadiers），under the command of Majors Browne and Clibborn，advancing upon the intrenchments with the difficulty in suspending their fire when our cavalry were beginning enemy had some time before been observed to move in parently to sustain the cross fire of the Artillery－the bat Major Leslie＇s guns．Major Stack，with the 3d Cavalry under Captain Delamain，and the Sciade horse，com manded by Captain Jacob，made a brinatis left flank，crossing the nullah，and cutting down the Beloochees for a distance of some miles．About 50 of Captain Tait＇s men followed four miles beyond the village，and cut up some two or three score of Beloochees，
along the deep and wide canal in which the footmen were slowly and doggedly retreating；almost all old men，well armed，and determined to die hard．None asked for quarter，and none was given；they fought until over－
powered and slain．The right flank was，mesowhile， turned by the Poonah Horse and 9th Bengal Cavalry， under Captain Tait and Major Story respectively，who broke them，and drove them from the field before them， sabring many in the flight．The action had lasted three hours；the Scinde artillery and infantry fought well，the cavalry indifferently．They were now completely brokel and driven from their position everywhere，and their flight
had become universal．Our whole line had crossed the dell，and occupied the position originally held by the enemy．The brunt of the battle fell on Her Majesty＇s 22 d ，which，together with the Horse Artillery，decided the victory． 19 standards and inguns were between 500 and 600 dead were counted on the field，and nearly as many more were believed to be strewed scarcely any vouths were found on the battle－ground，and it was remarked that the corpses were those of grim and powerful warriors，the pride and élite of the tribes，whose mostly reached，and many of them passed，the prime of mostly reached，and many of them passed，the prime of found in Asia．Our loss amounted to 39 killed and 231 the 9th Cavalry；and Lieutenant Smith，of the Horse Artillery．Lieut．F．Burr，21st Native Infantry，after－ wards died of his wounds．The conduct praise．The finest spirit of cordiality prevailed between the Queen＇s and Company＇s soldiers，and such the admiration his conduct has excited，that his army might have been overwhelmed into in ben defeated．Of the 19 standards which fell 2 of them by， 44 were taken by her Majesty＇s 22 ， bearers．The loss of this gallant regiment amounted to nower than 23 killed and 131 wounded．Sucts as had the 16 th of April－the earliest date at which they could ff，and reached Bombay on the 25th，to the number of 60．They were all in excellent spirits，and，though the cases of some of them are severe，they are mostly doing fiercely－contested action of three hours，between armies amounting jointly to 25,000 men．＇ General has directed＂that the unserviceable guns taken at Hyderabad shall be sent to Bombay，and there cas he English and two native languages the uames of Major General Sir Charles Napier，and of the several officer mentioned by his Excellency in his despatch，and likewise the names of the several officers，non－commissioned the names way be for ever recorded of those who at Meeanee obtained for themselves that glory in the field

业ส向。

have been committed out of the domimons of the Queen，and in
parts where no offence could be committed against her laws．But

 ofnence which，for aught nat a appearenue．It was said on the
side，that abroad，was not principal offence had occurred in any part o the Queen＇s dominions，the aiding and abetting as now laid would
have been sufficient， But tit might have occurcd in the dominions or a foreign potentate，and then the argumeets wouth o Queen were
cable．It was nothing to say that the subjects of the Qued
impeded in their labour，for that might be the case with the subjects of the Queen employed in factories in foreign countries，so that that
allegation did not assist the renuc．But the venue here was more defective in stating the offence to have been committed at diver
places，than if it had been alleged to have loen commmted in Pari
an in
 statute provided that，in order that the punishment of offenders
might he less frequently intercepted in consequerce of technical or muxemmeanour，whether after verdict，wefant，or otherwist，should
he stayed or reversed for want of the averment of a y mater unne－
cessary to be proved，nor for the omission of certain words，nor for cessary to be proved，nor for the omission of certain words，nor for
omitting to state the time at which the offence was committed，nor
stating the time imperfecty，nor for want of a proper or perfect venue Where the court should appear by the 2ndictment or intormation to
have had jurisdiction over the offence．－M．Justice Coleridge said that all this argument proceeded upon the supposition of the charge
being that of being accessory to a felony，But suppose the charge Was that of a substantive misdemeanour；suppose it was a charge of
inciting a Frenchman to murder a Frenchman in France；then the offence to be committed would he out of the jurishliction of the whether the crime theited took place or not，and therefore the case，
supposed could not be compared to a case of aading，ahetting and comforting persons in a crime in which tliny were already engaged．
If they were not engaged in committing it crme they coutd not bo
aided in committing it．Az the allegation stood in this count it yas ahsolutely necessary that an original offence should have been
conomited，in order to make the defendants hable as aldıng and murder，where the act of incinng was a complete offence，and would
be indictable though the incting might have no result at all．
Inciting the people unlawfully to assemble together might be a sub－ stantive midemeanour，capable of being made the suhject of indict－
 difficulty could be pot over by charging the defendants as principal
misdemeanants．The learned counsel cited a great varicty of cases
dine want of the sufficirgt allenation of a venue．He submitted that the any express provision in favour of a case of this sort，and it could
not be made to apply by implication．Besides，the act made the the indictment itself，appeared to have jurisdiction over the offence．
Now，he trusted that he had satisfied the court that this indictment and if so the statute／George IV．，c． 64 ，was not applicable．To
make it applicable，even in a general manner，to criminal cases，it
must le expreasly declared by the Legegiatature to be so．There were

 Pullen＇s Reports，the delendant was charged with advisediy endea

master．Che doubt there was whether the indictment was good，as not stating how the nffence was committed．But though not exacti nonctment his．Hut aiding and abetting might be effected in and Alderson＇s Reporta，was quoted on the other side，bet was guilty
in point．There the question was，whether the defendant was
of an indictable offence in a particular county．The court did not decide commuted l，y varinus acts in chifferent ronntics，the is，hactment might
bo proterred in ary ，ne of them．Fut in that case there was no
question whether a venue was laid，and properly land，the only ques－ question，whether a proper penue was laid．The King v．Scott，in
tion wast
2 East＇s Pleas of the Crown， 780 ，was in point．That was a question as to the form of an indictment for a misdemeanour for receiving
stolen iron，knowing it to have heen stolen．The court intmated an
opmion that the starute had excepted certain cases；；and it was clear opinion that the starute had excepten certain cases，
that，for the purpose of that indintment，no disinct act of stcaling
need take place．－Mr．Justice Coleradge：But you must allege and

 jur．sd．ct．on，ammunted to a sufficient allegation of the offence．－Lord
incimath：llut if she had kept away a prrson from a tribunal which hid no jurisdiction in the matter，sle would not have been guilty of
any oftence，notwithstanding her state of mind．But Stott＇s case
son：Is theticient allegation of time and place．－Mr．Justice Patte－ is an accessory before the fact when theress no aillegation of the fact having been committed？It is very possible to charge a man with though the crime had never been committed．But that is not the case here－Mr．Erle ：It would be impussible to charge a man 2 s accessory before a fact，if that fact never was commited．The
nbsence of any allegation of time and place could not be cured by verdict．There was no such allegation here，and the indictment was of a venue to one essential tart is an omission to the whole．－Mr． within the jurisdaction of the court ：but the offence，if any，was not caption of the indictment，sufficient，not for the offence presented， but only for the jurors who present．In the Oxford case the marginal xford county，nnd not Oxford city．But that was contradicted by
the allegation in the body of the mulictment，which showed that the
oflence was commited in the city．Alt these cases showed the neces sity of having a proper vcuue properly laid．Now here，in the fourth
count，there was a defective allegation of venue，and in the fifth mport into the body of the indictment the venue stated in the margin very material fact ought to be alleged wish a proper venue，and on the same side，submitted that the marginal venue could not be mported into the body of the indictment．For this he cited a great many anthorities．In one ease，in an indictment for bipany，there was
venue in the margin，but the differcnt parts were all alleged in blanks The prisoner was comich， on the ground that it did not appear on the face of the old Bailey in September scssions， 1833 ，before Sergeant Arabin，and reserved or the judges，was the case which he referred to．－Mr．Justice Cole ringe：There was ample ground there for arresting the judgment
without its supporting your proposition，－Mr．Dundas：It certainly supported the proposition that the venue in the margin could not ifth count was clearly bad，and the judgment must be arrested．－ Mr．Bannes，on the same side riled on the obechne distinctly a，legring the place where an wats absolutely necessury to the valdity of the indictiment．Without such preciseness，it was impossible for a defendant to know what the material part of the fourth count was without any allegation of it was necessary that every material allegation should have a venue， this indictment couk not be supportell，－Mr．Sergeant Murphy， court in now confining the argument to the question of the venue Lord Denman sand that the court wished the case to he argued now upnn the question of venue，as if no other objection existed to the
indictment．If it should be necessary afterwards to bear the learned counsel on the other point，due notice of their being called on to
argue th wouid he given them．Mr．Sergeant Murphy then addressed argue it would he given them，Mr．Sergeant marge could tie supported without a good aflegation of venue．If there was an inuictment wigane a p prson for harbouring a thief，but without an allegation of
time and place，the indictruent would be bad．If so，the case of the King＂itott＇whech ws，rened on had been misapprehended，for it was against the ordinary expe－ if aileged without a sufficient venue．The object of the venue was enable the defendant to know what the charge against him was，no that he might be able to meet it．If no venue or a defective venue
were given，both these ubjects were＂defeated．Here there was no proper allegation of venue in the fourth count，so as to show that the was no allegathon of venue at inll，and tor aught that appeared there，
the nalnged offence might have been commited 1 n any renote part giving a jurssdecton to the court，and consequently dad not enable statute，the object．on of defective venue could only be re wedted 112
 were not aided by thestatute．On the whole，they sulbintted that it absolute．Lord Denman said that the court would in a few days
intimate to the partues its intentions with respect to this casp，－Ac－ cordingly on Wednesday he delivered the following judgnsent：＇The with reference to the objections arising upon the point of venue． the count is for that reason bad．Wivery material fact must be
stated，with time and place，in order that it may apcar that the grandjury bad jurisdiction to find the bill，and also that it may be krown whence the petty jurymen are to come wities cited at the bar．
This 1s laid down in all the boaks and authorion
Indeed it was hardly contended，on the part of the Crown，that the count could be supportcd at common law，as it contains no venue in atself，nor any words of refercnce to the venue in the mand accord－ ing to the distinction hereafter to be mentioned．Recourse
had to the statute of the 7 George $1 V$ ．，c． 64 ，sec． 20 ，which
cnacts that＂no julgment nfter verdict，or confessions，or defult nemacts that＂no judgment nfter verdict，or confessions，or detaunl
shall he staved for want of a proper or perfect venue，provided it shall appear by the mothetment that the court had jurisdiction be consi－
offence，＂Now，whether a total omispon ot venue can be be con－
dered as cured loy these words，or whether the statute must beyerly or imperfectly，inerther case the condtion on thich that remedy for
delcet is given by the 7 （feo．IV．1s，that it hall appear by the indictmencthat the court，had jurisdiction over the offence．If this place is mentioned in the body of it；and we cannot，as aiready
stated，impart into it for that purpose the county noted in the mar－ gin，as has been done in civik actions．To hold thas would be to say， as was indeed said by the solicitor－General，that wo forer found a bill of indictment for a
jury of any county whatever upon it in that county must be good after verdict，though the indictment does not show the court to have had any jurisdicthe
over the offence，on which condition alone the defect is cured by the statute．The argument drawn trom the 16 th and 11 civil utions，the total
c． 8, anil 4 th Annc c． 16 ，was that， ＂for wart of a right venue；＂so the thotal oralssion of venue in
criminal cases may be cured under the 7 Geo．IV．，which uses the words＂for want of a proper or perlect venue ，＂＇but the defect
cured in civil actions introduction of an improper or imperfect venue，and it is byen a jury
only cured by the statute of Clsarles，if the ecase is tried by of the proper county in which the action is lind．Now the and if the
cvcry cival case aslaid in the county stated in the markan， tha of Anne，the remedy is extended to the case of judgment by the statite of fault；all the defects which would have been cured ly the sen in such
Jeofails，in case the verdict of twelve men had been guven action，being expressly cured by the the 7 Geo．IV．should have county in uluch the indictment was preferred．The cere ine indictment show that the court had jurisdiction to try the The distinctionbetween cally referred to in the bo yof the indictment．The distinction betwe call

Crimmal and civil cases in this respect is found to be takea in the King
©. Knollys, 2 Lord Raymond; Lenthal's case, Croke, Elizaheth; the
King $v$. Budridge, 3 P. Williams; and the King $n$. Fawcett, there 0. Knoliys, 2 Lord Raymond; Lenthal's case, Croke, Elizaheth; the
King v. Budridge, P . Williams; and the King $n$. Fawcett, there
cited, and numerous other cases quoted at the bar. It has been established in such a variety of cases, that it is impossible for this court to overrule or overlook thera. It follows, therefore, that as the
court cannot comnect the venue in the body of the indicment with not appear by the margin, for want of such special reference, it does was found had jurisdiction, and that defect was not cured by the
statute of 7 George IV. The court had considered whether the statute of 7 Geo. IV. may not admit of a different or wider meaning,
namely. that the offence should appear to be of such a nature that the court has authority to try it, and a strong argument in tavour of
that construction arises from the apparent imposkinnity of piving that construction arises from the apparent impossublity of piving
effect on the words in any other manner. But we nre satisfiel such are not interded to he cured, unless the jurisdiction of the court in
respect of locality is made to appear. One cunsideration, inded, is declsive of that. Persons arcused might otherwise be punsherl for referred to a case reported Kurn's Justree, and also in 1 Mondy, Crown Cases. We have detore
us the very case, in whach the opnion of all the judges was taken, and also a cospy of the indictment. The prisoner was tried for breany
at the old Bailey, in 1833. The first marriage was alleged to have been contracted in Kent, and the second in Surrey; and the pursuer
was alleged to have been apprehended on a day named, but of the Tlace or county where he was apprehended no mention was made. orience in Surrey, though the venue in the margin was Middlesex;
but no one sugested that Middlesex could be drawn from the margin into the body of the indictment, though that would, uncues-
tionably, liave cured the defect, nor was it suggested that the court appeared hy the indictment to have jurisdiction over the offence of
higamy, uhich would have cured the defect, if the rcference had been to the quaty "f the offecce, and not to the place whree the offence
was commetted, or the prisoner apprehended. An objection on the score of omitting the local venue is not merely techncical, but reat
and important, for the allegation of material facts as ocuring in
particular county is not only that which autlorizes the rrand particular county 18 not only that which authorizes the grand jury to
find any bill of indictment, but 18 also a warrant to the sleriff to
summon the petty summon the petty jury, which must pass judgment on those facts
between the Crown and the prisoner. The trial of wituesses for per-
jury might jury might be embarrassed, and justice defeated, if the jurymen were
to be empannelled without authority. To make the act of trying confer the right to try would be a charge so violent that we cannot
believe it to have been intended by the Legisiature. Upon the whole, We are of opinion that the judpment upon the fifth count must be case, in 2 East's Pleas of the Crown, was thought to bear directly on nats
noctrine, and was not successfully distinguished by the defend-
nut note of the argument offered by Lord Abinger on the one side, and ane late Mr. Justice Vaughan on the other, in Michacimas term, ly9s,
atod the endorsement of the learned judge intimates that the case
stond for further arrounent. The prisoner was convictel in April, and was senthenced to twelve morthe' mprisonment, more than anal as decided. Indeed, he himself untumateq that, if there was an error
in the pressed to transportation for fourtcen years, a strong reason for not
howeyre, that herment ffounded tipon that case further. Wre think conduct imputerd to the defendants is criminal, and is stated with the place at diversount places, without naming them, though that statement ing persons to continue the said assemblies, and the aiding and though the marerial facts in the early part of it are wrethout plac and refers to a former part of the connt, whish former part, therefor the court had jurisdiction, and that is the very case contemplated by
the stand on the validity of the mode of stating the charge in that count, and We appoint Friday morning for that purpose,- Mr , O'Connor was
convicted only on the fifth count, the effect of the above judgment is Polace. - The parquit him.
Alexander. Chisholm, the surgeon, have already appeared in this Paper, and it will be remembered that Mr. Stratford, by whom the assault Was committed, was liberated on Saturday, the 27 th ult., upon his
personal recognizance in $500 l$ and two sureties $18250 l$ e each, for his
heing chagre of Mreming Chishntm, whourt on the day the bail wais entered into,
Wars pronounced by his medical attendants to be ont of dander Was pronounced by his, medical attendants to be ont of hanger. On
Wednesfay Mr. Stratford appeared decordingly, when Mr. Colsholm's
degal degal adv.ser announced that he had no mtention of pressing the
charge further, being satisfied that Mr. Stratiord could have no
vindintive Vindictive feeling towartls him. A public apology was then i
on behalf of Mr. Stratford, who was immedaately discharger. En Wednestlay evening, after the closing of Bow-street Office, the Secretary, of State to Mr. Twyford, the sitting manistrate, to issue a warpant for the apprehensiou of Samuel Mayer, who had written a
letter to Sir J. Graham, offering to assassinate Mr, O'Connell. The

Butif the nubber was so unusual, there was nothing extraordinary in the quality of the animals, except their badness. A worse lot
never went to the post ; and the best proof of it is, that up to Wednever went to the post; and the best proof of it is, that up to WWed-
nesday, so feeble were the public pretensions of the favourites (Maria Day, who was not in her form, excepted), that 8 to 1 was victory that the on Bersy Bedlam filly and Decisive came so strongly
into the market. The new rule for starting did not prove so suc into the market. The new rule for starting did not prove so sucthe real one such a bungling affair that two jockies had their horses
heads turned the wrong way when the word was given, and were
lett behind. For the first quarter of Carillon, Sister to Jeffy, the Bessy Bedlam filly, Decisive, and the
Elegance fillylying in front so close to Elegance filly lying in front so close together that it was impossible at greatly-dimainished speed, followed by Decisive, Bessy Bedlam
next, and the ruck at their heels. This order was observable to the
milcon, arid Lord Westminster's two were tailed off; the others nent on
in a eluster to the turn, round which Sister to Jeffy went two lengths advance, attended as before, reached the last road, where Extem-
oore, Fanny Callaghan, the Bessy Bedlam, Elegance, and Rococ filies closed with her, and for a fewstrides they were " all of a heap." Extempore then went in front, followed by Poison, Bessy Bedlam poison then shot ahead of Extempore, and, inatating Cotherstone,
passed the chair by two lengths. Extempore beat the Bessy Bedlam
filly half alength, Messalina was a length from the latter and half length before Decisive, who was not quite a length before the Rococo
filly. Value of the stakes, $2,600 \%$. On comirg to scale, a formal objection was made to the start; but the stewards, after hearing evidence, deeided that it was valid. Maria Day brole down in the
race, and the Laura filly pulled up lame. The rider of the latter Whs fined 5 . for starting twice without the signal.
The AFembers' Plafe of $50 \%$. for 3 - yr-olds, 6st.
 Mr. Cowley's Adrian aged (Calloway) beat Mr, Bainbridge's Lady
Mary, 5 yrs, Col. Charritie's The Knight, aged, and seven others.
 \&c. allowed 3lbs; horses that have started once at, this meeting and if entered as to be sold for 80l. allowed 7 lbs over and above all othe allowances; the second to save his stake. Heats, one mile. (18 subs.)
Mr. Bastard's Teapot, 4 yrs (Nat), beat Mr. Kling's Dahlia, 6 yrs ;
Statistios of the Derby. - The lat was the 63d anniversary of this celebrated race, it having been established in 1780, when it
was won by Sir C. Banbury's Jiomed, beating 8 others. On that 161, , eing 22 less than last year. It would appear that it was some
years betore this race became popular with the patrons of the turf, for during the first seven years of its existence the entries dwindled from 36 to 29 , and from that period until the present year they have
been gradually increasing. The Jowest number of horses that ever started was in 1794, when. Lord Grosvenor won with Dradalus, 4 only
coming to the post; and the highest number when Coronation carried off the prize, 29 starting. During the last $16 y c a n s$ horses that have started is 23. Eight years after the race was esta-
blished the Prince of Wales won the stakes with Sir Thomas. The Duke of York was a winner twice-in 1816 with Prince Leopold
and in 1822 with Moses. Sir F. Standish was the first gentiema who won the race two years in succession, in 1795 with Spread Eagie,
and the following year wita Didelot. The Duke of Grafton and Lord with Pope, and the next year with Whalebone, the latter in 1804 with
Hannibal, and in 1805 with Cardinal Beaufort. The Duke of Graftors was a wimner of four, and Lord Egremont of five races. The former
nobleman was the last wiuner of the Derby two years successively. The Duke of Bedford was a winner on three occasions in 1789 with with John Bull and 1794 with Derdalus. The Dukes of Rutland and Portiand were not so fortunate, being winners of only one Derby each,
the former in 1828 with Cadland, and the latter in 119 with Tiresias. Lord Jersey was a winner of three races-in 1825 with Middleton,
1827 with Mameluke, and in 1836 with Bay Middleton. Mr. ${ }^{\prime}$ ' Kelly, the owner of the celebrated Eclipse, was a winner in 1781 (the second
year of the race) with Young Eclipse, and in 1784 with Sergeant, the Dery and st. Leger in one year (1800) was Champion, the MARK LANE, Fridax, June 9.-This morning being unsettled the Factors asked higher prices for free Foreign and Englısh
Wheat, but the Market was not brisk, and there was great ulfinculty in making 1s. advance, although it was accomplished in held at an advance. Barley continues to sell at the same prices,
but the supply is short. Peas are held higher in consequence of some unfavourable account of the crop. Beans are unaltered in

# NEW AND IMPROVED CHURCH AND CHAMBER ORGAN, MANUFACTURED BY H. C. LINCOLN, 

Organ Builder to Her Majesty TheQueen

And to their late Majesties George the Fourth and William the Fourth;
and builder of the organs in
HER MAJESTY'S CHAPEL ROYAL, BRIGHTON. her Majesty's palace, the pavilion, brighton her Majesty's chapel, devonport.

## Mr. LINCOLN has just had the honour to receive the following testimonial from the Rev. W. F. H. Hooper, <br> Incumbent of Witlungton

Withington, Manchester, March 27, 184
Mr. Lincoun has just completed an Organ for my Church, which was opened by Dr. Gauntlett on Friday the 17th, and Sunday the 19th, of this month. The Instrument has given the most complete satisfaction to me and to all who have felt an interest in its erection. The bestjudges both amongst my own people and of persons unconnected with the Church have pronounced it perfect-unsurpassed in its softness, richness, and variety of tone. I have pleasure in adding that Mr. Lincorn has treated us with considerable liberality, has acted with openness and uprightness, and as becomes a tradesman of the highest respectabinty-has spared neither labour nor (I may add) expense in fulfilling $\mathrm{h}^{\mathrm{s}}$ s contract to the utmost, and has devoted himself strenuously, not to say enthusiastically, to the work of turning out an Instrument that should give perfect satisfaction to the
Committee of gentlemen concerned in its erection. In this he has completely succeeded ; and I shall be happy if my recommendation secures him further patronage.

## Organ Manufactory, 196, High Holborn.

Mr. LINCOLN solicits the attention of the Nobility, Clergy, and the Professors and Amateurs of Church Vocal and Instrumental Music, to the peculiarities and advantages of the great and numerous improvements he has recently adopted in the conhave been made with a view of affording an increased efficacy to the Organ, in rendering its support to a large congregation, and in the performance of Church Instrumental Music. The effect gained is such as to combine the breadth and variety which distinguish the Continental Organ, with the mniversally recognised sweet and silvery tones produced by the English mode of voicing and finishing the pipes.
The advantages gained by the adoption of the new mode of construction are unquestionable:-
1st. The Organ has a more weighty and solemn character of tone, which is gained by the introduction of the new Stops, called the Bourdon, Tenoroon, and Quint.
2d. It has a more brilliant and sitvery character, from the new mode of arranging the Sesquialteras, Mixtures, and by the use of a new Stop, called the Doublette.
3d. It has a more soft and varied character, from the circumstance that instead of the Instrument only possessing one Flute, Stops in producing an entirely new quality of tone to the Organ, and which is admirably adapted to the purposes of Psalmody. These Flutes are called the Claribel-Flute, the Obne-Flute, the These Flutes are called the Claribei-Flute, the Obne-Flute,
Wald-Flute, the Suabe-Flute, the Piccolo, and the Flageolet.
 of a new method of manufacturing the Reed Stops. These are made to speak, so as to combine the weight of a Diapason with the fullest tone which it is possible to wive to a Reed Pipe. The new Reed Stops are called the Posaune, the Trombone, the Cornopean, the Soft Horn, the Corno-Flute, the Clarionet, the Trumpet, the Clarion, the Oboe, and the Octave Clarion. 5th. A distant, subdued, and piano effect, combined with bril lancy sufficiently prominent to keep up the voices, is gained by the Tenoroon Dulciana, a new Reedy-toned Dulciana, and the Echo Duiciana Cornet, a Stop of Five Ranks of Pipes, which has been copied from one in the celebrated Organ of Cologne Cathedral. 6th. More Pipes are obtained to each Key than has yet been attained, and at a less expense; and it must be evident the greater number of Pipes of differing qualities of tone that can be brought to bear upon each Key the greater must be the musical resources of the Instrument.
th. The Sound-boards are made to contain nearly double the double the quantity of wind. 8 th the quantity of wind
the greatest attention is arway upon useless mechanism, but the greatest attention is paid to create music in every possible aricty and combination.
9th. Although the compass of the Keys is apparently contracted to CC, in effect the Organ extends to CCC, as every Key on the Manual has it with its Unisons, the Octave below; thas, Paul's Cathedral, without the disadvantages attending the old compass.

Mr. Lincoln begs to refer to the followide Urgans, as examples of the new manner of combining great power THE NEW ORGAN IN THE CHURCH OF ST. THOMAS, THE ROLLS, CHANCERY-LANE, (Opened in November)
THE NEW ORGAN IN CROSBY.HALL, BISHOPSGATE-STREET (Opened in December) ;
THE ORGAN AT THE NEW CHURCH, WITHINGTON, MANCHESTER (Opened in March) the new grand organ now erecting at the cathedral church of st. David.
Mr. Lincoln submits the following Testrmonials from the late Dr. Clarke Whitfield, Mr. Attwood, Mr. Thomas Adams, Dr. Gauntlett, and Mr. Parkis, as to the Character of his style of Organ Building :-
I have the pleasure to inform you that I think the Organ built great power, and very complete in all its 1 ant 4 .
Testimonial from the NEW CRURCh Committer, Newington, and
The undersigned feel highly gratifed

 chanism, and powers, but also to the very fine ant 1 , herre-
quality of tone it so eminently possesses, and of which it is quality of tone it so eminently possesses, and of which it is

Chilwell Nurseries, near Nottinghe

MAGNI
LUCOMBE, PINCE, \& Co., beg leave to call the has been raised from seed in the Exeter Nursery, and which they have no hesitation in saying is decidedly the finest variety ever produced ; indeed, it is at once admitted to be so by all who see
it, wlio are struck with admiration of its noble appearance. Htowers are exceedingly large, being longer as well as broader than those of any other Fuchsia, and are of very rirm, thich
waxy substance. The tube and sepals are of a rich scarlet crinson colour, opening freely and well displaying the corolle
which is widely-expanded and of a fine violet-tlue colour, dif fering greatly from all other hybrid Fuchsias. The whole habit of the plant is exceedingly good; the leaves are thick, glossy,
and of a Luarcl-like texture; ;it blooms abundantly, and the Aowers hanging gracefully upon long peduncles, clear and dis-
tinct from the foliage, appear to great advantage. it flowers well
 by any person who calls there, and will also Je shown at the next
great Exhibition of the Londoun Horticultural Society, on the great. Exxibition of the London Horticultural Society, on the
1Tth inst. Strong, healthy plants will be ready for telivery on
the 10 th of August next, at 10.0 , $6 d$ cach, carefully packed in tin cases. Orders will be executed strictly accordidy to the priority of their reception. The usual discount
to the Trate if six pintats are orderec.
N. 13 -This secdling Fuchsia was raised last summer, has been fully prover, and will give satisfaction to all who purchase it.-
Exeter Nusery, June 1,183 .

YOUELL SUPERS Chrysanthemums.
OUELL \& Co., in offering their LisT of Chrysan3rd inst.), to the notice of amateurs, and those who intend
competing at the autumnal exhibitions of the present season, beg to observe, they have taken such precautions for excluding
varieties merely nominal, that they feel assured the list wiil be found highly satisfactory to those who may not only have the above object in view, but also to those who are desirous of
decorating their greenhouse and garden with tbis unsurpassed Autumnal Flower. The plants will be strong and healthy, and
sent free of postage (on the receipt of a Post-ofice order) sent tre of postage (on the receipt of a Post-ofice order), to any
part of the United Kingdom, at the rate of $12 s$. per dozen.-GFeat

## Mr. Clement Hoare, in his excellent treatise on

 the cultivation of the Vine on open walls, remarks Vine prevailing idea, that the more wood there is in a reverse of the fact ; that to permit a Vine to make a great quantity of wood under the idea of thereby getting a great quantity of Grapes, is grasping at the seep a pland catching the shadow; that in order to kneep a plant in good bearing condition the pruningany other be used to a far greater extent than on most severe manner in which that instrument is with that required by as nothing when compared are not confined to winter pruning, but applied to the are at all seasons ; and upon the assumption that they are correct, Mr. Hoare founds his mode of "long-rod" discussio It has always occurred to us that a little subject Subject, and we therefore invite the attention of Mr. Hoare's theory, as we understand it briefly expressed thus: The quantity of Grapes whicha Vine he quen capable of producing is not in proportion to foliage is disadvantageous to the Vine, and should be emoved. In support of this proposition Mr. Hoare own expers to practice in vineyard countries, and to his vineyards inents. It is stated that the proprietors of the number of in their leases covenants to regulate because, in eyes to which a branch is to be shortened, the quality ould exhaust the Vines, and gradually ruin standard work the wine, Upon turning to Chaptal's We find work on the cultivation of the Vine in France $V_{\text {ines }}$ tht quality of the Grapes obtained from the hang from the allowed to scramble over trees and to superabutery quality of the sap conseguent upon the another place (vol. i. p. 296) he says that in in French place (vol. i. p. 296) he says that in the hinder the dispersion of the sap, and the formation of leaves, white quantity of shoots, branches, twigs, and Would which would push in crowds from the buds, powte degree, $\mathrm{B}_{\mathrm{ut}}$ in of sucking up fluids from the soil (aspirution) Wood depriving it of what is called superfluou Which the sap is concentrated in a part of those shoots ripe fruit," considered best suited to produce fine, good, Mr.
To describe the results, which, with little variation Were the cribe the results, which, with little variation,
selecte in all, one Vine may be advantageousl year of This was a White Muscadine, in the eight bearing con age, and, like all the rest, in the highest lowing condition possible. It produced in the fol shoots, and spring an abundant supply of vigorous bearing Produce of shewed 78 bunches of fine Grapes, the and left shoots. As the season advanced the right extended thoots. As the season advanced the shoots
increaselves rapidly, the bunches of fruit usual, seem in size, and the Vine thrived as well as Shortly seemingly quite unconscious of the task it the fruit set, the trial of strength commenced, and inches fromuly many of the bunches measured 11 When matur the shoulders to the extremities, and as they. They hung coue weighed a pound and a as they extendey hung close together, forming, as far Wass of Grapes, the weight of which, if rimpact month ave exceeded 60 pounds. The middle of that size of small and the berries had only reached the subjected to Peas, while those on other Vines, not
comamenced the such trial, were full grown, and had

August no perceptible increase of size in the berries had taken place, and the Vine began to show strong symp oms of exhaustion. About the middle of that month the foliage assumed a withering appearance, and on the lst of September the vegetation of the plant was almost at a stand; the shoots ceased to grow, the fruit and foliage were in a prostrate condition, and the vital energies of the Vine appeared quite unable to supply the daily increasing demand for nourishment Throughout that month it continued in a pitiable condition, and though a valuable plaut, it was never heless suffered to take its course as well as all the thers, in order that the trial might be decisive. About the 1 st of October, the greater part of the berries having grown as large as middling-sized Peas, those on the shoulders of some of the bunches began to show symptoms of ripening by becoming a little transparent, and at the same time the berries at the extremities of the bunches began to shrivel. As the month advanced the ripening process proceeded slowly, but the shrivel. ling increased rapidly. Towards the latter end of
October the trial was over, and the experiment comOctober the trial was over, and the experiment com-
plete; on many entire bunches every berry had shrivelled, and in no bunch had the process of maturation proceeded farther down than the shoulders. The whole crop was gathered about the lst of November, and the ripened portions being put together, weighed $9 \frac{1}{2}$ pounds. Not one of these ripened berries, howver, was more than half the usual size, and in point of flavour not to be compared to others of the same sort ripened at least six weeks previously

This is, no doubt, a very instructive experimen in some respects, and well wortn the attentive consi-
deration of Gardeners ; but there is a somewhat important omission in the circumstances relating to it, so far as the question now before us is concernednamely, how this Vine had been treated previously, and in what manner it was pruned during the pro gress of the experiment. All that we learn is, that in the previous years the Vine had been remarkably It orous, and had been closety pruned.
It may perhaps appear that, at all events, this sor of evidence is conclusive as to the correctness of Mr.
Hoare's theory, and shows that close pruning is advantageous to Vines. We must, however confes that it does not carry conviction to our mind. Mr Hoare's experiment seems to us to amount merely to it can support, those bunches will shrivel and not ripen. But there still remains behind the question,
it cannot support its own produce? and that is not answered by the experiment. Mr. Hoare, indeed may say the bunches did not swell " because the quan tity of Grapes which a Vine is capable of producing i with equal justice be inferred that they did not swell because the quantity of leaves to nourish the branches was insufficient? -insufficient both during the year o he language which the Vine spoke on this occasion not only might, butt should be thus interpreted

Mr. Knight long since showed that the Melon when young, and before its organizable matter is formed in sufficient abundance, is incapable of sup porting its fruit; that if fruit is set on very young
Melon-plants, it either turns yellow and drops off, or remains small and of bad quality; and that the true principle of obtaining finely-grown and richlyflavoured Melons is to prevent their bearing till their organizable matter is abundantly stored up. Now his appears to us explanatory of the shrivelling of Mr. Hoare's Grapes. In the first place, the Vine had been previously close-pruned, which would diminish the amount of organizable matter prepared in
its branches during the season previous to the experiment ; for it is the constant rule that the quantity of organizable matter in a plant is in proportion to the quantity of its healthy leaves; and secondly, it is to be inferred that the same system of close-pruning was observed during the experiment, which in that case would further deprive the bunches of matter whereon to feed.
With regard to the evidence afforded by the French Vineyard practice, it has not necessarily thatconnexion with close pruning which it at first sight appears to bunches to be borne by his Vine-stools, and direct the removal of branches, in order to insure the perfect ripening of the fruit; for, as Chaptal observes in another place (vol. i., p. 294), "the nearer the Grapes are to the surface of the ground (provided they do not touch it, which ruins them) the more they are exposed to the heat reverberated from the soil ;" but of course that reverberation would not take place a mass of branches and leaves. In this country Grapes are not placed in such circumstances as they are in the French Vineyards, where the Vines cover the ground from a foot-and-a-half to two yards apart, like the plants in our Gooseberry-grounds.
It is true that Chaptal mentions repeatedly the watery quality of sap consequent upon a superabun-
dance of leaves, but this sort of physiological reasoning is inadmissible. Sap is not watery because of a super abundance of foliage, but because of an undue supply of water by the roots, or an insufficient exposure of leave o the inffuence of lizht i indeed, Chaptal's own instances in support of his interpretation may be used against it ; for, while he refers the bad quality of the Tree-Grapes of Provence and of the rampant Vineyards of Poitou to a superabundance of leaves, he admits that the higher temperature of Italy, where the Vines are also allowed to scramble among trees, will occasionally produce good Grapes; although he adds, this is only in some places, for the wines o Italy are of poor quality, and will not keep. We should rather say that the bad quality of the Tree-Grapes, \&c. is owing to their leaves being shaded by the branches among which they grow, and that the indifferent quality of Italian wine is due partly to the same cause, and partly to the careless way in which is made.
Upon the whole, we cannot say that the system of close pruning and frequent abstraction of leaves is satisfactory to us; and we would in particular expres our doubt whether it does not materially retard the ripening of Grapes out of doors. But as this is a matter of very considerable importance, and there are many points connected with it which we have no room to enter upon to-day, we must reserve our fur ther observations. In the meanwhile, we shall be extremely glad of the experience and opinion of practical Grape-growers upon the subject, observing only, in addition, that all the foregoing remarks apply o summer pruning only.

Keeping in view the principles we laid down in our last Number respecting the lettung small portions of land for garden cultivation, and distinguishing such garden-farms from the allotments or gardens let to he labourers working on a farm, we will endeavou o explain our meaning by a reference to such occupations in other countries which we have had an opportunity of visiting, principally in F'landers, France, and Switzerland. Although the general state of agriculture, on a large scale, is very different in these countries, being most perfect in Flanders, next in Switzerland, and the least so in France, there is much less difference in the management of the very small occupations cultivated principally by the spade Except in a small orchard-a most useful appendage to a cottage garden- no part of the ground is in per manent grass; and the stock, of whatever kind it may This may be considered as the foundation of the whol system, Without which §o small portions of land could there is no manure; the land, instead of improvie stock fertility, is soon exhausted, and no labour can restore it. Where there is a cow, and a calf to succeed her, food must be raised for them-artificial grasse and other green food in summer, and roots and straw phows what quantity of and must be devoted to this purpose. Those who are not acquainted with this system will scarcel believe that two acres of arable land will feed two small cows and a heizer, and two or three acres more suffice to raise corn and pulse to feed a family and carry some to market ; that poultry and pigs are kept on the refuse, and a sheep is often fatted in the same shed or stall with the cows. It is not so much by the abundance of each crop, as by the rapid succession in which they are raised, that this is done. But as facts are always more convincing than arguments, we will here extract a short account of a small farm in Belgium from the Outlines of Flemish Husbandry, p. 90, which we have every reason to believe is correctly stated.

Near Alost we met with one of the smallest farms which will maintain a family without other work-it was barely five acres. The house was much larger than such an occupation warranted; but it was an old farm-house, and the land hadlbeen divided into small holdings, leaving only five acres to go with the house.
There was a small orchard of about a quarter of an acre, in which there were some thriving Apple and Plum trees. The grass under these was good, and the only cow which the man had was led by the wife in a halter to graze there for a short time every day-apparently more to give her exercise than for the food she could pick up. The grass seemed to have been cut for her in another part. This cow had cost eight pounds, and the man regretted that he had not had the means to
purchase a second, as he could have mainitained two purchase a second, as the could have mainitained two half in Clover, Flax, and Potatoes; so that the Clover did not recur sooner than every sixth year, the Flax and Potatoes in nine. As soon as the Wheat was reaped he began to har'. the stubble about four inches deep with a heavy lict. and as fast as he got a piece done it was sown with Turnips, after having had some of the contents of his urine tank poured over it-for, small as the farmiwas, it had its reservoir for this pre cious manure. Thus a considerable portion of the

Wheat stubble was soon covered with young Turnips of a quick-growing sort, which, if sown in the beginning or middle of August, were fit to pull in November and December, and were stored in the cellar for winter use. There was a small patch of Cameline, which was sown less for the seed than for the stems, of which he made brooms in his leisure hours in winter. But these hours could be but few, and only when snow covered the ground, and prevented him from digging and trenching, which was a constant operation; for the whole five acres had to be dug in the course of the year, and as much of it as possible had to be trenched, the soil being a stiff loam of a good depth, which was much improved by stirring and trenching. The milk and Potatoes, with a little salt pork, fed the family-for a pig was fed ou the refuse of the food given to the cow and a little corn. Most of the Wheat, and all the Flax, were sold, and more than paid the rent, which was not high-about 10l a year, without any rates, tithes, or taxes.* Incessant labour kept the man in good health, and his wife was not idle. They had two or three young children, one at the breast; but, except the wish for another cow, there seemed no great dissatisfaction with their lot, nor any great fears for the future. They had no parish fund to fall back upon-not even a union-house; but had they come to want by unforeseen accidents they would have found the hand of private charity ready to help them.
This interesting account shows what may be done by cheerful industry. No time must be lost ; no gossipping of the wife or tippling of the husband, but both striving to assist each other. A man who works for himself always works harder and more cheerfully than he that works for wages; his children are brought up in industrious habits; honesty is inculcated by precept and example ; and, as there are few temptations where there is no idleness, there are fewer examples of vice. $M$.

## THORNS.

As there is no genus more ornamental than Cratægus although some of the species are not desirable, the following list will, we hope, be found useful to such of our correspondents as have expressed a desire to possess
select collection. They may be planted next each other in the order in which they stand.

1. Cralagus heterophylla, bas small red fruit in great profusion.

## 2. C. Aro

3. C. Douglassii, has rather large, black fruit, very early in the season.
4. C. oxyacantha rosea superba, the most beautiful of all the Thoras when in bloom, with deep crimson flowers and small red fruit.
 large, pale-red fruit.
5. C. Leeana, the large Tansy-leaved Thorn, with large, pale-xed fruit.
6. C. macracantha, the very long-spined Thorn, with very small bright-red fruit in great profusion. 10. C. Oliveriana, the small black-fruited Thorn, very profuse but late.
7. C. prunifolia, the entire-leaved Thorn, with profusion of bright-red fruit, very late.
8. C. oxyacantha; the new double searlet; a most beautiful double variety of No. 4 in this

ON THE BOKHARA TREE CLOVER.
(Melilotus leucantha major.)
The Bokhara Clover claims a place in every flower garden for its beauty. It is very striking to look upon an herbaceous plant, 10 or 12 feet in height, covered with
spikes of white Pea blossoms, which also shed a sweet spikes of
perfume.
I esteem its value in Agriculture of greater importance The objections to its cultivation are, that cattle give a preference to other green food, and that the stem contains
too much woody fibre. The plant, however, is too much woody fibre. The plant, however, is new to
Britain, and we know that man and animals frecut Britain, and we know that man and animals frequently
require successive trials of new food before taste is require successive trials of new food before taste is acquired for it. As a proof of this, I understand that some cattle are getting very fond of this Clover; and we Know that the tissue of plants in general is changed more and more into woody fibre as they progress towards maturity. Nature increnses the woody fibre of this Clover for support as it elongates its gigantic stem. If, however, it is cut for cattle, when about two feet in height, it will be found nearly as succulent as the common Red Clover.
I exhibited plants of it at the Highland Society's Show last September, 9 feet in height, being the second crop of it that season from poor sandy land. I know no plant Whatever that will produce so much weight of vegetable production of vegetable manure, it is a boon to the Agricultural world. In my experiments with it last summer as a manure for new varieties of Alsike (?) Clover, I found it the very best and cheapest manure.
In the economical formation of manure, it might be to young cupplied with ors, in an onen * It must be recollected that this is in a country where the dabour is about 18, what is about 388, the quarter, and where
bedded over with layers of turf, peat-earth, whins, broom, brushwood, ferns, straw, weeds, \&cc., and thus save much The Bokhara Clover may be sown at any
The Bokhara Clover may be sown at any time throughout the growing season; but the most profitable time to sow it is immediately after a crop of early Potatoes, or even
after Grass, Barley, Wheat, \&c. The land heing well after Grass, Barley, Wheat, sc. The land heing well manured, ploughed over, and barrowed smooth, it may be sown in shallow drills, 18 inches apart; being cut once in
autumn, it will produce a much earlier spring crop than autumn, it will produce a much earlier spring crop te cut
Tares, Italian Ryegrass, \&cc. It should always be very close to the ground, as the shoots produced from beneath the surface are the most luxuriant, and it will thus stand a severe winter much better than when its vitality is exposed on long stubble. Treated in this way with me, it stood two successive winters, and acquired all the characteristics of a peremnial root. I have no doubt of its continuing perennial and more vigorous with the age of
the plants, if only cut close in autumn, and top-dressed the plants, if only
I saw a remarkable result at Oxenford Castle the othe day, which Mr. Gardener pointed out to me in the garden. Mr. Gardener sowed the Bokhara Clover last May, and cut part of it several times for use, leaving a part which
produced ripe seed. The latter is now considerably noore luxuriant than the forme
Might not this Clover be advantageously introduced thinly over the dry pastures of Australia? The seeds would vegetate if sown during the rainy season, while the plants might afford shelter and shade to the surrounding Grass, and even food, when other vegetation lies scorched beneath a tropical sun.-Robert Arthur, , Waterloo Place, Edinburgh.

FAMILIAR BOTANY.-No. XVI. 7
The Water Dropwort.- Some of a neighbour's chil dren were amusing themselves by the side of a ditch whose sides had been worn away by the heavy rains that have
lately deluged the country, when they spied some nice tender roots, white inside, and looking like little Parsneps. Such a prize was not to be neglectea, and in a
trice a good parcel of them were pulled up, brought home trice a good parcel of them were pulled up, brought home
and eaten. Alas! in a short time the children all became and eaten. Alas! in a short time che they went raving mad, and in three hours two of ill, then they went raving mad, and in three hours two the others will recover.
This sad calamity was caused by a pernicious plant called by the English herbalists the Water Dropwort, by the Kentish people Bendock, by Botanists Genanthe crocata, by the Irish peasantry, who often suffer from it,
Dahou, It is one of our most poisonous weeds, and is every year the parent of frightful mischief. The books tell us that during the last war "eleven French prisoners had the liberty of walking in and sbout the town of Pembroke. Three of them being in the fields a little before noon, dug up a large quantity of this plant, which they
took to be wild Celery, to eat with their bread and butter for dinner. After washing it, they all three ate, or nothan taoton af the wnita A A they were entering the
town, without any previous notice of sickness at the stomach or disorder of the head, one of them was seized with convulsions. The other two ran home, and sent a

surgeon to him. The surgeon endeavoured first to bleed, and then to vomit him ; but those endeavours were fruitless, and he died presently. Ignorant of the cause of their comrade's death, and of their own danger, they gave
of these roots to the other eight prisoners, who ate of them with their dinner. A few minutes afterwards the remaining two who gathered the plants were seized in the same bled, and an emetic with great difficulty forced down, on
account of his jaws being, as it were, locked together. This operated, and he recovered, but was some time affected with dizziness in his head, though not sick, being bled and vomited immediately, were soon well." Sumetimes the hair and nails are said to come off ows and horses perish when they feed upon it, as they will do if they find it in their pastures; dogs are also will do if they find it in their pastures; dogs are also fearful poison. Luckily, however, it is easily known. Its roots are produced in thick fangs, like those of Dahlia, but are smaller ; they have been frequently sold during the winter by knavish gardeners to silly customers as the roats of that plant. In the autumn and winter they contain a yellow strong-smelling juice, but in the spring this disappears. The leaves are dark green, perfect mooth, as is the stem, which grows 4 or 5 ft . high. The are divided in a bipinnate way into numerous leafets, whic are somewhat of a lozenge form, but ane decply and bluntly gashed. The flowers are white, and in compound umbels; they are of the Umbelliferous order, and have a visibly five-toothed calyx, with two stiff uprigg
styles. The fruit (vulgarly called the seed) is oblong, ribbed, pressed closely together, and terminated by the wo stiffened and almost spiny styles.
By these marks it is easily known from all our wild ambelliferous plants. Not a hair is upon it-its leave are of the deepest green-and if you draw a line all round the leaflets without regarding the incisions, you will find that it will generally describe the figure of a lozenge noor or less accurately : a good practical mark which whl hard deceive you. Lest, however, you should not be able recognise your enemy by this description, I add his por crait, and I beg you to hunt him down, and root him wherever he can be found. $-\boldsymbol{R} . E$.

## THE ANTIQUITIES OF GARDENING

## No. I.-Extracts from Six

"Artificial earths are either simple or compounded and roots. The uncompounded are-1. Willow earth, which is found in the trums or bodes of old oillo into the very substance of the tree rotted with moisture the
an earth, but soe light and fine as none exceedes it for the bringing up of tender seeds or ronts. 2. Dung, especially bringing up of tender seeds or ronts. 2. Dung, especially
of cowes, but so well rotted that it will pass through a reasonable fine sieve, and this is absolutely necessary either alone, as for Beare's Eares and other fibrous flowers or mixt, as shal bee hereafter arecte, for alm and flowers. 3. Rotted leaves and sprigs of trees, gion for
sweepings of houses and streets, all which are good for sweepings of loouses
most sorts of flowers.
" The compounded earths are made up of some parts of the natural and some parts of the simple artificial wel mixt together, which, being skilfully done according to as natures of several plants, will cause admirable effects, Tulips prosper wonderfully in a compounded earth of fittile sand, aonat diy black earth;
[It appears from the above extract that Willow earth has ber for florists' flowers. Some still continue to use it.]

In such earths as these your Tulipes will flourisis but every two or three years at most you must bring in fresh, for they delight in change thereof, as well as of the ayre. I know in Paris one of the ablest florists and he who lad got a great deal of money by Tulipes, and every assured me that he changed his habitation purposely which third or fourth year in Paris, because of his Tulipes, w well he found infinitely bettered by varyeties of ay as
"The beds ought to lye a little higher in the midde thun the sides, that all the flowers may be seen the bet the and especially that no wet may lye too long aboun of rootes, which would putrify them, as the ; yet some digg in such deep under the earth the rootes stand in, fume whereof comforts, as they say, and not dess you them; but I should be cautious of using it, unless never desire to have your flower

When your Tulipes are past flowering, crop off the talks of your choice atript ones, that they may not seed, for thereby they are much weakened.

AMATEUR'S GARDEN.-No. XXIV

It this purpose, as in every garden kinds best adapted for they may now be seen in but as some may they may now be seen in are most suitable for winter-
know those kinds which are know those kinds wherate a few. First, then, amo
flowering, I will enume the tribe of beauties are Nemophila insignis, phace Mr . the tribe of beauties are oides, atomaria, and which has black Howers, beaution N. margined with white. It is a variety atomaria, and as it comes pure from see mamed Collinsia sidered a permanent kind. Next malchella and p. alba bicolor and grandiflora, Clarkia poriestii, and Hookeri: Schizanthus pinnatus, p. humilis, 1 , Ageratum mexichand lastly, Erysimum Rinds of Salpiglossis and Peturm num, and the various kinds of aised from cutting taken from

the old plants in August, and if potted off singly as soon as rooted, will flower in a warm room up to Christmas. As most annuals transplant iadifferently, it will be advisable to sow them at once in the pots in which they are intended to bloom; and in draining these it will be well
to follow the advice given in a leading article twelve to follow the advice given in a leading article twelve and fill the pots half full of moss before any soil is put into them. The moss will be found advantageous through the summer, as it will retain moisture, and if the pots could be plunged in it it would be greatly in favour of the plants. The seed must be sown must be thinned, retaining only the proper quantity in each pot. This, it must be recollected, is the first supply; but a second for later flowering must be sown about six weeks hence. Those who admire Stocks in pots, ette will of course not be forgotten.
Of plants before spoken of, the s
goniums, the propagation of whe scarlet and other Pelarwill require to be potted off. If they are well rooted the may be placed at once in their blooming pots, in rough They must be stopped to give them pots in proportion. Must be left on the plant till after the middie of August. The first sowing of Primula sinensis will now be fit to pot off ; they must be put, two plants in a large 60 -sized pot, if they Weather. A second sowing must now be got in for the main winter and spring supply.

If strong plants of Salvias are desired for blooming in small no time must be lost in preparing them; but as the old plants at the end of August, and rooted in heat, $\mathrm{R}_{0}$ wes quite early enough. Propagate Chinese and other the plants strong by autumn they will, with if you get forcing, bloom all through the winter. I have now I drawing-room, and it will be the Amateur's fault if he have not a supply of them next winter.--W. $P$. Ayres. Ay if he have

## HOME CORRESPONDENCE.

New Manure.-I have seen in your columan some Valuable statements respecting the different manures now
in use, and though muny foolish and expensive theories
have been a portance, and that, I think the subject one of vast imto the public. I have tried guano and nitrate of soda on better than the former. I have also tried another manure (perhaps from years, of which I have seen no mention ining dregs or the refuse of the skins of animals prepared this neights. This is a material extensively used in freat The produce from this is about three times as Where it can be got in sufficient quantities, is only aucust Bradford, Yorkshire.
Polaioes.-About a third of my crop of early Potatoes decapped, bug, I was induced to examine if the tubers had mplosed sumple, with young Potatoer attached, but no manure bepping part of the land they were set upon, no stiff (burnt six or eight years ago) ; the other portion is a ago: both and only brought into cultivation three years your other readers with the probable cause of my crop uns failing? -R. R. R., Chester. [We regret to be he sent is sound, and the young one, when exposed to the ar, 800 n began to turn green-a sign that vitality is
ative. The diseases of the Potato are not at all under Stood by anybody. Possibly the cold wet weather may
$h_{\text {ave }}$ some concern in the mischief; if so, warm weather Will remedy it.]
Chroniole, signed "I. L. $Y$." I should be glad to $k$ now from him, how long the "t tea-scented Roses in large pots, grant two to three feet high, covered with large and frathe they been growing therein only since the notice of about system of showing in pots has been promulgated "And if, as might be supposed to have been the case the " "Y." was in possession of something far transcending Other disapp-shifts," I can only regret, in common with
have with have withheld his very interesting display. My opiniou is The chronicle formed before I saw what Mr. $3 d$ inst--that the plants exhibited dering occasion alluded to were splendidly grown, consithe Horticultural Society profess to have in view, is the this occasion skilful gardening : now the skill dis, luycd on doubs, or the prizes would not havn been awarded. any one Rose, "I. L. Yotted since the new system was given the time in his possession $\mathrm{P}_{\text {atul }}$ could have borne comparison with the new onesOxhibited by, Cornice de Seine et Marne, and othersstead. I recollect on former occasions, when Rose exhi-
biting biting was in its infancy, that a single box of Scotch

Roses, half-blown and surrounded by a few buds, was shifts" a prize ; indeed it have see such sorry "makewould blush many a cottage-gardener of the preseat day these were the best of the time, and were meritorious, them this country. must know that new Roses imported into sibility, be grown to a height of three feet, by any posroots, and be "covered with large and fragrant flowers." - Alpha. [We have struck out some passages which ou correspondent will, upon consideration, perceive were that the decision of the judges, whether right or wrons, could not be influenced by the novelty of the sorts exhibited. They could only regard them as specimens of cul they 0 , ad they considered them entitled to. 1

The Oniscamyntic Epiphyte Stand.-I am extremely pliyte St the name which $I$ have given to my new Epiphiyte Stand has not met with approbation. I am al
the same time, however, much gratified that it has been the name only which is disapproved of, while the principle has been invariably admitted to be good, new, and well calculated for the growth of tropical Orchidaceæ. I propriate appellation; and in this $I$ am inclined to hope that many, on consideration, will agree with me. It expresses in the fullest possible manner the use for which
it is intended. The name is a compound word, derived from the Greek obvorklos, a wood-louse and ảuyructos, defensive, or used in defence against; and by dropping the English character, Oniscamyntic. I do not think, that by selecting the above expressive Greek words, I have been guilty of any innovation, when I recollect how very many of the generic names given to Epiphytes are derived from that language,-Dendrodium, Epidendrum, Oncidium, Isochilus, Cyrtopodium, Peristeria, \&cc. \&c. The name the Epphytes are at liberty to call it by whatever and then judge if it has been miscalled.-J. Lyons. [It is only to persons unacquainted with the meaning of words that such as Mr. Lyous has contrived are offensive. New things require new names, and we would beg those who object to the Greek compounds, necessarily used in Natuout of Saxon or Latin ; recollecting that a few dozet better of no use. We must be provided with at least 10,000 to begin with.]
Roses at
correspondent "6 ilions. - The concluding remark of your my notice. After some remarks on the Roses brought forward at the Hort. Soc. Exhibition in May, he concludes ceases "I for one shall much regret when the Society new Roses be exhibited." Deprecating as much only can sible the now-exploded mode of exhibiting these lovely flowers-in bunches strangled in moss, I yet venture to think it worth some consideration whether cut flaswer express restrictions or conditions:-That they be attached to a sufficient length of stem to bear them up, at least six inches or more above the tubes and moss in which they and mode of flowering, and in no case to be tied in bunches. Single branches, or at most two in a tube of water, would induce "I. L. Y." and other "Roseand I the exhibition. I ventured to suggest something of the sort in the Gardeners' Chronicle two years ago-before dmissibs for the purpose of -ating new sorts into earlie notice. But I leave the subject to wiser heads.- Quercus. Squirvels.-A very remarkable fact in natural history has just occurred at Swarthdale House, six miles from month or two since, some wood was felled in Kellet-wood and with the fall of one tree came down a squirrel's nest with three young anes in it. The little creatures were carefully carried to Swarthdale House, and as a cat in the care. Strange to say, she took to the young strangers most kindly, and in fact completely reared them, just as now fairly out of the nursery. The little rogues are betake themselves to the woods, and at night regularly return to the house. They are perfectly domiciled, and are treated with all imaty
of the family. - Facile.
Gorleria rigens. - Is it not an unusual circumstance to have a tuft of the Gorteria rigens in the open air, having survisoms ready to erpsed now with seventeen strong upon them? This is the case in my garden at this time, situated not far from the southern coast.-J.P.S.S. [Yes. Very unusual.]
Bees--It is with great reluctance that I answer Mr Wighton's letter, and ine. If Inse the hension, I hope I shall be forgiven. I shall avoid al unproftable repetition. He still pretends to say that so on. I said, take away the Queen, after the swarm and so on. I said, take in the hive os he the swarm had been a certain ; but he will not argue fairly. He goes on in this manner,-"I fear that Pettigrew misrepresents things and until he become serious, 1 shall take no notice of
what he says, for his knowledge of Bees is beyond my
ken." I am sorry to find Mr. Wighton so uncourteous and uncharitable. Two years ago he, in a discussion, told own don articles were complete hoaxes, carrying thei own denial," \&c.; and as soon as I had relapsed into silence interpret the present thorowghly, we must understand and interpret the present thoroughly, we must understand and
unfold the past," says Channing. In this present discus unfold Mre Wighton is loth to confess, and present discus ceal, his lack of ability to meet cess, and unabie to contherefore very unseasomably tries to fface my facts, and tear himself away; finding shelter, or seelking retreat, by saying that I am not serious. Philosophers tell us that "doing a thing imperfectly is often worse than letting it alone." Therefore 1 ask Mr . W. and the gentleman who first put the question, whether we have or have not proved that Bees'-eggs are transmutable? I think we their satisfaction for I think this is the most importan point in the history of the Honey-Bee, and that I am as competent to prove that Bees'-eggs are transmutable as that 4 and 4 do mot equal 9. I shall be anxious for an answer. Mr. Wighton seems to doubt that 110 pounds of honey were produced by one swarm in 1842 . If any other individual doubts it, I will give the address of the person who squeezed the honey out of the combs before he weighed it. I said Queen-Bees, generally speaking, live four years; some prolific (not unprolific) ones live but three years and two months. "It appears to me" says Mr. W., "as if he got his knowledge from a Ready Reckoner." I take leave to inform Mr. W., that I was taught all I know of Bees by experience; hence it is that not one jot of my writings has been disproved. That those Queens that do not live four yesrs die ten month sooner is a beautiful provision of nature. Almost all Quens are bred in June and July $\cdot$ and if they were to die later in the year than August, the Bees would be nonplussed, for they have no eggs to be metamorpliosed into Queens. The Bees themselves seem to be aware of the danger of having then throw the old one out alive. She crept in four times, and met with the same fate. Mr. Wighton says, that "Bees do not hatch their young by incubation; the warmth of the hive alone brings the larve forth." I did not ask I shall attempt to prove that it was out of his power. incubation. If wy prom ment feed a swarm wions find that the Bes ane litlo and the Quen berins to lay, Bees draw together-leaving a semicircle of brood uncovered, which dies notwithstanding the warmorli of the hives. When warm weather comes, the Bees spread again, and eggs are placed around this brood: but before they are half hatched, the unpleasant odour of the back-gone brood becomes unendurable, and the Bees are obliged to leave them uncovered, which is leaving them to perish. Thus, this backgone brood increases all the summer. Sometimes the stench of the brood compels the Whole swarm to forsake the hive. Some hives have back-
 New Fuchsia.-I think that you will be pleased you for Fuchsia Exoniensis, and we have to thank cordifolia in the Botanical Register, stating of Fuchsia be a fine species to raise hybrids from. I immediatel availed myself of this suggestion, and impregnated ${ }^{6} \mathrm{~F}$ cordifolia" with "F.globosa," and this out of many hundred seedlings has been the result, proving the correctness of your assertion.-R.T. Pince, Exeter Nursery. Public suouroan Gardens. -It has often been a matter manypise to me that in England, and at any rate in promenades, like the Alamedas in Spain, no planted gardens in some commanding spot, where those who cannot afford or cannot obtain a house with a large garden, may be able, not only to walk themselvem, but to send their children to gain health and freth air among the refreshing green shrubberies, grass, and flowers. My by has been more particularly directed to this matte by the fact of what is about to happen at Camberwell jus plenty of green fields and lanes, where pretty village with about and fancy yourself miles from the metropolis but with the increase of population and modes of converane every spot of arailable ground is covered with houses, and to ols with the old established dwellinge that ges, and can be found. name of gate a fer of tho mate of larger the garden a fen yards square of ground rathe larger that a good-size jown while hundreds and hod of the the the hudreds and hundreds men's cort-hores, and along paths, which those who kno Camberwell, agree give much employment to shoemakers from the grinding pointed loose material of which they are formed; and then all air and view in that vicinity are locked out by the intervening walls, palings, and houses, of the more lucky dwellers upon Champion, Denmark and Herne hills. A good-sized piece of ground, well laic out in waks, shruberies, and fower-beds, and which might be kept in order by a sman anuual subscription by those who used them, and be kept private by a laage a the entrance, would bo a real boon to the whole neigh bourhood. A. plot of ground now offers itself commanding delightful views of known doubtless to yourself and other lover's of Horti culture, as I believe, planned and arranged by the cele brated Dr. Lettsom, Grove-hill, and, until now, in the
occupation of Charles Baldwin, Esq., bat which in this
month comes into the hands of Mr. Chadwick, the builder. © consideration of our practical realers, some of whom
New roads, streets, \&c. \&cc. are talked of, but I am sure New roads, streets, \&c. \&cc. are talked of, but I am sure were you to see the place as it now is, with beautiful groups of the finest trees-CCdars, I should think, two would agree with me in thinking that to doom so sweet a place to bricks and mortar, and level to the ground the growth of centuries, must amount to a sin almost, and 1 hundreds, to induce the possessor to appropriate the principal part of these beautifully laid-ont and situated grounds to the purpose I have mentioned; in fact, for a arge garde gardentess fami the a for fower-beds and shrubberies
exists, and the nlantations might be added to, but could carcely be improved by being taken from. The grounds are all well inclosed; there is a lodge at the gate. The rules as to who should he almite, The adjoining grounds once belonging to Mr. J. Jackson, are alike doomed, and would be a valuable addition, but I must not be too exorbitant enlist us on your side. May I beg of you to plead for us? so you would help to preserve the beauty of a place long confer a lasting benefit on the inhabitants of Camberwell, and an especial favour on one who with most of his neighbours breathes the smoky air of Babylon all day anA Merchant. [We know the place well, and should quite But it rests with the inhabitants of Camberwell to prevent the destruction of the place. If they will subscribe a fund for the maintenance of the grownds equal to their value for ground-rents, we should think Mr. Chadwick wou

The Training of Flowering Plants in pots is at present much attenued to by gardeners and others, but wrowing in the flower-garden that would be greatly improved by a little more care being taken of them. The Daphne Cneorum, or Garland Flower, is one that repays well with a little trouble bestowed upon it; left without any notice being taken of it, most of the flowers will be produced at the extremities of the plant, and sometimes it will be found brushing the ground when the wind is high, and many of the branches worn half-way through : such a plant as the Garland flower, breathing clothes with glory the ground on which it grows, deserves better treatment. If carefully trained, it may be made to cover much more ground than is commonly aliowed for it, and produce greater abundance of flowers; by making flower has ronm to flourish freely, and a plant of it covered flower has ronm to flourish freely, and a planerence is really a'beautiful object I have one trained in such a manner its diameter is five feet. Such a plant in a May morning,
 sure which is impossible to describe.-Peter Mackenzie.

The Pelargonium Spot.-I shall be obliged by your correcting the statement made by Mr. Ayres in last Cock, of Chiswick, was obliged to destroy a number of his finest specimen plants to prevent The truth is, the whole of my plants were affected with it last August (before they were removed to the greenhouse), but with a little care and attention they soon recover and I hereby declare that I never lost a plant through it in my life. W. Coch, Chiswick.

Bees Swarming.-In answer to your correspondent as to time of Bees swarming, the earliest swarm was on 5 th of May, and from that time to the Ilth swarms were very common.-A.J., Willingham Rectory

Vines.-I have five Vines, which I planted three years ago, in a new house built entirely for Grapes. A border was made in front of the house, at the same time, which consists of as good soil as can be got, and the border is well drained. The depth of the border at the back is 3 feet, and 2 feet at the front. The Vines were planted in April, and made some very good wood the same year. This I cut down to two eyes the first time of pruning; and the next spring I commenced forcing them in the early part of February. To my great surprise they made much weaker wood than the previous year; but what is more losing their leaves, and continued doing so until every leaf was gone. Beginning about 3 feet from the bottom of the house, I lose about 2 or 3 leaves every day from each Vine if the sun shines upon them. There is not the least a
sun has slone about an hour, then they scorch up as if they had been burnt, and may be rubbed to powder. I keep the heat of the bouse by night about $65^{\circ}$, and by day $70^{\circ}$ to $75^{\circ}$. I train one Vine up each rafter. Last winter I cut them down to about 4 feet from the front, and this spring they were all. I thourtht as this is the third year I should get a bunch or two off each Vine; but instead of bunches, I helieve I must be content if I can keep the Vine. The leadmg shoot of this year is quite yellow, ing up in the same place as before. It does not matter ing up in the same place as before. It does not matter shaded by other leaves they will scorch the same.

## PROCEEDINGS OF SOCIETIES.

ROYAL AGRICULTHRAL SOCIETY OF ENGIAND.
a Montliy Conncil held at the Society's house in Hanover

royal caledonian hortictltural society. The first summer meeting was held in the Hall in the Society"s more ungenial 1st of June. The principal prizes were offered for
Florists' Flowers. Pansies and Calceolaris were goorl; Tulips indifferent, and, owing to the hackwardness of
Pinks, nor Ranunculuses, nor Mimuluses were protuced in competitinn. There was, however, a fine dansies or Hearsense, the silver medal was awarded to Mr. John Finlayson, Koncas
the names of the flowers beang Queenr Margarct, Rhoderc Dhit, Sir Audrew Wyhe, Jeanie Deans, Prince of Wates, Marmion,
Fiora Macdmald, Lady Keith, Black-Eyed Susan, Daniel Defoe, Volney, Laird O'Lngan, Lass of Brechin, Seedling of 1813, Gipsy, layson himself, He Henchman's La Superbe, Doogenes, Victory
Beauty of Hitchins, Arago, Dr. Johnsm, Widnal's Decora, and Brown's Countess of Orkney. The bronze medlal, or second
prize for Pansies, was voted to Mr. John Young, qardener to T Oliver, Esq., Newington Lodge. For the best
medal was awarded to Mr Y Yung, Newngton Lodge, for fruus
XVI. (bloom much inferior to tnat former year-, Ambasandeur
 Dumean, Gloria Mundi, Bonaparte, and Adcuren Rainlow,
Bizarres). The scond prize was woted to Mr. Alex. Forrester
For the best six dnuble gr. to Captain Falconar, of Carlowne.
stock Gillifowerc, three red and three white, the medal was
assigned to Mr. Rovert Fairbairn, Portobllo. The prize of two Nurseries, Throngh ffer mecturn of tincl Co.z of the Leith Wat for by practical gardeners,', for the six finest varieties or hybrid
of the 'alceolana of Chili or Peru, was awarded to Mr John . John
Young, gr, to Mrs. Hamulton Nisbet Ferghson, of Archerfield, th Young, gr. to Mrs. Hamulton Nisbet Fergisson, of Archerfield, the
Kinds being named Reliance, Stella, Paragon, Reld's Medium
Barnes' Hone, and Lass of Riclimond Fill. For another collec non, consisting wholly of secilings raised by the competitor, ald
named Purity, Mrs. Stewart, Gloriosa, Eclipco, Nymph, ind Sun
beam, the Committee voted an extra premium from the Society
funds to Mr. W. Ilam Connacler, Er. to Ef. Stewart, Esflo, of St
 was
in. This collection was, however, consulered very good, mert
toriuus consisting of Garth's Flash, New Cornnation, Foster'
Prince Albert, Queen Dowager, Foster's Nymph, and Erectum, and an extra premam was awarded for it from the Soctety'
funds; while the awarding of the prize offered by Messrs. J
ickson and Sons was delayed till the meeting of the $28 d$ Jun current. One of the most meritorious productions of the day
consisted of a superb collection of seedling Calceolarias, raised consisted of a superb collection of seedling Calceolarias, rais
at Maryfield, by Isac Anderson, Esq. , is greenhouse and pit
being managed wholly by himself. Among several of grea being managed wholly by himself. Among several of great
beauty, the varicties named Duchess of Bucclench and Miss
Walker were pre-eminent. The Society's silver medal was voted to Mr. Anderson, as a mark of approbation. In a large squar tray there was a some of the newest and finest Pclargoninms, (the
and leaf of trus of fowers being placed in front of the leaf of each sor
tressectively, including, among others, the Queen of jairies respectively, ) including, among others, the Queen of fairies,
Duchess of Sutherland, Lady Sale, Topaz, Flach, Captivation and Mabel. This display was from the Inverleith Nurseries of full flower, from the Botanical Nus sery Gardon of Mr. Cunning
ham, Comely [3ank, attracted much notice on account of $x$ ts sin Gularly curions appearance. It is believed the plant was never
before seen in fower at Ed.nburgh. The hall was further adorned tion; particularly a choice collection of greenholse plants,
including several extanizte Cape Heaths, remarkalhe for dwarf Leith Walk ; a rich general collection of greenhouse plants from prcenliouse specimens from Mr. Syme's garden, at Trinity Cot Hall, Roselbank, an amatear cultivator. Some select specimens rom the greenhouse and stoves of the Experimental Garden
tself recelved decerved commendation, as exhbiting the perfecHon of culture. Several interenting communications, chiceny from
$\qquad$ and bulls, and curous seeds, procured from the interior of Brazil
was presented to the Giarden in the most handsome manner by new Memhers were on this nceasion added to the Socicty, as that an evenug promenarle shonld have taken place, but the stat ROYAL SOUTH LONDON FLORICULTURAL SOCIETY. Surrey Zoological Gardens on Tuesday, the 13th. A north-eas
wind, and a day of incessant drizzling rain, prevented more than
a very few vistors from attending, while the exhbition the a very few visitors from attending, while the exhbition itself
wn in no deyree femarkable. On looking over some of the
collectien collections, we conld not discover a single specimen deserving of notice. Others, however, contained much more mexitorious
ohjects, and a cew comprised beautiful and finely-grown plants. ohjects, and a cew comprised beautiful and finely-grown plants.
The lovely Phalonopsis amab, 1.5 was about the rarest and most
valuable plant shown. This was from Mr. Cox. Gloxinia valuable plant shown. This was from Mr. Cox. Gloxinia which have whicte ribs and rich purple fowers, was in a collec-
ton sent by Mr. Wilson, gr. to Gillia't, Esf, Clapham Park; as was also a very large specimen of filoxinia rubra, the showy
Gladiolus insigns, and filandsia amona, fincly in flower. In a collection from Mr. G. Young, there was the pretty Achimenes
rosea, filue p ants of Nimnlus Maclamanus, a dark flowered
var.ety of Dallum bull)ferum, and a bcatifnl plant of Epacris

 splendicla, prostrantherasa, lasianthus, ant old but interesting Halley's 1 lacind, which has the halit of tencrioides, but with
tyattel heads of Jlac flowers. Of Orchidaceæ, there were Onciand the curious Coryanthes speciosa, from Mr. Bruce, gr. to two varieties of Gongora, and Vanda multiflora, from Mr. Cox.
The plants which appeared to be cultivated most perfectly were Leschenaultia formosa, a <plendid hittle specimen, Coleonema, pulchra, extremely compact, and a red-lowerecl Alstrœmerik,
brought by Mr. Bruce, fr. to B. Miller, Esq. The Heaths were
by no means finc . by no means finc; still the colkection of Mr. Halley, of Black
heath, was made up of beautiful though small plants. included E. propendens, odorata alba, and several varieties of E. ventricosa. Those produced by Mr. Bruce were likewise
tolerably good. E. tricolor, eximia, Cavendishii, and some varicties of ventricosa, were the best or thes
tolerably extensive display of Pelargoniums, with litte, however,
of xovelty in their appearance. We give the names of those which received prizes. Mr. Gaines's plants were Joan of Arc,
Lady Elizabeth Bulteel, Juba, Beatrice, Raphael, Louns Quatorze, Lady Douglass, Perfection, Albina, Exquisite, Grand Duke, and Victory. Lady Daget's collection had in it Joan of Arc, Elize
superb, Florence, Coronation, Erectum, and Victory. That of
Mr. Welsh, pr, to G. Edmonds, Esq. Wandsworth, contained Mr. Welsh, gr. to G. Edmonds, Esq., Wartory, Matilda, Priory Quecn, Grand Duke, and Primce Albert. Mr. Pamplin's com-
prised Ajax, Madd of Seragosa, Assassin, Sir R. Peel, Camillad Perfection, Vesta, Enchantress, Sir Walter Scott, Hesperus, and
Superb. Mr. Bourne, gr. to Sir F. Paget, Chelsea Hospital,
shewerl Orange Boven, Fany Garth, Erectum, Lady H. Paget, shewed Orange Boven, Fanny Garth, Erectum, Lady H. Page,
Bridesmand, Comte de Paris, and Mablel. In Mr. Edmund
group, thele were Jewess, Victory, Nymph, and Comte de Pars. The relative mersts of these will be seen by the list of
awards. Mr. G innes's Calceolarias were in good condition. They were Rival, Kngl, Argo, Favorite, Lanis, Golden Soverelgh,
Attila, Quece of England, Lass of Richmond Hill, grandifora, magniflora, Incomparable, and Sunbcam. RIssa devoniensis was
cxhlited in pots by Mr. Yalley, of Blackheath. There was quantity of cut roses, sevcral encral collections of cut fowers,
pretty food Pansies, some excellent Ramunculuses, and a stand of seed ing do, with a few Pinks. Some well-coloured Black
Hamburght Grapes were shown by Mr. Cnapman, of Vauxlaall,
and Mr.R. J. Clapman, of Clapham. Myatt's British Queen Strawberries, growng in the pots, by Mr. Rawlins, and a variet
of really fine vegetables, among which the Cauliflowers and ardnons were perhaps the most noticcable. The judges distr
buted the prizes thus: Amarrivrs. - Twenty-four Heartspuse,

## MISCELLANEOUS.

Vegetation of Swan River.-A file of papers from Swan River having reached us, we extract the following obsames Drum the Vegetation of the Colony, by Ma contain with The he ;ut ore sortler, bu they the Nery little flavour ; the natives use the Nuts fo greasing themselves; they appear to contain a large por on a pure vegetable oil, which might perlaps be Ihave to account in seasons when they are abundalum among the ironstone hills near the Beaufort, River. The Exo carpus the order: we have several species, the largest and showiest the Exocarpus cupressiformis, which appears to found all over this vast island. Of the natural ore, the Thymelxes we have many fine species ; of the Swan to decussata and rosea are both common, fhe coast; a large
King George's Sound, in the vicinity of the ellow-flowered species is common among the hills; it so fragrant, that in a dull cloudy day, or in the event $i$ it is delightful to travel among the hils whants of this genus ; the Pimelea spectabilis, a remarkably fine one, grows on the tops of the hills between the Helend and Canning rivers. The natural order at Swan River almost peculiar to Australia, abou of aro species. In our list now amounts to upwarde of 250 petrophila and firat two genera\#described by Mr. Brown-Petter united; Isopogon, Dr. Lindley justly remarks, were better unio.
and "our Swan River species confirm his views in that respect. The species of the two genera, are so much alike, and run so much into each other, that I have long given
up trying to distinguish them. One of Fraser's species, up trying to distinguish them. One of Fraser's species, the Petrophila linearis, is common on the sandy ground about Perth; in size and shape the flowers resemble the English Honeysuckle. Another fine species, the Petrophila biloba of Fraser, grows among the rocks near the foot of the hills. Dr. Lindley remarks of Petrophila brevifolia,-a species which he describes from Swan
River, $\rightarrow$ that it has fiowers which, when infused in hot water, give out so brilliant a yellow, that it is worth examination as a probable source of a dyeing material ; the species is common in the sandy country to the east of the Toodyay district. The finest Petrophila I have seen, with heads of flowers as large as some of the roundflowered Banksias, and very fragrant, grows on sandy ground near the Beaufort River; it belongs to Mr. Brown Dr. Lindley remarks that the only beauty is in the leaves, which almost hide the flowers; but we have several species to which that character does not apply. A pretty red-flowered, box-leaved species, grows on the
road-side between Perth and Guildford; and another, with red leaves, which, from its being almost always in flower, I have named semperflorens, grows on the tops of the hills. There is also a beautiful rose-coloured
species, which covers the ground as with a carpet of that species, which covers the ground as with a carpet of the
colour, found on the sandy land to the south of the Beaufort River. Of the genus Conospermum we have Beaufort River. many interesting species at Swan River; Dr. Lindley many interesting species at swan suver; Dro enas at Swan River to belong to the order at all, until after a minute examination; for while the majority of the species, with their long woolly, panicled, irregular flowers, have altogether a peculiar aspect, a Conospermum acerosum
might be mistaken for a Colletia—and Conospermum might be mistaken for a Colletia-and Conospermam
glumaceum has altogether the appearance of some Bupleurum, with great membranous bracts. The C. acerosum grows between the Guildford lakes and the foot of
the Darling Range, and C. glumaceum, which is very the Darling Range, and C. glumaceum, which is very
fragrant, grows on the Toodyay road-side, close to the fragrant, grows on the Toodyay road-side, close to the
foot of the hills. Dr. Lindley remarks of the genus Synaphea from Swan River, that they are in many cases ragged-looking plants, whose leaves seem as if they were
intended to be larger, but starved into hard dry lobes. Synaphea decorticans is a strange oak-leaved plant, Whose bark is thrown off in numerous thin brown layers. Eryngium, and S. pinnata has large regularly piunate leaves, glaucous on the under side. Besides these species described by Dr. Lindley, we have his gracillima, and several of Dr. Brown's species of this curious genus. George's Sound, and I observed it in travelling to the south, soon after passing the Capel River. The which grows about 3 feet high, with panicles of brownish yellow flowers, and divided strap-shaped leaves, is a speries of Srmohionema and we have several others, one of
which, growing about 2 feet why at to the east, with round heads of golden yellow fragrant flowers, is the finest. Of Agastachys, we have two spe-
cies, distinct from the odorata of Brown; one of them is found to the south of the Capel River, and both among the hills to the south of the Vasse Inlet; they are both beautiful fragrant plants. The Persoonias, Dr. Lindley observes, are plants of little beauty; the handsomest. Persoonia macrostachya, like Petrophila brevifolia, seems to possess dyeing properties, which deserve investigation. The Persoonia laureola is a small Laurel, from which it takes the name; and P. Drummondi, described by Dr. Lindley from specimens collected among the hills between the Helena and Canning rivers, the Leschenault district, - forms sometimes rather a handsome small tree; its long green falcate leaves and drooping branches being ornamental ; its bark, formed of numerous layers of cuticle of a red colour, is very characteristic. The Anadenias consist of plants whose leave conspicuous. A. flexuosa is a most curious species with cemerkable rigzar reflexed leaves; it is found on the top of Toodyay Catta. A. aquifolium, when notl in flower, bears a great resemblance to a Holly; and A. Hakeoides has broad-toothed reticulated leaves, so much like those of Hakea undulata, that it might be taken for that plant Of Grevilleat we have many species; the Grevillea Thielmanniana, a splendid scarlet-flowering species, grows on the ironstone-gravel formation on the top of the Darling range of hills. G. eriostachya bears
flowers ; bipinnata and quercifolia are fine species. A remowrers ; bipinnatla and quercifole black-flowered Grevillea, not yet named, grows on the banks of the Salt River; it grows in a pyramidal form, with bifarious branches, to the hanglesia, a new genus laty separated from Grevillea, we have 7 or 8 species; I believe all the known ipecies of the genus are from Swan River; the finest of
them, the G. tridentifera, now in full fower in the York and Toodyay districts, is called by the settlers the Swan River Hawthorn, as from the number of its snow-white flowers, and the size and shape of the plant, it bears some
resemblance at a distance to the favourite English Hawthorn. Of the genus Hakea I have collected over 50 species in the colony; I shall only notice a few of
the most striking species. The H. glavella of Frazer, common about every settlement, produces a large quan-
bushy a beautifully transparent gum; it forms a low The H. mixta of Lindley is remarkable for bearing simple filiform leaves, also trifid filiform leaves and entire oval leaves on the same plant. It varies as much in height and habit as it does in the form of its leaves: in the Swan River district to the west of the Darling Range, it forms a shrub from 4 to 6 feet high, with white downy flowers on the top of the ironstone hills to the east of the Darling Range it has long spreading branches, and bears yellow flowers; in the Kojonup district, it is a tree 30 feet bigh, with the habit of the Evergreen Cypress. I can find no difference between the leaves and seed-vessels of these plants by which I can distinguish them as species. The and seed-vessels as large as a common Russet Apple, grows to the south of the Beaufort River, and it has lately解 species, with round prickly leaves, grows in strong clay specimens the leaves all drop off; on that account I think the species is not yet named, although it well deserves to it grows to the when in fower, one of the finest species; beautiful crimson-flowered Hakea, which I think

## set named; it grows in such abundance on som

the hills, that they appear, when the plant is in flower, of a crimson colour, from its numerous blossoms; it is a small prostrate-growing species, with ovate acuminate
glaucous leaves, which end in sharp points; the plant is glaucous leaves, which end in sharp points; the plant is
abundant near the Mission-house on the Swan. We have a curious species of Hakea, with filiform sulcate leaves, 9 pointed long, and a very remarkable one, with roundpointed leaves, and large pear-shaped seed-vessels, found
abundanlly on the banks of the Salt River, about 20 miles to the east of Mr. Morrell's residence. Lambertia multifora of Lindley grows on both sides of the Toodyay road
near the foot of the hills, and it is particularly abundant to the left of the road. Since Dr. Lindley wrote on the Botany of the Swan River colony, I have found in it four additional species of Lambertia; two of these are described in the supplement to Dr. Brown's Prodromus, and a
third, with beautiful silvery obovate leaves and strawcoloured flowers, found to the south of the Gordon River agrees with Mr. Brown's formosa in the number of its
blossoms. In my late journey to the south of the Yasse I found a species of a trunk 3 feet in circumference, which, although some times bearing twin-flowers, is no doubt properly refer journey to King George's Sound, about two years ago, found what I considered a new genus, nearly allied to that plant the flowers eve very numerous in the axils of the leaves; it grows on hills to the north of the Beaufort River. Xylomelum occidentale, found by throughout the Leschenault district, and may be seen in flower and fruit every season on the banks of the Swan, wile above Mr. Joseph Hardy's house. I have found the hills to the south of the spring called Bibachgoin by species in our colony. The finest of the whole genus, the B. grandis of Linnæus, we may well call the pride of the wan, where it is very common, and grows sometimes 30 feet high, with a trunk two feet in diameter. As reported
by Frazer, in healthy young trees the foliage is beautiful, nd the flower-spikes from 14 to 16 inches long; it is the native Mangite, and when the natives are left to their own
resources, men, women, and children live for weeks resources, men, women, and chindren they suck from the flowers of this fine tree. Banksia Caleyi and B. Menziesii are both abundant, and form the principal fire-
wood used in the town of Perth. Verticillata is common wood used in the town of Perth. Verticilata is common in our swamps, and grows to a large size; I have observed and nearly entire leaves. The Banksia aquifolium of Lindley, common about Perth, which produces flowers like a Hakea, at first yellow, but soon turning red, appears George's Sound ; but observations which I made in my late journey to the south convince me that these plants are the same species, and not even varieties. There is as much difference between B. Caleyi and B. grandis, as they appear here and at the sound. Cunningham observes George's Sound; there the B. grandis is a mere shrui compared to what it grows to at Swan River, but the coccinea which they use for firewood there, is a splendia plant. I found a ine new red-fiowering species on Barker. Since Dr. Lindley wrote, I have found at least 10 new species of Dryandra, some of thesa makes our best substitute for the Holly in maaking hedges; $D$, nobilis grows on the right hand side of the old Toodyay-road Avon, and also near St. Ronan's Well, on the York road proteoides is found a little to the south of the Toodyay road, about half a mile before travelling so far to the eas suck lioney from the flowers of Grevilles eriostachya, and G. bipinnata : from several Dryandras, and from Banksia Caleyi, Menziesii, and verticillata, It is worthy of remark that no genus of Proteaceas with more than two seeds in the capsule has yet been discovered in Wester Austraia.. 1 a Stenocarpus, have many-seeded capsules.

 siderable eminence, the house is fronted by a lawn, which alopes
part of the way down the hill, and then condue exceedingly wich down the hill, and then conducts the eye over an
scene to Wimbledon Park, and the surrounding country. In this broad valley the trees, though
appearing to form a wood, are actually much scattered and
occasion an appearing to forma a wood, are actuaily much scattered, and hence
occasion an unusual and enchanting variety of surface. A view
from another part of the garden includes the whole of the Netro from another part of the garden includes the whole of the A Metro-
polis, with the fine hills to the north and north-west ; and another southwards, takes in those of Addington, a great deal of the
Surrey range, and pait of Kent; \&o that, ni three shies, there are
prospects ot an extremelv diversified ct aracter, for 15 or 20 miles

 and in winter being very attractive by the redness and regularity,
of its shoots. Although so high the prownd clayey substratum, requires much draimng, and is apt to get
swanyy mwet weather. In a spacious conservatory, immense
plants of Acácia pubescens and plants of Acácia weather. In a spacious conservatory, immense oxycedrus, the yellow Banksian
Rose, and Bérbers fascicularis have just ceased bloomine; Rose, and Bérberıs fascicularis have just ceased blooming; while
an enormous Poly gala grandiflora and a Bignonia
just in just in perfection. The mode of treating the plants in this con-
servatory is to allow a few specimens to grow as large as they derable space, and are particularly splendid when in bloom; but kill all the slower-growing species, The open portion beneath
them, when they get so tall and bare at the bottom is filed temporarily with a succession of flowering plants in pots, such blossoming. There are other greenhouses, a stove, and some frames, for the culture of flowering plants; and invo ane of these
Gesuera Cooperi, and some varieties of Gloxinia, are admirably grown. The secret in managing them so cleverly seerns to be
giving them a rich soil, and a pretty large pot, keeping them in a moist atmosphere, and giving them plenty of water, (occasion.
ally enriched with manure), while they are advancing. Pine. appes, forced Strawberries, \&c. are abundant, and good. Two
large Viveries, containing old Vines, have lately been altered, and
the Vines replanted. One was done in Marct, tae winter. The object of the change has been to contract the
last
width of the honses, (which are high, 80 as to render their pitch rather steep in front, and also to renew the borders, and plant
tile Vines nearer the top. On account of the tres hein former too deeply rooted, the Grapes dıd not ripen well. In the house recosered frome ine sharch and are bearing freely. Those which were
removed in the past winter are making rather weakly shoots at present; though they promise even better than weakly shoots at
the same period after shifting. By thus retaining the old Vine and not planting fresh ones, several years have been gained in
regard to the crop, which appears likely to be excellent in future. are growing up, some specimens in pots have been introduced
between these, and are now ripening their produce well. The
Grapes are not much inferior to those on strong planted out

THE NATURALIST'S CORNER.-No. XIII.
the seeds of the Bixa Orellana, is produced the sūbstance known in commerce by the name of Arnotto. Dyers form with it the colour called aurora, and when mixed with Lemon-juice and a gum it makes a crimson paint, with which the Indians adorn their persons. By the Spaniards is used for the purpose of adding to the colour and flavour of chocolate and soups. In Gloucestershire and Holland buter is dyed with it The bark of the tree is made into ropes in the West Indies, and the wood is used for the purpose of procuring fire by friction.

The Weeping Willow (Salix Babylonica) is said to have been introduced into England by the poet Pope, who being with Lady Suffolk when she received a parcel from and planted it in his garden. It grew up, and afterwards and planted it in his garden. It grew up, and afterward This tree is one of the greatest favourites in China, as This tree is one of the greatest favourtes in China, as may be inferred from its constants of its native Euphrates, pictures. Growing on the bamis), it was the Willow on Which the weeping daughters of Zion "hanged their harps." 51 We wir James Smith, speaking of the Sam bucus nigra, or common Elder, which is found abundantly In this country, says that our uncertain summer is esta blished by the time that it is
gone when its berries are ripe

## Mrebípos.

Par. 76.-"It is easy to determine beforehand," by examiniog the darferent component parts of leaves, which of nes ness. parts, which are con ented into resin by the absorption of oxygen, will take up more oxygen than such as are deficient in those substances. Others again, in the sap of which tannin and gallic acid occur, or which contain highly-azotised substances, will absorb more oxygen than plants in which those substances are deficient. The experiments of Saussane are decisive proofs of this. Whilst the Agave Americana, with its succulent, scentless, tasteoxygen in 24 hours if placed in darkness, those plants
which are rich in gallic acid, like Quercus robur, will absorb ten times, and the leaves of Populus alba (full of a volatile oil easily convertible into resin) twenty-one times their volume of oxygen. This chemical action of the leaves is very evident in Cotyledon calycina, Cacalia ficoides, and some others, which in the morning are sour, like Sorrel, at midday tasteless and in the evening bitter. It is therefore clear that during night an acidifying and oxidizing process takes place in the day and evening ; on the other hand, disoxidation takes its turn; the acid becomes converted into substances which contain oxygen and hydrogen in the same proportion as water, as in all tasteless and bitter substances.-Liebig's Org. Chem.

Those leaves which remain longer green than others will receive in the same period less oxygen than tho Whose suostances go through a speedy state of change. yield, under proper culture, five little plants.
Par. 85. - "The food which the young plant can receive from the air in the form of carbonic acid and milate more than the air contains. If, therefore, in the beginning of its development the number of shoots, leaves, scc. has exceeded these limits in consequence of a superabundance of nutritious substance derived from the soil, and if it therefore requires for the completion of its development into flowers and fruit more nutritious substances formation formation of fowers and fruit. In many cases this food only suffices for that full development of leaves, culms, and plants are transplanted into larger pots, and allowed to plants are transplanted into larger pots, and allowed the food will be consumed in multiplying roots and leaves, which will shoot into mere herbage, and not produce flowers. With dwarf fruit-trees the case is reversed; we abstract, as it were, a part of their branches, and consequently of their leaves; we prevent the development of ficially created, which is then used by the plant for multiplying flowers and increasing the size of the fruit. The pruning of themistry.
Par. 96. -" If the ripening of fruit take place in the dark, oxygen is absorbed, and the green of the leaves (resinous, and replete with resinous matter) is changed ; red and yellow pigments are formed; vinous, citric, and tannic acids vanish, and in their stead are found sugar, starch, and gum.-Liebig's Organic Chemistry.
Par. 98 . $"$ The fruit of the Fig-tree is eatable
Par. 98.-"The fruit of the Fig-tree is eatable, but, as has been lately proved, not nourishing.
Par. 99.-" The formation of acid
Par. 99.-" "The formation of acid is accompanied by the slightest excretion of oxygen; it increases in the socalled neutral substances of the ligneous fibre, sugar and starch; and it reaches its maximum in oils. The
effects of the light of the sun and the influence of heat effects of the light of the sun and the influence of heat
in the ripening of fruits is somewhat represented by the numbers, which express the quantity of the secreted oxygen of organic compounds in determined proportions. -Liebig's Organic Chemistry

## not succeed.

Note, p. 83.-" If the temperature is somewhat lower, and moisture considerable, most of the Pelargonia either will yield no pollen at all, or some very imperfect ; whilst under different circumstances, some even of those conof anthers-at least a sufficient quantity of perfect pollen, to be capable of fertilization, and yielding good seeds. Double Yellow Rose not flowering) is contradicted by an experiment of our own. We know two places where the Double Yellow Rose produces every year perfect flowers they are distant from each other one league. The situation is a particular one, and in both places there is tion is a particular one, and in both places there is the wall of a high building, around which there is on one side a wet ditch, up to which the extremities of the roots must reach; in the other place a canal is close to the roots. If in both these cases the roots do not actually soil moistened by water. As the one building, near which the Rose stands, has a projecting roof, and the which the Rose stands, has a projecting roof, and the winds, the leaves are constantly protected from moisture, whilst the roots have as constant a supply of it. Par, 119.-"The statements as to the temperature of Vienna cannot afford gardeners any certain data, because the observations are made in the middle of the city, where the number of chimneys, the warmoth of houses, stables, and dung-hills, which where horses are kept can never be entirely emptied, radiate a considerable amount of caloric, which must diminish the cold. The vapours, which are seen floating above the town in chilly mornings (To be continued.)
CALENDAR OF OPERATIONS for the ensuing weet. Abour the beginning of June is generally the time for budding Rose call monthly Roses. But already we are in the niddle of
as we month, and hardly a bud can be got in yet; the wood of both
the
bud and stock being so green and soft, owing to the continual bud and ftock being soeks. I used also to begin to put continual
rans of the last six
of all the China and climbing Roses about this time ; taking the young, stubby shoots which flower alorig the mame; trancinges, and
are about four or five inches long These are now about ready
for makition

of water they required, and how often should they have it, with a great many more questions about them. After answering them
we went to make cuttings, took the short flowering shoots, cut them off from the boughs so close that we had to pare off a little of the bark round the bottom of the cuttings; then cut away the
two lower sets of leaves, aud pinched off the tops of the cuttings, who lower sets of leaves, and pinched of the tops of the cuttings,
because they had flower-buds on them. They were now ready for planting; some with only two sets of leaves, and some with
three, which were all left on. I then showed them how they should plant them, abont an inch and a half deep, pressing the
soil very tight to them; and told them if they could pull them up soil very tight to them; and told them if they could pull them up There are scores of plants of which cuttings may be made now in the same way; and if they are planted in a shady place, threy
will soon make roots. All the Pelargoniums will, for instance ; will soon make roots. All the Pelargoniums will, for instance; but if one had a handglass to put over them they would ront in a
much shorter time, only there is more trouble when a handglass is used; as, if the cuttings are not regularly looked over every About a pint of water through a fine ruse watering-pot will be
enough to water all the cuttings under one handglass at first ; enough to water all the cuttings under one handglass at first;
and half that quantity every other day afterwards, unless the weather is very dry, when they must have it every day, and
al ways the first thing after breakfast. I thought I should have room to tell young gentlemen just come home for the summer but as buddmg can le dene any day through the holidays, next
week will be time enough to tell them all about it ; only, in the meantime, see that your penknives are very sharp, and have
some stout worsted, such as is used to make shooting stockings, some stout worsted, such as is used to make sing.

- -KITCHEN-GARDEN AND ORCHARD.

PiNERY.-If you give the plants plenty of room, plenty of heat plants less troublesome than Pines; and on the table it is the king of fruits. When the tank system of bottom-heat comes to
be understood, and the French mode of growing them without pots adopted, we shall have the
Vinery,-I expect we shall have a very dry summer yet, after these rains are over. There seems to be a complete cycle of drenchings and droughts going on in our latitude. But what
has this to do with the Vineries? Nothing, but that the late
heay heavy rains have washed down all the goodness from the surface of the borders, where the most active roots are; and when the
dry weather sets in they will have nothing to feed on, unless
you give the you give them slight waterings with thinuid mayer of short grass, to keep down evaporation. They could -uys. - This has been a bad season for ripe Peaches. good flavour ; and so with Grapes and Melons; since the middle of May, all that could be done was giving air by the doors and down, as if they were fixed.
Mrlons.-The successicn plants will require large portions of Water at the roots when they are swelling their fruit, , and also a
smart bottom-heat. Keep turning over the fruit which is ripen ing, lest it get damaged on the under-side, by being too long in one position; and if you can get the stalk end clownwards, it is young plants be kept thin of shoots.

On dry soils the wet has done no harm yet; but crops are in a sad plight on the heavy, wet lands, and a cliange to dry weather tender crops have come to a stand-still, and the fy has made
several attempts on the fruit-trees; but the dashing rains keep it under yet. Peas are growing out of all proportion to their stakes down many of them. The Strawberries are late; but there seems to be a good crop of them. In some places many of the Cherries
and Pears have dropped; but the Gooseberries, Currants, and Raspberries never looked more promising at this time.
Onrons. These have grown so fast lately, that unless they hardy seedlings this season, they soon crowd each other on the seed-beds. Do the same with Cauliflower and Cabbage plants.
BEANS AND PEAS.-Except for the earliest crops of these people seldom think of stopping them, but they should all be, STRAWBERIIEs.- Those plants that have been turned out
from the forcing-houses since the middle of May have had such a fine time to finish off their growth without any check, that many berry plants the sccond time, but one of the best gardeners in is a larger crop from the same sized pots. After they finish their growth, about this time, he lets them get dry in the pots, as they
do with the Pelargoniums after cutting them, for a fortnight cr three weeks, then shakes the dry mould from their roots, and repots them in fresh soil, planting them deeper than they stood
before. I had previously read of the plan, but was not aware of the advantages of it. See that enough small pots are at hand ENDves - Plant out a few of these for the first supply, and a
few more ten days hence, after which they will enter your xegular few more ten days
succession-crops.
Orchis is about the best time to scarify the branches or stems of hide-bound trees ; a good old practice, which has fallen into disuse, probably from being performed in winter, when not be healed till the return of the sap next summer. But, it performed now, the incision will be filled up in two or three Weeks with a layer of soft matter from top to bottom, along which
the returning sap will find a ready channel to the roots. Iust
try a branch or two this way fi only for experiment try a branch or two this way, if only for experiment. I am satis-
fied, from long experience, it is a safe and useful plan to invigo. fied, from long experience, it is a safe and useful plan to invigo
rate stunted branches; but it must be done at the right time.
II.-FLOWER-GARDEN AND SHRUBBERY.

STove.-The weather has been so dull lately that we could
hardly give sufficient air to the stoves, and the young growths are too weak in consequence; so that shading must be resorted by degrees with abundance of air. Keep an eye after insects,
which multiply fast at this time, if not disturbed; and see that none of the plants suffer for want of larger pots. the plants, with attention to cleanliness, are all that you can do the plants, with attention to cleanliness, are all that you can do
now, unless some of the plants may want another shift. It might
be worth while to mark such plants as fower from April to June be worth while to mark such plants as flower from April to June,
and are getting too large or straggling, or are zot in grood health, and keep them in a warm, sheltered place; and when you begin how early in spring sou cond flower them. If they should not answer, you could get good cuttings of them before you throw
them away, Depend upon it, whoever gets the most plants to fhem a way, Depend upon it, whoever gets the most plants to
fower in the of winter, will, in a few years, be thought the
best gardener ; and, like everything else, a little forethought and best gardener; and, like everything alse, a tittle forethought and CONSBRFATORy.-The late dull weather was more favourable to plants in fower in this house than to any department of gar-
dening ; no sun or dry hot air to fade the blooms, and no shade require so much water as when they are in more active growth;
but the strong conservatory climbers planted out in the borders
hints about c
Pirs.-Cold turf pits are just as useful in summer as they are in winter; and if they are only covered with the thinnest calico stretched on frames, hundreds of plants will live and thrive in them
betler than anywhere else. Some of them should have a thin aye of soil, to plant out young seedlings in, or newly-rooted plants and for young, tender Roses, \&c. All sorts of flower-garden plant may be propagated in them for the next three months, either in pots, or what is better, planted out in a bed of light soil, covered in practice. Any country labourer can put up such pits; and their size should correspond with that of the Melon-pits
same cstablishment, so that the frames may do for either.
Too much rain is as hurtful to young half-hardy plants as too they have done this season. Flower-gardening is of such a routine nature that one hardly knows what to say about it; as every one minds to keep their flowers in order, by tying them nip of wor

## 

REPORT ON COVENT-GARDEN MARKET,
The market is now very abundantly supplied with Gooseberries, Currants (Which are beginning to colour), Peas, Lettuce of the rots, Onions, Potatoes, Mustard and Cress, Asparagnis, French
Beans, Cucumbers, \&c. Among the Fruts, Cherries can be had as low as 1 s. 3 d . and $1 . \mathrm{s}$. 6 d a pound, while there are some of the Bigarreau kind. A most remarkable improvernent is perceptible are une Peaches and Nectarines, particularly the formex, which usely supplied. There is a larger quantity of Grapes than usual, year; but a number of the black ones are very poorly coloured. Pine-Apples are more than commonly numerous. Strawberries are falling off, probsbly on account of the advancemcnt or
out-door crops. The most conspicuous novelties in flowers are cut specimens of Lilinm eximiumsmast nf the romman annula, appearing to have been grown in a swamp with rich soil, and fresh in the collections of potted plants.

## NEWS OF THE WEEK

The proposal of Ministers, granting to her Royal Highness the Princess Augusta of Cambridge an annuity of $3,000 \%$. a year, to commence on her father's death, as a dowry on her marriage with the Hereditary Grand Duke of Mecklenburg Strelitz, was submitted to the House of Commons on Monday. An address in reply to the Queen's message on the subject was first bronght forward as a matter of form, when Mr. Hume proposed an addition to the address expressi the consideration of the House for the present unsatisfactory state of the 276 . This amendment was rejected on a division oy proposes to 52 , and a desultory discussion on the took place, which ended in an adjourncommittee of supply, when Mr. Hume moved another amendment, declaring the opinion of the committee that the allowance so long enjoyed by the Duke of Cambridge should have enabled him to make provision for his children,
and that it was neither wise nor just in the present state of the country to propose any grant by way of dowry to the Princess Augusta. Sir R. Peel justified the grant on the ground that the Duke of Cambridge has to transmit a dukedom to his successor with the means of keeping up its dignity, and adduced various precedents for the vote. A division ensued, when the motion was carried by 223 to 57 votes. Another division took place last night on the second reading of the bill, ${ }_{5} \mathrm{Mr}$. Hume having moved that it be read a second time that day six months; but this amendment was negatived, and the second
reading carried by a majority of 104. On Monday, Lord Howick's motion for a repeal of the coal duty imposed las year was negatived by a majority of 63 ; and on Tuesday, Lord J. Russell's motion for a Committee to consider the present state of the Corn-laws, with a view to the adoption of a compromise in the form of a moderate fixed duty, Graham announced the intention of Government to abandon the Educational clauses of the Factories ${ }^{*}$ Bill, and promised to explain on Monday the course which clate Government would reading of the Canada Corn Bil was opposed by Col. Sibthorp, who moved its third reading on that day six months, but the House on a division passed the Bill by a majority of 150 to 75. The debate ensued, which has not yet come to a division. In the Lords, on Tuesday, Lord Aberdeen brought forward his Bill for regulating the affairs of the Church of Scot land : considerable opposition was offered to its details but it was ultimately read a second time, on the under standing that many of its alleged defects could be remedie in committee. The accounts from the Provinces within the last few days give gratifying reports of a favourable change in the weather, which for some weeks past had given rise to great anxiety. It is now hoped that the occurrence of more genial weather will be lasting, and that the result will show that little permanent injury ha been done to the crops by the long continuance of rain.
From France we have accounts of renewed discussions in the Chambers on various measures of Finance, in whic the Ministers have been again defeated. The interest of these questions is chiefly local, and the only politichl character they possess is their possible influence on the stability of the Ministry.-In Spain the apprehensions expressed last week for the tranquillity of the provinces, are fully confirmed; four regiments in Catalonia have deserted to the insurgents, and the Barcelonese Junta has declared itself independent of the Government of Madrid. An understanding is said to exist between the party of rumonred that the Regent intends to remove the young Queen from Spain, and place her under British protection, unless the movement can he speedily suppressed.

## 

Court.-Her Majesty, Prince Albert, the Prince of Wales, and the Princesses continue at Buckingham palace, and are quite wall. Edward Ryan, and and seats as Privy Colbitiors. In the evening, her with their presence, and on Monday went Theatre-Royal, Drury-lane. On Tuesday, the Queen held a Chapter of the Order of the Thistle, at which the
Marquess of Bute and the Earl of Mansfield were elected Knights of the Order. The Queen and Prince attended the performances at the Italian Opera in the evening. Wednesday the Queen gave a dinner and concert to the King of Hanover, the Queen Dowager, and other Mr. Waterer's exhibition of American Plants, King's road, Chelsea, on Wednesday, and was pleased to express his satisfaction at the exhibition. The Prince will hold a levee on Wednesday by desire of her pay a visit to Wamer Castle early in the summer, and be to Plymouth, where the seat of the Earl of Mount Edgecombe will be prepared for her reception. - The
Princess Clementine of Orleans and her consort, the Prince of Saxe Coburg-Kohary, at present spending the honey moon with the Queen of Portugal, are expected to arrive in England in the early part of July, on a visit to her Majesty.-The King of Hanover left town on Saturday for Kew, and returned to St. James's Palace on Monday. Previous to his departure his Majesty held a levee for the reception of the Foreign Diplomatic Corps. His Majesty occupied his seat in the House of Lords on Friday night Duke of Wellington and Lord Aberdeen on the Ministerial oenches, and was dressed in deep mourning.-The marriage of the Princess Augusta of Cambridge with the Hereditary Grand Duke of Mecklenburgh Strelitz is understood to be finally arranged to take place on Wednesday next

## fforelan.

Francy. - The papers are for the most part taken up menta in the Pacific, and the repeated defeats experienced
by Ministers on this and other financial measures, although not directly of a political character, had induced some misgiving respecting the power to maintain themselves in office. A trifling decline in the funds took place on Monday, solely caused by this impression. The discussion on the credit of $5,987,000$ francs, required for the establishment of the colonies in Oceania, recommenced on Monday. M. Billault moved a reduction of
243,500 francs in the first item, which led to a long discussion, after which M. Guizot proposed a reduction of 678,000 . He offered to reduce the money on the
effective of troops by $397,000 f$, instead of 325,000 f, effective of troops by $397,000 f$, instead of $325,000 f$.,
taking from the pay of marines at home that destined to the force employed abroad. In addition to this, $M$ Guizot proposed a further reduction, striking off 100,000 f. from the 300,000 . left at the disposal of the Government. The Chamber was satisfied with the proposal, and passed the grant by 220 to 140 votes. In the course of his through the isthmus of Panama was perfectly practicable that a company had been formed for the purpose, and that the expense would not be so great as imagined by the adversaries of the project.- The papers publish some particulars of a banquet given at Maçon to M. de Lamarine, and a report of his very remarkable speedeavour to recall the Government to the principles which placed the present king on the throne; but that, should the Govern pursued, the people must not accompany them in it." According to the figurative reasoning of $M$. de Lamar which the monarchy magined and decreed that of Kin Louis Philippe, was the work of reason and of necessity, -a monarchy not enveloped in the mysteries of English metaphysics, concealing its origin in heaven, but the monarchy of broad dayligha, examinea by everybody, agreed to by everybody, belonging to everybody. Less would be the republic." He concluded by giving as The regular and peaceable accomplishment the destinies of democracy. 1789-the military monarchy of Napoleon and the divine right monarchy of the restoration, endured for only 15 years each ; that the present experiment of the monarchy has existed for now nearly 13 years, and may be expected to expire in a couple more; that then the existing monarchy having been, though a work of necessity, a masshould have no more to do with monarchies of any kind or description. - The official journals announce that the demanded of the Emperor of the Brazils, with the consent of the King his father, the hand of her Imperia Highness the Princess Frances of Braganza, which was The Prince de Joinvilite is now on his way back to France, in the frigate Belle Poule, with
bis young bride, and is expected to arrive in the course of next month.-The weather had begun to improve in Paris. The journals of the departments of Saone and Loire, of the Aine and of the Rhone, announced that the Saone had overflowed its banks, and caused much injury.
Letters from Gremoble mention that the country in that Letters from Grenoble mention that the country in that The journals of Maçon state that the floods caused by the continued rains had occasioned serious disasters, and great fears are entertained for the crops. Letters from
the south of France announce the all but total failure of the vintage in that guarter. Learly in the season tae vin gave promise of a harvest equal to that of 1834, but, so great is the damage caused by hailstorms of unusual vioalmost entirely into spirit.-The Cour Royale of Orleans was occupied during the whole, of the 5 th, 6 th, and 7 th of this month in considering the appeal lodged by our countryman, Mr. Conaty, against the judgments which had and the Cour Royale of Blois for playing with marke cards. After hearing the pleadings on both sides, the immediately discharged. It is said, however, that the dis charge has been opposed by the Advocate-General, on the ground of his having lodged an appeal against the judg-

Spain.-The accounts from Spain received by the French telegraph are very unsatisfactory, and are conRegent, unless some decided change should speedily take place. They announce the passing over of four regiments in Catalonia from the Regent to the insurgent force organized by Colonel Prim, and state that an understanding exists between the Christinos and the party now in oppo the downfall of Espartero, which the movement calculates on effecting. No doubt exists as to the violence of the excitement which prevails in many parts of Catalonia, and it is said that the crew and captain of the Government steamer at Barcelona have been bought over by the insurgents. Colonel Prim is master of the south of the province, and intercepts all the Government despatches The vanguard of General Zurbano, who was marching agaiust the Colonel, deserted, and the General was obliged tretreat. The Barcelonese Junta suddenly found itself in possession of sufficient fuads corrupt the Government at Madrid. Previous to these events, General Zurbano, who had marched towards Tarragona, had returned to Barcelona for bis baggage. He
was discovered in the streets, hustled, and with difficulty escaped to his hotel. The crowd gathered round the hote, and he was obiged to get an escort. This escort refuse to he wa the people, the halise fid tie sare stoks, ane and wounded two persons. The baggage was flung into the sea. The Captain-General hen was about proclairo martial law, but the provincial deputation and ine civic authorities begged him not, and he recalled his decree. From Bayonne we learn that Ciudad Rodrigo had revolted, and that Valladolid and Valencia were disposed to follow its example. Much excitement prevailed at Burgos on the 8th, and it was said that a battalion of the provincial regiment of Lerida, which had marched for Ciudad Rodrigo a few days before had deserted to the insurgents Fears were also entertained for Santander. Navarre and the Basque Provinces were quiet. It was not known what resolve the Regent would take, but it was feare that it was too late for him even to accept a Lopez cabinet Madrid that the reported in the Opposition circles of young Queen, to procede Majesty under British proed to Lisbon, and place he dignantly denied by the official journals, and the tran quillity of the capital has not been disturbed.
Portugal.-We have Lisbon news to the 5 th instant The Duke of Naxe Coburg and his family had arrived a Lisbon on the 30 th ult., in the French steamer Pluton. The Duke had been waited upon by the diplomatic corps, and the officers of the garrison, at the palace of Necess, sades. The court was expected to leave shortly for Cintra The Duchess of Braganza was expected to leave on the The iession Duke of Cambridge steamer, for Holand another month, and the financial projects were under debate. A bill imposing an increased legacy duty had passed the Chamber of Deputies, after a prolonged discussion. The Ministry had been left in a minority on two clauses, which led to reports of their retiring; but, at a subsequent meeting of their supporters, it was appsrent that the great maiority of the Chamber was staunch to the Government and a Costa Cabral's, the nert day, was carried by 62 against 29 votes. Germany.-The King of Prussia has returned a answer to the Diet now in session at Dusseldorf, with respect to giving full publicity intends to make some modifications in the Jaw concerning the regulations of the press. The King had appointed M. Grube Prussian Consul-General to China, who is immediately to proceed there by land for the purpose of informing himself, on his way, in what manner the interests of Prussian commerce may best be promoted. The upper part of the spire of the cathedral at Königsberg fell down last week, and crushed several of the surrounding houses. No life was lost, but a considerable number of persons remainder of the structure, 160 feet high, would give way, all the inhabitants of that neighbourhood had deserte their pending negotiations betw

 Frankfort states, from Vienna, that the steam-boat Vienna, which plied between that city and Presburg, had run on a bank and been sunk. st veral of the passenger were drowned, and a large quantity of merchandize was lost. Wednesday.-Another fire broke out in this town on of Messrs. Croft, in Come the extensive soap manufactory Was nearly new, was entirely destroyed. The damage is estimated from, was entirely destroyed. The damage is
held during the week, at which resolutions ings favour of a
petition to Parliament on the subject
in the town were unanimously carried
Maidstone.-On Friday last carried. Maidstone.-On Friday last the great meeting of the county of Kent, called for the purpose of taking into con-
sideration the depressed state of agriculture, and of all other branches of British industry, was held on Penenden other branches of British industry, was held on Penenden
Heath. The weather was extremely unpropitious; the Heath. The weather was extremely unpropitious; rain poured down throughout the day. Yet, in spite of the weather and the exposed situation, from 1,000 to
$\mathbf{Y}, 500$ persons kept their position from the beginning to the end of the meeting, which lasted nearly five hours. The High Sheriff briefiy opened the business of the meeting, by adverting to the subjects mentioned in the requisition, and requested a fair and impartial hearing for all who might address them. Earl Stanhope then came
forward and said that they had met there for the express purpose of considering the causes of the grievous distress which afficted the country, and which pressed so heavily and severely, not upon the agricultural classes alone, but
also on every productive class in the country. Since the also on every productive class in the country. Since the tion of the new Tariff system of the present Governmena fearful and fortunes and lamentable change had visibly come over the situation was anything but an encouraging one. But not to deal altogether in general assertions, he would came ir ateation to the fact, that since these measures of corn operation there had been a decline in the price Now, the annual produce of Great Britain in grain alone amounted to about three hundred millions sterling, and taking the loss to the country at only 25 per cent., it and Tariff, it has been already plundered to the amount oi seventy-five millions. This fearful calculation of loss was upon grain and other products of the soil, and did not include the loss which had likewise accrued to the agriculThis was tion was a bad one, and he warned them to bear in mind that, bad and gloomy though it might be now, it might become still worse. In some districts of the country rent their farms, but by drawing upon their capital ; whilst in others, farms, in many instances, have been altogether others after the occupiers of them being unwilling to take at what rents others could be procured. Such even to inquire tial exposition of the disastrous effects produced by the present discouraging prospects of the agricultural producers, extended also to another class of the community, who have a right to look to the Government for that protection could not be disconraged and suffering tithout Farmer being, as a nataral consequence, depressed. The labourers felt the pressure as well as the farmers, and were now working on all hande at diminished wages. In some places what was worse than all, there were many who could not procure work for themselves at any price, and great both able and willing to provide themselves with wore ence. The measure which the Government had provided and carried into effect had driven hundreds of them from their employment into prisons and union workhouses Where he was sorry to say their poverty was punished as a crime. The stagnation of industry was general. The great majority of the interests of the country were suffertself a profitable investment. Ruin and revolution wer advancing upon them with rapid strides, and the evils, of which the country had already but too much reason to complain, were aggravated by the recent proposition the Government-the new Canada Corn-law. Farmers now straining at a gnat. The reason was, perhaps, that their stomachs were so full with swallowing the camel that there was now no room for the gnat. But had they followed his advice, they would have swallowed neither camel nor gnat. His advice to them was, that they should not trust to the present Ministers, who by their conduct had proved themselves utterly unworthy of confidence.
He had also advised them not to trust to Members of ParHe had also advised them not to trust to Members of Parliament, who were sometimes but too ready to forget their promises to their constituents. ewas anxious to defend, the rights of the farmers, and also the rights of the labourers, the most numerous and prtant to the state. The times were critical, and we might expect convulsions, in which neither life nor property would be safe. He would, therefore, recommend a close and munity for than ang all defence. The noble Earl in conclud ing moved that a petition be presented to both Houses of Parliament, and that the High Sheriff be requested to ghe the same in the name of the meeting. He then read adequate protection to all branches of industry, Mr. James Ellis seconded the resolution. Mr. George Beaton injurious to the community at large, without being bene ficial to farmers, and that a petition be presented to and suggested an amended petition to the effect that the Corn-laws were contrary to common sense, common hatanity, common justice, and common Christianity that they were of no advantage to the producers of food,
as they rendered farmers more liable to panics than they would otherwise be, and praying for the abolition of the bread-tax and all commercial monopolies. The Earl of Radnor observed, that the proposition made by the last speaker was perhaps not worded as he himself should bave worded it; but as to the substance of both the petition and resolution, he cordially agreed with them. Though not worded altogether to his taste, be yet had no objection to second thern-for the proposition made to
them by the previous speaker was in substance an opposition to all monopolies. Had this opposition been consined to the Corn-laws he should have willingly concurred in it, but he was all the more willing to do so now, as
it embraced a wider field. It was futile to expect to secure prosperity to farmers by legislative exactment. Produce a general prosperity throughout the country, and the farmers must necessarily partake largely of it, with the other classes. On, the grounds he had now stated, be begged to dissent from the proposition of the noble lord. With respect to the Canada Bill, they need care but very little about it. It would produce little or no not com lowering the price of corn. Canadian corn would corn was therefore its lands would be cultivated. Men would emigrate to the colony, and capital would be sent out to keep them in employment. The demand for food was increasing in this country every year, at the rate of about 1,000 fresh mouths every day. We could not in this country produce sufficient additional food to supply this constantly increasing demand; and Why should agriculturists be afraid of importing corn from abroad? They have always received the largest prices prices when importation was limited. For the last 170 vears Parliament had passed, he believed, upwards of 140 laws for the protection of agriculture-each more stringent than its predecessors, either putting a higher duty on corn, or the price at which corn would might certainly be regarded as an exception. Experience had taught them that none of these expedients had succeeded. The plan of restricting the importation of corn had been tried perer and over again it was now tim corn we tried the other course. They must be satisfied, hom ever, that it would again repest his cordial concurrence with the senti ment of the resolution which he seconded, and with the prayer of the amended petition for the repeal of the Cornlaws and all monopolies.-Sir Edward Knatchbull fully concurred with the noble Earl that the general fall in prices was not to be attributed to the new Corn-law or the new tariff. The farmers had received no injury from those measures. They were salutary measures, and their ultimate result would be to place the interests of this country on a safer and more secure basis than hitherto. At all events, they have not been productive of the present for. The noble Lord (Stanhope) bed properly accounted the eve of the last harvest wheat were imported into this country. Reckless speculation had placed this corn in bond in expectation of a bad harvest. It was, however, an abundant one, and they were then compelled to pour their corn into market at a loss to themselves and to the injury of the farmer. These were the causes of the present low prices and wages. He was sorry to see that confidence did not at present prevail to any great extent among the agriculturists. He was
anxious to re-establish this confidence. The want of it arose from arose from an erroneous supposition on the part of the
agriculturists. They supposed that the late corn-law was passed only as preparatory to greater changes yet in store. He believed no such changes were meditated. The noble Lord (Stanhope) did not believe that such was the case. He himself gave his assent to that measure, because he firmly believed it would be a lasting and permanent one; and it was his settled conviction, that when the late corn law was contemplated and carried into effect, the Govern ment no more thought of further change than it did of a total abrogation of the corn-laws. He would advise the farmers, ${ }^{1}$ they valued and wished to maintain the prim ciple of protection, to adhere to the law as it now is ; but if they agreed with the noble Lord, let them use thei influence to abolish it; let them guard the law as it now stands, forin that only consisted their safety. If they wer only as firm and as vigorous as the auvocates for corn-law repeal, they would be able triumphantly to sustain it. In regard to the Canada Bill, the agriculturists had nothing to fear from it. Instead of injuring their interests, was, in his belief, an additional protection to them. He would explain to them the grounds on which such abelief might be made to rest. themselves, place had thus opep emessed themselves, both in and out Parliament; and in the next place, it established the principle of protection in Canada, and England and Cabada would mutually assist each other in maintaining the necessary protection. The farmers would therefore see As the luw now set greater protection than before s., the average dou with the duty varying from 1 s. to about $2 s^{\text {s }}$. The amount in the way of protection would ow be $4 s$. per quarter, - 1 s. paid by the Canadian should not it country, and 3s. paid to Canada. We importing his wheat into the colony, but the loss much confusion in juste. Mr. Plumptre followed amidst wuch confusion in justification of the vote he had given in favour of the Canada Bill. Mr. Hodges, formerly Mena-
ber for the county, then proposed a third resolution bef for the county, then proposed a third resolution,
afing the advantages of a faxed duiy of 128 . over a
sliding-scale. He remarked that should the Canada bill
pass, a large quantity of American corn would be pass, a large quantity of American corn would be imported into this country, to the prejudice of the points in the public life of Sir R. Peel, to show that the right hon. Baronet was altogether unworthy of confidence, and wondered how Sir E. Knatchbull could continue to renose any confidence in his ministerial colleague. He believed that the Prime Minister was at this moment preparing in bis own breast measures of a very different character from those with which he was now feeling the pub ic pulse. Lord Stanhope briefly replied, after which the different resolutions were presented to the meeting. For Mr. Hodges' resolution for a fixed duty, the show of hands was very feeble. Mr. Beaton's motion, in favour o total abolition, very nearly divided the meeting with Lord Stanhope's resolution. This last, however, appeared to have the majority, and the meeting immediately adjourned. Oxford.-The daily papers announce that the Rev. T. the Vice-Chancellor, for the sermon preached by him before the University on Ascension Day. The sermon has since been published, and it is understood the follow ing is the passage which drew down the admonition:intercedes for this Church, whose enemies he resisted unto death-and for this ancient seat of prayer and holy ontemplation, cor whis his private devotions the Apostles Creed, and a more expanded form of it , and also a more concise statement of the principal mysteries in the economy of Redemption, by which they may be called to nind at any moment: 'Caro factus et concentus Natus'; Passus; Crucifizus; Mortuns; Sepultus; De scendit; Resurrexit; Ascendit; Assedit; Revertetur Retribuet.
Plynouth.-A meeting of the council of this borough was held at the Guildhall on the 7th inst., for the purpose of electing a Lord High Steward in the room of the late Duke of Sussex. Mr. Whiteford, theyal Highness Prince Albert be elected to fil the vacant office. This was seconded by Mr. Soltau, a Whig, and unanimously agreed to. The common seal o he corporation was to the office, after which appointing tandard was hoisted at the Guildhall, and the church bell rang merry peals on the occasion.
Rye.-On Saturday, a meeting took place in this town for the purpose of hearing an address from Mr . Cobden meeting first assembled in the Town-hall, which was fouad to be so small that it afterwards adjourned to the cattle market. Mr. Cobden addressed the meeting at great length. He said that some persons perhaps would contend that without some protection the farmer could not com pote with the foreigner. Why not? The land was a ood here as abroad, and labour, taking into accoun not the English farmer compete with the foreign farmer The manufacturers paid taxes and did without protection then why not the farmer? He might be told that the the contrary, the landowning legislators had taken care to ease themselves of their fair portion of tasation. If thi Were not so, why did they oppose the motions that wer burdens which it time far the land bore? hose eachaive of the ostensible reason alleged for protection; in privat the landlords talked in a very different way, and some times one of their number, not over sharp, let out th whole secret. Sir Edward Knatchbull, for instance tated tbe other night that without the corn-laws the mar rage settlements could not be paid, and Lord Mount cashel that they could not pay the interest on their mort gages. It was said by some that the corn-laws were fo im to him to state most positively that agricultural labourers wages were received in purely agricultural districts, th wages of agricultural labourers increasing in proportion to their proximity to manufacturing towns, He had generally found also that the best farmers were advocates for free trade. He was for free trade in everything; but he attacked the corn-laws as being the keystone of all monopolies, being perfectly aatisfied that the corn-law ence of any other. not do, for the part that remained would be adduced as a plea for the continuance of other monopolies. He then moved, "That in the opinion of this meeting the cornlaw has proved iojurious to the interests and the independence of the tenant farmer and the farm labourer, and Major Curteis thereupon moved, "That in order to pre vent the depreciation of the property of the tenant farmer which must ensue from an immediate abolition of the corn which was seconded by Mr. Selmes, was supported by about a dozen hands; and Mr. Cobden's motion was arried by a large majority.
Windsor:-Captain Cumming, who succeeded to the Governorship of the Military Knights of Windsor on the decease of the late governor, Colonel Basset, in January, the lower ward of the Castle, on Sunday morning, after a long ilness, in the 56th year of his age. The vacant Governorship is in the gift of her Majesty, upon the recommendation of the Dean and Canons of Windsor one, the Governor ay be said to be merely an honorary
annum b
Wood Oxfordshire Agricultural Society took place in this town last week, Mr. Ashurst, the President, in the chair. The oast of the "Members for the county" was responded to by Lord Norreys, Mr. Harcourt, and Mr. Henley Mr. Harcourt thought the English system of farming extravagant, and recommended that the systen of farming and improved mode of cultivation adopted in the Nether lands should be pursued by the farmers of this country By the system of manuring pursued in the Netherlands much greater produce was obtained from the soil, and by that means the farmers were enabled to pay higher rents for their lands. It was no common thing to see farms of armer to whill, while a same in this country were regarded as insignificant, and at the same time the farmers were paying there as high often as 76 per acre for their land. He also highly eugis the pinio system of farming. Mr. Hench. colleague who had just sat down. He thought it would be ridiculous in the English farmer to adopt the foreign system of cultivation 30 widely different was the soil, the climate, and the chaThe the farmers hourg larger. Mr Harcourt had spoken of Scotch farming. He wished to know if ever there was an instance of a Scotch farme coming into that county to farm without putting his hands into other's breeches-pockets. The Scotchmen were too hire at and "canny to pursue their system in oxfa was found, he was always in the position of a bailiff. He ever knew but one instance of a Scotch farmer having embarked in farming on his own account in Oxfordshire Mr. Blackstone, M.P., acknowledged the toast of "the newly-elected Members of the Society." He quite agreed Hene agricultural principles announcedis farmers, the would ; and he hoped that, as eng their own system of farming. So long ss be had the happiness of soring the confidence of his constituency, and at present he might ay he had the confidence of two-thirds of them, he shoul never desert those principles which he had expressed in Parwhich were distributed in the presence of the meeting
Railways. - The returns of traffic for the week, by the principal lines, have been as follows:-Great Western Birmingham, $18,023 \mathrm{l}$. South Eastern and Dover 2 , 281 South Western, $7,277 l$.; North Midland, 3,967l.; Grand Junction, 8,304l. ; Midland Counties, 2,493l. ; Blackwall, 982l. ; Bryghton, 3,538l. ; Greenwich, 1,030l. ; Ěastern Counties, 2,483l.; Croydon, $415 . ;$ Great North o England, $1,362 l . ;$ Hull and Selby, $1,172 l$.-The Llanelly Railway and Dock Company daes not yet pay a dividend o the proping in the early port of the week the gros xpenditure is, 7500 per annum, and the gross receipt 7,800l. -The traffic on the Greenwich line during the air was as follows:-Whit Sunday, 9,650 passen Whit Tuesday, 11,190 passengers, $330 l$.; Whit Wednesday, 6,986 passengers, 208b.; making a total o passengers for the four days of 51,063 ; and a gross re pany was held last week for the purpose of receiving the report of the committee of inquiry, appointed on the 28 th Feb. He report being of extreme length and in print, was not read to the meetiog the sugges tons of the committee, as already noticed in this Paper, hey recommended to be concentrated os far as practic able at Blackwall. The, accounts had been found in order as far as the committee had inquired, but they thought it requisite that they should be of the period to make the inquiry bad prevented the committee going into the past transactions of the com pany to the extent they would have desired. After a he connecting steam that the affairs of the company might be relieved from their present state of depression. Dr. Bowring entered into an explanation, and said that every information had been given by the directors. Mr. Sergeant Gazelee went through the report, and maintained that the committe had not told them anything but what they knew before men soing the the past mittee being nominated. He concluded by moving an amendment, "that in the opinion of this meeting th committee have mistaken their duties in not inquiring the repert management of the raiway, "Mr. Bigg seconded it. Mr. Daniell, one of the committee, entered into a long explanation, and said that they had not been mons and the chairman also explained. The amendment was lost, and the report was received.

IRELAND
Dublin.-The Irish papers continue to announce the resignation and dismissal of Magistrates. Mr. Johr W. S. O'Brien, M P or and Mr . Henry Grattan M. P. have resigned the com mission of the peace. Mr. F. Comyn, of Galway; Capt

Mockler, of Meath, and Mr. Blake, of Galway, have been dismissed. Mr. Delaney, of Kilkenuy, has been rein stated, his resignation having been sent in without his knowledge or authority. The usual meeting of the Repeal association took place on Monday. The amount of ren for the week was $1,717 l$. 11 s .103 . The enthusiasm is said to have been beyond description, the immense crowd outside the building joining in the cheers from the inside Previous to the adjournment, the chair was taken by the
Rev. Mr. Lowry, a Presbyterian clergyman of the north of Ireland, whose appearance at the meeting was hailed with great applause. Mr. O'Connell has issued a long mamiesto to the rish peopte on the subject of Repeal ut of the groposed Rth into the various questions arisiog Illows the proposed Repeal of the Union; but our space iscusses. Mr. O'Conaell proposes a Local Papics or Ireland, consisting of the Sovereign acal Parliament Lords, and the House of Commons. The restoration of iffire herds presents, he says, no seriou inculties, and any modification of the Peerage, in consefuence or creations siace the Union may be safely left to the decision of the House of Peers itself. All Irish quesfribs of ittigation would be decided, he says, in rish ribunats, without any species of appeal to British tribunais. He does not expressiy say that the final appeal ther fie the Irist House of Lords, but he suggests no ther final appeal. As to the Commons, he admits there must be a reform of the old system, and says he would iscuss the principle and detail of a reform plan. He insists that nothing like the ascendancy of Romanism i intended by Repealers or the persecution of Protestants, or the confiscation of any vested interests in Church property. He would have every religion severed from the ifetime, but as each ecclesiastical benefice fell in, the ecclesiastical state revenues should be gradually and at ength entirely appropriated to purposes of public charity and general education, but should not be appropriated, in

Mallow.-A Repeal demonstration took place in this lown on Sunday, at which 400,000 persons are said to the Rev. Dr. Collins in the ciaair, at which Mr. O'Connell addressed about 600 persons on the prospects of the Agitation. "The Repealers," he said, "were peaceable loyal, and attached, affectionately attached to the Queen, If they assailed us to-morrow and that we conquered thera, as conquer them we will one day, the first use of hat victory which we would make would be to place the avour, and whose conduct has ever been fuil of sympathy and emotion for our sufferings, What I want you and hiem to understand is that we are sensible of the position by apprehension I do not mean fears but they are hreatening us Irishmen, peaceful and tranquil, and for What offence? An act of Parliament binding two counter torether is insisted to be repeated by the Irish people. I have thrown my whole heart and soul before you, and I wish you all to understand your state, that I might frighten Wellington and Peel from their attempt will kepl win the we will stand within the constitution, and let them not dare attempt to try our patience beyond what it will endure for it is not safe to drive even cowards to madness ; and h, it is much less safe to drive those who are not cowards feel perhaps a few days will tell us what they mean to do but recollect old buccaneering Wellington, and the maniac disposition of Stanley, and the bigoted prejudices and disposition of Sir J. Graham are in operation in Cabinet, and the resuit may be adverse to us. If so, prepared, I tell you, for the worst. Take care, of all thinge, to listen to the communications that will be nosd to you-for if they do not gag my mouth and maaacle my hands you whil hear me poining out the course of cond not most wise to be adopted, and though that course may not strike you as being the most wise, yet I bope you wil give me credit for my intention. Thope my dre. conflict will never be realised, that it is an empty vision, but let nome of us be to blame; lel us stand should be shoulder on the constitution, and let not Ireland be abandoned to her foes by the folly, the passions, or the reachery of her children.
Kilkenny.-A Repeal-meeting took place in this city on Thursday of last week, at which no less than 300,000 persons are said to have been present. Mr. P. S. Butler who has recently been dismissed from the magistrac presided. Mr. O'Conuell commenced the proceedings by directing the music to play "God save the Qneen, of the was done by more than a dozen bands, the whole of the vast multitude remaining uncovered. He then addressed the meeting at great length on the various topics connected with Reneal. A dinner took place in the evening, which 500 persons were present.
Dungannon.-After two days of minute investigation, the inquiry into the riots at Carland has closed. . magistrates have decided on taking informations againste seventeen of the Protestants and nine of the opposes party; against the first for riot and attack upon hous for rer "wrecking;" against the olners the assizes assault. All the cases have been
Tipper the trials to take place at $\mathbf{M r}$. Scully, of Kilfeacle, are all in custody, and four of them, now in

Clonmel grol, will be tried at the ensuing assizes for this county. It appears that there were five persons concerned in the murder of the ill-fated gentleman, and that one of them has become an approver. They were all hired assassins. The man who fired the shot followed Mr . Scully, without his shoes, until he came close to his back, into which he discharged the contents of his gun, which took instant effect. The only cause that has been assigned or the homicide was a proposal made by Mr. Scully to a tenant, to exchange the farm which he occupied for another equally good and eligible. The murderers were neither the tenants of, nor in any way connected with the property of the unfortunate gentleman.
Monaghan.-A fatal affray between the country people and the police took place on the 5th inst., on the estates of Mr . Shirley, at Maheracloon, in which one of the rioters was shot. On Thursday the jury returned a verdict that the deceased came by his death by a gun-shot wound from a party of 28 policemen, commanded by Major Wilcox and Sub-Xnspector Barry; that the police have not produced sufficient evidence to show that they were in imminent danger of their lives at the time they fired on the people; and that there was not proof as to the identical person Who has rather increased than allayed the excitement of the peasantry, and that the people have imbibed the notion that they should have a fixed tenure, their own rent, and that their landlords by demanding their rights are persecuting them.

## SCOTLAND.

Edinburgh.-The number of ministers who have signed and adhered to the protest given in to the General Assembly on the 18 th ult. is stated in the Witness of Tuesday, the names that have been hitherto printed in the Witness, it appears, however, that the number of ministers is only 395 , of whom are: Parish ministers, 214 ; Quoad sacra ditto, 144 ; Professors, 3; Assistants and successors, 14 Ordained assistants, missionaries, and others having no cure, 20 ; in all, 395 . The number of parish ministers in remain 733. The number of ministers of Parliamentary churches and chapels of ease is about 246 ; deducting together, 835 . It thus appears that there are 733 parish ministers, besides 102 ministers of chapels, who have not retired from the Establishment.

## THEATRICALS.

Drury-Lane.-Her Majesty and Prince Albert paid a occasion of a royal visit to a national theatre was the Sovereign received with a more enthusiastic welcome. As anxious to obtain admittance, and the rush to secure places was so general that in a few moments every tenable the reserved seats. The dress-circle was very quickly filled, and the house altogether presenled a splendid appearance. At ten minutes before seven her Majesty
left the Palace, preceded by seven royal carriages, in which were the atlendants on the Queen and Prince Albert, guarded by an escort of the Horse Guards. In the carriage with her Majesty and Prince Albert were the
IEarl of Jersey, Master of the Horse, and the Duchess of Barl of Jersey, Master of the Horse, and the Duchess of
Buccleuch, the Mistress of the Robes. Throughout the Buccleuch, the Mistress of the Robes. Throughout the
progress from the Palace to the theatre the most loyal demonstrations were exhibited. Her Majesty arrived at the theatre between five and ten minutes after seven Macready and Mr. Serle. For some time after her arrival the enthusiasm of the audience could not be restrained, and the warmoth of their feelings continued to pour itself out, cheer after cheer, and peal after peal, in the midst of Which the curtain rose, and the National Anthem was sung on the whole company. The performances commanded It," It," with the farce of the "Thumping Legacy," In both Her instances it is sufficient to say that the cast was excellent. Her Majesty and Prince Albert appeared to enjoy the performances very much, a circumstance which they indicated as well by remaining until the termination of the farce, as by frequently indulging in laughter at Mr. Keeley's drollery in the afterpiece. At the conclusion of the performances the audience again called for the National Anthem, which was immediately acceded to,
and it was repeated by the whole strength of the company, the audience meanwhile standing. The Romal party left at a little after cleven, and the rising of her Majesty to depart was the signal for a renewed at this theatre closed on Wednesday right, when Mr Macready delivered his farewell address to a house crowded performance was Macbeth, and at the fall of the curtain andippeared at the call of one of the most enthurtain ladiences ever collected together at Drury Lane. The n the pit and and waved their handkerchers, the masse gigantic dimensions were hurled down from all quarters, and in an instant the stage presented the appearance of Macready of his reception, came forward and affected by the warmth after stating that his resignation of the theatre was a caused by the want of public encouragement, or was not nightly receipts, but by the heavy expenses incurred in restoring the various departments expenses incurred in itself froma decay and ruin to its of the establishment tself from decay and ruin to its present state, he gave

He then passed to the circumstances of dramatic patents and disclaimed all intention of imputing blame to the proprietors of the theatres or to individuals, but declared sons totally unacquainainst the law, which gives to per appertaining to the dramatic art, an irresponsible power over it, every impartial voice should be lifted up." "The confidence in my system, said, have teliberately consenting to hazard one-third of their incomes in its support; and have volunteered myself still further sacrifices towards perfecting what is so far advanced; but as I cannot subject myself to the liabilities required of me, I have The antly and with deep regret resigned my charge untenanted. The holders of their patents are unable themselves to present the glorious works of Shakspeare to an English audience, and yet are armed by the law with I now, after all I have given and endured to maintain the drama in these theatres-were I excluded by circumstances I now am from them-to attempt in a theatre lately of brutes and bord Chamberiain 1 to attempt there acting a legitimate play, the law, ' with all their might punish me. May I not ask for what public benefit, or to law is framed, or for what one good purpose it is persisted in? In regard to the proprietors of this theatre, let me imputing blame individually-for many of them I enter tain the highest respect and esteem-it is the law runder which they act that I complain of, and condemn as the drama's worst enemy. In conclusion let me merely add gement have endeavoured to make your national theatre worthy of Shakspeare and of our country. In this attempt I hope have not entirely failed. I have at least striven my rould have you if, as should have been the case, this theatre had been adequately appointed. For that encouragement, ladies and gentlemen, I return you my warmest acknowledge
ments. To the respectable portion of the public press ments. To the respectable portion of the public press I
am anxious to offer the expression of my gratitude for its am anxious to offer the expression of my gratitude for its hanks, let me indulge the hope that time may bring about a better state of things, and that I may yet again,
under happier auspices, be honoured with your favour and approval. With a feeling of sorrow, but no desponding ladies and gentlemen, I respectfully and most gratefully
take my leave." Mr. Macready retired amidst loud and continued cheering.

## zlaba.

Court of Queen's Buner.- (Sittings in Banco.) - The
Chartists.-The Quega v. Mr'Douall.-Mr. Erle had to support

## the rule for arresting the judgment on the fourth count of this indictment, and before drawiag the attention of the Court parti-

 cularly to the count itself, he would pray their Lordships wouldbear in mind what this indictment did not charge. There were known offences of conspiracy, and several faral wespect of frioned for
and tumultuous assemblies ; but this and tumultuous assemblies; ; but this count was neither
conspiracy nor tumultuons assembling. The thrd ecult identical with the fourth,
chargin dearging the more aidng and abottung, it cl arged that the not framed for any offence that had a name in respect of which any precedent was to be found. He need not draw attention to were accessory, The indictment was framed apon the principse
of charging in the earlier part that some other persons as prin. cipal offenders were guilty of a principal offence whereof the He was to submit that dividing this indictment into abetting He was to submit that, dividing this indictment into two parts,
there was no offence charged in the first branch of the indict-
ment; and the latter branch of the indictment, impating that the defendants were accessories, was not sufficient to establis) that offence. The first part of the indictment charged no principal
offence; it was not a charge of conspiracy, nor was there a
charge of riotously charge of riotously assembling. The description given was,
"that divers evil-disposed persons unlawfully and tumultuously assembled together." If that did not constitute an indictable offence, he was at a loss to know how the introducing several
steps in the indictment could form an often could not be found guilty of riotously assembling. It was
essential that three or more should be charged, becanse the essence of the offence was, numbers should be assembled. (CO Litt., $176 ; 1$ Ventris, 251 ; , Salkeld, 934 .) It was essential that
the purpose of the assenbing was to disturb the peace, or that
the indictment should have gone on to show some act done in common by the parties assembled, which in itself would consti-
tute a riot, or breaking the peace; but it was consistent with tute a riot, or breaking the peace; but it was consistent with
the present indictment, that they might have assembled for the purpose of festivity or electioneering, which were legal assem-
blies, and the mere adding the word "unlawfol" would not nake the indictment good. The first step, therefore, did not show that the persons, being peaceable subjects of the realm, were incited to ceave their occupations and employments, and thereby labous
was impeded. Was there to be found in thatstatement anything
which, taken by itself, would constitute on ind Which, taken by itself, would constitute an indictable offence?
The result was no part of the offence, The mere impeding labour
was not an indictable offence. The nearest offence to this Was not an indictable offence. The nearest offence to this would
be that of assaut; ; but it would be inle to say that a party could
be convicted of an assault by circumlocution, such as was to be lound in this indictment.- Mr. Justice Wriliams.- If person would be an indictable offence, would it not?--Mr. Erle said his hlarge acts of volence. The prosecutors had abstained from
charing that the divers persons so asscmbled had done an act aw. The yesidue of the first brath the reach of the crimina an indictable offence by saying that they thereby impeded labour because that was merely the result. They ought to have been charged with an offence of a known name. Those who made criminal law. The count was bad on the ground that it did not
appear where these divers persons were assembled, There was
a point of a mir or description, which was that the duers persons
who were the pr, ne pal cffender, were netther named nir stated
to be minnownin, and in suppritt of thin arsument the learned
counsel cited the case of se The King counsel cited th

lect that a similar charge was brought against the lady by
Mr. Newton a few months since at Cheltentlam trates, after full investigation, dismissed the case. The hearing of the evidence occupied the court during three adjourned sittings, ducted his own case, and Mr. Humfrey appeared for Lady Ricketts.
Alderman Mnsgrove objected to Mr. Newton conductive his own case, and clecided that all questions should be putt throngh
him. Mr. Price, from the Audit-office; Mr. PIke, senior clerk
in the Pa in the Paymaster-General's Office; and Mr. Mr. Defaur, the Navy
Agent, were examined at great length. Mrs. Newton was then
examined, and distinctly stated that the signture examined, and distinctly stated that the signature to one of the statement created an extraordinary sensation, but it afterwards appeared that she had not seen her father write for fifteen years.
Two servants, who formerly lived in the service of the late Sir T. Ricketts, swore positively that he was quite childish, and daughter of the accused swore that the signatures to the three alleged forged certificates were in her father's handwriting. Mr.
Humprey made a powerful speech on behalf of Lady Ricketts, and brotheriding Alderman said, it was the opinion of himsel the charge of forgery, and therefore the case must be dis-
missed. The result was receis ed with loud cheers.

## SPORTIN

SPORTING.
Ascot RAoss, Tu®sDAY.-These races commenced this day
mader very unfavourable circumstances. The rain set in early under very unfavonrable circumstances. The rain set in early,
and continued withont ceasing throughout the day; the
approaches to the course were ankle-deep in mud, and the cours approaches to the course were ankle-deep in mud, and the course
itself in a state that lus rarely been equalled. The assembla was in keeping; the Grand Stand contained only the inveterate were almost tenantless, and the whole display was disheartening. $2=2 \pm=2$ xama Belly, beat Duhe of Bedford's John o Gaunf, 53 rs. Mr. Ohwer's
Girace Darling, 3 yrs, and 8 others which were not placed. Won
easily by two lengths. easily by two longths.
The St, James's Palace Stakes of 100 sovs, each, h ft; for
three-yr-old colts, 88 ft 7 lbs ; fillies, 88 st 4bs. Old mile, three-yr-old colts, 88 t 7 bs ; fillies, $88 t$ 41bs.
tsus. Lord Westminster's c by Touchstone out of Languish
(Templeman), beat Lord Exeter's c by Beiram out of Marnello Lord Bruce's c by Elis out of Rosalie; and Lord Jersey's c by Slane The Ascot Derby Stakes of 50 sovs. each for three-yr-old colts. beat Mr. Thornhil's Exixir; General Wyndham's c by Velocipede The Ascot Stakes of 25 sovs. each, 15 ft , and only 5 , \&sc., with 100 winaner of any handicap after the weights were declared thibs
extra; two miles and a half, 37 sulgs, 18 of whom declared

 couse. Ah Gaper, Lord Chesterifild's New Brighton, and Mr.
Rentinck's Gorturn
Grevile's Portumnus. Won cleverly by half a length. The Gold Vase given by her Majesty, added to a sweepstakes of

 The Coronation Stakes of 100 sovs. each, h ft for three-yr-old
filies, sst 7 Ibs each. New mile. 10 subs. Sir . Heathcote's La Stimata beat Lord Exeter's if by Jerry, out of Macrenma, Mr.

 and so for the second horse. Last Three-quarters of the Old mile,
18 suhs Mr. Wreford's f by Saltan, junior, out of Moolmia ( 31lvs), beat Colonel Peel's c by Touchstone, out of Vulture (3ibs, Colonel (31bs), Duke of Bedford's Panther, and Lord' $G$. Bentinck's Here-
 beat Colonel Peel's Garry Owen, 6 yrs, 9st 3rbs ; Mr. Balchin's
 threc lengths.
Who-yr-olds, 7st, and three-yr-olds, gst; fillies, kce., allowed 31 flbs. To start at the cup Course postand run in. 21, sabs. Mr. Ongley's
The Quen of the Gipsies, 3 yrs (Sly), beat Mr. Rogers's Amata, 2 yrs, Lord G . Bentinck's Best Bower, 2 yrs, and 7 others who
were not placed. Won in a canter by three leughs.
 Lev's Fairplay, Sir G. Heathcote's f by Velocipede ont of Countess,
Lond Exeter's $f$ by Beiram out of Datura, and Mr. J. Peck's Corodino. Won by tro lengths.
 Her Mrujesty's Plate of 100 guineas; three-yr-olds, 7 st 21 bs ; four, 9 st 2 bs ; five, 10 st; ; six and aged, 10 st 5 bss. From the New
mile post, once round and in. Lord Lowther's c by Bay Middleton, out of Silyertail, 3 yrs, beat Mr. J. Day's c cyy Emilius, out
of Kate Kearney, 3 yrs, Mr. Newton's Ma Mie, 4 yrs, and

 Dr. Syntax, 5 yrs, beat Mr. Pettit's. St. Francis, aged, Lord The New Stulkes of 10 sovs each, with 100 added, for two-yr-old
colts, 8st 7 lbs ; fillies, 8st slbs. T.Y.C. 35 subs. Mr. Crockford's Assay. (5lbs extra); Mr. Rawlinson's Charming Kate, and 5 others. The Grand Stand Plute of 1001 Once round and a distance.
Lord Exeter's Albion, 4 yrs, Ost $1016 s$, beat Mr. S. Scott's Mosque, 5 yrs, 8 st, Mr. Combe's Rosalind, 4 yzs, 7 st 1316 l , and Buckingham Paluce Stakes of 200 sovs. each, h ft, colts, 88 gt 7 lbs ;
fillies, 8st 31 bs ; 31bs and 51 b allowed, \&c. Swinley course; five sulbs. Colonel Anson's Napier beat Lord Westminster's Lan-
guish colt. fillies, 8st thlhs; Old mile; four subs. Lord Exeter's Wee Pet, MARK LANE, FRIDAT, June 16.--In consequence of the fine in the Wheat-trade; the holders of Foreign were not disposed to give way much in price, and the Millers were not inclined to pur-
chase at a trifing declme; bonded Wheat, of which there was a good sale on Wednesclay, was without purchasers to-day sarley is selling at the same rates, ant we do not observe any
alteration in Peas or Beans. The Oat-trade continues the same.

## SATURDAY, JUNE 24, 1843. <br> MEETINGS FOR T Tuesday, June 27 Wedinesday, June 28 <br>  <br> 

The Potato crop has of late years been seriously affected by a disease which consists in the production of tubers, instead of stems, when grow th first commences
after planting, and in the loss of all further power of vegetation consequent upon this malformation We have examined several specimens of the disease without succeeding in discovering the smallest trace of organic injury, and we feel satisfied that there is nothing in the visible formation of the Potato which will account for it. All the tubers, young and old, seem perfect
It is therefore probable that Chemistry must be called upon to explain the source of the mischief, and that some deficiency or excess of the proximate principles lodged in the tuber will be found connected with it. Although we have nothing positive to state facts which may possibly lead to the discovery. We all know that the Potato-shoots, when first produced, are fed by the matter lodged in the tuber from which the shoots proceed. That matter consists largely of starch; an insoluble substance, which only becomes capable of nourishing a young shoot by changing into gum or sugar. Chemists tell us that such change is effected by a form of matter which they name diastase, in which nitrogen is an element. Since we know that the quantity of azotised matter * found in the quantity of diastase also varies, and that in some cases it may be altogether insufficient to render the starch soluble, except to a small extent. If that were mable to grow into aprings froma a tuber, would be develop itself in an imperfect way, and remain as a little tuber, without any power of growing further.

This may be the history of the atisease in the Potato now under consideration; and if so, it would perhaps be removed by adding azotised manure; for the nitrogen that is required. It is true that diastase is a peculiar compound, and that we have no authority for supposing diastase itself likely to be formed in a Potato by the addition of azotised matter to soil. On the other hand, we know so little of nitrogen, and its important, that it is a fair subject of speculation. If leaves cannot decompose carbonic acid, except in the preserice of nitrogen, it may very well be that starch also cannot change into sugar or gum except in its presence, and that in any nascent state it may act just well as if produced by the decomposition of diastase We would recommend then those whose Potatoes are thus affected to manure them at once with water containing ammonia, This can do no harm, and may do good. Experiment, too, is somewha
favourable to the trial ; for lately, in the Garden the Horticultural Society, some Potatoes which had not made their appearance above ground at the time when others planted at the same time were in full Vegetation, were, at the desire of Mr. Edward Solly, watered with a weak solution of muriate of ammonia; when in a few days the leaves and stems came up and are now the most vigorous of all.

Tho important effect of the stimulus incessantly applied to Horticultuxe by the Horticultural Society Was never more conspicuously mamifested than on ress. The cultivation of some of the plants witquite wonderful, nor was the total absence of bad garexhing men less surprising. Royal Academy still are-a few noble specime of the Royal Acadeny still are-a few noble specimens of art, many good ones, and a great number that reflected no credit on the senders. But the latter class is now fairly eradicated, and it would have been difficult to to the grower, with the exception of one exhibition of

For
For this result, the Horticultural Society have an
out of their determined perseverance in refusing rewards to ill-grown plants, and in applying their ample funds to the encouragement of good cultivation instead of mere collecting. By setting their faces steadily against all attempts at obtaining prizes for plants merely because they were new, they have raised the standard of Britisi Gardening a thousand per cent., and placed it in a position from which nothing can now make it descend. Complaints have indeed
been made of the operation of this system, and a few gardeners have withdrawn from competition at Chiswick; but in doing so, they only prothe aimed their unskilfulness by tacitly declaring that the standard of cultivation fixed by the Society's while their places have been taken by better men, who have had the talent to appreciate the true principles of cultivation, and to apply them more skilfully than
has ever been done before to practical operations. The has ever been done before to practical operations. The
miserable Kalmias and wretched forced Roses, whose just condemnation a few years ago by the Judges produced so much discontent, have disappeared; and he would be a bold man who would now venture to proRoses in pots on Saturday last, it was better than those to which we allude, and it was the only instance really bad gardening which met our eye.
We would ask any unprejudiced person whether Judges had been weak enough to allow themselves to be intimidated into awarding high medals for low skill, merely because high medals were offered, and none but bad specimens produced. To have done apathy, but absolutely to discourage exertion ; because if exhibitors had discovered that the prizes were awarded under all or any circumstances, they would have had no motive to cultivate their plants better
than ordinary. Their great object would have been 0 ascertain what plants in their own possession were not likely to be produced or exhibited by others, and have easily sending them to the Garden they would reward. But the Judges stopped this promptly by declaring that they would not award prizes, whateve might be offered, unless the objects produced were
really worthy of the distinction; while, at the same time, they often marked their sense of really good rardening by increasing the medals promised by the Society.
Among the beautiful species that graced the tables Orchidaceous plants commanded the greatest admirasweetest, and the most graceful of these charming flowers, a hundred feet in length, formed a spectacle such as has never before been seen in Europe. Heaths, from Lucombe and Pince, of Exeter, exhibited among miscellaneous subjects, obtained Gold Banksian Medal, although nothing higher had been offered in that class than the Silver Knightian The large collections of Stove and Greenhouse plants from Lady Antrobus and Mrs, Lawrence were each so good in their way, that they both received the highes ofize; and no fewer than seventeen medals, altogether of new or rare ornamental plants. Such circumstances sufficiently indicate what this Exhibition was.
We were sorry to see some instances of exhibitors entering their plants in wrong classes, for all such instances are necessarily passed over by the Judges time, and were excluded altogether. We trust that hey will be more exact on a future occasion.
On Wednesday, the 12th of July, the last of these Exhibitions for the present year will take place; and it gives us great pleasure to announce the intention of
the Duke of Devonshire, on that occasion, to open his beautiful gardens and grounds to all the visitors to the Society's Exhibition. Few, except the personal friends of his Grace, know anything of this delicious residence, and the permission to stroll through so charming a retreat will, we are sure, be regarded by the visitors as au act of the greatest kindness on the part of the noble President of the Society.

There are many clergymen, retired merchants, and tradesmen, who take pleasure in rural occupations, but who would be afraid to embark in the precarious speculation of farming. A neat house or villa, with a good garden, and a few acres of land, naturally suit the otium cum dignitate of those who have been long engaged in the active pursuits of life and are now come to the age of repose, while they still want some stimulus to exertion, without much care or fatigue. From the questions which are repeatedly asked us on very simple subjects of practical husbandry, we presume that some general practical instructions as to the useful, if not profitable management of a few acres of land may be interesting to many of our readers, and useful to another class, whom we consider as peculiarly our scholars; we mean young
gardeners, who may often be intrusted with the management of such parcels of land in addition to that of a garden. We will therefore, in a few short articles, give some hints derived from actual practice, which may be useful to those who take pleasure in the occupations of the country, and who may not have leisure to read books on Agriculture, or to stady minutely the best practices of improved husbandry. lf our observations may appear trivial and our directions minute, we repeat that we do not write for experienced farmers, nor pretend to develop all the arcana of modern scientific Agriculture, with its references to physiology, chemistry, mineralogy, and meteorology, but simply to tell those who do not already know it how they may improve their grass-fields, and make the most of any arable land they may occupy, without being led into unnecessary expense or rainous expe-
To begin, we shall take a view of the best management of ten, twenty, or thirty acres of grass-land, arable land attached to it, and this will probably be the case with the rus of many of our readers.

There is no family so small but what will produce manure sufficient for several acres of land: garden refuse and pot-liquor with very little bran or pollard will feed a sow or two ; and as there is generally at least one horse kept for use and a couple of cows, a portion of grass-land for pasture and to make hay is great convenience. The stable-dung will probably be mostly used by the gardener for hot-beds, and if he be not restrained, the whole will be afterwards dug into the garden. There is no necessity for this when the soil of the garden is good and has been kept in tolerable heart; besides, much sweeter vegetables, if not so large, are raised where more vegetable than animal manure is used. Parings of grass where it grows rank and weedy, and sods taken from grips made to let off the surface water from clay soils, laid for a time in a heap and moistened with a little liquid manure and then furned over, will make the best compost for a kitchen-garden or to dig in around the roots of fruit-trees and shrubs: this every good gardener knows well. What we would now inculcate is
the economy of manure, so as to have enough for the the economy of manure, so as to have enough for the garden, and also for the grass-land.

The stable and cow-house and the pig-sty are generally looked to as the great sources of manure-so they are on a farm; but where there are only a few acres of grass-land and no great quantity of stock carl be kept, it is the house which is the real producer of manure, and that it may be so, there must be an arrangement of drains and tanks so that nothing shall run to waste. If a new house is erecting, the plan of ommon sink with a proper barrelled drain, by whis a all refuse liquor is carried to some convenient spot out of sight, where there is a copious well-cemented tank, arched over, with an opening or door through which arched over, with an opening or door through which
it may be occasionally emptied and cleaned out. It it may be occasionaly emptied and cleaned out. It
should be divided by a water-tight particion into two chambers, so that one may be emptied gradually while the other is filling. Into this tank should be brought all the liquid parts of the dung of the animals, and all the water from water-closets, soap-suds, \&rc. ; in short, it should be a universal receptucle for all waste liquids. Close to the tank should be a square pit walled round, to receive all the litter from the stables, and the solid refuse of house and garden, excepting that which the pigs will eat. Into this pit should be collected the mowings of the lawn, the sweepings of the gravel-walks, and all the leaves which can be colected. If the heap is moist it will be in a constant state of decomposition, which may be artificially assisted where there is an opportunity, by occasionally adding some liquor from gas-works, or guano, merely to excite fermentation; but this is not essential, if the tank-liquor be occasionally pumped over it ; sods and earth may be added if the decomposition appears to go on very rapidly. The whole may be turned over now and then to accelerate the fermentation, or be trod close to check it. In this way a"sufficient heap of rich compost may be obtained which will manure several acres of land. If there is a large tank the liquid should be pumped into a large cask set on wheels, and let out through a hole in the lowest part of the cask, so as to flow on a board set slanting under it, to spread it over a certain space as the vehicie moves on slowly; a bung or valve keeps the liquor in Thit arrives at the place which is to be manured This may be done in spring and after hay-making, hoosing rainy weather in preference. No one who had not seen this plan in operation would imagine that from a moderate family and only one horse, a couple of cows, and a few pigs, ten acres of grass-land could be manured every year, and thus twenty or thirty acres kept constantly in good heart. The first expense is not great. The common drain carrying off all refuse liquids to some distance from the house contributes to its salubrity. The effluvia of a well-managed dung-heap are always keptdownand absorbed by earth, so ss never to offend the senses, besides being out of
sight. In short, this arrangement is the basis of all further proceedings, and the money expended upon it is a capital which will pay a most excellent interest ever after.- $M$.

Our readers will remember the extraordinary aquatic plant, named after her present Majesty, and the anxious desire which has been felt to procure it in a living state. A year or two ago, a small number of seeds reached England, and were dispersed among a few gardens, but they invariably failed. We are therefore most happy to direct attention to an advertisement in this day's Paper, announcing the arrival of a fresh supply, from Mr. Schomburgk, who has also directed that all the purchasers of the seeds formerly sold shall be supplied with other seeds without charge. Thus we hope this magnificent flower will be at last secured to our gardens.

REMARKS UPON THE CULTIVATION OF TERRESTRIAL ORCHIDACEE.
By Frederick Otto.-(From the Gartenzeilung.)
IT is well known that the Orchises of the north of Europe seldom thrive in gardens. The principal cause of this failure is no doubt the neglect of the rule, that all plants should be transplanted when they have arrived at the greatest perfection and have completed their gay flowers. The inexperienced eye cannot distinguish a large part of these plants before they are in blossom, nor afterwards, when they wither and are hardly visible aboveground ; so that it would seem as if it were indispensable that they should be transplanted when in their tenderest state, if they are to be had in gardens at all. Neverthe-
less, all cultivators agree as to this time being the most less, all cultivators agree as to this time being the most
unseasonable of any. It is, however, possible to transplant unseasonable of any. It is, however, possible to transplant
them when in flower, if they are taken up with a ball of them when in flower, if they are taken up with a ball of
earth at their roots, so that neither the roots nor flowerearth at their roots, so that neither the roots nor flower-
stalks are injured; and this is tolerably easy, because a great part of the Orchises grow in damp meadows, where the earth which surrounds the roots does not readily fall off; and in such cases the plant may be removed without its growth being injured. But in the absence of this pre-
caution, it is idle to transplant Orchises during their time of growth. Their roots would never recover the injury caused by suck disturbance, and we should wait in vain for their re-appearance the next year

The best time for transplanting Orchises is really in autumn, when the plants are in a state of rest; and the they are almost withered upon the ground. There can be no doubt that this is the proper time for transplanting ; and I find that our species brought from the Tyrol, Switzerland, and Italy, where their Lubercles have been properly preserved, will unfold in the following gping, and produce stron
But this is not all that must be attended to. When our native species are transplanted into gardens great care should be taken as to their situation and soil. I have often remarked that they grow much better if placed between other plants, as they there find themselves in
their natural situation. And this is an additional reason their natural situation. And his is an additional reason
for the opinion I bave already mentioned, viz., they sloould for the opinion I have already mentioned, viz., they should
be brought into the garden not only with the whole of be brought into the garden not onll of earth, but also with all the sorts of plants their ball of earth, experiso with all the sorts of phatever attention we may pay to our Orchises, and however exactly their natural soil is imitated, yet if they are cultivated in neatly-kept beds, they never thrive so well as if they stood
among the other plants which naturally surround themamong the other plants which naturally surround them--
a peculiar quality which appears to be well worth attention.

It would be well to find out whether this species retain this habit in other gardens. Experience has taught that the greater part of the Swiss and Tyrolese Alpine Orchises, as well as those from the south of Europe, are best cultivated in pots; but in this situation the plants weaken from year to year, until the tubercles at last disappear.
If we would retain them longer in our gardens, particular If we would retain them longer in our gardens, particular attention must be paid to the soil in which they grow ;
and it would probably be best to cultivate them in boses and it would probably be best to cultivate them
which may be covered during the winter month.
In conclusion, it may be useful to those who would collect the northera species and introduce them into gardens to know the situation and soil in which they naturally grow. With this view I submit the following list :Malaxis paludosa, upon very wet peat earth, among Sphagnum.
Corallorrhiza innata, upon stumps of roots in wooded peaty marshes
Liparis Loeselii, in peat meadows, among Sphagnum. Orchis morio, in meadows and pastures.
palustris, in damp meadows, often half under water. mascula, in meadows and pastures
pallens, upon chalk in mountain meadows. variegata, in loamy m
militaris, in meadows.
fusca, upon chalk in mountain meadows.
coriophora, in meadows.
", ustulata, in meadows.
sambucint, in meadows
maculata, in very dry meadows,
latifolia, in meadows.
Anaeamptis pyramilialis, in meadows.
Gymandenar conopler, in meadows.
Platanthera bifolif in dry meadows, on mountains, and in forestr.

Herminium Monorchis, in meadows.
Ophrys Myodes, in shady forests, particularly upon chalk
arachnites, in meaduws, also upon limestone.
apifera, upon limestone hills.
Epipogium Gmelini, upon mouldering roots of trees, in mountainous woods.
Spiranthes autumnalis, in meadows.
Neottia Nidus avis, growing upon roots of trees in woods. Listera ovata, in damp places in common woods,
cordata, in mountain meadows and woods.
Epipactis latifolia, in forests.
atrorubens, in mountain woods, particularly upon limestone.
viridiflora, in shady places.
palustris, in meadows.
Goodyera repens, in Fir woods among moss.
Cephalanthera rubra, in shady woods
ensifolia, in shady forests.
Cypripedium cal
TRELLIS FOR CLIMBERS.

## ON RENDERING VINES PRODUCTIYE.

 SEEING some remarks by "Mr. R. Errington," at page Roberts's Treatise on the Vine," reviewed by you at $p p$. 103 and 119 , has iuduced me to forward the following, which is merely a copy of a short communication given to Mr. R. Thompson, of the Horticultural Society' B Garden, the thanks of the Society for forwarding my Grapes.The Grapes forwarded along with that communicatio
The Grapes forwarded along with that communication
were of the third crop, from Vines planted in the beginning of May, 1837.
The object in view when planted having been obtained -viz, a plentiful supply of fruit in as short a time as possible, -I forward the account of the mode of treat-
ment adopted, for the benefit of those who may be simiarly situated.
Two Vineries were erected at Hawkstone, Salop, (the seat of the Right Hon. Viscount Hill, ) in the spring of 1837-the one for an early, the other for a late Honse.
The borders were thrown out three feet deep and thirty The borders were thrown out three feet deep and thirty
wide ; and after taking every precaution necessary for preventing a stagnation of water, they were filled up with the following mixture, viz. :-
To every six loads of turfy loam were added-one load To every six loads or cury ooa were added-one load of well-rotted manure, one load of leaf-mould, haif a load being well incorporated and siightly trodden, the Vines were planted in the following manner:-
Having selected them principaily of one year's growth from the bud, with from three to six feet of well-ripened wood, after removing all the buds except the leading one, and having slit them under every other bud (previously removed) and placed a small piece of decayed wood to keep it open, for the purpose of making them root more one-third decayed tan, one-third sand, - part of the above compost was laid on the surface of the prepared borders, when the Vines were laid on it, and entirely
(except the leading bud) with the same mixture.
That year they were allowed to grow without stopping the leading shoots, many of them exceeding 20 feet in feet of well-ripened wood, thicker than many which i have seen of three and four years' planted Vines.
On commencing to force the early Vinery, in March, 1838, by proper attention to heat and moisture, there were few buds that missed ; the result was a supply of Grapes from July, 1838, to February, 1839.
In 1839, the forcing commenced in February, the Vines being previously pruned on the close-spur system, the
supply of Grapes lasting from June, 1839, to March, supply of Grapes lasting from June, 1839, to March 184 the 1840 the early Vinery
In the year 1840, the early Vinery was commenced in January, the Grapes accompanying my communication
to the Society being part of the produce.
To this I may add that, after the
filled in with stones, the border was perhaps not more than two feet deep. But planting the Vines is nothing to
the means you must use for bringing them on afterwards as without attention to their daily wants you cannot be certain of success, though you may, by chance, hit the mark. As facts are not easily disputed, and as your Chronicle is widely circulated in this and the surrounding counties, I beg to inform your readers that l have this season re-laid on a similar plan two vineries, wich Vineyard," or other respectable persons who may feel an interest in scrutinising the effects produced.-James Maodonuld, Mount Shannon, Castle Connell, Ireland.

## AMATEUR'S GARDEN.-No. XXV.

I AM sorry to find that the remarks I made relative to the spot on Mr. Cock's Pelargoniums have given offence, for in referring to them I merely wished to show that the A mateur could not be survised at his plants beingattacked, since the best cultivator in the country had not been able to avert the disease; and I regret it the more because, as Mr. Cock has publicly denied the statement, he has compelled me, in justice to myself, in the same manner to pelled me, in justice to myself, in the same manner to
prove that if I was in error, that error originated with Mr. prove that if I
The facts are these : in looking over the grounds of the Duke of Devonshire, at Chiswick, early in February, I noticed to Mr. Edmonds that his Pelargoniums had the disease, and the conversation turning upon the subject, stated that Mr. Cock was in trouble about it, and a short time before had destroyed some of his plants, alleging that if he did not it would spread through the whole collection. I mentioned the subject again to Mr. Edmonds on Saturday last, and he assured me he perfectly recollected, to use his own words, "the earnest manner in which Mr.
C. spoke of it." . spoke of it.
Had Mr. Cock addressed me privately in this matter I would with pleasure have modified or withdrawn the statement; but as he did not he must not now blame me for clearing myself, though it be at his expense. As, however, it appears Mr. C. experienced no difficulty in ridding his plants of the disease, I am sure he will be conferring a great favour on a number of the readers of the Gardeners' Chronicle, both amateurs and practical gardeners, if he states the particulars of the treatment to which his diseased plants were subjected.
The learned President of the Microscopical Society assures me there is no trace of insects in the leaf of the diseased plants, and therefore I suppose all my former speculations are worthless. Indeed, no person, with the exception of Mr. Cock, appears to understand the disease, as one attributes it to cold, a second to deleterious particles in the soil, a third to damp, and so on ; almost every person ascribing it to a different cause. But let its origin be what it may, it is pretty certain that it is a contagious disease, and that neither heat nor cold, nor drought nor moisture, will prevent it for any length of time ; but if the infected part be merely pricked with the point of a penknife when first perceptible, the disease will not spread any further in that part, as I have satisfactorily proved within the last fortnight; I therefore still say, prevent its spreading as far as possible, and in every available manner.
Never, in the whole course of my practice, had wesuch
an unfavourable season for flower-gardening, for in thousands of instances half-hardy plants are not so large as they were six weeks back; and now, instead of drench. ing rain, we have parching days, and cold dewless nights. But what is to be done? Why, in many cases, tender spring-propagated plants must be taken up again, and the beds planted with something more hardy; and those that are left must have the soil well stirred about them to the depth of two inches, to make a light surface and prevent the evaporation of moisture. Peg the plants down as they require it, and train them so as to cover the ground as require it, and train thera so as to cover the ground as taught me, and that is, that in this uncertain climate there is no dependance to be placed in spring-propagated there is no dependance to be placed in spring propagalled
plants bedding out. Circumstances have compelled plants fol bedding out. Circumstances have compelled since March, and in almost every instance they will be a month later before they are in bloom than those propa. month in the autumn. I can therefore with contidence say to the inexperienced,--if any one tells you that suring is the best time to propugate plants for bedding out, do not believe him.- W. P. Ayres.

## HOME CORRESPUNDENCE

Heating Apparatus.-I observe at p. 345 of the Gardeners' Chronicle a second inquiry respecting bottomheat by tan, similar to the inquiry at p. 305 by "A mateur."
The following plan may be relied on as having been fairly The following plan may be relied on as having been fairly proved at Fortan Cottage, near Lancaster, the residence
of $R$. Tangue, Esq., and it has far exceeded his expectations for raising seedlings and keeping plants in winter. By a sliglat inspection of the figure it will be easily understood. An inclosure is made 12 ft . long, 5 ft . wide, and 2 ft . high, and is covered over with stone flags. Then there are placed thereontwo and a bed frame sand quantiny in them is place the seed-pans and pots to siand upon. A fire is made in the in-
time, - that is, after a quantity has been got into the in-closure,-so that, at night, a turf is laid on the hot ashes, and will keep burning all night and maintaining the heat in the inclosure; and if the day is fine and sunny, there
needs no turf putting to the ashes, but if the day be wet and cold, then turf may be applied, and the heat will be kept to what is required. To supply moisture in the frames it only requires the sand to be watered. At one end of the inclosure there is a small door for supplying
the fire. Where turf is not to be had it may be done with the fire. Where turf is not to be had it may be done with
wood or sawdust; the whole is a very triffing expense, and may be made to any size. I have taken away part of the inclosure and the frame for the purpose of showing the inside of both.-M. Saul, Garstang.

Wheelbarvows.-In filling earth into a wheelbarrow with a spade, it is no uncommon thing for the spade to
strike the end of one of the wheelbarrow bandles, and take part of it away; what remains is generally smoothed with a knife to prevent the hand of the person from being injured, and by repeated strokes of the spade, and repeated paring with the knife, the ends of the hands of the and are very unpleasant to work with. By way of experiment, some years ago. I had the ends of one protected with shields of iron, which have answered all that was required and made to fit the ends of the handies, which is commonly of an oval shape. Two holes were made in each nails. The spade and the shield have come sometimes in contact, but the shields have preservel the wood from being contact, but the shields have
injured.- Peler Mackenze.

Excavation of Trees by Birds.-The Parus, or, as it is called by some, the Titmouse or the Blue-mope, does much mischief in gardens and orchards by picking off the tender buds of trees. Thirty-one species are scattered over It is a very fertile tribe, laying from 10 to 20 eggs at one hatch. They feed on seeds, fruit, and insects, and a few on flesh. Most of them are fond of the brains of other birds, which they get at by cleaving the skull of such as
they find dead. They are restless, bold, and cruel to birds they find dead. They are restless, bold, and cruel to birds
less than themselves, and will attack such as are three times their own size. My attention has been drawn for some time past to a pain of those birds, which have built their
nest in a tree by the side of a road along which I have to nest in a tree by the side of a road along which I have to
pass. A description may be of interest to others. The tree is an Elder. It is about 4 feet high, and $10 \frac{1}{2}$ inches in diameter; and an Ivy plant has grown upon it, which gives it a most beautiful effect-the top having been cut off some years ago. The first time my attention was
drawn to this tree was by observing a bird peening from one of its cavities. On examining the tree, $I$ found the entrance no larger than I could put the end of my finger in, and I should not have supposed that there was such a thing in the tree if the birds had not come out at the time I was passing. I was therefore induced, at different times, wl:en I first observed them, they were just commencing to excavate the interior of the tree for another apartment and as the one picked off the wood in the new apartment,
the other brousht it out and dropped it at a distance from the tree, in the being discorered. But on the 12th of May last it was found by a lad who was passing by, as a bird was coming breaking into the tree to get at the nest, which he found contained 8 eggs. It so happened that I shorty after examined the wonderful work that those two birds had nchieved. There is a passage between the two apartments. year, as there was an old nest which the been made last discovered. The first had been made last year, the other in the present year. The entrance from the old one was which was just above the side of the nest. The wood of the tree was scooped out about 4 inches by 3 inches, being centre, and which was lined with a little fine moss. The wood was picked, and formed as finely as if it had been cone by the hands of man. An engraving, representing entitled "The Builder," but it is very incorn since met with another of these nests in the stump of an old Sycamore tree, and which I have no doubt has been occupied several years by a pair of those birds. There
is only one apartment in this tree, which has but just been found out, on account, I suppose, of its requiring a carpenter's axe and much labour to come at it.-M. Sau Garsfang.
Bees. - "A Lady" has requested me to state how swarms
are to be taken off artificially, and to give the dimensions of the hives I recommend; if I induce a few apiarians to keep large hives, and adopt the artificial system of swarm-
ing, I shall do some good; and I am fully aware that Mr. Nutt and his disciples, with Mr. Wighton and his, are pursuing pbantoms. Mr. Wighton says, in his answer to against lseeping them. How galling it is to have the number of Bees reduced instead of having a bellglass of
honey!" What ! does the swarming of Bees reduce their number? No, it increases the number two or threefold.
Three or four Queens are breeding instead of one. All systems that prevent Bees from swarming are not profit two swarms will be taken from every stock every year and if the year be propitious, one or two beliglasses of he cottager, whose paramount object is profit, that Bees,
when kept in one apartment, gather a third more than when kept in two. Therefore, he will find it more lucratop, unless the hive by ekeing, than putting a box on the the price of run honey. The hives of which "A Lady" the price of run honey. The hives of which "A Lady" wishes me to give the dimensions are from 20 to 24 inches
diameter, and from 12 to 15 inches deep, for first swarms; and a little less, and deeper in proportion to size, for second swarms. Shallow hives are not good for winter stocks, though Bees can put more honey into them than into deep ones. We take off swarms thus :-Blow a little smoke from cotton rags (rolled up in the shape of a candle) into the hive, which stupifies the Bees; lift the hive off
the board, and place it a few yards from the stool with its crown on the ground; place an empty hive of the same size on it, and tie a cloth round the joining of the hives to keep in the Bees; place the hive that the young colony gently on the old hive for about the space of ten minutes to make the Bees run into the empty one (the warmer the nigbt the faster they run); take off the topmost hive, and place it on the ground with its mouth up-spreading the the swarm. She is easily known; as soon as she is seen shake the swarm into the hive that is on the board, and about the usual number that go with the first swarm, but this must not be the rule; for there must be as many left in the old hive as will cover and bring out the brood. If must be removed for a few minutes; if too many, place it on the board for a few minutes. The old stock place yard to the right, the colony a yard to the left of the old have found artificial swarming to be very profitable indeed. How galling it is to stand for days beside a hive, and see knowledge and poverty of genius is exhibited in doing so ! What an incalculable loss !-A.A Pelligrew, Wroth am Park uently seen in the Chronicle Limewater recommended for destroying worms, and by one correspondent Cor osive Sublimate, both of which I admit are very goodnature, will never be generally used, while the former is nature, will never be generally used, while the former is
not easily procured by some-and as I was very much annoyed by the worms getting into the pots, of which have five or six hundred, and nut a place where I can set them in the summer season, excepting round the edge of the grass-plot, I have used for this last three years Chloride of Lime, and I have found it quite to my wishes. The quantity that I use is about an ounce to eight gallons of water, and I have never found it to hurt or discolour a leaf as I have frequently watered the beds, plants, and grass plot all over. It kills the moss on the latter; but what find it the most useful for is about every month to wate round the pots, that it may run underneath, which it quickly does, the garden being on the descent; and by making the water a little stronger, and applying the brush gently to cause it to go over every part at the same time, Lime in a his is going from gardening) for destroying the smal bugs that fowls are infested with. All fowls are not troubled with them, but where they are, they are a great iest; so should, she is in ecarcely a hen will sitits time, and to bring the chickens up. By throwing a few handsful from them. They are very small, only whitey-brown. I only know that they are very busy hey will make full employment for The Lily of the Field.-Some time since (vol. ii. p. 744 ) we ventured to express our confident belief that the Lily Mount, was not, as is commonly supposed, the White Iily. And wegrounded our opinion upon the absence of A kind correspondent has just found in the Holy Land Prom a gentleman resident at Aleppo, who completel confirms our conjecture. He says: "Although I have resided long in Syria, I am imperfectly acquainted with the botany of Aleppo and Whethoch Lily in a wild state no lave I heard of its being so in Syria. It is cultivated here on the roofs of the houses in pols as an exotic bulb, like the Daffodil.
Mulberry Trees.-About 11 years ago I put a very small Mulberry tree into my garden. It has grown very 1839 to 1841 -it produced a good deal of fruit. In 1842, bowever, I had scarcely any fruit: the tree was full of blossom, but it was all false blossom, and fall on. Thi I shall have no fruit. The soil is a black common soil; near the tree I have Strawberien- inquire how I had bete nothing this year. May I beg to inquire how I had better [See a leading article a week or two ago.
Autumn Souing of Annuals.-I beg to call the atten tion of sowe of your numerous readers, more particularl the amateur, to a subject which mean that of sowing hardy Annuals 10 stand over winter for early suminer flowering. Although there is perhaps little original in the practice followed here, I will describe my method for the benefit of the amateur, who generally is anxious to make his week of October I sow my seed, on a fine day, in beds,
n a situation that is sheltered from cutting winds, but ing the beds moderately firm with the feet and air, tread plants are moderately firm with the feet, as the young firm as on a soft bed, and to be thrown out by frost on a Nothing more is bed, and Anishis. of wilh the rake. until the following A prily, except keeping free of weeds, whir the for there in to plats to frower. I then transplant row of the apart, and at the same bed. By this method I have wo them on the same bed. By this method have two crops on the bed the same si the 1st of May throughout the summer and autumn months: I slso follow the same practice in planting patches in the mixed border by dropping in seeds of the same sorts. The sorts I treat as above are Plectoitis congesta, Collinsia bicolor and grandiflora, Clarkia pulchella, Gilia tricolor, Eutoca viscida and E. Manglesii. The Nemophila insignis and atomaria are both very hardy to stand the winter, but I prefer sowing them where they are to flower. The above will all withstand he severest frost if the beds are firm, moderately sheltered and on a ary bottom. And I believe as many more might be added equaily hardy, but these present a sufficient variety to be interesting.-G.W.G.L.
Wrens.-"Peter Mackenzie's" paragraph, in your Number of June 10, reminds me that in Gloucestershire it a common traditionary persuasion that the male Wren is ess. tenant of a nest which he occupies in single blessed met with these nests, and a uously, "Oh ! it's only a bach.elor Wren's nest." There is mostly some foundation for these articles of the popular Melons.-If "I. H. S." will grow his Melons about eight or ten inches from the glass, he will find them answer very well. I have grown them so for four years in two light frames, and have invariably ripened eight in each light, the produce of three plants. I have them ow eighteen inches in circumference hope to hear again from this correspondent.]
s this time of day you will carcely believe that the great proportion of practical for or ralsing Asparagu, chielly because toes not accord they to they cling to the old azy fashion of trusting to covering them up with manure before winter, and cutting only shoot here and there in sping, allwing of coase the pith and essence of the plants to we the as hetore in weak shoots, which they permit to spindle up from the first, and especially the weakly ones. In your las Number, June 10, there are very good hints givell on this subject, but they are not specific enough, as I venture to think, to cause uninitiated beginners to adopt you suggestions, and far less to induce the old gardener to abandon his prejudices, especially that class which is in service, and has the ear of the master or mistress, who are in general themselves iguorant of kitchen gardening and permit themseives to be overruled by men who are too often most distinguished by their obstinate resistance Thererying new wirch they themselves do not suggest more are few things that di-fashioned gardeners swag are about than the produce and managemeat of the very ration hings which you have treated of so well asd a ragus and Phour tion of the Potato itself is not more simple and common place than is the But will this be admitted and acted on by those who having served a routine apprenticeslip in order to befit themselves for managing gentiemen's gardens, devote their attention much more to the treatment of the forcing house, the conservatory, or the Melon and Cucumbergarden? I font mo you to instruct us how to cultivate successfully the classes of vegetables which require several years to bring them to perfection. Asparagus being a great favourite-I should say the greatest of these-and the present being the proper season for carrying in to execution the excellent views which are expressed in general terms in your last Number, I would suggest to you the advantages which would accrue from a set of general rules being immediately promulgated as to its cultivation during summer, now that the season for cutting is over. It is but justice to you to say here, that on reading the first paragraph in the Chronicle which I noticed this spring on the cultivation of Asparagus, I caused my Asparagus beds to be cut clean over as with a sythe, then Ihad a considerable portion of them dressed Fith guano, at the rate of four cwt. to an acre of land; and from that day to this I have not allowed a single shoot to run up, not caring whether they were fit for table use or not, but cutting everything off the beds whether small or large-and I have had far better Asparagus as well as much more of it than ever before. Has my practice in this squared with the advice which I understood you laid down? Next let me ask, should seed now that cutting for table-use is at an end? if not, say how these should be selected, restricted, and regulated, for this point is one of great importance with the uninitiated, when contending for a better system with those who can boast of having served an apprenticeship to and manuring Asparagus, being new in these parts, will probably be stoutly disputed, unless you shall fortify your recommendation from authority,-Robert Wallace, Kelly. the gardeaers in our correspondent's neighbourhood. That
persons are to be found who refuse to alter any part o
their practice, however defective, is no doubt true ; but this occurs with others quite as mauch as with gardeners, and is the inevitable consequence of bad education and a
want of intercourse with the world. We must say, however, that the really respectable of modern gardeners are not open
to the complaints of our correspondent. With regard to the treatment of Aspraragus and the necessity of improving he usual way of
are few better kitchen-gardeners than those round London, and yet their Asparagus seems intended
rather than a tender and delicate esculent. If we can find
leisure we will comply with our correspondent's wishes, by
putting directions for its cultivation into a specific form management goes, all that is necessary is to water it with while the plants are growing; to preserve all the shoots, Nothing strong, and thet them a a natural deat Nothing can be worse than the practice of some people to die naturally. If it were possible to prevent the formatio that can only be done by hand-picking the operation will probably be found too tedious.]
File-Droining.-In your last number you have quoted largely from a correspondent in Kent (Mr. Hammond) description and small size-so much so as to admit seven thousand being drawn on a waggon; this to us in with one horse over common country roads, is something astounding; and your correspondent would do a great
favour, were he to state the size in length, breadth, and thickness of the Tiles he alludes to, and their weight b the thousand. I shall offer no apology for making this give information on any subject in which the comfort or prosperity of the people are concerned; and that guch ted customs, and to overrule prejudices of long standing PROCEEDINGS OF SOCIETIES

## 

## 

was a magnificent specimen, proving that the species may be
rendered of a close habit by proper attention s Acrophyllum

specioss, in a large and small state, splendid; a well-covered
trellis of Tropeolum tricolorum, on which there was not an inch trellis of Tropæ'olum tricolorum, on which there was not an inch a large Leschenauttia formosa; Azaiea Danielsiana, and Hibbertia (unninghamii in good order; a handsome Leschenarlitia very like C. specirsissimum. In Mr. Goode's collection there
was a pot been exhibited, and was of a first-rate character ; a beautifully
cultivated vigorous and richly flowered plants of Cleroderutron squamatum;
three Polygala cordifolia in the finest condtion; several Pimelea decussata of a great size, one of which was losing its flowers ; Leschenafltia bilobagrandiflora, a charming plant, with dazzling
blue inflorescence; a gigantic Stephanotus floribundus, clothed abundantly with both leaves and blossoms, the latter lovely and
fragraut in the extreme; Apheleas se: a very close head of bloom; very splendid Azants of Epiphyllum
speciosum, and Corcus pretty specimens of Pimelea rosea, Pavetta caffra, twelve feet palli, in a standard, exyuisitely beautiful : Erythrina Cristabular trells, from which the branches all stand out and give a
rather rather natural aspect, while extreme denseness is attained. A
third great collection by Mr. Redding, gr, to Mrs. Marryatt, of note in it were Aspásia epidendroudes, a only plants worthy cans: Maxillária aromatica, flowering in profusion; a healthy
Brássia caudata; large specimens of Céreus speciosissimus and
Pimelea decussata; Marica cerulea, and Cátleys Mossipa Pimelea decussata; Marica cæerulea, and Cáttleya Mossixe. A
small group brought by Mr. Pawley, of Bromley had in it an small group brought by Mr. Pawley, of Bromiey, had in it a nice
dwarf Rondelétia speciosa; a similar Ixora coccinea; Mahérnia incisa, a pleasing cone of pretty red flowers; a large plant of a
species of Sinningia, probably velutina; Azalea Danielsiana, in a healthy dwarf state; Acropera Loddigesii, surrounded with pendulous flower-scapes, Mr. Hogan, gr. to H. Puwnall, Esq., were a good specimen of Fuchsia fulgens, of an in exmensent size, but more noticeable for foliage there were many exhibitors of Heaths, and in some of the col beauty, Perhaps the most conspicuous group was one from Messrs. Lucombe, Pince, and Co., of Exeter, made up of twenty-
one varieties of E , ventricosa. As a whole, this collection produced a most enchanting effect, and the individual specimens were each from 18 inches to two feet in height, broad, compact,
and similar contribution from Mr. Brazier, gr. to W. H. Storey, Esq.,
Isleworth, consisting of 8 seedling varieties of E . vestita. Judging by the well-known difficulty of growing these plants perfectly, ties were distinct. A more general collection, exhibited by Mr. perspicua, vestita coccinea (particularly fine), inflata, an ex-
tremely tall specimen, with few flowers: Cavendislii, well grown; intermedia, something like E. Bowieana, dwarf and close; Westphalingia, finely managed ; and the curious and wellgrown gnaphalioicles. Mr. Green had E. jasminoides, , small
plant; Beaumontiana, handsome; perspicua, remarkally merto-
rious. splendens, excellent: a very fine propendens; ventricosa superba, in a magnificent state; and some other rich specimens eso were a superb E Cavendishii : Humeii, fine ; Westphalingia, very healthy; gelida, extremely good e and some Park, produced E. translucens, four feet high, a glorious speci-
men; tricolor, fine and ternse; jeest icua nana, cicecdingly lovely; and splendid varieties of ventricosa. E. tricolur, perspicua, Westplialingia, and several of the ventricosas were par-
ticularly fine, from Mr. IIunt, gro to Mis Traill. Mr. Bruce, gr.to
B. Miller, Esq., hroughta noble E. tricolor, an excellent E. Cavendishiri, and a few admirable ventricosas. Mr. Jacksoll, nursery
man, of Kingston odorata, a gigantic jubata, which was only partially in flower;
a very spreading, rather bare E. tricolor; a capital Cavendishil; Daphnæffora, large and dense; and a pretty specimen of baccans. propendens, in a pleasing state; spuria, three feet high, excel-
lent; with elegans, small and compact, were from Mr. Frazer,
nurseryman nurseryman, of Leyton, Essex. From Mr. Pawley, of Bromley, we
noted a fine E. Cavendishii, and some large ventricosas. Shown as single specimens, there was E. Cavendishii, excessively rich, and
 new species, called E . pulverulenta, of a curious upryht nabit, eem to be covered with a whitish powder: this was from Mr. Dawson, of Brixton Hill.
The climbing plants were not generally conspicuous, and there In this we remarked, Stom Mr. Goode, gr. to Mrs, Lawrenhat beart-shaped leaves, which bave silender hairs round the edfe, and chose of some On flowers, which have curled petais, and lonk lat. There are likewise a species of Cyclogyne, with liandsome prirple only just begirning to bloom; Troper olum edule, exceedingly show y; T. pentaphyllum, pretty good; Poivrea coccinea, excellent; Ipomea tyrianthina, splendid, but the fluwers closing
in the afternoon a arge Echites suberecta; a capital concal plant of Hardenbérgia monophylla, Aristolochia ciliosa, a nicely-
grown Manettia bicolor, and the brilliant blue-flowered clitoria
ternatea.
Two collections of Cacti were brought by Mr. Falconer, gr. to A. Palmer, Esq., and Mr. Bruce, gr. to B. Miller, Esq. In that of low standard, and of Jenkinsonit. That of Mr. Bruce contained splendid specimelns of Ackermami and speciosissimum, a contcal trellis, and covered with fowers. The main point that we noted in these collections was that all the other species are grachness, orm, as standards or dwarf bushes. The last are obtained by twisting the stems of the stock round a small trellis, and cover ing them with scions of the required species. by Mr. Goode. great variety, comprising some magnificent things, and severa plants that were new to these shows. As instances of cultiva
tion, the Pimelea decussata. more than four feet in diameter shown by Mr. Poole, of Leyton, Essex ; Styifunm fasciculatum probably the most remarkable plant at the exhibition, by M Mountjoy, Ealing, Siphocampylus betulæfolius, equabe, Pinct
four feet in height, with branches extending to the same breadth,
sheeted over with small white blossoms, and stated to be evergreen and hardy; with an Epacris grandiflora, four feet high, of
most superb description, by Mr. Frazer, of Levton ; and Acrophyllum venosum, in the highest perfection, by Mr. Redding, gr to Mrs. Marryatt, were among the most extraordinary, and
could hardly be surpassed. of new plants, or sach as have not could hardly be surpassed. Of new plants, or such as have not
been long introduced, there were Nepenthes ampullacea, a been long introduced, there were Nepenthes ampplacea, a
novel species of Pitcher-plant, with beautioully motuled and
fringed pitchers, by Mr. Mylam, gr, to S. Rucker, Esqo. Euxemfringed pitchers, by Mr. Mylam, gr. to S. Rucker, Esq.; Luxem-
burgia ciliosa, a fine plant. with ciliated leaves, and showy
 which have a slighty fringed marrin, also from Mr. Smith,
Statice macrophylla, having peculiarly farge leaves, and flowers resembling those of S. arborea, by Messrs. Lucombe, Pince, and
Co of Exeter ; ansecies of Lathyrus, with ornamental redish
and

 species included a Kallmia latifolia, on which almost all the
Howers were so close a ato thuch each other before they opened.
This wasfrom Messrs. Rollison, Tooting, and excited much notice Hotiea Japonice, extremely well managed, and profusely decked
with its white feathery spikes of flowers, from Mr. Reding, gr to Mrs. Marryatt; Gompholboium polymorphum mejor, trained
to a kind of pillar, and very beautitul, from Messrs. Lucombe, Pince, and Cor a fine species of Gesnera, of which the plant was
both large and handsome, from Mr. Hunt, gr. to Miss Traill ;
 for its deep blue flowers, a food specimen, from Mr. Hopgood, Krown, from Mr. Brace, gr, to B. Miller, Esq. Achimenes longi-
Hora, not remarkable, from Mr. Stanley, gr. to H. Berens, Esq.; Vanda teres, very pale, from Messrs, Lucombe, Pisce, and Co;
Oncledium microchilum, from Mr, Hunt, thales macrophylla, a good but rather straggling plant, from Mr.
Hayes, High Beech, Essex; a pale biue towere Leschenaultia,
from Mr. Goode; and from the same, Elichrysum retortum, weli treated and singular, Fuchsia corymbilo ora, handsome, with a Very rich specimen of Gloxiniz maxima.
For the prize offered for Fuchsias there Messrs. Lane and Son, of Berkhampstead, and Mr. Catleugh,
of Hans-street, Chelsea. In the last-named collection, the Inest sorts weere-Venus victrix, a beat-ifinul and very distinct
kind; conspicua arborea, resembling Chandlerii, but having a kind; conspicua arborea, resembling Chanclerii, but having a
more erect rigid habit, and brighter scarle corollas; arborea,
from which the previous one is only slightity different; magnifica, with extremelly short and spreading flowers-a aood variety;
Salter's splendens, a large flower, though defcient in colour; Salter's splendens, a large fower, though deficient in colour,
and Buisti, a small-flowered kind, like formosi elegans, only
rather more slender. Messrs Laneli, very compact in habit, a free bloomer, and having handsome flowers, tricolor, with a pale blush-coloured calyx, of
Which the tips are tinged with green, and a deep crimson
corolla-a very pretty variety formosa elegans, the habit of purples Grenvill, which is near Laneii, onily it has a somewhat penni, which flowers with astonishiug freedom, and is a tolerwhworthy of record, in respect to the varieties; but the speci-
unens were
 Bually great binssoms, but the specimen shown indicated tte
most rampant growth, though we understood it had been some-
 very long crimson calyxes, and purphish corollas. Mine towery
appear hardy to expand sunficienty; though we are informed
that this circumstance, and the cumparatively loose charac er o the specimen,
werm housc,
In regard to the Roses in pots, there were but two collections, and one orthese was or quite an inferior character, having in it
tall stragelirg and standard specimens, yon means pleanig to
the eye or well-grown: this was from Mr. Dennis, of Chelsea, and the Duchess of Buccleuch wwas the finest plant in it. The
other, from Messrs, Lane and 'son, of Berkhampstead, was much better, still the plants in it were, rather pretty little specimens
than fine and highly-cutivated ojjects. What is desired in this
class of plants is
strone specimens, whether bushes or dwart class of plants is strong specimens, whether bushes or dwart
standards, bearing from 20 to 30 exuanded flowers, and tupwards Whereas those which have been shown are young plants, with
from three or four to eight or nine expanded flowers, and only prom three or four ofect by being groped together, not tas sepa-
rate objects. Some of Messrs. Lane's plants were, however, very good, considering the sorts; though decidectly the most
dearable plan of proparing these snljeects is to take the well. dierrabe pernens from the olien borucrs, and pot them for the
grown specme
pur
 Bourbon Phenix. Several good collections of (nt Roses, were
exhibuted, and, as usual, attractell nuach of the ermpanl) by their exhiuted,
fragrance.
the names

## sea, and twelve good plants of the (ilobe scarlet compactum

 Caines, for Argo, Rival King, Lass of Richmond Hill, (names were
bst to the three others). For Shrubby Calceolarias in 6 varieties, tese were also grown in slate pots, with a profusi ha of blwor ;

 Conssted of his fine spotted and mottled raxieties, and comprised Cometitor, Elysium, Princess
Vannevelde, Mary,
Boz, Adveuturer, Surprise, Deitcata, Exciter
 Ine, and the plants vigorous and healtby; and there was less ever wit rememerer to have seen. The ounly ouve thal was sar bel hind
iti Competitor was that placed next to Mr. Dobson's, whose plants
were uniform in appearance, and well managed. Mr. Gaines in'
his small collection exhibited Nymph in fine order, and with a
greater head of greater heald of bloom than we rempmber to haver seen upon this
variety. The Sylph also among Mr. Catleugh's large plants was a fine object. The flowers in Mr. Hunt's oplants (in the larger
collection) were remarkable for their size, but this experiment we thouglt carried a little ton far, as some of the flowers 1 ost cha-
rneter.

 uniform in size and in their head of bloom, containing the follow-
intig varieties: Luvy, Leonora, Erectum, Susanna, Martha, scarlet Cleopatra, Evening Star, Meteor, Lord Chancellor, Geraldine,
Luna ; the ovther collection to which the silver Kniighliann was given was from Mr. Hunt, gr. to Miss Traill. These flowers had no name
attached, and from their reciving the smallest medal offered
by the Society, it is evident the judges did not consider them cul tivated with the skiv1 and pertection experten in this class. MM
Catleugh and Mr. Gines contended for the gold medal in this
Class as nurserymen. class as nurserymen; their collections were both fine and well
ccultivated: Mr. Catleugh's was decided to be the better of the Mo, his plants were-Paris, Hannah, Gipsy, Priory King, Hebe
Madame Taglioni, Jubilee, Troubadour, Queen of the Fairies Gaines, whose collection contained Lady Sale, Rising Sun, Jubilee, Madelina, Eximia, Euterpe, Ginsy, and Orange Perfec-
tion. In collections of 12 varieties in pots of 12 to the cast, in ee Amar's Class, the silver medal was obtained by Mr Duke, Ovide, Arme, Erebus, Bleda, Jut ilee, and Annett, these
plants were large, finely grown, and well boomed. The large ilver was awarded to Mr. Hunt, fr. to Miss Traill, for Jubilee,

 E. Bell, of Chelsea Hospital, for Joan of Arc, Comte de Paris, The tent set apart for seedlings was, as on former occasions,
an object of much interest ; this interest was in no degree abated on the present occasion, for it was literally crowded with spec-
tators till the close of the gardens. There was a large quantity tators till the close of the gardens. There was 2 large quantity
of Seedling Pelargoniums from numerous growers, but thi
number of really fine flowers, of these which cotel on this beautiful class towards greater perfection, was very
limited, and few were considered by the judges as fulfiling th1 desirable end. The specimess from E. Foster, Esq, of Clewe
Manor, claimed, for novelty of colour and sterling properties
sity principal prizes having been awarded to three out of his collec.
tion of five, and another variety (Pheton) was cousidered lyy the judges as not sufticiently expanded to be a fair subject for exami
nation. In the stlection of the Seedlings for the prizes the
Silver Knightian was awarded to Mr. Whomes, gr, to E, Fosler, Esqer Kor Phitian. a nos awarded fower. The under petals are of a light
rosy salmon colour, and the dark maroon bloteh in the npper petass neariy covers their surface, leaving the edge of a light rosy
maroon. The flower is large, of a fine cupped torm; the petal received a Silver Banksian for the Duke of Devonshire, a flowe
characterized by extraordinary richuess of colour, white centre,
the lower petals terminating in a rich purplish rose, vemed of the luwer petals terminating in a rich purplish rose, vemed of
deeper colour; the upper petals are deep and fine in colout,
velvety in texture; the blotch is very dark, clapoing crimson carmine to the edge; the flower has great substance
the petals being thick to the edge and perfectly even. A second
Silver Banksian was also awarded to Mr. Whomes for Robustum This vaniety has rosy purple under petals, broad and finely
formed, and so perfectly even on the edge, as to have the appear
ance of being cut by a sharp instrument; a slight tinge o crimson surrounds the blotch, and the petals have a rosy purpie
tinge at the edge. There is a slight nnevenness in the uppe seedling named Princess Alice, bright salmon pink under petals crimson, leaving a narrow margin of rosy verminon round
the edge. This is a remarkably clear and bright flower, of good form, and finely cupped; the edges of the upper petals ar
slightly serrated. A certificate was also given to Mr. Ingram, o
Southampton, for Corinthian, a pretty tiower of good properties it is of a good form, and cups well; the centre is white, with the dark and even. In addition to the seedlings in pots, there wer
cut blooms froin Mr . Pamplin, and also a collection from Mr Rendle, containing several of the new Devonshire flowers. W
also noticed in a collection (we believe from lucombe, Pince $\&$ Co.), a single flower of a seedling named Defiance, which pro-
mises well. The seedling Calceolarias were not numerous; there
were some curious varieties, but not an advance poon some previousiy exhibited; one only was selected by the judges, from Mr
John Standish, of Bagshot, called Iluminator, good in form, and novel in marking; the ground-colour is yellow, and the flower is
covered with brown spots, leaving but small portions of the was awarded to Mr. Neville, for a seedling Pink named
Brilliant, a very pretty and compact flower; and to Mr. G
Yiper, for a seedling Cineraria named Princess Rnyal, white Piper, for a seedling Cineraria named Princess Rnyal, white
tipped with purple, with a scent like that of the Heliotrope

[The excessive length of this report compels us to defer all others till next week.]
NOTICES OT NEW PLANTS WHICH ARE EITHER MEDINLLA EFULGROPGYLA, Reddish-leaved Medinille. (Greenhouse Shrub.) Melastomacee. Decandria Monngynas.
-For the introduction of this handsome shrub our cultivators
are indebied to his Grace the Duke of Devonshire, whose col are indebied to his Grace the Duke of Devonshire, whose col-
lector, Mr. J. Gison, found it on the Khosea, hills, which con-
stitute a part of the Himalayan range in the East Indies, and
broupi lowing season. Being a free-growing plant, which is readily
multiplied, it has been so distributed since that period that it is tow in most of the principal nurseries, and in many private gar-
dens. Its chief characteristics are an extreme bealthiness of aspect, very ample and finely-formed foliage, an abundant procapacity of thriving well either in a greenhouse or stove. The
blossoms are borne about the months of June or July, and last a very loog time. They appear in clusters on the lower and naked
portions of the stem or branches, and are not much unlike those of the Peach, but less spreading or cup-shaped, and with dizer
ently-arranged stamens, which stand out rather prominently, reddsh tmge, from which the specific name is derised. After-
wards they become purey, though pale, green. Noticing it in
the miscellaneous matter of the si Botanical Repister " Dr. Lind ley says that "it is apparently very near M. rubicunda, a Suma tra plant, with the leaves obtuse at the base. One of the prinin the form of 8 very small lobe, quite at the bat it only appears opposite the anterior auricles. The species is quite a Medinilla
in habit." It is a plant of easy calture, growing freely in a
mixture of tury loam and heath-nould. with sorne pleces of

[^9]great perfection, treats them in the following manner The depth of the trenches in which they are grown being entirely dependent upon that of the springs by which they
 nearly as possible, a regular depth of three or four inches can be kept up. These trenches are three yards broad, and the bottom is made nuite firm and slightly sloping planted, the bottom is made quite firm and slightly sloping, so that the water which flows in at one end may run out at the
other. If the bottom of the trench is not sufficiently moist, a small body of water is allowed to enter to soften it. The Cresses are then taken and divided into small sets or cuttings, with roots attached to them; and these are thrown over the bottom of the trench at the distance of 3 or 4 inches from each other. The Cress soon attaches itseif to the damp earth; in three or four days the shoots straighten and begin to strike root. At the end of five or
six days, a slight dressing of well-decomposed cow-dung is spread over all the plants, and this is pressed down by means of a heavy board, to which a long handle is obliquely fixed. The water is then raised to the depth of 2 or 3 inches and never higher. Each trench is thus seplanted annually, and furnishes twelve crops during the 15 or 20 days, but less frequently during winter. Care is talen that, at each gathering, at least a third part of the bed is left untouched, so that neither the roots may be exhausted, nor the succeeding gathering delayed. After every cutting, a little decayed cow-dung, in the proportion naked plants, and this is beaten down by means of the rammer above mentioned. After the Water Cresses have been thus treated for a twelvemonth the manure forms a tolerably thick layer at the bottom of the trench, and tends to raise its level. To thrown out upon the horders which separate the treache from each other. These horders may be plated wit Artichokes, Cabbages, or Cauliflowers, which will here attain a great size. Cress-grounds should always be at a distance from trees, on account ind pick out. There are two wants and require much time to pick out. There are two weeds which, even in the cleanest Cress-grounds, can scarcely be kept under; these are multiply so quickly, that unless carefully rooted out, they do great injury to the Cresses. The Zannichéllia may be kept under by careful handweeding, and the Duckweed by raising the water so as to make it float above the
Cress-plants, when it may be skimmed off with a besom. Cress-plants, whe

A new Tree Pcony.-We understand that Mr. Van Houtte, of Gbent, has in his possession a new Tree Pæony called the "Triumph of Malines," which is remarkable for its beauty. Its flower is said to have the appearance of a cluster of Rhododendrons, forming a pyramud almost to be deep Amaranth. We presume the variety will soon be in the trade

Seedling Caclus.-We have received from Messrs, Davies \& Co., of Wavertree, specimens of seedlings, having flowers which share the form of the latter and having fowers which share the form of the latter and
the red colour of the former. Two fine varieties are before us; the one with large blossoms, very like those of before us; the one with large blossoms, very like those of
C. grandiforus, of a pale red and rather dull colour, and the other somewhat less like C. grandiflorus, of a richer hue, more resembling C. speciosissimus. There is much grandiflorus, are said to remain perfect for two days. We have also received from Mr. J. F. Wood, a flower o a seedling which grows in the way of the creeping Cereus,
and which was obtained from speciosissimus, which is asd which was obtained from speciosissimus, which is
supposed to have been accidentally fertilized. Its flowers are in the way of Ackermanni, and exhibit very slight traces of the beautiful parple of speciosissimus. They are
however handsome, and the plant, with the pendulous however handsome, and the plant, with the pendulous
habit of the creeping Cereus, must have a striking habit of the

Ceylon.-We have much satisfaction in announcing the appointment of Professor Gardner to the charge of the death of Mr . of Mr. Gardner, and the practical acquainanedge tropical vegetation gained by him in hiaintance with Brazil, render him peculiarly fitted for such an appoint ment, which cannot fail to be a gain to the colony.

## GARDEN MEMORANDA.

J. Moss, ssq., otterspaol, near Lieprpool.- This phace is plea-
santiy situated on und lation of surface. The kitchen and fritit-gardens are well con-
ducted, and are kept tery clea ducted, and are kept very clean. In the forcing depiartment
observed an exceltent crop of Grapes and some good Pmes. one of the plant.houses axe some very lerge healthy bulbs of the ably fine plants of the Gloxinia maculats, which some remark leaving only one stem to form a a plant. In the house devoted to the cultivation of Orchidaceons plants is a very large specimen
of Cattley a Mossixe, it is the ongmal plant imported by thie libera proprietor ot this place, and from which the figurer was taken for
the Botanical Magazine. At the time of nur visit it had twelve informed by the intelligent gardener, Mr. James, the others in flower, we observed Cattleya Forbesii, Among ampliatum, 0 . Lanceanum, O. pumilum, and a fine plant of

Prize Essay of the Wetherby Agricultural Association, on the Application of Rape-Dust and other Hand Tillages. By John Hannam. Longman. pp. 35. We have perused this Prize Essay of Mr. Hannam's with great satisfaction, and do not hesitate to pronounce it to manuring. He does not confine himself to the ostensible subject of Rape-dust and similar artificial helps to vegetation; but he gives a very clear and concise view of the theories of modern chemists and physiologists on the practice of the best faxmers is in perfect accordance with the latest discoveries of eminent chemists in the composition of vegetable productions. The whole is clearly stated, and we can sately recommend
consideration of practical farmers.- $M$.
CALENDAR OF OPERATIONS for the ensuing week, Tras flower-gardens at shrubland Park are open to the public every Fridan, while the family is passing the gay season in I. ondon,
Among other parties, we had three schonls over the grounds lately

 along the lewns, Inore orderly than grown-up people eften do. They
were particulariy interested when 1 tol them how we made the standard Roses by hudding; and as this may interest other young peo-
He, now home for the summer holydays, shall tell them, as I I romised Inst week, how we gardeners bud Roses and other plants. But the
best way to learn his, or anything else which hardeners do, to to see
one do ot. Now, if you have a tharp penknife, and a litice ball

froin this branch. There is a bud at the botom of each leaf on the
upper sidie, and every one of these buds wculd malke a branch nex Year, if lefet to themselves, and they will do so if you take them off
the mother plant, and insert them within the rind of another Rose shoot or branch, and this is called budding. When you make a pen yout in the same way. Yout take onf a a silice of bark, and a littile of
juse wood, about anl inch long, and the bud in the midele of the
the siice, then make a cut in the bark, where you want to put in the
bud as long as the slice, and at the upper end of the cut manke
竍 nother cut acros, and the two cuts will form the leter T. Now
opert the bark a little on hoth sides of the first cut with your pen-
 square with the cross cett, and it will licit in close. Then you t.e the
loose birk over the slice with your worsted, and turn it ruand and
round till you cover all the cut, only feaving the little bud in the centre free, for fear of smothering it. Now the work is finished ; and ail buds are put in in the same way by almost everybody. 1 .
sometimes, however, practise $a$ different mode, which $I$ want to disclose, for the consideration of established practitioners. It is this:
when a friend sends you a Rose-shoot in 4 letter, ten to one if the buds on it are half developed, and of course you throw the shool
amay as useless. But if you take out the incipient buds, with half the thiekness of the shoot, along with them, the top part s santed off
wedge fanhion, and the botom sqared. you can take out simina
piece of the stock, and work in your bud after the manner of side prect of and not one out of a score of them wall fail, and this is the
great way to work them in spring and autumn, when the bark does
gur not rise freely. 1 - - KITCHEN-GARDEN AND ORCHARD.
Prxgs. - Now that we are in the heart of their growing season,
let us supply them abundantly with the usual stimuli of kiquid
 for this treatment suits the fruiters also at this time till the fruit is full swelled, When the over-moisture must he given up by degrees.
ViNERY. The bunches of the latest Vines are now in most places in a forward state for being thinned, and as these are to stand over
the dullest months of the year-November and December-they ought to be well thinned of their berries. You may also push theni
on with a strong moist heat until they are swelled to their utmost
 push them in the autumn to colour them.
fruit, the trees and all parts of the house being well washed of the with the engine. If pou end this growtha as you began it last
December ; that is, letting it finish gradually in a gente moist hast, with plenty of tir, the trees alould be in a good condition for the
next crop.
Figs. The second crop of these is now in a forward state; the
trees want abundance of moisturc at all periods of their growth, and trees want aumndance of moisture at all periods of their grow th, and
more particularly when swelling their fruit.
current then of air, and syrninge them frequently over-bend. have a free Mk LoNs.-A thrity, strong plant, in n fresh, rich. soit, will teach if uch a plant has not tren kept thin of sloots from the begnnning,
these are now crowded in inextricable confusion, and the more you prune them after this the perhaps.
CUCOMBRRS on the ridges are now growing away with great free-
dom they do not cover the space allotted to them, regularl

 them clean; and they will require less water if the beds are covered.
About the end of June and beginning of July, as the early Pea
and Beans are cleared off the ground, is the usual time planting out Broccoil, Bruse ells siprouts, Savoys, gce., but if room of orther cropes that are expected to come of soon. No one ever
think of plating any of the Cabbage tribe without first manuring
the the ground.

SEEDLING FLORISTS' FLOWERS.
Ts.-J. $C$.-None of your seedlings
glargonicms.-J. C L.-None of your seedings possess the qualities of good flowers; they are bad in form and very thin.
dark spot in the upper petals; the flower cups well, and retains
its form it is a fine clear, brilliant, and desirable fower, decidedly the best in the collection. The petals of Devoniensis had all fallen, but jndging from the shape of them, the flower
must be a bad form; it is a high-coloused variety, with too must be a bad form; it is a high-colonjed variety, with too
much feathering seen in the centre. Aspasia was also seen under similar circumstances, and from the eyf talazice of the the ground-colour appears uncertain and too much mattled.
Hecuba, too comman; and Sulvator Rosa is too tringed to be of ans use No 5 I., too Long and loose. Hermione, bad form,
all the petals toro long. Princess Alice is no in all the petals tho long. Princess Alice is no in privement; the
fower is small and wants thiliancy. Formosi is a flower of
good form, whitish centre, very daik spot, the remainder of good form, whitish centre, very day spot, he remainder of
the flower pink; a clear flower of a good cul p d form. Cberon, good form, with distinct spot, a pleasing flower and rather
novel in colour; if it outgrows the nnevenness in the upper
putals it promises to bect me a desiratule flouer petals it promises to bece me a desirable flower. Antonius is a
dower of good culour; but what remained was not sufuclently expanded to enable us to judge of its mirits. Zitania, pretty
colour, with distinet spot, but all the petals appear to be rather
 hands, and is well known for its pure and splendid colour.
Imogene, lower petals broad and well formed; of a very delicate puk, approaching whiteness, Jarge spot nearly cosenit the
upper petals; this changes to rosf crinsor, leaving the ediges
of the petais pmik, the reathernig is nearly obliterated. This s a large und very fine rariety. Seedling No 10 , somewhat
like, but inferior to, Princess Alice. Enchuntress Superb, under boraer of white; it is a brilliant flower, of a geod cupred form, but the upper petals are rather 100 high. Modesty is a
large showy seedling, somewhat in the sty le of the Syluls, but of a deep bright rusy pink, white centre, lower petals broad
and well formed, spot small, dark, and terminating abruptly; if this flower retains a goud cupped form, it will prove an attracstance, they appear to uant firmuess. Seedhng 11 , too muck
like Modesty, and the uuder petals not so well formed. $/ 1$ ed worth and Celestial we have not seen in perfection, and as these
flowers enjoy cunsiderable reputation in Devonshine, we must was tuo far gone ; it is a vers large and bold flower. Redworth appears to want brightness; the blue in the centre $r$ ns fluwer.-James Best.- Your seedling belongs to a race lorg
since discarded; it is bad both in form and colour. - Cuptrin to the form of the flower; the upper petals are rather pointed, and the set of the side-petals is very peculiar and objectionable, side petal being drations ay form the botto flower, by the aupears to open too fint, this circumstance is, however, diff-
cult to decide, from the pip beng cut off so short, that the flower will not revive suffciently in water to enable us to Constellation, good in colour only; these seedlings belt 2 g g to a racter, pointed upper petals, small spotal, a great deal of -E.H. M. and Contre, and the petals all narrow and long. me present day. 2 is pretty in colour, spot small, wi h too has considerable substance, but the colour is objectionable. No. 2 is too much fringed, and cull in colour -C. W. T.stance, and the petals do not appear to unfold well; ; Spartam,
Cora, Isubella, and Attruction, hate the sanie tathes;
 varreties of the same character, officient both int form and sub-
stance, the petals are loug, natow, and than.-. S B. - Yur
seedlings are all flowers of the same character, they are very deficient in substance, the petals generally ate long and poimted; best in the collection.
ucksia. $M$. C. T. - Your Fuchisia is a rich coloured and fine
variety, similar to upon the habit of the plant whether it is a oesirable nuwel y.
ANsIzs.- N. N.-Yur seedhugs are not \&qual to the present
race of these beautuful flowers. No. 50 is the best, but we have several purple sells very superior to it, $51,52,53$ ase uf no
use; 54 and 55 will make very pretty torder varieties. The ground.colour is inuperfect in both, the lower petals being Eliza is a good flower, large and round, the ground-solour
pure white, the ey dark and fine; the upper petals are of dep
blue purple, a broad belt of the same cout suric lower petals; the petals lie flat, but the edges want a little substance; the ground colour wauts purity; it is tho undecided
for a show fower. Talntu Las a blotched and fine ese, but
the Murchionness of Thomond, a gond sized and well-tormed light purple colour upon a creamy ground; there is a delicute
tilige of light blue on the edges of the petals; if the colours prove permanent it will form a desrable variety. Ludy $d e$
Vere, a flower of the same character, with a tinge of blue on this has some resemblance to the two last-mentulued flowers, is a deep brown, from which proceeds a s ellow thige, making
the ground-colour in this petal uneven; ine upper petals are ground-colour, with a blotched eye ot a bright light purple, very delicate and pretty: we should like to see blo ms again,

## NEWS OF THE WEEK

In the House of Commons on Monday, Sir J. Graham stated that it is not the intention of Government to abandon any portion of the Factories Bill except the Educational clauses, and that they have no intestion to introduce any olber measure the suje and attributed the aile sat of decision in dealing with the religious classes of the community. The bill, after some further discussion, was then passed, in order to have it printed in the amended form. The adjourned debate on the Irish Arms Bill is not yet terminated: on Monday a motion for throwing out the bill was negatived by a majority of 154 ; and after seven nights' debate on the preliminary stages, the House last night went into committee on the bill. The first clause provoked an animated discussion on Irish affairs; and the
postponement of the clause was strongly urged. The House, however, negatived the motion, but ultimately the committee was adjourned to Monday. On Tuesday the second reading of the Townshend Peerage Bill was carried by a majority of $104 ; \mathrm{Mr}$. Hawes's motion on the Danish claims was negatived by 57 to 42 ; Mr. Crawford's motion for a repeal of the Septennial Act was rejected by 46 to 23; and Captain Berkeley's motion condemning the conduct of the Admiralty in fitting out the old class of ten-gun brigs under commanders, was rejected by 75 to 41. On Wednesday the Princess Augusta's Annuity Bill was read a third time and passed; and the second reading of Lord Worsley's Bill for the inclosure of waste lands in the country was carried by 64 to 4. On Thursday, the Sugar Duties Bill passed through committee, after two divisions on amendments ; the first, proposed by Mr. Ewart, recommended an equalization of foreign and colonial sugar duties, and was negatived by a
majority of 85 ; the second, proposed by Mr. Hawes, majority of 85 ; the second, proposed by Mr. Hawes,
recommended the reduction of duty on foreign sugar to 34s., and was negatived by a majority of 81 . Last night, on the motion of the Chancellor of the Exchequer, the House resolved itself into a committee on the Excise Acts, and adopted the Government resolutions for the reduction of the duty on Irish spirits.
From France we have accounts of the debates on the various items of the Budget, and of the continued determination of the Commission to enforce a reduction in the expenditure. An animated debate is expected on the Army Estimates, in which the Commission propose a reduction of 14,000 men, and nearly eleven millions and a
half francs on the demands of the War Minister.-From half francs on the demands of the War Minister.-From Spain we have additional particulars of the progress of the
insurrection, which appears to have assumed a more favourable aspect notwithstanding the occasional excesses which have been committed. The Regent has determined to put himself at the head of his troops, and suppress the rebellion in person. He has issued a Manifesto to the Spanish nation, declaring that he will folfil the duties imposed on him as first magistrate of the nation, and defend them as becomes a soldier.

## 敃口me Nems.

Court.-Her Majesty, Prince Albert, the Prince of Wales, and the Princesses, remain at Buckingham Palace, and are in excellent health. On Saturday Prince Albert went to the "ast India Docks to inspect the "Victoria
and Albert "yacht; and in the evening the Queen and and Albert" yacht; and in the evening the Queen and
Prince honoured the Italian Opera with their presence. On Monday the Prince presided at a meeting of the Fine
Arts Commission, and dined with the Duke of WellingArts Commission, and dined with the Duke of Welling-
ton at the banquet given by his Grace in commemoration of the battle of Waterloo. On Tuesday the Queen held a Court, at which the Prince and Princess of Oldenburgh were presented to her Majesty, and several noblemen and gentlemen had audiences to deliver the Insignia of different orders of knighthood worn by deceased members of
the respective orders. The Queen and Prince Albert attended the Italian Opera in the evening. On Wednesday the Prince held a levee by desire of her Majesty, Which was very numerously attended, and in the evening the Queen and the Prince honoured the French plays with
their presence. On Thursday Prince Albert attended the ceremony of opening the Museum of George the Third at King's College. Her Majesty will hold her first draw-ing-room for the season on Thursday next, at St. James's and returned to town on Monday, on which on Say he parday, dinner party at his residence in St. James's Palace. On Monday evening the King honoured the Lord Chancellor with his company; on Tuesday dined with the Earl of Wilton ; on Wednesday attended Lady Peel's assembly, and on Thursday dined with the Duke and Duchess of Buccleugh. - The King of the Belgians arrived in town yesterday, to be present at the marriage of the Princess Augusta, which will take place on Wednesday next.-
Viscount Hawardenand Capt, the Hon. A. Duncombe, R.N., Viscount Hawarden and Capt, the Hon. A.Duncombe, R.N.,
have succeeded the Earl of Warwick and the Hon. Capt. have succeeded the Earl of Warwick and the Hon. Capt,
Hood, as the Lord and Groom in Waiting on her Majesty.

## 1 faretan.

France.-The Paris papers are still occupied with
the debate on the Budget. The estimates of the Minis ry the debate on the Budget. The estimates of the Minis ry of Foreign Affairs gave rise, during its discussion, to some
mention of the treaty of commerce between England mention of the treaty of commerce between England
and France. M. Guizot said that the project of the treaty with England dated before his Ministry. It went as far back as 1839, and therefore the distress of the last few months could not be attributed to it. Government
would always negotiate with a due care for French would atways negotiate with a due care for French
interests. The Budget of the Minister of Public Instruction gave rise to little discussion. The Commission and the Chamber curtailed the Minister's list of two inspectors professorship of Chinese, with which he professed himself much pleased. The administration of the royal library gave rise to a variety of censures and remarks; but on the whole the Budget passed without much debate or vention to the Italian Opera, and transferred it to the Odeon, where the successful tragedy of Lucrece has been lately brought out. On Monday the Conmission refused the Army Estimates. All the efforts of the king and the Ministers, and all their arguments about the stato of

Spain, failed to make an impression on the deputies. The Commission proposed a reduction of 14,000 men, and nearly eleven million and a half francs, on Marshal Soult's demands. The Cabinet procured a meeting of
the Commission on Saturday, and four of its members the Commission on Saturday, and four of its members who attended it earnestly entreated them to relinquish
the reduction. The Commission met again next day, and the reduction. The Commission met again next day, and
almost unanimously persevered in their proposal. The almost unanimously persevered in their proposal. The
discussion on this portion of the budget was to commence discussion on this portion of the budget was to commence
on Wednesday or Thursday, and there was every reason to anticipate that it would prove a very animated one, - A serious panic was produced in the Bourse last week by
the alleged arrival of unfavourable news from Spain, and the alleged arrival of unfavourable news from Spain, and the Opposition papers insinuate that it was produced by the connivance of the subordinate officers of the Govern-
The Journal des Debats admits that several Spanish refugees have just re-entered Spain, including Gen. Carsy, one of the ringleaders in the insurrection of Barcelona in 1842. Some of the other papers supply additional information on this point. La Patrie announces
that General Naryzez left Paris on Monday week, after receiving instructions from Queen Christina, and that he is repairing to Andalusia.
Spain.-We have accounts from Madrid to the 13th inst, at which date the capital remained perfectly tranquil. twenty-four hours South was, that Grenada had asked twenty-four hours to arrange a capitulation. General
Alvarez, however, would, grant no terms, and the Revolutionary party in Grenada then determined on resistance, and General Alvarez was preparing to attack the town. The junta of Malaga was dissolved, and another junta the assistance of troops. The news of the events of Valencia, announcing the breaking out of the inaurrection and the flight of Generais Valdez,
with the wife of Gen. Zurbano, on board an English brig-of-war, had reached Madrid on the night of the 12th. It had created considerable sensation, and the Regent had been much affected by the defection of General Zabala,
whom he had long considered as one of his most attached whom he had long considered as one of his most attached
friends. It was said, that after declaring in favour of the friends. It was said, that after declaring in favour of the
movement, he had resigned his command. The Regent has determined to put himself at the head of troops, and march without loss of time on Valencia. The 7,000 men left there by Zabala had joined the movement, to avoid bloodshed, but wele averse to it, from its and Absolutist character. Señor Camacho, the
Carle political chief, had been enticed to a parley by the consignal for disorder, and the means of its succeeding. The body of the unfortunate chief was dragged through the streets by a rope. A letter from Reus states that after a bombardment of six hours, which had much damaged the had refused surrendered at discretion. Gen. Zurbano who was obliged to quit the town. Zurbano remained master of it the entire day of the 12 th , and had disarmed the inhabitants. Reus was perfectly tranquil and in his
power on the evening of the 12 th . Lerida had sent away the movement party, and remained true to the Paway The son of Zurbano was master of Gerons, and stood firm; the garrison of Figueras remained in its fort; and the Commander of the fortress of Montjouic has positively refused to give it up, or receive the Catalonian officers named by the Barcelonese Junta to command it The Captain-General Cortinez had previously issued a proclamation announcing his allegiance to the principles of the Junta. The Regent has issued a decree appointing
General Seaone General-in-Chief of the united General Seaone General-in-Chief of the united armies of
Valencia, Arragon, and Catalonia, and directing the Captains-General of those districts to obey his orders, as respected military operations. The Captain-General and
M. Mendizabel had a long conversation on the morning of M. Mendizabel had a long conversation on the morning of
the 13 th with the Regent. the 13th with the Regent. Nothing had transpired as to What passed on that occasion, but it was reported that, from Valencia, the Regent was advised to yield to the motement which was becoming general, and to request him from his present difficulties But all this advice was offered in vain, and it is positively asserted that Espartero replied, "No, gentlemen, I never will yield. I know that in hand." to die like a soldier on the field of battle, sword generally believed that the appearance of the Regent at and that he will effectull aguin be attended with success, National Guard of Madrid are still unshaken in their attachment to him, and are fully expected to justify the confidence he will repose in them by committing the young Queen to their charge during bis absence in the
disturbed provinces. These impressions are confirmed by isturbed provinces. These impressions are confirmed by address to the people of Spain. In this important document he declares his determination to fulfil his duties as first magistlate of the nation, and to defend them as
Porrval
Portugal.-We have advices from Lisbon to the 12th inst. Tranquillity prevailed at Lisbon, and the Spanish
disturbaaces had not had any corresponding effect there. The Cortes had been occupied with various Government projects. An address to the Queen, praying her to con-
sent to a diminution of income in consideration of a necessitous state of the country, was met by the Ministers declaring that her Majesty had again given up 50 contos this year, and the King Consort 40, and was rejected by 89 votes against 4. An address of thanks both to the Queen and King Consort on the occasion of this conces-
sion was carried by 72 against 21 votes. The Court was to remain in Lisbon till after the great annual procension
of Corpus Christi, when it would proceed to Cintra. The Duchess of Braganza left on the 8th for Rotterdam, in the Duke of Cornwall British steamer, and was paid the usual honours in going down the river. The proceedings of Dr. Kaley, an English physician at Madeira, had excited much animadversion by the high Catholic party, and great efforts were made to induce the Government to remove him from the island, but it was not considered that a measure of the kind was either justifiable or probable. Dr. Kaley, it appears, has been in the habit of giving the poor people of Madeira gratuitous advice and medicine, and has acquired great influence there. He has held Scripture readings twice a week, at which everybody
who chose attended, and about twenty persons have, it appears, declared themselves Protestants. This has given umbrage to the priests; and great efforts have been made to get Dr. Kaley removed. It is asserted that he preached against images, and, in fact, against the religion of the state; and altbough the late Catholic bishop attended his lectures, he has been commanded by the Governor to desist, and guards have been placed at his doors, by command of the authorities at Lisbon, to prevent any
Portuguese from attending his religious meetings. Hi conversions were considered to be due, in a great measure, to his benevolence and personal influence.
Germany.-Letters from Berlin state that motions have lately been made in several Masonic lodges to receive Jaith as brethren, and not to inquire into the religious motions, however, found much resistance, and were the cause of serious disputes, which have now been settled by a final decision of the Grand Master, the Prince Prussia, that neither Jews nor Jews converted Christianity, can henceforth be received, but that persons of the latter class who previously have been received into the order an to continue therein
Italy.- We learn from Genoa that a treaty has been oncluded between the Sardinian Government and the Republic of Geneva, for the purpose of constructing a railway from Chambery to Geneva, at the expense of the wo Gveraments. . The eglected state of the navigation on the Rhone making direct commancation between switzerland and the Mediterranean very difficult and slow, this will be of the utmost importance for Swiss commerce.
TURKEY.-Accounts from Constantinople of the 3 Ist ult. inform us that Redschid Pasha had an attack of apoplexy of a decided character, on the evening of the 28th. The principal medical men had been called in but he still continued in a most unsatisfactory condition, with extreme prostration of strength and faculties. The Sultan being informed of this melancholy event immediately despatched his private physician, with orders to neglect roo means which might be conducive to the restoation of his bealth. Under all circumstances, it is nople will now be abandoned. Involuntary respect is paid to bim, even by his enemies, notwithstanding the ntrigues to which they have sacrificed the ablest Minister in the empire. The Sultan has issued a firman to Hafiz Pacha, announcing that Prince Alexander Georgewitsh has sent in his abdication, dated May 16, and that in conequence a new election should take place as soon as pos-
 General, as Russian Commissioner, from which election however, Prince Michael is excluded on the ground that during his regency his administration was not conducted in conformity with the wishes of the Porte. A general amesty is also granted to all Servians except Prince Michael and his three Ministers.
EGYPT.-Letters from Alexandria of the 27th ult anounce the intention of the Pasha ofroceed with the ea with the Me long propsed work of joining the Red sea suez to from Suez to Palusium. The epidemic aniong the oxe still continued in Egypt ; more than 5000 , lately pur-
chased for Ibrahim Pasha, had died of this distemper. A. loud of locusts appeared in the province of Sherkie on the 13th ult., and spread over the country to Alexandria The corn having been reaped, they destroyed the cotton crop. It was hoped that the approaching inundation of the Nile would destroy them.
almor indes.-The mail steamer Trent arrived at an freight. Her dates are from St. Thomas's ${ }^{24 t h}$ the and from Bermuda, 31st May. The accounts from Jamaica report favourably of the prospects of the ensuing barvest, while the heat in Barbadoes had been so oppressive, that the young crops were suffering in consequence, A vessel called the Glen Huntly had arrived at Kingston, on the 11th May, from Sierra Leone, with 85 emigrants, which was regarded as a small supply only for the demand occasioned by the Jamaica negroes continuing to settle on their own lands, and which caused a want of field-labourers. Much difficulty had been experienced in inducing the poor Africans to volunteer their labour upon the fret principle, but it was expected in due progress of time that their prejudices would be overcome.

seconded the motion. - Captain GorDon did not view this class vessels with so much alarm; and seeing they had heen so long em-
ployed in the service, the Board of Admiraity would not be justified ployed in the service, the Board of Admiraity would not be justified be considered available. Their present destination, on the coast
Africa, between the tropics, where calmas and light breezes prevaled,
was the ljest udapten for their capaliilitics and as ther were to

 were dangrous hut hecause of their lam salme yhaties, and ho an abstract proposition, based on a misconception, and which would
not do justice to the conduct of the Admirally respecting details
which were purely of an executive nature. Sirc NApre attributed nave defects of our naval architecture, and the mismanagement of our
naval service, to the constitution of the Board of Adiniralty, which Was radically detective, nad kept us half a century behind the rest of
the world in a department essentially connected with our national
safety. After some additional observations from Captains Prere and BERKRLEF, the motion was rejected by 75 to 41 .
Captain PECHELz moved the printing of the returns of appeal cases on the assessed taxes for the years 1841 and 1842 , which, being
opposed as unnecessary ky Sir $G$. CLERK, was rejected by 79 to 16 . Lord Ctements renewed his motion for the production of the
correspondemce connected with the disbandng of the yeomanry corps
in reland, to which Lord Eliot gave the eame reply as on a former occasion, namely, that he was willing to furnish copies of all orders
for the dishanding of the yeomanry, with some selections, omitting
from the corvespondence whatever was of a personal from the correspondence whatever was of a personal or superfluous
nature.-Lord C\&EMENTS asseuted, and the returns were ordered. Wednesduy.-The Princess Augustn's Annuity Bill was read
third time and passed. The Cuaneelzor of the Fxcmreur atated that he intended to move that the House should on Friday resolve itself into a committee on the Excise Acts. The year
experiment that had been made of the additional duty of 1 s a gallon on Irish spirits had shown a progressive increase of offences against
the Ficcise laws, while the revenue had not been increased to the extent anticipated. He felt so strongly with regard to the moral
effect of the change in the Irish spirit duty that he could not consent of the Coroners Bill.-On the suggestion of Lord G. Somerser, the
bill was committed pro forma, in order to have the amendments,
Lord Worstey moved the second reading of the Commons Inclo-
sure Bill.-Colonel Sibthorr moved, as an amendment, that the sure Bill.-Colonel SIBTHORP moved, as an amendment, that the strongly the importance of carrying forward the bill during the pre-
sent session. There were nearly two million acres of waste land in the country, which could be reclaimed at an expense of 122 . an acre, parties were deterred hy the great expense of separate inclosure
pills. He proposed to carry out his measure by the aid of the tithe
bill commissioners ; Who, on the application of two-thirds of those inte-
rested in an inclosure, should send assistant commissioners to examine and report; the commissioners to report the progress of al inclosures twice a year to the Home-osice, and the House of coms
mons to have a veto on any inclosure, should one-fourth of those
interested object to it. He had endeavoured to ascertain the pro interested object to it. He had endeavoured to ascertain the pro tem, amounts to trom $400 l$, to 6002 ., would not, by the present bill,
exceed $40 l$. Considering the capital which would be invested in reclaiming land, and the employment which would be afforded, $h$
was satisfied that the bill, if passed, would prove an important boo though objecting to the bill, on the ground that it would for ever nevertheless satisfied that some measure for the reclamation and measures of Sir loobert Peel had prosed failures; food was stmi vancing, atcl throwng multtudes out of employment ; and the state
of the working classes in the manufacturing districts was appalling Lord Worsley's bill would be a boon, so far as employment was con
cerned; luat he could not vote for it, on the ground of the deprnation of the right of the poor; lis obyection, honever, would be obviated
were the principle of the allotment of wate luads to labourers incor horated with it, as proposed by lis own Allitment of Waste land
Bill - Sir C. Burazit and Mr. Milis approved of the bul. - Mr Honbuck oljeetrd to the brll that its tendency was to create a pau-
per popilatun connected with the land. Depend upon t, an al ot-
ment system would rame a pauper agrarian population in this ment sy'stem would ralse a pauper agrarlan population in this
cruntry. It was better that the working classes should be dependent those adjacen of the population, especially the workng classes, was mmense
Moreover, he saw in the bill the seeds of many a lawsuit. Let Lor Worsley, and those who thought with him, repeal the Corn-laws, and
they would provide surer and more abundant employment for the population than any thing this bill conld do for them,-her on makes but an allutnent system would enable them to eke out their sub-
sistence. Buth wisled Lord Worsly's bill to be postponell until
the report of the committee of incurry on the subject of nlloturnt was made. -Mir. C. ButiLer paid a comphiment to Lord J Manner
for his kenerous sympathes with the poor and working classes. Hut blished no new principle, and the operation of which, he conceiveial
bould be exceedingly beneficial. Mr. Roebuck's objection inclusure of commons, on the ground of the health and empoyment of the population, wis ned erstand why the culuvation of waste land
he could not possibly und
shoul. not be undertaken for a reason like thas.-After some olservahons from Lord Sandon, Mr. S. Crawford expressed his deter the pour. It proposed, undeed, to give them "phaygrounds ," lut
the best plavground for the workmg man was the land from which he might devive ank indepenient income. Her also totaly oissented
from Mr. Rucbucks position, that the working classes should be dependent on uages. Thongh himself a staunchadocate of the repeal
of the Curn-laus, he, nevertheless, thought it essental for the best interests of the working classes that they should have some delend
ence on land.-Mr. DVETT, looking to the deticiency of emplovment, and the importance of extending it, for AGLiONBX also declared his support of the bill, on simular grounds.- On a division, the
second reading of the bill was carried ly to to 4 . Thurshay.-Mr. Ward gave notice, that on the third readung of
the Irsh Arms Bill he will move an amendment, which will npen the
question of the Trish Established Church, with a wew to the redis. question of the Irish Established Church, 1ghts, and the maintenance of gpirtual insoruchion, on a scal relatrom, o sootland, stated that the Goveri ment drd not intend On the order, f the day fur considering the Sugar Duthes, the Ear in the casc of the Townsmend Pecrage Brill, and contradicted the
assertion that no property was involved. The contrary was the case assertion that no property was invoived. Me contrary was the case,

The Waterloo Banquet.-The Duke of Wellington, in consequence of the anniversary of the battle of Waterloo occurring this year on a Sunday, gave his annaal banquet
on Monday night at Apsley House to those officers who shared the dangers and honours of the field. A great number of persons congregated at the entrance-gates of Apsley House and on the opposite side of Piccadilly, so concourse of people collected, it was with the utmost difficulty that a passage could be obtained for the different vehicles, Many noblemen and gentlemen and several ladies on horseback took up their position on the western side of the eastern entrance gate, a position which commanded the recognition of those distinguished officers entilled to join the party. His Royal Highness Prince Albert arrived shortly before eight $o^{\prime}$ clock, and the presence of the Prince was the occasion of the most enthusiastic cheering. Colonel Buckley (a Waterloo officer, ) and the Marquess of Exeter, groom of the stole to his Royal Highness, The Duke of Wellington received his Royal Highness immediately on alighting from the carriage. The crowd consequently had an opportunity of seeing his Grace, and about of applause from without was the resul. It waests, amounting in number to 81 , took their seats at the table. The Duke of Wellington of course presided, supported on the right by Prince Albert, and on the left by General Washington, who had never before attended this annual festival, from his residence nearly 22 years in Prussia. The Marquess of Anglesey sst on Prince Albert's right. The Duke of Wellington firstgave who proposed the Duke, then that of Prince Albert, who proposed the Dake" given by the Duke, and drunk as usual, with solemn silence. "The British Guards,", "The Artillery a coupled with the name of General Washington, and everal other toasts succeeded
Public Testimonials.-At the anniversary dinner of the 7th Hussars, which took place on Friday last at the Clarendon, being the first of the three days commemoraGive of the battle of Waterioo, Lient.-General Sir E. Kerrison, in the chair, a piece of plate of the value of 1,000 guineas was presented to their late Colonel the Marquess of Anglesea, as the commander of the regiment for nearly haif a century. The memorial represented a
corporal of the 7 th Hussars engaged with a French Dragoon, and was the work of Messrs. Mortimer and Hunt -On Wednesday week a number of gentlemen assembled at dinner at the London Tavern, and presented a service of plate, which had been voted to Sir John and Lady
Pirie, in December last, in testimony of the conrteous, exemplary, and distinguished manner in which they dis charged their duties as Lord Mayor and Lady Mayorentis
of the City of London. Mr. Cotton, the Governor of the Bank of England, was in the chair, and was supported by between sixty and seventy gentlemen.-On Monday a Willis's Rooms, for the purpose of presenting to that gentleman a piece of plate, as a tribute of their approbation of bis exertions in reviving the legitimate Drama. The Duke of Cambridge presided, and in a speech of some Ropal Highness concluded by saying. "You have suc ceeded in reviving a taste for the Drama, which, for the last twenty years, has been gradually declining, and I believe that the result of your exertions has bad a very favourable effect on public morailty. Whas
stated that you are about to leave England. Wheresoever, Sir, you may direct your steps, rest assured that you bear With you the best wishes and sincere esteem of your coun-
trymen, who earnestly hope that, on your return, they may again see you in the unimpaired possession of those powers which have afforded them such high gratification, Drama will heartily concur with me in this wish." Mr Macready then came forward, and was received with length he addressed his friends as follows :-"May please your Royal Highness-I find myself labouring under more than ordinary emotion when reply tu the too partial terms ia which you have thought fit to address me. I stand indebted in a large amount of gratitude, and must still lament my inability to discharge
it. I thank you most cordially and earnestly, both for myself and the whole of the theatrical profession who have registered their names as friends and patrons of the drama in this splendid testimonial. There are some persons whose thoughts are like 'the eyes of Mammon, always downward bent;' these persons considered my tenure of Covent-garden Theatre as from sordid motives. Did I merit this reproach the disappointment would have been most bitter; but although I have sustained some personal loss, I trust that the experiment to revive the taste for the legitimate drama was not wholly unsuccessmechaoic's art but I bave merely endeavoured to furnish the stage worthily for the great poet, whom we all honour. Mr . Macready was here completely overcome by his emotion, and had evidently been for some time making great efforts to suppress his feelings; at length he recovered himself, and concluded an eloquent address pany. Mr. T. D'Eyncourt then proposed a vote of thanks to the Duke of Cambridge, which was unanimously carried. Anti-Slavery Convention.-The Convention held its last meeting on Tuesday, being the severth day of its protracted siting. The proceedings have run to a great ress and suppression of siavery in all parts of the world gress and suppression of slavery in all parts of the wordd
have been so fully discussed, that it would be impossible, in our brief limits, to give an abstract of the speeches. On Friday a discussion on free trade incidentally took place on a motion by the Rev. ment of this Convention, the introduction of the slavegrown produce of Brazil and Cbba, into competia colonies
the Iree-grown produce of the British West India col the Iree-grown produce of the British West India colonies
and British India, is rendered necessary, as an act of jusand British India, is rendered necessary, as an act of jus-
tice to all parties interested, and is in consistency with tice to all parties interested, and is in is constituted." Mr. E. N. Buxton proposed as an amendment, "That it is the opinion of this Convention that the introicucto the the slave-grown produce of caba
British markets is calculated to encourage the systems of slavery which exist in the former countries, and of stimulating the African slave-trade." A iong discussion
followed, in which Mr. Cobden, Dr. Lushington, and other followed, in which Mr. Cobden, Dr. Lushington, and other
gentlemen addressed the meeting; but it was considered gentlemen addressed the meeting; but it was considered by any decision on the subject, and the previous question was ultimately moved, and carried by a large majority. On Saturday the state of the slaves in Cuba and other Spanish colonies was brought forwart was adopted on the condition of the free people of colour in the United his coooperation in abolishing slavery in bis duminions. On Monday a series of resolutions in favour of voluntary and after a long sitting negatived by a large majority, only three hands being held up in their favour. On Tuesday, which it appeared that several of the delegates had been Which it appeared that several of the delegates had been day : When his Lordship, who listened with great attention to the inforcation given him by the deputation, promised great object of abolishing slavery in the republic of Texas. His Lordship assured the deputation that no underhand or sinister policy would be adopted, but that the British Government were determined to proceed by the fair und open interchange of diplomatic intercourse with Texas or its accredited representatives. The fol-
lowing resolution was then carried unanimously:lowing resolution was then carried unanimously:-
"That, in the deliberate judgment of this Convention, the annexation of Texas to the United States is sought, and would be used by the slaveholders of the southern
states, for the purpose of promoting the slave-trade and states, for the purpose of promoting the slave-trade and
of perpetuatiog glavery in the American continent, and it is therefore deprecated by this Convention as one of the greatest calamities that could befall the human race. ${ }^{32}$
Lord Morpeth moved a resolution expressive of the symLord Morpeth moved a resolution expressive of the sym-

John Quincy Adams, late President of the United States. At the afternoon sitting, the Rev. Dr. Ritchie, of Edinburgh, brought up the report of the Committee appointed to consider the effect of the 10th article of the Ashburton treaty, in reference to the fugitive slaves in Canada. The report and the resolutions consequent thereupon gave rise to considerable remark, and several resolutions were ultimately adopted having reference to the escape into the English Lerritories of fugitive slaves from the Unite States, declaratory of the injustice of delivering them up on the demand of the American authorities, under the sanction of the 10th article of the Ashburton treaty. vention resolved,- . That it is the opinion or this Con moted and strengthened by the formation of anti-slavery societies, founded on the principle of the fundamental guilt of slavery, and of the morat duty of immediate, to carry into practical operation the above resolution, the delegates and friends of this Convention be requested to assist such societies in their respective cities and neigh of the Convention in 1840 ormity witred mittee of the British and Foreign Anti-Slavery Society to call another Convention, similar in character and objects The Convention was then dissolved
By it. ${ }^{\text {British }}$ and Foreign Anti-Slavery Society.-On Wednesday the anniversary meeting of this Suciety was celeLord Exeter Hall, Lord Morpeth in the chair. His Lordship was supported by Lord Ebrington, the Bishop numerous assemblage. Amongst the ladies present were numerous assemblage. Amongst the luthess of Sutherland and daughters, and Lady Noel Byron. A large number of the Society's delegates from Anerica and other quarters of The Chairman opened the proceedings in an eloquent address, congratulating the sociecy on objects and wion was then read. It gave details of the objects of the Society, and of its operations in America, British India, Africa, and Asia. It touched upon the present state of the abolition question, the state of the African slavetrade, the results of emancipation in the Indies, and on a multitude of other topics. The general question of slavery as at present existing throughout the worid
discussed by the several speakers at great length.
Peace Convention.-On Thursday "The Friends of Universal Peace" commenced their sittings at Freemasons' Hall, when Mr. Hindley, M.P., presided, supported by a numerous body of the Society of Friends, and保 delegates from Paris, New York, Birmingham, The ch, Liverpool, Bristol, Gloacester, and other places. aimed was briefly arresting the evil practices of war, and for promoting which will ucc. According to the programme of topics the sittings are likely to last-through the week.

Temperance Conference.-On Monday evening a conference between the members of the National Temperance Society and the delegates from America to the AntiMr. Samuel Bention was held at the Crown and Anchor ject of the conference was to assist in the propagation of temperance principles throughout the world. The Rev. Dr. Ratchie chen moved a resolution to the effect, that, while many philanthropists were now in London attending the Anti-Slavery Convention, and about to attend the meetings of the Peace Sciety, the present conference could not separate without calling their attention to the evils of intemperance, and solicing their assistance in its sup-
pression. The Rev. Mr. Clarke, a missionary, seconded pression. The Rev. Mr. that, whilst recently travelling through the State of New York, he visited many families, liquors in any form. The resolution having been carried, Mr. S. P. Andrews, from Texss, moved, "That while the use of spirits continues, intoxication must to sume extent
prevail." The resolution was passed. Mr. Buckingham, Mr . Sturge, and several gentlemen from America, India Africa, and other parts, addressed the meeting, after which another resolution was passed, that the conference agreed with $\operatorname{Sir} R$. Peel, that, while the use of opium abroad was condem
St. Marylebone. The special Poor-law Commissioners, Dr. Farre and Mr. Hancock, recently appointed to inquire into the alleged neglect, ill-treatment, and mor bone workhouse, having made their official report, it has directors report is of a voluminous character, occupying nearly 300 pages. It was accompanied by a letter containing certain report whicl possessed, in fact, its entire substance. This letter, which was of considerable length, having been read, ome discussion followed, after which a committee was appointed to take the subject into consideration, and pert thereon at the next weekly meeting. Mr. Bushe answer to the Poor-law Commissioners, referring them to the protest made Mr. Young on beha of therish ioners at the outset of the inquiry, which denied the right of the Commisioners to interfere in any way with the government of the poor in the parish
Sociely of Arts. - The annual distribution of prizes by this Society took place on Monday in the Adelphi. The
President, Prince Albert, was received with great warmth
by those who were present on the occasion. His Royal Highness was supported by the Duke of Sutherland, the Marquess of Northamptoh, and several Vice-Presidents of the Society. His Royal Highness introduced the proceedings with a speech, expressive of the great pleasure which be felt in presiding at the meeting of a society which had been framed with such excellent objects; and alter his conclusion, the last year's report of the proceed-
ings was read. It commenced by a brief recapitulation of the history of the society, and touched upon the causes which had led to its decline, but which had happily been removed since the consent of His Royal Highness to take upon himself the office of President, more than 120 members having, during the present session, been admitted into the society. From a change also in its discipline, the range of objects for scientific illustration has been greatly increased, as patented objects have lately been admitted The repart also stated that since the establishment of the society, $100,000 \%$ had been given in the form of rewards, and mentioned the names of the following eminent artists as having received the medals of the soclety:C. Ross, \&c. The prizes were then distributed by His Royal Highness with a few kindly words of congratulation of the recipients.
The Wellington Statue.-On Saturday a meeting of noblemen and gentlemen interested in the erection of the memory of Lord Nelson, took place at the Mansion-house. The Lord Mayor in the chair. It was moved that the subject of the appropriation of the surplus metal, presented by Government for the City statue of his Grace, should be postponed. An amendment was proposed, that the surplus metal should be handed over to the west-end Wellington statue committee; and nine hands were held up for, and nine hands against the amendment , so that the question remains undecided.
Syrian Medical Aid Association.-On Tuesday a public meeting of the supporters of this institution was held at the Music-hall, Store-street, Lord Ashley in the chair. His Lordship lauded the association formed to establisit a British dispensary at Beyrout, for the gratuitous relief of persons of all nations, and in doing so saidat was better, imparted spiritual knowledge and consolation. ' The Rer. Dr. Colls read the report, by which it appeared that Dr. Kerns had been appointed chief medical agent, and had, with his family, reached Beyrout last year, having obtained a free passage from the Lords of the Admiraty, at the instance of Sir R. Stopford. The Edinburgh Foreign Medical Society had sent the committee a donation of 35\%. After defraying the expenses of the past year thete remained in the treasurer s hands a batance or 217. Yr Kerns During the six months, ending March 1st, that Dr. Kerna tortant entablished at Beyrout he performed under every disadvantage, no fewer than 2,737 patients, previously destitute of all medical aid. At present, with the exception of Dr. M'Gowan, located at Jerusalem with Bishop Alexander, there was no other resident qualified prachlestine and Syrierns throughow millions of inhabitants. The report was received, after which several gentlemen addressed the meeting in support of the association.
The Now Royal Yacht.-On Saturday Prince Abert, attended by the Earl of Liverpool, Sir G. Ansun, and wall, to inspect the Victoria and Albert, fitting out there for the use of her Majesty. The Prince left Somerset House in the Royal barge about half-past ten in the orenoon, which enabled him to proceed to Blackwall with the last quarter ebb, and to return with the flood, giving of the Lords of the Admiralty and other naval authorities in the Admixalty barge. Prince Albert cemain purds of an hour an board the Prince Alber red team-vessel, and havis examedre the modation, expressed wheer greall ph wid made arrangements, ana what the phor ill berdy ber towards her completion. Whe wh th By the and mognes will be suffien for to proceed to Chatham, where she will be fitted with her masts, spars, and rigging, and by the 20th of the month she will be ready to receive her Majesty. On leaving the docks, the Prince, with the Lords of the Admirally, embarked in the Queen's barge at the Brunswick Pow, by returned to Whitehall-stairs. The barge was row be 22 watermen in scarlet liveries, and the Admiral s bag only wich accompanied it, was rowed by 10 men. The conboats accompanying the Prince were two under thold their trol of the harbour-master, to clear the river, shonstruction The Scotish Presbytery.-At a meeting of the Pres bytery of London in connexion with the Esth inst. several members separated from the body and deciare themselves attached to the free Presbyterian Church. They appointed a new moderator, and took pors, however withdresw from the scene of the old mult, and resumed the proceedings as the Presbytery in connexion wita the Cburch of Scolland The Seceders met on Thursday, and received a deputation of Ministers and Elders from Sco land, who atar pose of blain ing mony and be satisfied with lesb $30,000 \mathrm{l}$ Resolutions were then passed, pledging the congrention to
Cogregation to give their pecuniary assistance. Aldermen
Court of Aldermen. The Committee of
appointed to inquire into the circumstances of Alderman T. Wood's conuexion with the Talacre Mining Company held their final meeting at Guildhall on Saturday evening. The proceedings being deliberative, were conducted with closed doors, and the result was, that the Committee agreed to report to the Court the evidence which had been presented to them, together with a statement framed b
the chairman (Alderman Brown), and designated " the chairman (Alderman Brown), and designated "a statement of facts." Alderman Wood strongly insisted on the propriety of presenting all the evidence to the as partial, imperfect, and incomplete, and calculated to leave an unfair and untrue impression on the minds of those who had neither leisure nor inclination to go through sisted. The result of Alderman Wood's objections was, that the Committee agreed to present the whole of the evidence to the Court ; but the Committee declined giving an opinion upon the inquiry

City Improvements.-At a meeting of the Common Council on Tuesday, Mr. R. L. Jones presented the report of the Select Committee on the proposed improve-
ments in the City. He submitted a motion declaring that the Court agreed with the report, which stated that a favourable opportunity existed for drawing the attention of the Government and the improvement Conomissioners, as to the best means to be adopted recommended that the Committee should be empowered to confer with them. After some discussion, Watling-street and Newgate-street were added to the list
Illness of Earl Grey.--The daily papers announce that Earl Grey, who is now in his 80th year, is seriously indiswhich the noble Earl is suffering is rather debility consequent upon advanced age than disease, and is not of quent upon advanced age than disease, and is not of a character calculated to give grounds for any immediate apprehension. One of the consequences of this

East-India Company.-The Quarterly Court of Proprietors was held till September his motion respecting the Temple of Juggernaut, but submitted a memorial on the subject from The Baptist Missionary Society, praying that the idols of India may no longer receive support and honour from the public funds. A conversation ensued on the reported
massacre of Col. Stoddart and Capt. Conolly, but the massacre of Col. Stoddart and Capt. Conolly, but the except through the newspapers. Major-Gen. Sir J. Bryant made a statement, proving that the accounts of cruelties said to have been practised by the Indian Army in Affghanistan were entirely without foundation. The chairman confirmed this statement, which was received with applause. Institution of Civil Engineers. -The annuak conversazione given by Mr . Walker, the president of this willing to afford his guests ample opportunity for examining all the works of art and science prepared for their enter tainment, he this year issued invitations for Friday, the ing about 300 visitors were present, and on the latter occasion a large company assembled, comprising many distinguished persons in science or the arte, and including Prince Albert, the Duke of Wellington, \&c. \&c
Wood Pavement.-On Saturday there was a very full attendance of the members of the Marylebone Vestry, for resolution of the vestry with respect to no more wood paving being laid down in parie presented a petition, signed by 59 omnibus proprietors and job-masters, agaisst any further extension of wood paving, and praying the vestry not to moved that the resolution come to by the vestry on the 4th of March, declaring its determination not to carry out any more wood paving for a period of three years be
rescinded. The resolution having been seconded, Sir $P$. Laurie said it was outrageous to noake such a proposal as rescinding a resolution passed three months since. Wood paving was a decided faiture, and all those who were tell them that all the carriage folks were leaving Regentdanger of the wood paving. Earl Manvers said he was formerly in favour of wood paving, but his views were changed; and such was the degree of danger he felt con-
nected with it, that if he voted that day in favour of wood paving, and broke his neck in driving over it, he believed no conscientious jury sitting on his body long discussion the question was put, when there ap-
peared-for rescinding the resolution, 20 ; against it, 35 ; majority against wood paving, 15 .
Inquests.-On Saturday afternoon an inquest was held
at Woolwich, on the body of Captain W. S. Blount at Woolwich, on the body of Captain W. S. Blount, R.N.,
who comraitted suicide under very distressing circumstances. Two pistols were produced, one of then Btill loaded. Lieutenant Clavel, of the Royal Marines, deposed that the deceased was his brother's house in Greenwich Hospital on Tuesday evening, when he alluded to a cerHe circumstance which appeared to been acting as Commander of the royal yacht Victoria and Albert, and from some cause was informed by the Admiralty that he could not have his commission that day, and was told ro, and during the cvening, he said
that he should demand a Court-Martial or Court of
Inquiry to clear bis character. Witness had heard the result of an application to that effect, and the reply was, the Board could not grant it. He had no doubt the deceased was quite deranged. The evening he spoke of, the deceased would not listen to any reason; he walked about in a state of the greatest excitement. He had no doubt that the disappointment was the exciting cause deceased had from the first announcement fallen off from a stout man to a mere skeleton. Mr. Payne, of Green-
wich Hospital, said he had known the deceased for wich Hospita, and he had successively held many appointments years, and he had successively held mary appointments amiable and honourable man, greatly attached to his family, and a strict observer of his religious duties. He missioned. Witness had no doubt the imagination that his character had been aspersed, had overcome the balance of his mind. A more excellent or amiable father, hus-
band, or man, could be rarely found. The appointment, if obtained, would lead to certain promotion, and he would not have been chosen at all except for his knowledge of
steam and his high character. The Jury immediately returned a verdict of temporary insanity
Mortality of the Metropolis.-The number of Deaths registered in the week ending Saturday, June 10, was as Central districts, 189 ; East districts, 199; South dis. tricts, 175 -Total, 848, Males 417 -Females 431.

## Flabimial Nefoss.

Aylesbury.- We lately noticed the erection of a monument to John Hampden on Chalworth field, the spot on ceremony of throwing open the monument to the public took place on Monday, in the presence of a great con-
course of spectators. After the ceremony a dinner was given near the spot, at which Lord Nugent presided, supRev. Dr. Hampden, Sir S. Hancock, and several members of the University of Oxford and gentlemen from the adjacent towns. A considerable number of ladies were also present Carmarthen. -The lawless depredators known by the power and influence in Carmarthenshire, and if they con tinue in the same ratio as they have done during the last ew weeks, civil power, as far as local authority goes, will be completely subjugated. Their proceedings during the pas the civil authority at defiance. On the day following the destruction of the Water-street gate at Carmarthen three men passed through the aperture where the gate had previously been, refusing to pay toll. The toll-collector previously been, refore the magistrates, to whom they said that Rebecca had given them notice not to pay They were fined in the penalty of 40 s. each, and costs which not having been paid, a distress warrant agains heir goods was issued. some bailiffs and constable were sent to exily ordered by Rebecca's disciples to return, which they readily did. The magistrates, determined to enforce the law, swore in about thirty pensioners as specis constables, who, together whilifs, \&c., proceeded on Monday week to execute the bailiffs, \&cc., proceeded on Monday week to execute the
warrant. They succeeded in making the distraint with iittle or no molestation, but berore they had proceeded a quarter of a mile with their booty, the sound of a trumhundreds of Rebecca's. Daughters, some of whom had their faces blackened. They immediately compelled the constable to deliver up the goods, together with all the firearms and other weapons of defence ia their possession. They then proceeded to demolish a wall belonging to Mr bad offeoded them, and they gave the special constables and police their choice, either to assist them in demolish the wall, or run the ris $k$ of being stripped and sent to town naked. The officers made choice of the former alteruative, and destroyed the wall, upon which Rebecca allowed them to go home. The above accounts, however, are far surrage, in which the rioters were dispersed by the troops At about mid-day on Monday, reports were brought into the town by persons from the Pembroke-road, that the ebeccaites were assembing were seen marching in due oot, and shortiy after cca herself, followed by about 900 horsemen and 8,000 or 9,000 on foot, marching 14 or 15 abreast. They entered the town by Sir Thomas Picton' monament; but previous to entering they don Lamas selves into two bodies, one portion pater-street, shouting and yelling. They carried banners, and were most of them yrmed with a short kind of pike, such as is used by miners, and many bad fire-arms. The inscriptions on th banners were in Welsh; one had "Liberty of toll, the Guildhall-square the two bodies again united, and proceeded to the Union workhouse, and immediately commenced a fierce attack upon the gates of the oute the workhouse and demolished the furnitare. Whilst engaged in this work, a troop of the 14 th Dragoons opportunely arrived at full gallop from Neath entered their horses dropped dead from down whilst attempting to seize the bridle of one of the dragoons. On the appear-
ance of the soldiers the mob began to fly, and on their atriving at the workhouse the magistrates assembled, and read the Riot Act, but on seeing the preparations to fire, the workhouse in the custody of the authorities, the troop, aided by another which had in the meantime arrived, having surrounded the workhouse. About 250 were captured, together with 60 horses. The magistrates committed the greater number to the county gaol the same night, to which they were escorted by the military. Crewkerne.-A remarkable case of infanticide has just come to light in this town. For come time past it has
been rumoured that a girl named Martha Clark, who lived as servant to a Mr . Alven, a person of indevendent property, and the son of a former banker of the town, had perty, birth to child of which he was the father, that he acted as accoucheur, and destroyed it. At an adjourned inquiry on Thursday week the girl made a full confession, inquir or atren was the father of rom wion it acconcheur: that he had twisted a twisted a bay. child, but heard it ery, that Mr. Alven had never told child, but heal her whe hare that be had buried the body in the garden. The magis-
 Assizes, Alven as principal and Clarke as accessary after the fact. Application was made by Mr. Alven's solicitors to the magistrates to take bail for his appearance, and bai to a large anount was offered, but the magistrates refused it
Huntingdon.-A public meeting was held on Saturday last in this town, in consequence of an invitation from Mr. Cobden and the Anti-Curn Law League to the farmers and inhabitants of the connty, to have an open discussion on the causes and remedy of the existing agricultural distress. The meeting was appointed to take place in the large room of the Mechanics' Institution, but in consequence of the nuubers brought together by the market held on that day, and the strong excitement prevailing on the subject, the assembly adjourned to the common in the neighbourhood of the town. Mr. George Rust was called to the chair, and was supported by the Carl of Sandwich and the leading landowners and farmers in the county. He opened the business of the meeting by reading aloud a note from Mr. Cobden, stating that a severe cold, which totally precluded the possibility of his addressing any public audience, prevented has presence and deputed to Mr. Bright the duties which would other gise have fallen on himself. After the disappointmen produced by this communication had subsided, and some preliminary discussion had taken pace as to the person who ought first to speak, Mr. Bright addressed the meeting at great length. He was followed by Mr. Moore on the side of the League, and by Mr. James Rush, Mr. Bower, and Mr. Day, in favour of the Corn-laws. A motion in favour of protection was carried by a large majority. It is stated that about 3,000 persons were on he ground, two-thirds of whom voted for the motion. On he previous market-day a meeting of farmers had taken place, when a committee was appointed to ascertain the declarstion was accordingly drawn up for distribution in very parish throughout the county, and in the course of weel the names of upwards of 1,100 tenant farmers were attached to it expressing their opinion that, while the present the landed interest remain they present charges whe foreign grower of corn without cannot compete with the foreign grower signed by tenant protecting duty. Liver pool.-There is no longer any doubt that the requent fires which have recently occurred in this town, were the work of incendiaries. On Tuesday morning a piece of cotton and lucifer matches were found inside the at-hole of a warehouse, in Dundee-street, and some pare ore have also been discovered in a warehouse in Great Howard-street, in this town, which had evidently been wlaced there with the intention of producing another conflagration. Happily, in both instances the attempt proved unsuccessful, in consequence of igmition not having taken place. Eivery elaries by whom the town is infested, but as yet without success.
Lynhr,-On Wedaesday the 14th inst., a young man of the name of Sangar, a clerk in the Lynn Bank, absconded with a large sum of money, the property of the proprietors of that establishment. He also contrived to pluder neightouring banking concern. Upou investigation it was ascertained that he must have taken away with him between 4,000l. and 5,000l. Intelligence a municated to the Committee of Bankers the City Police, who have announced twat the greate part of the missing property han bea
Manchester. The following are said to be the verdict and sentences of the courts-martial held last week, for the purpose of trying the soldiers of the 15th Reg., accused of mproper conduct in connexion with the late attack apon the Mancbester Police :--Sergeant Nolan, against whom there were three charges, was acquitted on the frst and third, and found Guity on the second; and was sen tenced to be reduced to the rank and pay of a private soldier. Two privates pere found Gulty, and each senwere acquitted.
Nollingham.-On Wednesday the 14th a public dinner was given by the Liberal electors of this borongh to Mr . Gisborne, their new representative. It took place in the exchange Hall, Mr. T. Wakefield in the chair. The ronm tlemen addressed the company at great length, on the circumstances of the late election.

Oxford.- The case of M'Mullen $v_{0}$. Hampden was brought before the Vice-Chancellor's Court in this University a few days since, on a motion for the admission of
the libel. Mr. Hope appeared as counsel for the plaintiff. Dr. Twiss, for the defendant, opposed the admission of the libel, first, on several technical objections appearing on the surface of the libel, such as the wrong title given to the court, and to the description of the party proponent, \&cc. After a long argument the Assessor ordered
the libel to be amended in regard to the first objections and took time to look into the numerous cases cited in regard to the substance of the libel and mode of proceeding. Lord John Hay, arrived on Monday in the Sound, Captaio from New York. She brought the body of Sir C. Bagot, the late Governor of Canara, which has been conveyed to Liver-pool.-The Breakwater Lighthouse, which will prove an
important addition to the public works in this port is fast approaching to completion. During the past week the third story of the building was completed, including the room, which will be the sleeping apartment, is in a for ward state, nearly the whole of it being dxy set at the Breakwater quarries at Oreston
Stufford. -The local papers
which the malignant influenza mention the severe losses county and in Shropshire. Mr. Taylor, of Thibberton, near Newport, occupying a farm under the Duke of Sutherland, has lost or been obliged to kill, since July last, upwards of 50 head of cattle, suffering from this
complaint, exclusive of the loss he has sustained by forcing others into the market from fear of contagion. The skill of the most experienced veterinary surgeons is said
to be completely baffled by this destructive disens to completely bafled by this destructive disease.
Warwick. - Earl Spencer, at his estate leighton, for some time past, has kept all the poor in the parish, so that the inhabitants are not troubled with poor-rates. His lordship allows his labourers in the
winter 9 s. a week if out of employment. The men are employed on his Lordship's estate hedging and ditching \&c., with a house, for which each pays a nominal rent of 1 s. per amnum.
Windsor.-Capt. Thomas Fernyhough, formerly of the Regiment, has been appointed Governor of the Military Knights, in the roon of the late Capt. Cumming. Captain Fernyhough entered the army in 1799, and was appointed one of the Military Knights of Windsor in 1837
Railways.-The following are the receipts of the prin$1,277 \%$; Eastern Counties, $2,607 \%$; Edinburgh and Glasgow, 2,098l.; Grand Junction, 7, $297 l$; Great North of Selby, 1,262l. Livernool and Manchester 4. Hull and minghain, 17.2522 , ; Brighton, 3,480l.; Croydon, $305 l$. ; $6,562 \mathrm{l}$. ; Manchester and Birmingham, $3,5881$. . ; Manchester and Leeds, 5,449l. ; Midland Counties, 2,776l.
North Midiand, 4,311l.; South Eastern, general meeting of the Brighton Company was held on for the purpose of electing th, Mr. J. Harman in the chair recrors of the company. The meeting was one of the largest of Mr. Bennett, of Brighton, moved that in the opiuion of the meeting the appointment of the new direcand that the names, addresses, and number of shares held by each of the candidates, should be sent to every shareadjourned to some future day. After some discussion on this motion several gentlemen were putin nomiaation, and a proposal for proceeding to the poll was taken as an amendment, when the latter was carried by a majority,
Mr. Earle, the representative of the Liverpool shareholders, making use of a large number of proxies. Considerable discussion, of a noisy and desultory nature
ensued; until at length, while the poll was proceeding, exception was taken to the Liverpool proxies, on account of their not being stamped. It was then agreed upon that the decision of counsel. The adjourned meeting was held on Monday, when the chairman laid before the meeting the opinior of Sir William Follett, Sir Frederick
Poilock, and of Mr. Waddington. It stated "that prozies were instruments of procuration, and, as such, reject these proxies, and declare the result of the poll according to the majority of the votes of the proprietors and that it was now too late to adjourn for the purpose of having the prozies stamped; and that nothing now remained but to declare the result of the scrutioy." The gave the result of the votes which bad been polled on
behalf of the on Tuesday last. They were as follow :-For Mr. Parsons 2,561 votes; Mr. Gilbert Henderson, $2513 ;$ Mr. Nash, 1,935; Mr. Rowland Hill, 1,939; Captain Kelly, 1,995; Sir Juhn Simpson, 1,210; Mr. Crowley, 1,$844 ; \mathrm{Mr}^{\text {F }}$. Mr. Ellis, 1,$200 ;$ Mr. Cooper, 1,028 ; Mr. Lee 991 ; Mr. W. Smith, $983 ;$ Mr. Thompson, 849 ; Captain 374; Mr. Mansfield, 86. The Chairman 'Mren Flood, the ten gentlemen at the head of the list duly elected, all of whom, with the exception orion-At Ahe special nomiof the Taff Vale Company a committee was appoeting inguire into the serious allegations made both against the
general conduct of the directors and the jobbing carried on by several of them connected with the contracts of the working of the line.-Th Ther articles necessary in the Dundee and Arbroath Railway Company was held at Dundee, on the 7th inst., at which, after some discussion, a resolution was passed declaring a dividend at the rate of $2 \frac{1}{2}$ per cent. per annum for the last two years. The directors common with almost every ruilway in the kinge that, in Company had suffered severely in consequence of the depressed state of trade and commerce. The deficiency compared with last, amounts to no less a sum than $1,219 l_{\text {, }}$. ireland.
Dublin.-A meeting of the Irish Conservative Peers and Members of Parliament was held at the Earl of Wicklow's on the Thth inst,, at which it was unanimously
resolved-" That this meeting deeply deplores the present alarming state of Ireland. That they consider the multiIrdinous assemblages now taking place in various parts of Ireland to be dangerous to the pubic peace, and calculated well-disposed subjects of all classes in that country. That in consequence the ordinary occupations of the population are suspended, and the public mind kept in a state of painful the undersigned noblemen and gentlemen feel it to be their duty to declare, individually and collectively, their exertions, in co-operation with her Majesty's Government for the purpose of upholding the law, preserving the public peace in that part of the United Kingdom, and allaying Signed by the Marquesses of Downshire, Thomond, and Ely; the Earls of Devon, Wicklow, Clare; and 44 other noblemen and Members of Parliament.-A
of Conservatives and Protestant Loyalists, convened by of Conservatives and Protestant Loyalists, convened by
the Metropolitan Conservative Society for the purpose of entering their protest against the existing Repeal agitation, was held last week in. Dublin, at which numerous
resolutions condemning the agitation, and pledging th meeting to co-operate with the Government in suppressing it, were unanimously passed. - The weekly meeting of the clergyman addressed the meeting, and suggested an appen to force. Mr. O'Connell said he could not too strongly In the antuing in she shape of an incentive to force. legal and peaceable assertion of their demands for justice. viction conteroplated no other means; and it was his contotally repudiated the contemplation of any other. At the close he announced the rent for the week to be Chancellor has amidst protracted cheering.-The Lor of rumours are afloat as to the cause, the most current of Which is, that his Lordship leaves for the purpose of on Tuesday, Robert Lindsay Crawford was indicted for having returned from transportation. The original derry, 1827, for horse-stealing, was proved. The case urned oll a question of identity. It was admitted that had been subsequently pardoned and brought back, and died in Scotland, after he had commenced the prosecution of his claim to the Crawford peerage. It was admitted that the prisoner had been in New South Wales, where it was alleged he had gone voluntarily, and whence be had returnea to advance his claim to the peerage on hearing
the death of his father. After a long trial the prisoner was acquitted
Cork.-On Thursday week the Lightning, Government afterwards his flag was hoisted on board her Maj soo ship Malabar, under a salute from board her Majesty war in the harbour. The Cyclops steamer has also arrived, and the following vessels, it is stated, are ordered to that 8tation:-Caledonia, 120 ; St. Vincent, 120 ; Vanguard, 80 ; Inconstant, 36 ; Tyne, 28 guns. The Dublin papers add-"The official order for the assembling of the squadron states that it is for special service.
Clare.-The great Repeal meeting of this county took
ylace on Thursday week on the race-course of Ballycoree. Mr. Cornelius O'Brien, M.P., presided, and no less than 700,000 persons are said to have been present. At the He said," The Queen made no such declaration length E. Sugden attributed to her. As to the Queen's declaration, somebody had the kindness to communicate to mealthough, mind, I do not say she knew it would be done which I am truly grateful. He had it from her own lips, and I have it from him, who heard her declare in bis presence, that she never authorized Peel to make such - Peel, who calumniated bis amiable and lovely Sovereign, or the agitator, Daniel O'Connell, who would die for her? It is utterly impossible that the Irish peopleso determined -so animated-so well instructed in political knowledge- 50 schooled in adversity-so taught by misfortune-a people who know what an Irish Parliament Dr Ked before-can be conquered by their enemies." Dr. Kennedy, the Catholic Bishop, then addressed the meeting. He said, "Mr. O'Connell's only crime is, that loving his unhappy country more than he loves himself, his family, and his kindred, he has fearlessly exposed to
her, and to the execration of the world, the true causes of
her unparalleled misery, points to its only remedy, and the practead the way to ths peal of the Legislative Union and of the re-establishment of a national Parlament in I reland, I will only say, gentlemen, that if I did not firmly believe that, under the guidance of $\mathrm{M}_{1} . \mathrm{O}^{\prime}$ 'Connell, they can be achieved without blood, without crime, and without the slightest prejudice to our allegiance to our beloved Sovereign, you may rely on it I pould not be a party to the present agitation for their attainment

 Ershilue, Manic, Cilthan, and Barons Parke, Gurney, and Rolfe, attended the House of Lords on Monday, to answer certain ques-
tions wbich hal been put to them respecting the law in cases of monomania. The quextions were in the foilowing form :-" 1 .
What is hlie law respection alleged crimes committed by persons
afflicted wilh insane ciulusiun, in respect of affleted with insane deliusiun, in respect of one or more particucommission of the ealleperdcrinne, the ececoser knew he was acting
contrary to law, but did the act conylained of with a view, under contrary to law but did the act conylained of with a view, under
the intluence of insuate delusion, of redressing or xevenging some supposed gricvance or injury, or of producing some supposed
publicic leenefit? 2 . What are the proper questions to be submanted

 under an insane delusion as to existing facts commits an offence in consequerice thereof, is he thereeof excused? 5. Can a
medical man, conversant with the disease of insanity, who never
saw the per saw the prisoner previously to the trial but who was present
during the whole trial and the examination of all the witnesses, be asked his opinion as to the state of the prisoner's mind at the
time of the commission of the alleged crime, or his opmion whe time or e commission of the allegeat crime, or his opmion whe-
ther the prisoner was conscius, at the time of doine the that he was acting contrary to law, or wilether he was labouring who aiffered from the rest of the Judges, first delivered his opi-
nion ; but the extremely tow tone it impossibe to hear moie than a few broken pplirases of of his
speech. He was speech. He was understood to say, that he regretted being called
on to deliver hisispinin, without having the advantage of hear--
ing the case argued by counsel excuse any man for the commission of a crinme ought to be that
wluch in wrong. The question put to the Juty in such a case was simply
that of guilty, or not guilty; but iin asking how that question sary to know the state of facts in respect of which that question arose, and these facts nust be presented to the Jursmen, and
they mant be asked whether on those partucuar facts they be-
lieved him, before the commission of the act for which he was hieved him, before the commission of the act for which he was
indicted, and at the moment of 1 ts conmiss incapalie of distinguishing between r1git and wrovg. There
were not any particular terms in which this
 who had heard all the evidence on that tuial, and who gave their
scientific opinion on such evidence, ile was underotuod to be of

 There must be every possibile shade of difference of facts in each case, and as it was the ordinary duty of the Judges to go upon
the fact, and after hearing the arguments of cuansel, they could
not but feel that it was dangerousto to make, without these gids, ary minute appphtication of the senve here to giving an answer to the abestract questions pro-
posed to them ty the House a and as all but his quel Maule were agreed in the answer they intended tod give the
House, they deemed it amnecessary to sive seratim, and they had therefore desired him (Lord Chief Justice Miudal) to express their opinons to their Lordships. The first
question which the House had called on them to answer was What was the law respecting au alleged crme committed by a trary to law, but where he dad the act complaned ot with tue
 laboured ubrier a partal delusion; and they wele of opinion dressing some injury the party did so act with the view of repunishable according, to the nature of the crime committed, if he knew that he was actiog contrary to the law,-by which expres-
sion they understood to mean the law of the land. Hhe second question was-what was the proper question to be left to the and such clelusion was set up as a defence to the indictment? left to the Jury, where the unsoundness of mind appeared in the course of the trial? The Judges thuaght that these two quesThe Jury ought to be told that every man was presmaned to be of a drtence on the ground of insanity, it musi be proved that the
party was labuang under the defect from suca a asease of the hind as not to be 10 a state to kinow the nature ot ine act, or, putting this question had been-whether the party had been capable of understanding the difference between right and wrong. This was certannly not so accurate a mode of putting the queshe was charged by the indictment. If the guestion with which With the expression, knew whether, what he was doing was right
or wrong accurang to the law of the land, the Judges thought that such mode of expressing the question thernt confonnd the thew the aw. But such an impresson would be erroneous, fur man must be taken to know the law. If the party was conscrous
that the act he was engaged to performing was one which he oo be adopted, therefore, was to settle the questit. The sole course time of doing the act, he knew that what he was so doing was wrong. This mode of putturg the question would be correctly acThe fourth question was, if the person was under an insane delvsion only as to the exising case, what consequence ought to
follownought he to be thereby exculed ; The answer to that
question must depend on the nature of the delusion. But making partial delusion, and was not in other respects insane, he must
be considered the same, with respect to his responsibility, as if be considered the same, with respect to his responsibility, as if his lle, and he killed that man m what he believed to be self-
defence, he would be free from liability to punishment. If, on the other hand, he killed a man in revenge for an injury which
he believed that man to have committed towards him, he would medical men conversant with the subject saw the person till the time of the trial, could be asked their opinion upon the facts they heard deposed to in evidence, as to
the state of the miod of the prisoner at the time of commiting know whether he was acting contrary to law, knew the a difference between right and wrong, or whether he was abouring under
any delusion which prevented him from knowing it? The Juctges were of opibion that a medical man could not, in strictness, be questinns involed the determination of were therefore fit only
deposed the decision of the Jury, and which would not be made a question of
for the out involving the decision of questions of fact, it might be convenient to put the questiox in that fornl, hough at could not be
so done as matrer of rygt, - Lorrd Brougham said that the opi-
nions of the learned Judges, and the very abie manner in which they had been presented to the House, deserved the thanks of
their Lordships. Mr. Justice Maule had expressed his rearet at their Lordships. Mr. Justice Maule had expressed his regret at
not haviog heard these questions argued by counsel. Generally
speaking, it was most important that, in questions put for the speaking, it was most important that, in questions put for the
consideration of the Judkes, they should have the great assistance afforded them by an argument by counsel. But it was plain that way abstract questions of law, the answers to which mghtt
assist their Lordships in their legislative duties. This had been done in the memorable instance of Mr. Fox's bll on the Law of the Judges to give their opmions on the matter of the existing learned Judges agreed, and one of then differed. It seemed nion should we delvered by one be the case, for the House then lust the advantage of knowing the individuat reasons which Lord Campbell expressed his sutisfaction that the noble and ask the Judges to ariswer these questions. These questions themselves into the pure law of England, and it was fit that the who might be calied on in their legrslative capacity to chang the law. It would be desirable to lave such questious argued a
the bar, but that course could not a, ways be pursued where the House requuren the assistance of the Judges to determine what
was the law. His noble and learued friend had stated one instance Where the opinions of the Judges were taken in this manner
but there was even a more recent instance, the Judges having been summoned rejoiced in the course which had been pursued. The answers given by their Lordsthips were most highiy satisfactory, and
would be of the greateqt use in the administration of jusitice
Lord Coltenham coucurred in the expression of therr Loreships Lord Coltenham coucurred m the expression of ther Lordships

## their Lordships possessed the power to call un the Juages to give

 as these questions had been. He had himself, whin Lord ChinefJushice of the Cimmon Pleas, conmunicated to the House the
ovinons of the Jucges un questions of this sort, framed with reference to the usury laws. Upon the opiunon of the Judges
thus delivertd to the House by him, a hill had been founded, and
bad atterwards been passer into al law.-The Lord Chancellor entirely concurred in the opinion given by ohner woble and learned
Lords, and for bimelf thanked the judges for the attention and Vice-Chancelsur's Court.-(Belore Sir L. Shadwell.)-
Astill and Others v. Mitchell and Others.- Mr, Stuart moved, on behalf of the defendants, who were certain freemen of the
borough of Leicester, to dissolve an injunction granted against from dipging or breaking up, or parcelling out in plots of garden grom digging orbreaking ap, or parcing out anishots of garden
groar the town of Leicester, which in the pard been allotted under an
mat inclosure act, passed in the 44th year of George M11., to the free
men and widows of freemen (during their widowhood), in respee of their rights of common of pasturage for horses and oxen, after the South-fields and Burgess-uneadows, or from otherwise deal
ing with the ailotment in such a manner as to interfere with the occupation thereof as a common of pasture. The inclosure act after reciting to the persons entilled to the night of common in the open tields and meadow, af a plot or parcel of land were
alloted to them un the fields in han of ther common rights of were to make an allotnient to the ireemen and treemen's widows
resident in the borough, of so much of the Sonth-iields as in tlie jualigent of the conamissinners should be a full equivalent and
natefacion for therr rights of cumen, whereupout their nghas dows were to cease for ever ant we exmminshed, except upon provided, that if any part of the anotment made to the freemen
and widows should consist of land capable of mprovement in
the the judgront of the commissioned and slonghed, and afterwarg fenced out with good ouk rauls, and protected with a ditch of
proper depth and width, and a quickset hedge. Nic madnage ment of this allotment was entrustra of from the fremen and orders, "as well for the dranning, loughng, culture, and atspo
sition of the crop, and laying down and sowng of grass, or other
 that the allotment should be sto ched, and the geteral manage
ment of the comnon plot, as shound appar to them must pruper for the advantage of the personssons made their award in the containing about 124 acres, whinch was immedlately land dow ingrass, and had been ever since enjoyed mature subject to the manament of the depu out interruption until Jannary last, when a scheme which had
been entertancd for sume tume anong the fremen was asature at a meetuig of the freemess and willows beld at the Townhall
for breaking up the greater part of the allotment into phots or to each freeman, or freeman's widow, for a garden, and a rent o to each freeman, or freeman's widow, for a, garden, and a rent of
ls. paid for every 100 yards, to create a fund to be applied to the
advancement of loans to the freemen and widows without inte-
rest the purchase of more land when convenient, and the accu-
mulation of a tund to be directed to the foundation of an educamulation of a tund to be directed to the foundation of an educa-
tional or charitahle institution for the bencfit of frcemen and reemens widows of the borough and their children. The aftidaof fremen resident in the borough, but that the right of depas-
turing cattle on the allotment had been rarely exercised by reason of a vast majority being too poor to keep commonable cattle. The scheme therefore of parceling out the allotment in garden widows, and a plan so benevolent in its object, and so qenerally beneficial to the body of freemen, was opposed only by about 170 , Who insisted that whatever the object might be it was contrary instituted the present suit to restrain the proceedings by injunc. thion. The argument turned entirely upon the cosstruction of contending that the deputies were suficiently authorized under down and sowing," and "sowing with grass and other seeds;" and especially ander the provision which entrusted them with
"the general management of the common plot as should appear to them most proper for the advantage of the persons occupying
the same; "to cullivate the allotment in gardens in conformity with the wishes of nearly the whole body of resident freemer and widows having rights upon it.-Mr. Bethel and Mr. Phillips supported the injunction, but were not called on to address the
Court.-The Vice-Chancellor said, he entertained no doubt upon Court.-The Vice-Chancellor said, he entertained no doubt upon to interfere by injunction to preserve the property until the
hearing of the cause. His Honour then read the recital of the act with regard to the righis of the freemen on the common fields, and the declaration that after the allotment by
the commissioners in lien thereof the right should cease; and observed that the obvious meaning of the Legislature was to take away certain pletes of land from the freemen and free-
men's widows over which they formerly enjoyed rights of common, and to give them a piece of land in lieur thereof, over
which they should continne to excrcise a right of pasture. The clause relating to the oak-rails and ditch, with which the
fence it in such a way as to secure to the freemen and widows
the right of pasturage. And looking at the other parts of the Act, His Honour thought, that generauy speaking, it had by ciently shown what was the view the Legislature took of the
matter, and especially in the powers given to the deputies, to consider the allotment as a piece of land given to secure to every
freeman his right of pasture which he had given up. The only used for garden-ground. The Act of Parliament enabled the deputies to make rules and regulations for draining, sloughing,
culture, sowing, cropping, and disposition of the crop, and laying made. But the whole of the Act must be taken together; and
the latter section meant, that if there should be a cropping or disposition of the crop, the land was to be so laid down as to be
fit therealter for pasturage. The "sowing with grass and other seeds" might be applicable to sowing with clover and balley,
but it did not mean to apply to such oowng as would yender the
ground unfit for pasture; and of the deputies would point out ground unat for pasture; and if the depatean of which, it a
Bome certain mode of garden. culture, by mans of
crop were taken off the land, it would still be fit for pasture, the was, as derined by incidental and express words of the Act, he
was of opinion the Leginlature never intended the land to be usad as garde. . ground. If any new method of culture could be
suggested Irom the reading of the Georgics at Leicester, to slow be glad to hear it; but at present he felt it his cuty to continue application with costr.
Court of ExGHEQUR. - (Custom House Frauds). The At-
torney.General v. Dearn. - This was an informaton filed at the instauce of the Customs Department against the cefendarit, who
is one of tine firm of Dean, Candy, aud Co., forcign sisk mer chants, carsying on an extensive business in Watling-street.
The proceeding was founded on the same transaction which
formed the subject of an information against Mr. Candy, which whi tried at the sittings after Easter Terin, and then reported in
this Pauer. The evidence in the present case occupied two day, but the facts differed little from those of the former trial. Tue and Another. - It will be remembered that in February last the
bills of Covent Garden Theatre announced the appearance of Mr. Gregory, the proprietor and editor of the Sutivist newspaper in that character on the 13 th February, and minconsequer ce of the curtain was dropped at the end of the second act. Mr. Gregory subsequentiy alleged that the uproar had been caused by hise account of feelings of anger they entertained towards him, fo certain articles published in the Satirist, and he subsequently in stituted this action against his Highness and Mr. Vallance, his
solicitor, to recover danaages against them for the injury he unity of realising the profits which he expected to obtan fron the calling of an actor. The cause came onf for trial on Tuesday and occupled the whole of that and the following day, several
witnesses were examined on the part of the plantiff, among Fitzclarence, Lord Beauniont, Count Balhyany, the Ear. of
Erril, Mr. Bunn, \&e. The chrefolject of theit evidence was to qubstantiate the fact that the phanntiff was a good actor, in addi-
thon to which, Lortis Gadiner, Belfast, Fitzclarence, and Beaunont, deciared their belief that the wives and dalughters of the
audience have nothing to du with the private character of an actor. Mr. Serjeant 'ralfourd replied in a powerful speech,
addressing himself particularly to this doctrine, and declaring hat the opposition to Mr . Gregory's appearance arose not from hbelier for hire. The Lord Chief Justice summed up, and the
lury returned a vernict for the defendams. The result was received with loud cheers by a crowded Court, wheh the Chie
Justice suppressed, desiring the parties to recollect that they Centhal Crimynal Court,-Giuseppe Azsopurdi, convicte at the last session, under the commission, of the wilful murder of
Roma Sluyk, a Dutchwoman, at Smyrna, was placed at the bar. formed the prisoner that he had been found guilty of the crintie of wilful murder, and asked luim if he had anythiug to say ocfore sentence of death was passed on him. The prisoner said
hat there were witnesses at Smyrna who could have disproved the charge against him, but they were not allowed to come. Mr his trial ; had there been, it would have been attended to. Hi counsel lad upon his trial takenan objection, on the ground tha his case did not fall within the proviaied, he, a British subject having corrmitted a murder in a foreign country, on a person who was nut a British subject. He (Baron Gurney) had reserved
the case for the ennsideration of the learned Judges. The Judge had met and had considered it fully, and they were all of opinion ruled. He (the prisoner), \& British subject, living under the tection of the British Government, was subject to the laws of

Great Britain, and he had offended against those laws by the murder Ge had committed. Sentence of death was then passed.
James George Howse and W. Curnelius Fuller were indicted with having feloniously stolen a plate-chest, value 2h, c.m12l., a quantity of silver forks, a silver box, aud other articles, counts in the indictment, laying the property in other parties.
The particulars of the case have already been given in this paper. The only additional evidence wrisney defending persons charged with what are called "pat up" felontes, who was now
confined in prison for debt, and on whom Howse had called in his Lordship's gig at the prison, and asked him if he could recom-
mend any one who could dispose of some plate for him. Dignum had answered that he knew no one why could be trusted in such
a matter, and advised Howse not to attempt it. Howse, however had persisted, as he wanted to make some provision for himserf.
The Jury returned a verdich if Grilty agdint Howse, and acquitted Fuller, Mr. Baron Guruey then pruceeded to palt
sentence. He said, that after a long and patient investigation, the Jury had been compelled to find himguilty, and he muat say,
that of all the ca alogue of crimes of a similar nature which he had ever met with, be considered this the worst. The sentence Poitct. - A case nearly parallel with that of the Steinber
tragedy, which took place some years ago, was brought under the consideration of the magistrate at Queen-square, ou Mouday. having his nead bound up with plaister, and his hands covered
with blood, was placed at the bar, charged with having, on that and his daughter, an infant of two years of age, and also to destroy himself. It appears that he lias for years past been
labouring under an impression that he would, sooner or later, come to poverty, and has, under that dread, twice befor
attempted self-destruction. About five years since he was observed to be in a desponding state of mind, but apparently
harmless. One morning he was discovered in the water-butt, it was with difficulty he was brought to a sense of consciousness. of destroying himself and children, and thus prevent the pos sibility of tueir ever coming to want. On Monday, he attacked
his wife and children with an axe, fractured the skull of the boy his wife and chidren with an axe, iractured the skull of the boy,
and severely injuriog the others, They were removed to Wet-
minster Hospital, and are likely to recnver. The prisoner hat been remanded for further inquiry.- Another case of the same
kind, butattended with fatal results, occurred at Greeawich on thursday. A man named Mee, a fisherman, murdered his wife and afterwards destroyed himself by cutting his throat
razor. He had for some t.me beenconsidered to be irisane

##  <br> Sloogh Pink and Hear tease. Royal Cornwal Horticulturn

(1.) IF all the leaves which a tree will naturally form are exposed to favourable !influences, and receive the light of a brilliant sun, all the fruit which such a plant may produce will ripen perfectly in a summer that is long enough.
(2.) If all the leaves of a tree are exposed to such influences, all its fruit will advance as far towards ripeness as the length of the summer will admit of; it may be sour and colourless, but that condition will be perfect of its kind.
(3.) But if all the fruit which a healthy tree will show is allowed to set, and a large part of its leaves is abstracted, such fruit, be the summer what it may, will never ripen.
(4.) Therefore if a necessity exists for taking off a part of the leaves of a tree, a part of its fruit should also be destroyed
(5.) But although a tree may be able to ripen all the fruit which it shows, yet such fruit will neither be so
large nor so sweet, under equal circumstances, part of it is removed; because a tree only forms a certain amount of secretions, and if those secretions are divided among twenty fruits instead of ten, each fruit will in the former case have but half the amount of nutrition which it would bave received in the latter case.
(6.) The period of ripening in fruit will be accelerated by an abundant foliage, and retarded by a
scanty foliage. Wenty foliage.
We submit these propositions to Horticulturists as the expression of general truths, which are applicable to all cases, and especially to the Vine; and we would beg them to ascertain experimentally whether they
can be infringed with impunity. We do not believe that any quite unobjectionable investigation of this point has ever been made; on the contrary, as far as our experience, or reading, or correspondence
goes, no evidence exists to contradict these stategoes, no evidence exists to contradict these state-
ments, which are founded on apparently well-ascertained laws. If this be so, the system of rigorous summer pruning of the Vine must be wrong; on the contrary, its leaves should be allowed to form in abundance, and that destruction of laterals at an early period, which is so much recommended, must be injurious; because all those laterals, if allowed to
grow, would by the end of the season have contributed somewhat to the matter stored in the stem for the nutrition of the fruit; because the preparation of such matter would have been more rapid; and because the ripening of the fruit, which depends on the pre sence of such matter, would have been in proportion to the rapidity of its formation. If we are not greatly mistaken, the early maturity and excellence of the Grapes obtained out-of-doors by Dr. Maclean, of Col-
chester, a vcteran horticulturist, well-known for his skill, is entirely owing to the large quantity of wood which he lays in during the summer, as early as he call possibly persuade his Vines to produce it.
It is a mistake to imagine that the sum must shine on the bunches of Grapes in order to ripen them. Nature intended no such thing when heavy clusters were caused to grow on slender stalks, and to hang
below the foliage of branches attached to trees by their strong and numerous tendrils. On the contrary, it is evident that Vines naturally bear their fruit in such a Way as to screen it from the sun; and man is most Whase when he rashly interferes with this intention. What is wanted is the full exposure of the leaves to the sun; they will prepare the nutriment of the rear it up into succulence and lusciousness. We therefore submit to our Horticultural readers that rigorous Lummer-pruning is wrong,
Let us not, however, be misunderstood. We do not suggest that a Vine should form all the wood it pruning that should be provided against by good winter gruning, and by rubbing off such buds as are not to those shoots which are selected to remain should be permitted to produce as much foliage as possible; tion of foliat, as the destruction of laterals is the diminu.
When foge, that destruction should be discontinued. When, however, branches have grown for many weeks, and are in the autumn beginning to slacken in
their power of lengthening, theory says it is then right
to stop the shoots by pinching off their ends, because after that season newly-formed leaves have little time to do more than organize themselves, which must take place at the expense of matter forming in the other leaves. Autumn-stopping of the Vine-shoots should therefore be not only unobjectionable, but advantageous; for the leaves which remain after that operation will then direct all their energy to the perfection of the Grapes.

This is, in fact, returning to the practice of the
Ati-

At dum prima novis adolescit frondibus ætas,
Parcendum teneris; et dum se lætus ad auras
Palmes ait, laxis per purum immissus habenis, acies nondrum falcis tentanda, sed uncis
Ipsa acies nondum falcis tentanda, sed uncis
Carnendæ manibus frondes, interque legendæ.
Carpendæe manibus frondes, interque legeddæ.
Inde ubi jam validis amplexa stirpibus ulmos
nde ubi jam validis amplexa stirpibus ulmos
Exierint, tum stringe comas, tum brachia tonde
Ante reformidant ferrum : tum denique dure
Exerce imperia, et ramos compesce fluentes.

## Which we venture thus to translate

But when the shoots with new-born leaves are gay And scrambling Vines are struggling into day, $O$ mur not then their first sweet taste of life With the rude edges of the cruel knife
But if the crowding shoots more room demand,
Just pinch them gently with judicious hand;
Then when with powerful grasp the full-grown
Then when with powerful grasp the full.grown Vine
Shall round the Elm its vigorous arms entwine, Shall round the Eim its vigorous arms entwine,
The steel no longer dreaded, trim the spray, Stop the weak shoots, and bend the strong away.*
injury of their milk. They should be in the house from eleven in the forenoon till four in the afternoon, or as long as the sun is very hot: they may have a lock of hay to amuse them, but they do not absolutely require it. The best food, next to grass, is a few beans soaked in water for twenty-four hours ; this increases and enriches the milk without giving a bad taste to the butter. When the land is extremely rich and highly manured, a second crop of hay may often be mown the same year; and if the weather is fine in October, and this lattermath hay be well got up, it will be excellent for the cows in winter; it should not be given to horses, as it is apt to affect their wind, especially those which are driven fast.
The making of hay is an important operation where there is only grass-land, and its success, especially in showery weather, depends much on the management of the grass. No minute directions can be given on this subject; but a few general cautions may be useful Rain will not hurt the grass while it is fresh cat and green ; decomposition will not take place till the vital energy is destroyed; or, as one would say, till the grass is dead: so that in showery weather it is not advisable to be in too great a hurry to spread the grass out from the swarth; it is as well to let it lie, and when the outside is dry to turn it over, without much dividing it, then to put it in very small cocks, laid somewhat hollow, that the wind may blow through them: thus it will bear much wet without being materially damaged. Never hurry the stacking in wet terially damaged. Never hurry the stacking in wet
weather, the hay will get more harm in the stack, when not quite dry, than it will even lying flat on the ground. If it is discoloured let it lie till quite dry, or you only make bad worse; for spoilt hay put up dry may still be palatable to cattle, only they will waste more of it; but if it comes out musty from the stack nothing will eat it, except when pressed by hunger. If the weather is very fine and the glass steady, grass may be made into hay, and secured in a stack in three or four days. The only danger is from over-heating, and it requires some experience to know when the bay is sufficiently made, and will not heat too much; the larger the stack the greater caution is necessary. These hints may be useful to many who are not conversant with the subject. We shall in another article give some directions about the proper attention to the quality and quantity of the grass.-M.

ON THE CULTIVATION OF COMMELINA

## CELESTIS

This is a half-hardy perennial of considerable heauty, and well worth a place in the borders of the flower-garden, where it will produce a succession of its beautiful ephemeral azure blossomas from July to September.
It is easily cultivated if treated in the following manner :-About the end of February sow the seeds in pans or pots filled with a mixture of sandy loam and leafmould, and place them in a warm pit or dung-frame. The seeds will soon vegetate; and when the young plants are large enough to handle, pot them off singly into sixtysized pots, and return them to the warm frame or pit for a week or ten days; afterwards admit air, and finally remove them to a cold frame or pit to harden, ready for planting out in the open border, which should be done about the end of May or beginning of June, when the danger from late frost and cold nights is over.
In planting, they must not be put in a dry or shaded situation, but in a warm and rather damp one; and in a rich loamy soil. They will then flower freely all the summer and autumn ; but, like the Dahlia, their beauty is destroyed by the first frost in the autumn.
The plants flower freely the first season from seed, but they display their delicate azure blossoms in the greatest perfection the second season, he Dahlia over the winter, which is best done in the following way:-When the plants have done flowering, and there is danger of the roots getting injured by severe frost, they must be taken up and placed to dry for a few days; then procure a box or some large flower-pots, and place a little dry soil at the bottom-(the best substance for packing all kinds of roots in during winter is dry sandy peat); ;-then place a roots in during winter is dry sanay peath soil-and so on
layer of roots, filling in between with until you have disposed of all the roots, when the whole should be covered over with a thick layer of any dry substance. Place the plants either under the stage in the green-house or in a frost, they will then require no more reachble until the following March, when they should be taken out, potted, and placed either in a warm pit or dung-frame, to forward them again for planting out

The roots will survive the winter in the open border if slightly protected and kept dry, but then they are late in starting, and through the winter like roots are taken up and The old roots may be divided, like those of the Garden Ranunculus.-George Gordon.

ENTOMOLOGY.-No. XLV.
The Black Turtle-scale. Cocous testudo (Curtis). -The scales, as they are termed by gardeners, are perhaps the most troublesome of all the insect tribes in the Ireenhouse and hothouse, and there are few conservatories, I believe, entirely free from them; it will, therefore, be species. The scale insects vary so considerably in their
habits, that they may with great propriety be divided into three sections, which will form as many genera : lst, there is the true or typical Coccus, the female of which is covered with a scale, inseparable from the animali faLinnæus; 2dyy, a large number is distinguished by Bouché under the name of Asnidiotus, of which C . Nerii of that author and C. Bromeliz* are examples. In this group the females are covered with a scale, which does not adhere to the animal ; 3dly, those species, comparatively few in number, I believe, whose females are not furnished with scales, but are merely powdered over; they are very different, also, in not being stationary, but run about when full grown, as well as when young; i propose calling them Trechocorys (Running-bugs), type.
I have seen several species of Turtle-scales which belong to the lst section; they generally live upon the leaves and stems of plants, requ Turtle-scale (fig. 1) infests both sent to me as the Black Turtle-scale (fig. 1) infests bot

sides of the leaves, preferring the undersides, to which the females adhere, generally lying in lines along the midrib. On lifting up one of these fema hundreds of eggs and young ones were lying upon the leaf, and in the cavity of the mother: they were of a pale orange colour; the former were oval, cylindrical, and
shining; the latter were flat, oval, and like little woodshining; the latter were flat, oval, and like little wood-
lice; they were furnished with two fine antennæ, hairy at lice; they were furnished with two fine antennæ, hairy at the apex, two little black eyes, six legs, and a notcla at the
anex of the abdomen, which produces two long hairs or setre; the back is transversely striated with the lines formed by the numerous abdominal segments. They ran fast, and kept pushing about the eggs, which were only partially and sparingly supplied with the cottony substance so abundant in some species; they were also intermixed with the pale, empty shells of the hatched eggs. Fig. 1 represents part of a leaf of Brexia spinosa, with two of the adult females and a younger one between them; they are oval, very convex, dark-brown, and from their similarity to a tortoise, I have named this scale Coccus testudo; there is an elevated ridge along the back, with two transverse ones, the first being nearest the middle, the second towards the tail; the whole surface is finely shagreened with small white tufts scattered over the whole. Fip. 3, lighly magnified, the upper end being the tail. I have never seen it remarsed that the thates as soon as the youns hatch they are ready to ascend the plant, and consequently spread over the fresh and more tender portions. The underside of the scale bas a broadish margin, which is the body is concave, dark, with a purplish tinge, with six minute legs, and a largish lobe towards the anterior por tion, which is furnished with a fine proboscis. Fig shows a multitude of eggs, the young, and, the whicisin from a scale which has been removed
In Feb., 1841, I received a twig of a Mexican plant, upon the stalk of which were about 30 specimens of a similar Coccus, but the leaves were free from them; they were o a chocolate colour, somewhat oval, very gibbose, and had a fleshy appearance, resembling rather aphides that had been punctured by parasites than scale insects; the outside was shining chesnut-brown, with irregular punctures, and minute tubercles scattered over the surface; in profile it was very gibbose, being pyramidal truncate, the anterior surface nearly vertical, with a lobe over the apex the hinder extremity was more sloped off, and when removed from the stem the slender siphon of the rostrum was visible; I could also see six minute legs, the anterio pair moved about whilst I was examining the scale, and was the only evidence of vitality it exbibited; the four hisder legs were closer together, but obscured by the eggs, which amounted to 50 or more; they were larger than usual, oval, dull, ochreous, and shining. I could not detect either eyes or antennæ, neither have I ever seen the males of these scale insects. It is difficult to imagine how these immovable females contrive to get the eggs so completely under their bodies, unless there is an oviduct which is protruded from the anal suture, and directs the eggs to that position.
A third species 1 saw in vast numbers in July on the underside of the leaves of a plant in a hothouse ; they had swarmed over each other like bees, and being of a darkbrown colour were very visible; they were either round
and hemispherical or oval, with a smooth and rather shining surface, but, under a powerful lens, appeared covered with minute tubercles; the entire margin was a little reflexed, with a long cleft or suture very visible
beneath at the tail. On removing them there were a few small young ones of an orange colour, and an immense quantity of dirty white skins, leaving the egg-shells from whence the young had escaped, which at onc
this was a very prolific species.- Ruricola.

ON POTTING AND SHIFTING PLANTS.
MoCH, if not the greater part of the success in cultivating plants in pots depends upon a proper method of potting and shifting them, and this as much in the state of the materials employed as in the manner of employing them. But in vain may soil, situation, and treatment be consonant to their natures if care and attention have not plants attended to by Nature herself. But when we place them in pots, we give them an artificial habitation, and they then require of us artincial treatment First, the soil will, of course, be a composition suitable to the particular plan or plants to be potted; but of whatever it may be composed, particular care should be taken that it be not too wet nor too dry. If the former, it becomes, during the process of potting, a compact mass, which, contracting as it gets drier, leaves a vacuum between the exterior of the pod and the ball of the plant; thus allowing the free admission of light and air, which is, of course, anything but beneficial to the plant. If, on the other hand, it be too dry, it prevents for a considerable time the free passage of moisture to the roots, and it will often be found especially if the plant itself is dry at the time of potting, that it will suffer greatly ere it receive sufficient moisture to recruit the evaporation of its juices. Secondly, the pots, if not new ones, should be scrupulously clean; for obtained in turning the plant to examine or re-shift it, it would amply repay the trouble. But independent of this, a plant enjoys better health in a clean than in a dirty pot; and if no other consideration would urge to cleanliness, appearance would, I presume, decide in its favour. Thirdly, drainage should combine two proper-
ties, to allow free exit to the superabundant moisture, und to prevent the entrance of worms ; and although the latter object is somewhat difficult of attainment, we should seldom have to complain, if plants, when placed in situations where worms are likely to abound, were set upon a sufficiently thick layer of cinder-ashes, or some similar material ; cinder-ashes, I think, claiming the preference, as we seldom see worms attempt to penetrate them, if two abundant moisture, let the crock be placed so as to form an arch, with a few smaller ones placed round it, covering the whole with a slight quantity of moss, sufficient to prevent the finer particles of sol being washed round the larger crock, which would effectually obstruct the drainage, when the soil would become sour and unhealthy ; and, as a natural consequence, the plant would follow its example. Fourthly, the depth of potting should be regulated by the mark which uature points out, and which is always conspicuous in plants than when it receives its first remove from the cutting or seed-pod. To bury an inch or two of the stems of a plant is very injurious, although a practice of common occurcient spac careless poting. Fithiy, $m$ on no account le it form a kind of basin; that is, a hollow round the sten but let the soil round the stem be as high as the rima o the pot, receding gradually to a depth round the rim, agreeably to the size of the pot, the nature
I feel confident if these few simple rules were followed, many plants which we now see dying, or at best, barel vegetating, would be vice versá- Tyro.

## AMATEUR'S GARDEN.-No. XXVII

The greatest triumplh which gardeners have achieved the manaremen of plants is that by which almost innumerable and very beautiful varieties of flowers bave been raised from the weeds of our fields, as in the Hearts ease and Tulip; and what, in exotics, are comparatively iittle better, the single Dahlia, the Dianthus, Pelargonium, and several other genera. This is effected by what is Which process the properties of dissimilar but allied species (and in popase that the seedling produce will partake of the character of both parents, and the flowers be frequently superior to either.
Nature, unaided by art, has accomplished much, and has produced the Golden Pippin Apple from the Wild Crab, and the Damson and other Plums from the common Sloe ; yet it must be confessed that art, properly directed, has effected and will effect more in a few years, than nature, dependent upon accidental circumstances, would do in a long lifetime. As an operation to fill up the leisure hours of the lady gardener and amateur, $\mathbf{I}$ do not know anything more pleasing; for there is something akin to creative power in it, as we are bringing new forms into existence; and though all the offspring may not be equally interesting, some may be very pretty, and others superlatively beautiful. No one but a parent can have parent's feeling' is a trite saying and certainly pleasure of an enthusiastic florist in viewing a first-rate flower of his own raising, amounts almost in some cases to a species of jdolatry.
To explain the method of artificial fertilization, it will be necessary to offer a few remarks on the formation of fiowers. In all flowers, when divested of the petals or
corolla, there will be found standing in the centre, and
attached to the flower-stalk, -of a Fuchsia, for illustra-on-a small pin-like substance, which is called the pisthum, or female organ, and surrounding it a number o horter pins of various lengths, with rather large heads, which are called stamens, or male organs. A slight xamination provided for the multiplication of the different ature farina falls from peci mon in others is depo ifed there by an elastic force in the filament, as is exemplified in the flowers of the Kolmia. The pistillum consists of three parts, viz., the ovary, the style, and the stigma, and has been likened to a column, as the first will represe the pedestal, the second the shaft, and the which are called the filament, anther, and pollen or farina sof mealy powder which the anther throws out, and which, when it falls upon the stigma, or top of the pistillum fructifies it, and a production of seed is the consequenc Now, when gardeners wish to produce hybrid or cresspland seed from of their stamens, and proceed to fertilize the stigma with farina taken from some other plant: thus, if I wished for a family of plants between Fuchsia globosa and F. Venus victrix, I should take the stamens from the flowers of the latter directly the flowers were open, and fertilise the stigma with farina taken from F. globosa, and the result would probably be plants resembling F. globosa in habit, and partaking of the colours of venus victris in the flowers, as the hadit of the plant generally resembles the male parent, and the flowers those of the female ; and for this reason particular attention should be paid to the choice of parents, if we wish to make decided improvements in the habits of our plants. After the stigma is fertilized, it should be guarded from the contact of honey-seeking insects by a muslin bag placed over the flower, or by keeping the plants in a pit or frame covered with strong gauze or fine canvas. The best instrument to convey farina from one plant to it iner is a camel-hair pencil, and the best time to apply and the the morning, when the flower isule make assurance doubly sure, it is well to apply the pollen for several days successively.

As it is reasonable to suppose an highly-organised seed will produce a stronger plant than an improperly ripened ne, no plant should be allowed to produce more than six pods of seed, and no flowers after the seed-pods begin to well, but should be encouraged, by proper attention, to grow as healthily as possible.
Where it is inconvenient to fertilize the flowers, as in Heartsease, and many other plants, none but the very best kinds should be allowed to produce seed, as it is seed from the six best Hearts from six ould produce more good flowers than the seed from six hundred indifferent kinds.-W. P. Ayres.

HOME CORRESPONDENCE.
Manures: Guano.-I have used Guano on strong brick-carth at the rate of 30 cwt . per acre, with consider able advantage, as you will see by the accompanying Pea and they are all much of a size in the row. It was applied after they had grown about 12 inches. I mention this act, as there appears amongst your correspondents con siderable doubt as to the maximum of quantity in Guano Less than the above would kill grass, and no doubt would be dangerous on hot gravelly solls, or even on undraine clays thatywond cake near tue surface. I have applied more than a ton and a haif per acre on my hower-garden, in addition to considerable quantities of Bone-dust, Soot, Salt, and Nitrate of Soda; and the extraordinary luxuriance of their growt and the size of the fowers ha apply it before or during rain, and not to allow it to touch the foliage. My Potatoes and other vegetables appear to like the Guano. On 8 acres of Oats, on recently-draine strong land, I have used 4 cwt . of Guano per acre on 3 acres. In both cases the crops look well, although on poor exhausted soil after Wheat ; but where the Salt is added, there is a vast superiority, altbough that part o he fu wo The diference is percentible a quarter of a mile off. The difer porme the anotho fiell Oats, Salt and Go Guano, the Corn looks walthy but far inferior to that manured with Guano. Two stetches, on whicl were neither Salt nor Guano, look yellow, miserable, and thin.-F.J. M. [The Pea sent was in a state of wonderful streng th . axuriance, and appears to be commencing to bear fave my Asparagus.-I followed your advice, and gave m Asparagus plenty of salt much to their advantage quantity and size; but previously mine were quite gre but all through. This year there was very little green, balt the white was quite tender and good to eat. affect it thus?-I. B. H. [We apprebend not and the' want of colour was owing to the cold dark spring. $]$

Cultivation of Water-cresses.-I observed a paragat in your last Number upon the "Cunvai is rery good: cresses, which I have not the least doubt is very goon but as it is not in the power of many to gha mem ind way, not having a spring of wath I will simply state the way in which every one has the means of adopting years, a plessesses ever so small a garder. I have no kitchen-yarden, but a border for flowers by the side is a north wall, and as I could not get these to do as wight I could wish, it occurred to me that Water-cresses migh succeed. About the beginning of May I prepare a piecon of ground, 8 feet by 3 , with rather rich soil; I then pron

* Vide Gard. Chron., vol, 1., P. 131; figs. 3 to 6,
cure two-penywworth of Cresses, make them into cuttings about $2 \frac{1}{2}$ inches long, caring little about their having roots, plant them about 5 inches apart, water them to set them dry. Thepeat the watering once a day if the weather be have grown a few inches, the shoots want a little pegging down at first; they take root at every joint which touches the ground'; and in this small space I can gather a good dish every day for about five months, with leaves as large as any of those which appear in the markets, and I think
if there is any difference, with a better flavour.- $W$.
Mawthorns.-One of your correspondents complains that his scarlet-blooming Thorns have produced white Iowers this year. This is raiber a common occurrence. saw, and gathered the berries. More than half the plants saw, and gathered the berries. More than half the plants
from this seed proved to be the common Whitethorn. from this seed proved to be the common Whitethorn.
One of the finest of the others, in a few years, produced a One of the finest of the others, in a few years, produced a very abundant bloom of perfectly white flowers, without
any leaves. I removed it to an opposite aspect, and it recovered its foliage, but the blossoms have never resumed reconered its fol tage, but the beassoms have never resumed even a tinge of their former beauty.

Pettigrew," have "J.Wighton" relative to Bees. The former asks who first put the question which led to the various things in dispute, - "Whether we have or have not proved
that Bees' eggs are transmutable?" What I have gathered from both is little more than what is related by Huber and others. "W.," however, don't believe like "P." and others, that the grubs which ought to produce work-
ing-Bees, are metamorphosed by "Bee-pap" (Royal jelly. " "P." mentions a change in the geeder, - a thing
foreign to the sabject, for working-Bees are considered to be Queens in an undeveloped state. Like "W.," I doubt 1he accuracy of " 110 lbs of run-honey from a hive in one hive from which such great produce was the size of the "the add which such great produce was obtained, than of the curess of the person that squeezed the honey out 1radiction: run and squeezed honey are not the same. Perhaps "P." will explain this ; also how to make Bees fill a large hive as soon as a small one. "W." goes too far when he says that "P." "got his knowledge of the Queen Bee's age as some get their accounts, from a Ready author that mentions it. Indeed, the fact of her repeatedly removing renders it difficuit to fnd out. However, 1 have read or heard of one that lived several years; she version how Bees' eggs are hatched, and observes, that none are hatched except they are set upon." In cold where their eqgs and brood are but when otherwise, their eggs are hatched by what "W." calls "the heat in the hive." "P." mentions that "almost all Queens are the year than August, the Bees would be nonplussed, for they have no eggs to be metamorphosed into Queens., general, Queen Bees appear from about the 1st of May to the end of June, and strong colonies contain eggs at Asparagus.--In your Leader of June 10 ,
from some papers of Mr. Beaton, who says quote Asparagus is as hardy as the Oak. I think, Sir, this must be received with some modification. That there is to protect it, is most true ; but if the beads come in contact with frost, death will be the certain result. My beds of Asparagus bave suffered very severely this last winter from being too bare of soil. One-fourth of the very finest roots were quite killed by the frost. The rains must have
washed the soil from off the heads, and the frost killed Washed the soil from off the heads, and the frost killed
them. I must also state, that early in the spring some heads pushed a few nice shoots, and that during a frosty night they were quite killed. Are my remarks likely to treat the Asparagus as a hardy Oak? If so, you will perhaps state what I have experienced,-Discipulus.As Asparagus is a native of England, it is not likely to be very impatient of cold. When growing it is no doubt
tender, and so is an Oak; for who has not seen the tre tencer, and so is an Oak; for who has not seen that tree With all its young shoots killed back by late frosts? We understand Mr. Beaton to mean that it is hardy in the winter, and does not require much protectiou at that
time. We are, however, much obliged to our correspondent for producing this explanation, as it is by no
means improbable that the, observations of Mr. Beaton Deans improbable that the, obse
may have been misunderstood.]
Mout $10_{2}^{*}$ Kill Grubs - As insects of all kinds are likely while to mention that, finding my Cabbages very murh eaten last yeur by the Grub, I scattered a small cquantity Which entinely destroyed all those that were hatched; This I repented two or three times during the season with. the most perfect success.- $k$. Titanin.
Night-scented Flowers. - I have frequently observed Daphne Laureola and Habenaria bifolia, which ordinarily, are not fragrant in the day-time, if gathered and laid aside till they are flaceid from want of moisture, become so. We (if we mappose they acquire the quality of diurnal fragrance Would it not be a more probable inference that they lose by this treatment their natural power and property of arise from the Does the scent of the flowers in question

Does not essential oil usually volatilise by heat? If so, then either the essential oil of these night-scented flowers forms an exception, or else it volatilises as soon as formed, and that under some peculiar conditions, perhaps of light,
electricity, or atmospheric influence, which evening alone presents. These are crude suggestions; but the facts stated appear to indicate that "the exhalation of carof the problem. not likel
Bees. - I find that Mr. Golding has noticed my reinarks on Mr. Rochet's observations on the fortifica. tions of Bees a la Huber, which appeared in the Chronicle of April 22d. To convince me that I am wrong, he refers me to p. 379 of the "Honey Bee." In the volume pabsubject in dispute, but was a little surprised to see, at p. 372 , that "Bees may frequently be observed to roll their into two masses, which they dispose of in the usual way." This happens to be one of the things which I noticed in Mr. Rochet's observations. It is useless for me to repeat what I said respecting it. But as Mr. Golding says assistance" author of the 'Honey Bee" his unwearied mealy Bee story which led to Mr. Rochet's version of it. Mr. G. adverts to his Bees once closing, or " making suspect that that was one which the Bees did not enter at I have a Polish hive myself, having 6 feet of comb; and the Bees endeavoured to make fortifications, or, to be plain, to close the holes they do not enter at. But this holy accords with their habits of blocking up all draught holes, especially in the top of their dwelling. I admit and to common entrance to a hive is ames reduced, and, to appearance, like that mentioned by Mr. G.; but
that only happens when a part of the combs, or rather propolis, falls down, and the Bees form ways through it. The same may be seen on the floo of a hive. I am aware that much might be brought against what I have said, even the authority of "the ever-amusing Mr. Jessie."
But $I$ ask, if such a power 'resides in Bees to close their But I ask, if such a power 'resides in Bees to close their door against their enemies,-how is it they seldom do it? and why do they strive to enlarge their door when it happens to be reduced, if their enemies are about? These facts do not argue much in favour of great instinct in Bees regarding self-preservation. I now notice Mr. G.'s statement, viz,- - "Among the many apiarians, correspondents of the Gardeners' Chronicle, some of them, if they persevere in their apiarian researches, will see cause to modify certain premature opinions ;" and he farther observes, - "There is no one whose general views so nearly accord with my own as those of Mr. Wighton. formerremarks ; be that as it may, whatever opinions I have advanced relative to Bees are from careful observations at the apiary. Huber is wrong ; there are not two kinds of whorking Bees-wax-workers and sculptors. I may observe, niew of noticing what I consider to be wrong, and not with any view of finding fault with one to whom we are much indebted for our Bee-knowledge. By-the-by, I question if such would have been the case if it had not been for Burnens, who was Huber's servant and friend, and assisted him in his unwearied researches respecting Bees. In short, he was everything. Huber himself says of him, "I must share the honour with him:" and an able writer mentions, "It is only right that this faithful and intelligent man should share whatever of earthly mmortality belongs to the name of his master. Perbaps some as December, 1831.-J. Wighton.
Hot-vater Apparalus_I think it is very little known that a Hot-water Apparatus should be filled with hard water, not rain-walphate former deposits a thin coating tion of the iron pipes,-the latter, on the conevary oxidaoxidates the iron, producing a sediment of rust of a quarter to half an inch thick.-Flora. [But, then, some hard water will throw down such large quantities of sediment as will prevent the action of the fire altogether.]
Bees.-Permit me to thank Mr. Wighton for his kind notice of my recent inquiry respecting two stocks of Bees, which a purchaseत last autumn, und described as one strong, and one weak; and that I had discovered, as the spes and swarmed the weak one had become the 24th, and 29th June ; while the strong one had 1eco 24th, and not swarmed at all strong one had become weak I jish sow to add all. Respecting this latler Wighton's (or any other skilled in Bee management) kind attention- About a fortnight since, I perceived in the morning early there had been a slaughter of the drones curing med night, which were ying dead about the
entrance and under the front of tie live, in great numentrance ad it appeared to me, too, that there were very few of the other Bees left, and these in a very wenk almost torpid state. Oa Saturday evening lust, I turned up the Live, and found the colony either deserted or defunct-at any rite, there were no live Bees, and not more than a dozen or a score dead ones. What can have
occasioned this? I have described those two stocks as strong and weak; now strong and weak are vague indefinite terms, and it occurs to me that I may have been deceived. That which I supposed was strong has nine regular well-formed combs, full to the bottom-1 mean that the live is filled with these combs, but not a full of combs, with a numerous family of Bees, and perhaps a small quantity of honey, may have induced the
chase, and that the other-the weak one-might have had a smaller quantity of comb, but tolerably filled with honey, which might have led me to the conclusion that it was a poor stock; but having been, as I before stated, more liberally fed, has become vigorous, swarmed three times, and is vigorous still; while the other, for the reasons I have given, has died, or flown away, from mere want. Would Mr. W. advise me, supposing I should have another swarm, to take out every other comb, and house them in the deserted hive? It appears quite sweet and clean, and it has occurred to me that this would save the young and late colony the time and labour of building combs for themselves.-A.J.S.

Potatoes.-In your last Number, page 413, "R. R. R." mentions the fact of his Potatoes, to the amount of onethird of his crop, producing tubers without foliage, but plant not say when he planted tiom pianted, by way of trial, last Nalnut-leaf Kidney as I suppose it to be. Of the Ash-leaf perhaps one-fourth failed, as mentioned abore; of the Walnut leaf not abore one in forty. I planted the Ash-leaf again in March, and not one has failed thus it might be the weather, or it might be the kind. Is the Ash-leaf getting to be an old yariety and therefore subject to disease? Some future day I hope to send you the results of planting Potatoes in November; for though no new practice, it may be new to many, as it was to I have reaped from the Gardeners? Chronicle much intruction amsement, it adds to the incesant in of a practice, and in winter it gives hope and matter for thought as to all coming crops. Through it I obtained from the exemplary liberality of Dr. Bevan, the yellow Kidney Potato of Mr. Knight which grows beautifully and has plenty of leaves, as I hope it may have of tubers. This led me to read Dr. Bevan's "Honey Bee," a capital book, and anything but. Bevans honey Bee, a capita know, the fates and merits of two or three seedling Potatoes of Mr. Knicht's, which were growing in the Society's garden at Chiswick about a year since.-S. $\mathrm{S}_{0}$. Norwich. [Which seedings ?]
Black Nemophila.-Mr. Ayres, in his weekly instructions for the "A mateur's Garden," makes mention, a mongst other annuals for sowing at the present season, of a new black Nemophila, stated to have been raised from N. atomaria, by Mr. Pawley, of Bromley. This I beg to say is incorrect, as it first originated from N . insignis, in the garden of a Clergyman, a short distance from this place, about four years since. Shortly after it flowered, a drawing of this singular freak of nature was commenced by the lady of this clergyman, for the purpose of transmitting it to Mr. Harrison, conductor of the "Floricultural Cabinet," but in consequence of the indisposition of the artist, it was for inished. This spring, however, I forwarded a figured it in the Cabinet for the present month..-Thomas Cripps, Tunbridge Wells.
Vines.-In my opinion the failure in Mr. Querill's hines may be attributed to the difference of temperature berween the house and border; the same circumstance some happened, though in a less degree, to my yelf. T have every year since they were planted the leaves have at first shrivelled in a similar manner to those of Mr. Querill's Vines; but this year they haye been much worse, and as the border is a new one and well drained I cannot assigu any cause for it but the one $I$ have mentioned; for as soon plants havecomes powerful enough to warm the border lisl phane of effectually overcoming the evil, but would suggest to Mr. Querill keeping his house lower in temperature, covering the border during winter, but particularly from the time he commences forcing, and not forcing so early.

Ancient Price of Agricullural Labour.-In the year 1352, twenty-fifth of Edward III, wages paid to haymakers were but $1 d$, a day; a mower of meadows 3 d . a day, or 5 d . an acre; reapers of corn, in the first week in August 2d., in the second 4d., per day-and so on until the end of the month,-withont meat, For threshing allowance, finding their own tools. For hreshing a quarter of wheat or rye $2 \frac{2}{2} d$. a quarter of beash, peas,
barley, or oats, $1 \frac{1}{4} d$. By the thirteenth of Richard M ., A.D. 1389, the wages of a bailiff of husbandry $13 s .4 d$. a year, and his clothing once during that time, at most ; a carter, $10 \mathrm{~s}_{\mathrm{o}}$; shepherd, 10 s. ; oxherd, $68.8 d_{\text {. ; }}$; cow herd, 6s. 8d. ; swinehera, Gs.; a wohs 7s. From a day-labourer, $6 \mathrm{SA}_{\mathrm{o}}$; a driver of ploughs, 7 s . hrom this time up to the twenty-third of Henry N. the price of labour was fixed by the jus 1444, twenty-third Henry bandry were 20. price of $5 s_{0}$, $20 s_{s, \text {, }}$ and clothing, $4 s_{\text {. ; common servant of }}$ husbandry 15 s ., clothing, 3 s .4 d . ; woman servant, 10 s ., clothing, 4. In time of harvest, a mower $4 d$. a daywithout meat and and drink, 5 de ; a woman labourer, and other 解, $2 d$, a day-withont mean a day. By the eleventh Henry VII., 1496 , there was a like rate of wages, only with alittle advance.- $A$ Quiet Observer.

## PROCEEDINGS OF SOCIETIES.

stated in our Report of last week, that Messrs. Lockhart and Co of Cheapside, obttained the Keek, that Messrs. Lock Eatr and Co.,
lection of Ranuxculusian Mcdal for an excellent coil-

ROYAL BOTANIC SOCIETY OF LONDON.
28.-The Second exhibition of this Society took

Wind, and a heavy shower of rain in the afternoon. The visitors
were mor enumerous than on the lastoccasion. Inconformity with
orever our previous practice, we shall merely speciry tose piants which
were not at the Chiswick cxtibition observing that there were
a cood many specimens present which had been at Chiswick on the 1 th. The things which struck us as most remarkable were
tome of the Heaths, which were spledidily mown; a very noble
sowe cher plant), from Mr. Mylam, gr. to S. Rucker, Est., Wands-
 very fine new Fuchsia, called Queen Victoria, from Mr. Smith, fiowers, with a rich purplish corolla, and appears to be one of the
best and most distinct kinds yet made known. Among the col lections of plants, therer was one from Mr, Brarnes, fr.t to G . W, W,
Norman, Esq., of Bromley, containing some excellent plants,
 state ; Elichrysum proliferum, singularly luxuriant, bushy, and
full of flowers; Ixora coccinea, particularly tall and gorgeous,

 Achimenes longifora, and some goo specimens of Erica
 gr. to Sir E. Antro menes longifora. Mr. Hunt, gr, to Miss Traill, supplied a colexcellent speciaen; Cattleys crispa, a very; good plant, with one
spike of its charming flowers; ; nd some mannificent Heaths, the finest of which were tricolor elegans, tricolor superba, gem mifera perspicua mana, densa, Massonin, translucens rosea, and We
phal.ngla. In a collection furnished by Mr. Cockburn, gr. the Earl of Mansfeld, Caen-Wood, were a very showy plant of Smainsonia galegifoliai, st tall Brugmansia suavereolens; Siphoto flower, and a, Rood specimen of the singular Anyozanthos
coccurens, Mr. Clarke, gr, to T. Smuth, Esq., Shiriey Purk produced, in his collection, a superb plant of Erica triconr decussata, in a dwarf and rich state; and Dracocephatum gra-
cile, beautifully managed. In a group contributed by Mr. Pawley, of Bromley, there were some Fuchsiag, of various kinds, with one called a seeding, which is
very like Eppsii; Ixora coccinea, peculiarly dwarf and splendid;
Mahernia pinamat, Mahernia pinatata, a cone of pretty red flowers, and Alstrcemeria
pelegrina, very handsome. A collection by Mr. May, gr, to E. Goodhart, Esq., Beckenham, had in it a beautiful plant of Gard exquisite syecimens of Sprengelia incarnata and Epacris hetero nemas. The collection from Mr. Frazer, Leyton, contained a
charming little Pimelea rosea, the pot of which had been placed in a larger one, and the sppee filled up with somethmg to protec
the roots; Erica Bergiana, a delightful specimen, though with Yather dull-coloured flowers 5 Euthales macrophylla, and some
extremely handsome plants of Kálmia latifolia. Messrs. Henderextremety handsome piants of Kalmia latifoliaa. Messrs. Henderthe elegaut Marianthus cerruieo-punctatus, a large and beaut
fully-flowered Siphocámpylus bicolor, and Erica ventricosa coc cinea minor, the specimen of which was one of the loveliest
chings imaginable. Several persons exhibited groups of Heaths.
 added; and very magnificent flowering-plants of Cavendishiana
 Goodhart, Esq, there were specimens, likewise magnificent,
Humei, odorata rosea, grandiflora, tricolor, Westphalingia, ves

 speciosa (an eiegant variety), Savilleana, and a specimen of odo
rata, four feet ig height, wonderful plant Mr. Barmes exhi-
bited, as a single specimen, Ericica Massoni, which was in the bited, as a single specimen, Erica Massoni, which was in the
very higheststate Mr. My lam, gr. to S. Rucker, Esq, Wandsworth, exhibited besides some that were at Chiswick, a very fine plant of Cycdrum pastoris, Peristeri men of Aefrides amerne. Mr. Goode, gr. to Mrs. Lawrence, Ealing Park, produced a very pale and small-ifowered Barkéria specta
bilis,
a large Dendrobium moschataum, stanhopea grandiffora, hurst, Esq., the Fence, rear Mr. Applestieby, the to to were Brockle
 Stanhopee tigrina, and Oncidium luxidum guttatum. From
 perium spectabile. In Fuchsias, there was little that diif
fered from those shown Rt Chiswick by Messra. Lane an tained F. princeps, a short-flowered variety, with good colours
 excelsa, which has a good habit. Mr. Brazier, gr. to W. H
 beautiful tree-like plant of plobosa major ; and Mr. Smith, of
Dalston, a new variety, called incarnata, the flowers of which are pale pinkish, with a light red corolia. It is pretty, and
rather distinct. The collections of cut Roses, by various exhi bitors, were morre spiendid than ussan. Those in pots were in no men of Hardenbergia monophylla, Batatas bonariensis, and Shirley Park, The specimens of various plants, exhibited by
themselves, were Statice sinuata, a very handsome specimen

 crimsony pink, and very full towers; and Verbena striata, a red-inowered kind, with small indistinct white stripes in the
blossoms. The exhibitions of Shrubby Calceolarias contained some ghod plants by Mr. Barnes, gr. to G. W. Norman, Esq., of
Valentine, Standishii, Incomparable, Shrubby perfection, Land
 kinds, which were very good, by Mr. Barnes, were Princess
Royai, Glow-worm, Model of perfection, Lady Sale, Gauelle
and Delicatissima; and by Mr. Catleugh,
Isabelle, Magria, Surprise, and Claudia.
 Rhoda, Joan of Arc, Flamingo, Grand Monarch, Mabel, Mastel
Humphrey, Lord Mayor, Corona. Mr. Henderson showed also Driory Queen, Wilson's Superba, Madonna, Beauty,
 worth, for Luna, Leonora, Evening Star, Meteor, Erectum, Cleo patra. $2 d$ prize, Mr, Stains, Middiesex Place, for Coronation,
Orane Boven, Priory Queen, Madelina, Prince (n) Wales,
Superba. The number of specimens exhibited in this class by
 Pertection, Madelina, Euterpe, Royal Adeaaide, Lady prize, Mr.
Rising Sun, Augusta, Cotherstone, and Jubilee.
Catleugh, for Queen of the Fairies, Juliet, Angelina, Unit, MM1. berry, Symmetry, Jubilee, Luna, Tournament, Amina, Enchant ress, and dueen of Beaties. Pelargoniums in collections of 6
varieties in 21-sized pots: 1 sit prize, Mr. Bell, Chelse Hospital,
for Coronation, Erectum, Comte de Paris, FIorence, climax , Sylph $2 d$ prize, Mr. Bourne, gr. to Sir E. Paget, for Chelsee
Pensioner, Erectum, Sylut, Speculum, Mabel, Nymph.
3d Mr. Hunt, gr. to Miss Traill, for Prince of Wales, Jubilee, Louis Qy Nurserymen in this class was doubled: -1st prize, Mr. Cut-
leugr, for Hebe, Unit, Una, Comte de Paris, Leord Mayor,
Duchess of Sutherland, Witch, Selina, Priory Duchess of Sutherland, Witch, Selina, Priory Queen, Jubilee,
Victory, Matilda. $2 d$ prize, Mr. Gaines, for Matilda, Juba, Alb Perfecta, Exquisite, Captivation, Syiph, Joan of Arc, Roosea Per
fecta, Rienzi, Lady lsabella Douglas, Victory, Nymph. Pelargoniums in ocllections of \& varieties, in No \& 8-sized pots:-1st
 of the tent, not for competition
RANDNCULUSES were exhibited by Mr. Ansh, and by Mr. Alexander. The $18 t$ prize was awarted to Mr. Ansi, for Prince Sylph, Adcline, Wonder, Prince of Wales, Nellson, Victoria, Pretiosa, British Queen, Mirabelle, Sir R. Peei, Othello, and Clarissa,
$2 d$ prize, Mr. Alexander, for Mrs. Nielson, Bartlett's Chatlote
 Elvira, Minos, Robert Burns, Horace, Lady Peel, Demosthenes, Ninus, Alexander's Rienzi, Princess, Annette, Scoont, Aurora,
Ensign, Mr, Wyse, Romeo, Tricolor, Emancipator, St, Paul, Ensign, Mr. Wyse, Romeo, Tricolor, Emancipator, St, Paul
Nonpareil, Felix, Pactolus, Triton, and sir Wm. Wallace. In
 Henry, Prince of Wales, Ibbet's Triumphant, Hero of Kent Hastings, Cray's Beauty, Willmerw's Queen, Bunkel1's Eclipse Church's Rowena, Omega seeding, and Marianne. $2 d$ prize, to Auckland, Omega, Norman's Defiance, Earl of Uxbridye, Lady Mora Hastings, Majestic, Barret's Conqueror, Ibet's Litthe
Wonder, Rainhow, Whiter's Warrior, Rosanna, Keynes's Alpha Diamond, Garrat's Alpha, Gauntlet, Eclipse, Model, Creed's
President, Ne plus Ultra, Seedling, Coronation, Countess Stanhope. A colicection of very ine irises was sent from Mr. Lock-
bait, embracing all the variations from delicate white to deep purple, many of them beautifully variegated.
of which would have taken prizes two or three years since, but were not considered sufficiently good to have prizes awarded to Standish, of Bagshot, was selected for a prize, and one from M from Mr. Piper, and a flower of good properties was also noticed There were interesting collections of dried and named Agricultural. Grasses from Mr. Moore, Aibany-ste, Mr. G. Turner
and Mr. Coates, Norwood. Those of the first-named exhibito wad been pressed, and were fastened to paphe, while the other were free, and stood erectiy. Specimens of the Chevalier Bartey
were sent by Mr. T. Perne. A group of the species of statice was furmisted by Mr. Wood, nurseryman, of Norwood; and British Ferns, in pots, by Mr. Wood and Mr. G. Turner AT a Weekly Council, held at the Society's house in Hanove Square, P. Pusey, Esq.., in the chain, C. Arkwriht, , Asq., of Dun
stall Lodge, near Burton-upon-Trent, Staftordghire, waselected a
Governer
 nformed the Council that the Directors had passed a resolution by which, during the Society's ensuing meting at Derby, no
increase is isuaranteed on the usual fares for passengers, while onricultural implements, a further reduction would on chat onte and sion be made of one-third. Mr. Colvile, M.P., stated that an
office for the registration of furnished houses or apartments, similar to the one established at the Bristol Meeting last year, had been opened at No. 14, Market-place, Derby, where
Mr. Moody, the Registrar, would recive nad duly attent oll
the wishes of parties applying to bim on that subject. Mr. Miles, the wishes of parties applying to bim on that subject. Mr. Miles,
M. P., having read letters received from Mr. Handiey and Mr. implements and the extinition of their peculiar principles o his purpose; when Mr. Pusey stated, that, in order to test the implements on a soil with which the Derbyshire farmers were
most familiar, the Council had ordered that every attempt which the weather would allow should be raade to effect that trial on
the strong land at Mickleover originally selected for the purpose, and which would be brought by the requisite processes of plough-
ing, harrowing, \&c., into as favourable a state as the soil would 28th inst., he should propose that prizes be given for long and prizes for horses, and in the mode of their designation; and $M$. E. David, that prizes be given for Dairy cattle. Mr. Clive also
proposed that a prize should on some future occasion be given for the best mode of keeping farming accounts and taking stock.
Mr. Cherry sumitted the model of his new Land Roller in sections, having changeable points of traction; whereby com
paratively unitorm pressure pmay be given to uneven surfaces,
Mr. Cherry at the same time explained the advanter forge of simple construction and light weight, which he had
arso presented on a former occasion, and which being easill transferable from place to place, became suitable for jobbing purposes on extensive farms. Mr. Barton read an interesting
case of self advancerent in agricultural industry, which he had met with in passing through Norfolk; Mr. Pusey communicate
an account of a new variety of Rye from Mr. Taunton, and statement of a count deariect of Ryy from Mr. Taunton, and a seeds he had sent him, which he intended to try, and would
report the result to the Council; Mr. Kirberry, of Oxfordshire, comanunicated the results of his experience in the use of his
Dibbling machine; and the Rev. W, Bromley of Derbyghire Dibbling machine; and the Rev, W. D. Bromley, of Derlyshire,
the accunt of his mode of shedding ewes on mountain farms. A Weekly Council was held at the Society's house, Hanover
square, on Wednesday, the 2 Ist of June, the Right Hon. Lor
Portman, Vice-President, in the chair. Inshes, near Inverness, Scotland, Fas elected a Governor, and
gentlemen Members of the Society. Mr. Henry Colman, Agri-
cultural Commissioner from the United States presentect and sectional drawiug of Atwater’s steam Generator, for
domestic use, for cooking fuod for cattle, and for several puresoses to which steam may be applied. Mr. Colman stated that
phe principal advantages of the invertion were the rapidity with wiich steam might be produced, the little cost of the machine, Coiman likewise of fixel it required, and its portableness. Mr. stalks of Indiau Cornu, or Maize ZZea Mays.). This was a fair suyar,
and in the state in which it was taken from the pans arter the evaporation of the juice. Mr. Colman considered that this sugar
might be made might be made a mast valuable product Wherever the ndian
Corn could be grown, and stated that the plant, when sugat isto
be made from it, is not allowed to oipen, or even to form its seed, se made from it, is not allowed to ripen, or even to form its seed,
and that the stalk only is used. The leaves or blades and the top odder, and the stalks, after they have been pressed, will furnish fed for cattle. Mr. Colman remarked that it had been already
ascertained that more than 1000 hbs. of sugar can be obtained
from a single acre, and he liad lodout that amount would eventually be obtained by proper cultivation and management, the manufacture being yet in its infancy ; but that
in respect to cost, quality and the facility with which farmers maysupty themeselves with this important article of romestic
consumption, the best results might confidently be anticipated. consumption, the best results miinght confidently be anticipated.
The sample then submitted to the notice of the Council was sugar in America, but there was no reason why similar riceess
should not attend the trials made in this country. Mr. Colman also presentec several specimens of Cax, preparediny stean, with Specimen No. 1, Green Flax, broken, and the fibres separated
entirely by the action of machinery, and called the "Stem Fiax. No, 2, Green Flax , brokent the fibres separated, and the glutinous cold water. No. 3, Flax which had gone through the same pro-
cesses water, and a small quantity of alkali in the last water, also
shortened and equalized for spinning. No. 4, Yarn spun from Flax in specimen No. 3, on a Cotton throstle, with the preparation specimen of Perennial. Flax, from a plant growing wild in CalI. Walker, Eckford. The following specimens of Silk and Cotton
were also presented by Mr. Colman: 1, a specimen of wild silk found upon the forest tree in the interior of Mexico, produced by
an insect, said to be of the spider family; $2, a$ specimen of Sill Cotton, from a tree of the Bahama Islands, and resembling flosssila; a specimen of native Cotton, found growing in a wild Davenport sumbinitted and explained a machine invented by his
bailift, Thomas Scragg, for making pressed tiles, at $15 s$, per the coal being calculated at 128 s. per ton, carriage hicluded. Mr.
 on thorough draining in the last Journal (page 48), in referring Southampton, he had stated that he understood the inventor
to have disposed of has patent to Messrrs. Ransome, and to make his tiles without the construction of "sheds !" He had, however, of his patent, and that he makes his tiles without "shelves," but nunication sheds. Mr. Pusey then read an me end application of pipe-tiles, from Mr. H. Dixon, of Witham, in Essex, whose experience of the seing the most permanert and economical. Mr.
vinct in im
Hobss stated that he could vorch for the correctness of the details then laid before the Council, and for the coodness of the tiles in question; Mr. Dixon having done more for land-draining and the county. Mr. Warnes obtained leave to submit various
specimens of Norfolk $F l a x$, and explain the circumstances of their growth and management.
INN TAN AN SOCIETY
June 20.-Edward Forster, Esq.. in the chair. Robert Brown, Esqe nominated Vice-presidents. A list of the names of Fellows was read over, whom the Council proposed should be expelled the Society for non-pay ment of arrears. A paper was read from The author described most of the trees according to their colonial to which they werc apllied. The black-butted Gum tree is re-
markuble for its gigantic height, and is one of the largest trees in the colony. The Eucalyptus mannifera, is called Mamia tree bling manna. The colonists use this secretion for the same pur-
poses as sugar, and it is said also to have the same medical properties as manna. An account was also given of various trees known by the name of Stringy Barks, also of the Mahogany and
Cedar-trees of the colonists. These trees belong to very different families from those known by the name of Mahogany alld Cedar
in Europe, but there is a resemblance in the character of their woods, and they are applied to the same purposes by the colo-
nists. Mr. Varley exhibited a new microscope with an improved
staie stage phial-holder, and praphic eye--
bited one of his powerful instruments
The Floricultural Society yeld their annual exhibition for seedling Pinks, Pansies, and Pelargoniums, on Tucrday, 2 th, had for
Class-howowing in the two frst-mentioned flowers. Upon the tables
 Chandiler and son, Yauuhall, specimens of Pimelea, hispida, Spireas
japonica, Fuchsia St. Clare, and an extensive collection of cut bloom of Verbenas, Petunias, and Pelargoniums. A very beautiful seed-
 The Moss is rich in colour, and abundant. Mr. Hooker also oxtiThe for fine specimens of the double Yellow Persian. Mr. Rendle

 the nursery of Messrs Henderson, Piie Apple-place, this pretty

 concerning its nature may show the propriety of keeping it in a
greenhiouse; and if so, it will become a more taluable, plant. it
it
 if taken off in early spring, will strike treely in a warm, moist greater quantity of laterals, and thus the amount of blossom will common mixturerably strong, The plant may be grown in the
 Botany.
Hovis

 best of all Hoveas, H. Celsiii. On a more attentive in syececion,
however, and a comparison of the two plants, they are materially

 colour, as those of the species with which we are now comparing
them, Uniess the roots of these plants are carefululy watered and the soil kept well drained, there is no tribe more likely to die orf in a sudden manare when they yave attained any size. They
should bepoted ingh in the centre of the pot, so so to to have the juiction of the roots with the stem amost atere, and we weond
prefer a soil with more of light open loam in it than one contain
 stone or potshierds for drainage. The species is increased by
cottings.-Paxton's Masuavine of Botany
 sections of the genas no one is beter marked than that called
the spatulate, which consisto of species with a suffe erect habit,
 large showy fowers, and the petais remarkab:y longer than the the
sepals. But bey ond this there is onthing that difiters from Den
 rize the establiarisment regardead of thate present plant is a native

 cles near the apex. The column is short and somewhat pouched

## MISCELLANEOUS.

New Strawberry.-Mr. Myatt, of Deptford, has this year produced another fine variety of this fruit, which he prothing like that of the Downton, and is very hairy underneath. The fruit which has been submitted to us is magnificent, with the clear rich scarlet colour of the berries and Elton when neariy ripe. Many of the Cockscomb, and, when not so, having the appearance of an enormous Elton. The flesh is firm and heavy, and well is very good; not so rich as the old Pine, but most agreeably acid. In warmer and brighter seasons it will probably be first-rate.
Neill Testimonial.-A testimonial of respect has been presented by the Scottish Practical Gardeners to Dr. Neill, triangular pedestal, and standinfon an appropriate plateau On one side of the vase is placed a medallion likeness of Dr. Neill, surrounded with a wreath of flowers composed of Nierembergia calycina, Philibertia grandifora, and Tweedia cærulea; originally introduced by that gentieman. On the opposite side is the following inscription:Secretary of the Royal Calodonian Hortieultural Society by Six Hundred Practical Gardeners, Natives of Scotland, in testimony of their high esteem for his personal devotion of his time and talents to the cause of Horticulture, and the interests of its Cultivators. Edinburgh, 22 d June, 1843 ." We regret that our limited space prevent our giving a report of the dinner which took place on this
interesting occasion. Few men have deserved better of interesting occasion. Fe

Arrowroot Pudding (Souffé).-Three table-spoonsful of Arrowroot to half a pinc of milk, and one ounce of butter mixed in with it. To be boiled till thick, stirring it all the time. Two ounces of loaf sugar, half a dozen
Bitter Almondsy four eggs, the yolks and whites beat sepa rate. Mix the sugar, Almonds, yolks of eggs, with the milk, \&c., and add lastly the whites of eggs beat to a froth. Twenty minutes, or half an hour, to bake it.root, with a little milk to mix it. A pint of milk put on the fire, with eight Bitter Almonds chopped fine, or cruised, and two Laurel leaves, and three to four ounces of loaf sugar. Pour the boiling milk on the Arrowroot, stirring it well, and give the whole a boil up till it thickens. It must be turned into a mould. To be made the night before required. It should look like Blanc Mange. [We attention more to the production of Arrowroot. could be had genuine, at a moderate price, it would be largely consumed in England. But $3 s$. or $4 s$ a pound is a prohibitory price.]

GARDEN MEMORANDA.
Messys, Henderson's, Pine Apple Place.-As is usual at this
nusery, all the show-houses are very beautifully decorated with
 canvas during brght sunshine. There is a house full of Pelargoniums in spiendid manner, or to one side, than nin that more regular and spreading manner which is common with the plants prepared fur standing on taller stages, where they make a gorgeous dis play. Among them we It has by no means a fine flower, but the habit is
is such a pleasing minture of white and crimson in the flowers
that it is likely to be quite a farnunte. The plant to wl tch wo

 of character, without which al, findintt towerc must pass into
oblivom. In a lorder, fronting a wall with ann eastern aspect, 2 s a good collection of the newest Verbenas. The plants are very way of a large Chamædrifolia, with deep velvety purple is in the Way Princess Royal, which greatly resembles one named Queen,
and which has close heads of large whitish flowers, of a
and and which has close heads of large whitish flowers, of 2
very perfect form. This last is the finest Verbena, in regard to the size, arrangement, and shape of its flowers, we have yet seen.
A variety of Phlox Drummondii, raised by Mr. Wood, of Mares-
field, and known by his name, is blooming in one of nad, besides being of a very superior habit, has superb darl
crimson scarlet flowers. The prety Sedum about in pots, in the open air, and is covered with inflores placed Calla बsthiopica, planted in the bottom of a large exposed cistern or reservoir, has lately blossomed, and thrives exceedingly well
there without protection. Spreading over several of the borders and presenting broad trusses of delicate lilac bloom, is the elegant ornament. A varnety of Antirrhinum, tou, beanng the name of here 15 a very large andi handsome collection of calceolarias, al
 Lambertia formosa, which is so rarcly seen 111 bloom; Sollya
inearis, superior to $S$. heterophlilla, because having such deep. phylla, which contrast well in point of colour; the large variety howing flower; and many beautiful Heaths. Some of the Lubeurprising vigour and regularity. The plan is likewise applied to many other plants, of which the species of Zichya and Boronia serdopted with Gloxinias, and there is a noble plant of $G$ rnbra thus managed. Also in a stove, there are yumerous plants of Eschynanthus ramosissimus, which, by varying its time of rest,
is made to bloom now, and at almost all seasons of the year ; Angelonia grandiflora, a good species; Betleria pulchella, a very
ornamental old herbaccous plant; Gloxmia macrouhylla variegata, hovel and handsome; Brugmansia floribunda, now finely n dower; an excelient plant of Hoya carnosa, in a pot, an
trained on a low conical trellis, flowering most abundant $\} \mathrm{y}$ : varrety of Gesnera, like verticilata, though with much darker
flowers. Colnmnea Schiediana, bearng a great number of its pretty white berries, which are almost as preasung as the blos-
soms; Allamanda cathartica, one of the best of stove-climbers; and the lovely Stephanotis florng over a large portion of the roof, and adorned with
extending of
hundreds of its sweet scented blossoms. The orchacee here hundreds of its sweet scented blossoms. The Orchindacer her
are looking extremely well, and there is a fine specimen of Cyc
noches chlorvchilon and others in the nickest bloom.- $E^{*}$. $K$. June 27 .
Sir Charles Lemon's, Curclew,_-There is at present blooming
here a specimen of Callistemon salignum, raised from New Hol where it has stood for the last four years without protection, and ttained the heigh

## 3Rebirtos.

An Inaugural Lecture on Botany; considered as a Science, and a Branch of Medical Educa
Edward Forbes, F.L.S. 8vo. Van Voorst.
Thas discourse, delivered by Professor Forbes, on first meeting his Class in King's College, London, cannot fail to be read with interest by all who are either lovers of Natural History or concerned in the great work of educa tion. It will be found a most skilful exposition of the connexion between Botany and general science, and by
far the best plea we have yet seen for its universal far the best plea we have yet
adoption as a branch of education.
A few extracts will show the skilful manner in which Professor Forbes has handled his subject.
"Of all the Natural History sciences Botany is the most advanced and the most pursued. From an early period in man's history the attention of the observiug had been directed towards the vegetable kingdom, partiy from the facilities for the study of plants-assembled as they are in their various kinds abundantly around us-and the olden time the herborist and the physician were one in nations ss yet unemerged from their infant or barbawere at first purely utilitarian. Fanciful resemblances to the forms or symptoms of disease furnished the principles of botanical arrangement. But continued inquiry, even when conducted upon false principles, led at length from empiricism to science, and the herborist ripened into the
 longer to be regarded as mere depod for their own sakes The wonders of their structure were exposed ; the variety f written. The vital processes, continually going on within their bodies, were explored; their affinities with each other and with the animal kingdom investigated; and their history became a store, from whence conld be drawn at pleasure numberless admirable examples of the per fection of design in creation, and of the benevolence and omniscience of the Creator.

This change in the object and manner of the studies of the botanist did not, however, divorce the science from ies firmer together. The the lnow, tudying the vegetable king tre knowledge gained by benefit to medicine than all the fancies and dreamy theories of the herborist. We learned that the properties of nlants were correspondent to their natural affinities ad the discovery of the botanical relations of a apecies gave us the true clue to its useful qualities. Reason and the gain to medical science was great indeed

The teaching of Botany in its relations to Medicine But I oneuld be deceiving my pupils and mynelf if I
encouraged for a moment the supposition that such object is to be gained by the mingling of herboristic notions with the more scientific parts of the subject That the medical student acquires but little by his attend ance at botanical lectures, is not an uncommon fancy
among the senior members of the profession. Some among the senior members of the profession. Some
eminent men have gone so far as to denounce it as lost time. The utmost the student is supposed to carry away is a knowledge of the names, classes, and orders of such plants as furnish products used in medicine. It seems to me that the true object of the connexion of Natural History studies with more professional pursuits is, as in this case, too generally lost sight of, and I gladly avail myself of this opportunity to urge their claims on your attention, and to plead for them on grounds which have not been put forward sufficiently prominent hitherto, though by no means novel, seeivg that the positions I am about to maintain are avowedly acknowledged in private by most scientific teachers, though rarely advanced in the class-room. The plea which I wish to advance is, that student is not merely the teaching him a certain number of facts, the recollection of which may be serviceable to him in after-life, but the training his mind, by means of the peculiar forms of research which characterise those sciences, to that tone and vigour which must be of the utmost consequence in giving him power for future professional avocations of a different nature, especially such 88 are to form the after-occupations of the student medicine.

The two qualities most essential to the physician are correct observation and accurate discrimination. The frst depends mainly on the power of seizing all the feature of an object or case with clearness and facility, detecting adventitious characters at sight, and excluding such from all influence on our conclusions. The second implies powers of just comparison, of perceiving the mutual relations of parts or facts, and of testing the possible greement of stalements with the circumstances whic accompany them. Now though all men are eadowe with the elements of these qualities, all are not born correct observers or accurate discriminators. Men mus be educated into such. The mind must be trained to reason justly, the instruments of the mind to observe correctly. The classical and mathematical studies of our youth are not intended merely to teach classics and mathematics, but to train us to the business of life, and to right judgment in the higher pursuits of men. The bodily exercises of our youth have not for their object merely those pleasures which such exercises afford, but the strengthening of our physical powers in order to ensure us a healthy and vigorous manhood. The training of the mind makes the intellectual man, the training o the body the physical man. The end is gained in both cases by means essentially distinct from thatend. Now hold that Natural History should be regarded in a similar ight among the studies of the young physician.

The first lesson of Natural History is observation The study of an animal or vegetable species is the perfection of observation as far as that species is concerned. The form, the substance, the qualities, the phenomena of existence, the influence of surrounding objects, are al observed with the greatest precision, and defined so as that species is left untouched. The study of a group o tenus of animals or vegetables is in like manner the perfection of discrimination. All the members of the group are compared in all their parts with each other, the relations which they have in common are summed up, and heir differences recorded in every possible point of viem. The causes of those relations and differences are anxiously Mevered into and surver is taken of the bearingioasl whole group to its proximate allies and finally of the equivalent assemblages in arganized atur

Who can rise up from such a study and not feel mentaliy strengthened? The mind through such an exercise must gain in both its analytic and synthetic powers. Such an investigation calls into action all the aculies, the perfectionizing of whe essential to the frmation of a sound physician. The mental process is the same at the bed-side of the patient and in the cabine of the naturalist : its first element, correct observation leading to correct diagnosis ; the second, accurate discrimination, leading to sound methods of treatment in th one case, and philosophical views of affinity in the other." The following is Professor Forbes's view of the value of the Linnæan system of Botany, long so universally fol lowed, and now as universally abandoned-"Those who slightingly think of the Iinnean system, as it is termed, forget in the present to look back fully and fairly on the past. They should remind themselves of the state in which Botany was when Linnæus undertook to make its trea sures consultable. The understanding of things depends greatly on the perception of their order and relations When that order and those relations require deep study ere we can comprehend them clearly, the man who give
Lua a plue, hamper insignificant it may be in its own nature, is not only conferring on us an invaluable benefit, but endowing the despised instrument with golden value. Such a clue did Linnzus give when he put forth the sexual system. The scientific systematist, surrounded by treasures were often amassed in the first instance by adventurous and earnest men, rendering good service by their hands and energy, as good in its humble way as that which he gives by his head and pbilosophy. It was not to be expected of such men that in the field they should sccupy themgelves with thoughts of arrangement or affinity ; their part was to abserve and select, and the guide to their observation and selection was in most cases no
other than the Linnzan system. In the scientific hive as in the apiary, there must be working-bees and neuters
as well as queens and drones : it is necessary for the eco as well as queens and drones: it is necessary for the eco-
nomy of the commonwealth. An easy means of acquirin and arranging information An An easy means of ackme of science, and no department has gained more thereby than Botany, which, through the facilities afforded by the artificial method devised by Linnæus, has had its fact amassed in enormous quantity for the use of its more philosophic votaries, and owes its present advanced state in great measure to such humble means.

The clue to the labyrinth then having served such noble purpose becomes a consecrated object, and should gnomin hung up in the temple than thrown aside with gnd miny. The traveller returning from his adventurou with affection on the wall of his study But traveller must return to the fields, if more is to be done; and so wust botanists, and each must have recourse again and earliest jose he
In this we entirely agree. The merits of the Linnæan long passed a way. We regard it with all veneratione has object of antiouarian interest, but only as such. Like th armour that defended our ancestors, its place is amons the relics of bygone times.
The Lecture is terminated with the following excellent
In conclusion, whatever the ultimate view of the student respecting the intention of his Botanical studies may be,-whether to enter upon them as exercises for the training of those faculties which are afterwards to be applied to professional purposes; or to engage in them with a determination of pursuing Botany as a science, and in the end developing its laws-or to gain an acquaintance for future hours of recreation $p$ and 1 elife of for future hours of recreation or study in a his of busines mind, 1 would remind him earnestly to bear in mind, at the same time, the more serious benefits which may accrue from the study of Botany. That which Lord Bacon said of all knowledge is especially true of this department, that it "is not a couch whereupon to rest a and and variable mind to walk up and down with a fair pros pect; or a tower or state for a proud mind to raise itsel non; or a fort or commanang ground for stike and house for the glory of the Creator and the relief of man estate.

CALENDAR OF OPERATIONS for the ensuing week. From the beginning tr me midale of July is the best time of the year to increase Roses from tayers. The shoots are less brittle now
and ou than account enaier to tandle than when the are ripe. There
is much time saved also by summer layering, as the layers will be rooted, and fit to bee bedded out in nursing rows next November
Besides, there need be no cold fincers abult Besides, there need be no cold fingers about the business, as when
done in February or March. Those who intend to grow Roses in
pots for exhibition, or for private use, and for early forcing also, should pots for exhibition, or for private use, and for early forcing also, should hear the bottom, which may be layered for stocks, and budded parts of this volume. The proper height at which these should be
fudded is a matter of taste; for private use you had hetter follow the common herd, and have yours from nine inches above the pot up conservatory in early spring ; and you can always hide their ugly
stems with other plants. For exhibition, on the other hand standards will not do at aill, unless they are exceedingly wel stocks of the cornmon China Rose are as good as any, the Boursaults, however, possessing the softuess and exeitabiaty of the Cainas,
with the hardiness of the Ayrshires, are considered by all growers to he the best stocks for gencral purposes. Any variety of this section wil
answer; Drumnonds Thornless is one of them; so is the "Ros without a Thorn," as country people call it, and Rose de $l^{\text {'I }}$ Isle.
Either of these, that are readiest at hand, will do equally well with shoots for layering be very particular in picking out all the buds below where you intend working in the new ones; this will keep
your stocks always free from suckers and side-shoots; not, however anless the shoots are of this year's growth, as we have no power or
this sort over older shoots, which are already coated over with a laye

## I.-KITCHEN.GARDEN AND ORCHARD.

PrNRRq.-If you keen up a very moist atroosphere, you can hardly give too much top-heat to healthy vigorous young plants about this
time ; and if they stand the sun without sbading so much the bether but a slight shade for a few hours will do no harm these long days. their season as long as possible.
Niveax.- he late vines require the most attention now, excep that they are kept more close, and with a greater degree of heat tha the cartier ones at the same stage. The usual routine of thinning an PEACH-HOUSE. - No fly, spider, or any other enemy, should get footing in this house till the last leaf of the season is down; and the it bo for the next crop. More wholesome riped from the carly or late ones, and as this is the the warmest period of our summers, you may gyc the plants almindance of soft pond-water till thisy are stuclled out to their full s.ze ; and if the shoots have not got too crowded you ought to hav.
fection, according to the merits of the korts you grow.

Symptoms of summer weather have come at last ; but gardernng summers seldom come in in our climate before the turn of the
season, by the middle of June. A week or two over, and all our troubles about
will he forgotte
Crops in Rows.-The surface of the soil has been battered with rust, and the necessity of deer stirrins between rows and indeod all over the garcen, was never more apparent than at the present You must breal the crust some ehow, and allow an inter-communica
tion betwen the atmospher and he roota of plants. tion between the atmosphere and the roots of plants. tion between the atmosphere and the roots of plants.
CoLeworrs,-Seeds tor supplying thene should be got in soon.

Broccout.-Large hreadths of the winter and spring sorts should
now be got out as vacant pieces of hrownd fall ing now be got out as vacant pieces of ground fall in.
CAULILLOWERE, ENDDVE, and other autumnal you will also plant out at regular intervale, and see that there are no
plants left to run to seed amone the plants left to tun to seed a among the beds of Carrots, Salseffy, Scor-
zoncra, skirrett, and C Ciscory, all of whick are liable to throw up
and zonera, Skirrett, and Chiccory, all of which are liable to throw up
seed-stalks. The remedy is to pull them out at once, and wheel
 sumner growth, and the destruction of insects, must still be con-
tinued. All the stone-fruit may now be budded, the springgraits looked over, the clay brolken off, and the bandages loosened. windy day. The blackliinds and the the strawherriee recunire y our next
attention. If you did not mark your sterile Hautbois while in attention. If you did not mark your sterile Hautbois while in
blossom, you can do so now, as they liave no fruit; and unless you root them up their runners will spread all over the beds, and in phace
of one sterile $\begin{aligned} & \text { plant this year you will have } 500 \text { next seasson }\end{aligned}$

## il.-Flower-garden and shrubbery

STove. - By this time the growth of Cyrtopodiums is nearly
finished ; but they are so excitable that a second growth is followed immediately, unless you stint thelm a little by with hollhng water,
and by removing them nearer the door. A nice point in their culture is to keep then for the next six weeks just as they are at present, or, indeed, as long as their foliage remains green; but you must keep a
constant watch over the buds on the lower parts of the recent shoota, for if these are allowed to push, or even to become very prominent, the plants will not flower next spring; or if they do, they
will not be good for much. Those few sinple rules affcet at least 400 Species ontrchidaceer,
GRERNIO OSE PLANTS Gremenioose PLANTS wiil now ro well enough with the usual
routine of watering, syringing in the evenings, tying, staking, and
 secrets, of which most gardeners had a goodly stock 30 year ago, here is room for their application, to keep plants from being drawn,
and to retain their blossoms much longer than they gencrall last in and tor exain their blossoms much longer than they gencrally last in
the dog-days, , Inc. In the absence of such helps, pour larre portions
of water over eevery spare aprner. of water over every spare corner, borders, paths, and all, beep light
screens between them and the sun through the day, and all the
 he choicest kinds of greenhouse plants in summer. Heaths here,
that have not yet flowered, should not have any shade over the glass,
 perature about the plants all night. canly Tulipg, Hyainths, Narcissus, \&cc., may now be talken up,
dried, and cleaned in a dry fled, and be put up in the secd-room dricd, and cleaned in
till planting-out time
Curxsancrirmiems. - To have beautiful little plants of these,
with immensely large hcads of flowers, you must begin now by selecting the strongest shoots on the plants growing in the open ground; draw these out along the ground, and at three or four inches
from the top, peg tiem down. They will soon turn up their neints froin the top, peg them down. They will soon turn up their points
again, and in abouta fortnight or three wecks you may sink pots
under the bends, full of rich mould and ayer these sho under the bends, full of rich mould, and layer these shoots, letting
the bend down near the bottom of the pot. The pots will soon get the bend down near the bottom of the pot. The pots will soon get
full of roots, and on a dan2p evening you can cut off the shoots, and remove y

State of the Weather at Chiswlck during che last 17 years, for the ensuing
Week ending July 8 , 1433.

## REPORT ON COVENT-GARDEN MARKET

Tre Cherries and Strawberries which we spoke of last week ns had of an improved quality. There are no good Cherries, however, to be had for less than $6 d$. a pound; nor Strawherries lower than $8 d$. per pottle. In addition to the common kinds of strawberry, there are now Myatt's British Quecn, and one which appears to are some splentid Pine-apples, and very extraor dinary Peaches,
with excellent Nectarines and Melons in the Market. Some Gooseberries and Currants are shown in a perfectly ripe state and large quantities that are partially coloured. The Grapes are though not particularly good; Carrots, Turnips, Onions, \&cc, are in an excellent condition, and Asparagus is beginning to get
smaller and scarcer. Besides the usual supply of ordinary cut smaller and searcer. Besides the usual supply of ordinary cut
flowers of which the parious kinds of Roses constitute a large flowers, of which the various kinds of Roses constitute a large
proportion, there are Orange-blossoms, Crassula coccinea, Less
 V enus vietrix Fuchsia; with Thunben
and M M etrosideros floribundus in pots,

## Notices to Correspondents.

NEECTR--It would be very desirable if our Correspondents would take some little pains in forwarding the various grubs
and insects which they wish to gain information about. More than half we receive are in such1 a state that were they not well
known it would be impossible to determine them. Those forwarded in a quill generally come to hand quite safcly, and that Manures. - Dinmthrs. - We plan of inclosure for the post The nitric acid is only a speculation, and may not succed. It

and the only one worth preserving: 2 , is common in colour, and too indented at the bottom; $s$, is small, and bad in cr,hur, , is small, and of a bad form.- $J$. Plunt.- Alice Maud Mary
is singular in colour, and covered entirely with very minute spots, it is too small.

## NEWS OF THE WEEK

The debate in the French Chambers on the proposed reduction of the army terminated on Friday, in a large majority for Ministers. Marshal Soult strongly resisted the reduction, and hinted that he would resign rather than carry into execution so dangerous a measure. This threat, added to a favourable statement from the Finance Minister on the finances of the county, produced a strot effect upon the Chamber, and upwards of 200 out of 380 members rose against the reduction. Notwithstanding is trimpn, the Ministers liave found it necessary to give way on some other matters of expenditure and have consented to reductions to the amount of $7,000,000$ francs. The spirit of economy, lowe Chambers that they have refused to entertain for another year the Paris and Belgian Railmay Law, though urged to do so by the Cabinet.-The accounts from Spain, though in some respects satisfactory, are calculated to give rise to apprehension. The Regent left Madrid for Valencia on the 21st ult., amidst the warmest manifestations of enthusiasm and attachment from the National Guard and
population of the Capital. He was accompanied by 6,000 infantry, 2 regiments of cavalry, and 15 pieces of cannon and with this force there is no doubt that he will speedily reduce Valencia. If, bowever, the French telegraph may be relied on, a fresh complication has arisen at Barcelona, in consequence of the precipitate march of Gen. Zurbano upon that city before he had obtained the support o Gen. Seoane. He is said to have been cut off and
attacked by Col. Prim, the insurgent leader, and his position is represented as so perilous, from the refusal of his troops to fire upon the insurgents, that a surrender at die cretion is considered unavoidable.-From the United States we have accounts of numerous meetings of Irish emigrants in different parts of the Union for the purpose of expressing their sympathy with the Repeal movemen in Ireland. At some of these meetings the question appears to have been discussed with much violence of language, and threats of an invasion of Canada, in the event of any attempt being made to coerce Ireland,were thrown out by some of the speakers; but the most respectable sentiments, and declare that the people of the United States have no right or desire to interfere.

At home, the marriage of the Princess Augusta of Cambridge to the Hereditary Grand Duke of Mechlenburg Strelitz, which took place on Wednesday, is the chief topic of interest. In the House of Lords on and on Tway the Royal assent mission. On Monday Lord Cottenham's motion for the appointment of a select committee to inquire into the Bankruptey Act of last session was negatived without division; and the House went into Committee on Lor Aberdeen's Bill relative to the Scotch Church. A division took place on the principle of the Bill, several of the Law Lords contending that the Bill was made to declare what was not the law of Scotland, and was entirely at variance with the judgment of the House in the Auchterarder case;
but the disputed clause was ultimately retained by a majority of 22 , and the further discussion of the Bill was adjourned to Monday. The long protracted debate on the Irish Arms Bill is not yet concluded. Every clause has given rise to repeated divisions, in which Ministers have had the advantage, although a succession of adjournments has been the result. On Tuesday Sir T. Wilde brought forward his motion for a select Committee on the Management of the Post Office, which led to a long and interesting debate. The motion was agreed to by Ministers with a slight verbal alteration, confining the inquiry to the manner in which the Penny Postage has
been carried out. In the course of the discussion Sir R. Peel said, on behalf of the present Government, that they were fully aware of the advantages of the Penny Postage, and that as long as they continued in office, they would exert all their influence to secure the fair working of this great social and commercial experiment.

Marriage of the Princess Augusta of Camardge. The marriage of H.R.H. the Princess Augusta, eldest daughter of the Duke of Cambridge, with H.R.H.Frederick, He reditary. Grand Duke of Mecklenburg Strelitz, was solem nized on Wednesday evening, with great splendour, in the Chapel Royal, Buckingham Palace. Her Majesty and Prince Albert, the Duke and Duchess and Prince George of Cambridge, the Duchesses of Kent and Gloucester, the King of Hanover, the King and Queen of the Belgians, the Crown Prince of Wurtemberg, the Prince and Princess of Foreign Ministers Once Reuss Lobenstein Ebersdorf, the of the principal members of the Nobility, were present at the ceremony. The Hereditary Grand Duke of Mecklenberg Strelitz arrived soon after eight o'clock, attended by Baron Bernstorff. His Royal Highness was habited in a cavalry uniform of dark blue faced with of a Grand Cross of the Guelphic Order, and the star of the Black Eagle. The Princess Augusta arrived at a quarter before nine, accompanied by the Duke and Duchess of Cambridge, Prince George and the Princess Mary. The bride and bridegroom, with their supporters and attendants, remained in the Queen's apartments till her Majesty's procession reached the chapel. The Ceremonies were in attendance at the chapel, and on the entrance of the Queen's procession, the Officers of Arms
and Officers of the Household arranged themselves on either side, when the Vice-Chamberlain, assisted by the Master of the Ceremonies, conducted the royal and illustrious personages to the seats provided for them. The Lord Chamberlain accompanied by the Groom of the Stole to Prince Albert, and the Lord and Groom in Waiting to her Majesty, then returned to the royal closet, and conducted the Bridegroom to the chapel, supported by the Dukes of Beaufort and Devonshire. His Royal Highness having taken his seat, the Lord Chamberlain, accompanied as before, returned to the royal apartments, and conducted the Bride to the chapel, supported by the King of Hanover and the Duke of Cambridge; the train of her Royal Highness being borne by Lady Alexandrina Cane, Lady Elizabeth Leveson Vower, The Arch bishop of Canterbury, having the Archbishop of York and the Bishop of Norwich on his left-hand, and the Bishop of London on bis right, then performed the ceremony At its conclusion, the Bride approached the Queen, and was saluted by her Majesty, as also by the Duchesses of Kent, Gloucester, and Cambridge. The Grand Duk The Royal Bride and Bridearam then aft the altar the Royal by their suite, and were soon followed by her Majest and the rest great dining-room, where the registration of the marriage was made, and attested by the relatives, and by the ministers and officers of state, The Bride and Bridegroom left immediately atterwards In the evening her Majesty had an evening party in honour of the occasion. The Prince of Wales' Tutor.-Various speculations an the name of the Rev. Divin Who has been selected by her Majesty to become the early stood that the individual who has been chosen by he Majesty and Prince Albert to fill this responsible appoint ment is the Venerable Archdeacon Wilberforce.
The Army.-The Marquis of Londonderry has suc meded the late Earl Catbcart as Colonel of the 2 a Reg lst Life Guards, and General F. N. Rebow, rondon derry in the Colonelcy of the 10th Hussars.-Government have determined upon adding to the military force in reland six experienced field-officers, who are to be selected from the unattached half-pay, and employed on special Earl Grey. - We have much pleasure in being able to state that Earl Grey still continues to improve. The attack under which his lordship has been suffering for the last few days is one of paralysis, the more severe symptoms of which have now subsided. The last bulletin stated that his lordship bas had a good night and is going on well.
The Earl of Ripon.-We regret to hear that the Noble President of the Board of Control was taken unwell whilst atteading the Cabinet Council at the Foreign Office Ministers Ministers separated. His Lordship has not since been Royal Commission of the Fine Aris.-The Commis sioners have given notice that the exhibition of the Cartoons sent in pursuant to the notices published in April and July, 1842, and March, 1843, will open in Westminster Hail on Monday next, July 3. During the first fort night the exhibition will be open (from nine o'clock in
the morning till seven in the evening ${ }^{\text {Th }}$ to visitors paying one shilling; afterwards, for a period hereafter to be fixed, the public will be admitted gratis, except on Saturdays, on which day the exhibition will be closed shilling. The comp and work in wood will be required for various parts of the New Houses, and in the first instance for the doors of the House of Lords, and that various windows in the building will be decorated with stained glass ; they therefore invite artists to send specimens in these departments of art, to be exhibited for the purpose of assisting the commassioners in the selection of persons to be employed. The specisent in the course of the first week in March, 1844, to a place of exhibition hereafter to be appointed. The die digns forming the detals be oak. In the designs for the windows the objects forming the details of decoration may be either figures or heraldic devices relating to the Royal Families England, or a union of the two, and may be accompanied by borders, diapered grounds, legends, and similar enrich ments. The invitation to send specimens for the proposed exhibition is confned, as in the case of the cartoons, to British artists, including foreigners who may have resided ten years or upwards in the United Kingdom. Artists who propose to exhibit are required to signify their inten tion to the secretary on or before the 1st Jan., 1844.

Official Appointments.-The Queen has been pleased appoint Commander H. F. Seagram, R.N., Lieutenant Governor of the settlements in the Gambia, to be Governor and Commander-in-Chier or the said settlements; Lieut. R. C. Moody, R.E., Lieutenant-Governor of the Faikland said islands ; troller General of Convicts in Van Diemen's Land.

Winter Gaol Delivery.-Our readers will no doubt have perceived from our Parliamentary report last week, that Government has determined to establish a winter gaol delivery, to obviate the inconvenience and frequent injustice of keeping prisoners confined during the long interva between the Summer and Spring Assizes. It is generally understood that the duty of going the circuits at the pro Common Pleas.

France.-The debate on the reduction proposed by the Budget Cormmittee of the Chamber of Deputies on the effective force of the army demanded by the Govern ment for 1844, ended on Friday, and the result proved favourable to the Cabinet. On the previous day Marshal Soult warnly opposed the reduction, and hinted tha he would resign if it were carried. He urged that the reduction would "bore through the vital forces of the country, shorten the sword of France, and impose upo her a suicide; he next exhibited its detrimental effect on the army, and concluded by declaring that he would betray his country and be wanting to his duty if he con sented to it, and that he considered it so dangerous a measure that he never could carry it into execution. Thereupon, M. Guizot demanded that so serious a discussion should be adjourned to the following day, which was carried. The Minister of Finance at this adjourn sitting drew so bright a picture of the finances of the Chamber, and more than 200 out of 380 members present rose against the reduction. This majority included all the Ministers who are Deputies, M. Mauguin, Mind friends of M. Thiers, who openly voted for Ministers, Uut carefully abstained from participating Cabinet comment with great exultation, considering that it is a fresh prof of confidence given to the Administration, and that it will consolidate it until next session. Although, however, the Cabinet successfully resisted the reduction of the numerical force of the army, the found it necessary to consent to a reduction in exp diture ; and it is admitted that the triumph would have been a much more decisive one had not the Marshal, on the very eve of the debate, striven to concliare the anitee by yielding them reductions the amole saving , 0000 francs, which is about half of the whole The discussion on these details has since occupied Chamber, and several reductions have been effected. of 320,000 francs, proposed by the committee, has wise been adopted, after a protracted discussion, notwithstanding the resistance of Marshal Soult. Chamber, after disposing of these matters, refased discuss this year the Paris and Beigian Rallway though pressed to do so by Ministers.-One of the m celebrated public characters of France during the teller,-died in that city on Monday, the 26th inst., the age of 72 rears, leaving a fortune of $500,000 \mathrm{francs}$. She reckoned it is aid, among her clients all the cel brated characters of the age-all the soldiers, gamblers, and other udventurers of both sexes, from the Empero Napoleon and lezander down to the suttler and kitche maid fundity of her knowledge of events, past and future

The Regent took his departure for Yuencia in evening of that day. On his passage, on the Prado, fro the Palace of Buena Vista to the gate of Atocha, he welcomed with hearty vivas by the National Guara, who each battalion were prenented to him as he passed, and
he embraced them with a degree of feeling which excited Through the ranks an enthusiasm impossible to describe. The troops preceded him on the 20th to the number o 6,000 infantry, two regiments of cavalry, and 15 pieces o artillery. It was believed that the Regent, after reducing Valencia, would establish his head-quarters in the village of Roda, on the road to that city. This position would enable him to communicate with the right wing of his
army operating in Andalusia, under the orders of Generals army operating in Andalusia, under the orders of Generals
Van Halen and Infante, and with the left wing comVan Halen and Infante, and with the left wing com-
manded by Generals Seoane and Zurbano, the former of whom had left Saragossa and reached Lerida. The Regent could not have left Madrid at a more favourable moment. The attachment and enthusiasm of the National Guards could not be greater, and is marked by an admirable address to their brother National Guards of the kingdom, advocating the Constitution of 1837, Isabella III., the Regency of Espartero during the Queen's minority, and public order. All the officers met on the 18th, and the capital and the safety of the Queen. The Alcaldes, or municipal chiefs, were to exercise in turn the captain-general, and Colonel Lemeri, as governor, were to exercise the military command. It was reported that the Regent had conferred the title of Count of Montjuich and the rank him gallant officer has resisted all attempts to seduce him from his allegiance, and has made the Barcelona fortress a second time the key of the destinies of Spain. The insurgent leader offered him 100,000 dueros if he would surrender. In reply to this, he threatened to bombard the town, if troops marched from it to attack those of the
Regent. Colonel Prim is said to have 50,000 men, of all Regent. Colonel Prim is said to have 50,000 men, of all
kinds, under his command, which he has mustered at kinds, under his command, which he has mustered at
Molina del Rey, six miles from Barcelona, where there is a bridge over the Llobregat. The two roads, that from Madrid and Valencia, unite as they cross this bridge, which is thus an important position. It is said by the last General Zurbano, in this position, and has captured 60 prisoners in a charge. Zurbano is also reported to bave ordered the Governor of Montjuich to bombard Barcelona the moment hostilities commence in the city; but, if great without the support of General Seoane and bas even offered to capitulate. His troops are said to have refused to fire on the insurgents, and it is supposed that he must surrender at discretion. We learn also that General Van Halen arrived before Granada, and began the bombardThe on the 16th; but the result is not yet known. General Alvarez had entered Malara and that the insurrectionary Junta had fled, carrying with them 80,000 piastres, extorted from the citizens. Corunna and Burgos are said to have declared for the insurrection.
The con The committee of the Chamber of Deputies appointed to recommended by the Finance Minister to be insufficient to meet the charges on the Treasury ; and having come to ment to much further length without cetriny retrenchpublic service, it had adopted the only other alternative, that of additional taxation; and had, in consequence, wine for consumption in the country, independently of the new taxes proposed by Ministers, all of which the committee adopts. By these additional tazes, and by cutting down pensions and half-pay to 60 per cent. of ordinary deficit of the Treasury will have been provided for
Germany.--We learn from Berlin that several rehearsals have been held under the direction of the poet Tieck, for The performance of the Medea of Euripides, in the original. The music to the choruses are composed by Tauber, and are said to be conceived in his happiest style. Baron de BourGoing, the French minister at Munich, has transmitted to his the formment a statistical account of the progress made in being the complement of a work on the same subject published by him last year. Of this the following is a meneral table of the results given in kilometres, each kilo Lines completed within the year: From Heidelberg to Karliruhe, 62 kilomẽtres ; Wolfenbuttel to Harzburgh, Oppeln, 88; Prérau to Leipnick, 16; Vienna to Re 80; Presbourg to Tirnau, 48; Leipsic to Altenburg, 40 ; dorf to to Stockerau, 26 ; Berlin to Stettin, 80 ; Berge-- Lines Hearly torgh, 16 ; Prague to Pilsen, 100 . Russia.
Russra.-It is now announced that the Emperor's visit and thsaw will take place late in July, or early in August, city, for the quainted with the state of the administration.- The medica commission sent by the Russian Government to Egypt by heat abjocts impregne the experiments made to purif plague have perfectly succeeded. They promise to show, of destroying the pestilential miasma.-Letters from Bessarabia state that for several months past nothing of importance had occurred in the line of the Caucasus, The Circassians had made several attacks on the Russians, but had not obtained any decisive success. Sometimes may be assumed that on the whole, the loss of the Russians is the greatest. They have very severe duty, as they are not secure by day or by night from the attacks of the mountaineers. Those corps suffer the most which are sent out to reconnoitre. Scarcely a day passes without
one or more men being shot by the enemy, who lie in ambush. Meantime the Russians have erected several forts, and it is believed that as soon as they have com pleted a line of fortresses and entrenchmedts, as a basis or their operations, they will proceed to act on the offensive.-The Emperor has appointed M. Boatenieff special Ambassador to Rome, to settle the long-pending disputes with the Holy See.-The Augsburg Gazette of the 23d announces the arrest of Prince Dolgorouki, and the seizure of all his papers, immediately on his arrival a Cronstadt, where he landed on his passage to St. Petersburgh from Paris, where he had published a book which had given offence to the Emperor, and to many powerful families in Russia
Greece.-Accounts from Athens of the 10 th ult. state that great excitement prevails among all classes, as it is issued by a conference of the plenipotentiaries of the three Powers now sitting in London. The object of this protocol is to demand payment of the interest due on the Greek loan, but it is evident that King Otho is resolved Hesse Grand Master of the Ceremonies, the most important place at Court, in the room of Col. Soutzo, a Greek, and has also appointed another Bavarian officer to be one of his aides-de-camp. An additional cause of discontent is arrived from Marseilles, with Greek corvette Amelia chandeliers only, for the new palace and that lumps and chandeliers only, for the new palace, and that 14 new state hrom Trieste.
United States, --The steam-ship Acadia arrived at Liverpool on Wednesday evening from Boston and Hali ax, having sailed from the first-named place on the 16th, and from the latter on the 18th ult., thus performing the trip in ten and twelve days respectively from the points of her departure. The papers by this arrival are filled With an account of the President's visit to the cities of
Baltimore, Philadelphia, New York, and other places, on Baltimore, Philadelphia, New York, and other places, on
his way to Boston, for the purpose of attending the his way to Boston, for the purpose of attending the
Bunker Hill celebration on the 17 th. His reception appears o have been cordial, but by no means enthusiastic, at leas in New York. A great Repeal meeting of the lrish inhabitants had been held in the Park, New York, to declare their sympathy with their countrymen in Ireland, and their determination to assist them in obtaining that measure There were about 5,000 persons present, and some of the speakers threatened to invade Canada, and produce a revolution in that colony, in the event of Ireland being adced. Another meeting, called for the same purpose, failure compa with the but of the Sandwich Islands by Lord Paulet is severely commented on in connexion with this sympathy for Repeal, the parties knowing nothing at the time of the explanation which has since been given in the House of received from Cuba, announcing that a dreadful neen insurrection has broken out near St. Jago de Cuba, in which a great number of whites have been slaughtered, and many plantations ravaged, and buildings burned. The region of the island which is now supposed to be the prey of civil war, is exactly opposite St. Domingo, and many suppose that the movement is connected in some way with the negro republic of Hayti. Troops have been sent from Havall , and alcough the particulars of the revolt have. It is now ascertained that the missing Texan schooner-of-war, San Antonio, has become a pirate, and is cruising in the West India seas. She has been recog nised by two sailors off the coast of Florida. It is known that, on sailing a year ago, she shipped some very suspicious characters at New Orleans, and it is believed that a majority of the crew rose and murdered the officers, and then turned sea-rovers.
Egypt.-Accounts from Alexandria of the 6th wilt. announce the arrival of a special messenger from Constantinople, sent expressly by the Sultan to arrange the payment of the arrear of tribute due by Mehemet Allue still continued to extend At Alexandria. Three new cases had been declared on the 6th ult. A letter from Cairo, in the Augsburg Gasette, May 22d, states that the British
mission to Abyssinia to open negotiations with the princes of that country, had returned to Cairo without having succeeded in their object.
Cape of Good Hope.-Letters from the Cape of the 18th April mention the capture of three slavers. The first of these, the brigantine Esperanza, under Portuguese colours, was chased ashore and destroyed off Quillimaine on the 4th March; the Portuguese barque Desengano was captured on the 14th; and the Brazilian barque maine, and sent into Simon's Bay by H.M. ship Lily.

 and calculations.- The CHANCEYIOR of the FXCHRQURR admitted
that in stating the amnount passing through the money-order office
lhe had cast his eye on the wrong column of figures; but it did nut
 formerly pursued in the Poot-office, and highly lauded the present
Postmaster-Gencral, Lord Lowther.-Sir Roprer Pext had neyer doubted the greatt ocial advantagese which would result from the
ailoption of the peiny postage; he had only hesitated about its immeriate application, on considerations of revenue. He
mave the fullest crecit the the motives and qualities of Mr. Hill
If he Post-office functionarics were as adverse as Mr. Baring liad represented them to the plan of Mr. Hill, the proper course for Mr Baring would have bece, not to keep Mri, Hill as a yearly servant of
the Treasury, but to make him Secretary of the Post-office, so as give him the means of overruling all these official obstructions. Lori
Lowther being known to approve Mr. Hills plan, it was not likely
to to meet with discouragements under tbat nobleman. For limsel office they would exert all thair influence to secure the fair working of
 tricts; and announced his intention of asking hereater rior some
information about the security of money-letters, and the effect of the
late enactment respecting the transmission by post of notices of late enactment respecting the transmission by post of notices o
objection under the Voters Registration Act. MM. Gocziven mave some explanation. - Mr. H UME did not think Mr. Hill's calculations
so extravagant as they had been represented ; for while all the other branches of public income were falling off, the Post-office revenuc
was still increasing. He disapproved of the principle which placed the Post-orfice under the Treasury, but bore his testimony to Lord
Lowther's ahie administration. He rejoiced in this committee, which he hoped would show how the Post-office might bem be made,
useful to the public.-Mr. Hurt spoke in praise of Mr. Hill. T. Wro ee, in rently, said that all the purroses of his motion would
be answered by the committee which Mr. Goulburn proposed to substituse, It had been intemated that Mr. Hirl was blameable for
having thus nublished the informntion sury ; but it was not of a confordentian nature, for it helated only y to hi
own plan. Nor had it been brought forward with any hostile feeling to the present Board of Treasury, the only objection was, that the
Post-office authorities were allowed to exercise too tron agninst all reforms.-The amended motion wast then agreed to. means and expediency of preventing the nuisance of smoke arising from fires or furnaces, which was agreed to. -Captain PECHELI,
brought on the next motion, which related to the claims of indivi dual) on the Admiralty, to which Capt. GorDoN ar Mr Mr. Corr
replied. After a short discussion

Her Majesly's Coronation. - Wednesday being the anniversary of her Majesty's coronation in 1838, the at the different churches thy the ringing of anelis. The Royal Standard was hoisted at the Tower, Somerset house, the Opera-house, and the usual public buildings. and the vessels in the docks and river. foreign, hoisted their colours, in honour of the occasion.
an mounting his horse at the corner of Waterloo-place and fermyn-street, when a carriage drew rapidly up, and the pole caught his right leg, and very nearly precipitated him is een the horses, who reared and plunged violently Sale of the Duke of Sussers Pros H.R.H.'s property commenced last week, and will inue until Wednesday week. The portion sold on Satur il hisprised a collection of enal and ravinge mostly proofo The buser weme chiefty deal nor was there much anxiety manifested by the public to become possessors of any of the lots. The whole day' ale did not realise more than 770l. The engravings were old for about 73l., the enamels for $42 l$., the paintings fo $41.9 s, 6 d .$, and the mimatures for $4126.5 s$. The sale of the plate took place in the early part of the week; the nd seals on Thursday, and the snuff-boxes yesterday Many of the articles realised high prices
brought up the report of Saturday Alderman Brown aquire into the connection of Alderman Thomas Wood that Talacre Mining Company. The report stated and examed ay befo mer submitted to them, which they agreed to rame he Court, together with a statement of facta ound that the papers suppied to them; and they Company, which appeared to have been formed withou any pecuniary foundation, was established. The com mee offered no opinion on the conduct of Alderman I ood, that being a duty which they considered to apper . Wood mividual members of the co hich had been read, although professing to be fair and candid, omitted he answers which the evidence contained, at the same quoted sev ble lenth to sho spoke at conside and that in all his transactions with the Talacre fompan e had acted with the reatest probity. Alderman Cop and denounced the Talacre Company is a froulule concern, and asserted the thit a fraudule ronk and as prise port indulgentran Court so indugently drawn up. He would call upon the fom the documentary matter submitted to that committee and then say whether there was any want of candour, or airness, or indulgent feeling to be attributed to him wh drew at up, or those who agreed to it? After an angry member intended to bring forward any motion on th subject of the report, a regular notice should be given Election of Sheriffs. - On Satur take place
Election of Sheriffs.-On Saturday Alderman Musgrove and Mr. N. G. Moon, the printseller, were in a conomo Hall unanimously elected Sheriffs of London and Middle
Entertainment at the Mansion-XIouse.-On Wednes day the Lord Mayor gave an entertainment to the Judges and members of the bar. The guests were more numerous than on any similar occasion at the Mansion House, Egyptian of 150 individuals being seated at table in the Diocese of London. - The Bishop of London hes addressed a pastoral letter to the clergy of his diocese is laing his remarks on the subject of the offertory at and to adopt his wishes or not, according to their own discretion. He states that on occasions when charity sermons are preached for specific objects, and when there is no ommunion, the practice of collecting from pew to pew country ger that of the proper to make it while the offertory sentences are read than during the singing of a hymn. "I believe," he ays, lecting has in in respect propriety and solemnity, have caused it, after no very long recommendation of this method, which, after all, is nothing more than occasionally applying to the whole congregafion form to which tho wo without question or demur, ought not in fairness to be egarded as indicating a disposition to favour any peculia theological opinions, least of all those against which I may venture to say few persons have protested more distinctly emphatically than mysel.
The Gresham Lectures.-A new building, in the arich Roman style of architecture, with a theatre capable of accommodating 800 persons, has just been completed at the corner of Basinghall-street, at a cost , $000 \%$., for the delivery of the Gresham Lectures
P'eace Convention.-This Convention held its Iast sitting on Saturday, and passed several resolations, the main objects of which were declaratory of the ymeriple the frue interests of mankind. The meetine was addressed by the Marquis de la Rochefoucault Liancourt in French, Mr Mr. Tappan of New York, Mr. Buffon, of (onteMr. Hindly, M.P., Mr. Hume, M.P., and other gentized world was adopted, together with a resolution in favou of a congress of nations to settle and perfect the code of and apply that laty a high court of nations to interpl dis-
putes, as one of the best practical modes of settling such disputes peaceably and satisfactorily. It was also resolved
." That since intemperance is in various ways one of - "That since intemperance is in various ways one of vention earnestly presses upon all classes the necessity of promoting, to the estent of their power and influence, the principles and practice of temperance,", and "That the tion to announce to the world the time and place for holding a second comvention, when it shall be satisfied as to the right time and place, after communicating with its corresponding associations in Europe and America.

Universal Suffrage Society.-A meeting in favour of this object took place on Tuesday evening at White Con-
duit House, Mr. Joseph Sturge in the chair, supported by Col. Thompson, Mr. Sharman Crawford, Dr. Bowring, Mro Hindley, Dr. Ritchie, of Edinburgh, and mostof the Resolutions were passed in favour of Universal Suffrage, and declaratory of the opinion that the people bave a
right to a full and free representation in their own branch of the Legislature. Mr. S. Crawford, Col. Thompson, and Mr. Hindley spoke in favour of these views, and were followed by Dr. Bowring, who wished to carry the prin-
ciple farther than any of his predecessors, as he would give the right of voting to women. The Rev. J. Levilt, Mr. Pennington, Dr. Ritclie, and Mr. Vincent the Chartist, also spoke, the
at considerable length.

University College. The Council of University Col lege, at their meeting on Saturday week, received another present of a 500 l . Texchequer Bill from their former bene factor, "Patriot." This donation was transmitted to
Lord Brougham, to be applied as his lordship may think Lord Brougham, to be applied as his lordship may think
best for the benefit of the institution. The fund for which the College is indebted to this munificent friend now amounts to $3,844 l$. A portion of the annual income
arising from this sum has been appropriated by Lord arising from this sum has been appropriated by Lord
Brougham to procure for masters of unendowed schools Brougham to procure for masters of unendowed schools
and ushers courses of lectures on mathematics, natural philosophy, Greek and Latin, by the Professors in the College. These lectures have been well attended, and many have availed themselves of them to obtain a qualiportion of the fund, $500 \%$, Lord Brougham has directed to be applied towards the testimonial to Dr. Birkbeck, as soon as the contributions derived from other sources shall College a Professorship of Machinery and Manufactures to be called the "Birkbeck Professorship"
Opening of a Catholic Chapel. - On Monday was relist, on Duncan-terrace, Tslington The John the Evan Griffith was the officiating priest, assisted by the Right Rev. Bishops Dr. Morris, Dr. Wilson, and Dr. Wiseman, the last of whom preached to a numerous congregation, througloout the country. He said that when was waking gation saw such attention paid to the outward observance of worship, they had reason to believe that their doctrines were growing popular with the people. After centuries had been destroyed it was gratifying which their temples were now rebuilding; that great additions were made to their number-and that converts were daily joining them. subscription was then made to complete the building.
The Free Church of Scolland.-On Wednesday public meeting was held at Exeter Hall, for the purpose order to adopt putation of ministers and elders, and in Church adopt measures for aiding the Free Presbyterian Cburch. The Marquess of Breadalbane was called to the chair, and opened the proceedings by stating that the tant which had called them together was the most imporScotland since the Reformation Presbyterian Church of of 500 ministers of that Church, with nearly a moillion of persons composing their congregations, was eminently sympathy of oll that the Church of Scotland had, for some years back, been contending for two great cardinal principles, commencing by endeavouring to secure to the constitution of which they maint Church certain riguts and privitges on which the Charch was founded-particularly that fundamental principle that no minister should be intruded upon a parish contrary to the expressed wish of the people. In endeavouring to attain this great object an siastical Courts of Scoltun a colision which was acclevated by contending for another principle of Church conduct, viz., that it recognises no other rule in the looks to no therhitual affarss than the Bible-that it ples had been boldly disputed by the Civil Courts, and the confirmed that iniquitous decision. Fortunationally the Pred that iniquitous decision. Fortunately for of resbyterian Church-fortunately for the great cause of religion itself-fortunately for the people of Scotlanda great body of ministers, true to their principles, and quences, resolved to leave that Church, thereby sacrificing every worldy lienffit they had formerly derived from the conmexion. Fio surport these men in their prethey were thut day assembled. The Rer. Mr. Grcy and The Rev. Dr. Cunningham then addressed the meeting. position and plans of the non-intrusion party. It would he said, be necessary to erect churches for 700 congrega-
tions, to found a college for the education of their future ministers, and to establish a theological library for their
use. He would have the meeting distinctly to understand use. He would have the meeting distinctly to understand
that whatever might be done for the promotion of religion in Scotland must be done through the Free Church. The idea that "the residuary establishment" would do any thing valuable was perfectly ridiculous. All would depend on the Evangelical Dissenters who had gone out before,
and the Free Church which had separated now. Mr. Beechman expressive of the heyan Minister, moved a other bodies of Evangelical Christians, the Free Church of Scotland might regain the religious eminence which in Weslerns she occupied. He assured the meeding the Secessionists had adopted, and read a letter from Dr. Bunting, in which he expressed his approval of the step they had taken. The Hon. Fox Maule seconded the expressive of sympathy were then moved and agreed to Canada Company. - The half-yearly meeting of proThursday for the purnose of declaring a dividend, and on other business. The report stated that the receipts from Canada for the five months were $6,911 \mathrm{l}$., exhibiting a considerable deficiency as compared with the corresponding period of last year, when they were $15,000 l$. This was in consequence of the difficulty of collecting money, but as there was every reason to suppose that th would nnance of the dividend of six per cent., which was agreed to. The thanks of the meeting were then voted to the
directors and to Mr. Widder, the Company's Commisdirectors and to
sioner in Canada.
Metropolitan Improvements.-Orders have been issued by the Commissioners of Woods and Forests to take Martin'slane, between Long-acre and Great St. Andrew'sstreet Seven-dials. This street will be part of the new line of street from Coventry-street to Long-Acre, which Will form a direct line from Piccadilly to the west of Holborn. In consequence of the rapid increase of houses on the Marquis of Westminster's estate at Chelsea, it is one in Belgrave-road for St. George's district, the other upon a site contiguous to the river. The chief portion of
the expense will be defrayed by voluntary contributions, and the residue made up by grants from the Ecclesiastical Commissioners and Church Building Society.
Marylebone and Paddington Hospilal,-A meeting in behalf of the foundation of this hespital was held last week, Mr. Bond Cabbell in the chair. The report
stated that the Committee had received $4,448 l$. and 200 annual subscribers. Their expenses had been 184l. Earl Manvers said he should cordially support the undertaking, provided the resolution he held in his hand were approved of by the meeting. The resolution was to the enect:That the erection of the proposed hospital should not hands." Mr. R. Currie, M.P., seconded the resolution, and felt sure that the sum required, and even more, would be speedily subscribed. On the motion of Sir A. Murray, seconded by Mr. Hector Rose, the meeting agreed to
the acting committee to collect the 15,0002 . required.
the acting committee slum. -The ceremony of opening th
Infant Orphan Asylum.-The ceremony of opening the orphans was celebrated on Tuesday by his Majesty the King of the Belgians, on behalf of Prince Albert, who was prevented by indisposition from attending. The proceedings of the day commenced with divine service in the Asylum Chapel, and at two o'clock the West Essex
Yeomanry Cavalry received his Majesty on his entering Yeomanry Cavalry received his Majesty on his entering the county of Essex, at Lea-bridge, whence they escorted
him to the asslum. The City Marshals received his Majesty at Whin's. The City Marshals Majesty at Whip's-cross, and on the arrival ofor, Sheriffs, and Clergy. After the ceremony of opening the asylum his Majesty presided at a dejeuner, and anownced hat the Prince had sent a donation of 100 guineas, to which the King added a similar sum in his own name. The Death of Mr. Murray, the Publisher.-We regret to announce the death of Mr. Murray, the eminent publisher, whicl took place on Tuesday morning at his house in Albemarle-street. Mr. Murray had been ar some tin character until Friday last. As a publisher, Mr. Murray's name is associated with those of the most eminent men who have adorned the literature of the present century and as long as English literature shall last, the names of Byron, Scott, Southey, Moore, and a host of others lmost as illustrious, will not fail to excite the remembrance of the publisher who first gave their productions on the world, and lived with them on terms of intimacy and friendship. Mr. Muraybisher, first in Fl year, and had been in business as a purle-street, for upwards of 40 years. Messrs. Ackermann's Bankruptcy.-At a meeting of the creditors of Messrs. Ackermann on Monday last, statement of their affairs was read, showing liabilities amounting to $30,664 l .9 \mathrm{~s}$. 6 d ., and assets aniounting to $28,3142.18 s .5 \%$. A proposition was then made on behal of Messrs. Ackermann to pay a composition of 15 s . in the pound, in six instalments of $2 s .6 \mathrm{~d}$. each, at interval of six months' date from the Ist August next-the firs instalment to be paid on the 1st September next. There were present upwards of 100 creditors, who unanimousl agreed to accept the proposition.
The Tower Moat. - On Monday, while workmen were digging in the moat for the formation of a sewer, they
discovered some coins of Queen Elizabeth. The semer is intended to be carried all round the Tower, passing through the centre of the moat, and communicating with the houses within the fortress. The moat will be filled, and formed into a terrace, on which trees and shrubs will be planted. Victoria Park-Although the act of Parliament for the formation of this park at Bethnal-green has been passed for some time, few steps have been taken in its menced their labours in making estimates of the value of property which in some instances the proprietors are disposed to litigate. The last act, empowering the commissioners with full authority, received the Royal assent on tie 13th May, 1842, when five years were assigned for the full completion of the park. The teanants occupying the tenements and lands have received notice to quit by the 10th October. Amongst these are 11 persons occupying fields as market-gardeners, who have aately cropped expressed the for the winter montas, valuation bas, during the last week, been made of six houses, the rembants of the palace of Bishop Bonner, known as "Bonner's-liall," the inhabitants of which have all received notice to quit, and preparations are making for leasing the fields adjacent and in front of the chief entrance, for the erection of a handsome square oi houses. A great deal of the land required for the park is the property of Guy's Hosital and Sir Joln Cases's Cherits who have shown every disnosition to forward the views of the Commissioners. In anticipation of the completion of the park, several new houses have recentiy been erected of superior description in Wick-lane, which have been let to respectuble tenants, whilst building land has attained a premium in the vicinity. A new road, undertaken by private speculators, but supported by the different parishes Limehouse been lecided by the Commissioners that the principal entrance shall be through Bonner's-hall-fields, opposite the Greyhound Inn, in Old Ford-lane.
Marylebone-At a meeting of the Marylebone vestry, on Saturday, at which Earl Manvers, Lord Strafford, Mr. Mufnell, Sir J. M. Taggart, Lord Barrington, and Sir a motion for adorting a petition to the Legislature and to the Queen against the grant of 3,0001 . a-year to the Princess Augusta, and also against continuing the grant of $21,000 \mathrm{l}$. per annum to the King of Hanover. In the distressed state of the country, he asked, was it honest or just on the part of her Majesty's ministers to impose fresh burdens upon the labouring population? Mr. Gibson was ultimately carried by a large majority, only six hands being beld up against it. last week, for the purpose of further considering the instructions given by a vestry on the 2 d ult. to the churchwardens, to take measures to obtain the reinstatement of diversion by road to the same condition as it was befor called to the chair, Mr. Hawkes moved "That a committee be appointed to 0 , ing out the resolution of the vestry regarding the diversion of the Addison-road." Several amendments were subsequently proposed by the friends to a comprowise, but the motion was carried by a majority off, som to assist the churchwardens to carry out the resolution.
Sleam above Bridge.-There were landed on Sunday, the 25 th of June, from the steamers-at Chelsea, 5,432 passengers; Putney, 3,701 ; Kew, 3,234; Richmond, 4,621 ; independent of those who
smith, Brentford, and Wandsworth.
River Medway.-A fine sturgeon, between five and six feet in length, was captured on Wednesday week in the Medway, at a place about four miles from Rochester, called Horn's Place. The fish was sent to London, but the corporation of Rochester have clamed it back as theirright. Mortality of the Metropolis.-The number of Deaths registered in the week ending Saturday, June 17, was Central districts, 185 ; East districts, 245 ; South districts, 203-Total, 955. Males 476-Females 479. Weekly average for the last five years, 903 . ( 461 males, 442 females) ; and for the last five springs, 854.

## 

Aylesbury.-On Monday evening, Dr. Sleigh, the conservative candidate for this town, according to previous announcement, addressed the electors and inbabitants in the County-hall. His speech occupied upwards of two hours, and was listened to by an auditory amounting to about a thousand. He attributed the distress to want of wages, inadequate remuneration, and to the grasping spirit nounced foreign competition, machinery and ioint ato banks as other grand causes of national distress, and said that the true remedy for distress was to increase protection. Mr. J. Gibbs, in reply, proposed a resolution declaring that the removal of all restrictions on trade would be the best way of lessening the amount of national distress, of hands this resolution was or all classes. unanimously Bath.-A fatal accident occurred 'last week in the neighbourhood of Durkerion, whereby the lives of six individuals were sacrificed. The sceue of the calamity was the coal-pit known as Bray's Down-pit, about seven miles from Bath, and three from Dunkerton. From the
attached themselves to the chain by means of a hook and
a piece of rope forming a noose for one leg, they were lifted off the platform by the engine, and were then let
down ; but, after descending about 100 feet, the drumwheel was observed to be revolving rapidly, having by some unaccountable means become disconnected with the Wheel which should have regulated their descent; and in consequence of the velocity with which they descended, jecting stage erected some few fathoms from the bottom. The jury returned a verdict of "Accidental Death." Bristol.-The remains of Rajuh Rammohun Roy, who died at Stapleton-grove, near this town, about eleven years since, and was buried in the grounds adjoining the
house, were removed last week to the cemetery at Arno'sbale, and interred in that portion appropriated to the use of Dissenters. A sum of money has been forwarded from India for the purpose of erecting a stately monument on the spots, and upwards of 30 ft . in height.

Carmarthen.-Since our last account of the Rebecca riots everything has remained quiet in this town. The troop of the 4th Dragoons marched from hence on Sunday, for Newcastle Emlyn. Colonel Jove, the Commandant
of the district, has ordered the marines and Castle Martin of the district, has ordered the marines and Castle Martin
Yeomanry from Pembroke, and other troops of cavalry Yeomanry from Pembroke, and other troops of cavalry
are on the way to this district, it being the determination are on the authorities to cover the country with military, so as to prevent any further depredations. There seems
to be no doubt that the exciting cause of the recent outto be no doubt that the exciting cause of the recent outrages was the oppressive tax of the toll-gates on the by-
roads, and the dislike of the people to the working of the roads, and the dislike of the people to the working of the
New Poor-law. A meeting was held on Friday last at Newcastle Emlyn, when a conference took place between the county magistrates and delegates from the several
parishes. The Vice-Lieut., the Hon. Col. Trevor, presided, and Mr. Lloyd Hiall, the barrister, who bas been retained by some of the parishes, was present. The following document was submitted at the proposal of the magistrates:--"We are willing that every grievance that be removed, either in the administration of the funds of the trusts, or by the erection of new gates, or by increase
of tolls. For that purpose we will name a committee of trustees and tally-holders to go into all the accounts of he wishes it, on your behalf. If any point of law should arise, counsel's opinion shall be taken, by which the trustees must abide until set aside by a court of law. The magistrates have had a force of troops put at their dis posal by the Government, and though they are willing to and must put down also all disturbances, the Government being ready to increase the number of troops, if necestory, And the committee was appointed. Subsequent accourts state that no less than five gates have been destroyed since Saturday last-three in the immediate neighbourhood of Narbeth, one on the Brecon road, and on the London high road. A notice has also been posted on the Holyland gate in the neighbourhood of Pembroke, signed by Rebecca, announcing a speedy visit to the signed by Rebecca, announcin
Union workhouse of that town.

Cheshunt.-The Poor Law Commissioners have pub lisbed their report on the case of James Harvey, a paupe sioned by the neglect of the relieving officer. The Commissioners state that the man was death; and that there is no ground for charging the relieving officer with material neglect in the case. But they detail various erroneous entries in the books and returns of the medical
officer Mr. Smith, and consider that he neglected his duty in this instance. Under all the circumstances of the case, they think it would be inconsistent with their duty
to allow Mr. Smith to continue to hold the office of medical officer, and they have accordingly directed an order to issue for his removal.
Exeter. - The law reports announced last week that the Rev. Henry Erskine Head, rector of Feniton, in this county, had been sentenced by the Arches Court, at the suit of the Bishop of Exeter, to three years' suspension from the office of the ministry, the loss of his living, and the costs of the action, for having published a letter, in Order of Baptism, and the Order of Confirmation, in the Book of Common Prayer, contained erroneous doctrines. Mr. Head, who is a brother of Sir Francis Head, is an evangelical clergyman, and the living is worth 5007 . year, so that the sentence is equivalent to the imposition f a foe of 1,500\%. in addition to the costs of the action preached his farewell sermon last Sunday to a crowded congregation.
Glazenwood.-.We find that a floral fête was given by Mr. Curtis in his beautiful grounds on the 16 th ult., which was attended by upwards of 3,000 persons. The band o the Coldstream Guards was present, and greatly contri-
buted to enliven the scene, which appears to have been buted to enliven the scene, which
one of unusual beauty and gaiety.

Maidstone.-It will be recollected that a few week since, in pursuance of a requisition to the High Sheriff of Kent, a meeting of farmers and others connected with agriculture was held on Penenden-heath, when resolutions in favour of protection to agriculture, and expressive of dissatisfaction at the recent changes made in the Corn-law by the introduction of the Canada bill, were carried by a
large majority. As a set-off to this result, the friends of large majority. As a set-off to this result, the friends of
a total repeal invited Mr. Cobden to attend a meeting at
the same place on Tharsday last, in order, if they approved of his explanations, to pass resolutions in favour
of a total abolition of the Corn.laws, and thus nullify the of a total abolition of the Corn. laws, and thus nullify the proceedings of the former meeting. The meeting was addressed by Mr. Cobden, Mr. Villiers, and others on
the part of the League ; and by Mr. Osborne, a local landowner, on the other side; after which, resolutions were carried in
Norwich.-The exhibition of the West Norfolk Agricultural Association took place on Wednesday week, and was very numerously attended. The members dined chair. The speeches were confined chiefly to agricultural topics, a general objection being manifested to any allusion to political matters. A piece of plate was presented
to Mr. J. L. Milnes, the honorary secretary, as an acknowledgment of his zeal in originating and promoting the objects of the Society The Hon. Mr. Wilson, in returning thanks for those gentlemen who had offered extra premiums, suggested the formation of a society for the encouragement of industrious labourers; and the meeting was afterwards addressed at some length by Mr. Hamond, Mr. Lugar, and other well-known agriculturists. Oxford.-A remarkable scene took place on Wednesday
athe Sheldonian Theatre, which has been rarely equalled in the annals of the University. It has occasioned the abrupt termination of the commemorative festival, without the oration of the Professor of Poetry, or the prize essays and poems of the year being delivered. It is usual at the annal commemoration, which always takes place at this
time, to propose some distinguished persons to Convocatime, to propose some distinguished persons to Convoca-
tion for a D.C.L. degree. Late on Tuesday evening it tion for a D.C.L. degree. Late on Tuesday evening it
became known in the University that Mr. Everett, the American Minister, formerly an Unitarian preacher in the United States, would be proposed for this honour. The news created considerable sensation on the ground of that entleman's religious opinions, especially among members of that body in which the right of bestowing degrees rests. Accordingly when the convocation assembled, the proceedfilled the area of the theytre, and resisted with loud non placets the degree of the American Minister, which was, he per, after some confusion conferred, with a protest on indergrat tractarians, and amiast loud selow, by a successful attempt to terminate the proceedings, unles the junior proctor, who has rendered himself unpopular, would quit the room. The Vice-Chancellor, in conse ation of the outrage, dissolved the assembly. A depuately waited on Mr. Everett, to express their 0 arow being compelled conscientiously to take the course they had, and remove any impression of personal opposition. His Excellency received them with the utmost
courtesy.-An accident of a distressing nature occurred here on Thursday, the 22 d ult. The youngest son of the Dean of Christchurch, and a son of Dr. Phillimore, both students of Christchurch, lost their lives on that day whils bathing in the Isis. Mr. Gaisford was seized with the ramp; Mr. Phillimore was dressing himself in the skin jumped in and was his self carried was by the strea and lost. The jury at the inquest returned a verdict of Accidental death"
Stafford.-On Monday evening, at one of the pits belonging to the Fenton Park Company, situate at the back of the china manufactory of Messrs. Green and Richards, of Fenton, an explosion of fire-damp occurred, f the $u$ end of the accideat is ascribed to the imprudence of one reopened, caused a rush of foul air towards the shaft, which ignited by the candles by which the men were lighting themselves. Two of the sufferers lost their lives by explosion, and four others who were assisting them nearly perished by suffocation. An accident of this nature has not happened in the Potteries for many years
Raizoays.-The following are the receipts of the prin cipal Lines for the past week:-Greenwich, 8756 ., Brighton, 3,791l.; Paris and Orleans, 3,964l.; Eastern Counties, $2,716 \%$; Paris and Rouen, $3,038 \%$; Croydon 3292.; Blackwall, 1,132l.: Great North of England ,ovel. ; Liverpool and Manchester, 5,092l. ; Hull and and $1,206$. ; Manchester and Leeds, $4,812 l$. ; York na North Midand, 1,6422 . ; Manchester and Birming mingham and Derby, 1,220l.; Birmingham and Gloucester, 1,831l.: Midland Counties, 2,518l.; Grand Junction, 8,252l. ; North Midland, 4,166l ; South Western, 6,996l South Eastern and Dover, 2,503l.; Great Western, 17,039l. ; Birmingham, 17,448!.-On Saturday last the chairman and directors of the South Eastern and Dover Railway, with Mr. Cubitt the engineer, and a party of friends, made a trial trip over the line, preparatory to its being opened to the public on Wedneslay, which will be before the period at which the engineer promised that it should be ready. The train leit London-bridge at 6, A.ac. of 81 miles, at 40 minutes past 8 o'clock, the average speed being 30 miles per hour. The party then embarked in a steamer and proceeded to Boulogne, where the arrived in 3 hours, and were entertained by the SousPrefet and the French authorities at a public dejeuner The steamer left Folkestone harbour at 19 minutes pas , and arrived at Boulogne at 25 minutes past $120^{\circ}$ clock It started homewards at 38 minutes ${ }^{\text {past }} 2$, and
reached Folkestone at 23 minutes past $60^{\prime}$ clock; the reached Folkestone at 23 minutes past 6 o'clock ; the
railway train started at 7 minutes past 7 , and landed its
freight at London-bridge, after seven stoppages, at 6 minutes past 10 o'clock, P.M. ; the party having thus travelled, by land and sea, 225 miles in sixteen hours and six minutes. Thus the entire journey from London to Boulogne and back, was accomplished easily in one day and there is no doubt that the time is not far distant when a regular communication between London and Paris will be effected in 24 hours.-At a general meeting of the share holders of the Lancaster and Preston Company the fact of the leasing of the line to canal proprietors at a chear rental of 4 per cent. per annum for 21 years was of the money, out of which it was proposed to empower the directors, now the actual income of the undertaking is ascertained, to declare half-yearly a dividend of 16 s. per share on the whole shares, and of 10 s. three-quarter shares. This was unanimously agreed to,
and the debt of $15,000 \%$. owing will be liquidated by 8,000 \% in shares, and the remainder in land und cottase property, sufficient to cover it, now in possession of the company. -The committee of inquiry, appointed by the hareholders in the Brandling Junction Company, have iven in their report. It embraces a history of the anarement of the affairs of the company from its com mencement. It then notices the appointment of engineers, ecretary, sc, sad sets forth that injury has been sus ained by the non-residence and divided attention of thes parties. The directors are also blamed for aing reat expense "without plans or estimates," and for owing a portion of their number "to transact much of important business of the company, keeping the thers ignorant of their proceedings. fae report concludes by a severe condemnation of the directors on a
variety of charges, which are said to have increased the apital to four times the amount first announced.-An larming accident occurred on Wednesday, at noon, in the centre of the Summit Tunnel, by the mail train running into a luggage train. The mail train leaves Man reat speed. No intimation had been given to the drive n entering the tom a advance, and that that a baggage-train was oniy jus light at the end of the train. The consequence was, that when about half-way through the tunnel it overtook and dashed into the luggage-train, smashing two or three carriages, but fortunately not hurting any individual.

## IRELAND.

Dublin.-A report was current in the beginning of the , Lucas, the Under-Secretary, had resigned Eliot, on consequence of some disagreement, With Lord office; but it has since been announced that there is no foundation for the rumour. The Protestant nobility and gentry of Cavan, Fermanagh, \&c. have 1ssued addresses ealling upon the people to avoid all processions and assem blies of large bodies, at the ensuing Protestant Anniver saries. The Archbishop of Dublin delivered his customary charge on Thursday last, at St. Patrick's Cathedral, a the annual visitation of his clergy. Mr. Joyce, of Mer fiew, and Sir R. Musgrave, Bart., have resigned the Com mission of the peace since our last report. The weekly meeting of the Repeal Association took place on Monday when Mr. John O'Connell, in the absence of his father addressed the meeting at great length. The amount of rent for the week was 1,258l. 3s, 9 d. -The Malabar line of-battle ship has left Cork for the coast of Spain

Slibbereen.-One of the Iargest Repeal demonstrations this 600 the inlan, on hursday the 22 d ult. It is said that 600,000 persons were assembled on the occasion, many of whom came a distance of 30 or 40 miles. Mr.
$M^{\prime}$ Carthy, of Loughine Lodge, presided. Mr. Shea Lalor opened the proceedings, and was followed by M E. B. Roche, M.P., and other gentlemen. Mr. O'Cornell spoke both at the meeting and at the dinner atterwards at great length on the usual topics connected with Repeal. Gahway.-A Repeal meeting took prace on Sunday a Oranmore, about which was attended by Mr . O'Connell, the Roman Catholic bishop of Galway, and an immense concourse o spectators. Lord Firench presided, and Mr. O'Connell spoke at considerable length on the prospects of the Repeal agitation. He concluded by advising the people to organise, and said that all he wanted was that they hould pay $1 s$. each, and enroll themselves as associates before he proceeded to take his next step.

Edinburgh, -The sCOTLAND. Assembly of the Free Church of Scotland has just been issued, and has excited a good deal of interest, the prin Epal topic being, of course, the late secession from the Established Church. After some introductory matter the address proceeds to describe the circumstances of the seasion, which differ in no respects from the statemeress ing thir aratur for the unity that had attended them from the beginning of the struggle, and that, especially as it approached its crisis, the way or the Church's duty was made so plain and clear, the address alludes at some lenoth to the particular state ". Beciy at such an important period, and thus a seen, and which deceived by the word schism, which has and which will often be, employed by adversaries. Scm the is a sinful because an unnecessary separation Church; but there is not here, properly speaking, a sepa ration from the Church at all. Whatever in the eye of
the law may henceforth constitute the Church of Scotland,
assuredly that church in the eye of conscience and of the law of conscience-that Church, while yet acting freely,
and without coercion of the civil power, pledged itself and without coercion of the civil power, pledged itself
before God and the world in its claim of right to renounce the Establishment rather than submit to those conditions which have since been imposed. It has now only redeemed its pledge. It is the Church, properily speaking, which bas separated from the State. Assuredly this is not schism ; and those are the true and only schismatics, who by refusing thus only, caused the diarruption of the Church. In like manner you will not be deluded by the supplicating cry, Church of your fathers is that Church which holds the principles that they held, which bears the testimony that they bore, and which is now suffering in the cause of that great truth for which they suffered. Where was the Cburch desolated fathers during the 28 years of persecution which prelacy held sway, and where curates occupied the pulpits from which the martyr ministers had been expelled? Or was it with the persecuted Covenanters on the waste heaths or moorlands among the wild glens and mountain soli-Peden-with Cargill and Renwick? You cannot otherwise quit the Church of your fathers than by cleaving to Wise quit the Church of your fathers than by cleaving to principles for which your fathers bore their testimony, of the Church of your fathers than by adhering to those who are following their footsteps, renewing their testimony, and preparing like them, to encounter every kind and degree of suffering and danger in defence of the Redeemer's crown. One other plausible argument with
which you may be addressed is the assertion that we ought to follow the example of our fathers, who in all former struggles never left the Church till they were
forcibly ejected. In answer to this, let it be observed, forcibly ejected. In answer to this, let it be observed,
that they were in circumstances totally different from those in which we are placed. During their days religious toleration, such as we enjoy, was unknown. There was
no such thing then as leaving the establishment, and having freedom to preach the gospel out of it. The claim of the civil power was that of a universal supremacy over ecclesiastical. Between such a claim and the leaving of the Listablishment, had that been possible, there was no connexion. The one only step left to our forefathers was to resist the civil power in its interference with conscience, have a ground of freedom still left in the constitution without the pale of the Establishment. If still we remain in it, acquiescing in the unlawful conditions, of course we we remain in it resisting them, we not only, to all practical purposes, betray that sovereignty, but we dishonourably compliance with the express conditions on which they are bestowed." The address then goes on to remark upon cludes by exhorting their people in their religious duties and calls upon them to labour zealously in rebuilding the walls of their prostrate Zion

## fitiscellameots.

The Heart of St. Louis.-A few weeks ago, the workmen employed on the restoration of the Suinte Chapelle, adjoining the Palais de Justice, in Paris, having discovered
behind the ligh altar dedicated to St. Louis a leaden box, M. Duban, the architect, on being informed of the discovery, made it known to the Archbishop of Paris, who
sent his grand vicars to inspect what had been found. The box contained a heart, and with it a writing on parchment, on which it was recorded that the contents baving
during some repairs made in 1802 been found in another box completely decayed by rust, it was again enveloped in lead, and re-deposited in the same spot. This document
is signed by M. Camus, Archivist General of the kingis signed by M. Camus, Archivist General of the king-
dom, M. Terasse, Keeper of the Archives, and the Secretary of that office. As Moreri, the historian of France, affirms that the heart of St. Louis was carried to the Sainte Chapelle, and placed hehind the high altar, it was expected that the investigation ordered by the Minister of Public Bacred relic. M. Letronne, however, the Keeper-Genern of the Archives of France, addressed on the 20th ult. a menaorial to the Minister in which, after citing and comjoenting on all the authorities who had written on the subwho died at To the conclusion that the heart of St. Louis, must form part of the relics deposited in the church of MonTeale, near Palermo ; and that even supposing it to have been brought back to France, it had not been deposited in the Holy Chapel. Since, the publication of this opinion, has addressed, a deputy of the department of the Eure, M. Letronne's long letter to the Moniteur in reply to bad not been removed to France, and that if it had been, it would certainly have been inclosed in a box made of a the former precious metal than tin. M. Leprevost considers on no well assertion as extremely hazardous, and resting argument whe paltry value of the box," he says, "an by observing thas gained many partisans, we will begin tin, norving that the box in question was neither made of
it it a single fact which appears to us conclusive. The who we prince nearly coëval with the French monarch, Who was certainly as great a king as St. Louis-I mean
which box, so fortunately discovered by my learned friend, M. Deville, and so shamefully abandoned cver since, in a corner of the Cathedral of Rouen, is not made of gold,
gilt-silver, or silver, nor even of tinned copper; it is made of the vilest of metalsmlend." A correspondent of a daily paper suggests that the English Government should have claimed this relic in return for the body of Napoleon. has addressed akspere Autograph.-Dr. S. Mackenzie that " within the last few weeks there has turned up what if authentic, must be by far the most valuable of all the Shakspere autographs. This is no less than the identical used by Shakspere, enriched with Chronicles which was andy above all, by his own autograph signature in full, It was purchased some weeks sgo by Mr. Thomas Powel Antiquities of France.-The Paris papers state that there has just been discovered in the ground excavated ar the Northern Railroad, between St. Leu d'Essevens n cord, having a hook at each end. The weight of this object is 342 grammes, and the gold is valued at 880 f . It was found within (wo feet and a-half of the surface, and no other article was discovered near it. M. Haubigant, wember of the Council-General of the Oise, paid the workmen bandsomely for giving it up to him, with a view or the Bibliotheque Royale of Paris. It is supposed to orlong to the Gaulish period, about the time of Cessar.

## 㸞ab.

Housg or Lords.- - (Committeefor Privilpges.)-The Committee on Tuesday last, after hearing Sir Harris Nicolas for the claimant, that the claim of Washington Shirley Ferrers to sit in the Houso of Peers as Earl Ferrers had been fully established. At a previous
gitting he Committee resolved that Mr. Tracy, the claimant of the Tricy the Committee resolved that Mr. Tracy, the claimant of
the Vice-CBNacrisase. Burchnall and others v, Mitctiell ard others.) -Mr. Bethel. and
Mr. Philips appled to the Court on behalf of the plaintift for an injunction to restrain the defendants, their agents, and workor disposing of the crop of hay now standing upon a certain
piece of land, situate amidst certain other pieces or parcels o land known, as Southfield and Burgess's Mearows, in the parish
of $\$ t$. Mary's, in the borough of Leicester, and which piece of
 men's widows of the borough of Leicester, in liela of th eir former
rights of common of pasture over all these said pieces and parcels of land which they had previously erijoyed immemorially. The
piece of land in question in this suit is identical with that which constifuted the subject-matter in dispute in the case of "Astel
and Others $v$. Mitcljell and Others," a fullstatement of the details and Others $v$. Mitchell and Others," a full statement of the details
of which, together with the Vice-Chancellor's judgment upon
the construction to be given to the act in governed the respective rights of the litigant partics, was given
in our Paper of last Saturday. The defendants in this suit are the same as those in the former suit, being a najority of the manage and regulate the enjoyment by the freemen and their
widows of this piece of land so allotted to them. In the former suit the chief question at fssue between the parties was, whet her
the defendants in the suit, the deputies, had power nnder the act to divide this allutment into garden-plots among the freenien by the suffrages of the great majority of the freemen and their widows. The Vice-Chancellor, on that occasion, was of opinion,
upon a minute, critical, and legal construction of the act, that the depurres had not the power to turn this land into gardenplots, or to make use of it for any purpose which would render it
unfit for pasturage. The plaintiffs in the present suit were not
parties to the former suit ; but, as they claimed to have an interest parties to the former suit; but, as they claimed to have an interest
in the enjoyment of this piece of allotted land, they filed this bill, and now applied for this injunction, to restrain the defendants the picce of land in questiong the crop of hay now standing on
ceded to the defendants, at the period of the former decision, that they might be at liberty to cut down the standing crop of hay now on the land, without infringing the terms of the injuoc-
tion granted and continued by the Court against them in that
case. The Vice.Chancellor, in the present instance, without cating on counsel for the defendants to make a siagle, observa-
tion in opposition to this application, at once refused the motion COURT OF Qusen'g Bench.-The Queen $\vee$. Stowell.-This was
another of the many cases that have recently come before the Court on the question of venue. It was an indictment found in the Central criminal Court, and clarged the defendant with evidence on another indictment against two persons, named
fohn Williams and John Wakeling. The indictment had the John Walliams and John Wakeling. The indictment had the
words "Central Criminal Court" in the margin, as the venue words "Centrai Criminal Court in the margin, as the venue
given lyy the statute whach crated the jnirsdiclion of that Court;
at it did not contan any statement of the offence haver committed withn any one of the five counties over whach, or
parts of which, this jurtudiction extended. The case had been removed intu this coutt on certiorth, abd the delendant had been
tried by a Middlesex jury, and had been convicted. A rule had the general allegation of "Central ( rimimal conrt" as a venue, The case was subsequently alyued by Mr. Chambers for the
detendant, ani by Mr. Michards forthe Crown. Loru Denman now delivered judgmant. Having stated the nature of the objection,
his Lordslup referred to the statute 4 and 5 W .4, , 36 , the third section of wheh provided that the district situated within the
limits of the jurisdictun created by that act should be deemed one county for ail purposes of venue, licat description, \&c. It would have been sufficient for any case tried at the Ccntral Criminal Court; but the objection arose in consequence of the
case leing removed into this court. The venue was material as case leing removed into this court. The venue was material as
showing the place from which the jurymen were to be summoned. Here the case, in consequence of the certiorari, was tried in this the indictment, that that jury had been properly summoned, or That the court had jurisdiction in the matier. Even in the indictments prect a place applscable to the allegation of the constituted the offence, alleging that place to be within the jurisdiction of that court; but it was absolutely necessary that such
an allcgation of venue should exist in cases of indictments an allcgation of venue should exist in cases of indictments
removed into this court. In future, where such an allegation of
Venue was not made, this court would not grant a rule for a certhe juristiction arising from such want of a speciai venue. Here
the want of it was fatal to the proceeding, and the judgment must therefore be arrested

 department. 1 do not see that any lair
borok should be called a puffer.-The Soicitor Gieneral objected
to this style of question.-Mr. Thesiker contended that the question was most important. The inquiry here was, whether
there was not a system of puffing, and whether tue artucle
complained of was more than a criticism on a practice which cormine beneft of the public, ought to be put downo- Lord
forman thought that the inuestion was, whether there was
Den a libel or not, but not whether it was so in respect of any
particular party connected with any particular person. Mr.
Moncruf fris wen called, and proved that he was the writer The "Ellistoniana" in Colburn's Magazine. Mr. Thesiger then
nddressed thr Jury for the delendants. He deuied tiat there
was anything here that could properly be called an atho adaressthing here that could properly be called an attack upon
was any
private character. The defendants had no private motive intluencing their conduct. If persons assumed the office of public
journalists-if they affected to journalists-if they afrected to guide public taste, and to affurd
to the public the proper means of formag a corsect judgment,
-they were not merely entitled, they were bound to show in what way that judgment was covertly endeavourerl to be influ. puffing-so ingenious but so deceptive-which this artucie in the odical and then in another, were so many expressions of dif
ferent voices honestly and falthfully expressing the ouniuns of ferent voices honestly and fathfully expressing the opiniugs of
various individuals. It seemed that he was in thas quite mis.
taken -that, in fact, they all proceeded from the same person, were puffed from one publication to another, tull they had com-
pleted what was called the round of the papers, and had succeeded in inducing simple-minded persons, like himself, to believe
that the voices of all the critics were unanimous in darour of
the work which appeared to be criticised. No one could doubt that the system was a most improper one-no one could doobt
that, if it deceived persons for a time, it must bring discredit on
literature itself, and was tiserefore a systen which deserved it, and in doing sathey had orady pointed out an mstance in which, as it seemed to them, the system haa been unfairly
carried into practic. In what they had done they had not the law allowed them to write whithout restraint. 1 th was to be
regretted that such strictures as therrs were necesar. --t was to

 case of Sir John Carr, authorised fair criticism ou his pubicaexposure of the puffing. The public character of such a persen
was not a public property on whil every one might prey; bur
it was sump and in a farr way, freely animadvert. lhese defendants had done no more; they bad not touched the privatecharacter of the
plaintiff; they had done no more than they were warranted in in their favour. Lord Denman summed up the case. lle said that in the inculpated antmele, the subject of phifing had been
iniroducen whith a good deal of humour, and if the Editors of the Allus had been able to show any paragraplis or the nort they had
humorously described had puceeded from the office of tise plaintiffs, and hdd becn sent the round of the papers, the jury and proper mode of criticism, and would think that they ought
to be allowed great liberty in exercisipg it. But that had pot been done here. The jurors would, unger these circumstances, lous attack on the personal character and the honour of the tiff, and thens sal to what dany und, they wonld find for it e plani-
thoug entitled. But it they they would then find their verdict for the defendants. As to the expression supposed to have been used by Mr. S. Whuting, on
which comment had been made, he (Lord Denman) should only cast any, responsibuty on the defendants; but, at the same time
the jurors could not shut their eyes to the fact that the adversubject of discussion between the parties. The jurors would
give this aud ail the other facts in the case their due weight, end the case required. The jury returned a verdict for the plaintift Damages 40 s .
being called on fre triacen v. Gregory, - Urgon this indictment defendant, Mr. Grefrry, proprietor and editor of the Satirist) prosecutor, I am instructed to apply to your Lordship for permission to withdraw the plea of not guilty, and to plead guity, I
thirk it fight to inform your Loordship, in so doing, that the riend, Mr. Chambers ; but he desires me disturctly to state, ani in the most unreserved terms, his regret for the annoyance and of Brunswick and friends, by a series of libels which, although course, and in accepting our advice, Mr. Gregory has had no communication, negotrations, advice, or understanding, dırectly
or indirectly, with his Highness the Duke of Brunswick, or with
 free to take such steps neccssary in this matter as he and his tions stat.on. Mr. Nergeant Talfourd- I apprehend I cannot at
ail, on my part, having the honour to appear here on behalf of his Highreess the Duke of Brunswick, make any objection to the course my learned friend has pursued, if your Lordship thinks
he is entitled to take that course; but I am anxious to have it distinctly understond that the course my learned friend intended heard what course my learned friend had thought fit to take. On the part of his Highuess I am not instructed to offer the least Which is the natural result of this prosecution should be followed
and it will be for your Lordship to say whether, under the cir cumstances, you will give judgment now upon this indictment, Lordship's considteration. All I can say is, his Highness the sense of duty both to hmself and to the public; and that it is
utteriy impossible be can for a moment come to anything in the cested. Mr Sergeant shic-The reverse is distitictiy stated Mr. Justice Wergitman-I do not purpose to pass sentence now; it will be better, for more reasons than one, that it should remain
for judgment till next term. Mr. Sergeant Talfourd-So far from anything lise compromise, I am instructed on the part of his Hence at once; but 1 do not for a moment press that. Mr. Juss tice Wightman- - It will be mure satisfactory if the defendant's
future conduct is some extenuation. Mr. Sergeant Talfourdfuture I can say is, that I have nut the siglitest authority in the SPORTING

DAXTON'S POCKET BOTANICAL In what may be called an age of Cycloppedias, when the compresbring at within the means of persons of all ranks, is so universally sought, tit evidently desirahle that the Gardener, and those con:
nected with his profession, should be as well accommodated as other nected with his profession, should be as well accommodated as othet
classes in this particular. No such worl existing, classes in this particular. No such work existing, however, priot
to the issue of the present publication, its value will be apparent ; since it combines the more essential features of a Botanical Catalogue, a Horticultural Guide, and a Technical Glossary. adapted for the Amateur and Floricult description, it is especially adapted for the Amateur and Floriculturist; who may, by carrying to his inspection, and immediately derive every intelligence respect-
ing the peculiarities or affinttes of particular species which could reasonably be wrshed for. 'This is na advantage that can only be assiciently estimated by those who have felt the want of such an assistant, and to all such individuals, as well as to every agent or
Iriend of Horticulture, the Pocket Botanical Dictionary is decidecly London: J. Andrews, Bond-street; Orr \& Co., Paternostcr-row.

## FUN FOR THE FIRESIDEI!

JOE MIL LERB'S JESST-BOOK. atd alterations only having been made as were required by the
greater deicacy observed in modern conversation; but, that the greater deicacy observed in modern conversation; but, that the
volume might have some substance, and be a good table or tra-
veling book, copious additions have been made from other old volumes of Facetiz.
"Another strange circumstance connected with this work is, that everybody presumes that he himself and everybody else are perfectly
familiar with tts contents.... and yet, if the reader will ask his
acquintance it acquaintance, it will appear that not onet, in five hundred ever set eyes
an a copy. It is in consequence of like questions that this edition is on a copy. It is in consequence of like questions that this edition is
published."

COOKING UTENSILS with SILVER lined with tin, the chief advantages of the former being greater durability and cleanliness, and the impossibility of burning - viz., giving a burnt flavour to mink or any gelatinous or farinaceous ELECTTRO PROCESS, adheres so tenaciously to the copper, that moderate care it will last for years, and can be renewed at a moderate charge when necessary. J. L. BrNHam considers this particularly imlortant to the Army and Navy, and to families tinned is often very great. Old articles getting coppers properiy and be lined with pure. sitiver by this process.-19, Wigmore-
street, Cavendish-square, London.

A LL DISEASES of the KIDNEYS and BLADDER The speedily and effectually cured by DR. YOUNG'S MIXTURE. The efficacy of this Medicine in the above Cumplannts fias been years ${ }^{i}$ standing, and has induced the present proprietor to make it more generally known. Sold in Bote each, by the Proprietor's Agent, J. SANGER, 150, Oxford-street, London; 260 by Johnson, and all medicine Vendors throughout the country.

T PRESLEY, late Gardener at Plaistow Lodge, the Bromley, Kent, begs to inform his gardening Friends an FOURTH Public generally that he has taken the GEORGE THE green, where he will be glad to see any old friends or acquaintances whe may think proper to call upon him.-Well-aired Beds, choice Wines and Spirits.
$\overline{\mathrm{H}}$ ORTICULTURAL SOCIETY OF LONDON:-
 Society, has kindly directed the dnoms of his Garcicns and theasure-
Grounts to be opened, for the reception of all peracms who shall
have been admitted int the Sociefy's Garden thy tickets. have been admitted int, the Society's Garden hy tickets.
SUBJECTS FOR EXHIBITION must be at this office on TUESDAY, July 11 , or at the Garden before half-past Eight atock, A.M., on the day of Exhibition. The gates will be opened
at One, p.m. Tickets are issued to Fellows at this office, price
5s, each. or at the Garden in the afternoon of the days of Exhi5s, each; or at the Garden in the afternoon of the days of Exhi-
bition at 7s. $6 d$. each, but only to Orders from Fellows of the Society. N.B.--No Tickets will blissued in

## SATURDAY, JULY 8, 1843. <br>  <br>  <br> \{Royal Botanio, Regents, Park <br> Couxtry Skuws-Tnesday, Jusy 11 . Ronaz Corn wall Horticultural.

$A T$ the last meting of the Horitioultrall Society in Regent-street, some most beautiful specimens of the application of the Electrotype process to vegetation were exhibited by Messrs. Elkington, of Regentstreet. Upon the surface of leaves a deposit of cop per was thrown down, so as to form a perfect
sentation in metal of the surface of the foliage.
Since that time we have been favoured by Messrs. Elkington with a sight of other leaves coated with gold and silver as well as copper. Among these wer a Pelargonium-leaf, having all its glandular hairs pre erved with admirable precision ; an ear of Wheat ; leaf of Fennel; ; Fern, with its fructification; a shoot
of the Furze-bush, and an insect, (a Carabus,) with every part of it encrusted with the metallic deposit.
In our opinion this opens quite a new and most interesting field to the application of the Electrotype process. The ornaments required for the decoration of nature may thus be furnished by the unerring hand workman ; flowers and leaves for the hair or the dress may be prepared with all the lightness and finish of reality; and we see no. reason why ladies
should not to day send their favourite flowers to the silversmith to be silvered or gitt for the evening, and then return them on the morrow, in order that
the metal may be reduced and again employed in encrusting other things. But it would lead us too far from our subject if we were to speculate upon the possible application of this most curious process.

Some weeks ago we called the attention of our eaders to the importance, or rather the necessity, of keeping down the termperature our correspondence tells us that the warning was not given too soon. As Grapes are now generally ripening in forcing-houses we resume the subject.
It will be remembered that our reasoning on the former occasion was partly founded on physiological considerations, and partly on an examination of the Both those sources of evidence Both those sources of evidence may now be employed
to show that when Grapes are ripening, the night temperature should be nearly as high as that of the day.
In its favourite regions the Grape ripens its fruit at the hottest and driest period of the year. In Corfu the Grapes are ripe in September; now it appears from Dr. Davy's observations that the range of the thermometer in that island, day and night, is in August
from $77^{\circ}$ to $84^{\circ}$; and in September from $74^{\circ}$ to $82^{\circ}$; that is to say, it is never colder at night than $74^{\circ}$ in September, or than $77^{\circ}$ in August. At Malta the
lowest temperature observed in August was $74^{\circ}$; and lowest temperature observed in August was $74^{\circ} ;$ and
in September $69^{\circ}$. In Candahar, Mr. Atkinson found Grapes ripe in June, and at that time his paper curled up and became perfectly crisp while he was writing on it. The night temperature of Candahar in May and June is not given; but we may be very sure that in a country like that, where a burning sun has been shining for three months, and the ground is excessively heated, there must of necessity be a very high temperature at night. In fact, in Persia, which is nearly the climate of Candahar, the midnight temperature of
August has been known to be as high as $108^{\circ}$; and it is certain that in all such countries the difference between the temperature of the day and night, at the hot season of the year, when Grapes ripen, is inconsiderable. We may, therefore, assume that a night temperature of from $70^{\circ}$ to $80^{\circ}$ ought to be secured when Grapes are ripening, and that the temperature of the day should be something higher

At that period of their existence much atmospheric moisture is unnecessary, or rather injurious to Grapes, for it will inevitably cause the Vine to break into a the fruit of little branches to the the air is parching Mr. Atkinson's paper curled up in Candahar while he was writing on it; and the Vine will bear such a
climate well, if it is gradually inured to it, provided the roots are in a moist soil, and there is a firee circulation of air.

It is to be recollected that when a tree is ripeniug its fruit, it is in quite a different condition from what occurs when it is flowering. At the latter period its energies are all directed to organizing itself, and consolidating the parts that may have been formed; it is growing, and hardening its growth. But at a later period organization and consolidation are accomplished, and it is the elaboration of the fluids, stored up within the plant, that has to be provided for. The fruit of such a plant as the Vine is incessantly sucking fluids out of the branches; but that fluid is little more But after reaching the fruit it thickens by evaporation it changes by the chemical combinations brought about in consequence of a variety of phenomena that need not be here explained; the result of which is
the conversion of acid into sugar, and the creation of the delicate flavours which give the Grape its value as a fruit. Now the evaporation that is indispensable to the conversion of watery sap into Grape juice cannot take place unless the air is dry and warm; and it will take place in proportion to the dryness and heat to which, within natural limits, it is exposed; for light and heat quicken all the chemical changes that occur
in plants, while dryness renders the juices viscid, and in plants, while dry
No further argument, then, seems necessary to show that the condition of the atmosphere in which Grapes are to ripen is the reverse of that which is required and setting their fruit. In the latter case, they should have high temperature by day, and be cooled down considerably at night, while a moist atmosphere is care fully preserved at all times. In the former, a high
temperature night and day, and a dry atmosphere temperature night and day, and a dry atmosphere
should be substituted. So says the climate which the Vineloves best,-so says theory,-so says the practice of those who know how to ripen Grapes as well as grow them (and there are not too many gardeners of that sort); and what nature, theory, and practice, alike point out, the gardener may be sure he ought to believe implicitly
There is only one cause which can render a very high temperature and dry air injurious while Grapes are ripening, and that is dryness at the roots.
course, under a high temperature and dry air ther will be a great loss of water from the surface of both leaves and fruit; that loss must be abundantly supplied by the soil; and to that end water must be England there is not Much to in such a climate as England there is hor water in our soil. Nevertheless, now that the importance of draining Vine-borders is so well understood, it is by no means impossible that they may become too dry, if incessantly acted on by the numerous roots of
a strong Vine, loaded with fruit, in a hot and dry air. In such a case water must be applied abundantly to the border. In the dry climate of Persia Vines are regularly irrigated; so they are in the lonian islands, and in all the best vineyards of Europe the roots of the Vines have free access to moist and cool strata. The famous Vine at Hampton Court probably owes its vigour to the proximity of the Thames, and we
shall always find that the finest and best-flavoured Grapes are obtained under similar circumstances.
On a future occasion we shall endeavour to show at what time, and for what reason, a free circulation air is necessary to Grapes.

It is a very common notion that nothing is required but good land and regular manuring to ensuregood pasture and fine hay ; but this is a great error. The richer the pasture or meadow, and the more it is manured, the more weeds will be mixed with the grass: we do not mean Nettles, Docks, and Thistles, or the Wild Carrot, which grows under trees; these are so obvious that they are generally noticed and pulled up; but there are weeds which have the excellent food, and to which names are given, indicaare various kinds of Ranunculus, the juices of which are acrid, and which no cattle will eat if they can get better food. When a meadow looks green, with plenty of the yellow flowers of the Buttercup, it is by many thought to be a very rich pasture. It is true that these Ranunculi are only found in good moist meaduws, and seldom or never in poor pastures. The yellow flowers found there are Potentillas, and other dlants, which thrive in poor soils. But observe a cow feeding: she will eat all around a plant of Buttercup, and leave it standing alone; or if by accident-she has got it into her mouth, and it is not too much entangled in the other grasses, she will drop it out. Thus instinct as well as taste teaches her to avoid it. Some fanciful men have ascribed to the Buttercups many of the diseases of cattle, and even of men, from nsing the milk and butter of cows fed on them. This is absurd; for the cows will not eat them unless
driven by hunger, and then they will neither give much milk nor butter. It is sufficient that it is a useless weed, and takes up the room of good grasses.
The weeding of meadows and pastures cannot be too strongly recommended; and where the extent is only a few acres, and plenty of poor women and children can be found who will gladly work for a mere trifle, the grass may be much improved, and consequently the milk and butter. An acre of good grass, where the weeds are as much as possible eradicated, and where the growth of the best grasses is encouraged by an occasional sprinkling of their seed over the ground after it has been well scarified or harrowed, will give more good feed for cows than two acres of the same kind of soil which has been neglected in everything but manuring. Some of the richest land we ever saw, which might fatten a bullock and five sheep per acre, (this is the mode of valuing land in Ireland as well as in Lincolnshire, was so overrun with weeds, that it looked like a wilderness of Thistles and Docks, while there were scores of men and women perfectly dle for want of employment; but the idea of weeding grass land never entered their heads. The butte was very fine, for the cows avoided eating the weeds but there would have been twice as much if the weed had been kept down. This was in Ireland, and we have seen the same in England, althoughnot to so grea

When grass-land is so infested with weed and inferior grasses that weeding is out of the question; the best way to have a clean pasture is to pare and burn the surface, plough and pulverize the soilthe deeper the better; take one crop of Oats, whic will be luxuriant, and therefore would smother al Clover or grass-seeds sown in it; then let it lie rough from the plough the winter after the crop has been harvested, and in the spring pulverize well, and sow the best picked grass seeds, with some white Clove and Trefoil; weed carefully, and you will soon have s pasture worth double of the old. The manure in the tank and the compost-heap are not to lie useless, bu to be carried on with judgment as a top-dressing
Should your soil not be mellow and rich, the same plan may be followed-only in spring it must be well manured, and then inoculated with tufts of good rass cut into small pieces and scattered over the surface; a heavy roller and a few rainy days will secure the rooting of the grass. When you have a good rich pasture filled with the most nutritious grasses, keep is so by careful weeding and a frequent application of liquid manure

We say nothing of the artificial manures which are offered for sale everywhere, because we have not yet a sufficient experience of their value; besides, those for whom we are now writing ought to be entirely independent of extraneous help in this respect-that is, if they have followed our instructions. Experiments, however, may be made with various substances ; and, provided we conee
to no hasty conclusions, but patiently observe and calculate the cost and produce, and repeat our experiments year after year, we may throw some light on the expediency of substituting these manures for our tanks and compost-heaps, which, at all events, are much less expensive.

When we have got our grass in a perfect state, the hay will be bettex in proportion. It may be as well to warn young hay-makers that the richer the grass, the more it must be made-that is, not only freed from moisture, but the juices dried up and reduced to a solid extract ; or it will heat in the stack, and either burst out in to flame, or at least be so carbonized as to be unfit for horses. The finer the weather the more danger there is of carrying the hay too soon. Every occupier of 20 acres of grass has a rickcloth as a matter of course; if not, the sooner he buys one the better. There is no better outlay in our changeable climate than the price of a rickcloth.-M.
$W_{E t}$ trust that the last Meeting in the Horticultural Society's Garden on Wednesday next will include a display of fruit worthy of English Gardeners. cannot say much in favour of the previous Exhibitions this year, which, although they contained some fine things, were, upon the whole, strikingly inferior to the produce of the flower-gardeners. The fine weather of the last three weeks has been favourable to the ripening of fruit, and it is to be hoped that the reputation of forcing-gardeners will now be upheld without blemish. We may as well add that the Society
rurns all fruitto the growers without expense to them
We learn with great pleasure that his Royal Highness the Duke of Cambridge bas presented Ten Guineas to the funds of the Gardeners' Benevolent Institution. May we be permitted to suggest once more to our numerous wealthy readers that this is a good charity well administered, for good purposes and that contributions to it would be the means of substantially benefitting old Gardeners of respectability, now worn out in the service. On former occasions we have appealed to Gardeners rather than to
their masters; but we would now entreat the latte heart would, we are well persuaded, be in no way more gratified than by finding that he had succeeded in awakening the sympathies of those who can so well afford to part with a part of their abundance for the relief of the oud and destitute Gardener.

## THE TANK SYSTEM

I have lately altered the mode of heating my hothouse, by introducing Mr. Rendle's tank system; and as I have differed from the plan proposed by him in some material points, I think that many of your readers may be inteto follow the mode which I have adopted, we induced to me to be an improvement in some respects on that of Mr. Rendle. I send you a drawing of the house, with the tanks, as now at work. It is drawn to a scale of $\frac{1}{4}$ inch to a foot, so that a pair of compasses will at once give the with the floor of the house, the fireplace which is level shed. The boiler is a small conical one, made by Messrs. Hood, ironfounders, Earl-street, Blackfriars. B 1 and

$B 2$ are the tanks; $C$ is a trap-door, opening into the tank, which I can lift up at pleasure, and fill the house through the tanks and pipes. The two pipes, though drawn side by side (to show themselves) are really one above the other-the return-pipe being, of course, the lower ; above these pipes is a stone shelf. Tank B I is made of Oak, the otber (B 2) of Elm; the wood of each
is $2 \frac{1}{2}$ inches in thickness, and they stand on Oak blocks is $2 \frac{1}{2}$ inches in thickness, and they stand on Oak blocks
3 inches thick, to raise them from the floor; this not only tends to prevent their decay, but promotes at the same time a freer circulation of the hot air. The bottom boards are placed the lengthway of the tank, and not the carpenters to whom I have spoken on the subject the carpenters to whom I have spoken on the subject lengthwise, and as the tank ought invariably to stand on blocks about two or three feet asunder, it is impossible
that the boards can be strained by the weight of water, that the boards can be strained by the weight of water, inasmuch as each board receives a support from every
block. The bottom as well as the sides of the tanks are bolted together by iron bars, five-eighths of an inch in thickness, passed through the wood, and screwed up as tightly as possible. Each tank is divided by an inch-andhalf EIm board, and is covered with common roofing slate, those that are generally called "Princesses;" being
24 inches long and 14 wide. Mr. Rendle recommends 24 inches long and 14 wide. Mr. Rendle recomonends (p.15) that "these slates should be $1 \frac{1}{2}$ inch thick, that the edges should be cut square, and the joints well stopped
with Roman cement or Aberthaw lime, to prevent a superfluity of steam from escaping into the house;" and he adds (p.30)-"The slates need be of the best quality, to withstand the heat of the water, and care should be taken that their edges be made evenly ; the slates for this purpose cost me (at Plymouth), $3 \frac{1}{2} d$. per foot." I found on inquiry that I could not have got slates of such a thickness, of the best quality, and carefully cut square at the edges, under $10 d$. or $1 s$. per foot, which would much have increased the cost of the work. I therefore tried the penny per foot, and I find that they answer the purpose remarkably well. I did not cut the edges square, but I used them just as I purchased them, and stopped the joints merely with wetted clay. There is no fear of too much steam escaping into the house. I am constantly forced to syringe and open the trap-door, to let out more I had a small strip of Oak nailed on the inside of the tank, of sufficient thickness to allow the slates (which were 14 inches wide, to reach across. Round the edges of the tanks I placed (as Mr. R. recommends) an inch board 11 inches deep, and the plunging material which I use is fine sand. The slates carry the weight of this sand, though 11 inches deep, with ease, not one of them having cracked as yet; indeed, they would bear a much greate weight, for I saw one of the masons stand with his whole conght, on, one of them, and it did not give way. In a instead of the sand, in which I have planted Pines without any pots, after the French mode; how this may answe remains to be proved, but they appear to be doing well.
The most material point in which I differ from Mr. Rendle is the depth of the tanks; instead of being 4 inches deep (as he 2dusson, p. 1.5 ), mine are 18 inches deep in the
clear, inside" This much increases the bulk of water, the clear, inside" This much increases the bulk of water, the
tanks holding 22 hogsheads instead of about four and a
half; and I find that my boiler, though a small one, I could heat with the same boiler another house equally large; I have some idea of trying this soon, and should I do so I will, if you wish it, communicate the result to you. If I carry out my proposed plan, the boiler will have to heat nearly 60 hogsheads of water. I have no fears in my mind as to the reault, judging from the apparent ease with which 22 are heated. I have a ther-
mometer fixed in the tank, the bulb being immersed in mometer fixed in the tank, the bulb being immersed in the water, and the upper part being inclosed in a small
box at the side of the tank, by which means I can at any box at the side of the tank, by which means I can at any
time see the heat of the water, and I find $114^{\circ}$ or $115^{\circ}$ of Fabrenheit is high enough to keen the house or $115^{\circ}$ perature of $70^{\circ}$ at night. I also find that a moderate fire kept up for five or six hours in the 24 is abundantly sufficient. The hothouse was heated before by four-inch iron pipes, besides having a large bed of tarner's bark (eight large waggon-loads), in the centre, and I could not produce the same heat as that now given by the tanks without keeping up an incessant fire aight and day, added instead of the temperature of the house was then dry, the colour of the leaves of all the plants, and the rapidily of their growth is surprising already, though the systera has not been at work more than six weeks. Every lover of horticulture ought to feel much indebted to Mr . his system; bringing it, in its present form, before the public. The saving in fuel is immense-at least one-half; but the greatest advantage is the equability of temperature which it produces; so large a body of water, when once warm, retains its heat for a very considerable period, rendering the temperature of the house more uniform and regular. To illustrate this 1 give the following fact: I desired my servant one day not to light the fire (which he generally
did about six o'clock in the evening), in order that I might see how much such a body of water ( 22 hogsheads) would cool in 12 hours. At night, when I last saw it, the eight o'clock, it was $1093^{\circ}$; the next morning, at about eight o' clock, it was $109^{\circ}$, having sunk only $4^{\circ}$ in that brisk fire for 24 hours before it had attained the temperature of $120^{\circ}$; but this I found to be too hot, and I now keep it at from $112^{\circ}$ to $116^{\circ}$, and this is easily the evening, making it up the last thing, to burn during the night as long as it will. No fire need be applied at delighted with the system, and strongly urge all to adop faven if it be for economy's sake alone; keeping this fact in view, that the body of water can never be too and I feel quite confident that 50 hogsheads would not common-sized conical boilers

## John Iuuyshe, Clisthydon Rectory.

ON THE CULTIVATION OF CYCLAMENS. either curious, gay, or fragrant flowers, as in the dif ferent species and varieties of Cyclamen; yet they are hardly to be found in cultivation, and any one acquainted with their pretty appearance might well be surprised to find such beautiful objects so much neglected. Flowering, too, as they do, at various seasons, but particularly during the winter and spring months, and lasting in flower for a considerable time, the greenhouse or even the windows of such plants during all the spring months, by prowing few of the early flowering kinds.
In cultivating the different sorts of Cyclamen, it must be observed that some are much hardier than others, and may remain in the open border all the winter; while some are destroyed by a few degrees of frost. But it must also be remembered, that all suffer alike from excess of moisture during winter; they are, therefore, best cal culated for growing in pots, as the summer and autumnflowering kinds may then be plunged in the open borders through the flowering season in their pots, and taken up again before winter, and placed in some dry situation until the following season
The Cyclamen is increased in two ways: first, by cut ting the largest roots into pieces, which is a bad practice as they are very liable to rot during the first season after cutting, or while in a dormant state, unless the parts are kept very dry, a thing very injurious to the earlyfowering kinds; secondly, by seeds, which should be or pots well drained and be autumn or spring, in pans parts of sandy loam and leaf-mould, to which should be added a sraall portion of well-rotted dung. Then place the pans or pots in a cold frame or pit, kept close if sown in the spring ; but if sown in the autumn, they should be rather dry during the winter, and gradually watered more
The spring advances.
The autumn-sown plants will be fit for transplanting about the end of May, or beginning of June following, properly treated, while those sown in the spring should not be removed from the seed-pans before the following spring; they will by that time have formed roots about the pans, well drain and fill thepare then some large pots or as that in which the seeds were sown, and transplant the young roots from the seed-pans into these, placing them bout three or four inches apart, according to the size of keep them Return them to the cold pit or frame, and admit air freely by day, but keep the pit close at night till
the beginning of July, when the pots or pans should be plunged, and the plants fully exposed both day and night, taking care, however, that the soil in the pots does not will require no coo much rain or become too dry. They weeds and slugs, till the middle of St keeping free they should be potted singly into small 48 -sized or 60 pots, (according to the size of the roots,) filled with the same kind of soil as that previously used.
In potting, the bulbs should never be entirely covered with the soll, but about one-third left exposed. When potted they should be placed on the back shelf of the greenhouse, or in a cold pit, where they can be kept dry and free from frost until they begin to grow.
If they are the early flowering kinds, a few may be placed in the window of the sitting-room, and but sparingly watered until they commence growing, when they should have a more liberal supply
The roots will begin to bloom the second season, and may be placed on the shelves of the greenhouse; or if
 wamn, the pots may be plunged in the open border
When done flowering, they should be returned to the cold pit or frame, where the lights must be kept on during the night in cold or wet weather, but where they can have plenty of air at all times; observing, as they ease growing, that water should be withheld, and, finally be roots gradually dried. The roots, when dry, should as is frequently done; for, when taken out of the soil they are almost sure to get too much dried before they are again potted. This is particularly the case with the early flowe

The proper time of the year for resting the flowering roots entirely depends on the sorts. C. persicum will be at rest when the C. Europæum and C. Neapolitanum will

The roots should be or a.
The roots should be shaken from the soil and repotted the the early spring-flowering kinds may be forced earlier into and placing them a few of the strongest roots sooner, be excited too rapidly warm dry place. They must not the leaves are almost sure tored freely; for, if they are, winter months, and particularly those of the beautiful . persicum and its varieties.-George Gordon.

## AMATEUR'S GARDEN,-No. XXVII.

In continuation of the hybridrising and cross-breeding of plants, as noticed last week, it is not only necessary where fertilization is impracticable, that seed be gathered from those flowers only which possess the finest qualities, but that they, as far as possible, be kept from the vicinity of inferior flowers. Nor is this practice to be confined to forists' fowers only, but it also spplies with equal force to every kind of flower whatever, and to every plant which is commonly propagated by seed. Thus the careful growerg of Turnip and Onion-seed plant none but perfectly-formed bulbs, for if they were to do otherwise the kind mond degenerate, and after a few years be unworthy of cultivation. Now, if so much care is necessary in saving the seed of plants which are cultivated by the acre, and where fow degenerate plants would be scarcely noticed, how much more so is it requisite in gathering seeds for the fower-garden, where nothing of jnferior description should be allowed to grow? For this reason it is necessary, when desired to keep seed true to its kind, much more to mprove the kind, that all inferior flowers be remove from the garden as fast as they show bloom, and befor there is any possibility of their pollen being conveyed to thats and other means. orase seeds properly they require to be grown in ere the removal of inferior kinds numa gaps in the beds would be of little conse qua Mr We raiser of annual seeds was Mr. Weeks, gardener to J. Sheepshanks, Esq., who sed to reside in Blackheath Park. There the ground was prepared with as much care as for the choicest plants and a single row of Nemophila insignis, the seeds one foo apart in the row, would generally cover a bed four feet wide. The nnest seeds ever seen in London were grown at That place, and no expense was spared to attain perfection. The amateur, is he has not already commenced, must the no time in getting in his pipings of Pinks; for, if ment in the summer The sping will make the flower strong in the of spent dung best way to proceed is to make up a bed over that place an old door, plastering the sides securely, to prevent the escape of heat; and on the door place the compost in which the pipings are to be planted. The best with should part of loam and one part of silver sand; these well incorporated together, sifted through a of three inches.
In preparing the cuttings or pipings, all that is necessary is to remove the lowermost pair of healthy leaves, pipings must then be pressed into a mould to the depti of one inch, taking care to make the soil firm round their bases, and after they have received a liberal wratering, the frame or hand-light must be placed over them, and they will require little more care, pacept frame close, shading from the sun, and sprinkling occasionally in an evening with clean water. It is also a good plan to remove the glass on warm dewy evenings; but it must eplaced before the pipinga are dry in the morning
nations and Picotees, which may be increased with equal
facility and with as great certainty as by layering. In
truth, in my opinion, the trouble of layering Carnations is a mere waste of time.
I perceive Mr. Cripps, of Tunbridge Wells, has been putting me right about the origin of the black Nemophila. His statement may be correct; but though nature certainly does perform "' strange freaks," I think it far more probable that this variety should have originated from N. atomaria, which combines the two colours, than that it should sport from N. insignis, which does not that it should sport from N. insignis
possess either colour.-W. $P$. Ayres.

## IOME CORRESPONDENCE.

Ilybrid Plants.- Having noticed in the Gardener's Chronicle of the 8 th of last October, that you intend
shortly giving to the public a Paper on the Muling of shortly giving to the public a Paper on the Muling of
Plants, Ithink it may be rather an interesting fact for Plants, 1 think it may be rather an interesthy
you to know that my late much-lamented father practised it upwards of 50 years ago; be confined himself principally to Ericas, with a few exceptions, which $I$ shall notice
hereafter. I have heard him many times remark, that the hereafter. I have heard him many times remark, that the
first plant he operated upon was Erica grandiflora, which be set with the pollen of Erica vestita coccinea. The variely the admixture produced was called by him, fulgida, or vestita fulgida. From the period he com-
menced, viz., 1790 , until 1841, he succeeded in obtaining menced, viz., 1790, until 1841, he succeeded in obtaini
nearly 90 varieties, comprised in the following list:Erica acuminata

I may mention now a few other plants upon which he tried with the pollen of Azalea nudiflora speciosa, he obtoined a variety called the "New Pink;" from Rhododendron ponticum und punctatum, a very curious dwarf variety; a fow plants of which, 40 yrso old, are not more than 30 inches succeeded in crossing several kinds of Ixia, Sparaxis, and succeeded in crossing several kinds of ria, Sparaxis, and
Tritonia, but having no memorandum relating to them I cannot give the names of the varieties so obtained. I must not forget to mention that he raised several varieties of
Pelargonium as far back as 1796 , one of them was called "Pelargonium quinquevulnerunn," a distinct and pretty variety: I believe it to bave been obtained between Pelar-
gonium ardens and Pelargonium triste.-George Rollisson, F.H.S., Nursery, Tooting. [Our readers will with us regard this letter as one of great interest. It fixes a
date to the first considerable production of hybrid plants in this country, and is in many respects a valuable document for refernice. Next week, or the week after, we
shall offer some observations upon the greab question of procuring hybrid plants; of the first importance not only Gardening, but in husbandry.]
Gold Fish.-In the Gardeners' Chronicle of 29th April last are some observations on Gold Fish, by the writer of
thls note. In the following No. are some remarks thereon, signed "J. M." Absence has been the cause of my not sooner replying to those remarks, and to some queries
that, "J. M." has put. He asks, "Where did I get the Nuphar minima?" I answer-that I am not sure that my broad-leafed Yellow Water-Lily is the Nuphar minima. Our running and stagnant waters, rivulets, and meres, in
this neiphbourhood of Woodbridge have abundance of it. The Martlesham, Great Bealings and Little Bealings Hivers, Rushmere, Loudham (or Ash) mere, and others. My Yellow Lily lhas been some weeks in bloom. Several
of the blossoms have passed away, others are now out of the blossoms have passed away, others are now out;
more are coming. There are seldom more than two in full bloom at a time. In my tank I bave also a very beautiful White Water-Lily. It has been there I think
two years in a pot. It has now for the first time a single blossom. This plant is not very rare in the above situa-
tions. tions; but it is not so common as the yellow, nor are the
leaves so broad. It has five floating leaves, and others are visible under water; the blossom is going off. It was as large, when fully expanded, in the two or three warm looking fowt week, with the yellow, centre, was and is very beautitul; so is a yellow blossom, now out. My spreading

Buck-bean has had many beautiful flowers; they are gone. The sweet-scented Rushes have, perhaps, a dozen or more blossoms; they are three or four inches long, prettily lapering, nearly as large as one's little finger. I shat He next asks-"Does not the stagnant water that for four or five years has been in the basin get putrid or discoloured?" I answer-no ; I am not aware that it does. altogether clear or trausparent; dead leaves are removed. As I have said, we occasionally start five or six casks of fresher water into the tank. None has been put in since have kept the tank nearly full. "Will the Gold Fish," "J. M."next asks, "live in the water after it is saturated with vegetable substances that have been carried into it?" To this I answer-what the fish may do after such satuvery lively and I have lively and happy under the circumstances that make little alited, and make little alteration in my way of treating them. I am
not aware that I have lost any since my communication not aware that I have lost any since my communication of April. In warm days the young fishes seem to enjoy
concealment under the broad leaves of the Yellow Lily; gently moving a leaf will show four or five or more. To the last question of "J. M," I can give no further
reply. The white-blossomed Lily appears healthy, and, reply. The white-blossomed Lily appears healthy, and,
as 1 have said, its fully-espanded flower is very beauti-ful.-Sulfolk.

Ross in J. Ross is again carping at a statement made by Mr. W
Proctor, maintaining that Salvia patens is not hardy Proctor, maintaining that Salvia patens is not hardy
enough to withstand without injury, nor to outlive indeed enough to withstand wilhout injary, nor to outive indeed Mr. P. adduced an instance confirmatory of such state ment, and in instauce and affirmation he was quite right
Let Mr. R try the efficacy of his coal-ash and sawdust covering to Salvia patens of heavy retentive clayey loam, and in spring he will find instead of "bursting buds" a "beggarly account of rotten ronts." But let him leave others in a well-drained bed of light porous soil, and he will find that a very is the humidity and claangeableness, not the intense cold of our winters, that destroy Salvia patens and many plants besides. Several plants of Salvia patens planted in well-drained pots of light soil, and placed in a situation so as to be shaded from the sunshine, but not from the weather, have outlived the last winter well with me; and others left in the open ground in the situation alluded to by Mr. P. have perished, notwithstanding they were, What the H .
Monald.
The Union Magyot-Some few days ago I observed that the grub was making sad havoc in my Onion-beds, of soda on the places which were affected; the result is, we lost no more Onions, and those parts of the beds iner than any other part,-in fact you can trace to an Radford.
Pis for Melons, \& C., Having several years ago a growing Meofons and Cucumbers, and having bad the whole construction of them committed to my trust, I mimediately turned my attention to having them contoo well aware that pits of which the walls are composed of brick or other materials, and laving only dung and leaves or such like things to constitute the bed on which glass, I thought that I might remedy (at least in some degree) that evil, and have made an experiment which has given me such entire satisfaction that $I$ feel induced to send you the particulars of my plan. There may not nowne, be anything new in it. I shall just describe $m$, your readers may more fully understand me. Having first fixed on the situation and extent of the pits, I had an excavation made to a certain depth, and then a foundation of flat stones laid all round, on which to build my walls range divided into two light compartments ; this done range divieder laid on the old pigeon-hole system, keep ing each brick of the first course 5 inches from the other carrying on the division-walls in the same manner and a the same time as the other; the second course had 2 inches at each end or the brick to rest on the under course and so on uat 1 anved at within 15 inches of the in teuded height of my walls, when I bad the bricks bedded close together whe lime, in order to prevent the ingress brick wall I had a wooden wall-plate fixed firmly down with iron rods, from the bottom of the wall, which proves a great sapport to the walls. The rafters the sashes econd one portable. The remaining ones were all fixed immediately on the top of the division wall, which keeps the whole firmly bound together. I then had a groove deep slifting sides. Having previously nrepared them of such lengths as exactly to correspond with the length of each compartment, these shifting sides, when placed in the groove in the wall-plate, were all fixed at the ends by ance of the upper rafters, in a firm position; the two ends of course were made to correspond with the sides in re-
gard to shifting. My reason for having the shifting siles
of short lengths, that is, to correspond with the exact length of my divisions, was (if necessary) to have 1, 2, or 3 parts in operation at one time, when $I$ could put on or take off, more or less, as wanted. The depth of my shifting sides are from 8 to 12 inches; and into the top of them I have slight rafters fitted, which I can put in or tike out of their places at pleasure. These last-mentioned rafters are independent of those mentioned for the wall-plate, as part of them are there permanently for the better strengthening of the walls, and consequently would not answer both purposes. Then, before 1 make up my
beds, which are of dung and leaves, I rafters, which run exactly across the centre of the bed, removed, in order to let me have the beds mate bed high as the rafters on the top of the shifting sides will a mit, leaving as much room as is necessary for the soil and plants, as soon as the beds are in a fit state to them. Now, the advantage of the shifting sides are thes as soon as the beds subside enouch to sidmit of the sashes running on the under without touching the leave of the plants, I have the shifting sides, with their rafter all removed, and stored by for the senson. Then the sashes are let down to the under rafter, after which my plants never fall too far away from the glass. The pit also present a good effect, both with and without the shifting sides. The space I have outside the beds, for linings, is $2 \frac{1}{\frac{1}{f}}$ feet wide, inclosed by a narrow stone wall, not quite so bigh as the brick wall. The space between the exterior and interior walls is covered all over with movable wooden shutters, made of convenient sizes for retaining the heat in the linings. $-A$ Reader of the Gardeners Chronide. We insert this letter, but we do chat that hot dung will be consigned hereafter to the farming steward, and that the reign of linings and all their clumby adjuncts is at an end.]
Rust on Grapes.- Having sometimes seen remarks in your Paper respecting the rust on Grapes, it will probably confirm the supposition of some, when I state that I am quite satistied that one cause is greasy mater having come in contact with them. I found in thinning some thi spring, that those berries that had unavoidably touched the hair of my head were the next day covered with rust, ${ }_{-}$and appe
Forns.-It may be useful to inform your correspondent Gallicus" that several of the Londot nurserymen are through collectors abroad, paying attention to exotic Ferns ; also that two or three well-engraved figures of Ferns, most of them late introductions, have appeared every month of late in the "Floral Register," attached to "Maund's Botanic Garden." If worth notice, I could send you some particulars respecting a few of the newlyintroduced species of this tribe-one, by-the-bye, which is rapidly gaining on the affections of the more scientific cultivators. "Gallicus" should remember that dried specimens generally afford the means of propagation. Crypius. [Pray send them.]
New Anagallis.--Observing a blue Anagallis advercrown Mr. which, as florists measure, are as large as a frathilin piece. This being the case, people may buy for 5 s. a less flower than they can get for $6 d$.- Flora. [Quite right.
Gas-Water upon Grass.-In the beginning of A pril watered half a clay-land meadow of 5 acres with ammoniacal liquor, diluted with 5 times the quantity of clear pond water. In three days I perceived that all the moss and many of the finer blades of grass close to the ground were destroyed. The bulk of the herbage, however, appeared to be unaffected; but in a week's time there was a decided improvement on the portion manured, and from that time to this there has been an increased quantity and very improved quality of grass. Its colour is darker than the other, and my stock prefer grazing on that side of the meador. In the last week in May, I mised on part ammoniacal liquor with ten of liquid manure from an open cesspool,-which receives all the rainwater and drainage from my fold and dwelling-house, -and watered the half of a second meadow. The effect is extraordinary the herbage is much improved and thickened, the colou a healthy dark-green, and the growth materially acceler ated. There is double the quantity as compared witt the unmanured portion. The cattle, sheep, and horses, prefer the former Had my cesspool been a covered one think lort to but an this week building an inclosed tank, and intend making other experiments,- Monmouth
Vines.-I think "A Subscriber", is quite wrong in attributiug the failure of Mr . Querills s and his own Vine to the direrence of hefre there wonld be very and border; for, if this be fily grapes grown in the north of england. Jhave for many yenerally cut ripe fruit about the latter end of May, with generaly cut ripe frut abou border. Knowing from expe very little covering on the border, Knowing from experience that
covered borders than from any other source, I am foully persuaded they have botk planted their Vines am fully persuegan forcing them before they thad fully establishei and began forcing them before they had fully establishen take one of their Vines up, they wiil find each of them decayed at bottom, and nearly without roets. I have seen Vines more than once in this state.-A Subscriber from the bcginning.
Hedge Sparrows.-I have this year, for the first time, obsersed a Hedge Sparrow busily engaged among the Rose-bushes, and collecting the smali green aphis for its young in her nest close to the spot. The above fact proves
tected instead of being so persecuted as it always is by Gardeners; there is a strong feeling against it, as being
destructive to seeds; whereas it is a solt-billed bird.- $A$ Subscribe
Asparagus.-" J.B.H." -In the Gardeners' Chronicle, July 1, p. 444, this correspondent says, "I followed your advice, and gave my Asparagus plenty of salt, much to their would your readers (and of course you, Mr. Editor, ) be, if "J. B. H." and other correspondents would be a little more particular, and state when, how much, and under What circumstances-of wet, drought, or other prevailing
points,-salt or other fertilisers may have under their direction been applied.-A. $B$.

London Vineries.-About eighteen months since, I took Ine liberty of asking your opinion upon the following :the leads of a projecting room at the back of a bouse in that I should plant Vines therein; and you were kind enough to say you thought my plan would answer. I am nervatory in time to do ruch. I did not build the con I brought from the country becoming years plant house was finished, and the summer being extremely hot everything was against me. This year I have done much then planted them in slate-bozes (made by Mr. Beck) about two feet every way. The Vines have broken ex-
tremely well, and are quite strong and healthy; the boxes are so formed that the front can be removed, and the roots pruned, or fresh earth put to them, or an additional length
may be made to the boxes, as the Vines grow. All my plants (many of which are of last year), are quite healthy and flowering freely, which I attribute to this-every evening I give them a watering. The Vines and plants that are not in flower I water all over, and I also water over the flooring, and keep pans of water in the house, and $I$ then shut it up entirely; in a few minutes the glass is covered with steam, and in the morning everything is as London; the plants scarely flag in the day, as I have an awning over the roof when the sun shines: this differs from the plan recommended in a recent paper, of throwing open all the windows at night. I generally find that when there is a draft of air upon wet leaves, they shrivel up; by seeding Pelargonium, raised by one of my daughters, which has been in the house all the winter, and has now flowered for the first time. I do not send it as being anything extraordinary, except to show that plants may thus and I send you a Vine-leaf to show the same. The Pe largonium flower is very like its parent, which is a very
free flowerer (I don't know its name), except that it seems of a more compact habit, which again shows, as I think, proportions of nitrate of soda and water should be used, and whether you think it would be beneficial ; the great aspect being due west), and being obliged to keep the plants always in the house. My object in this address is to show that even in such a situation plants may be kept healthy, and much rational amusement afforded, paricutop glasses being let down they are hung upon hinges, and the ends put up to a height sufficient to let in enough of air the whereby the cbimney-blacks, instead of falling kept perfectly clean.-D. $X$. [Nothing can possibly be more healthy than the foliage sent us by our correspondalways taken about the atmosphere of London. It is bad gardening only that has to be blamed for the bad state of nitrate of soda; but if it is employed, there shocald not be more than a piece as large as a nutmeg to a common water-pot of water.]
Potato Starch.-
Potato Starch.-Will one of your correspondents inform me of the best mode of manufacturing Potato Starch-the machinery used-and particularly the manner of drying it, whether in kilns or otherwise, and if in
kilns, the construction of them ?-M. $K$. kilns, the construction of them ? $-M . K$.
Wild Plums.-In the last
Wild Plums.- In the last Number of the Chronicle, ing pase head "A mateur's Garden," we have the following passage :-" Nature, unaided by Art, has accomplished much, aud has produced the Golden Pippin Apple from the wild Crab, and Damson and other Plums from the publications with regard to the Sloe being the parent of all our Plums. If it is so, I shonld be glad to have your opinion of the origin of the Plums found in North has a handsome fruit of the same shape but larger than the Damson; when ripe, it is finely shaded with yellow and red, which gives it a transparent appearance; the tree has the habit of the Damson. I do not find it described in Pursh's Flora-is it grown in this country? Pursh describes the Chicasa Plum, the tree of which I have seen but not the fruit; the tree has very much the appearance of an Apricot. Now with regard to the Sloe, I believe it has not been found in North America, the older States about settlements, evidently introduced from Europe.-B. [We have not much faith in the statement that the Sloe produced the domestic Plum . the contrary, we believe that it and the cultivated Cherry our Sloe and wild Cherry. We are unacquainted with the wild American Plums ; but there are several, considered by Botanists distinct from those of Europe.]

## spectes, with very large and love $y$ white tlowers, that have blotch of orange in the lip. This specimea received a Knightian

motch of orange in the lip. This specimen received a Knimhtian
medal. Mr. Appleby, gr. to T. Brocklehurst, Esq.o. the Fence,
Macclesfeld, brought a very excellent specimen of a dense-

 a botanical curiosity, from having part of the nectarial fring a bunch to the base of the stamens, and the rest forming quit Marly rayed circle. A certificate of merit was adjudged to this. pretty, but small. Mr. Hugh Low, of the Clapton Nursery, of the most interesting, as well as the finest, of the Sun-dews,
from Swan River. It has broad leaves, which arc covered with glandular hairs, and the plant is ased for dyeing purposes,
A Chilian bulb, which is a yellow varicty of the old but Mr. Mountioy, of Ealing, was also from Mr. Low. From
Mr. Mr. son-flowered Achimenes, grandifloora, the blossoms of whim-
appear to be borne almost in clusters. It is a good com-
panion to A. panion to A, longiflora. Mr. Stephen Hooker, F.H.S., sent
a box of seedling Roses, in which were a few pretty good
flowers, but nothing extraordinary; and Mr. R.vers, of Sawbridgeworth, firnished a stand of Moss Roses, among which we
noticed Princess Royal and Celine, as two new and very dark
varieties, the latter particularly good, Unique de Provence, the Varieties, the latter particularly good; Unique de Provence, the
old Rose Unique, mossed , Louis Colet, with curious foliaceous sepals; French Crimson (the Mousseuse pourpre of the French)
very bright and pretty; E'clatante, also very brilliant, and
most vigorous unique variety, Panachée pleine, the double-striped Moss; the
old or Shailer's White Moss, not the White Bath, which was also in the collection. From the gardens of the Society there were plants of Campinula grrga from Cabul, which is hardy, bushy, and has numerous heads o Statice mucromata; a dark variety of Acropera Loldligesa, Onci-
dium Wentworthianum, and Lanceanum, Galeandra Baveri and cut llowers of Pæónia albiflora fragrans and Humeii, two though slightly tender, evergreen shrub. Mr. Ms att, of Dept-
ford, sent a punnet of his new Deptord Pine Strawberry, to
which a Banksian medal was awarded. It was stated that the the Ist of August.
ROYAL AGRICULTURAL SOCIETY OF ENGLAND.
 of prizes to be given specially at the Southampton mectug
namely, 50 guineas for "Short-wooled Sheep Hot qualified t,
compete as Southdowns," 50 guineas for "Catte of the Channe Islands Breed," ard 2ul. for the "Best Sample of Secd Barley,"
making the prizes alone, for stock, implements, Essays, \&ce, no awarded next year out of the funds of the Society, amount to than $1,690 l_{\text {. }}$ It was decided that the prizes of 302 . and 20l. for the "Best Stallions for Agricultural Purposes," and
those of 20l. and 10l. for the "Best Mare and Foal for Agricul-
tural Purposes," should not, as heretofore, be limited to those of tural Purposes," should not, as heretofore, be limited to those of
the cart'" breed; that the exhibitors of Seed. Wheat and
Barley should next year be required to grain specimens fairly taken of the Wheat or Barley in than one foot in diameter, and with the roots attached, and that ing should be the 1st of June, 1944. The Council then selected Derby. Mr. Thompson gave notice that he should present, at
the next monthly Council, atile made by Lord James Hay, and move "that a select committee be appointed to conduct a model
experiment with tiles made on that principle experiment with tiles made on that principle, and to report to
the Council on their efficiency." Mr. Clifford Cherry, principal
veterinary moderinary surgeon to the army, presented a paper on the best
modroving the breed of horses, which was referred to BOTANICAL SOCIETY OF EDINBURGH.
the Botanic Gardens, Dr. Neill, the President, in the chair John Kirk, Esq., was elected a Resident Fellow. Mr. Brand read Jersey, respecting some recent discoveries in the Flora of that Brackenridge, who was at one time a journeyman in the the more readily, that his successful career may encourage others of his profession to similar exertions. Mr. Brackenridge very much to my satisfaction, as foreman to Mr. Buist, who has
one of the largest plant establishments in America. When the
South Sea Poinsette, the secretary of war, to accompany it in the capacity
of Assistant-Botanist and Horticulturist. The voyarc lated
near nearly four years, and my compenbations during the last thrce
years was 1200 dollars per annum. The squadron (under the
command of Lieutenant Wilkes) on its way Madeira, the whole of which we scoured. I ascended the peak
of Ruivo ( 6246 feet high) almost to its very summit. It is covered
with with dense forests of Erica arborea and Mediterranea (which
some travellers have called Pine trect). Scveral of these Meath trecs are forty fect high, and at cighteen inches from the ground,
their stems are two feet in diameter - E. Mediterranea, always
new, 111
mahogany (Laurus In. Mica, and foetens) is in great abundance,
and as and and as large as the English Oak. In five days we coliected 460
species of plants on the island. At the Cape de Verds, Rubiaceous annuals and grasses were the principal plants found. But Brazil,
at which we aext touched, may pe denominated, the head
quarters of Flora. I went about 150 miles inland, in a N.E.
direction, from Rio de Janciro, travelling most of the way through forests of flowering-trees, fantastically adorned with innumerable parasitical and epiphytical plants. These trees
were often propped up by aerial roots, which reminded one of the rigging or stays of a ship. The undergrowth in such places consists of Palms, arborescent and many other Ferns, with a Organ Mountains, seventy miles from Rio, after all that Mr.
Gardner and others have done, abound in thousands of fine
$\qquad$ know we.l whitci, to select. On rock ethere are Gesnerias,
Glowinias, Cact, Tillandsias, and Orchideæ, in the greatest
profusion. I calculate that more than one-half of the plants of profusion. I calculate that more than one-half of the plants of
Brazil are still unknown to botanists. Insects, birds, and
quadruped a are as varied, in proportion, as the vegetable kingdom. We spent about two months on Tierra del Fueg. Here was a
contrast to Braziltan vegetation : stunted Birches, with Misodendrums in tufts like birds' nests on their tops- scrubby Berberries were the characteristic features. The face of the hi.ls is covered
with spongy, mossy turf, in which we found a Primula (like a Myrtus, and the charming Callixene - with many nice things which I thought well adapted for your alpine frame, We reached Chili in the dry season, so that we did not find nuch
in flower till we arrived at the mountains. Behind Santiago, on the Andes, in the region of perpetual snow, we found an imgense us. Figure to yourself 10 or 12 kinds of umbelliferous platsts,
with Heath-like leaves, and fruit as large as that of Heracleum, and yet none of them over one inch in height. In Peru, behind descended a considerable way on the opposite side, along one the branches of the Amazon. This was a rich journey for us in
plants,-fine Rhododendrons (?) at the height of 13,000 feet. At the base of the snow was a dense sward of plants, none of them over Gentianas, and curious Calceolarias. At 14,000 feet we found yast patches of an Echinocactus, so wrapt up in its own wool,
that at a distance we tork the patches for sheep. The scenery,
here was of the grandest kind. We saw some splendid Cacti, T. tuberosum, and Tropeolums, and on our way down, ficlds of
vicinity of Lima; so that to raise fruit and ver yitle rain fails in the must be had to irrigation. The Cherimolia (Annona tripetala), is here the finest of all fruits I ever tasted. You will, no doubt,
have heard of our discovering an Antarctic contment (Ross says it is only a batch of islands, Of this I camnot speak, having
been left at Sydney, with the other scientific gentlemen. Here
we chartered spent right weeks. This same New Zealand is not the fine
country that the English Government and land specalater it up to be. The climate is very wet and the soil cold and crack -consisting principaily of a stiff yellow loam, on great part the principal food of the natives. The surface of the country
rourd the Bay of Islands is very irregular-high ridges and valley vucceeding each other in xapid succession. In some of these Lamong them the Courie Pine (Agathis Australis), 120 feet high Leaving New Zealand, we touched at Tongataboo on our way
down to the Fiji Islands- 260 in number - all which we surveyed
In doing this, two of In doing this, two of our officers were brutally murdered by the
natives. We had also a proof of these islanders being cannibals, as they brought in a canoe, allongside of our ship, part of a
human body, which they were eating. We discovered several new islands on the line in passing to the Sandwich Isles. Th
grandest sight seen during our cruisc was the volcano on the grandest sight seen duxing our cruise whe the volcano on the coast of America, our voyage lay again by the Sandwich Ysles;
and searching for a near passage to the China Sea, we were led among the Souloo Isles and straits of lialabac, huen down to
Singapore, which is a very flourishing place. Here I met a
cousin of Sir Walter Scott's, who looks very much like what the old man was. During this voyage we collected and dried
upwards of 10,000 (P) species of plants ; sending ulso a preat many upwards of 10,000 ( ( ) species of plants ; sending ulso a grat many
live ones and seeds to the National Institute at Washington, to
which which I am at present attached. To mee the most interesting of
these plants is a species of Nepenthes from Singayore, bearing
$\qquad$
$\qquad$
$\qquad$
$\qquad$ very beantiful and interesting exotics, recently brought into
flower in the grenhouses and stoves; and afterwards accompawer the members over the gavicn, which presented a mont
charmmg appearance. Every season it is becoming more and the learned Professor and his able coadjutor, Mr. M'Nub.
June.-This Society held its eighth meeting for the season, at the Botanic Gardens, Prolessor Graham in the chair. Denations
were presented to the Library, from C. C. Babington, Esq., Cambridge, (his Manual of British Botany); from Dr. J. K. Maly of
Graty. L. W. Dillwyn. Esq, and others. Mr. Names M'Nab anomalies. Ine stuteit that several years ago, a trem was sent
from the Epsom Nursery to the Koyal Botanic Garden here as from the Epsom Nursery to the Royal Botanic Garden here, as a same root, without any further engraftmg than that of working
the red Lafurnum on the yellow. Thas tree is now to be seen in flower, the ycllow and red flowers lemg predommant. Last spring den, bearing several large tufts of Cy tisus parpureus, with one
small shoot of the yellow. The same tree this year has ten distinct shoots of the yeliow, and a quantity of those of C. purpu-
reus On Mondlay last, at Dy sart liouse, he observed two trees, the other (ytisus Lhurnum and C Lisus Laburnum coccineum, neither of them having more than two varieties. This atternoons
he examined the plants of the red Laburnum in Messrs. Lawson's Nursery, turee years graited, and tound several of them pro-
ducing shoots of the yellow, but only one of them having c. pur-
pureus and in the several of the plants, two years grafted, have shoots of the yellow, bat none of the purple. The red Laburnum first appeared at Getween the common Laburnum and Cytisus purpureus. Dr. phenomenon, viz, of mules reproducnge the differcnt forms on
one plant. It had occurred also in plants of the Cactus tribe,
but form and habit merely are affecterd hy crosing. He considered specimens, in flower, of Orchis ustulata, and Ophrys fucifera from mnceting. 3. Dr. Dourlin Maclagan presented to the Society, ship buildng. The athor of tumber in use for the purposes of America; Pitch Pine (Pinus rigida), from Caroina : Red Pine ble to makinsa), from Quebec. These kinds are chtefly applica Were Vlikewise noticed along with Beechwood, as being the kinds
best adapted for keels, bottom planks, and other parts of ships
which are constantly in water. British and American Oak, and Which are constantly in water. British and American Oak, and being of very general applicabulity to the purposes of the ship.
wright, as also the Arrican teak, or, as it is often called, Africdn varieties of hard and heavy woods were pointed out as being occasionally imported among African teak, and having similar qualities, but which are unknown to botanists or wood-merchants. Of timbers imported fi ora the West Indies, two deserve remark.,
The first is the Mora, or Morra timber, (Mora excelsa, Benth.), Which is a large and valuable timber, now introduced in consider-
able quantity from British Guiana. It has a foetid odour when able quantity from British Guiana. It has a foetid odour wy an
scraped. The other is the Greenheart timber producd by
unknown tree of British Guiana), a heavy, hard, and valuable in the Clyde. Dr. Maclaghan had sent specimens of the fruit of this tree to Dr. Lindley and Sir W. Hooker, both of whom consiknown genus. He stated to the Society that this tree was known
in Demerara by the Indian name of Bebeeru, and also by the Dutch name sipeeri , and that the bark of it had been found, by sessed the power of curing agues. Recent experiments of his own had shown that there were two distinct alkalies present in
the bark and seeds of this tree. 4. Previous to the reading of these papers, Professon Grabam, accompamed by a large party,
visited the Greenhouses, where he pr muted out some of the more rare and interesting plants with which they are now literally
crowded. It was pleasing to see so many specimens, brought together from every climate and region, in the most thriving and
luxuriant state, with scarcely an exception.

## NOTICES OF NEW PLANTS WHICH ARE EITHER

 USEFUL OR ORNAMENTAL.Barnade'sia rosea. Rose-coloured Barnadesia. (Stove
Shrub.) Composite, Syngenesia Polygamia.-The singular genus Barnadesia co so very similar a foliage that they can hardly be heads. This, obtained through the kindness of greeuhouse plant, and should be kept durmg winter in a warm mediature averages $47^{\circ}$, or as near as pussible. It may 1 e grown perature averages 47, or as near loant, and sand, in equal propor-
in ansomporternsisting of peat, Water should be liberally given in summer, bat sparingly
tions. In winter, otherwise the plant would naturall| suffer from damp,
being a native of elevated situations. It is proparated by cuttiugs, being a native of elevated situations, It is propagated by cuttings,
or seeds, in the usual manner, Botanical Reguster.
Gritberry. Comarostaphrhis Arburoides. Arbutus-like Gritberry.
(Half hardy Shrubo. Ericacee. DecandriaMonogyna,-A native
of Quezaltenango, in Guatemala, this plant bas been raised in the garden of the Horticulural Society frora seeds received from Mr. Hartweg. It produced its flowers for the first time in
October, 1842 , and is now (May, 1843 ) again in blossom. In
some respects it is much like Comarostaphy lis polfolla, but its leaves are much broader and larger and thinmer, and they are pancles, standing high above the leaves, are four tumes as large,
and are white, not crimson. In appearance it is much like an
Arbutus, but Arbutus, but it, has crimson. In appearance it is much like an
of that genus. It differs from Arctostanhly is in the tubercles Arbutus in the frut in having a five-celled dripe, and from
some other many-seeded. It appears, with Arbutus in the frut not beng many-seeded. It appears, with
some other plants, to form a perfectly well marker genus, and is
a pretty shrub, which proves rather tender for the chmate of London. It gruws five or six feet high, and like the common
kinds of Arbutus, thrives well in a light sandy loam, mixed with a small portion of leaf-mould. It is increased either by seeds or by budding. The seeds should be sowndirectly they aree ripe, in
pans filled with light sandy loam, and kept rather dry, until MAROE'TIA EXCORIATA. Loose-barked Marcetia. (Stove
Shrib.) Melastomaces. Octandria Monogynia.-This genus consists of a group of curious little Melastomaceous plants, having almost the habit of Heaths. They are all found in tropiand give a peculisr feature to the places where they grow
our gardens they are almost unknown; that which is now $r$ sented, from the collection of his Grace the Duke of Northum berland, at Sion, being the first that we have met with in cultimould, mixed with loam and sand in equal yarts. A good drainage is necessary, and plents of water at the roots at all times,
While in flower, syringing should be dispensed with altogether, for the moist atmosphere in a stove is quite sufficient. Atter the
flowermg season is over the plant should be cut back, at least al slender branches shonid be removed, in order to produce Bupply of young wood for flowering the following year, It
propagated by cattings in the usual way.- Botanical Register.

## MISCELLANEOUS.

The Respiration of Leaves.-At a late meeting of the Royal Society, Mr, Haseldine Pepys gave an account of a series of experiments on the products of the respiration of plants, and more particularly of the leaves; selecting with
this view specimens of plants which had been previously babituated to respire constantly under an inclosure of flass; and employing for that purpose the apparatus which he had formerly used in experimenting on the combustion of the diamond, and consisting of two mercurial closely joined together at their bases, so as to form an air tight globular receptacle for the plant subjected to experiment. The general conclusions he deduced from hi numerous experiments, conducted during several years Were, first, that in leaves which are in a state of vigorous rounding atmospheric air to its naturbl csadition, by the absorption of carbonic acid and the disengagement o oxygen: that this action is promoted by the influence o slowly, even in the dark. Secondly, that carbonic more is never disengaged during the bealthy condition of the leaf. Thirdly, that the fluid so abundantly exhaled by plants in their vegetation is pure water, and contains no of carbonic acid gas contaned in an artificial of carbonic acid gas contained in an artificial atmosphere, maining portions ; as if their appetite for that pabulum maining portions; as if their appetite for that pa
had diminished by satiety.-From the Athenoum.
Purifying the Air of Stables. - Having been invited by Mr. Evass, of Dean House, Enstone, to make some experiments on his excellently-conducted farm and stables,
trust the results of those upon the absorption of ammonis trust the results of those upon the absorption of ammonia may prove of sufficient interest to entitle them to publica-
tion. As gypsum (crystallised sulphate of lime) had been highly recommeended for this purpose in some recent works
on agriculture, the stables were in the first instance freely strewn with this salt coarsely powdered; but though the ammonia was evolved duty grraw in sucient quantiy to aco, slightest trace of it in the gypsum when I examined it with slaked lime. This result was the more surprising, as it is known to every chemist that solutions of carbonate of ammonia and of gypsum are incompatible; the carbonic acid leaving the ammonia to form the precipitate carbonic of lime, the sulphuric acid passing to the ammonia; and I had previously ascertained that in an atmosphere 80 highly charged with ammonia as to be destructive to animal or vegetable hife, a very appreciable proportion was
taken up by wetted gypsum. The following experiments appeared conclusive upon the point, that under less favour-
able circumstances not an atom was absorbed :- 200 grs . able circumstances not an atom was absorbed :- 200 grs .
wetted with distilled water were exposed in a close stable for three days, precautions having been taken to avoid any error from evaporation ; it was again weighed, no jncrease could be perceived, nor was any ammonia evolved on the application of the usual tests; while 200 grs . wetted with diluted sulphuric acid, and exposed the same time, were found to have gained 36 grs , of ammonia. The stables
were then strewn with the gypsum moistened with sulphuric acid, and examined the next morning ; every portion was found to have absorbed sufficient ammonia to erolve its peculiar pungent odour when brought in con-
tact with slaked lime the stables bad also lost their close unhealthy smell. To use the words of the grooms, they appeared sweetened. As it was evident the gypsum acted merely mechanically, affording a convenient absorbent surface for the acid, experiments were made, substicing, That the proportion of free ammonia in stables is very large, may be shown by the simple experiment of placing acid in a stable. In one badly cleaned or ill ventilated, the effect is instantaneous ; but even in those of Mr. Evans, where the greatest attention was paid to these points, the paper was observed in a few minutes to become blue; even to take off the chill, becomes sufficiently impregnated with ammonia to affect tests. As this alkali is justly ranked among the most powerful stimulants, the continua breathing of an atmosphere vitiated by it can hardly fail to have a prejudicial erfect. Grooms are observed to be in horses, and their distressing predisposition to colds and affections of the chest, are no doubt greatly aggravated by this cause. The increased salubrity and sweetaess of the stable, if pointed out to the grooms, would therefore soon
reconcile them to the slight additional trouble the adoption of this remedy would incur. At Dean House the acid gypsum was first strewn amidst the straw; butas this was
considered likely to injure the feet and clothing of the hunters, it was afterwards spread on trays. One part of sawdust will be found to absorb readily three times its weight of soid solution, whioh 1 made with one part, by
measure, of sulphuric acid to 15 of water. If intended to be tried sumpled it when removed from the stable During the prest rotting, the ammonia is evolved so freely that, at the end of two or three weeks, the acid powder, which should no ing, will be found completely neutralized without chang ing, will be found completely neutralized; and as the greatest benefit was derived from covering up and salting
dungheaps, by which I believe an additional absorption of ammonia could only have been gained, it may be reasonably hoped that an increased value would result from a manure Roys surcbarged with ammoniacal saits.-Journa
of the Roy. Agricul. Soc. of England, vol. iv. p. 278 . Saucepans silvered by the Electrotype Process.-Mr Warrington, of Apothecaries ${ }^{\prime}$ Hall, in a recent Number of the Chemical crasette, directs attention to the fact which has come under his notice, that copper vessels, such as saucepans, extract pans, \&c. silvered by the electrotype vinegar, if allowed to remsin in them femont time This, he says, must arise from the deposited silver being so porous as to allow the acids to permeate its substance,
and the action is most likely assisted by the formation of a galvanic circuit.-From the Pharmaceutical Journal.

## GARDEN MEMORANDA.

Messrs. Lane and Son, Berkhampstead.-The nursery of these gentiemen is situated just on the outskirts of the town, R few
minutes
walk principal part of it lies in a vallee, through which a canai and a majority of the plants are later than those about London. For
example, some Ghent Azaleas, example, some Ghent Azaleas, and one or two hybrid Rhodo-
dendrons, are still in bloom. There are several greenhouses and frames scattered about the placee, in whicich are q quantity of
foses in pots, an astonishing number of Rosecuttinys tor pagation, an excellent collection of the best Fuclusian, amone grown Gloxinias and Achmenes, especially A. .longitiora, and A.
grandiflora, the last of which is just coming into fower, and the usual miscellaneons tribes. We observer partucularly a showy
kind of Nerium Oleander, called Rayanot, having five semi duuble crimson Moore's splendens, with exceedingly large dea
Petunia, named Mon purplish crimson flowers; and, in the open ground, a very splendid dubble Senecio elegans, the size and closeness of the flowers of
which are unusual, with a remarkably fine drooping purple Beech, which has very deep-coluured leaves. The Roses that are mercesed by cuttings here are placed silugly in very smal
thumb-puts, from which it to considered easier and saler tore-
move them than from pots containiug several cuttings. They are plunged in saw wust, over a covered chamber, in a pit heate
by an open gutter of hot-water, whico is connected with an appa ratus that heats a ling house and several pits, and was put up
many years grown here in pure loam, flourish quite as well as they generally
do in moor-soll; andhave even a more luxaximpt agpearance. The

## THE NATURALIST'S CORNER.-No. XIV

52. Caoutchoue, now in such common use in various branches of our manufactures, was first brought to Europe about the beginning of the last century; but nothing wa known concerning its history till 1736 , when, in a memoir is found in Brazil a tree from the bark of which, there is found in Brazil a tree, from the bark ond in, when wounded, a milky juice flows, which hardens in the air, and is then called by the native wase thi fheace ou rord hand hous coth impervious to rain ; and, when hardened, flambeaux are made of it. The same tree has been found in Cayenne, Guiana, and other parts of South America, where it 1 called Hheve. The latest name given to it by botanists is that of Siphonia elastica, and it is placed in the natural order Euphorbiacere. Besides the American Caoutchouc a substance bas been discovered in the East Indian Islands, and more particularly in Pulo Penang. It is procured from the juice of a climbing plant, called in Jave Bendua, and by our botanists Urceola elastioa. The East Indian Caoutchouc is dark-coloured on the outside, but light within; that from America, having been more completely dried by the air, is of a dusky grey throughout Besides these plants, the species of Indian Fig trees fur nish Indian rubber of the best quality, especially Ficus elastica.
53. The genus Kydia.-Dr. Roxburgh, in establishing the genus of trees called Kydia, found in the hilly parts both of Peninsular and Central India, as well as all along the foot of the Himalayan Mountains, says-a Collo Robert Kyd, of Bengal, whose attachment to botany and horticulture induced bim to retire from the high rank he held in the Army, to have more leisure to attend to his favourite study, to the advancement of every object which had the good of bis fellow-creatures in view, and to the Bablishment of the Honourable East India Company Botanic Garden at Calcutta, where he was particularly being to the introduction of useful plants, and to the being disper
of nankind.
54. The Baobab Tree.-Cape de Verd is said to owe its name in part to the foliage of the Adansonia digitata Guinea with its green ellintic whole of Senegambia and presenting almost at a displic athes, a rulg of free According to Adanson diameter of 30 feet moderate, varying from 50 to 60 feet. The lower branches, however, shoot out to an incredible length, at first in a horizontal direction. These are covered with a dense foliage, which, from its weight, causes them to bend
towards the ground; and thus there is presented an immenas hemispherioal mass of verdure, 120, 140, or evem

150 feet in dismeter, and perbaps 60 feet in height. A is given by Adanson, in the Memoirs of the Royal Academy of Sciences, at Paris, in the year 1761.

## 3Rebíptus.

The Cullure of the Grape Vine and Orange in Australia and New Zealand. By Geo. Suttor, F.L.S. Smith and Elder, 12 mo .
This little book consists, in part, of extracts from Jullien's work on Vineyard Cultivation, and in part, of observations on the subject made by the author during his residence in New Holland, or tours through some of the
Vine districts of Europe. He strenuously advocates the application of capital to the formation of Vineyards, both in New Holland and New Zealand, and appeals to experience as to the possibility of making good wines, at least the quality of some samples of Sydney wines which we have tasted being such as leaves no doubt that at least good marketable wine, far better than that of the Cape of Good marketable wine, far better than that of the Cape of New Holland. With regard to New Zealand, we were not before aware that its climate had been proved to be
favourable to the Vine. But Mr. Suttor states that-
"The gentle slopes of sheltered valleys, generally speaking, -the land which produces the famous bulbous Fern roots, in New Zealand,-will be found, when well trenched, and the Fern eradicated, very favourable for the planting of the Vine. Peaches have long been grown there, and are very fine; also Melons, at and near the Bay of Islands; and Grapes were there in abundance,
when one of my sons visited that place in 1836-38. The when one of my sons visited that place in 1836-38. The Zealand, but the winters, though mild, are often wet this would be in favour of planting the Vine there."
The work is not adapted to the purposes of those who cultivate the Vine in England; but it may be recom-
mended to emigrants as a useful guide to the proceedings mended to emigrants as a useful guide to the proceedings
of persons who are inclined to direct their attention to of persons who are incl
Vineyard management.

David's Temperature of the Soil is a sheet of figures explaining the temperature of the soil at one foot below the surface, in latitude $50^{\circ}$ to $56^{\circ}$ during each month from
February to August inclusive, at different elevations above February to August inclusive, at different elevations above
the sea as high as 160 feet. The intention is praiseworthy, and the tables, if to be relied upon for accuracy, useful ; but upon the latter point we have not sufficient data to form an opinion. Our readers may, however, test the truth at once, when we mention that, according to
Mr. David, at 80 feet of elevation the temprature of the soil on July 10 , at one foot below the surface, should be $65^{\circ}$ in lat. $50 ; 64^{\circ}$ in lat. $51 ; 630^{\circ}$ in lat. 52 ; and $61^{\circ}$ in lat. $54^{\circ} ; 60^{\circ}$ in lat. 55 and 56 .

CALENDAR OF OPERATIONS for the ensuing week. saw a number of men at work painting and reglazing all the old lights that could be spared off the houses. Nothing could be more,
economical or substantial than the way these men were set to work,
and the manner in which the work was finished. Now, when we see and the manner in which the work the arrangenconte of the officials at
such forethouqht and comomy in
Kew, where the public purse bears the burden, we cannot help Kew, where the pubnc purse bears the burtitn, we cannot help
blushing at the very extravazent manner in, whel these things are
conducted in nine cases out of every ten in private enstablishmentes. In
our private establishments all sorts of alterations, additions, and our private establishments all sorts of alterations, additions, and
improvements ne houses, pits, fire-phaces, \&c. Rc. are put off till
the beginning of winter, and tufore the last stroke of the hammer,
 is better for drawng instruction from than any maginat.ve opera-
tions. All gardeners know that the best painted hoth uses, with the
best kinds of glaz ne, wi.l hegin to want repars ater best kinds of glaz ng, will hegrn to want reparrs atter a serles of
yars. Now, instead of endeavourng to stop this dreay by pint,
the people at Kew went to work in the rught way. They ordered all
 and paint, and and all the laps to be puettied and not more than onecourse pat by for other uses, such as mending handglasses and parts of the globe. All this work will he well seasoned long betore
the winter sets in, and will remain good for many ycars, with a coat the winter sets in, and will remain good for many ycars, with a coat
of pante every other season. I \&a, rathcr aunused to find from one
of the panters at Kew that they intenled to finish off the glazng
after a manner which I myself adopted for some time, but whench has never appeared in print in any work on gardening or hothouse
bulding, as far as my rearinu goes. at is thas: when the giass is
bedded in the putty accog the astragals, the usual way is to "front puty" the whole at once, but at bew the lights are put by after
the elass is bedled till the beddurg putty is diy. The astragal then gets a coat of paint, and alko a strip of the glass the depth of the
bedding on the astragal ; and when this is dry the front putty is put on. The coat of paint on the glass will cause the front putty to
adhere to the glass, and it will remain sound many years longer than when it is put on without this precaution. This is a cenpital con-
trivance for lights that slide up and down; but for lights that are
fized, the best way is to have no front putty at all, as recommended

## I.-KITCHEN-GARDEN AND ORCEIARD:

Pingry. - When it becomes necessary to withhold water from a iruiting-house, owing to the fruit being nearly all full swelled or
ripe, the suckers on the plants receive a severe checks, the best plan,
therefore, is to pull off the best of the suckers at this stage and set them growing in a place hy themselves. The succession plants you VrNERY. - The leating article of the t'hronicle of last weels has
thrown our old notions of stopping laterals overboard; here practice and theory are at issue, Practice says, stop up every channel which
diverts the current of sap from the main leaders, as oue leaf on a learier is worth four

arrived at for several weeks yct
Prach-Housir.-As soon as the fruit is gathered let this house be kept in a moist state, with plenty of air day and night; and if the
glass is intended to be taken off, see that the leaves are first inured groperly for the change; but taking off the glass often does more
pron harm than good,
Figs.-A good supply of air and moisture, the young shoots stopped ate every manure to the roots, ought to keep these in a healthy, bearing state MRLONS AND CCUCMMBERS.- Far late autumn Melons, plat out
firm, strong, stocky plants in the frames now being emptied of their firm, strong, stocky plants in the frames now being emptited of their trying to get a second crop from the same plants; good, experienced cordenser nevant Calendars. The recond crop, and such men, of
cumbers are now in
danger of getting so entangled with shoots that little fruit need be danger of getting so entangled with shoots that little fruit
expected from them. See to these; they are very useful.
Out-door Department.
The principal sowings and transplantings will now soon be over will come on. Everything lately planted ought to be watered occasionally till the plants begin to grow freely. Birds are very
tronblesome to the early fruits, and must be watched; ; and although
the garden he the graden has been kept free from weeds wall the season, the.e are
thousands of seeds of weeds now floating on every breeze, nnd those which fall on good ground will soon become troublesome if not
Cabbages and Catintilower Plants for autumn use, should have the ground well stirred about them and a little mould drawn round their stems
made in warm, sheltered places, as they come in late in the autumn
when cold weather prevails Calery. - The prain crop might now be got out, and the rows for merly planted should have a hittle mould drawn to them; first taking hattcred into a crust with the watering. If the earliest row does not
throw up seed-stalks, you mayy assist it very much by a good dose iqquid manure.
week; and this is about the time we are so much Peas after this
mildew on our Peas. Aith against this evil.
Succession Crops.- These aye now reduced to salad plants,
which are always sown according to the demand and the state of the last sowing.
ORCRARD, The principal orchard work now is to guard the fruit
from hirds, from birds, scc., to gather and preserve Strawberries, and to procure
plants of these for next forcing time. Get a quantity of 60 -sized boles alongside of a row of Strawberries ; push a pot into each
hole down to the rinm; then single out the runners, and pinch off the tops just beyond the newly-formed plant; clouble the runner on the
other side of the plant, and with your forcfinger push the doubling young plant is just brought within the soil, and is firmly pegged with a peg, or with a stone or lump of soil.

> II.-FLOWER-GARDEN AND SHRUBBERY.

STove. - In the morniag or forenoon throw water on the paths and under the stages, to keep up a moist atmosphere, and allow growth formed, so as to ripen slowly, before the long, cool nights
Grgentouse.-Keep the plants here thin also, and sprinkice them
well in the afternoon with the engine; this is, perhaps, the worst well in the afternoon with the engine; this is, perhaps, the worst
time in the year to allow plants of any kind to flag for want of watcr, as, in a few hours, the leaves, being in a very active state, will suck CONSERVATORY.- A cool, refreshing Rur, loaded with the perfumes
in this housc, is always agreable in summer; and the only way of in thas housc', is always agreeable in summer; and the only way of
obtaining this is by large portions of air, by slight shading, and by
pouring large quantities of water over all spare places round the housc. Stove plants brought in here for flowering do not require supply of water in the height of summer. CoLn PrTs are warm enough now to allow of the glass or canvass
to lecticn off at night, to five the plants the benctit of the night ews, which seem to sutt them better than any sort of artifici moistening. Then the sun is out strong; that is, if he shinns at all
brilliantly this season, throw a slight shade over the Camellias,
Azaleas, Rhododendirons, and similar plants. Azaleas, Rhododendrons, and similar plants.
FLowranarobn, -The routine business garden is so simple and uniform at this time that few words will all the flowers staked or trained in some shape or other ; no plant or bed stands in need of water for many hours at a time; every flower
and leaf is picked off as soon as it begins to decay; and as to weeds,
they are not allowed near such a scene.-D. Beaton, Shrublund

report on covent-garden market,
 dant in the market, and Raspberries are now added in proty
coustiderabile
quantitios.

Albert strawberries are present in unusual abundance, and of
fine quality. Grapes are plentiful, but hardly so good as they have been, except in a few instances. Peaches and Nectarines, large supply of them. Among the many Pine-Apples, there is a two or three of a splendid description; and Melons are both numerous and goon. Plenty of Gooselberries and both red and white Currants may now be had in a ripe state. There is a quantity of Chili Capsicums now in the market. The French flowers; but the Cucumbers are neither long nor straight Asparagus is entirely gone; there is only a very littie Rhubarb; and the common vegetables are, from the late genial weather, in orange-flowered variety of Troverolum majus, Tuberoses, vari eties of Pentstemon gentianoides, Balsams, Sweet Peas, and some particularly handsome Pinks; while, of rarer cat flowers,
there are Erica Aitonii, Hibiscus sinensis plena, and Eucomus punctatus.

## Votices to Correspondents

Manures - -2 . $L$.-We are inclined to think that Yotters Artificial Guano and Mr. Lane's Super-phosphate of Lime are among
the most powerful and manageable agents yet known.-.J. $H . S$. -The term wealk is not applied in a very strict sense in directions for the use of liquid manures; bat cultivators must trust to their own experience in determining its meaning. Suppose, however, it were desired 10 give a plant an ounce of nitrate of
soda, it is better to dissolve a $\frac{\mathrm{z}}{\mathrm{y}} \mathrm{oz}$. in a watering pot of water and apply it at four different a times, than to dissolve the whole ounce in the same guantity of water. There is no object in olserving preat precision in these operations, which are rather a question of labour than of anything else. If such matters are
atiministered in strength they are apt to kill plants ; and it will be years before we shall know what the exact limits are between they will be washed out of the soil before they can have been absorbed by the plant. You are right in supposing that plants they have mave new roots.--Flora.-Liquid manures may be used to all herbaceous plants; but care must be taken not to over-stimulate them, or they will run to leaf. T.
phosphate of lime or Potter's guano, both excellent.
AINTFOIN.- $, B, H$.-Saintfoin may be used with great advanconsumed in the south of Europe. The time of sowing is in Spring, in a crop of corn, as clover is sown; but it may be sown in July or August, and, unless the season be very dry, it it might be injured, as it is rather tender when young. It is the most proftable green crop, next to Lucern, and will grow on much poorer soil, provided it contain a considerable portion
of calcareous earth. Be sure to have good seed of the kind of calcareous earth. Be sure to have good

stock your Grass when you have a good store of hay for the
winter. The most profitable use of rich Grass would be to keep Milch-cows, and make butter, if you have a good dairywoman; or you may buy in heifers in calf, and sell them when
they have calved. Having a good stock of hay you need never,sell to a disadvantage. Or else you may buy shcep, a cake or meal, and fold them on your Grass land thll they are
fat, which will much increase your next crop. It must depend on local circumstances which of these plans is preferable. M.
Rosms.-Rural Chemistry should put in cuttings of Roses that. Roszs.- - Rural Chemistry shond put in cuttings of Roses that are
not Chinas at the present time; and if allowed a very trifing
bottom-heat, they will form rooted plants before winter commences, ceased to fower, they should be cut down, leavirg only two or
three joints to each shoot. The prunings may then at once be made into cuttings, and will readily strike under a hand-glass in the front of a south wall, if shatled while the sun can reach
them.- Paul Peter:- Your collection would be improved by rejecting Joan of Arc, Perfection, and Proserpine, and filling their places by Foster's Favourite, Sir
Grysanthemums.- Paul Peter. -In the Gardeners", Chronicle for 1842, p. 221, in the article "Amate
management of Arancaria-seeds; there was no advantaur however, in sticking them apright in the soil. It they were all fresh, the probability is, that you have given them too much
water before they were able to make use of it. The history of the Thrips has been already given at p. 228 of 1841 .
The Lily or the Field.-R. S. $V$. P. complains that under this head we lately (page 429) spoke of our conjecture about
the white Lily not being the one intended in the Sernion on the Mount being confirmed by a letter from a gentleman at Aleppo; and he says that he first called our atteution to the
fact some months ago when he remarked upon the extract rom Lady Callcott's book upon that sabject, and afterwards fact that the white Lily was not indigenous to the Holy Land. We trust that our correspondert will, upon consideration, per-
ceive that his complaint is unfounded. We, at p. 744 of vol. ii., pointed out the absence of evidence to st ow that the white
Lily inhabited Palestine; and at a subsequent period Dr. Bow ring showed, for the first time, that Our Saviour's plant was
probably the seariet Martagon Laly. Our conjecture as to what $t$ might be was overthrown by tilis impoitant ( widicnce; which, it might, it could not be the white Lily. Will R. S. V. P. do ridiling Cacti.- $F$. M.- Your mule botween Cereus grandi-
forms and speciosissimus is much like several others, with the same origin, which we have lately received, but itis rather paiter,
These are all fine flowers, but not equal to either C. prandi florus or speclosissimus. . AF. Kenny.- Your Cereus May-
nardia, between C. grandiforus and speciosissinus, is one of the finest we have. seen of this new race. Its colour is nearly
that of C. Aekermanit. Dhat or c. Ackermanmi. A Constant Reader - There is no single work by
which a man could instruct himself in architecture as conby kand, by copying from a few numbers of "Hnllmandy sketch Book," Is, each. Then procure "Smith's Etements Classic Architecture," published in Edinburgh nt $2 s .6 d$. For
garden structures, he may copy from Austin's work on garden structures, Suburban Gardener." The price of the whole would be under be indispensably. I. P.
Books.-PPlmn. There is no book in English or French with
the genenc characters of plants. Encllicher's "Genera Planta cin is the plesent standard work. Woodlice which eat your Melons is to catch them, and this may be done by laying pieces of any tobular material, such as Bean-
stalks, about tive frames, and blowing out the Woodlice which congregate there into hot water, as is done with carnigs. or picces of Turnip or Carrot may be scattered allont, whinch will
attract them. Or, as they collect round the sides of the frames,
boiling water may be poured down these occasionally, if the boiling water miy be poured down these occasionally, if the
roots are not too near them.
 recommended, and may possibly be effectual. You may pre-
pare your soil in autumn with a dressing of soot and lome
 green-thy. Is not your inscet enemy the thrips? Tyy gas

SEEDLING FLORISTS' FLOWERS
imagine it to be. Thicre is a great want of substance in thi
flower altogether ; the bottom petals are not pure white an riower altogether; the bottom petals are not pure white, and
the colour in the upper petals very ragged and uneven near the edge, which is thin: we have several flowers already out yery
superior to jt.-G. W. Fox.-Cceur de Lion is a fine high. superior to it.-C. W. Fox.-Ccer de Lion is a fine high
coloured variety, of a bright rosy vermilion, with a light centre; the finwer is too long in form. Patroness is too small
and thin in the bottom petals; and Marquis has the same
faults. faults.- F. Burr,--Neither of your seedlings are worth $p$ p
serving ; the pink variety is had in form, ihe petais being ling, and the nower atogether loose, and not preserving the
form with which it opens; the top petals are also too veiny
beyond the snot and too feathery observations apply to the white scedliug.-G. W. Houte.- It was very mortifyng on opening your box to find it such a mass different petals belonged. Had you placed over them a thint paper, fastening it tiglit about the stalk, and leaving it oper at of the petals tave a promising appearance, particularly a high
coloured fluwer; genea ally the under petals seem to want substance, and some of the top petals are too thm at the erige.
IlIr. Kpat. - It is ne necensary to seport upon your flower singly, as the same character, yariously modified, , yuns through
them all: take, for instance, "10, bad form, lower petals too long, upper petals high and pointed, with jagged edges ;" this
description would suit most of them: they want the form, subtlower among them.-John Davis.-Nos. 1, 3, 4, 5, B, 9, coarse loose, and badly-formed fiowers; 2 is a pretty good
form, but tic petals curl back too much; 7 , broad under-petals, top oncs cioudy, liney, and uncertain; the best flower is No. 8 ,
both in form, substance, and smoothness on the edge of the petal; 10 has good colour and substance, but the lower petals uhen fully expanced there is a large and deep dis ision between
the nuper and lower petals, and the latter are commonly too Trentfield Nun is a pretty little well-formed flower, but wanting veiny. King of the Gipsies, upper petals thin at the edge.
Cupid, singular sariety, but not, we think, worth keeping. The to curl back, but the lower petals are short and well forme - E. $\operatorname{E}$. M.--Your seedling is too rongh for a show-flower, as ali the border it will be very ornamental, as it appears to be a ver prodific bloomer.-H. B.- Your seedling is no improvement about the edges, -W. $H$. M.- Shylock is a very poor specimen, petals are broader, of a better form, and smooth on the edge in a dry and bad state, so that no, satisfactory opinion can be colour was quite gone; 3 is a bad form, the under petals being form, short and round, the upper petals were too far gon good pretty, but not equal to some we have in the same style, 5 is dispruportionately long. 2 , good general form, the edges of the
petals jagged and uneven; the irregular veining in the lower petal: this, if it retains a cupped form wher vanrety. 4, edges of the upper petal rather thin, colour finely
spread, leaving a ligl,t margin; lower petals short, of a delicate sa very pretty flowpr, frum the a possible to tell the form of the flower. 5, petals too long
6 ( $)$ uneven 6 (3) uneven and watery edge, lower peals too long, 7 , bad
form, lower petals toc long. 8, upper petais uncertain; Hower attrger jetals pointed and uneven, bottom ones too long. 10 uppants form, all the petals turn back, II, good spot, which
terminates badly; edges to petals rough; 12, lower petals thin and long. 15 , unevern edge to upjer petals, good spot, and pretty conong, and the flower altogether wants substance, uncven; puckeret both in the upper and lower petals. No. 6 is the best of your seedmgs, the colour is ciear and good, the
spot dark and well decincd, the lower etals are broad, but they
are, however, rather too lot ge the flower is altogether of good sulustance, the petals thick, and even on the eifges; it is large, all the petals too long.- A. B.-The petals of your seedling ground colour is not sufficiently pure
ously-marked seedling; they are all small, and common compared to the varieties grown about London.t flowess hawng bi ell cut very short, they lad by tle journey

of Fuchsia evoniensis prove it to be a very splendid variety; it of Fuchsia exoniensis prove it to be a very splendid variety; it they expand freely, and disclose the rich crimson purple

PaNsies.--Polly.-Princess Alice is a large, round, fat, and fine purple, having a very broad band of the same colour round Jarge and bold, the ground collur is yellow, and there is a
very slight difference betweent botom a fine varrety. W. C. T. Our impression was that Broune's
Elsa would prove a very uspful flower; and haring pouted out
its good qualities it was mroper to point but you admit.--Missey. - Nos. I and to ponnt ont a defect, which
but ticy are but of your flow but ti,cy are but miniatures of the Pansies nuw groun.-- Wr
Hutchings. - Darle Prefection, ones; it is much inferior to the selfs we already pussess A Lover of Punstes.- Purity in the ground-colour of the Pansy cient in this respect, must be consigned to the border; 2 and
must share the same fate differing from that of the side pctals. The serrated edges of
the petals to No. 4 is a disquallifation, at the same time the general form and proportion of the yetals are very good. No. dark ey e, upper petals of a blue purple, with a very de
band of the same round the lower petals; this appears stunt Reader.- Your flower is runnd, flat, and well formed,
with a good eye; the yellow ground-colour is not even bein deepest in the britum petal, and it melts so much into the blue
of the top peta.s, and the broad band of the bottom ones, as to
change half the cefour into a bron indistnct appcarance. We should like to see it again.--G,
Lepither, Esp, Knowsthorpe.-Mrs. Meynell Ingram is an
extremely pact eye, of a dark blue purple ; the upper petals have a few spots of delicate blue away from the edge; the flower in its
present state is rather too small. were too much sharivelled up to judge fairly of, they are small,
and there does not appear to be anything particularly worthy
of notice of notice.--H. K.-It is impossible to form an opinion upon small.--M. The creamy white is a pietty flower, round, with Hower, and the edge of the belting wants to be more clearly
defined,

## NEWS OF THE WEEK.

The Overland Mail from India has arrived this week with news from Bombay to the 20th May, and from China to the 28th March. The proceedings in Scinde are the chief points of interest in the Indian news. Sir C. Napier's conquest is not likely to be held without another struggle; Shere Mahommed, who was defeated at the battle of Fullalie, has rallied the mountaineers of the Beloochee tribes, and has advanced to within six miles of Hyderabad with a force of about $30,000 \mathrm{men}$. Sir C. Napier had sent for reinforcements, and it was expected that another battle would take place in the middle of May. All communication by sea will shortly be cut off and the country will very soon be flooded by the periodical rise in the Indus, so that it was doubted whether any continued military operations could be carried on until the close of the season. Under these circumstances, the result of the anticipated battie is looked for with some aniety. Akhbar Khan is at Jellalabad, negotiating ith the mountaineers for the safe passage of his father hrough the Khyber Pass; the Kuzzilbashes are in Cabul, and a Persian Chief is said to have established his authority at Candahar. The state of the Punjaub was begianing to attract attention; Shere Singh had suffered from a paralytic stroke, which was likely to prove fatal, and thus render British intervention necessary control the rebellious portions of his kingdom. The affair at Khytul has terminated in the suppression of the disturbance, and our troops are now of the place. From China we learn that Colonel Mal colm arrived there on the 16th March with her Majesty's arrangement had been ade for the exchange with the Chinese Plenipotentiary ir H. Pottinger bad declared his intention of proceeding ciations, but sorn port in order to carry on the tariff nego tiations, but every means was put into practice by the authorities around Canton to induce him to remain. The accounts from Spain are extremely unfavourable to cause of the Regent. The insurrection now com prises two-thirds of the kingdom; and since our last,

Pampeluna and its garrison, and other important towns, have joined the movement. The Royal Army is separated into three bodies, each acting at a distance from the the insurgents or to effect a junction with one of the other divisions. In the meantime, the insurrection has spread in a circle around the Regent, and great doubts are entertained whether he will be able to make head against the powerful and well-organized conspiracy which now surrounds him.
At home, the revenue returns for the year and quarter ending the 5 th inst. are the chief topic of interest. The general balance for the year shows an increase in the total revenue of the country to the amount of $2,442,942$ l. The increase of the quarter amounts to $1,700,5322$.; but as this includes the produce of the silver received from China and the Income-tax, it does not give the absolute increase upon the ordinary branches of revenue, which amounts to about 50,0000 . for the quarter. The Custom on the accounts for the quarter, the increase on the one being $135,015 l$ o, and upon the other $140,013 l$; but the decrease on the year, as compared with the year 1842, is In 126\%. on the Customs, and $1,013,868 \%$. on the Excise year and quarter ; in the Stamps, the decrease on the year i 203,717h., and on the quarter 39,369l. ; and in the Taxes the decrease on the year is $249,033 l$., and on the quarte Post 0 , on the year the increase is $59,000 \mathrm{l}$. -The proceedings of Parliament present few subjects which call for special observation. The adjourned debate on the Irish Arms
Bill is not yet terminated, and every clause and sentence of the measure continues to give rise to amendments and divisions. On Tuesday Mr. Smith O'Brien moved that the House resolve itself into a committee for the purpose of taking into consideration the causes of the discontent
at present prevailing in Ireland, with a view to the estaat present prevaining in relant, impartial government in that part of the United Kingdom. A long debate to our Parliamentary Report.

## 

Covrt.-Her Majesty, Prince Albert, the Prince of tinue at Buckingham Palace. On Monday the Queen and Prince Albert took an airing in an open carriage; and
the Prince of Wales and the Princess Royal were taken an airing, accompanied by the Dowager Lady Lyttelton. party. On Tuesday morning Prince Albert reviewed the party. On Tuesday morning Prince Albert reviewed the
Scots Fusilier Guards in Hyde Park, and in the evening Her Majesty and the Prince, and the King and Queen of the Belgians, honoured the Italian Opera-house with their presence. On Wednesday the Queen had an evening party, and on Thursday Her Majesty held a drawing-
room in honour of her birthday, which was very numerously attended. Viscount Sydney and Captain Meynell
have succeeded Viscount Hawarden and Captain the Hon. have succeeded Viscount Hawarden and Captain the Hon.
A. Duncombe, as the Lord and Groom in Waiting on the Queen. Major-General Wemyss has relieved Colone Buckley in the duties of Equerry in Waiting on the Queen,
and Colonel Bouverie has relieved Major-General Sir E. Bowater as the Equerry in Waiting on Prince Albert.-The King of Hanover met with an accident on Friday afternoon
Kew, by stumbling over a stone step. In the fall his at Kew, by stumbling over a stone step. In the fall his His Majesty came to town in the evening, and took an airing in an open carriage on Monday and Tuesday. On
Wednesday his Majesty went to the Temple in the evenWednesday his Majesty went to the Temple in the eventhe Inner Temple with his company at dinner. The Lord Chancellor, Duke of Buckingham, Duke of Beaufort, Marquess of Londonderry, the Earls of Eldon, Delawarr, and Digby, Viscount Strangford, Bishop of Rochester, Lords Brougham, Denman, Kenyon, and Lowther, the his Majesty. After dinner the King returned to Kew.-On Monday the Grand Duke and Duchess of Mecklenburg Strelitz took their departure from Kew for the Continent, and embarked at Dover on Tuesday morning for Calais, under the usual salutes. Her Majesty the Queen Dowager of a skithe last fow we are happy to state that she is daits recoveing. It is understood that Witley Court, near of her Majesty, who is expected to the month from Marlborough House. It is expected that at the annnal meeting of the Royal Agricultural Society at Derby. His Royal Highness leaves town on Monday next, and will be the guest of the Duke of Devonshire. stein Ebersdorf went by rallroad to Windsor to view the Castle, Virginia Water, \&cc. His Serene Highness left town on Tuesday, and proceeded by water to Woolwich to inspect the Dock-yard and Arsenal. The Governor, Lord Bloomfield, gave orders for the garrison to go through his Gerene Highness dined with her Majesty at Bucking ham Palace. H.R.H. the Princers Clementine of Orleang,
now Princess of Coburg, is expected to leave Lisbon so as The Lrmy.
The Army.-The following promotions in consequence of the recent successes in Scinde were gazeted on
Friday: -To be Lieutenant-Colonels in the Army Majors Poole, 22d Foot, and M•Pherson, 17 th Foot. To be Majors in the Army : Captains George, $22 d$ Foot, and Cnnway, 22 d Foot. To be Aide-de-Camp to the Queen, with the rank of Colonel in the Army in the East ndies:
Lieutenant-Colonel Pattie, 9th Bengal Cavalry. To be Lieutenant-Colonel Pattie, 9 th Bengal Cavarry. To Majors Reid, 12th B.N.I.; Waddington, B.E.; Stack 3d, B.C. ; Wyllie, 21 st B.N.I.; Browne, 8th B.N.I.
Story, 9th B.C. ; Woodburn, 25th B.N.I.; Lloyd, Story, 9th B.C. ; Woodburn, 25th B.N.I.; Lloyd,
B.A.; Outram, 23d B.N.I. ; Leslie, B.A. To be Majors in the Army in the East Indies: Captains Dela-
main, 3d B.C. Willoughby, B.A.; Whitlie, B.A.; main, 3d B.C.; Willoughby, B.A. ; Whitie, B.A. 25th B.N.I. ; Tucker, 9th B.C.; Stevens, 21 st B.N.I. Green, 21 st B.N.I. ; Blenkins, 6th B.N.I.
The Navy.-The Lords of the Admiralty have given notice of a change in the Naval uniform. The following are the general directions, subject to the usual modifications applicable to the different ranks of Officers: The coats of all Officers, now having scarlet collars and cuffs, sleere, which is now blue, to be white. The bullions of dress epaulettes to be loose, instead of fixed, as at prethat to be worn by the Admiral of the Fleet, and with the same distinctions heretofore used, except that the binding, which was formerly of black silk lace, $2 \frac{1}{2}$ inches, is to be 2 inches in width, and of the oak-leaf pattern.
Order of the Bath.-The Queen has been pleased to appoint Major-General Sir Charles J. Napier, Knight Grand Cross of the Order of the Bath, to be a Knight been pleased to appoint the following officers, in Her Majesty's service, to be Companions of the Order, viz. :Lieutenant Colonels Pennefather and Poole, 22d Foot; and M-Pherson, 17 th Foot ; and Majors George and Conway, 2a Foot. Her Majesty has further been pleased appoint the following officers, in the East naia Company Pattie; Lieutenant-Colonels Reid, Waddington, Stack Wyllie, Browne, Story, Woodburm, Lloyd, Outram, and Lealie. Majors Delamain, Willoughby, Whitlie, Fisher, Jackson, Tucker, Stevens, Green, and Blenkins.

The Revenue.-The Revenue accounts for the year and quarter ending the 5th inst. were published on Wednesday, and are satisfactory, as showing a small increase in some of the more important sources or revenue, and an indication
of reviving trade. The total revenue for the year was $47,780,342 l$, and that of the corresponding year ending July 5,1842 , was $45,337,4002$, showing an increase or
$2,442,942 l$. in favour of the present; but this must not be considered au absolute increase, as it includes the Income Tax and the money received from China, without which there would be a deficiency of nearly $1,900,000 \%$. The accounts for the year show an increase on the Post-office
of $59,000 \mathrm{l}$; Miscellaneous, $1,080,214 l$., to which must be added Property Tax, 3,317,997l.; Repayment of Advances, $142,257 \mathrm{l}$., making a total of $4,599,468 \mathrm{l}$. They show a decrease on the Customs of 514,9261.; Excise, 1,013,8687.; to which 17. ; Reaxes, $249,033$. ; Crown Lands, 60,000 ., $114,482 l$., making a total of $2,156,526 l$. Which being deducted from the amount of increase $4,599,4681$., as stated above, gives $2,442,942 l$, as the increase on the year. The accounts for the quarter show an increase on the Customs Crown Lands, 2,500l.; Miscellaneous (including the money received from China), 849,7672 .; to which must be added, Repayments of Advances, 35,655l., making a total of Taxes Moneys, 200,350 ; Post-0ffice, 9,000 . ; 2 mprest anich being deducted from the amount of $2,024,659 l$., as stated above, gives $1,701,532$. as the increase on the quarter
Earl Grey.-Last evening the answer to inquiries resLordship had a comfortablenerable peer was that his improving satisfactorily. His Lordship is now able, with assistance, to leave his bed-room, and sit up during a considerable part of the day in an ante-chamber.

Post Office.-Lord Lowther, the post-master general, Post-office authorities of Belgium, Holland, Prussia, Austria, Saxony, Denmark, Sweden, Norway, and Russia, for the transmission of letters and newspapers to and from England and those countries, on the same terms as the recent postal convention with France, which came into operation on the 1st of June, either by paying the postage or not.
the Master of the Mint and the Lords of the Treasury, relative to the Sycee silver Lomitted from Chisury appears that the total value is $1,334,480 \% .7 \mathrm{~s} .7 \mathrm{~d}$., the freight and other expenses connected with which is 19,291l. 18 s . 2d., leaving a balance of $1,315,188 \%$. 9 s .5 fd .; $6,000,000$ dollars, the first in Nankin. Of this amount, $1,281,406 l_{\text {. }}$ 33s. 10 d . has been paid into the Exchequer, and 53,0733 . $13 s .9 \mathrm{~d}$. reserved for preight, charges of preparation, contingent expenses, allowfreight, charges of preparation, contingent expenses, allow-
ances, \&ec. subject to the approbation of the Treasury.

## 1 Fortan.

France. -The news from Paris is chiefly connected with the details of the Budget, and with matters of domes-
tic interest. On Saturday the Bill for opening a credit of 527,241 francs for the Minister of Finance, in order to enable the Government to pay, should King Otho's Govin ment not do so, the hary, interest due on the portion of the Greek loan guaranteed by France, passed the brief discussion which preceded the vote, M. Guizot said that there was every reason to hope that the financial difficulties of Greece would not to hope tong diration and dhat the pill would probsly be the fast of such that the pre brould have to their assent to The Chambers were but thinly attended on Monday, in consequence of the funeral of MdHe. Barrot, the only daughter of M. Odillon Barrot, whose early death is deplored by the Journals of all parties. The greater portion of the Members of both Houses were present at the funeral. The Chamber of Deputies commenced on that day the discussion on the project of a railway from Avignon to Marseilles. One of the Opposition papers having stated that when the King came from Neuilly to the Tuileries, on Friday, he alighted at the Perron de la Reine, and that he appeared to be suffering, and was compelied to lean forcibly on the arms of the two officers who accompanied him, in order to be able to reach his apartments, the Ministerial paper says, that nothing can be more false than these detains, and that the King was never in beter health. The Duc d Aumale landed at Marseilles from Algiers on the 29th uit. In the beginning of August, his brother, the Duke de Nemours, is to proceed with his consort to the camp formed at Plelan, near Rennes. The Prince and Princess de Joinville arrived at Brest on Saturday last, from Rio Janeiro. Dr. Hahnemaun, the founder of tomœoopathy, died in Paris on Sunday, aged 88. Summer tourists may be interested to know that a new line of packets has been established on the Loire, by means of which a travelier, leaving Paris at six in the morning for Orleans by the railroad, can arrive at Tours Spain. -The accounts received this week hy the French telegraph are of considerable interest, and the state of affairs in the provinces has assumed an aspect of very grave importance to the Regent. Two-thirds of the kiogdom have joined the insurrection, which is becoming so general in Andalusia, that Gen. Carratala, the Governor of Seville, who had retired to Cadiz after the outbreak at Seville, has declared Cadiz and its province in a state of siege. Pampeluna and its garrison, all the military posts on the frontier except Irun and Fontarabia, have made their pronunciamento for the insurrection. In Gidity. Vigo, Pontevedra, Orense, Lugo, and Betanzos, have followed the movement ; but at Ferrol the population was still kept down by the Captain-General. Burgos is the seat kept down by the captare enetic junta, which was organising the insurrection throughout the entire of Old Castile The General commanding the citr was compelled Casivi Valladolid still maintained himself in an old convent converted by the Erench into a citadel during the Peninsular war All these circumstances prove that the Burgos insurgents are not yet ready to march upon Madrid with those of Galicia, as they boasted they would in their the upper mountains, people of the valley of Aran and of the upper mountains, as well as Huesca and Daroca, in Aragon, had declared against the Regent. Paima, in the Balearic 1slands, Ceuta, Algesiras, and the camp of San Roquez, had likewise "pronounced." The Regent reached La Ronda oa bae 24th, and proceced the next day to Albaceta, where he was received with the greatebt enthusiasm by the people and the National Militia. He had found it necessary, however, to wan uai be could be reinforced by Gea. Van Halen, who had found the troops of Alvarez so diborganised before Gravada, that he was obliged to withdraw them. Gen. Van Halen was still at Jaen on the 25 th ult., awaiting the arrival of the Governor of Cordova, with a reinforcement of 1,500 men, to cross the Sierra Morena, and effect a junction with the Regent. By the latest news from Valencia, it appears that the Junta of Salvation, as they style themselves, commanding in that city, had issued orders to all the country within their reach to pay up within six days the tases due for the entire year. All bachelors and widowers without children, from the ages of 18 to 40 , are ordered to take up arms, and a strong temptation is held out to the Regent's troops to desert by an offer of one real a-day adeir pay, and a reduction or a year in the period on the members of the Lopez Administration to meet is that city. General Serrano had, in virtue of the powers vested in him by the Junta, pronounced the termination of the Regency of Espartero, and relievert all Spaniards of their allegiance to him. The repined
of several of battalions of Zurbano's army having joined the insurgents was untrue; but he has found it necessary to enter into an arrangement with General Castro, the insurgent General, by which he has been allowed to fall back upon Cervera without coming to a battie. The the poput bombardment had subsided at Barcelona, Since the retreat of Zurbano, the Governor announced, that having no instructions to persist in his menaces, he would no open the fire, unless acts of hostility were committed against the place. So long as a superior army shall no compel the insurgents to shnt themselves up in Barcelona. the fort of Montjuich will be of little use, since it would round Lerida that the fate of the insurrection may be desided. Cand manceuving to outflan cided. fortrens and opon a communication with the militias of
the upper valleys marching upon Balaguer. The Madrid journals contain no news from the South, but state that the capital continues tranquil. The officers of the National
Guard had assembled, and made an offer of their services to the Government to defend Madrid, without the aid of the troops of the line, until order should be completely restored. Private letters announce that the leaders of the insurrection, despairing of subduing Espartero in the field, nand VII., to assassinate the Regent, and he is positively asserted to have left Madrid for that purpose.
Porrugal.-We have Lisbon news to the 26 th ult. The news of the Spanish insurrection had produced press of Lisbon published the accounts with avidity, in the hopes of getting up a movement in Portugal, which, from various circumstances, it appeared somewhat diff. cult to effect. The Chambers, about to close their long Finance Minister. The budget had been voted by the Chamber of Deputies, and also the authority to collect commission of both Chambers was about to decide on the fate of the Road Bill.
Germany.-Accounts from the Rhenish provinces of Prussia state that the rejection of the Prussian penal cone, had been the occasion of joyous demonstrations at Cologne, Dusseldorf, and other towns. The houses of Cologne were illuminated at night, bonfires were lighted on the surrounding heights, bands of musicians traversed the squares. In the evening the deputation of the Diet embarked on board two steamers, which were dressed with figg and illuminated with lamps of different colours to Dusseldorf, where the intelligence had reached by express, the deputies were saluted with lively acclamations. Dusseldorf they were received with the greatest solemnity the principal inhabitants came to meet them, and con ducted them in procession to the Palace of the Marshal of
the Diet, to whom they communicated the unanimous resolution of the Assembly. The Marshal replied that the Government, whose good faith could not be questioned, had conceived it advantageous for the country generally to establish an uniform legislation
thronghout all the Prussian dominions, but the Diet have ing determined to maintain in its integrity the judiciary ing determined to maintain in its integrity the judiciary
constitution of the Rhenish provinces, he had no objection to oppose to that resolution. The Deputies then retired, and after partaking of a banquet to which they were The same accounts state with much satisfaction that, by a Ministerial rescript of the 14 th May, the 50,000 rix dollars granted by his Majesty towards the completion o Cologne Cathedral for the year 1843 , are placed at the
disposal of the committee. Letters from Berlin state that disposal of the committee. Letters from Berlin state that the Rev. Mr. Gerlach, who has been in England for some the Liturgy of the English Episcopal Church, has now ntroduced in the Elizabeth Church in that city a new Liturgy, for which, however, he has not taken that of the English Church as a pattern. His principal objectappears to be to forward good sacred music in the Prussian upon the mind of the congregation.
Malta, - The new cathedral will, it is expected, be consecrated by the end of the year ; its internal fitting are already commenced, and benches are to be supplied her Majesty the Queen Dowager will be here to honour with her presence the consecration of the building which she has so generously endowed. A singular phenomenon rising peared in the harbour of valleta, the water suddenly the new dry dock; it almost immediately fell five feet and a half: during this period a very strong current was runstem. It is supposed this circumstance must have occurred through some earthquake at a remote distance, and it was reported that at Tripoly in Barbary several severe shocks had been felt.
Iral $Y$.--Letters from Rome state that the Pope is described revive the ancient ceremony (so graphically 8olemanly crowning the greatest poet at the Capitol, and that he has offered this distinguished honour to Chateaubriand. The venerable author, however, has declined the intended honour, declaring that he did not believe he had done sufficient to deserve it.
TURerey.-Accounts from Constantinople state that the Servian people met on the 17 th on the plain of Topsidere presence of Wucsitsch and Petroniewitsch would invalidate it in the eyes of Russia. But every voice was for Prince Alexander Georgewitsch. It was arranged that Alexandion should take place on the 3d inst. ; the Prince ministers to Kragugewatch, there to await the now certain result. Redschid Pachat had recovered in some measure self in readiness illness, and had been ordered to hold hima journey which, in the precarious state of his health, it considered probable would be his last
EGYPT,-The intelligence from Alexandria is of consifrom advancint. The Pacha had publicly declared that unequal to ali the cars and infirmities he found himself to his Government, and that his successor lbrahim being an invalid, it is his intentiom to associase with himself his
grandson as wakeel, or assistant, with full powers to act
on his behalf. This arrangement, though not looked upon as immediately mischievous, is pregnant with danger in the event of the Pacha's death, because there has existed between Ibrahim and Abbas a long-cherished and deadly hatred, and both parties have numerous and powerful partizans. The plague of locusts still continues; collection, giving for them, to the Zellahs who collect, two piastres, or about $5 d$., for every two pound and three quarters, English weight, which they bring in. Depots dountry; in one depot alone there have been seen in one
day 120 lbs . English weight of these destructive insects brought in and paid for.
india.-The Overland Mail arrived on Monday with days before the usual time, in consequence of started ten of the monsoon rendering the navigation difficult from Bombay to Aden. The chief points of interest are conIt appears that Shere Mahommed, who was defeated at the battle of Fullalie, on the 24th March, had got over the river and incited some of the mountaineers of the Beloochee tribes to join his standard, and approach the bad, with an army amounting, it is said, to between 30,000 and 40,000 men, with about 20 pieces of cannon. The motive which has induced him to adopt this rash step written Sir C. Napier to the effect, "that having fought written Sir C. Napier to the effect, "that having fought
two battles for his country, he must have one more for his religion !" Another chief, Ali Mourad, who had joined the British, was no longer to be depended on. Sir C. Napier had given notice to the former to give up his
useless resistance, or he would proceed to rout him. The 15th of May was publicly mentioned as the date of th expected battle. Her Majesty's 28th Regiment had left Kurrachee early in May, and were expected to reach Hyderabsd before the 15th. The great portion of the
other troops were concentrated around Hyderabad, with the exception of one native regiment, which was stationed on the right bank. The season of the periodical rise in
the Indus had begun, and it was much doubted if any continued operations, and beas much doubted if any as the country is intersected with overflowing canals. The Bombay Government was most active in sending reinforcements to strengthen Sir C. Napier's position. The 22d Regiment having been much weakened by the two to Bombay, from which station one wing of the 78 th Highlanders had been dispatched to take their station at Kurrachee. The greatest efforts were made to open a the mouths of the Indus, and the blowing weather will prevent all communications by that means for two or at Sukkur, from which place some troops were proceedin to Sehwan. The ex-Ameers of Scinde, who had arrived Shahdad, who is accused of being implicated in the murder of Capt. Ennis, has been sent to Surat, in order to be safely guarded in the castle. The other ex-Ameers have been sent to Sassoor, a fort formerly belonging to attract attention. Shere Singh, the third in succession to Runjeet Singh, who died about three years ago, had had a stroke of the palsy, and the sovereignty of his life, as the British would have to interfere to keep down the rebellious portions of his kingdom. In Candahar Chief: the Kuzzilbashes were also said to he all Porsian in Cabul. Akhbar Khan was at Jellalabad, endeavouring to make arrangements with the Khyberrees for the passage Khis father through their defiles from Peshawur. The ances in Bundelkund have been nearly put down, notwith standing the difficulties that attend mountain warfare Lord Ellenborough, who is at Agra, expected to be enabled by other arrangements to bring about its complete pacification. The Somnauth gates have turned out to be made pine, and not of sandal-wood
CHINA. The sccounts
28th March, but they contain China come down to the Colonel Malcolm had arrived little news of importance. cation of the Treaty; but ratifications could not be exchanged until Elepoo's successor reached Canton, which it was hardly expected he would do in less than two months. It was said Sir H. Pottinger was about to publish the result of his negotiations. The new Tariff had been inspected by the principal merchants, and dea of proceeding to the northward ; and it was reported Colonel Malcolm was aly requested permisaion to retire. to home authorities. The feeling of enmity against the English, 'so long prevalent at Canton, appeared to be gradually subsiding. The opium trade continued to
flourish, and some clippers had even proceeded with their cargoes to the northward of Chusan. Several daring acts of robbery, murder, and piracy had been committed near Singapore, for tria, for kidnapping women in Cochin Chima, and bringing them to Singapore for sale. Commercial transactions were much in the same state, but little else can be expected until the conclusion of the negotiation

Ceilis-From the Valparaiso Gasette of the 16th,

17 th , and 18 th of March, received this week, iwe learn that before has been the sce of call on the 15th March, flames were first seen breaking through the roof of one of the baval stores. An altempt to break down the connexion between the buming edifice and a newly-built house having failed, the fire spread with the utmost rapidity, embracing a wide range, threatening to extend over the whole circumference, which it brilliantly bouse one of the finest buildine made to save the Custompulling down houses in its vicinity in the New World, by puling down houses in its viciaty, and, fortunately, with success. On the other side of the place, however, where destroyed the whe pil destron the sea. Ang attempt was made to arrest the confagration by blowing up a store with gunpowder, but, the quantity of slight earthquake, which, mous crowd of spectators who occupied the pier, every street, the neighbouring heights, \&c., the boats and ships in the bay, whose noasts and rigging were crowded with human beings. The crews of the vessels, both French and British, gave the most valuable aid by their courage, promptitude, and discipline. Prompt measures had been collect in repair the consequences of this calamity; to collect in one place all goods rescued from the flames, and to make arrangements for the resumption of business, which had been wholly interrupted. The damage is estimated at 400,000 .

## 挸arlíantent.

Monday.-The House went into committee on the Scotch Church Bill, when Lord CAMPBELi, momed an amendment for
the purpose of limitng ohjections to ministers to spiritual or the anlendment, and Lord Brovgham made his promised state-
ment. He hoped the forl ment. He hoped that for the sake of the bar, the law, and the
adrainistration of justice in this country, they wrould listen to
his his reasons for opposing the bill, both in form and substance. Auchterarder case, was impligned by this bill, and he felt that he would be unworthy of the position which he held if he did not
defend the reasons on which that jadgment was founded declaratory bill, its practical effect would be to make the judgment good, but the reasons on which it was founded worthless-a
position at once msintimg to the Judges, and the most dangerous
in its consequences that coulu possib y he conceived. 1 lie bull might give a triumph to the sscotch judges, and even add the
Court of Ses.on in rescuding the appellate jurisdiction of the
House of Lord House of Lords; but at least one evil consequence was hkely to
happen- h Judges, in w.chrering their Judgments on appeal
cases, would refrain from giving the peasons ou which they ceeded, it they found that they were exposed to declaratcry acts,
which set aside their law as bad
be inceted be inserted in this bill permitting the Auchterarder case to be
re-heard. There was litle probability that the bill would pass
the House of Commons. but the House of Commons; but he was anxious that the House of Lords should pursue the right course, and not leave it to the
Lower House to correct itt errors. If the Church was to be
endowed with a power so enormous os this hill proposed to endowed with a power so enormous as this bill proposed to con-
fer, it nught to be given by enactment and not by a declaratory
law. -The Lord CgANesiLore felt the importance of maintainuing law. - The Lord CHANesLLor felt the importance of maintainulg
the judgments of the House of Lords unimpeached. The bill,
hower, however, was not at variance with the decisicn in the Auchter-
arder case-a judgment in the reasons of which he entrely con-
curred. It was only declaratory on one point-the nght to object, not the right to declaratory on one point whint-h had not right to
issue in the Auchterarder case. Besides, it was not declaratory issue in the Auchterarder case. Besides, it was not declaratory,
but enacting on the right of the presbytery to decide, and there-
fore, altngether, the bill was not opposed to the Alchiterarder fore, altngether, the bill was not opposed to the Aucliterarder
judemment.-Lord Cortentam remarked that the Lord Chancellor
and the Earl of Aberdeen materially differed in the argoments and the Earl of Aberdeen materially differed in the arguments with
which they supported the bill-the ose expressing his concurrence
in the judgment in the Auchterarder ing it as bad in law. After repeating at considerable length his
former ormer arguments against the bill, he pointed oul the inconsistency The Earl of GALLIowAy, in supportivg the bill, cited opinioas formerly expressed by Dr. Chalmers, as sanctioning uts principles.
Came Earl Uf HAnnsGTon opposed the amenduent of Lord bill was requisite after ali that had happensed in Scot present to
allay the unhapyy ferment whoch had distracted the Church. of the House seemed dreposed to pursue with respect to thajs bill. The reasons on whicich the Auchterarder indgment proceeded were because th sulted some persons to say that these reasons were
wrong, they were hurrying a declaratory bill through the House,
the effect of which would the effect of which would undoubledly be to dimbinh the welght
and authority of the law. By the bill, tliey were about to trans-
fer prent fer property and rigits from one set of individuals to another,
without the decency or justice of hearing the patrons in their
own defence at the bar of the Honse. Should the bill proceed own defence at the bar of the House. Should ther with these declaratory words retained in it, he would rately and solemnly taken upon certain questions to be submitted
to then-for he hignly disapprovet of the irregular course of
olitanner oltanning private opinions. There was nothing more calculated
to bring the law into contempt, than a declaration that uhat was laxd down by the highest court in the lingdom was not the If the biln were not passed, it would be the cause of the dicesta-
bishment of the Church of Scotland. There was nothing of which he was more convinced than the imperative necessty of this measure, which had beed, substantially, belore the puble for
three years, inasmuch as st was simular to his former bill. - Lord
CAmribne, in reply, reatirmed that the passing of thus bill was CAMI'BELLL, in reply, reathirmed that the passing of thas bill was the amenam place, on an amendment proposed by Lord Brovorision, to
took
convert the which was rejected by 38 to 10 . After some remarks frome, the Earl of Minro, the chairman reported progress.
Tuesduy. - In reply to the Earl of Minto, the Earl of Absndisn said it was not the intention of the Government to apply what
was called free teinds to the Archbishop of DUblin presented a pertion, prayng live House to take measuses to remedy the evils ceccasoned by the want of a
Church Government ftr the United Chmrch of England and
Ireland; and called attention Church in relation with the cirill legislature. Hs pishect was to
urge the necessity of constiluting some legislative body which should have the power of setting those polnts on which mem-
bers of the Church differed in opiulon, but without atering the
established ject to the especcal notice of the Enghsh Prelates who were per-
manent members of their Lordshnys' Huase.-The Bushop of AALISBURY also expressed has opinion that some power of self-
accommodate itself to those changes which take place in society.
He felt satisfied that there could be no permanent security for He felt satisfied that there could be no permanent secirity for
the Church unless it were permitted to adapt itself to the
changing circumstances of the times, and to make those alterache Charch unless it were permited
chang circumstances of the times, a
tions which should be found necessary.

nothing but a domestic legislature would remedy their grievances.
Sensible of the inconveniences which would attend a repeal of the Sensible of the inconveniences which would attend a repeal of the
Union, he felt, nevertheless, that Ireland might have been happier
and more prosperous if that Union had not been accomplished ; his and more prosperous if that Union had not been accomplished; his
own experience as a member of the imperial legislature for 12 years had shown him how much Yrish interests were neglected; and if the
Union were not productive of benefit to his native land, he saw not why he should be afraid of adopting the other alternative. He con-
cluded by warning Ministers that in the actual condition of Europe, and our relations with other states, Ireland, in its present condition, Was a source of vital weakness to Britain.-Mr. WYsr seconded the
motion. He glanced at the church, defended the Catholic elergy,
expatiated on the grievances of the country, and traced the operation expatiated on the grievances of the country, and traced the operation
of the gradual relaxation of the penal laws, from the first permission
to allow Catholics to hold land down to their admission into the to allow Catholics to hold land, down to their admission into the
Legislature. Catholic emancipation was the last of one series of
 obtained it - Lord ELnin complaned of the extensive range and
variety of the topics embraced in the speeches of Mr. O'Brien and
Mr. Wyse. The complaint of the great proportion of Protestants to could promote its political opponents, and the greater portion of the Cathoses of Yreland were opposed to the Government. He was the country. He, for one, was prepared to resist the repeal, as a
dismemberment of the empire. The condition of Ireland was not so deplorable as might be inferred; its trade had shared in the general depression of that of the empire ; but there had been an increase in
its shipping, and in the amounts of the deposits in the savings' banles.
all which were evidence of an improved condition. The Government were not open to the charge of rieglecting the affairs of lireland; last session he had introduced 23 buls, on which not a single division House. Fuxity of tenure was a delicate point, which had been
rather avoided by Mr. O'Brien. He freely dmitted that "Property
had its duties as well as its rights"" buty they were noral duties, easily to be made legally cognizable. The Established Church must England; and the land which contrmbuted one thy of tre mainly belonged to the Protestant landowners; Mr. O'Connell had himaself admitted motiou, as calculated to impeach the conduct of Government, and to
hold them up as not governng Ireland impartially.-Mr. C. Woon said that the speech of Lord Eliot left them precisely where they were; and in the present appaling state of ireand, and at the ciose Great and good men had opposed the Union, and it had been carried
by infanous means; but after it had lasted so long he felt that to
repeal it would be a diamemberment of the empire. But then it was repeal it would be a dismemberment of the empire. But then it was
the duty of Government to answer the appeal which had been made to them, and say what they proposed to do for that country. -
motion of Mr. B. Cocrrank the debate was then adjourned. Wednesduy.-Sir G. GREX withdrew the Charitable Trusts Bill
for the present session.-SirJ. GRAHAM stated that the bill which he had formerly mentioned as in preparation on this subject, would called attention to what he conceived to be a gross breach of privilege on the part of the Standard newspaper, which, int allusion to
the recent discussion upon the Nottingham election, had repre ment of having hired otherss to the potential sin, at Ieast, of perjury,
with as much levity as if they had been mentioning the most indifferent, or even laudable actions; adding, that such men, who wer Mutumutumew Mr. GIsBornE briefly supported the motion.-Sir R. PEEL expressed
his opinion, that if calumnious charges in newspapers were to be made matter of privilege, the House would have ample work on
hatids. He entirely acquitted Mr. Duncombe of baving said a
thing which could justify the expressions of the Stundurd, thought the editor was confounding the speech of last Friday with cerned in the matter than the individual Alember who made the the editor.- Lord J. Russelit expressed his decided opinion that
the expressions in the Standard, of which complaint was made, con.
stituted a gross and malignant libel. Statements of that kind did stituted a gross and malignant libel. Statements of that kind dic
more injury to the press which uttered them than to those against whom they were directed; and he thought it better, after the oppor-
tunity whichl Mr. Duncombe had had of vindicating himself, that no
farther notice should be taken of the matter.-After some additional remarks, Mr.Duncombe adopted this advice nnd withdrew his motion
Lord WorsLiey moved the re-committal of the Coroners Bill. Mr. Pakingron moved its re-committal that day six months, The
Housc divided - For going info committce, 134; Against it, 41:
Majority, 93. The House went into commoittee, and aiter many amendments and five divisions, all the clauses were agreed to. On
the consideration of the schedules, after a division on a motion for postponement, progress was reported.
On the order of the day for the committal of the Commons Inclo-
sure Bill, Lord WonsLey moved that the Bill be referred to a select committee.-Mr. Brotherton, as an amendment to the motion,
moved the adjournment of the House. On a division there wereFor the adjournment, 12; Against it, 37: Majority, 25.-LIord
WorsLev again moved that the bill be referred to a select commit-
tee. Another motion for adjournment and a division followed, when the debate was adjourned to Monday,
Friday. The adjourned debate on Mr. O'Brien's motion was
resumed by Mr, A.B. Cocrinne, who was followed Dy Mr. WARD
 efficiently the Government was defended, supporters and opponents
allke censuring its poliey. He would not destroy the Irish Church Establishment, but would reduce it to the wants of the Protestants,
and place the two religions on a footing of pexfect equality. The and place the two religions on a footing of perfect equality. The
secret why there had been no agitation for Itepeal of the Union with
Scotland, lay in the fact that Queen Annc's Ministers had recog
nised nised the national religion of Scotiand. Sir J. Gragam repog-
and said the Governmeut were determined to maintain the Church and said the Governmeut were determined to maintain the Church
Establishment, and suppress the Repeal Agitation. The debate was
then adjourned.

Her Majesty's Birthday.-Thursday being appointed served 28 a day of rejoicing The morning was ushered in by the ringing of bells; the Park and Tower guns fired royal salutes, and the illumireview in honour of the day took place on the parade in Duke of Cambridge, and the Dake of Wellington; and the troops in Woolwich garrison were brigaded on the Comvening at Apsley House, in honour of the day, and by
order of the Duke of Cambridge, the gates of the Park were kept open all night for the egress and ingress of car tion of the Chancellor of the Excher, who is sute from a domestic affliction, gave state dinners to the Ambassadors and other official personages.

Tribute to the Duke of Sussex.-A public meeting was held on Saturday at Willis's Rooms, for the purpose of entering into resolutions for a memorial to his late Royal Highness the Duke of Sussex. The Marquis of North ampton took the chair, and opened the business of the meeting by remarking that it was to show their affection and regard to the memory of one of the Princes of the house of Brunswick. His late Royal Highness was the patron of literature and arts, and the devoted friend and supporter of all charitable institutions. The Duke of
Sutherland expressed his great satisfaction that the noble Sutherland expressed his great satisfaction that the noble President of the Royal Society, the successor in that disfinguished office to the late Duke or Nussex, had consente to take the chair that day. After paying a high er io-
gium to the merits of his late Royal Higbness, lis fiace read extracts from the speeches of the Duke of Welling ton, Sir R. Peel, Lord J. Russell, \&c. in Parliament as to the ability and kind-hearteduess of the illustrious Prince, and observed that happy must the memory of that man be whose character was so honoured by such men. They had now met to give an opportunity for offer ing a public tribute of respect to the memory of his exp expressive of regret for the Loss Marquis of Breadalbane nd carried unanimonsly. The Earl of Roseberry moved the second resolution, "That a memorial be erected by public subscription to the memory of the late Duke of Sussex." The Bishop of Durham seconded the resola. tion, which was agreed to. Other resolutions in conformity with the objects of the meeting were adopted, on the motion of the Earl of Arundel and Surrey, the Bishop of Norwich, the Earls of Zetland and Fortescue, and subscriptions to the amount of about 600l. were announced Sale of the Duke of Sussex s Properiy.-The sale of the late Duke's property during the last three days has, rom its interesting character, attracted a very numerous assemblage of fashionable company at Messrs. Christie's ooms, independently of the parties usually attending similar auctions. The catalogue included a collection of interesting historical curiosities, many of which realised extraordinary prices. The trinkets were sold on Monday ; he regulators, clocks, and watches, on Tuesday; the and Friday. On Monday, Tuesday, and Wednesday next the pipes, tobacco, and cigars, will be sold.
Duel at Camden Town.-On Saturday a duel, which appears that about a quarter past five on Saturdsy morning, a police constable, who was on duty near the Camdenthe keeper of the toll-gale facing the Brecknock Arms, observed two ctbs, the first containing Maiden-lane ten minutes after they were alarmed lyy hearing a single shot fired, and presently after the two cabs returned at a rapid rate with but three out of the five gentlemen, and rove in the direction of Regent's Park. This circum stance excited great suspicion, and immediately after severa abourers, who had come to commence their haymaking was lying in the field, gave information that a gentleman hastening to the snot the nolice found a been shot. On gave his me is pio the police found a gentleman, who 188, Sloane-street, lying on the grass, bleeding from a wound in the right side, and another gentleman, who gave be the surgeon of the Koyal Horse Guards Blue, standing by his side. On the police inquiring what had happened, Col. Fawcett rephied What is that to you? It is an accident. "Under the direction of Mr. Gulliver a shutter was procured, and the unfortuate gentleman was in the first instance conveyed to the Brecknock Arms' Tavern, but was refused admittance. He was then conveyed to the Camden Arma, Randolph-street, where accommodation was afforded. At the request of Colonel Fawcett his wife was at once seat for, and on her arrival the Colonel confessed that he had been fighting a duel with his brother-in-law, Lieut. Munroe, of the Royal Horse Guards Blue. Mr. Sandys, surgeon of Kentish Town, was then sent for, who deened it advisable, from the dangerous state of the who arrived about eight o'clock. The result of their consultation was that they discovered the ball had entered the body on the right side, passed through the right lung, and had apparently dropped into the intestines, in a similar manner to that in the case of the late Mr. Drummond. Ona consultation it was the opinion of both medical gentlemen difference os the Brodie pronouncing it fatal, and $\mathbf{M r}$. Liston expressing a belief that he might recover. During the whole or Satur day, Col. Fawcett remained in a very precarious state, but on Sunday there was a marked improvement in the symptoms, which continued to give hopes of a favourable how up to 11 oclock at night. Soon after midnigat thewever, Mr. Sandys, observing a marked change for, and that the Colonel exhibited symptons of delirium, lost no time in despatching a messenger for Mr. Liston, who promptly arrived. Medicines were then administered, after whicli the Colonel became somewhat more rational for a short period. He, however, remained until 6 A.M. on Monday, when deatic put a period to his sufferings. About an hour prior to the
death of Colonel Fawcett, Mr. Sandys deemed it advisable to acquaint his wife with his approaching dissolution, and
also sent for Major Daubeney, of the 55th Regiment, his Riso sent for Major Daubeney, of the 55th Regiment, his
personal friend. Mr. Sandys describes the death-bed personal friend. Mr. Sandys describes the death-bed Mrs. Fancett became acquainted with the fact of her Mrs. Farcett became acquainted with the fact of her utmost difficulty that Major Daubeney and Mr. Sandys could remove her from the body. She was then conveyed by Major Daubeney in his carriage to her own residence, in Sloane-street. Throughout Sunday Colonel Fawcett was exceedingly cheerful, and once or twice referred to
the rencontre which had taken place between himself and the rencontre which had taken place between himself and
Lieut. Munroe. He stated that Lieut. Munroe had been his agent during his absence in China, and that on Friday night, whist Lieut. Munroe was on a visit at his house, be been maraged. This drew a reply from Lieut. Munroe, Who, Colonel Fawcett stated, insulted him three times in such a manner that he rang the bell, and gave direc-
tions to his servant to order the Lieutenant's carriage, Which was done; and that shortly after Lieut. Munroe sent him the challenge. Mr. Sandys semarked, that the high character of the Colonel in the Army he thought would have justified him in refusing to acceptit; to which but he did not think it would ever have come to that. He thought Lieut. Munroe wanted to bully him, and although he told him that he (Colonel Fawcett) did not wish to insult him, he would not submit to be insulted in his own
house. He added, that he never intended to shoot Lieutenant Munroe; but that the moment he had taken his position in the field he received his fire, was instantly "doubled up," and fell ; and he positively asserted that right arm with the intention of firing in the air. In the course of the evening Mr. Wakley, the coroner, held an number of military officers and personal friends of the deceased and his antagonist. Mr. Sandys, the surgeon, and said that on a post mortem examination, in conjunction with Mr. Liston, he had ascertained that the wound in the side was about one-quarter of an
inch in diameter, the ball having entered the integuments covering the seventlu rib, which it fractured, penetrating ing in the ninth dorsal right lung to the spine, and lodg. sixinches in depth. The immediate cause of death was an effusion of blood from the lung into the right cavity of died from injuries consequent on the wound. The ball not become imbedded in the body of the vertebra, but had of University College, confirmed this Liston, the surgeon particular. He said that the facts were so clear that there death; and that, supposing ing the cause of deceased's have fully understood the nature of the injury, and to have known the course of the bullet, he did not think it Would have been possible to save the life of the deceased. amined, after which the inquest was adjourned to Thurs day. So great was the interest felt in the inquiry, that who happen to be in London respectivg the Coroners, Bill now before the House of Commons, were present wateh the proceedings. At this adjourned inquest, Mr
Isidore Blake, Assistant-Surgeon in the 8th Hussars, a half-brother of the deceased, attended, and identified the body; but there was still a want of material evidence on many important points. Mr. Gulliver, the Surgeon, also
attended, but as he had previously appeared before the attended, but as he had previously appeared before the
nolice magistrates and bailed, another difficulty occurred police magistrates and bailed, another difficulty ultimately arranged that the police should be answerable for the safe custody of Mr. Gulliver, and the inquest was then adjourned for a week. The proceedings at the policeCourt are also adjourned to next week, Mr. Gulliver being
held to bail, himself in $1,000 l_{\text {. }}$, and four sureties of 2501 Wach, the latter being the Earl of March, Sir W. W. Wynne, Colonel Richardson, and Captain Oliver. It appears that Colonel Fawcett had been stationed in India ordered to Chins about two years aince, Mrs. Faveing
ors returned to England, with her two children, one of which is only recently dead. After serving through the principal events of the late war in China, Colonel Fawcett, Whose health had become seriously affected by an attack
of fever, obtained leave of absence, and arrived in Eng. land, in company with Major Daubeney, of the 55 th Regiment, on the 18 th of last month, taking up his residence in private lodgings, at 188, Sloane-street.
Exhibition of Cartoons.-We announced Iast week in honoured the exhibition of Cartoons with their presence on Friday, preparatory to the private view which took public on Saturday. The exhibition was thrown open to the Thd during the whole week it has been numerously atteuded. large Cartoons are 140 in number, and being all of very Walls and a large screen placed down the division of the pearance chompletely covered by them. Their general apand a good knowledge of the principles of composition; sidered to them possess great merit, and are generally conbave not as yet advanced so rapidly as might be desired, have, at all yevents, within these few years, made consider-
able progress ; and that in historical pictures the artists
of this country may be expected to compete successfully of this country may be expected to compete successfully
with the artists of any other modern school. The follown ing is the award of the judges as to the subjects entitled will be seen that, although several Academicians have competed, none are included among the fortunate competitors. The undermentioned classes constitute the only called on to determine.-Prizes of 3002 . Cesar's first Anvasion of Britain, Mr. E. Armitage, 13, George-street, cus led in triumph through the streets of Rome, Mr. 'P. Watts, Robert-street, Hampstead-road; First Trial by Jury, Mr. C. W. Cope, Hyde Park-gardens. Prizes his Christian Queen, Mr. J. C. Horsley, High-row, Kensington Gravel-pits; Cardinal Bouchier, urging the
Dowager Queen of Edward IV, to give up from sanctuary the Duke of York, Mr. J. T. Bell, School of Design, end, Blandford-cottage, Brompton. Prizes of 100 l . Una alarmed by the Fairies and Satyrs, Mr. W. E. Frost, tons, Mr. E. T. Parris, Grafton-street; Boadicea haranguing the Iceni, Mr. H. C. Selons, Camden-street North; Alfred submitting his Code of Laws for the Berners-street; Eleanor saves the life of her husband, afterwards Edward I., by sucking the poison from the Buckingham-gate. Of the other cartoons it will be suffiMilton, and 17 of Shakespeare. One represents "David", Milton, and 17 of Shakespeare. One represents "David," 57 , and c. xviii.g v. $1,6,7,8,9$, and 28 . All the rest of he cartoons, with three exceptions, are illustrative of passages in the earlier records of the History of England; than the 15 th century. One of these has for its subject A Wilch led to Exxecution, about the year 1481." It many subjects taken from Shakespeare and Milton as from the whole range of English history, and that there is but one subject from Holy Writ. The arrangement of the drawings in the Hall is the subject of general com-
mendation, and it is only to be regretted that in the mendation, and it is only to be regretted that in the compelled to find room for some very imperfect specimens sent in for competition, which, in some slight degree mar the effect of the more finished productions. Both sides some places reach nearly to the roof from the ground. The centre of the hall is occupied by a lofty frame-work, on each side of which two tiers of subjects are arranged. light for the various drawings, but the result evidencer much care and labour bestowed in a satisfactory manner. of the well-known French painter first prize, was a pupil is said that he is only 2 yainter Paul Delaroche, and it has obtained one of the 100l. prizes is known by his
drawings for the Book of Beauty, and as the figures and groups in Mr. Burford's Panoram Mr . Cope is also known as connected with art, and Mr . Severn during a long residence at Rome acquired consi-
derable reputation among the English visitors by historical paintings. With these exceptions all the other fortunate competitors are comparatively unknown. The the con will continue up to the close of next week a the carge of one shilling ; it will then be thrown open to the Saturday in each week, reserved at the price of a shilling for those who wish to examine the drawings more at leisure. The money derived from the exhibition will be bereafter to be determined on
Sudden Death of Colonel Ellison.-This melancholy event occurred on Monday morning, about 9 o'clock, under the following distressing circumstances:-The Colonel was commander of the 1st Battalion of the Grenadier Guards for field duty. The men had deployed inter Hyde-park for field duty. The men had deployed into line, and the had just given the word to "Present health and spirits, had just given the word to "Present arms," as a general salute, when he fell from his horse in a fit. Numbers of the ofticers hastened to render aid, while several galloped to obtain medical assistance. There was, however, a surgeon on the spot, but all efforts were useleas, and in the course of in Norfolk-street, Park-lane, and was borne to his residence in Norfolk-street, Park-lane, on a stretcher, attended by character of the scene, his wife, who was talking with her husband but a few minutes before, witnessed the ocer rence; at the next moment she was at his side upon her knees, endeavouring to render every assistance in her
power, but overcome by deep emotion, she fainted, and was conveyed from the Park by some of her friends. Colonel Ellison was nearly 60 years of age, and entered the army in 1807 , and served throughout the Peninsular war,
under the Duke of Wellington; at Quatre Bras and at Waterloo, his bravery and gallantry gained the notice of of Major. He was at the taking of Peronne in 1815 served in command of the 2d battalion in Canada, 1840 and returned home in 1841, when he took the command ried the Hon, Mary Montagu, sister of Lord Rokeby, by whom he leaves a family of one son and two daughters. returned a verdict of died by the visitation of God.

King's College.-On Friday the annual distribution of prizes to the students took place in the thealre of the college. In the absence of the Arcbbishop of Canterbury, who was prevented from attending from indisposition, the chair was taken by the Bishop of London, the President, supported by the Bishop of Llandaff, Lords Radstock, Normanton, and Calthorpe, Sir R. Inglis, Dr. D'Oyley, and numerous other patrons and friends. The Ciairmaa, briefly stated the object of the meeting, regretting the occasion which prevented the Archbisbop from presiding, was founded, designating principles on which the college purely a Church of England institution Lonsdale, the Principal of the college, and the Archdeacon fessors, addressed the meeting, and announced the names of the prizemen in their respective classes; after which the Bishop delivered the prizes as follows, accompanied by an appropriate address to each:-Department of General Literature and Science-Divinity: First-year's Men, A. Barry, J. F. Hardy; Second ditto, J. F. Vinter, ThompJ. F. Hardy ture: Prize 1, W. Ince; 2, A. Barry; 3, W. F. Edwards; 4, A. P. Lovekin. Latin Essay-Junior: E. W. Field. Mathematics: L, F. W. Vinter; 2, A. Barry, Dunn; 3, Rowe : 4, Edwards; 5, Wiglesworth. English Literature: A. Barry. English History: 1, A. Barry; 2, A. Povah. Hebrew: 1, J. L. Capper; 2, Dickinson. German: A.
Barry. French: A. Barry. Stephen Prize: A. Povah. Department of Engineering, \&tc.-Divinity: First-year's Men, J. P. Wormeley; Second ditto, Edward Chance. Mathematics : I, E. Chance; 2, W. R. James. Natural Philosophy and Mechanics: 1, J. F. Twisden; 2, A. W. Makinson; 3, Edward Chance; 4, W. R. James. Che-
mistry: 1, W. Clark; 2, J. F. Twisden. Geology : H. mistry : 1, W. Clark; 2, J. F. Twisden. Geology : H.
Hayter. Arts of Construction: H. Hayter. Architecture G. Srell. Mineralogy: T. C. H. Deacon. Mana facturing Art: Prize 1, H. Hayter ; 2, Haynes; 3, Twisden: 4, Thompson; 5, Henchman. Geometrical Drawing : Prize 1, W. Clark ; 2, Makinson. Surveying : Prize Peile; 2, J. Morgan. Associates-F. W. Moody; F. Spurrell; A. J. Biddle; J. S. Lavies ; H. J. Clarke; G. Snell. Certificates of Honour in Engineering-Snell, Llandaff proposed a vote of thanks to the Bishop of London for his kindness in presiding, which was seconded by Lord Radstock, and carried unanimously. His Lordship returned thanks at some lengts, and paid a high compliment to the talents of the professors and the general proficiency and conduct of the students. It will be seen from the above list that Mr. Barry, a son of the architect of the new Hlouses of Parliament, is a successful competitor in several of the most important classes.
Uniètersily College. - On Saturday afternoon the annual distribution of prizes in the Faculty of Arts and Christie, Escl., M.P., in the Chair. Professor Loge, W. D. of Faculty, read the report, which gave a satisfactory account of the proficiency attained by the pupils in literathe science, and other departments of study not within of students in the Faculty scholastic course. The number being a considerable increase upon that of the preceding year, and many of those who were last year in the junior classes had become competitors for the highest honours on the present occasion. The Chairman then proceeded to apard the prizes to the auccessful competitors. Latin - Professor Longo-Senior Class : Prize I, W. F. Durant ; ring, Nomerton, of Bristol. Junior Class: 1, C. A. Bow-- Professor Malden.-Extra Senior Class: 1, Breek of London. Senior Class : 1, C. Somerton, of Bristol ; 2, W. F. Durant. Juaior Class : 1, C. A. Bowring.
Hebrew - Professor Hurwitz. - Senior Class: 1, J. Hebrew - Professor Hurwitz. - Senior Class: 1, J.
Brown, of Coward College. Junior Class : 1, J. Edkins, Brown, of Coward College. Junior Class: 1, J. Edkins,
of Coward College. Énglish-Professor Latbam.-1, W C. Roscoe, of Liverpool. French-Professor Merlet.1, A. Crowley, of Alton, Hants; 2, C. F. Kingdon.
Ilalian-Professor Count Pepoli.- 1, A. Crowley, of Alton, Hants ; 2, A. Mott, of London. German-ProHall. Junior Class: Class: 1, C. Beevor, Haigham Hall. Junior Class: 1, J. Forster, of Brampton, CarAlton, Hants-Professor Creasy. - 1, A. Crowley, of Alton, Hants. Philosophy of Mind and Logic-Professor Hoppus-1, J. Beighton, of Coward College; 2, A. Crowley, of Alton, Hants. Malhematics-Professor De Morgan.--Senior Class, Higher Division: 1, W. R. Wills, of Birmingham. Lower Division: 1, W. H. S. W. Waley of London. Nalural Philosophy and Astronomy.-Senior Class: 1, W. R. Wills. Junior Class, Equal; 1, 2, A. Warren and J. Edkins; 3, C. A. BowClass: l, R. H. Hutton, of London. Drawing-Timentul Mr. Moore.-1, H. Bankart, of Camberwing-Teacher, tur'e - Professor Donaldson, - 1, E. Dobson. Croucher. Botany-Professor Lindley.-Junior Class: -1, W. Marshall, of Norwich Zoology-Professor Grant. Carey.-First Course: 1, J. B. Hoskins, of Loosson Second Course: 1, P. W. Morris, of London. Third Professor Graves, Morris, of London. JurisprudenceCourse : 1, J. B. Hoskins, of London. Mr. Cbristie then prospsed the meeting at some length on the increasing prosperity of the college
American, Belgian, and Enclish gentlemeng of French, Sir R. Peel, on Caturday to present to him an st address to he Peel, on Saturday, to present to him an "address
the recent sittings of the Peace Convention in this Wab introduced by Dr iddress from the Peace Convention urging the introduction of a clause in all international treaties, binding the tion of a clause in all international treaties, inding itra parties of one or more friendly Powers. The address was read by the secretary, and very courteously received by the Prime Minister, who promised to place it before the other members of Government, and stated that the principle of arbitration had been frequently
upon during the last twenty years.
Meetings of Companies.-On Monday the half-yearly matecting of the proprietors of the Colonial Bath was her
J. Irving, Esq., M.P., in the chair. From the report $1 t$ appeared that the profit for the past half-year was
$14,907 \%$. 93 . $10 d$. The total assets was stated to be 14,9072. $9 s .10 d$. The total assets was stated to be
$1,505,0306$. 8 s .10 d . The directors recommended dividend of $1 l .10 \mathrm{~s}$. for the half-year, which was at th rate of three per cent. per annum. The directors hoped, as a more favourable state of things had arisen
West Indies, that the losses would not amount to thore than was estimated at the last meeting. On the chairman reapect to the losses incurred by the bank, in which Wr. Wood, M.P.; Mr. Gurney, Mr. P. Stewart, M.P., ac. took part. Mr. Wood proposeama comme the repor adopted.-The half-yearly meeting of the London Dock Company was held on Tuesday. Fromi the report it the docks from foreign ports, during the six months ending the 31 st $M_{+y}$, was 434 , measuring 96,486 tons1842. Notwithstanding the decrease in tonnage there Was ati increaste in tevenue, compared with the correpoonding period of last year, 8,28 , tons sit the corresponding date in last year, 94,469 tons. $\AA$ dividend was declared for the half-yea was declared for the hall-year of two per cent. on tho Wednesday the cuarterly court of proprietors of South Sea Stock was held at the Company's House, in Thread-needle-street. Mr. Franks, the sub-governor, in the chair After some routine business bad been disposed of, the dividend declared, Mr. Mocatta brought forward a motion for the surrender of the Company's charter to the Crown of equitable terims. Mr. Capel seconded the motion and after a long discussion on the propriety of enterwithout notice, the Chairman put the resolution, when only the mover and seconder held up their hands in favour
of jit. Nearly all the rest of the proprietors voted against it.

The New Steam Frigate.-The Penelope steam-frigate Was commissioned last week by Captain Jones, who
formerly commanded the Vestal, and was inspected on Saturday by the Lords of the Admiralty, for the purpose o trying her engines and rate of speed. The atrention or he naval world has of late been directed to this vessel, recently
converted from a sail ing frigate of a useless class to a powerful war steamer, 245 feet long, and fitted with engines of a power surpassing any hitherto made, either for land or sea purposes, the cylinder being 92 inches in diameter. The lines of the French Hebe, at Chatham, in 1830. There are nearly 40 of this class of vessels lying in ordinary at the several ports, none of which are, parative dimenslons, suited $f$ foreign navies, either in size, capability of armament, o equipment, and have therefore become nothing more than blanks in the list of the British navy, although they could not have been buit at a less cost the Admiralty, with the view of rendering these vessels serviceable to the country have caused the Penelope to be converted, as an experiment, into a steam frigate, in order to ascertain if they can be made available to the service as war steamers. If is now hardly a doubt, these otherwise useless ships can be converted into a steam fleet of such enormous power as may bid defiance to the navies of the whole world, and a mast of less than one quarter of the amount it woul require to build them. The Penelope can stow fuel to last her 16 days with full steaming power, and by husband ing the consumption of coals be the capailitie can be increased to 24 days' steaming, which, with the 8 i can beil will take the ship to the Cape of Good Hope : or sail, will take from England, with a regiment of 800 aldiers, in addition to her crew of 300 men , giving ample acommodation to all. She will be furnished with an armament that is astounding to all who are acquainted with the power of naval gupnery: Damely, two 10 -inch pivot guns of 84 cwt . each; eight 68 -pounders, all shel guns; and fourteen 32 -pounders ecks, making, in all, commanding position, to bid defiance to any two ships the line. In the trial on Saturday she prover be a vessel of extraordinary velocity, her maximum rate of steaming, with the tide in her favour, being 138-10th miles per hour, and her minimum speed 103 -10ths miles per hour. On ber return to Blackwall, she was off Erith at 437 P.M., and reached her moorings at 5 37, having performed the distan
Light Gold.-It has been discovered that a consider able number of light sovereigns and half-sovereigus have been making their appearance in the metropolis for the
last few months, and it is ascertained that the bulliondealers and Jews in Paris, Rotterdam, Hamburgh, and this country all the light gold they have had in exchange during and since the panic.
Hammersmith. - The business of the Kersington Police Court will, after the 12 th inst., be transferred to more commodious premises at Brook-green, Hammersmith and the Court will be called the Hammersmith Courn. Chelsea Hospital.-The governors of Chersea Hospita djoining the College for the erection of a church for th pensioners, which will be also free to the public. A Bil is before Parliament empowering the governors to apply Colonel Droply property the erection of the propose church. The building will be almost sufficiently capacious or the accommodation of matiy of the inhabitan
Millbank Prison.-The Penitentiary at Millbank has been changed into "The Millbank Prison," and placed ander the superintendence of inspectors. The practice of visiting justices has been discontinued, and magistrates have now no power over its internal mage discipline inspectors are to make rulos to gopinent and laid before Parlisment. These alterations have been effected br and che into aperation on the 27 th nl
Middle Temple Gardens.-The Benchers of the Middle Temple have issued an order against the gardens being ened to the public in fature on Sunday
Thames Tunnel.-The number of persons who passed through the Tunnel last week was 48,628, making the Mortality of the Metropolis. - The following is the number of Deaths registered in the week ending Saturday, June 24:-West districts, 139; North districts, $175 ;$ Central districts, 190; East districts, 182; South
districts, 199 -Total, 885 . Males, $450-$ Females, 435 . Weekly average for the last five years, 903 . ( 461 males, 442 females) ; and for the last five springs, 854

Bath.-The Rev. Dr. Baines, Vicar Apostolic of the Western Distriet, was found dead in his bed at Priorpark on Thursday morning. The deceased prelate, who Woman his 59 th year, assisted at the opening of the from the Irvingites, is attributed to an attack of apoplexy, to which he had formerly been subject. Dr. Baines was consecrated Bishop of Siga on the 1 st May, 1823.
Brisiol. -The liabilities of Messrs. Harford and Co. wose failure was recentiy announced, amount 986 , the assets are estimated at 93,0002 ., besides the surplus of the price realized by the works above the mortgages. The gages are stated at from $40,000 l$. to $60,000 l$.
of 1 possibility of breach of the peace continue fo from Pater Cardigan, and two troops of the Castlemartin Yeomanry have arrived at returned on Tuesday night. Other troops are to be stationed here; and, in fact, the whole country is to be tudded with soldiers, who are to be kept continuall unable to calculate at any time upon their presence at any particular place. The magazine on Picton-terrace is to 200 or more will be permanently stationed in this town The gate-levellers have continued their nocturnal depre dations as usual. The papers report the nemore Cardigan
three gates near Lampeter, of two or three near three gates near Lampeter, of thouse, which is a heap o ruins; or a gate called New Inn Gate, on the road fon Llandilo to Talley ; of Trevach Gate, and several other in different parts of the county. At Cardigan they wer scarcely less bold than in their attack on the Carmarthen workhouse. About tweive oclock on Friday night, th 23d, they commenced an attack on the gate and tollhouse erected on the main road leading from that town to Abe with "Rebecca" appeared on foot, dressed daughters, assuming the name of Pboebe, had considerable interes in the command, and she was often called upon, with oud cry of "More hands, Phoebe! About ten minute past one, the toll-house, with about eight perches of was
built stone fence, erected on both sides of the gate, was mass of ruin. The gate-posts and the timber forming the roof of the tollhouse were smashed to picees. The folloge a loud cheer, hundreds clapping their hands, mob, headed by their leaders, marched in procession through the principal streets of Cardigan, firing now and gates, standing about thras the Rhydyfuwch te off, the first on the road leading from Cardigan to Newcastle Emlyn. There are two gates, with the toll-h and it was destroyed in a few minutes, when the depredators disappeared, and none of them have yet been detected. Devizes.-A meeting has been held in this town for the purpose of establishing an agricultural college for a district comprising Wilts and the adjoining counties of Gloucester, Oxford, and Berks Durham. -The local papers mention as a fact, that the
trophies won by Mr. Bowes's horse "Cotherstone," the
last winner of the Derby, have actually caused the fame of Cotherstone cheeses to be spread to such an extent that their price has risen from 9d. to 18d, per pound and at this moment.they great has been the
Guildford,-At the Surrey Sessions last week, the Grand Jury, prior to their discharge from attendance made the following presentment. It should be stated, that when the chairman delivered his charge to them on he frot day of the sessions he exptial al length on the importance of persons engaged in agricul tural purbuits exerting theasetw to to employment to the labouring population. "The Gratid Jury, whose names are subscribed, in consequence of the remarks of the chairman, in his aadress to the Jim in hi apinit that if labourers had constant mployment, with adequate wages, there would be a great diminution of offences ; but from the depression in the value of agricultural produce, we cannot expect, neither is it possible with the preseat can improve their cultivation, or employ more labourers than is absolutely necessary." - Mr. Cobden paid a visit to this town on Saturday, for the purpose of being present a public meeting and explaining his views as to the are which the Corn-laws operate upon tenant place in farm-labourers. The meeting was to take place was not large enough to was soon found to thember of persons anxions to be present, and it was therefore agreed to adjourn to the barrack-field, where some wasgons had been placed for the accommodation of the speakers. Nearly two thousand persons assembled, but in from a wat of interest in the proceedings, or from being engaged in the harvest, very few of the number consisted of formers, the areat proportion of the aaditory being labourers and inhabitants of Guildford. Mr. Mangles, one of the members for the borough, took the chair. Mr. Cobden then addressed the meeting at great by Mr. Maydwell, who opposed Mr. Cobden's arguments, and stated his opinion that steam had been the cause of all the distress, by destroying the demand for houble Mr. Moore next aldressed the meeting at considerable lengla, the opinion of the meeting, il munity at the expene protection to an chass bly of the others, ought to be inmmediately and unconditionally
abolished. The motion was seconded, and carried by a majority of about two-thirds of the meeting
Knutsford. - At the Quarter Sessions on Monday wreek the Rev. J. Mitchell, assistant-curate of Habergham Laves, was appointed chaplain of the comist gepentation hima, M. Traford, complawe enpecting the discussio Which had appeared in the reportrespected that he had put it the Court whether the loder and hela something ike a threat to exclude the press, misrepresentations were persevered M. He did note that the words used were these:-"It is my duty to as you if this letter requires an answer? Mr. G. Wilbraham subsequendy rose to move, hiat an ans a leter; but finding the meeting against him, he abandone o intention, declaring, amid the laughter of the other mis otion was then agreed to, appointing five fresh vising meeting he Mr. H. Marsiand station on the subject of the dismissal of the g
Lancaster.-The late Mr. Joseph Ridgway, of Ridg ont, made bequests to public institutions connected of his widown $8,600 \%$., to take erfect arter the deceas Cents. to produce annuities, to be applied to churches and schools, amounting to $432 l_{\text {. All this is said to be free }}$ of legacy-taz and the entire sum is not less than 26.0002 Lym-We lately noticed the robbery of the byn Bank by a cerk namd Sancer, who absconded on the 15 th bant 1 n and Ullswater, on Monday last, and the whole of the property, except 20l. spent on his tour to the Lakes, amounting to 4.300 z He was sent immediately to Norfolk in custody to take his trial at the assizes.
Liverpool.-A meeting of the subscribers to the monument to Mr. Canning decided that the balance of the funs collang Mechanics', and the Royal Institutions. Mechanics', and the Royal Institutions.
the timbertome Shields Railway, was discovered to be on fire. By midnight nearly the whole of the timber in the yard, valued at between $b, 000$. and $6,000 \cdot$., was enveloped in and before the fire could be subdued, twelve dwellits houses, inhabited by poor people, was cold value of the property destroyed is estimated at 20,000 and the tre is supoosed to be the work of anincesala Portsmouth.-The Waterwitch, 10, Lieutenant Matson, arrived in this port on Thurstay, the 28th. She sa the from the Cape on the 7 th March for a short cruize on the coast of Africa, where she arrived on the 12 th, and on the 3d April captured a vessel with 390 slaves on board. the 27th April she boarded a brig, which was run on she the in chase and deserted by her crew, and hove her off, the shavers men keeping up a for musketry man was wounded immediately over head, by which one mas Water-
witch's captares during the period of her service on the coast a mount to forty, and from these vessels she released 2,922 slaves. During the whole of her service on the coast of Africa only four of her men have died on board, of Whiom two were of coast fever and two casualties.
Shisthampton.-It has been officially announced that this port is finally fixed upon as the starting-point of the steamers carrying the mails to the West Indies and South America, to the East Indies, Egypt, Malta, and ali parts of Spain and Portugal, without calling at Falmouth to talke in the mails, or on the homeward voyage to deliver them. In future, all the steam mails, with the passengers, are to be dispatched and landed at this port.
Railways.-The following are the returns of the underBirmingham, 17,6982.; Great Western :-London and Western; $7,098 l_{0}$; South Eastern, $2,485 l_{\text {. }}$; Eastern Counties, 2,7151. North Midland, 4,4271 , ; York and
 Selby, 1,2281 . ; Midland Counties, $2,7011$. ; Paris and Shareholders in the a special general meeting of the held last week, for the purpose of dividing the remaining funds of the company, the directors recommended a return to the shareholders of $8 \%, 6 \%_{0}$ per share, after paying Thich, the surplus in hand would amount, it is stated, to time in the bands of trustees prior to a final distribution, This company obtained an act of Parliament some years熋o for the purpose of forming a branch line from Camden Skinner-street, Snow-hill, so as to bring the northern Ines into the city, - The remaining portion of the Bolton lines into the city. - The remaining portion of the Bolton
and Preston Railway, after having been inspected and approved by General Pasley, the Government Inspector, was opened to the public last week, thus completing an towns of Manchester, Bolton, and Preston.-At the mennal general meeting of the Dufryn and Lynn Company, held at Glamorgan, the report anijcipated an augmenta-
tiou of traffic, and a dividend of four per cent to the shareholders. The receipts for the year amounted to 5,2781 . leaving a balance, after the payment of expenses,
of 2,2007 . At the annual reneral and Forfar company at Duadee, the accounts showed total revenue for the year of $8,500 \%$, and an expenditure of 6,4722 ., Jeaving a surplus profit for the year of 2,068 . sinking fund, which gave rise to considerable discussion, and ultimately a committee of inquiry was appointed to investigate the whole of the company's affairs.

## RELAND.

Dublin,-The following magistrates have been supersoded since our last :-Mr. Denis M•Carthy, magistrate Yor Cork; Sir Valentine Blake, Bart., M.P., Mr. P. P. and Lyons, for Queen's County; Mr. Sherlock and Mr. the following magistrates :-Mr Chancellor has appointed me font, for the magistrates :-Mr. R. W. White, of Springmount, for the county of Tipperary; Mr. J. S. Barry, Mr.
Orpen, and Mr.Reid, for the county of Cork: Sir R. Paul for Waterford; Mr. C. M/Garel for Antrim ; Capt. J. Johnston
for Cavan; Mr. J. Johnston for Fermanagh ; Mr. J. John for Cavan; Mr. J. Johnston for Fermanagh ; Mr. J.John-
ston for Donegal; and Mr. H. O'Reilly for Wicklow. ston for Donegal; and Mr. H. O'Reilly for Wicklow.
-One of the most extraordinary popular demonstrations ever witnessed in this city took place on Monday; on the
occasion of the meeting of the tradesmen of Dublin to occasion of the meeting of the tradesmen of Dublin to
petition for a repeal of the union. From eight o'clock the streets were thronged by multitudes, anzious to witness the various trades proceeding to the place of rendezvous, Each of the trades, headed by its northern suburbs. marched two and two, and, in some instances, forr abreast, With the utmost precision and regularity. In the mean
time the city was all bustle and animation, the various streets through which the processiocially in pass, on the route from Phibsborough to Donnybrook. Along the quays towards the North-wall the shipping in through Dublin, the procession halted in front passing residence of Mr. O'Connell, who stood on the balcony to receive them, accompanied by several members of his New York 'The firt of the trades remainder, in regular order, proceeded by Mr. O'Connell's house, and thence passed on to the Donnybrook road and, ultimately, into the Fair-green, in the centre of Which a platform was erected for the accommodation of the speakers. The Evening Alail estimates the numbers lations considerably over 100,000 persons;" but other calcunumber of horsemen, farmers, and others from the neigh bouring counties. The Fair-green, containing about 15 acres, was crowded, as well as the road adjacent, and part of the village. The multitude, notwithstanding its im. mense extent, was perfectly tranquil and orderly throughand read a letter fro Mr. J. O'Connell took the ebair apologising for his absence, but expressing his hearty approbation of the objects of the meeting. Similar letters The following the Bishop of Ardagh and Lord Ffrench. "That the malignity evinced towards Ireland by and present cabinet, who direct our august Sovereign, against our beloved country, has not, nor shall noats Bhake our confided country, has not, nor shall not, her Irish subjat Royal lady require the services of Irish subjects on any emergency whatever, none
amongst that loyal people would be found more ready to of her Royal person and throne thensary, in defence the ancient and loyal city of Dubli, the tradesmen of tion was to the effert that of Dublin." The next resoluIreland enjoyed the benefit of domestic legislation. that it is preposterous to suppose that foreign legislation could promote the interests of the country; and that Irish Parliament. The thitrd resolution restoration of the Irish Parliament. The third resolution embodied the firm conviction of the meeting that a jealousy of Irish pros-
perity was the originating cause of the union. Both these perity was the originating cause of the union. Both these
resolutions were carried unanimously. Mr. O'Connell then addressed the meeting, congratulating them on the approaching accomplishment of their object, and detailing the progress of the movement. Several other persons
followed on the same topics; after which, the immense multitude quietly dispersed. The weekly meeting of the Repeal Association took place on Tuesday. Mr. O'Con nell handed in $1,0796.35$. 6d, from Boston, New York,
Philadelphia; ahd Brooklyn, in the United States, Philadelphias, and Brooklyn, in the United States, and
200. from Halifax. At the close of the procedins 20.. from Halifar. At the close of the proceedings Mr . O Connell announced that the repeal rent, ap to Mon-
day, was 2,4951 . 14 s . $0 \frac{1}{2} d$., independent of 3002 , received on Tuesday, which should go to the next week's account -The accounts received from the provinces show that the Eeneral order of Lord Roden has been obeyed throughout Uader, and, for the first time during many years, ther procession as far as the inteligence extends, no Orang naut, ascended in his balloon on Thursday, the 29th, fo the Portobello gardens, and in his descent fell into the sea Coas bray Head. He was fortunately rescued by the water and tha fishermen, fler being 20 minutes that the Right Hon. A. E. Blake, Chief Remerabrancer of the Exchequer, has resigned, "his state of health requiring that be should remove to a thore genial climate:" and that the Solicitor-General, Mr. Greene, is to e his successor.
300 thidalk. -A repeal meeting, attended, it is said, by lown on town on Thursday week. Mr. De Vernon presided, and adopted. Mr. O'Connell then addressed the considerable length, and said he bad three provinces witl him, and the greater part of the fourth province with him and he defied all the Wellingtons that ever gained battles, and all the Peels that ever exercised dexterity, to preven him from having repeal. At the dinner in the evening Mr, O'Connell explained his plan for the new Irish par-
liament, and said, the towns that ought to send members to the new Irish parliament will be ascertained by taking up the population of 1831 ; so that no favour is given to anybody. "Every town having 9,000 inhabitants is entitled to representation ; and that, with county memout this plan, I will propose that each order to carry to representation do lay down 100l,, and with the aid of the individuals whom they select, we will meet in Dublin consider the plan I have suggested. Any town that sefuse to to make that sacrifice, I don't think it would deIf the individuals sacrifice for the towns, they don't reserve to make that for those towns afterwards. I would thus have 300 red themen assembled in Dublin by accident. A treasury will be formed by the inpouring of the sums I have specified, and they can dissolve themselves the next day, if the law requires it. And what is to prevent my asking those nobody else shall attend but themselves and me? I don't see way we should not have our conciliation board - not sitting as deputies, but merely bappening to have the confidence of localities. I have made my plan-I have exgentlemen through every Parliament, and will drive 300 objection to that plan-there will be 300 men with a nation to their back. There remains only the assent of the Sovereign; and I tell you distinctly it can at once be revived, legally and constitutionally, by the mere exercise of the prerogative of the Crown-revived hy the issuing of writs, without going to the British Parliament at all."

Edinburgh.-The Professorship
University baving become racalp of Divinity in this Dr. Chalmers, the Provost and Council have resolved of proceeding to the election of a successor on September 5 . Glasgow,-According to announcement the Repealers in the City Hall, Candleriges last weol. otheir view filled in every part, the hall was filled in every part, and the proceedings, which did no the most enthusiastic description. It is calculated that he morly 3000 persons drat tea ol Dumfries, M Kirkwod of the occasion.
Dumfrie.-A. Now, of Holywood, who signed the Convocation ist, and who left the Presbytery of Dumries along with the other Convocationists in April last, having made a statement of his views, it was moved that his name be entered upnn the roll, which was agreed to.

DAXTON'S POCKET BOTSANTCAL
In what may be called an age of Cyclopæedias, when the compres ion of a great variety of information into one volume, in order to
hring it ivithin the means of persous of all ranks, is so universal sought, it is cvideritly desirable that the Gardener, and those connected with bis protesstol, should be as weil accommodated as other
classes in this particular. No such work existing, however pher classes in this particular, No such work existing, however, prior apparent; since it combines the more essential features of a Botanical Catalogue, a Horticultural Guide, and a Technical Glossary
Fesides being of this comprehensive description, it is especially adapted for the Amateur and Floriculturist; who may, by carrying
itin his pocket, examine all the piants that are at any time submitted to his inspection, and immediately derive every intelligence respect ing the peculiarities or affinities of particular species which could reasonably be wished for. This is an advantage that can only be
sutticently estimated by those who have felt the want of such an suftictentiy estimated hy those who have felt the want of such an friend of Horticulture, the Pocket Botanicul Dictionary is decidedly London: J. An.drews, Bond-street; ORR \& C0, Paternoster-row.

# NEW AND IMPROVED CHURCH AND CHAMBER ORGAN, manufactured by h. C. Lincoln, 

Organ Builder to Her Majesty The Queen,

And to their late Majesties George the Fourth and William the Fourth HER MAJESTY'S CHAPEL ROYAL, BRIGHTON her majesty's palace, the pavilion, brighton her Majesty's CHAPEL, DEVONPORT.

## Mr. LINCOLN has just had the honour to receive the following testimonial from the Rev. W. F. H. Hooprr <br> Incumbent of Withington

Withington, Manchester, March 27, 1843
Wr. Tricons has just completed an Organ for my Church, which was opened by $D_{\mathrm{R}}$. Gauntibtr on Friday the 17 th , and Sunday the 19th, of this month. The Instrument has given the most complete satisfaction to me and to all who have felt an interest in its erection. The best judges both amongst my own people and of persons unconnected with thre Lurcoln has pronounced it perfect-unsarpasset in its softness, richness, aness and uprightncss, and as becomes a tradesman of the highes treated us with considerabie liberaity, has acted with openess a folfiling his contract to the utmost, and has devoted himsel respectability-has spared neither labour nor (I may ada) expong out an Instrument that should give perfect satisfaction to the strenuously, not to say enthuslastically, to the work of thr he has completely succeeded; and I shall be happy if my recommend Committee of gentlemen concernet
ation secures him further patronag.

## Organ Manupactory, 196, Migh Holborn.

 Mr. LINCOLN solicits the attertion of the Nobility, Clergy and the Professors and Amateurs of Church Vocal and Instrumental Music, to the peculiarities and advantages of the great and numerous improvements he has recently adopted in the construction of the Church and Chamber Organ. These alterations have been made with a view of affording an increased efficacy to the Organ, in rendering its supportto a large congregation, and in the performance of Church Instnumental Music. The effect gained is such as to combine the bradth and variety which dis. tinguish the Continental Organ, with the universally xecognised sweet and silvery tones produced by :he English mode of voicing and finishing the pipes.The advantages gained by the adoption of the new mode of construction are unquestionable:-
1st. The Organ bas a more weighty and solemn character of tone, which is gained by the introduction of the new Stops, called the Bourdon, Tenoroon, and Quint.
2d. It has a more brilliant and silvery character, from the new mode of arranging the Sesquialteras, Mixtures, and by the use of a new Stop, called the Doublette.
3d. It has a more soft and varied character, from the circumstance that instead of the Instrument only possessing one Flute, it has three, four, or even six, all of which combine with the new Stops in producing an entirely new quality of tone to the Organ, and which is admirably adapted to the purposes of Psalmody, These Flutes are called the Claribel-Flute, the Obne-Flute, the Wald-Flute, the Suabe-Flute, the Piccolo, and the Flageolet.

4th.". It has more breadth and body of tone, from the adoption of a new method of manufacturing the Reed Stops. These are made to speak, so as to combine the weight of a Diapason with the fullest tone which it is possible to giva to a Reed Pipe. The new Reed Stops are called the Posaune, the Trombone, the Cor nopean, the Soft Horn, the Corno-Flute, the Clarionet, the Trumpet, the Clarion, the Oboe, and the Octave Clarion.
5th. A distant, subdued, and piano effect, combined with brilliancy sufficiently prominent to keep up the voices, is grained by the Tenoroon Dulciana, a new Reedy-toned Dulciana, and the Echo Dulciana Cornet, a Stop of Five Ranks of Pipes, which has been copied from one in the celebrated Organ of Cologne Cathedral. 6 th. More Pipes are obtained to each Key than has yet been attained, and at a less expense; and it must be evident the greater number of Pipes of differing qualities of tone that can be brought to bear upon each Key the greater must be the musical resources of the Instrument.
7th. The Sound-boards are made to contain nearly double the work of the ordinary sound-boards, and the wind-chests nearly double the quantity of wind.
8th. No money is thrown away upon useless mechanism, but the greatest attention is paid to create music in every possible varicty and combination.
9th. Although the compass of the Keys is apparently contracted to CC, in effect the Organ extends to CCC, as every Key on the Manual has it with its Unisons, the Octave below; thus, in fact, the Instrument has the same compass as the Organ in St. Paul's Cathedral, without the disadvantages attending the old compass.

Mr. Lincoln begs to refer to the following Organs, as examples of the new manner of combining great power and variety at a small expense.
THE NEW ORGAN IN THE CHURCH OF ST. THOMAS, THE ROLLS, CHANCERY-LANE, (Opened in November)
THE NEW ORGAN IN CROSBY.HALL, BISHOPSGATE-STREET (Opened in December);
THE ORGAN AT THE NEW CHURCH, WITHINGTON, MANCEESTER (Opened in March);
THE NEW GRAND ORGAN NOW ERECTING AT THE CATHEDRAL CHURCH OF ST. DAVID

Mr. Lincoln submits the following Testimoniats from the late Dr. Clarke Whitfield, Mr. Attwood, Mr. Thomas Adams, Dr. Gauntlett, and Mr. Purkis, as to the Character of his style of Organ Building :-

From Dr. J. Clabee Whitpield, Professo
1 have employed Mr. Lincoln at Trinity and St. John's CoI leges during my residence at Cambridge, and therefore can vouch for the superiority and durability of his work, as well as for his moderate charges. It is my opinion that the Diapasons "Father Schmidit" than those of any other Organ Builder of the present day.

## From Mr. AtTwood, Organist of St, Paul's Cathedral, and

I have the pleasure to inform you that I think the Organ built by Mr. Lincoun an instrument possessing a fine
great power, and very complete in all its parts.

Testimonial from the New Church Committre, Newington, and Mr. PupEIs, Organist
The undersigned feel highly gratified in expressing their opinon upon the Organ huilt by Mr. Livcoiv for the said Church, and testifying to the great satisfaction he has given
therem, not only with respect to its internal construction, mechanism, and powers, but also to the very fine and superior quality of tone it so eminently possesses, and of which it is ccarcely possible to convey a suficiently just and adequate itea
$\begin{array}{ll}\text { (Signed) } & \text { Gilubert Ellowt, Minister. } \\ & \text { John Purkis, Organist. }\end{array}$ John Purkis, Organist.
(And all the Committee.)

Testimonial from the New Church Comsittere, Camberwell,
The undersigned deem it only common jnstice to Mr. Lincols oxpress the very high and general satisfaction which he has any written contract, he completed, withan the time stipulated, all, and even more than in his tonder he had engaged to perform, Organ, of its internal mechanism and workmanship, and above all, of its powerful yet mellow and most beautifal tone, it is scarcely possible to convey a just idea of the praise which
been bestowed upon it by all who have seen and heard it
$\qquad$
John Vane, Minister.
Thos. Adams, Organist. (And all the Committee.)

Testimonial from Dr. Gauntlett, Organist of Christ Chu
Newgate-street, London, and of St. Olave's, Southwart. Mr. Henry C. Lincoln has erected two Organs on my new recording my opinion of his merits. In the contracts which he has executed under my supermtendence, I have ever found him, although exceedingly moderate in his price, yet very desirous to give his employers every advantage. The internal mechanism the best style. The metal and manufacture of his pipes have been of high excellence; and every portion of his instrument
has been completed with the same uniform attention to its durability and due effect.

Mr. Lincoln has the honour to announce
A NEW AND IMPROVED CHURCH BARREL-ORGAN;
TIIE CONCERT-ORGAN FOR THE SALOON OR DRAWING-ROOM; THE APOLLONICON, OR SELF-ACTING ORGAN

## or the Mechanical Performance of Sumphonies, Overtures, Chornses,

Mr. InNcots continues to manufacture the OLD ENGLISH UNISON and GG CHURCH-ORGAN, to which he gives some new Characteristics, by means of his newly-invented Flute, Reed, and Diapason Stops. He also reconstructs the Old Instruments upon the New Plan.

E Lectro-plated and gilf articles. meet the increasy \& Co., Patentess, beg to announce that, to
 (CORNER of JERMYN-STREET, ) where every yariety of articles
for the Side-board, Dinner, Desseit, and BreakKast Tables may be inspected. They have also a similar assortment at their City Establishment, No. 45, MOORGATE-STREET, where they have a MANUFAC-
TORY for PLATING and GILDING, RE-PLATING and $12 E$ TORY for PLATING and GILDING, RE-PLATING and RE-
GILDING ARTICLES of every description, and of ALL METALS. GILDING ARTICLES of every description, and of ALL METALS beg to state that they differ from all goods litherto offereld as "Plated Conts" or "Substitutes for Siver," beng made in the same manner as SOLID SILVER, trom which they cannot be
known, and being also composed of a hard white metal, strongly known, and beng also the Electro process.
Siver Articles of every kind or pattern exactly copied.
Every article made by the Patentees bears then eneath a Crown.)

n
nothing else ; for vapour of the ammonia, and to weak gas-liquor, their death does not appear to be hastened by that operation; on the contrary, when ammonia, they died even faster; and caterpillars
a to foating in the weak gas-liquor lived longer than when compelled to inhale its vapour. In all cases the insects make vehement efforts to escape, so that no doubt can exist of the ammonia producing immediate inconvenience and a sense of danger. If a saucer is berry moistened with weak gas-liquor, and the Goose-
catlar is thrown on it, the creature becomes immediately convulsed, and the creature itself vecomes immediately convulsed, and throws itsel
violently backwards and forwards, after which it becomes half torpid. The caterpillars do not, how ever, die, unless exposed to the influence of the ammonia for some time.
As we foresee that many inquiries will be made as to the proper proportions of gas-liquor and water that ought to be employed, it is as well to anticipate them by saying that it is impossible for us to answer such inquiries except in general terms. Everybody must ascertain the fact for himself, by miring gas-liquor and water in various proportions, and trying their effect in a small way in the first instance. The fact is, that the quantity of ammonia contained in gas-liquor is extremely variable, the gas-works making it of no uniform strength. That used by Mr. Gordon, and by the gentleman above alluded to, was very strong; effervescence not ceasing in an ounce of it until 50 drops of the sulphuric acid of the apothecaries had been added. Those who wish to determine the relative strength of that which they employ can do so by a very simple process : take one fluid ounce of the gasliquor to be employed, and add to it, drop by drop such sulphuric acid as may be bought in the apothecaries shops, until efrivescence ceases; then, supposing they find this to occur after 25 drops have been added, they will know that their gas-liquor is only half as strong as that used by the Horticultural Society; and consequently, instead of adding ten parts of water to one part gas-iquor, they must only add five parts to obtain the same strength, and so on. It is true that this is not a very exact proceeding, because the sulphuric acid of the apothe-
caries itself varies in strength; but we conceive it to caries itself varies in strength; but we conceive
be quite sufficiently exact for gardening purposes.

There is one important advantage that is obtained by this process-namely, that, independently of killing the green-fly, the plants are well manured bythe same operation; so that nothing is lost.
When gas-liquor cannot be had, or where its offensive odour is inconvenient, we should try the effect of carbonate of ammonia dissolved in water, in the proportion of one ounce of the carbonate to a pint of water. This would form a solution of about the strength of London gas-liquor, and might then be lowered with ten proportions, or, as none of the ammonia is uncombined, with 7 proportions, of water

Axthough this has been a season unprecedented of late years for its coldness and wetness, and therefore as unfavourable as can well be imagined to meetings in the open air, yet the exbibitions in the Garden or the Horticultural Society have been always crowded and have afforded undiminished enjoyment to the lovers of Horticulture; for, in the midst of almost incessant rain and cold, three fine and thoroughly English days have enabled twenty-three thousand three hundred and thirty-five persons to visit the Society's establishment. On Wednesday the beautiul gardens of the Duke of Devonshire, so kindly opened to the throng, were, as they always must be in fine weather, a great object of attraction. Nothing could well be more picturesque than the groups of well-dressed people seated on the soft turf, or wandering among the fine old trees, while the charm of the scene was greal moreased by the admirable music o the band of the Royal Horse Guards. We have said so much elsewhere, and on former occasions, concerning the exhibitors and their productions, that nothing remains to be mentioned, except that thirtythree gold, fifty-three silver-gilt, and two hundred and fifty-eight"silver medals, have rewarded the successful competitors during the present season.

There is a very common idea that arable land is troublesome to manage, and leads to expense and loss, when it is not in the hands of a very experienced farmer; and so it is, when there is such an extent of it as may be called a farm. Very few gentlemen who occupy arable land find that they havea profit at the end of the year, allowing for rent, taxes, labour, \&c. But a very few acres of a moderately good soil, occupied with a greater extent of grass land, may be very valuable to a man who keeps horses for his pleasure, and cows, sheep, and pigs, for the use of his family. In the country a horse and cart is extremely convenient, if not an essential part of an establishment. This
horse may be used in a four-wheeled carriage, alone
or with a companion, and it will be no detriment to him, whether it be a degradation or not, to draw green food for the cows and to transport manure into a field. He may now and then draw a light plough r harrow, or a horse-hoe; and if he is not wanted every day for transporting his master or some of the family from place to place, he is better occupied in light farm-work than in standing idle in a stable. In a larger establishment, where a regular carriage is kept, n odd horse is very useful, such a horse as may be substituted for one of the carriage horses, in case of his being lame or wanting a dose of physic; at all other imes he is a cart-horse.
The quantity of arable land we would suggest as useful and profitable, in addition to twenty or thirty acres of grass, should not exceed ten or twelve acres, and be chiefly cultivated for green crops-that is, roots, Cabbages, and artificial grasses for green fodder. If Corn is ever sown it must be under peculiar circumstances, for the Wheat raised by gentlemen is often dearer than that which is bought in the market; but crops of roots to feed cattJe are a great saving of Hay whereas they cannot be readily purchased, and are heavy to carry to a distance ; they require more frequent manuring, but they thus gradually improve the fertility of the soil. Suppose, then, ten acres of a ood mellow loam, worth $2 l$. an acre to let to a farmer, at a distance from a great town, and the other burdens amounting to $10 s$. more per acre: here is a rent of 22 . 10s. per acre. It may be , arst, to get some neighbouring farmer to lough the whole as deep as possible, with harrows and scarifiers, after what the who hoes. It is presumed to lie on a porous subsoil ; if not it must be thoroughly underdrained with stones or tiles before any other operation. This necessity will make its original value less than we supposed above; but the result will be the same, if we add the interest on the expense of draining to the original rent. The field should be divided and cropped as follows:-1 acre planted with Potatoss, 1 acre sown with Beet or Mangel Wurzel, I wi'h Swedish Turnips, 3 with Rye and Tares, sown at different times; if the ground is not too heary, 1 acre may be in Carrots, 1 planted with Cabbages, and 2 acres with Lucerne. This last will continue for many years if the soil is deep and mellow, and if the crop is weeded every time it is cut. As fast as the Tares are cut green for cattle, the ground is hoed by hand, and White Turnips are sown in rows. The winter Tares and Rye will be ready to cut in May, and the ground may be hoed over and raked, and liquid manure may be poured over it, before the Turnips are sown, which will be by the end of the month or early in June. Swedish Turnips may yet
be sown to advantage, or the Globe, or Red Round be sown to advantage, or the Globe, or Red Round
Turnips. Later in the season a smaller and quickerGrowing sort may be sown as late as the end of August. little attention to the succession of the different crops the ground may be kept continually in a productive state; and as all the producecan be consumed at home, the land will always have returned to it, in the shape of manure, all that is drawn from it: no plants ripening their seeds in it, there will be very increasing.
If it be asked what is to be done with all this produce for cattle, -for, except Potatoes, no food is raised for man,-we will readily answer, there is no fear of any difficully: if the stock is not sufficient asume the produce, it is easy to increase it We suppose a considerable quantity of pasture land this will keep sheep and young cattle in summer, and the roots, Cabbages, $\& \mathrm{c}$. will keep and fatten them in winter. To have a fat sheep or a lamb now and then to kill for the family is a great economy, as you have the butcher's profit as well as the grazier's; a cow or Scotch ox may also be fatted off, and will find its value in the market. The Lucerne must be kept for the horses and milch cows; the Carrots stored for the horses and pigs in winter. It is difficult to calculate the value of this produce when consumed at home, and not sold ; but the crops may be valued as they are carried off; and by putting only two-thirds of the market value it will be found, that where these crops are well managed they are far more profitable, on an average of years, than crops of Corn, even if these could be raised every year without intermission. 350 bushels of Potatoes per acre is a very common crop-but say 300 , at 18 . per bushel, which they are
well worth to feed pigs-here is $15 l$ well worth to feed pigs-here is $15 l_{\text {。 . The Carrots, if }}^{\text {the white Belgian Carrot is }}$ 15 to 25 tons; we will take sown, will produce from tons, at $1 l$. per ton: they would sell for twice that in a town, for horses-here is $15 l$. more. Tares for horses are readily sold at 18 . the square perch, the buyer cutting and carrying them; this is $8 \%$. per acre-say only $5 l$, or $15 \%$ for three acres. Lucerne is worth fully as much, or rather more, as it may be cut three or four times; to the consumer they are
bages and Swedes first sown will be worth 52 . per acre and the Beet as much. The Turnips, after the Tares, we will set only at 5 l. the three acres. We shall thus have an average produce of rol., besides all the manure which is made from its consumption, and which is more than the land requires for the subsequent crops. The rent and taxes were $25 l$., which leaves 45l. for labour. We have set down nothing for the occupier's profit, because we suppose that the convenience and saving in the feeding of his horses, the milk and butter, pigs, poultry, eggs, \&c., which he has at a much lower price than the averages, we have made ample allowances for risk from failures, for our experience holds us out in warranting the average produce to be fully what we have stated for any number of years. The variety years it might be neary doubled, outroordinary success of produce, a general tailure or extraordinary success
in all the crops is not to be expected. All the work, as far as is practicable, should be done by the task, except the taking off the crops and carting the manure. $-M$.
We perceive by the advertisements that another of Mr . Skinner's importations from Guatemala is about to be brought to the hammer. Among the plants, is the rare Sobralia macrantha, of which a very large specimen, in its native soil, is mentioned; and the very curious genus, Evelyna, of which one specimen flowered some years since at Kew , but which has never since been seen in flower in Europe. At the same time some very interesting New Zealand remarkable are-1, a new species of Araucaria, which, with the habit of the South American species, has, mirabile dictu, quite another sort of cone; 2, a noble specimen of a Fern, called Acrostichum grande; 3, some very cuxious species of Clematis, Jasmine, and Rubus, entirely new, and possibly hardy; 4, a new Dacrydium ; 5, the hitherto ness there is little doubt ; and, finally, a new species ness Orchidacer, of the curious genus Earina, which is of Orchidacer, of the curious genus Earina, what it
not in Europe elsewhere, and is so fragrant, that it not in Europe elsewhere, and is so fragrant, that it
was originally discovered in consequence of a passerby being attracted by its sweet smell to the tree on which it grew ; it is the Earina suaveolens of Professor Lindley. In the same collection are some most curious New Holland Dendrobia. We regard the last as one of the most curious collections of plants lately imported.

## PROCESS OF MAKING CHARCOAL.

Where iron cylinders are not employed for the purpose, charcoal is usually made by setting fire to a pile of wood, so covered tinat the free access of air is prevented; for if this were admitted freely, the charcoal of the wood would be driven off in the state only some ashes would remain.
The wood should be cut in lengths of two or three feet, and so as it can be packed pretty closely together. The pile may be either placed on the level ground or in a pit; in the sides, from the bottom of the pit outwards, in order to admit a little draught for the ignition of the wood in the first instance. In the centre of the area several long pieces of wood must be fixed so as to leave an opening
for introducing the kindling ; or an opening may be formed by pieces 12 or 15 inches in length, two of which are laid horizontally, six inches apart; two others are then laid at the same distance from each other across inches square and so on; thus forming an opening siie Round this the billets or faggots are closely packed in a nearly upright position. When completed, the pile should be of a rounded conical form. The wood may, however, be dis-
posed in the form of a ridge, several openings being left posed in the form of a ridge, several oplanings being left covered with turf, which may be farther closed by earth or sand, as is found necessary daring the process. Where turf cannot be easily procured, old mats or any rubbish that will prevent the earth from mixing with the wood, will afford a tolerably good substitute. When all is covered except the opening at top, and some holes for air near the bottom, fire is introduced down the central opening. As soon as the pile is fairly ignited, the top must be well
closed, and the smoke, but not flame, encouraged to issue as equally as possible from every other portion of the surface, by making holes with a pointed stick where smoke does not appear. Some portion of the wood must expel the water composing, as regards quantity, the principal portion of the sap. After the wood becomes thoroughly heated to $212^{\circ}$, the water is given oft in the throughout. Great care is then necessary to prevent flame bursting out; and as the heat increases the openings in the covering must be reduced, and finally closed when the the covering must be reduced,
In a late Number of the Gardeners' Chronicle a Correspondent inquired how charcoal could most readily be prepared in a state of powder. So many usefonints are the least return which can be made is to impart any sugteleast return which can be made is to impart any sug-
gestion whick may have occurred to oneself, likely to
be of use to other readers. For the purpose of mixing with potting-earth for striking cuttings or growing seeds, scc., charcoal may be readily prepared from saw-dust. fire of dry sticks, \&ce. being lighted on the ground, upon a circular space, when it is well alight begin to heap on saw-dust with a shovel, allowing pleaty of air at first for a few hours, till the fire has got well hold, then cover the whole over with saw-dust, and pat it down with the shovel, leaving three or four stout sticks projecting to the outside, Which can be raised now and then to admat be kept so for months, or indeed, for any length of time, taking care always to have a load or two of saw-dust at hand, which is to be thrown on as the fire breaks out at any spot: the heap should be sheltered from strong winds, and never allowed to burn out in the open air. A part of the char
coal thus made may be taken away every month or so from one side of the heap, leaving the rest to keep the fre burning. Any one within reach of a saw-mill can get saw-dust for the trouble of carting it, and may thus make a useful manure of it.-Carbon. Neariy all
charcoal is prepared in France by a process which is know is prepared in France by a procass in heaps (meules) the name of process of cat conical heaps o variable sire hich are covered over with a thick layer o earth and of coal-ash; the heap is kindled from the centre where a cavity has been kept open for that purpose, and which descends to the base. In this cavity burning char is iad placed and some small pieces of wos, and over th whole circumference of the heap. After some hours, during which the central cavity or chimney is allowed to remain open in order to determine a more active combus tion, the superior orifice is shut, and the carbonization is directed from above downwards, by piercing holes in the covering nearer and nearer to the base of the heap, as the operation advances.-Chemical Gazette.

## WATERING OUT-DOOR PLANTS

As one of the objects of the Gardeners' Chronicle is not merely to recommend sound practice in the details of gardening, but to inquire into the reasons of that practice, I ber to offer a few observations on watering out-door plants in dry weather, and to point out the moost suitable time at which this operation should be per
formed. In this neighbourhood I find the practice varies formed. In this neighbourhood I find the pr the morning the watering sometimes takes place in the morning, sometimes in the evening,-the main design being to give is ater, aithough evidently a matter of indiuftren it may b is applied. in other parts of the country ints, I would beg to recommend througk its medium the morning a the most proper time in generalifor watering out-door plants. Two acknowledged agents in vigorous growth are heat and moisture ; plants out of doors must take the heat as they find it, and as we cannot increase, our object should be not to diminish it: moisture is under our control, but if we exercise that control, and wo at the expense of a great portion of the heat we desire to preserve. Two influences are at that time brought into operation in cooling down the plants, and retarding their growth, which we thus vainly endeavour to urge forward by moisture : these are evaporation and radiation. Evaporation is the more rapid in proportion to the dryness of the air ; and hence it is most energetic, when the necessity for watering is most prgent: but evaporation cannot take place who producing cold, and that cold is propor place without proidity of the process. Chemistry points tionate the the rap this out the reason of ths, vapour baving a greater capacily for heat than water, the heat sensible in the water becomes latentijn its vapour, and the sensible temperature falls, additional heat to keep up "the temperature not being quickly enough supplied by the surrounding media. Let us look at the effect of this evening's supply of water to plants : the air is dry, evaporation goes on briskly; the temperature sinks, the plants are chilled, there are no sun's rays to communicate fresh warmth, and their growth is sometimes even more unsatisfactory than that of such plants as are growing in the apparently arid soil, which have been allowed to take their chance. The other source of diminished temperature I noticed was radiation : every warm body tends continually to throw of its heat to all others of lower temperature, near or remote: but radiation in meteorology is more particularly confined to the radiation of heat from the surface of the earth and object with equal rapidity: rough surfaces do it more readily than equal than sarfaces than those of lighter than smooth, shade of colour. Apply the latter remark of evening watering: almost all soils are darkened in their of evening watering : amost all soils are darkened
colour by moisture, and hence soil by this practice is colour by moisture, and hence soil oy this practice is down during the night. It is thus that the combined influence of evaporation and radiation, by evening watering, exerts itself in thwarting the desire of such as heedlessly practise it. The best time for watering exposed plants consider to be about or soon after sunrise. Evaporation, no doubt, will then also go on freely, but the atmosphere is beginning to get warmer, and the sun's rays to exert their counteracting influence. The darkened surfacethat very condition which made the soil throw off its heat more readily during the night-causes it to imbibe the heat of the sun's rays by day with increased facuity, so that you thus have the greatest amount of the plants. When evening again comes round, the surface moisture has been dried up, and its colour again rendered of a lighter shade: there is consequently little diminution of
temperature beyond surrounding objects, either from evaporation or radiation of heat.-J. L. Newburgh.

## ON VEGETABLE MANURES.

3. Cranberries (Vacoinium oxycoccos).-In mountainous and woody countries the herbage of Cranberries is often used as litter. It contains much powerful manuring mineral substances, and probably an equal mount of nitrogen, so that it deserves every attention It is however, necessary that the manure thus obtained sould be well rotted in the stable or on the dunghill for it decays with difficulty in the fields, its texture being very woody wit dime 100,000 parts of the green air-dried herbage contain of mineral

475 parts of silica magnesia
potash
soda alumine oxide of iron xide of manganese sulphuric acid phospho

## 3,319 parts of mineral substances

It contains 4 per cent. tannin, and 3 per cent. wax.
It is to be supposed that its greater amount of lime, potash, sulphuric and phosphoric acid, will render it a better? were less. Previons to using it as litter, it should be packed in large heaps, by which it will be heated and rendered softer, while its great amount of tannin will be decomposed.
4. Bibberry-Leaves (Vaccinium myrtillus).-This herbage is also used as litter in mountainous forest countries Having a very woody texture and much tannin and was it should be treated lake the herbage of Cranberries, well rotted, either under the cattle or on the dunghill.
100,000 parts of the green gathered air-dried herbage contain of mineral substances:-

> 169 parts of silica

$$

AMATEUR'S GARDEN.-No. XXVIII.
The Calceolarias, especially the finer hybrid varietiess are a family of plants which are vary after they are out treatment, and rather difficult to manag accurrence, if they of bloom; indeed it is no uncon them perish altogether. are neglected at this season, asure by the exhaustion of Thi
doubt by, consequent upon profuse flowering, aided no in the sol the attack of insects, the want of nourishmen altogether conducive to their well-being. Many amateurs experience considerabie difficulty in managing their plants at this season, and therefore a few remarks on their After the plants have done beors
have become shabe or rather after they perfect all their bloom-for they should not be allowed to and divest them of all the flower-stems, and such of the leaves as may have an unhealthy appearance; examine face-soils to see that the drainage is free; remove the surrich light sandy compost, taking care to place it well up round the base of the plant, so as to allow the young shoots to strike root into it, and if they are at all filthy, fumigate them slightly for several nights in succession With tobacco. When they are clean, they must be and if a frame and sash can be spared to cover them in btormy or cold weather, it will be to their advantage; the course of a fully exposed at all other times. la treated, they will begin to produce shoots pretty liberally, thin when these are about an inch long they must be or another, leaving sufficient to form a specimen-plant tion. At the same time the plant should be cut in to make it form an uniform head in the following scason; but the knife must be used cautiousily, as the plants are rather impatient of its influence.
lants week after the above operations are performed, the re-potsing require shaking out of their old pots, and cautiously into smatler ones. In doing this, proceed than can be avoided, but get as much of the old soil away from them as possible. The compost for autumn potting must be rather poor than otherwise; and should consist of turfy loam, peat, and sand, in about equal proportions, With a sprinkling of leaf-mould for the strongest-growing plants. Be careful to drain your pots thoroughly, which will be best secured by using the inverted pot, and adding that, by sized one every time the plants are re-potted, so there is a hollow cone thent gets into its blooming pot, earth, which secures it against any stagnation of moisture, and also admits of a free ingress of air to the roots. I Years past, and find it the best that can be adopted. they will plants are potted and replaced in the frame, they will require to be kept close and rather cool until freely admitted make new growth, after which air must be - If large hand
must be kept slowly specimens are desired, the plants but of course without being forced in the dull monthinter, young plant, however, vigoronsly in the dull months. A until next March, will generally make the finest specimen for exhibition, as for that purpose it is not large plants that are required so much as clean, neat, compact, and luxuriant specimens. During winter, Calceolarias do not fequire much water (but should not at any time be allowed to of it. The best soil that can be used for growing CalceOlatias in is equal parts of turfy be used for growing Calcehitis about one-sixth of white sand mixed with inould, is ond be used as rough as possible, and if the Ieaf-mould planis, half decomposed, it will be all the better for the planis.
The only secret in growing Calceolarias is to get the plealy of airg in autumn; grow them gently, with in Februg pots on the one-shift system in the first week Keepinuary, and then push them along in a gentle heat, April them free from insects, until they show bloom in April, after which they must be grown in a cool, airy drawn, to prevent the flower-stems from being too much Vines HOME CORRESPONDENCE.
opinion that it is wrong to imagine that grapes require to be exposed to the sun to bring them to maturity, as it that I have statement which I made on a former occasion, Wrown under the shade of leaves or beneath a rafter than When more exposed, and that they are less liable to shank offin such a exposed, and that they are less liable to shank
doctring. I cannot, however, subscribe to the extend the that the longer the shoots are permitted to the leaves could be exposed to the growing crop, even if in a hothouse, where a bunch of grapes is expected in the space which every half-dozen leaves would require. I am
done the frult, would the leaves, instcat of secreting juices for matter for wood, not rather be employed in ahp, opriating confess my follod season. Theory may be acgainst me, (ant 1 on may my ignorance, ) but experience and observation are
experience. In a conversation which I had with an experienced gardener, he assured me that he never saw and I have nitted to ramble, as on those that werestopped, proofs, under my own eyrs. Indeed, rere it not for the Sarme joint the fruit shade, I wonld stop every shoof at the discern the embryo bunch, becanse I ana soon as I could at least in their early stage, swell the faster for it. In thinning some burches lately, I observed two shoots that
had proceeded from a double eye; both had a bunch of grapes,--that from the small or hind eye not having even a
leaf beyond the fruit, yet the berries are larger than on the
other shoot, which has leaves, and is, moreover, much other shoot, which has leaves, and is, moreover, much
stronger. I amo aware that this is a dangerous field for an stronger. I amo aware that this is a dangerous field for an
uninitiated writer to enter upon, when Mr. Knight and others have demonstrated that, unless there are leaves to draw and prepare the juice of a fruit, it will neither swell freely nor have flavour; but I have seen both Peaches
and Plums without that auxilliary, as large as others, and and Plums without that auxilliary, as large as others, and have tasted them when ripe, and found them not flavour-
less.-J. Murdoch. [It should be observed, that we do not pbject to "stopping" in order to make bunches swell. What we doubt the expediency of is the pracI haveting aside your judicious observations at p. 443, which produce fruit in pots, and judging from the quality of the fruit, I see no cause to abolish this practice. In Spring, when every foot of glass is to be system: more rods may be admitted with less fear of crowding them; the foliage grows to an immense size, and is so full of sap that if the mid-rib is broken, it soon heals over and appears as capable of producing a plant as Haunburgh Vine has been subjected to this treatment for many years, and annually !bears from 30 to 40 bunches which are ripe in May. The branches are always kept in heat, and the roots are always warm from the bark-bed in front of them.-W. Brown, Merevale. [We trust it will be observed that the roots bere are kept warm.]
well as to "A fubscriber from the beginning," for favourVg me with their opinion respecting the failure of my ines, (mentioned at p. 414,) although I do not agree with either of them as to the supposen cause. The failure of my Vines cannot be attributed to the difference of tempeone leaf betwen the house and border, since I do not lose both the before the sun attains sufficient power to warm that his Vines recovered as soon as the sun became powerful enough to warm the border, that is sufficient evidence that his Vines are not affected in the same manner as mine. A Subscriber from the beginning" says, at p. 461, he is persuaded that I have planted my Vines too cleep, but ten fexamining their roots the other day, I found them surface, and quite healthy. In an adjoining house, I have five Vines which were planted a year earlier than the others, and were treated in the same manner; in the third year each bore seven bunches of fine grapes; and this year they have each ten bunches upon them, as fine as
gardener would wish to see.-S. Querill, Park Villa.
found to was applied to Caulifiowers, and it has been by the Wire-worm ; it was sufficiently were not injured having been watered alternately in the rows, the plants plant not watered was more or less infested.-Zephyrus.

Asparagus. "Perhaps," says Mr. Wallace, of Kelly, in will scarcely believe that the great proportion of practical gardeners disbelieve the method which you recommend for raising Asparagus, chiefly because it does not accord with the practice they have been used to, and therefore they cling to the old lazy fashion of trusting to covering them up with manure before winter, and cuttiog only a shoo here and there in spring." Now, for the life of me, I condescend to make such an uttack upon the majority of gardeners, and take upon himself to say that the majority of gardeners disbelieve your method of raising Asparagus, and I venture to think that they would be equally the be proved; but I stoutly deny the charge, and say that the greater proportion of practical gardeners do believe your method to be very excellent, because they have both guano, and during the summer to apoly liquid manure and common salt. The If cutting of the Asparagus completely over in spring is not so new in Kelly as Mr . Wallace would have us to believe, for I can prove that the same plan was adopted there by a good gardener some 20 Kelly. How is it then at all possible that the majority would condly. The honourable M.P calls uper prac"fortify your recommendation from authority." Does he for one moment suppose that the majority of gardeners would question in the profession or does he think that we and a vast deal more sound judgment in garden affairs, Who would very soon prove the method to be right or wrong? But gardentrs are fully aware that you would not be guilty of anything so ridiculous as to advance, any doctrine without being fuily satisfied of its soundness; ay and state your views quite specific enough for any one.
Verily, Mr. Editor, we must be a very stiff-necked, contumacious, and rebellious race in the west of Scotland, (at tumacious, and Mr. Wallace would have you believe so,) to be so easily gulled into anything that we may suggest. I am not acquainted with the honourable Gentieman's gardener, -If he is a gardener at all,-but I should like Mr. W. to inform me whether lie very handsowe sum 27l. per annum to a gardener. Where, in the name of wonder, that person expected to find a man that would or could conduct his garden affairs for such a sum I know not; but I apprehend neither gardeners nor their masters ought to be astonished if such a gentleman were to com-
plain of "men too often distinguished by their obstinate resistance to everything new which they themselves do Nitrate of Soda. Mathison, Clydesdale.
Nitrate of Soda. - Some persons assert that, although a good crop may be obtained by the use of this salt-the following year, if the salt is mot again applied, the produce is poor and the soil is deteriorated. Will some of your readers who have experimented during two years be kind enough to state the fact? G. $_{\text {. }}$ S.
Potting. -In a late Paper, when treating of potting plants, you say, "to bury an inch or two of the stem of plant is very injurious." Now, as a general rule, I dare say it is correct; but, had I observed it, my small collection of plants would have been less by sir. In summer. They came up, and I kept them so sarm that hey became, when abo tho support themselves-all died excepting one, and that I plunged up to the first leaf in a rich compost; it grew, and is now, as far as form is concerned, a singulariy beantiful plant-it is about 3 ft .2 in in circumference, 17 inches in height, and is supported on a single stem anderne it is one mass of in which the hoots in ar is has been raised in a room without fire, and, excepting in very evere weathe, has never, since re-potting, been in a warm place. I have raised six more this spring, and they bid fair to rival "my pet" in robustness. It has flowered this summer, and I send two of the petals for your opinion. $-E . C$. [We regret to say that the Pelargonium here alluded to was so much shrivelled as to be anrecognisable. It did not appear of any value in a foristical point of view.]
Salvia patens.-As "Mr. Ross, Holme Gardens," asserts that Salvia patens is hardy, I beg to inform him that a plant was left out last winter in the garden here, by mistake, the soil and situation, however, being as favourable as in most places at Holme. While digging the border, the tubers were turned up. I inspected them minutely, in order that if any vegetation remained, some cuttings maight be got from them. However, it proved otherwise; for although the tubers were fresh, the crown of the plant was completely decayed, so that it was utterly useless and good for nothing. Possibly Mr. Ross's plant may be hardier than those grown in the neighbourhood Avoch." - Cromdale. - Considerable doubt seems to be entertained by your subscribers as to the above plant being able to stand the winter unprotected. I was determined last winter to try for myself, and sorry I am that I did so, I give you the result. I had a fine Salvia on a south and very dry border, and when it had
ceased flowering and the stems had partly died down, I covered it over with what we call pea gravel, and placed a flag-stone on the top to protect it from the heavy rains. In the spring! I found, to my regret, that it was dead. Not wishing to risk my other plants, I took them up in the autumn, and potted them in soil; kept them in the little water. The consequence was, them occasionally a shoits . The consequence was, they started to make alive. early, and I have a fine collection, all being with much the latter mode is so simple, and not attended at all events, trouble, I would advise your correspondents, their plants during winter,-Chemical Jack. [We think enougl has now been said about Salvia patens.
Silk Plant of Madeira-The beautiful plant in Madeira, called by the natives Arrore de Seda, or Silk Tree the "Gomphocarpus fruticosus." Perhaps this may be " Madeira Silk Plant" mentioned in your answer to Zephyrus," at p. 465.-E.J. M.
West Anoot.-You state at $p .447$ your wonder that "the to the produrction of Arrowroot," surd that "iftention more had genvine, at a consumed in Epgland. But $3 s$, or $4 s$ a pound is ${ }^{\circ}$ gely hibitory price." Allow me to say that I have imported for my own use, and for the purpose of giving away required for poorcr ners past, direct and genuine fro West Indie ; that the reason why is the cultivated, is, that the price at which it is sold (genuine) there for will not sufficiently repay the producer for trouble-i, e. $1 \%$. $12 s, 6 d$. per cwt.! Add to this the present rate of duty, $1 s$. per cwto ; freight, $4 s_{0}$; sundry expenses, say $2 s .6 d . ;=2 l$. per cwl. As I have stated, I obtain moy Arrowroot genuine, and at the above price;
so that if sold even at ls. per pound, there would be a clear gain of 150 per cent. to the retailer, and at the price you state some 400 or 500 per cent. The fault, then, lies not with the West Indian cultivators, but with the English retailer.-A West Indian.
Gladiolus communis.-In the heart of the New Forest Giated, about a week since, the inclosed, Gladíolus, with many others in the midst of long grass, buring never, that $l$ am aware of, been noticed as having been
foundin a wild state-Pinus. Cluamomile.-Two years ago I plan'ed three beds of soil. The following year I wors sur in very strong the blossoms, with the exception of one or two patches, dug up, and replanted, after receiving of the beds were and cinder-ashes, with good double-low prenty of manure neighbouring garden, and this year, I think, everyone is nessle. Will any of your correspondents have the kind does not suit them? Tank System of He. W. T.
tanks at p .460 , the dimensions are so much reduced
that it may lead to error. It is also not drawn by any scale, so that no measurement could be taken from is To prevent mistake, may as well stater feet long, and seven feet eight inches wide at the largest end; the two sides of it being earh two feet eight inches wide-the walk up the milde being and two feet wide, inside. Both tanks are eighteen inches deep in the clear.-John Huyshe, Clisthydon Rectory.
strawberries.-In answer to a subscriber, who in quires at p. 464 respecting the method of treatment pur that after havinr tried at various times all the plans recommendert by the ,est authorithes, conse therefore continued to pructise it for sex erad years with unvaried success. Strong inches apurt, in manuref and well-prepared beds four feet wide, in a s.ameuhtr
amoned on remam unth f're folioming July, dumpg whin the flowers and rumners regularly pinched off, and be watered whenever hikely to sutfer fot in small 32 -sized pots, two plants in a pot, taking the greatest care that neither poots nor leaves are damaged in the operation, and an important part of it is to press the earth firmly about them : the soil used is twich will hold five or six rows of pots, are then formed and suread upon it a layer of coal-ashes: down a sulficient number of stakes to form the bed, to which must be nailed ho the pots, which are then to plunged to the rim in spent bark or ashes. All that they will here requare, is ton with firnt covering and a slight protecting severe frosty weather. lalways preserve from 300 to 4100 of the latest-forced plants of the ahove description and after baving carefully reductu theing, repot them in large 32 -sized pots in Juiy, treating them atterwards precisely as the others. I find these, by having their buls formed early (through the slight forcing they have received, and becoming very strong, are admirally
adapted for the first crop, and always repay me for the adaptert for the first crop, andor.
Ipswich Cucumber Soriety.-At p. 464, you state in answer to "S. Sie last Ipswich Cucumber Show were Hamilton's Blach Spine, Hamiton's White Spive, Walker's Pea-green, and Roman Emperor." That statement is not, however, correct, as the , Latter's Hybris, Black Spine; 2, Ringleader, ditto ; '3 and 4, Latter's Hybrid, dhtto; 5, Masterpiece, ditto; 6 , Standard, ditto ${ }^{3}$ Spine.-Thns. Willd, Mon, Sec.  grain will be crushed. The following is a lint of th. In uad. . - A and J. Howard of Bedford. This plough is made (utires) of srun
 surtable to as great a variety of soul as possible. The share of the patent iron plough is dastened by a screw rod running down inside
the frame and turning into the share, so that it may be removed or renclered fast with the greatest ease and dr the. h. Th. coulter has as draught chain, and other irnprovements inas the frame, bandes whe whels,
 towards the lands, Two-horse swing-plough, invented by Edward Brayton, and manufactured by himsedf. This plough is of a new front of the coulter, and all conmannicating thence to the bridle
 break ng the horses. A plough adapted for heavy land, invented by
Wi,kir. nf Scolland. Tis has been improved by William Wood of knutaford, in the leam for regulating the depth, The draft has,
been diminished by Mr. Wood's improvements. A plough,
invented by W. H. Hyett, Esq., and manufactured by R, P. Cliew invented by W. H. Hyett, Esq., and manufactured by R. P. Chew, of of lonsening and pulverising the soil in the bottom of the furrow, is
attached to the right side of the beam, A one-wheel plough, invented and manufactured by Messrs. Barrett, Exall, and Andrews,

 being worked by the action of the plough-wheel. It it also accom-
panied by a harrow and roller for coverine the seed. A set of irn seed or fallow harrows, by Mr. Charles Wright, of Idridgehay, the cleansed without stopping the horses. A Acrusher, hy Haul and Co
the weight of which, without the frame, is ten-and-a-half handre the weight of which, without the frame, is ten-and-n-half handred
weight.. Its peculiarities are, that moveable lnives, on the prin
ciple of a screwt are placed obliqnely on vertical whecls A winnowing machine, invented and manufactured by Messrs
Samuel and Richard Jackson of Nottiligham. This machine wil
anawer for a hlower to separatr the liont mprovements on the ricing an I fallmg rildles, the halkers and ath turnips, ze. This smplement presents a perfect, simple, and cheap
mode of forming regularly, at any distance from each other, s1x
grooves sufficientily decp to receive any descrintion ecrapers are fixed so as to keep the pressers clean while they are in
operation. The apparatus for drilling bones, or other small manure operation. The apparatus for drilling bones, or other small manure
is fixed in the front of the pressers, so that the manure is firers
down by the presers into the grooves, and mixed with a portion o
soil. An az.
 every tind of land after it has been ploughed, they breals the clods and pilverise the snil, and in many cases there is no necessity fo
havinc the land harrowed. Upon clover lev, the prossers are set
gavin thu sime samt as the purh,
 put to work uponl it. se pressers have not any tendenry to pul up
oong manure, hut press it down. The presser drill turns at the ends
of the lands without difficulty, and is not obliged to be lifted out of of the lands without difficulty, and is not obliged to be lifted out of
the pround. If a wheat crop should fail, or be very thin, the
improved uresser drills will be found of sow sprang wheat or other grain amonggt the wheat without injuring
it, but on the contrary, will do it good by pressing it down, whic fastens the roots. Six renovators muyy be applicd to this machine in or land cultivator. This implement will, in a very short time, con invaluable. It contains fifteen pressers for crushing land, and b
taking part of the pressers off, will make trooves to receive sed a
folltws :-Twelve grooves at six inches asunder, eleven grnoves seven inches asunder, nine groovess at eisht minches asunder, nin
grooves at nine inches asunder. When it is wanted to be used as presser, take some of the pressers off the shaft, and put a collar an
screw on ech side of the remaining pressers, so as to lreep them a
any distance the seans or scrapers are only required in wet or darap weather, and one thon
every other preser will do when crushing, fut when it is pressing, meats improves beyond belief; not only - are there very numerous
new contrvances and improvements in old implements, but the competition between different manufacturers has caused a grea
improvement in the workmanstip. It would be impossible to Many inventors and manufacturers are naturally disappointed in ther Amongst many improvements, there is one on the thratime I did not see it work, but it rite rap. inn id to me hy Mr. May, ti
partner of Ransome s, who have taken out a patent for it. A gri machine, by which the motion is readily reversed, and the gras many improvements on his scarifiers, and his chaff-cutter.
 Sasmundham, for a dritl for general purposes. The hencreral at att, if Grass seeding, whick is accomplished as follows :- Corn and manure
may be deposited together down the ssame conductors, or throuti
separate coulters, ralkes heing provided to cover the manure with mould upon which the seed is deposited. The seed-enure wiee arrom
panying this drill, is adapted to sow at the same t.me with onrin or withtut hanurc. It possesses the following important add witions stirrer is introduced into the manure-departmente, having a perpen-
dicular, ald, also a revolving movement, by means of which the
manure which in the drills hither manure (which in the drills hitherto in use has frequently clogged
and hung back in the manure-box, so much so, as to require the
attendance of a man to prevent it) is in this,
 bitherto presented stself, of mixing together the heavier with the proportions. TTo remedy this, the small beavy soeds, such as Clover,

 effectual method of steering or guiding, so that on flat ploughed A prize of $10 \%$. to Mr. David Harker, of Merallel with the precerlingrows. frame supported upon four or more wheels, the wheels are nipo
 mig out part swings in the centre of the frame, with a movabl depth to throw the soil a littie off the side of the drain. Tpo small
wheels are fixed on the front, the one running horizontal, and the
other vertical, to guide in the some cut other vertical, to guide in the same cut again, so that going or return

 a tine $t$ ) it of any do rription. It is all mane of mallealim iron. A
prize of 10 . for a patent chaff-cutter, invented by the Earl of Ducie This machure will cut twelve inches wide, and can be driven hy any

 delay attendant upon removing them for the purpose of sharpening and advancing the emery grinder towards the cutters; care must be
 for changing the length of the cut, which is done is also adopted
strap from one pair of pulleys the another; there are three pain, thus-when the strap is upon the large pully on thee axise of the
cutting cylinder, and the simall one on the shaft that drive the feeding rollers, it will cut three-quarters of an inch long,
and shorter by a quarter of an inch in every other pair of pulleys The quantity is in proportion to the speed. A silver medal cylnder attached, with a smali knife on each side at the lower end verew at the bottom, making an aperture of about seven inches in
diametor (for ventilation) through hay and corn ricks when too much heated. A Mr. John Norton, of Chester. This machine is used for measuring
corn for catle, instead of the man going into the pranary, It con-
sists of a cylinder divided into two compartments, each holding a quarter of a peck; the dials are three in number : the first is divided revolution of the dial one bushel; the second is divided into 10 , each indicate 10 bushe bush ; the , other dinal is divided into 8 , each division
representing 10 bushels, and one revolution of the representing 10 hushels, and one revolution of the dial will be 80 known when it is out by inspecting the dials. A silver medal for an
improved drain-level, invented by Andrew Notman, of Painswick It 18 used for the purpose of draining land in a dry season; its frame
work are three horizontal hars of wood and two upright legs, with pirt-level fized in the uppermost bar ; it also has a sight attache has a vernier scale, so that if the fall be ever so smail, the level can b
set to it and locked: It can then be put into the hands of the work man, and used the same as a common level. A silver medal for
soil-pulverizer, invented by the Hon. M. W. R. Nugent. This i
made of wrousht iron, and has five tines and eirht mortices, the tines cun be put to follow the common plough, at nine o
cight en inches, to stix the Iand between the rows of Turnips

 or immediate use. It is fitted up as a complete steam irrigator, and will he found adapted for irrigating land by means of the hose, fron
a distant tank, river, or poond, also for draining or flooding land emptying ponds, ec., discharging a great body of water at a required
hizher or lower point, and serving as a fire-engine of immene power and as a most useful agricultural steam-engine, driving a thrashing
machine, Rec., with a power equal to six or seven horses. A Silve Medal to Mr. J. B. Denton, of Southampton, for a maysen in relief of a
district, with instruments. The model is constructed of plaster, or electrotyped in copper, to a true scale, and by means of the instru use as a complete gulde to draining economically is evidend, white waters of the hisher to the lowest levels, exhibit how the The exhibition of live stock was good; but except the collecting together mors good animals, no great improvement could be per
ceived n any one breed;-in fact, all the breeds have been lon and the grat olpyet of the lirecorcrs is to keep up the quality of thei stock. Un the whole, the exhibution of stock was not superior $t$ A great number of prizes, varying in value from 30sl. to 2t. Weere The Cooncri. DinNar took place this day in the County Hall,
which is very fine room. Above 400 tickets had been issued, but
only about 350 sat down. only about 350 sat down. Lord Hardwicke, the President, luad
on his right the Duke of Devonshire, Mr Fwerett the American
Minister, the Marquis of Northomen the Agriculture of various countries in Europe, Pxof. Owen of the On the left sat the Mayor of Derby, the Marquis of Downshire, Lori gentlemen. Atter the usual public toasts, which, and several othe
faced loy Lord Hardwicke, whose fine-toned voicty prefaced by Lord Hardwicke, whose fine-toned voice filled the whole
room, Dr. Buckland was called upon to respond to that of the Science of Agriculture, " which he did in his usual manner, showing
the great advantage of the application of science to Agriculture, and eulogising the scientific men present.

## The award of the Judges of implements not having arrived, the Pressident quve the health' of all the exhihitors, and observed tha this department was improving every year, both in the number

 new inventions, and in the perfection of old, at prices which were A. Ransome, whose name was joined to the toast, made a very good

 bition for the sedson tionh 1 lace s,i the Faper mental (iartuens,
Inverleith Row, when the usual promenade touk ,place. The and fashionable assemblage of visitors. The grounds were in the higheststate of order, and, notwithstanding the late ungenial weather, presenter many attractions. The exhibition of flowers plants exhibited, no one would have sietected the traces of the
late ungenial weather; and few exlsibitions, at the same season
of the exhibition was the Heaths, of which several varieties were
shown, all rich and beautiful. Next in order came the Pelargoniums, which, though rather early for them, were very splen aud specimens of new varietios raised by Mr. Symintton, Newington.
$\qquad$ mirers. The band of the 66 th Regiment was present during the
day, and played many fine airs. The following were the prizes Mr. G. Stirling, gr to Lord Mrluhe; the plants being Aphelex is
humilis, Chorozema várium, Polygala oppositiólia, and Pımelea sylvestris; 2, Mr. J. Young, "Gr to T. Oliver, Esq., Newingtoun
Lodge, for Eparis grandifora, Diplacas puniceus, LescheFlowermd Capr Hparms, silver mednl, to Mr. D. Foulis, gr to Jas,
Tytler, Esq., of Woodhousclee, for Erica Beaumontiana, vestita coccinea, odora rosea, and ventricosa: 2, Mr. Stirling, Melvile but one collection of considerable nuerit having been sent in,
consisting of F. Venus victrix, magnfica, and Invincible, a premium was awarded to Mr. Young for the same. For Thr Two
FInEst Tropical Orchidaceous Phants, silver medal, Mr, R Middleton, gr to Dr. Neill, Canonmills; the kinds being Epidendrum aromaticum and Dendrobium censiforum. Mes priz
of two givineas, offered to practical gardenes, by Messrs J.
Dickson and Sons (and placed at the disposal of the Society), for the SIX NEWEST AND Finkst STAGE Perargnniuas, was Lane's Lady Cotton Sheplerd, and Garth's Queen of Fairies,
For another collection, consisting of Bridesmaid, Duenna, Flasit, Fair Maid of Devon, Fonsence, and Comte de Paris, the ComCraigiehall. For the finest specimen of any Tender Exoric Raith, for a magnificent plant of Pime
$\qquad$
 Woodsia hyperborea. And a smaller award was made to Mr. quadrifólia, Cypripédium calcéolus, Gymnadénia conópsea, and cecently introduced annual flower exhinitert. From the $J$ eith-walk Nurseries of Messrs. Dicksont and Co., there was an extcinive collection of showy plants, principally Pelargonilums, and abo a rus
containing forty choice sorts, a truss of the flower being placed
 to Messrs. Purdie and Merulees, of the $S$

## eir fue seeding fuchsia stanwrinana. Several gurn necultug

 being saperior to esteerned kinds now in gencs al call, , toms, t :, 1 enumerate the firse plants which occupied the tables of the Hail, some noble specimens from the Royal Botanic Garden towerng above the humbler beauties. Among these may be montionea,as remarkable for their great size and splendour. Grevillea acanand, it may be added, that two magnificent Palms, Latánia dorbonica, from the same establishmeat, adorned the two enths of
the Hall. Some lovely Cape \#leaths from the collection of l't.
Dunbar, Rose-Park, were much admired, particularly Trica vesseedling Calceolarias, raised loy Mry Anderson of Marytield by See. Seigh, at Lauriston Castle, and by Mr. Thynne, Glasgow,
with some choice seedng Pansies, raised by Mr. Symington, of
 tracted general notice. A large Musk plant, Aster argophy lus.
in full power, from the greenhouse at DeriboIni Green, scented the Hall. From the garden of Capt. Falconar, of Carlourie, there garden excels. Various fine specimenss of fowering plants were ncludiug Labichea lanceolata from Swan River, and a surn... cose Aster from the BimalayanAlis. Messrs. Sang, of the Rew whe scarlet Thorn. Other fine plants were sent from the gat
amoug which Oncidum divaricatum, O laxidum, 0 . Wentworldianum,
spicuous.

 for the bestion of seedling Pelargoniums; and to Mr. F. Nichol, the productions for which extra prizes were awarded, a variety ofbeautiful plants were exhbited belonging to the neighbouring gentry. In the stand of Greenhouse Plants shown by Messrs. Han-
cock and Son, for which an extra prize was awarded, were some very handsome specimens; amongst the most conspicuous in the
collection was the new Rose Bosanquet, Fuchsia Rogersiana, Beauty, Dillwynia clavata, and a great variety of Heaths.
Earls Colne Horticultural Society, June 15.-The first show by was extremely well attended, a general feeling of satisfaction
prevailing at the successful efforts of the producers. The prizes were adjudged as follows:-GARDENERS' CLASS, -Mr. Nichols,
gr to K . Hills, Esq., of Colne Park, for the best dish of fruit, brace
of Cucumbers, 2nd best Peas, best new Potatoes, 2 nd best CaxThus, 2nd best Letce, 12 Roses, 2nd best Pansies, do. Greenhouse plants,
 and 2nd best 12 Roses. Mr. Holden, jun., gr to Mr. Unwin, Cog-
geeshall, for 2 nd best new Potatoes, best Carrots, best Letuces,
best Cabbages, extra prize for Turnips, best Pansies, and best
 Pinks, Ruscs, Greenhouse plants, and an extra prize for des, gh,
crown and cushion. Mr. F. Cawston, for 2nd best Potatoes, best
Cabbages, Lettuce, and 2 nd best Carrots. Mr. D. King, for \&nd best Cabbages, best Carrots, Cucumbers, and Peas, and an extra prize
for Gooseberries. Mr. T. Wenden, for the best new Potatoes. Felton Floral and Horticultural Society.-This Society leld
their second show of Flowers and Vegetables at Mrs. Melrose's Widdrington Arms Inn. The meeting was well attended, and,
notwithstanding the late unfavourable state of the weather, the flowers and vegetables were in a higher state of perfection than
could have been expected. The prizes were awarded to the tollowirg competitors:-TULips-lst and 2d best three Rose, ht and
2d best three Yellows, 2d best three Violet, and best one of any colour, to Mr. Pitt, Felton; Ist best thee Violet, and 2nd best one
of any colour, to Mr. Dawson, Aclington. Cucumbras, 1, Mr.
Riddell, gr, Acton House; 2 Mr. Crosslıng, Felton Park. Potarors, 1 and 2, Mr. T. Jeffrey, Felton. CAbBages, 1, Mr.
Melrose, Felton; 2, Mr. Dawson, Acklington. Lettuces, 1, Mr. T. Jeffrey, Felton; 2, Mr. Melrnse, Felton. Radisage, 1, Mr.
Mark, Felton; 2, Mr. J. Rochester, Felton. ExTRA Prizrs
were awarded to the following gentlemen:-Mr. Crossling, Were a warded to the following gentlemen:-Mr. Crossling,
Felton Park, for two very superior stands of Pansies, and a
splendid Perlargonium, called $\$ y$ yh ; Mr. Riddell, Acton House for a very fine specimen of a Wbite Moss Rose, rate to bloom in
the open air at this season of the year; and Mr. Melrose, Feltod,
for very fine spring-grown Onions. Feltan Flo ists' Society, June 12.--The florists of Felton and
its vicinity held their annual show of Tulipg, being therr second exhibition for the season, in the dining-room of the Widdrington
Arms Inn, when the prizes were awarded as under:--Roses-
 the 2 d to Mr. R. Richardson, for Comte de Vergennes; and the
6 to Mr. B. Burn, gr. to C. W. Bigge, Esq., Linden, for
Duchess of Clarence. Bybecmens-The ist prize to Mr. Burn, for Violet Imperiale; and the $2 d, 3 d, 4$, 4 , Sth, and 6 th, to Mr.
W. Scott, for Madame de Pompadour, Grand Prior, Alexander
Marnus, Triomphe de l'Isle, and Hngobert. Brzarmes-The 1nt Magnus, Triomphe de l'Isle, and Hugobert. Bizarres-The 1tt
and 5th to Mr. Burn, for Demetrius and Unkown; the ad and talque ; the 4th to Mr. R. Richardson, for Piatoff; and the 6th
to Mr. Scott, for Divey's Trafalgar. Owing to the late unfavourable weather, the table of flowers was not so large as on
some former oceasions, but many of the flowers were in a good state of preservation, and atracted -- Hamptead Florists' Society, June 8.-At the first exhibition for 1843 the following prizes were awarded:- Calceolarias, 1, R. B. Gold inder, Hector; $2, \mathrm{Mr}$. Tucker, gr. to A. Crofton, Esq., for Leedlings; 3, Mr. Goulding, gr. T. Turner, Esq., for Lady of the seedling. Pelarguniums, best 9, R. B. Foreman, Esq., for Dennis's
Perfection, Jewess, Coronation, Joan of Are, Grand Duke, Rienzi, Climax, Lady Denbigh, and Garth's Victory; 2 , Mr. Goundizg,
for Jewess, Beanty of Hampstead, Beauty of Ware, Rienzi, Dennis's Perfection, Diadematum, Garth's Victory, Joan of Arc,
Louis Quatorze i 3, Mr. Cockburn, gr. to Earl Mansfield, for

for Victory, Grand Duke of Russia, Imogene, Vindictive, Miss
Stainsforth, Pipe's Black Prince, Queen of Whites, Prince Abert, Thompson's Coronation, Venus, Brown's Curion, Delicata, Grand
Turk, Thompscn's Eclipse, Jewess, Bridesmaid, Captain Cook,
Sultan, Souter John, Tam O'Shanter, Nabob, Jehu, Vivid, and a
 for a collection of Plants; Mr. Eliott, gr. to J. M. Jones, Esq.,
for a collection of Fuchsias; Mr. Goulding, for a collection of Plants; Mr. Calver, for Coxcombs; Mr. Tucker, for a collection
of Plants; Mr. Cockbunn, for Coxcombs; R. B. Foreman, Esq.,
for Fuchsia iulgens.
 Society held its first show in a spacious marquee, erected for the number far exceeded that of any show in the previous year. Prizes were awarded to E. G. Barnard, Esq., for the best Melon,
second best Potatoes, do. Cucumbers, Bouquet, Roses, and second second best Potatoes, do. Cucumbers, Bouque, Ror best Potatoes, extra oest greenhouse pianco
prize for Rhubarb, best Pelargoniums, and best single plant. E.
May, Esq., for best Culifowers, Cucumbers, and Lettuce. -Vigors, Esq., for second best Pelargoniums, Greenhouse plantB,
for Pess. R. J. Day, Esqq, for Heartsease. R. S. Edwards, Esq., ar Cacti, and an extra prize for a spliendid Fuchsia corymbififorai
as specimen plant. J. N. Brewster, Esq., for best Strawberries. Mr. Cant, for second best strawberries, and best Calceolarias.
Mr . W. Root, for Grapes and Ranunculuses. Mr. J. Bentall, for British Phenogamous plants, comprisint ins species, many of
them rare plants. Several prizes were also siven to cottagers. An excellent collection of Ranumculuses, Anemones, Pelargo-

 far exceeded any other since the establishment of the Society.
The exhibitors were much more numerous than usual, and as well as being of rave kinds. The collection of frrit exhi
bited was of course small. Amony the plats most desevi. of hotice were two collections of succulents from J. G.
Snepherd, Est. Many of the specimens had bloom-buds upon
 imported from Belginm, A. Gespriyhti, with rosy purple flowers,
spoted in the throat; the leaves are also red beneath, and
very whict species it seems nearly related. The Rev. W. Brockman crimson spots on a yellow ground, called Curiosa; and a finely-
grown plant of Fuchsia corymbifora. Prom Mrs. Webb tnere wa a very extensive collection, including Amaryilis vittata, some beautiful cut American plants, including several varieties of Rhododendrons, Azaleas, and Kalmias. From G. Buckiey,
Esq., there was a very well.grown Elicirysum spectabile, covered
with flowers ; a small Erica odora Tosea

 Earcen-chairt. F. Sankey, Esq., contributeen a rumber of green-
 and Carices fuaud growing in this vicinty. From Mr. Ald
Masters there was alarge colection of plants, among which was

 mon kind; Gongora maculata fulgens; Onciuium Juridum, Cattmagnificent Caryota urens. The productions of the cottagers mnch better than those offered for competi.ion by the sabscribers.

| London flowers, have caused the Bourbon and French varieties to lose some of their perfection, and they are beginning to fade. But the Perpetuals, of all descriptions, are coming fincly into fower, and there is altogether a very handsome display. As the best sorts were oticed in thas paper last year, it is unnecessary to enumerate them afain. We need only observe that, with a judicious preparation of the soll, it is evident from this collection that Roses may be grown ahout large towns to a richness only little inferior to What it egain in the country; and, from their extreme beaty and isarrince, there camot he more desiralbe plants for suburbari Fardens. Perhaps, too, as the Perpetuals afford such a lengthened production of bloom, they are the most desirable class for such a purpose. In respect to tlie preparation of the soli, the chief points riquaring attention are, that it be a good substantial loam. not too l.ultandopen, and that it be enriched with decavel matur. In <br>  splendid Delphinniun Barlewni, which is plarticizlarly sultabie suburban lucalities. Several greenhouses and pits contain a Imaze siwck of Fuchaias, Pelargoniums, Heliotropes, \&e, for dew:..il ar "ve winctows or small mreenheuxes of the nfighhonrine res dents, and <br>  <br>  characteristic is isoth novel and attractive.- $-\therefore$ K., July 10. |

Page 108.-" The cultivation of the Vine in England stating that the degree of sweetress of Grapes is well known to depend on external circumstances, which will be Vines from southern countries because the Grapes possess Page 111.-"We regard warmth not only as a stimulus of vegetation, but it is also extremely necessary for the in contact. It also sets free certain cases which the leaves take up, and through these sources of nourishment promotes the growth of plants.
Page 112.-" If by 'influence upon vegetation' is and the development of the leaves and shoots, then it is right; but we believe the time is past when any one would templates nothing more than the preservation of life in the plant. The perfect vegetation of a plant consists in most plants, only takes place when the soil possesses a peat, Wheat would produce no ears, and many other plants neither blossoms nor fruit
Fage 112. - "This experiment of our celebrated countrymana Fintelman, only proves what is of great
importance, that the leaves of plants which are forced rectuire coustantly a due degree of nooisture, which does the place where it is employed. It proves also that the leaves and green parts of plants contribute especially to
their nutrition.
Page 112.-" The connection between bottom-heat and
the goodness of Datch salad is not denied ; but it the goodness of Datch salad is not denied; but it should also be remembered that the Netherlanders employ great
care in the production of good seeds, and that the soil contaius all those ingredients which the most perfect vegetation requires for the production of the most perfect
seeds. The great attention also which they pay to the airing their beds in the cultivation of salad-plants should Page 114.-"The bark-bed is injurious, inasmuch as the temperature of the surface is liable to very considerover, often becomes too burdensome to the individual who has the care of it. We prefer running through the bedtubes of hot-water, as we are convinced of the utility of
bottom-heat as well as the author, but we atribute to it

## no exclusive value.

Page 119.-"Care should be taken that plants in pots have not too great a quantity of moisture when they first
Page 119.-"The necessity of a greater or less degree to grow, depends upon their when plants first begin vegetables in which the leaves provide the greatest portion of the nutrition, a moist atmosphere will be found more useful at the above-mentioned period than a moist soil. Page 122.-"Since we know that the rain-water of our own climate carrics with it carbonate of Amnionia, and and that throught the carbonic acid wbich is contained in min-water, plants derive a considerable quantity of carbop, we can easily imagine how it is that vegetation in tropical lands makes such extraordinary progress after a rain and inces, we shall find that the result will be similar to the cifct on vegotation with us, of rain during a tempesp fo-
lowed by a his is temperature; the rain-water then a ajvay contaiming nitrate of A momonia.
Poge 123. "In France, in the Vine districts, where frequextly water collects in gieat quantities at a certain
denth in the earth, the standard fruit-trees are planted upon an under-layer of stones, which are covered with earth, and in this manner the roots of the plants are kept from too much moisture, and the water is drained away.
Page 127.-"Justus Liebig says that certain diseases duced by a disproportion in the azotised and non-azotised matters which act as the food of plants. It would reward the labour to put both views to the test of experiment and we believe the result would be in favour of the latter

## REPORT ON COVENT-GARDEN MARKET

The late fine weather has greatily increased the supply of all becoming more abundant. Pines of good quality, consisting of Envilles and Queens, are well suppliet. Both Black and White
Grapes are abundant, and very fine. The quality of Peaches Grapes are abundant, and very fine. The quality of Peaches
and Nectarines has greaty improved, and a few Apricots have and Nectarines has greatly improved, and a few Apricots have
made their appearance. Melons are becoming more plentiful. made their appearance, tselons are some excellent samples of Myatt's British Queen and Elton Strawberries. Cherries consist of Black and White Cir cassian, ingarreau, and Maydule, Gooseberries and Currants are exceedingly pienti ful. In consequence of the late warm weather, Caulinower tables, are of pood nuality. Letraces are on the decline
A small quantity of Asparagus is still to be met with but it is inferior. Crlery has mare its appearance, and, with, scarce; but the Windsor and Longyod are plentitul. Tolerably good Vegetable Marrows are also offered, Flowers in pots consist of Sweet Peas, Hydrangeas, Ericas, Polianthes tuberosa,
Heliotropes, \&c. The Cut-Flowers are very numerous, comprising Gladioli, Alstromerias, Stocks, Pinks, Roses (many varieties) Lilies, Gardénias, Picotees, and Carnations, with Bignonia venusta, Ac
Bee Orchis.

## Notices to Correspondents.

One Shilling each will be given for Nos. 2 and 8 for the present year.
MANURes.-A Devonian.-Tanner's bark is a bad manure unless
thoroughly decomposed, and owing to the difficulty which there is in ascertaining when this is the case, it is a dangerous material to employ an ongst flowering shrubs, $t$ formation respecting the cylindrical draining tiles in addition o the statement which has been already. given in a former Botrom. HBAT.-Z. - We cannot say what is the greatest amount roots :- probably $120^{\circ}$ in some cases.f Vines.- Guichenet.-The advantage, in planting young Vines, is laid under ground is this: it prevents any suckers from emit roots more readily than would otherwise be the case. $\ddagger$ Grapes.-A Subscriber.-From the account you give of your species of coccus, the excrements of which fall on the Grapes It such is the case, your best remedy is, after the Vines have received their winter pruning to remove the rough bark from
the stems, and ecrape nff all the insects which you may meet with. The Vines should then be coated over with a mixture of ence of thick paint. When Grapes begin to change colour, they dry. f- Francis. - From your statement we suppose that your Grapes are affected with what is commonly termed "rust," the cause of which has non yet assigned 1s, that the Grapes are in an carly stage of their growth injured by thrips. The fact connexion with the disease
Meroxs-Guarhimet-It is better to allow Melons to remain
upon the mother plant untui thoroughly ripe, unless they are senuired to be sent to any distance; in which case the better and after they have reached thear journey's end, to place them
in a warm house or frame to mature them pexfectly, t-- Wilts
will be obliged if "Cummins," who stated at page 429 that he invariably ripens eight Melons in each light, will be kind enough to inform him of the size of his two-light frames, and the sort of compost which he uses to grow them in; also,

## NEWS OF THE WEEK

The long-pending debate on Mr. O'Brien's motion for committee to inquire into the grievances of Ireland terminated on Wednesday, when the House negatived the
motion by a majority of 79 . Sir R. Peel on the previous night made his anxiously-expected declaration on the policy of Ministers. He said they were prepared to administer the affairs of Ireland on the principles of impartial justice-to recognise the equality of civil privileges -to give a'substantial and not a fictitious right of suffrageand to consider the relations of landlord and tenant; but with respect to the Established Church, they were not prepared to make one alteration in the law by which that Arms Bill has made but little progress; on Thursday the motion for going into committee for the consideration of the remaining clauses was met by an amendment for throwing out the bill altogether, but the original motion was carried on a division ay majority of 77 . Iwo of the and the Bill bas consequently advanced as far as the 14th clause. Lord Worsley has withdrawn the Commons Inclosure Bill for the present session, in the hope that Government will originate a measure on the subject next year. In the Lords, the Church Endowment Bill has passed, with modifications; and Lord Aberdeen's Bill on the Scotch Church, after having been re-constructed in order to remove the difficulty with regard to its declara tory portion, has been agreed to.
From France, we learn that the session of the Chamber of Deputies virtually terminated on Friday, after a debate on the Budget, which was voted by a majority of 218 to topics of closing proceeding the sion on the Avignon and Marseilles Railroad Bill, and on the Orleans and Tours Railroad Bill, both of which were passed. Some changes in the Cabinet are anticiMarshal Soult is mentioned as probable.-The news from Spain is still extremely unfavourable to the Regent. Badajos, Bilbao, and other important towns, have declared for the insurgents, and an engagement has taken place between Gen. Narvaez, the revolutionary commander, and one of the Regent's brigadiers, in which the latter was most distin Albacete, apparently unable to effect any movement on the offensive; but it is generally expected that the next telegraphic despatch will bring some decisive result, and announce either the abdication of the Regent or a complete victory over the insurgents.-In Portugal there has been some apprehension of a movement in consequence of the events now passing in the Spanish provinces; but the Ministers appear to have been prepared for such a contingency; and the tranquillity of the country has not been disturbed.-From the Levant we learn that the Servian election took place on the 27th ult., when the unanimous choice of the people fell on Prince Alexander Georgewitsch, the lately-deposed Sovereign.

## 

Court.-Her Majesty, Prince Albert, the Prince of Wales, and the Princesses, are quite well, and continue Saturday for the reception of an Address on the Throne from the corporation of the City of London, on the birth of the Princess Alice. Her Majesty and Prince Albert of the Princess Alice. Her Majesty and Prince Albert
attended divine service on Sunday morning, in the Chapel Royal of Buckingham Palace. The sermon was preached by the Bishop of Bangor. On Monday the Queen and Prince took an airing in an open carriage, and in
the evening honoured the performance of the Philharthe evening honoured the performance of the Philharthe King of the Belgians. On Tuesday her Majesty held a Court, at which the Grecian Minister had ars audience to take leave. On Wednesday the Queen and Prince Albert took an airing in an open carriage and four, and rode out on horseback on Thursday. Her Majesty and Prince Albert are expected to take their departure for Claremont this day, accompanied by the
Prince of Wales and the Princesses. The Court is not expected to prolong ith 畋y in Surrey beyond Wednesday
or Thursday in the ensuing week, when her Majesty will eturn to Buckiogaam Palace for about ten days or a Court will Court will remain at Windsor until her Majesty's anticipated marine excursion to the Kentisi coast, and upon remain at Windsor for four or five months. Her Majesty has given notice of her intention to visit the Italian Opera in state, for the first time since her accession, on Thursday next, the 20th inst.-The King
and Queen of the Belgians, attended by their suite, left Buckingham Palace on Wednesday morning for Woolwich where they embarked for Ostend.-The King of Hanover dn Sunday was visited by the King of the Belgians at
Kew, and came to town on Monday. In the evening of that day his Majesty honoured the Earl of Aberdeen with his company at dinner. On Tuesday the King dined at party in the evening. On Wednesday his Majesty was present at the marriage of Lady F. Vane, daughter of the Marquess of Londonderry, with the Marquess of BlandSalis and in the evening the King had a dinner party and honoured Mrs. Beckett's party with his company in the evening. His Majesty wilt this day dine with the has sufficiently improved as to admit of her departur from the metropolis; and her Majesty, accompanied by her Court, has left Marlborough House for Bushy-park service on Sunday at the Temple of Kent
The Army.-Her Majesty has been pleased to appoint Major-General Sir G. H. F. Berkeley, at present employed upon the Staff of the Ionian Islands, to serve upon the Staff of the Army in Ireland, vice Major-General D'Aguilar appointed to the command of the troops in China, in suc-
cession to Lord Saltoun. The late Lord Robert Kerr is to be succeeded in his staff appointment of Assistant Adjutant-General at Edinburgh, by Lieutenant-Colonel Eden, now Deputy Adjutant-General in Canada
Pensions.-The following is a list of all pensions granted between the 20th June, 1842, and the 20th June, 1843 and charged upon the Civil List :-Sept. 24, 1842-Baro ness Lehzen (in consideration of the faithrul services ren dered by her to her Majesty during a period of eighteen years), 4002. Nov. 17, 1842-The Misses Kennedy, sisters of Sir R. Kennedy, late Commissary-General (Additional pension, in testimony of the public services of their late brother), 2002. Nov. 17, 1842-William Wordsworth, Esq. (in consideration of his distinguishe literary attainments), 300l. Nor. 25, 1842-John Curtis, Esq. (in consideration of his zealous devotion to science), Professor. 25, the College of Surgeons, (in consideration of his distinguished exert.

## $\sqrt{\text { Forefgr}}$

France. - The session of the French Chamber for anotler sitting terminated on Friday lasto anere was adjourn till the day fixed for prorogation; but the business of the session is over. The Avignon and Marseilles Railroad Bill was passed on Wednesday, but with considerable modifications. The discussion of the Orleans and Tours Railroad Bill was commenced, and closed on Thursday by closing of the session took place by the passing of the Budget. The debate that preceded the vote was totally devoid of interest, the principal items having been voted without any discussion. The Budget was carried by a
maiority of 218 to 53 . The Chamber was occupied on majority of 218 to th. The Chamber was occupied an none of which were, however, of public interest. The Chamber then adjourned sine die, with an understanding tha when the attendance of the members should be required, notice should be given at their places of residence. A
rumour had prevailed in Paris, which was said to have rumour had prevailed in Paris, which was said to have taken prisoner by the Arab the Moniteur contradicts the truth of it, and none of the other papers mention it at all. The Courrier Francais states that a modification of the Cabinet would take place immediatelyafter the close of the session. It was rumoure in the Chamber of Deputies on Thursday, that Messrs. Martin du Nord and Teste and Admiral Roussin would then positively retire from ofnce, and be replaced respectively by Messrs. Hebert, Dumon, and Salvandy. It was also rumoured that Marshal soult ta "august influence," he had refrained from compromising the existence of the Guizot Cabinet by his retreat. A pampblet on the marriage of the Queen of Spain, said to be from the pen Naples ad Mor attached to the French Embassy in London, has just been published. The object of the work is to show that the puea of marrying Her Majesty out of the house of Bourbon idea or to herlos, the son of Don Francisco de Paula, the Prince of Lucca, and a Prince of Naples, are all equally objectionable; and that a son of His Majesty the King of the French ought alone to receive the hand of Queen Isabella. In the domestic intelligence in the Paris papers there is nothing worth mentioning, unless it be the promotion of (the young Duc d'Aumale t the rank of Lieutenant-General. Horace Vernet is, moreover, stated to have been ordered to pain a large picture of his late capture of Abd-el-Kader's
smala," for the Versailles gallery. The heat of the sun on Wednesday last was so intense, hat some of the asphalte pavement of the squares and boukvards exposed to its almost perpendicular rays, became nuch softened. The Courrier Français, alluding to this thet, goes so far as to relate that a lady on passing, about two n'clock, before the Café de Paris, was unable to extract her shoes, and was obliged to leave them behind ber. The announcement of the arrival of the Prince de Joinville and his young bride t Brest was premature, and they are not expected before the 15 th or 20 th of this month. On Tuesday, the nauguration of the chapel of St. Ferdinand, consecrated the memory of the late Duke of Orleans, took place. The ceremony, which is described as extreme'y aftecting, was attended by the King and Queen, he Du
Orleans, the Dukes d'Aumale and Montpensier.
Sparn. - The accounts received this week are still very anfavourable for the cause of the Regent, whose difficulties appear every day to become more serious. In Paris, according to the daily papers, it is generally expected that the next telegraphic despatch will announce something decisive respecting the insurrection, the abdication of the Regent, or a complete victory over his foes. Defection is oo general in the provinces, that except a few of desperate delity, everybody looks for the desertion from the Regent's cause of the whole army. A few still cling, owever, to the hope that he will yet make a successful efiort. Madrid was tranquil on the 8th, but some towns of the environs had pronounced, among which was Alcala denares, but the National Guard had marched upon it to restore order. Badajos pronounced on the lut, as Captain-General and Political Chief of Badajos remained firm to the Regent, and had withdrawn. General Zurbano had evacuated Balaguer, and on the 3 rd the first serious engagement of the insurgents with the Regent's forces took nlace in the neirhbourhood of Teruel, when General Naryez attect Briedier the Recent's mander and retiond the town. The lot and 3at batalions of the Princesa regiment, a battalion of that of Isabella II, and a squadron of cavalry of the Infante regiment immediately went over to Narvaez: who on the 4th repaired to Daroca, which has effected its pronunciamento but as this movement menaced Saracossa, General Seoan has marched upon it. The tidings of the landing and reception of Generals Narvaez and Concha in alencia has excitea much sensation in the capital, and had what alarmed the Ministers, for an order had been given to Van Halen to fall back on seville and Cadiz; they had also ordered the formation of a ree corps or 800 men and 60 horse at Madrid, and had likewise forbidden the circulation of the Opposition Journals through the Post Office, in consequence of which they have ceased appear. The Regent was still at Albacete on the 5th inst. General Narvaez, instead of marching against him, had marched first to Teruel, to relieve it, and cut off the communication between the Regent and his Generals in Arragon. General Concha had gone to take the command Regent. Bilbo And Alicante, and from thence mensce the collision, buta J unta was immediately formed. Letters from San Sebastian of the 3d inst. state, that, at 11 o'clock on the previous night, a courier had arrived with despatches from the Junta of Vittoria, apprising the inhabitants of the pronunciamento in Alava, and inviting them to follow the example. General Hoyos, the CaptainGeneral, immediately called a Meeting of the muni-
 antil a tate hour On the following evening too antil a vary
 Sebastian, and having joined five others stationed there, soon afterwards sailed out, the crews crying, "Long live the Queen, the Constitution of 183\%, and the Lopez Cabinet." They then summoned the city to declare against the Regent. This demand created the greatest agitation, the shops and houses were closed, as well as the city gates, the drums beat to arms, and in less than ten minutes the 500 National Guards of the town wie or up on the great square. The General, the Chief of the Staff, and their Aides-de-Camp, and the members of the Municipality likewise repaired thither, and to mously agreed not to yiela until orders should be received from the Government. The National Guards then took possession of the military posts and the citadel, and at 11 p.mo., the Avuntamiento having again assembled, sent an officer to order the trincadores to put out to sea, or otherwise the Castle would fire upon them. The Supreme Junta of Barcelona had issued a bando declaring public property the ditches, glacis, and other fortifications of the city about to be demolished. They were to be forthwith solu, and twe proceeds aphea to pa the workmen employed in their demolition. The governor of the fortress of Monfuich continues faithful to the Regent. The Imparcial of the 4th states, that the Minister of the Interior had gone to prepare for the retreat of the Regent upon Cadiz, where it asserts that he intends to remove the Queen, and convoke the Cortes, his plan of operations being modified by events. The forces of the Regent are described as greatiy reduced by the fatigue of the march, disease and desertion, and it is said that he has little moll he brought from Madrid.

The Min We advices from Lisbon to the 29th had been actively engaged, in consequence aformation that it was intended to get up some oporto, it is said, was the point fixed upon, the Spanish pronunciamentos having given an impulse, as might be expected, to the revolu-
tionists of this country. There was no doubt, should
anything occur, that vigorous measures of repression would at once be resorted to, sach as the suspension of habeas corpus, the calling ort of the volunteer battalions, \&c. The Queen bad been summoned from Cintra to attend a council of state on the subject. The Cortes are about to close, after a long session, in which some important measures have been passed. Among these is, contrary to made so many amendments, that it was generally expected the bill would have to lie over till the next session. The Mixed Commission of the two chambers, however, have decided the question, by rejecting the am, upper house; so the bill will become law in the shape in which it passed the Chamber of Deputies. The peers
have joined with the Deputies in a vote of confidence, under which the Government is empowered to collect the taxes for the ensuing year, and to raise money upon them in the best way it can, by issuing exchequer-bills, \&ce.
Germany. - Letters from Vienna state that the English and French ambassadors have followed Prince Metternich to Ischel, whence the latter will go to Marienbad, a
watering-place in the immediate neighbourhood of Konigsmarks, the Prince's principal estate in Bohemia ; but the French ambassador will go to England, on leave of absence ; and it is rumoured that Sir R. Gordon will not return to Vienna until a new ambassador has been appointed by the Austrian court to that of St. James's. The sudden rise in the price of grain in many parts of Germany, and more particularly in Bavaria and in the countries on the Maine, has caused a good deal of alarm, and most of the local governments have taken measures to check the injurious effects, apparently caused more from mercantile speculation than from actual deficiency. The merchants of Trieste intend to send, at the end of August, commissioners, by way of Egypt and Suez, to Southern Asia, and especially to India, in order to ascertain the possibility of opening an active trade between those countries and the Austrian empire. We noticed in our last the rejoicings in Penal Code by the Diet. The following incident, in connection with the same subject, is mentioned in the papers, During the representation of Mozart's "Don Juan" at the Coblentz Theatre, on the evening of the 24th ult., in the scene where Don Juan compels Leporello to invite the statue to sup with him, the terrified valet, according would rather suffer the bastinado than have said, " would rather suffer the bastinado inan invite such guest ", but M. Seraucturitz, who performed the "part of
Leporello, substituted for "bastinado" the words "Penal Code of Prussia." This allusion was received with almost frantic applause by the audience. The Commissary of Police, however, construed it into an offence against the
 the continuance of the opera. The ill-judged joke of the actor win cause his appearance in a different
Russia.-The French Ministerial papers publish a letter from St, Petersburgh of the 20th ult,, stating that Prince Dolgorouki, the author of a pamphlet on the Russian nobility, which we noticed at the time, and which gave offence to the Emperor, had been arrested immeiately on his arrival at Cronstadt, and placed in solitary of the chief of police, the Prince having said nothing in his book nor in his interrogatories to justify a prosecution for libel, the Emperor offered him permission to enter the military service. The Prince having declined to accep military service. Che Price havisy dechned o accep tions, the Emperor caused him to be transported to Wiatka, on the confines of Siberia, where be is to remain nder the survellance of the poiice.-According to the last census of the Russian empire, the total number of
inhabitants who can write and read was $4,167,995$, or the proportion to the whole population as one to twelve. Servian frontier, bringing the news of the re-election of the Prince Alexander Kara Georgewitsch as Sovereign of Servia, on the 27th ult. The only difference between this election and that or last September consists in the presence of Baron Lieven, the Russian Commissioner, the Russian Consul, and Hatiz Pasha, at the election now concluded. United States.-By the arrival of the Rochester and England packet ships, we have accounts from New York to the 20th ult. The annual celebration at Bunker's Hill, which took place this year with more than ordinary splenpresence of President Tyler gave it a very imposing cha racter. The papers contain the report of a speech delivered by Mr. of State treats largely of the state of public affairs. The topics touched upon are chiefly of a domestic character, and the address altogether, possesses, comparatively, little interest for English readers. The Canada papers contain an account of an outrage committed by the labourers on the Beauharnois Canal, who had
struck for higher wages. They entered the house of the struck for higher wages. contractor, and while he was in
fractured his skull. A detachment of soldiers was soon
on the spot, the Riot Act was read, the soldiers fired on the spot, the Riot Act was read, the soldiers fired,
several of the mob were killed, and the remainder dispersed. The malcontents had fled in great numbers into the wood, where the soldiers were preparing to attack them.

Thesiday.-Lord Brougraw's Slave Trade Suppression committed for the purpose of having amendments made in it and printed.-The Church Endowment Bill, with amendments obviating the objections made to it by Lords Brougham, Camp-
bell, and Cottenlam, was read a third time and passed. The bell, and Cottenlam, was read a third time and passed. -The
Earl of ABERDEE moved the re-commitment of the Scotch Church Bencfices Bill, and stated his intention to accede to Iord Brougham's suggestion, by trausferring the last portion of the with respect, to the declaratory part of the Bill would be removed the Bill as amended more absurd than before, and moved an amendment to the second clause, which was negatived by 31 to 14. - Another amendment proposed by Lord Camprinli, on clause
5, to the effect that if the Presbytery exceeded their juris diction should be given to the presentee in the Civil Courts, was negatived without a division, and the remaining clauses with the
preamble were asteed to. Wednesduy. - The Royal Assent was given by commission to Chelsea Hospital Bill, the Grand Jury Presentments (Ireland) Bull, the Maryport and Carlisle Railway Act Amendment Bill, the Neath Harbour Bill, the Aberdeen Harbour Bill, the Kingston-unch-Hull Waterworks

Thursday.-The Episcopal Functions Bill was read a second stage, and ordered to be read a third time on Monday. serres of resolutions, referring to the recent dismissal of Irish Magistrates. He disclaimed being actuated by party motives sidered act, for which the House could find no precedent even in the worst days of the Stuarts.

HOUSE OF COMMON
Monday. -The Chartist "Remonstrance" offered for presentation y Mr. Duncombe, on Friday night. was withdrawn, the SPRakRR House of Commons of a Remonstrance unaccompanied by a petition.-
 which the House should reso.ve itself into committee of supply: -that
arrangement had been made by which parties who had the same amount of stock that they held last year, the interest being less than nnil that the report on the Custom-honse fruals, with the rxecption
of that portion affectug charges still jensing, would be Jaul on the
 rither as prinepals or as secondy in any ducl; or of the (iovernment
would, in the next session of Pariament, brin in a hull for the entire revention of duelling, Sir R. PeEs replied that he was not prepared importance of the subject, but he considered that any declarations respecting it should be made only after the most mature deliberation,
and that it would not add to the weight and effect of those declaraons if they were made suddenly and on the spur of the monlent, and
 siastical Courts and Local Courts Bills, and that they were deter
nined to press them forward this session. The adjourned dibate on the grievances of Ireland was resumed
hy Capt. Brennat, who recommended the construction of railways by
the Government, the aholition of the vice-regal court, an increase to the Government, the abolition of the vice-regal court, an ancrease to the agitation, and moved, as an amendment, that the House, deprecating the agitntion that prevailed in Ireland, would suspend any
measurces for the redress of any grievances, real or fanciful, of Ire
land, until by the cessation of agitation that country showed itsel and, until by the cessation of agitation that country showed itsel
a condition to receive as a favour any measures of redress o but the amendraent, not finding a seconder, fell to the ground.
Mr. Virmirrs STUART proposed that the whole ecclesiastical reve nues of that country should be appropriated to the support of the
Roman Catholic Church, and that another tenth should be levied upon the Protestants to support the Protestant Church. - Captain
Rous said that Catholic emancipation was but an instalment-th rest must be paid sooner or later. The state of the Protestant testants, and which was paid for the support of clergymen, many of
whom had $1,500 l$. a year for taking care of twenty-five parishioners. Let us change places with the Roman Catholics, and then sce what
would be our feelings. Strongly denouncing religious war-cries Protestant ascendancy or Roman Catholic supremacy, he argued that the only way to goveru Ireland was by consulting the feclings of the op ten millions sterling upon lrish railways; a large sum to educate the industrial and mechanical talents of the pcople; the abolition of the Roman Catholic prelates of the titles which they chose to assume. He counselled the sending of some distinguished Roman catholic soothing of the irritated feelings of the Trish people as the mostindis pensable point. He was also of opinion that the lord-lieutenancy might
be aholshed, for power and responsibility were now inconvenientis and unequally divided between the Lord Lieutenant and the Iome Secretary. There was also another inconvenience :
Lieutenant's household comprised a number of idle
Dull, n was now nearer Lomdon than many parts of Englarid were ew years ago; abolish the lord-lieutenancy, applying the expense o
it to public works, and, if necessary, have a fourth Secretary of State in London. In looking back to the past, he exempted no Govern
ment from error; he supported the motion in no party spirit, though
he feared it was too Iate in the present session to enter on the com prehensive and statesman-like plan required for the pacification of
Ireland. Let the Government apply themselves to the subject during the recess, and call Parliament together early in winter, in
order to consider $2 t$; an awful responsibility rested on them ; and
Sir R . Peel, with manly policy, or else he swept along the current down which lhe 1 ,
rapily flosting.-Mr. G. KMGMT said he was willmg to give the
Catholics all he Catholics anl he could get for thena; but be it bigotry or not, the
people of England and Scotland had made up their minds, and any
attempt to subvert the Established Church in Ireland would not only cost ang minister his place, but even the Soverefign the crown. Hi ing extremes. - Sir B. Hact considered that the Government did no dare to put down the ngitatinn it I Ireland for two rensons- frar o
the Orangemen, and fear of Mr, O Connell. He exhorted to contthe Arms Bill, until they ascertaned what the intentions of Government were. - Lord Jocelys condemned the agitation, felt that
something must be done to abate the alarm which it created, and to preserve the neace, and declared that he hard too rond an opinion o to ary mearure for the npoliaflom of the churcht EEe concurred with
the opinions which had been expressed about public works and the
promotion of industry; but the agitation, by disturbing tranquility, dromotion of industry; but the agitation, by disturbing tranquility, tion were revolutionary, and sufficiently warranted the resistance of Lord Worsser withdrew the Commons Inclosure Bill for the
present session, hoping the Government would origunate a measure on the subject next year,-On the motion of Lill passed through committee.
Holyrood-park Besumed by Mr Tuestay.-The adjourned debate on Ireland was resumed by Mr
M. J. O'CoNNELL, who urged the necessity of the motion, and com plained of the abstinence of Ministers in refraining from indicating in past times, and the present position of the Conservative party with which they had evinced on municipal corporation reforn2, and the they went the length of threntening the Sovercign with the fate of
James IM., because Mr. Sheil had been made a privy counsellor.

 onnquered conntry hy a a arrisot ot Prot. tarta, or on the broad princlple of making millions happy, We were told that the Protestants
possessed the wealth and the land; but what if so? They were stll
but 800,000 men against, $8,000,000$. If the country had been well governed, one-tenth of the people could not have engrossed iis whole
wealth and land. What he now complained of was, not that Sir $R$. Peel had done worse than his predecessors, but that he had not
grappled with the state of the country. Mr. OConnell, he must
admuit, was alternately dupe and impostcr, and certainly could never have really belicved that a repeal of the uniot would hring the golden
days he was accustomed to represent to the people as its results Now with respect to that badge of conquest, the Irish church.
something were not done upon that subject, tile Irish chureh would
deatroy itself: Irt Mr. O'Conncli only surczes, the nonpryment of tithe
 nas opposel to all rellres. The tut. $r$ was not the property of the
land-owner, but, of the nation. It was ereated by Troman Catholics
for Rpman Catholic purposes, which purvoses were chan for Rpman Catholic purposes, which purposes were changed by the
nation's will, and might, therefore, loy that will, be changed baek
again. He recommended Government to look to the intercsts of the Sir R. Pbre then rose. He was ansious, in the first place, to
obliterate all personal or party recollections. He would vindic.te his
own course, but he would not recriminate. The question was of too deep an interest siol that. The real anject of this motion was nut an
ingquiry into possible emedies. but an expression of opinion adverse
to the Covernment. If the Government did appear to the HIouse unfit, from party connexions, or from other rensons, to govern Ircland,
this vote ounght to be amaninst him ; for certninly the tenure of offce
by any party was a consideration of no valuc in comparison with the

 bonn flde to fulfil the principle of the Relicef H3yli, which establishcd
nquality between Protestant and Catholic. He showed the absurdty
of the allegation that Irishnem had not had their f.it wo of Irimh patronage, and cited several instances where 1 Hhinhic.c. hind hoc:
appointed to employments in Eugland. The attention of the House had been called to three sorts of Irish grievances, the social, thic
political, and the religious. The social, or agrarian, were not
new grievances, nor was it possible for the Government to devise
$\qquad$ advances for railways, he maintained the inpxpediency of lendung the public money for any public works which did not hold out a reatsonthe Government would have to come upon the country for repayment,
which it would loe difficult to adjust nid invicious to demand. Next,
as to political grievances. He fully admited, and had admaxted long ago, that religion ought not to operate ns a disqualification for office.
As to oaths, he had loug sivce cxpressed himselt favourable to the ment bad not yet brought in a registration bill, he proceeded to the
question of the church. On thrs bead he would not comsent to give
the pledge required of him by the Opposition; he would much rather

Which it had marde on this, win the times both of the late and of the
present Ministry. He pointed out the practical absurdities and incon-
sistencies which must foilowa severance of treland from Engand with sistencies which must foilow a severance of Ireland from England, with
separate Parliaments, revenues, armies, and navies. Such a severncee
could not last a single year without a conflict. To prevent this evil could not last a single year without a conflict. To prevent this evil
the Government had, without asking for any new measure, resolved to rest upon the cxisting powers of the law and consti-
tution. "I am asked," said the Right Hon. Barouet, "what
course I intend to course I intend to pursue. "Declare your course," is the
demand. I am prepared to pursue that course which 1 consider
I I have pursued; namely, to administer the Government of shall be equality of civil privileges. I am prepared in respect of suffrage. In respect to the social condition of Ireland we ar
prepared also-but that is a matter for legislation, and we all fee pared to consider the relations of landord and tenant deliber ately, and all the important questions involved therein. Wir-
respect to the Established Chareh, I have already stated that we chercht arepared to make one alteratimn in the law hy which that Why don't you bring in measures at once? I know what a tensures of coercion. But we must have regard to the real circum Government. Demands may be made for new measures, upon
which to rely for the suppression of distarbance. Sir, I claim for the Government the entire right to judge with regard to the discretion to be exercised, either as to the application of the
existing laws, or as to an appeal to Parliament for new ones. I am not asiamed of netimg with forbearance and moderation in
matter i of this kind. I believe that whatever be the clamours
for new restructons and new powers, a hasty and prectpitant demand for them does not add th the strength of the Exceu-
tive. I think that the agitaton which exists in Ireland cannot phocect without ranging on chat se of the rovernment man flow from that asitation." He then procecded to say, that hi foresaw the conseguences of assemblung a new Parlianuent for elam for new powers would be the stronger for the past forbearno distinction betwcen Protcataut and Catholic. The Catholics and enactments able feeling to them still subsisted in the Imperial Parliament Te appealed to these considerations, to the long connexion of the of Sir $R$. Peel. It was more like the speech of a member finding one who was the head of a Government himself. After enlarging upon the magnitude of the present danger, he acknowledged that coercion. But the course on which the Government seemed to posals of other members, and then commenting on the insuf ficiency of one suggestion and the doubtfulness of another. To in the Ministers. If they had been afraid to propose measures It was not because there had been any violence on the part of the rights existed between England and Ireland; in proof of which
denial he referred to the numbers of the Parliamentary conIrish Muaicipal Act. He then camet to the question of the Churech.
On this subject he desired to explain the opinions expressed by ina on a former evening, by which he had meant to intimate thought it a principle much misapplied to a Church like that o reland, which had no connexion with nor influence over the
bulk of the people: and it was requisite, in order to make such principle a
in a manne same footing with the relipinn cstablished in favour of thic
minority. How that was to be accomplished might require much
consideration: at present he did enough in asserting the principle. There remained the question of Ministerial patronage, as ow you ought to partake. It might be a curious question by what naens Ireland was governed just now? The ranks of repeal were had Zeen done, and partly from despair of what ought to be done y Mr. Fox's Government in the days of the Irish voluntecrs Welington ir deprecating cifvil war with Ireland. Let not, then
the present Goverument think it necessary to be more dignified the present Goverument think it necessary to be more dignified
than Mr. Fox in 1782, and the Duke of Wellington in 1829. The Government-the temper of the Government-the fear, which 1 allowed to call it a magnanimous fear, will make people reflect
 of Lous XIV, ants of Nopeleon to place a member of the French
dynasty on the firrone of Ireland may be again attempted? We beleve that thone friendly terms will be continued and well be posed to disturb your Canaluan frontier for the purpe
weakeming your strength in Ircland-and if the people
as they will, they must come to the conclusion that

 Hotced the Govcroment.-Mr. Rocre declared, as a Rcpealer

 wedt inchar ed an the inhtiny, tor all were adke an a state of diffidiat,ifictly whether or not thins was a vote of want of confidence, Rcucrt Peel lad deceived every party, in the country.
Lord PALMPRSTON observed, that this was a debate femarkable
the what had been said, and for what had been left unsaid, for Whare taken against Ministers by many of their own supporters, Hrom their the views of Government he defied any man to infer
froy were, no doubt, distracted and paralysed by contrary impulses-not only from their friends out of
doors, but even in the Cabinet itseff. He had said a little while ago that if Ministers should resign their places, the country to change that opinion, and he felt bound as a gentleman, and a man of honour, to say so, that he might not mislead them into a
resignation. He did not think Repeal was a question which Ministers would have to consider, he rather thonght that Repea rievances. The only point upon which Ministers had held out ste chance of a remedd, was the law of landord and tenant; and
mosthappy should he be to co-operate with them on such a subOct. On the greatest evil of all, the relative position of the
Protestants and Roman Catholics, not the slightest alleviation was intimated. The present amount of Rstablishment was capa-
ble of being considerably reduced; and as Lord Stanley had bee the author of the Church Temporalities Bill, there could be no ciple of recuction. Jin point of justice, perrlape, the Catholics sidering the state of their own Church, cound you expect that
they would not? He would say, therefore, suspend those hving in which there is no duty to be performed. Bint if you woul not abate the Protestant church, put that of the cat holics nipon voluntary gift, perhaps with some aid from the State. The
amount of the establishment at Maynooth, too, was far below it amount of the establishment at Maynooth, too, was far below it
proper line. Austria, Bavaria, Belgium, Prussia-each made provision from the funds of the State for more than one denomi Parliamentary, and the too high amount of the Municipal fran chise. Under all these difficulties, here was a Governmen unprepared with any remedy. tinguish the difficalt from the impossible; and it was impossibi for a Government to go on long as the present Ministers were
going on now. The party who supported and withleld them were an inert mass, moored in the tide, and serving only to shov party and retire from office would be far more plorious to tha minded Ministers than to persist in their present course. H hoped, at all events, that nothing would be said from the Treasury benches to strike the Irish people with despair, and that,
before another session, measures would be matured for satisfying berore another session, measures wo
Lurd Staniry declined to adopt the suggestions of Mr. Munt and Mr. Ferrand, who had required the Government not only to for all the evils in all the British dominions. He had read his motion as charging the Government with insensibility justice; but the speech which had introduced it was a speech upon the general state of Ireland, and against past as well as tself was not now very easy to be defined. Some gentlemen called forbade them to take any strong measures at all. The Government had been charged with intending nothing on the subject o the Parliamentary franchise; whereas, at an earlier period of that franchise, upon the basis of the new valuation contemplated in the Irish Ponr Law Amendment Bill; but the working of that could be prudently enacted. Then, on the subject of the Irish could agree; but some had said boldly, "Abolish the intrusive church of the minority ;" and Lord Palmerston had asked how in its revenues? Why, it was the very point upon which he had resigned his seat in the Whig Cabinet. He admutted that a high portant princlple; but he did not think it would becone such a proposal of equalising the two religins meant, he did not understand. Did it mean ane equal, wr did it mean a proportionate
division of the Protestant revenues lyetween the Protestant and the "Catholic clergy And to what result would your cquality
lead? Why, to plice in the House of Lords a Roman Catholic prelacy, net nominated by the Crown of England, but by the
Court of Rome; for Mr. Morc O'Ferral himself had de not accent a stipend from the nation, on the terms of permiti any intexference with their civil state. The law of landlord and enant was a difficult subject; and he acknowledged that
if the Irish landlords, as a class, dealt with their tenauts otherwise than the landlords of England, a case was made out for the

Meeting on the slate of Ireland.-On Monday a meet ing of influential electors of the borough of Marylebone, convened by its Parliamentary representatives, took place the residence of Sir B. Hall, in Portman-square, for the purpose of considering the propriety of making a
public demonstration, with reference to the present state and future prospects of Ireland. Sir B. Hall was called on to preside, and was surrounded by a large number of ppinion. Mr. S. Crawford, Lord Clements, and Mr. Wyse addressed the meeting at some length in favour of
the proposed appeal to the public; but Gen. Evans suggested the propriety of caung upon the Queen, by a constitutional petition to her Majesty, to dismiss the present Parliament and Ministry from power. Sir B. Hall proper and dignified course, to direct her Ministers to adopt some measures of justice to Treland; and if they did not, to dismiss not only?them, but even Parliament. He then read a memorial expressive of alarm at the state nd indignation of the policy of the present owards Ireland, and appealing to her Majesty, in the country, at once to dismiss them from her counsels. This was adopted unanimously, as was also a resolution deter mining to hold a public meeting of the borough, over which Sir B. Hall was requested to preside, on Monday next. A committee was then appointed,", with, Sir De Lacy Evans as chairman, to arrange the preliminaries for the demonstration
Sale of the Duke of Sussex's Properiy.-The sale o the miscellaneous articles closed on Saturday, with the decorativelfurniture, oriental and Dresden china, and other 1,900l., and the sum realised by the auction up to that time was stated to exceed 40,000 l. The sale of the Duke's tobacco and cigars, which commenced on Monday, excited onsiderable interest, and attracted a very numerous indance. The meerschaum bowls realised extraordinary paried fome of them retching upwards or son the cigars ranged from $10 s$. to 27 . $2 s$. per lb. At these high prices, the articles were purchased either as curiosities, or by wealdy smokers. Most of the tobacco and cigars conale closed on $W$ to the Duke from personal fiends. The of the tobacco and cigars were sold. Some of the rare cigars sold for more than $2 s .6 d$. each; and it is a remarkable fact, that three small parcels of them realised a sum exceeding that fetched by the whole of the carriages belonging to the late Dukel sold on Monday last, by hessrs. Tattersall. The principal purchases made during high for the brokers. 500 Woodvilles fetched! $18 l_{\text {. }} 17 \delta, 6 d$. ; a box of 9 Havannahs, 5 l. 10 s.; 1000 Havannahs, 43 l . 1 s. ; 2125 cigars, presented to his Royal Highness in 1841 by Che arer Hebeler, were purchased by Colonel Gurwood for J. Churchill, by the same gentieman, for $137 l$. It was generally remarked that on no pres similar prices known to have been realised by articles of the like description. The proceeds of the day's sale amounted to upwards of 2,000 .
menand gentlemen coge.-A very large meeting of nobletook place on Friday morning, at Willis's Rooms, the Duke of Richmond in the chair, for the purpose of hearing a lecture from Mr. Smith, of Deanston, in consequence Dukes of Richmond and Buckingham, gentleman, signed by the wicke and Zetiand, the Marquis of Northampton, \&c. and drawings of soils and farming implements, commenced his address by remarking on the great importance to the agriculturist of a proper system of drainage, whereby nothing but peat or moss, mioht be rendered fertile. He remarked, that lands in general suffered very little from water rising from springs, but it was that which fell upon it in the shape of rain, that had to be guarded against and carried off. To effect this with advantage, it was sary to sink drains in the subsoil, at distances of from In proportion to twenty-one or twenty-two feet apart. crack, and becomes interspersed with fissures, whereby the water would the more readily percolate through the upper The fissures thus caused in the subsoil thence be carried off. spheric air to enter, which also acted very beneficially the native soil, which soon became converted into monld, and was then capable of retaining with advantage a preat of the greatest importance that the active soil should. It was of considerable depth. He had seen several instances in Scotland, where there had not originally been more than proper draining and subsoiling to a depth of fifteen deep enough; they generally constructed were not nearly a half deep, and might be easily formed by means of plough going over the ground twice, the second time in of this operation would be about $1 \frac{1}{4} \frac{d}{d}$. per English chain Many methods of filling up the drains had been adopted, found to act well, and though perhaps at the same was not might not cost more than half as much as a stome or tile drain, it foukd not be nearly bo denirable, and would be
found the more expensive in the end. A stone or tile drain would last for twenty years, and be in as good condition at the end of that time as when first constructed. He had examined many which had been constructed that time, and he had found them in a perfect condition, and not in the least silted up. The peat draiss, on the contrary, would scarcely endure as many months. The stones should be about the size of common road metalling. When the land was properly drained, and the active soil had become dry and friable, it was necessary that the subsoil should be stirred up by means of a subsoil-plough, 80 as not to be mixed with the active soil. The cost of this subsoil-ploughing, which was most essential in all soils where the land was properly drained, but was otherwise most dangerous, as it only created greater cavities for retaining the water, was from $30 s$. to $40 s$. per acre, a sum which, though apparently large, would be found to be
amply repaid by the increasing crops. Until land was properly drained it would be much better that the furrows should be shallow instead of deep. Mr. Smith was listened to throughout with profound attention, and conremarks on the advantages which must accrue to all classes of the community from an improved system of agriculture, to be effected by means of efficient drainage and subsoiling. At the close of the lecture, the Duke of Richmond observed that he-and he doubted not all concurred with him-had derived much gratification from the curred with him-had derived much gratification from the
remarks which they had heard, proceeding as they did remarks which they had heard, proceeding as they did
from a gentleman who had gained his knowledge from lengthened experience. He would therefore suggest that
a vote of thanks should be passed to Mr. Smith. The a rote of thanks should be passed to Mr. Smith. The
Duke of Cleveland seconded the resolution, which was Duke of Cleveland 8 carried unanimously.
The late Duel.-On Saturday morning the remains of Col. Fawcett were buried in the Kensal-green Cemetery. The faneral was conducted with the strictest privacy, and Was attended by Mr. Blake, assistant-surgeon to the 8th Hussars, half-brother, and Lieutenant Tuthill, of the
Queen's Bays, as chief mourners; Major Daubeney, of the 55 th ; Lieutenant Robertson, of the 15th Hussars and Captain Barrett, late of the 55th, all of whom were particular friends of the deceased. Captain Jackson, of the 57 th, was the only other person present. On Saturday last Mr. Gulliver was liberated from the custody of the police by a writ of habeas corpus, granted on the previous
day by Mr. Justice Coleridge. On Wednesday he atteaded with his securities at the adjourned inquiry at Mary lebone Police Court, when additional witnesses were examined, and the bail was enlarged to Monday, the 24th inst., with the understanding that, should any fresh evidence The adjourned inquest took place on Thursday, but as The adjourned inquest took place on Thursday, but as there was
Peace Convention.-LLast week a deputation had an interview with King Leopold, to present the address adopted at the late Contion the civilized world," on the importance of inertin clause in international treaties binding the parties to refer disputes to the arbitration of one or more friendly powers ciously received by his Majesty. The King expressed i strong terms his approval of the principle of arbitration and referred to the satisfaction he had experienced in danger of war had appeared. He spoke of a continental war as above all things to be deprecated, and regarded it ss all but impossible, so long as Austria, France, and
England were united in favour of peace. His Majesty also referred to the threatened war in the east of Europe, and to the dispute between France and the United States in which the panonstrance and friendly interference o otker powers had led to satisfactory results.
University College,-In the account we gave last weel of the distribution of prizes, we find that we omitted to give the names of those to whom certincates had been
granted. We therefore repeat the list, with the addition of the speech delivered by Mr. Christie, M.P., who pre sided on the occasion. The proceedings of the day having been opened in the usual manner, Mr. Christie alluded to the fact of his having been formerly a student in the College, as one of the circumstances which had led to his College, as one "o the circumstances which haid in former years he had himself received on the same spot froma the years he had himself received on the same spot from the
hands of others, but by the award of some of the same hands of others, but by the award of some of the same important-that "to an institution, whose beginning was fresh in men's memories, and which was stull very generally considered as in its infancy, it was of consequence
to show the world (and this, perhaps, couid not be done more forcibly than by putting forward one who is now in some degree before the world, who left it ten years ago, and had then spent four years within its walls), that it has lived and prospered long enough to feel no further appre-
hension from the efforts of its enemies, although the first hension from the efforts of its enemies, although the first long since subsided--long enough, indeed, to render it continued prosperity a certain proof of extrinsic strength. He mentioned other Members of the Legislature whoma especially Mr. Aldam the Member for Leeds, "who having gained at Cambridge all but the very highes unable to take a degree, being a Dissenter; who, however, though he was thus denied a degree in the University of Cambridge, and would have been refused even admission to reside in the University of Oxford, finds free admission to the Legialature of the Nation." Referring to the pre-
sent condition of the Institution, he said-" There are no wanting other proud marks of the progress of this College.
When I left it in 1833, it was an institution standin When I left it in 1833 , it was an institution standing
altogether by itself, unrecognised by the State. It has now been some years in possession of a charter and placed in connexion with another cbartered Institution, which has the power of conferring degrees, to which
it ungrudgimgly gave over the name of University of Lonit ungrudgingly gave over the name of University of Lon-
don before held by itself; and if it then made an sacrifico tion while it sees many other Colleges, and among them one which beganin at least unfriendly rivalry, sharing in the privileges which it was itself mainly instrumental in procuring, and by the vast superiority of success which has bonours. Hitherto, with but one trifling exception, no substantial privileges have been attached to the degrees o eges in a very short time, perha is every reasoan to hope the Inns of Court in the Metropolis will place the degree of the University of London on the same footing with those of Oxford and Cambridre, as repards privileges for admis sion to the ber I canna believe but that there ment will avail itself of the opportunity afforded by the bill now pending for the reform of the Courts of Doctors Commons, to remove the great grievance on Dissenter from the established faith of entire exclusion from practising in these Courts, and will do this by investing with privileges the law degrees of the University of London. Again, the medicalreform which has been under taken by the Government will also give it an opportunity o attaching privileges to its medical degrees. I cannot help mentioning that there is one member of the Governmen for whose zealous co-operation in every effort to extend her usefulness or promote her welfare, this College has a special right to hope-who was one among its first pro prietors,-who is one of its proprietorṣ still,-who once dis chair, and whom on that occasion I remembe to have heard (I was then a boy sitting there), with tha chaste and perspicuous eloquence which ever finds even in the warmest political opponent a willing listener, declar his deep conviction of the importance of this College, and his earnest desire for her prosperity and fame. I trust that Sir James Graham, now that as the Secretary of State for the Home Department he is the official head of the University of London, and must have a principal voice in all questions of legal and medical reform, will not forget his former declarations of zeal for the University College, but will rather be solicitous to show that he has not lost the will on acquiring the power to benefit us ions to this College, and his continued attachment in an altered political position to a cause which is not the cause of party. I venture to think there cannot be a more striking instance of the extent and variety o and is capable of conferring, than that supplied by the courses of lectures for schoolmasters, mentioned in the report read by Professor Long, the Dean of the Faculty The want of suitable means for the educatio school masters of small unendowed schools, and of ushers in al private schools, is known to every one. The Universities o attempt to supply the want. The position of this College in the metropolis makes its efforts in this way, o are either engaged in teaching in the numberless schools around London, or who, being in London, and being anxious, with sufficient inducement and opportunity, to prepare themselves to be schoolmasters, can come to attend lectures in this College, but could not afford to go and reside at a distance to receive instruction. Itrust is any legislative attempt be made (and such an attempt is d somprobable, to improve the education and condilion of usefulness in this respect of this College will not be overlooked. The fees paid by schoolmastors and ushers attending these lectures are $12.10 s$. for the four classes of Latin, Greek, Mathematics, and Natural Philosophy, and 1. for each class singly. The College has been able to make the fees thus moderate by devoting to the objec different times, in sums of $1,000 \mathrm{l}$ and 500 z , by unknown benefactor, who calls himself (and none certainly can dispute the fitness of the name which he has chosen) Patriot ; and this leads me to a pratifying announcemen which I am able to make. Within the last fortnight the Council of the College have received an additional sum of 500l. from the same unknown benefactor. This is, indeed are those perhaps, who, given to mourn over the selfishness and ostentation of our age, might wish that it should remain unknown as it is, and even grieve if the veil in which this munificence has shrouded itself were to be
withdrawn. But I think you will say with me that this withdrawn. But Ithink you will say with me that this
College has not yet been able so far to forget the virn ence of its enemies, or to become so accustomed and indifferent to generous sympathy, as to acquiesce withou reluctance in ignorance of ats friends ; and I will hope,and though I who speak it am the humblest member of the Council of the College, all will echo the hope ; and rust the hope so echoed may reach our unknown bene factor,--it is not impossible but that even now it may full apon his ear ; that, if so long, not longer at least than he can himself enjov the satisfaction of doing good by stealth, or than fame makes him blush, will be withheld from us a name which we are all so well prepared to love and honour, be a strong support to us, and serve to fix and strengthen his
example for others who might wish to imitate his bounty," The address was concluded with a few words of congratulation to the students who had obtained prizes. "It was an illustrious array of names," said Mr. Christie, "which heralded the College into existence; unremitting has been the assiduity of those to whom from time to time the government of the Coliege has been entrusted; it has fained and kept the assistance of a body of Professors to whose zeal, character and learning the world will admit no superior. The munificence of its founders has raised round us this splendid building replete with every ccommodation for instruction, and destined in all future ges to be admired. But no splendour of external means and appearances, no array of fine names, no zeal or reputation of Professors, can carry beyond a certain point the success of a place of education, or do for it that which may be done by a body of devoted students, mindful of the benefits they have received, and eager as far as it may Slma Mater's reputation, as them- jealous of their their own because their honour and disgrace must be always shared by the College which has educated them "The following is an authentio list of the tudents who obtained prizes and certifictest of the Latin. - Professor Long, A.M. The Church of Scotland.-On Tuesday the anniversary meeting of the ministers and members of the Scottish Presbytery in London was held at the Scotch Church, in Crown Court. The Rev. Dr. Brown, Moderator, presided, and addressed the meeting in a speech of considerable length, in which he alluded to the recent secession of so
many ministers from the Scottish Church, and regretted that those who had so long worked together as brothers in the same vineyard, should now have thought fit to separate upon mere points of etiquette and law, and on
comparatively non-essential matters, and intimated that in the course of a short time a deputation from the Establisined Church of Scotland would visit the metropolis, in order to
the case in its proper light before the public.
Meetings of Companies.- The meeting of the London When the directors declared a dividend at the rate of 6 per cent., deducting 5,000 I. from their guarantee fund, now standing at $90,003 l_{\text {. } 15 s . ~}^{15 \mathrm{~d} . \text {, to regulate this payment to }}$ to a dividend being 12,1837 . 17 s . 5 d , and therefore insufficient to this extent for meeting the dividend the directors wish to continue. The depression of trade and the abundance of unemployed capital, with the low rate of interest, are mentioned by the report as sufficient causes Union of London Bank, on the same day, the dividend Uas of the rate 5 pre ont per annum, sidding 2,000 2. was at the rate of 5 per cent. per annum, siding 2,000 . and is invested in Government securities. The balance of unappropriated profits was stated at $29,962 l .6 s .2 d$. ; and of income-tax, the addition to the reserved fund, and the deduction of $500 \%$. in liquidation of the preliminary expenses, a surplus of 6,317l. $6 \mathrm{~s} .2 d$.
Canada Loan.
Canada loan.-The bidding for the second portion of Friday at the loan, amounting to $300,000 \mathrm{l}$., took place on in the monied circles , The biddings were ab follows : Mr . Maubert, for the whole amount, 108 . $7 \mathrm{~s} .9 \mathrm{~d} . ;$; The Bank of England, for the whole amount, 1091 l ; Smith, Payne, and Co., for $50,000 \mathrm{l}$, 109 l . 1 s . It is understood that there were other biddings, but all below the two last named, and the consequence was that Messrs. Smith and Co. obtained the amount for which they tendered-namely, was adjudged the remaing of England at the price offered for the whole. The rate at which the former issue was negotiated was 108 per cent., and the improvement in the terms obtained by Government on Friday is owing to the prevailing abundance of unemployed capital and the Metropolitan Improvements.-On Saturday an inquisition was held before the Under-Sheriff of Middlesex, to decide whether the Crown, the public, or others, would water's |trustees stopping up and inclosing a high street or thoroughfare, known by the name of Catherine Wheelyard, which leads from Cleveland-row into Little St. Duke of Bridgewater that, in compensation for what was thus meant to be taken away, they should give greater benefits to the public. They proposed to make a road be a much greater boon to the public than that of which they meant to deprive it. The road they meant to make Would be wider, more uniform, and much nearer. The Under-Sheriff summed up, and the Jury ultimately
returned a verdict, that there would be no damage or prejudice sustained by the Crown or any other person.
Launch of the Chichester.-On Wednesday the fine weather induced a great number of persons to visit WoolWich, to witness the launch of this first-class frigate. The gates of the churchyard, commanding a full view, were poeed to the public at an early hour; and at the time of the person there could not have been fewer than ten thousand persons present, besides those in the numerous steamAdmiral, named the vessel, and she glided off the stocks amidst the cheers of the spectators. The frigate is upwards of 1,002 tons, new measurement.
Fires.-On Monday night, shortly after ten o'clock, a of the metron stis consequences proved the most calamitous that has happened in that neighbourhood for many years. It originated marine-store dealer, the whole of which were destroyed together with several cottages inhabited by shipwright and dockyard labourers.-Un Tuesday morning, about four o'clock, a fire broke out among a pile of buildings situate between St. Dunstan's-hill and Idol-lane, belong factory, workshops, and timber-yard, as well as the manufactories of otber parties. The whole of these premises were destroyed, but the fire was prevented spreading beyond the spot. The loss of property is said to amount to several thousand pounds.-On Tuesday night, about
half-past ten, a fire broke out on the premises of half-past ten, a fire broke out on the premises of Messrs. Joalnoer and Co., patent candle manufacturers, near St. John-street, Clerkenwell. It was not got under before the entire stock was consumed, which consisted of the machinery, tallow, palm oil, \&cc., amounting, it is said, to the sum of $5,000 l_{\text {. . A large portion of the oil and }}$ melted tallow flowed from the premises into the streets, melted tallow flowed from the premises into the streets, and all the central parts of the town were illuminated by
the flames.一About a quarter past ten on Wednesday
night the town and neighbourhood of Kensington was thrown into a state of alarm by a report that Kensington Palace was in flames. Hundreds of persons instantly hurried to the Palace avenue, when the report received confirmation by the appearance of a dense body of smoke
and flame above the stables on the north side of the Palace; and on reaching the spot, a large rick of hay, containing from seventy to eighty loads, which was stacked nearly adjoining the stables, was in flames. There was a great deficiency of water, and the rick was entirely destroyed.
When discovered, only a portion of the end was on fire, which leaves no doubt that it was the work of an incendiary Harrow School.-On Wednesday, July b, the secona annual speech-day took place, and attracted a aumerous
assemblage of visitors to Harrow. Together with the speeches, three prize compositions were recited by the
successful candidates-the Greek Iambics (Governors) and the Greek Prose (Hope) by the Hoa. P. P. Smythe and the Latin Essay for the Peel Medal by Mr. A. Grant. Mortality of the Metropolis.-The following is the July 1.-West districts, 133 ; North districts, 173 Central districts, 159 ; East districts, 184 ; South districts, 190. Total, 848-(411 males, 437 females.) Weekly average for the last five years, 903 - (46.
442 females, ) and for the last five springs, 854.

## 非robincial Nepors.

Bridport. -On Tuesday week, at a late hour in the evening, the quiet village of Burton Bradstock, situate a few miles from this town, was visited by one of the most try for a considerable period. It raged with great violence nearly the whole night, occasioning in its progress the destruction of no fewer than 22 houses, besides other buildings and much property. The families burnt out of whom is insured. The origin of the fire is involved in suspicious circumstances, and there is every reason to believe that it is the work of an incendiary. The buildings are the property of Lord Rivers, by whom they were insured ; and fortunately there were no lives lost
Gristol.-It is now announced as certain that the and that Prince Albert has consented to be present on the occasion. His Royal Highness will leave town by a special train at an early hour in the morning, and will be accompanied by many of the high officers of state, ambassadors, and others. After the launch, a banquet will be given to his Royal Highness and the visitors, The room, erected for the occasion on the company's premises, is fully equal to the accommodation of about
3,000 guests. After the banquet, the Prince will return to Buckingham Palace.
panied by the Hon. C. P Villiers, and Mr. R. R. Moore, paid a visit to this town, for the purpose of meeting the farmers of Essex on the market day, to discuss with them the influence of the corn-laws upon tenant-farmers and farm-labourers. Considerable interest was excited by the event, as it was known that Sir John Tyrrell, Mr. Round, and other agriculturists, would be present to oppose the
doctrines of Mr. Cobden. The hustings were erected in a field near the East Bridge. The appearance of the town during the day resembled that usually caused by a contested election; and the oldest inhalicaus scarcely persons were present on the ground at the commencement of the proceedings. On the motion of Mr. G. Rebow,
Mr. Bawtree, banker in the town, and president of the Mr. Bawtree, banker thral Association, was called to the chair. The chairman having briefly opened the meeting, Mr . Cobden, in a speech which occupied two hours, proceeded to recapitulate the arguments in favour of free trade, and dwelt on the injurious influence of the protective system of the corn-laws upon the interest of all classes, more especially those of the tenant-farmer. Mr. Cobden concluded, at the request of Sir J. Tyrrell, by proposing the following resolution:-
meeting the corn-law and every other law which favours one class at the expense of other classes, is injurious and unjust to the community at large." Sir J. T'yrrell then presented himself, and after a few preliminary remarks, moved the following amendment:- Mat in the opinion the home-grower of corn cannot compete with the foreign grower without a protective duty." Sir J. Tyrrell then proceeded to take the sense of the meeting upon his their hands for it, the remainder of the meeting being in favour of free trade. This proceeding, however, was con secon a gur, the amero it was withdrawn. The meeting was then addressed by Ferrand, M.P. for Knaresborough, and on whose speeches were not concluded till $9 o^{\prime}$ 'clock at night. The chairman then put Mr. Cobden's resolution to the meeting, which at that late hour had been reduced to mously, twenty-seven hands only beaing held apost anst it Denbigh.-On Wednesday week a meetins the County Hall, convened on the requisition of about fifty tenant-farmers, principally occupying farms in the Vale of Clwyd . The requisition stated, that, " observing the progressive and almost daily depreciation in the value of all Agricultural stock and produce, the thenants
whom the document was signed beg to suggest to their wrother tenants of the county the urgent necessity of
calling a meeting of the farming interest, for the purpose depressed into consideration the present unprecedented to procure that proticulture, and the means bestadaptech their great importance demands." Lord Dungannon, Mr George Griffith, and other proprietors the meeting was very thinly attended. Mr. Proby, Mayo of Denbigh, was called upon to preside. Letters were read from Mr. Townsend, Mr. Mainwaring, Mr. Biddulph, the High Sheriff, and other gentlemen, on the object of the Meeting. Mr. Biddulph in his lette adverted to a moderate fixed duty more as a source of revenue than as a measure of protection. The Mayo then called upon the requisitionists, or some one of them to address the meeting, but in vain, for no one responded to the call; and this continued for nearly a quarter of an League were allowed to address the Meeting, upon which Lord Dongannon and others left the Hall, on the ground that such a proceeding was a departure from the requisiFree Trade and proterion a amendment in favour of a fixed duty was carried, and petitions embodying the resolutions were adopted for presentation to Parliamen
Derby.-The friends and admirers of the late Earl of Leicester, in Derbyshire, are about to raise a monument to his memory in Longford Church ; and the ladies of his family have also subscribed for a marble bust of his lordship, which is in course of execution by Mr. Francis. The whole of the past week has been occupied by the various shows, meetings, dinners, \&c. which form the customary routine of celebrating the anniversary meeting of the Royal Agricultural Society of England. A great number of persons were present, among whom werses Northampton and Downshire, and most of the members of the council. Friday was the latest day for receiving implements, which were on Saturday arranged by the stewards for the inspection of the judges, which took place on Monday. The implement-yard was opened to the members on Tuesday, and on Wednesday to the public. Tuesday aro the last day for receiving cattle and stock of various descriptions, which had arrived from all parts of the kingdom. Wednesday the stock was inspected, and the prizes awarded. Thursday the cattle and implement-yards were opened to the public, and Friday was the day of sale. Besides ploughing matches, lectures, and incidental matters, there have been three dinners : one given by the mayor to the council of the Society on Tuesday, the council dinner on Wednesday at the County Hall, and the general dinner of the Society in the great pavilion on Thursday, which was followed by a meeting yesterday morning. At the mayor's dinner on Tuesday, the Earl of Hardwicke returned thanks as President of the Society, and the Duke of Richmond acknowledged the toast of the army. The Duke of
Devonshire"s health was drank as Lord Lieutenant of the couns and in returning thanks his Grace said that had the objects of the present Society been the promotion of, not Agriculture, but its twin sister, Horticulture, he might, as President of the Horticultural Society, have been able to descant more in detail on the varions interesting objects which the exertions of those he saw around him had collected this year in Derby and its neighbourthe Duke of Richmond, himself a practical farmer, and better qualified than most men to give an opinion on Agricultural subjects, He begged to express his high approba-
was unnecessary. tion of the objects and exertions of the Royal Agricultural Society of England, and his satisfaction at being one of its governors. He had perused with the greatest interest the last volume of their proceedings, especially that portion of it which described the improvements abl drain. The spech of the the process of thorough Hillyard, President of the Northamptonshire Farmers' "The Royal practical Agriculturists in the connty. ane Royal Agricultural Society," although its establishment could only be called of recent date, there were seen, in many parts of the country, improvements in the cultivation of the land. Ht ad preted a desire of improvement in the generaily pral farmers ; it had been the means of dissipating many longstanding farming prejudices, and it had opened the of the slovenly and parsimonious, and convinced them they had lost money, by loss of produce, from their niggardly expenditure in manual labour. education had arisen expansion of liberal ideas in the rising generation of farmers, and there would, he truated, be amnually a less number of those most unserviceable members of the community. In regard to the union of Science with Agriculture, be professed himself a practical man. He did not mean to say that the present best farmag thend not be improved. On the contrary, he believed that, from mechanical science, which had brought about such great improvementsin Agricultural implements, and, combined with chemical and geological aid, some of the mysteries of nature might possibly be so developed as to enable the cultivators of the soil to obtain a larger produce time, his firm conviction, drawn from his own practical experience, that, although by potent manure an almost anbounded quantity of stems may be obtained, yet there was a boundary beyond which nature and the soil conle
and some he believed to be valuable manures, but it was much to be doubted whether any of them would, by application, be the means of causing such an increase of produce as would repay their great cost with the henceforth expected low price of grain. The national agricultural machine was propelled by the practical farmers. there were still clouds hanging over the Agricultural atmosphere, it was not in that complete state of darkness which the theoretical farmers imagined. The opinions he had formed as to the useful connexion of science with practical Agriculture were these: Scieuce, without practice do a vast deal. Science and practice now went hand-in hand; sciencenow took its proper and useful position. It did not stand forward as instructor to the experienced practical science and practice, joined by the best exertions of tenant farmers, effectually supported by liberal landlords, and all engaged in Agriculture-with all this in prospective, such general improvement in British Agriculture might reason-
ably be expected, as to place the country in that most deably be expected, as to place the country in that most de-
sirable situation for every country-that of not being dependent on foreign nations for any part of its supply food."
Eton.-On Saturday week, between one and two o'clock in the morning the pupils who were sleeping in the Long Chamber of the College were alarmed by the cracking of
the ceiling, extending nearly the whole length of the chamber, which is 70 yards long; they rang the alarm bell, and the servants of Dr. Hawtrey were instantly in attendance, when it was discovered that the rafters had given way, in consequence of their ends baving decayed
from excessive age. The ceiling is now shored up, and will undergo repair during the Midsummer vacation.
Halifax.-The little village of Mount Tabor, about consternation on Tuesday week the natural murders ever committed in this county. The victim is a poor man, named John Dobson, aged 52, Tabor. His son, Joseph Dobson, his son's wife, and two children, came lately to live with him. They were on bad terms, and frequently quarrelled. On Tuesday morning the old man and his son's wife had several quarrels, during which the father declared that she and her children should no longer live with him. The son on hearing this borrowed a gun and shot his father through the heart. It at first missed fire, but he replaced the cap, and fired with fatal
effect. The old man died instantly, but the son managed to escape to the woods. The jury returned a verdict o Wilful Murder.
Liverpool.-Dr. Duncan has just established the fact, that mortality is greater in this town than in any other in Great Britain. One in 54 dies in the country, one in 37
in London, but one in 28 in Liverpool, while in Manchester it is one in $29 . \% \mathrm{Dr}$. Duncan bas shown in explanation of this, that the cellars, 7,000 in number, may be regarded as preparatory graves, for in these damp dens there reside about 21,000 of the labouring population of the town, of whom there die annually of invited diseases
not less than 1,000 . Between 500 and 600 of the population die annually of fever, while the number attacked by fever is stated to be 7,000 , showing that, although higher places. In the metropolis, the mortality to females from consumption is one in 464, but in Liverpool it is in Liverpool, while in Birmingham it is only one in 404 . Infancy, too, suffers in Liverpool by comparison more infants in Manchester, from convulsions and teething, were in two years 1,765 ; in Liverpool, in three years, they were 4,081 . The cause of this high rate of mortality is attribute
mpurity.
mote and sect murder has just come to light in this remote and secluded part of the principality. About two months ago, a middle-aged widow, named Margaret Davies, acting as servant to one Evan. Jones, a husbandry
labourer, holding a petty tenement on the mountain Moel labourer, holding a petty tenement on the mountain Moel was suddenly missed, and various conjectures were formed as to the cause of her absence. Weeks passed away, but
still there were no signs of her return. On Friday, howstill there were no signs of her return. On Friday, howabout 300 yards from the cottage in which she had dwelt with her presumed murderer. It was much mangled by dogs, and was discovered accidentally by tracing a dog to the spot. Nothing as yet has transpired to throw light The supposed murderer was immediately taken into custody, and the jury, at the inquest, brought in a verdict of "Wilful Murder" against him.
Manchester.-On Monday morning the neighbourhood of Granby-row was the scene of considerable alarm, in warehouses of Messrs. Nightingale and Co., and which spread with such rapidity that in the course of an hour
and a half the whole building was a heap of ruins. The building was five stories high, twenty yards in length, and nineteen in breadth. It contained upwards of 1,000 bales of cotton and 300 sacks of flour, most of which had been
recently removed from Liverpool to Manchester, the latter town being deemed less liable to Fisk from fires. The entire loss sustained, the building included, is estimated at about $10,000 l_{\text {a }}$, which is covered by insurances
in several offices. It is not known how the fire originated. Tahen in connexion with the late fires of cottorn at Liverpool, the matter has excited the utmost alam here; and
an idea is becoming prevalent that some of the materials used in America for cleaning cotton may be the means of closely packed in warehouses. Certain it is that fires were not formerly so prevalent in cotton warehouses ; but, what is one of be the cause for their recent frequency, the subject a searchuch importance to the manufacturing inte. instituted.-Another fre broke out on Tuesday morning in the extensive print-works of Messrs. Gisburn and Wilson, Salford. The building was fire-proof, so that the flames were confined to ore room, otherwise the damage must midst of several dye-works and works being situate in the loss is estimated at from $7,000 l$. to $8,000 l$. There were about thirty persons in the room when the fire was first discovered, and such was the rapidity with which it raged, their lives. - The well-known Father Mathew, the postle of temperance, arrived in this town on Saturday week, and put up at the Temperance Hotel, and on Sun-
day celebrated mass at St. YPatrick's, Livesey-street, at which about 2,500 children from the Catholic day and Sunday schools of the district attended. He left Manchester on Monday week for York, where he attended the pent a week in Yorkshire, administering the pledge; and then proceeded to Liverpool for a week for the same purpose ; and will thence return to Manchester for a similar Patrick's, on Wednesday, the 19 th July, and subsequently to administer the pledge. He will then quit Manchester or London, where it is expected he will remain 3 weeks. Oxford.-The local papers mention that the religious party in the University, of which Dr. Puer to come out early in next term, the management, editorship, \&c. to be completely under their control. Dr. Pusey's sermon demand for it, that the printer could not work them off fast enough; and Mr. Parker, the publisher, was obliged to avail himself of the services of another printer to assist. Upwards of 3,000 copies have been sent to Ireland. Two editions, of 6,000 each, have been printed; and a third edition, it is expected, will be published next weel. It is
said that Mr. Marriott and Mr. Sewell, with other dissentients, are determined, if possible, to bave the degree of Mr. Everett, the American minister, rescinded. expressed by Counsel, that the this, from the opinion expressed by Counsel, that the proceedings at the com-Sheerness.-On Wednesday afternoon, whilst a salute was firing on board the Camperdown flag-ship in honour of the King of the Belgians passing down Sea-reach, one of the portable magazines blew up, forced up the upper deck on the starboard side from the mizenmast as far forward bulkh mainmast, and knocking down near y all scarcely a whole pane of glass is left in the ports on that deck. So great was the force, that the iron horn-knee on the zine "exploded, was broken asunder. Lieut. Blackmore and three seamen were seriously hurt, and two young were wounded and burnt. Nearly all the officers received slight injuxies by splinters, and were more clothes and the bulkhead boards which were blown upon clothe

Sheffield.-During the afternoon and eveuing of Wedof this town was visited by a thunder-storm of unusual severity, which appears to have passed from south to north storns experienced in this part of the country. The most southerly points at which it seems to have appeared are Nottingham and Derby, where the storm commenced about heard in the sough distant thunder had been previously passed in a line almost due south and north over Derby, Chesterfield, and this town, visiting the latter about halfpast six in the evening ; and, to have been experienced at Doncaster at an earlier hour. It was experienced at Bradford in the evening; through the whole range of country from the East Riding of York, to Northeven in Scotland. It was also felt at Ashton-under-Lyne, and other parts of Staffordshire, where the large masses of hail did considerable damage; but fro
stafford.-A meeting of the Staffordshire ironmasters was held last week, at which a deputation was appointed to wait upon Sir R. Peel, and bring before him the depressed ondition of the iron trade in this district. The local disastrous and unsatisfactory, but its prospects are still darker; and nothing but an increased coasumption of iron can prevent ruin from falling upon thousands
Wakefield.-A few days since, according to the York Herald, Mr. Brierly, son of the chief constable, with his assistant, in searching a notorious lodging-house in Wren-
gate, Wakefiel, found concealed there an immense quanty of documents mione the by which the begging-letters, petitions, and memorials, have been manufactured, with which not only Yorkshire, but the whole kingdom has been supplied by a gang of swindlers. The most remarkable of the manuscripts are many hundreds of genuine signatures of the nobility, clergy, and gentry, residing in different counties in
and stack in rows upon pasteboard, for the purnose of eng imitated in duplicate sham petitions. Amongst these signatures are those of many respectable inhabitants Wakeneld, Heath, York, Halifax, Leeds, besides those hamshire, Lancashire, Cumberland, \&c. Another documents consists of models of petitions and memorials for persons pretending to want funds to emigrate to New zealand; to make up losses by fires and shipwrecks; to raise funds for those pretending to be afflicted with blind. ness, lameness, \&c. A third set of documents were routes in England and Ireland, for persons travelling with the petitions, giving the mames and residences of persons on the roads likely to be called upon, and pointing out where the petitioners should -such a person is described as "a qiver to all callers;" another will give if "stuck to and talked well to "" a fourth " must be seen the breadfe mayt-time "; a fifth muth a fourth "must be seen at breakfast-time ;" a fifth must through an amazingly long list of the nobility and gentry. From these details, there seems to be no doubt that the police of Wakefield have broken into the main manufacture of the begging petitions.
York.-The committee appointed to report on the affairs of the Yorkshire District Bank have published a leagthy document on the subject, in which they recommend a dissolution of the old concern, with the formation business hitherto found profitable. A fiee accommodation to persons in trade who had not sufficient capital or credit to meet the advances they obtained, and the want of sufficient discretion by the general managers of the concern, are mentioned as the causes which have led to the dissolureport that the It appears from the detanis of the prior to 1840 and to have considerably excery heavy fourth of the paid-up capital, no losses of any magnitude having, however, been incurred subsequently to that year. The company had 40,000 shares, the amount paid up on which is, at $17 l$. per share, 680,000 . Of this large capital the sum of about $544,000 \mathrm{l}$. is said to have been lost, leaving only $136,000 l$. in available assets, with which to prosecute the operations of the new company. The principal losses of the District Bank are believed to be distributed in about these proportions:-Leeds $397,000 l$.,
Hull $7,580 l$., Wakefield $10,067 l$. Barnsley $52,586 l$, Hull 7,580l., Wakefield 10,067l., Barnsley 52,586l., and Pontefract $11,038 \%$. ; the localities of the minor branches dividing the residue of the estimated total.

Railways.-The following are the returns for the past week:-Greenwich, 861l.; Eastern Counties, 2,725l.;
Paris and Orleans, 3,987\%. Paris and Rouen 2,998l Bris and Orleans, 3,987l. ; Paris and Rouen, 2,998. Brighton, 3,825l. ; Croydon, 379l. ; Blackwall, $1,075 l$. ; 1,436l.; Hull and Selby; 1,315l.; Liverpool and Man chester, 4,910l.; Midland Counties, 2,657l.; Edinburgh and Glasgow, 2,182l.; Birmingham, 16,978l. : Northerm and Eastern, 1,967. ; South-Eastern and Dover, 2,485l.; Midland, 4,3577.; Birmingham and Gloucester, 10897 Grand Junction, 8,000l.; Birminghana and Derby, 1,192l. -The Liverpool Times states that Government has at present under consideration plans for quickening the interfrom Chester to Holyhead, on the plan proposed by Mr. Stephenson. The line, according to this plan, will cross the Dee just below Chester race-ground, and will keep the sea-coast along nearly the whole of its course, winding round the base of Penmaenmawr and others of the Welsh mountains, crossing the Menai Straits by the present
bridge, and terminating at Holyhead, which Mr. Stephenson considers the best point of embarkation for Ireland. Should the determination to carry out this great work be persevered in, it will have to be executed, either in whole
or in part, at the public expense, as the traftic along the as along the construction.-A railway between Salisbury and the South Western Railway is now in contemplation, and is expected to form a connecting link between the latter line and the Great Western, and the ports of Bristol and Southampton. -The Birmingham,and Gloucester Committee have issued their report, and on the whole it presents a favourable aspect. A reduction in the working staff of about 4,000l. per annum is recommended, but it appears to be a question down, instead of the higher salaries might not be cut upon the lowest classin the weight of this saving The opening of the Bristol and Gloucester Railway is expected to increase the traffic of the line.-The first excursion for the present season on the South Western Railway took place on Monday. A special train left town at 8, A.M.9 arrived at Southampton at $\frac{1}{2}$ past 10 , where the Monarch steamer was waiting to take the party round the Isle of Wight. The day and the tide were extremely favourable, of the party was performed in seven hours and ahaifo some Netley Abbey and omnibuses the New Forest, others to Who Abbey, and omnibuses were ready to convey lhoft Who preferred land travelling. The special train ef Southampton again at 7 in the evening, and arrived in been at past 9 , the whole journey, 230 miles, having been performed in 13 hours and a half. This is the first excursion that has taken place this season on the Noure will ampton Railway, and it is expected that several more wiven by the Directors before the close of the sumer.

## IRELAND.

Dublin. - Mr. Bindon, the oldest magistrate of the in that county, in the full confidence of Sir R. Peel, when
the right honourable gentleman was Chief Secretary for Ireland, has been dismissed since our last report, for joining the Repeal agitation.-The Right Hon. Charles Kendal Bushe, at one time a distinguished political cha. racter in Ireland, when opposed to the legislative union, died on Monday afternoon, rather suddenly, at Furry Park, near this city, the residence of his son. Mr. Bushe took
office under the Liverpool administration, as SolicitorGeneral, and upon the death of Lord Downes, became General, and upon the death of Lord Downes, became
Chief Justice of the Queen's Bench. Soon after the formation of the present Ministry, he retired upon a
superannuation, and was succeeded by the present Chief superannuation, and was succeeded by the present Chief
Justice Pennefather. Mr. Bushe had been half a ceatury at the bar, having been called in 1793, and had reached his 76 th year. The weekly Repeal meeting took
place as usual on Monday. A great number of subscriptions and communications were received. Amongst others Was an address to Mx. O $^{\prime}$ Connell signed by thirty Orange-
men of Stewartstown, and professing to have the sanction men of Stewartstown, and professing to have the sanction
of one hundred associatesrepeal. This address was read by Mr. Clements, with the Mr. O'Connell expressed his delight at the event. The proceedings continued till near six o'clock, when Mr .
$\mathrm{O}^{\prime}$ 'Connell announced the week's rent to be $1,690 \mathrm{l}$. $5 \mathrm{~s} .9 \frac{1}{\mathrm{~T}} d$. It was announced in the course of the sitting that the corporation had elected Sir Coleman O'Loughlin their pealer. pealer.
Belfast.- The sittings of the General Assembly of the
Irish Presbyterian Church commenced in this town on Tuesday week, when the Rev. Dr. Stewart was chosen Moderator. On Weduesday the English Presbyterian
deputation, consisting of the Rev. Messrs. Welsh and deputation, consisting of the Rev. Messrs. Wess and
Gardner, were introduced, and both addressed the assembly. The deputation from the Free Church of
Scotland, consisting of the Rev. Dr. Smith, of Glasgow and Mr. Gray, of Perth, were also introduced. Dr. Smith and Mr. Gray, of Perth, were also introduced. Dr. Smith
addressed the assembly in the forenoon. At the evening sederunt, after some preliminary business, Mr. Gray, of Perth, coramenced by saying, that it was impossible not
to feel that the Free Church of Scotland had been placed in a position to give testimony to the other churches. He then proceeded, at great length, to indicate the cha-
racter of that testimony. Lord Aberdeen, he said, had introduced a bill, but it would be well if he would tell them what he intended by it. He would tell Lord Aberof Scotland after as before the disruption ; and he also begged to tell him, that he knew nothing about the matter, if he said a hundred and fifty ministers would be kept in would be influenced by it, he would have exceeded the mark by at least fifteen. It could not be intended for the rauch the better for them; their ministers had been left
without houses of worship, and their flocks served God under tents or in the open air, but he was thankful to say that they were not wilhout congregations. No bill that to extend their principles as had been done by the disrup-
tion of the church. Dr. Edgar stated, that the Irish Assembly had resolved to place, forla month, two of the most hard-working young men connected with their body sitting of the Assembly the Moderator said it was his painful duty to inform them that intelligence had arrived twelve Judges of England, which was, that ththe marriages performed by Pre parties belonged to the Established church, are illegal.
Contrary to all expectation this was the reeult, and the decision came to this, that they were not duly qualified to perform the functions and discharge the duties of their
sacred office. It remained with them to consider what course was best to be adopted. Dr. Brown said that it Was a useless waste of the time of the house to enter into aay discussion upon the clecision of the judges at that time.
He would only rcmark, however, that it was but the commeucement of coming wars-the shadow of what was yet to cone. Dr. Cooke agreed perfectly with Dr. Brown
that the present was but the fore-shadowing of what was yet to come. He tiought it his duty to the country, to newfy-furmed opinion, but one which he had long entertained, that the present was but the commencement of a series of persecutions sinular to those which attlicted their
fathers in the reign of Charles the Second. A committee was then appointel to draw up resolutions and addresses to both Howsos of Parliament, declaratory of their feelings H alerfori, -A repeal meeting was held on Sunday in this city, which is said to have surpassed any of the pre-
vious demonstrations. Mr. O'Connell's progress from Kilkenny to Watefford is described as one continued scene of enthusiastic acclamation, the peasantry collecting ingreat numbers on the road-sides, at various points, to bitants made a sort of grove of the town with trees and huge branches, triumphal arches and banners being erected as the rendezrous, it was thronted to overting fixed upon earlig hour in the morning with persons who had travelled Thil night from remote distances to join in the procession. which all the grand centre of attraction, the point towards hundreds of theusern are said to have assembled there. When the first part of the immense multitude that accom-
panied Mr. O'Connell from Kilmactiomas reached Waterford-nearly six hours had heen occupied in getting over twelve miles. As the procession passed along, the
numbers increased ; about thirty temperance bands accompanied them, and the scene is described as one of the most extraordinary and animating exhibitions ever Weheld. The shipping in the river, along the quay of Waterford, displayed their flags ; triumphal arches were
erected, and altogether the city wore all the appearances erected, and altogether the city wore all the appearance
of a day of great public rejoicing. As the procession proof a day of great public rejoicing. As the procession pro-
ceeded to the place of meeting-the hill of Ballybricken -the most enthusiastic cheering was heard upon all sides whilst ladies, who crowded the windows along the line waved their handkerchiefs as long as Mr . O Connell remained in view. As to the numbers, the papers state
that it is impossible to speak with any degree of accuracy that it is impossible to speak with any degree of accuracy and the calculations vary from 100,000 to 300,000 , whils some assert that the multitudes upon the hill of Bally The enormous platform upon the bill is capable of accommodating 3,000 persons, and it was quite crowded. Sir R. Musgrave, Bart., was called to the chair. Dr. Foran, Roman Catholic Bishop of Waterford, sot beside him, accompanied by Mr. Meagher, mayor of Waterford, a ford, from iClonmel. Weaford, Kilkenny, \&c., and nearly one hundred Roman Catbolic clergymen.

## SCOTLAND.

Edinburgh. - A number of agriculturistsin the Lothians recently formed themselves into a society for the purpose endeavouring to apply the discoveries of modern chemembers of this society and three from the Highland Society, was formed, and subscriptions taken for carrying隹 vews of the society into effect. At a meeting held to the soay week, in Edinburgh, this committee reported didates for the situation of agricultural chemist had preented themselves. The resur offered themselves for the situation, all distinguished for their attainments in chemistry, and two of them foreigners make choice of Professor Johnston, of Durham, who had offered, for a salary of 500 l . a year, secured to him for five years, to attend in Edinburgh for eight months in the year, and to provide, on his own responsibility, a properly qualified substitute for the other four. Mr. Juhnston's terms were to give two analyses in the year to every sub.
scriber, at rates varying from $3 s$, to $5 s$., and as many more as they pleased at one-half the price of these two. On the motion of Mr. Alexander, of Southbar, seconded by Lord Murray, the report was approved of, and Professor Johnston elected to the office on the terms specified nd also mor the Professor will be to analyse soils, aken from the soil by the previous cron, and the manure which lought to be applied in the circumstances, and according to the nature of the plant to be grown.-An on, whent has been effected with the Earl of Hadding to divest himself of the office of Hereditary Ranger of the Royal Park of Holyrood, and the whole profits, claims of property, and other rights legally annexed or appertaining to the office, to be vested in her Majesty. fying and confirming the sale and surrender of the office

## fatiscellaneous.

The Regent of Spain.,-There is no man upon whom放 intently fixed than upon the Spanish Regent; and the London, are constrained to do justice to the firmness and political honesty with which he has met the perils of the ecent insurrection. "We rejoice to find," says the Times, "that, in the midst of the dangers and temptaflexible energy and good faith to those constitutional principles to which he owes his power, and by which glone his power can be defended. It is in the highest degree creditable to the Regent that he should renew, in the most emphatic manner, his engagement to defend the Constitution and the Throne at the very time when not only his own interests, but the public safety, might furnish measures than the Constitution itself has provided. But his own interests, rightly understood, and the safety of the State, prescribe the wiser and nobler course, to which the Regent appears to be determined to adhere. Within highest trust that a subject can enjoy, and with that trust he wields in his own defence the royal prerogative, which he is bound to maintain. One step beyond them, he would sink to the level of a soldier of fortune, raised only by the accident of success, the audacity of his followers, or his own desperation, above those military adventurers who are remembered in the dismal annals of the Spanish revolution by a miserable death, inflicted on them by that populace which they professed to serve. We are well aware that it is the fashion in certain circles and in certsin countries to depreciate the character of Espartero, and to grudge him, not only those honours which fortune qualities which he owes to nature-m, sound heart. But, if ware an upright mind and merit will outlive the columnies ghich mave been dis charged against him; and we are entirely at a loss to comprehend the tactics of those who profess to respect his character and his qualities, whilst they predict his fall. Whose quadities will, as we trust, be vindicated by
success. It lias already been his fate to affront the greatest perils which can shake an empire, and for the
most part to subdue them. In the utmost penury of the state, he reorganized the army; in a civil war, he not only expelled the enemy, but he pacified the country; in civil government, althongh he rose to power by the influence of his military achievements, and had before him the tempting path of military power, he alone, of all the men, except Washington, who have occupied a similar position, enlarged the political liberties of the nation; at he has maintained the dignity of poverty, monestyelty, justice maintained the dignity of poverty, honesty, and justice; in various emergencies he has invariably displayed him aptitude than the him credit for, and disease and the listlessness of rather a sluggish nature, he Has maintained his athoricy and defended the Queen' prerogative in Spain for several years, without having committed a single action which history will blush to record.
Artesian Wells.-We understand that it is intended to carry the bore for the Artesian well in the Garden of Flants to the depth of 800 or 900 metres, whereas that at ane is only 550 metres deep. The object of piercing ation is fo water of a high temperature. The expecArago and M. Walferdin, at Grenelle, that the temperature of the water increased in warmth one degree at every 32 metres depth, and consequently at that of 800 or 900 metres must be at from 36 to 39 degrees centigrade about from 97 to 1040 Fahrenheit) with which the hothouses of the equatorial plants, and also the lodges of the animals in the menagerie, and even the hospitals in that quarter, may be warmed in winter.-Paris paper
The Census.-By the returns just presented to the House of Commons relative to the population of the United Kingdom, as ascertained by the last census, it appears that the total population of England and Wales appears that the total population of England and Wales number of persons travelling by railways and canals on number of persons travelling by railways and canals on the night of the 6 th of June, 1841 , being 4,896. It further appears that the total population of Ireland amounts to $8,175,238$, of whom 852,064 were ascertained to be members of the Established Church, 6,427,712 to be Catholics, 642,356 Presbyterians, and 21,808 Protestant Dissenters.
Subterranean Forest.-The Belgian papers contain the following extract of a letter from Bruges: "5 Nearly 500 workmen are employed in digging the canal of Zelsaete. The work, therefore, proceeds rapidly, and has already been commenced on a line of 5,000 yards. These excavations have laid bare on the whole extent of the work, and nearly on the same level, a bed of turf. Near the village of Oostkerke, for above 2,000 yards below the bed of turf, there are the remains of a vast forest of oaks, firs, and other trees. In several places the trunks of the trees have disappeared, but in others they are found lying full well. We must therefore allow that the level of the yards lower than it is at present, but that vegetation was very flourishing for in the subterraneous forest just diseo vered there are trul 0 of

Antiquities.-The Bath Jotmal last wot anmounced the discovery of a stone coffin in the vale of Lyncombe. On Monday last a second coffin was found, about fourteen inckes beneath the turf. This relic was about six feet and a half in length, formed of one block of oolite, and, excepting its weighty lid, unbroken. The skeleton it contained was much more perfect than the one in that previously found, and the coffin had been scalptured with more care than the other. These interesting relics are
for a time left in the vestibule of the Literary and Philosophical Institution. Not far from the coffins were found sophical Institution. Not far from the coffins were found and Carausiual.

Isthmus of Panama.-At a meeting of the Academy of Sciences at Paris on Wednesday week, M. Arago made a communication of the steps that had been taken towards the great work of the cutting through the Isthmus of Panama, which has been so long talked of, but which many persons have regarded as chimerical. According to Messmuntas been entered into by Messrs. Baring and Co., of London, with the Republic of to threnada, in virtue of which the republic is to cede 80,000 acres of 1 nequired for the projected canal, with in the interior of the country. Messrs. Baring and Co had, it is, said, in the first instance, fixed the amount of toll for the navigation of the canal at the price of 18f. per ton, but they have reduced it to 8 f. The work, upon. which from 4,000 to 5,000 men are to be engaged, is to be completed in five years.

New Water Pipes.-The Courrier de Lyon states that water-pipes made of thick glass, covered with a coating of bitumen, and made to insert iato each other with bitumen joints, are manufacturing at Rive-de-Gier. These pipes, will, it is asserted, bear a higher degree of pressure than those of cast-iron, and are 30 per cent. cheaper.
evidence of the progress of mind in reviewing the evidence of the progress of mind and development of change of feelings and observer may note the interchange in long sine estring and hostije, between distant races connected by origin and langaages, but till lately too far and interests much infuence on mutual relation and interests. The extension and simplification of post office commumication has almost reunited families whose members were widely separated. For all purposes of in India, for exchange of tokens of friendship, the settler mighta, or even China, is now nearer than his father f have been if located in Austria or Italy. The class sea-coast of their native isle now spread oper the the
genial cline of southern France，or traverse the bosom of the majestic Rhine；while the richer and more enterpris－ ing visit Italy or Greece，and are likely to be led by curiosity and thirst for novelty to the regions laid open by the discoveries of a Tasman or a Cook．What thoughts are suggested by facts indicative of such mighty changes in society as are shown by the，public offer for hire of
summer residences on the banks of the Arno or the Tiber or the approaching sale of a territory in Wisconsin，on th banks of the mighty Mississippi ！What in the last gene－ ration could have availed an offer of 20,000 acres of land Occupation of such a property westward of Lake Michigan the purchaser an agrecable change of residence．These investments of wealth and exchange of interests are the great guarantees for the render war be superseded，than all the quackerie

Court of Chancery．－Curtis y．Mason．－An appenil from an
order of the Tice－Chancellor，directing the defendant to be charged with a sum of $806 \%$ ，lost to the estate of the testator by the insolvency mitted a wilful default by allowing his co－cxecutor to retain posses－ notice that the money was not paid at the of a lime the co－excecutor had promised to pay it，and when he suffered it to remain in the hands ment．－－The Vice－Chancellor thought that，under such circumstances， in support of this decision，that nothing but a case of the strongest
necessity would form any justufication for an executor permitting necessity would form any justification for an executor permitting
the estate of a testator to remain under the sole control of his
co－executor，and that in the present case there had been neither necessity nor any justitication To the exccutor it was argued
at some length that the cases of wifful default cited by the one．Here the executor had parted with money to his co－executor， the teatator himseff would have parted wrth it to a man in whom he mitted，therefore，that the executor was not liable，as there was no it had been a loss by the testator．－The Lord Chancellor observed that the case was a painful one；the money had been lost to the
legatee hy the insolvency of one of the executors，and the only ques－ tion was，on whom the loss must fall．It appeared that the execu－ order to the broker was in their joint names；both，therefore，were liable．They afterwards met at the house of one of the legatese，and
having divided the money in six portions，they paid five to the persons then present，and Mason allowed Marshall to carry away
the sixth，in order to pay it to the legatee，who resided at Ply－
mouth．Marshall went to Bath in order to ohtain that legatee？ assent to the withhoilin from her trustecs at Plymouth a sum
mhch he had previonaly advanced to her．That consent was not made no inquiry about the money，or sought for its remplyryemenct， although Marshall had pledged himself，on leaving tondon，to invest
it in their oint naincs within a wekl if the dispute with the legatee
was not brought to a termination．No reason had been assigned for this delay，or for the neglect on the part of Mason to have the
money reinvested．Six morths after，Marshall died insolvent．The
case was one of wilful default ；and，however hard it might be， Mason must now replace that portion which had been losi by his
negligence as an executor．His Lordship，therefore，affirmed the same V ．Datwes．－Mr．Thesiger stated that thetere were actions by
Mcsis．Pinniger and Westmacott，eminent solicitors，to recover resu，ted in the defendants becoming entitled，as next of kin，to a extent of the services rendered by the plaintiffs，or more properly，lyy by him），it would be necessary to advert shortly to the singular and hy the exertions of Mr．Westmacott，wcre now clearly ascertained．
The Baroness de Feucheres was of the humblest origin：she was one
of ten children；her father＇s name was John Daw，and she was born register of her baptism，but it appeared that her parents were in the ness de Feucheres，was an inmate of the parish workhouse of New－ port，in the Islc of Wight，from 1796 to 1805 ，when she was put out and the produce of which enabled her，in 1809，to apprentice berself educatinn wh．ch afternarls rulilled her to make so con rmeunus a
figure．Fromi 1809 till 1815，Sophia Daw resided in froucester－ ledge of languages，and made herself mastress of many accomplish－
ments．During this period she also became acquainted with the Duc de Bourbon，and in the year 1815，after the peace，went over to
France，and became acquainted with a nohleman who resided in the establishment of the Duc de Bourbon，and who afterwards eecame Divw，or as she called herself，Dawes，returned to England，and was thought it necessary or expedient，whilst living there，to have herself
baptised as an adult．In the particulars there registered，sie stated that she was borm at Southanmpton，in 1792，and that her parents
resided there．In 1818，sophin Dawes was married to the Baron de Feucheres．She was then prossessed of 214,000 francs，which she had
derived from the bounty of the Due de Bourbon．At the time of the marriage，a contract was entered into，under which the parties scssed at the time of the marriare，but after－acquired property was marriage，the baroness got her father，who was then living，to make time of the marriage until the year $1 \$ 24$ ，the Baron and Baroness de lady＇s tajents and accomplishments enabled her to make a conspicuous figure at the Frencl Court，where it seems she enjoyed considerable
influner．It apr eared，however，that the Baron die Feucheres criter－ between the baroness and the Duc de Bourbon．To allay his suspi－ that she was his natural daughter．This served the purpose for Feucheres obtained a regular decree of separation，or what we should with tie Duc de Bourbon until 1930，when he died，leavine her by his he had come to his death unfairly and by violence．The Baroness de
 thoroughly investigated，therc did not appear to be any foundation
for this imputation on her character．Some time after her trial and acquittal，the baroness formed the determination to return and reside
in England．She purchased a place near Christchurch for about 21，onol．She purchased a house in Hydc－pa
mitted about 100,0006 ，in money to Fnclant
self in 1910 ，being then in very bad health，and on the 15the Decenaber， 1840，she died，leaving no will，but leaving a testamentary paper，by
which she left several tegacies；amonzst othere une to the chlllorateil
Odillon Barrot，and the bulk of her property to a niece，Charlote Taillennand，the daukhter of a sister wrophory to a mariece，Charlotte paper was contested by the next of kin，and amongst those were the
defendants，Mary Ann Clark，a sister of the Baroness de Feuchercs who had married an attorney＇s clerk，and heccune a widow in 1820 ，
and James Jawes，the brother of the Baroness de Fcucheres，who was the defendant in the second action．Mr．Westmacott was thes
attorncy and adviser．The testnmentary paper left by the barones
was ultimately set aside，hut still there were great difficulties in esta was ultimateiy set aside，that still therewere great difficulties in esta－
blishing the claims of the next of kin．It was nceessary，in the outset，to identify the Baroness de Feucheres，und prove leer legit
macy．This was extremely dificult，under the circuinstances．Sh
was born in 1790 ；at her bantism she declared she was born in in the marriage contract she stated herself to be born in
and her father，in his affidavit，stated that she was born in Agammermith；and，in the register of her death，ghe was described
Ha a spinster．To render the difficulty of tracing the pedigre grcuter，this obscurr fawes had，several years betore，rhanket the
name from Daw to Daves．The Baron de Feucheres was stilliving 0 ．Taillennand and the executors claimed the marriage contract． rapers．Litigation of the most extensive and complicated kind was carried on，both in France and England．Mr．Westmacotteconducted all the voluminous correspondence，and incurred an actual outlay
5,6006 ，for which he never could have been compensated if he ha describe the labour and anxiety he had undergone for two years His efforts，however，were at jength curowned with success．He
entercd into an arrangenent which would give the defendant，Mrs， Clark，as a minimum share， 70,0001 ．There was a decree of the Cou uas an apperal to the Cour Royale．next of kin，but from this ther ferred his rights to a corporation，whech was entrusted with the management of the hospitals in Paris．A long negotiation took The president of the Cour Rayale was an active member of th the claims of the hospitals for a sum of about 13,0001 ，an arrange ment which，he was sorry to say，could not be completed until the counsel for the hospitals got 20,000 francs for his private share ；an he expressed his indignation in the strongest mannter．When the business was completed，great gratitude was expressed；but．in the
end，Mr．Westmacott met with nothing but ingratitude for his ger－ vices．Those servics were of such a nature as made it impossible
to charge in the usual manner．The claims of Mr．Westmacott were referred to Mr．Amory，a most respectable member of the legal beyond his outlay for his services．The defendants refused to sub－ mit to this award，but since the action commenced Mrs．Clark had
paid into court 1，600l，and the other defendant $1,400 \mathrm{l}$ ，which did not cover the outlay，so that it would be for the jury to say what Mr． were cxamined，Lord Abinger interposed，and observed that there was no doubt Mr，Westmacott＇s services were of a most meritorious
description，but he did not know how a jury could estimate them． the profession，by whote award the parties would be bound．－－Mr
Kelly，for the defendants，asked leave to state that his clients were never disposed to underrate the claims of Mr ．Westrmacott；the
wished him to be rewarded liberally．But there were other person Who claimed as next of kin of the Baroness de Feucheres，and it wn
difficult to olstain their concurrence，and unfair that the defendant should pay the whole expense．－After some further communication
between the court and counsel，the cause was referred to a barrister， Prenngative Count，－In re William Martin．－The testator
employed a friend to prepare a will for him，by which he hequeathed one whole of his small property to his children．The friend drew
on a printed form．and the testator and the two witnesses，appearin
to mos ndierstand the form，signed ther side of the conclusion．By dongg so the niunc of the dreressed wa
placed in the middle of the appointment of the executors，Sir H．$J$ ．
Fust beld that act of Victoria，which required the signature to be＂at the foot o day se＇nnight a respite of the sentence of death pronolnce
against Giusppe Aznnpardi was recelved by the Governur
Newgate．The prisoner was convicted at the last Newgate．The prisoner was convicted at the last sessions of
the Central Criminal Court of the murder of a female named as a protection against thteves，and the extreme sentence of the law was pronounced arainst him，which，at the time，was
believed would not be carried into effect．The sentence will ulti－
mately
Alfred and Willium Aldridge，James Aberdeen，and 26 other with a conspuracy to cut down the fences，gates，and trees of
Robert Fuller Graham，and with having afterwards unlawfully assembled in a tumuituons manner to carry into effect the
destruction of the said property．There were other counts in the indictment，charging the defendants with a riot；with assaulting certain constables in the execution of their duty；and with the It appeared that prior to the year 1836，there were in the borough of Newbury two open fields，called the East－tield and the West－
field，which were what is generally known as Lmmas land；and that from time immemorial the householders of the borough of
Newbury had exercised the right，whether a stricty legal right had been cleared away．This mode，however，of enjoymg the venience，a public meeting wolled in 1836 of the landownel and other parties interested in those open fields，and at that
meeting a resolution was adopted by which it was declared that the General Inclosure Act， 6 and 7 William IV provisions majority of the signatures to the agreement，which was drawn
up in orler to carry this resolntion into effect，consisted of the ment upon a clistinct representation made to them by tho land Owners，on whise behalf Mr．Graham canvassed for signatures，
that a compensation either in land or money should be maade to them in liela of the privilege which they had formerly enjoyell Sir W．Follett，and Mr．Bellenden Ker，who delivered an oninio mas land．At a second public neetino held in January，1837，th npinion was produced，and the honseholders were informed that those who wished might erase therr signatures from the agree－
ment．The lands，however，were inclosed，and were held in severalty from the year 1837 to the year 1842 ，when Mr ．Graham On the 21 st of September in the last－named year，a considerable and sent in to say that they wanted to speak to him．Upon ringleader，said＂You unhang these gates，and let us in，in
crder to saye these fences，＂pointing at the same time to Mr．

Graham＇s inclosures．Mr．Graham refused，and said that if they wished to try their right，he would enter into a written agree
ment to pay the costs of both parties，let the result of the trial ment to pay the costs of both parties，let the result of the tria
be what it might．This，however，did not satisfy the mob；the stated they were determined to have the fields open，and tha
they would po to Dr．Binney to hear the truth．They then they would go to Dr．Binney to hear the truth．They then went
away，but about 5 n＇clock Mr．Graham was informed that some boys and men were trespassing in his home ground，part of the inclosed land，and upon his going out and remonstrating with the men，he was attacked by a large numwer of persons，knocked
down twice，and escaped into his house again with Aberdeen and another man were taken into custady，but the violence of the mob was so great，that the magistrates though
t most prudent to release him upon before them the next day．This concession，for as such st was Mr．Graham＇s fences，gates，and trees，were pulled collecten lhis is an outline of the case，and it is hardly necessary to outer
into fuller details，as all the defend acquitted，accepted the offer made to than on the Gosedty，and withdrew their plea of Not Guilty，and pleaded Guilty，upon undertaking upon their own recognizances to It was intimated that judgment would not be prayed for unless

$W_{\mathrm{E}}$ must beg our readers to believe that the article published last week on watering plants was not written whose as some suppose, but by a correspondent, for whose opinions we are therefore not answerable. We considered it a clever piece of ingenious speculation, (which is all that its author intended it for,) without in any way pledging ourselves to defend the writer's opinions-a task which he will be well able to execute for himself, if it should be necessary. As, however, it relates to a matter of considerable importance at this season, we shall now offer a few observations upon it. of watering plants at night, because of the cold produced by the operation, in consequence of the united action of evaporation and radiation. And he is, no doubt, right in supposing that the temperature is thus lowered to some extent. But the real questions to be determined are, lst, Whether such a loss of heat is detrimental to plants? and 2ndly, Whether there may not be some compensating advantages?
healthy state that all plants are retained in a more and theate by lowering their temperature at night, and that no error is greater than that of supposing warm nights advantageous to them. In all countries nature cools down the soil very considerably at those seasons when plants are growing, and she ceases to do so only when vegetation is exhausterl-or, perhaps, we ceases to do so. It is doubtiess true that this con she process may be carried too far; but whether that is done when plants are watered at night is a question to It is worthed by experiment, and experiment alone on two similar and contiguous piecing thermometers watered in the evening and the other ground, one ascertain the difference. That the other nor so, and to ascertain the difference. That the amount of evaporation is not very considerable at night, is shown by the
damp state of the soil the next, watering, and it is therefore probable that the loss of heat is principally owing to radiation.
In watering at night the ground is soaked with fuids in consequence of the perspiration that of their going on consequence of the perspiration that has been he better; and during the sooner that loss is supplied eases, or very greatly diminishes, a plant is enabled o absorb by its roots the water it wants, so that by pessiblurn of day it is filled with fluid, and in the best But when wate to resist the renewed action of the sun. is very different is applied in the morning the result moistury different. The plant is called on to throw off absorbing action skin before it has been refilled by the at night retain of the roots; the ground, too, which at night retains its water and conveys it to a plant, is and gradul give it up immediately to the dry, warm, watering cally heating air. So that, in fact, a morning's thing like so much water as that of the of plant anyWhich, then, is the better,-to feed evening. Water copiously at night, at the risk of lowering with temperature too far, or to feed it scantily in its morning, for the sake of keeping it warm? That is friends for antion, which we refer to our experimental Now that take the liberty Dahlia season is approaching, we Who favour us of reminding those country friends indispensable it is with reports of country-shows how sorts should be furnished as well as those of the wing ning exhibitors. This would be easily effecterinto the manal of all exhibitors that they should deliver the flowers aner of the exhibition, at the time when flowers. Unless entered, a fairly-written list of their awarded. There this is done, no prizes should be hishing the reporters with the be no difficulty in furout imposing ungrateful and unreasonable labour with--
If the friends and patrons of Horticulture, and the
Wedresday, the garden scenery had a great treat on 12th instant, at Chiswick, no less
gratifying to the patrons of Agriculture was the exhibition presented to them at the meeting of the Royal Agricultural Society of England at Derby, on the the 12th, and 13tn. It was regretted by many of and we hope that another year such arrangements and we hope that another year such arrangements
will be made by both Societies as not to interfere with each other.
If Agriculture is of the first importance to the nation,-because food is of all the necessaries of life the most indispensable,-Horticulture is no less so, in a state of high civilization, where wealth abounds; and that which ministers to the pleasures and luxuries of life is next in importance to that which merely sustains life. It is not the .rich alone for whom
exotic fruits and plants are brought they are gradually disseminated through the pertion, but of the middle classes, and end by adorning those of the day-labourer. Of all luxuries, that of the varied colours and perfumes of flowers, and the rich flavour of domesticated fruits are the simplest, and may be enjoyed by all ranks without any fear of enervating Wind.
We would now draw the attention of our readers Royal Agricultural Society of England in the of the try; and if we should venture to suggest comimprovements which may be made in the arrangements, we hope that it will be taken by those who criticise management of the details, not as a wish to and render these exhibitions still more conducive to culture. We have attended sce and practice of Agrithe Society,--from the first held at Oxford meeting of held at Derby,-and the impression onford to the last that of a regular and rapid improvement minds is branch connected with the shows. The inadvertencies and inconveniences perceived in one year have shows had been long familiar to most of the leading members. The increase in the number of the animals in each class soon suggested more convenien arrangements ; and our general impression of the not perfection. Before the public greatest order, if not perfection. Before the public were admitted into the yard, the judges appointed for each class had animaly examined and compared the qualities of the fully y submitted to their judgment. They wer fection of an animal of that point by which the per and in listening ito the observations ascertained, farmers, we heard not the slightest expression of doubt as to the perfect justice with which the prize were awarded. In short, the cattle-show was the best we ever saw, or probably has ever been seen before there was a greater number of fine animals to compare; and every farmer who paid any attention to the show must have greatly increased his knowledge of every kind of stock. If we are asked whether the individual improvement in the shape and profitable qualities of the best animals was very conspicuous when compared with those formerly exhibited, we
must reply in the negative. The breeding of horses, sheep, and even pigs, has been for many years brought to great perfection; and we recollect having seen animals exhibited many years ago that would probably have gained prizes at Derby. The superiority of that show consisted in the number of fine animals brought together, affording opportunities of nice comparison, and consequently rendering the task of the judges more difficult. To them every praise is
due, and we believe has been generally accorded by due, and we believe
the body of farmers.
We come now to another part of the exhibition Which has increased in importance every year: we mean that of Agricultural implements and machinery, to make perfect work and economise manual labour. The most rapid strides have been made in this department. The show of implements at Oxford was bited there. At Cambridge it was much better, pool and Bristol surpassed the was much better ; Liverthere was the greatest collection of ; andat Derby implement--from the simple plough to the portable steam-engine-which had ever been brought into one fully in following thas we spent many hours delightments pointed out by the diffentions and the improvemore days would hye beerent makers; and many was worth the attentio been required to notice all that was worth ! except a alan of the agricultural mechanician. of the various machinlerably systematic arrangement machines, and a copious catalogue, there observer to any inve the scientific or unscientific On the last day, Friday, no award of the judges had yet been published, although certain tickets might be seen here and there inscribed with the words "Prize of $10 l$. . $5 l ., 3 l ., " \& \mathrm{c}$. , and the reporters for the papers
collected from these a list which was obtained by collected from these a list which was obtained by being correct. We will not say where the fy or its
because we do not know it; but we may venture to suggest how this may be avoided in future.
Experience has fully proved that a public trial of implements is unsatisfactory, and even impracticable. competent judges, by persons fully in private, before the ideas of the inventor or improver in suad with and situations as they are suited to and in such soils chosen at random, without proper preparation, and where a dense crowd prevents all just appreciation of the merits of the implement. This should have been done some time before the meeting; and where a public exhibition of an ingenious machine is desirable, it should already have been stamped with the approbation of the judges. Allowance would then be made by the bystanders for any failure caused by circumstances over which the exhibitor had no control, and on the recommendation of the judges farmers would purchase such iristruments with some confidence, and their use would soon be proved.
The manufacturers complained that, after all the trouble and expense they had been at to bring highlyfinished and improved instruments to the show, they took place gazed upon, but no minute examination for place by the public; and few orders were given would her that guide which the award of the judges Number of the Journal, which will probably come out after Christmas, an elaborate report of the judges of implements will appear. Had only a slight outhine of such a report been distributed before the opening of the Exhibition on Tuesday, all that is now complained of would have been obviated.
After we had rather minutely gone over the different stands, not scrupling to ask many questions, which we invariably answered with the greatest alacrity, we went away with a strong impression that much of the mechenical ingenuity and accurate execution of the makers of nice and delicate machinery, such as is used in manufactures, was transferred to the makers of agricultural machinery; and, for a sanguine imagination, it was not difficult to anticipate improvements and inventions as great and useful in Agriculture as machines for making stockings, lace, or bobbin-net have been in manufactures, and productive of equally important results ;-but we are launching out a little beyond our province, and we shall be reproved by the
old saying, Ne sutor ultra crepidam.-M.

Consioering how very large a part of the expense of a garden consists in the glass used in the construction of its buildings, it is a matter of the greatest moment to knfow what is the most economical form of this substance that can be employed. Here we find as in so many other cases, that the cheapest material is the dearest. It is usual to employ crown glass, and very often a bad description of that kind-thin,
brittle, ill-annealed, and cheap. It looks very well when new, but after a few weeks' use a sash is suddenly struck an accidental blow, and smash go a few panes. Then comes frost, and chip go others in all directions from the laps; so that in the short space of a twelvemonth the glazed sashes are full of broken squares, or of new ones in the room of those which have dropped out.
What is called sheet-glass is a dearer material at first, but so thick, elastic, and well-annealed, that it is liable to none of the inconveniences just described ; on the contrary, it resists all the ordinary accidents of usase; its elasticity prevents its being broken by frost, and after many years it scarcely demands repair. We leave our readers to judge for themselves Which it is preferable to employ under such circum-
stances.
ances.

At the Garden of the Horticultural Society, the great iron conservatory is glazed with this material and up to the present time not a score of squares has been broken in the roof by frost or accident. It was, however, more particularly for the power which this glass was expected to possess of resisting hail that it was employed by the Horticultural Society in the construction of their conservatory; and although it has been hitherto exposed to no trial in that place, yet it has proved so thoroughly efficient elsewhere that we have been desirous of introducing with these remarks the following important letter from Mr. Paxton, dated Chatsworth, July 19:-

A most terrific hail-storm raged here, and in some doing great damage to the crops by breaking in many places, nine-tenths of the stems of Wheat, and other grain. The Horticultural buildings have also suffered most severely. At the Sheffield Botanic Gardens 5,000 squares were broken; in the Rectory gardens, at Darfield, about 1,000 feet were destroyed and at Mr. Young's, near Sheffield, and many other places, the greenhouses were completely riddled, and De plants in them much damaged. But at Mr Roberts's, of Queen Mary's Tower, Sheffeld, whose houses are glazed with the German sheet-glass, and
where the storm raged in where the storm raged in its utmost fury, only two
were not in the roof, but in the end where the wind drove the hail-stones from the south-west. At Chatsworth, not one square in the great conservatory, or in any of the houses glazed with the sheet-glass, was injured. This is a most decided proof (if any were wanting) of the strength and superiority of this material for Horticultural buildings, skylights, \&c.; and when we consider the great size of its squares, its clearness, and comparative cheapness, we may assert that the day is not far distant when it will be universally adopted in all Horticultural buildings, or wherever glass is required to be exposed to storms.

SPRENGEL ON VEGETABLE MANURES.
6. Cotton grass. (Eriophorum vaginatum and E. poly stachyon.)-This plant is largely used as litter in the boggy moors of North Germany, where it is called "Luck." At the first setting in of frost it is cut, and at once carted away. It is generally mized with Reindeer
moss, Sphagnum, and the cross-leaved Heath. The moss moss, Sphagnum, and the cross-leaved Heath. The moss
of peaty bogs is one of the worst of litters, for $1,0001 \mathrm{bs}$. of peaty bogs is one of the worst of litters, for $1,0001 \mathrm{bs}$.
contain only $7-101 \mathrm{~b}$. potash and soda, $2-10 \mathrm{lb}$. of lime and contain only $7-101 \mathrm{~b}$. potash and soda, 2-101b. of hose and
magnesia,
$1-10 \mathrm{lb}$. sulphuric acid, traces of phoshoric magnesia, $1-101 \mathrm{ib}$. sulphuric acid, traces of phosphoric
acid, and $3-10 \mathrm{~b}$. of chlorine. The value which Cotton grass has as litter is equally trifing, it being nearly as deficient in potash, soda, lime, \&c. 100,000 parts in an air-dried state contain of mineral substances :-

1,028 parts of silica
254
lime
$\begin{array}{r}110 \\ 3 \\ \\ 36 \\ 318 \\ 43 \\ 43 \\ 27 \\ 4 \\ \hline\end{array}$

potash and soda-(the green plant contains, however, 116 parts of potash and soda).
alumina
oxide of iron and manganese sulphuric acid phosphoric acid chlorine

1,603 parts of mineral substances.
Cotton grass litter is the better the more Reindeer moss (Lichen rangiferinus) it includes, because the latter contains much nitrogen; at
Manure obtained from Cotton grass will decompose sooner than that obtained from straw; its effects therefore are not of long duration. Generally speaking, it is not much valued by farmers, the corr
7. Common Broom (Spartium scoparium). -Wherever Broom grows abundantly it is worth while to gather it for litter; it must, however, be cut and dried when young, else it will be too woody. It is chiefly valuable for the to $12-15 \mathrm{lbs}$, in 1000 lbs of the dry

100,000 parts of green-gathered air-dried Broom contain of mineral substances:-

120 parts of silica
$\begin{array}{rll}296 & " & \text { lime } \\ 52 & " & \text { magnesia } \\ 242 & " & \text { potash }\end{array}$
soda
alumina
oxide of iron
oxide of manganese
oxide of manga
sulphuric acid
phosphoric acid
chlorine
1,145 parts of mineral substances.
Cosmon Broom contains much tannin and wax, for whicle reason the manure obtained from it must not be carried on the fields without due preparation. It must be thoroughly rotted in order to render the woody parts tender 8. Forest-Litter.-Under this name are comprehended weeds growing in forests, cut off with iron implements. decayed leaves, the leaves of Firs, Pines, \&c., small brauches, \&c. The weeds contained in Forest-litter consist of various plants, especially mosses ; but as the latter do not constitute valuable manure, the importance of Forest-litter is chiefly owing to its phenogamic plants, leaves, \&c. It is somewhat better if, instead of mosses, an abundance of lichens is contained in it, and better still if it "cludes fungi, which are always rich in nitrogen. Ty; - value of many plants found copiously in forests, such common Broom, has just been spoken of, and as we also know what value litter composed of different sorts of leaves possesses, we possess a certain scale for determining leaves possesses, we possess a certain scale for determining
the value of Forest-litter, so far as the different plants contained in it are concerned.
If Forest-litter contain many of the plants just quoted, or muchource ie is always best to heat it in large heaps before, it 2 unsed in the stathes. If, on the contrary, it chiefly censiats of mipssea-and lichens, it may be employed
 moss, Hypum, contain $\frac{3}{10} 16$. potash and soda, $\mathrm{t}_{0} \mathrm{lb}$. lime, chlorine. chleripe. loaibs. of the dry moss Polytrichum contain no potash or soda, some traces of sulphric acid, phosphotit acid and chlorine, and $\frac{9}{10}$ b. of lime and magnesia, being, Gerefore a máterial of the very worst description. 9. Flag's (tfis seadacorus, I. germanica, and Acorus calamus).-Flags abound in most powerful manuring Thbstances, and should therefore be carefully collected. They, howerer, decay so speedily that the manure thua obtained campot be buried too quickly.
10. Refuse of the Flax and Hemp-dressers.-Experience has shown that the above substances have little value as litter, and that the manure thus produced has no nourishing properties. Flax and henp refuse afford the surest proof that the goodness of litter chiefly depends on certain cremilime and magnesia, and contain potase of sulphuric and phosphoric acids and chlorine, which are exactly the substances of which soil is in most cases deficient. Flax and hemp refuse possesses indeed as much, and even more carmanure, which is to be attributed to the want of nitrogen It yields humic acid very slowly; and the decomposition is very difficult, on account of the woody fibre, fof which it is almost entirely composed. If it is ever to be used as litter it must be packed wet in large heaps, and heated for a considerable time.

## HEATING APPARATUS

I fave for the last five years heated two Pine-pits, each fifty feet long, belonging to C. Turner, Esq., M.P., by means of an apparatus of my own invention, which has of the refuse of coal to keep up the proper heat. As the apparatus is very simple, and can be easily apptied to any pit, and that at a amall cost, I have been induced to submit to you the inclosed drawings, which I hope will fully explain the nature of my plan of heating. The boilers are quite exposed in the inside of the houses, and have merely as much brick-building in front as is required for conver lng the smoke-flue into the wall.

Section on line BC

Elevation of Furnace.
The fire is put into the furnace at B; from thence the heat passes up through the under part of the boiler by the aperture shown in plan B , as indicated by the arrows, and continues on beween the upper ond under part of the
boiler till it reaches the flue, whence it proceeds onward boiler till it reaches the flue, whence it proceeds onward it escapes in a vertical flue at the end of the house. The hot-water-pipes are four inches in diameter. They drop down at the extreme ends of the house, and return at the lower level in the same direction to the boilers. There is
no building over the water-boiler in the inside of the no building over the water-boiler in the inside of the house. The apertures marked J and K at each side of bricks over the fur the admission of col the purpose of cleaning.-Peter Watson, Gardenter, Stoke Roohford, Colsterworth, Lincolnshire.

ON THE CULTURE OF PELARGONIUMS.
My treatment of Pelargoniums having proved successful, it has induced me to send you the method which I have pursued for many years, by which I obtain a succession of fine blooming plants throughout the year. In August, cuttings are taken from the old plants, chooring such as have the young wood tolerably matured. These
are taken off about six inches long, and close beneath a
joint, each cutting belog put into a small 60-sien pot, filled with a compost, consisting of equal parts of vegetable mould, good loamt, well-totted cow-dung (at least a year old), and one eighty part of white sand. Previously to filling the pots, the compost is well mixed together but not sifted). The cuttings are inserted by making hole in the centre of the soil, and after placing them in the hole is filled up with white sand; the soil is then pressed close to each cutting, and after being watered, the pots arel plunged in a hot-bed frame. No air is admitted for several days, but they are shaded when required.
As soon as the cuttings push, air is given freely. In four or five weekss these cultings are shifted into larget pots, the same kind of compost being used as beforts, the plants are then placed in a cool frame, of removed into the greenhouse, where they twill come into bloom early in March following,
bout the end of September, another succession of cuttings is put in, and treated as the others were; but when the plants are about ten inches bigh, the ends of the shoots are pinched off. This causes them to throw out a number of lateral branches and makes the plants buchy These flower early in May. In January, a third stock of cuttings is put in, which are also stoptued at ten inches high. The plants are kept in atol and siry situation, from the lat of May to ful and are then taken into the houses to bloom, whith they will do until the end of Sep tember. Tliese plants are removed towards the end of Apriil inte ptts eight inches wide by nine in depth. In Marte a fourth lot of cuttings is putin; these, after being theped, will throw out shoots, which, when they have go six inches long, are also stopped. These plants are kep in a cool, airy situation, from the end of May to Sep-
tember, and are then taken into the houses, and will bloom until December or later.
The plants are frequently syringed with a mixture of soap-suds and tobacco-water, which keeps them perfectly free from insects of any kind. I also water them oftels at the roots, with strong manure-water and soap-suds. Plants treated in this manner always appear healthy and vigorous, and the blossoms are much finer than those produced upon old plants, that have been cut down and treated in the usual manner. All my spare old plants are finally turned out into the open borders, and flower admirably; and being so dwarf and bushy, they are very buitable for the purpose.-A Young Gardener, Raheen, near Limerick.

## THE ANTIQUITIES OF GARDENING.

## No. I.-Extracts from Cardening. (Continued.

"Of Beare's Eares, or Auriculars.-The seed is ripe in June, and best sowed in October. The best way is this:-Take good black mold, mix it with rotten cow. dung, ins pans or boxes with withina foot or less of the keepe wormes away; then sift on that Willow earth, above an inch thick, or otherwise soe much of the finest light old rotlen dung, on which scatter your seed pretty thiek; and rotlen dung, on which scatter your seed pretty f ins same passe through a very fue just hide the seed."
"Of wittering Flowers. - River and pond waters which are constantly exposed to the sun and influence of the heavens are best for watering all things. That drawn out of deepe wells or brought farr underground in pipes is too cold for tender seedes and roots untill it hath stood some time in the open warme ayre.
"Of Tulipes.- The Tulip is the queen of bulbous plants, whose flower is beautiful in its figure, but most rich and admirable in its colours and wonderfull variety of markings. It is also a hardy plant, and constant enough, if well ordered. Wee had it first out of Turkey, about fifty years since, where it grows wild in some parts, particularly about Jerusalem as they write, and is thought to be that flower trunslated ill a Lilly, whi
more gloriousily arrayed than Solomon. heads of spears within the flowers of Tulips, which the Latins call Stamina, and the French Estamyns, and wee Chives; and if these bee yellow, the flowers are seldom valuable, being inconstant commonly, and having rich colours faint and confused; but if they bee of a rich purple, it is almost a certain sign of a good kind, so that be purphe, ingle colours as have purple stamynes are only to be chosen to gather good seed from, or to keep in hope of chosen to gat
striping well.

The best propertyes of earth for Tulipes are lightness and dryness, yet there must be some paltness in it; one third part of sand, and two parts of Willow earth be but spoken of, make an excellent composition for there, take because withow earth is not to be had every mold out of instead thereof two parts of fine rich old day spriggs, and the fields, or such that is made of leaves and very consumed found about old wood piles, with a little vary."
cow-dung and add to them a third part of sand." fis flowers
"Spanish Jasmyn or Gessam.yne.- This flowerly later than the common sort. It is 80 tender that paris, where preserve it all winter in potts or tubs; yet in Pari, w south the frosts are sharper than in England, I on the common wall planted with this kind enoculatea 1 a laid duwne on white, which in October were unnayled an . what else you the earth, and a low wall of horse-dures cold, covering please, made before them, to keep off he irds to keep them well with mosse, and a penthouse of give them of the snow and great winds, leaving paces lye lyus some aire in faire wynter weather; setting then moving till the great froats of wynter are past, and iling the stocks all the covers and pruning them low, and naing aing ntly up against th

derable time" to bud, you must every year prune them close down to the of a finger long of new sprouting for a graft:-and, by the way, note, that these come better of grafte than enoculation, or any other way of insition. If they bee not yearly pruned thus low to force out new branches, they will be "The Arabian or Alexandrian Jasmyn prospereth well in diverse parts of Italy, where they have had it long. It came
first from Egypt, and is called by the Arabians Sambach."

## AMATEUR'S GARDEN.-No. XXIX

 Among the plants which now require attention preuniversal consent, claim the first place, for there are fewt persons who do not admire them, and not many plants there is little skill required in growing a Pelargoninm, and this may be true; but there is some little art required to produce them in that style of excellence which is chaHorticultural fetes in the neighbourhood of the metropolis. Few persons in the country can form any idea of the Catleagh, Gaines, sud others : grown by Messrs. Cock, old school would pronounce it impossible to produce them are plenty of gardeners bitted, also, that although there mens, we have but few cultivators who can 'procure a meas, we have but few cultivators who can !procure a plants, we lose sight of an important physiological lawe -namely, that whatever conducts to phxuriant growth is and hence prize cultivators never allow, and vice verséa; become what the cultivators never allow their plants to and luxuriant at that season, but keep them by potting them in poor soil, and supplying them moderately with Water, in a healthy but by no means luxuriant growing a great quantity of suctive roots, and the storing up of sap in a highly elaborated state, which, being brought into in the production of flowers instead of bring, is expended this reason it may be laid down as a rule of culture, fhat of bloom the following plants will not produce a fine head the prey following season, neither can any stimulus in This is tle liquid manure induce them to do so.as exempified in the of the cultivation of the Pelargonium, To apply it to practice - the plants that best cultivators. ing must be turned out of the house and placed in the full sun, under a south wall, to ripen their wood previously to seed is not desired, to remove the whole of the time, if stems, but retaining as much of the foliage as possible In cutting the plants down, the Amateur must be goverued by circumstances, such as the sized plants be
wants in the coming season, and the convenience land for large specimens. As a gencral rule, I sho at hever recommend the growth of large specimens; small thes in is quite 24 -sized pots are far more interesting, and of a lalger size; that is, if they are grown as plants biding the greater bart of the depending over the side, and been attributed to the quantity of old wood left in plant at the time it is cut down, but the advantage of extent, inaginary, though it camnot be doubted but that case of neevoir of nutriment for the ycung branches in be placed in a fter the plants are cut down, they must shoots are one inch long, at which time they myoung shaken out and repotted into small pots, using sandy loam and peat only, and placing the phants in a close, cold
frame, until they begin to must be fully exposed to the weather until the approach of frost renders it necessary to louse then for the winter W. subject will be again noticed towards October. -

## Rendle's TaME CORIRESPONDENCE.

 engaged in Hank System.--Prejudice on the part of those bar to the ines for plants, has unquestionably been a great Only provision of artificial climate; but it is not the almoste. Experience has proved that the inventors of than they really method have claimed for them far more have, by contiar adaptation to particular purposes, they mon sense, dending against nature's laws and man's comTank system, who has read Mr. Rendle's treatise on his gentleman in will, I think, feel disposed to include that doubt as to the subove number; neither can there be any But I must besent ernployed for maintaining bottom-heat. hould be able, by state, that I ana not quite satisfied that I tive of the roots of Pine plants, unless I did so irrespecIt is very tevident, in the the superincumbentatmosphece. Whens would receive but very little heat from the tank, cboy conducfor; and this fact is sendered still monMr. R.'s statement, "that when the large
derable time." It is true that $\mathbf{M r}$. R , proposes to carr the flue round the interior of the house, and says that, "In cases where the heat from the fiue is not sufficient not absolutely indispensable, to have it better, although tank, close by its sides, a two-inchave carried round the could be joined to the tank with white lead, and caulked in the same manner as the flue-pipe." Admitting that by such contrivances a given degree of heat might be proquestion arises both the roots and leaves of the plants, the quesion arises-how is the heat within the house to be varied to meet the changes of the weather, without discurbing the regulurity of the bottom-heat; seeing that the heat of the water, and the hod without first raising the receive additional heat only through the can, of course, it be remembered, that the time when the roots will be middle of winter-is exactly theperature-namely, the should, if possible, be avoided. I certainly do think that onless an horticulturist can obtain a thorough command made, independent of each other which reference has been R.'s plan can never be made available for horticultural purposes to the extent that he anticipates, or anything in it by in bcarcely need to say that the alteration made and it is to Rev. Mr. Huyshe is more objectionable still "strongly urge all to adopt it, even if it be for econom" sake alone," when that gentleman finds it necessary to raise 22 hogsheads of water to a temperature of 115 deg., "to keep the house at a temperature of 70 deg. at night," made indale of summer. If the; experiment had been have heard of economy as being its chief charactoul Unless, therefore, I have misunderstood Mr. Rendle' treatise, I would still prefer such a plan as Mr. J. Weeks's by which I could have, from the use of one boiler, any amount of top or botton-heat which 1 might want-vapour nany quantity-a circulation of warm air if required, and a perfect control over all.-W.
R. Mills, Esq., Stamford Hill.
Bees.-Instead of answering my question, "A pis" says related by Huber." ( I other author says on the subject, for I haver not any perused a book either on the history or management of Bees. If Huber makes the thing as plain as we have done, why not believe him? Mr. Wighton and "Apis" find fault with me for mentioning. "a change of the gen-
der-a thing foreign to the subject, for Working-Bees der-a thing foreign to the subject, for Working-Bees is not foreign to the subject, for Working-Bees are evidentiy of the neuter gender, and are as fully developed (i. e. as perfect) as Queens or Drones. Would your corlay orly one sort of lay only one sort of eggs, and that either Queens, Drones, Bee-ker? Certainly Bee-keeper. Certainly this would astonish them. How friends may be, I, were I worth a thousand pounds, and given to betting, would wager it all that I wound , and given to betme, wound wager it all that I would cause the Bees to metamorphose all the eggs that a Queen may lay into Drones, exclusively; nay, I would cause them to in April, and so on alternately; and a few into Queens at any given time. Mr. W. and "Apis" must bathe their minds in the stream of oblivion, and forget the theories of the undeveloped schools. Bee-keepers seem to know less of the management than of the history of letters of Mr. W. and "A pis" quotations from the authors. The former says, "Queens generally perish i the virgin swarms. Supposing, but not admitting that this is true, I ask, can it not be prevented? Yes, and is by all who know the first principles or A B C of Bee Queen's removing repeatedly renders it difficult to the out her age." When our Apiaries contained 160 hives, We knew the age of every Queen. "Apis" says, "some ear withes appear one part of the island with ane on we shall find that the greater part of Queens are hatched in June and July; but this is a trifling matter. Hesays that 'p' and squeezed honey are not the same. Per large hive as soon as a small one" In Bees fill where the 110 lbs were gathered, all honey out of the comb is called by the persantry, run-honey. The difference is in the act of taking. According to "Apis," squeezed hon of the put into a bag; and run-honey is put into the to its being being squeezed. The squeezing system is by farg without speedy and profitable. On the system is by far the more here put a small hive into the of May the gardener go to a certain field and bring a swarm whicquested me to on a tree. In order to prove thwt large was hanging filled ss small ones, I shall first tell "A pis" are as soon done as cat ; and secondly, what was about the size of a tombeen a large swarm. This small swarm filled a small hive and was ready to throw a swarm on the 19th of June. took off a swarm on the evering of that day, and a second July will drum all the Be ane month. On the July, I will drum all the Bees out of the old hive, and obtain from it about a pound's worth of hovey. On that day the three swarms will be worth 30 s. Well, if such hives as I
recommend were kept by the person who lost the $s$ warm
it would have been as large as a shepherd's dog. This large swarm would have filled a hive three-fourths larger, produced fifty shillings in the same space of time, and shillings' worth; and worth of boney instead of twenty about 3l. This, then, is plain matter Some of the Apiarians in this vicinity are in ecstacy with artificial swarming. I have taken off three swarmas lately; one in the space of thirteen, another in fifteen, and another in eighteen minutes. An Apiarian from St. Another in had heard the gardener here describe the utility and wio plicity of the system, exclaimed, as I was goinm in at garden-door, "Well, I have kept Bees for thit at the and thought I knew something about Bees, but really I know nothing. However, a man is never too old to learn." - A. Pettigrew, Wrotham Park.
Wasps.-I have adopted a plan recommended in your Waluale Journal, in rewarding people who brought Queen 57 of the above destructive to the preseut time, paid for Bees.-As the accuracy of the stotement mer
335 , as to the gatherings of our Bees in 1818 , at p . doubted by some of the oub Bees in (has been Chronicle, I beg leape the readers of the Gardeners tion in saying that st the produce of is no exaggera110 lbs . of honey and the produce of one swarm was gathered in the mon gathered in the month of August alone 50 lbs . each." quantity produced by oure not more astonished at the quanty produced by our Bees, than I would be on seeing the environs of posts 18 inches high in Mr. A. Pettigrew London. If attention be paid to what folly of ketiorew says on artificial swarming, and the olly our readers make more of their Bees than we do of ith with them. On the 11 th of July, I sold for $\mathbf{1 7 s}$. a box of honey, which I got from one of our top-swarms of this ywarm are gathering 2 lbs . every day.- William Petigrew, Carluke, Lanarkshire.-Your columns contain 80 much information connected with the habits of Bees that I feel induced to ask whether you, or any of your Corres pondents versed in this subject, have ever observed any wide diversity in the temper and disposition of these listle animals. I put the question, being quite a novice myself. because my gardener has several times remarked how spiteful the Bees were in my hives, compared with others which he had met with, adding not long ago an assurance that we had got a swarm which did not proceed from our omi Bees, because they were so much better tempered. The fact of a swarm from the hive of one of my neighbours having settled and been hived in my garden close to the other llees, I'believe to be placed armost beyond doubt; diversity I was somewhat incredulous as to the alleged experience, homper, 80 .perceptible to others, Painfal perhaps punish my former scepticism, for while convers ing with my gardener on the very subject, and standing quietly at a distance of at least half-a-tozen yards from the bives, I was furiously attacked and stung by one of the Bees, and nothing but a hasty retreat saved me from the dergoing the same treatment from others of the hive, who came buzzing around me. If this difference of temper be a common phenomenon ant point to atod to in the section and propaguport a stock, to see that they are of a kindly disposition, and not like the poets, a "genus irritabile." - Omicron. my cats-- witnessed an unosual sight a few days since in what I took to be a monse; but on a closer insplation with proved to be a Cockchafer, and after amusing himself with it for some little time, he devoured the whole of it.-m A Subscriber.
Wrens--The principal point of discussion seems to be nests, as they are familiarly termed. I have examined many, and can discover litte or no difference in the exterdal appearance, except, perbaps, a little coarser workmanship the material being the same both in those destined to receive the young family and those which are

But look at the interior, and all similitude vanishes a linion particle of anything approaching to the nature of formed can be observed in the "cocks' nests," being formed of the same materials throughout-moss and the finer portions of the dry fronds of the common Fern, if the zest be in a bush or affixed to the trunk of a tree; and if in the eaves of an outhouse or haystack-straw, hay, or a similar material, corresponding as much as possible both in colour and substance with the locality in which the nest is placed, with the view, I should suppose, of avoiding detection as much as possible. With refereace to the uses of the "t cocks' nests," I should think, as they are generally built in more exposed situations than the others, their only object is to draw attention from the
real habitation. The same peculiarity is observablo in the real habitation. The same peculiarity is observable in the are sometimes called in which nest or "trail" as they will find them sansperin which young are deposited, you "cocks' nests" of the Wretty much- to the nature of che when built in the hollow of a tree, being precisely the same, and probably built with the same view. Now, the tains and the eggs of the Wren are deposited contains a very thick lining of hair, feathers, down, \&c., leaving only sufficient room for the mother and her tiny offispring, and rarely during the time the egga are being deposited do the old birds enter without carrying something to add to the warmeth of the interior, so that they can hardly be said to finish building till the phole of the eggs are deposited.-Tyro.
Botanioal Destruction.-It appears to me that thome
persons who call themselves British Botanists might with great propriety be divided into two classes : near; and Conservative Botanista, who are content to leave plants as they find them, after having provided pretty liberally for themselveg. Unfortunately, however, the
first class is by far the more numerous, and the consefirst class is by far the more numerous, and the conse-
quence of their excessive fondness of plants is, that many quence of their excessive fondness of plants is, that many in a fair way for being rooted out from the face of the earth. This, by the way, is a somewhat Irish method of showing one's love of flowers. An Irishman "meets botanist meets with a flower he admires, and for love roots it up. I am told that some of the members of the Botanical Society of London exhibit this destructive pro pensity in a remarkable degree, and one wholesale colthe hundred. Now, if these over-keen investigator would inflict their science upon Dandelions, Docks, and Thistles, no harm would result from their enthusiasm but when one sees them doing violence to the fair face o Nature, by rutblessiy destroying her loveliest and rares productions, it is high time to cry out. A word from error of their ways," and would greatly gratify $A$ Nettle [It is certainly too bad, but it passes our skill to drive greediness out of the world.]
greediness out of the world.] have received, from Messrs. Youell, of Great Yarmouth, fruit of the Fastolff Rasp berry, and we find that it merits all that has been stated in favour of its excellence. The fruit received is very large, obtusely conical, and of rich flavour, far exceeding in this respect some other new and large varietie
plants bear abundantly, and in long succession.
Strawberries.- In answer to a correspondent at $p$. 644, respecting the cultivation of Strawberries, you say that mowing off the leaves is the worst of all practices, and cannot be too much condemned. I beg to state that this remark is contrary to my experience. Four or five years ago I should have agreed with you, but since that time I have aropted the following system of cultivating this valuable fruit, viz., to mow off all the leaves as soon as the friit is gathered, and to give the bed a good coat of rotten manure, so that after it is dressed over it appears nearly all covered. I began this plan upon a two-year old bed, and I find by this way of treatment that the old, stools are nearly all cat off, which I cobsider to be an advantage, as I never take off any of the runners, but let them all remain on the bed. Ifind, by destroying the old stools and that my beds, by this plan, produce threefold what they did before. I have not selected any one sort in particular, but have practised it upon the six different sorts Which I cultivate. My soil is generally of a light tex-ture-D.Z. [Our correspondent will, no doubt, get better Strawberries by mowing off his leaves and adding dung, than by mowing off his leaves and using no dung. during the autumn, and added his manure in October or November.]

 of Hammersmith, for which an extra prize was awarced. The

## MISCELLANEOUS

Gooseberry Caterpillars.-Mr. D. Baillie, a Scotch gardener, having observed that this pest was seldom seen near Whin or Broom plants, chopped and bruised a sheetful of the shoots of the Whin, and boiled them in about 42 gallons of water until the liquor became a strong decoction. Upon distributing this fluid over 430 Goose berry bushes, most of the insects wore immediatel destroyed; a few atropilled by a Blackwood's Journal of Agriculture.

cata has also been received, from which may thourands of plant cata has also been received, from which many thounands of plants have been raised.

## 3Rebíćos.

Lees' Botany of the Malvern Hills is a good specimen of the manner in which local floras may be rendered interesting to others than the residents on the spot, for whom such books are principally intended. It open with a few pages of well-written introductory matter from which we glean the following scrap relating to the general appearance of the district :-
" Gen irkal Appearance AND Asptct of the Hills.-From the period when the vicinity of Malvera was 'a wilderness, thick set with trees," above whose solemn umbrage the Bald Hill (for such is the deriva tion of the conjoined British words Moel Wern) must have peered with fine effect, charming the Saxon monks to its peaceful solitudes, down to the present day, these eminences have never wanted visitants or admirer: Whether the ancient Britons or the conquering Roman did more than form and occupy the noble fortress on the Herefordshire Beacon, it may be difficult to say: but the monks of the two priories of Great and Little Malvern at all events sanctified the saluhrious waters of the hills, by giving the name of the Holy Well to on spring, and dedicating the other to St. Anne. We may rest asanred therefore, that whatever interest the saint est assured, then in the matter, something was known of the curative qualities of pure spring. Water, even in those comparatively unpolished times. The monks of Grea Mal Maivern, hon seenery superaded thereto Church a highly venerated having within, is especially denounced by Bishop Latimer, in his aterm but quaint sermons $\dagger \dagger$
quaint sermons. $T$, that the Maivern Hills seem to rise 'like stairs one above another;' and this homely slmine is very apt, Worere hill somewhat them the lowest southe the apices of the Worcentire Ben Nort Hill Hill terminating the view. This stair-ike aspect is not, however, ob obvious when the hils are asp south, as then the broad mass of the Herelordobire Beaco ss brought into view, and this noble ill then appears rise in the centre of the chain, its subject heights undu lating from it on either hand. The best view of the entire chain is that, perhaps, obtainable fro the escarp ment of the Cotswolds, near Cheltenham, or from Bredon I have a silver coin of Vespasian, found in a hole excavated by sheep on the
lie still concealed.

Latimer's Sermont, preached before King Rdward VI. sto.

Hill, near Pershore. The entire length of the hills, from north to soutb, rather exceeds nine miles ; the breadth is variable, at the utmost scarcely exceeding a mile, and this only occurring at the gorge, where the Herefordshire Beacon boldly falls back to the westward, near Little Malvera.

Three transverse and one lateral valley perforate the hills, and at these points the most craggy aspect of the chain might be expected to present itself; but this is scarcely the case, as the gradual slope of the hills even in these passes, from the friable nature of the rocks, pre-
vents that stern rigidity of feature which would be evident vents that stern rigidity of feature which would be evident
with less disintegrating materials. The pass of the with less disintegrating materials. The pass of the 'the Winds' Point,' exhibits a fine view of the Hereford. shire Beacon. Besides these vallies that break entirely throngh the chain, numerous ravines stretch up the sides in what is called 'the Winding Valley,' between the Worcestershire Beacon and the North Hill, and the Stony Glen, between the North and End Hills. These are some of the best stations to find plants upon the hills. The only lateral valley between two parallel spurs of the shire Beacon, where the westernmost height, called Midsummer Hill, forms the highest ground of the fortiMidsummer Hill, forms the highest ground of the fortification; the eastern height, which is included in the
entrenchment, is called Holly-bush Hill. This is a good locality for cryptogamous plants."

The Muck Manual. By F. Falkner, Esq. Murray. 12mo. Or all the subjects connected with Farming that of manure is beyond all comparison the most important next to draining, which is, indeed, in many cases, even second to it. As concerns Gardening, it is also the great field in
which the most multiplied and varied experiments are which the most multiplied and varied experiments are required. We therefore hail with pleasure all practical,
and most speculative, essays relating to it. It is for that and most speculative, essays relating to it. It is for that
reason that we have allowed it already to occupy so prominent a place in our columns, and that we have no intention whatever of letting the subject sleep. For the present, however, it is desirable to pause awhile, until the experiments of the season shall have been brought to a head; and as indicating the present views of observan persons this book of Mr. Falkner's will be found useful. It gives a succinct account of the manner in which animal and vegetable maaures are best prepared, preserved, and applied; and of the action of the more common mineral and artificial manures now being so extensively employed. In addition to which, the introductory matter gives a brief sketch of the nature and properties of some of the chemical elements which give manure its value. The author very properly insists upon the paramount importance of horae-made dung, in which we entirely agree with him, as we have repeatedly stated on former occastons; and although we cannot concur in all his views as productive-especially when (p. 127) he recommends that no dung should be allowed to ferment until a few week before it is put into the soil, and then only in a slight degree-yet the mere fact that the paramount value of home-made dung is strongly insisted upon is an excellent feature.
We have no space for a detailed criticism of this work, and shall therefore only quote a passage relating to the indiscriminate use of simple manures, to the good sense of which we would particularly direct the consideration of our agricultural readers.
' ormed-that many different substances are required fo their nourishment, and that the presence of all those subtances is requisite to the fulfilment of the condilion of their growth-he applies one substance only, an individual salt; and if it happens to be the very substance that was
wanted to fulfil the conditions of fertility, he gets a crop. Encouraged by this success, the same salt is applied to nother field, with the full confidence that it will produce similar efiect. surprise and capapoinment of the farmer, it proves an entire failure. Induced by the success of the first application, other persons try the same salt, some with entire auccess, others with partial benefit; but the greater num ber generally without any perceptible advantage. Further experience of this kind plainly proves that there is no
dependence to be placed upon this particular salt, and it s ultimately abandoned. Such has been the fate of several different salts in succession; and thus common salt, gypsum, carbonate of soda, nitrate of soda, and nitrate of potash, have each had their periods of favour and disrepute. A few successful experiments with a particular salt have led to an extensive application of it, and to consequent great loss and disappointment.
The American Agriouthurist. New York. Wiley and This is an American periodical, occupied with Agricultural and Horticultural subjects. As far as we can judge from the Numbers before us, it appears to contain some seral information, although, of course, less importan the wide difference in their climate. It is illustrated with wood-cuts of Plants and Cattle, and is worth the having of those who wish to know what their brother farmert are about on the other side of the Atlantic.

CALENDAR OF OPERATIONS for the ensuing week. THz summer climbing Roses, such as Ayrahire, Bourgault,
Bankian, , and many of the evergreen and multiflora
now fivisions are are the arcades and pillare of Roses, walls, banks, \&c. which will not be
filled up agin
would have been thought of little consequence, but in these days
we are so accustomed to
 succession of bloom. How to effect this is the object of my remarks
thiv weck. We cannot possibly do away with our beautifuls sumnier garlands without losing the best feature of our flower-gardens; we on them autumnal fowering Roses, using those only that are of a
dwarfish, compact habit, so that they may not interfere with the free hahits of thectir habiter so that they may nots, so to speak. Hybrid Perpet tuals
and Chinas are best suted ing Roses are arainst walls with favourable aspects, when you may employ the dwourf Bourbons and a few of the tea-scented kind.,
instead of the Chinas. The prevailing tint in summer climbers is whitish, and as some of the sorts to be budded on them may be
expected to flower occasionally at the same time with the be as well to make use of higher-coloured varietiest but ind ividual colours in the autumn. Among the Chinas, perhaps the best whites for this purpose are Clara Sylvain and Infidelité de Lisette, to
which you nnay add Camellia blanc, or any other white sort you may already possess. Among the higher colours in the section of
Chinas there is Chinas there is great room for chuce, but private gardeners can
hardy beepecte to know all the hest sorts. Untily you find
better list, take the following. Paris, Saint Pern, Cramoisie supe rieure, Henry V., Baron de Lange, Camoens, Ableé Mioland, particular about the kind of stock they as china Roses are no many of the Perpetuals, they had better be wrought on the Ayrshire Roses, while
the hbbrid Perpetuals should be budded on the Boursault and kinds, and being more tender than the Chinas and Perpetuals, should have the more favourable situations. Any one having a large
Banksian Rose againat a house or south wall, may easily establizh Banksian Rose against a house or south wall, may easily establish a
selection of Bourbon and Tea-scented Roses on it, and in hard
Ren of the Tea and few of the dwarf Bourbons do well on their own roots in our climate. There are few good white Roses among the Bourbons; perhaps Julie à Joynes and Acidalie are the two hest
this colour, whule there is no want of crimson coiours. Among the old Perpetuals the Crimson or La Per-
petuelle is the best; and William Jesse is perhaps the best among the newest ones, but in this class the diffeculty is to pick out a bad one ; they are all good. I . KITCHEN -GARDEN AND ORCHARD.
PinkRy.- Besides the routine of watering and giving air, the
chief attention must now be turned towards your fine succession plants; and thosc of them that are to fru $t$ next May cannot now be first day's potting; the smaller plants will come in better by-andby. Many good growers use disproportionately large pots for a few
of their bess plants at his time, and do not fill them quite up at first.
Pines of oll Pines of all ages are potted deeper than other plants, as they root
from the collar of the plant, near the surface; and whenever a new to induce them to throw out fresh roots in the new soll
Vood syringing morning have now done bearing ought to have a good syringing morning and night, and to have the atmosphere they must not be kept close under this treatment, for fear of inbe kept rather close at present; that is, give them air early in the morning, and shut then up between threc and four $o^{\prime}$ clock in the
afternoon, tisl all your herries are full swelled then the of the season ought to be warm cnough to colour them slourly, and

As usual, a host of letters have arrived too late for answers this week

## NEWS OF THE WEEK.

The proceedings in Parliament continue to derive their main interest from the debates on Ireland. The debate in the House of Lords on Friday night, on the resolutions of he Marquess of Clanricarde, was remarkable not only for he declaration of the Duke of Wellington on the policy of Government, but also for the opinions it elicited from Peers of both political parties on the present state of Irish affairs. The Opposition condemned the dismissal of magistrates and the policy of Ministers, as the chief causes of the present excitement, while the Duke of Wellington conended that the Repeal agitation is calculated to endanger he public peace, and therefore to call for unusual precau tions from the Government. He argued that it was the duty of Ministers to be prepared for any outbreak, and that they could not safely leave the commission of the peace in the hands of magistrates who might be called upon to put down what they had aided in bringing about. After an animated discussion, the House, on a division, negatived Lord Clanricarde's resolutions by a majority of

In the Commons, the Irish Arms Bill still occupies attention ; every clause continues to be opposed, and the Bill consequently makes such slow progress, that many days must elapse before it is finally passed. Sir R. Peel on Thursday explained the determination of Government on the state of the public business now before the House. He said that they were prepared to give precedence to the Irish Arms Bill, to the Scotch Church Bill, to the Irish Poor-law Bill, and to the Export of Machinery Bill ; but that they intend to postpone, for the present session, the Ecclesiastical Courts Bill, the Factories Bill, and the Trish Law Courts Bill. With respect to the County Court Bill, he postponed to scme future day the announcement of the intentions of Government with respect to that Bill, as they were very unwilling to abandon the hope of carrying in the present session. With respect to the Small Debt Bill and the Bill for the Regulation of the Superior Courts of Common Law, their progress will ultimately depend on the decision to which the House may come with regard to the County Courts Bill. In the Lords, on Thursday, the Lord Chancellor brought forward a Bill, the object of which was to render valid marriages celebrated by Presbyterian and other Dissenting ministers between members of the Established Charch. In laying this Bill on the table he said it must not be uuderstood that some was thought better to introduce the present measure at
once, but the committee would proceed with its labours, and endeavour, as far as possible, to establish some
general system which would meet with the approbation of the people of Ireland.
From France, we learn that the agitation in Ireland has excited a lively sympathy among the Republicans of Paris. At a meeting on the 14 th inst. to celebrate the destruction of the Bastile, a subscription in behalf of Mr. O'Connell's Repeal Rent was set on foot, and Deputies, was commissioned to visit Ireland and assure the Repealers of the deep interest which the French democratic party take in their present struggle. On the
other hand, M. Guizot, in the Chamber of Peers, has declared that France has no right to interfere, and that in the opinion of his Government there is nothing to be apprehended for the tranquillity of the United Kingdom.-The news from Spain is contradictory, although it apparently
confirms the unfavourable reports in regard to the prospects and position of the Regent. Madrid is now besieged by the iasurgents, and three armies, commanded by their generals, are simultaneously advancing to attack it. Meanwhile the Regent has quitted his former position by forced marches, and is either retiring on Cadiz, or endeavouring to effect a junction with General Van Halen, and then fall upon the insurgents under the walls of Madrid. For the details of these operations we must refer our readers to our Foreign article-premising, however, that all our intelligence is derived from the French telegraphs, and that, although appearances are extremely unfavourable to the Regent, his movements and policy are by no means known, even to his own adherents.

## 烈口me Noms.

Court.-The Queen held a Privy Council on Saturday at Buckingham Palace, after which Her Majesty and Prince Albert, accompanied by the Prince of Wales and the Princesses, left town for Claremont, from which they
returned on Monday. On Tuesday the Queen and Prince returned on Monday. On Tuesday the Queen and Prince
Albert took their accustomed walk in the gardens of Albert took their accustomed waik in the gardens of
Buckingham Palace, and in the morning of the same day, the Prince presided at a meeting at the office of the Duchy of Cornwall. On Wednesday the Prince left tnwn for
Bristol, by a special train on the Great Western Railway, Bristol, by a special train on the Great Western Railway,
and after witnessing the launch of the Great Britain and after witnessing the launch of the Great Britain
steamship, returned to Buckingham Palace in the evening. On Thursday Her Majesty visited the Italian Opera in State, for the first time since her accession. It is
announced that Her Majesty intend to give two State announced that Her Majesty intends to give two State
balls on the most ample and magnificent scale, the first of which will take place on Monday next, and the other towards the latter end of this month. Lady Portman has succeeded Viscountess Jocelyn as the Lady in Waiting on
the Queen ; and Lord Byron and Sir F. Stovin have succeeded Viscount Sydney and Captain Meynell as the Lord and Groom in Waiting on Her Majesty.-Their Royal Highnesses the Dake Ferdinand and Prince Augustus and Princess Clementina of Sase Coburg Gotha landed at Southampton on Thursday evening, from Lisbon, and immediately proceeded by a special train on the South Her Majesty.-The King of Hanover honoured the Baroness North with his company on Saturday at the Majesty afterwards went to his residence at Kew, and returned to town on Monday. In the evening the King honoured the Earl of Clesterfield with his company
at dinner. His Majesty dined with Baron Brunow, the Russian Minister, on Tuesday, and with the Marquess of Abercorn, at Stanmore Priory, on Wednesday, returning to town on Thursday morning, to be present at Mrs. de
Rothschild's public breakfast, at Gunnersbury Park. His Majesty afterwards went to Kew, and returned on Friday, Mo dine with the Earl of Mount Edgcombe.-Prince George of Cambridge will forthwith proceed to the Ionian Islands, and be stationed with his regiment at Corfu. His Royal
$H$ Highness, it is expected, will remain abroad about 2 years. has rapidly recovered from his late attack of indisposition. His strength has gradually returned, and on Monday he was sufticiently convalescent to take an airing in ${ }^{\text {a }}$
carriage for a considerable time. Should his Lordship continue to improve satisfactorily, the family will shortly leave town for a short residence in Northumberland.
Parliamentary Movements.-Mr. Purvis, Q.C., is an-
nounced as a candidate for Durham, on the Conservative nounced as a candidate for Durham, on the Conservative
interest, and the Marquis of Blandford and Lord Seaham have also been mentioned as candidates on the same side. Mr. Bright, of the Anti-Corn-law League, it is said, will offer himself on the Free Trade intereat. A vacancy has occurred in the representation of Ayrshire, by the accession
of the Earl of Glasgow to the peerage. The names of Col. Macadam Cathcart, of Craigengillan, Colonel Mure, of Caldwell, Mr. Alex. Oswald, and Sir Charles Fergusson, have been mentioned on the Conservative side, and Mr. Rigby Wason on the Whig interest.
Naval Pensions.- The good-service pension of 2001 . per annum, which has reverted to the Admiralty by the
death of Rear-Admiral Sir James Hillyar, has been conferred on Rear-Admiral Sir Charles Ballen, who was captain of the Britannia at the battle of Trafalgar.
Church Preferment.-The Queen has been pleased to make the following presentations to livings in the Church
of Scotland, void in consequence of the late secension of their reapective ministers :- The Rev. David Strong to
the church and parish of Dailly, in the presbytery of Ayr,
in the room of the Rev. William Chalmers ; the Rev, in the room of the Rev. William Chalmers; the Rev John Wison to the charch and parish of Forgandenny,
in the presbytery and county of Perth, in the room of the Rev. James Drummond the Rev. David Thompson to the church and parish of Forgan, or St. Pbillans, in the presbytery of St. Andrew's, Fife, in the room of the Rev.

Angus, in the room of the Rev. James M

## 150retgn.

Franci - The Paris papers are filled with comments on the state of Ireland, which appears to create almost as great a sensation in the French capital as in London. The National gives a report of the toasts and speeches made at the banquet held in Paris to celebrate the destruction of the Bastile, as well as the sympathies for Ireland expressed as an episode of the banquet. Besides sixty republican electors of the capital, there were present sundry officers of the National Guard, magistrates of Paris, members of the Institate, and the principal writers of the Press, togetber with deputations from the republicans of Rouen and Orleans. Among the members of the Chamber of Deputies were MM. Arago, Carnot, Ledru-Rollin, de Courtais, Legendre, Viellard, GarnierPages, \&c. In short, above one hundred persons sat was, "To the 14th July, 1789" -" "to the triumph of democracy in France and in Europe,"-and to "Our France, the enemy of all pepressors." This was given by M. Ledru-Rollin, with a speech of which we can notice but the principal features. After summing up the woes sphere ha, he said that the republicans of another hemi sphere had uppealed to France in her behalf, and that their M. Iedru-Rollin, "convey to our oppressed brethren the testimony of our ardent sympathies; let us convey to them the tribute of our labours; let a vast subwhole surface of Prance; let her pour into the Repeal coffers abundant succour, so long as it shall suit the great politician and powerful orator of Ireland to maintain her calm and on the defensive. But let, also, England know, the moment she shall attempt to prevail
by violence over so many legitimate rights, that France has been able to supply nations in their decisive struggles with tried heads, resolute hearts, and valorous arms, and by private citizens and brave volunteers wha proclaimed by private citizens and brave volunteers, who had sailed from her harbours at their own expense, long before her
Government officially acknowledged it." This oration is said to have kindled universal sympathy; and after the toast of the French Canadians, "long victims, like the Xrish, of English oppression," M. Marrast, a writer in the National, called upon the assembly to commission
M. Ledru-Rollin to proceed to Ireland, and convey to the Repealers the assurance of the deep interest democratic France felt in their struggle. The proposal was assented to with universal applause, and M. Ledru-Rollin accepted the mission.-The Chamber of Peers sat on
Monday, and discussed the budget of expenses for 1844 Monday, and discussed the budget of expenses for 1844. of the Marqued much animation from various questions Spain, Ireland, \&c. M. Guizot, in reply, declared tha the Prench Government had not in any manner interfered in the actual affairs of Spain, and that that which had subject was roa toacon, Madwid, and Paris on lais M. Guizot observed that, although he had no right to meddle with the occurrences in that country, he might reply that there was nothing to be apprehended for the tranquillity of the United Kingdom. He was confident fifteen years a great deal had been done for Ireland, and the present Cabinet, whilst combining conciliatory vien
with firmness, would do all in its power in the interest of
the unity of the British Empire.
Spain. -The unfavourable anticipations in our last in regard to the prospects and position of the Regent are apparently confirmed by the advices since received. Madrid, declared by the Ministry in a state of siege, is now besieged by an insurgent army. Gen. Aspiroz, atter crossing the Gua darrama without difficulty, arrived on the dath of the last only two leagues from Madrid, and at the date of the last
advices was on the mountains overlooking the capital, while his friends were doing their utmost to corrupt the civil authorities and National Guards, but hitherto in vain. The Cabinet, however, would seem disposed to negotiate, for it is affirmed that the Governor of Madrid repaired in person on the 12th to the head-quarters of General Aspiroz, in order to try to come to an understanding with him. Mean while, General Urbina was marching on the capital with the garrison of Badajoz, and is probably already co-operating with the former General. On the other hand, Gen. Narvaez was at Guadalajara on he 14th, and had incorporated with his army the two battalions and detachment of Cavalry sent against him has, Saragossa, under the comsmand of Colonel Ella. He han, moreover, been joined by forty officers, who had come to meet him from Saragossa. This defection had produced a deep sensation at Saragossa. The large forces which the Junta of Catalonia have just displayed, and the orion dection of the Rent's troops, the moment hey are in presence of the insurrection, seem completely to paralyze the operations of seoane and Zurbano. Narand was expected the high road rom on the 15th by forced marches, and operate there in conjunction with Generals Aspiroz and Urbina. The Regent, who left Albaceta on the night of the 7tb, with about four thousand men, was on the 10th at Val de Penas. All that can be cult country, and after so mares and so inexplicable an inaction, is, that the Regent now thinks only of securing himself a retreat towards Andalusia, and of reaching the Seville high-road, considering Gen. Van Halen as his last prop. That General, no doubt complying with the Regent's instructions, had taken great caro ing with the Regen's instructions, had taken great caro of his troops on that grand line of communication. But the latest news announces that, having arrived by Carmona before Seville, he has sustained a check, the city having refused to open its gates to him, and resumed the direct road to Cadiz by Alcala de Guadalra, Utrera, add Xeres. His object is probably to effect bis junction with General Carratala, who still holds out for Esparter Cadiz. But by retreating towards Cadiz, Gen. Van Halen leaves Espartero completely isolated on the ather side of the Sierra-Morena. General Concha arrived on the 2 d a Malaga, where he was organising his army in order to cut central Junta of Catalonia, composed of two delegates from each province, installed itself on the 11 th at Barcelona, and the Spanish frigate, Cortes, has declared itael at Algesiras. Public attention, for some days, will, of course, be fixed upon Madrid, and on the military operations which may be expected in its neighbourbood. The enemies of the Regent in the capital continue their calumnies even in his fall, and repeat the charge relative to the removal of the Queen, but the Govern ment have formally denied that they have any intention to carry off her Majesty from the capital. During the stay of General Zurbano at Lerina, a Luigi Pacherotti, well known as a Lieutenant of a free corps during the late civil war, and subsequently as one of the editors of the Archivo Militar. Three species of poison were found on him and on his serpant; one was prussic acid, another corrosive sublimate, the third has not yet been analysed. The assassin had gained the General's confidence, and was admitted freely to his house, when he mixed poison with his eau sucré, in the Geneals absence from the room. On Zurbano's return, he which incressed ss age took up his glass. He could not keep his eyes off the draught and the drinker; but Zurkeep his eyes owing to drink it He saw that the water was turbid, and the Italian powerfully excited. He took his keen wh those $o$ Pacheer eyes from the elass, and Pacherotti. There needed and self-detected criminal. He boldly confessed all, and marched to death with a courage worthy of a better cause. At the place of execution, when the act of military coilty demnation was read, and heact specined-") Italian attempt to poison the General Zurbano" added, "and the other also" (meaning Seoane), threw away the chair they gave him to at upon, and raly ceived the fire of the platoon in his back, standing in inst.
Portugal.-Letters from Lisbon of the loth tate that thin -Letters from Lisoon of thed anious inte that the affairs of Spain are still watched with anxioust is entertained that the fortunes of Portugal will follow, in a great measure, those of Spain, and that in the event of the Regent succumbing, an immediate change may be expected here. Every telegraphic announcemeat-ev movement indicating success to the disaffected partycaught up in a moment with avidity by the press, brought to bear accordingly. The arrival of the Britithe packet also with news from Ireland is hailed with ind greatest interest, and invective of every ha Lisbon papers against England, which is described by the Lisbon papey hail Mr. O'Conaell as "t the lightning that is to blight the"
oal." They call England the "despot of the world,"
the "island tyrant," and rejoice that she is to go down at
last to oblivion ; while Mr . $\mathrm{O}^{\circ} \mathrm{Connell}$ is already designated by them "Lord of the Isles Germany.--By letters of the 7th inst., from Vienna, we learn that Count de Bombelles, the Austrian minister to the Swiss Confederation, died that morning in the absence. The Hungarian Diet has voted the usual address in reply to the speech of the Emperor on opening the session. The address contains one remarkable pasage. It calls the attention of the Imperial Goveramen to the undue and extraordinary influence which Russia has acquired of late years in the provinces bordering on the Dannbe and it prays the Government to take measures to counteract it. They have also passed a law excluding Latin altogether, as a language to be used in public deliberations; and have brought in all members of request the Emperor to make alial faroily learn and speak the Hungarian idiom." is is between the Austriand French Governments relative to new arrane Austrian and French Governmenthe two States, and particularly for putting an end to the necessity of prepaying letters.
Russia.-Letters from Konigsberg announce that the elders of the Jewish community in that city have lately him to address to the Emperor, in which by which the min to revoke the ukase of the 2d May, by which the dews who live on the frontiersor of the empire.
Greecr.-Accounts from Athens, in the papers, Btate that the Greek Government has requested the protecting powers to pay the dividends on the Greek loan up to the 1st March, 1844 ; but that the Ambassadors have replied that the Greek Government must provide the means of meeting even the dividend due on the lst September next. It is added that Messrs. Tricoupi and Colletti, the Greek Ambassadors at London and Paris, have been recalled. M. Tricoupi will, it is said, be Foreign Minister, and M. Colletti Minister of the Interior. Turkey. -The Levant Mail has arrived, but the details it brings add little to the intelligence already nown to Alexander. It appearon Lieven had the good sense to sympathise with public beloved that he is spoken of in terms of enthusiasm ; and it may be asserted, without fear of contradiction, that he is the mest policy of Rusia is considered as surprising, but at the policy of Russia is considered as surprising, but arst the Russian Government
United Gravernment.
United States and Canada.- New York paper-ship the 27 th ult. have been received by the packer-sim. Garrick, which arrived at Liverpool on Tuesdery, the Attorney-General of the United States, who Legare, the Attorney.General of the Uniten States, who on the 20 th ult the after an illness of three days. The on the 20 th ulto, after an illiness of three
funeral was attended by the President and the members of his Cabinet, the authorities of Boston, and crowds of citizens. The President, owing to indisposition and the citizen the course of sudden death of Mr. Legare, had stopped Mr. Catherine his tour, and returned to Washington. hars. Catherine Cochrane, alias Gilmour, charged with having murdered her husband at Paisley, had been arrested at New York, where she had arrived in a vessel from Liverpool, by a Scotch police officer, who had arrived by the Columbia, steamer. Having been brought up at the police-office, a plea of insanity was set up on her behalf, and she was not to be delivered to the Scotch officer until the Court should decide the point. This is the first arrest under the new treaty. The Canadian papers brought by the Garrick are to the 25th. The village of Boucherville, one of the most beautiful on the banks of the St. Lawrence, had been totally destroyed by fire; 52 houses, besides other buildings, had been burnt. The church, convent, achool-room, and all the principsl stores had been destroyed. A verdict of "justifiable homicide" had been returned by the coroner's inquest held on the bodies of the five men shot in suppressing the riots among the labourers at the Beauharnois Canal. The presence or the military had prevented a renewal of he disturbances.
The Oxford Packet arrived in this port on Thursday, ofter a passage of nineteen days. The Great Western reached New York on the lst inst. 'Much anxiety has prevailed, boilh in Liverpool and London, in consequence of the non-arrival of the Columbia ateamer from Halifax and Boston, which has now been due a week; but a vessel arrived on Thursday, which reports that on the 4th she saw the Columbia on the rocks that on the 4th she there were plenty of fishing. boats close to Seal Istaud; would be safely landed.
West Indies.- By the mail-steamer Tweed, papers have been received from Trinidad and Antigua to June 14th, June 1 fth. June 15th; St. Vincent's and Demerara, to June 17th ; and Dominica to June 18th. There are also Havanna, and Dominica to June The weather at Jamaica continued favourable for the planters. Although the heat, continued favourable for the planters. Athogs, there was as summer approached, was becoming intense, there was
but little sickness. The only check that had been given but little sickness. The only check that had ween found in the the encouraging prospects of the island was found the melancholy death of Lady Elgin, who died in her confinement on the 7th June, after having piven birth to 8 daughter, who also died soon afterwards. This event seems to bave cast a general gloom over the community, among whom the Couitess had rendered berself extremely popular, as, indeed, the public respect paid to her memory on the day of her funeral abundantly testifies. At Bar-
badoss the first Legilative Assembly has opened under
the operation of the new Franchise Act. The effect of the change is to increase the number of Members from double the former constituencies. The Gomer French double the former constituencies. near Guadaloupe, but was got off without receiving damage. Two smart but momentary shocks of earthquake had been felt at Antigus on the 9th and 11th June

## 据arliament. <br> HOUSE OF LORDS.

Friday.-The resolutions of the Marquess of Clanricardz, Which we rien $\begin{aligned} & \text { noticed in our last, gave rise to a long an } \\ & \text { remarkable discussion on the affairs of Ireland. Lord CLANRI- }\end{aligned}$ CARDR declared his opinion that the attempt to degrade the question of repeal by the impolitic, unwise, und bot, consequences the
missal of magistrates, had been forlowed che che
very reverse of what its promoters anticipated from it. The present state of Ireland he attributed to two causes- the grend-
ing poverty and misery of the people, and the policy of the present ing porerty and mich had found the country trannuili, and had aided
Government, whit in placing it in its present condion winin the sion
has elapsed since their accession to office. The Duke of Wki.Lncron followed in a characteristic speech, delivered with consideraile aination areded to argue that the
at one the nuestion of legality he proce
mode in which the Repeal agytation is cartied on in lreland, is culculated to inspire terror in the peaceful and weli-disponesed, and to endanger the public peace; and, therefore, to calle the prioof life, ondivididual satety, and property. He admitted that the
opeace of trelaid was in the hands of one man ; and quoted the remarks of Mr. O'Connell, about his having at his command and control a finer army than Napoleon led into Rnssia, or the Duke Grace, bin theereupon drew the inference that the Government
stiond should be prepared the peace in the hands of men who might
the commission of the called nion to put down what they had ad
The duke expressed himself as very sorry to learn that there were two millonsor the people of Lieland 112 a state of extreme poverty, amyl i dded that that porerty would nots cured by with 20 or
men from their ind ustrial employments, and sending them
 ing every portion of the Irrsh policy of the Admunistatite

The Queen's Visit to the Opera.-Thursday evening Was the first occasion of her Majesty's risiting the Italian Opera-house in State, the theatre not taving been similarly
honoured since the year 1834, when King William IV. honoured since the year 1834, when King Willian IV.
zad Queen Adelaide occupied the Royal box. The scene was a repetition of the royal visit to the other theatres, upon a greater and more brilliant scale. Her Majesty
and Prince Albert on their appearance were welcomed and Prince Albert on their appearance were welcooned
with great enthusiasm, and the National Anthem was sung. The opera was "Il Barbiere di Siviglia," and the ballet was "Ondine," added to which Fanny Ellsler and Cerito say that the performances, in every respect, gave general satisfaction. Her Majesty retired amidst loud cheers,
the National Anthem being the Nationa
departure.
Meeting on the State of Treland.-On Monday the public meetiog of the Electors of Marylebone, the preparations for which we noticed in our last, took place in persons. Sir B. Hall, one of the Members for the Borount presided, and was supported by Sir De Lacy Erans, Sir C. Napier, Mr. T. Duncombe, Mr. S. Crawford, Mr. Owen, of Lanark, \&c. The chairman opened the bueiness of the meeting by stating his desire that the meeting should be the precursor of others, and that the feelings of the people of England, as manifested towards Ireland, should be made known, not only to the Ministers and Parliament, but should go in the shape of a memorial to the Queen herself. Sir De Lacy Evans moved the first sorrow and the most serious alarm the present excited state of public feeling in Ireland, and regard with pain and indignation the present policy of her Majesty's stringent and obnoxious provisions of the Arms Bill now before Parliament, and the unconstitutional dismissal of magistrates from their office, and the absence of all adequate plans for the just and equitable rule of the Irish people. Mr. G. Daniell, in seconding the resolution justice for England or for Ireland from the present Government. Mr. F. O'Connor then addressed the meeting, stating that Ireland would never rests satisfied the meeting were prepared to gire them thation, Unless come there with no better stock in trade than mere justice to lreland, it was but a poor bundle of sticks to go to the
fire with. Mr. O'Connor at great length proceeded to dwell upon the wrongs of Ireland, and implored the meeting, if
they wished to do justice to that nation, not to separate without supporting them in their attempts to obtain a repeal of the legislative union. Mr. Ridley, a Chartist moved an amendment that "The meeting was further of moved an amendment that "The meeting was further of ments towards Ireland has been unjust and tyrannical na the Trish nation has an undoubted right to take suc cure a repeal of the Union." Mr. Fussell having seconded the amendment, Mr. T. Duncombe, M.P., said excellent, that he had no choice between both of them so
Had this been a mere Whig meeting, they would not have found him there in support of that old, and, be hoped, defunct policy. He thought that unity in such a question was be better to amalgamate both the resolution and the amendment. The latter merely called upon them to express an opinion as to whether they thought the Irish that they had the right to demand the repeal of an Act Which was adopted in fraud, and executed in iniquity. Mr. M. P. Haynes next addressed the meeting in support of adding the amendment as a rider to the original proposition ; and Mr. R. Owen, of Lanark, attempted to sion which meeting, but was not heard, from ailed that amendment had been incorporated with the original the lution, which was received with the loudest acclamations. Mr. Baker moved the second resolution -"That the meeting bad heard with the deenest regret the opinion ayored by the principal Secretary of State for the Home Department, that concession towards the lrish people had reached its limit, by which they were led to apprehend towards Ireland-a coercive policy is to be persevered in than to exasperate the feelings, without remoting effect content, of our fellow.subjects in that country." Mr. Savage seconded the resolution. Sir C. Napier said it was gratifying to him to find that Marylebone was the the principle of din jual ment looked of doing justice to Ireland. The Governdegree of dread for mat meeting with a considerable could bert in for many would follow it and if they Government would be increased tenfold. He had stated in the House of Commons, and he repeated it there, that the speech of Sir Robert Peel in the Commons and Wellington in the Lords, regarding Ireland, had done more to advance repeal than $O^{\prime}$ Connell He might differ from some of them, but as a staunch and determined friend to Ireland, he would yield to no one. But he would candidly and frankly acknowledge that he did not approve of repeal. He thought that under its a dangerous power, and which ought not to be permitted. He called on them to beware ; France was eagerly watching the movement of the Irigh people, and would be assist therein, not formberment the Irish pire, and to for the purpose of breaking the power of England. No good end would be answered by a Repeal of the Union, Let justice be done to Ireland, and repeal was not wanted. wn Governmess and the power and strength of the British on the grievances of Ireland, and recomen resolution memorial be addressed to her Majesty embodying the foregoing resolutions, praying that she may be pleased to take the same into her most gracious consideration, that a stop may be put to coercive measures, that such a wise just, and conciliatory policy may be promoted as will advance both political and ecclesiastical reform, and tha to the senty may dismiss her present Ministers, and appea seconded the resolution, which was carried unanimously. Mr. S. Crawford then addressed the meeting, announcing his intention to join the Repeal agitation unless justice be morial founded on the resolutions be presented to her Majesty by the Earls of Charlemont and Leitrim.

The late Duel. -The fourth sitting of the Coroner's on Tur look place on Tuesday, when Sir B. Brodie, Mr. Blake, and other witnesses were examined. Mr. Blake, the half-brother to the duel. They were in Col. Fawcett's hand relative and appeared to be rough copies of wis bandwriting 30th him and Lieut. Munro. They were dated the 30th une, but it could not be ascertained to whom they whe desure ofsed, as the name was torn off. Mr. Blake, at read them to the Court, produced the documents, and -My dear - - (here the name was tor 184. inclosed gives you the fullest insight to the nature of the Had he not been the Munro and me that I can offer. conduct in flatly contradicting me, and then saying be would have thrown me down stairs, I should have mand a weeting, not giving him the option of making me apology. And this demanding an apology seems to fable absurd as his langnage and manners were uojustifighting my tailor, if challenged, should Mr . Munro wish . Oblige me by having the meeling Mr. Munro wish os sible. Yours faithfuily, Lynar Fawcett." Mr. Blake t,en proceeded to read the enclosure, which also bore
-"After some conversation with Mr. Munro relative to Mrs. Smith, I said, 'No matter, it was a blunder I might boozled made I been acting for you, but she has bam. Mr. Munro in you (I cannot say which), Upon which you have ace lory loud voice, said, This is four time No, Munro, I me of allowing you to be imposed on. me to be imposed on; on the contrary, I said it wos blunder which I might have made towards you under similar circumstances. Mr. Munro in a most bullying manner saying, 'I say you have, four times.' On rou I said, A tat endure ad I desire you leave my ment, sir, we are strangers, again, ${ }^{3}$ on which I stood up, and ringing the bell desired the servant to open the door for Mr. Munro. Thi fter remaining shous open until you do. Mr. Munro eft the house. He returned soon after. apologise to Mrs. Fawcett for having left without wishing her good night. He then addressed me. 'Do not suppose 1 Ieft the house because you desired me. I would stay here all night in spite of you, and if it was not for the connection of the family, i should on your ordering before received, I should heve insult such as I have never down stairs, To this ruffanly threat I over heels Munro, that is not the ruffianly threat I said, "Mr rices, and as to cease to think of it.' During this intrusion Mr. Munro continued to swager During this intrusion Mr. Munro pledge my hagger his cane, and kept his hat on. I pledge no truth of what passed between us to the best of my recollection, and when not bad lef, my wife was surprised at my forbearance in not calling in the police.-(Signed) Lynar Fawcett. June 9, 1843." The Coroner: Have you any other letter?-Mr. Blake; I have one other. The Coroner: I do not know whether the Jury have not heard enough. The Jury had, however, for their own satisfaction, better deal- (the name was here arain third letter. "My letter)-You are fully authorised on away from the Mr. Murro, that I never accused him of allowing me to be wronged wilfully. That I neither insulted him, nor had the most distant intention of insulting him in any way; but that I turned him out of my house for most grossiy msulting me.-- Yurs faithinlly, Lynar Fawcett June 30, 1843." Evidence was also adduced to show that the seconds at the duel were Lieut Grant of the 44 th Reg., and Lieut. Cuddy of the 55 th Reg. The Coroner then summed up, and the Jury having consulted together for about an hour and a haff returned the followiog as their unanimous rerdict:-"We find Alexander Thompson Munro, Duncan Trevor Grant, William Holland Leech Daniel Cuddy, guilty of 'Wilful Murder, as principles in the first degree; and George Gulliver guilty of 'Wilful Murder' in the second deore believing him present only as a medical man" The Jury by direction of the Coroner, again retired and ultimatels it was understood that Mr. Gulliver was to be forthwith committed on the Coroner's warrant, to Newgate.
The Duke of Sussex's Library.-It is understood that there are doubts whether the valuable collection of Bibles and collection of rare manuscripts and books, constitutiog the library of the late Duke of Susaex will or public competition or not, as the King of Naples is tated to have entered into negotiations for the purchas of the entire collection. It is said the offer of the King was liberal, but it is hoped that Government will endea ar to secure the collection for british Museum. The Royal Yacht.-_On Wednesday her Majesty's new imental ther imental trip to try her engines. The trial was very satisfactory, both as regards the efficiency of the engine and the capabilities of the yacht herself. The machinery worked whe the greatest ease, and had been so correctly fixed that it did not require the slightest adjustment. The fficial inspection was made by the Lords Commissionera f the Admirally yesterday, when the yacht again proceeded to the Nore, and thence to Chatham, where she will remain to be fitted with her masts, yards, and nigging As soon as she is completed at Chatham, she will be brought to Deptford to be perfected in her interior de corations. Her furniture is ald ready, being the same as was on board the Royal George. In about a fortnight from the present time the yacht will be completely fitted, and perfectly ready in every respect for the use of her Majesty.
Conservancy of the River.-The Lord Mayor, attended by the Recorder, Aldermen, Sberiffs, and other City Offiders, held Courts of Conservancy for the counties of Middesex and Surrey, on Friday, for the purpose of receiving of the Thames the Juries appointed the Middlesex Jury called the attention of the Court to the projecting pisat Cheyne-row, Chelsea adoining the public stairs, or landing ; at the front of the Swan public-itouse, Chelsea; at Milbank-row ; adjoining the public-house at Westmin-ster-bridge; at the front of Hungerford-market; at the end of Great George-street, Adelphi ; at the eastern side of Waterloo-bridge; at the end of Essex-street, Strand; and near the Thames Tunnel; all of which, in their opinion, "at a certain state of the tide, occasion an obstruction to the free and uninterrupted navigation of the inshore of the river, and lead to the accumulation of mud-banks and other nuisances in the bed and shores thereof; and are unsubstantial, inconvenient, ill-conJurors also renresented "that an ancient patiway,
formerly open to the public on the banks of the river, between Vauxhall-bridge and the Chelsea waterworks, has been closed by the owners or occupiers of the adoinare actvised that such an encroachment upon the rights of the public hot having been committed on the river, or the soil and bed thereof, is not Withih their juristiction, they deem it right to include it in their presentment, that the deem it right onction of the Conservators may be drawn to the subject, Hs they are of opinion that if the diversion of the ancient Coot path on the navigation of the river be permitted to
continue, it may in the course of time, give to the owners of the adjoining lands, private rights that will prevent the making of walks aud other improvements on the banks of the river, which are so much required for the healthy commetropolis." The Recorder informed the Jurors that he should recommehd the Lord Mayor to bring the subject of so sefious an encroachment before the Court of Aldermeh, who no doubt would instruct the City Solicitor to adopt measures of prevention. In the Court of Conas insecure, and calculated to interrupt the inshore pasas insecure, and calculated to interrupt the inse of the river and cause mud-banks. The Jurors sage of the river and cause mud-banks. and that safe
recommended that they should be removed, and convenient structures should be erected in their places at Battersea, Nine Elms, Lambeth Palace, Westminsterbridge and London-bridge. They also presented several timber-rafts, which are floating in the river, and tiers of barges, moored in the midale channer.
Extibition of Cartoons.-The exhibition of Cartoons sent in pursuant to the notice of the Commissioners of Fine Arts, which has been open since the silling each per80n, was closed on sama lato admission of the Monday morning for the gratuicus admission of the public. The receipts during the short interval ays) have far exceeded the sumo originally anticipated. The visitors have averaged upwardr of 1,800 per day, and on Saturday (the last day on which paymem was taken) they exceded 2,000 . The total sum received at the doors up to Satur-
 sioners have determined on apportioning nearly the whole of this money, in sums of 100. cach, to the arists of the ten next best drawings. The folliowing are the sub jects which have been selected by the judges as entitled to the number attached to the cartoon in the catalogue. No. 11. Una coming to seek the assistance of Gloriang. German Hospital.-A morning concert was given on Tuesday at the Hanover-square Rooms, the proceeds of Which are to be appropriated to the funds of a German Hospital, now establishing in London. Among the instrumental performers at this concert, M. Ernst demands the first notice, since he conferred upon the distinction of making it the only occasion on which he will perform in public during his present visit to London; and he is, moreover, one of the finest players on the violin that Europe, already so rich in that respect, can boast. Nothing could exceed the enthusiastic demonstrations with Which each of his performances was received; shouts broke out on all sides, both from the audience and his fellow-musicians, and he was several times recalled to receive still further applause. Several other vocal and instrumental performers gave their gratuitous services on this occasion, and Mrs. Stirling pronounced an address composed for the occasion, consisting chiefly of a flattering appeal to the sympathies of the British public, which Was received with considerable applause, The Concertpresence of the patronage the Concert was given.
Anti-Puseyite Meeting.-A meeting of laymen was held at Freemaasons'-hall, on Wednesday, for the purpose of proposing a memorial to the Duke of Wellington, as Chancellor of the University of Oxford, directing his Grace's attention to the rapid progress of tractarian presided, ind that ancient seat of learning. Lord Ashley presided, and opened the proceedings of the day by referdoctrines, and urging on the assembly the necessity of
adopting immediate measures for their suppression. nation of resisting to the extent of their power the spread of opinions and practices which they declared to be so dangerous to the peace and security of cimously agreed to and will be presented to the Duke of Wellington in the course of a pros the Protestant Association has also prepared a memorial, addressed to the archbishop and bishops, on the same subject.
Brilish and Foreign Institute.-A meeting was held on Thursday at the Hanover-square Rooms for the purpose of considering a Föreign lnstitute," for facilitating personal intercourse between the educated classes of all countries, and rendervisitors firerary circles visitors from the Continent, colonies, and provinces, morl readily, it is said, than is done by he Cord D. Stuart, of Devon presided, and Lord Brougham, Lord and others, addressed the meeting in support of the raised for the erection of a house at the west-end, and that Mr. Buckingham, the proposer of the scheme, be appointed residetit director.
Westminster yohool.-It is stated that the Right Rev. Dr. Carey, Bishop of St. Asaph, has lately placed in the hands of trustees the sum of $20,000 l$. for the benefit, after the death of his Lordship and Mrs. Carey, of studen Hackney.-A meeting was held last week in the vestryroom of the church to pass the late churchwarden's accounts and make a rate for the ensuing year. The estimate for a new rate was read, from which it appeared, that owing to 6482 . would be required, which, on a rental of $88,000 \%$. would need a rate of 2 d . in the pound. It was then moved and seconded, "That a rate of $2 d$. in the pound be granted," to which an amendment was moved, postponing the question for twelve months. After some discussion, the cbairman took the numbers, when ther apparma or the amendment, expressing tis determination to offer every opprosition to the imposition of a clurch-rate. The polling closed on Saturday, when the chairman declared the numbers to be-for the rate, 373 ; against the rate, 43. Within the last fortnightt the church-rate has been made in vestries of South and of West Hackney without a poin.
The Greenuich Pier.-The lawsuit between the stone pier company and Messrs. Grissell and Peto, the contractors, has been stayed by proceedings in Chancery. Messrs. Grissell and Co. have binant counsel, and an amicable arrangement entered into for both parties to bea an equal proportion of the expense to be incurred ting the permanent pier into realiy substantial conditions It is stated hat to do so at least 17,000 of the est
Fires.-On Saturday morning, one of the most serious explosions that bas occurred in the metro the extensive oil and turpentine works belonging to Messrs. Johnson and Co ., in the Beck-road, St. George's-in-the-East, which not only destroyed the whole factory, which is considered to be one of the largest in London, and contained several thousand barrels of turpentine, but injured part of the Blackwall Railway, and damaged between 30 and 40 houses School neighbourthood, inctuding the Romad in depth about 50 feet, within a couple of feet of the Blackwall Railway, three arches of which were rented by the firm, and used for the deposit of turpentine and other combustible materials to the amount of at least 2,000 barrels. When the gates of the warehouse were forced open an explosion took place, causing destruction to the entire factory; the roof was blown off, and the walls were forced outwards into the street. For several minutes the we and district rasning rempants of the building. The shock resembled that of an earthquake, and the houses for some distance round were shaken to their foundation. Eight subsequent explosions took place, At one period the street in the immediate vicinity of the conflagration prestreet an extraordinary sight, it being literally on fire with the burning oil and turpentine. The trains on the Railmay were not started for some time, until the arches Rail been remined by Mr. Tite, the architect; but his investigation having satisfied the directors that they were quite safe, the trains commenced running in the course o inquiry was instituted as to the origin of the fire, it being inquiry was suspected that, as none of the workmen had arrived, it was the work of an incendiary. This supposition, however, gave way, and it appears
Mortality of the Melropolis.-The following is the number of Deaths registered in the week ending Saturday, July 8:-West districts, 124 ; North districts, 169 Central districts, 143 ; East districts, 163 ; South disTricts, 212 . Total, $811-(424$ males, 3 - 461 males, 442 females, ) and for the last five summers, 846 .

Birmingham.-The quarterly metiog of the iron-mas ers took place in this town on Thursday week, when a memorial to Sir R. Peel on the depressed state of the
masters took place on Saturday, and like that beld at Birningham on Thursday, in consequence of the present tate the she the poring district, created more The nominal price of pig and mandact the chef, indeed
 the absorbing points of interest in the conresat, the probe day, were the state of heming populatione hing bility of a strike, and the result one approaching inter view with sir R. Pee. become general throughout the district. In that neigh bourhood the pits bewngiog otoped work, the Mr. Wood, and others, ha sped reduction of $6 d$ a Somef to to accept Hill-top have also struck, and many at Oldbury, Dudley Port, Biston, and other places, are also brought to a stznd. The amount of distress prevailing among the miners may be imagined from a passage in the Masters' Memorial to Sir R. Peet, in which they express their wish to refrain from offering any opinion as o the remedies, but consider it their duty to decias a much longer continuarise of this frightifl depression cf the condition of the working classes and productive inters The deputation mention with the peace of the distict Sir Robert Peel on Wednesday. They were accompanied by Lord Hatherton and Lord Lyttelton, and the members for South Staffordshire and Wolverhampton. membercellor of the Exchequer, the Secretary for the Home Department and the President of the Board of Home Department, and intersiew. Mr. Foster having Trade, were pacts of the themorial, Sir R. Peel raid ho stated milling ois best attention to any remedies should winngy give hemselves to the minds of the Deputhat might sugg ened the production of iron had been tation, bu the requirements for railroads aud other canses
 so much beyon ources of consem ant neasures within the power of the Government. The De $\ddagger$ putation stated that ane nearly unanimons in the conviction that the depression under which their trade was suffering as well as that affecting most other branches of productive industry, was attributable to the great falling off in the demand, occasioned by the vicious operdtion of our present money laws, ana here prices of a suficient circuation to manta public and adequate to the disclarge of the fixertion of the cost of burnens which form so targe that some change of production in this country, a mopinion, but hitle liope of any improvement in the condition of the working classes, which would gradually approximate to that disent from classes in Ireland. Sir R. Peel expressed his dissent from
 the temperate and judicious manner in whith they had stated their views on the important objects whic
engaged their attention, $B$, the cont. The lathen of Great Britain steamer, and the visit of Prince Albert to this city, for which so much anxious preparation had been making during the past week, took place on Wednesday, and passed of in arrangement his Royal Highness, accompanied by the Marquess of Exeter, Loid Wharnchfte, the Earl of Lincoln and suite, left the Paddington terminus of the Great Western Ralway at seven in the morning. The Royal party arrived at the Bath station at nine, where they were met by the Mayor and a deputadis, This corporation of that city, to present anl address. the ceremony occupied about hare for Bristol, where it arrived at ten o'clock. The Mayor and corporation were in attendance to present an address the Roy the same together with a deputa and the local anthorites then propurpose. The Prid of the Great Western Company, and as the the different streets every bouse throughout the whole line, a distance of seven miles, was decorated, and across the street, at various points, were flags, banners, and triumphal arches; every nook and corner were cramned with anxious feers, while the fring of guns, ringing of bells, and the cheering of the populace, all bore one sound of rejoicing. Arrived at the yard of the company, the chairman ana drectors were in attendance to receive the Royal party, and conducted them orer the magnificent ship, with in his Royal Highness frequently expressed After going over the vessel and Works, he the dir visitors sat down to a dejeuner given by the directors, at which the chairman of the company presided. The health of the Prince was of course drank with great applause, and in reply His Royal Highness said-. thank you for the honour you bave done me in drinking my health, and I assure you it affords me great pleasure that I have come here to-day, and I shall always bear a lively remembrance of the cordiality with which you have received me. Allow me now to propose the health of The Mayor, and prosperity to the city and trade of Bristol. Several other toasts were then drunk, during which the Prussian and United States Ministers returned thanks on behalf of the ambassadors. The company then adjourned o the open air to witness the great ceremony of the day, which can scarcely be termed a launch, as the steamer was merely floated trom the dock in which she was built. As she passed slowly into the outer basin, the Prince broke a Britain," with the usual ceremonies. The Prince immediately took his departiore for towni, and left the terminus at

Bristol at to'clock by a special train. The burthen of the
Great Britain, which is bult entirely of iron, is 3,600 tons register. For the sake of contrast it may be well to tons. The Gieat Britain will carry double the guantity ofthe Great Western, and be light afterwards. She will be lengti, from figure-head to taffel is 322 feet; length of het 289 fret, extreme widrh 50 feet 6 mehes: she has font diechs, the upper dech is flush, and is 308 feet long; aft or first 110 feet six inches by 22 feet, and saloons, the or second class, 7 feet by 21 feet 9 inches. on Sunday and Monday week Mathew's visit to this town to 6,000 persons. In Bradford, on Tuesday the pledge he administered the pledge to 7,000 . In Huddersid on Wednesday, his visit is also said to have been attended Lewes.-Mr. Cobden he gave the pledge to 2,000 . Tuesday for the purpose of addressing the this town on on the subject of the Corn-laws. The meeting fir assembled in the County Hall, but afterwards increased so much that it was necessary to adjourn to the Friars Custein 1600 persons assembled. Mr from Mr. Cobden followed by Mr. After a long addres this borough, Mr. H. Brown moved, "That M. for opinion of this meeting. protection to one class at expense of other classes is injurious to the commurity large, and, therefore, all laws professin to protect the agricultural, colonial or professing protect eithe to be forthwith abolished." The chairman then spought favour of a fixed du $y$, after wheh be mut Mrac in resolution to the meeting, and every hand appeared to be raised in its favour; be remarked that it became his duty against it, and both, of them two hands laving been held up Literpool.-A discovery in connexion with the recrson.
fires at this port was made last week from whe recen reason to appreliend that the week, from which there is perpetrating additional mischief. It seems that as one of the police was going his rounds about $80^{\prime}$ clock in the evening, he found a large heavy piece of pitch intermixed with fresh cotton, lying under the weatherboard of a cella in Greenock. warehouses, extensively filled with an inmense pile of valuable property. The pitch and cotton were immedi ately renoved to the office of the Commissioner of Police, where it has been inspected and found to be in a highly combustible state, only requiring the slightest application a lighted match to set ir in a blaze. It was most for the night, or the consectuences might early a period of serious. No clue has yet been obighined love been very apprehension of the affenders
Southamplon.-A deputation from the council of the Royak Agrscultural Society held their first meeting in this arrangement annual meeting of 1844 . The depuiation arrited by rail way, and were niet by the mayor and corporation, with taking of a collation to the Audit-house; and, atter parexamine the lation provided by the mayor, ploceeded paviion, and plonghing-matelses, \&c. The committee expressed themselves pleased with the excellent accommodation this town and neigbbourbood is capable of affording them, and will make their report to the next general meetisg of the council in London.
board H M.S. Camperret to state that the accident on serions than was at first anticipated, and proved more and Miss Yerker, one of the ladies who were on ama have died of the injuries they sustained by the explosion roved have been held on the bodies, at which it wa the King and Queen of the Belgians were salute as portable magazine, called the saltbox was placed main deck, about three feet from the after piaced on the bulkhead, which was used for saluting cartrid, before the obviate the frequent opening of the at the time of the opening of the magazine. The box three pounds each. There were also ten cartridges of agaiast the heam over there were also four rockets hung rockets, and the salute had been other two half pound. After the Royal saltbox exploded and another gun went off, and then the charged rock, and a short time afterwards a dissalthox was pied in mides The knees on the side, that being the most secure part of the two. The box has been in the same place for more than box so placed and custom in the Navy to have the on the haced, and is under the charge of the sentry the lids of the, who stated that the ammition and firing of the Royal salute perfectly secure during the keep, for Royal salute. It is also customary to line-of-battle ships, under the half-deck. the beam of on board the Camperdown were placed in a similar posi is adopt is also usual to fire the guns with port-fires, is adopted on board her Majesty's ship Excellent, Portsmouth. The ship's crew were firing with Finmore' fubes for priming, and it has been known that the quill part of the tube, and part of the worsted, have quil thrown from the gun in an ignited state. Several gunner were examined, who proved that the salt-boz was placed rine most secure part of the vessel; and Componder Finling, of the Camperdown, slated that he and his Officers had used every means to discover the real his of the explosion, but they had not been able to catis themselves. In the case of the seaman, the jury ratisfy a verdict of Accidental Death, at the same time y returne their opinion that all proper care and diligence had been
taken by the Commanding Officer of the ship; wite the case of Miss Yerker, the jury returned the following special verdict-"That the deceased was accidentally killed by the explosion of a portable magazine on board her Majesty's ship Camperdown, but how that ox board her curred there is no evidence to show ; but the jury are of opinion that it partially arose from the reprehensible prac tice of keeping so large a quantity of powder out of the magazine, and the jury do recommend for the future that be carried inthorities will cause their recommendation to Winchester.
and Mr. Bright meeting, convened by Mr. Cobden and Mr. Bright, took place in this city on Saturday, for the Corn-lase considering the "agricultural working of condition of the and the cause of the present depressed mencint the farm tenantry." The hour fixed for comtheng the proceedings was 2 oclock, but there were then not more than 100 persons present. Shortly before then estimated then , Cowden, with his friends, having tak up heir position upon the platform, which Exchange, the business was prons at the rear of the Corn M.P. for Andover, in the proceeded with; Mr. Etwall, M.P. for Andover, in the chair. Mr. Bright addressed Corn-lawg on the various topics connected with the Cora-laws, and said he wished it to be known that the Lhey were not advocate low prices, but natural prices. They were desirous of those prices which the produce of men's industry would fetch if it had not been interfered had nothing to Whigs or the with politics; they never supported the ape their fixed duty, and had with equal energy prould the present Ministry with its sliding-scale; they detern inue their exertions to the last by the most es opposition to all Minsters, of whatever poli dics they might be, or honever influential, if they inter cred in the slightest degree with the furtherauce of the mances of free trade. Mr. Cobden next addressed the meeting, and commented for an hour and a half upon the evi effects of restrictions of any description puon trade He retterated the opinion he had promulgated in Bedford Norfork, Essex, Kent, and elsewhere, that the Corn-laws He contendection" to tenant farmers was a rank delusion principally depended upon the home industry of this country, and that the laws regulating the importation of, foreign productions put a fetter upon indastry referved arguments which he passed in 1815, and repeated the the continuauce of the Com-laws. He sad he hiad spoken feelingly upon the sul.ject, being a farmer's sum, and upon the condition of the operation of thove enatments the ruin which had come upon the farmeis of England for the last 28 years to nothog else but the Corn-laws. He tion to the great length upon various topes in opposidid mot expectang and ind the part hect any advantage whatever personally from prineiule of frea in the question. He regarded the pripites of free trade as just, and of importance for the establishment of peace between the people of all parts of rentar. There were so many moral and social ad antages inkely to grow from it, he had supported it wit and pow of which se was capable, and the only reward he expected was that he should be considered faithful and zealous advocate for the accomplishment of those principles of free and unestricted trade all over the word. Mr. R. Owen next presented himself, but in con equence ar it was impossible for him to proceed. Mr. Hoskins, M.P., also attempted to address the meet ing, but was scarcely audible an consequence of the genera rot and confusion which continued among the crowd. and Som understood to deny that the farmers of Dorse aws. Wret were favourable to a repeal of the Corn olicitor . Jones, a practical farmer, and Mr. Marsh, a his dissent from ressed the meeting, the latter expressing farmer proposed a resolution condemnatory of the Cornaws as injuilous to classes of the community and stating that the adoption of free-trade principles would be dvantageous to the country in genery 'The resolution was seconded, and adopted by a large majority.

## Dublin.-Mr, IRELAND.

Dublin.-Mr. Maurice O'Connell has been superseded papers our last, for attending Repeal meetings. The daily papers statethat the money transmitted to the Repeal Assoc ation is periodically invested in the Government securitie Last week the sum of $6,000 l$, was invested, in the Ne Three-and-a-half per Cents., by the broker of the Associ ation. A Repeal demonstration took place on Sunday, at Swords, a village about seven miles from Dublin. The place was decorated with triumphal arches, and an immense quantity of green boughs. The attendance was very numerous, amounting to several thousands, and Mr J. O Connell, M.P., addressed the meeting.-The weekly

Mr．O＇Connell alluded to the proposed subscription of
the French Republicans，and to the promised visit of M．Odillon Barrot，as noticed in our Foreiga News． He said the French sympathisers＂need only write to Mr．Ray，and the gentleman who proposed to come over could，instead of taking that trouble，write to him（Mr． $\mathrm{O}^{\prime}$＇connell ），or to the secretary．But with reference to any communications with ulterior objects，he wommenca－ tinctly say that they would receive no such communica－
tions．When，the other day，they were threatened with civil war，they declared that they would not strike the first blow；and he now could tell them that there would be no second blow at all．In sympathy for civil and religious liberty，in sympathy for freedom of conscience，and in sympathy for those in France who wish to strike down the iron yoke of monarchical domination，where it pressed
upon popular freedom，they heartily united ；but whatever upon popular freedom，they heartily united ；but whatever
would throw the slightest taint on their allegiance，shake Would throw the slightest taint on their allegiance，shake
the connexion between these countries，or disturb the golden lisk of the Crown by which the empire was united， bad no sympathy whatever from them．＂ $\mathrm{Mr}^{\circ} \mathrm{O}^{3}$ Connell
then announced the rent for the weels as $1,464 l .19 \mathrm{~s}$ ． $7 \frac{1}{2} d$ ． an announced the rent for the wesk as $1,4642.19$ station
Tullamoxe．－The King＇s County repeal demonstration took place in this town on Sunday，and was attended by between 40,000 and 50,000 persons，while some thousands more lined the main avenues of the town，finding it im－
possible to get within hearing distance of the platform． possible to get within hearing distance of the platform． The walls，the windows of all the houses and storehouses even chimney－tops，all found ready and patient spectators； but certainly not listeners，for they could not have heard anything beyond the cheering，in which they sometimes
assisted．Dr．O＇Rafferty，the parish priest of Tullamore， assisted．Dr．O＇Rafferty，the parish priest of Tullamore， presided；and after several resolutions had been passed，
Mr．O＇Connell addressed the meeting at great length． He said，＂The present Administration had proclaimed， trumpet－tongued，that the progress of repeal was irre－ fool who while they stood wer＇s side for the water to pass by that he might walk across．Notwithstanding their declared preference of civil war to repeal－supported as Chat declaration was，at the time to was made，by creature named Beaumont，who called himself a Catholic －not one of those Muisters，during the recent debate of or，indeed，dared to talk of coercion，or of civil war， tion of repeal－they just came to the magnanimous deci－ Bion of doing nothing；thereby admitting the legality of the peopless conduct and their undoubted right to look for the mitted more，－they admitted that the temporalities of the Irish Church could not long be continued．Under heaver there was no Ireland to pay a set of parsons for preaching doctrines to Which they did not subscribe．A greater wrong，both on a country than transferring those temporalities to the church of the minority－a minority of one in ten of the population；and that wrong every one，blessed be Heaven，was now admitting．The first great benefit of poses of charity and education，and the British Parliament poses dinner to $\mathrm{O}^{\prime}$ Connell（which was attended by about 500 persons，consisting principally of shopkeepers from Tullamore，Athlone，Birr，Portarlington，Edenderry，and other towns，and farmers of the county，）took place in the evening．The decorations were few，but the inscriptions
were numerous，and consisted chiefly of quotations from were numerous，and consisted chiefly of quotations from
speeches in favour of and against repeal．Over the chair （which was filled by Dr．Cantwell，the titular bishop of the diocese，）was Sir R．Peel＇s opinion that civil war was pre－ ferable to repeal，followed by $\mathrm{Mr} . \mathrm{O}^{\prime}$ Connell＇s defiance to him to commence such a strife in Ireland；Dr．Higgins ${ }^{2}$ defiance to all the Ministers of England to put down repeal in the diocese of Ardagh；and Mr．Steele＇s defiance of ＂let him try it if he dare．＂Mr．O＇Connell spoke at length on repeal and other topics connected with Ireland．Refer－ ring to the decision of the twelve judges in England on the subject of Presbyterian marriages，he declared that a more indefensible or wicked decision he bad never seen in the annals of judicial folly．He thought that there was an overweening respect paid in this country to my lords the judges．When at the bar be fought them，and now that he was from the bar he would say that a worse set of men were not，he believed，in the community．As a member and repair to the House of Commons the moment the Presbyterians required it，to assist in passing a law to remedy this grievance，and reverse a decision which went men at all．Alluding again to England＇s weakness，he said that she dared not hold out a single threat either to France，America，or Spain，until she did justice to Ireland， But what sort of propositions were made in the British Par－ liument under that pretence？One said，＂Abolish the laws＂ －there wereno such laws－－＂which prevent your sendingan ambassador to the Pope．＂Another said，＂Give the Roman Catholic bishops，whom the Irish people so much vene rate，their titles＂Dr．Cantwell here interrupted him and said，＂We bhould despise them，coming from a British Parliament．＂Mr．O＇Connell．－＂You would，my Lord， and yet that Parliament denies you the privilege of sign－ ing yourself＇Bishop of Meath，＇or my right rev．friend Higgins．ing bimaself down Bishop am the bishop，though．＂Mr．O＇Connell． success；you are the Bishop of Ardagh，in unbroken succession from the days of St．Patrick，a succession that
shall last to the second coming of the Redeemer．But
what an absurdity to suppose，that，because the people of Ireland venerate you，you would allow them to be con－ ciliated if the British Parliament conferred upon you titles which you already possess ！＂He then touched
upon the questions of the Irish church，landlord and tenant，unjust tazation，fiscal robbery，diminished fran－ chise，limited municipal reform bill，\＆c．，and observed that the British Parliament admitted them to be grievances， but did not promise to redress them．He，however， would not take their promise．What cared he，then，for May he would have a Parliament in Ireland，as surely as the fising of the sun，unless the Irish people were untrue to themselves．The second step towards repeal was coming．A few more of these meetings，and be should be ready to proclaim the meeting of 300 gentry in the city ＂The Right Rev．Dr．Cantwell，Brophop of Meath；＂who in returning thanks，cballenged Lord Eliot to point out a single appointment by the grand jury of Westmeath，a county in which the Roman Cathoincs were 11 to 1 ，of a single Roman Catholic to any place，however bumble，of starving in the midst of plenty；the produce of their starving in the mind oil plenty， conct in luzuries of men mho resided in another country，and that wae estale of things which he could not suppose it to be the will of Providence to continue In conclusion，he gave the＂Irish Hierarchy，and one of its brighe in Higgins，in reply，adverted to the proposed remedies for rrish grievances．As to the Ambassador to Rome，he said，he would be regarded and called an English spy Let the ambassador be Protestant or Cationc，he cared not which if the Catholic were an Evghinul，hould become the duty of the Irish bishops to select one from amongst themselves whom they would send to Rome a He ，for one，would look apon it as the first step tuward the downall of his religion，if any man，selected by the present Cabinet of England，were to be sen as ambassador to the court of the holy father，as bis purpose would obviously be to bring the political the pure and simple character of their sacred reli－ gion．The other proposition was，to give them title ha revenues．The tilles，thank God，they alread． had from a higher source－they were of God，not man ments of every Roman Catholic bishop in Ireland，whe be said that the moment those revenues were forced upon them，they would－he，for one，at least，would－go before this pollution，or receive from my hands my crosier an my mitre．＂They knew what pollution there was in the with the Cathalie Chata state，and a day or agitation more frightful even than the present．He could not sit down without alluding to the gross ingratitude of the English nation towards the Cathonic bishops of frele whfiens liey had called a demon priesthood，suresent peaceful a gitation．But did they know that when the Catholic bishops of Ireland joined for repeal，instead of the aristocracy asking what they would do with the people， the people were asking what they would do with the aris－ more familiar amongst the exasperated inhabitants of the country than the notion of beginning an agitation agains rents，and measuring the rights of landlords by the law of bishops of Ireland turned the peaceful agitation for repeal ；and if that repeal werelong withheld he was not the man to prevent an agitation against rente，which once begun would soon shake the empire to its very cenire．The die was cast ；onward they would move in peaceful agitation，and ke had now only to hope that the stupidity and cupidity of England woold not drive the people to that other agitation to which he had adverted．＂After some other toasts，the company separated．
Enniscorthy．－A melancholy case of assassination is just reported from the county of Wexford，a district hitherto so tranquil．Mr．Fayle，who was postmaster，and also collector of county cess，has bean ass thated．Th appeas having arisen in certain quarters，Mr．Fayle was obliged in his public capacity to make seizures．The result of this was，that he received some threatening letters，and for his protection was obliged to carry fire－arms．On Wednesday he slept at Newtownbarry，driving there in his gig，and at five on the following morning，he was found lying in a ditch，within tive miles of his home，and the borse grazing near him．Mr．Fayle was not dead when discovered，and he wes enabled to state，that on passing a plantation on the road side，a shot，fired from behind，gave him an alarm，but the slugs passed through his hat without doing any injury．Three men then leaped out of the wood，and from a ball in the front of his forehead，and Mr．Fayle＇s pistol was found on the road discharged ；but whether he fired off，or it had been used by one of his assallants， cannot be ascertained at present．The object of the was found on his person．It is said that there are no bupes of his recovery

SCOTLAND．
Edinburgh．－The general education committee of the Free Protesting Church，at a meeting Lield in Edinburgh
on Tuesday week，in the exercise of powers conferred upon it by the Free General Assembly，made the follow． ing appointments to the chairs of the college established cipal and Primarius Professor of Divinity；Dr．Welsh， Professor of Divinity and Charch History ；Dr．Cunning－ Professor of Divinity and Church History ；Dr．Cunniag－ ham，Professor of Divinity；Dr．Duncan，Professor or
Hebrew and Oriental Languages．Dr．Cunningbam does not commence his duties till the session of 1844，and the committee have requested him to proceed in the meantime to America in order to become acquainted with the system of theological instruction followed in some of the most eminent American universities．The committes also agreed that teachers belonging to other evangelical communions shotuld be eligible to officiate as masters of schools，aided by or in connexion with the committee．

the finest variety ever produced. Frowers of it were submited the finest variety ever produced. Flowers of it were sabmited
to Dr. LINDLEX, who, in the Gurdeners ${ }^{\text {Cluronicle }}$ of the 8 th inst., ensis prove it to be a very splendid variety; it is a flower of great substance throughout, seed-vessels dark, tube and sepals of a rich crimson carmine; the sepals are long, they expand
freely, and disclose the rich crimson- purple corolita, which is very large, and of a peculiar denseness of texture.
The pliant was also exhibited at the last great meeling of the London Horticultaral Society on the 12 th inst., and obtained the Strong Plants will be ready for delivery on the 1oth of August next, at $10 s .6 d$, each, and will be sent, free of all other charge,
by the post, caretuly packed in stout tin cases. The wsuar dis. count to the trade if six plants are ordered. For a fall descrip. tion, see Advertisement in the Gardenerss' Chronicle of the 17th wit.
N.B.- This Seedling Fuchsia has beess fully proved, aud wili FIUGH LOW and Co. have the following PLANTS SALE:-

Hydrangea japonica
Habrothammus fasciculatus (see description in the "Botani
Habrothaminus fasciculatus (see description in the "Botani-
Paul Register" for the present
Salix japonica, new hardy tree
Podosty hus sph herica
Chorozema ericoides
Fuchsin stanwelliana, very fine
A remittance or reference required from unknown correspondents. No allowauce on the Troproium uniless more than one is ordered. Clapton Nursery, London, July 20. 1843.

MICHAEL BREWER, Sen., Nurberyman, \&c., his splendiu deep blue, faill and complete round-petaled Seedling ANAGALLIS SREM ERIN, being of a strong green and vigur ins
habut, and renarkalis weil-adipted for bedding. It 1 s nux reacy horr senouly nut, at s.s. per plazt, pustage free, to any tart cif the MI L, ixin by, of which he gives the rollowng description in the

 Place, Edgeware Road, Ludor, Nutserymen, \&ic, P, Peaphle Flon ists, gave orders for it, on the ground of seeing the flower previous. Flowers will be forwarded to any applicaut on receipt
of two postace Also, packets of his Brilliant CINERARIA SEED, comprisiog every slade of Dark and Light Blue tint; and as the present is the best time for sownig' for Winter, and early Spring flowering,
he is induced to offer Seed, wurrauled as newly gathered, in
 orders, will be immediately executed.

NEW AND IMPROVED CHURCH AND CHAMBER ORGAN, MANUFACTURED BY H. C. LINCOLN,

Organ Builder to Her Mojesty The Queen, And to their late Majpslies George the Fourth and William the Fourth
and builder of the organs HER MAJESTY'S CHAPEL ROYAL, BRIGHTON Her Majesty's palace, the pavilion, brighton. HER MAJESTY'S CHAPEL, DEVONPORT:

## Mr. IINCOLN has just had the honour to receive the following testimonial from the Rev. W. F. H. Hoopra

## Incumbent of Witiington:- Withington, Manchester, March 27,1843

Mr. Irvcolw has just compieted an Organ for my Church, which was opened by Dr. Gauntıstr on Friday the 17th, and Suday the 19th, of this month. The Instrument has given the most complete satisfaction to me and to aill who have felt an interest in its erection. The best judges both amonrst my own people and of persons unconnected with the Church hav pronounced it perfect-unsurpassed in its softness, richness, and varcty uprighimess, and as becomes a tradesman of the highest treated us wity
 strenuously, not to say enthusiasticall, to the work in this he has completely succeeded; and $I$ shall be happy if my recommend ation secures him further patronage.

## Organ Manupactory, 196, Hige Holborn

Mr. LINCOLN solicits the attention of the Nolility, Clergy, and the Professors and Amateurs of Church Vocal and Instrumental Music, to the peculiarities and advantages of the great and numerons improvements he has recently acopted in the construction of the Church and Chamber Organ. These alterations have been made with a view of affording an increased ention, and in the performance of Church Instrumental Music. The effect gained is such as to combine the breadth and variety which distinguish the Continental Organ, with the universally recoguised sweet and silvery tones prodaced by the English mode of voicing and finishing the pipes.
The advantages gained by the adoption of the new mode of onstruction are unquestionable :
1st. The Organ has a more weighty and solemn character of tone, which is gained by the introdnction of the new Stops, called the Bourdon, Tenoroon, and Quint.
2d. It has a more brilliant and silvery character, from the new mode of arranging the Sesquialteras, Mixtures, and by the use of a new Stop, cailed the Doublette.
of a new Stop, called the Dowblete. character, from the circum. stance that instead of the Instrument only possessing one Flute, it has three, four, or even six, all of which combine with the new Stops in producing an entirely new quality of tone to the Organ, and which is admirably adapted to the purposes of Psalmody. These Flutes are called the Claribel-Flute, the Oboe-Flute, the Wald-Flute, the Suabe-Flute, the Piccolo; and the Flageolet.

4th. It has morc breadth and body of tone, from the adoption of a new method of manufacturing the Reed Stops. These are made to speak, so as to combine the weight of a Diapason with the fullest tone which it is possible to givs to a Reed Pipe. The new Reed Stops are called the Posaune, the Trombone, the Cornopean, the Soft Horn, the Corno-Flute, the Clarionet, the Trumpet, the Clarion, the Oboe, and the Octave Clarion.
5th. A distant, subdaed, and piano effect, combined with brilliancy sufficientiy prominent to keep up the voices, is gained by the Tenoroon Dulciana, a new Reedy-toned Dulciana, and the Echo Dulciana Cornet, a Stop of Five Ranks of Pipes, which has been copied from one in the celebrated Organ of Cologne Cathedral. 6th. More Pipes are obtained to each Key than has yet been attained, and at a less expense; and it must be evident the greater number of Pipes of differing qualities of tone that can
be brought to bear upon each Key the greater must be the be brought to bear upon each Key
musical resources or the Instrument.
7 th. The Sound-boards are made to contain nearly double the work of the ordinary sound-boards, and the wind-chests nearly double the quantity of wind.
8th. No money is thrown away upon useless mecbanism, but the greatest attention is paid to create music in every possible variety and combination.
gth. Although the compass of the Keys is apparently contracted to CC, in effect the Organ extends to CCC, as every Key on the Manual has it with its Unisons, the Octave below; thus, in fact, the Instrument has the same compass as the Organ in St. Paul's Cathedral, without the disadvantages attending the old
compass.

Mr. Lincoln begs to refer to the following Organs, as examples of the new manner of combining great power and variety at a small expense.
THE NEW ORGAN IN THE CHURCH OF ST. THOMAS, THE ROLLS, CHANCERY-LANE, (Opened in November)
THE NEW ORGAN IN CROSBY.HALL, BISHOPSGATE-STREET (Opened in December)
THE ORGAN AT THE NEW CHURCH, WITHINGTON, MANCHESTER (Opened in March) THE NEW GRAND ORGAN NOW ERECTING AT THE CATHEDRAL CHURCH OF ST. DAVID.

Mr. Lincoln $k u b m i t s$ the following Testimonials from the Iste Dr, Clarke Whitfield, Mr. Attwood, Mr. Thomas Adams, Dr. Gauntlett, and Mr. Purkis, as to the Character of his style of Organ Building :

From Dr. J. Clazkre Whitrizld, Professor of Mrusic to the
University, Cambridge.
I have employed Mr. Lincoun at Trinity and St. John's Colleges during my residence at Cambridge, and therefore can votch for the superionty and durability of his work, as well as "Father Schmidt" than those of avy other Organ Bailder of the "Father Sch

From Mr. Artwoon, Organist of St. Paul's Cathedrul, and
Composer to the King.
I have the pleasure to inform you that I think the Organ built by Mr, LiNCoin an instrument possessing a fine

Testimonial from the New Caurch Committere, Newington, and The undersigned feel highly gratified in expressing their opinion uporn the Organ built by Mr. Lincosn for the said Church; and testifying to the great satisfaction he has given chanism, and powers, but also to the very fine and superior quality, of tone it so eminently possesses, and of which it is
scarcely possible to convey a sufficiently just and adequate idea,
 John Purkis, Organist.
(And all the Committee.)

Testimonial from the New Church Commrtere,
and Mr. Thomas Adams, Orgunist.
The undersigned deem it only common justice to Mr. Lincoln o express the very high and general satisfaction which be has any written contract, he completed, within the time stipulated all, and even more than in his tender he had engaged to perform without claininge a single extra. Of the appearance of th Organ, of its internal mechanism and workmanship, and ation it powerful yet inellow and most beautiful tone, it scarcely possmpe to convey a just idea of the praise which has
been bestowed upon it ly all who have seen and leard it.

Thos. Adams, Organist.
(And all the Committee.)
Teslimnning from Dr. Gauntuewt, Organist of Christ Church,
Neuratto-street, London, and of St. Olaves's, Southwarh. Heurgite-street, London, and of St. Olave's, Southwark.
Henry C. Lincoin has erected two Organs on my new plan, and has two others in progress. I have much pleasure in recording my opinidn of his merits. In the contracts which he
has executed under my superintendence, I have ever found him although exceedingly moderate in his price, yet very desirous to give his employers every advantage. The internal mechanism and the outward decoration of his work have been finished in
the best style. The metal aud manufacture of his pipes have the best style. The metal and manufacture of his pipes have
been of high excellence; and every portion of his instrument has been completed with the same uniform attention to its durability and due effect.

## Mr. Lincoin has the honour to announce

## A NEW AND IMPROVED CHURCH BARREL-ORGAN

THE CONCERT-ORGAN FOR TUE SALOON OR DRAWING-ROOM

## THE APOLLONICON, CIR SELF-ACTING ORGAN

For the Mechanical Performance of Symphonies, Overtures, Choruses, \&c.
Mr. Lincoln continues to manufacture the OLD EN GLISH UNISON and GG CHURCH-ORGAN, to which he gives some new Characteristics, by means of his newly-invented Flute, Reed, and Diapason Stypps. He also reconstructs the Old Instruments upon the New Pl\& n.

K EARSLEY'S ORIGINAL WIDO
K EARSLEY'S ORIGINAL WIDOW WELCH'S peculiar irtues, are strongly recommended to the notice of every lady, havin! ohtanucit the sanction and approbation of most gen-
ticmeu of the Medical PIotecsim, as a safe and valuable Medicine in effectually removing obstructions, and relieving all other inconveniences to which the female frame is liable, especially those which, at an early period of life, frequently arise from want
of exercise and general devility of the system: they create an appetite, correct ind gestion, remove giddincss and ncrvous hearlach, and are eminently usefull in windy disorders, pains in the
stomach, shortness of breath, and palpitation of the heart. being stonnach, shortness of breath, and palpitation of the heart. being
perfectly innoceent, may be sarely used in all seasons and climates. ${ }_{*} *$ It is necessary, owing to the numerous imitations, to inform the Pubic that KEARSLEY'S is the only ORIGINAL and GB-
NUTNE MEDICINE of this description ever made, and has been prepared by them for more thant Fipry Ykers II Purcliasers are particularly requested to remark, that as a testimony of authen-
ticity, each Bull of Directions coatains an afficavit, and bears the
 wrapped in white paper. Price $2 s .9 \mathrm{~g}$.

```
    SATURDAY, JULY 29,1843.
mentings for the two Followyng wehis.
```

In another column will be found a statement of the prizes which the Horticultural Society of London offers to exhibitors at the Garden for the year 1844. It seems desirable to mention some of the more important particulars in which the plan which has been observed this year is to be departed from.
In the first nlace, the number required for large collections of Stove and Greenhonse plants is reduced from 40 and 20 to 80 and 15 ; but it is in be observed that neither Greenhouse Azaleas, Rhododendrons, Cacti, Orchidaceæ, Pelargoniums, Heaths. Calceolarias, or Fuchsias, will be allowed to form a part of those Jarge collections. This will have the effect of making the latter more strictly than they have been, collections of miscellaneous plants, and of confining the excluded plants to the classes in which theyare separately shown. On the other hand, the medals are increased for some of the plants belonging to the excluded classes. For example-a new class of Azaleas in sixes is opened; the medals for Cacti are increased from a Large Silver to a Gold Banksian, or, in other words, from $35 s$. to $7 l$. : and the number of Rhododendrons to be shown is reduced from twelve to six. Then a new class of Orchidacece is added to the old ones. is now decided that a large gold medal, value 201.; value Knightian, value 10., ; and a Gold Banksian, Exue 7l., shall be given for the best three sets of
Extic Orchidacee shown in collections of not fewer than 20 species. This will, it is expected, produce the important effect of inducing the very great growers of these wonderful plants to contend with each other, and consequently of giving an increased
In Roses, the prizes offered for specimens in pots remain as before; but Amateurs are not required to show more than twelve plants. This will, we trust secure the appearance of many rivals in what we regard as one of the most interesting branches of cul tivation. It will be remembered that we last year
offered an additional prize of Five Guineas to the offered an additionan's gardener who should first obtain the principal medal for Roses in pots. No gentleman's gardener having succeeded in doing so, we paid it to Messrs. Lane, of Berkhampstead, to whom the Gold June meeting. We now offer the same sum, in two prizes of Three Guineas and Two, to the best and second best collections of Roses in pots, exhibited by yentlemen's gardeners at the meeting in May next year, provided they have not been previously exhibited
elsewhere. Among minor changes is the reduction in the number of Stove and Greenhouse Climbers from 12 to 6 , medals corresponding diminution of the yalue of Herbaceous for them; the union of Shrubby and longaceous Calceolarias in one class, there being no Leartsease from exhibition, and the admission of marterers as exhibitors of fruit in the same class with market gardeners.
As new subjects for exlibition, Cinerarias in for the and plants grown in Ward's cases are now, latter subject time, specifically admitted. Upon the There subject we have a few observations to make. Tivating seems no reason to doubt that the plan of culthe ging plants in close-glazed boxes, first proposed bv will enableman whose name they bear, is one which of country air or not, to manage plants successfully; and that a ready means of indulging in one of the afforded even to the fatiguing of all recreations is thus her room even to the poor invalid who is unable to quit arises from. Yet Ward's cases are seldom seen. This the treatment of plants in them, and we now trust ffect- offer of medals for them will have a twofold atention that of causing skilful gardeners to turn their manufan to the details of their management, and elegant forms to the art of making them of more the plished, we mayy, without exposing ourselves to charge of enthusiasm, express our confident
expectation that Ward's cases will become as common everywhere as bird-cages are now.

A very sensible letter appeared in the Murk-lane Express of the 17 th on the improvement of waste lands, or rather on the necessity and advantage of there are at this moment immense tracts of absolutely waste land in Great Britain or Ireland, or of land producing so little in scanty pasture as to be nearly Waste; and our attention has been long directed to
the means by which such lands might be rendered the means by which such lands might be renderec
productive, without any great risk or sacrifice. The suggestion in the letter alluded to,-to establish Joint Stock Companies for this purpose, -appears to us to be made without much reflection on the nature of such companies and the mode of their management There is no difficulty in finding capital for any there is a fair prospect of its being secure and affurding a reasonable interest; but before you can raise money by mortgage on waste lands, something more than the mere soil must appeirr as a security. This is labour, judiciously applied, and buildings. The first thing is to get houses erected for the cultivators, with other necessary farm-buildings, of such dimensions as may induce men with slender means to ry out their labour
on the land. There is no mode of bringing poor land into cultivation like a garden-system-the spade must begin the work. Trenching and clearing of large stones are essential preliminaries to future production. This can only be done with the spade and pickaxe: but when it is done there is already a value added to the land. If extensive draining, such as that of bogs, grant such length of lease as will indemnify the grant such length of lease as will indemnify the
lessee; and there is no want of enterprising men who lessee; and there is no want of enterprising man who $10,000 \mathrm{l}$. or $20,000 \mathrm{l}$, if there was a fair
would prospect of profit. This is seen every day in Scotland One good directing head, who has a large sum of mirectors paid for their services, and only risking of of their own compared to the whole capital of a com pany. But whatever be the capital of the improver he cannot insure success without the help of inferior agents, who must be stimulated by a sinilar motive of self-interest. An industrious man with a family may
undertake ten, fifteen, or twenty acres of waste land, and will in time bring it into cultivation. The land in its present state is worth little-little rent, therefore, must satisfy the proprietor ; and a lease of twenty-one years will appear to the tenant as a kind of perpetuity The expense of the buildings. if built by the proprieto of the soil, should nay a half of which should be done by the landlord and the other half by the tenant. If the tenant can build a
house, it should be done according to a regular plan given by the proprietor, who may furnish materials or not, according to circumstances. The tenant, in general, has little except labour to give; but this is exactly what is most required. No paid labour will ever equal that which is voluntary, and of which the immediate profit is the labourer's. Experience fully proves this. Intelligence, diligence, and sobriety, which are the fruits of a judicious education, are essential to success. In Scotland and Prussia, where
the labourers are well educated, great tracts of poor the labourers are well educated, great tracts of poor being let out in small portions on lease; and when the term is out the tenant has thriven, and the landlord's rent is vastly increased. Then several of the small holdings may be thrown into a farm; more extensive buildings erected, and the most industrious and inteligent of the smaller occupiers made regular farmers. But what is to become of those who are turned out at the end of the lease? If they have shown sufficient intelligence and industry, another portion of waste land may be let to them on advantageous terms, and they will go on improving land with all the advantage of their former experience. If they have not satisfied the expectations of the proprietor, and have not been so successful as others, they had better return to the condition of day-labourers.
A great part of Flanders has heen changed from a barren sandy heath into fertile fields by the industry of small occupiers, and land which was of little or no value in its waste state now pays a rent of from 20 s, to $S 0 s$. per acre; while the tenants have, in many instances, saved as much as to buy the land they had mproved, at 30 , and even 40 years purchase.
In Prussia, and different parts of the North of Ger many, the same system has had the same result; and we know of a large tract of black peaty suil in the North of Scotland where Heath alone was seen, and where stones and rocks of all sizes appeared througl the soil, completely reclaimed by being let on lease 11 small portions to industrious labourers, who, havin materials allowed them, built small houses and sheds, according to a regular plan laid down, and gradually
brought the whole into cultivation. In the Iuth Vol. of the Prize Essays and "Transactions of the High

Iand and Agricultural Society of Scotland, there are no less than 17 Reports on the Improvement of $W$ aste Lands by the proprietors or lessees, the expense in each case being accurately stated. In these instances the waste land was already attached to farms in cultivation, and consequently required few additional buildings; but the results show that inf most cases the capital laid out was anoply repaid; and these repurts afford much useful information to those who would embark in such undertakings
Why should the strength and sinews of the nation be expended in distant lands, which scarcely acknowledge a common interest with the xnother-country, while there are yet so many wastes affording ample scope for industry, even within a few hours' walk of the metropolis? A foreigner is struck with the light heaths and commons near London, and is apt to ex-claim-Where is all the superfluous capital, which can scarcely find profitable employment, and suggests uncertain expeditions to the $\Lambda$ ntipodes in hopes of profit, when the bosom of the earth is open, and would gratefully and amply repay what is judiciously confided to it? One great cause of the fear of embarking in a losing Agricultural speculation is a want of confidence in the steadiness and sobriety of the labouring classes in England. They cannot always be trusted to their own guidance; they are
not sufficiently educated to feel the importance of industry and sobriety. Whenever they are not under the eye of the master the temptations to idleness are too strong to be resisted. The activity of the mind having no proper direction-the desire of information not being satisfied, for want of early habits of reading and reflection-company is the only relaxation, and the company of idle men leads to idleness and intem perance when there is no substance in the thought or conversation. When the waste of the mind shall have been cultivated, there will be no difficulty in reclaming that of the land.
The well-educated labourer is in a far superior position ; he can find relaxation from the toils of the day in reading and study; where his own experience fast, he can have access in books to the experience of past generatious. The examples of those who bave rank to affuence, and even power, from the lowes ranks in life, stimulate his exertions; he dreams of advancement, and every nerve is strained to improve
his situation in life, which the knows secured by honest and persevering industry. How important, then, to the prosperity of a nation is a proper attention to the education of the people ! $M$.
We mentioned'some time since (p. 603. 1842) that Count Hompesch, a Belgian gentleman, had ascertained that the bituminous shale of Portland could be profitably worked as a source of manure, in consequence of its becoming, when carbonised and deprived of the bituminous patter, a powerful disinfecting material, We now and charcoal in that respect.
We now find that the facts connected with this project have been collected into a small pamphlet*, in which the advantages expected from the preparation of the shale are explained. For ourselves, we can only state that it is certainly a most energetic remover of putrid smells, and express our belief in its being a material extremely well worth examination. We have no personal experience in its manuring quality, but we understand that when united with decayed animal matter, it has proved highly valuable in gardens. Among some papers before us, we find the following memoranda relating to this matter:-"Three sick Orange-trees, in a very bad state, with a few yellow leaves, and which had not flowered for two years, were top-dressed two inches deep with the prepared powder on the loth of March. "In two months they were covered with leaves of a deep green, and flowers were appearing abundantly. Similar effects on the Camellia were obtained by similar means,--the flowers became larger and more double.

Count Hompesch tells us that he has always found it best to use the material as a top-dressing, and to water with it frequently in small doses; and that when the material has been mixed with the soil, he has not found the same beneficial effects. "This," he observes, "I attribute to the disinfecting powder of the bituminous shale having the property of retaining the carbonate of am that passes through being charged with just the dose which vegetation requires; so that absorption is slow and uniform, instead of being unequal and rapid, as happens when the material is mixet with soil.? may add that an interesting account of the important fertinisigg powers of some bituminous shale, Gowen in the last Number of the Royal Agricu:t sal Suciety's Journal.

> ENTOMOLOGY-NO XVI

Coccls patelleformis ("ulle, The Arown Lim-

true Coccus. It is nearly allied to the Orange-scale, true Coccus. It is nearly allied to the Orange-scale,
called by Linneus C. hesperidum, but it is longer and called by Linnæus C. hesperidum, but it is longer and larger. From the strong resemblance it bears to some of thistinguished it by the specific name of Patellæformis. distinguished it by the specific name of Patellæformis.
The brown limpet-scaies, which are the females, are disThe brown limpet-scaies, which are the females, are dis-
tributed along the stems and branches of the twigs, with tributed along the stems and branches of the twigs, with
their heads downward, and vary considerably in size and their heads downward, and vary considerably in size and
form, some being oval (fig. 2), whist others are more form, some being oval (fig. 2), whilst others are
elliptical and slightly curved (fig. 3). The outline, ever, is apparently never symmetrical; they are very convex, somewhat semi-cylindrical, shining, and of an ochreous colour, variegated with bright and dark brown. The edge is thin and membranous, and at the binder extremity is a suture, furcate at the base (fig. 4, greatly magnified). The under-side is very concave in the adult females, the skin lying close to the back of the scale, and the portion towards the tail is blackish. They have six
small legs ; but in the specimens I examined, I observed small legs ; but in the specimens I examined, I observed neither eyes, proboscis, nor antennæ, but no loubt they white cottony lines on each side of the scale : the first pair at the middle, and the other pair towards the anterior extremity. These lines are common to the scale them securely to the plant (fig. 5). On remoring the scales, a cottony substance remained on the stalk with and not larger, but rather broader in proportion, and less active ; there were but few, and no eggs nor exuvie accompanied them. With the large scales were smaller ones (fig. 6), which I believe to be of the same species at an earlier stage of growth; indeed, they had every appearance of the young ones which had settled there imbibing the sap and forming a bcale over themselver, untrip hatched, when they would become fertile, rapidy males hatched, when they would become fertile, rapidy moving from the spot where they first pierced the bark with their fine syphons. They were yellow and oval; the
minute black eyes were visible, and the back was rayed minute black eyes were vis
with bright brown streaks.

I have never seen the brown limpet-scale abound to any great extent, as many of the other scale insects do, yet largest, I believe, of the hothouse scales, they must greatly weaken the plants which they attack. I regret that the males of this species are unknown to me, but they are, no doubt, minute animals and winged; indeed, little is known of this very curious tribe of insects, not less interesting to the gardener from the injury the various species do to his choicest plants, than to the merchant to whom many species are of vast importance as articles of commerce, as will be readily admitted when we state, Great Britain is estimated at not much less than half a million sterling ; besides which other species of Coccus furnish shell-lac, employed in the making of sealing-wax,
of varnishes in japanning, \&c. It will therefore afford of varnishes in japanning, \&cc. It will therefore afford
me intinite pleasure should these sketches of their economy lead those who have constant access to hot houses, and better opportunities than myself, to study their histories and give the result of their investigations to the public, with accurate figures of the eggs, larvæ, pupx, and the male and female adult insects. A good example has been set by Boucbé, who in his " Garten-Insecten," and "Naturgeschichte der Insecten," has done a good deal towards a better knowledge of the Cocci, injurious to the gardens at Berlin, by relating their economy and des. cribing many new species; but unfortunately these works are written in German, which renders them almost sealea books to the majority of English readers. fina attends the scale insect, as many others do the Aphides or Plant-lice. As it is an interesting fact, I will endeavour to translate the paragraph. "The Shield-louse," he says, by the Formica marginata, by ants in hothouses, especiaily its excrement , they are nourished by it, and the ants fre quently squeeze the Shield-lice to obtain their eracuations in such a manner, that they die from it. This fate particularly happens to the weak males, which consequently To exterminate turity.
insects seems to be very difficult the true Cocei being large and prominent species may be Will xemo ve them; but as multitudes of the eggs and young ves eay escape injury from their minuteness, it will be nec eseay to wash the trunks, \&ec. immediately with some mixt.ares. so.7p, tobaceo, and water; whether the addition of sulphat be useful, 1 am unable to determine : the great $0^{2}$ jject, ho wever, n extirpating them, must be to ascertain the period when the young issue from the eggs, and then apply the remedies proposed, as at that time they are undefended, and the slightest application will kill them. As scrubaing the leaves is impracticable, such plants as have the foliage infested to any extent, ought, if possible, to
be imnerned in some medicated liquor, as, for instance, 11 b .
of soap mixed with 4 gallons of soft water, adding half-a-
pound of tobacco and one pound of flour of sulphur; then boil the whole until it is reduced to 3 gallons ; when cool, immerse the plants infested after the roots and leaves are trimmed for potting, and they may in a day or two be washed clean with pure water: this mizture is said to be too strong for delicate exotic plants, and if used for matering,

## ON THE CULTIVATION OF THE CHERIMOYER.

 (anona Cherimolia.) fruits should be cultivated in England, almust the only one being the Pine-apple, which, if it is to be estimated by the value set upon it where it has to withstand a comparison with other natives of hot climates, is a very poorfruit indeed. It is perfectly well known that the Pine is fruit indeed. It is perfectly well known that the Pine is thought one of the poorest of fruits in those countries
where it grows in the open air. There are many tropical where it grows in the open air. There are many tropical
fruits which might be cultivated without much difficulty in England, if proper means were employed; but if people expect to get fruit from any stove plant without bestowing at least as much pains and money on its cultivation as is bestowed on that of the Pine, they will most assuredly be disappointed.
The tropical fruit which I think would be cultivated most easily in England is the Cherimoyer (Anona Cherimolia) ; it is often mentioned as one of the finest fruits in the world, and is the only one which I have tasted that I think worthy of comparison with a first-rate Peach, properly ripened. The Cherimoyer is a fruit of considerable more; it is of an irregular heart-shape, and pale greenishyellow colour ; the skin is very thin, and covered with obsolete impressions of scales, which I have observed are less apparent in the finer varieties of the fruit than in the common ones. The eatable part is a white pulpy matter about the consistence of custard, which forms nearly the cells of the pulp; they are quite smooth, few in number, and are separated without difficulty; so that, although of considerable size, their presence is no drawback to the pleasure of eating.
have no doubt that the Cherimover might be cultirated with as great success, and with as small an outlay, as the Peach (I am not talking of out-door Peaches), because I have grown it to perfection in a climate where the Peach thrives perfectly well. The course of treatment I would advise would be, to build a house like a Peachhouse, and in it to plant the Cberimoyer. The only difference between the requirements of the two plants would be in the duration of heat necessary for ripening. The heat of the Peach-house would be quite sufficient, but it
must be kept up at least two months longer than is must be kept up at least two months longer than is
required to ripen Peaches. The winter-heat should be only just enough to keep the plant from being frozen ; will then lose its leaves almost entirely, and when the spring comes, and heat is applied, the flowers will appear impregnation or the fruit will be few, ill-shaped, and small ; indeed it is more than probable that without great attention to this part of the culcivation no fruit would ever be set in this country; although, if pains were taken, the crop would, I believe, be abundant
The Cherimoyer is a large, straggling bush ; one of 10 feet high would spread 20 feet, if left to itself, which five feet high will bear fruit. if it be not a seedling, and will bear a succession of its curious, half open, sweet-scented flowers for about three months: so that by a little management ripe fruit may be obtained during an equal period of time, or even longer, for I have seen late fruit bang on the tree during a whole winter, and ripen in the spring. The Cherimoyer is a native of a very dry climate but it likes a good supply of water during the flowering season, or it will not set fruit. It seems to thrive best in sandy soil, which need not injurd plant, not easily injured by heat or drought, very hardy plant, not easily injured by heat or drought,
and I hope it may some time procure from English Hortiand I hope it may some time procure from Enghish
culturists the attention which its merits deserve.-J. O. B.

## AMATEUR'S GARDEN.-No. XXX.

Had I not recently become acquainted with Mr Beaton, I should almost feel disposed to pick a quarrel with him for forestalling me with his article on the im provement of Rose garlands, in the introductory remarks think Ialendar of last week; but on a self that so inter estin 1 ought rather to congratulate myself that so interintrodus subject has met with such an able advocto. Tillars, garlands, or walls a favourite idea of mine; and I have long thought that is ever I should have the charge of a tolerabiy good surface of Rose wall, 1 would try whether an unique and rather novel feature in flower-garden scenery could not be produced, by grouping the kinds in masses, according to their comat anyntary colours (as far as these could be obtainac), or not to bave a light colour close by, to enhance, by com parison, its brilliancy; but as I shall not have an oppor two, I throw it ont wis thea into execution for a year or may be induced to carry it into practice.
Climbing Roses, though very beautifnl when viewed en masse, are in a floristical sense but poor things, as many of them are little more than semidouble, with thin flimsy petals, and therefore but ill suited for that close day. It is consequently worth consideration whether
their cultivation ought not to be, to some extent, discon tinued, and their places filled up by better things. This mat readiy effected by buddung the choice sorts various heights on the climbing kinds at the present time, eleva care to give the delicate-growing varieties the mor elevated position on the branch, and placing the strong gractised for towards the bottom. This method thave practised $\begin{aligned} & \text { pillar covered with six or eight kinds of the best of the }\end{aligned}$ French and Hybrid China Roses, has a far more imposing appearence than wh covered with fery fimsy fower of the climbing kinds. In the coming season I am about the climbing wis. Tn the 30 ins scason 1 am abou and I there intend tu introdue nowe but the most mpent growing Ayrshire kinds and then bud them as they ad vance with areral solletion of the ties. It is surprising with that vigour the Trench and Hybrid China kinds. The French Aglaia Adanson, Boova de Nanteng Nelly, Franklin Pharericus Rouge b́blouisante sereal thers 4 to 8 feet long the season after budding, when worked on the old wood of a Banksian Rose, and I have no doubt but that the Bourbon, China, Tea-scented, and other perpetual Roses, if worked in the same way, would grow with corresponding vigour; and if so, we have reason to expect that many of the delicate-growing kinds would bloom much stronger in consequence. The experiment, however, is worth trying, and I earnestly recommend it to the consideration of the Amateur
As the busy season of propagation preparatory to is heat by the antiquated and uncertain plan of fermenting material, must lose no time in forming a slight ho bed for cuttings of Pelargoniums, Verbenas, and other grouping plants. As only a very slight degree of bead Cucumber raired, an old lining from the to use : to which, to excite fermentation afresh, a small quantity of short grass may be added, the whote to be spriniled as tho bed is formed with ammoniacal liquor, diluted with ter times its quantity of water. The bed will not be fit for the cuttings for a fortnight to come, and by that time shall offer some remarks on the plants to which attention is first required. $-W$. $P$. Ayres.

## HOME CORRESPONDENCE.

Bees.-At p. 445, I perceive that "Apis" has observed eontroversy between "A. Pettigrew" and myself, relating to Bees, and that he has left little for me to netice. However, as "P." says that I do not argue fairly, I shall offer a few remarks on my own behalf. He speaks of "my disciples;" I know of none ; but supposing that have any, if his charge be true I should soon lose the P." founds it on what I called his own words, whe patting a queenless swarm into an empty them produce a queen." To clear this up I shall gom his own version of it at p. 209 more fully. . When the one of the first two swarms we take away the quen, the day after they are put into emply hives we find thays, queenless swarm, after searching one, two, or three dayo, begins to make royal cells, by adaing wax to conce cells." The term empty hives renders this seal the ather obscure. I said that the cell in which form of queen-cells, being less pear-shaped, and not so deep. "P." denies this, without seeing the cell in question. He says 1 "erred in saying that they are not so deep ". rees cells generally are." Does this show that "P. depriving plan, otherwise he would not have demurred at my statement, viz, "how galling it is to have a hive weakened" swarming instead of having a bell-glass full of honey. now notice "P.'s" plan of making artificial 8 warms. suffice it to say that it is intended, in a great measure, suffice it to say he cutside of their hive. This being an important point, I shall offer a fen remarks upon it. Why do Bees become idle, especially before the first swarm quits the hive? Want of room makes them turn outside of it, but when this is not the case, idleness prevails in a g pon leaving the hive than the queen is willing to lead them off. She will not leave in bad weather, nor before her successors are in some degree matured in their celis. The question then is, what is gained by premature separation? If done in bad weatherld there is none-perhaps an injury; for what use wother Bees be in an empty aive airatimes be gained; but were good, a few days might sometimes hive by smoke when the unnatural disturbance of the taken into con and the uncertainty of success are let alone. "P." sideration, I think the scheme so take may urge that success is sure, but woreless Bees to a diss the precaution to remove the treasure otherwise the nige and confine them, say 24 ?." may dem his, but my to their oe accords with that of a writer think Riems) who says-s Bees deprived of their ?isiols ought to be confined 24 hours, with a soon search for of air ; without this precaution they their queen, and infallibly find her to the Bees in ques alleged that this is hardy appricable to the hive, whilst tion, for the queen is with them in the empe condition ${ }^{a b}$ those in the full one are nearly in the sa is gone; that Bees usually are after the first swarm one is batched. The danger is, lest the queen and all the Bee return to their stored home. a may riced, related by \$ir
W. Jardine. At present I cannot give his own words; the following will, however, explain his meaning :-- When Bees hang in a cluster outside the hive, comb, and place it immediately where they stood; then carry the full one to another part of the parden; the returning Bees will enter and remain, though with surprise, in the treasureless hive.' There can be no necessity for either plans after the first swarm, although sare occuren. experimented after the first swarm; but it is a swarm. When it does happen it is better to give more room, than to force away part of the Bees; for as soon as and queens come forth, repeated stock will thus be reduced to weakness, or what Sir W. J. calls " puny stock hives, which give munch "trouble, and cost a great deal more than they are worth." August." If he were to ask his friend that squeezed the 110 lbs . produce from one hive, perhaps he would tell him amongst honey in October. As the drones are in general amongst honey in October. As the drones are in general
destroyed before August, he probably believes in the old notion, that the drones sit upon the eggs ; hence they
are called sitters. But it may be asked, where are the are called sitters. But it may be asked, where, are the
sitters in the winter, at the time that "P." notices "Bees drawing together and leaving a semicircle of brood uncovered, which dies, notwithstanding the warmth of the hive, the stench of which compels Bees to forsake their hive $\ell_{"}$ He observes also, "that this back-gone
brood increases all the summer:" Without a proper brood increases all the summer." Without a proper
degree of heat, the brood of course must die, and would soon become dry and crisp without stench, and cleared out before other eggs were deposited in the cells, in a way similar to that by which drones' cells are cleared of brood at the time their slaughter begins.- J. Wighton. [Our
readers will agree with us that this is enough of argument. Mr. Pettigres intends shortiy to state, without argumenta tion, his own views of Bee management.
Bees. The diversity in the temper of Bees mentioned by "Omicron" at p. 501, is owing simply to traffic in public thoroughfare for the terous Bees were placed in a would become very mild-tempered; and if peaceable, unoffending Bees were not to see men or cattle for the same space of time in summer, no person could approach will wage war with a person if there be pacisible bees spiration on him. No Bee-keeper ought to attempt to hive a swarm when he is perspiring. It were better to shade the swarm, and sit in a cool place for a few minutes. was or should have been conscious of the danger, theless attempted to take a swarm from dange,but was stung so severely that he was carried from the scene in a highly sick and dangerous state. - Pet Pom the - I think that "A.J. S." is right in the opinion Bees at the time of purchasing them. As ans of weak stock having deserted the hive in June, it is rather awing to scout hees from However, I think it might be taken possession and destroyed the rightful owners. The drones would, of course, slare the same fate, or perhaps the dead ones at the front of the hive were slaughtered from the other stock. In general, scout bees remain only during the day, clearing out old or deserted hives. This may account for none being found in "A.J. S. s" stock,
when it was examined in the evening. It may be alleged that fresh swarms only enter deserted hives. This, howpossession al ways the case., A swarm of mine lately took possession of a weak stock's abode, under the leads on a the combs in "A.J. S.'s" hive are fresh, they would be of great use, especially to a weak swarm, without "taking respecting the desertion of the weak hive I may safely Observe that poverty was the cause of its failure.- $J$. 505, I beg leave to state that a few years back, as I was passing through a field in which grew a great number of trees, my attention was attracted by the humming of Bees around a Whitethorn. On examination, I discovered what a Mought to be a Fungus, but on closer inspection found employed as though they had been in a hive. On cutting down the combs, I found both honey and young Bees in their abode state. How long they might have taken up en the the Bees? ingust.- $A$ Bath Subsoriber. [But where were

We breaing. -These being the days of moral reform, when ing for one of more innoxiouscharacter, the idea occurred to me that some of the casks might be turned to another numpere-that of heating Vineries, \&c:, by having a neeting of them placed end to end, with short pipes conthecting them, so as to maintain a healthy circulation of tion be at all practicable, itmay probably be of use to some of be at all practicable, it may probably be of use to some
your readers.- F. Y. [In order to xender this system erviceable, the - F. Y. [1n order to xendel mis system a bad conductonsiderable length; otherwise, wood being into the surround heat, but little warmth will be thrown Ringing. - In the atmosphere.]
"inging" on two phing 1 performed the operation of granate. Now, whilst the shoots above the incision exhibit no difference in appearance from the rest on the
plant, the shoot (in both cases) next below the incision has grown with astonishing rapidity and vigour ; so much so, that these shoots, besides being of very much greater length are of more than twice the trickness of any othe of the same age. Is this consistent with the notion that "ringing" confiues the sap above the incision by checking the descent?-L. B. [No. But the probability is that
the ringing has checked the curren: of sap upwards; in what way this has taken place could only be determined by inspecting the specimens.]
Mulberries.-Among the many edifying articles in the Chronicle, I have not seen any lotice respecting the growth of Muberries in pots; and I am surprised that no gavener has given any information on this subject.
have five small plants from 18 to 30 inches high; and such a tree in miniature, with a humdred rine fruit on it would, if of no other value, be pretty to set on the table with the dessert, for the ladies to pics their own fruit from y plant may be brought into a bearing state in five or six ruit nearly ripe by the time that their leaves open in a natural state out of doors.-W. S. D., Coventry.
Plants for Edgings.- Amongst the plants which have in shady situations, Cotyledon umbilicus has not been mentioned. I never met with this plant abundantly anyWhere except in this part of the country. It looks re-
markably well when grown in patches.-Thomas Sellers, Pennoyre. [It will only thrive, we believe, in the damp, mild climate of the West and South of England.]
Strawberries.-I perceive at p. 502 , that you are still bad practice. I should feel olliped to yon or any is a tical reader of the Chronicle, that will inform me of any new plan that would be likely to succeed better; until system Ishall not be easily persuaded to forsake my present tradicted. I have found, after the leaves have been taken off, that, with the assistance of manure, the beds have been well feathered with foliage, which is, 'I consider, a great the following season. But as I grow six different sorts, piz, Downton, Keen's Seedling, Royal Sovereign, Myatt's cease from bind Alpine, ,. Which last two sorts do not beginning of October,-you nearly agree with me as to the time when the manure should be laid on, as I mow of he leaves as soon as the fruit is gathered.-
Chamomile.-At p. 4791 observe that "J. W. T." asks why his Chamomile produces single flowers. If he will plant it on poor sandy ground, well trodden, so that every part is as hard as a gravel walk, he will find that his Cha-
momile will bloom double and abundantly.-E. C., St. Peter s-street, Cambriago
Improved Garden Pots.-I herewith send you drawings of two garden-pots which I consider will be found valuable; - the one
for growing specimen
plants in, the other
for striking cuttings
in. Wher Mr.
Brown's pots were
first announced,
was much pleased with the invention, and considered that reat service to plant growers in the cultivation of specimen
plants, Heaths, New
 Holland plants, \&c. as affording shelter so the roots from the
sorching heat of the sun's rays ; brt alhough it appeared provement to me, I devertheless consistructed as here represented, would be of greater importBrown's invention
 more perfect, as it would afford a complete drainage as well as preserve the roots from the sun; I think it would be found valuable in forwarding the growth of specimen plants, as must be obvious to any plant-grower, who will mmediately see the utility of $i t$, as the roots of the plants The propagating pot, No. 2, will be found of great value o nurserymen or others in the propagation of tender cuttings, \&c. This could be made with or without Mr Brown's improvement, but I think it would be preferable with it. What I consider the chief superiority of this plan over the common pot is this: that when the pot is plunged in heated materials, the barrel of the pot ould form a hot-sir chumber, thereby always imparting genial glow of warmth to the sides of the pot, and thus cuttings placed therein.-William E. Rendle, F.H.S., $P$ Plymouth.
Moss Rose.-I have a standard White Moss Rose on its own bottom, which grew last year nearly eight feet high. The top has been foreshortened about 18 inches, and the standard is now about $6 \frac{1}{2}$ feet high, literally covered with upwards of 30 well-formed buds, and not one yet
expanded. No one can imagine the beautiful appearaace
which the plant has, by being supported on its own stem. Do any of your readers remember to have seen the White Moss growing similar to the one I have described? -J. E., Rotherham
Polatoes.--In answer to " $\mathrm{S} . \mathrm{H}$. 's " inquiry, p. 445, I beg to state that my Potatoes were planted about the 20 th of March, und are Ash-leaved Kidneys. I procured them, bout four years since, from Nottingharnshire, where they known as Aldbury Kidneys.- $\boldsymbol{R} . \boldsymbol{R} . \boldsymbol{R}$.
New Budding Knife.-Thinking that any little im provement tending to facilitate the operation of budding would be interesting to some of your readers,--I send you the pattern of a Budding-knife made after my own shape, and which, from the rapidity which it allows of being turned in the hand, and its ready application to the bark, gain as he would with the oid straight-handled Budding nife. The knives are Plum, of Bristol. Henry Curtis, Moorend and West of England Rose Nursery, Bristol. [This is the neatest Budding-knife we bave seen. The ivory handle is shaped like the blade of a curved pen-knife, is sharp and turned up at the point, and is evidently extremely well contrived for the purpose it is intended for.]
Composition for Watercourses.-Though II am very A.B.'s" remarks, p. 462, that all sorry to say I cannot be so. In regard to salt with Aspa ragus, I am of opinion, and am not inclined to alter that pinion, that you cannot err, either in time or quantity. You say "the best food for cows ine to guantity. Beans soaked in water for 24 hours "Now, a few Beans should say, "A B"" 24 " and it would indeed be whule thous expleng abont it would an more his question? I have a watercourse laid in answer me this question? L have a watercourse laid in bricks and months, butafrost causes great good during the summer onits, but arll canses great leaking. Is there any comwind and water? It would save me pounds, and more wind and water?
Peat Drains.-Mr. Smith, at p. 492, states that a stone r tile-drain would last for twenty years, and would be in as good a condition at the end of that time as when first constructed. "Peat-drains," he says, "would, on the contrary, scarcely endure as many months." I have no doubt if Mr. Smith had an opportunity of examining some Peat-drains on the Natebey-hall estate, near Garstang, that e would find them in nearly as good a condition as they The Duke of Hamilton has been adopting this plan to a ery ore plenty of good stone some years, although he has got name many other landowners who are adopting Peat in preference to stone-draining. - $M$. Saul.
Muriate of Ammonia.-Observing at p. 477 your remarks on the destructive power of ammonia on animal life, it reminded me of what I saw practised upwards of served, years ago, by a gardener under whom 1 then shallow pans placing muriate as exposed to the sun, with the belief that the effluvia then arising from the pans was effective in keeping away insects, and he was a very swecessful cultivator. I should be glad to know, supposing it had the desired effect, of what use the sulphur was ;aporehend in any way on the ammonia? $-A$. with the effect. It is not likely that the sulphur had any action on the muriate; it is probable that the sulphur alone was of use in keeping away insects.]

The Cuckoo.-I heard the Cuckoo singing clearly and distinctly on the last day of June, which I never noticed before the present season. Does the above circumstance betoken a fine summer? I never heard it in full note afte the 15 th of the above month. There is a friend of mire who has in his possession a young Cuckoo, which he took Whinchat's Wraing fe found only one egr left, which prof an on morning he foud the rest horing been ejected, and fo be broken immedintely urder the nest. He hopes broken immeaiately under the nest. He hopes to kee The Furke - In June last the gardener to Mrs Chorles of Bolton-lu-Sands, near Lancaster, Chorley, of Bolton-le-Sands, near Lancaster, observed a pair of these birds frequenting an ornamented bottle which was standing upon the gardon, and he was therefore that thated to examin thin nest and gid eges ine, he fonnd that they had made their nest and laid eggs in the bottom of the bottie, and he was and how the young would and their way out, as the passage was only two inches deep by three quarters of an inch in diameter the e istance form of the bottle, being thirteen inches, he therefore resolved main, and in due time ten young birds were produced refound their ar and the their way further proof of the boldness of the Titmouse as describe in p. 429.-Facile.

FOREIGN CORRESPONDENCE.
Paris, July, 1843.-The fruit-growers of England will not have much reason to dread foreign competition this season, at least not from France, for we have had miser able weather for the last two or three months. Such a rain er has scarcely, if ever, been known ; cold winds, hail fine day is complete mastery, and a realy which in genergl is so with flowers in May, and so well furnished with summer fruits in June, has been this year but scantily supplied with either. The flowers in the
markets looked crippled, the blossoms neither opened freely nor emitted their usual odour; Strawberries and Raspberries are without fiavour, and later crops present
unfavourable appearances; a bad season is certain. The primary cause of all this is, no doubt, the severe weathe which visited us in the middle of April, when for three successive nights the thermometer stood at $24^{\circ}, 22^{\circ}$, and then coming into full leafoyed all the young Vines, just Apricots, Nectarines, Almonds, Walnuts, and Pears ; and the subsequent cold and rain have completed the disaster Even so late as the 30th of June a white frost was per ceptible in many places round Paris. All this will be severely felt in a country like France, where the Vineyards are one of the chief sources of wealth, and fruit (together with bread) almost the sole subsistence of the labouring classes during the summer and autumn. On the 13th July, 1842, I cut ripe Grapes from a south wall, to send to a friend in England ; on the same day this year they and numerous, bat the greater part of the buds are eri dently chilled, and fall off upon the least touch. The pen ground Vines in this neighbourhood are not eve in bloom, and anything like a crop from one or the other is quite out of the question, except we should be favoured ith a long and hot autumn. The poor fruit-growers of Montreuil, Bagnolet, Charonne, and the neighbouring hamlets, will be nearly ruined; there is not sufficient fruit to pay the expense of training. You may walk along entire walls without seeing scarcely a Peach or Nectarine unfortunately, there is not only a season's fruit lost, but ranches covered with gum, and appearing as if struck by lightning. Apricots, Plums, and Pears have not suffered o the same extent, but there is nothing like an average crop, and in exposed situations you see no fruit at all. Walnuts will be very scarce. Cherries are selling at from 3d. to 6d. per 1b. ; English Blackhearts and Montmo rencies readily fetch this, or even more; last year they were from $2 d$. to $4 d$. The Cider crop has also suffered. I have examined whole rows of trees without seeing single Apple; I speak of those near and within 15 or 20 miles of Paris; but I nnderstand the same may be said both of Normandy and Picardy. As to Agricultural prospects, I cannot pretend to give an opinion: but I good condition last month. During the last fortnight however, the Wheat has been much laid by the heavy rains. Haymaking is not yet finished. Most black clouds have, however, a silver border; and so, in this abundance of all kinds of vegetables. New Potatoes have never been known so fine nor Peas so cheap; 40 to 50 gous ( $1 s, 6 d$ to $2 s$ ) a sack has been the market price and ous (lo. fore fine young Maris (a kind a his time only threehalpence a itre, or English quart Caulifowers, Cabbages, Artichokes, and, in fact, all of Currants. I now turn to Floriculture, and while still apon the bright side, would remark that the Roses have been splendid. I have resided in , or been in the habit of visiting, France for the last fifteen years, but never remember to have seen the blooms so large or perfect before. In ordinary seasons the petals are either burnt or drop in a day or two. It has not been so this year; they have cc., with their hybrias, have been literally covered with fowers for two months. The China, Bourbon, and Hybrids, are also now in great perfection, and remind me of the noble blooms I have so often admired in England when visiting the collections of Messrs. Rivers, Hooker; be in France and ; form districts, it is in eigh seasons out of ten larger and more perfect to the eye in England, Holland, and Belgium. Greenhouse plants have quently as low as 42 and 44 deg. Fahr.) seriously checked quently as low as 42 and 44 deg. Fargonium, sen more than thirds of their usual size; moreover, oftentimes ill-formed and quite out of character. A kind of thrips has also committed almost as great havoc as the green-fly ; it has also ands. Annuals have be dided filnge dinary ; yesterday the thermonoeter was at 82 deg. Fahr in the shade, to-day it an 50 deg.; and last week the fluctuations were even greater: in fact, we might alnost
suppose ourselves to be in the month of September rather suppose ou
than July.

PROCEEDINGS OF SOCIETIES.

## OYAL AGRICULTURAL SOCIETY OF ENGLAND.

 July s.-At a Monthyy Conncll held at the Socjety's house in inclosed cietton, was grown, not in the interior of Mexico, but in the interior of the county of Nottingham.been very interesting to me, and this is bring it into notice. I do so, now in consequence of having read
the report of the proceedings of the Council of the 21 st of June, the report of the proceedings of the Council of the 21 st of June,
in which it is stated that Mr. Colman, the Agricultural Commissioner from the United States, exhibited some specimens of Silk, Silk-cotton, and Cotton, this last the produce of a large tree.
The specmen I send 18 also the produce of a large tree, growing
upon the estate of the Earl Manvers, at Edwinstowe. With the upon the estate fome foot stalhs, and also some leaves. I am much inclined to think it a pure specimen of the one described by Mr .
Colman. $I$ regret I did not attend to it sooner, as I then should have been enabled to procure some Cotton in a better state, as
well as finer foot-staiks, with the capsules more perfect. The seed is about twice the size of the g they are emitted immediately
be fonnd amonest the wool; I think be found amongst the wool; I think they are emitted imamediately
should be made to grow Cotton in this country, if only for the
purpose of naking down pilows." Mr. Cherry' paper on prizes
for horses was referred, with several others, to the Journal Committee. The Marquess of Downshire presented a specimen of
Irish Flax of the growth of 1843 , from a field, averaging 3 feet in Dean (civil engineer to the Haarlemprainage Commissioners). of his proposed drainage of the Metropolis. Mr. Shaw exhibited
paintings of a boar and sow belonging to Mr. Nutr, of York; and
Mr. Easton transmitted a specimen Mr. Easton transmitted a specimen of

Jul chair, 36 yentlemen vere elected Members.
Jedy $19 .-T h e$ Marquess of Downshire in the char, 20 gentlemen were elected Members. Mr. Denison, M. P., stated the great Meeting at not finding on the Implements exhibited in the showyard, such information as would lead the Members and the public
at large to profit by the decision of the Judges, and be enabled
to draw just conclusions on the comparative merits of 1 mpleto draw just conclusions on the comparative merits of imple-ment-maker of the villate, the great object of the party being Thelect such implernents as appeared best suited to their land,
They found a splendid show of implements, but hardly any essistance from the Judges to guide them in their pur nation was given of the grounds of the award; and thus the ourney of che party, as far as its main object was concerned,
proved entitess. Mr. Denison then applied to parties choice of two or three of the most important implements he each recommended different implements. Considering that in member, or less likely to tend to the formation of a just decision, money in awarding prizes, the members who provide that money examined and deliberately judged, he thought it a great reproach
to the Society that the omission had occurred. He would venture to suggest that a much larger number of Judges should be apfor ploughs, another for drills, another for threshing-machines and chaff-cutters, and so on. He thought that in this way
something really useful might be dove, and decisions of some the statement; and so desirnus were the Council to remove every ust cause of complaint, that he would himself second any motion
which Mr. Denison would propose. The latter gentleman then gave notice that he would move, at the next monthly council
"That at future country meetings, on or before the morning on of the tue show of implements is opened to the public, the award to guide the public in the selection and purchase of implements."
Mr. Shaw gave notice that he should move, "That a committee of three persons, to consist of one member of the council, one be appointed to take land, get it prepared, and make the neces-
sary arrangements for the trial of impiements at the Sonthmpton meeting : That the trial of implements shall take place implements at work, and not a trial of their merits, shall tak place on some day during the meeting: That the number
of Judges of implements be increased, and that there be
one or more practical farmers among them: That it be to state to the best of his ability the name of the invento (if known), the time when invented, the particular points of what district it has been and is used." Prof. Owen having been
informed that the Council were degirous of transmitting to the ries made by that learned body on the subject of the Alpaca,
undertook to obtain the required information; in the meantime he inclosed specimens of the four varieties of wool, of the value
of which he had long been impressed with a favourable opinion. He fea developed in the Andes, if even the Alpacas could stand the trial. Mr. Beman communicated the mode of his trial of different
varieties of Wheat; Mr. Bennett, his remarks on the advantages of the Tweeddale tile machine; the Rev. T. J. Powell, his mode of registering (as an Honorary Distribator), the distribution of Friendly Institutions, which were referred to the Journal Comdraining tools; and Messrs. Robertson, specimens of their new grated pipes for drains. A large collection of specimens o
plants and minerals was received from Dr. Daubeny, from Spain hi
ROYAL SOUTH LONDON FLORICULTURAL, SOCIETY. or the Surrey Zoological Gardens. The weather was favourable cerned, surpassed anything of the kind which we have hitherto seen in this place. The miscellaneous collections of plants n the awarded to Mr. Townley, whose collection comprised Hoya carnosa, flowering in great luxuriance; a fair specimen of Thum-
bégia alata; Clethra arborea, with neat white bell-shaped flowers, particularly fine; Jasminum grácíle, and Lantana aculeata. In the of Clethra arborea the stockwell, there was also a fine plan specimen of Achimenes longiflora; a well-bloomed Calceolaria,
like Standishil, and Columnea splendens: for these a Middle Mr. Bruce, gr. to B. Miller, Esq., obtained the Gold Medal; his collection contained particularly handsome specimens of Achicealing the pot, and loaded with bloom; a small plant of Státice galli, very vigorous: Erica ampullácea, beautifully bloomed; a good plant of Phymatanthus tricolor, with several pret ty Ericas.
The large Silver Medal was obtained by Mr. G. Youngi in whose collection were Lilium Thunbergianum, in excelient health;
Mirbelia undalata, with prickly leaves and light purple fowers; the dark variety of Achimenes longiflora, blooming freely in a large pan; A. grandifora, equally fine; Maurándya Barclayana
alba, trained on a circular horizontal trellis; Siphocámyylus betuifefolius, in excellent health; whi Lilium eximium, Erica Boweiana, sc. The third prize (middle Silver Medai) was awarded
to Mr. Wilson, gr. to - Gilliat, Esq., of Clapham Park, whose
collection contained a not more than two feet high, yet having eight branclies, each bearing at the tip several of its gorgeous trumpetbut slightly on the decline; a pretty specimen of E. sa, in
leana, one marked M'Nab's seedling, and E. Aitoniana, in
隹 Thorne, Esq. of South Lambeth, received the fourth prize on a small upright trellis, and having a pretty effiect; a fíe speand several good Fuchsias. Small collections, from Mr. Brag5
and Mr. Schroder, were also recomroended for a prize. Mr. Jackson, of Kingston, amongst nurserymen, obtained
Medal, the principal plants in his collection being Heaths
were, nevertheless, well-grown specimens of Achimenes longi-
lora, several Gloxinias, Státice mucronata, sinuata, and pseudofora, several Gloxinias, statice mucronata, sinuata, and pseuco-
arméria. The second prize in this class (large silver Medal) was
awarded to Mr. Halley, who exhbited fine plants of Fuchsia a warded to Mr. Halley, who exhbited fine plants of Fuchsia
Iveryana, Cormacki, formosa élegans, and Moneypennii ; Statice arborea, blooming freely; Erıca eximia and tricolor elegans,
beautifully flowered; and Liftum eximium. In M. Fairbarn's

## 

 brilliant Crássu a coccinea; Linum eximum, and a dwarf plantof La. Thunbérgianmm, For Heaths the large Silver Medal was
awarded to Mr. Jackson, for an extremely large specimen of Erica jubata, and well-grows plants of E. ampullácea major,
princeps var., cruenta carvifora, a fesh-coloured seedling, Jack soni, tricolor élegans, viticliflora, jasminiffora alba, and a seed
ling from Shannoni. plants of Erica Savileana ampullácea, Irbyana Hartneili obbata umhellata, exsmia, Massoni, ampullácea rubra, jasmini-
flora alba, and several varieties of tricolor. Mr. Catleugh, of Chelsea, exhisited the only coliection of Pelargoniums; they Medal; consisting of Beauty, Nestor, Queen of the Fairies,
Priory Queen, Selina, Duenna, Erectum, W itch, Mlrs. Stirling, scarlet Pelargonium compactum was bousht by Mr. Baile, of
Hammersmith. Mr. Mragg received the midde Silver Medal for a collection of Fuchsias; arnongst them were fine plants of the
old formosa elegans and globosa major. Mr.Catleugh exhbited $F$.
arborea, Lane1, splendens, Stewártii, sang Devonia, insignis, magrifica, Una, and Cormacki1, beautifully
bloomed; but a prize was not awarted in this class. Mr, Gaines Gen, auratatia, fulections, multtifora, ilictolion (very elegant), Venus Salter's splendens, Lanel, mad excelsa. The middle Silver Medal dwarf and well-grown Cockscombs. Mr. Doran, gr, to W.
Hawes, Esy., exhibited another creditable collection. From the
latter person there were also 12 healthy Balsams, for which the niddle silver Medal was given. Messrs. Paul \& Son, of Cheshunt cut. Roses. Of the prizes given to gentlemen's Gardeners for
collections of Rose-blooms, the middle Siver Medal was awarded to Mr. Parsons, of Enfield, and the small siver to Mr. Mason.
of the extra prizes given by Mr. Deyyer, for the best 12 single
trusses of Rose-blooms, the ffrst was awarded to the Rev. Bouquet de Flore, Coupe d'Hebe, Boula ce Nanteuil, Queen of second to Mr. Young. Amongst miscellaneous single spe-
cimens, Mr. Cox received the large and middle Silver Medals small Silver Medal was awarded to Mr. Jackson, for a beau-
tifully-bloomed plant of Erica Savilleana. Of Amateurs. MI, Bragg received the middle Silver, and Mr. Cox the small Silver
Medal for cut Flowers. A small Silver was likewise awarded to Mr. Townley, for the same. Mr. Bruce and Mr. Parsons obtained
the first and second prizes, amongst gentlemen's Gardeners ; and mongst Nursery prizes were given to W. T. Flifi, Esq., and Mr. Bragg, for the
same. Mr. Garty, of Camberwell, likewise received a middie Silver Medal for Cut Flowers. The first prize for Pansies was
awarded to Mr. Edmonds, and the second to Mr. G. Young. Mr. Henbrey also obtained a prize for the same. A good coliectiox
of Verbenas was exhibited by Mr. Catleugh, and several fine
Ericas by Mr. Dawson, of Brixton Hill. The Gold Medal was Ericas by Mr. Dawson, of Broxton Hill. The Gold Medal was
awarded to Mr. Newhall, arongst Amateurs, for his collection
of Carnations, consisting of Willmer's Flora's Garland, Franklin's Dr. Franklin, Puxley's Queen and Cobbet, Smith's Mrs. Bett, Ely's Bright Venus, Martin's Conthe same. For the hest12 white-ground Picotes, the Gold Medal Orson's Adelaide, Annesley's Sarispareil, Wain's Victoria,

 Royal Horticultural Snciety of Curnwall, July $11,-$ The second exhibit. on fur the season
Falmonth. There was a good atiendayce of compaxy from dif-
ter fir display of plants and flowers, ferent parts of the counthougls choice plants were not quite so numerous as astal. The nursicmens contributed much to the gallery, and their beatital specimens contrinated anch to the plants which obtained the first phaty in flower. If bere was also another fine specimen Sutoni, Cattleya Lodulimesi, Achimeatitu perlunculata, and Oncidium pulvinatum. 'there were a fine collection of Grea of different knas, The rychich was a mafri ficent $F$. cory mbiflord frize was well grown. The Pelargontums obtained the second prize was well grown. The Pelargontuas were murh more mone They comprised same choice seedlings
good for the seain.
raised by different growers. The first prize was obtained by Mr. C. W. Fox, of Truro, tor a seedling named "Sir 4 pagh Gough;" in colour it was lrilliant and attractive, the upper pelals being of a bright searlet crimson with a large spot, amd a very free blocmer, and bears large liunches rosy crimson: from 8 to 10 ona truss. W, th it were enhihited two very beautiful, seedings, also raised by Mr. Fox; one in particular,
called sanguineum, had a very high colour, being of a rich and Hugh Gough." A group of Roses in pots was good, and in ex-
cellent flower. The Verbenas in pots were numerous. There
was a good collection of Perennials in boxes, and among the cont Whawers were some very good Pansies, Roses, stock k, and
flow
stemons; but of the latter there was only one box shown stemons; but of the rater there was onty one box shown, The
Cockscombs and Balsams were not remprkble for exclelence.
The show of froit was good, considering trat we have had a bad season for ripening. There were two pines from one person, of
sood flavour and well prown: the Gooseberies were large and well ripened, and the dish that obtained the first prize was regood. There were some good Cherries and several dishes of
white, black, and red Currants. There was one small dish of seeding Apples, not very tempting to look at, but said to be a
good dessert sruit, and an extra prize was awarded to them. tables exhibited by gentlemen were very yood, though in this
department they do not shine so well, perhaps, as the market gardeners, and the cottagers tread very clocely on their stens. the gentiemen. The first prize was again won by Mr, S. Treseder,
of Truro, whose articles were well grown and maintained his hiqh
reputation. In the zallery, Messss. Lucombe, Pince \& Co Co. shlewed Achimenes grandifora, and the beautiful Fnchsia exonilensis a veolens. Messrs. Veitch, of Exeter. showed drawings of seven new 1 innts from South America, five of which were climbers;
they were all collected and sent over hy Mr. Lobb, their collector. The clim bers were Echites splendens, E. atropurpurea, Tropectum

 bisied beaty, also a splendid collection of Roses, comprising,
about 50 choce varieties, and specimens of hary Perenials,
Yerhenas, Verbenas, \&c. Mr. Pontey, of Plymouth, exlibited several pininis,
of that new and beautiful genus, Achinenes rosea, lonifora, and gradiflora; also Brugmansia par sifora in fower. Among
the cut-flowers, which were numerous, were stephanotus forio-
bundus, Manettia elabra. Ixora rosea, Rondeletia speciosa, rec. Also a great varitety of Pelurgoniums, gmong which were Con-
steliation, Priory King, Beauty, Rising Sun, Wonder, Acme, Sir Robert. Peel, Buxhing Maid, with mnst of the new and choice
sorts. Russ, -Ghoire de la France, Brutus, Village Maid, Jose-
phine Malton, Devoniensis, Bougere, Henri Plantier, Yellow China, Violet Blue, Fulsens, Anernonéflora, Tuscany, with a
 exhinted a chnice display of horal beauties, which were much
damied. The Pelargonimins were fine, and comprised many of
the newest sorts. Amongst them were Lyne's Lord Cbrington, Lyne's Duke of Cornwall, Princess Foval, Cynthia, Heamlet.
Beauty of Exe evale, Overon, Constllation, Rc. His colcetion of
Fuch Fuchsias was good, comprisink sevcrai new and richl-coloured
varieties. The selection of Enylishil Trises was uncommonly
as woll,
as was also a beautiful collection of Gladioli, comprising many new sorts. Besides thesco, Mr. Rendle had a good collection of

 ccous Pereunial.) Ranuuculaceg. Polyandria Polygynia,-This
is among thee most curious plants that have been procured for
our gardens by the fibirality of the Fast India Con pany. It our gardens by the hbitrality of the Fast India Con pany. It Hower till July. Whether whot the flow ers whll atways prenerve ascertan elevate inself a hittle more, a whing of it in wate. This is remarkable in it, that the flowers aro not incobose, as in the old
species of Trollius, but spread open, in a starry manner, like species of trolius, but spread open, re deep orange; the carpels ireely in a mixture of sandy loam and peat, and in rather a damp situation. It is increasy punt plants grow but slowily at first, and Afrings vinins. Deep-green-leaved Air-plant. (Stove kyi1 cm Java, with sweet-scented flowers as large as those of A.
 have recently floweted at. Acrald form such a cluster of beautiful dowers as ft woud be very dificult to match rnr beaty Eqagnra qrincata. Truncated-1 Mowered Gomgora, (Stiove from Mexico by Mr. Rucker, who received it from Linden, in 1840. The flowers are pale straw lip. Before expansion they being so biunt that when flattened they are almost of the form of a haf obiong. The lip has no speckles at all, and looks as if
varnished. It has a very peculiar scent, and is a really fine decp-grecn, ylussy leaved, and it niay be anticipated tlat in a
country so mueh damper than Calfornia, as England is, it will
preserve that verdure The plant has been rajsed ly the Horticultural Society, from sceds presented by R. B. Hinds, Esq., late surgeon of H.M.'s
ship the Sulphur, by whom it was found in California in great
abondance, and forming a most conspicuous object.-Botanical abundance, and forming a most conspicuous object.-Botanical
Register.
PITcaibina mycyantua. Small-flowered Pitcairmia. (Stove perennial.) Bromeliacees. Hexandria Monogynia. This singular
Iittle species was found among some Orchidaceous plant imported
from Rio, in December, 1841 , by Lieut. Chxistopher Smith, of H.M's from Rio, in December, 1841, by Lieut. Charistopher Smithith, of H.M's It flowered at Carclew in Mareh, 1843 , and proves to be very distinct
from any other of the genus to which it belongs, as well as the
amallest that has yet come under our notice. It requires the constant hrat of a damp stove; and thrives very well eitheq in loose vegetahle
matter, of on the decayed branch of a tree. The leaves are numerous, matter, of on the decayed branch of $a$ tree. The leaves are numeerous,
flat, undulated at the margin, flaccid, spreading and recurven, finear-
lanceolate acute, from nine inchis to a foot long, and about an inch
 long, issuing from the centre of the plant, of a hrownish green,
remarkably slender, round and downy, with several linear bracts
along the stem, which is half its length, covered with fiwerg , along the stem, which is half its length, covered with flowears; while
the flowers are white, not exceeding a quarter of an inch across, dropowng and opening, one or two ata time in succession, from the
base upward.-Botanical Register.

## MISCELLANEOUS

Myatt's Pine Strawberry.-It is a very singular fact, to which we have alluded on a former occasion, that
Myatt's Pine Strawberry, one of the best of all kinds, shouid he so entirely uncaltivable by most persons, and yet should flourish with the greatest luxuriance here and
there. We last year mentioned the fact, that in Mrs. Marryat's garden, at Wimbledon, the sort succeeds abuadantly, and proves most prolific. This year it has con-
tinued to preserve all its vigour and fertility; and yet tinued to preserve all its vigour and fertility; and yet
plants from Wimbledon, transported to the garden of the Horticultural Society, are just as unmanageable as ever; scarcely growing, and bearing little or nothing.
We must, then, again beg to inquire among our correspond. We must, then, again beg to inquire among our correspond-
ents whether, since last year, their exnerience enables them to point out how this most valuable sort can be grown with certainty.
The British/ Association.-We find it announced that the next meeting of this body will take place at Cork, on
Thursday, the 1 th August next. The circulars just issued state that there will be arranged in the rooms of the Agricultural Museum, open daily to members and ladies provided with tickets, an exhibition of philosophical apparatus, models, machinery, collections of natural tion of flowers, fruits, and vegetables, open to members of the Association and Jadies provided with tickets, will take place, in honour of the Association, on Tuesday, the Exchange.
Mr. Hartweg.-We have great pleasure in announcing the safe return of Mr. Hartweg to this country, after bls long travels in equatorial America, in the service of the been ransacking Mesico, Guatemala, Guayaquil, Popayan, and New Granada, and the large number of fine plants obtained during that period bears witness to the zeal with Which bis researches bave been prosecuted.
Agriculturist, that if cows are fed upon boiled cotton seed, with a little chopped corn added, it gives the butter a rich flavour and fine yellow colour, and doubles the quantity. The cotton seed m
Disease in Potatoes.-We learn from the local papers that at a late reeeting of the Probus Farmers' Club, the consident disease of the Potato crop was brought under for some time past directed his attention to this subject and with a view of eliciting the opinions of the members of the clab, and stimulating them and others to institute cause of failure ming determine the very frequent with the following paper, confessing, at the same time that he bad obtained as yet no satisfactory result. The -The sets appear to sprout as they ought, and as others which surround them in the same field have done; but they are stopped short before they reach the surface, and left bare ; and when the ridges are dug ap, it is found that these abortive sets have formed each a little button, were, gone to rest after the effort. The disease produced were, gone to rest after the effort. The disease produced
no very sensible effects on the crops till about four or five years ago; but I have been informed by a farmer of this
neighbourhood, that he recollects a few instances in which these little dwarfs, called by the country people " Bobbin Joans," were noticed as long ago as 30 years. In the
neighbourhood of P'enzance, a great Potato country, the failure of crops from this cause has been more general and more destructive than in this part of the county, in This information I derive from a gentleman residing there, on whose accuracy I place great confidence. Without dwelling on the name, then, let us inquire as to the thing,
unde derivatur "Bobbin Joan?" The form in wich unde derivaiur "Bobbin Joan?" The form in which owing to the soil or the seed? Whether, in fact, some principle necessary to the growth of perfect Potatoes is sive culture, extracted? And, again, whether the excesmay not have contracted some disease, or perhaps bave exhausted that vitality which we know will last only a limited time after the creation of a new plant from an unlimited surface by the propagation of its offspring. And this latter supposition is that adopted by the gentleman to whom I have before alluded; who says that the
Potatoes in his neighbourhood "have degenerated, are
degenerating, and ought to be regenerated." I shall first let me give the history of sorne of his experiments. He first tools some Potato sets from a field which was much infested with "Bobbin Joans," and planted them were some, but not very many of these abortions. He then planted sets of a fresh sort in the ground previously supposed to be infected, and the crop was entirely free neigbbourhood has made the same experiments; and though the result agreed with that obtained near Pen zance only in this, that good sets produced perfect
Potatoes in ground which had previously produced Potatoes in ground which had previously produced
"Bobbin Joans," I think it is enough to prove that the condition of the soil is not the true cause of the complaint. The point in which the issue of the experiments made here differed from that arrived at near Penzance, related to the reproduction of imperfect Potatoes from diseased
sets. Here none such appeared ; but there was a good and healthy crop. Moreover, I have planted in gardenground, the very "Bobbin Joans" themselves, in which, if anywhere, the disease must have prevailed; and in due of which was sound and of full size. From the foregoing experiments, it appears to be clear that the condition of there is is not the sufficient cause of the effect, an constitutional debility in the plantion that disease decrepitude of age computed from the original sowing, which explain the loss of energy in the plant Then, I think, easily revived foont for other canses account for the stunted growth described; and the mode of planting the sets suggests itself as the most natural and the habit which between the effects thus produced growth of certain bulbous plants. The common autumnal Colchicum, for instance, if planted too deep, will make a shoot which stops short of the surface, and then forms ensuing year ; and I have even seen cases when the plant has been accidentally buried very deep, where three or four of these bulbs have been formed at nearly equal disjourney to the surface by stages. Therefore, planting too of the caus of the production of "Bobbin Joans." The root may not have strength to reach the surface ; and so transfers a very imperfect solution of the difficulty ; for in a fifeld where the culture has been equal, and apparently there has been no variation in the depth of the plants in diferent parts, "Bobbin Joans" have occurred in one place remark is entrely wanting in every other. This same me, that applicable to che idea which suggested itself to ight might account for the imperfect arowth of the set as described in the third volume of the Horticultural Society's Transactions, page 48. It is there stated that produce covered with sand, and placed in a cellar, will The author thus explains the phenomenon. "The Potato, from the abundant nourishment which the disposition to vegetate; and it seems to be possible to place it in such a situation that the vegetating power, to form stem from exerting itself upwards 80 a out mond with their appen emplan in throwing out roots only with their appendages." But I do not to prevent the vegetating power from exerting itsel tion for the natural history of "Bobla following circumstances seem to point to that direction and $I$ submit them to the growers of Potatoes as leading to a conjecture to be verified or $r_{2}$ contradicted by their experience:-From a beap of Potatoes lately turned, some three examples have been brought to me in which the shoot ad been suddenly stopped by a small tuber. On cutting open the Potato, I found that the inner substance had entirely decayed away, and not more than half an inch remained of the interior substance. This, however, appeared to be perfectly sound. Furthermore, on referring again to the farmer from whose field I first got the "Bobbin Joans," and who had suffered severely in his crop in
the season before Iast, I learnt that the Potatoes from which he had taken the sets which produce the defective crop, had been drawn in very wet weather, and stowed Way without being properly dried. They had remained though unperceived when the Potatoes were cut, had produced some change in the substance unfavourable from any other cause, and peating by fermentation, duce the same sort of disorganization ; and I think not difficult to conceive that the starch of the Pota before the young plant is in a condition to absorb it, the set may be rendered unable to afford the nourishment requisite for healthy growth. What remains of the original substance may be simply transierred to the little transferred to the root-leaves, before those leaves have begun to perform their functions, and attract from the atmosphere the proper nourishment for the infant shoot. The r.asoning which I have thus indulged in I confess is and practical conclusions, and I offer it in the hope that
the subject may be taken up by a more experienced agriculturist. In my hands the result pretends to no mor than to be conjectural, and my sumise ane follows 1st. That a chemical change may occur in the internal substance of a Potato which the eye cannot discern ; but young play render it unfit to afford nourishment young plant in the first season of its growth. 2d. Tha hess, by heating orposition may be produced by dampcare is requisite to preserve that portion of a crop which in intended to plant again in the most perfect otto health and integrity.-Carclew, A pril 18, 1843. P.S.-Since writing the above, a circumstance has bee plicable, according to the view which to be entirely inex . cojecture $:-A$ large quantity of Potatoes were out fo sec. . Some of these were planted in the morning, and planted in the morning the same day. Those which were evening proluced dwarfs, and ended in a failing crop men. and the result may be thus explained. The sets which were at the top of the heap were sown first ; and these would be less affected by the exclusion of air and the pressure of the heap. Those sown in the evening were a weight of the mass above them,-at all events, fermentation would commence there ; and therefore the chemical change of substance which would end in fermentation would paper, a rather long and interesting disease in question. Its destructive effects were acknow ledged by all, but so completely were the opinions of the members at variance, as to the cause that it was recom mended that experiments be instituted forthwith, and we recommend otuers to do so also, so that we may now hope, will be thoroughly in brought before the public, that will be thoroughly investigated

The Journal of Agriculture, and Transactions of the Highland and Agricultural Society of Scotland. New
Series, No. I. Blackwood. Tне appearance of
THe appearance of this excellent periodical is always welcome, and we are glad to find that the commencement of a new series furnishes those who are only now turning their attention to the science of Agriculture with the opportunity of becoming subscribers to it. As usual, the papers of the Highland Society demand the greatest share of attention, but in the Journal itself are several articles well worth perusal.
In the first article, Professor Johnston takes advantage

of the recent subscription in Scotland for securing the services of a chemical adviser in the farming interest, to poiut out in what way he considers suck an oficer woud
be most useful. Among other things, he recommends Lectures as an efficient means of diffusing modern views Lectures as an efficient
agricultural science.
"If, for political purposes, oral addresses are considered the mosteffectual means of influencing the popular mind -and if, for religious and other benevolent ends, a peripatetic agency is found the most effective-- way siourin the same means be useful in the dissemination of agricul-
tural knowledge? $I t$ is in vain to publish books when men refuse to read, or to reason upon paper to those who something in the fervour of the living voice which the dormant spirit cannot withstand, and in personal appeals to the understanding which even those uaaccustomed
think will scarcely be able to resist. In the proposed peripatetic character of the chemical officer, I see the ready means of accomplishing, in part at least, this great good. Stored with all the available knowledge which geology, chem-
istry, physiology, and botany have yet supplied, he will, as a part of his regular duties, visit now in this and now in that district of the country. He will lecture in public, and a few here and a few there, will form so many smaller centres from which knowledge shall gradually circulate among all. And if much time must eJapse before all parts and deputies I have supposed to accompany him will lessen in part this unavoidable difficulty, by carrying the advantages of each address to the more distant parts of the knowledge may be diffused among the agricultural classes more rapidly than by any method ever hitherto tried? It is true that lectures upon science are occasionally given in
the provinces; but why leave them to the chance of a stray visitor, or to that of imbibing wrong notions from a half-instructed lecturer? Even were such instruction generslly provided in our universities, why sloulat those not permit them to repair to those distant fountains !
Why, especially, should this be the case in reference to a subject so important as the culture of the land, and in the case of a body of men so invaluable to the State as those to whom this culture is entrusted? It will not be considered as an unimportant consequence that the will be supported and strengthened by it-the objects it has in view more fully brought out and appreciatedand its influence for the bencfit of agriculture extended even rise. Is the balf of Scotland yet awakened to the connection between science and ggriculture?-to the benefits which the former already has conferred, and promises in future still more to confer, upon the latter? Will they soon awaken to it, or will they awaken of themselves?
know of nothing so likely to rouse them as the sound of the living voice.
There are those who believe that the analysis of soils whl lay the foundation of good cultivation. We believe and that it is to the analysis of manures and of crops, rather than of soil, that we must look for chemical assistof soils are as much as a good chemist can perform in a year, and we believe this to be near the truth; and if so, derived from such analyses, in practical agriculture, can be equal to the necessary expense of obtaining them. We are glad to see that Mr. Johnston looks at this subject
in the same way as ourselves. We quote his observations in the same
soil, and apparently very simple method of improving the mend the prosecution of refined analyses, is founded upon the following mode of reasoning. Take two soils, one fertile, one more or less unproductive : analyse the former, and you see what a fertile soil contains; analyse the latter, and you see in what it is deficient; add these defective substances to the unfertile soil, and, making the two soils posing that when thus mixed, the two soils would prove equally productive-which is by no means a necessary Conseguence-there are so many causes of diversity in result of an analysis can rarely be trusted to as indicating What the soil is actually in want of. In different parts of consciously gathered, that a rigorous analysis of any one while if the exhibit the general constitution of a whole field, samples, the analysis of the mixture will give the composition of no part of the field whatever. Soil gathered from the same spot also is liable to stch diversities, that, a given substance, while at another it may find the same substance wholly, wanting. In summer when the hot sun draws up the moisture from the soin, it
bringes fing with it whatever soluble substances it holds in solution. But when it reaches the surface, it evaporates, and leaves these behind it; and upon somesp accumulate 80 much, in a hot summer, as the soily to form a white saline crust upon the surface of the soil. Collect
the soil at this period, and the chemist will pronounce it to abound in a remarkable degree with sulphate of soda, or sulphate of magnesia, or sulphate of lime, or sulphate of iron, or sulpliate of alumina, or common salt, or
chloride of calcium; and whatever bad qualities the soil chloride of culcium; and whatever bad qualities the soil
was known to possess, he may ascribe to the excess of these or other soluble substances he has found it to con-
tain. On the other hand, collect it after a season of
washing rains, and-especially if the soil be lightscarcely a trace of the same soluble substances may be found in it; and thus chemistry might bid the practical man to add to his land what it already abundantiy conwhich. Such dificulities lying is the way ormples of a whole field, and at every season of the year, it is obvious that much uncertainty must attach to the results of analysis, both in regard to the constitution of fertile and unfertile soils; and that he who founds upon this basis alone his prescriptions for improving the condition of the land may often form erroneous opinions himself, and may induce practical men to incur expense which can lead to no sensible good, and may actually diminish the amount of his a view to certain special objects, is neither worthless nor deserving of neglect. One soil, by an easy examination, is found to be deficient in organic matter, and the advice may be-try the ploughing in of a green crop; anotrer
may contain much vegetable matter in what is called an inert state-- try upon that a dressing of hot lime; a third may contain sulphate of iron or alumina-drain, deep plough, lime, (or marl, and summer-fallow such land, and you take the shortest road towards a cure. Again, one may ask- Why does lime not benefit my land aready, and must have a season of rest from liming ; or because it poor in organic matter, and requires more liberal supplies your land requires draining. So the subsoil may be yellow and noxious when brought to the surface, or it may kill the roots of plants when they descend to it. Then a simple examination may prescribe draining, and subsoiling, and the noxious matter may be washed out by the rains, it may be rich in lime, which has sunk from the surface, and, after frequent limings, has produced a real marl bed beneath, affording a congenial harbour to the pestiferous coltsfoot; and here the chemist ray say, plough your the cost of lime for a season, and will rid yourself of a In anoter
In another place, in the same paper, the statements of Liebig are taken toillustrate the atility, or rather necessity, to to be led into expensive errors by false theoretical views.

Observe, by one or two examples, into what practical errors the propagation of a mere theoretical opinion may
lead. It has been long known that the stenis of the Corn crops-their straw-contain much silica; and it has been soda, and chiefly the former, that silica is enabled to enter into the plant. Upon this opinion, Liebig-whose name has recently become so familiar in connection with scientific agriculture-based am explamation of the benefit of naked and green-crop fallows. He broadly announced that Wheat grows well in this soil because it contains much potash-refuses to grow in that because potash is wanting, and that the efficacy of a fallow consists in its allowing the potash of decaying minerals to accumulate in crop of corn. What was this, but to say that, by adding potash to the soil, you may grow Wheat after Wheat for an nnknown period? How important, and yet how simple, a discovery this! No wonder that it attracted the attention, and excited the hopes, even of the more instructed farmers, and that a kind of potash monomania should have spread among the distressed agriculturists from one end of the island to the other. Then was the flood-gate opened for new varieties of quackery, and every large town speedily produced its own chemical-manure mahufactory. of this opinion of Liebig. A green crop favours, he says, the after-crop of corn, by allowing the potash to accumulate; and yet, according to the a four years' rotation, possess, of from the soil ten times as much pytash and soda as the two corn crops. Where is the possigility, then, of accumulation? what becomes of the theoty? what the quack manures? what of se hopes oultimate benefit thus
succession? It may produce some to unsettle men's minds; because it will lead some to bink, to inquire, and, at last, to make conkiderable approaches towards the truth; but it causes an impediate pecuniary loss to many, and disgusts mote wilt the lapplieven its best-founded prognostications.
"Again, in another case, Liebig reasons as follows ? Wheat straw contains about 16 per cent. of inorganic martey straw, 8 per cent., and oat straw 4 per cent.therefore, "upon the same field which will yield only one wheat, two crops of barley and four of oats may be grown. .ad thes-add to the soil those substances contained in
tical the straw, and, if you wish a crop of barley, add twice, or wheat, an easy thing to farm land upou chemical principles ! Yet the facts from which Liebig's opinion and the practical rules are both deduced are incorrect. There is seldom the three kinds of straw in question, when grown upon the same soil. They all vary, leaving, in general, from 4 to 8 per cent. of their weight. Y litte is nothing then reason from. Howdation for such unsound opinions!"
In an article by Mr. Main, on the Means of supplying Air to the Roots of Plants, are some observations upon

Draining, which deserve the attention of many practical men. "It is surprising to those who know but little of the nature of the various strata of the earth's surface, how easy it is in some cases to get rid of surface-water. For instance, if there be wet and dry places on the same field, the owner may be assured that a bed of clay, or other kind of earth impervious to water, lies beneath the wet, and a porous subsoil beneath the dry, places. A drain of sufficient depth opened (and filled nearly to the surface with stones or loose gravel) from the wet to the dry places, will certainly render the whole dry. In my own practice, and acting on this principle, I have been in many cases very successiul in laying arable fields dry. Two cases I may mention as examples:-A field of eleven acres, of a fine loam, suitable for whent, beans, or indeed any other crop, had a hollow near one of the ends, which was every winter filled with water, and ruinous to wheat or grass, very frequently to the extent of between two and three acres. This I resolved to drain. A neighbouring farmer predicted that the attempt would be a failure; because his father, when tenant, sunk a shaft to the depth of above seventy feet in the lowest dip of the hollow, and filled it with stones, excepting that this would form a suallow for all the rain and melted snow retained by the hollow. But this expectation was not realised ; the water first filled the pit, and then flowed over the land as before The cause was easily comprebended: the pit did not reach to the chalk-rock, nor did it pierce through any porous stratum; its loamy sides and bottoould escape. lan was different I saw marks in an adjacent field of where chalk had been drawn at some former time ; thither I opened a stone-filled drain below the ploughshare, from the lowest dip of the hollow; and, when the water had accumulated, it ran towards the old chalk-pit, but totally disappeared long before arriving at the place, and thus was a valuable field laid dry. Another arable field contained a pond, which very often overflowed its boundaries. Lower ground was at the distance of half-a-mile ; and the expense of forming so long a drain prevented all attempts to get rid of the annoyance. 1 advised the bank of gravel, into which frem water pond up into a high ately; and ever after carried off all excess. By this simple expedient a large piece of excellent land was reclaimed and brought into a regular course of culture at a very trifting expense."
Among the papers furnished by the Highland Society is one by Professor Traill, on the Production of Butter, which will be read with interest, but of which we can only pive the conclusions, which are as follows:-

That the addition of some cold water during churning facilitates the process, or the separation of the butter, espo 2 . What creas thick and the weather hot. 2. That cream alone is more easily churned than a misture of cream and milk. 3. That butter produced appears to keen that the buttermilk so obtained is poor and small in quantity. 4. That scalding of the cream according to the Devonshire method yieids the largest quantity of butter, which, if intended for immediate use, is agreeable to the palate and readily saleable, but it intended to be satted, is most liable to acquire, by keeping, a racid mavour. The process of scalding is troublesome; and the milk, after the removal of the cream, is poor, and often would be unsaleable from the taste it has acquired from the heating. 5. That churning the milk and cream together, after they have become slightly acid, seems to be the most quantity process on the whole, the buttermilk is of a good quality-a point some importance when buttermilk is lorely Lancashire. 6. That the keeping of butter in a sound state appears to depend on its being obtained as free from uncambined aloumen, or casseine, and water, as it can be, by means of washing and urorking the butter when taken from the churn."
There is also an instructive report upon the Use of Manures, by Mr. Maclean, of Braidwood.

Maclean states 'that the severe drought of the season has been rather unfavourable for the full development of most of the fertilising qualities of the great pro-
portion of the applications experimented upon. The farm, however, is situated in a mountainous district of country, at an elevation of between 800 and 900 feet above the where the copious dews, falling vightly upon the grass, would, in some degree, assist in rendering the manures into a more soluble condition than could have been expected to take place in a climate more genial and dry.
From the great benefit the whole fof the applications derived from the genial showers which fell from the 28th Jute to the 10 th July, it is evident that the fertilising qualities of artificial manure are brought more completely into action in a moist season than io a dry, and all crops appear to improve in damp weather; but the seedling grasses and clover plants seem to receive a stimulus which no condition the land could be, put into by the most liberal application of farm-yard manure could convey to them. Plants as well as animals are benefited by a change of the same kind, and none more so than a continuance clover plants, which circumstance often draws from intelligent and experienced agriculturists, the common remark, 'that the land is tired of producing them.' The experiford therefore, trusts that the following tables will afford ample illustration of the benefits which grass crops manureses experimented upon, and as nothing tends more
to keep up the fertility of the ground than a luxuriant herbage, the ultimate profit to be derived from the application of these manures must not be regarded as limited to the grass crop alone. It will be observed from the tables that luxuriance in crops does not always imply a proportionate degree of weight ; for example, that portion dressed with salt was always inferior in its appearance, and yet the weight of the produce is ample.

It is also somewhat curious that the weight of dried hay per acre from the portion dressed with soot is only 200 stone, while with a mixture of sand No. 2, it is 202 stone; with No. 3, peat-ashes and soot, it is 217 stone -No. 4, clay-ashes and soot, 220 stone-No. o. 7, subsoil
and soot, 230 stone ; and with No. 8, compost and soot, 202 stone. These various substances being mixed with the soot, may, perhaps, give a more full development to the ammonia, which principally constitutes the fertilising qualities of soot. The subsoil of No. 7, was of a rather rich quality, having a marly texture; the whole of the substances were in mixture with the soot about forty-eight hours, and were in a dried state before being mixed. The great produce and weight of dried hay, and the ultimate profit per acre, from the application of guano, No. 6 ; saltpetre, No. 11 ; and nitrate of 80 da , No. 12, give the manures for seedling grass crops.
would engage to have two peach-houses, everything as to soil and situation being the same, and I would almost destroy the trees in one house by artificial gum or canker, and the trees in the other house should be nearly, if not altogether, free from it. This, I admit, is a very bold assertion; but the following experiment eaables me to make it with some degree of confidence:-I had a small Peach tree growing (or rather dying) against a south wall, which was so affected with disease, that it had only two living buds on it. I potted it, and set it in the peachhouse, to see if I could restore it to anything like a healthy state. One of the buds was knocked off by accident ; the other bud grew, and did pretty well. The second year I planted it against the west end of the house-its aspect being east. Having, us $I$ fancied, traced the disease to external causes, I disbudided, as we gardeners term it, two buds on the little tree in question. The one bud was pinched off, leaving one small leaf to it; the other was pinched off without leaving a leaf, but leaving the nucleus pinched off without cultivators of the peoh suds treated in the practical cultivators of the Peach. buds trated in the latter mode never put forth again. Over these denuded buds I fixed an open vessel of clear rain-water, in which I placed a wetted worsted thread, one end of it hanging over the side of the vessel in a perpendicular line with the buds. By the well-known law of attraction in this case, the thread dripped its regular supply of water on the denuded buds, which were allowed to be kept moist, by this means, rer the days at a time. Then the thead was removed, and the buds allowed to be dry for a day or two, when the water was again applied; and thus we proceeded with those alternations for a short time, occasionally examining the buds. On the first examination I could not oerceive anything remarkable in their appearance; but, by and by, I fancied I saw a slight discoloration of bud. bark becoming darker in colour, and small glubules of gum, as clear as drops of rain in the sunbeam, exuding krom the bark, about an inch below each bud. After applied, and in a short time the gum took its well-known dark amber colour and the burk its well-known brown Thus the disease was fully established artificially; and here the branch is on the tree for any person to seemany of my neighbours having already seen it. At the present time there is gum hanging on the said branch and any stranger would take it for the disease in its natural way, as there is no discernible difference in it. In fact, I do not think that the branch will live much longer, as the disease has almost extended round it. I had, for years, felt pretty certain that by far the greater number of cases of the disease made their first appearance at or near the buds in the Peach tree, but never could decide exactly how the dawn of its existence trok place, till I had the satisfaction of witnessing it in the above simple experiment

In Peach trees, generally speaking, and probably in many other trees, natives of warmer climates than ours, there are always more or less of what gardeners term abortive buds, both of wood buds and blossom buds. This abortiveness establishes itself earlier or later in the autumn, or probably from the vicissitudes of a severe wiater, such as the last winter, for instance; when in the latter part of January we had here April-like weather, but on the 15 th, 16 th, and 17 th of February, the thermothe blosin to 17 deg. below freezing, which rendetwithstanding their growing against a south wail. The abortive wood-buds are more numerous in those trees which are rather declining in vigour, or in those branches of a young rather decherg by its more robust neighoure, or, which is often the cuse, by tore on branches whith have borne too much fruit. Mmatters Itle, the dised, hare the disease commences its sileat but certan and destructive operations. When the buds are dead, they, like all dead vegetable matter, become poworal water, whether of the finely-divided vapours of the atmosphere, or the more condensed form with water. So hence, after rain, they.become gorged with water. So long as these dead buds rest on the trees, there is little or which they rest on ; or, at all events, not before they have been saturated with moisture, which first saturation, after death has taken place, enters iato the most incipient fermentation with the sap of the plant, at the connection between the dead bud and the living branch. By the alternations of wintry weather, from wet to dry, and proaches, the frost, freezing the water in the dead buds, enlarges their capacity for holding the destructive element, which assists in carruing on the fermentation between the alburnum and the bark. In this infant stage of the disease, it is not discernible by ordinary observation, as the disease has entered the colour for some time after dry weather follow the recent establishment of it, its ravages are arrested for a time, but which, nevertheless, ravages are arrested for a time, but which, nevertheless,
progress as the sap attenuates, when the disease maniprogress as the sap attenuates, when the olsease mammore than to the eyes of the gardener, who has carefully morepared his well-drained border, as a preventive or cure of the past in question, and who finds, as I bave found, that the whole 'root doctrine,' as a cure of canker on the that of the tree is next to a allacy a cure of canker on the head of the tree, is next to a fallacy, save, as i have above stated, that a soil should possess ingredients which win
produce a tree sufficiently vigorous for the purpose inproduce a tree sufficiently vigorous for the purpose in-
tended, avoiding that state of exuberance which prevents it.
"There are, however, some other features of the disease met with during the summer which camo for instance, as a abortive buds for their origin. Such, for instance, as a luxuriant sboot being attacked by it-and, if not seen art time, it soon destroys the branch: but it the shoot probe cut outwith a sharp knife, the economy of the shoot pro ceeds as though it had not been alace or will be instances, some of the sut a few inches in length. The former case may be attributed to the punctures of insects, or other accidents, when the water enters, and summer to assist it in so doing. In the latter case, it may easily be traced to buds which have been partiaily affected; that is, buds which have not been quinifested itself, and, when the bud shoots out, it carries the disease (only on the bark) with it, not by absorption, but by extensionent, by the force of absorption or the rising of the sap, just as coloured infusions are taken up by the living vegetable, would seem probable; but i. it must be in its early stages, before gum is established, us afterwards its so doing seems impossible. There are cases of the disease, however, in old branches of long standing, which, from their lack be sap, seldom if ever protion, but even here I have not been able to trace it. It may, and, no doubt, has been sup posed, that it is the disease which renderciment, and the tive in the first instance; the above expehouse frequently fact that the abortive buds in a peacb-house frequealed, drop out of their receptac
go to prove the contrary
There are also some observations by Mr. Pearson on the doctrine of root excretions poisoning land, but for his opinion upon this subject, in the case of the Raspberry, we must refer to the work itself.

## The Art of Living. By Dr. Henry Dubring.

We cannot introduce this work to our readers better than in the words of the author, who thus explains his plan :Of all the various branches of usefur knowse to possess and to it can be the object or our eme greater importance to every human being, than that knowledge which teaches us in what manner, and by what means, we may bope to render our existence as pleasant or happy as it possibly can be. However, as to teach in a few short essays, like the following, so extensive a knowledge as the art of living, physically, mentally, and morally considered, could not be my object, evera if I felt myself capable of undernot be my object, even if i heit myse preferred to single out for illustration a feew of its most important general principles, on the due knowledge and skilful application of which our happiness mainly depeeds, and which to know must therefore be of importance to wise the conditions, much happiness frilities of which we hardly, if at all, are acquaint

## ot sown <br> Among the five principles which are taken by the author

 and the foundation of man's happiness." He shows how this is in a chapter from which we make the folefulness, it is not As, in order to secure hature that we must labour, but only a condition of we labour in such a way as to produce something useful or agreeable; whatever lives, grows, and undergoes changes before our eyes, if prodaced by our own labour, must be more productive of enjoyment to us than and trains trees, strikes plants from cuttings, or sows grass-plot in his garden, lays, as it has been well observed by Mr. Loudon, a more certain foundation for enjoyment, than he who builds a wail, shoots at a mark, or plays at bowls. The pleasure which is enjoyed trom the contem. plation of what we have planned and exccuted ourselves, is also infinitely greater than the pleasure nhich can be planned by another. For our own work is endeared to planned by, another. For be met with and conquered at us by the difficulties we have met has its history, and recallsevery step; and every suci step, every step; and every suciastep has is connected with it. The Jove of the heauty and sublimity of nature is also an inherent principle in the hunsun soul, though it may not be equally developed, or of the same strength, in every individual. And, if we may believe vi. Repton, another high authority in these matters, the good and the wise of all ages have enjoyed their purest and most nnocent pleasures in a garden, from the beginning of time, When the father of mankind was created in a garden, till the fulness of time when IIe,

These extructs so entirely explain the tone and feeling of the author in managing his subject, that and foment on our part is superfluous. We have no deter tacquainted with Dr. Duhring's book, which we can safely recommend to their perusal.

Elements of Practical Agriculture. By David Low, Esq., F.R.S.E. 8 vo. Longman so Co. 4th edition. The opinion of the public has been pronounced in favou It is the best treatise on Agriculture in the language, and this is much the on Agrion it. A passage in the Preface is so full of practical wisdom, and is applicable
with so much justice to Agricultural affairs in their present state, that we cannot do better than quote it, partly for its intrinsic value, and portly as an indication of the manner in which, in this greatly improved and revised edition, Professor Low has extended the matter of his valuable pages.
"In the present edition I have entered somewhat more than in the previous ones into an explanation of what may be termed Principles. Thus, Ihave treated more in detail of the soil, of the external agents which infuench added to it, increase its productive powers. Public attention has been particularly directed to the subject, and this is highly to be approved of and encouraged. But we must be careful that we do not generahse faster than our actual knowledge will warrant, and substitnte theories for ine application of known truths, in the vain he farmer and improving Agriculture. We instructing the farmer and improving Agncult the advanmay be assured that Agricutcure
tages which science and advancing kncwlecige are calculated to afford. But we may retard and not hasten the result, if we urge our pace too precipitately, and seek to
consider truly the nature of the art which we consider truly the nature of the art winder which our principles must be applied. There is just reason to hope that Agriculture will be improved by the cautious appocation to it of the means which liter bractation of our ledge may supply; but there is hitie expectato the cultibeing able suadenly 0 op of art which, more than any other is fimpovement experience acquired, and which demands the application of steady labour, economy of means, and practical skili in all isd detlage, and elsewhere, adverted especially to this subject, and endeavoured to show the mistaken applications which may be errors into which persons, little conversant with practice, are apt to fall, with respect to the kinds and degrees of knowledge required to be possessed by the practical farmer. With equire in have treated somewhat more in detail thay in the former editions of the rarer substances which may be employed as manures, chiefly the Alkaline Saits, to the more extended use of which the farmers of the country have been gradually conducted by the which our numerous manufactories afford. It is beyond a question that many of these substances are calculated to afford valuable subsidiary manures to to the general resourcot lead the farmer into errors of practice by presenting to him conclusions not warranted by experience. been recently recorded win dinerent suir superiority chiefly the Alkaline Salts, and inewe over the manures has been sometimes too hastily Now, the knowledge of more accessible to the is mormers of this class of substances, is non of them, Saltpetre, which this and ocher cont is amongst the most pormand for more than a century o the farmers of england oxperimentally in competiWhen with farm-yard dung, with reference to the effects upon any crop, the balance would seem to be all in favour of the stronger application. But it is manifest, that, in such a case, an essene permanence of the effect. Farmomitted, namely, thre of the farm itself, and on thi yard manure, the post valuable of any manure to the farmer, has an effect which is calculated to last for an least a course of crops, while the efiects of the Alkaling Salt are rarely perceptibie beyond the season in competi is used. When the same substance is tred to be, that it tion with Lime, the conclusion would seem to be, that the was amongst the must useful of manures, and the salt Lime was comparatively worthless. Yet, whict for the exerts an action so traysient, add to the permanent fertility of the soil and farm.

## NEWS OF THE WEEK

Tre accounts from Spain announce the surrender of Madrid to the insurgents, after a brief engagement, in which the troops of the Regent under Generals Seoane and Zurbano went over to the capital, after a succesNarvaez is therefore
sion of marches and counter-marches, manoenvres and tactics, which have, perhaps, no parallel in military history. The triumph of the insurrection and the defection of the troops have been so sudden accomplished by other means than an appeal to force, and Spain has thereby been spared from the renewed calmmities of war The movements of the Regent are still involved in uncertainty, and are explained only by theording to the last accounts, he was in the neighbourhood of Cordova, apparently retiring within the frontier of Portugal. The future policy of the iusurgents is of course the object of grea the Christino party in Paris. Their avowed exultation a the present crisis of affairs leaves little doubt that the recent movement originated in the French capital, where reserve. According to these rumours, the restoration of the Lopez ministry, the declaration of the Queen's majo rity, and the choice of the Duc d'Aumale as the husband for her Majesty, are likely to be the first measures of the party now in nower.-From France, we learn that the Repeal agitation, set on foot by the Republicans of the capital, has made but little progress, and is indeed discountenanced by the leading papers. Mr. O Conne had speech, repudiating the necessioducing this result; and there is some doubt whether M. Ledru-Rollin, the Repeal delegate, will now visit Dublin. The Chamber of Peers on Saturday voted the Ministerial Budget by a large majority, but postponed the Government bill for the Tours and Orleans railroad to next session. The two ordonnance. - From Italy, we learn that the long-pending treaty of commerce between Great Britain and Naples has been signed and forwarded to London for ratification; and from Turkey we have the confirmation of the statement that Prince Alexander Georgewitch has been unanimously elected Sovereign of Servia.-From the United States we regret to learn that the Columbia steamer, which we announced totally lost. The crew and passengers were all saved, and have arrived at Liverpool ; and a great deal of the property on board has also been secured. For the details of the accident, which appears to have been altogether unavoidable, we refer our readers to our Foreign news.

At home, however, another steam-boat accident, more calamitous in its consequences, is reported under our
Provincial intelligence. The Pegasus steamer, from Hull to Leith, has been lost on the Fern Islands, near the scene of the well-known wreck of the Forfarshire steamer, and all her crew and passengers, with the exception of six persons, have perished. The particulars are fully given in another part of our Paper, and will be read with melancholy interest. In Parliament, during the week, the proceedings have been mostly of that routine character which always indicates the approach of the close of the Session. The Irish Arms Bill and Lord Lyndhurst's Bill for legalising Irish Marriages have been passed in the Commons, and several other measures mentioned in our Report have been advanced in their respective stages. It is generally exp

## C'oloninl Bushonics.-The second report of the arch-

 bishops and bishops forming the committee appointed to dowment of additi Govament for the erection and enhe following stational sioprics and expenditure to and of June, 1843:- Special fund: donations and subscriptions for New Brunswick, Ceylon, Cape of Good Hope, Soutir Australia, China, New Zealaud, Tasmanis, and Gibraltar, 4,935l. 14s. 1 d . General fund: 60,2497 . 13s. 4d. The expenditure, including 32,500l. invested in Exchequer Bills and other Government Securities, has been 23.3906 .18 s. The repurt siates that $t w$, of the brapops consecrated for sees newly funled have now been for some ime on their respective spheres or labour. first visitation Zealand (Dr. Selwyn) had favourably of the progress of religion in these settlements. The Bishop of Gibraltar, having resided some weeks at the metropolis of his see, and for a considerably longer period at Malta, and, having nominated an archdeacon for the general superintendence of ecclesiastical affairs in each of those places is now engaged in visiting the several cities in which the English congregations have been gathered together in the islands and on the coasts of the Mediterranean. Already he has exercised the functions of his office at Athens, Smyrna, and Constantinople, where, office at Achen, considerable congregations in communion wath the Church, no Anglican bishop had ever before been seen. The Bishop of Tasmania (Van before peen seen. The. Bishop of cese at the end of Diemen's Land, who salued for ins diocese days at the February last, undertoox to remain arainister the rite of confirmation. The committee bave determined on appropriating a large portion of the fund remainiug at their disposul, namely, the sum of $20,000 \mathrm{l}$, towards the endowmeat of a bishopric in New Brunswick. The contribuat the date of the last despatches, to 2,1501 . The Bishop at the date of the last despatches, to $2,150 \%$. The Bishop of Australia, though lately reilieved froni the care of New Zealand and Van Diemen's Land, is still charged withectual superintendence, and he has, in a recent communication, pleaded earnestly for the erection of a distinct bishopric in the thriving settlement of Port Philip. The Bishop of Calcutta has also recommended the subuivision of his own enormous diocese, by the erection of a bishopric for the nortbern provinces of India. The committee intend, in the first place, to recommend to her Majesty's Government, as soon as the adequate endowment shail have been secured, the erection of a separate bishopric for the province of New Brunswick ; afterwards for the other amportant colonial settlements, in the order suggested by the joint considerations of their intrinsic claims, the offers of assistance, and the probability of success.The Chinese Expedition.-A parliamentary return just published shows that the sums paid or to be paid on account of the war with China, amount to $2,079,8736$, of balan sum 804,964l, are required to states due to the Last 13 . 5 , will be required to make good to coin holders of opium surrendered in China in March, 1839, the amount of compensation due to them under Art. 4 of the treaty of peace. The above amount, however, includes a sum of 29,2892 . 11s. 9 d. as a claim by two Parsee firms,
of which depends on further explanation

## $\sqrt{\text { Foretan. }}$

France.--The great subject of remark in the French papers is Mr. Connell's comments on the radical meeting All of M. Ledru-Rollin was deputed to visit Dublin. proceedings in Paris (now so decidedly repudiated by the Repeal Association), and recommend the matter to be allist of subscriptions in F . Cin favourof the repeal agitation in Ireland ; this list mounts to $412 \mathrm{f}, 50 \mathrm{c}$, making the total gmount subscribed 11375 50c.-The Chamber of Peers sat on Friday, and, despite the efforts of the

Minister of Public Works, postponed to next session the ministerial bill for the construction of a railroad between
Tours and Orleans. Immediately after, the bill for enabling the Government to pay the interest due on the part of the Greek loan guaranteed by France came under discussion, and passed by a majority of 96 to 4 . On majority of 98 to 4. The two Chambers were formally closed on Monday by Royal ordonnance. The attendance in both houses was exceedingly small, and the whole ceremony, which terminated with shouts of Vive le Roi, did pected, the Moniteur publishes a Royal ordonnance appointing Vice-Admiral Baron de Mackaw Minister of the Navy and Colonies, in lieu of Admiral Baron Roussin,
who has resigned. The domestic intelligence in the who has resigned.-The domestic intelligence in the despatch from Brest announced, on Sunday, the arrival
of the Prince de Joinville and his young bride from the of the Prince de Joinville and his young bride from the
Brazils. They are expected immediately in Paris. The appeal of the celebrated Vidocq against the sentence of
the Tribunal of Correctional Police, which condemned the Tribunal of Correctional Police, which condemned
him to five years' imprisonment and five years' surveillance, came on before the Cour Royal on Saturday. After the speech of the Advocate-General, the Court, withou
even hearing Vidocq's counsel, reversed the sentence even hearing Vidocq's counsel, reversed the sentence.
Vidocq was immediately set at liberty, and was warmly congratulated by his friends. Gexeral Alava, Aide-de-
Camp of the Duke of Wellington in the Peninsular war, and afterwards Spanish Ambassador of Queen Christina at Paris, has just died at Bareges, aged sixty-four.-
The Palais Royal, so famous some years back, is now every day losing favour with the public, and the numerous passages in the neighbourbood threaten it with complete
decay; 18 or 20 arcades are now to let; 22 others are occupied by the vendors of ready-made clothes; and some of the principal cafés and restaurants, the goodwill of which used to be worth $300,000 \mathrm{f}$.
because they did not clear their expenses.-At the first week, the cause of "the Marquis of Hertford against Nicholas Suisse," valet de chambre of the late Marquis, Nicholas Suisse, valet de chambre of the late Marquis, for the Marquis, who sought to recover the value of
$30,000 \mathrm{f}$. French rentes, which had been placed in the 30,000 f. French rentes, which had been placed in the
hands of MM. Cailliez and Debague, bankers in Paris, by Nicholas Suisse. M. Dupin, in a long pleading, recapitulated all the facts as given in evidence on the trial of the refusal of M. Cailliez to appear as a witness on that occasion, in consequence of which refusal he contended
Suisse was acquitted. After an authenticated report of the trial of Nicholas Suisse before Mr. Justice Williams at the Old Bailev, had been read to the Court, the cause Was adjourned for eight days to hear the counsel for the defence.-A Toulon paper publishes the following letter
from Mascara, July $5:-$ "Abd-el-Kader has again escaped the pursuit of our soldiers by an almost miraculous flight, thanks to the simplicity of his costume. The Spahis, who thought only of plander, abandoned the principal per-
sonage to strip the Emir's physician, a Frenchman, who sonage to strip the Emir's physician, a Frenchman, who
was richly dressed, and rode a horse splendidly caparisoned, and yet this person puinted with his figer to the Emir, who was only ten paces off, tightening the girths
of his horse. The day before yesterday the Emir in per son was attacking tribes under the cannon of Mascara." Edwards, who have been employed to explore the cargo of the Télémaque, at Quillebeuf, are proceeding actively, but hitherto without much success. They have
brought up thirty-one pieces of timber and some fragments of the hull, and have made attempts to raise some ments of the hull, and have made attempts to raise some sand, but they came to pieces on applying the tackle to sand, but they came to pieces on appying the tackile to
them. Their contents were merely whale or palm-oil. A considerable nuraber of casks still remain to be examined,
and it is believed that there are in the vessel several large and it is believed that
cases bound with iron.
cases bound with iron.
Spain.-A telegraphic despatch from Madrid, dated
July 23d, announces that the troops of Gens Seoane encountered each other on the previous day, at Torrejon, and after an engagement of about a quarter of
an hour, the soldiers of both armies fraternised. Gen. an hour, the soldiers of both armies fraternised. Gen.
Seoane and the son of Zurbano were taken prisoners. Seoane and the son of Zurbano were taken prisoners.
Zurbano made his escape, and concealed himself in Madrid. The municipality was going out at the moment when the telegraph was despatched, to surrender Madrid unconditionally to the insurgent army. The Militia of Madrid were returning to their homes, and the troops of
Brigadier Enna, which pronounced themselves, are in Brigadier Enna, which pronounced themselves, are in
possession of the posts. It was expected that Gen. possession of the posts. At was expected that with his division. This despatch may be regarded as the close of the first act of the eventful drama, whose result
must now be regarded with the greatest anziety. The triumph of military anarchy has been so sudden and complete, that it has effected at least one important object, in 8paring Spain from the renewed calamities of a long to record during the last three weeks, in which, until now, no battle has been fought, in which an army has been without a shot being fired, in which everything has been done by marches and counter-marches, manoeuvres and tactics, the observer has been astonished at finding important results accomplished daly by other means than those of force. What has lately been passing around
Madrid and on the Saragossa road was truly curious. Madrid and on the Saragossa road was truly curious,
Several columns of both parties seemed to be closely following each other, and apparently mingled in
an inextricable, manner. The marching of these columns, dovetailed, as it were, one with the other, preing phenomena in the history of modern warfare The protracted absence of the Regent from the scene where his political existence was at stake, is still altogeretiring into Portugal. The army under Zurbano and Seoane, which appears to have "fraternised" with the corps under the insurgent generals who are now the masto have doubted of the cause in which they were engaged, when they learnt that the Regent himself was retiring in the gorges of the Sierra Morena, at a moment when the of his supporters, all depended on his presence. His cause is now irretrievable, and the more because the change which has been effected in the destinies of the Peninsula is emphatically a military revolution; for it has been
accomplished by unbounded corruption in the army, and by the energy of military adventurers. If there were ever
any doubt that the movement originated in Paris, it would any doubt that the movement originated in Paris, it would
now be removed, by an announcement in the French papers of Tuesday, the significancy of which is increased by the fact that the Duc d'Aumale has long been mentioned as a candidate for the hand of Queen Isabella.
"Queen Cbristina," they state, "held a grand levee in the Hotel de Courcelles on Monday, on the occasion of ber birthday. The King, Queen, the Duc d'Aumale,
the Duke and Duchess of Nemours, and Madame Adelaide, successively visited the ex-Regent, and M. Guirot and Marsial Sonlt presented their homage to Her Ma-
jesty." "The Duc d'Aumale," observes the Commerce, "was most gracious to all the Spaniards present in the them in their native language." -The daily papers give the following account of the manner in which the above as the despatch Madrid was received in Paris. As soon immediately to the Hotel de Courcelles, that he himself might have the pleasure of announcing the news to Queen off with the news to King Louis Philipne express Chateau de Bizy. In the evening the ex-Regent threw open her saloons, and all the courtiers of her party, both French and Spanish, pressed forward to offer their congratel, at which MM. Torenso, Zea, Castillio, Grimaldi, and several others, assisted. It is said that it was deterto Madrid with instructions for General Narvaez and for M. Martinez de la Rosa, who left Paris a few days ago, for Spain. Queen Christina and her councillors will appears to be their intention to proclaim the Lopez ministry, with all its members, as a Provisional Government, charged to convoke the Cortes, and to cause the
majority of Queen Isabella II. to be proclaimed, although her Majesty is only 12 years and 9 months old.
Portugal.-By the Royal Tar steamer we have news from Lisbon to the 17 th inst., where all was tranquil. Dissensions still prevail in the Cabinet respecting the measures to be employed for the prevention of any popular outbreak, on which subject M. Costa Cabral and the to be farmed out by public auction for three years, at the end of the present month.
gustus of Prussia learn from Berlin that Prince Audenly at Brandenburg, on the 19 th inst. The Prussian Government, induced by feelings of interest for the comUnion, intends to send a commissioner to China for the purpose of obtaining authentic information unon mercial mat orsang an batish a Prussian Con comat Canton for the whole Chinese empire. M. Grube, of Dusseldorf, who is to be the Consul, was formerly employed in the office of the Minister of State, the President f 8000 dollors years at his post. After that, on his leaving, he or his Madame Caroline Pichler, Madame Caroline Pichler, one of the most popular novel writers of the age, died at vienna last, week, at the ad-
vanced age of 74 . Several of her works have successfully been introduce into our literature-A letter from Pres burg, of July 7 states the the Emperar of Actria, in his quality of King of Hungary, has just decided the long disputed question of the religion of children sprung from mixed marriages. In answer to a petition from the last freed from the obligation of bringing ap their children exclusively in the Catholic religion, his Majesty has Catholics, as may seem fit to the parents; and in cas they cannot agree, the children are to follow the religion of the father. This resolution, the letter states, caused intelligence the houses were illuminated. -The Grand Duke Michael of Russia passed through Bamberg on the 21 st inst., on his way to the wa
He would thence proceed to England
ITaly.-Recent letters from Naples announce that the Treaty of Commerce between Great Britain and Naples was signed on the 26th ult., and forwarded to London for ratification.
Turkey.-Accounts from Constantinople of the 7th inst. state that a squadron of nine sail-of-the-line were on Capitan Pasha, for the purpose, $t$ was supposed, of
making a demonstration on the coast of Greece and the European provinces of Turkey. Rifaat Pasha, the new Minister for Foreign Affairs, and M. de Titoff, the Minister of Russia, arrived on the lst, by the Russian steamer Meteor. Namik Pasha, who had just returned from Bagdad, had been appointed President of the Council of War at Adrianople. Redschid Pasha was rapidly ing to advices from Teheran of the 7 th June, the troops of the Khan of Bokhara had routed those of the Khan of Khiva, and taken possession of the town. Through the same channel we have reports similar to those received from India with respect to the fate of fidently asserted, are both alive to this who, it is constantinople news announces the termination of the Servian question of which we had previous the question, of which we had previous accounts through Alexander Care Gormith mously, and that his Ministers, Petroniewitch and Wutschitch, whose banishment was so emphatically demanded by Russia, have been permitted to remain in Servia, EGYPT.-Letters from Alexandria, of the 6th inst., state better health, riding out every day in and apparently in Ibruinim Pacha remains apparently taking no interest whatever in what is going on, allowing Abbas Pacha, who for the last week has been there, to assume the pomp and Highness. A new light has, however, been thrown upon this matter, perfectly consonant with the policy of these countries. Abbas Pacha bas been for some time past intriguing and attaching to himself in Cairo, a large and influential body, the Oulemas, at once men of the law and ministers of religion, and consequently a powerful organ with a fanatic population; before these intrigues reached a point dangerous to the government and intended line of succession it was necessary to put a stop to them. It is that that Mehemet Ali and Ibrahim decided in concert rounded by under the immediate surveillance and surlikely to do mischief than if left to himself in Cairo, and it is for that reason that he is brought to Alexandria. and will be kept there with the highest honorary title the Pacha has to bestow, with far less ability to do mischief than he had before, and with just as much real power as the Pacha may think it prudent to allow him.
the Mar Sch the Margaret stamer a Liverpool, on Sunday, under comring the Chind bearing the cortunate soul was sho has been totaly lost, fortunately every soul was saved, as well as much of the property on board the vessel. The following are the particulars:-The Columbia went ashore on the 2a, about one o clock, upon the Devil's Limb (a solid rock), a mile and a quarter from land, and one-and-a-half from the lighthouse on Seal Island. From the thickness of the fog, nothing at a distance was discernible, and consequently it was impossible to form any accurate judgment as to their particuar situation. For three hours, in this perilous predicament, their ultimate fate was a matter of most anxious solicitude, and their impending danger continued to assume a more hopeiess aspect. During all this time every exertion was making to lighten the vessel by throwing the coal, \&c. into the sea : and with her engines, and every available means, a continued perseverance was made to get her off, but without saccess. Alarm-guns were constantly fired, but unfortunately-from the ignorance of their posi-tion-at the side of the ship from the shore. About four mack, to their no little delight, a boat from the island meir its appearance, and very quickly explained to them shore; most of the ladies were all immediately sent on next morning with the crew on board, for the purpose of rendering whatever assistance they could toward saving the shin from destruction At every flod tide the engine was put in operation wiom the impracticability of moving her may be perceived from the fact that she was so far up upon the rock as to draw at her bows five feet of water less than the Margaret left she was swinging by the bows lemmotion of the wind and waves, to become utterly destroyed. All the movables on board have been saved. The crew of the Columbia have been left at the wreck, and hopes are encertained that they will be able wion a great part of the engines before she goes to pieces.-The Great Western and Hibernia have since arrived, the latter after a passage made within the almost incredible space of nine days. They bring accounts that the chief portion of Fall River was burned down on the 1st inst. It is computed that the loss of property amounts to 250,000 dollars, at least. Fall River is well known by our coasters, for many dessels freighted with coal from Pietou and Cape Breton have disposed of their cargoes there. An angry feeling between the native and Irish citizens of the Union is arising from the Repeal question. Mr, O'Connell's denuncistions of the slave-holders, and threatened interference with them, when the opportunity arrives, have so excited the ire of the anti-abolitionists of Baltimore and Philadelphia, that they have resolved to suppress, if they can, the agitation of the complaints of Ireland in the States. At meeting the Repeal Association have held a special pronounced against Mr. O'Connell, and then the Association dissolved finally, distributing its funds to two Catholic charitable societies. The lovers of literature atholic charitable societies. grat avest living "ornaments,
will be gratified to learn that Mr. Washington Irving has succeeded to a large fortune, which has been bequeathed to him by one of the Society of Friends, to whom the distinguished American author was personally unknown. Mr. Irving, in consequence, intends immediately to relinquish his appointment as United States Minister at Madrid, where, it is said, his health has suffered materially since his recent residence in that capital.
Australasta.- Sydney papers to April 2d, and Hobarttown to April 8th, have arrived this week. In the Morning Herald, (a Sydney journal,) the affairs of the Bank of Austraia are refe in the administration of those establishments in the colonies. Alluding to something which had transpired the day previous, it is observed on March the 31st:-"The 'untoward' disclosures of the mismanagement of the Bank of Australia have na fact, with the exception of the recent discoveries of the frauds committed on the Bank of Manchecter, we know of nothing equal to the m, and stance of the exceed the former from the circumstance of the cashier, the day before the discovery became ine
having quietly swept out some $15,0001 \mathrm{l}$, being the balance in the iron chest, and absconded to America. The affairs are even blacker than we representre to have obtained
terday. The firm that was stated to $108,000 \mathrm{l}$. is liable for upwards of $50,000 l$. in addition, 160,000 . in the whole. $80,000 l$, and another director have had 40,0001 . has had shich there are various triflin debts of $15,0001 ., 20,0001$. , \&c. There is but one opinion of the conduct of the directors." Things were still very depressed in Van Diemen's Land, and the colonists were speculating on the causes and remedies for of Australasia. affairs. There is no Hope-Advices from the Cape the 6th May, contain the copy of a minute laid before the Legislative Council of the colony by the Governor, respecting Port Natal, and announcing that her Majesty's Government had decided upon taking the emigrant farmers onder the protection of the British Crown, of recognisiag their district, of adopting it as a British colony, and of establishing such institutions, under British authority, as her Majesty may deem necessary. The Governor adds that incorporation of Port Natal with the Cape gainst he Mcorporato Government had felt disposed to admit their validity, and to consider the best means by which due provision might be made for establishing a coonial government and Meanmile the ranted by Lieut.-Colonel Cloete. Grants or sales of land on the district are, however, prohibited the becided that Majesty isknown; and is to be appointed by her Majesty and that no laws to be passed in the colony shall be valid without his consent. H.M.S. Cleopatra arrived at Port Elizabeth on the 27th April, having captured off Quillemaine, on the 12 th , the Brazilian brigantine Progresso, with 440 slaves on board.
 Cleopatra, and the remainder sent forward with a prize master to Simon's-bay

Royal Visit to the Thames Tunnel. - On Wednesday he Queen, Prmce Al end, ther distinguished persona, the Princess Clementine, Tunnel with a visit. From the shortness of the notice fow preparations could be made. Indeed, most of the irector sir Isambert Brunel, the deiner whe wore commenced and completed, was too far from town for a communication reach in time to be present. At about half-past 3 there was a numerous attendance of visitors, the fact having transpired that her Majesty was about to visit the works. The flags were hoisted at the Tunnel works, and from various other places in the viciaity, and a scene of the hour stated, the royal barge arrived off the Tunnel ier, and her Majesty was received by Mr. B. Hawes, uni., M.P., Sir A. Crichton, and three of the directors. The Queen was welcomed by the people who had collected with great acclamation, and, preceded by the secretary and the assistant-engineer, her Majesty descended the Rotherhithe shaft, Lord Byron being in immediate attendance on her Majesty. Having proceeded through such a work as never a Queen before had traversed, the royal party returned, and as they re-ascended, Gou save assembled multitude. On arriving at the entrance-room, her Majesty was pleased to express her gratification at being enabled to witness the completion of the Tunnel, and her regret that Sir I. Brunel was not present. The rrangements, though hurried, were well carried out, and her Majesty entered the royal barge amid the cheers of thousands, the bells of the churches in the vicinity ring ing at the same time a merry peal. Her Majesty, when Pincs Victoria we believe, once viewed the works which were then not half completed.
The Custom-House Frauds.-The report of the Com missioners of Revenue inquiry on Custom-house frauds has just been published; but the evidence on which it is founded has not yet been made public. The repor shows that a well-organised system of fraud has been going on for several years past, andity, have now been purish ing in full impunty and sucese, if touched the conscience of Mr. Burnby, one of the delin quents, who, in the autumn of 1841 , inculpated no less than 21 landing-waiters, who had been selected for employment on the silk and baggage import duty, on Revenue. Mr. Burnby's disclosures were not at first credited by the Custom-house authorities, who desired, as a proper measure of precalion, to wait for corrobora tion; and this was obtained through the instrumentality of Mr. Homersham, another criminai, now deceased, and a landing-waiter of the first class, at a salary of $400 l$. per
annum, who speedily made a disclosure of the fraudulent which are classedich he and others were implicated, and heads:-"I. The granting of false certificates by the export officers, whose duty it is to ascertain what goods are shipped. 2. By grantiog a false certificate of the quality, or of the existence of goods for exportation, to obtain an amount of drawback of duty far exceeding what is legally due, or a drawback for an imaginary exportation a package of low daty goods for a package of high dut goods. Passing cigars, for instance, under the denomina tion of marble. 4. By the negligent or wilful undervalu duties, and the dishonest or careless and faulty enumera tion of the goods when their amount is to be stated 5. By the improper computation of the tares of packages. 6. An under valuation and under account of goods, so entry in the rough book on means of making a proper obliterating that entry so soon as they were safe in the warehouse of the importer, substituting in place of the proper entry a false and insufficient entry of the duty to the Crown. 7. The fraudulent entries of p $p$ the substitution of fresh leaves for the original lea the landing-waiter's 'Blue Books,' with imitations of hadwriting of the registrar's clerks, with false en
and with false seals. 8. The obliteration of the ent and with false seals. 8. The obliteration of the entry in the "Blue Book, by a chemical process, and the substituheads of fraud above enumerated are attributed by the Commissioners to the allowance of "sight entries," and maintenance of high deties, the evasion of which frequently places within the reach of the revenue officer, by one salary amounts That it is of more importance, even with a view to protection of our own manufiactures, that daties should be be nominally high rates of duty acting as an encourage ment to the fraudulent, and a discouragement to the and most irregularly and partially enforced." They refe particularly to the evidence given by Mr. Porter, of the Duties, respecting the evasion of the silk duties, and append to their Report the completion of his statement the accounts of the French Custom-house of silks exnorted and from those of our Custom-house entries of imports, by which the fact is established, that less than one-half of the silk goods exported from France to England pay duty Sale of the late Dutce of country.

## Carmarthen. -Mr . Hall, chief magistrate of Bow-

street police-office, left town on Monday by direction of Gevernment, for the purpose of instituting a rigid and
searching inquiry into all the circumstance with the "Rebecca riots" and disturbances in this part of the kingdom. It is understood that Mr. Hall is accompanied by one or more legal gentlemen to assist
in the inguiry. A body of the Metropolitan Police been sent down to assist the local authorities. Although the Deag oons are in the saddle every night, scouring the wrong place, and the work of outrage continues not only nndirminished, bat with increased and increasing audacity In the coal districts near Pontyberem, on Friday night, a any civilizeic country. The troop of the 4th Light Dragoons stationed at Carmarthen, were led out by Colonel goons stationed at Carmarthen, were led out by Colonel
Trevor, Vice-Lieutenant of the county, who in quence of information of an intended meeting, deemed it advisable to be present to check any tendenç to outrage. Accordingly, with Colonel Love, commandant of the dis-
trict and Major Parrby, the Colonel and the tropses left Carmarthen about half-past five in the evening, proceecded through Porthyrlyd and Llanddarog, nearly to Llanon. Llangendeirne. During the whole line of marcherem not the
Let slightest indication was manifested of a disposition the break the peace, although it was evident that the whole
country was in an extremely well mischief. Before the Dragoons had wat and condition for Carmarthen, a shot was fried from a high hill by the rond side, known as Cystanog Wood Hill, which was iom mediately answered from other hills, and which plainly proved that a system of signals was successfully establisilied throughout the whole country. The Dragoons, after their 30 miles went. The following morning, howeverer y as wise as they Carmarthen, that within an bour after they had pased through Bethanie gate, situated near the Tumble by the firing of rockets to the numbecaites were assembled they instantly proceeded to brealk the about 1000, and which they accomplished in a very shortt time. puring the progrees of their work they testified the fulness of tair triumph by beating drums, tiring guns, blowing
horns, \&.c. They were unt disyuised as herit women's clothes, but being principally eolliers, and their faces being already blackened, they needed no further disguise than their occupation lad already endowed them

Boalifes were lighted on all the adjacent liills, and disappeared in the same mysterious manner as they had
and appeared. On Sunday morniug a man named Jones, of Mayor, Dr. Bird, and the other mave information to the Mayor, Dr. Bird, and the other mogistrates, that he was form against 40 othuers. form against 40 othiers. Their names having been taken, Superintendent of the night Captain Napier, with the Superintendent of the Glamoriganshire police, took a fy, marthenshive, succeeded in anprish ordianeay, in cartiotern. On Monday morning a company of foot-soldiers
police, in four-horse conches by a division of the rural cerded to Lhangrelach some more of the parties, against whome of apprehending been lata. They lat? no sooner arriped information had a large mob assembled, and evinced every the spot than resist any aftempt a farmer's wife, Mrs. Morgan, threw a saucepan of boiling water over Capt. Napier, which scalded his shoulder, and she atach whe saucepan, with which Morran a also attacked Captain young man, having seized a sickle on attacked Captain Napier with it, and wounded him tain ene a fortupaty drew on of pistols, which, however for Mory or Morgan immediately grasped his wrist, and turning the trigger, but without effect. Fapt. Napier's breast, pulled Capt. Napier immediately drew his other piste in danger and shot the young mun, the ball entering the abdomen after, however, having recoiled and felt the wound, he mmediately renewed the struggle with increased despera con, but the noise of the fistol having alarmed the police. men outside, they rushed into the house, where they found Capt. Napier covered with blood, and succeeded in rounc ing him and securing the prisoner, who was brought into Wansea and conveyed to the infirmary in the gaol, where lodged in thined by Dr. Bird, who found that the ball had the from which Dr. Bird succeeded in ex dispersed, but not beeing their companion fall the mob among whom are the postmaster of Pontydowlais and several farmers. The wounded man Pontydowlais, and the Swansea Infirmary, where he is doing well. The scene of these depredations, it will be observed, bas now been quite changed; the disturbances having originated in the rural districts on the borders of Pembrokeshite and Carmarthenshire, but now having entirely removed from that quarter, and the state of affairs being clearly more shire, in the mining and manufacturing districts. On in and rad to Sun The the most dacing manner establishmeat of a rural police
Croydon.-Pursuant to public advertisement, a meeting giving Mr. Cobden at at Croydon, for the purpose of farmers and cobden an opportanity of addressing the subject of the Com Lavs Theighbourhood upon the Town-laall, and afterwards adjourneeting assembled at the withstanding the inclemency of the weather. Mr. Alcock presided. After Mi". Cobden had spoken at some length in favour or a total repeal, Mr. Iife came fowward, and expressed his opinion that the proposed measure would be ruinous to the country. He was proceeding to develop wis views in opposition to free trade, but the meeting then moved that it was expedient to have a the Corn Laws. Colonel Thompson having spoken up the resolution, three persons, whose names appeared to be unknown, attempted to put lorth the doctrines of the charter, but the nieeting rufused to listen to them of the posell and seconded. The anondmena was pro bands only were held up in favour of it ; the original

Iull.-We We then put and carrind
nother. We regret to have occasion this week to record property, by the wreck of stearn-vessels, which ife and ate years invested with such melancholy interest the land. gryup or island on the cast coust or Northmber* events that hresent wreck is one of the most painful the destruction of the Forfar part or the coast since Grace Darling of similar atastrophend ach elearit. It is, in fact, a distance of the spot where place within a very short to the Pegasus struck $u$ hursday, the 20 h , the steam-boat short time becapon ack near Holy Island, and in anfortune became a total loss. Neally the whole of the The Pegusus, which has plied between Leith and Huil for several years, left Leith harbour on Wednesday evenin a little before six o clock, having on board, it is supposed, nearly 70 individuals, reckoning both passengers and crew. ne was comanded by Captain Miller, formerly wellman this coast as the master of one of the Leith bing. The evening was $\mathrm{ch} \mathrm{m}_{\mathrm{m}}$, the surface of the water being scarcely even agitated, and the vessel bore on its fral course for some hours, till about la olock, when reachell the neighbourhood of the Fern Islands. The de being almost at ebb, and the water consequently shat w, the vessel, when passing the inner Fern Isiand, struck pon a sunker reef near what is called the Goldstune Rouk with great force. When the vessel struck, the captain was standing on the bridge, in-the centre of the vessel, and eeing the danger, he immediately ordered the boats to be wered, lest the vessel should go down whenever she was oved from the rock. All the passengers by this time ere on deck, several who had been in bed having, of course, been instantaneously roused, and the extreme o distress and agitation was manifested. The Rev. Mr. (Kenzie, from Glasgow, engaged in prayer upon the were launched into sternity. THe captin, having thought that if the vessel were brought off the rock, he could
run her on shore, which. was about a mile and a half distant, ordered the steam to be let on, for the purpose of backing her off. This accordingly was done, and the vessel proceeded heavily in the direction of the shore, but had not gone above two hundred and fifty yards, when the water, rushing in at the fissure which the rock had made in the bow, instantly extinguishea the A few seconds served to complete the catastrophe. The passengers, seeing that the vessel was rapidly going down, and would very soon be submerged, made a the boats, which had been previously lowered, the effect of which, movement was, that both being overloaded, were swamped; and those who had thus attempted to escape were involved in the same hostruction, wheamer. The scene of the drowning women are described as terrific. Several of the drowning women are described was as the vessel gradually sark, they were either wasbed into the water, or perished on the rigging. picked up by the Martello steamer, the same company, which was on its way from Hull, and by the same course. Between 5 and 6 o'clock in the morning, whell this vessel passed the Fern islands, the
wreck of the Pegasus was discovered, the topmast being wreck of the Pegasus was arscovere, Inediaty before a boat came driftiog past, containing one of the passengers still living, who was picked up, but being quite unable to utter
a word, they were not by him made aware of the catas. trophe. A dead body, however, next floated past, and this tod something of the sad story, which they soon
understood too well, when, looking round, they discovered at some distance the topmast of the Pegasus, with two individuals clinging to it. They immediately proceeded for some time, and succeeded in picking up other three individuals, who had been clinging to various supports, thus saving altogether six persons. The passengers saved whither he was returning along with a gentieman in a weak state of mind, who was lost ; and a Mr. Hillyard, also belonging to Hull. Baillie was saved by keeping lis place water, was quite sufficient to sustain one individual ; and Hillyard was one of those on the top of the rigging. Those of the crew baved were, the mate, the engineer,
the carpenter, and a fireman. The Martello remained in the varpenter, and a fireman. The Marthre of the wreck for about three, and picked up six of the bodies, tro of which, it is said, those of the second engineer and of a young lad named hrought on board, but could not be effectually restored. Tirree of the other bodies were those of Semales; the first, that of a middie-aged married lady, since
claimed as a Mrs. Alexander, from Paisley; the second clained as a Mrs. Alexander, from Paisey, the second an elderly woman, who had evidently been aroused feill and who still lies unclaimed in South Leith Church, where all the bodies were carried upon the arrival of the Martello at Leith. The third has been claimed as, Miss Lincolnshire. When found she had firmly clasped in her arms a little boy, apparently about four years old, the brother of a young lady on board, also a pupil of the same school, whom it res supposem she had seized with a hope to son of Mr. Martin, cabinet-maker, Great Russell-street, Covent Garden, who is also lost. The names of all the sufferers, or even of most of them, are as yet unknown; and as the steerage passengers were not booked, many will, in all probability, never be ascertained. The cabin passengers booked at Leith were-Mrs. Edington, from Edinburgh ; Miss Hopetoun, Miss Floors, Miss Briggs, Mrs. M.Leod, Mr. M'Leod; Mr. Torry, from Hull; Mr. Elton, the well-known actor, who appeared last week at the Edinburgh Hodgson, son of Mr. Hodgson, printer Edinburgh, and assistant secretary of the LeedsMechanics Edinburgh, anev. Mr. Mackenzie, from Glasgow, tutor in the Independent Seminary, and editor of the "Congregational Magazine;"Mr. Banks; Mr. Elliot and son, thought to be from Dundee; Mr. Moxham, Mr. Milne. Besides these, it is understood that there were on board Besides these, burgh, who was with the Wesleyan Methodist body Mr. James Hunter, son of Mr. Hunter, itonmonger, 15, Howe-street; Mr. Martin, of Great Russell-street, Covent Garden, London, Aird, grocez', Hanover-street, who was on his way to in business. Some troaps belonging to the 56 th regiment were also on board.
Hythe.-We have to record another fatal steam-boat accident, which occurred on Monday morning, off Dungeness. The following facts have been gathered from the crews of both vessels. The Pluton, a first-rate warsteamer, belonging to the French government, after landing at Southampton, the Duke personages, now on a visit to her Majesty, was ordered to proceed round the coast to Woolwich, to await their return to the continent. On her passage to the Thames, when off Dungeness, while going at full speed, she ran into the fane of Sunderland, from Newcastle, bound to Rouen, with coals. Such was the force of the collision, that the steamer tore away the chains, rigging, and everything within reach of her bows. The mate of the schooner was crushed to death between
the main chains and the steamer's bows, and his body carried overboard. The master, and the rest of the crew, jumped into the boat at the schooner's se moment as the down by the head alnost at the same mome they came up with the Pluton, which, at the moment after the collision took place, put her helm hard a-port, and pro-
ceeded on her passage, until she was compelled to bring ceeded on her passage, until she was compelled to bring
to, to clear away her bowsprit and head. which had gone overboard and impented her progress. They were taken on board, and on being landed yesterday morning an
Woolwich, received 3 , to pay their passage to London The pilot states that he saw the schooner, and beard the shouts of her crew, and called to the engineer to stop her, crew of the Pluton (120), being foreigners, and not understauding English, his commands were not obeyed.
Liverpool,-An extraordinary case of robvery has recently come to light in this town. It appears that on three Bank of England notes, each of the value of 10000 ., Masterman and Co.. in London, and his residence in Regent-street. On Monday week Mr. Taylor Jennings, a clerk in the branch Bank of England in this tomn, was apprehended on a charge of having had one of the iove. Mr. Rushton on Tnesday morning, and discharged for ant of evidence. On the same day John Anderson, a notorious claracter was placed at the bar, charged with
having knowingly received the above note. The evidence van to a good length, and consisted chiefly of the depositions of Mr. Jenuiugs. It appeared that the prisuner,
from peculiar and disreputable circumstances, had got Jennings in his power, and had the Preston Guild (the particulars of which were fully noticed at the time), for seven other 100\%. notes deposited in the bank by several customers. For each note so changed Mr. Jennings received
7l. 10 s . as his share of the spoil. On the 7 th inst. the prisoner Anderson requested Jennings to get a note for
1000 . changed for him, for which service he promised him 200l. Jennings took the note and delivered it to Mr. Wood, who keeps a public-house in Windsor-street, in met in street for him, and borrowed from the latter 20l. Mr. Wood took the note to Messrs. Barnes, and those Wentlemen having heard an honest suspicions that sil was not right, and stopped it. The circumstances were subsequently detailed by Mr. Wood to the been given to the police it was discovered that the $1000 l$. note was one of those lost on the 3d inst. by Mr. Hayter Blackmore. Jennings was inmediately apprehended, and this led to the subsequent apprehension of Anderson, as above stated. in the course of his asked Anderson how he came by those notes. He told him that a person brought them down to Liverpool fron rom a person who was riding in an omnibus. He said they saw him come from a house, but he had forgotten whether he said a banking-house or what. They watched him and saw him get into an omnibus, and they got in with him, and when he got out at some street they got
out too. While he was in the omnibus they saw him keep his hand on his right pocket. When they got out they followed close to him, got out. One immediately set off for Liverpool, and the other watched the gentleman bout where he went to. They saw him so back to the place where they first saw him, and the people that he told would not believe him. Anderson said the one who had tarted to Liverpol with the money gave him this 1000 l tate. These facts were confirmed by several witnesses, note. These examinations, were bound over to prose Who, after remanded forla week. - Mr. Henderson has been appointed the new Recorder of Liverpool. The salary is fixed at 500 guineas a year, to be paid out of the borough fund, although the patronage is iomed John Bailey,
Manchester.-A Clans the leaders of the party has been regarded as wo always occupied a conspithis neighbourhood, and who always occhpied a conspicuous position in those periodical dis of Mr O'Connor strength and feeling got up in bour on the occasion of his in Tuesday, on before the borough magistrates on Tuesaay, on a serrous charge of felony. It appeared that Consterdine, residing in Portugal Oldam-road, and that taking advan tage of forcing open the back-door, broke open a box, and took therefrom is purse containing a considerable amount o gold and silver. He was seen in the house, moving about in an apparently stealthy manner, by a neignour, who stated what she had seen when Bailey was apprehended, and a crooked sixpence found in ins possestion was identified as a part of the stolen that the prosecutrix had been robbed a short time previously of $8 \%$. or $10 \%$, and that on that occasion the prisoner evinced extraordinary sympathy for her loss. He made minute inquiries as to where she kept her money, under the pretext of obtaining some clue which might enable him to reach the guily parties, but in reality, as it blow appears, for the purpose of following their example. He was committed for trial at the next Wednesday last, and since that period has been occupied upwards of nine hours a-day in administer-
ing the pledge of total abstinence to the people of Manchester. He was assisted by the united efforts of the Protestant and Catholic teetotallers of Manchester, who merged, for the occasion, their religious differences, in the desire to promote the object in which they were agreed. Many of those who received the pledge at the hands of the rev. gentleman had previously been total abstainers; but as some notions of pecular sanctioly was renewed in order to ensure the reception of his bene diction Up to Saturday evening 18,000 persons took diction. Up to Saturday evening 18,000 persons took the pledge. On Sunday it was administered to 30,000 , total of 80,000 pledged teetotallers in Manchester. Of total of 80,000 pledged teetotallers in Manchester. Of the St. Patrick's district, a part of Manchester principally inhabited by the Irish.
Porfsmouth.-The Lord's of the Admiralty have decided upon building a new class of brigs, of 12 guns, which will supersede the old 10 -gun brigs, so long known as the "floating coffins." "The new 12 -gun brigs are to be armed with ten 25 cwt . 32 -pounders, and two 18 -pounders It is stated that Mr. White, of Cowes, is to give a design for a brig of the new class, and that Mr. White Chatham, is also to give a desig. Mr. White is the builder of the Waterwitch, formerly a yacht belonging to
the Earl of Belfast, and which was brouglit into the serthe Earl of Belfast, and which was brouglat into the service, and since noted for its powers of salling, and con sequent successes on the coast of Africa in the capture of staves. Mr. Fincham is the builder at Chatham Dock yard. It is also understood that the Surveyor of the Navy, monds, will furnish a design
herness. - On Monday another jury was empanelled in the Royal Dockjard on the body of Miss Barton, 22 Isle of Sheppy daughter of a clergyman residing on the receised such severe injuries from the explosion of the portable marazine on board H.M.S. Camperdown, that she dred on saturday evening. The deceased is the third sufferer who has died from the effects of this occurrence. The evidence adduced before the jury was similar to that week, upon which occasion the jury returned a special verdict with respect to keeping so large a quantity of powder out of the magazine, and hoped that the authoriinued. The wald cause dangerous a practice to be discontinued. The jury returned a verdict of Accidental Death, ies would act up to the recommendation of the previous

Railways.-The following are the receipts for the past week:-Croydon, $372 l$; Greenwich, $847 l$.; Blackwall, Midland, 2023l. North Eastern, 1757l.; Birmingham and Slocester, 2163 l . ; Eainburgh and Glasgow, 2515l.; Eastern Counties, 3008\% ; South-Eastern and Dover, $31 \overline{3} 3 l_{\text {; }}$; Liverpool and Manchester, 3341l.; Brighton,
$4112 l$; Midland Counties, 46696 . The chairman stated that the amount required by the directors was 177,777l., which they proposed to raise either by means of loan notes, or by debentures for the Bricklayers Arms branch. A resolution to this effect was then proposed, and after some discussion as to the terms upon which the money was to be borrowed, passed with but hree dissentients. The next business was the consideration of the construction of the Maidstone branch, which underaent much discussion. The chairman stated that the proposed line had been surveyed by the engineers, lessrs Stephenson and Bidder ; that its distance from he moin line would be about ten miles; the total estimated number of passengers 77,000 . per annum, and the ath income 24,2156 . The proposition met with opmosition from a few of the proprietors, but ultimately, pasing put to the vote, was carried by a large majority The other requisite resolutions having been agreed to, the me othen in the course of thecussion stated that within and steamboats wo plying between Folkestone ten day ad bistance from London to Boulogne in little more plish the hours and a hulf. The system of low fares more han six lo done much to benefit the railway. dopted had dhe whole line would be opened elieved Der wor the branch line efore Decembe, and that bravoh ive to Maidstone cold be complat obtaing possession of the land. His statement was followed by resolution that in or mortgage the bum empowered to brrow on loan-notes or mortgage the sum of 266,6002 , which was caried the Croydon Company was held this week for the purpose of giving the directors authority to raise 70,000 . by an issue of new shares, to enable them to complete their portion of the Bricklayers' Arms extension line, the shares to be nominally $20 l$. value, at $10 l$. each, payable in ferred to an increase of the bonded debt, which already anounted to 230,000 l. Resolutions to this effect were agreed to.-On Monday a meeting, convened by the high constable, was held at the Town-hall, Brighton, to receive the report of the deputation appointed to confer with the directors of the Brighton Railway. The chief feature in the report was the communication from the directors, that after the 1st August the prices of the first, second, and
third-class passengers by mixed or slow trains would -On Monday-week the two o'cluck mixed train of carriages on the Dundee and Arbroath Railway-line took fire. The carriages started from Dundee ac the usual hour, and were midway on the line to Broughty Ferry, working at the road. Immediately behind the engine were four waggons loaded with flax, and one of miscella neous goods, consisting of flannels, cloths, laces, and similar articles; and lastly, another tier of flax waggons, ending with those conveying passengers. The fire originated in some of the ashes being blown among the flax,
which readily ignited, as the day was very stormy; and in he course of a few seconds the first two waggons were in blaze, and were rapidly communicating to those behind. The damage done amounts to $300 l$. or 4001 .-The special engaged for the and his relatives, performed the journey, 77 miles, in one hour and 39 minutes.

Dublin.-Sir Edward Sugden has left town for Eng. land, to join his family at Boyle Farm. The Master of the Rolls, Mr. Justice Burton, and Baron Cefroy are appointed Keepers of the Great Seal in the absence of the Chancellor. His Lordship, previons to his departure, peace-viz., Mr. George Ruxton, for the county of Louth; Mr . Charles Webber, for the county of Sligo; aud Mr.
Edward Crips Villiers, for the county of following is Lord Lyndhurst's Act for legalising Presbyterian Marriages, the whole being comprised in the fol Iowing words:-"Whereas marriages have in divers interian and other Protestant and Dissenting Ministers or Teachers, or those who at the time of such marriages had been such, between persons being of the same or different marriages ; Be it therefore enacted by the confirm such marriages; Be it therefore enacted by the Queen's Most the Lords Spiritual and Temporal and Commons in this present Parliament assembled, and by the authority of the same, that all marriages heretofore had and celebrated in Ireland by Presbyterian or other Protestant Dissenting
Ministers or Teachers, or those who at the time of such Ministers or Teachers, or those who at the time of such and taken to have been and to be, of the same force and effect in law as if such marriages had been had and solemnised by clergymen of the said United Church of England -The Grand Jury of Armagh have published a declaration condemning the Repeal agitation, and expressing an use of those powers which the laws and constitutill make them, for speedily putting an end to proceedings so fraug with mischief to the best interests of our country, and of every individual of its community." This declaration is signed by the whole of the Grand Jury, and countersigned by the High Sheriff, the Duke of Manchester, and several also been beld at Belfast, ing opposition to Repeal has of Manchester, the Marquis of Donegall, Earl O'Neill, Earl of Roden, the Earl of Erne, Sir R. Bateson, \&c. Bishop Hughes, of New York, who recently arrived in from the far west, on business of his episcopal brethrent addressed to a friend a letter on the wrongs of his native land, in the course of which he observes:- " Repeal the Government will not grant till the last extremity, and nothing short of repeal will satisfy the Irish people. But there is orre melancholy consolation, that, until it be England's weakness and shame. The Parliament nations England's weakness and shame. The Parliament and the leading journals (he writes from London) speak of nothing impression on the iron-bearted people here. But the truth is, the Irish musc depend upon themselves. It had been my plan to visit Ireland after I had transacted my business on the Continent; this I may still do ; but my feelings got so much excited by the poverty and oppression, I witnessed in that lovely land, that it is a relief to escane from the spectacle."-One of the murderers of the herdsman to Mr. James Scully was found gulty at Cloninel Assizes on Friday.-At the meeting of the Repeal Association on Monday, Mr. O'Connell gave an account of the Tuam demonstration. He said that " all the Bishons of thing only had tarnisbed this bright prospect; it was the gross misconduct of the people of Ahascragh. It was paramount duty the people should be ignorant of their Abasamount duty to keep the peace. The people at ordered to take it down. Now everybody knew that no was the duty of the might be committed against them, it was thing illegal be done arainst them the authorities. If the law and punish the aggressors ; but we can vindicate the law and punish the aggressors; but there must be no policemen, and they did no more than obey the orders of their superiors. Yet the people pelted them with stones, and drove them into their bdrracks, wounding one man
seriously. Such conduct he declared was trease seriousiy. Such conduct he declared was treason to Ire-
land. The persons who were guilty of it were traitors land. The persons who were guilty of it were traitors. They would have broken up the Connaught meeting altogether, but for the profound respect he felt for his venerated friend 'John Tuam.' Yes, he would have
mark his contempt of the people guilty of such an out
rage. The poor policemen were but doing their duty, an twas barbarous to attack them. He now moved that Abascragh should be blotled out of the map of Ireland and that the name of every one belonging to it should be moved that no inhabitant of that town should be are: he among them." This motion was deliberately moved, he meeting, from which it appeared that in read to sums received in the quarter ending 4th July amounted to but 999l. Ys. 7 d ., while the total received in the cor being an increase on the quarter of 3 4,799l. 1 s .8 d . Mr in the public funds to the credit of the association. He Wexford, $84 l$., $51 l_{\text {. }}, 21 l_{\text {o , and }}$ other large sums, amount-
What ments of money from America-31l. from New York 100l. from Providence, Rhode Island, 20l. from St. John's, $265 \%$., from Ulster, $80 l$., handed in by Mr. Duffy. From England, 72l. The total amount of rent for the week was

Tuam.-The Repeal demoustration in this district took nterest, from the circumstance of the requisition convening the meeting having been signed by Dr. M‘Hale, division of bis diocese. The procession, in which of this M'Hale, Mr. Bodkin, M. P., and Mr. R. D. Browne, M.P., met Mr. O Connell about five miles from the town. Gurrane racecourse, two miles from the town, on the side opposite to that by which the procession had to returnthe road, it was half-past six before Mr . O'Connell his friends reached the platform erected in the middle of the race-course. The immense number of persons colcovered an are impossible accurately to pesi The continuous line from the place of meeting to the town. I cars with females. On the platform they seemed dis posed to fix the number present at above 100,000 . body of police mere the neighbouring stations. Mr. Bodkin presided. Lord Legislative Union, and pledging them to persevere in national parliament Mr. in restitution of their seconded the resolution, which was carried with acclamat tion. Mr. R. D. Browne moved a resolution of gratitude him in his struggle to obtain complete national regenera carrid Mr. T. Bodkin seconded the resolution, which was addressed the meeting, and said they would get Repeal it they would act by him as he desired. They would get tages Repeal would give, to induce them to assist him in the way he requested? By Repeal they would be profrom the slavery of paying the clergy of a church in which they did not believe. If he got Repeal his first step $800,000 \%$. from the church temporalities, ; and with the hospitals and houses of refuge for the poor. They would pay anolsh the grand jury cess. The government should elieved from the grand jury cess. Then the land be holder and every married man should have a vote, and would be protected in the exercise of that vote by the obtained out of Ireland. Give him Repeal, and next year these nine millions would be spent in Ireland. There was people to powder. The tyranny of the landlords was that there shouli be no shorter lease than twenty-ane

It might be as much longer as the landlord pleased, fent, he would give an appeal to the assistant-barister rom him to judge of to ascertain the value of the land-nay, more, every tenant who laid out money in the improvement of the in the Crown-office; and, if his lease were not renewed, his landlord should repay him what be laid out. He then alluded to the condition of England, and her points of weakness, to show that she could no longer resist Repeal. A resolution, expressive of sympathy with the superseded magistrates, and of a determination to resort to the and carrin cases of difference, was then proposed, dinner took place in a large room attached to the Mitre accommodated three hundered were fitted up which spoke at great length, and Dr. M'Hale adverted to the the ouject for when the Catholic priesthood. He said, the sentiments of the Catholic clergy, so far he might be deemed their humble organ, should not be misunderstood. some of their rulers. Thed to be coming over the minds of the Catholic clergy the sanctuary of the British 'Treasury, nay, even to open to their hierarchy bigh places in the
British Legislature, if they would but bow down and

Worship Saxon ascendancy. But the virtue of the of their ciergy was proor against the treacherous ordea liberty of Ireland, if the Catholic clergy entered into any arrangement which would withdraw them from the conf dence of a suffering people. And he would tell the the clergy were the last persons for done to the people ought to feel the least anxiety Was it not provision they Governmea mate the the The people suffered under many grievances. Was it just hat the accumulated treasures of ancient piety should be monopoized, in a country entirely Catholic, by a few persons of another creed? They were told of the concession of Emancipation. No thanks to them for that concession; but what did it amount to? What boon was eiphty place grateful for because, out of some sixty or eighty places, an individual, perhnps a perliaps for political apostacy from his principles. They must go to the fountain of the evil, and dry up that misery Why not try the principle of coercion to the heartless landlords, who were destroying the tenantry of the country: As the Parliament were unwilling to give a pe alternative but a Repeal of the Uniun. Upon the principles of jurisprudence, as well as of Catholic then the ery wrong atonement would be Union, they waving been inflicted upon Ireland by the pelled the English Government, by the until they comrish Parliament, to make full and adequate reparation to Ireland. The Chairman proposed the health of the Right
Rev. Dr. Browne, titular Bishop of returned thanks, and expressed of Galway. Dr. Browne Efforts made to procure the Repeal of the Union.
nimen then then took place on Thursday, and was attended by thousands of F. Talbot presided the titular bishop of Ferns, Ond Connell, Dr. Keatiage, meeting at great length erns, and others, addressed the meeting at great length on the prospects of Repeal. At ledred the He said that the of the Catholic Priesthood of Ireland. hope but in the Cathonic clergy rejoice that they have no hope but in the Repeal of the Union. "If we had other hopes our minds would be distracted in the pursuit of those other objects-our minds by that distraction would be weakened-one set of men would encourage one measure of relief, and another set of men would encourage another ; but now all our energies, and hopes, and determination, are concentrated upon this point, and by that powerful concentration we must succeed in carying our one object-the Repeal of the Legislative Union. The Catholic clergy have taken that position at your head, and I am confident that you will not disown their leadership. They whil not do any discredit to the sacred character they bear for while they are your leader the polition triumph will bear likewise a sacred character Tholical character they do not forget-that sacred character they are invested with, and it is that character whioh guarantees to you that their advice, their exertions in cooperatis with your must be essentially directed to a leitiota object, and to attain a national end ${ }^{3 y}$ a legitimat

Nobleman's Country Seat.-"Take a Iord, now, and visit him to his country seat, and I'll tell you what you will find-a sort of Washington State-bouse place. It bread a rail old castle of the genuine kind, or a ginger existed in made modern else it is a great, cold, formal slice of a London terrace stuck on a hill is a wood. Well there is la artificial pond called a lake, deer that's fashionablised and cinsed, and as little natur in 'em as the humans have. Kennel and hounds for parsicutin' foxes-presarves (no What we call presarves, quinces and apple sarce, and partridges and penagar, but presarves for breedin' tame h'yew-veries, peasants to shoot at), h'aviaries, hive-eries, before every word Yankeesmedn't Onen we don't speak English."-- Sam Shick in England - penery, illustrative of Tumulus.-A most interesting Romery, hlustrative of the faneral customs of the AngloRomans, has been made in the parish of Rougham, on the astate of Mr. Philip Bennet. At the corner of the two roads leading to Hesset and Bradfield Manger, and within Eastlow-hill, and a slight distance theref a hill, called semicircular mo the vered with herbage and shrubs. The feet in diameter Mr. Levett's farm were engaged in clearing belonging to these mounds, to lay the soil upon the lad whe on Friday week, having come to the centre, the pick of the workmen broke into an oven-shaped cist or pick of the taining sepulchral remains. A hole, between three and four feet square, appears to have been frest dug about and feet below the general level of the country Fiour hows of red hollow tile bricks, each Il inches long, about meches wide, and seven inches deep, and nearly an inch thick, and laving a circular hole and nearly an inch end, were then placed on the soil and cover over with large flat tiles. The whole was arched orer with tiles forming a chamber of was deep; open at one end. Each tile was ornamented with and atriated bands, placed diagonally from angle to angle.

| handle on one side. It was nearly 16 inches bigh, and | fellow-countryman, the missionary Gutzlaff, in China | eight inches wide; and was about half full of burnt bones By the side of the urn was a large plain iron lamp, of the By the side of the urn was a lurge plain iron lamp, of the handle nearly a foot. Unfortunately, from the ignorance of the man who made the discovery, the cist was opened so carelessly, that the fine and curious urn was broken. This part of the country must have been extensively occupied by the Romans, for pateræ, and pieces of pottery, swords, spurs, and othel articles of iron, have been frequently and for many years discovered within two feet of the surface in this part of Rougham, and withim the

adjoining parish of Whelnetham. The land was common till within the last 30 years ; and so many human bones were found, it is said, on removing part of the Eastlowhill, that the then owner of the estate (Mr. Kedington) refused to permit any more of the hill to be cleared. Adjoining to the tumulus which has been opened is another, as yet quite undisturbed; and near to them are procured to heap up these simple and long-enduring rest-ing-places.-Suffolh Herald
be more strikingly illustrated thes and manners cannot account of Prince Albert's visit to Bristol, as inserted by us last week, with the following curious particulars of a Royal Consort, Prince George. In "Corry and Evans's Royal Consort, Prince George. In "Corry and Evans's "Extract from an old Bristol newspaper, relative to Sir J. Duddlestone.- Prince George of Denmark, consort of Queen Anne, in passing through this city, appeared on the Bxchange, attended only by one gentleman, a military oficer, and remained there till the merchants had pretty
generally withdrawn; not one of them having sufficient resolution to speak to him, as perhaps they might not be prepared to ask such a guest to their houses. But this
was not the case with all who saw him; for a person Was not the case with all who saw him; for a person lived in Corn-street (probably the house now occupied by Norton and Son, booksellers, which is very ancient), went up to him and asked him 'If he was not the husband of
the Queen?' who informed him, 'be was.' John Duddle. stone told him he had observed with a good deal of concern that none of the merchants had invited him home to dinner, telling him he did not apprehend it was for want of love to the Queen or to him, but because they did not but he was ashamed to think of his dining at an inn, and requested him to go and dine with him, and to bring the gentleman along with him, informing him that he had a piece of good beef and a plum-pudding, and ale of his dame's own brewing. The Prince admired the loyalty of the man, and, though he had bespoke a dinner at the White Lion, went with him. When they got to the house, Duddlestone called his wife, who was up stairs, desiring her to put on a clean apron and come down, for the Queen's them. She accordingly came with a clean blue apron with was immediately saluted by the Prince. In the course of the dinner the Prince asked him if he ever went to London He said, that since the ladies had worn stays, instead of bodices, be sometimes went to buy whalebone; whereupon the Prince desired him to take his wife with him when he went again, at the same time giving him a card to facilitate his introduction to Court. In the course of a little time be took his wife behind him to London, and, with the assist ance of the card, he found easy admittance to the Prince and by him they were introduced to the Queen, who in vited them to an approaching public dinner, informing them they must have new clothes for the occasion. So the and in that dress they were introduced by the Queen her and in that dress they were introduced by the Queen her-
self as the most loyal persons in the city of Bristol, and self as the most loyal persons in the city of Bristol, and
the only ones in that city who had invited the Prince ber the only ones in that city who had invited the Prince ber Queen desiring him to kneel down, laid a sword on his head, and (to use Lady Duddlestone's own words) said to him, 'Ston up, Sir Jan.' He was offered money, or a place under Government; but he did not choose to accept use, and he apprehended that the number of people he saw bout her must be very expensive. The Queen, however, made Lady Duddlestone a present of a gold watch, which my lady considered as no small ornament when she went to market, suspended over a blue apron. Sir John Dud destone, with his lady, lie buried in All Saints' Church, Bristol, on the right side of the entrance from the north door.'
The Comet.-A letter from Villeneuve-sur-Lot (Lot-etGaronne), 17 th inst., says :- "Last night, at about ten o'clock, we again saw the famous comet, as it appeared in the month of March. It occupied an immense space horizon, to the south-east, it had a slight oblique direction with respect to the Milky-way. Its form has not changed, but it appeared much more brilliant in our changed, but it appeared much more brinant in our moon the light of the comet became feeble, and at a quarter past ten it was no longer visible." - Extract from 1843: "We dare Syll exey, New South Wales, March 6, a prodigiously-fine exceedingly interested in the course of a prodigiously-fine comet which surprised us a few days ago. I saw it on Thursday, March 2d, just at sunset, and since then it has arisen higher every night. It infinitely surpasses everything I have ever thought of in a comet. The tail was 40 degrees, of a perfect white, and Chight as a line."
China -A Berlin correspondent of the Débats writes,
stating that he had ascertained that the art of constructing have lately been the first discoverers, has been practised for centuries in the Chinese empire. M. Gutzlaff has found on the top of a hill, near the town of Tsing Kiang rou, in the province of Kiang Nan, a pagoda entirely
composed of cast iron. It is covered with bas-reliefs and inscriptions, which, from their forms, characters, and dates show that they are as old as the dynasty of Tang, which was tury of the Christian era. It is in the shape of an octagon pyramid, is 40 ft in height, and 8 ft . in diameter at the
base. It has seven stories, each containing extremel curious historical pictures. M. Gutzlaff represents thi monument as being strikingly elegant, and surpassing
in this respect everything of the kind he had previously seen in China
Steam in France-On the 1st Jamuary, 1842, there engines, besides 169 locomotives. Of these 5,605 boilers 4,857 were of French manufacture; 1,747 of them fur nished steam for various uses, and the remaining 3,858 supplied the 2,807 engines. Of the 2,807 engines, 58 2,223 high pressure, equalling 25,182 herse pow, an together 37,296 horsewpower; that is, the force of 121,888 draught horses, replacing the strength of $783,000 \mathrm{men}$ of labour. These amounts, as compared with the year 1840 present on one side a reduction of 40 boilers, not used fo boilers for steam-engines, of which last 216 were fixe and 27 locomotive. This increase gives an equivalent to men. In 1841 steam-engines in France did the labour of I55,061 draught horses, or $1,085,427 \mathrm{men}$
in 1572 , under Charles in 1572 , under Charles IX., was only $17,000,000$ f., was in 1832, 5,417,495,016f. At the present time it is almost $7,000,000,000 \mathrm{f}$. France has already been bankrupt six
times, viz. :-Under Sully, who deducted the interest formerly paid on the capital; at the end of Louis XIV.' reign, under Desmaret, who paid neither capital nor letier ; under the Abbe Terrai, who did not pay the assign mente; during the revolution after the creation of of two thirds of the deb

 the purposes of the argument, and for those purposes alone, that
 case meant to go that len rth. Such a rule would render redress
in many cases quite impracticable. The law would never recogin many cases quite impracticable. The law would never recog-
nise the legality of a partnership, and yet not afford the means of redress on breach of the contract hetween the parties. He must declare that on the present state of the pleadings, and on
the assumption that the answer was true, he must hold that the suit was defective for want of parties. With such a declaration cause, without prejudice to any question, and w.thout prejudice
to the right of the plaintiff to amend his bill, and all costs must
 Wresclinto an indictment, charging her with the wilful marder of last. This case, which has for some months excited in this county and the adjoining parts, was noticed by this Paper At the time, early hour. The jury baving been sworn. the counsel for the
prosecution proceeded to detail the almost nnparalleled circum. stances under which the prisoner became involved in this accusation; and from this statement, corrolborated by the testimony the trade of a milliner and dressmaker among the lower orders
of society, after having buried her first husband, one Henry Mead, married William Dazley, the subject of the presentinquiry, in October, 1840. For some time they continued to live together marred by discord, for not many weeks before his death, which
took place on Sunday, the 29th Octaber, 1842, they were known to have had a serious quarrel, which ended in the exclange of
blows. Notwithtanding this, the deceased enjoyed among his
neighbours the charactare about a fortnight before his death, it certainly appeared that his
wife was unremitting in her attention to his wants, though his mother lived in the house, and that she made a point of adminis-
tering to hima all his medicine and food. On the Tuesday before Sandell by name, happening to ride through their village Mrs Dazley called him in to prescribe for her husband. The cotidition told the prisoner to come over to bis residence at Polton and
get some medicine. This she did, being accompanied by ond get some medicine. This she did, being accompanied by one
Mary Carver, to whom on their way home she said "she should not give her husband the pills which she had got from the a woman who sold drugs in Polton, and knew quite as well as
a opened the box, threw, away its contents, and inserted in their, she
place three other pills, which slie produced from her pock
piece of newspaper. piece of newspaper. On her arrival at home she told hor husband to take the pills which Mr. Sandell had prescrited for him, and
quitted the house. During her absence the deceased took one,
but not without great demur, so much so, indeed, that a girl who was in attendance was obliged to take one first. This curcum-
stance, when made known to the prisoner, appeared yreatly to
excite her anger, whule both ther husband and excite her anger, whle both ber husband and the girl Mary Bull
became very sick, hot, and thirsty, in about an hour and a half afterwards. This attack, however, soon subsided, and the sick
man beythl to mend tili the Saturday, when the prisoner said
slie was slie was going again to Mr. Sandell for sume more medicine.
This'she accordingly did, and havigg returned, io the evengg;
she, in the she, in the presence of the two brotbers of the deceased and
Mary 3nin, empted a wh, fow dex nuto a cup, and yase it to

$\qquad$
$\qquad$ the widow entered into a thard matrmonial engagement with as young man named Waldocll, their banns being once asked in
church. About this time, however, in consequence of the unexpected death of the prisoner's first husband, and her sun by him,
yeople began to say openly that she had poisoned all three. these reports having come to the ears of Waldoch, witl aninti-
mation that if he married ber he would incur the scandal of mation that if he married her he would incur the scandal of
having been a party to those crimes, he at once treclined to go
further in the natter, and himself forbad the banns the prisoner quited Wrestlagworth subuenly, under the pre-
tence of guns to Baluoch to her lawyer, and took up the residence in the purieus of London, where she was alscovered by having been institutcd before hum, stie was handed over to the provinial authorsties, on suspicion of having puisonct all the exhumation of the bndies for the purpose of medical inspection;
and though great difficulty interposed by the length of time which nad occure fore Mead, even hins bod of Willam Dazley, and the boy Meal, and especially in the in conscruence of this a Coroner's Jury returned a varduct o committed to take her trial at these Assizes. Tbe Grand Jury, prisoner was now arraxgned sulely on the c.arge of thele son, the
death of her hataband. In order to brigh body of ewidence, chrefly circumantral, was adduced, but, wasthoutlive of the main facts, it may suffice to state that Mr. Burnhove a chemist at Polton, and his apprentice, deposed to the fact that
the prisoner bought some arsenic at their the prisoner bought some arsenic at their sLop on sume Satur
day between Juty aud Christmas last year, whle Mre expressly swore that he had never givent her any ponder at
all for her husband ; and it further appeared the to make up sone pulls early in the week, which she put was seen prece of newspaper before she went with Mary Carver for tile first,
medic.ne from Polton. Besides this, many declarations poseul hostilty and malice towards her husband were put forsuch as, that she was "determined to have unnatural conductwithout doing for him ;" and "that though her husband was a good grese." Althe shim deat, and would glady follow has to Bigyleswade, on her way to Polton, she entered into a long es at versation with the women apponted to sit up with her, in which,
after inquiring whether "the Judges hanged much aow," she
said "she should not be hanged, for no one saw her buy the
arsenic, or give it to her husband." - This being the case for the Crown, Mr. O'Malley addressed the Jury on behalf of the prisoner, observing upon the many inconsistencies which presented
themselves at every step in the course of the prosecution, and calling upon them to acquit tive course or the prosecuition, and
then proceeded, with great care, to sum up the evidence to the then proceeded, with great care, to sum pp the evidence to the
Jury, the questron for whom was not whether the death of Wil-
Jiani Dazley had been causel by poison. for that was hardly lam Dazley had been causel by poison, for that was hardly
denied, but whether the prisoner had wiffully administered that
poison to hinl. It, was surgested to them on the part of the pro-
 mond that the

 Nortrerv Ciru Uit -York.-Anaie Patock, an aged lady, ina highly respectanle station in life, and connected with some of the mostrespectable families in the North Riding, appeared to take her
trial npon an ndictment, which rharged her with having folo
niously forged the will of one Abigan Mitford. She is apward
$\qquad$ made afrainst her. She hed been out on bail, and slarrendeled to
take her trial when called upon. The will whichs bie was accused
of forging was dated so far back as the year 180f, and there was a codicil to it on the same piece of paper dated in 1809. 1t ap.
peared from the testimonyr of a witness, named Cncper, who it the will being set aside, that the whole body of the will was in
the handwriting of the teitatrix, Abigail Mitford, and hegan, "J,
Abigail Mitford," \&ec., which, as the law then wwe woll been deemed a sufficient execation to reuder it valici. It pur it was alleged that the signatures of the testatrix and also of the
attesting witneoves were forped. To prove this, two persons
nament Masser were called, who deposect that they never atrested the will, and that the signatures of the attesting witnesses were
not their handwriting. The codicil was, however, admutted to be a genuine docunent, and the cracution and attect
regnar, These carcumstances apparins, the learned con,
for the prosecnation dectined to proceed furtber in the case, threw up his brief, stating that it was imposshble to sustam
charge, annl he admited that there was no pronal to sutain prosecutions. The counsel for the accused seemed inclined to
wish that the prosecntion might proceed, inorder that they might
have a fuil opportunity to destroy every vestige of the charge, arrialls savy the is tatrix exceułe it, in court, realy to produce,
had occasion required it, it was aiso stated that, previously to
the trial, the attorney for the prosecution, a person named Hardisty, had been informed, either by the real witnesses, or by some
other persons who knew them, that he had not got the persons Who hand realy attested the whil, whose name was Massa, and
not Masser; and that the difterence in the spelting was pointed
out, as well as the residence of the real witnesses, one of whom was a butcher, and the other of whom had married a person
mamed Holingwell, and ressded in York; notwithstanding which he persisted in preferring a bill to the grand Jury. Mr. Justice directed an acquittal, observing, with strong emphasis and great sional life, witnessed so infamous and disgracetul a prosecution,
and for which there was not the shadow of a pretence. The
Jury saint th it they fully concurred in his Lordship'sobervations, and a verdict of Not Guilty was at once recorlerl.

## SATURDAY, AUGUST 5, 1843.

## Thesday, Aus. 8 \}

The new aids which recent observers have been suggesting to gardeners will doubtless prove to them as beneficial as modern potent medicines have become to physicians. What mercury and calomel, with all the poisonous brood of Hellebore, Aconite, and Henbane, are now to the latter, ammonia, with the nitrates, sulphates, muriates, and phosphates, will soon be to the gardener. But in both cases, a knowledge of the true and beneficial application of them will be arrived at through many accidents and errors. If this has been the case with medicines for man, it will who have to administer the latter are unskilled in delicate operations, and the death of their patients involves but little responsibility. Nevertheless, as a good deal of inconvenience and some serious loss the most beneficial substances, we cannot do better than offer some observations upon the manner in which, as a general principle, agents of unknown force ought to be applied.
The common error of all those who are experimenting is to imagine that because a substance is undouht-
edily beneficial to one plant, under one set of circumstances, it will necessarily be so to all plants, and under all other circumstances. A man is apt to believe that he cannot have too much of a good thing; and, applying that idea to his plants, to suppose that if a little of anything is useful to them, a good deal
must be still better. It was some years ago ascertained must be still better. It was some years ago ascertained
that if a little muriatic acid was mixed with a great deal of water, the plants in the neighbourhood of the vessel from which this fluid was evaporating became excessively vigorous; immediately after this discovery, a zealous gardener placed pans of pure murieverything within reach of the fumes. Nitrate of
en anse soda has been proved incontestably to exercise a highlybeneficial action upon most plants, if used in very small quantities; yet how many hundred plants have perished under the infliction of this agent in excess! Nothing can be more important to heallhy vegetation than ammonia ; yet, because we suggested the probability of its proving advantageous to plants in Vine ries, and similar buildings, if allowed to mingle with the air, a gardener of our acquaintance placed pans of the strong London gas-liquor among the leaves of his Melon plants, and, of course, acouple or hours put
The truth is, that all agents of this sort should be applied in what it is now the fashion to call homoe pathic doses, that is to say, in quantities so small as to be inappreciable by our senses. It is thus that nature administers them, and we never can do better than follow her closely. Naturally, ammonia is convery small at each dose, that chemists could not for a long time discover its presence at all. In thunderstorms the quantity may be doubled, and we all know with what beneficial effects; yet even then it is undiscoverable by our ordinary senses. Salt is in like manner given to plants by the atmosphere, yet Who can taste salt in the air of even the sea-coast, unless in stormy weather? Now these things are not the result of mere chance, but form a most important part of the system of unerring Wisdom observable in of suddensen and violent action ; they have not, likabe the of sudden and violent action ; they have not, like the
stomach of animals, a rapid power of decomposing and assimilating what is presented to them ; but their digestion is sluggish and incapable of being much quickened withoutdanger to their lives. Tothat dange
ature does not expose them-why should man?
The more we see of the action of alkaline and other the true upon plants, the more we are convinced that small quan way of administering them is in extremely
quat a time, and that although they may sometimes bear larger doses with impunity, yei that risk always attends their administration in quan Kity. For example, suppose that it was desirable to give garden plants gas-water at the rate of one gallon a rod,-instead of applying it all at once, however different times, and indimitely better to give it at ten wourld be better, instead of mixing it with fifty gallons
of water, of water, and applying it all at once, to mix it with
five hundred gallons of water, and to apply it on ten successive occasions. We are extremely anxious that this should be clearly understood, because we foresce that if it is not attended to, all that powerful assistance which artificial agents are capable of giving to plants will be lost, and that gardeners, dismayed by the bad consequences of over-doses, will leave off using them at all. And yet their own experience gives them a
better warning than we can of the great importance of better warning than we can
attending to these matters.

Every gardener knows that when a hot-bed is first made up, the atmosphere of it is one in which plants cannot live; although when it "sweetens," as they say, it becomes more grateful to plants than any other atmosphere of a hot-bed fatal at first, and salubrious afterwards? Its temperature?-hardly that, for it is easily moderated, and rarely is more than plants can well bear. The quantity of water that is suspended in it? - certainly not; for a damp atmosphere is incapable of producing such sudden death as seizes plants in the vapour of a fresh and rank hot-bed. It is the ammonia that flies off, which, when abundant, as at first, is fatal, and which, when in moderate quantity, as afterwards, is so grateful to plants. We have here a case of poisoning at first by an over-dose of that
which afterwards, in prover quantity, is the carrier of which afterwards,
health and vigour.

These are most important considerations, in every point of view, and more especially now that the tanksystem of furnishing bottom-heat is so rapidly driving appointment in the effect of the tank-system, as comappointment in the effect of the tank-system, as com-
pared with the old hot-beds, unless some means are taken of throwing a proper quantity of ammonia into the air. We have no doubt that in using this substance a gond many gardeners will kill their plants outright and that there is not the shadow of a necessily for any such unfavourable result. The maxim must be A very very little, very very often." We should begin by pouring a wine-glass-full of gas-liquor for avery ten sashes into the tanks or water--rougns once this a safe quantity we should double it ; and go no further, except with extreme caution.
Some general directions as to the mode of cultiva ting the small portion of arable land which we
recommended to be occupied with the Grass-land attached to a country-house or villa may be acceptable even to those who have ample means of information, from their own observations, or from Agricul tural works. This land must be considered as something intermediate between a garden and a farm; it should be cultivated as a garden, but cropped like part of a farm. The tillage should be as perfect as possible; and the great object, whatever be the nature of the soil, to bring it to the lighest state of fertility of which it is capable. If the soil be originally poor, a judicious outlay in labour and manure will gradually improve it; but a certain system must be fol lowed to avoid a useless expenditure of capital. In all cases it should be trenched all over at least two feet deep. If the subsoil is of so barren a nature as to be unfit for being brought to the surface, and only a small depth of good soil lies over it, the improvement will be slow. The subsoil must be stirred to a small depth at first, and earths mixed with it to improve it. Suppose a very coarse gravel mixed with sand and yellow oxide of iron within six inches of the surface, where the soil is a poor light sandy loam-we can scarcely suppose a worse soil. We have chosen it on purpose; for it is frequently met with in Surrey and Hampshire, and particularly on Bag-hot-heath; yet such a soil has been improved and rendered fertile by poor cottagers, who were allowed to build a hut and inclose a garden on the heath, the land being of no value. A person with a command of capital would improve such a spot in much less time, In the first place, the iron is to be neutralized, which may be done by exposure to the air, when moist, with the addition of lime, or chalk, and peatashes. The protoxide will gradually be washed out, or changed into peroxide. Clay or marl mixed with the sand and gravel will consoliate it, and animal or vegetable manure will make it produce Buckwheat and Rye are the only kind of grain which will succeed as yet. Continued tillage and abundant manuring soon produce an improved top soil, which, from being of a yellow colour, becomes brown by the addition of humus. There is often a hard thin crust at a small depth below the surface of such a soil, which is known by the name of the pan, or moor-band. This is formed by the iron deposited from water which runs through the light soil, and meeting a more impervious loam, crystalizes or forms a kind of hard cement with the fine siliceous sand. This is impervious to water, and until it be removed or broken through, no improvement can take place Deep trenching is therefore indispensable, and i
repaid by the loam which is found under the pan, and which, although impregnated with iron, improves the texture of the loose top sand.
By great expense or indefatigable industry many acres of such a soil, which the law declares to be suapte natura sterilis, or absolutely barren, so as to be exempt from tithes for seven years after cultivation, under the old laws, have been brought to a comparative state of productiveness. We would not recommend such land while better is to be had, but we take an extreme case as an example.
The other extreme is a wet stiff yellow clay, which it is impossible to work upon in its wet state, and which becomes a perfect rock for hardness when dry. Yet this soil is more readily rendered fertile than the last. It must first of all be laid dry by numerous drains two-and-a-half feet deep, and rery close to each other, the tiles in the drains being covered with six inches of small gravel, and the whole ground trenched two feet deep, laid in ridges before winter, and not touched again till moderately dry and mellowed in spring. Manures chiefly in a long undecomposed state may be dug ins, and Potatoes planted, laying the ground as loose as possible over them; or Beans may be dibbled in rows, two feet apart. If lime or chalk can be obtained, it will greatly improve the soil, and may be put on to almost any extent. Twenty cart-loads of chalk, forty bushels each, will not be too much; or 300 bushels of lime per acre Coal-ashes likewise will greatly improve the land, by preventing its running into clods. However unpromproved than the peor anst, it will be more easily We do not suppose that many spots will be chosen for cultivation where the soil is so unpropitious; but many partake of the one or the other extreme, and with a little pains may be converted into very useful land. Patience and perseverance overcome many difficulties. This may be considered as a digression, as few of our readers we hope have such soils to bring into cultivation ; but by giving extreme examples we shald better instruct those who have little experience. We havenurselves land in cultivation, once very nearly as unpromising, and our description is not taken from mere imaginatio
The spade, the pickaxe, the fork, and the heavy hoe are the instruments of tillage which alone can is the great improver. The old man in the fable, who told his sons when he was on his death-bed that a treasure lay buried in their field, gave the great secret of fertility. Dig deep, stir it well, expose it to the air, and the treasure will be found in the crop-M.
TREATMENT $\overline{\mathrm{OF}}$ F $\overline{\mathrm{UC}} \mathrm{CSIA}$ CORYMBIFLORA. BEING aware that the robust growth of Fuchsia corym ttaining toften beeln complained of, for small buildings, I was, last summer, induced to endeavour to flower this plant in as dwarf a state as possible, but having it at the same time in good health. As I have succeeded beyoud my expectations, and as an account of its treatment may be of service to others, , communicate it to you, that you The leading known throug oung plant was last summe pinched off, so as to leave two healthy joints, to produce shoots from the axils of the leaves. When these shoot were about a foot in height, the strongest of them were bent down and trained horizontally, for the double pur pose of allowing the weaker ones to overtake them in growth, by remaining erect; and likewise to cause other young shoote to spring from those parts of the stem that were principle that the sap in general has a tendency to ascend From those shoots that pushed, nine of the strone re selected the remainder being rubbed off. Six of them are arranged to form the outside the other thre thour che The tons of the shoots mee tee conply $\gamma$ ent at first; but as the central shoots the benefit of receiving more of the ascending sap, they the benert a lead of those forming the circumfere which brought the plant to the most suitable shape for rendering its floral beauty attractive. This spring, when it was scarcely two feet in diameter, and about the same in height, it developed its "gaudy corymbs from the sume it f , ithe hor abje each dhoo. time ptrrecting the eye of conspicuous objector a long the for of the visito mmedately on ent il tepoted beore shift, and used very rich soil. It has not been repotted since, being allowe Which it grew through the winter. As it is a gross feeder, occasionally give it liquid manure.-H. H. Cantley.
on the Transmission of Cuttings to india Abour the first fortnight in August is the ripht time of fruit-tre the first steps for preparing grafts or cutting November, to India or China distant possessions. For the manner of penaring our grafts see the remer at manner oreparing such and others the last year of the of a gentleman of high physiological acquirepprobation akes anctive interest in subjects tending who general improvement of our East Indian territories; se aiso vol, iil, p. 539, and Number 14 of the current volume,
p. 228 ; to which I may add that I have the sanction of my worthy employers to prepare grafts here after the manner I suggest, and that I shall be glad to send be packed for the , to London next October, in time to add, that I once unpacked a case of plants I may further add, that I once unpacked a case of plants that had been lying seven months in a hot warehouse at Vera Cruz, and that some of the woody plants packed in saw-dust were still alive, after being packed full nine months; and I have little doubt but grafts of two years old wood, if packed after the manner of those sent to India by the overland route, and placed in a large case of dry saw-dust, or in a bale of cotton, might be sent to India or China round the Cape of Good Hope, in the bottom of a merchant vessel ; and if care were taken not to excite them too much at first, there would be little danger of their success. In Dr. Gibson's letter of the 27 th April, 1842, (vol. ii. p. 539), he says, "All the cuttings of the Jargonelle, \&c. have rooted, and till the beginning of the hot season were flourishing. Since then they have drooped much and I fear they will die." Now, it was natural enough to suppose that these cuttings were rooted, when they broke forth into leaf, but the chances are that none of them formed any roots at all. Indeed, from their arrival till the date of Dr. Gibson's letter, there was hardly sufficient time for their rooting, even in the climate of Bombay or Calabar, supposing they had arrived in as good a state as when they were packed in London. We have all of us seen analogous cases at home; the Elm and other decidous trees, after being felled in the spring, break into leaf on the approach of summer, and keep green for five or six weeks, or till the leaves exhaust all the available sources of the parent tree, and then fade a way, just as the above cuttings are reported to have done, after going through the same process; and in all probability the fate of the two Golden Pippin and one Duchesse d'Angoulême cuttings, which reached Calcutta safe, will be reported by Dr. Griffith to have been the same, unless better precautions had been taken to insure their success than were used towards those in the nearer stations of Calabar or Bombay; and if so, something further must be done for the safety of future trials. If one might suggest a gardening hint to our distant friends in the East, it would be this:-Plant the cuttings 4 inches deep, in very light soil, and press it about them so close, that you could not pull them up without a good effort. The sun should not shine on your cuttings at any hour of the day; if this shaded situation is naturally dry so much the better in your hot climate, but you must keep the soil always moist by watering after the rainy season. As soon as signs of vegetation begin, place a wooden box over the cuttings about 15 inches high witl the bottom taken out of it, and glass or strong white paper, oiled, used instead; this will give them light enough at this stage. In England, we would place a hand-glass over them, but the wooden-box is preferable in your climate, being powerful non-conductor of heat which is just what your cut tings require. If yous cuttings require. If you see the box, remove it, within the a little of the surface-soil away little of the surface-son all ound, and sprinke some dry erme the rod wipe the box dry, and turn it young shoots are from 4 to 6 ine young shoots are from 4 to 6 in . long, begin to let in air by placing piece of wood under one corne the box suficient to raise it up 3 in. : but this is a critical period. If you see the leaves drop in the least you must let down the box again for another week, and afterwaxds begin with opening only one inch, which you will increase
by degrees, as your tenderlings gain strength; but I should think you cannot dispense with the box altogether for five or six months, although you may take off the glass or paper top as soon as the leaves will endure a 6 -inch opening under the box. Unless you have a good gardener, you should never plant your cattings in pots, as they are liable to get either toondry or too moint-the natural moisture of the soil is more uniform and congenial for them.
That I might speak with more confidence on this sub.
ject I began to make the same experiments here about this time last year, by preparing cuttings of Apples and Pears, which I planted in two aspects last November, on an east and north aspect-those on the north aspect are now a month in advance of the others. 1 did not think handglasses would be necessary in our cool moist climate. By the end of last May they began to leaf, and by the end of June you would have supposed by their appearance that they were well furnished with roots, but not a fibre was made at that time, and now they are only beginning to put out roots, and 1 shall send one of them along with this to sbow the state they are in. Now, if this summer har been as hot and dry as the last, all my cuttings would have perished last June, unless I kept a cool moist atmosphere round them under a hand-glass.
The English reader will excuse me for going this length with a subject that might be privately reported to the parties interested, but as there may be others engaged in the same pursuit in otker distant parts of the world to whom any suggestions of this nature may be acceptable the pages of this widely-circulated Journal seem the bes channel for the purpose.-D. Bealon.

PLAN OF THE PROPAGATING-HOUSE AT Messrs. Veitch's, EXeTEl?.
The accompanying are plans and sections of our new Propagating House, which has now been erected and in
full work for several months, during which time it has more than answered our most sanguine expectations. It is divided, as will be seen by the plan, into two compartments, which are entered from the back through a lobby or small potting-room. One division we devote to propagation in general, and the other to the raising of newlyimported seeds; and it is at this time completely filled with supposed novelties from all quarters of the world, especially from South America, whence we have received them, through our collector, Mr. William Lobb. The house is built in the middle of a piece of ground containing a quarter of an acre, and is inclosed with walls and hornbeam hedges, being so situated as not to be seen by visitors. It is surrounded with pits, frames, hand-glasses, arc., in which the young plants raised and propagated within the house are hardened off, and in which the nerease of such plants as do not require the aid of a house or bottom-heat is also carried on, the whole forming a complete propagating department. The house is heated on Rendie's tank system. The tank is formed of brick arches worked in cenient, with brick sides, the whole being well coated with cement. The top is of slate, cemented down. The sides of the bed are also formed of brick-work. The material used for plunging in is a clean sharp sand, which we find retains the heat for a considerable time. In one part of the bed we have put soil. able thme. In one part of the ber we bave put soll, rapidly. We would draw your attention partionarl to the simple and yet to the simple and yet efficient manner in heated water by means heated water by means By this By this contrivance we can heat only one division of the house at a time, or only half of either or both divisions; and while all can be heated at one time, yet each bed may be regulated to a different degree of heat, thus forming four distinct beds to be heated as circumstances may require. These apertures are formed with shor pieces of 4 -inch iron pipe, cemented into the brick-work, and the circulation is regulated by having plugs to fit the pipes. This plan, though simple, we believe to be new, and the advantages arising from it must be apparent to every one. Steam, if required, may at any time be obtained by opening the doors at which access is procured to the apertures for incressing or diminishing the circulation of the water. Mr. Rendle water. Mr. Rendle has seen the house, aad joins in the opinion expressed by every other person who has inspectedic, that is the most complete house of the kind which he has ever seen, and he also considers his tank system of heating to fully and efficiently fully and efficiently
carried out. From the trial already given, we unhesitatingly say that, as a medium for obtaining bottom -heat, it is most admirable, and ere long will entirely supersede the use of Tan, and all other fermenting materials. - J. Veivh and Son.

Plun of Construction.

AMATEUR'S GARDEN.-No. XXXI. THe first step towards ensuring an effective display of flowers in the coming year is to make the arrangement at the present time, when it can be determined with the greatest accuracy what kinds of plants will look best in certain situations; for, let it be remembered, that, however well the plants may be known, the exact-I may say peculiar-tint of the flowers, cannot be carried in the eye, and therefore no correct arrangement can be made at the
time the plants are out of bloom. In making the arrangement, the best way to proceed is to take a quantity of sard and spread it on a table or potting-bench, of sufficient size to admit of a correct representation of the flower-garden being formed upon it. If your garden is on gravel, form your beds, and proceed to fill them with flowers of the most admired colours, and if the first arrangement doesnot please you, re-arrange until you get it to your suces between the ben the garcuen io rass, as it is indispensable
that you have the colonr of the spaces between the beds, or you cannot determine what colours will look best in
thein. After the arrangement is completed the beds must be numbered on a plan, and the names of the flowers entered in the "Garden Catalogue," with the number of plants requisite to stock the beds properly-always allowing a few of each kind for deaths, or for giving or exchanging with any friend that may be disposed to barter With you. Where there is more than one flower-garden, the plants for each should be kept separate throughout
the winter, and in spring, when they are potted off, it is the winter, and in spring, when they are potted off, it is
easy to put in a few pots of cuttings to make up any loss easy to put in a few pots of cuttings to make up any
that may have occurred, which, where a great quantity is required, is almost inevitable.
At this place we have four distinct flower-gardens, which wilh their circumferential borders require, to stock them properly, about 10,000 plants, and we require nearly the same quantity to fill up the vases, rustic baskets, borders and bells scattered about the lawn. In the coming season, I intend these four gardens-three of which are on grass, and the fourth (will be) on gravel-to be representacive of four distinct styles of grouping; while in the flowers of a drooping habit which ere best seen on a level, with, or rather above the level of the eye, us for instance The whole tribe of Fuchsias and many Pentstemons, Sce. In one gurden the flowers will be arranged in masses of moargined wilh its complementary one, as blue with orange purple with yellow, scarlet with white, and so on,-in the third three or font colours in each bed, with probably specimen greenhouse plant in the centre, -and the fourth which will be on gravel, principally with cold colours, as bue, purple, and their numerous shades, which cannot b this way I howe grass, which is a cold colour. must way 1 hope to do away with the sameness which visitors examining whing to think about, and an opportunity of examining which is the most effectuve style of gardening charged is, 1 think, new idea, and hope I shall not be an opportunity of an opportunity of applying it to practice
me layering of Chrysanthemums, if not already commenced, should be no longer delayed. The way to proceed is to make an incision in the under side of the shoots, about six inches from the tip, and sink it into the ground, placing a little fresh sandy compost round it, and either pegging the shoot down, or securing it by placing a stone or half brick over the compost. The young plants will be ready to take off towards the end of September, and will The beautiful dwarf flowering specimens.
The middle of August is the best time to sow Ten-week Stocks to be preserved through the winter in pots, and planted out is April for spring blooming. One of the best growers for the supply of Covent Garden Market makes it a rule to sow on the 11th and 16 thi of August, and the plants generally commence blooming about the
end of Marcl.-W. $P$. Ayres.

## ROSES IN POTS.-No

The Rose, which bas been justly designated the "Queen of Flowers," has, perhaps, never attained to a higher degree of popularity in England than at the present time. The of new varieties, has been greater, within the last few years than the most sanguine Rose cultivators could have anticipated; and the improvement in the cultivation here has been quite equal to the success in originating fine tion of "Roses in Pots" by the Horticnltural Society of $\mathrm{I}_{\text {and }}$ Roses in Pots by the horticultural society of of culture Frhibitors during the nast season have been few, because there were many misgivings on the point, which want of experience and knowledge of the varieties best suited for the purpose tended to confirm. Those, Reweyer, who have grown Roses in pots during this are imaginary, and are looking forward to another year to produce handsome plants, with more perfect flowers. Roses in pots form highly interesting objects among the it is allowed that our general cultivation of Roses in the pen ground is quite equal to theirs?
One great advantage in exhibiting Roses in pots is, Rose their true character becomes apparent; we see the Tofer as it would appear growing in our gardens, and can gerer it to its proper class. On the other hand, the greatest difficulty is to obtain a sufficit nt number of phants Tlothed wilh fllowers, and in perfection, at a stated period. reat measure be remedied, by growing the freest bloomers Alld slufting the plants to a sumny or coul situation, as for state may require. Where twelve plants are wanted hundred plants should be grown, and the greater portion of these should be Autumnal Roses.
But before adverting to their culture, the question may is mrobalut varieties are best suited for the purpose? It following chat most varieties would succeed, but the be selecled wilhout fear, a great portion having been proped suitable in the nurseries here during the present Bearon lica, Darieties from the sections Moss, Provence, GalWouldadyask, Perpetual, and a portion of the Hybrids, I siz inches to to be grown as worked plants, on stems from sis inches to two feet in height; the others may be grown
on their own roots, or at the option of the cultivator. In very many cases, however, worked plants produce a
greater quantity of flowers, and
as are grown on their own roots.

Those marked 'a' are large full Roses, the others are desir-
albe on account of their fine habit, distinct colour, or showy able on acco
appearance.
Roses trained as climbers would form very beautiful objects in pots. If allowed to grow to the height of three or fuur feet und then stopped, I imagine they would throw out lateral slioots, and become covered with foringe and lowers, I should select in elge of ce po the Ayrshire, Boursalt and Sempervirens, sone of the Hybrid China, Boursad Perpetual, Noisette, Burbon, and even some of Hybrid Pepetal, Niselle, Bowby in growth; the flowers of the former being mostly small, or semi-double. Notwithstanding this, they are, perhaps, unequalled when
grown as pillar-Roses in the open ground. Their growth is rapid and graceful, and their large corymbs of flowers render them a mass of beauty. Such plants as are not kept in pots should be removed from the ground eariy in autumn, as soon as the shoots are sufficiently ripenec which they generally are by the middle of September
t potting, the sized pots best adapted are Nos. 12, 16, 24, and 32 , according to the size and habit of the plant and these should be well drained. The soil used shoul consist of equal parts of turfy loam that has laid by and become mellow, and as to have the appearence of hed sould If the loam be of a hard or binding mact milde fill be mecessary Having selected mizture son the the plant, shorten in shi through a fie rose. Ne phe the to a sheltered situation, and plunged up this the pots in alan ther ashes. Noer ment, if tamed fibrous roots will be seen forming in abundance; they, will appear to have quite recovered from
and will bloom well the following summer.

With regard to such plants as are always kept in pots, they may be shifted at different seasons of the year, as their growth may require. Supposing them to be in small 60 pots in the spring, they may then be shifted into 48 s , keeping all fiower-buds nipped off, and afterwards into 248 , which will generally be found sufficient for their growth during the first season.-W. Paul, Nurseries, Cheshunt, Herts.

## HOME CORRESPONDENCE

Experiments with Artificial Manures,-1 have been much interested in the Table of the action of Manures by Mr. Maclean, published in the Chronicle of July 29th and I have nodoubt but that most of your numerous reader will join me in thanking you for bringing before thei notice, from time to time, results fraught if so much importance to the Agricultural consons. An due to you for thus noticing the labours of others, of how much greater praise is he deserving who contrived and carried through such a mass of experimental investigation It is from data such as those afforded by this tabular record that we can alone hope to educe principles for our sure guidance in the scientific improvement of agricuiture. my opinion, that man is more entited to our gratitude, in a national point of view, who carefully compies such table as Mr. Macleans, -being the resuit or his ownexperiments, and guarded as muci as possible from sources o error, than he who writes volumes of speculative theories. It is by such dabours that the practical farmer may rende indispensable service to the man of science, who, without it, must infallibly grope as it were in the dark in search o truth, and be liable to be misled by every ignis fatuets which flings its uncertain ray across his benighted path May I indulge a hope that you will, whenever practicable, present your readers with similar tabalated results; they will not prove of passing interest oniy, but tend to confe an increased value on your esteemed periodical when bound up as a book of reference. But I will not dismiss these remarks without pointing out what must surely be an erro in the tuble referred to, and which must tend to bring into disrepute a manure which almost every one agrees in setting a high value upon-I mean the Sulphate of Ammo ia. In the Table, this substance is valued at sos. cwt., while every one knows it may be purchased for 18 s . bo that in the experiments on Turnips it appears that a absolute loss mas caused by its application, and is the onls instance in which such loss occurs. It seems that 8 ct of sulphate of Ammonis can, under the circumstances of be arerm form 15 cart-loads of farm-yar Man the pore berth the Manue, 30 eatlon of med nixture as whe so cane the mixture eeractly the Th Table gives the 67 , his his point or it yard mar rel duty by the adaution of ammonia; hut the real cost or the mis and 1 submit hat this must mastrialy atter our pinion, as deduced from the Table, of the economical application of the salt in question. A similar alteration requires to be made in the 28 th experiment on Crass. I may also point out that the cost of Guano in experiments on Grass, Nos. 6 and 15, is putat nearly doubl its present price. This reduction will, of course, ver much enhance its value as an economical Manure, and will place it at once at the top of the tree. These remark may serve to point out how necessary correctness is in every element of such a Table, and without it nothing will be easier than to convert that which should be the grand test lof truth into
Pelargonizms.-Will you allow me to suggest the trial of a diluted solution of the nitromuriatic acic to Pelargoniums for root-watering, where that peculiar disease in the leaf exists. I took one out of its pot, trimmed the roots, and watered it with the acid. It seems quite recovered; a second, similarly treated in its pona, was put into the same soil, but watered only 3 pond-water ; it will go off again ; both were cut down to Alum useful in tixing Ammonia, I naned to you th other day that Alum was overlooked as an ageut for fixing the Amponis in liquid manues, surd you seemed doubt its efficiener. I have since proved it, and you wil find upon trial how conapletoly it acts, and how speedily it removes from a stable the strong ammoniacal foetor,
(where there is not free ventilation, by the using a pail-
ful of water with about half a pound of Alum dissolved in it. Upon adding the two solntions of Carbolvate in Ammonia and Sulphate of Alum together, immediate effervescence ensues, the alumina is deposited, and the phate is used in tanks) can be employed or not, but why not?-itwill be in all probability a subsulphate, and in some cases as good as gypsum ; but a little lime thrown upon would soon fix any acid which was free there, and I think whe combination of the two earths would have no bad tendency, but the reverse, in some soils.-Thomas Ingle,
M.D., La Hague, St. Peter's, Jersey. Watering Out-door Plants. - I quite coincide with growth of plants are heat and moisture; but I cannot general rule to go by, that the morning is preferable to the evening for watering plants out of doors. "J. L."
states that evaporation is in proportion to the dryness of
the air, -might it not have been as well for him the air,-might it not have been as well for him to have ice is forming on the surface of the earth? but I dare say ment, and conceived it the wiser plan to leave it out. However, that is no reason why it should remain so in so
important a discussion. It is a well-known fact that the sun's rays impart no heat to the air in their transmission to the earth; but any sensible effect produced by them is in proportion to the eatent they are reflected or absorbed, sun has passed the horizon, very little evaporation takes place beyond the power which the heat has given to the ture so carried up will soon again be deposited in the form of dew. This last circumstance, with the water thrown on, will retard radiation- (or why is it that a clear night is more favourable to radiation than a cloudy one?) form of vapour. Now, I think these statements in some degree remove "J. L.'s" objections to watering in the removed so far from the plant as he imagined; and also that evaporation by evening watering is limited indeed. soon after sun-rise." Who would disturb the silent dew? effects is his system of watering but how different in its effects is his system of watering to that calm quiescent state in which plants delight to dwell, compared with which in motion, morning watering is a state of atmoof vegetation.-C.
Watering Out-
Watering Out-door Plants-- You require an answer frae practical men as to whether it is better to water out-
door plants in the morning or at night. I hae had a gude share of both planting and watering in my life-time, and I hae come to the conclusion (for I think I hae na been has been applied to them by the hand o' man in the morning, at midday, and the gloamin), that gardeners in general are great gowks for watering sae muckle as they do. Such a statement may not please some o' them, for I ken that there are some gay full chaps belonging to the profession, and, according as the advertisements read, have a perfect knowledge $0^{\prime}$ their business in every department. there is mony a thing I would need to be instructed in, and that $o^{\text {" watering amang the rest; } \text {; hae been like mony }}$ more in the world that hae watered and watered and better ae day, when I was unco tired at the wark, I sat down on the edge $o^{\prime}$ the water-barrow, and looked up to the cluds, and I may say prayed for rain, but I thought again that and I may say prayed for rain, but I thought again that man had a rational soul within him, and if !he would just exercise the faculties that his Maker had given him, he might be a great deal better off, for we often act as if we were animals $o^{\prime}$ instinct, and as if we had nae reason to guide us; and when I say that I intend to water a great deal less than I hae done, you are not to imagine that I live in, or even in the neighbourhood of the parish of Dreepdaily, where Andrew Fairservice served his time, and learned to grow Green. Kale beneath glass, and forced
Nettles for early Greens. I will not be able to explain Netties for early Greens. I will not be able to explain my meaning perhaps in Natural Philosophy terms, for I am no sae weel acquainted wi' radiation, absorption, eva-noo-a-days as I would like to be; but I get wonderfu' help frae that wonderfu' book "Brande's Dictionar," whare ane will get $a^{\text {a }}$ the kittly words explained that lie between Abaciscus and Zygophyllaces, and every gardener should try and be able to lay his hand upon ane as soon as he can. And as I was saying before, when I was resting upon the water-barrow, with my elbow upon my knee and my something else might do far better for into my head, that watering them; I thought if something like a mackintosh could be had for summer crops, it would be agreat benefit to them,-something ye ken that would keep in the heat and the moisture, and no interfere greatly with the working o' nature, and after trying various substances that aside, bat I mak mysel believe that I hae suce soon laid last, but the stuff is so common and so cheap, and so muckle despised, that I maybe shouldna tell ye what it is sheet-anchor to some of $m$; at ony rate it has been as a ing we sll had our ohare of cold and wet in the spring months of this year; then came June with hirstering heat,

Which rent the earth about the roots of our crops, and some vegetable crops, and water besides practised among be dieing in the spring of their days; then was the time that I spread the mantle over their roots,-it appeared as refreshing to them as the shadow of the Gourd was to Jonah in the land of Assyria. They improved every hour after it was put on, and those that were left without it have
made but a sorry appearance. What I hae said will permade but a sorry appearance. What I hae said will per-
haps not please you for an answer to your questions, but haps not please you for an answer to your questions, but improvement in gardening if crops could be made to thrive weel in hot weather without water being applied to them by the aid of the gardener ; some may be so wedded to the water-tub and the watering-pot, that they will not easily part with them. For my part, I am heartily tired of them,

## Maluran

exion doch's statement, at p. 479 , that Peaches and Plums will come to maturity without leaves being in immediate connexion with them to draw and mature the sap, allow me under that the same fact has several times come Peaches and Prvation. At the present time I have both with them, swelling as fast as those that have all the appendages necessary to bring them to perfection. Some years ago I accidentally broke the leader at the same joint from which a fine Fruit proceeded. Although not expecting the latter to swell any farther, I determined to give it over chance by bringing the leaves of the nearest branches and ripened to all appearance in a sound state. swelled off cases, does nature make up the deficiency from the leaves nearest to the fruit? or, admitting the doctrine that Fruit possible that the whole of the leaves or wood, is not formation of Fruit is deposited in the stem or branch previously to the swelling of the Fruit, and that the leaves only exercise their proper function with a view to the for the Fruit?-Dee. [We apprehend that in those inor the Fruit?-Dee. [We apprehend that in those in-
stances the Fruit was not at the end of leafless braches btances the Fruit was not at the end of leafless branches, also to be presumed that in the first instance mentioned the Fruit was already swelling, and able to attract food to itself, independertly of the leader that was broken off. No doubt, after fruit has acquired a certain size, it becomes more independent of neighbouring leaves than when it is younger.]
Shings, I beg to - Although I agree with you in most the leaves of Strawbervith you respecting the cutting of do not cut quite so close as "D. Z.," I am sure, from considerable experience, that the principle is good. In point of neatness there is no comparison; the beautiful green objects in autumn, and affording quite sufficient covering for them in winter ; in fact, they may be compared to birds after moulting. And to observe the fine plump buds of those which lave been cut over when they have made a few new leaves, the difference is at once manifest and if done in time and with judgment, the result will be plentiful crop of fine and large fruit the following
Foroing Strawberries.-Perhaps it may be thought invidious to object to anything proceeding from so high an satisfy the inquiries of "A Subscriber," as to the best manner of preparing Strawberry-plants for forcing. I have manner of preparing Strawberry-plants for forcing. I have Keen's seedling, when there was more occasion for it) a similar plan to that recommended at p. 480, viz., to take runners of the previous season and transplant three of them into 32 -sized pots, at the end of April or the begin. ning of May, plunging the pots in an open piece of ground, ting them into They become fine robust plants; but I do not think it commensurate with the extra trouble, though by one circumstanced as Mr. Paxton, who has merely to say "Do," strike some runners in small pots and repot them again but I am mostly satisfied with the best runners I can find in the month of August, when I plant three of them in 24 or 32 -sized pots, according to the size of the plants. I adheres bestays to take the runners up, as the mould roots, as it causes them to produce twice the quantity of it should be hot weather, behind a them I place them, if ten days, after which I plunge them in an open part of the garden, in the common soil, up to the rims of the pots. A friend of mine, long gardener to Sir William Folkes, a successful forced-Stawherry-grower, used to recommend taking the small runners in the month of September and potting them, as he frequently found the autumn; and the best crop I to come into bloom in had was on an comer remember to have me to Octo put off potting the runners till the first week in make many roots before the season was over, I filled a frame with fresh horae-droppings, and plunged the pots therein, but without covering them with lights. This was the usual custom of the late Mr. Press, long gardener to Mr. Gray, of Hornsey, who, besides supplying the wants manys master's famis, (I have heard,) could gend a great many to market; and the chief place he had for growing
them in was upon some shelves in front of a Peach-house. I believe the chief cause of failure in forced Strawberries arises from their being introduced into too warm a place. I always find those which I place in my vineries when I later.-John Murdoch
Prizes for Seedling Pelargoniums.-In the Chronicle of July 15 you gave a list of the prizes awarded at the last exhibition of the Horticultural Society, in which I Medals two Silver Knightian and two Silver Banksian Merit for a seedling Pelargonium, named Psyche. It was the opinion of one of the most experienced growers of seedling Pelargoniums that Psyche was the bestever exhibited in this or any other year. Of its merit, therefore, I conclude there can be no doubt. It is equally clear that one of the objects of the Society in offering prizes is to encourage merit, and to proportion the value of the prizes to the degree of skill exercised in producing the object exhibited. I take the liberty, therefore, of asking. Whebeautiful geedling least as much merit in producing a dish of Cherries? A tolerably good soil and favourab season will produce fine Cherries without exercising the skill of the gardener, but to raise a seedling Pelargonium able jumpetition in the present day requires considerexperience in the management parent plants, and some am confirmed by thagen tion at Chiswick in Knightian and two Silwe Bankian Meds one siver ling Pelaron Wre Banksian Medals to three seedthose Peargoniun. With the parties who exhibited on those two occasions I have no connezion, but as a Fellow ing, Horticultural Society of more than 20 years' atanding, 1 feel mon anxiou that its character for fairness and consistency should be maintained.-F. $H . S$. [We have no doubt that some one of the judges will snswer this next week.]
$R o t$
Rot in Larch.-I observe in your answer lately to a question on a subject of great importance-the heart-rot in Larches, that you suggest the probability of its arising from too much moisture about the roots. My experience would lead me to a precisely contrary conclusion, namely, that the disease is caused by a deficiency rather than by an excess of moisture. At least, I know that the disease is prevalent in the dry sandy heaths, till lately so common in Cheshire and the neighbouring counties, and I ana latyoes not occur among Larches planted on the sides of much Larch plantations in this part of England have been made upon thin, dry, sandy soils, which are by no means suitable to the tree, so that we are not likely to form a true notion of its real value as a timber tree in situations where the soil will allow it to flourish.- [We bave stated that the subject is exceedingly obscure, and we should be very or what therience of others is on the sub ect. Our own impression is, that the published evidence cans towards a wet subsoil being the cause of the mischief; but our correspoudent's evidence seems, in this instance, to point the other way. Is he, however, sure that the subsoil is dry ?]

- Bees.-In answer to your inquiry at p. $519, \mathrm{I}$ beg to别 that the Bees were in the comb, which hung from ne of the brion Bub arer cussion than I am; but as Mr. Wightonseems to say that
my meaning in one place is not clearly understood, I beg o clear away all ambiguities. Before a first swarm is 24 and and eggs are placed therein. Then, if the queen be taken away, the Bees add wax to one or more cells, which may be called bent royal cells, for common bee cells are horizontal, and queen cells vertical. The wax added to the common cells is put in a vertical form. Mr. W. saw this part of the cell only, and therefore says that I argue unfairly, because I was not at Cossey Hall to see it. I have seen many like it.-I thank Mr. W. for pointing eggs ascrepancy in my article: viz., that Bees have no but, generally speaking it is right. I assure Mr. W. that when brood goes back before it is ten days' old it never becomes dry. When speaking of artificial swarming he stands on very slippery ground; but I forbear to make another remark. - A. Pettigrew.

PROCEEDINGS OF SOCIETIES.

 Hunt, W. Shaw, E. Steer, and J. Tatham, lisqirc, were electedFellows. A communications from the Comte Ietheur respecting
Strawher Strawberrie
distinctive
several others might he added,
each kind arives at the maximum of ats, productivn; 3 , How
many years the same plant will 4, What varieties will bear two crops in the same season :
thus, for instance, Kcen's Scedline and the British Queen will , thus, for instance, Keen's Seedling and the British Queen will,
planted in the open border after bemg forced, grow luxurianty, and produce a second croy more abumaant than the first; whilst
the Elton, under similar treatment, throws out nothing but ruriners; although these three sorts, after bcing forced, make extra-
ordinary growth towards the end of the season, and bear prodigious quantity of fine fruit for severnl succecding years. Comte Lelieur was of opinjon tlat it wourd be nisccult to select a certann
number of plants of each of the best varietics after forcing, and to plant them in the open border to ascertain whell kints will
produce a second crop; and that it was a good plan, before turn-
ing them produce a second crop; and that it was a good plan, before a short
ing them out of the pots, to withhold water enturely for
time, in order tlat they mioht be excited into new timc, in order that they roight be excited into new growth by
repeated waterings. The writer also observed that the temperarepeated waterings. The wxiter also observed that the temp first
ture of Pine-stoves was too warm for Strawberies, when
placed in heat to bring them forward, that the fowers of these placed in heat to bring them forward; that the out an abundance of foliage before blooming, mhould be brought on cradually,

Thus, for instance, the Elton is barren, while Keen's Seding
succeeds in a rather high temperature, provided the house is

Walering Plants in the Ionian Islands.-Where gardens are cultivated, as in the neighbourhood of the are employed, viz., by hand and by gutters. The gardener courg the water from it, with the other hand he scatters it over the thirsty plants. The gutters are little channels water from a well by means of a lever and bucket, till the water ho thoroughly saturated. The time of watering i ground evening, usually atter suaset. In the process the folo ing one channel, or breaking down a little embankment ing one channel, or breaking water into different beds, bringing to recollection the Scripture expression of water ing the seed "with the foot, as in a garden of herbs. By the villagers, who are fond of fowers-and is a valent taste, particularly in Corfu, where they pride them selves upon their fine Carnations-another method watering is used, which probably has been found by ex perience to have a better effect. The florist takes the water into his mouth and spurts it on his plants. The slightly raised temperature of the water may be beneficial, and also the small quantity of saliva mixed with it, which Islinds.
New Mode of employing Creosote for the Preservation of Butchers' Meat and Fish.-Creosote, so named from its great antiseptic power, which exceeds, perhaps, that of any other substance, has been long enployed to preserve creosote is usually applied for this purpose, consist either in exposing the meat which we wish to preserve to the smok of bu
water containing a few drops of creosote. Articles of food prepared by either of these methods may, as is well known, be kept fur a long time without spoiling; but both these modes of using the creosote are attended with the inconvenience that the food necessarily acquires the taste and smell peculiar to smoked meat, which is by no mean this inconvenience is entirely avoided. During the past summer, which was so unusually hot, in common uith preserving fresh meat even for a few days. It struck me might be found useful for this purpose, and the method adopted was the following very simple one. I placed a small plate containing a little creosote immediately under each piece of meat as it hung suspenced in the larder, and covered both over with a cloth. The creosote son and
off vapours which formed an antiseptic atmosphere around the meat, and kept it quite fresh three or four days longer than it would otherwise have been. If the plate is gently heated before the creosote is put into it, the vapours rise more quickly, and if the additional precaution is also taken of suspending the meat in a wooden box or earthen still more discernible. I have tried this process duriug the greater part of last summer with invariable success, and a butcher, who also tried it on a larger scale in his stal, was equally convinced of its efficacy. The meat, when cooked, has not the slightest smell or taste of creosote There is also another advantage attending the use of etfectually Its smell is 80 disagreeable to fles noxiou insects. The same quantity of creosote may be used for several weeks, but on being long exposed to the air it loses most of its smell, and is partly changed into a species phical Sooiety of Glasgow.

## GARDEN MEMURANDA.

Messrs. Norman, Woolwich. - Those who have not visited this
little spot durng the Carnation and Picotee season (now nearly over in this neighbourhood) have lost a treat. We never saw plants in better condition, or the blooms finer, both as regard to the Messrs. Norman for their perseverance and skill; their ordinary occupation abstracting much of their attention fiom
Heir favouit pursuit, and their garden being so limited in ostent, as to render the complete success which has attended is princpaply by pping, whach, althuugh attended with more the health and soundness of the plants produced. The proper plas is to pipe early, before the grass becomes hard and which ar not so sportive ; but with the Carnation, on account of its disposition to run, the process is attended with much more trouble; it being necessary to mark the pipings from each plant, in order that when the plant from which
bloom, and is discovered to be run, they may be identified and
thrown away. Unless this precaution is taken, it is better to postpone the work till blooming time, but then it is compara-
tively late, and less likely to be successful, particularly with reference to the shorter period allowed for the growth of the plants after they are established. Cunip, ainta lave been
made for some time past of the deficiency in Purple and in
Rose flakes; this can no longer be done with justice, as we noticed seyeral that would vie successfully, as regards properthes, with the best flowers of any of the other ciass
the Purples, Mansley's Beauty of Woodhouse, a full-sized flower, with fine white and good purple, the only defect being an inclin-
ation in the petals to reflex, and also to lie too close together, ation in the petals to reflex, and also to nie too close to not so
Pollard's First-rate, a better shaped flower, though not
large, nor with white so pure, but highly deserving its name Ely's John Wright, a noble flower, as large, and deeper in colour than Beauty Hilwat's Premier Bonny Bess; Milwood's Premier, though the white is not good;
Nix's Lady Chetwynde, large and bold, but the colour not generally uniform; and Wilmers too deficient in colour. In Rose flakes,
 as Hoyle's Beeswing. There is more room tor guont scallet
flakes, the white in most of them not being pure; Chadwick's Brilliant is probably as good as any in this respect-the ilower, Scarlets in point of colour is Ivan's Marclioness of Westminster, the colour pout bemg so red, but light, and unusually bright; the
white is, however, not gond, and the edge of the petal rough, in colour, but the white is impure, and the flower too thin. In
Ely's Mrs. Granger the white is also inclined to be pinky, but the edge of the petal is remarkably smooth, and the shape of the
flow cr good, in Weldon's Earl of Lichifeld the white is fine, and
the petal found to possess the finest colours:--Hedley's William Cobbett, Ely's Duke of Mexborouzh, Ely's Lord Pollington, in which the year as last; Ely's Regular, (with regard to the darker colour, the
scarlet being dunl, and the white onnly tolerable); Rainforth's
Game Boy, Twitchett's Don John, Martin's Sulendid (in which the petal is excellent, but the collours not so bright as in Don John), and Hufton's Patriarch, in which the colour is intense; the flower is, however, much too thin, and the dark stripe not sufficiently deep,
 therr beautiful colours; and Mansley's Robert Burns. The
Picutces were femarhably fine, and uotwithstanding the advances made min this beatiful class, tlecre still remains something to be not su mooth as the Carnutichi. Ohac mamicst actrantage, powstance of its petal. Sharp's Duke of Wellington at present stand
unrivalled amongst the heavy red-edged Howers, notwithstandunrivalied amongst the heavy red-edred
ing the smoulhness of the petal tnd peculty of colour. Wild-
man's Isabella, Sharp's Criterion anid Gem are also excellent. man's Isabella, Sharp's Critelion and Gtm are also excellent.

Fard House, near Tarnton, the seat of the Rev. E.T. Halliday. - A specimen of the Cereus serpentinus ind ather incthes in circumference, and possessed a strong rose-scented perfume. The plant is 12 feet 9 Inches in
height, and about four inches in circun fence. It suelled altugether four buds, one of which, as above reantioned, attained
maturity, aud the others promise an early developement. dicnicios.

[^11]lead. Thus he says (p. 6) that "vegetable physiologists"
consider humus as the principal food of plants. Now this is not true: vegetable physiologists have no sacred books in which their code of laws is contained, and if any individuals have maintained such a view, the great body has not. In fact, Ingenhousz, Senebier, Curt Sprengel, other views. The doctrine of humps is altogether a che mical one, and has only been supported by chemists. Again, Liebig says (p.24) that "all botanists and vegetable physiologists have doubted the assimilation of the carbon of the at mosphere by plants." Yet ail books on vegetable of carbonic acid from the atmosphere is so absorption admitted that Adolphe Brongniart, in the 13 th volume of the "Anuales des Siciences," has even proposed to account the supposition, that the atmosphere at the period those plants were growing contained a larger amount of carbonic acid in its composition than it now does. This might have other instances displayed an equal amount of ignorance of botanical literature and facts. As, for example, when he says (p. 91) that the woody fibre of lichens may be replaced by oxalate of lime, and that in Equisetum and the Bamboo bundles, and (p.36) that a leaf secreting oil of lemons or oil of turpentine has a different structure from one secreting xalic aciu.
in An instance of Lejecting the theory misrepresentation of facts occurs in lis rejecting the theory of the respiration of plants. It is well known that plants absorb oxygen in the dark, and give out carbont acid; and this has becn attributed by
botanists to a true process of respiration. This, Liebig botanists to a true process of respiration. This, Liebig
thinks, betrays great ignorance on the part of botanists. thinks, betrays great ignorance on the part of botanists.
He believes the giving out of the carbonic acid to be He believes the giving out of the carbonic acid to be
merely a mechanical process, and the absorption of oxygen to be a chemical one. He says all leaves, dead or living, absorb oxygen, and the more oil or tannic acid they possess, the more oxygen they absorb. He endeavours to prove this position by comparing, from tables made by leaves of Pinus abies, Quercus oxyuren absorbed by the as compared with the quantity absorbed by the Agave americana. Mohl remarks on this statement, that, in the first place, the Inantity of oxygen absorbed by the Agave is put donn at 0.3 , when it ought to have been at 0.8 , so as the sccond place, those plants in De Saussure's table which contan neither oil nor tannic acid in any quanity, altonether omitted, although they absorbed more ary are than those mentioned by Liebig; whilst the orly Juniper and Rue, which are also omitted, absorbed less. Again, Liethig states on this point, that the atherorption of oxygen haq nothing at all to do with the proresses of
life. Iow is i, then, ashs Monl, that plants begin to be
blighted highted when oxygen is withdrawn; that seeds will not
germinate: that leaves lose their irritability; that the germinate: that leaves lose their irritabnity; that the flower-buds will not open when brought into an atmosphere respiration would appear to be to determine whether the respiration would appear to be to determine whether the
asserted relation between the quantity of oxygen absorbed asserted relation between the quantity of oxygen absorbed
and the quantity of carbonic acid given out was wrong. In De Saussure's experiments, there was found to be an exact relation in all cases. This would not be the case,
were Liebig's theory of the origin of the carbonic acid
These few general remarks, observes Dr. Mohl, will serve to indicate the claim of Liebig to become a reformer of botanical science.

## CALENDAR OF OPERATIONS for the ensuing week.

 Try Hawhorndean and other Colling Apples grow free enourhfrom cuttings pinted under a north wall in in overmber, nad no doubt
