believers in the Trinity. In process of time a class of Dissenters, who called themselves Presbyterians, had emurace had apulied them in support of Unitarian objects. This perversion of the founder's tntentions had been finally corrected by judgments of Vice-Chancellor Shailweh and Lord Lyndhurst, With the unanimous concurrence of the Judges, save one. Mean-
time the Unitarian trustees were removed, and it was referred to the Master to appoint other rrustees, and to approve of a scheme for the future application of the charity funchs, which had be-
come of very great value. The relators who had tricd this cause come of very great value. The relators who had tricd the called tndenendents they (who had the carriage of the decree subject to the control
of the Attorney. General) were proceeding to numunate trustecs from ther own body of religionists exclusively, in 1836 , when
two other classes, one calling themselves Orthedox Presbyterians, in connexion with the Kirk of Scotland, and the othe nexion with the United Secession Cluarch of Scolland, interposed, and presentell separate petitions to Lord
praying that they might be at liberty to go in before the Master, and to watch the proceedings, and to propose proper persons to
be trustees. And after full discussion his Lordship made an order, giving the petitioners the liberty they requared. The re-
laters accordingly, and the two classes of petitioners, attended before Lord Henley, who made a separate report, approving of represent the Kirk Presbyterians, and two other trustees to re present the Secession Church. Soon after Lord Lynuthurst's accession to the Great Seal a petition was presented by the ret wheh that the relators intent of the relators, informent heport; and as that matter would have to be discussed before the Vice Chanpetition if he would delegate his powers to har it to the Vicemafle an oriler to that cffect. The case has therefore been argued clusivcly with the arguments for mary successive days. Wiss
Bethell appeared for the relators on both petitions Mr. Twiss coincided in what the Master had done, but did not wish to interpose his authority in a case of this magnitude. Sir Charles
Wetherell apueared for the Secession Church party, and Mr. Swanston for the Kirk party, and both addressed the Court a reat length on the merits of the case. It would be inmpss. On
in our limits to give even an outline of the pleadigs. Tuesday, his Honour said tiat he should not pronounce his judgment until lie had carefully read over all the evidence, and
evcrything bearing upon the question; there was so much matevcrything bearing upon the quse, that it would take some time before he should be able
which had been raised.
Court of Common Plesas, Wood v. Sir Matithew Wood, Bart, and late Mr. James Wood of Gloncester, to recover from the the late Mr. James Wood, of Gloncester, aefendants, his executors, the sud, by the authority of Sir M.
alleged, a Mr. Philpotts had agreed,
Wood, given on behalf of the executors, to pay them. The al. leged agreement was in the following words :-" Memorandum,
May, 1836 . It is hereby agreed between John Philpotts, Esq. arrister-at-law, acting for and on behalf of Sir Matthew Wood, Larrister-at-1aw, acting Chadorn, and Jacob Osborne, three of the executors of the decease. J James Wood, and wham Botion and Islington, Thomas Wood and Charles Gale, of Westminstcr, as
ollows:--That is to say, that the satd James Wood, of lislington, Thomas Wood, and Charles Gale, shall forthwith withdraw the caveat entered by them against the estate of the sald James Wood, mantain and uphold the said will; and that, in consishall, on or before the 25 th day of May mstant, invest the sum
of 20,0002 . sterling in the public funds in the names of the said way persons, Wm. Baton and sumplepien with the accumulations, on the 1 st day of May, 1837, to those parties, unless the said will of the deceased should be in the mean time set aside. "od ever gave Mr. Philpotts authoris such anthority, Mr. Philpotts did enter into the agreement. After the examination of several witnesses, the Learned Judge, in summing up, told the jury it was a question entirely for their must determine to which side they felt themselves bound to give credit. There was, however, this circumstance in the case, that the paper was not sigued inr. Philpots, circumstance, that the paper itself was such as one would not expect that a person conversant with ths law wonlid the parties immediately to invest the money without any con dition being annexed as to the will being proved, and divide of the winl velng set astue after a long litigation. The jury
retired, and, after haviug been absent for some time, returned retired, and, after har the defendant
with a verdict for
Srcondaries' Court. - Macqueen v . Westron. -This was a action brought by market-gardener against the defendanc, a ccover the sum of $2 l$. 3 s ., beirg the balance of 166 . for goods supplied. It appeared that the phantif was in thie habit of sest till the 31 st July, cight quarts of peas were suppled per day
to defendant, being at the rate of $15 ., 100 .$, , 9 d., sid., a and $b d$, pe quart. Fourtecn pounds hance. Tle quastion was left to the decided upon giving sin., and at the same the struck off from the bill all that relating to the peas supplied on the Sunday, By
this, having decreased the amount of the bill much below the original an
defendant.
PoLick.-Last week Mr. Joshua Jones Ashley, late Ensign in the 40th Regiment, and a son of the well-known robing various Was broughtich he is a member, of plate. The adjourned exam clubs, of took place on Thursday last, when all the the cxcitement mated in evidence. It is impossible to descrive ine society and
tais station in the prisoner's case produced. In

DESCRIPTION OF FUCHSIA ST. CLARE This magnificent Fuchsia was raised by Mr. Meehan, gardener
to Colonel IIarcourt, at St. Clare, Isle of Wight, from whom Messrs. YoubiL obtamed the entire stock. In May last it was
submitted to Dr. Linjulisy for his opinoln, which wilh be found in the Gardeners' Chrontle of the 14th of that month, as follows:-
"y our Scedling Fuchata is by far the finest hybrad we have seen, the flowers being three inches in length, with the tube and sepais you say, it is a strong grower and a free bloomer, it will prove a valuable addition to this beautiful genus." As a wro f of its being a most profuse blommer, X. \& Co. had a plant in Hower on Sept, 15,
1842 , on one branch of which were upwards of 200 blooms, form1842, on one branch of which were upwards on
ing a splendid object for the greenhouse, conservatory, or flowergarden. Price Kiv.

| SATURDAX, MARCH 4, 1843.

In the Guernsey Star newspaper of September last apeared the following statement:-"The splendid Tussack Grass is the gold and glory of the Falkland Islands. Every animal there feeds upon it with avidity, and fattens in a short time. It may be planted and cut like the Guinea Grass of the West Indies. The blades are about six feet long, and from 200 to 300 shoots spring from one plant; about four inches of the root eats like the Mountain-Cabbage ; it loves a rank, wet, peat bog, with the sea-spray over it it is nutritious throughout the year, and all the smaller Falkland Islands are covered with it
This could not fail to excite attention ; and so many of our correspondents have made inquiries about it, that we have endeavoured to ascertain what the facts are relating to it.

The earliest notice that occurs of the plant appears o be in Pernetty's Voyage aux Isles Malouines, published in Paris in the year 1770 . We are not acquainted with this work, but the statement contained in it is, we presume, the following, quoted by Burney in his "Collection of Voyages," (vol. v. p. 144.) Pernetty says, "We were half a league distant from two flat islands, which, at first view, appeared as if covered with small copse-wood, but, as we afterwards discovered on landing, they were only tall Bulrushes or Cornflags: they grow each of them about two feet
and a half high, and afterwards shoot forth a tuft of green leaves nearly of as much height more."
The next trace of it is in Bougainville's account of his voyage in La Boudeuse, in 1766 :-"All the seacoast," says this navigator, "and the islands in the interior of the Falklands, are covered with a plant which is improperly called a Cornflag; it is, however, a species of Grass, of the most beautiful green colour, and growing to the height of six feet. It forms a hiding-place for lions and sea-wolves, and served as a shelter for ourselves during our travels. A house is formed in a very short space of time; the inclined stems, when fastened together, serve as roof, while the dry straw makes a tolerably good bed. It was with this plant that we likewise thatched our houses. The root is sweet and nutritious, and is pre ferred by beasts to any other food."
Later travellers speak of it in similar terms. Gaudichaud says that the base of its stem has the pleasant taste of the Cabbage Palm, so much esteemed in tropical countries. And in the account of Freycinet's Voyage, p. 143, we find the following statement:"Finally, there is a plant of still greater interest, hich furnishes nearly all the year round abundance of nutritious food, namely a large Grass (Festuca fla bellata), which covers two-thirds of the Isle of Pen guins, and other small islands in the French Bay and which, according to M. Orne, is met with in equal profusion on the coast of all the Falkiands. This plant grows from four to six feet high; its leaves are sheathing and compressed. The interior of the stem, to the height of five or six inches above the root, is white and soft, of an agreeable flavour resembling that of a Filbert. This substance consists of the lower sheath, with the young central leaves and stem firmly encased within each other. Its flavour may be also compared to that of the Cabbage Palm, so highly esteemed."

The most complete account, however, that we have seen, is the following, which Sir William Hooker has been so obliging as to extract from the letters of his son, Dr. Joseph Hooker, now with Captain James Ross's expedition:-" Near the sea-coast a very noble Grass grows in immense abundance, called Tussac It forms quite an extraordinary feature in the landscape, covering immense tracts of land, especially on a sandy soil. Its roots form great balls, which rise

five or six feet above the ground, and are often as much in diameter. The culms spring from the top of them, bearing long leaves, which hang down all round in the most graceful manner, and are themselves six or seven freet in length. These heaps, or tussacks, grow generally apart, but within a few feet generally guite the intermediate space of ground being generally quite bare of vegetation; so that, in walking among them, you are quite hidden from view, and the whole Tussac eround is perfect Tabyrind Cattle thrive admirably, and soon get fat upon this Grass; and so fond are they of it, that when they can get it they will touch nothing else: and with horses it Such is .
plant. Gaudicheph Hooker's graphic account of this from four to six faud describes it as a handsome (irass, those of some six feet high, with fan-shaped leaves, Tike Lamarck called this, from which circumstance, no doubt, The soil on the species licstucra flabollata
Gaudichaud (A2n. Sc. v plant grows is described by uncultivable; Ann. and. v. 90.) as a spongy bog, utterly
hat at its edges this hog forms in many places a cliff escarpement. four or five feet high. Dr. Hooker also states that the whole district is covered with peat bogs or grass lands. It would therefore seem as if the plant might be introduced with advantage into Ireland. that, however, is a point that cannot be determined otherwise than by actual experiment.
Concerning the climate of the Falklands, we have tolerably exact information. D'Urville states that it is much more temperate than might have been expected from its latitude. From the observations made by himself and others, he concludes that the thermometer scarcely rises above $15^{\circ}$ cent. ( $59^{\circ}$ Fahr.), or falls below zero cent. ( $32^{\circ}$ Fahr.) ; and according to Bougainville the winter is very mild, and snow lies on the ground only for a short time. M. D'Urville also states that in 1822, at the beginning of December, the month which answers to June in Europe, the highest temperature observed was almost always behighest tempen $12^{\circ}$ and $15^{\circ}$ cent. ( $51^{\circ}$ to $66^{\circ} \mathrm{Fahr}$.) On the tween $12^{\circ}$ and $15^{\circ}$ cent. ( 5 Parish tells us that in the Eastern Island, the thermometer generally ranges as
high as $75^{\circ}$ in summer, and sometimes falls to $26^{\circ}$ in winter; he, however, confirms the French statements, that snow disappears in a few hours, and that ice is seldom above an inch thick. (Journal of Geog. Soc., iiii. 25) The days of summer are described by the same authority, as long and warm, with occasional showers, producing a rapid vegetation. All this would suit the west and south of lreland well enough, but would hardly justify our entertaining expectations of the Grass succeeding in England or Scotland, except in particular localities, even if the plant should so far hange its southern habits as to forget that our winter is its summer
Winter is its summer. Wm. Hooker that only a few days since a packet of the seeds of the Tussack Grass was received at the Royal Botanic Garden, Kew, but they were in bad condition, and offered small promise of germinating; although from the same parcel of seed a plentiful supply of young plants was coming up in Dr. Joseph Hooker's Garden at the Falklands where they had been drilled in rows, like Turnips Let us hope that some of these young plants will be introduced in the Ward's Cases which have been sent out from Kew for the purpose.
It is right to add that there is another sort of Tussack Grass at the Falklands, much inferior to the Festuca flabellata, and produced, as we are informed by Sir Wm. Hooker, by the Carex trifida of Cavanilles This is probably what is mentioned in Burney's Voyages (vol. v. p. 144) as "A kind of Grass, a foot and a half high, which spreads over every part to the tops of the hills. The soil is of a dark-brown colour, and is formed into a mould by the annual decay of the Grass. It rises with a spring under your feet from the roots of the Grass being interwoven with it
Those who interest themselves in procuring the Tussack should take care to distinguish between the two kinds.
For the opportunity of publishing a view of the places in the Falklands, where this Grass occurs, we are indebted to Sir William Hooker, who has kindly placed at our disposal a drawing made on the spot by W. E. Wright, Esq.

Ir would be difficult to name any department of gardening, or indeed of vegetable physiology, concerning which so little is positively known, even to those most conversant with such matters, as the nature of vegetable diseases. The number of writings on the subject is inconsiderable, and the information afforded by them still more so. Even De Candolle, with all the aid of his great learning, could find but little on which to build a theory of vegetable nosology; and more recent writers have added almost nothing Yet the subject is one of grave import; it does no concern merely the luxurious tables of the wealthy but it is intimately connected with the prosperity of our forests and the productiveness of agriculture.
From the first day of the existence of this Journal we have been searching for facts relating to vegetable disease; but we find little beyond opinions, many of which, absurd as they evidently are, continue to find their believers. If you ask a man what causes canker, what the gum, or whence it bappens that his Potatoes curl and his Peaches blight, you get as many con ficting explanations as you consult individuals. One tells you the cause is in the air, another finds it in the earth: "constitutional debility" satisfies one class o inquirers "peculiar habits" a second; while others ing quite "pate to "blirht" and "mildew, o arequir "at what do all suck their neighbouns nulanes. Buly information do phrases really mean? what earthly information do they convey, by which a man may profit to his own good?--they may be fruitful in lawsuits. ness and uncertainty are choice cates for our legal friends; they may be profitable to people who terrify the directors of cas-works or the owners of manufactories into compensation for imaginary injuries. But their value extends no further.
But their value eatends endeavour to collect evidence pet us, therere the diseases which wood is heir to : and if our correspondents will help us, a body of really useful information may, it is hoped, be gradually secured. To do this, however, much co-operation in a definite manner is required. Of vague and uncertain statements we have more than enough; what we now want is exactinformation upon particular points. If the advice given by us, and by Professor Henslow, in another place, to the farmers, is adopted by gardeners, -and they will do, each for himself, what they can, following the directions we may give them, as nearly as their means will permit,-we shall be sure to get truths for them which they cannot possibly obtain for themselves.
In order to make a beginning, let us take the Vine, and investigate the causes of some one of its many diseases. Mr. Loudon, indeed, says the Vine has no diseases except bleeding (which is not a disease; see Encycl. of Gardening, edition of 1835, p. 785) but to this, we suspect, he will hardly gain the assent of those gardeners who know anything of rusting, and
shriveling, and shanking, and scorching, and not setting, and not colouring, every one of which is as much a disease as the gout or rheumatism in a man. Let us begin with the rust of the Vine.
The rust of the Vine is a disease which attacks the Grapes, covering them with a tough brown skin which is incapable of natural extension, and which stops their growth. Wherever the disease appears the crop is injured, or even ruined. Now, in this, as in all such cases, if we are to cure the evil we must find out its cause; and it is to that we would ask our gardening friends to attend, by way of beginning a formal inves tigation of vegetable diseases. One person says it is caused by the attacks of the Thrips insect; another is convinced that it arises from his having planted his ine too deep; others are perfecesiness of the hands caused by the persies; a fourth observer refers it to a period anterior to the setting of the berries. One of our correspondents, who ascribes he rust to the Grapes having come in contact with greasy substances, at the same time throws the blame upon the Thrips (see Mr. Bromley's remarks, p. 853); and in a subsequent letter, now before us, he gives as, a reason for preferring the long-rod mode of pruning to that of spurring, that old spurs are difficult to clear of Thrips: so that here are two totally different causes assigned by the same observer for the same malady Finally, to close the catalogue of opinions, we have a letter from Mr. Webster, who conceives the rust to arise from the use of excessive moisture previously to the opening of the flowers.
Which of all these speculations is to be regarded as correct? that is what should be proved experiment ally; and the season is now arrived when the matter may be investigated by thousands of observers. We would therefore propose the following plan:-

1. Grease a few bunches, just as much as it is proning, and leave the remainder of the crop without being touched. This will settle that part of the question: if indeed it is not decided by the fact that Grapes on the open wall, unthinned, are occasionally as rusty, or more so, than in houses.
2. Where the rust prevails, examine the plants well, and see whether Thrips abound; if so, observe the effect of removing this insect.
3. Direct attention also to the red-spider, and ascertain, if possible, whether that pest has not something 4. Watch the Greengage and other sweet Plums in the same way, and observe whether Thrips, or redspider, or greasy substances produce the mischief there; for we presume that the rust of Plums is o the same nature as that of Grapes.
Here are some experiments, trifling in the amount of observation they demand, but very important in their results; and we trust they will find observers among a good many of our readers.

In another column we give the Report of the Flori cultural Society upon the seedling Dahlias exhibited before it during the last year. That the owners of second-rate flowers should be discontented at their being so classed, and that in carrying out its objects the managers of this Society should have made some enemies, is only what must be expected by all those who venture to expose fraud and discountenance imposition. Nevertheless, in the long run, honesty of purpose, as well as honesty of action, is sure to bring its own reward; and we entertain no doubt, that, in
proportion as the Society is out of favour with selfseeking florists, it will gain the good opinion of their customers.
As we have stated on a former occasion, the great point to attend to in the formation of the committees of all such Societies as this, is the exclusion of every person whose character is at all doubtful; this has been attended to most scrupulously by the Floricultural Society, and must secure for them the support o all honest and respectable florists. As for those of a different description, they may always be known by their associates.

Fouding Sheep on Turnips, where the land is light and dry, is the most effectual and economical mode of manuring. Much attention is required to make the profit on the Sheep pay something towards the Treat expense incurred in raising a good crop of Turnips : and, in this, great improvements have been cutting of the Turnips in slices principal are : the means of a machine worked by hand, feeding the Sheep in narrow troughs, and regularly, so that nothing is lost, or soiled, to clisgust the animals. The troughs are placed on the spot from whence
the Turnips were drawn to be cut, and moved the Turnips were drawn to be cut, and moved
so that the droppings of the dung may be equally distributed ; cut Clover, Hay, or Pease-haulm, is given, mixed with crushed oil-cake, or Pease or Bean meal, or Oats. This not only corrects the cold watery
nature of the Turnip, but also materially improves the manure; that from Sheep fattened in this way may be considered as of double the effect to that of store Sheep merely fed on Turnips and some Hay. The advantage of the old mode of folding sheep at night on fallows, when they had run in poor pastures all day, is problematical : for not only are the dung and urine of a much less fertilising nature, but the Sheep suffer, and in many cases the loss on this accoun makes the manuring, such as it is, be dearly paid for Hence some good farmers have a prejudice against folding Sheep, and not without some reason; but the mode we are describing is very different : here, the Sheep are well fed, and not driven from a pasture to a
fold, which is only robbing one part of a farm to old, which is only robbing one part of a sorm and lie down to ruminate, and thus communicate considerable warmth to the soil. It is extremely useful not only to their general health, but likewise to stimuate their appetite, to place lumps of rock-salt here and there in a trough for them to lick at. We have invariably found that with salt to lick they could digest more Turnips, and thrive faster, while their dung and urine are certainly improved by the salt dissolved in them. The quantity of oil-cake or meal which is most advantageous to be given must depend on the time when it is'desirable the Sheep should be fat for the butcher. They should never be overfed, but as long as they eat up all that is placed in thei troughs, after having had a full meal of Turnips, they may be safely supplied; cut Clover-hay may be mixed with crushed oil-cake or meal, in the proportion of one peck of meal to two or three bushels of cut hay of this mixture they may be allowed to eat as much as they like, twice a day, after they have eaten their cut Turnips. The same system may be pursued for ewes and lambs. Bean-meal and oil-cake increase the
milk of the ewes, and all the fat will go to the lambs as long as they suck; when Turnips are cut into shor strips, it is astonishing how soon lambs begin to nibble at them, and learn to lick up the meal; by the time the lambs are weaned or sold off, the ewes will be in good condition; and whether they are fatted or kep for breeding, will be much the better for good feeding The calculation of the difference in the expense, com pared to the benefit received by the improved method depends so much on circumstance and situation, tha we cannot enter into them. It will take women and boys to pull up the Turnips, clean them of earth, and first picked up by the Sheep when they are let into the fold; there is not much nourishment in the green leaves. When Turnips are carried off the land to be eaten in the yards, or stored for winter and spring use, it is best to leave the tops to be ploughed in as manure; and in this way they are useful. A flock of 300 wethers will require the constant attendance of a man and a boy. They are to set the hurdles and change the folds regularly, put the food into the troughs, and clean them out-a very useful practice after every meal. Two women, or a woman and a boy, can pull up the Turnips and cut them, the shepherd and his boy helping occasionally. The hay and meal are supposed to be prepared in the barn, and brought to the field daily, taking back a cart-load of Turnips for the cows at home; if no bullocks are fatted in the yards this expense must be added, deducting the value of the Turnips carried off. If the value of the Turnips can be estimated at what they could be sold to carry off the land, this must be set against the profit on the Sheep, after the hay, meal, and attendance are reckoned: the balance is the cost of the manure, which can only be valued by its effects on the subsequen crops. The form of the account is as follows:-
300 tegs or wethers, valued or purchased, £

## per head

acres of Turnips, at per acre
loads of Clover-hay, at per load
quarters of meal, or bruised oil-cake,

## Expense of cutting

Carting and grindin
A shepherd, boy, and two women,
weeks, at per week

Contra.
Sold 300 fat Sheep, average per head deducting loss by death or accident), including the "onl
Balance, as the cost of manure

This balance must be carried to the account of the hext crops in the rotation.
Without correct accounts no accurate result can be obtained; and after two or three experiments it will e soon ascertained what is, upon the whole, the most profitable method. It is well known from the discoveries of the first chemists that Turnips are defi-
cient in nitrogen, and that all animals require a portion of it for their healthy nourishment. Clover and meal contain, hesides other nourishing substances, a sufficiency of nitrogen for the supply of animal flesh, and their addition greatly increases the fattening qualities of Turnips; much of the juice of the Turnips remains undigested, and is voided without any change when they are the only food of the Sheep, which more nitrogenous food would enable the stomach to decom-pose-at least such is the prevailing theory; and it is very plausible. Experiments and accurate observations alone can substantiate it, or refute its truth We can only repeat the excellent advice of Professor Henslow to the farmers around him, to make numerous accurate experiments, which they can do with little trouble and expense, and by the multitude of the results they will be able to ascertain what is real fact under dissimilar circumstances, and whether the theories of scientific men are proved or disproved by these facts. $-M$.

## SANDAL-WOOD.

Your readers, like every one else, must have heard so much of the Sandal-wood gates of Somneuth, that some account of the tree producing it, as well as sorae circum stances connected with its history, may prove not devoid of interest. Mr. Atkinson, indeed, throws some doubt upall faoous gates having been made or Sandal-wood rought by Me hoor, he says, is part of the spoil Somnauth, in Guzzerat, said to be made of Cedar or Sandal Wood; but the smell is certainly gone, if it ever had any tis in panels, carved, and well put together. Two folds hinged, form one-half of the door, which seems to be about 8 ft . wide, by 14 ft , high. It is a massive door, and the same whicl Runjeet Singh coveted so much, that he at one time demanded it as part of his recompense for aiding in the cause of Shah Soojah's restoration. He medans, and to hetore it to rescue of Smath thereby hoping to mert the swatiude and aimis of the Hindo " ${ }^{\prime \prime}$ the probability is that Sandal-wod ployed in a ployed an a tenple on East to been lavished. That was the practice in the East to wake gates of Sandal-wood is evident, from the observations of Joseph Barb. viaggia alla Persia, quoted by Celsius. "La porta della camera era di Sandali entar sata con fili d'oro. And again-"Mi moustrarono etiandio due ${ }^{\text {a }}$ porte lavorate grandi di Sandali, di piedi sei
una, \&c
The term Sandal-wood has been applied to the wood subject of this, which have zothing to do with the Sandal-wood, yielded, I believe, by two trees, one Pterocarpus santalinus, and the other Adenanthera pavonina There is also a yellow Sandal-wood, which may or may This wo hoed by the same tree as minte saad or-w agreeable mas long been famous in the wast ount it has been much employed for different articles which are much handled, such as fans and rosaries; in Europe we find it esteemed for ladies' work-boxes, cabinets, \&c, An oil is also distilled from it, which is much esteemed in Turkey in the present day. From such applications Sandal-wood might be supposed to be an article of little mportance; but from the price currents of Calcutta and of Canton, we find that about 200 tons of this wood re annually importad :into the former, and about double that quantity into the latter. These two ports are not however, supplied from the same places, Calcutta being supplied from the Malabar coast, and Canton chiefly from the Feejee, Marquesas, and Sandwich islands, as well as from India. It might be that the same species of tre rielded the Sandal-wood of all these localities; but as wo species have been formed by Botanists, we shall firs notice the Indian species, and then that which has beer more recently discovered.
The Indian Sandal-wood is produced by Santalum album, of the natural order of Santalace:g, and which has been made more interesting from the many valuable observations made on the development of its
ovule by Mr. Grifith. This species is common on the Malabar coast. The fullest accounts of it have been given by Dr. Buchanan in his Journey through Mysore, Malabar, and Canara, where he says it is called Sri-gunda. It is also found in the central forests of Mysore, that is to the westward of Bangalore, and likewise in those on the Malabar coast between Seringapatam and the sea-port of Teilichery and Calicut. The tree is usually about 25 feet in height, with opposite, oblong, and smooth leaves which are glaucous on the under surface. The flowers are small, at first straw-coloured, afterwards purplish, and without odour. The tree resembles the Myrtle, more, perhaps, than any other plant which is common. When felled, the stems are usually about 9 inches in diameter but they are occasionally 3 cubits in circumference, thoug is not probable that they have been allowed to atcan the diameter is white wood nealy deroid of smell and the remaining third more hity coloured and the The scent, indeed, is said highly coloured and fragran the som, ind hs said to be in proportion to the dep may be yilded by te sone on the yellow sandal-w b subsequently mentioned. The lowest part of the stem, or that immediately above the division into rots, is the best, and that grown on steep rocky soil is far superio to such as is produced in low rich situations. The trees
require from 20 to 30 years to come to perfection, and were all the property of the native governments within whose territories they grew. When cut down they were brought to the public servant, whose office the wood into the merchant or contractor, who tifferent kinds, according to size and quality. Dr. Buchanan states that the merchants sometimes divide Sandal-wood into red, yellow, and white; but these, he says, are all different shades of the same colour. The says, are all aiferent to China, and the middling-sized to India. The chips and fragments answer best for the Arabian market, as from them the essential oil is distilled. It is sometimes said that Sandal-wood is buried in the ground to enhance done for the purpose of concealment, as individuals cutting done for the conceal them in the ground until a favourable opportunity occurs for smuggling them into a neighbouring territory. Sometimes, also, Dr. B. says, this may be usesappy part of the wood, which is devoid of smoell. The quantity procurable from the different forests it is difficul to estimate, from tron used to be obtained from reppoo suibs as well as the central forests of Mysore.
Besides these, a less valuable, but larger-sized Sandal wood is obtained from the more northern districts of Onore, which is produced in the low tract which lies between the ghauts and the sea-shore. Though this, like
all other Sandal-wood grown in similar situations, is less all other Sandal-wood grown in similar situations, is less fragrant, it becomes a larger tree, from being more freel from Onore having been one of the early ports, might have been known to and obtained by foreign merchant resorting to this coast.
The Chinese, besides being supplied from India, obtain a still larger quantity of Sandal-wood from Timor, the to be yielded by the same, that is, the common Indian, species ; M. Gaudichaud, however, considers it to be a distinct species, which be has figured and described from the Sandwich Island, and has named S. Freycinetianum. The Chinese, besides manufacturing various articles from this Sandal-wood, make use of the fragments, \&c., by reducing the whole to sawdust, which they mix up with Rurnt as incense in their houses and temples.

We shall pursue the historical part of this fragrant wood in a future communication. $-R$.

VEGETABLE REFUSE AS A MANURE. (By Professor Charles Sprengerl. Translated from
[The common Mapdeburg acre consists of 180 square roods,
25,020 feet Prussian, which is about or 25,920 feet Prussian, which is about 16 of an Engish acre.]
The principal vegetable refuse used in manuring field and meadows consists of oil-cake, malt-dust, fruit and Vine husks, and stubble.

1. Oil-Cake.-The oil-cake of Rape has not been so or insed in Germany as in Belgium and England, where, for some years past, that the importation of it is yearly increasing. It is, indeed, so powerful, that we must take care not to use too much, or the crops of all Corn will be laid. Oilcake affords the most convincing proof that the animalization of food, on which so much stress was formerly laid, matte vo very important, for through the bodies of animater which has not passed of animal manure. The effect of oil-cake is, however, transient, for (in the quantity in which it can be safely used) it lasts but one year. that the substances of which it is composed are easily decomposed, and very soluble in water. It consists chiefly of albumen, vegetable gluten, gum, and mucilage, so much so, that out of 1000 part of oil-cake, 350 are soluble in water without the aid o oil-cake consist of
80.5 lbs . of water in fluid form

278.5
hydrogen, oxygen, silica (13.5), and traces of alumina, oxide of iron, and manganese.
1000.0 lbs

If, therefore, 1000 lbs . are brought on the Magdeburg acre of land (and this is a strong dose), the quantity of It cabstances above mentioned will be conveyed to the soil. It cannot, however, be doubted, that it is the carbon and
nitrogen of the oil nitrogen of the oil-cake which act so po

It has been often asserted, that Rape-cake principally acts as a manure, in consequence of the oil it contains, but according to my experiments, this is not the case. lbs. of cake, which is whe contains 5 per for one - 600 land, will not convey to that acre more than 30 lbs . of oil, containing in the whole about 23 lbs. of carbon, the substance to which the manuring quality of oil is chiefly to be ascribed. But 23 lbs . of carbon cannot produce any evident when we consider that to form 100 lbs , of straw,

50 to 60 lbs . of carbon are required. It is also quite certain that the albumen and vegetable gluten of Rape cake are of the greatest importance for Corn crops, because
of the supply of nitrogen which they afford. The Wheat of the supply of nitrogen which they afford. The Wheat crop of an acre contains, at the most, 30 lbs . nitrogen;
but as 600 lbs of cake convey to the soil 32 to 38 lbs . of nitrogen, this will be not only sufficient for the Wheat, but will also leave a small surplus for the succeeding crop.
Rape-cake will be always most effective in light soil, because the roots of Corn can, in such'land, search most xeadily for the manuring particles contained in the cake, or prodaced from it. If, on the contrary, clayey land is manured with cake, its fertilizing substances cannot penetrate the soil, and will evaporate without producing good effects. A clayey soil, therefore, must same effect. In England the dust of Rape-cake is usually drilled into the ridges at the sante time that Wheat, Turnips, \&c., are sown. By these means the manure is brought close to the plants, which not only occasions a saing substances being lost by evaporation, which always will be the case if it is strewn merely on the top, or even harrowed in. For winter crops 600 lbs . are used per acre. I have found by experiment that in light pily 10. wil be so strong, that the crop will be easily jure, If Rape quantity, however, also actore Potatoes are planted, dust is put ine thes dust does not come in contact care must be or the eyes will be destroyed, especially in dry with them, This is caused by the albumen and gluten of Rape-cake developing a great quantity of ammonia, which, as we know, kills all vegetable sprouts. For this reason Rape-cake will be most useful in wet weather,
because in that case the ammonia which is developed will because in that case the ammonia which is developed wil
be diluted and distributed in the soil and neutralized by be diluted and distributed in the sole ind in dry scasons to
the humic acid. If oil-cake is applied summer crops, it will be of little value, especially if use as a top-dressing or just harrowed in. In such a case, all the best parts of the manaring substances will be converted into gas.
In Belgium the dust of Rape-cake is often added to sinks of urine: water is added, and the whole is left rotting for five or six days. Although such a manure will be very powerful, yet I cannot recommend it, because a part of the ammonia will be always lost. But it is more common, even in Belgium, to strew it in the autumn over the rye summer crops. The Belgian practice (which cannot be too much recommended) is, not to use much of this manure at one time, but rather to repeat it every year, or at least every alternate year: they consequently take at one fing acre. In some places the dust of oil-cake is also deburg acre, in some placiously to using it) with 1-7th mixed ( its volume of slaked lime; I, however, think that this operation always causes a loss of nitrogen, because the lime will induce the vegetable substances containing nitrogen to form ammonia, which will escape as gas.
It is said that on fields manured with oil-cake the molecricket (gryllotalpa) will disappear; this, if true, would be of some consequence, for these insects often injure Rye o a great extent
Linseed-cake is seldom used as manure, because it is thought better to give it to cattle as food. In Belgium, Linseed cake is used in manuring Flax, which succeeds very well after it.
2. Malt-dust.-In countries like England, where an immense quantity of beer is brewed, Malt-dust is also used as manure. It acts nearly as powerfully as oik-cake, and its effects are equally fugitive. 800 to 1000 lbs are applied to an acre as a top-dressing for sickly winter crops, or are harrowed in with the seed of summer crops. ON HEATING HORTICULTURAL BUILDINGS. THE recent discoveries of Bude and Boccius for renlight in addition to heat in the proper treatment of plants inght an this country from tropical or warm plants intes so to ensure their uninterrupted enjoyment of ates, so the production of magnificent rich and virid health, and the produch those borne by th, and vivid coloured flowers, equal to those borne by the same spe cies in ther own unclouded, origa, aza sunny lands, suggest the application of gas as an eigible medium to attan the mot dor buildings devoted to Horticultural purposes
The Great Being who governs the world has shown in The Great Being who governs the Alighty power, and as given to various lands their varied charms, both of animated and inanimate nature. In the human race, especially in this highly-civilised country, he has implanted more than ordinary affection for the beauteous productions of the soil; and many a happy hour is spent in nursing and tending them, and in watching their progress from the time the minute seed is committed to the earth, until it germinates"and becomes a pleasing object, producing beautiful flowers, or until it forms a handsome shrub or magnificent tree, clothed with the richest tints, in many instances bearing delicious fruit, gratifying to the eye, plea
mortals.
On examining the harmonious system of nature, and the almost invariable rules by which certain results are accomplished, it is evident that the present modes of heating Horticultural buildings, although eminentiy suc cessfu tion of the highly intelligent class to whose charge they are conined, are en thich acored As ant illustration which nature appears to be or the arat these buildings in this country for the protection or propagation foreign plants, the respiration of the human frame is materially impeded, owing to the impurity of the air occasioned by the requisite heat being commuicate through the medium of iron or metal pipes, disengaging from these substances a subtle and invisible kind of gab which renders the air as dry and intolerable as it could bo found in the sandy deserts of Africa. The same effects are experienced in churches and public buildings heated on the same principles ; and it is only by the aid of a profus evaporation of water that these places become aturally endurable. When these effects take place on the naturally strong constitution of the human race, their action on the tender fibres of plants must be either to entirely destroy them or prevent their assuming the fine form or the brilinant and cheerful colours which they put on when editful ing the pure air of the open
and cooling breezes of heaven.
The introduction of gas, either in the form of Bude or Boccius lights, or argand or jet burners, as might be most approved of for heating Horticultural buildings, after experiments being made to ascertain their respective adyantages, would probably not incur a greater expense than is entailed by the present system, especially when required an an an ane needed on a mall scale, a sufficient supply of gas may be always obtained in the vicinity of almost every town in the kingdom. On an extensive scale, such as would be requisite for the splendid conservatory of the Duke of Devonshire at Chatsworth, or forthatin the Horticultural Society's Garden at Chiswick, it would be advisable to have gas-works exclusively attached to them : and these works, discoved for consuming the simhly and instead of fying the gas, might be made highly ornamental insted being considered a nuisance, as when lins to conceive the It is much easier for the imagination by gaslight, and beauty of Horticultural buildings heated by ghe hundred presentiog a brimancy equal to merion Nights' Enterlamps of Aladdin, described in the Arabian Nos of the effect ainments, than to attempt to coavey Chronicle. The suggestion is hages of the Gardeners crial, as the following will show : Several years ago, the writer had a pair of fine canary birds, and the place in which their cage was placed being within a few feet of an Arg andil 8 'clock lighted at sunset, and allowed to bura unti 8 o clock, P.M. ; these birds continued to bour an average severe winter, and the time the quite healthy. It did not occur amselves in this country natural mode of conducting themselves their proximity might have taken place in consequence of heir proximity to the gaslight; but it is now evident this was in reality the cause which produced the effect stated, as the mate never ceased to sing, nor the birds to be as lively, and to eat and drink as weil during the evening, until the gas was put out, as they were during the day. In the same window where the gas-burner was placed, were several Pelargoniums, which continued in a remarkably healthy state throughout the winter ; and on reflecting on their appearance, although it is many years since, it is easy to remember the tender leaves of an evening turning to re ceive the full rays of light from the Argand gas-burner. The introduction of hot water in tanks or troughs for heating Horticultural buildings is a decided improvement, and must be far more congenial to the plants than heat transmitted through metal pipes; and were the tanks con-
structed of any substance not liable to oxidation and consequent evolution of noxious gases, they might be made valuable auxiliaries in dispensing heat and moisture. It is not, however, at all probable that the tank system derives its value on the principle of bottom-heat, which is contrary to that of nature. The only heat given out by the sun, the life of vegetation, enters the ground at the surface; and it is, therefore, more than probable that the success of the tank system depends upon the steam arising from the hot waterin the troughs falling upon the leaves, becoming condensed, and running down the plants in a genial form, penetrating the earth, and nourishing the roots-infusing life, beauty, and vigour into all their parts. Should this view of the action of hot water in Horticultural buildings be found by experiments to be correct, instead of being placed in iron tanks under the plants, ciple by substituting troughs made of the same material, and nearly similar in shape to house-tiles, which could be joined together by cement, so as to convey the hot water by its own natural gravity to any part of the buildinge. Under the superintendence of an intelligent gardener, an artificial hot-water miniature river might be made to flow artificial hot-water miniature river might be made to fiow throughout the whole extent of a conservatory, diversified by numerous miniature waterfalls, which would add much to the purity of the air; and the water, when nearly cool, might be received in reain enter the boilers to be heated, and perform a perpetual round, diffusing warmth and moisture equal to that of tropical climates, or graduated to suit
tions of every country warmer than our own
subject, would have preferred maling the ews on thi subject, would have preferred making the experiments himself; but his other avocations prevent him at present He feels convinced, however, that any experiments carried on by the admirers of Horticulture will be freely made public in the columas of the Gardeners" Chronicle.John Grant, Editor of the "Army and Navy Register,"
Woolwich.-[We insert this letter from our ingenious correspondent, without at all advocating the view he has taken of the subject, in some of its details, especially as regards light by night, and bottom heat.]

## ON THE CONSTRUCTION OF ARTIFICIAL

 ROCK.Tre pleasure-ground of a mansion can scarcely be considered complete unless it contains a piece of rockwork, either natural or artificial. There are, however, few persons who can imitate natural rock successfully. Have task which they had to perform was that of raising an artificial mass, so as to present a natural appearance; and this is not to be wondered at when we consider the unfitness of the materials which are oftentimes employed. The common method is to raise mounds of large rough The common method is to raise mounds of large rough stones, and I have seen some tolerably good imitations
made in this way: it is an operation, however, which maduires much skill, especially when the stones are ill. suited for the purpose.
It is desirable, then, that the construction of artificial rock should be better understood; for, in addition to the romantic effect which rocks in most places present, there
are numerous plants which grow admirably upon them, and which seem more at home in such a situation than when growing in the common border. The following method of constructing artificial rockwork is now coming into use; and as it is greatly superior to the old or usual method of employing rough stones only, I doubt by your readers.
Where a large piece of artificial rockwork is to be formed, it is advisable first to sketch the surrounding scenery, and afterwards to introduce a drawing of gives a good idea of the effect which rockwork would appearance of the mass in his "mind's eve" must future to stake out the foundation, which, as the form of the rock should be irregalar, must be so likewise. If the body of the rock is intended to be raised much above the ground level, a quantity of soil and rubbish should ? carted into the centre of the space. This soil, besir es serviag to support the plants to grow in.
Having at hand plent
Having at hand plenty of large, rough stones, broken bricks, or stony rubbish of , any kind or colour, proceed With these to irnitate the form of natural rock as nearly
as possible. Rough, bold, angular projections, and deeply-formed chasms, are the principal features in natural scenery which please us most. A rock with a flat unbroken surface, whether horizontal or perpendicular presents too much sameness to be pleasing to the eye varied and bold; and unless rapgedness and intricact form principal features in its composition, it will lose much of its effect. If the rockwork be on a large scale it should not be one continued line, but broken at intervals; in one part lost beneath the surface of the earth, and again rising in another part, and resuming its sinuous
form.
So far, there is little difference between this and the com mon method of making artificial rock. When, however every stone has been arranged to suit the eye, the inter stices between them are to be filled up with any kind of tended for the plants which are to cover the places, in be left open, so that the roots may penetrate to the soil beneath the stones. The next operation is to daub the the latter should be mixed with water, until it is of the
consistence of thick paint, in which state it may be applied to the stones with a large painter's brush. The
spaces between the stones having been filled with rough spaces between the stones having been filled with rough mortar, prevents the cement from being wasted. The than the eighth of an inch; it will unite the whole into one mass; and rockwork thus constructed, is, beyond all comparison, far more natural than that made in the usual way. Ithas none of that disjointed appearance which usually accompanies rockwork made without cement.

After a few months exposure to the weather, rockwor thus formed (if skilfully made) cannot, without carefu examination, be distinguished from a natural mass; it will \&c. will se the appearance th nature, for mosses, hchens the cement bever all but the most prominent parts. If situations, may be the caght a colour, which, for som be mixed with it. Care must, however, be taken that no substance which may make the cement more porous is used, otherwise it will peel from the stones after a hard frost. For the benefit of those who are not accustomed to using cement, I may mention that no more should be moistened at once than can be used in a short time; if the cement be good, it will quickly harden, and will then be in a manner useless.
In preserving cavities in the rock for plants, care should be taken that no places are left in which the water may lodge ; or in frosty weather, the ice, by expan sion, would split and peel off the thin crust of cement therefore, all hollows or cavities should have a hole at the lowest part of them, communicating with the soil beneath the stones, so that the water may drain off.

There are many plants which thrive much better on rockwork than in the open border. I fear, however, that a list of them would occupy too much space; and by enumerating a few I should undoubtedly leave out many interesting ones. There are, nevertheless, several Saxi frages and Veronicas, hardy Heaths, Ferns, and Vincas, which grow remarkably well in such a situation. They should never be allowed to coyer entirely the rock on which they grow ; considerable portions of it should be left bare, or it will assume the appearance of a shrubbery, especially if viewed at a distance. I have seen several fine pieces spoiled by being too thickly planted.
Much of the good effect of rockwork depends unon its situation. It may, in itself, be beautiful; but if it be improperly situated, nothing can be a greater eyesore. The choice of the situation, then, should be left to the experienced landscape-gardener, or to one well versed in the picturesque, who can distinguish between the proper and the improper situation. After the site has been chosen, its formation after the manner that I have just described would be easy. Nature furnishes us with an abundance of ex cellent examples; any one after an attentive observation of a natural rock, might direct a labourer to make a rough likeness of it. Thus an imitation of the dropping well at Knaresborough, or even of the rocking-stone in Cornwall might be made. It is not, however, every piece of natural rock that is worthy of being imitated; a little taste will be equired in the selection
It is not in the pleasure-ground alone that rockwork might be advantageously introduced. There may probably be many romantic and appropriate situations in the length of the approach, or in sequestered drives, where
masses erected here and there would greatly heighten the beauty of the scenery. Iven whereaty heig hten exist, they of the scenery. Even where rocks naturally improved appearance might, in many cases, be much to their heighter might be easily made.
Rocks, where they exist naturally, or where artificial ones are judicially introduced, tend greatly to beautify a piece of water. What can be more appropriate than rocks for the high banks of a lake? The introduction of one or more islands of a proportionate size would add for the its picturesque beauty, and what more suitable the pendent branches of the Weeping Willow, studded over with the modest little Heath, or clasped in the em brace of the tortuous Ivy they seem, pith their rocky bound the tor oun coass, and their ine batories their feet. In harmony with the whole, a boat-bouse, in the form of a cave, might be built in some retired corner A fantastic appearance may be given to any piece of rockwork, by fixing with cement to its more prominent parts large pieces of calcined coal or clinkers, and cover ing them with cement of the same colour as the rest the rock. These clinkers will impart to it a singular, bu certainly not a natural, appearance. If it is desirable to form a piece of rockwork without reference to its natural appearance, these clinkers may be used; but under any other circumstances I cannot recommend them.

Chairs, vases, and similar ornaments, having a rude re semblance to the antique, may be easily imitated and placed where fancy may dictate.
A grotto built of rough stones and' coated insid with cement will form an interesting retreat during the heat of summer. An unnatural effect is produced by having shells, sce., studded over the roof in diamonds, stars, circles, and half-moons; but petrified substances spars, crystals, curious stones, \&c., scattered carelessly about, would have a much more pleasing effect than disposed in farcy figures. Externally, the grotto may be filled up as a piece of rockwork. There should not, I imagine, be an extensive view from the grotto, nor should it open on the highly-finished lawn and pastures. It may easily be secluded by being surrounded with shrubs, an its refreshing coolness. There are numerous Ferns and
other plants which will grow in a subdued light, and these may be planted inside the grotto
making artificial rock for waterfalls, or other constructions where the cement may be constantly exposed to the action of water, the best water-cement should be used. Any preparation that does not quickly indurate under water will, in a short time, be washed away, and leave nothing but the bare stones. It will be seen that have spoken principally of making rockwork on a large scale; the principles are the same, however, whether ap plied to covering a rod or an acre of land. In conclusion it manst ever be borne in mind, that "s the greatest triumph

DESCRIPTIVE LIST OF CARNATIONS AND $I_{T}$ is possible that the oteEs.
IT is possible that opinions given below may be at riful and frogre beau tiful and fragrant flowers. With all due deference to my perfection to that of Nottingham, I beg leave to state that, perfection to that Nottingaam, I beg leave to state that with us, purity of the white is indispensable; and that an is equal is also requisite: form and regularity of marking take the precedence of size, and the pod must be long and wellformed. Petals either very thin or serrated are disquali fications which cannot be overlooked. The following lis will contain a description, which may be taken as the opinion of Nottingham florists, of about 20 sorts in each class, cultivated by myself.
Jolly Dragoon (Ely's).-A large and rather coarse flower, colour high, and white tolerably pure
Game-boy (Rainforth's).-Does not crown well, yet is a great favourite with many, on account of its beautiful markings ; too thin for a first-rate flower
Leader (Hepworth's). - Finely-marked, and a highcoloured flower; rather small, but a general favourite. The layers appear to be more shy in making roots than some other varieties ; it therefore requires to be layered

Don John (Merchant's).-Thin of leaf, muddy, and Lady of the Manor (Milwood's).--Rather small; often deficient in dark stripes; may occasionally be caught fine, and requires to be grown strong.
Patriarch (Hufton's).-Pod good, inclined to be thin but when grown fine there are few in its class that can excel it ; the colours and disposition of the stripes are good.
Union Jack"(Ward's).-A fine and large flower ; colours well distributed; of excellent shape and petal, crowning well: its only drawback is that the white is flushed When the flower is opening.
Sir Robert Peel (Grove's).—A well-shaped, finely-marked, and useful flower.
Locomotive (Marris').-Raised a short"time ago at Leices ter; the stripes are good, on pur
it promises to become a favourite
Duke of Leeds (Hoyle's). -Thin ; the white seldom pure by no means firstrate, although it wins many prizes in Lancashire
Prince Albert (Hale's).-Fine pod and very large flower; well-marked, and decidedly the best of its class which I have yet had from the south.
Splendid (Martin's).-A finely-shaped flower, though not so "splendid" as I was ledito expect. With me, there was not a fair proportion of bizarre; the colours were not properly balanced, although having only grown' one season, I am not sure that this is its usual cha硅
Conquering Hero (Wilmer's),-Large; rather coarse Brutus (Cut's) a sometimes comes fine
Brutus (Colcuts).-A very large and finely-formed flower ; indispensable to a first-rate collection. It is question whether Splendid or Don Joln can beat it. uba (Colcut's). - A fiower of later date than the abovel;
of first-rate shape; a good marker, and a decided of first-rat
harles the XIIth (Mansley's).-Sometimes rather de ficient in dark stripes; when in good order it is a
William the $I V$ th (Walmsley's).-High-coloured; white impure; decidedly second-rate.
Colonel (Lee's).-Good shape, but rather thin ; the white has a yellowish tint, otherwise it is a meritorious flower uke of Devonshire (Fletcher's). -Not large, but with stiff, well-formed petals; generaily the succession blooms have less bizarre than the first.
Mars (Walmsley's).-The white rather impure, but the petals distributed; sometimes very fine.

Duke of Bedford (Ely's).--A beautifully-marked flower white pure, and shape good.
Count Paulini (Holmes').-This, although much admired
by many, appears to want that due proportion of colour which constitutes a first-rate flower
Duchess of Kent (Brown's), - A beautiful, high-coloured flower, of good form and substance; rather late
Bloomsbury (Soorn's).-The petals are rather narrow
and thin; the white often impurs still it a and thin; the white often impure; still it is a pleasing Hector (Brown's).-Improperly called Toone's Conductor; late, but highly-coloured; is sometimes met with extremely fine; the petails are stout and well
Lord Mitton (Ely's),-A great favourite ; form 'good colour high and well-distribated; extremely apt to

Lord Brougham (Greasley's). -Quite as good as the preceding, but much scarcer; the grass is apt to mildew, more than that of most other sorts; balanced.
Squire Pluntree (Hufton's).-A fine flower; petals rather long; colour well distributed; the layers are Mrs. Brand (Ely's).-Large and well-formed; rather deficient in darks stripes; when strongly grown and in "proper colour it is irst-rate : wiower," from its uncertainty.
m. Caxton (Ely's). Pod long, not apt to burst; the flower is of medium size, thin of petal, but marks well. Robert Burns (Mansley's).-A fine and double flower, equal in point of marking to Ely's Lord Milton and
Greasley's Lord Brougham; cossequently ranking in the first class.
Tallyho (Woolley's).-Serrated, as one of the exploded Picotees; utterly worthess as a show flower
Bonpland (Wilmer's). - Finely marked, with a good pod ; petals rather long, but a clean, useful flower. coloured, of good form and size.
Rainbow (Cartwright's).-A good old sort, apt to expand with its petals much disordered; a shy propagator, nd
with Ray (Hufton's).-A remarkably clean flower, wake of the first-rate ones before alluded to.
Betsy (Lovegrove's).-Large, but will not do for this part of the country, one-half of the petals being almost destitute of bizarre ; desirable only as a border fower. perties; a superior second-rate.
Eelipse (Easom's).-A large and gaudy flower; outer petals large and well-formed; strongly-marked, the
centre often coming rather confused. centre often coming rather confused.
Taglioni (Pickering's).-A beautifully-marked and showy flower, of medium size, differing in colour from most other sorts; in this variety there appears to be almost too great a preponderance of the crimsox

## AMATEUR'S GARDEN.-No.IX

The potting of plants is an operation easily performed though the principles upon which success is founded are not so well understood as the proper treatment of plants sufficiently obvious by the miserable specimens too gener ally met with. And why is this? Simply becanse the cultivator, instead of examining for himself whether his manipulations are in accordance with the laws of nature rests satisfied with following in the footsteps of his predecight or wrong; and hence but little pains have been right or wrong; and hence but little pains have been table organism, which nature everywhere so bountifully spreads around us
It is an undoubted fact, that all plants like fresh soil and leaf-mould; and any person who has a supply of these two, with good peat and silver sand, may, without any further assistance from soils, grow any plant in existence. A plant in a pot is in the most articicial state in which
it can be placed; as its roots instead of being some degrees warmer than the atmosphere which surrounds them, as they would be if planted in the natural soil, are from the current of air constantly passing round the pots, and the colder. This circumstance alone is enough to account for our precarious success; but when in addition to this, it is
recollected that the roots are constantly alternating between drought and moisture-that they are violently excited at one time and actually flagging for the want of water at and finely-reted plants is not attended with more disappointment than has hitherto been experienced.
The general method pursued in potting plants, till within the last ten years, was to sitt the soil as fine as possible,--to use little or no drainage; and when the plant and that at some stated period. In truth, plants were subjected to a regular routine of management, as invariable as day succeeded day; quite irrespective of their constitutional peculiarities and diametrically opposed to nature. But since the sifting of soil has been to a considerable extent dispensed with, larger pots have been necessarily been the the time of Ab, Almose to Sweet, and from Sweet to the present day, with few exceptions, recommend soil to be sifted, and the indispensibility of giving plants a small shift in repotting is insisted upon. And what is the themselves later roots, from their doposinund the side of the pot laterally, are constantly matted round the side is the pot, and as the action of the root and branch Itself, so will the branch likewwe the root ceases to exst to a cousiderable extent, and, as a natural consequence, small, stunted, bushy plants must be the result; whereas, if the same were planted in the open ground, for the well-prepared border of a conservatory, the roots would extend themselves unknown under other circumstances. As a proof of this I may point to the new conservatory in the Horticultural Gardens at Chiswick : the plants in the border are grown 2ng with a luxuriance which in some instances has given Them a character quite dissimilar to that under which they
are known in pot-culture, while the plants in pots are
little better than those we see in ordinary greenhouses, except that they are more profusely set for bloom -a difference mainly attributable to the highly-elaborated secretions of the plants consequent on the superior lightness of the house. These things teach us that coninement of the root is confinement of the branch, and that, we wish to rival the luyuriance of nature, we must approximate nature more closely in the pot-culture of our plants.

Having now said sufficient to prove that " our ways are not nature's ways," I will introduce to the Amateur's notice a new system of potting, which may be designated the one-shifl system, . f , system is, that, instead of a thumb to a 24 or 16 , or an different sized pots, from a other size that it may remain in per atany, to the permanent pot at once, oneral custom; thus, in purchasing small specimens of new plants, they may be placed at once in a 24,16 , or 12 sized pot, in which they will remain for four or five years.
The first hint which I received of this system was some years back, when Clianthus puniceus was first let out A cutting of it was at that time given to Mr. Caie, gardener to the Duchess of Bedford; who at the end orelve wonths had grown from this cutting a plant 7 feet in height, beautifully branched, and covered with bloom; while the original plant under my care, although attended with regularity, would not bear a comparison witt it. learnt from Mr. C., that his cutting, directly it was established in a small cutting-pot, was removed to a No. 4 sized pot, well drained, and filled with rough turfy loam resh from the field, and a little leaf-moula. Abo Eric physodes and pinifli but they were in such a deplorable pondition 1 did not consider them worthy of carriage To hor mas mistaken, Mr . C . Thored the small pots in which they were then growing into-16s, in rough turfy peat and silver a in the were handsome specimens 18 inches high, from four to five feet in circumference and beautifully furnished with branches
Since that time, I have practised this mode on various plants with success ; but to Mr. Goode, gardener a Ealing Park, belongs the credit of applying this system more extensively and with greater success been expected. Amongst the valuable collection of piant at that place, he has a great number in 24,10 , 12 , and sized pots, forming magnificent specimens, which are on an average from three to five feet in circum thumb-pots They here, in reality, made 'from three to four year growth in one season, and are flowering in the greates profusion. Among other genera, may be mentioned BorúHelichrysums, Ericas, Epacrises, Chorozemas, Polýgalas Roellas, Mirbélias, Dillwynias, Croweas, and Gomphoí biums. It is to be hoped, however, as Mr. Goode is a constant exhibitor at the Horticultural Society s meetings, that he will in future point out the specimens thus grown, to afford visitors an, opportunity of judging for Some gardeners who have seen the plants an Ealing Park object to the system, and contend that though
 that time die off. On what principle they found their that time die off. On what principle
The principal thing to attend to in this systera will be to have the pots thoroughly drained; for if water stagnates in such a mass of soil, all hope of success will be at an end. In growing specimeniplants, it is a good plan to drain the soll wila fore care to prevent the soil from for cutting-pots, taksing by covering it securely with falling among the dres of varions sizes, in considerabre Moss. Porous stones of various sizes, in considerable quantities, sticks in a halare heen used, with satisfa charcoal for some plata, 1 eschérltio tory results. The roots Chorozemas, thas the most beautiful manner
and charcoal in the soul of plants" As charcoalis said a no mean cultivator either, a few remarks on its use may not be out of place. In propagating plants, cuttings root freely in it ; but if they are not removed into other soil directly after they have rooted, the roots will almost invariably die off. Whether this is from the great supply of carbonicith the oxygen of the atmo the charcoal combining roots to perish in the midst plenty, I will not pretend to say ; but such a result is not improbable, as we know that a plant is soon killed improbaplying it constantly, with strong liquid manure, Com "by virtue merely of its ordinary well-known properties) can completely replace 'vegetable mould or humus," and as it is the "mosu able substance ciently porous to admit 'the atmospheric air amongst it must form adding carbon to carbon, as must be the magine case in adding ence. By mechanical action in all soils it beneficial ind as well as chemically in soils deficient in will do good, add to peat-earth is, in my opinion, a carbon, but of excellent manure. Mr. Barnes, of mere watributs the whole of his success to using charBicton, atribu charcol he uses is prepared from vegetable refuse, and therefore partakes as much of the character of refuse, an ashes, which are an excellent manure, as of the
vege
properties of charcoal. Nature supplies plants with chapcoal in the shape of decaying vegetable substances, and hat is the best corcoal that be wed, is modil by multiplied experiments he proves whether it is dvantageous.
In concluding this article, it may be remarked that the principal things to be attended to in this system of potting are, to use the soil as rough as possible. Plants potted in this way will not require so much atcention as those pottedlin the usual manner; because one watering wil serve them for several days-whereas in small pots, they would require constant attention.-W. P. Ayres.

## HOME CORRESPONDENCE.

Fixing Ammonia.-I see that several of your correspondents have alluded to an experiment which I have been proposing to the farmers of Suffolk, and of which you took notice two or three weeks ago. Wear my Eighth copy or the shat in insertion, I shal feel oblicd as it will show your correspondents that feel onge so anxious about proposing this experimen have form whin would be considered unexceptionable and a formatang the by chemists 1 bur which may be farmers to adopt a mode or er. My previous letters of importance to have pretty fully discussed he sabjo if your corre with gypsum and other suustances, and in the the spondents have an opportuals will see that 1 have forestalled some of in of have now superinconded the preparation orintend or ment, and hope in a day or ino raper neighbous: two more, with the aid of my more prackal nei bo in my I shall then draw up the schedule refared to in my ther, and if you can find roon for ha haction at one fature period, it may be the meana ill iacing aume to improve upon it. Ithink you will agree with me that some such scheme of extensive experimental co-operation as that which I have advocated, and as (1 am happy to say) the farmers of Suffolk have now proved to be feasprogress of Ágriculture-J. S. Henslow. [The following is the letter alluded to

## To the Farmers of Suffolk.

Gentlemen,-I must allow the leaves to go on with their exhalations and respirations, without interfering quest yur serious aftention to a few observations I wish quest on the resylt oy appeal to you. When 1 an nounced my intention of calling for not less than fifty to co-operate in the way I have proposed, I found a very decided opinion expressed in all quarters that I should hot be able to prevail upon so large a number. I had calculated on the well-known spirit and energy of English men wher farticular course is the right course to be adopted: my only fear being that I should not succeed in persuading many of you to see, as clearly as I do myself, what your present ought to be for securing the speedy improvement of Agriculture. I had also witnessed, during the last two years the great desire expressed by the mion of infor leigh Farmers , Cur for any des which might bear directly or 3 ndirectiy upon your pur suits. I find that I have not miscalcuat I the ceived ences which I drew from these premises. I have teceiced my challenge, and I find from two quarters calculate upon receiving from to 15 more. Ber another week has expired 1 hop 1 sheriment on two tended the preparation of the proposed experiment my pro mised circular with necisedirections how you are to proceed, and with it I will transmit a Schedule A (for rotten aung hills !) Containing blank spaces to be ber uped to me experimenter. These schedules will be reen obtained some months hellce, whell the results hambarked, I must be allowed to speak a little more gravely than always found myself inclined to do. I must fet I am quite sure that you correctly understand antain whethe aiming at. One point, certainly, is to ascertaill improve the addition of gypsum to a common dunghe this question the quality of the manure-which is puttiog thal chemical in its simplest Agricultural shape, divested of alis question and theoretical notions. But the decision or tirs of stil I hold to be a very subordinate purpose to. I am chiefl greater importance which I have desirous of giving you an ents ought to be conducted, if your Agricuitura to render them available for scientific purposes. I believe our gypsum experiment to be only one of several which must be tried before the question at issue can be fuly selus body of experimenters, thus tried by a numerous add something so prositive to the gemeral stock of knowled de, that it is mporsible it whould gen arcome of real importance to your interests. The little trouble or very trifling expense which each mdividua experimenter may happen to incur in such cases is no may
increased by his having 49 co-operators, whilst the value of his single experiment may possibly be augmented more than fifty-fold. It would Le a ridicutously trifing tax upon any farmer to perform yearly one such experiment We can all appreciate the advantages which flow from division of labour; and many who may not be qualified for suggesting correct methods of experimenting for selves, might be prevailed upon to act upon the sugges tions of others, provided the precise mode of performing
an experiment were laid down for them. The old proverb declares that "Lazy folk take most pains, and I almost question whether the proverb was not made prospec xper to apply times. There is no lack of Agricultural experimenterg. It should seem that we are overstocked with them in England. A gentleman, high in your confidence, writes thas to me: "The fact is, that whereas farmers were formerly averse to thing which is recommended, and it is necessary to be cautious not to mislead them into expense." Now, this struck me marvellously as a very lamentable necessity You are to be restrained in your anxiety to improve, and you to do. I have no doubt the science has been urging high outh from the bvious that the reason it 1 receivedit, butuse equaly in general have not qualified themselves for experimenting in a safe and judicious manner. Most certainly there have been many experiments of late, conducted in a correct and skilful manner by eminent and practical men, but too many even of these were undertaken with no other than some economical object in view, and not with any scientific aim. The results have mostly been tested by pounds, shillings, and pence, without regard to what new principles have been worked out. Butitis only when these shall have been discovered, that it will be time to test their application to practice by the pocket-argument. forly this piaced my hands by an intelligent gentleman of of obtaining coma, It is performed in the approved way fill fro, and from standing single, very little can be inferred fom it with respect to the natare of the influence exerted by the nitrate of sods. Half an acre sown with, and hal without the nitrate of soda.

Increase from nitrate

Cost of the nitrate of soda
Value of the $1 b, 1 p$. of Wheat, at $7 s, 6 d .$,
$9 s .4 \frac{2}{2} d o ; 94 \mathrm{lbs}$, of straw, at $2 l$. per ton, $1 s, 8 d$.

## Loss on the half-acre

Here the balance being against the pocker, no more attempts were made with nitrate of soda. The inspection of the above induced me to ask the experimenter whether he had thought of trying only one-half or one-fourth the be the same. If it should have turned out might not still the case, the pocket would then have pleaded in favour of its application. Before we can expect to understand the to the effect it produces on a particua or any other salt bears many well-digested experiments performed in many parts of he kingdom ; and their results registered with a sufficien together. Now, with the ready of their being compared merous local Agricultural Societies, and the of your central society in London, together with the invaluable advantaciety in London, together with the invaluable advantages offered by the penny postage, you might very easily Brganize a system of co-operation throughout Great Britain, which I am persuaded would work with a rapidity
and an efficiency that would surprise you all. Of course every one who may be desirous of promoting such a system aust be at some trouble, but this will generally not be greater than is required to direct and superintend a abourer for two or three hours, whilst he is trimming hedge or digging a ditch; the personal trouble to the farmer himself would literally be no greater than that The intellectual part of these proceedings might be all transacted within the skulls of a few chemists, who would suggest, and within those of the more active members of your various Agricultural Societies, who might busy themselves in preparing and circulating, the different schedules to be filled up by the several experimenters. All that is now wanting to the adoption of such a scheme, is to convince the farmers of England generally, that unless they win consent to co-operate, themselves (otherwise than by very slow degrees) of the disposal. I am no enthusiast in this opinion-I am speaking the words of sobriety. I am only repeating what others wiser than myself have continually asserted. I have already referred you, in my address to the Hadleigh Club, to the opinion of De Candolle, and I have within these few days met with oe Candolle, and I have within cultural work in course of simblar declaration in an agriof Durham. This gentleman is ation by Mr. Johnston, tion ; and, in his Lectures on is a chemist of high reputaGeology, he his Lectures on Agricultural Chemistry and Geology, he has suggested several experiments in practical Agriculture. In speaking of the effects produced by special manures, either on particular soils or on particular crops, he remarks:-" Now, neither of these subjects, whint to investigate, can be determined, either for then experiments devised and executed in the laboratory of a chemist. The aid of the practical farmer, of many practical farmers, must be called various localities, and by different individuals ; madle in ever, according to the same rigorous and accurate method in order that, from the comparison of many results; some;
thing like a general principle may be deduced. whole question then evidently turns upon this- The the farmers of Great Britain are prepared to co-operate in making experiments under the guidance of persons qualified for directing their efforts. There is, in fact, an mportant link yet wanting in the chain which is to connect science with practice; and if science is only per that link hold the pincers whilst practice plies the blows, much strengthened that this will soon ty hopes are now in future listen with impatience to any desponding surmises about your not being sufficiently awake to the importance of co-operating for such a purpose. "My neighbourhood (Surrey) is against expecting the present race of adult farmers to become much of readers ; and so my hopes rest on their sons." But I conceive it is not necessary, for that description of co-operation which is required of you, that the present race of farmers should become " much of readers." Let them act npon the sug gestions of others ; and then, whilst Liebig is uttering lamentations over his Germans, and consoling himself by talking of what will be done by a generation to come, the present race of British farmers will have forestalled that generation of foreigners yet to come, and have left the present generation behind. Why should we doubt that the farmers of Great Britain generally would be less prepared to co-operate than the farmers of Suffolk have shown themselves to be? No doubt there are some, and probably not a few, among you, as among every other class men, who would indolently prefer a shorter road than that which science points out to them. Perhaps it would ave been easier for me to have enlisted twice fifty co past studies in Botany had led me to the world that my marvellous composition, a certain incomparablevery of a elixir, in which it was merely necessary for the sower to steep his seed, and he would at once be able to double his crops ! But to have found more than fifty willing to anything promised abo spirit of philoph, and without
 From what I have heard consider of most excellent omen. little what 1 have seard aince my last letter, I believe little further delay would have greatly increased our numbers; for I find that several farmers of this neighbourhood have not seen my challenge, and had only heard of it through others. If not more than twenty-five of you had come forward, i should still have asked each man to procure a doubie, and I make no doubt that we should thus have got our number completed. As it is, I think it will be advisable to increase our numbers, rather for the sake of experimental inslruotion, than for the issue of the experiment; and I shall have a hundred copies of Schedule A struck off, that I may be prepared to supply any additional recruits. Whilst you are performing this experiment, $l$ must call upon you to toss all prejudices and antiquated opinions to the winds; and to proceed as closely as possible upon the instructions with which you will be furnished. There must indeed be a certain latitude allowed, because it may not be convenient for one person to use any but littered straw, or for another to apply it to a particular crop: but the very object of requiring so many as fifty is to merge the inconvenience of such con trarieties as these in the general results obtained w are not in the position of chemists operating upon weight which it is necessary to test to the tenth of a grain ; and we require no costly apparatus for determining our quantities. For the present experiment, your agricultural aboratory need be furnished with no more than the fol lowing instruments:-1. A dung-fork. 2. Pair of scale 4. Sieve. 5. W. A common basket and a pint measure powdered; and not burnt into Plaster of Paris

Your obedient servant, J. S. Henslow Hitcham Rectory, February 25, 1843
Brewers' Grains as a Manure.-I noticed, at p. 105 the Chronicle, some remarks on Brewers Grains as a having the comp not remind you of the importance of or employed as a fertiliser determined by chemical analysis Previous to your notice, I had been engaged in the examiation of Brewers' Grains, with a view to determine the proportion of water, organic matter, and earthy ash. Th esurt of may inquiries was as follows:-One hundred part f the Porter Grains of the Brewhouse contain-

Water separable at $212^{\circ}$
Organic matter
cium, and trace of sulpham, and cal-
hosphates of lime and magnesis
.25
.50
Silex, and a little alumine
1.25
100.00

The proportion of water will probably vary considerably, and could a ready mode be devised of getting rid of this two ways-by saving the away, it would be beater, and by preventing the rapid fermentation and heating during the transit so much complained of. Whether this could be done economically is another question. I understand Puantitrains can be obtained at the large breweries in in the dry state, they warter of 8 bushels. Supposing thema phosphates of lime and magnesia ; which is nearly half that present in that Vegetable Ivory, which I find contains 4 per cent. $-W$. H. Potter, Upper Fore-street

Your correspondent Totty, ${ }^{\prime \prime}$, who, at $\mathrm{p}_{0} 809$, Vol. ii.g requested information
upon transplanting large Walnut-trees, was, at p. 5 of this year, answered by Mr. Busby, who, instead of giving removing large Apple and Pear-trees. If the method removing large Apple and Pear-trees. If the method decomposed light turfy loam, or even any good soil, be preferable to leaves, particularly when a soil, be intervenes $\qquad$ dipging the trenches ad that of transplanting the trees? The former material vould encourage the root, cut in the operation of trench igg, to push out numerous young fibres; the latter, I think, would not. In the large park fronting the Man-1836-7and 8 spots successfully embellished with large and stately forest-trees, many of which were in the season previous treated according to Mr . B.'s system, with this difference, that good pulverized soil and chopped turf greatly encouraged the formation of spongioles. In transplanting them, open weather was preferred to frozen balls; the young fibres indeed kept the balls entire in that operation. I am of opinion that the system of freezing the balis of trees previously to transplantation anecessary, if not improper ; and I think there is by Mr prevent me from coming to this conclusion. For the better information of "Cotty" as well as Mr Busby wo doubts not, if the system practised by himself were adopted, that large Walnut-trees would succeed, I may state that at this place Wainut-trees have been tran planted which, from the authority of a creditable workman who assisted in the operation, were taken up regardless of that great and due precaution so much insisted upon by the scientific transplanters of the day, having had neither the unnecessary and often impracticable ball of 16 cwt . of earth, nor yet a frozen one. They have been removed several years, and are quite healthy, and in Whag forest-trees. any in en in sure vided they were manageable as to weight and bulk, proM'Lean, Easi Hampstead Part

On Planting.-At page 84 of this year's Gardeners Chronicle is an article by "R." on Planting. Allow me t maxe a few observations thereon, and to thank "R." fo bringing my experience and knowledge on the subjec into more notice. But had R ., with some others whe have witten readers of the Gandeners Chronicle where they got the knowledge from-would it not have redounded muc more to their credit, than to bring it forward 89 from their own experience-when it is cleariy evident they have gleaned it from my book, entitled, Facts, Hints, \&c the Management of Young Plantations," published aboul 17 years agol I beg of those who may be possersed moy work to compare the article on Planting by "R " with the following numbered pages in my book and theyil be fully convinced how and where he culled his knowledg from, as he has in most places used my very words verba tim. I would not have noticed such condret, only it is so grossly palpable. "R." might well be ashamed to svouc his real mame. Pages referred to in my work :-firs paragraph or division of "R. ${ }^{3}$ " article, refer to page 157 second do., 168 ; third do., 169 ; fourth do, 176,7 ; fift] o. 182, 3 ; sixth do., $184-189$; seventh do., 189, 196 lington, Underhill, Oswestry, Salop.--[We regret to find on referring to these places, that Mr. B.'s complaint perfectly well founded.]

Training Forest Trees.-Permit me once more to repl tauercus," who, at p. 37, still seems to misunder . him right. Had he availed himself of seeing my publica ton on this subject, he would, as he appears open to con iction, Lave been at once convinced. I entirely agre with him as to the injury proprietors, and managers o wods do to timber, by following the pernicious system aid down by theoristt, and adhered to in too many in stances with a confiding pertinacity which is truly asto nishing." "Quercus" says-" Mr . Billington sees fin lourishing timber through the medium of his system: and he himself says, "he sees it as good, or superior without any pruning at all." True. "Quercus" migh see here and there a chance tree as good; but my systen is to make every tree profitable, good timber. He the sks, how is "pruning oy any system likely to increas the timber in trees, if that increase depends upon thi number of branches and leaves? and again says, h counteract the intentionsteno of training that does no term pruning for training merely from the erroneous ane conflicting opinions about pruning; and I maintain tha he increase of timber is from the number of branche ad leaves including their healthiness-and that my sys em of training is to increase the number of both branche nd leaves, as well as their health and vigour-to regulat e branches to moderate size, ounds until the head shall begin curtail them at sll, except in cies, but to increase them when necessary. "Quercus" those parts (hranches and leaves) is simply to regulat. as to pid thoran and , add those properties in accelerating the elongation erpag lar expand itself in useless branches:" this is true. H then asks, "How can branches be useless if the increas What I mean by useless branches is, when thiness? arrived at maturity, and the branches have performe
their functions ; when the trees have to be cut down for "spray, firewood, and faggot;" and all on account of not having been trained in a proper way when young, so as to have increased the timber in the stem, instead of running all to branches-as most trees naturally will in
open places. To be sure, by leaving trees to natwe open places. To be sure, by leaving trees to nature, you may have one good tree in fifty, or perhaps a hundred; you will have every tree valuable, and in much less time. We may, however, write and inculcate the true system al cultural Society is established, and experimental plantacultural Society is established, and experimental planta-
tions are formed for training forest-trees, to exemplify by example and practice, and to show the certainty of the system accomplishing what it professes. It is become a cuckoo's song at the present day with most landed pro-
prietors, as few will listen and fewer heed the strain prietors, as few will listen and fewer heed the strain. I saying that he "fears I have some latent clinging in my mind to the old notion-that what is taken from the head of a tree by pruning is necessarily laid on the stem ;"
whereas, I distinctly said in my last reply, and again repeat, that the increase of timber or wood is from the descending filaments from the anaual leaves and leaf-buds: Whereas, were those parts diminished, it is evident that the increase of the timber would be also; and that my system, intended to increase and regulate them is so as to form profitable timber instead of useless branches. my not furnishing a more expressive term for " reciprocity between the roots and branches," by which I presume my way clearly on that point; for I cannot conceive an equality of roots with the branches, on trees with immense places. As to a mutual connexion between roots and branches, there can be no doubt of that.-W. Billington, Underhill, Oswestry, Salop.

Thawing Plants.-During four years that I had charge of an extensive collection of Ericas, I frequently went to bed fully conscious that on getting up on the following mornof of its elevated and exposed situation. In such instances
I invariably resorted to the plan recommended by Mr. I invariably resorted to the plan recommended by Mr.
Agres, at p. 84 ; by which means I soon thawed the Ayres, at. p. 84 ; by which means I soon thawed the
plants, while at the same time I kept down the temperature during the day, compared with what it would have been, had fire-heat been applied. I hope I shall not be misunderstood, when censuring elevated and exposed situations for a Heathery. It is an extreme case which 1 have in view, and therefore it is the abuse of the principle, and not the use of it, which I censure. I would not have $1^{\circ}, 20^{\circ}$, or $3^{\circ}$ of frost in the Heathery, if I could avoid it. I have had Ericas subject to many degrees of frost, which they have survived, with a loss of their foliage; but this injury from frost was affected by the very piniciple which I have censured, namely, a free exposure to
light and currents of light and currents of air; whereby the Ericas were renmentioned fact that the gardener must look for his suastin enabling plants not indigenous to this country to survive our winters: and what is true of Ericas is equally true of other plants, if we make allowance for the different circumstances that have made them what they are...J. climber, like all others, if not submitted to a regular mode of training, will become one confused mass of shoots, which, if allowed for a short tirae only to become entangled, are difficult to restore to order without injury to the preater scarcere any han connected with gardening is a wrant of proper training or to see climbing plants neglected from want of proper training, or having the shoots tied toge-
ther like a broom ; for whatever may be the natural habit of a plant, in regulating its branches we should imitate nature as nearly as possible, unless it is deshrable imitate nature as nearly as possible, unless it is desirable to train
them into any artificial form, similar to the wire trellis them into any artificial form, similar to the wire trellis
lately figured in the Chroniole. My method is the H . monophylla with five leading shoots, one from the centre of the pot, to which a long, small, neat stick is placed; the other four being fastened to four similar sticks, at regular distances round the edge of the pot. From each, of these leading shoots proceed numerous side branches which are densely covered with flowers. When the plant has done blooming, which is by the end of May or beginning of June, I still allow it to remain in the greenhouse, until the shoots are well ripened. During this time, the plant is watered sparingly ; for it is only by moderating the supply of water that we can imitate those periodical plants, is exposed in its native climate all other exotic week in Angust it is taken from the greenhouse and well
soaked soaked with water, then placed in the open air in a shel-
tered tered situation, but fully exposed to the sun, being double fibres, which prevent the sun's rays from destroying the small of the side shoots are principal feeding organs. The whole eyes, sade the leading are pruned to one or not more than two
strength, maining buds. to call into action the whole of the reto two inches in As soon as the new shoots are from one and nearly the whole of the poil is shaken from its roots : the stronger roots are at the soil is shaken frime cut back to smaller ; fibres. It is then repotted in a new or clean-washed por thater
thorent am acquainted that ; for there is no plant with which I drainage. The soil infiers more than this from imperfect turfy heath-mould in which it thrives well is chopped ing, it is placed in a shath with a little sand. After forcdegrees exposed fully to place for a short time, and by greenliouse by the end of September, being taken into the
phylla, when treated aunually in this way, will amply compensate for the tronble it occasions. As the leading shoots only are securect, the side branches become pen-
dant, and the plant has a graceful and pleasing appear-ance.-G. G. Walsun, Vicarage, Norton, Stockton-
Cultivation of Roses in Pots.-I commend you for the encouragement which you give for growing Roses in pots.
It will not only add a fresh and lovely feature to exhibitions, but it will create a much areater interest in the Queen of Flowers, from the fact of amateurs, like myself,
being able to purchase them when in blom. grown Roses for several seasons to what I consider great perfection; and I think the Bourbon family particularly adapted for growing and exhibiting in pots, from their hardier growth and strength of petal enabling them to stand more rough usage than a delicate China. There so as to forra a leading feature like the Pelargonium in our exbibitions, on account of the frailty of its bloom, and of its not producing a sufficient succession of them to enable a moderate cultivator to exhibit at any given time. I say, give them a fair trial, allow it the cultivation which two seasons, but cultivators will soon find out and grow those varieties which are best adapted for exhibiting in pots, what will be the effect in the course of a fect seasons? Doubtless, we shall see "potted Roses forming the most attractive part of our exhibitions," and, from their improved culture in pots, many fine varieties bloom which before would not ; while many of the best kinds will bear seeds in this country, which could not be induced to do so in the
open air.-A Rose Fancier.
On the Decose Fancier
One of the most curions phenomena which strikes the traveller in Australia is the appearance of so many of its frest-trees undergoing the above process. It appears and manifests itself in many different shapes and forms. The bark of several species of Eucalypti, being brittle, drops
down and lies about, either around the foot or is scattered 'by the wind to some distance around the tree. As the fibre of the Eucalypti is brittle and dry, it is
 loosened bark, not sufficiently dried to drop from the trees, sometimes surround the branches like the skin of a serpent about to be stripped off. This is the case with but therecies of Eucalypti whose bark is rather brittle ; and more flexible fibre, and such trees present appearances bark hat different when in a state of decortication. The when sufficiently loose also fall to the ground. These strips at times exhibit such varied colours that they impart to the forests a strange and extraordinary appearance. an original the trunks or branches thas denuded present of decortication, varies from pure white, through all possible shades, to a deep red. The trunk of Eucalyptus perfectly white appearance, just the same as if they had or grey, present a slossy appearance, far more remarkable than that of our Platanus, to which, however, they bear some Eucalypti are in a state of decortication at the beginning of spring (August and September); it should therefore be the aim of subsequent travellers to de-termine,-1. Whether the decortication of the different the year, or is dependent on other circumstances.
Whether all species lose their bark at the same period whetber this is done by various species at different periods, or is dependent on the soil, temperature of the
season, \&c. The cause of a phenomenon apparent in many species of a tree most widely scattered over the Australian Continent, is an especial matter of importance to physical geography and botany. A clue towards its explanation may, in the ifst instance, be attained by that bark are the reverse of each other; the former increasing externally, the latter internally. As Exogenous plants matter on their outside, it is natural to suppose the the growth of the Eucalypti is very quick, and as the alburnum swells so rapidly, the stratum of the liber becomes first so distended that it cracks and finally separates from the rapid growth of these trees in the swollen appearance which their branches at certain periods exhibited. Such as are crooked (and they bend most fantastically) bear the aspect of a motundity which characterise it. The cracking of the bark is still more assisted in Euculypti by the delicacy of the fibre previously mentioned. The liber, also, of most of the trees is brittle, very dry, and spongy; and it is from these species that portions of the liber is more fibrous (as is the case in those Eucalypti, which in the colony are called stringy-bark gum trees), the same disproportionate extension of the alburnum takes place; the barik cracks and becomes loosened, but on account of its fibrous and tenacious nature, adheres longer to the mother trunk. It is also obvious, that in take place, as this substance is capable of softening the liber, and consequently of making it more capable of distension. It is evident that Eucalypti, with their scanty distension. and resinous sap, possess but little cambium,
which accelerates their loss of bark. As in this process the outermost part of the alburnum has to become the epidermis of the future bark, a series of changes takes place Eucalypti which aft is obvious that those parts of the being whitewashed, are the places where the appearance of been changed into cortical epidermis. As the Fucalypil are evergreens, and the period of their rest is lis tinctly marked than in our northern trees, and morever, as this decortication shows their growth to differ from the of most others, it is difficult to determine the for trees by the number of concentric layers of wood ; some of them must, however, be very old, being 22 feet in circumference. It is customary now to connect the phenoit may therefore be starld with the economy of man; Holland have availed themselves largely of the pheno menon which is the subject of this memoir. Like the pendent faded leaves of tropical Palms, which form, as it were, a natural hut, and are the prototypes of the dwellings of the aborigines-the large sheets of bark which hang down from the Eucalypti of New Holland must have re The huts are savages they may be of use to them. The huts, or rather sheds, which they occupy temporarily, are made of such sheets of bark, which, if not already separated by nature, they cut off with instruments made of Serpentine, Trap, or other hard rocks. It is on such elves that the How Hollanders repose, and protect themmost from the humidity of the soil. They also make lakes 6hes. They bend and tie them in the required form, and Xan the crevices with soil and some melted gum of the light, they carry But, as it is difficult for them to strike a ignited branches on their hunts (either aquatic or inland) ous natnre, burn like tinder. Taking this, and other facts not suited to our present purpose, into consideration the New Hollanders may, with some propriety, be called the Eucalypti men.-John Lhotsky.
Amaryllis Belladonna.-The Amaryllis belladonna has always been a great favourite of mine, and I think I may cail myself a successful bloomer, having seldom leas than 60 or 70 blooming stems every season; still I do not your numerous correspondents, for to the inquiries of scores of bulbs at various times for I have distributed which have never, I believe, shown a bloom since they were in their possession. Mine are planted in various situations, in some of which they do not bloom; nor do they in any case where they are not planted at the foot of a warm south wall, and are there left undisturbed. They Pinerish most in the front of the outside wall of a small Pinery; and, from my own experience, they never bloom well except they have some warmoth at the roots, either from sun or fire. They are planted about six inches deep, tery leaves destroyed by the frost, have frequently seen the injured in the following season. Having a large number of bulbs, many, of course, do not bloom every year ; and I have frequently seen the blooms of such as have not briwed in the autumn thrown up very strong in the spring ; but these never expand. I cannot bloom them in pots (unless taken up in the early part of the summer, when the flower-bud has been formed for the season) nor can I bloom them in the border of a conservatory, though with the best situation possible for light and air. I have tried them under a common glass hotbed frame (planted in the ground), but the bulbs have had every care there for the last four or five years, and every sort of winter protection, yet without success-except that last year I had two blooms close to the uppermost edge of the frame and they were the largest stems that I hate ever seen. It is singular that in those situations where they do not bloom, they always increase the most rapidly by root, and form by far the bealthie bulbo Nowithstanding my own success with this deliotfful plant, I fear I have added nothing to the mend the bulhs to be planted about six inches deep, close to the foot of the wath wall there may be for in case there are any fire-flues in the garden, they are sure o bloom the tuite undisturbed giving them some triffing shelter in severe frost. They require little or no care ; but as far as my experience goes, if any one expects bloom before they have been established or three or four years, even in a suitable situation, he will be disappointed. They may bloom the first year after removal, as the blooms may be previously formed. In contradiction, hr. Biddulph's beautiful grounds at Ledago going over Mr. Bitaldis me he always took the bulbs
bury, and the gardener told up every year, and had never any difficulty in blooming them. They were then planted in a small bed in the open part of the garden. The temperature of that part of the country is much higher than with me. I saw no bloom If a channty Ver" will in the season.-Beta,If a "Country vicar" will give his bulbs of Amaryllis doubt they will repay him freated here, I have no viz.:-At 14 inches from the botlon of and expense, edge ja ceme, ay a brick in a bed of mortar, and one on level with the border upper edge of the lower, brick to be ground betwerder. This will allow the narrow strip of Mr. Beck's slate answer the purpose as Mr. Beck's slate edging would take up less room and well, or perkaps better, as would or any other contrivance (we cover with decayed leaves) rotted nor excited to grow till all danger of frost iser be

THE GARDENERS' CHRONICLE.

Before planting, the soil should be taken out, to the depth of 20 inches or 2 feet, and replaced, rather above the level, than otherwise-and about a sixth or seventh part of leafmould ; or, if that is not at hand, they will do in the loam moune. Indeed, most of the genera Amaryllis, Crinum and Hæmanthus do best in pure loam and a small quantity of silver sand; in this the bulbs are not so apt to decay o "shell off," as it is called, as when planted in any rich compost. In such a border as the above, but under the wall of a greenhouse and plant stove, we have Amaryllises of one kind or other in flower from the end of March till November. Even now (February 13), A. reginæ and formosissima have flower-buds two inches above the ground, in
front of the stove; these, with A. Johnsoni, vittata, \&c., will flower till towards the end of May, and throw up an occasional flower throughout the summer. In May, A bout
gifolia will begin to flower and continue till July. the end of July, A. belladonna will begin in front of the stove, and by the middle of August, it will flower in front and several Hzmanthuses, will have made their appear ance ; and by the beginning of October, Amaryllis lutea, and a álica will be in flower, and will continue till cut off by fourteen inches wide, we have a suecession of flower for nearly eight months. O'xalis Bowei, and several others, do equally well in the same place. freely than many persons suppos.
garden, Bury St. Edmund's, several bulbs were, 12 years ago, planted about 9 inches deep; since that time they have not had the least care bestowed upon theem, and, with ouly one exception, they bave flowered beautindy evoil is light, and very dry. They will also succeed in a heavy, cold soil; for in a neighbouring garden, where the soil is far from being either light or dry, 1 saw them
blooming well last year. It is fair, however, to state that they were planted in a narrow border immediately in front of the conservatory ; and from that they no doubt derived some small portion of heat, and of cianted in an exposed border. $\boldsymbol{H}$.
Tobolsh Rhubarb.-I do not force Rhubarb; but I have $a^{\text {"collection in an open quarter of the garden, where many }}$ species and varieties are planted near to each other, all
having the same attention bestowed upon them, i. e., no having the same attention bestowed upon them, i. e., no
attention at all. The Tobolsk has been planted four years, and it is invariably two or three weeks later in the spring than several other varieties; and therefore, judging from that fact, I should say it is not the most desirable variety for early forcing.-H. T
Asparagus.-I observe at p. 102, that "S. C." has tried the plan of putting a glass bottle over Asparagus, with the same ill-success had. The same has been the result in every case which has been tried in this part of Ireland the Asparagus so treated, being hard and not eatable I made the experiment with various kinds of glass, but none succeeded. A few years since a friend of mine told me that he harstender; and that there the following mode of treatment was adopted: so soon as the young shoot was perceived issuing from the ground, plece of hollow reed, cane, or elder, about eight ind suffient bore, was stacl down into the clay above the shoot, for the latter to grow into. The longer success. The Asparagus, when it had filled the tube, was cut; and my friend says that it was excellent, and of an enormous size. The same year, in consequence of my hearing of this, I placed a number of common flower pots over my Asparagus beds, and the shoots which came ap uader the tender. In some instances, where white, and not sufficiently high for the growth of the shoot, it had when it met the bottom of the pot, coiled itself round but still continued close-headed, and did not branch out nor become hard. I have no doubt the tin tabes to which German plan, above stated, and that the tenderness of th plant, in che cases I mention, arose from the exclusion of light, by placing over it an opaque hollow tabe. Ithin it was stated that the upper part of the tube was stopped;
in the case of the flower-pots, I covered the holes in the in the case of the flower-pots, I covered We have formerly seen this practised, and with the greatest success. Joint of Bamboo would perhaps be the best contrivance.] Cabbage.-Amongst the lists of Cabbsges given from time to time, there is one variety omitted, which I think deserves to be more generalify known. It is sold by the bristol seedsmen, under the name of Nonpareio compact; and is I thenk much superior. - Lu:
Fustolf Raspberry. -ln rep.y to "L. L.," p.
spectng He "Fastolf Raspberry," we beg to say that he will find, on referning to our advertisement, that it is culit requires nothing more than the ordinary treatment theretore, it does not clan its superiority from any ap plication of sea-sand or burnt sea-weed. Should have any further doubts of its ments, if he mill favour us with a line by post, we neghbourhood as well address of byshire, who, if he thought it necessary. would attest to its valuable qualities.- Youell and Co., Greal Yarmouth Nu, sey y.--In answer that 10 or liney years ago, some Ra-plierry canles were brought from Yarbiouih into this
from the nearest point of the sea-cosst. The fruit of the canes from this garden has frequently gained prizes at the
Horticultural shows in the neighbourhood. Canes from this garden have been distributed to other gardens from 3 to 10 or 12 miles distant; where, in every instance, the fruit has maintained the same character for size and superiority of flavor. The original canes, I should have stated, came from Caistor, near Yarmouth. Whether it is the origina Fastolfi I know not; but I presume this will answer from the sea. I have Youell's Fastolff Raspberry which I bave planted with canes from the stock brought from Caistor; but as the former bave not yet come into bearing cannot draw any comparison betw P.H.S. Lee commanications upon this subject, I am prompted to send you the following remarks, in the hope that some correspondent will favour me with his opinion respecting them. In September, 1840 , I prepared in my garden a pond of cousiderable size, bottom I cemented, and covered three inches thick with common field-mould. This pond I filled in the same month with spring-water, and stocked the fish large fish of Dutch breed. Until December all the fish were apparentis in good health, but after a sharp F . 1 let off the areater ane, not noticing them as formery, 1 leral of the fis portion of the water, and found hat in the mud, were dead, and wore than hall bir These latter I the remainder seemed to be deng carefully in the globes, removed from the pond, and tended canculallied conside ably. In January, 1841, I again filled the pond wit water, and put in 14 fish of fair average size, and of the same breed as the last. In Mebruary the poor fish cam to the surface, and remained there deadly sick, thei scales ruffled up, their eyes neariy closed with a film, and their bodies (particularly the fins, tails, and gills) covered with a white slime, having a very foetid smenl After a few days, for I would not remove them, they died I then again ran the water off, and taking up the other fight fish, put them into large earthen vesseis, renewing the wer every two days-for I had them in the house. Of these eight fish, five died in a few weeks, presenting e same appearances, of slime, film, 841, 1 removed all the bottom with well-washed white and, and turned in the three surviving fish, with eight others of the sharp-nosed breed. A month had scarcely lapsed before one fish of the old stock which had been of a brilliant red, turned of a deep purple, and kept always on the surface. Upon looking an became back a large raw spo, wh-like substance, and the fish covered wha greel they have died. Fil 1 bed abundantly Since the late frost in this year, the young brood have, however been, affected in a similar manner to my February stock; and I fear, although not one is yet dead, that 1 shall lose hem all The old fish do not appear to be injured. The pond contains Rushes, Waterliites, \&c., and is fed by the rains, and a spring occasionally ; the purity of the spring is beyond doubt, as I and my family use it daily. The ice has been carefully broken, and no means have been lef untried to insure success. The fish I bought in Covent garden ; but, excepting the last lot, which were resh rom a pond in Essex, they had probabiy bee
Killing Insects for the Cabinet.-When "D. H. W." took upon himself "to say a word to "S." on what he is pleasedj to designate "a most cruel mode of killing at all events have been more satisfactory if he had pointed out some speedier and less barbarous method of depriving them of life ere he applied such terms to mine. A more careful perusal of my letter will, I am sure, convince him that nothing I have recommended can be called "cruelty" guilty" to the charge; for I am one who feels-

## The heart is hard in nature, and unfit For human fellowship, as being void <br> Of sympathy, and therefore dead alike

To love and friendship both, that is not pleased
With sight of animals enjoying life,
Nor feels their happiness augment
and can say, that I never wantonly deprived a single insect of life. Nay, I may go further, and affirm, that have saved the lives of more insects than I ever killed for my cabinet, a them in, and
may observe

Will tread aside, and let the reptile lis
since I hardly allow that the poet was justified in saying-

## Or safety, "Interfan's, convenien righce, heaith,

But to return to my letter. The only media of destroying insect life I have recommended are, "boiling-hot water," "a hot fire," and "oxalic acid;" and I repest, for a "few moments" and "instantaneous" are the terms I used to mark the duration of their pain. Ihope, however, that "D. H. W." has discovered one, which sensibilities," as Matthews used to say, of those be warns against my barbarities. Cruelty and torture in such cases, according to my views, mean the infliction of a greater sary; and I Am sure that every one conversant with the subject will agree that these terms are inapplicable to my
method, Perhaps,
who believe that-
The poor beetle that we tread upo
As when a giant dies
and if so, it is useless arguing the point further with one so ignorant of the first principles of physiology. For the sake, however, of the "young readers to whom "D. H. W." alludes, and to save them unnecessary "pity" and "grief," I would merely observe that the the cold-blooded animals with an obtuseness of feeling to which those with warm blood are strangers, and that although it is very probable they experience some degre of the sensation we call pain, yet it is far removed fron what is generally meant by entomologist knows that it is chiefly to free itsel from restraint that the transfixed insect struggles on the pin, and the Tipulidæ escape from the spider's-web by the voluntary sacrifice of one or more of their legs. Were these creatures, therefore, constituted as those havin warm blood, speedy death must in contrary, we se natural consequence; whilst, inury had been sustained Them the pire sate thent it the the principal shich they are liable, both from their mode of life and the frame, would in most case of life and termins the the young be deterred fro the purgit of of the most interesting branches of natural history, through the fear that great sufferings to these beautinui creaus for chine for such, in truth the specimens captured for thot a single lif is not the case. At the ane the the wantonly sacrificed, or any needless craill 1 st 80 , 100 the specimens once sarely prow, years without renewal. Entomology is particularly adapte to youth, requiring a quick eye and a the wonders your young reader arow in then study of these most exquisite works of the creation will force them to exclaim with the old Roman naturalist, "In his tam parvis tamque fere nulis que ratio! quanta vis quam inextricabilis perfectio!" and tend more to humanize and refine their feelings than any mere appeas, how touching, to their unreflecting pity. To end this scrawl, I would tell "D. H. W. that I have ever practised the lesson contained in the adage he quotes, "The merciful man is merciful to his beast ; "and perhaps at some future time I may send you a few anecdotes connected with that practice for pour naturalists corner. If he means to insinuate the contrary, I can assure him he has not "placed the saddle on the right horse." $-S .-[$ Most certainly he has not, as we beg to assure him.]
Bees.-"T. G. Clitheroe," p. 101, may be assured that there is no practical way of preventing his Bees from sealing the holes in the ventilation tubes in their hives; and it often unfortunately bappens that Bees will swarm in spite of an improved habitation. I noticed this in reply to Mr. Nutt, in the "Gardener"s Magazine" for 1838, p. 540 " C ," complaint is becoming prevalent, and aincides with what I then stated, I cannot do better than ive an en from it "The collateral boxes were new, and would have deserved praise, if they could have prevented swarming, and if the queens did not deposit their eggs in them. The tin tubes are a mere fancy. They might be of in hives crowded with Bees and combs, but they are speedily rendered useless by the Bees sealing hem " 1 was wrong, however, in say that the collateral hozes were new. they are a vent in After all that bas been said about. is plan Bee keeping, his attempl at abid bill new aboat teem, and agh has boo said byly br well as myself to show the fallacy of it, especiaily by his metal tubes.- I perceive that Mr. Grant las, at p. Mo, ciced my remarks on his previous communicationion, viz, ing Bees, and that he differs from me in opmion, ventilation than by shading the hives. When it is known, however, that Bees have a disike to alr, or rathe to a draft admitted into their dwelling, especially in winter, the latter pian must be most agreable to them, as well as the surest way to keep the Bees at rest; for the warmth of the sun at the entrances of the hives wil entice the inmates abroad in spite of air-holes. Mr. G. explanation about the three dead Bees from his hive ma be correct; but the best way to test such a thing is to close in the Bees a few days. When let out, they will fine fly off with them to some distance. I may ouserv that in general, fewer Bees die during winter than in spring or autumn; even the numbers in a healthy hive are greatly reduced by Michaelmas. This fact led practical Bee keepers to reduce their hives by their resplectue plans about that time. Mr. G., mentioned in his former communication that now he says-"My views relative to forming artificial swarms, so as to increase the Jumber of stocks, and to prevent swarming when preferred, are as yet only theories hn mind. An's may be intrusive by alleging Scirach the of themin plans win be forbes, and, if so, may ask what use co tion of Queea Bees , wies would not be increased by such swarms be col them with any succis that wath through lead ment be cor pipes, paralyses dogs, it must also be injurious Wighion. [It is very true nevertheless; and the pure the water the greater the mischief produced blead-pipes.
Bees.-It appears to me that Bee-keepers do not make
sufficient allowance for their own bad management, when
the system which they have adopted fails of success. This the system which they have adopted fails of success. This remark I amo led to make by observing the general censure which Amateurs throw upon their endeavours to work ments appear scarcely compatible with truth; for instance -the alleged weight of certain boxes of honey. I once questioned him on the weight of a cubic inch of well-nilled answering, or rather not answering, my question. But, think the system is not altogether to be condemned. I have one set of collateral boxes; from these I took, in the bad honey-year of 1841, twelve pounds of beautiful honey; in 1842 , forty pounds of equally pure and white
honey. With this I ara quite satisfied. But I am not so much pleased with my old-fashioned straw hives. In 1841, a most magaificent swarm left the hive, and, without waiting for one moment, went away at so fast a rate, that thouga
my servant and myself did our best to keep up with them, we were fairly beaten after a run of a mile. That swarm was lost. In about eleven days the trumpering of the cast, and my hopes were not disappointed. I safely housed them in a second set of collateral bozes but three days alter, the weather broke up, and the wet
summer of 1841 took away all chance of their succeeding. This last year the Bees in my straw hive never once showed a symptom of swarming. I have one more remark to add in reference to an observation inlast week's Chronicle-" that
if .Bees are such sagacious animals, why should they close the ventilators, which are said to be so agreeable to them ?" I think the Bees in this really display great sagacity; they know that if the hive is very hot, the Queen-bee will deposit her eggs in the cells which they have made, and thus the species will be increased. But propagation of the species is not the object for which we keep Bees-we honey-and the quality most assuredly is affected by the weight with his who shail allege, that, because cattle would be much more natural in a field, they would be better there than fatteuing in a stall.-Agger
Bees.-Can you or any of your correspondents inform me whether the eggs of Bees are transmutable? Writers differ on this subject. I think Wighton says they are

## Prejudices.-Supposing some old bachelor were to offer

 a silver pap-bowl and cradle to the parent that could show selves be considered fit judges? Why parents them an exhibitor that would not laugh at the parent who, catching up his children after the exhibition, went grumbling off, exclaiming that-" Kissing went by favour." Yet no one lowers instead of chil so prejudiced in favour of our own productions, that we the upon an onderstanding that we submit to the judgment of officers carefully selected by the Horticultural Society for their suitability: we are bound to give them credit for honest intentions ; and whilst there exists such a variety of tastes, we must not expect an entire agreement. There is no harm in retaining our prejudice in favour of our others to differ from us. As a good-humouredily allow shall find the opinion of the judges confirmed by the judgment of the disinterested portion of those practically cquainted the subject $-K$Gardeners' Discussions.-I assent, without hesitation, to Mr. Beaton's remark, that "It is much to be regretted that young gardeners should so often indulge in personal abuse, while suggesting or explaining points of practice ;" long as the feeling prevails, that there is its cessation so emplified by them in "showing up" the faults of their fellow-gardener than in tracing out what is really good in their profession and adopting it. This latter process is not consistent with their notions of discussion_for to expect the stream pure when the fountain is contaminated, would be to expect impossibilities. As long as gardeners are more interested in reading palpable frivolity, and in encouraging the authors of it, so long will they be, hood winked, and their minds be occupied with puerile subjects, to the exclusion of what is really useful and enter-taining.-C. [After all, the fault lies more with the masters who per mit such conduct, than in the young gardeners oo indulge in it: for they know no betler.]
Garden Produce.- Your correspondent "G. L. E."" p. 117, from the size of her garden, conveniences, and comber of hands, should have a full supply of all the crmanon and forced vegetables that she could possibly desire. She should have a profusion of everything in and pend upon the time of forcing. I have known families as arge, with less ground and fewer men, provided with all tae uxuries usually derived from forcing-pits and a clever gardener. It would be easier to enumerate what she iaght not to expect, which would be a very limited list by "G. L. E." I should imagine that the following things maight easily be produced by any good practical gardener : namely-Jerusalem Artichokes, Carrots, Parsneps, Beet,
Onions, Leeks, Shallots, Broceli
Savoys, Brussels' Spronts, Coleworts, Salsify, Scorzonera, Skirret, Cardoons, Celery, Endive, Lettuce, small Salad, Rhubarb, Asparagus, and Seakale. The supply of Kitchen and Dessert Apples and Pears will depend entirely on the sorts cultivated. The forced flowers should comprise Lilacs,

Azaleas, Rhododendrous, Roses, Crocuses, Hyacinths, Narcissuses, Violets, Lily of the Valley, \&c. The quantity
of Greenhouse plants in flower will be regulated by the numreenhouse plants in fower will be regulated by the the year. $F$. $K$.-I do not hesitate to say that "G. L. E." ought, with the conveniences which she possesses, to be well supplied with most of the dainties of she has a right to expect at this period, the following frait and vegetables :-Strawberries, Cucumbers, French-beans, Asparagus, Seakale, Rhubarb, Mushrooms, with small these Radishes, \&c., sc. sufficient supply to create a change with the assistance of more hardy vegetables from the Kitchen Garden, which ought to be well stocked with a good portion of Celery, salem Artichokes, and a good portion of roots and Greens, which ought to be sufficient for the servants' hall Potatoes in great quantities are consumed in most families; therefore, where the size of the Kitchen Garden is under two acres, I would recommend that the main crop be planted on the farm, although a good portion of the Ashleaved Kidney should be cultivated in the garden for
summer and autumn use. This is rather a dull time for summer and autumn use. This is rather a dull time for
flowers; still, from the stove, " G . L. E ." might expect a few Roses in pots, Azaleas, \&cc., Lilacs, Camellias, Hyacinths, \&c., \&c.-W. Gordon, Castle Kimbolton.---
If "G. L. E." has got a good gardener, I think she canoot do better than consult with him respecting the subject of her inquiries, at p. 117, viz., "what flowers at this the houses in succession, what vegetables roots " but if her gardener she should find one that does.--J. W.
Varnish for Cotton-Frames.-As to the varnish made of eggs and toasted cheese, I was foolish enough to try it in a water-bath, in a sand-barh, and afterwee in an worthless, as it would not adhere to the cotton, nor was such a mirure calculated to do so - Taliesin was Jones. [This receipt was taken from the "Annals of Chemistry," ${ }^{\text {as }}$ we stated, and was not recommended by us.] To prepare Canvas for protecting Frames, \&o. -I have read with interest the account of your correspondent, who has applied himseff to the construction of a machine for
making Oil Cloth. In a former communication, I suggested the use of common fat ; but after trying both that and linseed oil, I am inclined to prefer the latter, though considerably more expensive. There is one point your correspondent appears to have overlooked; which is the necessity of employing some antiseptic to check the ten-
dency of all canvas, when saturated with oil, after a time, to decay. This will be completely answered by using common resin, to the extent of one-half or thereabouts; and a small addition of bees-wax may be advisable, to keep the cloth flexible ; and also as being in some degree antiseptic. There is one observation which should be strongly impressed on those who may try this most useful and valuable experiment, that of not rolling up or putting way the prepared canvas for some time after it is made. causing the whole to heat and rot, or even fire, if in quantity and in a close place; a secret well known in our arsenals, where the painted cloths used in the Navy are up, in order to avoid these serious consequences. There is one remark I must make on the machine. There does not appear to be any necessity for saturating the canvas, more oil is used. purpose is answered the oil being, of course, heated, and made quite liquid. There is another advantage to set off in using the brush against the small economy of labour in using tue machine; which is, the cloth can be made up previously to preparing. By this means the sewing is more
easily done, and the thread used in it is secured as well as easily done, and the thread used in it is secured as well as the canvas. If, however, any of your readers prefer the together preparing the canvass for it, and having it sewn the thread cll the stitches will give way long before the canvas is decayed. -W.
Description of the Pine Stoves at Bamford Hall., In accordance with the wish expressed by "A. B., at $p$. of my fruiting Pine stand the front rafters being 11 feet long and the back ones 6 feet. Its length is 25 , areadth 15 feet, hav wiih a shelf at the back, 3 feet from the $1 t$ is inted up another in front, 5 feet from the glass. The front of the house is 6 feet high above the walk, and the upper portion is glazed to the depth of 4 feet. At both ends of the house there is a flight of 6 steps fiom the front walk The back one, which is on a level with the front of the pit. corresponding with that of the roof; but instead of being heated by bark in the ordinary manner, the roots of the plants are warmed by means of hot-water pipes passing beneath them. For this purpose, the pit is surmounted by a boarded stage, contaming 4 sheives, with openings in them, to receive the pire-pots up to the rims. Each shelf is 2 feet in width and capable of containing 9 plants. The hot-water pipes in the pit and those which warm the house are on the same level, and communicate with each all disho that only one fire is required. These pipes are steam. The dishes in the pit are filled by means of one-
inch leaden pipes, one end of which comes through the stage; and these are filed twice every day with hot-water.
There are also 6 small one-inch iron pipes, about 18 inches long, which stand upright, and are screwed into the main pipes beneath the stage; the tops of these you can open or close, according as more or less moisture is regnired. The succession-house is 25 feet long, 18 feet wide, and 12 feet high. One half of the stage is appropriated to suckers, the other half to year-old plants. It is capable of containing 30 year-old plants and 36 suckers. I find that suckers strike root more quickly on this plan than in barle I have lately potted 30 plants, which were put in pots as suckers on the 25 th of Jannary, 1842; they are now aufficiently lare for fruiting. ond think that plants mof be grown to a larger size on this plan in two plants may they could in three if placed in bark. It will soon be two they could in three if placed in bark. $t$ will soon be two years since these houses were finisbed and stocked with that time (as I was obliged to have certain sized pots at fit the holes in my stage) it have certain sized pots to before they showed frest, This vear also they sease late
 in fruiting, the first Pipe being cut on the 1 st of August,
and others succeeding up to the end of December. I and others succeeding up to the end of December. I
have cut 41 Pines this season, the total weight of which was $112 \mathrm{lbs} .3 \mathrm{oz} ; 12$ of them (Montserrats) weighed 40 lbs .40 Z . Had they put up in Mareh, instead of June and August, the fruit would have been much heavier. I large fruit. My fruiting pots are 11 inches wide inside at the top, 6 inches wide at the bottom, and 16 inches deep, with a good strong rim, an inch wide, made quite flat, to fit close to the stage. My succession-pots are 7 inches wide inside at the top, 4 inches wide at the bottom, and 12 inches deep. Several Pines have fruited in these small pots, some of which weighed as much as 3 lbs .4 oz ; those grown are chiefly Montserrats. I forgot to mention that there are throttle valves in my pipes, so that I can shut out the water from the pipes in the house, and thus gain more bottom-heat in the pit during the summer, or rrom the pipes in the pit, if I wish to give the Pines a to $90^{\circ}$ or $95^{\circ}$; but the latter is my standard heat. Pines grown on this plan are not in danger of receiving any check from being potted. I find that when the pot is replaced in the stage, the fresh soil 8000 becomes heated.George Cherry, Gardener to James Fienton, Esq., Bamford Hall, Rochdale.

PROCEEDINGS OF SOCIETIES.

## Feb. 22.-P. Pusey, Esq, M.P., in the chair. Twenty gentle-

 men were elected Merbers.-Mir. J. Gillott communicated theressut of his trial of the Bokhara Clover, which was referred to
the the general committe, the author being requested to state the
nature of his soil and the result attending his trials durine the ensuing summer. Mr. Pusey and Mr. Miles expressed their in-
tention of instinting trisl tention of instituting trials of the Bokhara Clover and Khelat
Lucerne on peat soils, and Mr. Gibbs undert:ok to obtain further Information on the subject.-Mr. Hlingworth submitted his suggestion for a systeratic evtablishment of farmers clubs in
sonusexion with the Poor-law uniom and local associations coniuexion with the Poor-law unions and local associations
throughout the country, for collecting and transmitting to this chairman of the journal committee reported the result of correspondence with the Duke of Portand and the Rev. W. Thorpe, and the reception of various papers for the jwirnal. - Mr.
Stratton presented a series of liphographic drawings of his
waggons and implements exhibited last year at the Bristol
meting waggons
meeting.

## LINNEAN SOCIETY,

Feb. 21.- F. Foster, Ess., in the Chair. E. Doubleday, Esq,, and
D. F . B. White, Esq., were elected Fellows. A branch of Sco Fir, presented by the Duke of Northumberland, was exhibited in which, by an abnormal development of the buds, only a lateral a flat, instead of a round appearance. A male and female specimen of the Goliathus Drurii was presented to the society by Mr Savage, through the Rev. F. W. Hope. This insect is remarkable
for its beauty and size, as well as exceedingly valuable of its rarity. It is an inhabitant of the southern parts of Africa within the tropics.- A paper was read from Professor Croft on the manufacture of sugar from the Corn-stalk (Zea Mays. From late experiments in Indlana it appears that the Corn-stalk
capable of producing sugar. The juice of the stals couta capaser on three times as much sugar as the Beet, and five times
more than
more than the Maple, equalling, if not exceeding, that of the ordinary Sugar-cane, as raised in the United States. The sugar is more easily obtained from the Corn-stalk than from the Sugar-
cane, and the cultivation of the former is much easier. The Sugar-cane is 18 months m coming to perfection, whilst the Corn staik requires only from 70 to gu days. The refuse of the Maize,
after the expression of the sugar after the expression of the sugar, forms an excellent fodder for cattle. The quantity of sugar is said to be increased by removing
the ears of the Corn during its growth - The Rev. F. W. Hope
had a paper read on the portraits, painted had a paper read on the portraits, pairted and engraved, the
busts, medallions, \&c. representmg Linnæus. A great number of these works of art, produced or existing in the various nations
of Europe, were criticised, and the remarks were illustrated by an of Europe, were criticised, and the remarks were illustrated by an interesting collection of engravings of many of the portraits,
busts, and medallions of the great naturalist who gives his name busts, and
to the societ

they cannot be considered as having consistently maintained
their character. Of Seedlings of 1842, the only flowers which their character. Of Seedlings of 1842 , the only flowers which were thought to promise first class yroperties were Alexander's
Primrose Perfection, and Stein's Sir R. Chester ; but they were Primrose Perfection, and stein's
hout twelve farms, the largest 221 acres. The rent of land varies
rom 32 s. to $3 l$. per acre. The are 1,605 acces of meadow-land, rom 32 s. to $3 l$. per acre. There are 1,605 acres of mastrong clay
371 of arable land, and 54 of woocland. The soil is a well calculated for the growth of wheat, hean, and tares. Minng. In some parts the land in winter becomes su saturated with water as to be unfit for the support of cattle. No moder machimery
of any kind was observed. The agricultural profiuce, in 1842, was of any kind was observed. The agricultural prollows :-wheat, 24 bushels per acre; barlev, 3s; nats, 40 ; and potatoes 74. The number of live stock was 673 . Perivale con-
sists of 626 acres. It belnngs entircly to one proprietor, and is sists of 626 acres. It belnngs entirely to one proprietm, an four
divided into five farms. The soll is a heavy clay, requirnige foud divided into five farms. The soll is a heavy ciay, refitabie mode of managing the land is found to be the prodiction of hay for
 ag icultural produce per acre was, wheat 22 bushels, and has 5,31 were sheep, these animals berng taken in to teed at the rate
of $2 s .6 d$. per score. Hanwell contains 1,363 acres. The rent of land is about $50 s$. per acre. Manure is supplied from per acre
Theasricaltural produce, in 184 , was, wheat, wh bnstels phe live stock rye, 24 . oats, 48 ; protatoes,
amounted to 186 . Ea.mg consists of 3.37 acres rich kam, the former constituting nued. The rent paid for arable and pasture land varies from 40 s . to 60 s . per acre. Farms are geperally held on leases for 21 years. Little use is made of modern agricultural machinery, The implements A considerable portion anme kind that were in use 30 years ago. and forms a part of that of Ealing consists of market garde maetropolis, lying on both sides of the western road, which may be regarded as the great fruit and vegetable garden of London. The ruit.gardeners have an upper and an under soil is an excellent dry loam, and is abundantly manured The soumber of labourers employed on these gardens is very great and 18 estimated at personsts ef labour vary from 10 s , to 15 s . per week and the proportion of women to men employed is as wo to one. An important benefit was conferred on the labouring population, and on the poor of this parish, in the year 1832 by the Bishop of London, as iord of the manor, who granted 20 The proportion allowed to each person is 20 rods, at a yearly rent of 58 . The land is $n$ Jw divided into 146 allotments, and so great is the demand for those that are vacart, that there are, at the present time, 50 applicants. This system is found to be attended with most beneficial results. The occupicr undertakes to live forfeiting his allotment in case of non-complance. The average assessment for the relief of the poor, from 1827 to 1833, was 43 in the pound, and from 1835 to 1841 it has been reduced to $2 s .8 \frac{1}{2}$ d cuitural produce of 1842 was, wheat, 35 bushels per acre; barley cultural
50 ; oats, 43 ; potatoes, 85 ; and hay, 1 ton per acr
of

FLORICULTURAL SOCIETY
The following is a List of the Seedlings which have been selected by the Suciety in the year 1842, and considered to pos
sess suffici ent merit to be placed in the first or Second Class :-

During the evening, Mr. Smith, gr. to D. Alexander, Esq., di rected attention to a brace of Cucumbers, grown by Mrr. T. Latter, and called "Dr. Lindley"s Perfection," Which, in his opinion,
possessed every property requisite,according to the standard lately laid down by the Editor of the Gardener's Chronicle, to constitute perfection. He then proceeded to show the principal points in which this differed from the standard of the Society, and to defend the qualities at variance in the latter; alleging that the admisin $\mathbf{I}$ pswich are not good seeders, was a sufficient proof of their in Ipswich
excellence.
NOTICES OF NEW PLANT'S WHICH ARE EITHER USEFUL OR ORNAMENTAL.
Achimens multiflora, Many-flowered Achimenes. (Stove
Annual). Gesneráceæ. Didynámia Angiospérmia.-This very Annual). Gesneraceæ. Didynamia Angiospermia.- This very
beautifuil stove plant inhabits dry banks, in woods. on the Serra beautint stove plant nria, and near Villa de Arayos, in Braznl, whence seeds were sent home by Mr. Gardner. The plants flowered first
at the Royal Botanic Garden of Glasgow. They continue for a at the Royal Botanic Garden of Glasgow. They continutinually length of time in bloom, with a succession oot high. The flowers are nearly two inches long, deep lilac within, paler without, especially the tube, which is funnel-shaped. The limb consists
of five nearly equal, rounded lohes, strongly fimbriated at the of five nearly equal, rounded lohes, strongly fimbriated at the
margin.-Curtis's Botanical Mnggruzin. Comparistia róqea. Rose coloured flowered Comparettia.
(Stome Epiphyte). Orchadácee. Gynandria Monándria -This is one of thrise interesting objects which are occasionally met
with with, especially in the Orchudaceous tribe; and which, while they
do not dazzle us with their brilliancy, or powerfully arrest us by do not dazzle us with their brilliancy, or powerfuny arrest urable influence on the mind of the real admirer of nature, on account of their peculiar gracility, delicacy, and loveliness. Although
diminutive ul regard to size, there is a grace in its aspect, and diminutive un regard to size, there is a grace imits aspect, and is a general source of attraction. It is a native of the Spanish main, from whence it was obtained oy Messrs, Loth whom it has fowered for the lant two years. The leaves are few, and quite sessile, and the racemes of fowers are
drooping, They have a delicate, wiry stem, and the pretty roseand weah are the roots of this and the equally delightful C. coccinnea, that unless they are securely fastened to the log that sup. ports them, they are very labe to bec me detache the best way of fixing them is to pass thin wire round them and the block, does not mjure them, by placing a httle moss beneath it. The moss will be further beneficial, if kept moist in summer, by encourag. ing them to develop more and stronger roots. They shouid
always be grown on logs of wood, in preference to being kept in pota,-Panton's Mag Mazine of Botany.

Vrígsia psimpacina. Parrot-flowered phytt, Bromeliáceæ. Hexándria Munogynia. - This is an ex-
tremely pretty stove plant, for which we are indebted to $\mathrm{C} . \mathrm{B}$. Warner, Esq. It is said by Sir W. IFonker to be a native of the neiphbourhood of Rio Janeiro. In cultivation it requires to be potted in leaf-mould, with a quantity of potsherds for drains but
Plenty of water should be given during the summer months, but sparingly in winter. Or it may be grown suspended in a wire basket, like an Orchi
Botunical Register.

## MISCELLANEOUS

Horticultural Society of London.-We are happy to announce that the arrangements for the despatch of a Fortune has sailed for Hong-Kong in the shin Emu, amply provided with the means of forwarding the objects the society, and furnished with most valuable letters of from numen, both from her Majesty's Government, and duties os on agent of the Horticultural Society Mr Fortune will occupy himself in the collection of objects of natural history in general : and we doubt not that he will reap a rich and abundant harvest. If any gentlemen desire to participate in the collections of dried glants and coolegical propations which Mr Fi will form, it will be as well for them to communicate with Dr. Lindles on the subject.

Presentation of Plate.-We learn that at a recent meetm ing of the Morningside Practical Gardeners' Society, the chairman presented Mr . Liddell, formerly gr. at Canaan House, and late Secretary to the Society, with a hand some silver snuff-box, on wich was a suitable insoription, as a testimonial of the respect ia which he was heid by the members, for the diligence and attention with which he had discharged the duties of that office.
The Araceous Order.-These plants abound in an acrid principle which is volatile, and therefore dissipated by heat being soluble in water, it is also removed by washing, and easily separated from the fecula with which many of their tu berous roots abound. Hence several have been employed a rticles of diet from very ancient times, as Colocasia ant quorum, mentioned by Herodotus and Theophrastus, and remarkable as an Indian plant cultivated in Egypt, and now in most parts of the south of Europe. The roots are without acrimony, as is the case with many other long cultivated plants. They are universally cultivated in India and known there under the names of Kuchoo and Gaglee Arum nymphæifolium, which Dr. Roxburgh considers only variety of $C$ antiquorum is but rarely cultivated in Bengal Arum indicum Man-kuchoo and Man-curi of the Bengalese, is a species much cultivated about the huts of Be not pendulous bers. Arum campanulatum, now Amorphophallus, Ol of the Bengalese which deserves to be called the TelinPotso is 1 much cultivated, ga Pir, esteemed for the wholesomeness and nourishing anality of its roots. In the Himalayas, the apecies which I have called Colocasia himalensis forms the principal portion of the food of the hil-people; Cocar Tachar esculentum, forming the Fara, Faka, Faya, and Kopeh, and Cocoa roots, Eddoes, and Yams of the Pacific and other islands, yield a considerable portion of the food of the inhabitants. The stalks and leaves also of some of the species are eaten in many places; those of Arum sagittifo lium are said to be called Chou Caraibe; so also in the south of Europe, Arisarum vulgare, and A. Dioscoridis, which is perhaps only a variety of A. italicum, are occasionally eaten; but even Arum maculatum, and other acrid species, deprived of their acridity, are sometimes made to yield food in times of scarcity. Some of these, how ever, from their acridity and irritating nature have been used as vesicatories; Arum maculatum has been used medicinally even from the time of Hippocrates; Typhonium orixense, having exceedingly acrid roots, is, when rest applied in India by the natives in cataplasm to scusdis, or bring forward tumours. Dr. Roxburgh pronounces it to be certainly a most powerful stimulant; other species are likewise employed, as A montanum, Roxb., (macrorhizor, Ainslie) : the plant called by the latter Dracontium polyphylum is erhibited interally whenits acrimony has been phybdued, it is and to be 1 in 10 be prepa from it the Society Iolands Scindespes offici (Gaj-pip siderable (Guy-pipul. Mo Moria siderable repute in Hindoo Materia Medica; $i t$ is described as acrid, daphoretic, and anod. authors differ on the subject.-Royles
Philipe Abaca.-Abaca is a name which the atives of the Philippine Islands apply both to the vegetable fiores of which they make taer cordage, and the plant that yields them. This is a species of Plantain, the same which is called by Rumpf, Musa syl Malay language Pisang Utang. It is found wild on the Philippine and Mindanao Isles, and is also most carefully cultivated, on account of the singular advantages which the inhabitants have learned to derive fromit. Extensive plantations of it are to be met wha the island of Luzon, in the provinces of Albay, Laguna, and Camarines, but particularly in the vicimity of Mount Mayong, the base of which is about leagues in crrcumerence. The soil of this extensive tract is well adapted to the cultivation of the Abaci, which thrives only in moist, shady, and fertile ground. In such situations thickets are formed by their trunks and young suckers, which last are sheltered from the intense heat of the sun by the beautiful and widespreading foliage with which the full-grown trees are crowned. The stems issue from a sort of tuber furnished with fibres, and grow in less than 18 months to the height of 7 feet their thickness being that of a man's thigh The leaves forming the crown of the tree are from 10 to

12 in number, of which the onter ones spread horizontally, while those in the centre are divergently erect. They are 5 feet or more in length, $1 \frac{1}{3}$ broad, and supported by a stalk abouta foot long, which is prolonged on the under surface of the leaves, into a thick longitudinal rib, with which many small ramifications communicate. When this herbaceous plant (for such,
notwithstanding its size, it really is, ) has attained its greatest state of perfection, which it acquires in less than two years, a thick peduncle issues from the centre of the leaves, covered with partial, concave, ovate, acute spathes, which are developed in proportion to the length of 3 or 4 feet, the flowers appear, from 9 to 14 in
 inches long, disagreeable to the taste and applied to no use
whatever. When the fruit is ripe, the stem perishes as in orher herbaceous plants; but a progeny survives in the suckers, which by this time have made their appearance. As the old trunks are not proper for usif old, at which age this may be done with advantage. The stems being below the leaves, are slit open longitudinally in order to separate the medal bandala used in the fabrication of cordage; the inner consist of finer fibres, and yield the lupis, used for weaving the nipis and the guinarras are made. All these layers of fibres are saturated with a thick dressed like flax in a sort of heckle or long piece of wood, furnished with three narrow knives; which being held in the right hand, the shreds are managedis process cleared from the fluid with which they are impregnated. In this state they are dried in the sum, picked, and applied to different uses according to tbeir different qualities. Those intended for cordage, \&cc., undergo no further process; but the with a wooden mallet. They are then fastened to each other by means of almost invisible knots, wound into
balls, and committed to the loom, - Transactions of the Agri-Horticultural Society of India.
Plant's Vegetable Monster.- "What is this, of which' three roots are represented in the vignette ? In conse-
quence of the statement made by Mr. Plant, nurseryman of Cheadle, (See Bol. Reg., 1842 , plate 53 ,) that he bad obtained mules from a Gladiolus by an Amaryllidaceous plant, I was anxious to investigate minutely its correctas Plant's Anisanth is a true Gladsolus, raised between Glad. splendens (Anisanthus splendens, Sweet, Br. Fl. G.) and a hybrid, sold under the name Mr. Sweet improperily made a cenus Anisanthus of $G *$ splendens and Cunónius, and another genus of G. abbreviatus, three species of Gladiolus which have the lower lip abbreviated, a feature not more important than the conversion of the three penot more short bristles in Iris setosa. I always considered that something nearly approaching to G. abbreviatus might be raised between $G$. tristis and Cunonius. Mr. Plant has frankly communicated all the information he can
give concerning his monsters, and has sent three of his

uch anomaious birth? or roots of some piant unknown to ling Gladioli? has one very extroordinary peculiarity, that its several species breed more willingly by the pollen of any hybrid of its own genus, however complicated its origin, than by from the Organ mountains, having thrown up two two fowered stems, one flower on each stem was touched wit its own dust, and the other by that of a triple mule. When the flowers withered, the germen of each of the forme swelled first ; but after a few days, the latter began to former stopped, and they soon withered; both the latte proceeding rapidly, produced abundance of good seed, Such has been the invariable result of six years experi
ments; but we have failed in all attempts to mix Hippeastrum with the nearly-allied Habranthus or Zephys anthes. In the form of its seed and capsule, it has some
affinity to Gladiolus. I tried 30 years ago vainly to impregrate G. blandus by H. crocatum. Can any perso recognise the above as the roots of any known plant bred an anomalous monster between the wo natural orders Amaryllidáceæ and Iridáceæ, though all other persons have as yet failed in obtaining any mule vegetable between two genera decidedly distinct in one and the same order? I do not think disease cladiolus roots. Mr. Plant tried to make like cross last year by the Hippeastrum on a hybrid Gladíolus; and he has sent me a bulb which is its produce, and two seedlings from another pod not crossed by hese the same Gladiolus stem, burg the two pods have been evidently set by the pollen of two different species or varieties of Gladiolus, which the bees might effect without his privity. Mr. Plant pays a great deal of attention o the state of the stigma and pollen; but I cannot find that he has done so more than I have done during the last 30 years, when I was desirous of obtaining a difficult cross. Every encouragement should be given by culti. vators to Mr . Plant, who would perhaps effect much by industry and perseverance, if his means were equal to his real."-W. Herbert, in the Botanical Regisler
Guano.-The following extract from "Hovey's Maga Teschemasher Teschemacher, Esq., at a meeting of the Hortiveutural value of guano as a manure:-"In the following experiments, I will first observe, that all those plants whic were treated with guano were potted in a mixture, consisting of plain earth without any manure, sand, a
leaf-mould and Peat, with which the guano was mixed leaf-mould and Peat, with which the guano was
that those plants which are compared with them have been grow in the richest compost, and that both have had the same attention, and been grown otherwise unde the same circumstances. Fuchsia fulgens, one year seedling, potted 17 th June, when $2 \frac{1}{2}$ inches high, with on tea-spoonful of guano; repotted 9th August, then 12 inches high, with another spoonful of guano, is now 1 foot high. The contrast between this and tho two-year old plant is very striking, both as to luxuriance of growt and colour of the foliage, the plant with guano being vastly superior. I think also that the colour of the fowers is improved it is well known among gardeners that it seedlings grown with guano, and one of the same sowing without ; on the 17 th June the two former
four roots to me. I have made a careful sketch of them as above represented. He states, that, in 1839, he carried from the greenheuse pollen of a plant, which by bis deakin to white, to a downer of Gladiolus blandus in a cold frame The seeds produr deficient in the usual fo liaceous wing. Four roots were the produce. He state laceous wing. Four roots were the produce. He state of a Gladiolus. In the second season, 1840-1, he was ill, of a Gladiolus. In the second season, $1840-1$, he was ill, after three years' growth. The appearance is quite monstrous. There is scarcely a vestige of a regular corm, but the base is irregularly formed and substances, having some affinity to the scales of a fleshy substances, having some affinity to the scales of
Lílium, and topped with the wrinkled remains of tubular Lilium, and topped with the wrinkled remains of tubular
sheaths which eaveloped the base of the leaves. One of them, from the number of those tubular processes, seem to have formed offsets. To the eye, in their present state, they certainly exhibit no immediate hope of vegeta-
tion, but in due time they will probably do so. Mr. Plant suys that they were raised in a mixture of sand and rotten manure. The question therefore arises, whether these strange productions are diseased Gladíoli, analogous to the monstrous Turnips, like bunches of keys, which often
were potted with one tea-spoonful of guano, and repotted on the 9th August with anin favour of guano is very great. China Roses-two cuttings, potted 17 th June, each with one tea-spoonful of guano; one
was then 7 inches high, the other $4 \frac{1}{2}$; they are now 34 and 28 inches high respectively, with large healthy foliage and stems. these have not received a second application of guano. Celosia cristata, or Cocksond one the same sowing one tea-spoonful and one of the same sowing without; the size of the stem, foliage, and head of that with guano is more than double that of the other, is remarkable. Salvia patens, with one teaspoonful of guano--the effect here has been to lengthen the joints, and the flower appears sting the size of the foliage and length of the joints previous to the application of a teapoonful of guano, and the remarkable growth of both after wards. A Camellia, with two tea-spoonsful- This specimen, which was quite smail and unhealthy before the addition of guano, as may be seen by the lower leaves, exhibits in most marked manner, by its beautiful large deep green leaves and healthy bud, the action of this manure. On Camellia grown with a burge proportion of are and luxuriant, and of a healthy green colour, but not at all equal to thas treated with guano. One Balsam, two tea-spoonsful, repatted 9 th August with two more, to which a little lime was added. This is an ugly specimen, which confirms an observation in the Gardeners Chronicle, that Balsams manured with guano produced smaller flowers. I have watched bearing its seed-vessel, and that a single for-vessel I have opened contains from 14 to 20 perfect seeds. From what I have seen of guano, it is clear that its action is rapid and powerful on the seir green oliage, colour; of that it diminishes the pien of the flower in some
cases, and that it improves the seed, both in quantity and quality; of this, however, more experiments are required to prove the certainty. When those plants were repotted which received a second application, the roots were very numerous, and appeared in the most vigorous healththick, succulent, pure white, the tips with that hairy appearance so well known by cultivators as a sign of strong growth. In Peru it is cnstomary, when using guano to raise Pepper, to manure three times: first on the appearance of roots, then on the appearance of the leaves, and ment of its action on all fruits, particulariy the large fruit-trees, as Apples, Pears, Peaches, \&c., will be exknown to be excessively greedy for rich food, particu larly for bone manure, the chief ingredient of which, phosphate of lime, guano contains in considerable quantity." Mr. Teschemacher then proceeded to show that guano contained, in large proportions, the and for the maturation of seeds. "The nectariferous juices, or, as they are commonly called, the honey in flowers, are usually separated or secreted by glandular bodies called nectaries, and this honey has by many been supposed indispensable in the fecundation of the seed; but there are also gland wich per leaves and leaf-stalks (petioles) of many plants, which per form the same office of secreting honey; here, of course, camnot be of use for this purpose. Such glasia tribe on the petioles or lan the號 Balsam, Grewa, Baly, on Passinora, and wher of the only secrete honey during the youth and growt of the , When lhe lea structure can be properly observed. When the leaf has attained its full growth and perfection, the active part of is past, and the leaf then proe for observing their powern is past, and the leaf then proceeds in its own important function of elaborating the sap. It has been lately surmised, and it appears to me with every probability of truth, that this honey is an excretion of the superabundant and useless part of the juices thrown off, after the leaf r flower has selected all that is necessary, precisely anaogous to the excretions of the animal frame. I will at tempt very briefly to show that this view, if correct, is of some importance, both to agriculture and horticultare. Mr. A. A. Hayes, of Coxbury, in a beautiful, simple and, I believe, original experiment, before the Chemical Society Boston, proved the existence of phosphoric acid (probably combined in several seeds), by immersing sections of them in weak solutions of sulphate or acetate of copper ; in whatever part of the seed phosphoric acid existed on that part was deposited a precipitate of pho in Indian copper, A certain quantity of phosphoric acid, or phosphates is therefore necessary to the existence of these phates, and that part of the plant (probably the flower) seeds; and the function of preparing the juice desticed thers in for these selecting and ret phosphates and tained. Now the phe there those plants and tremely minute quantities, therefor, thoso plants and fowers whose seeds tions of food from the soil bor select the amount of phosphates necessary for the perfection of their seeds; and probably only as many seeds arrive at maturity as the plant can procure phosphates to complete; the remainder, embryos of which are always formed ia abus dance, are abortive-that io, never come to perfection The same line of reasoning, of course, applies to the othe necessary ingredients of seeds. If, therefore, we present to a plant food containing an abundant supply of these ingredients, it seems reasonabie to suppose that we shall produce more seeds, or rather that more of the embry seeds will be perfected. Now, the chemical analysis of guano shows that it contains, in abundance, most of the necessary ingredients of plants and seeds, the nitrogen of its ammonia being absolutely requisite for the cellar, vascular, and other parts of the stem and leave, and phosphoric acid, as well as its nitrogen, for the and if future experience should confrm what I have thus stated as an opinion, that the flowers of plants manured with guano become smaller, it may be accounted for the assumption that as there are presented to the plan these ingredients in abundance, particularly those neces sary for the seed, the flower and its glands, whose omice it is to prepare the latter, have less work to perform, les is mep leas to select, and less to reject; herice there where much exertion of these functions is required. The where will also be larger and in greater quantity
seed will also the Presence of Potato Starch in the Powder of Rice and Arrow-root by means of diluted Hydroohloric Acid.- If powdered Rice or Potato starch be mixed with concentrated hydrochloric acid, in the proportion of about one part of the former to one and a half or two parts of the latter, they form almost immediately a thick mucilage. The mucilage of Potato starch is nearly transparent; that of Rice, on the contrary, is opaque. They both emit the odour of formic acid. If a mixture of hydrochloric acid and water is used, a very dif. ferent action is exercised on the two substances already named. The Potato starch forms, in a very short time, a mucilage so thick that the mortar may be lifted up by means of the pesttat the mortar may be mare; while the powdered Rice does not acquire a similar viscosity in less than 25 or 30 minutes. If the Rice powder contains rom four to six per cent. of Potato starch, it is eary to detect the admixture by means of this revagent. For this
purpose, a mixture of equal parts of hydrochloric acid o ports itce and water should be used. Arrow-root com hydrochloric acid ; while Wheat starch resembles Potat starch in this respect. M. Marageau, as is known, ho proposed hydrochloric acid as a means of detecting Potato starch in flour, by the strong smell of formic acid which it develops in contact with the acid ; but as the same effect is produced, in this respect, with Rice powder and Arrow-root as with Potato starch, the hydrochloric acid cannot be used in this way for detecting the admixture of cannot be used in tais way for detecting the admixtu
these latter.-Annalen der Chemie und Pharmacie.
Soda produced in Cornwall.-The manufactory is Bisso-bridge, near Carnon, and one of the materials is mundic, hitherto the refuse of the mines. The process i this:--mundic, which is a combination of sulphur and
iron mixed with a proportion of nitrate of soda, is fized to iron mixed with a proportion of nitrate of soda, is fixed to
retorts similar to those in a gas-work, but not closely shut up. The sulphurous and nitrous vapours are carried into a chamber lined with lead, as in the ordinary manufacture of sulphuric acid, which it is the object of this part of the process to obtain. The weak sulphuric acid thus obtained is employed to decompose common salt,
from which it expels the muriatic acid and forms a sulphate of soda. This is decomposed by exposing it to high temperature in contact with carbonaceous matter, and the result is a very impure soda, which is dissolved, The crystals are very fine and pure. Perhaps, however, the most valuable part of the process will be the manufacture of sulphuric acid, the demand for which is enormous, and for which the vast quantities of sulphur imported from Sicily are chiefly used. It is understood that the value of the acid consumed annually is 50,000 ., an immense sum, considering the cheapness of the article but it is largely used in almost all manufactures.-Mark Lane Express.
Chinese Egg-Plant.-This bears a cylindrical and very long, white fruit, and is stated by M. M. Audibert to be an excelient variety, with more melting and less stringy hesh than any other kind. The fruit which has ripened upon plants at Paris has not, however, in our opinion proved of better
Bon Jardinier.

## THE NATURALIST'S CORNER.--No. X

33. The Myrtle was with the ancients a very favourite plant, and always expressive of triumph and joy: the
hero wore it as a mark of victory; the bridegroom on his bridal-day; and friends presented each other with Myrtle garlands in the conviviality of the banquet. Venus is said to have been adorned with it when Paris decided in her favour the prize of beauty; and for this reason it was deemed odious to Juno and Minerva. It was probably
from this cause that, when all other fowers and shrubs from this cause that, when all other fiowers and shrubs
might be used in the festival of the Bona Dea, at Rome, might be used in the festival of the Bona Dea, at Rome,
Myrtle alone was excluded. Harmodius and Aristogiton, when they slew the Athenian tyrant, had their swords concealed beneath wreaths of Myrtle, of which incident, as recorded by Alcæus, Sir Willia
34. A Naturalist, giving instructions to a young traveller in South America, requested he would collect for him everything ugly in preference to the beautiful; and cer tainly, were the same industry exercised in obtaining the procuring the most beautifol, productions that now exists in history would become immensely enriched, and many connecting links in the genera and species more satisfactorily accounted for
35. Nir Walter Raleigh, in his "History of Guiana," alludes to "men "whose heads do grow beneath thei, shoulders. ${ }^{\text {In }}$ "Hakluytt's Collection of Voyages,"
published in 1598, we find a nation "reported to have their eyes in their shoulders, and their mouths in the middle of their breasts;" and as late as the time of Linmiddle of their breasts; and as late as the time of Lin-
næus, a well-compacted story of men with tails found a place in that naturalist's highly valuable work, the "Amoenitates Academice." Such relations, doubtless, belong to a state of infrequent and imperfect intercourse with
distant countries, just in the same way that the belief that distant countries, just in the same way that the belief that
the elephant had no jointe in his legs, and the hyæna no vertebree in his neck, could only be received before natura 36. was established as a science.
36. Opinions of the Ancients respecting Animals.Many of the notions of antiquity, with regard to the structure and habits of animals, were quite irrational. It
was gravely maintained, for instance, that the elephant had no joints, and, being unable to lie down, slept leaning against a tree; that the badger had the legs on one side forth her cubs imper of the other; that the bear brought forth her cubs imperfectly formed, and licked them into cameleon derived its support solely from the atmospheric air. These, and many other fancies, proceeded either completal construction of metaphorical expressions, or gard to the laws by which animal life of nature wis 37. Wild Boar,-It would seem fre is regulated. cient authors, that the rapages of the wild boar were of an dered as more formidable than those of the other savage animals. The conquest of the Erymanthian boar was of the Calydonian boar is one of the most beautiful in of the
Ovid.
37. In the heads of deer and antelopes there are cavities embedded in a bony case, varying in size in different species of these animals. The
beliering them to be receptacles for tears, of which, the
thinner part evaporating, a substance remains called larmes de cerf. To this circumstance may
the belief of the poets that the deer weeps
the belief of the poets that the deer weeps.
38. The Camel often travels
39. The Came often travels three or four days without water, drinking 50,60 , or even 100 pounds weight, when her will sometimes endure a thirst of 10 or 12 days, though many of them perish under this privation. When though many of them perish under this privation. When
we see what the man and the horse require in those we see what the man and the horse require in those
arid countries, such a power in the camel must appear one of the most remarkable provisions of nature.

A Narrative of a Visit to the Australian Colonies. By James Backhouse. 8vo. Hamilton and Adams. pp. 560. The author of this work informs his readers that his is discharging a religions duty trained to habits of observation, he kept a Journal, in which records were made of the productions of the countries visited, the state of the aborigines and of the emigrant and prisoner population, \&cc. We have to do onl
${ }_{\text {rich. }}^{\mathrm{Mr}}$
Mr. James Backhouse is a brother of the very respect able nurserymen of that name, at York; he was himsel in Botany and other moreover, his early pursuits brought him acquainted with moreover, his eariy pursuits brought him acquainted with could not have been easily found to report the facts connected with vegetation which came beneath his notice Accordingly, we find at every step in the volume befor
Useful or entertaining information upon such subjects.
Van Diemen's Land, or Tasmania, was first visited, then Flinders's Island, Sydney, Norfolk Island, Moreton Bay, Port Philip, South Australia, King George's Sound, and, finally, Swan River; concerning all which place there is an ample supply of valuable evidence, from
which, notwithstanding the crowded state of our columns, we must snatch a few gleanings
Those who have their thoughts turned towards emigra tion will be glad to know what manner of place is a loghouse :-" When a place is first occupied by a settler, resting on the ground; and when other needful thing have been effected, one of upright logs is built, and co rooms ; one of which is fitted up with broad rough shelves for sleeping-berths ; and the other, which has a square re cess for a fire-place, built of stones, at the outer end, and continued into a rude chimney a little higher than the roof, is used for a cookıng and sitting-room. The crevices wool or sologs either remain open, or onening, closin with a shutter, admits light into each room, and short logs of wood or rude benches, serve for seats. Many fa milies that have been brought up in England in respectade circumstances, live for several years in a hut of this description, until they can find time and means to build hemselves a better habitation; and a hut of this kind is occupied by the male servants, who are mostly prisoners." The following description of a bit of wild scenery in Van Diemen's Land furnishes materials for ahming picture, the sketch for which is, indeed, supplied by "The broo
Me brook that supplies HobartTown with water flows from Mount Wellington through a valley at the foot of
the mountain. Here the bed of the brook is rocky, and the mountain. Here the bed of the brook is rocky, and
so nearly flat as scarcely to deserve the name of The Cascades, by which this place is called. Many dead trees and branches fie across the brook, by the sides of which grow,
Drymophila cyanocarpo Drymophila cyanocarpa-a plant, allied to Solonion's
Seal, producing sky-blue :berries on an elegantly tbreebranched, nodding top. Dianella ccerulea-a sedgy plan -flourishes on the drier slopes:.this, as well as Billar diera longifora-a climbing shrub, that entwines itssel among the bushes-was now exhibiting, its violetcoloured fruit. In damp places, by the aide of the brook a princely tree-fern, Cybotium Billardieri, emerged ferns of surrounding foliage. $A$ multitude of otier of the strom smal size, enriched the truek of one o the prostrate giants of the forest, a Gum-tree of large dimensions, which had been uprooted by some blast from the mountain ; and, in its fall, had subdued many of the the formoring bushes, and made a way where otherwise from this natural bridge, to examine a tree-fern, I found myself at the foot of one of their trunks, which was about 5 feet in circumference and 10 in height. The lower part was a mass of protruding roots, and the upper part clothed with short remains of leaf-stalks, looking rough hanging down, and nearly obscuring the trunk from disant view : above was the noble crest of fronds, or leaves resembling those of Asplenium Filii-fremina in form, but exceeding 11 feet in length, in various degrees of inclina and horizontal, and of the tenderes dark verdure of the surrounding foliage. Atmy feet were several other ferns of large size, covering the ground, and which, through age and their favourable situation, had attained root-stocks a foot in height, crowned by circles of leaves three times that length. Other plants of treeerr, at short distances, concealed from my view, by their towered a hundred feet above them. The trunk of one of
the tree-ferns was clothed with a Trichomanes and several
species of Hymenophyllum-small membranaceous ferns of great delicacy and beauty. On a rocky bank adjoining there were other ferns, with creeping roots, that threw u their bright green fronds at short distances from each deen, deorating the leages on which they grew. In the deepest recesses of this shade I could enjoy the novel scene-ferns above, below, around-without fear of moestation; no dangerous beasts of prey inhabiting this interesting island. The annexed etching will give the reader some idea of a tree-fern, many species of which of the beauty the stately palms of warmer climates.' Of the timber-trees of this part of

The timber about Macquarrie Harbour is very fine. Huon Pine, supposed to be a species of Dacrydium non is much valued for ship-building and general pur grained and more durable than White American Pine has an aromatic smell. This tree attains to about 100 feet in height, and 25 in circumference, and is of a pyra midal form: the branches from the trunk are a little belo horizontal, and are clothed with numerons, slender pendant, scaly branchlets, of lively green, serving the purpose of leaves, as in the Cypress and Arbor-vitw
Celery-topped Pine-Thalamia asplenifolia-so from the resemblance of a branch clothed with its dilated leaves, to the leaf of Celery, is well calculated for masts Myrtle, allied to Beech, but with leaves more like Dwarf Birch, is suited for keels. Lightwood-Aoacia Mela bling the bing from swimminc in while the Land ecent pins, in Land, except the pines, generally sink; in some parts the cour in called back-wod, on of Pink. Other timber-trees are known here by the name of Cink-wood, Carpodontos hucida; Hard-wood, a specie of Olea; Sassafras, Atherosperma moschata; Slinkwood Zieria arborescens, \&c. Forest Tea Tree, a species o Leptospermum, is valued for fuel, some crooked portions of its trunk are finely veined, and well adapted for fancy work. The black substance forming part of the stems of pose it , is used for reeding, inlayings manuf superior to Ebony. Respectaole hats have bee Acacia, as well from broad-leaved sedges, Lepidosperme gladiata, the leaves being first boiled and bleached."
on Minders I lana, M. Badrowis of them is added the in great perfection. - " We visited the Grass tree plains that extend toward the east coast. The soil is sandy and poor, and clothed with thin rigid herbage, and scattered, low Gum-teees, low scrub, and large Grassrees, Xanthorrhcea australis ${ }^{2}$. Some of the last are from five to seven feet high, and as many in circumference five to ten feet high, thickly clothed with hard scales, and small, white, star-like fomers, ezcept for about one and balf feet at the base which is bare. All the trunks are charred from the burning off of the scrub. Abundawce o ed resin, capable of being used in the manufacture of sealing-wax and French-polish, is exuded by them. This substance fills up the places fit by the decat stems of former years, and by injuries; it is also lodged abundantly around the base of the trunk, which is thus defended from an excess of moisture. The blanched base of the leaves, which our swathy companion obtained for as, by beating off the head of a Grass-tree that had not thrown up a flower-stem, is pleasant eating, and has a nutty flavour
In etchings of wild scenery Mr. Backhouse excels; among other things, he has given a view of the trees in
Norfolk Island, which is worthy of the Garden of Eden. Among than, whe bage Palm of the West Indies
"In the woody gullies, the Norfolk Island Cabbagetree, Areca sapiad, abounds. At a handsome paim, with a trunk about twenty feet in height, and from one and a half to two feet in circumference, green and smooth, with annular scars, left by the fallen leaves. The leaves or ronds form a princely crest, at the top of this elerant column; they are pectinate, or formed like a feather, and are sometimes nineteen feet in nine to fifteen in number. The apex of the trunk is inclosed in the sheathing bases of the leaf-stalks, along with the flower-buds and young leaves. When the leaves all they discover double compressed sheaths, pointed at the upper extremity, which split open indiscriminately on he upper or under side, and fall off, leaving a branched spadix, or flower-stem, which is the colour of ivory, and attached by a broad base to the trunk. The flowers are produced upon this spadix: they are very small, and are acceeded by round seeds, red externally, but white, and as hard as horn, internally. As the seeds advance toward maturity, the spadix becomes green. The young, unfolded leaves of this Cabbage-tree rise perpendicularly in the making brooms; those still unprotruded, and remaining inclosed within the sheaths of the older leaves, form a white mass, as thick as a man's arm; they are eaten raw, boiled, or pickled. In a raw state they taste like a nut, and boiled, they resemble artichoke bottoms. The seeds whish food for the Wood-quest, a large species of pigeon, neath has a bronzed head and -colout, and is white undereath, and principally slate-coloured on the back and wings. This bird is so unconscions of danger, as to sit then taken by a nose at end a stick; when one is hot, anotuer wik some remain on the same bough, till itself also is fired at. We measured a Norfolk Island Fine, twenty-three feet, and another twenty-seven
feet in circumference. Some of them are nearly two hundred feet bigh. The timber is not of good quality, but it is used in building; it soon perishes when exposed
to the weather. This is said to be the case with all the to the weather. This is said to be th
other kinds of wood on the island."

But we have already exceeded our prescribed limits; and for the rest we must refer our readers to the work itself, which is filled with details such as these.
A Treatise on the Cullivated Grasses, and other Herbage and Forage Plants. By Peter Lawson \& Son. 8vo. Blackwood.
This little work commences by informing us that the culture of plants for the food of domestic herbivorous animats has always been confined to nations distinguished civilisation; and that although the cultivation of the cereal grains, pulse, Flax, \&c., was carefully attended to by the Egyptians, Jews, and Greeks, yet the growth of appear to have been practised prior to the period when the power of Rome had reached its climax. Then-in addition to the cereal Grasses-Lucerne, red Clover, and of the Roman empire, however, this branch of husbandry was the first to decline, and, if practised at ant, was
carried on to a limited extent for many centuries.
The culture of herbage-plants appears to have been The culture of herbage-plants appears to have been
introduced into England from the Low Countries towards the middle of the 17 th century; which period is further distinguished by the cultivation of the true Grasses for hay and pasture, for which purpose Rye-grass was first employed. The culture of this, however, as well as of all true Grasses, did not extend for several years, because it "produced many small hair-like roots, which filled the and hurtful thereto." It was only towards the middle of the 18 th century that the attention of practical agriculturists was directed towards the growth of the most useful Grasses ; and it was at this period that different terms were adopted to distinguish between Clovers and true Grasses, the former being called artificial, and the latter natural Grasses. This interest in the cultivation of natural Grasses was increased by prizes, offered by the Manufactures," for seeds of the Meadow Fox-tail, Meadow Fescue, and Sweet Vernal Grasses, gathered by liand; and for the greatest quantity of land sown with Vernal Grass in drills; a gold medal being likewise offered "to the person who should give the most sative merit of any two or more of the several natural Grasses." Both in Scotland and Ireland the introduction of artificial and natural Grasses appears to have been of muchlater date fommin England; but from the increased facilities of communecation which have of late years been effected, improve-
ments may now be said to go on simultaneously in both ments may now be said to go on simultaneously in both Several of the succeeding pages are devoted to an enumeration of the most deserving adaitions within the last forty years; during which period 29 valuable species or varieties have been introduced or brought into more general notice. Many exotics, as well as native Grasses were, in 1820 , experimented upon under the direction of the late Duke
of Bedford, at Woburn Abbey; the results of which are contained in the "Hortus Gramineus Woburnensis," a work which first directed attention to this valuable tribe. The remaining portion of the Pamphlet is one of no ordinary interest to agriculturists, since it includes Tables seed required of each, upon various soils, for sowing an imperial acre. These Tables, thirteen in number, are each adapted for a different purpose ; for instance, the bandry; the second, those for permanent pastures: they are rendered still more valuable by the addition of a brief description of all the Grasses and plants recommended in them. In a horticultural point of view they are also useful, as they comprise a good list of Grasses for fine lawns, bowling-greens, \&
With regard to obtaining a Corn crop during the first eason in which the seed is sown, the Authors make the following remarks :-"It is not our purpose here to discuss the question, as to whether it is better to sow Grass seeds for permanent pasture with or without a Corn crop. Both systems have their advocates, as well as their advanbotes and defects, and depend, in a great measure, on the varied circumstances which present themselves in practice and therefore, in the following tables, separate columns are given for each of these methods; it being always expedient to sow a somewhat larger portion of seeds without than with a Corn crop; and, in that case, it is farther advisable, for affording shelter to the young plants, to are the mixture, when sown pantumen, and a bush of Barley, when sown in spring to be depastured or cut green along with the jyoung Grass crop."
We may state, in conclusion, that the Tables and descriptions appear to have been carefully compled; and that to persons interested in laying down land in Grasswhether for pasturage, lawns, or covers for game-this Work will be a useful guide.
On the Food of Plants and Drill Husbandry of Turnips. Ridgway. 1842.
This little book may be useful to those who desire to manures are supposed to act, and who have not leisure manures are supposedter deeply into such matters. One
object, no doubt, of the publication, is to recommend
Lance's Manure, which, if properly prepared, is of use on light saudy soils.- $M$.
1.-Remarks on thorough Drainage and deep Ploughing. By James Smith, PEsq., of Deanston Works,
Stirling. Oliver and Boyd, 8vo. 6th Edition.
Stirling, Oliver and Boyd, 8vo. 6th Edition. -Observations on Thorough Drainage as the Basis of and Marshall, 12mo.

- Drainage ; an Article in the last Number of the "Westminster Review."
The rapid and extensive sale of Mr. Smith's excellent pamphlet, the appearance of others in quick succession, speeches at public dinners, and reiterated articles in
newspapers and reviews, all show the great interest that is taken by the publicin in one at least of the means which science and common sense point out as conducive to the augmented productiveness of land. People have at last found out that swampy fields and roads fetlock deep in mud are not merely a personal annoyance, but a serious injury to their pockets, if not to their constitutions, May the good work prosper
 conducted on sound principles, and executed in a substantial manner, cases of disappointeeaier than was either necessary or anticipated.
We therefore strongly recommend all those who are occupied in the work of drainage to read the two pamphiets at the he father of good drainage, and his advice, the resuit of long and successful practice, deserves the most implicit confidence. Mr. Roberts's work may be regarded as a sort of commentary on it, and contains much sound advice, with many useful directions. The subject has 80 often been treated or lat
With weed not dwell upon it further.
With regard to the article in the Westminster Review, ascribed, we believe, to Mr. Bailey Denton, we have only to state that it is ably written, and full of important gen eralization. He insists more particulariy upon the import ance of saving the refuse matters of sewerage with land-dramage, and of converting the later into a means of conveying the former into the country. Al these considerations are of the first degree of interest and cannot be too frequently or forcibly impressed upon the minds, not of the landed interest alone, but of the rate-payers and inhabitants of towns. If the refuse matters now wasted in every town in Great Britain were taken care of, they alone would furnish no inconsiderable sum in diminution of the poor-rates; and if a diminution took place from such a cause, it would be immediately attended with other advantages, the most immedate of which would be a reduction of fever cases, and a furthe saving in doctor's bills. The newspapers tell us that the contents of the cesspools in Paris have just been sold for 22,000 . a year. Why cannot we do the
too rich-or too proud-or too ignorant?

The Year Book of Facts, for 1843 (Tilt and Bogue), has appeared. We expressed a favourable opinion volume for 1842 , and we find ourselves justified in speaking in the same manner of the present. Such works are of great use as depositories of little facts which are to recent to be incorporated in formal works on science; and which, till that happens, are forgotten by the mass of mankind. The matter is clearly arranged, well condensed, and rendered available by a good index. Among the various kinds of information which it contains are particulars of the completion of the Artesian well of Grenelle, after eight years' labour; of Liebig's views of Animal Physiology ; and of Bischof's investigations of the Cause of Tropical Miasmata.

CALENDAR OF OPERATIONS for the ensuing week. Rearing ornamental plants from seeds is one of the most interesting and, in some cases, the most dificult occupation in which the amateur or yomg gave been taken in sowing the present.
seeds in suitable composts and in well-drained pots, or boxes, yet
and seeds either do not vegetate at all, or, if they do, a'great portion of them often damof it is a good plan to prepare the composts for this damping and propagation in the previons summer, by seed-sowing an thin layers to the sun, and by turning them over frequently, till all their natural open airy shed for future use. In large to put thern by
establishments you will always see a portion of loam, sand, and
and peat thas prepared in open sheds.
seed-compost over the fire in an iron vessel; ; this is a ready way of procuring it free from alive as the former mode. Now, general purposes precautions, if you water the seed-pots with pondwater, alias liquid mud, or whe that you have again impregnated the whole with the elements hest calculated to ensure dampness
to the youms progeny; lalf dred soil, and fresh damp sand from the pit, watered w close, cold or warm pit, are the best means that conld be taken to damy even seedimg Oaks. When you see the either the soil or water, perhaps both, are at fant. It the seed
were large, and covered a quarter of an inch thick, the crust of were large, em may easily be removed, or the seeds may be sown
soil over thema

 they stand in need of more assistance to emable them to takr hold of the fresh sonl; this 15 given them in the meseased heat of the
fresh becis, and by keeping them morc clowe fui the nrat fortnaght or three weeks. I thin thew roots were established. At the spring potting the whole stock is to be regulated, some of the fruiter
fresh surfaced, new beds made, and the whole re-arranged fresh surfaced, new beds made, and the whole re-arrang be given occasionally, say at every other watering.
VINERY.-Another useful treatise on the cultivation of this fruit has lately been added by Mr. Roberts. I never recollect
such an unfavourable February for carly forcing and for garsuch an unfavourable February will now begin to force Vines
dening in general. A large class wheping them about $50^{\circ}$ turing the day, and by letting out the fires at night for the first fortnight or tagee require the usual routine already described.
PEACH-Houss.-These, as their leaves are now fully expanded, PEACh-housk, --These, as their leaves are now
require large portions of air, and the atmosphere rept steady and moist.
Cuerry-rousk, -Same as the Peach-house. When we do get
a sumay day, see if the trees want a little shade; their leaves seem very teuder at prcsent.
Figs.- These require to be constantly kept moist at the roots, Fiss.-These require enable them to swell fruit. If any of the shoots have not shown fruit, or if the freit has dropped off, pinch back the
shoots to two eyes, and they will show fruit with their next shoots t

## Strawberriss.-The earliest crop of these will have no

 flavour, unless we wet a sudden change to sumny weather.Kidney Beans and Cucumbers suffer less from dull weather than any other plants we force early.
Seblings of hardy plants, such as Seed lings.-All young seedlings of hardy plants, such as
Celery, Caulfower, Lettuce, Onions. Peas, Beans, \&cer, raised in heat require great attention this dull season. Remove them to Tourly above the ground. Caysicums, Tomatoes, Egg Plants, Tobacco, and Sweet Basil, may be sown in pots and boxes and plants after they come up. it will not be requisite that I
should occupy much space with points so obvious and so well should occupy much space with points so obvious and so well former volumes.
It is disheartening ellough int-dortsent. present, but more so in
the open aur. The soil has sclom been in a less workable state the open aur. The soil has scldom been in a less workable state
on the 1st of March, and we have erery indication of a late spring. This and the following month are proverbially the bustest time in the year for the gardener.
space, I shall divide the sowings into two classes: those for permacuent or perennial crops, as Asparagus, Seakale, Rhubarb,
Onions, Carrots, and Parsneps, \&c., and those required for successional crops, such as Peas, Beans, \&cc. As soon as the soil is In a fit state, the permanent crops above may all be sown
except the two last, Carrots and Parsneps; these will answer
better a month hence. better a month hence.
TURNIPs.-The Stone and Early Dutch Turnips may now be sown im a warm border, but sow a few every ten days for the
next in weeks in preference to a large breadth at once, as the
carliest sown ones whll run, more or liss, to sced.
 Antumin Broccoli, Savoys, and Brussels' Sprouts.
Orceard.-Little is to be done here now except finishing the Orckard,--Little is to be done here now except thishing ainst
nailing of Peaches and apricots, and providing for them againale frost. II_-FLOWER-GARDEN•AND SHRUBBERY.
In-door Department.
Srovers.-- Orchidaceous and other stove plants which have been kept in a temperature of $60^{\circ}$ during winter, of Orchidacea gradual increase to hetter be kept in the coolest part of the house, till all their hads or eyes are fairly in growth; otherwise, the more forward
buds may take the lead, and the rest may not start at all. It is too soon yet to increase the temperature for the hardier Orchidaceæ in the intermediate stove. Cuttings made now of the strong tops of ait the showy they are very useful and showy as late summer and autumr plants for
to pot as the plants begin to grow.
 Gribenhouse, - here will want potting, beginning with seedlings and stove pribes here The traffic between this house and the cold pits would pots. The traffic between this for the next two months. Conservatory.-An unkuown friend has sent me a ong sit
of blue-tlowering plants for the conservatory, which will be of blue-flowering plants for the conservatory, whicla wiven to
made use of sliortiy. Hardly any air could of late be give made use of shortiy. Hardiy any air coun osingere, and con-
this house, owing to the dampness of the atmospher sequentiy less watering was required. I have just heard that her-
saceous Preomes are good forcung plants tor sping Howers, and I have pritted a few on trial, but the

## NEWS OF THE WEEK.

Tres debate in the House of Commons on Tuesday night, on Lord Ashley's motion for an address to the Queen praying her Majesty's immediate consideration of
the best means for diffusing a moral and religious education among the working classes, will be read with the deepest interest. The importance of the measure is attested by the fact that all party and political considerations were laid aside by every Member of the House, and that the motion was received and carried with that general unanimity which nothing could have produced
but an overpowering sense of its necessity. but an overpowering sense of its necessity. Lord Ashley drew a melancholy picture of the continued increase of crime. He said that the country is weary of mere pal liatives; the evil is wider and deeper than can be reached
by the schemes of prison discipline and mere corrective processes ; and if it be not grappled with at once, we may anticipate, in twenty years, a general convulsion of the whole system of society. The time is come, he said, when the upper classes must bear in mind that they owe to the humbler ranks the long withheld debt of kinder language and more intimate intercourse; and that the imprudence and immorality of their poorer countrymen
are the result, in a great measure, of their own neglect, and, in no slight degree, of their own example. Sir James Graham concurred cordially in these sentiments; the question, in his opinion, is utterly different from those of mere party struggles-it is an immense and awful duty
which the House owed to the mass of the people; late which the House owed to the mass of the people; late come when the religious and moral instructor must go forth, and the destinies of the country are involved in the proper education of the rising generation. He then
detailed the measures now contemplated by Government: detailed the measures now contemplated by Government : education of pauper children in the Metropolis and large towns, under the superintendence of the Clergy of the Established Church, with provision for the instruction of children of Dissenters by ministers of their own persuasion; the experiment will first be made in the manufacturing districts, and other measures will necessaxily follow. Lord John Russell gave his warm support to the motion, and Sir Robert Peel in expressing his gratitude to Lord Ashley for his exertions, said that the interference of Parliament will have little effect, unless the educated
and wealthy classes can be convinced that they are all to blame,-unless those possessed of wealth and the responsibility for its use can be made to feel that they have all been individually neglectful of the education of the poor. He apprehended that the the country, and that the moral influence of such a demonstration, in which party-feelings were forgotten in a sense of public duty, will do more good, by encouraging individual exertion, than the interference of the Legis-lature.-In comparison with this debate, the Parliamentary proceedings of the week are interesting only as party questions-if we except Lord Aberdeen's announcement in the Lords respecting the satisfactory progress made in
the suppression of the Slave-trade. Lord John Russell, on Monday, called the attention of the House of Commons to the circumstance of the Duke of Wellington, as Com-mander-in.Chief, holding a seat in the Cabinet; but Sir
R. Peel claimed for himself and his colleagues the entire responsibility of the appointment, and appealed to the whole conduct and character of the Duke as sufficient pledges that he would never allow his political opinions to interfere with the public service. On Wednesday Mr . Roebuck moved a Committee of inquiry into the circummented with extraordine war in Affghanistan, and commented with extraordinary severity on the late Administration. The motion gave rise to an animated debate, but was negatived by a majority of 114 . The House has also affecting its privileges, arising out of the arrest of $\mathbf{M r}$. Howard, the attormey, in a case which has often been
before the public. The main object of the House was to
avoid a com promise of its independence by recognising the jurisdiction of a court of law. For the details of the proceedings we must refer to our Parliamentary Report. From France our news is confined to the particulars of of which will decide the existence of the Ministry. The debate commenced on Wednesday, and is not likely to be concluded for some days.-In Spain, the elections, which great uncertainty prevails respecting thepic of the day is expected that most of the large cities will return Opposition Members.-The negotiations between Great Britain and Portugal for the tariff convention have at length been
broken off, the British Cabinet having decided broken off, the British Cabinet having decided on the
rejection of the last Portuguese proposals, and on losin no further time in the attempt to negotiate. -From the Levant we have accounts of hostilities on the Persian frontier, which will no doubt increase the difficulties o the Commissioners in arranging the dispute between the
Schah and the Turkish Government. The accounts from Syria mention that the works of the Protestant church at Jerusalem have been suspended by order of the Pacha, and Cons the affair has been referred by the Bishop and the

Courr.--Her Majesty and Prince Albert, accompanied by the Prince of Wales and the Princess Royal, left Buckingham Palace on Thursday afternoon for Clarehoured Curing the week, the Queen and Prince Albert ho French plays with their presence.-The Prince presided on Monday at a meeting of the Commissioners for promoting the Fine Arts in the rebuilding of the Houses of Parlia-ment.- The Queen Dowager and her Court returned from Canford House, yesterday, , to the metropolis. Canning as the Lady in Waiting on the Queen; the Earl of Warwick and Capt. Hood have succeeded Viscount Hawarden and Admiral Sir R. Otway, as the Lord and Groom in Waiting ; and Colonel Buckley has succeeded Colonel Arbuthnot as Equerry in Waiting. Major-General Equerry in Waiting on Prince Albert. North Warwickshire is vacant by the appointment of Sir Eardley Wilmot to the Governorship of Van Diemen' Land, and Mr. Newdigate, of Atherstone, has announced himself a candidate in the Conservative interest.
Official Appointments.-The !Duke of Montrose has shire of Stirling, in the room of the late Lord Ahe cromby.-General Sir Hugh Gough has been appointed Commander-in-Chief of the Company's Forces in India Commander-in-Chief of the Company's Forces in India, It is understood that Mr. Thomas Pottinger, brother of Resident Officer at Hong Kong.-Mr. Turnbuil hast as Resident Officer at Hong Kong.-Mr. Turnbuil has been
appointed to the office of Commissioner of the Mised appointed to the office of Commissioner of the Mired
Commission Court established in Jamaica for the suppression of the slave trade.
Church Preferment. - The Rev. T. B. Murray, rector Bishop of London to a prebendal stall in St. Paul's.

## $\sqrt{5} \mathrm{rrign}$.

France.-The Paris papers continue to discuss the chances of the Ministry in the great struggle on the Secret Service Money Bill, which commenced on Wednesday. ma contest has assumed greater interest, because the split into which has hitherto supported the Cabinet, is to calculate to a certainty the result of the debate; but it is admitted by all parties that it will decide the existence of the Ministry. M. Viger presented to the Chamber on Saturday the report of the committee to which the bill had justified the use to which they intended to apply the additional million claimed for that service, and that the majority of the committee had been of opinion that the Cabinet was entitled to their confidence, inasmuch as it had preserved abroad an honourable peace, and encouraged
the development of at home. It had accordingly rejected the reduction in the amount of the sapplies mored by the minoction in recommended to the Chamber to grant the minority, and The debate commenced on Wednesday and attracted credit. mense audience to the Hall of the Chamber of Deputies, every part of which was thronged. The diplomatic gallery was also filled. After some preliminary business menced by observing that im. Ledru-Roilin, who comit would be the twenty-third since 1830 , and then inveighed successively ugainst the principles, system, and persons of
the Cabinet. attacks, but he declared was the particular object of his Count Molé and M. Thiers, and ingisted that a mere change of persons would not satisfy the Opposition, who require a complete change of policy. M. de Gasparin followed in favour of the Bill. He addressed the House in such a way as to denote that the Cabinet are determined on having a decided opinion pronounced upon their policy, and to prevent such barassing attacks being reshall come under discussion, The debate, after a speech
from M. Guizot, which produced great effect on the Chamber, was adjourned to Thursday.
with despatohes fre official papers are completely filled with despatches from the Generals employed in Africa, including the Duke d'Aumale. These reports detail their operations in pursuit of Abd-el-Kader, who has once more escaped their grasp, and plundered such Arab tribes as had submitted to the French, while the French have plundered those which have yielded to the Emir. General Bugeand admits that Avd-el-Kader is at the head of 2,000 horse, 600 foot, and 3,000 Kabyles ; and it was from this force that the French were recently obliged to seek momentary refuge in Cherchell. It appears from the late debate in the Chamber of Deputies on the additional demand of $20,000,000$ francs for the African possessions, that the present occupation of the country requires annually tenance of an army of near $100,000 \mathrm{men}, 10,000$ of whom perish every year, and that no less than 88,000 whom the hospitals in 1841. Several Deputies adverted entered fact, that all the attempts at colonizing the country have hitherto failed-that the army derives all its supplies have Europe-and that "Algiers is to France but an abyss which swallows up her money and men, vields her no commercial advantages, weakens her in a political point of view, and is the worst school for her army.'
alt. The elections, which wor the 21 st continue to be the all-absorbing copic of the doy 27 th, utmost uncertainty, however, prevailed respecting their esult ; and it was expected that those of Barcelona and Vlectoral would be carried by the Opposition. The Electoral Committee of Madrid had published an appeal to the citizens, in which it endeavoured to impress on them the necessity of proceeding in a spirit which might secure to the nation, in all its extension, the advantages of a truly representative Government. The Committee had drawn up a list of candidates for the province of Madrid, from which the names of Messrs. Gonzales, Mendizabal, and Arguelles, were excluded. This list, however, required the sanction of the districts previous to its adoption, and in two of them it had been burned by first to cens. Prince Jerome Napoleon, who intended at rangements to stop three days in Madrid, had made arSunday after his arrival he heard mass in the palace chapel, but the Queen was prevented from attending by indisposition. He was presented to the Regent on the 19th, and had previously been visited by the French Minister and the Dutch Chargé d'Affaires. His residence in Madrid had given rise to many conjectures connected with the marriage of the Queen. These advices corroborate the rumour that the Regent has insisted on the French Government recalling M. de Lesseps from Baree lona, threatening to withdraw the exequatur of the Consul unless the demand be complied with. The official Garetle publishes, by order of the Minister of Finane the terme of the public auction of the quicksilyer mines, the terms and Almadenejos, which are to be adjudicated at Madrid on the 28 th inst. These mines are to be formed for four years, from the 20th Sept next to the 19th Sept 1847 The contractor will be held to advance to the Treasury, in ten successive monthly instalments, $50,000,000$ reals in current gold and silver coin. The reimbursement of the $50,000,000$ reals will be effected in the four years, at the rate of $12,500,000$ reals annually. There is little doubt that M. Rothschild, the present contractor, will endeavour Fould, of Paris, has arrived at Madrid, with the vien is suph Pars, 1 , when, it is supposed, of bidding at the auction. - The Barcelons Capnals of the 19th ult. Contain a proclamation of the Captain-General Seozne, announcing to the inhabitants, that tranquillity and order being then completely restored, he had thought proper to raise the state of siege imposed upon Barcelona and its suburbs on the 4th December last, respective fune civi authorities in the exercise of their and to direct that the prosecntions military commission, tribunal should be prosecutions pending before that Later accounts, by way of the ordinary courts of justici. was again in a state of extreme agitation, in consequence of a resolution of the Provincial Deputation annulling the Municipal Elections, which had terminated favourably to the Opposition.
Portugal, -We have Lisbon news to the 21st inst. informing us that Lord Howard de Walden has received instructions from England to break off the negotiations for the tariff convention; the British Government not being disposed to accept the last Portuguese proposals, or to lose further time in negotiations. The Portuguese appear to have anticipated this result; and, while keeping up high duties to protect their manufactures, the Fishery Company are striving to concliate the Douro interests by grants of public money. The bill endowing a privileged wine, has passed the Chamber of Dexputies alies mously. This company will have an incom 150 uni or about 35,0006 a year, which it is to se 150 conto8, Douro wine-growers, taking 20,000 pipes of their inferior wines at higher prices than they now get, and disposing pany thas it best can. The proposal to give the comand of monopoly of brandy, at the cost of the exporters, majority of 3 provinces of Portugal, was rejected by a it a ministerial question A new tax will hat not making posed to supply the deficit caused by making over the French privilege present revenue to the company. The settled. The affair of the Gloria slaver will be amicangly by the Spanish Government buying in the veasel and paya ing the original fovernment buying in the veasel and pay*

Germany- - The marriage of the Prince George of Cumberland to the Princess Mary of Oldenburgh, which took place on the 18 th ult., is the chief topic in the German papers. The King of Prussia was present on the occasion, and it is ramarked as a singular fact, that no member of tivities. Among the twenty-three sovereigns and princes present at the marriage, there were seven reigning soveGrand Duke of Merklenburgh Schwerin, the Dukes of Saxe Altenburgh, Brunswick, Nassau, and Anhault Dessau, and the Hereditary Princes of Prussia, and Mecklenburg. on the 22 d ult. His Majesty gave a grand fête to the of the Royal Palace. All the Princes, Ministers, foreign A mbassadors, the principal authorities, and, above all, Ambasssdors, the principa authoweres, invited. Accord ing to some accounts, the number of guests were not less than 10,000 . The fete was a round of batres, and of the Royal Chapel, performed. There was a supper for the Royal Chapel, performed. There was and a cold collation for the gene The festival, as might have been expected, has caused a great sensation; the citizens were expense were spared to invitation, and no pains nor expense were spared to appear in a manier the Order of the Swan, created by Joachim I., Elector of Brandenburg, in 1440 , in honour of the Virgin, and as a reward do pas abolished by Joachim Christian virtues. He order as abolished by Joachim The first person on whom the King has bestowed the order is the Queen, on whose neck his Majesty recently placed the image of the Virgin, which is the principal -The Leipsig papers state that the health of Prince Metternich had become impaired within the last few days, and the departure of the Austrian ambassador for Frankfort is attributed to the fatigue and uneasiness which the situation of the provinces of the Danube and the negotiations commenced on that subject had caused him.--Letters from Prague mention that a great number of labourers in Boment, and the partial failure of the harvest, the Emperor has given orders that public works, to the amount of public expense. A pamphlet, entitled "Austria, and her public expense. A A pampust, appeared, and has made a
future Prospects, bas just a considerable sensation in Germany. It is understood to be from the pen of the Baron Von Reden, who is known an important post in the Imperial Chancery of Austria, an important post in the Imperial Chancery of this writer, under Prince prospects of the Austrian Empire are all but hopeless. During 25 years of peace, while other Governments have effected large reductions in taxation, and in their public debts, Austria nas In 1815, the nominal amount of the Aus $1,021,000,000$; and at this time the annual charge of the state debt (in-
cluding the payments to the Sinking Fund) is equal to $5,000,000$, sterling annually. The entire Austrian revenue, in 1839 , was about $16,000,000 \mathrm{~L}$, sterling ; f the
public expenditure exceeded that 'amount, and there has been an annual deficit for many years past. The commerce of the country has not been developed in proportion to
the increase of the public burdens, and consequently some immediate and effectual changes, are considered necessary for the stability of the empire.- The marriage of the Princess Maria of Baden, daughter of the Dowager Grand Duchess Stephanie, with the Marquess of Douglas, son of the Duke of Hamilton, was solemnized on the 23d ult., in the chapel of the Grand Ducal Palace at Mannafterwards the ceremony was again performed according to the Anglican rites, in the apartments of the Palace inthe Court of Carlsruhe.
Holland. - The Dutch papers mention that his Majesty King William Frederick, Count of Nassau, has been of breath. The bulletin of the 17 th stated that ${ }^{\circ}$ The early part of the night was restless ; in the latter part his Majesty slept at intervals. The symptoms of the disorder remain the same." the changes observed in the convalescence of his Majesty are so inconsiderable, that no more bulletins will be issued for the present.
Ostend for the ne Louisa Maria will very soon sail from director of the expedition, will be on board with the persons under his order. The expense of this first step taken by the company exceeds, it is said, 390,000 francs.
M. Simons takes with him 80,000 francs in money and bills. He likewise takes the presents intended for the chief persons and generals of Guatemala, consisting of
uniforms and arms. The Antwerp papers state that the English ship Orissa has brought a quantity of rats from Manilla. escaped, and have been killed on the quay. They are so numerous that if a workman leaves any part o
Denmark. - It is reported in Germany that the Prince Royal of Denmark intends to adopt the hereditary Prince of Oldenburg, who would of Denmark. The Jbranch of A ugustenburg would obtain as a compensation the Grand Augustenburg wotald obtain as arince of Hesse receive two
millions of crowns. According to another account, the Prince Royal will not ascend the throne in favour of the Prince of Oldenburg on the above conditions.
Russia.-A joint-stock company has been formed, for the purpose of establishing a communication by steamSchlifsselbury and Sermar, at the mouth of the Swir, and schluss the coast of Friedland, between Schlüsselburg and Sestobol ; the boat to touch at Kexholm and the coasts of Kennowetz and Walgamm. At present 800 vessels from Sermar annually navigate that lake. It is expected that the proits of towing these, and of conveying make the peculation prove successful
Italy.-A leter from Rome states that, on the 8th of the thber overfiowed its baks, and invaded a third ticularly the In Corso and the Jews, the inhabitants had been their provisions were brought to them in boats.
Turkey and Syria.- We have accounts from Constantinople of the 7 th uit., confirming the report 13 the city of Kerbeiah had been taken by storm on the an. by the Pacha of Bagdad, after a gallant ed by a few on the pait of the ininabitants and pilgrime be there for de votional purposes. It is feared, at Constantinople, that this impolitic act of Nezib Pacha, will produce such ex citemeat at the court of Teheran, an the part of the mixed as wmission to arrange the differences between the Porte and the Persian Government. Much interest had been and tan, and wife of Halil Pacha. It appears that the seraglio tan, and collateral branches, and which Sultan Mahmoud suspended in a moment of agony, at the death of his favourite daughter, who poisoned herself in order to anticipate the terrible mandate, was recently revived, and that the infant son of Saliha Sultana, after being allowed to live forty-eight hours, was strangled almost in the mother's arms. This cruelty produced the most violent effect upon the princess, who had factics ferer, and deli child's life would be saved. Hysterics, fover, and delirium ensued, and, after lingering about two moat pomp on expired on the 4 , and was in the late Sultan's mausoleum near the Burnt Column. - The accounts from Syria state that on be 14th ult. Izzet, Pacha of Jerusalem, forwarded a message by one of his effendis to Mr. Nicolayson, the chaplain of Bishop. Alezander, enjoining him, as he had no authority for building a Protestant church at Jerusalem, to cause the works to be suspended. Mr. Nicolayson having vainly remonstrated with the Pacha, it was resolved that the Bishop should repair to Beyrout, to take the advice of the British and Prussian Consuls-General, and his Lordship accordingly started from Jerusalem on the 20th for Jaffa, where he embarked for Beyrout. On the 23d he reached the latter city, and laid the case to their those functionaries, who thought proper to . Assad Pacha, to whom they applied in the meantime for an explanation of the motives of this prohibition, pleaded total ignorance of the affair
Cape of Good Hope- - By Her Majesty's ship Andromache, papers to the 18 th December have been received Natal had increased, and they had declared, that as soon as the truce was at an end they would proceed "to drive the English out of their territories, and would invade our settlements if whes." They had also laid claim to the whole of the lands, and stated that they considered the chiefs as holding their own possessions merely as still been continued, and as an inducement for parties to join them, titles to property were offered to be given. farmers to accept the terms, and others were preparing to join the rebels, though notice had been gid engage in such transactions would be held liable to the penaltie for treason and [sedition. At the earlier stage of the suspicion that it was chiefly caused by foreign interfe rence. This opinion was strengthened by a Dutch vessel having entered and left the port clandestinely, and itectly from Natal to Batavia, at which place her arriva hound been announced. A fur a Batayian officer had appeand among the Volksraad, dressed in full uniform, and deco from with an oxder, and had promised then Meanwhile the Government had not been idle ; the Lieutenant-Governor had marched against the Boers with all the dis ment the army to about 1,200 men. This, it was expected, would be sufficient to overcome the rebels, the acit was feared a serious lioss ore extremely distressing. The drought had not been relieved by rain, and the serious cattle from the want of rea and wate severely, and, their moment. The Cantes sufred most sony had died from principal sustenaine beirg to the Government want. agents to furnish them with food at the public expense. SouTh AMerica.- The Danish, srom Monte Video, arrived at Falmouth, on Wednesday, from Monte Video,
from whence she sailed on the 20th December, and brings intelligence of an action having been fought on the 11th, between the allied forces of the republic of Monte Video,
under the command of General Rivera and the army of under the command of General Rivera and the army of Buenos Ayres, in which the former were defeated with considerable loss. She also brings decrees and proclamations issued by the Monte Videan Government, and a memorial from the Senate and Chamber of Representatives of the Oriental Republic of the Uruguay to the Executive The ane bodied men who have been slaves, colonists, or wards, whatever may be their denomination, will be appointed to the service of arms, for such time as the Government shall consider necessary, and those who are unfit for military service, and women, are to remain as pupils in the service of their masters, subject for the present to the co

Monday.-Lord Campbis rough' proclamations, and gave notice, on the part of the Marquess of Clarricarde, of a motion on the sub Duke of wellington - Lostponed his motion on the Corn Laws, on account of the indisposition of the Earl of Ripon.
Thesduy-Lord Camp beil. inquired if the Government in-
tended to bring in a bill to settle the question of non-intrusion.Lord WHARNCuIPRE reforred to the letter addressed to the Moderator of the General Assembly, and signed by Sir James Graham.-Lorct brovertam inquired if the Government had revessels on the coast of Africa? -The Earl of Abzeomen, in reply, expressed his conviction that explanation only was necessiety france to put an end to the slave trade, our exertions were still regarded in that country. Four gentlemen, Dr, Lushingtons.
Mr. Robinson, Captain Denman, and Mr. Bandinel, had been for Mr. Robinson, Captain revising all the various instructions issue during the last 20 years to the slave-cruisers, and the several treaties into which we had entered on the subject of the slave trade, for the purpose of forming them into one uniform code of instruction for the guidance and assssance
ployed on this most dificult and responsible service. As Englayd had nothine to conceal, had none but her ostensible objects to attain, these mstrinctions should be made plublic, and would he trustecl, disabuse the candid portion of the French public of the unfounded prejudice they now entertaw with which our efforts to extirpate the traffic in slaves had been attended, read a report, from which it appeared, that in Cuba the number of vessels
employed had been diminished within the last four years from 71 to 3, while the number of slaves importe, These great results had been in a great measure achieved through the exertions of the Governor, Gencral Valdez, whose integrity of conduct and honourable disregard of private interest merited the highest ap-probation.--Lord generous conduct of General Valdez, and Lord Browaran and deen's statement.
Thursday.- Lord Brovoram brought under consideration the
constitution, condition, and management of the Corporation of the City of London, and moved an Address to her Majestiy on, the subject. In the great measure for the reform of the Muni-
cipal Corporations of Enpland and Wales, the Corporation of London had been expressly omitted, on account of the magnitude and importance of the interests involved. But Lord J. Russell, on the part of the late Government, had distinctiy pledged him-
self to bring in a separate bill, which would deal exclusively with self to bring in a separate bill, which would deal exchasively with
the Metropolitan Corporation. No measure, however, made its appearance, and in 1839 light wa thrown on the cases of the
delay. A Metropolitan Police Bill had been introduced in that appearance; and in 1839 light was thrown Amen introduced in that
delay, which proved to to Police Bill had heendingly distasteful to the citizens year, which proved to be exceedingly distasteful to the citizens,
who, availmg themselves of the political weakness of the Gio-
vernment, compelled the abandonment of all the clauses relatime to the police of the City. I3ut if the smaller corporations it a great deal more. Its vast importance, from the numbers of
the which it partly distributed, and partly misapplied, and partlly prevented from being accumanated -the mintluence which it dew
river from its ancient fame, and the immortal services it nad ren dered to the state, at all times-from the power it possessed over the community-made it, beyond all the other corporations which lad been reformen, neserving o the care thes his hag vene ration for the Corpuration of London, glancmg at its history, tails respecting its income and expenditure, the privileges and powers enjoyed by the administrators of the affairs of the corporation, and the jobbing which naturaily ensmed. The corporate body was a remnant of the bad feudal times; and the abuses
which arnse ont of the frudal privicges and duties of the Aldermen and Common Counclmen were conspicuous in what, by perversion of terms, was called the administration of general unfitness, principally from personal interest, of satisfactorily performing the due en as yolice magistrates, bice whereby parties, having no case which would be listenced to in a court of law, appeared betore the Aldermen under pretence of asking advice, and by stating their guevances priblicly, obtamed by neans of the newspapers the ear of the pulblic, and frenuently the assistance of the magistrates
in cases with which they had no right to interfere. He related a number of instances in which parties had been thus shamed or bullied into a compromise; but trasted that, after this warning, chlpable vanity, or to court false popularity, or with a spurious charity, persist in such an illegal course.-
thonghe that, 2 s no notice had been grven of the resnlutions now proposed, anda as he and other of their Lordships were now un-
prepared to engage in the dicussion, it should for the present be withdtawn. To this Jord Brou fixa ห ascentcd; and, after a few
 Lord Chancellor's suggestion, the motion was withdrawn. Lord TBy xham then gave notice of the following resolutions the opnion of this House that the sejparation of man and wife-
of parents and chalren-whincla takes p.ace in the anion workhouses, in an exceedny end, and forthwith sought. 3. That, by a judicious adminstration of out-door relicf, the use of the workof exigeney, mikht be, alut ought to be, abolished." Forged Exchequer-Bulls bull and to the Coal Vender's Penalties Bill. Lord Brovghan presented a petition from the Marguis Lewnsenter by an individual who hadime connexion with his family

Several Peers agreed that the House ought to lose no time, con-
sidering the age of the Marguess Townsend, in taking immediate measures to vindicate the privileges of the House and the
dignity of the Peerage; and on the suggestion of the LORD Chancellor it was referred to a committee.

Monday.-Mr. T. EgRERTON OFOMMONS
respect to the treatment of the Chartist prisoners cions with Knutsford House of Correction, which had beem commented on Lord Abinger. Mr. T. Duncombech on the motion reative to his allegations, reading statements in support of them. If he got
a committee of inquiry woum see that the condition of Knutsford gaol was particularly inquired into. Sir Jamisg Grasam undertook that the whole
matter indispute should be investigated on thic part of the Go-
vernment and the report wonld be tand on the table of the House
 J. Russell and the Marquess of Nornanly, when they were 1 that he would make mquiry mitu this fresh mistance, with a view that he would make mquiry mitu thas fresh mstance, with a vich
to arosecuion, if the facts alleged shond prove to be true.
Lord J. Russmin called attention to the almost unprecedenter circumstance (with the exception of the case of General Conway
of the Duke of Wellington, as Commander-in-chef, holang a seat in the calminet. As a conspicuous poltical leader he could
not be supposed to be tree from polntical bias; ant lus Grace hat himself, on a former occasion, declared his opinion that thic
commander in-chief should not be a member of the cabinet. commander in-chief should not be a member of the cabinet.
Sir R. PEEL replied that there was no constitutional rule against
it, and many instances conld be cited in favour of the practice The case of Marchal Conway wa 111 point. But in very recent been commanders-in-chief under similar circumstances. It was true, that these latter personages were not political characters, but Admiralty had frequently seats in the Cabinet, and the principle
was the Bame in all. Upon the retirement of Lord Hill, he had no hesitation in recommending to her Majesty to give the ComThe whole conduct and character of the Duke armies to victory. The whole conduct and character of the Duke of Wellington were
sufficient pledges that he would never allow his political opinions to interfere with the public service. He (Sir R, Peel) claimed
for himself and his colleagues the entire responsibility of this appointment, which he felt satisfied was in unison with the public On the motion for a committee of supply, Mr. S. Crappord moved the postponement of all further slapplies till the estimate of the whole expenditure of the country should be first furnished
to the House. The amendment, after a short discussion, was lost by a majority of 47 , - Sir H. Hardinos moved the army estinates for the year. The decrease from the charge of last
year, on the whole effective and non-effective force, would be
$139,225 b$, and the reduction of men proposed was 5,740 . - Mr. Hume moved a further reduction of 5000 men. The committee
divided, and the amendment was lost by a majority of divided, and the amendment was lost by a majority of 86 . - The
next vote was for $3,619,327$., for the expenses of the army was agreed to, as were the remaining votes. The vote for the
expenses of the volonteer corps was objected to by Mr. Williams, but was carried by 98 to 28.
Sir Jamiks Graham then moved the second reading of the Tuesday, -In answer to Dr. Bowrina, Sir R. Perr said that
the Porte had never given its formal sanction to the buidding of the Protestant church at Jerusalem, or to the residence of the Porte had interfered to stop the building of the church. - Sir $R$, PrRL, in reply to Lord J. MANNERS, said that it was the opinion
of the present, as it had been of the late, Government of this
country, that an uncstricted and unk, Countos, trom the French Government, to a csele wherever he
pleased, might seriously affect the tranquillity of Spain. pleased, might seriously affect the tranquillity of Spain.-The
SOMCTTOR-GENERAL brought under consideration a statement of the Sergeant-at-Arms with respect to an action at law imprisonment, in the case of Mr. Howard, the attorney. There
were two courses, either of which might be adopted; to order its oficers to let judgment go by defanlt, in which case there would
je no opportunity for explanatiop, and a jury might naturally assess heavy damages; or to direct the sergeant to plead the
authority of the House, and thas bring the znatter to an issue befopted on previous occasions, as in the celebrated case had been Murdett, be would therefore propose that the ofticers of the Honse showld be instructed to appear in the present action, and
plead its authority.- Sir ThomAs Wrupa urged the House, while they gave every consideration to the proposal of the Solicitorsugerested the appointment of a comminttee to inquire into the
merits of the arrest, and to make a compensation to Mr. Howard, should the justice of the case demand it.-After some discussion that the sergeant asking time to plead conld not be considered law in the matter: the Ser reant-at-Arms was therefore desired,
without any formal resolntion, to serve notice to that effect, and without any formal resolntion, to serve
Lort Ashlzy then brought on his motion for an Address praying for diffusing moral and religious education among the
morking classes. After enlarging on the general importance of working clabses. After enlarging on the general importance of state of crime and ignorance, and of moral and intellectual degradation, in Manchester, Birmingham, Leeds, and other populous districts, among the lower classen, esj).ccally the founger pur-
tion of them. They Incw no rellgion, 110 Gud; the only know
 are anmually expended in ardent spurits; and it was jroved by
medical ment that a large propertion, perhaps half, of all the
cases of parevalent. Hic wars aware that what he asked woulco occasoly sume expense; but if we would not conscust to tax ourselves fo
 public-husues, and to the miserable wondition of the peoples ha-

 gious people. He ncoged the House to recollect what were the proceedings a rew years ago in Bristol and Nottingham, when
phunder and violence were openly perpetrated, and when a shate
of thengs hittle short of autrolyy peevaled, and where houses Were fired for he knew not how many hours at the pleasure of aith and fear to this necessary work, there yet remanted before of the bestand greatest men, that the had the authority of some all proceedings
to ensure the happiness of a nation was the es tablabhment of a
sound and religious system of education. He could quote on
this point the testimony of distinguished this point the testimony of distinguished officers, both in the Navy no discipline for those who served with them was so good as that conduct almost aniformly followed a religious education; and
the House would find the occasion, in most emphatic language, by that good man and the benefits of a religious education were not found among the that however grievous their wrongs, they owed obedience to the law, not from a calculation o
law, but from conscientious heir minds this ondition of Eng. and see med destinu by Providence to leauthe
nural condition of the world. Year alter ycar did we scid would, ere long, pervade one-half of the entire world, and race great the blessing if they but carried out with thern our freedom,
our morality, and our religion. These were the grounds, the arguments, and such the plan which he had ventured to
bring forward. It was, he was aware, but a portion of what the country expected, but the rest would come. The poorer classes morality; and the charge, unhappily, was but too well founded ; mmorality, were the result, in mind that that imprudence, that neglect, and, in no slight degree, of their own example. They owed to the humbler classes the long withheld debt of kinder
language, of more intimate intercourse. This was no fanciful obligation on them; the people of this country were more alive welfare, to a sympathy with their distress, on the part of those though it oftentimes might, on unimpressible hearts, never trusted that the Parliament of the country, that the more favoured classes of the country, would without relay enter on a their humbler brethren, and in this noble effort balf their task would be accomplished. The blessing of God would rest on their labours; and the oldest among them might, perhaps, hre to remmortal, because the moral, glories of the Britshe empure. The presented to her Majesty, prayng that her Majesty will be gra-
cionsly pleased to take into her instant and serions consideration the best means of diffising the benefits and blesnings of a
moral and religious education among the wnrking classes;" and sat slown amidst loud cheers from all parts of the House. glowing fervour, with that elevated generosity of soul, with that
fervent piety, which so eminently distinguished his character. revent piety, which 80 eminently distinguished his character.
For himself, he had been rebuked as seldom rising above the tility was the feeling which predominated in his mind, and which actuated his entire conduct. If the rebuke were a just one, he could only say that his example was one which it behoved ail from the charge, as say, most honestly and sincerely, that upon this sion, and this subject, all party, all political considerations were ntterly absent from his thoughts. The sole question here was a
cluty-an immense, an awful duty-which they owed to the mass of the people of this country. This was no question of party, of party; the matter was simply and assuredly this, that in the calmly, and kindly, to consider the present moral and religious Mr. Chadwick with the preparation of a measure for the improveto put down the evils of the truck system, we nild be done. In te events were pregnant with solemn uarmug; the time was come
when the religious and moral instructor must go torth : the des tinies of the country were mrolved 10 the proper cducation of
the rising generation, If all party feeling were Inal aside, and a Church on the one hand, and the honest scruples of the Dispeople. After showing, from what the Committee of Privy ceeded to state what the Government were contemplating. It
was not desirable, at first, to attempt too much. District school are prop in the metropolis and lad for the education of pauper chil ence of the clergy of the Established Church, with provision for own persuasions. These schools to inclunc an area, having not excecirs. Fartory chldren had been alreally legelated for,
three years the intentions of the fovernment and the Legistiture were rendered inoperative by varous canse. He proposecito prombly certificates of ther attenuance at school to be granted by the
Natiolial and the British and Forernn Schools, and by the Roman Catholic Schools, in the case of Roman Catholic children; the
schools to be open to the inspectors appointed by the committe schools to be open to be made in aid of local exertions for the erection of such schools of the earnings of each child, to be retained by the employer in aid of a fund ior education. In the medium of the and instruc under of the Scriptures, with the aid of portions of the Liturgy Church, but with a proviso in favour of the children of Dissenters hagh stated; and if they were passed duxing the present session, large advance would be made in favonr of the moral and religi
ous improvement of the rising generation.
Lord JoHN RUSSELf read an extract from the second report Lord John Russelif read an extract from the second report of a portinnally raised large sumus to send out missionaries
which anno
abroad. Whilst anxious to protect the feelings both of Charchabroad. Whilst anxious to protect the feelings both of Charch
men and Dissenters, he thought that in the present condition of
the country it would almost be wickedness to cavil at the details of the measures stated by the Home Secretary, It was of
importance to provide for the training of schoolmasters; and looking at the aversion of parents to send their children to school, whenever any pecuniary temptation presented itself, he
thought that some advantages might be held out to them in deration to provide for the education of the class immediately above the working classes.--Lord SANDON expressed his satisfaction at the prospects which this evening had opened.- - Mr
EWART desired to wave theological differences, for the sake Ewart desired to wave theological differences, hr, Saxw was disappointed that nothing had been said ar. Bulcire reminded the House of the vast total of charity funds a year. There was another class of charities, founded for giving
but mischievous; they were generally expended in drink, and
would be much better applied in education. The amount of the
forintations
 it must always be a duty to attempt the propagation of what we
ourselves believed to the suggestion of diverting any charitable foundations from the
 muncation with the (iovermment no the sulject of a legislative
measure for rendernat certann classes of educational charıties
more available than at present Sir R. Pex said he was afraid the interference of the Legisia-
ture would be of little effeet, untess among the educated and that they were all to blame; unless they felt, ana were all conof wealth, and the responsibility for the use of wealth- thasessed they
had been all individually neplectful of the education of the poor
and he trusted and he trusted more to the moral effect of the demonstre-
tion of to-night encouraging individual exertion than he did to
the interference of the Lepisiature. to Lord Ashley for the time and attention which he his gratitude devoted
to the subject, and the manner in which he had introd the House, he could not but feel that it was greatly owing to the fencral manimity which lrad prevailed in the House during ductuve nf the best offict thanoughout the country, would be pro-
the prablic that wh. of public duty, there must be 111 this arena, so continually, and,
from the res nature of things, ,o necessarily devated to party
warfare, atrong and overpow
cace whing sense of the necessity of the to the objectunn on the cul ject of procelytism, the question was
mie of balanee bettucen gond and evil: and he was not willug
for the sake upon us. He would be content to admit stances had rendercu the origune phange of times and circumolject as that of education, a bequest intended for small dona-
tiuns to the foor. He defendell the limited sode rernment prevosed to begin their plan. Success in the manuattempted, would open the way for it in the rural districts: which the clergymen of the parrsh was to be at the head.-Mr. adopted in rublic schools, but he hoped that Government would partics might wish to found fir the education of chldren in the
principies of the Church of England aloze.-Lord AsguEy, in reply, thanked the House for the reception which it had given to
his motion, which was then unanimonsly corried Wednestay. - Mr. Roesuce brought forward hi serect committee to inquire into the circumstances that led to the war in Afighanistan, and to report the evidence and their own
observations thereon. He accused the late Administration of rasholitic, and unjust-and without the sanction of Parliament and inschievous activity of Lord Palmerston had excited war China. Lord Auckland had issued proclamations which contained positive falsehoods, and Which were therefore derogatory to the denolmeed them as contrary to all miternationai law, an diskrace-
ful to the Butish mame, as foolishly concelved, and shametully presucd, proved that lie was altogether opposed to the wear sup extracts they hacl thought fit to place on the table of the House.
He concluced a speech marked by passages of extraordinary
severity by declaring that all he asked then win severity by declaring that all he asked then was inquiry, and not form of the motion was quasual and whole substance and Burke's motion for an inquinusual and unparliamentary, Mr. argument applied against the other cases cited by Mr. Roebuck. Palmernton were nit such as applied to thorse persons ; and on motives that wouldactuate themselvesint they were same our places," and it wacenly when ne wan obliged to adopt a wailike policy

 Metropolitan Improvements.-At a meeting of the Metropolitan Society last week, it was stated that a letterhad been received from Sir R. Peel, announcing that the had been received from Sir R. Peel, announcing that the into the e expediency of an Ordnance survey and map of London upon the largest scale, and it was understood that the Committee was now engaged in considering the variou
plans proposed for an embankment of the Thames. At plans proposed for an embankment on Monday, Mr. R. L. Jones moved "That it be referred to the London Bridge Approaches committee to consider what improvements it is
expedient to make in the public streets and avenues within expecient city, and to report thereon to the Court, together with the opinion of the committee as to the best means of accomplishing the same. In bringing forward the motion, he been presented by Sir John Key, from the inhabitants of Lime-street and its vicinity, praying that the Court would adopt means to widen that thoroughfare. Looking to that petition, and to the petitions of the inhabitants other great thoroughfares, which certainly required improvement, he considered that the best course would be motion related, in order that in that committee the merits of ali should undergo investigation. He was oubjeced would be of the most searching and scrupulous nature and the committee would have, at the same time to determine from what fund the corporation would pay of the amount required for accomplishing the vast improvements hand in hand with the improvements projected by the Government in other parts of the Metropolis e e The Government would no doubt render the corporation ever assistance they might require. Mr. Godson seconded the motion. Nothing could give ham greapled isfaction than rable purposes. It was with great anxiety he looked forward to the long-expected improvements of Holborn-hill and he rejoiced that the Court had refused to sanction the enormous outlay proposed by the erection of Courts of Justice in the City. He disapproved of the frequent applications for little peddling sums to effect this or that which would be felt by the whole body of the inhabitants, would be immediately adopted. Several members expressed their satisfaction that the Government and the corporation were to co-operate in the great project of metropolitan improvement. The motion was thencaried, worthy of selection will meet with immediate attention.

East India House.-A Court of Directors was held on Wednesday, when the thanks of the company were voted undgment with which the resources of the British empire in India have been applied in the support of the military operations in Affghanistan; and to Major-Generals Pollock, officers of the army, both European and Native, for the officers of the army, intrepidity, skill, and perseverance displayed by them in the military operations in Affghanistan, and for their indefatigable zeal and exertions throughout the late campaign. It was also resolved unanimously, that the thanks of the Court be pres both European and Native for their gallant behaviour in Affghanistan.
Anti-Corn-Law-League.-The weekly meeting of the Anti-Corn-law League, and of the representatives of the Metropolitan Anti.Corn-Law Associations, took place on

Wednesday evening at the Crown and Anchor Tavern. The great room was crowded long before the commencement of the proceedings. Mr. George Wilson, of Mast chester, presided, and gave an account of the said, they and put in circulation upwards of one million of publicahad put They did not intend to adopt any other force to effect their object than the artillery or the price to present might of the public press. Ne the to him by the meeting the address at Mancter, whicl we have noticed in our Provincial news. It was signed by 32,000 inhabitants of that town, and was ate attack in the House of Commons, and of their sense of his exertions in furthering the objects of the sense of his exertions in furthering the objectss of National Aressed Lers Mr. Villiers, Sir De wards addressed at great length by Mre League.
Lacy Evans, and other members of the League.
Christ's Hospital.-A general court of the Governors Christ's Hospitat. - A general court of consideration an address to the Queen, praying her Majesty to accept their humble but hearty thanks for her
munificence, in the gift of 10000 ., lately presented by her to that institution. The treasurer who moved the thanks of the meeting, mentioned, that, from the foundation o the institution by the youthful sovereign, Edwan sovereign has ever bestowed one farthing upon th.
Dinner to Sir C. Metcalfe.-On Monday a public dinner was given to the new Governor-General of Canada, in the rooms of the Colonial Society, in St. James's-square Sir Augustus d'Este presided, and was supported by the Vice-President of the Board of Trade, the Under Secretary of State for the Colonies, Sir Francis Head, and a after the body of gentlemen connected wis proposed th toast of the evening. He said that in Sir Charles Metcalfe's presence it would not become him to talk of his merits as they deserved. When he looked at his long career of service, he hardy knew where tenced his career in the East under the immortal Wellington; and when they considered thelservices he had rendered in so many situations requiring, what he so well supplied, talent and industry, they would Indies. It was unnecessary for him to expatiate upon the manner in which he had conducted himself there. Having fulfilled his duties in that Colony to the entire satisfaction, not only of the Government,
nation which claimed him as its 0 wn, his services in a time of certain difficulty were again claimed. Again they found him ready to quit the comiforts of his home and country, and to plunge into the duties and and portant situation. Of the manner ingwhich those duties would be fulfilled no one could entertain a doubt. Perhaps one of the moid by the present Administration to the was the tribute pais by the preseman. He would conclude by proposing "The health of Sir Charles Metculfe, wishing him a prosperous voyage, and every success whin could attend him." Sir Charles Metcalfe said, I return you my warmest thanks for the honour you bave done me. to this splendid entertainment; that you, sir, have proposed my health in the generous manner in which it has been proposed; and that you, gentlemen, have drunk that toast in the corcial manner in which it has been done honow and it shall be my endeavour never to prove myself un worthy of it. Allusion has been made to my residence in Jamaica. It is an island of which 1 cannot think but fom gratitude. I received the greatest Idey I arrived until the day I departed-kindness I shallinever forget. When I return from Canada-a colony which shall have my utmost devotion and attenbation -Sir Francis Head said he congratulated the North American Colonies on the Governor they were abor mus we a m. of high talent, of great judgment- of calmnessbe a Colo nies required, as a Governor, a man who would possess the confidence of all classes of his country; and they required still more urgently a man whose principles were a man in England who possessed these qualifications in a higher degree than their illustrious guest. He had pleasure in feeling that he would leave this country supported by universal good wishes, and he trusted that the people of Canada would abstain from forming any opinion of his measures until he had time to look about, him and take. With respect to himself, he was obliged to disclaim the compliment lately paid to him. It was not himself who had put an end to the late rebellion-it was the loyal population of Canada. That portion of the peopit, they performed their part of the contract, and he hoped and trusted that the day would never arrive when this country "s the forget their exertions,-Lord Mountcashel progustus d'Este briefly acknowledged; after which several toasts of the various Colonies.
The Excise.-For some weeks past the Commissioners E Excise have obtained several convictions of chemists and druggists for selling spirits of wine without a license. 50h. inflicted. Where, however, it would appear the
parties had transgressed the law in igno The Temple Church. - In reference to the petition lately presented to the benchers for the re-establishment of the choral service, it is announced that the benchers have decided on the permanch chir-master to engace choir. They have authorised the choir-master to engage a sufficient number of professional singers to perform the duties reguired ; and it is expected shortly, when all the appointments are completed, that the full calded will be again resumed.
The Scotch Church.-On Wednesday evening the cotch Church, London-wall, was the scene of a vioient Church, delivered there by the Rev. Dr. Candlish, one of the leaders of the non-intrusion party. The Rev. Dr. Brown, one of the senior presbyters of tae estabishment and minister of the church in Swallow-street, Piccadilly, rose at the conclusion of the lecture, and stated that some days since he had received a message from Dr. Candish requesting to be allowed the use of his pulpit for the dellvery (Dr. Brown), consented, on condition that if he considered it necessary, he should be allowed to reply at its close; this was objected to, and Dr. Candlish had expressed his etermination not to allow his opinions to be called in question. The Assembly ought to be informed that the principles of Dr. Candlish and his party were distinctly disclaimed by a very large majority of the members or the Scottish Church; that the statements made were, to say the least of them, challengeable statements, and tha the alleged aggressions of the civil courts had been brougra Assembe unwarrantable proceediaterrupted by such Assembly. (D. Brown was hersible to hear groaniug and hissing, that, il beminutes.) Silence having a sentence hertleman stated that been partially restored, the $R$. $f$ them, the lamentable he regretted, as much and prospect of solarge a secession hould and influential men, and that remove the difficulties, and to the ma shipwreck which threaten. renewed, upo into discussion. Dr. Brown again attempted to be heard, but his words were lost in the noise that ensued and the meeting broke up in great disorder
The Polish Anniversary.-The anniversary meeting of the Polish refugees was heid in the hall of the National Association on Monday. Mr. Worceall sat on the right of the chair, in which the spirit of Konarski, the patriot of Poland, was presumed to preside. Mr. Worceall made some prefatory observations in French, after which Mr. Rogers addressed the meeting, and alluded particularly to the necessity of union, and a firm reliance on the justice of the cause of Poland. The manner in which sir R . Peel at the close of the last session alluded to the wrongs of Poland, induced an inference from his speech that he felt deeply interested in the advancement of her freedom. Major Benyowski then addressed the meeting in Freuch. He said that men would cease to be men if they were unmoved on the present occasion. They had assembled to commemorate the anniversary of the greatest martyr ever mere up on the altar of patriotism-Konarsk. before the spirit of Konarski, which was then presiding ver their councils. He 'concluded by expressing a confident hove that Sir Robert Peel would not allow the generous spirit which animated the bosom of every great England, he would not deny Poland his generous sympathy, but see her righted. Signor Bonissani, an Italian, who spoke in French, congratulated the meeting on the union or the Poles and 11 The mesting was ad were, to make all men brothers. dressed by several other speakers in Polish, German, French, ayd Italian.
The Law Courts.-On Tuesday a general meeting of form incors of the Incorporated Law was held, for the purpose of receiving a report from the committee appointed by the great meeting of the legal profession held on the 8 th May, 1840, relative to the removal of courts of law from Westminster. Mr. Foss, chairman of the Society, presided. The report stated that petitions had been presented to the, Lords by the Lord Chan cellor Cottenham, and to the Commons by Lord Campbell, in addition to petitions from other societies, whic had been referred to a pecial commato of Commons, who were directed "to consider the expe diency of erecting a building in the neighbourhood of th Innsiof Court for the sittings of the Courts of Law and Equity, in lien of the present Courts adjoining to West minster Holl with a view to the more speedy, convenient and effectual administration of justice. The evidence of several jus connel, \&c., had been taken in 1841 and 1842 - report of which had been made; the committee of the House of Commons had given no opinion thereon but it appeared that effect should be given to such evidence by presenting petitions forthwith to both Houses of Parliament." Several gentlemen addressed the meting and expressed their belief that the addressed remoral of and ortunity of improving the neighient, Wher and Westableurhood of estmins public view. Resolutions were Westminser Hil wot the necessity for removal had been generally acknowledged, necessity for removal that petitions be present Commons by the AttorneyLord Chancellor, to the Commons by the AementyGeneral ; and to carry the other resolutions into effect.

House of Correction,-On Monday evening, Mr. Wakfor the fourth time, on the body of a prisoner called Doyle, It appears that on the 15 th ult., Mr. Wakley held two inquests in the prison on the bodies of deceased prisoners. In the case of the first no suspicion was excited of impro per treatment, and the jury returned a verdict of "Naan opposite complexion, in consequence of a witness stat ing his belief that Doyle had bepn neglected (medically) in the prison, and made to work in an unfit state. The coroner, on the 35th, did not think it right to examine the witness at length in the absence of Mr. Wakefield, the prison surgeon, and advised the adjournment of the in-
quiry to the 20th inst., in order that Mr. Wakefield might quiry to the 20th inst., in order that Mr. Wakefield might be present, and that Dr. Quain, house-physician of the
University College Hospital, and Mr. Erasmus Wilson, lecturer on anatomy at the Middlesex Hospital, might examine the body. At these adjourned meetings, witnesses were examined who proved that the prisoner was suffering
under a fatal malady, and that he required careful treatunder a fatal malady, and that he required careful treatment and a nutritious diet. On Mouday, the jury returned 11 th Feb., on which day, for the first time, he was treated by the medical officer, adding, "that they could not sepa-
rate without expressing their opinion that the deceased had not that proper treatmint from the warders and me dical officer that the nature of his case raquired." The jury desired it to be understood that they exonerated the
governor of the prison from any blame. Mr. Wakefield wished to be informed if the verdict was an imputation on his character, and ultimately declared his intention taking the case into the Court of Queen's Bench deceased prisoner, a market-gardener, called Tickner, had been sentenced to 21 days' imprisonment for havin in his possession two heads of seakale, the property of Mr G. Bagley, of Kensington, without being able to give a proper account of them. It was proved that he was in treadmill. After a long inquiry the jury returned a verdict, "That deceased died a natural death," accompanying known condition of deceased on his admission, as the sur geon's book testified, he was put to labour on the treadwheel, for which labour he was totally unfit; and added that they trusted the governor would convey to Mr. Wake field, the surgeon, a statement to this effect
The Russia Company.-On Wednesday evening the Tavern. Mr. Astell, M.P., in the claiar. The chief event of the meeting was the speech of Baron Brunow, the Russian Ambassador, who adverted to the treaty of commerce lately concluded with this country. When, a fer years ago, he had first the honour of addressing the Russia
Company; under circumstances of great difficulty Company; under circumstances of great difficulty, when great anxiety prevailed in the public mind respecting the owing to the good understanding and concert happily established between Great Britain and Russia, he was confident the general peace would be maintained. The general peace had been maintained, and they continued to enjoy the benefit of that state of general tranquility in which thegreat Powers of Europe had a concurrent interest, and which it was their mutual desire to consolidate and maintain. In regard to the new treaty he might be permitted to add, when he treaty whatever had existed between Great Britain and Russia-when he considered that during that long period many conventions had been concluded for the purpose of war, and that this was the first for giving encouragement thought he was fully justified in congratulating themwhich he did from the bottom of his heart-that under the auspicious reign of her Majesty Queen Victoria such a treaty had been concluded, which he trusted would form a Sir J. L. Lushington, on behalf of the East Indiasia. pany, said it was peculiarly gratifying to hear from pany, said it was pecularly gratifying to hear from the eprest aincere desine ber prom the amity between two such great nations, because, from the situaion he oad himsel hoan and to say the peace, security, and prosperity of our Indian Empire mainly depended on the friendship-he hoped it would be perpetual-between Russia and Great Britain. Hancock, special Poor-law Commissioners, assembled at Fladong's hotel, to investigate the alleged ill-treatment and improper management of the pauper children in the workhouse of this parish. Some opposition was offered to
the inquiry on the part of the vestry, on the ground that the inquiry on the part of the vestry, on the ground that it was illegal, the parish being governed by local acts. nesses, who deposed to the general manamement of the infant school, and to its sanatory condition. The evidence was given at great length, but most of the facts elicited have been already before the public.
Accidents.-On Monday afternoon, as General Hopkins, of Gloucester-place, was riding on horseback over was valued at 100 guineas, slippede-street, the horse, which Hospital, and dislocated its back. It was got up with difficulty, but died soon afterwards. The General escaped without much injury, although several vehicles were pass ing along the street at the time

Carmartien. - On Monday, the 12th ult., a larg meeting of the magistrates and farmers of the neighbour hood was held at St. Clear's, the scene where the outrages
of "Rebecca and her daughters" first broke out, when of Rebecca and her daughters" first broke out, when proceedings, and pointed out the serious consequence likely to result to themselves from persevering in such a
course, particularly in the increased amount of country course, particularly in the increased amount of county
stock they would lhave to pay to the police and yeomanry. This apparently produced its effect, and about 50 farmers voluntarily came forward and were sworn as special constables to preserve the peace; and the yeohowever, a mob assembled and destroyed the toll-house and gate at Irevaughan, in the county of Pembroke, about six miles below St. Clear's. From information obtained by the police, two persons were apprehended on Sunday charged with being principals in this outrage ; and after lengthened examination they have been committed upon One of the Liwyndryssi, of the value of near 2001 . per annum, and is one of the persons who came voluntarily forward and was sworn a special constable at St. Clear's. The outrages
are spreading, for on Thursday night a toll-box, was destroyed at a place called Llandarog, on the road to Swansea. - The Welsh papers state that Sir John Guest and Co. have contracted with the Russian Govern mable that this order'will be doubled.
Chester.-In reference to last week's debate on Mr. T. Duncombe's motion for an inquiry into the conduct of Lord Abinger, during the late special commission, the was supplied to the Times by the Lord Chief Baron him self. They state that the two reporters sent down by that ournal, on some alleged cause of deficiency, applied to His Lordship to furnish them with a copy of it; but he told them that he had no copy, and could not furnish it in any
other way than by writing the whole from memory. His Lordship consented to do this, and after completing his task, he is said to have declared, that it was the very last time he would ever accede to such a request ; nor would he have done so on that occasion, if he had had an idea
of the time and trouble which the undertaking involved.
Falmouth.-A rumour is current in this port, that on the 1st April the Brazil mail, now conveyed monthly by sailing vessels, will be carried by steamers; and that her Majesty's ship Astrea, and the packets now on their vo
Halifax.-The local papers are filled with details of the case of cruelty practised on an orphan child belonging to the Halifax Union, which Lord Ashley brought before the notice of Parliament on Tuesday. It appears that he when nine years of age, and was sent daily near Elland, into the pit, where he was cruelly beaten, and allowed only three meals of thin water-porridge for his support. traw to lie upon, and with a heavy bag of iron suspended round his neck. The boy, however, escaped, and was found by the overseers of Elland in so revolting a state, that the magistrates iuterfered, and after placing him mons against the master on the charge of cruelty.
Huddersfield.-A meeting of manufacturers, merchants, held in this town last week. The meeting was unanimous in its condemnation of the tax, and in its determination to endeavour to obtain its repeal. As the first step towards this object, a memorial to Government was adopted, and, atter having received the signatures of the y a deputation appointed for that purpose.

The doily papers state that the paragraph which has gone the round of the newspapers, stating that a man named Holden, recently deceased in this county had confessed before his death to two women, that he was one of the perpetrators of the murder at Pendleton in 1817, is entirely a fabrication-no such confession having been made. The constable of the place has made inquiry from the women referred to, and other parties, and has ascertained that there are no grounds for the statement.

Manchester.-An extraordinary meeting of the League was held on riday, to repudiate the charges made in Mr. Cobden. The hall, which is capable of holding 1,000 persons, was so full that many hundreds were unable to obtain admission; about 600 ladies were in the galleries, Mr. G. Wilson presided. The following resoluthe attempts to throw odinm on the character of Mr Cobden, this meeting feels called upon to express its fullest approbation of that honourable gentleman's conduct in the cause of justice and humanity, and whils bours and eminent services, this meeting pledges itself to give to him and his excellent parliamentary coadjutors its best assistance and support, and to persevere in employing all just and constitutional means for the total repeal of those laws which, limiting the food of the people, are opto the benerolent designs of Divine Provideace." In accordance with these views, an address to Mr. Cobsen
was adopted, ackuowledging his servies in the cause of

Corn-Law Repeal, and expressing the hope of the meeting that he will persevere in his exertions.-In connection with this subject, Mr. Bayley, the dissenting minister of Sheffield, has addressed a letter to Mr. Cobden, in reference to his speech about 100 persons drawing lots to assassinate sir R. Peel. He states his belief that Mr. vered, and admits that a day or two afterwards Mr.Cobden expressed his wish that Mr. Bayley had not related the anecdote, whereupon Mr. Bayley said he could vouch pis autaority, and bed a prote He had accompanied the recital of it with a protest against all such acts; he could produce his where the scene occurred nor the persons engaged in it he regarded the fact "as a terrible sign of the times, and letter to the Times, denying that the day on which he related the anecdote was a Sunday, and stating that he never knew the person nor the locality where the drawing of lots was proposed. He denies that he ever advocated an ap-
plication "to the Parliament of force," declares that he pliction to the Partant of fore, decled a stron companied the narration of the anecdote wincolote, and evil had been perpetrated, I should have reproached myself with not having given warning to Government. I deserve thanks for making the anecdote public, and not abuse.
New Romney.-A letter from this place dated February , has appeared in the daily papers, giving an account of torms. The writer Kentish coast during fore Lecon to Ireland went on shore to the east of Dungeness, in the gale of Saturday the 18 th . The Coast Guard did all in heir power to save the crew, but owing to the heary sea beaking continually over the vessel, every soul perished. the vessel soon broke up, and her dye-wood, was washed along the besch. Hundreds of the inhabitants from the different towns came down to the beach ; and notwithstanding the efforts of the Coast Guard and agents, they managed to carry off property to a large amount. On the very day of the disaster and on the Sunday, tallow was openiy sold in Lydd by the and some of the more respectable plunderers bought the tallow from the minor thieves, and sent it to Rye and other places in waggons and carts.
Rochester. - On Thursday a case of felony was heard in the County-office ayainst two Officers of the 44th and another person, who had been apprehended under warrants granted by the county justices. The court was The prisoners crowded with civilians and military men. The prisoners gave their names as follows: Einsign R. D.
Chapman, of the 44th Regiment, Ensign J. Le Marchant Carey, of the same regiment, and John Foster, landlord Dragoon Reqiments. The warrants charged the two first prisoners with having on the 22 d ult, killed and stoler three fowls, and John Foster with aiding and abetting in the felony; the fowls so carried away being the property the Mrs. Walker. After witnesses had been exam they were, from the evidence adduced, wholly guiltless of the charge alleged against them; and they were, therefore, honourably acquitted. Their evidence, however, was taken against the other prisoner, as the principal in the felony, who was committed for trial at the Maidstone assizes on the charge of felony, but was admitted to bail. Mr. Cobdenlan A letter from the Mayor of this town to warded to himnouncing, expressive of the address had been forwarded to him, expressive of the grateful thanks of Commons, in aid of the manufacturing and general interests of the country, has been published in the daily papers. In acknowledging this communication, Mr. Cobden states his reasons for the course parsued by him in Parliament. He says that although the Queen'g Speech had borne testimony to the sufferings of her people, no measures were announced by her responsible ad Fisars; and when a motion was brought forwara by a mem the distress of the country, it was resisted by the Government. "I the country, it wa circumstances," he says, "that I felt it to be my duty to remind the Prime Minis ter of his responsibility to the country and to his Sovereign for the consequences which might ensue from his pohcy." He then alludes to the construction lpat upon his words by sir Robert Peel, and says that it was not till after he had endeavoured to make his first ex planation that he was mand which had been put upon his words, by some of the Mem bers beside him. He ridicules the absurdity of attempting to infer political assassmation, a crime anknown in this country, from acts such as those which Sir R. Peel had endeavoured to connect with his speech on the 17th ; and with respect to the violence with which he was assated in the House of Commons, he thinks that such violence will not be lightly repeated after public opinion has fixed its stigma upon the proceeding.
Tavistooks,-On Monday week an attempt was made to解 Bedford. He had been confined to his bed for some time past, and it was considered necessary that a man-servan should sleep in his room. About 6 oclock on Monday morning, the man was crossing the apartment to administer some medicine to his master, with a light in his hand, when as he passed the window a fowling-piece was fred into the room from the yard below. The window was shattered and several slugs were found in the walls, shot was intended for Mr. Benson, and a reward of $80 \%$ has been offered for the apprehension of the offender.

Railways. - The following are the returns for the past week:-Greenwich, 6261 .; Eastern Counties, 873l.; Croydon, 1701. ; Liverpool and Manchester, 3,3262. ; Brighton, 2,223l. ; Newcastle and Carlisle, 1, 203l. ; Grand Junction, 6,087l. ; York and North Midland, 474l. ; Blackwall,
$465 l . ;$ Great North of England, 1,1096 ; Sheffield and Manchester, 273l.; Manchester and Birmingham, 2,229l.; Manchester and Leeds, 3,613l.; Midland Counties, 2,083l. ; Hull and Selby, 800l.; Edinburgh and Glaggow 1,592t.; Birmingham and Gloucester, 1,4601.; Manchester and Derby, 998l.; North Midland, 3,4001 ; Great
Western, $10,426 l_{\text {. }}$; London and Birmingham, 12,647l. Western, $10,426 l . ;$ London and Birmingham, 12,647l.
Northern and Eastern, 1,011l. ; South-Eastern, 1,065l -The half-yearly meeting of the South-Western Company took place on Saturday. A dividend of $1 l .12 \mathrm{~s} .6 \mathrm{dd}$. per share was declared for the last half-year, being an addition of 28. $6 d$. per share on comparison warly $7,000 l$, the share-
months, and a surplus was left of near holders to pay the income-tax. The gross revenue for the half-year, (including a balance of $5152.68 .7 d$. from the
 of the working expenses to the receipts had been reduced from about $39 \frac{3}{3}$ to $35 \frac{4}{4}$ per cent.-The meeting of the North Midland Company took place on Friday last at Leeds. It was expected, from the great opposition raised to the course the new directors have pursued, th have furnished much discussion on the subject of the
general management; but it appears to have passed off general management ; but it appears to have passed of

by the conveyance of passengers to the meeting of the Agricultural Society, which is to be held at Derby this season.-At a meeting of the Statistical Society last week, a paper by Mr. Tremenheere, on the Agralt in which the effect produced on the Oxford road by the Great Western Railway was particularly noticed. It appeared, from the on the road been almost destroyed, but the prices in the Southall cattle-market had been seriously affected by the railway. Much discontent prevails among the farmers in consequence of the facility which the railway affords for the rapid transfer of stock from one county to another, and which deprives them of the advantages of their proxtle are often suddenly introduced into the market, by means of the railway, from the west of Eugland; 80 that the prices have been forced down, and the silled to sell at a loss, or to withdraw himself from comcompelled to sell ata loss, or cotn is also at a discount, in consequence of the diminution in the number of post.horses Since the grand blast of Round Down Cliff, to the west-
ward of Dover, on the line of the South Eastern Railway, many thousand tons of chalk have been blown into the sea, by a similar process, on a smaller scale ; and another blast,
by which 50,000 yards of chalk were dislodged, took place on Thursday, consisting of about $7,0001 \mathrm{lb}$. of gunpowder which were ignited by the voltaic battery.-On Monday special train left the shoreditch station of the EasternCoun-
ties Railway, conveying the directors of the company, and those of the Northern and Eastern Railway, together with 300 or 400 of the shareholders, and the greater portion of the company's staff, for the purpose of inspecting the line length of line proposed to be opened was 51 miles ; 17\% of which have been opened to the public for some years past. Bhentwood, where they were retarded in their progress through the cutting in consequence of the unfinished state of the works and rails, which had only been completed on Shenfield, where large piles of timber had been tempofound could not be completed in time. The trains having found could not diffeulty crossed over this, arrived at that part of the line which lies between Shenfield and Mountnessing, at which place another timber stracture, severat deep, had
yards long, carried over a chasm of many feet deen to be encountered. There the trains came to a halt, from its having been discovered that the necessary timbers had not been thrown across. In this spot the trains waited carpenters to bridge the way over. The necessary closure having been effected, a pilot-engine was sent forward in order to try the stability of the rafters, but even under the burthen of a single engine, the structure was observed would be unsafe to proceed. A return to town was the consequence, the shareholders strongly expressing their meeting of this company was held on Tuesday, when the particulars of the above disappointment were offcially made known. Mr. Braithwaite, the engineer, attributed the failore to the saturated state of the ground in consequence of the late wet weather, and stated that an experimental engine had subsequently traversed the line with perfect safety. Gen. Pasley, the Government inspector, had undertaken to examine the line in the course ould be opea for public traffic in about a fortnight. The Directors

Report announced a balance in hand of 13,144l., out of which it was resolved to declare a dividend of $3 s$. per original shares. In the passenger traffic there had been n increase for the half-year of $4,000 \mathrm{c}$, and of the general management show a decrease in expense to nearly the same amount.

## IRELAND.

Dublin. - The installation of the Hon. Henry Pakenham, as Dean of St. Patrick's, took place on the 24 th, with the usual solemnities.-The subscriptions to "the Mal building, for literary and scientific objects, are pouring in from all quarters. The following letter has been received rom the late Lord-Lieutenant, Earl Fortescue, dated Feb name to the subscription for a testimonial to the Rev. Mr. Mathew, as a small mark of that interest which all who have the welfare of Ireland at heart must, I think, feel in age or country, have, within the same space of time, conributed as much as he has to the moral improvement o their fellow-creatures-none, I am sure, ever devoted themselves to any good. work with more untiring zeal, or more
unaffected and single-minded benevolence." From Lord Ashburton, who is not connected by property with Ireland the following communication has been received :-"AI though personally unconnected with reland, 1 beg the tes timone aded to the eminent ser vices of the Rev. T. Mathew to his country and to hu-manity."-The Commissioners of Education in Ireland have issued circulars to the managers of the National hem's system of Vocal Music, and that if they are disposed to make a trial, on notifying their wishes to the Commissioners, grants of books, \&cc. will be made.-The weekly meeting of the Repeal Association took place on Monlength on the connell adduressed the meeting at grea leympth for relond had been r-echoed in the more ympath for Hon. W. Thompson, the Minister of the United States in Mexico, was also the Minister of the Irishman and the stranger. The rent for the week was 185l. 4s. $7 \frac{1}{2} d$.
Tuam.-An occurrence of a very tragical nature took great sensation in the county. It appears that Mr Michael Ward, son of Mr. Ward, of Doon Castle, in the county of Galway, and his wife, had not for some time been on amicable terms. A serious difference arose be kitchen for the purpose of seeing his dogs fed. Mrs. Ward followed, and shot him with a pistol loaded with slugs. After a vain struggle to detain her in his grasp,
Mr . Ward sank down bleeding and exhausted, and is said to be in great danger. The lady, who is', grand-niece
the late Lord Clanmorris, has for the present escaped.

Court or Conmon Plisis, -Moore, Clerk, V. Drummond,
Clerk, TMise was an action of siander. The circumstances which
gave rise to it made, at the time, considerable noise, and were
Guly noticed in this Pauer. The plinintiff is the Rev. William
Inarter Moore, B.A., curate of St. Peter's and St. Mary's, at
Boston, in Lincolnshire; and the defendant is also a clergyman,
and the incumbent of the Chapel loyal, Brighton. On July 30,
the plaint
the plaintiff, accompanied by his son, a member of sit. Jor
College, Cambridge, went to Brighton for the recovery of his
health; and on Suaday morning, the 318 st, the plaintiff end his
son, being then entire strangers to defenatant, entered the Chapel

 congregation. the the strangers, whe had before attracted some
attention by coming late into the church; considerable confusion ensued and the plaintiff and his son were followed from the
chapel by arowd of persons. Upon inquiring the cause of the
Core assemblage, they were informed that they were the person
against whom the defendant had cautioned his congreation. persuaded a person to accompany them to the hotel where they Where tieir respectabihty was unquestionably proved. That was
the oftence of which the ulaintifn on complained, and 1 sup-
port of his case he called several persons who were present on port of his case he called several persons who were present on
the occasion, and heard the words spoken, to depose to the
above facts, and also several witneesses to prove the perfect above facts, and also several witneeses to prove the perfect
respectablity of his character. Sir T. Widde addressed the jury for the defendant, and contended that this action ought not to
have been brought inasmuch as the defendant, s. soon as he
discovered he had made a mistake in respect of the persons discovered he had made a mistake in respect of the persons
whom he considered the plaintiff and his son to be, wrote a letter whom he considered the plaintifif and his son to be, wrote a a etter
to the plaintiff, expressing in the strougest terms his regret that
 son entered the church, information had been received hy the
defendant that two ootorious pickpockets had deenn riven from
Clrist Church, having come there in a fly, and that they had Christ Church, having come there in a fly, and that they had
afterwards gone to several other chapels in Brighton. That the
close arrival of the pianintif and his son led lim to believe they were the parties, andito make the address to his audience which

verdict for the plauntiff-Damages, 40 s .
Ascentrary Fintes.-Cherles Pustrout and Wrulliam Sparkes wer
Indicted for having set fire to a barn and outhouse at Havant tide 28th April. It appeared, that on the night of the 28 th Ap Mr. Atherley's barn was on tire. The prisoners, who ined
the neighbourhood, were at a public-house at 11 o'clock that evening; they assed for some lucifer matches, which the land
lord gave them. The prisoners Ifert the house together. The
to couse was shat up, but upon their calling, the lanalora, soon
the dor, and upon their request gave them the matches. Soon
fter this the barn was otserved to be on fire. The prisoners wier seen in the neighbourhood immeriaiely upon the efire being made by the prisoners before the magistrates were put in, wherein

Mr. Serije a full confession of having set the premises on fire. Mr. Serjeant Atcherley then summed up ; the jury found the prioners Guilty, and they were sentenced to be transported for
-William Burnes, a butler, and Elizabeth Pollurd, a lady's maid were indicted for having, on the 1st September, burglariously entered the dweeling hounse of the Dowager Lady Lisle, at Mill-
brock, near Southampton, and stolen therefrom a very laree brook, near Southampton, and stolen therefrom a very large
quantity of jewellery, bank notes, sovereigns, and guineas, her roperty. The particulars of this robbery were noticed in this adsorvered chieffy by the viipilanee of the gardener. After a long
disamination of witnesses, the jury acquitted the female, and
 baving, on the 1 th November, set fire to a rick of clover nay, in
the painsh of Cliton Hampten. It appeared that on the day in question the prisoner went to the police station at Abingdon, and custody. He was, however, informed that it was contrary th receiving a charge against him; and upon this the prisoner Latham. He was then locked up, but tha not been long in the it said that he could not rest eaby in his mind, as he had com-
mitted a very grave offence. This offence, he said, consisted in his having set fire to Mr. Latham's rick, which he had done with son,e lucifer matches. Counsel addressed the jury for the prisoner, contending that the jury ought not to give credence to accuse themselves of crimes from a morbid love of notoriety. Guilty. He was sentenced to transportation for 15 years.
Oxpord Circurt (Reading).-Thomas Pnice, a lad 19 years of age, was indicted for maliciously setting fire to the dwellinghouse of his master, the Rev. John sloper, on the 6th February, in this case, though it established a strongs suspicion of the pri-
soner's guilt, was mot suficint to convict, and he was accordfor setting finc. to the prosecntor's house, on Tuesday, the 9th
pebiruary. It was here proved that the prisoner had fired the premises by means of tow ant turpentine. The jury founcl him Guilty, and sentence of death was recorded, accompanied by an Rirhard Wallis was indicted for having, on the 7 th November 1838, set fire to certann ricks and farm- -uildings, ut Hampstead
Norris. The jury found the prisoner Gulty. Sentence was erred. At a later period of the day, Jesse Wallss (son of the last-named prisoner), Richard wallis, and three other prisoners,
who hail all been convicted at these assizes of arson, were placed at the bar to receave judgment. Mr. Justice Wıghtman, in passing sentence, sadd that the prisoners had all most properly been
convicted of one of the deepest and most dangerons offences nown to the law, and one which, he very much repretted to find, had prevailed in this connty to an alarming extent. It was, therefore, absolutely necessary that a severe example shoue
made of those who were proved to have been guilty of the commission of such offences. Distress and want, although no excuse for crimes, might occasionally tempt committed for the purpos of relieving themselves from hunger; but crimes like those of which the prisoners at the bar hard been found guilty had no such palhation. They were committed to gratufy the most mawould sat sfy all those who had heard of the conduct of the priperperrated, iwstice would at last overtake those who wet guility of them. His lordship then sentenced all the prisoners,
with the exception of Jesse Wallis, to be transported for the remainder of their respective lives. Jesse Wallis, on account of
his youth, and the belief whinch his lordship entertained that he
had been instigated by others, was transported for 15 years. - Samuel prentue, a a respectabie-looknng man, described as sel mously broken into Windsor Castle, with intent to rommit a
felony. the pribhe, that it 15 unnecessary to repeat them. It was prover eight years been employed in the work-rooms, and bore an excel improbabulity that a person in good circumstances, and with a good character, would enter the stores with felonious intentions and the jury at once returned a verdict of Acquittal.
Northran Circuit.-(Lancaster).- John O'Neib and John of Mr. W. Morphet, \& farmer, residing at Hornby, near Lan caster, on therphet, a farmer, residing at Hornby, neary, the particulars of which were giver in our last. It appeared that on the night in question, the
prisoners entered the prosecutors field, and drove away the
whole Whole of his flock of sheep. Next day they offered them in the custolly, and the sheep, instored to the owner. The jury found
the prisoners Guilty. The Judge seutenced O'Nell to 1.5 years
transppration -The Chartist Trials. - The triai of Mr. Feargus O'Connor and Wednesday before Mr. Baron Rolfe and a special jury. All the defendants, amountigg in number to 59 , appeared except Dr
M'Doaill, who was represented by Mr. Scrgeant Murphy, and
who it is whderstood will abide the event of the trial, and come in for judgment accordingly, The Attorney-General
opened the case with aspeech of considerable length, in which he stated to the jury the nature of the evideace whych he was upon the defendants. His syeech was chielly remarkable for the calmness of its tone, for the temper and forbearance which it ex-
hibited towards the defendants, and for the pride which he con ressed he felt, that during an outbreak of so serious and ex councmbered what was due to themselves and to their country, that, though many acts of illegal character and dan-
gerous consequences had been committed, yet on the whole most remarkahic degxee of moderation had been exhibited by stated by the Atorney-General, was endeavouring, by large
assemblies of persons combined, by force, violence, menaces, and intimidation, to produce such a degree of alarm and terror throughout the country, as to produce a change in some of the
fundamental points of the Constitution. The evidence of the different witnesses was, on the whole, rather favourable to the defendants, as showiog continual exhortations to peacefol and
orderly conduct, and that the original cause and the general character of the turnout was for "a fair day's wages for a fair
day's work," and not for the promulgation of the Charter. It after its commencencent that a portion of the turnouts thought it advisable to mix up the Charter question with the wages, nor
did they do at atlength without considerable opposition and division. It also appeared 'that at Staleybridge, where the first turngive up work unless they consented to a reduction of 25 per bear the character of a voluntary strike. It was also proved mined to shut their factory doors for a month; and had they not
done this, it was alleged that there was every probability that done this, it was alleged that there was every probability that
the strike, and it consequent disturbances, would have much
sooner terminater, and probably the question of the Charter
maight never have been raised at all. Central Cravinal Court. -William Cannell, described as a
waiter, was charged with felontously shootinr at and wounding waiter, was charged with felontously shooting at and wounding to murder her. in annther count he was charged with silooting harm. The particulars of this case have been already noticed, and no new facts of any interest to the publle werc elicited by
the evidence. The jury returned a verdict of gullty of firing withe inteut to do gricvous bodily harm, recommending the priLord Chief Justice ITmdal then adtressed the prismuer, and said that nothing but the recommendation of the jury could have prevented the Court from passing the severcst sentence of the
law upon him. As that recommendatuon, however, should alway teceive the greatest attention from the Court, the sen-
tence would be mach hghtened, though still sufficiently heavy Fo deter others from giving way to those bursts of passon which
are so frequently productive of falal results. Tue sontence of are so frcquently productive of falal results. The scuteuce of
the Court was, that he be transported for the term of 15 years to their Lordships, requesting that the trial of Mr. A Ahley, who stood indicted for stealing plate from several of the
clubs, should be proceeded with that morning, or fixed for Saturday, After a short conversation anong the counsel, it was fixed Trial of $\mathrm{Mr}^{\prime}$ Naughten. - This trial commenced Attorney General prosecuting on the part of the Crown w, wit nesses were cxamined at great length ont behalf of the prosecusoner's counsel), the trial was adjourned until this day, but it is Charles Shipley, a banker's clerk, was brought up evening. the judgment of the Court. The prisoner, who was clerk in the banking-house of Messrs. Williams, Deacon, and Co.. Birchinof $402 l$. 7 R , the property of his emphoyers. The Common Sum geant said it was a painful duty at all times to prass a sentence of transportation, especially when the party to recelve juslgment was connected as he was. The Court should be no respectcr of perprisoner's relations, respectable as they doubtless were. The seas for the term of scven years; but the friends of the convict might apply to the Secretary of state, who would listen to, and Shrrifr's Court,
Paub's Churchyard. -This Grial lasted six hours, and is of very great interest to the silk trade, as the forerunner of twenty or hirty more, for smuggling silks, in connection with the late for the Crown, $262 t$. $\qquad$

 very profuse and constant bloomer, with long upriglit foot-
stalks; and is considered by competent judges the best fower of its colour yet offered to the public; it was pronounced first-class flywer by the Floricultural Society
16, 1842; obtained a prize at Salisbury Plain
at South Essex, Sept. 8 ; a prize at Kingston, Seg. 31 ; a prize at Salt Hill, Sept. 16; a prize at Victoria Gardens, steprize Sept. 19; a prize at the Fortcultural Soc. of Lond on, Sept. 20 27 .-See Editor's opinion, Gurdeners' Gazette, Aug. 6,1842 growers appear to be aware of the properties xequired, the show Dahlia, and most of those exhibited on Tuesday pos sessed them in a considerable degree. Decid edly the best of flower, ${ }^{\text {S Smith's Sir Robert Sale, a beautiful ly-formed dark }}$ Floricultural Society meetings, out not adjudicated on by the being shown."-See Editor's pinion Gardeners' Chronicle Sept. 3. "Your crimson purple Dahlia (Sir R. Sale) is a flower of first-rate properties, fine, general form, centre well up, with great depth of petals." 105.6 d .
RIVAL YELLOW, Smith, deep golden
of great substance and depth, the centre well up cup petals, form, very constant and good habit. This Dahlia is warranted the best of its colour yet offered to the public. As the stock is very limited, early application is necessary to secure plants,
many orders having already been received; no allowance on this variety. 10 s . of good form, very constant, free bloomer, and excellent habit the flowers have long straight footstalks; quite a new and dis-
tinct variety from any other in cultivation. The form of this flower improves as the season adrances, sufficient to constitute it a show flower, 10s. 6d.
ORION, Smith, light yellow, cupped petals, of good form, very
constant, and profuse bloomer 3 ft . FANNY WAUGH, Forster, deep lilac, of fine form; it has obtained a first-class prize at Hexbam, and was in the second stand of 18 , ard the second of 24 bloms at the same place; was plact ard in its class at the Dahlia Show near Corbridge, mond, near Newcastle. This variety is very coultant of medium size, great depth of petals, the centre well up, and of good general habit; 4 ft . 10 s .0 d . and of good form ; has obtained several prizes; petals, large, light purple, fine ORYNTHIA, blush edged, and tipped with rosy purple; good form; 4 ft . 10s. $6 d$.
GREAT WESTERN, Bragg, shaded purple, very large, good shape; $78.6 d$.
PERPETUAL GRAND, Brown, maroon, fine form, $108.6 d$. BELSIZE RIVAL, Pipe, rosy blush, cup petals, fine form, good SURPRISE, Oakley, crimson, tipped with whife ; 4ft. 108.6 .
EMPRESS OF WHITES, G. Smilh, creamy white, good form, very dwarf grower; 2 ft . $108.6 d$.
CONFIDENCE, Cook, shaded orange, good form, very constant, fine habit; 4 ft. $78.6 d_{0}$. WINDMILL-HILL HERO, Miller, rich deep crimson, cup petal, round shape, good form ; 4 ft . 10 . $6 d$.
VAN AMBURGH, Miller, rosy lilac, good shape, and constant show flower, 3 ft. 10.8 , $d$, ,
PET RIVAL, Bushel, red crimson, cup petale, and very constant; NORTH MIDLAND, Evans, deep crimson, cup petals, and fine ESOM; has taken several prizes; 3 ft . $7 \mathrm{~s}, 6 \mathrm{~d}$. 4 ft . 10 s .6 d . BEAUTY OF SUSSEX, Mitchell, white, deeply edged with carMRS. JAMES RICHARDSON, Edwaxds, blush white, occasionally tipped, good form, has taken several prizes, 4 ft . $108,6 d$.
 QUEEN OF SUMMER, creamy white, with crimson purple tip and tark centre, good form, $108.6 d$.
RETRIEVER, Dewar, ruby crimson, fine form, 4 ft . 105.6 d . IMOGENE, Dewar, Hilac, first-rate, 2 ft .1108 .6 d .
CLAUDINE, Forstcr, white, tipped with rosy pink, fane form, GREAT MOGUL, Atwell, deep maroon, 4 ft. I0s. 6 d
F. and A. S. and Co. take this opportunity of informing those being grown in the immediate vicinity of London, they cannot produce their blooms in such perfection as those who have every were from August to the end of September so infested with the Bianca, 10 conipete at any of the three shous for Mr. Wildman's prize; as a proof of this, at the first show there was no competi-
tinn, they could not at the Salt-hill (the second, and the Floricultural (the with effect; as the scasoun ad sufficientiy recovered to compete withems in profusion, so as to
vanced, the Plants produced fine blooms rnable them to exlivit twenty-four fine blooms at the Evenug Mceting of the Floriculturai Society, when it was pronounced a white of first-rate qualities, and second to none.
White of first-rate quantions and acerd the thrip may be applied to
Tive same observations as rut three plants, they had not an Pertunity to compete for prizele, colour bright vermilion blush or rosy eye, large trusses, and very free bloom of stron mpright growth; it obtained a certificate of merit at the Exhi bition of the Horticultural Socicty of lonflon, Jnly 9,1812 .
The Vertena is handsome and very brimiant, it is no dotrbt a nion. Plants in May, 5 s.

## SATURDAY, MARCH 11, 1843.

Amona the errors not uncommonly committed by gardeners is one which we suspect has been productive of as much mischief to greenhouse and hothouse plants as high night temperature to Vines

In former days gardeners were unacquainted with the importance of maintaining a moist atmosphere,
when they cultivated plants naturally found in the hot and damp parts of the world. Water-plants, indeed, they put into water, and they had what were called damp-stoves, as distinguished from dry-stoves. But the first differed from the last in having a tan-bed in the middle, and in the moisture derived from it, more than in any other respect. At the present day, however, he must be a very ignorant gardener indeed who
does not avail himself of syringes, and evaporatingdoes not avail himself of syringes, and evaporating-
pans, and sphagnum, wherever stove-plants are to be pans, and sphagnum, wherever stove-plants are to be
managed. It is only, therefore, here and there that vegetation suffers from undue dryness.
We are, however, obliged to add, that people are to be found who now run to the opposite extreme, and who, because they find tropical plants bettered by a certain amount of water, under certain circumstances, fancy they cannot have too much of it. This is the has a gardeuer, a Londoner, from a great establishment, who, in the dark weather of winter, deluges the stoves with water, and suffocates the plants with heat. This is "keeping up the steam" with a vengeance. It is of no use for his master to show him that the plants are poor, spindled, drawn-up things, or to point to their dying extremities; the gardener is too great a man to regard such trifles ; he has lived with Me comes out of the great London establishment, and it was always done so there, and therefore must be right. As for the plants dying, they are treated according to rule, and if they will die under these circumstances, who is to help it? It is impossible for a plain country gentleman to resist such an appeal to the experience of those who kill

Tropical plants require a moist
certain. So is it certain that a man ropshere, that is but if he is kept incessantly walking all day and all night, what will become of him? A man requires to be awake sometimes; but if you never let him close his eyes, what will become of him in that case? A
gardener must have the means of allaying his thirst gardener must have the means of allaying his thirst ; keep it always in action, all day and all night, he will find the supply rather too abundant, even though the pump discharged good ale. We see, then, that a man may have too much of a good thing; and why not a plant
Again, as to heat; tropical plants demand a high
mperature ; certainly: so do we require warm clo temperature; certainly: so do we require warm cloth-
ing. But a heavy blanket coat, which suits the depth ing. But a heavy blanket coat, which suits the depth of dress for a gardener in the dog-days. He would soon feel its effects, we apprehend, and become thin and spindled, like Planta-Genista's unlucky shrubs. It should never be forgotten, that what is fit or unfit cumstances. That which may be indispensable in March may be most improper in July. With regard to pical matter now before us the fact is this. Although troptmosphere it is only when temperature and a moist light in addition. The effect of heat and abundance of to corapid growth, and, as a necessary consequence, which thel plants to feed abundantly ; but the food Which they take in can only be digested under the digestion, the less light the slower the digestion ; and greater the the brighter and longer the days, the bear: the darker and shorter the days, the less of these agents can be applied to them.
Let us illustrate this by an extreme case. Take a foot of Sea-kale ; grow it just below the glass of a will be short-jointed, broad-leaved, green, and firm. forcing-house at a a such another plant; place it in the forcing-house at a distance from the glass, where light
reaches it but feebly; it will be long-jointed, almost leafless, pallid, and watery: continue to grow it there; it will lose the ends of its leaves, and in course of time will die. Now this is only a strong illustration of the inevitable consequence of forcing plants into rapid
growth in the absence of bright light ; and perfectly growth in the absence of bright iight; and perfectly
explains to those who can understand, the reason why the operations of the great gardener "from the great London establishment, who had lived with My Lord this and My Lady that," are so bad. If his hothouse-plants were intended to be eaten, his practice might be good, but as they are intended by his master for a somewhat different purpose, no mismanagement can be greater.

All good growers of stove plants will diminish the temperature and moisture as light declines, and increase them again as it becomes stronger. In the
winter they will only give them just so much as is required to preserve them in a state of healthy rest.
One of the fundamental principles of this Paper is its avoidance of politics; and we think it must be conceded that we act upon that principle with perfect fairness. We therefore trust that what we are now about to say, if it should seem to savour of Anti-Corn-Law views, will be understood as having no political bearing whatsoever. We say nothing about the Corn-Laws: we advocate neither Sir Robert Peel
nor Mr. Cobden; we merely express an opinion, in which we think all reasonable persons must concur, when it is plainly set before them.
Whether protecting duties are necessary to the farmer or not-this, we submit, is undeniable, that he can best claim them after he has pushed the resources of Agriculture, and all possible skill, to their utmost limits. Having done this, and being still unable to compete with the foreign markets, notwith standing all his efforts, in consequence of the peculiar fiscal condition of his country, he would appear to make out a strong case for protection. But, on the
other hand, if he does none of these things-if he passes his life in apathy, neither exercising his own talents, nor availing himself of his neighbours' ; if he perseveres in standing stock-still while all the world around him is moving onwards, it is evident that to protect him under such circumstances is to offer him a bounty for indolence or perverseness; and, we may add, that no protection can save him in the long-run.
It is impossible for the warmest friends of prowill do nothing for themselves. On the contrary, when they cry for help, they must be answered as Hercules replied to the countryman in the fable.
Now we do not say that all farmers are of this description; we are far from insinuating that they all stand supinely still, refusing either to learn or to improve. On the contrary, we recognise a very consi-
derable and important move in advance. But we do say, and with much regret, that this move does not appear to be what it surely might he. There is not that universal stir among the agriculturists which their political position and the imminency of their danger loudly call for; and for hundreds who are helping themselves, there are thousands that trust those who blame them; on the contrary, their bad education disarms the critic, and we are convinced that if they do not move, it is rather because they do not know how, than because they are unwilling.
tlemen, to the rural clergy to the to country gencation throughout the country, that they should all bestir themselves, each in his own circle, in order to induce the farmers to try whether they cannot better their condition by bettering their husbandry, rather than by waiting helplessly upon Parliament We are convinced that if this were generally done an immense deal of good would result.
We shall probably be told that farmers are an impracticable race, and that it is hopeless to expect to influence them. We were assured, indeed, not month since, when urging these arguments unon excellent man, well acquainted with farmers, that it was useless to attempt to do anything with them and when we suggested that they might be induced to try experiments, which cost nothing, with a view to improving their crops, he asserted that a man might talk till he was hoarse without making the smallest impression upon them. Upon pointing to an appeal to the farmers of Suffulk, by Professor Henslow, calling on fifty of them to combine for the purpose of testing the value of gypsum as an agent for fixing ammonia in manure, he replied, " $A \mathrm{~h}$ ! it is very well ; but he will never get a dozen of them to join in his plan, even if he give them the gypsum and the manure to boot." But what turns out to be he fact? why the fifty men have been found, ready to try the experiment fairly, at their own cost; and
thus we see that when sensible and zealous persons thus we see that when sensible and zealous persons
will set in good earnest about pushing on the occupiers of land, it is not so impossible to rouse them as some
imagine. Let every county furnish but one Henslow, one the science of Agricuiture will move more in one year than would in half a century without such an impuise. We would only refer our readers to a communication from him in our last, in order to shew how this can be set about.
Feople take fright at the very name of experimenting ; and yet, that there is nothing so very awful in the word, maybe gathered from the following extract from one of the very useful letters, published by the gentleman whose name we have been com pelled to take the libexty of introducing into these remarks: "In lthose preliminary experiments," says Professor Henslow, "which Chemists or Botanists may attempt for the purpose of interrogating nature there cannot be too minute or laborious attention paid to all the details ; but when the results of such experiments appear to have ascertained some natural law of vegetation, which may be considered as bearing directly on the pursuits of Agriculture, then the fur ther experiments which the Agriculturist himself is called upon to make are of a much coarser and less elaborate character, and none of them need be made a tax upon his time, patience, or pocket, to any very formidable extent. An ordinary degree of attention to weights and measures is generally all that will be called for-little more, in fact, than the practice of the market itself requires. But success is mainly to be looked for in the multitude of co-rperators accumulating a sufficient number of positive facts. All England might be converted into one great experimental farm, if our different Agricultural Societies would prepare accounts of the exact mode in which some hundred farmers might perform a set of easy comparative experiments at the same time, and send in the results of then. This is what is most needed for accelerating the present jog-trot progress of Agrivancing.
In the latter part of this paragraph, as well as the first, we entirely concur, and we would most strongly urge upon the many Agricultural Societies now forming in this country, the propriety of directing their resources to so great a purpose. We entertain no
doubt that if they would but call into their councils judicious men, who do not ask for too much at a time. and who are capable of distinguishing theoretical facts having a direct bearing upon possible practice, from speculations of a less valuable description, and if they would plainly set the same experiment, in exactly the same form, before a large number of farmers, the very first year of such an operation would give birth to results of the most valuable description. All men of science would readily assist them, even those whose time seems already so over-occupied as to be
hardly susceptible of any further application, as will appear from a liberal offer to the Suffolk farmers made by Mr. Potter in another column. But we have much more to say on this subject next week.

## DESCRIPTIVE LIST OF CARNATIONS AND PICOTEES.

## Continued from page 135.) SCARLET FLAKES

Beauty of Cradley (Wallis's). - Fine pod, rather thin; petals finely shaped, ribboned with intense scarlet; white not very pure.
Ringleader (Toone's), -A vigorous and strong grower; flowers large, colours bright, and petal good. This variety is excellent as the male parent in cross-breed-
ing, the anthers affording abundance of farina for fertilization.
Bright Venus (Ely's).-Anything but bright.
Premier (Creswell's). - The white sometimes flushed, but occasionally a first-rate flower.
Lord Morpeth (Ely's).-This variety, I am sorry 10 say, is nearly lost. I believe it is one of the Messrs. Ely's early seedlings; it is a first-rate flower, sufficiently full of petals, without being crowded; form excellent, and colour well distributed; a weak grower.
Captuin Ross (Ely's).-This flower has a bad pod, otherwise it is beautifully marked, with a good petal.
Mary Anne (Greasiey's).-Has a good pod, and is a most excellent flower; form fine and white pure ; the scarlet being rich and well distributed.
Ann Page (Lovegrove's).- Large and coarse.
ATarquess of Granby (Simpson's). -Scarlet very fine; Earl of Errol (Wilmer's).-Rather goon impure. very pure, but the scarlet fine and well laid on.
Wellinglon (Foster's).-A variety of strong habit; pod and colour good; the flower large and well formed;

Earl of Leicester (Wigg's),-A' large and fine flower: scariet rather dull ; the white, however, is pure, and the colours are well balanced ; the form also is good, but it

## Rob <br> Rob Roy (Orson's). - A high-coloured and showy flower,

 Winning often in this part of the country.Madame Mara (Pearson's. - An old and universal favourite; beautifully ribboned, and the white pure; it has been the leading sort at most exhibitions in thts part of the country for many years, but is headed this

William the IVth (Wilson's), which is as well marked as
the preceding, being likewise a fuller flower, and of excellent shape.
Lady Hill (Pugh's).-Large, with a fine petal and good form, sometimes coarse, and the scarlet not so bright as in many other varieties.
Fox-hunter (Hufton's), sometimes, I believe, called Hogg's.-It is of fine form, Iarge, and with good colours; it is scarce, although raised in this neighbourhood, and from
Donna Maria (Milwood's).-Small and impure; decidedly third rate.
Red Rover (Fletcher's). -Thin, and quite second rate. Bishop of Gloucester (Brown's). -Flowers large, and, generally speaking, fine ; it is distinct in character from mood and well distributed.
Lovely Ann (Ely's).-A delicate and beautiful variety fors forst-rate, but by of excellent shape,
Rosea (Hufton's). -This is one of the late J. Hufton's best rose flakes; it is apt to make rather long, straggling layers, and blooms early. The flower is of the largest size, of very fine peta, and beautifully marked. pure, size good; a delicate and distinct variety.
Lady Gardiner (Ely's). -This sort is indispensable to every collection, however small, as it combines, with a thick petal, all the good qualities of a first-rate flower. Lady Ely (Ely's). -The foregoing description applies also to this excellent variety; it is hardly so strong in its also to this excellent variety; this ribbons are of a more intense pink.
Elizabeth (Easom's).-Is not quite so good as the foregoing ; still it has an excellent rose-leaf, combined with fine form and vigorous growth.
$V$ illage Maid (Greasley's).-A most delicate and beautiful variety, not quite so large as the abovementioned sorts; white very pure and form compact ; unfortunately it is exceedingly scarce.
Lady Flora (Hudson's).-Very highly coloured, form good, white pure, and well distributed.
Sarah (Hasting's).-One of the best-podded flowers I ever saw ; petals large and finely formed; rather too thin for the "Nottingham Standard."
Beesving (Hoyle's). - Large, of good form, and of course crowning well; the white is pure, and the markings are distinct and delicate.
Miss Walker (Ashworth's). This is a decided acquisition, the pod being good, the markings distinct, and of a different shade to most others; the white too is pure, and though the flower is not large, and blooms early, still it is a very great favourite.
Mrs. Pickering (Pickering's).-A seedling, taking premier prize in the class at the Mialand countes exulion, Nottingham, in 1842; not yet let out, but decidedly firstrate; it is able to cope with any of the flowers previously described.
Lovely Nanoy (Hoyle's). - A flower of great merit, and though only raised a few years since, ranking fifth in the Lancashire Show Book of last season.
Eliza (Parkinson's). This is a variety of about four years standing, large, and of fine form ; well marked with delicate Peach-bloom; the petals are, however, rather thin, and consequently will not bear much sun.
Emma (Lakin's).-A promising seedling, lately raised at Derby ; it gained a first prize there last season, but with me, it is too thin of petals for the amended system of judging. confused in (Ely's). - Flower large, and full of petals, contus.
sorts.
Queen
of England (Fletcher's). - A superb variety, highly coloured, large, and of good shape. I grew it for the first time last season, allection.
Luna (Brown's). - Petals rather narrow, otherwise a desirable flower, as the white is pure and the colour good. Lady Egerton (Low's).-In size rather small ; petals buted ; the layers have a spindling habit.
Lady Grey (Malpa's).-A fine old flower; petals large Wood, The Coppice, Nollingham.
(To be continued.)

AMATEUR'S GARDEN.-No. X.
Wrat'can be done with the limited means of a two-light frame towards producing a supply of flowers for the drawing-room throughout the year? is a question frequently asked by correspondente, but, difficult to answer; inasmuch as we often see green-houses, containing extensive collections of plants, almost destitute of flowers from October until the following April. However, if too much is not attempter,-for the amateur more frequently fails from attempting too much, than in being satisfied with a few easily cultivated but good plants- I am confident that it is possible to hate a few flowering plants at all seasons, with the aid of a two-light frame, and other little inexpensive contrivances which $I$ shall hereafter explain. Before proceeding to show with what plants this desideratum may be accomplisheed, I will first premise that there must be no huddling of them together, merely because they have a solitary flower or a few green leaves upon them ; but the whole frame must be given to the plants enumerated, and after they have done flowering they must not be relurned to the frame, but be either thrown away or preserved in a room or window until the following summer.
A two.light frame, of the usual dimensions, will cover
an area of 36 square feet, and, allowing on an average each plowering plants half a square foot, will hold six dozen the same time, say nine dozen plants.
Supposing, then, the season, when there is the greatest difficulty in producing flowers, and when, in consequence, they are the greatest luxury, to commence in October and end in April, the following plants will be the most suitable :- From October until Christmas - Chrysanthe mums, Pelargoniums, Sálvias, Cinerárias, Prímulas, Rus sian, Neapolitan and tree Violets, with Collfnsias, Clin tónias, and Mignonette; from December until Marchthe above annuals, with Scillas, Crocuses, Snowdrops, Hyacinths, Tulips, Narcissuses, and Jonquils; from April cinths, Tulips, Narcissuses, and Jonquiss; fow Apri-
until June-the whole of the above annuals, with Schiuntil June-the whole of the above ancials of Chinese Tea-scented, Bourbon, and other Roses, and a general assortment of Pelargoniums. In summer, plants in room are not so much cared for, and if they are, a list. of the kinds suitable is not necessary, as there are few persons who are not
that season
To give the treatment of all these plants would requir considerable space, but as the time to commence their culture is at hand, the necessary information respecting them will be given shortly. In the meantime, persons intending to cultivate them cannot do wrong
ing good varieties of any of the above genera. Anter frosty nights and sunny days is little warmt in the earth, there will be no advantage in sowing annuals in the borders for a fortnight to come. A collection of German, Russian, and ten-week Stocks, may, however, be situation where they can be protected by night in severe weather.-W. P. Ayres.

ENTOMOLOGY.-No. XLI.
The Whits-shouldered Woollen-Moth, Tinea arcitella of Linnæus.-People are well aware that their clothes, furniture, blankets, $2 c$. ., are often mothes these in it is incorrectly termed; but 1 find that one ofty of the
sects is likewise very destructive to the property sects is likewise very destructive to the propen of the
agriculturist. I shall therefore make its economy agriculturist. I shall therefore make ios. During the
subject of the present communication. greater portion of the spring, summer, and autumn months, we often find in our houses, especially in the bed rooms, a Moth sitting upon the windows, and back, with its wings folded, and resting flat upon its back, as shown at fig. 4, but the male is smaller; it is of a lit grey colour, shining like silk, and on touching thorax are the slippery scales come off, the head and densely covered with white scales, and this alone will densely covered with white scales, and this alone ilike short guish it from allied species; the antenne are
bristles, but ciliated in the male; and the palpi are bristles, but ciliated in the male ; and the palpi wings are der, curved upward, and pointed ; the upper wings are a patch at the base, and another upon the pinion edge; and there are four brown spots around the disc, more or less distinct ; the apex is margined with white spots, and a beautiful long fringe; the underwings are silky grey, narrow, and lanceolate, the entire margin beapex is pointed ; the abdomen hinder long, especially the tibix, which are also very hairy (fig. 5, a female flying, a little larger than life). * See Curtis's Brt. Ent., pl. 735 , for dissections, and his
"Guide," Gen, 1009 , Anacampsis and Laverna, Nos. 17 to 43 ,

These Moths likewise inhabit gardens, outhouses, granaries, stables, woollen and fur warehouses, \&c., and I believe they are most abundant in July. The female lays her eggs upon clothes and woollen articles ; and when the little maggots hatch they begin to feed upon them, eating off the surface, and forming cases of the particles to live in ; and when they are full grown, they change within their cases, or in a cocoon, to a brown chrysalis (fig. 3), from which the Moths again issue at their appointed time. It is therefore evident that clothes cannot correctly be said to be molh-eaten, as it is the caterpillars which do the mischief, and this is sometimes to a so rious amount ; they are soft and whitish, a little inciming to yellow, sparingly clothed with long hairs; the head is chesnut-brown and horny, with little horns and jaws the first thoracic segment is also horny, and similar in colour, but paler ; they have six pectoral, eight abdominal, and two anal feet (fig. 1, magnified ; 2, the natural length.)

If clothes be shut up in drawers or dark closets for any length of time, they are sure to suffer from the attacks of these and similar larve; and if the situation be damp, it is so much the more suited to their tastes. In this way also blankets, carpets, stuff and moreen cur tains, sofas, muffs, feathers, and similar articles, becomer injured and destroyed, if neglected, if is nol, hows; for the bousekeeper alone who has ondear that they commit 1 learn from various Corespo most extensive depreda stores. Last A", from Essex, with portions of the sacks whe we so strongly cemeal them actuall requis lome somthem." In December 1 received olnes rom dition, and crops which had been housed ad a daw cond , are the larve, alter the Ben found revelling amongst piles of Pea-sacks, having iatroduced themselves between the sacks, considerable ext Simber 1 hare rey, at the end or septewbe or the the the also been informed by two oher pars, wey were doing corks with the caterpilars in the, by ting round the much mischief in their wine-cellars, by ehbe It sides of the corks, close to the necks by very remarkable, that these caterpilars aldition to the such very different substances; and, in ado the betus foregoing, M. Duponchel says they ive upoll ine rotte of the Birch, and of other trees, as whe wood; and in Germany they have been detected generating amongst bloting-paper, in a paper was even the meal-tub is not secure irom chem, productions fore evident that both animal and regetable produ supply suitable fond for these mischierous annmaly difficult ho keep free from these pess possible, we ought not secluds evident that, as are woollen apparel or furni ture for any length of time ; and gardeners, farmers, and seedsmen should be most careful not to use old sacks that have been mended with worsted instead of hemp; much less any sacks in which woolten is spun in the thread, as I think I have seen in some of foreign manufacture, I am pretty confident, if sacks were clean, sound, and only composed of vegetable thread, that they would nere be attacked by such caterpillars; neither would coarse blotting-paper, were it not for the quantity of wool which it contains: and owing to the pitch and tar in the old ropes, of which our brown paper is manufactured, nothing, perhaps, is better adapted for protecting goods from the attacks of the insects which infest our habitations.
It seems singular that these insects should feed upon corks and rotten wood; but as they will live in Boleti, it is probable that some such productions, although minute, may be generated upon old, moist, or decaying corks; and we know that on rotten wood in cellars, such vegetables are for from uncommon. It is therefore very essential that such substances should not be left about, neithes should any woollen articles: for an old piece of a coat, or flannel, lying by accident for any length of time in an out havse, or the rarden, may breed thousands of these trouble which would fly in at the windows in the evening and soon establish themselves in the housco As indl abtly the subject, I will leave the remedies for future consideration.--Ruricola.

HOME CORRESPONDENCE
researches amongs the dusty tomes of Paracelsus, Van Helmont, Albert Groot, and the numerous spawn of cqualled by that

## "Sage philosonher,

Who read all Alexander labers have met with no better success. However, your labou you stand as another proof (hardly required) of we pan can take to go to the roots of things ; "A cenitates Acade vary your studies, and amplify the "or the anusement and
instruction of your readers. Your speculation on the
derivation of this word from Mars and ago is certainly ingenious; and I wish it may prove a "perfect magistery" in your etymological alchemy. But have you not opened a better road to the desired object in your article (p. 854) Dr. Bowring's opinion in support of your supposition, that the Lily in question was the Scarlet Martagon. Now, as the Martagons all came into the hands of our early gardeners from the Levant, is it not probabelongs to some of 1he Saracenic, Turkish, or Syriac dialects? and is it not more likely that, if the pillosophrom the flower rather than the flower from it? It would be in full accordance with the Eastern style of figure and hyperbole to speak of "the great secret" as the Lily of perfection, tha aelight of Solomon, and the joy of the pre-Adamite world. It would look something like "malice prepense" to send you another wild-goose-chase in this new direction, with no greater prospect of success tan to end with bility I offer to your notice; and perhaps to end widh wights, whose curiosity is only exceeded by their love o ease : every one, as ready as myself to subscribe, your friend and obsed servanth pondent $R$. finds nothing in the language artagon. He says, armat mar-tan signifies in Persian, "having a body like a serpent:" Mar, the name of serpent, being frequently compounded with other words, and he suggest that possibly the spoting ond this etrmology may be the true one, if the name was transposed froma the plant to the philosopher's stone, as seems probable; for we no find in an abstrat of chemisum, of following pun lished, in the rheatrum Ching thon been searching for the philosopher's stone. "Many occult names have been given to the material or this stone, chiefly derived from similitude. It has been called vegetable, minera, and anmal, buid the hose well know who are acquainted wis the secret and miracles of this stone. Of this kind was Raymond Lully's Lunaria, whose flowers, well known to philoso phers, possessed wonderful virtues. name, however, did not understand that jected on metals, or that anything like
prepared from them; but the abstruse mind of losophers regarded it far otherwise. In like manner they called the material Martagon, to which therefore they ascribed some occult chemical action, notwithstanding that it really meant nothing more than some hidden similitude." In this obscure language there is nothing to how distinctly whether the name Martagon was transferred from the plant to the material of the philosopher's stone, or vice versd, or whether indeed Martagon had anything to do with plants; yet as the writer immediately goes on to speak of vegetable substances, it ind if so, Martan may be its oriental root
Lime-Water:-Opinions and practice seem very much at variance as to this liquid's destroying worms. I tried it a short time ago on several collected together; it appeared to incommode them a little, as they moved off in
double quick time ; but as to dying, $I$, at least, could see no signs of it. The lime was good stone-lime, and the lime-water had just been made.-IIibernia.
Manures.-I may perhaps be excused for saying a few words on the subject of concentrated manures generally. It appears to me that we have more to learn of the best
mode and time of applying, and perhaps also the best quantity, than of the composition of this class of fertilizers. Chemical science indicates with tolerable precision the latter ; but a varied, patient, and extended practice can the infancy of a new system mistakes will be made and disappointments ensue. This may generally be traced to the neglect of some plain principle, or to the want of suf ficient experience. One of the most fruitful causes of error has been the idea that almost any quantity, however small, of these concentruted preparations, applied to the land, is to produce astonishing effects, as if by some magical or mysterious influence, and not by merely restoring to the mosterious influence, and other substances which had been withdrawn in the crops. The manure-maker has perhaps unconsciously encouraged this error, by his recommerdation of quantities too small to produce any marked effect. of the mane, and thus injuring or destroying the crop of the manure, and thus injuring or destroying the crop but there are others about which we cannot pronounce so decidedly-I allude to the mode and time of application. Here we must have recourse to the practical agriculturist; for it is only by carefully conducted, judiciously contrived, and varied comparative espermeds peroned by himsel (not left to his underlings), that we can ever arrive at the and cordial co-operation, the man of science must toil in Vain; he can never benefit him to any great extent. It is a question which can be decided by Whether, for instance, any particular manure had better be drilled in with the seed, deposited, mixed withit, above or below it, and to what extent ; whether it should ie appried
broadcast, harrowed in, and the seed sown upon it ; whether broadcast, harrowed in, and the seed sown upon it; whether
it should be applied as a top-dressing after the plant is up; it should be applied as a top-dressing after the plant is up; Whether the whole should be thus applied, or by instal-
ments, how many, and when? Where are we to look for ments, how many, and when? Where are we to look for
salisfactory answers to these and the like queries, but to
practice and practical men? I wish it were possible to organise an ealensive set of experiments, tending for illustrate and prove the things 1 have mentioned Gor anything is preferable to doubt and uncertain Glorious prospects are before us, and il seems we caa all verseuch them; but the space between is traversed only by patient labour. Would it not be pracicable to interest some dozen or two of inteligent agriculturists to experiment upon this subject after the manner of Professor Henslow in respect of the gypsumed dunghill-not so much to try manure against manure-
but to observe and prove the condition under which any but to observe and prove the condise them produces its maximum effect. The greater variety of conditions that these experiments are made to include, though exacting more time and patience, the more perfect, comprehensive, and satisfactory they will be.-Since writing the above, 1 have perused Prossor Henslow's eighth letter to the Suffolk farmers, and while I cannot but admire his patient pains-taking to bribe them, as it were, to promote their own interests, I think that unless some precaution is taken to ensure that what each experimenter uses as gypsum is really so, a loose screw will be introduced into the experiment; perfect a it may be in every other respect. Now, although I have not much time to give away, yet so anxious am I that the Rev. Professor's views should be carried out in an unex eptionable manner, that if he will allow me to co-operate oll him to the extent of my feeble ability, in the following manner, my services are at the command or the purposes of this experiment, gratuitously, examine any sample of "gypsum" that may be give my opinion of it. As much as can be conveyed in a penny letter will be sufficient. I think, Sir, you will agree with me that unless some sort of security is afforded, that (unmixed with carbonate or fine sand), that the experiment which it is so much to be desired should be as perfect as possible, may be vitiated to a very coissiderable extent. V. H. Potter, Chemical ful to Mr - [We are sure the Suffolk farmers wim tre gratesuch of them as a stamp along with the sample, in order that he may no have to pay back postage.]

Catle.- 1 t is stated at p . 103, that sleep kept in a cow pasture injure the butter. This fact wants confirmation, as newspapers say: "Cows and sheep have always red the A hor wir thealy do spoil milk, this occurs also if the cows can get at cabbage-leaves or garden refuse in which latter case I know the butter is deter Cucumbers. - In lookiug over the list of winners at Ipswich Cucur shor ordeners in this district, that the judges have, on this occasion, departed from the standard laid down by the said Society, for they assert prize ought to have been first, and the third to have been sccond ; for the second brace of fruit measured $19+16 \frac{1}{2}=$ $35 \frac{1}{2}$ in $;$ and the third $17+16 \frac{1}{2}=33 \frac{1}{2}$ in. ; whereas, the
winning brace was only $21+12=33$ in. : so that you will perceive the third to exceed by $\frac{1}{2}$ in., and the second by 2 inin, the length of the first. The second and third nel wise beat the first in was long and yellow ; whereas, in the second and third it was siort and of a good colour : the first was light green, whilst the other two were of a dark-green colour. The second and third likewise equal
the first in all other qualities. Now, how can the censors the first in all other qualities. Now, how can the censors which. I wish to see all such societies have? The precedent, too, is a bad one for our Manchester and other local exhibitions in the country, for if it is fonlowed, ala the rules may be trampled on with impunity, at the public
tions will become useless. I would add, that supposed the competition to have been for the best brace and not for a single fruit.-Justitio.
declined the amateur can depend for particular seedsiman on whom 1 suppose you will also object to allow your friends to do so through the pages of the Chronicle. Perhaps you are right in refusing to expose the present system personally being sold under falise names, the amateur who is limited to space must continue to bear his annual disappointment Last year proured seeds of the Cabbage and Caulifiower fon, Inever thought of being deceived but, alas! m Brocoli, Savoys, Cabbages, Lettuces, \&ce., turned ou perfect rubbish, and the Cauliflowers, nhich I have with great care saved through the winter, are all of a spurious being coarse, and without any signs of producing good heads. The only chance we amateurs have of obtaining true seeds, is by entering into an agreement to employ any " man who will advertise in the cold orticle to the enuine and that he requests his customers will publicly state either their satisfaction or dissatisfaction, after a fair trial." The question is, How can a man insure a true breed? Simply by sending plants of the various species to different cot tage gardeners at a distance from each other, only allowing one sort to be grown by the same individual, thus guarding against the mixture of the fertilizing property amongs the Brassica tribe. The labourer's garden would be turned to a most profitable account without much labour. A man with a small capital, who would give his attention
to this department of horticulture, with common care and attention, might in a few years realize a comfortable independence; the outlay in the first instance would be calt, and the return certain, provided diligence and dis and on were shown in selecting the plants for seedings, and occasionally visiting them in their progress Cauliflower in th serving them true to their kind. They must be situated at a certain distance from each other, in order that Bees and insects may visit many other flowers in their fiom from pold 0 pata and thus zet rid of the pollen of the Brocoli before settling on the Cauliflower, and unless this Brocat foct a mportantale -W. [We are sure that our corre sponder will spondents ommerd the all other cases is not give the same party an opportunity of selling bad seeds wwice.]
Madia sativa.-In your "Notices to Correspondents," page 89, you say that Madia sativa has no English name.
Is it not called the "Salad Oil Plant?" We received under that name, four vears ago, a packet of seeds from Germany, accompanied with a short description of its properties to the following effect:-"The superiority of this plant over all others known till this time is proved by experiment. The seed should be sown in the end of October or the beginning of spring, in any soil ; from 4 to 6 lbs of seed is required for an acre, It ripens in three months after being sown in the spring, and does no suffer in the least from frost nor insects, yielding about 450 lbs . per acre of sweet al the first quality. It has been proved to be much superior to the orve oir used in this country (Germany)." Not having convenience to try the experiment, I cannot say much as to its ntility as a salid on plant, but 1 belsere it mas been treal ho beot land, and found not to be of sufficient inportance to grown of any really English name for Madia sativa. It may, however, have had some such name as you me tion. Our chmate is too damp in summer to rencer it an object of profitable cultivation.
Amaryllis speciosissima.-I would recommend "A Country Vicar," p. 85, to take up his bulbs of Amarylis
speciosissima, which probably have, in their present situation, more aqueous food than they can assimilate in a low temperature, which will cause them to produce nothing but leaves. He slould, after polting them 3 in a pot, inches across, and well drained, remove their leaves are full grown; they should then be more moderately watered, but still kept warm, and when the leaves are quite dead the pots may be placed anywhere secure from frost until next February, whon the bulbs should be repotted, a pot or two at a time according to his stock, into turfy loam and sand; little water should be given unti the
leaves are in action. By introducing into a gentle heat two pots at one tione, he will find no difficulty in flowercession of flowers. Perliops some other correspondent will give him directions for flowering others of this genus.
Practical Philosophy in a small Way.-Many persons may have noticed the great rapidity with which the sacks of malt are raised to the tops of served that they shoot upwards like an arrow, notwithstanding that being drawn from various parts of the waggon, they must often start with a tendency to swing ar wible the man in the cart, who gives the sack a slight twirl as it leaves his hand, which rifles it as effectually as if it were discharged from a twisted barrel. This is, perhaps, as pretty an example of
science applied to humble matters as will be easily met Antiquities of Gardening: Market Gardencrs; Pigs. lu the common account of a singular privilege enjoyed by the comer vegetables to the public market were compelled to pay him a certain toll. That functionary himoself, with assistade of giving a receipt, by marking the amount with chalk upon the back of the person paying. These tins were antion in some other way d'Aussy, writing in 1782, says, "There are yet many people living who can testify to this fact; and I have uyself questioned several mer, who gardeners on the sub thas marked in their youth," A remember having beenly prevailed in Scotland, where the similar custom formen poll of meal and coal, \&c. in the common hangman took Edinburgh, and Inverness. Some other curious privileges were also possessed by the French other for instance, when an execution had taken place within the territory belonging to a monastery, the holy brotherhood were compelied, besides other fees, to present him with a pig's head. He attended annually on St. Vincent's day, wfer the head, provided for that purpose by the Abbot of St. Germain's. During the twelfth century, it was the custom of the inhabitants of Paris to breed pigs, which were allowed to roam about the streets during the day-time; thus gaintime creating an insufferable nuisance, which led to the following serious accident: On the 2nd Oct., 1131, as Prince Philippe, son of Louis le Grom, waif riding between
the Hotel de Ville and the Church of St. Gervois, a pig ran between the horse's legs, and frightened the animal
so much, that the Prince was thrown from his saddle, and so much, that the Prince was thrown from his saddle, and
his skull fractured so severely that he died the next day. This accident caused certain police regulations regarding pigs to be promulgated. They, however, met with considerable resistance; the monks of St. Anthony especias attended by pigs, claimed to be exempted from the operation of the new laws, and altimately succeeded in obtaining the privilege of being the only proprietors whose pigs were allowed to roam about the city. The
public executioner was appointed to seize any pig found astray which did not belong to the holy fathers; and, upon taking it to the Hôtel Dieu, he exacted a fine of five sous from the owner, or decapitated the animal, reserving the head for his own emolument.-T. Smith.
Bees.-If "Agger" will have the goodness to mention the primary cause why Bees store up honey, I shall, perhaps, at $p$ a word or two to say to bim respecting his statement at p. $129:$ viz., "That propagation of the species is not
the object for which we keep Bees."-J. W. Bees.-I find that your correspondent wishes to know if Bees' eggs are transmutable, is under the impression that I consider them not to be so. I cerperhaps some of the readers of the Chronicle may recollect a controversy respecting it, which appeared in the Garde-
ners' Gazetie during 1841. Though I then stated some things in favour of the belief of their being not transmutable I at the same time advised others to put the question to farther test. Since then I have done so myself, and found that Bees can rear a queen provided they have a brood comb. For the sake of "Apis," and otherss who may be ignorant of this subject I shall enter into it a Was first advanced by Shirach; but if I mistake not, Huber went so far as to say that their grabs can be
changed into Queen Bees although two or three days old ; and that it was accomplished by peculiar food and treatment. The casual observer may see nothing remarkable
in this, but the accurate naturalist will readily do so; for in this, but the accurate naturalist will readily do so; for
he sees it favours the belief of the transmigration of the species. When Shirach broached this startling doctrine, Bonnet condemned it, on the ground that it was against ment to change or make one kind of animal into another. In spite of this, however, A piariang believed it, though they could not esplain so strange a phenomenon. This, nevertheless, appears less startling when Huber's belief is
known; viz, that working Bees are queens in an undeveloped state, or half-queens, if I may say so; but that different food and treatment make up the other half I am not prepared to prove, nor can I assert that eggs which
produce working Bees are transmutable, far less that their produce working Bees are transmutable, far less that their
grubs are so. It is almost useless for me to mention that there is hut one queen or head Bee in a colony, and that without one it cannot long exist; for she deposits the eggs are only reared at certain periods, the question is, how are they supplied in cases of casual or accidental loss? The following statement will, I think, show how Bees are prethe gueen from a weak hive containing only three combs the inside one contained eggs and brood. The queenless Bees were soon in an uproar, as they always are when they lose their queen. I confined them in the hive to prevent their dispersion, as well as to keep out their
neighbours who were bent on their destruction. At the end of a week, a queen's cell was begun on the centre of the brood comb; in ten days afterwards it was sealed up, a queen in the hive which differed in no way, except in age, from the rightful one which $I$ bad taken. The cell
in which it was reared differed a little from the usual form of queen cells, being less of a ptar shape and not so deep; cocoon of the insect, in a way similar the length of the of queen wasps and hornets. Mr. Baxter, in his worlk on Bees, has given an interesting account of this subject, which shows how far the various organs of the grubs of Quees Bees. He seems to think that this is not enough; for he observes that those adopted queens are educated is foot the only one who tells us of the education of insects; but to enlarge upon this project would lead to the difficult question of instinct, from which I must detect Royal jelly in a bee-hive. I mean the peculiar mixture that is said to change the larve into Queen Bees. Having stated that working Bees are said to be Queens in an undeveloped state, it may be alleged that the enlargement of the cells gives room for the complete growth of
the insects. This is a more likely thing than Royal jelly changing them; still it is open to objection, for more Hrowth could hardly give colour or the marks peculiar to life. Quees, nor different instinct, nor longer period of rions subject one season. Those who disputed this culeet The rat švid that it but "bide you a wee," recol put into the cell, nor formed a cell round one, neither an egg that ought to have produced a working Bee. To ascertain the former, nothing but grubs ought to have been in the cells; as for the latter, Bees may have eggs in store that produce Queen Bees; this, however, is not
likely. But thee is another obstacle in the way:
Hit Huber awserg thit working Bees can deposit eggs, and
may, in such cases, those that produce Head Bees. Per haps the hest way to test this mysterious thing would be them with those from worke ${ }^{\prime}$ require the perseverance of a Huber or Bonner.-J Wighton.
with Lichen Fruit-trees.-When fruit-trees are infested with Lichens and Moss, not only is the health of the trees plication of lime twater, will effectually displace the Lichen :-a common water barrel, placed on a wheelbarrow, is best suited for the purpose, and it should be filled as full of water as a person can convenientily wheel it. Put in plenty of quicklime, as water will only take up a certain portion; it
cannot be made too strong, but it should not be so thick as to prevent its being applied with a syringe, having a coarse rose. It is best, I believe, to wheel it immediately slacking of the lime. It will be necessary for one person to keep stirring it while another syringes the trees; by this means a portion of the lime is carried with the water and adheres both to the wall and trees. This mode of destroying Lichen is nothing new, but it may not be gene-Plum-trees, and to my great satisfaction the Lichens were quite destroyed, both on the wall and trees; the latter now present a healthy appearance, and the bark is quite den-pots thoroughly after the plants have been turned out of them, before they are made use of again; and many pots which have been occupied by plants, requiring a liberal supply or water, are covered with a green vegetable production: if, after being washed, the pots are dipped
into strong, clear, lime-water, it will quite destroy this substances, 4 the present is a to trees, no time should be lost where they are attacked by this pest.-G. G. Watson, Vicarage, Norton, Stock-ton-on-Tee
Canvas Coverings for Frames.-I do not think that naing is more suitable for canvas coverings than plain painting with drying oin. This should be done in the autumn, the canvas being fully exposed to the sun and air for some time afterwards, by being spread on the Grass. Though this method does not make it quite transparent, Hibernia.
Refuse Hops as a Substitute for Slable Manure. Some few years back, being unable to obtain a sufficient quantity of stable manure, 1 was (at the instance of a two loads of hops, which had undergone the usual process in making beer. The hops were carted to me in a warm, moist state, and immediately made up into a couple of covered with about three inches of common garden mould and the lights shut down. Never having before tried the experiment, I was fearful of putting in cuttings (Dablias) the morning of the third day, no steam or rank smell being perceivable, I ordered one of the frames to be filled markably well By the time thay other bed had been cleared, and I directed the Hops to be turned over, well watered, and again made up. This caused them to heat moderately a second time; and the plants having been potted off into $60^{\prime}$ s, were at once rapid growth, seeming to delight in the genial warmth mitted from the Hops. I have adopted the foregoing plan for three successive years, and am now fully conso powerful in the first instance as common dung, yet that it is more lasting and equal. For those individuals who pelled to leave their frames for the whole day without peiled to leave their frames for the whole day without as on no one occasion during the above period were $m y$ plants ever injured by the sudden rising of steam or rank smell, a disaster which too often occurs when stable
manure is used, unless the beds are very carefully looked after.-

## PROCEEDINGS OF SOCIETIES.

 March 7\%-R. W. Barchard, Esq, in the chair. The Rev. J,Antrobus, W. Brown, and G, Green, Esqras, and Mr. J. Garra-
way, way, were elected Fellows. Mr. Goode, gr. to Mrs. Lawrence,
exlibibited a collection of plants, containing very handsome speci-
mens menc of Columnea scandensis, , ts light preen foliage drooping
gracefully around the pot, and each shoot bearing at its extremity large light crimson flowers; Oncidium bifolium, an elegant
syecies, with ammall, chocolate spotted perianth, and a arge,
bright yeillow labellum; Brassavola brifht y ellow labellum; Braassavola glacua, in excellent health,
which appeared to be owing to its being grown in earth instead of upon a block of wood, EBcchyyanghur maculatus, with dark
fleshy leaves, amongst which its numer heshy leaves, amongst which its numerous clusters of scarlet
blossoms prod uced a pretty effect; a species of Hippeastrum, with
bright scarret flowe bright scarlet flowers, having a greenishicentre; a large plant of
the new Begnia coccinea; Oncrium incurvum, and the beauthe new Bergnia coccinea; Oncidium incurvum, and the beau-
tiful Burlingtonia rgitia. a Kinightian medal was awarded for
the Coliumnea gr. to W. H. Story, Esq., well. bloomed plants of erica ardens,
venix rubra, and Petiveriana bicolor, the latter havine pretty greenish-yellow tubular flowers, with a reddish tinge at be base,
and prominent brown stamens, several handsome hybrid Epa-
cise
 of a deep rose-colour, and remarkable for the freedom with which thooms: a Banksian medal was awarded for the Epacrises.
From Mr. Beck, very heattly and well bloomed plants of C tisus racemosus, Leschenáultia formosa, Erica transparens, wicolor, and three Cinerárias, called Henciersonit, Madonna, and Urania,
all grown in slate pots, and affording an further convincing proof
of the succels. tivated in this material. From Mr, smith description may be cul-
handsome hybrid varieties of Rhododendron, called Snith
varium, raised between R. caucasicum and the white arbóreum the habit of all is dwarf, and they are stated to possess a consurdel
able degree of hardiness, liaving been exlooscd to the weatlic 2ble degree of hardiness, having beenc exploscd to the weathe
doring winter until taken into he housc of forward the11 bleoms
with doring winter until taken into the house to forward then blooms
with these was a small plant of a Rhododendron, called Rol
lisoni, with leaves of a rusty colour on the unker side, and fin deep erimson flowers, produced in a dense cluster, this appeal
to be identical with the Ceylon variety of R, arbereum; it i
stated to be hardy, but stated to be hardy, but doubts are entertaned upon this phoint Gaines exhibited a was awarding Rlod for the hybrid varicties. Mr
cailed Henri Favre), with neatly-cupped petals, of a lirias (onk called Henri Favre), with neatly cupped petals, of a bright rose
colour; the other C. monstrosa, red, with a double row of outes petals, and liaving the centre filled up with smaller pctals,
various forms. From Mr. Kynoek, gl. to Alderman Copeland
two seedling Epacrises. From Messrs. Veltch, seteral fin two seedling Epacrises. From Messrs. Ventch, selceral fine
blooms of a Camellia called pulchcrrima, a variety intorduce
from the Continent several years since, and bloomed by H. Por from the Continent several years since, and bloomed by H. Por
ter, Esq., of Winslade House, Exeter; the flowers resenuble those
of C. althriflors of C. althæalfora in size and form, and are of a dcep roseccolour,
mottled and striped with white; if it should always iloom a
large, and retain its mottled character, it will prove a valuable large, and retain its mottled character, it will prove a valuable
variety. From Mr. Dennis, a Persian Lilac in bluom. From Mr
Conway, two plants of Pelargonium Lanel, whell appears Io br a free bloomer, and well suited for early forcing. Messss. Rolwhite flowers, having the labellum strongly narked with light
yellow: a Banksian medal was awarded. My.Small, of Colnbrook, yent a a Beedling Fuchsia, apparently raisedt letwect Folnbrook, fulgens
sent or cordirolia, and some of the older and darker varictres. From thic
Hon. W. H. Strangways, a dish of Pine Golden Russet Apples, in
good preservation. From Mr. Henderson, gr. to Sir G. Beaugood preservation. From Mr. Henderson, gr. to Sir Go. Beau-
mont, Bart., a fair specimen of the Queen Pine Ayple, welgling
3lbs variety may be well swelled in winter, if kept at a fow tempera ture ; the plant from which the present fruit was cut having been
grown in a house never higher than from $50^{\prime}$ to $55^{\circ}$ by mght, and Mr. Stewart, gr. to W. Bagge, Esq., a leash of hybrid Cucumbers,
called the Ringleader, system, and watered with a solution of nitrate of soda, in the proportion of 10 oz . to 3 gallons of watex. From Mr. Martin, of of Wallington, Surrey, exhiblted the root of a Pear-tree, which
had been taken out of a well; this root was 33 feet long resembled a small rope, having only one or two 1 amitications during its entire length. From Mr. H. Scott, of Charles-street
New-road, specimens of cast-iron pipes, for the conves water and other fluids; these are so constructed that by means of pipes can be securely joined together, witho pipes, a selies
brazing. brazing. The same person also exhibited an ingenious contrivallow for the alternate expansion and contraction of pipes con-
taining steam or hot water. From the garden of the Society were plants of Oncidium altissimum ; the large and small varieties of On, ampliatum, the former bearing a fine sureading
panicle of large, bright yellow flowers; the showy On. leucoch1 lum; Dendrobium aggregatum, with a drooping spike of sulphur-
coloured flowers, having the centre of the labellimm stronply marked with orange; the delicate little D. sccuadum, and
Acfia Riceana, an elegant specics, with frooping branches loaded with a profusion of light yellow, feathery splkes of an early purple sort, of exceedingly
Monarch Pear, stated to lie hardy and
best as a standard, and bearing rich and moodting frumt, whech whll
keep well till January; Winter Crassane old Crassane, in bearing abundantly as a standard, and the
Vicar of Winkfid, described at p. 20 of the Chronicle of this year. March 1.-P. Pusey, Esq., in the chair. Twenty. Mepors were elected. Mr. R. Barker presented the monthly
report of the accounts, and state of the Society's funds, from which it appeared that in addition to invested capital the current cash baiance was $1,593 l$. It was resolved, "That in
future the carriage shall not be paid for the Journals of Nem-
bers whose subscriptions are in arrear, but that, on their receipt
a letter shall bee addresse a letter shall be addressed to the parties, informing them that
their journals may be had at the Office of the Society cation with a written order, and cane cither be forwanalded immne-
diately at their own expense, or with the next 1 umber of the diately at their own expense, or with the next number of the
Journal, at the expense of the Society." Col. Challoncr pre-
sented the general balance-sheet of the accounts connected with the late Bristol Meetinge, from which it appeared that, inde-
pendently of $1,300 \mathrm{l}$, given in prizes, and the various sums offered for Prize Essays, the Society had contributed sish. out of itt own receipts, thie latter being $4,202 l$, while the outlay amounted to reference to the arrangements for the Derlly mefting. This was
adopted, and the contract with Mr. Manning for the works comnected with the showyard and Pavilion for 2,200\%, confirmed. Mr. Pusey informed the Council he had applied to the Earl of
Aberdeen for letters of introdnction and safeguard in favour of
Dr. Dauheny, who in a few days would pocecd on tus tour of inquiry throuphn Estremadara and other distrects in Spant, where carth of bones) was known to abound. Mar. Musey also sfated

their manufacture, price, and peculiar merits; Mr. Squarey a
specimen of phosphate of lime; Mr. F. Clowes a communicalion

 The Lord Bishop of Norwich in the chair Messrs. T. C. Janson and W. Solly were elected Fellows. Mr, Smith presented a fine print of Bánksia grandis, Mr. Westwood presented two cury had
productions oltained from plants of Sonneratia acida. They hat
been sent to this country by Mr. Templeton, of Ceylon, in which island the Sonneritia grows abundantly. These bodies wer
spindle-shaped, looking like great Clavarias. In a letter from Mr the rwots of the somnerdia. The end most distant from the roo haul a disturet balk and pith; whilst that which was near the
root sent off sereral dist.nct yootlets of its own. The midule portion, which was very much enlarged, as compared with the tissue. On this account it had been used with great success as
a lining for insect-cases. As no discussions are aliowed at this Society, of course no opinion was given to the Members by the able botamists present on the nature of these curious produc
tions. A continuation of Mr. Griffith's paper on the developtions. A continuation of antalum was read to the Society, and
ment of ovilum of San
accompanied by drawings illustrative of the author's views. WLORICULTURAL SOCIETY.
Mareh \%.-Mr. Mauger ul the char. The following propo sitions relative to the exhbitrons of the ensuing season were
made by Mr. Wildman - "That untll the funds of the Society
will bear the expense of puble exhibitons on a scale suited to will bear the expense of pubic exhmitrons on a scile suted apart
its character axd ultimate obyects, no separate days be set ane
for that puspose ; but that in lieu thereuf the Soclety do neet for that puspose; but that in liew thereof the Society do meet
upon tuo occaulons during the season of each particular flower, opportumitics for comijetition, or for the exhnbuinn of specimens."
Carricel, for our occasion only. "That the prizes on these occsions be for the present restricted to seentimgs and single spec
mens in class slowing, unless any of the members shoud desire order to cncourage the exhmintion of seedlings, prizes be awarded, second-class dowers throughout the scason; the prizes to be
equal in value to those offered on the days of competition. But creating a reasonable distinction between members and non. members, that no such prizes be paid to any but subscribers."
Both the latter propositions were agreed to. It was further pro-posed-" That prizes be offered from time to time for essays upon
the various flowers which fall within the objects of the Society, the various flowers which fall within the objects of the sociex,
embracing their properties and defts; the best mode of ex-
lubitim nall of judgmg, and naming the heat varietics of each sort." On account of the late hour at which the business of the
evening was bronght to a close, the reading of Mr. Onson's paper
upon

## MISCELLANEOUS.

Treatment of Lachenálias.-The bulbs which are not: large should be posked in September, three in a pot. The parts of the former to one of the latter, with a small quantity of leaf-mould. Select good sound bulbs for flowering, and pot the small offsets by themselves. The pots should be well drained, and after the bulbs are planted, remove them co a frame, where they win have Keep them in this sitnation until November, or when the nights become quite frosty, giving just. sufficient removed to the parlour or greenhouse, placing them in a light situation, and watering then cautiously until they begin to grow. In February the flower-stems will appear, when more water should be given, though with course of a few weeks will be beautifully in bloom, remaining so for two or three weeks, or much longer if they are kept in a partially shaded place. In May, when the foliage begins to turn yellow, the pots may be removed to the open air for a few weeks, when the bulbs should be taken out of the pots and laid away in a dry, cool, Hovey's Magazine of Horticulture.

Bulbous-rooted Chervil.-Offsets and seeds of this plant were presented to the Horticultural Society of Paris by M. Lissa, who reported that it was grown in Germany for culinary purposes. A few offsets, about the size of nuts, are produced at the base of each plant. At present, we are of opinion, that, in consequence of the poisonous quauntil more is known respecting it, to use, this vegetable with circumspection.-Bon Jardinier.

New Potatoes.- In consequence the last antume mild experiment in gardening was attempted by a lady in Madeira-street, North Leith, near the opening of Queens-ferry-1oad, which has turned out completely successinul. About the middle of October she planted some Potatoe removed to drills in the garden, and warmly protected against the contingencies of winter. The stems grew was removed, and a plentiful supply taken up; the Pota toes varying in size from a pheasant's to a hen's egg-
Edinburgh Paper.

Sulphur in Plants.-Among the plants which are particularly adduced. There can be no doubt that these plants are capable of decamposing the sulphuric acid con-
therefrom the sulphur. Vogel, however, sowed seeds in a soil which contained neither free sulphur nor saline sulphates; and notwithstanding this these planis consisted of considerable quantity of sulphur. The soil consisted out a coarse powder of white glass. Before it had been put anto the vessel the glass had been strongly heated, but the point of fusion, and then washed with a cosi tak able quantity of water, which, however, did aot cress seeds, and kept the soil moist with distilled water. When seeds, and bept the soing plants hattained the height of some inches, hey were extracted, together with the roots, the white oots were then cut off, and, after being washed, quickly
dried, together with the plants. Both were then exposed o the action of heat in a retort, and it now appeared that not only the green leaves and stalks, but likewise the White roots contained a considerable quantity of sulphur This was indeed the case with the seeds employed, but the quantity of sulphur contained in the plants is much juice pressed from the plants of Cress grown on powdered glass, as previously described, also contained saline sul phates in considerable quantity. Vogel also caused som Cress-seeds to vegetate in coarsely-ground quartz, and in oulverized flint-glass, and also in fine and well-washe silica, previously disengaged from fluosilicic acid by mean of water. (The vegetation proceeded much slower in the ast than in the two first.) The plants grown in a soil of this description always contained sulphur and saline sul phates. in order to fix approximately the quantity of sulphur contained in the seeds of Cress, as well as in the plants grown therefrom, Vogel fuicher undertook the folowing experiments:- 100 grains of Cress-seeds were gasses gradually in a retort to a red heat, and the To this ley acetate of lead was then added, until no further precipitation ensued. The brown precipitate thus produced after being well washed, was found to consist of hydrated oxide of lead, together with carbonate of lead, and of black sulphuret of lead. The two former were dissolved in dilute and boiling nitric acid, and a quantity of sulphuret of lead was then left behind, which quantity of sulphed with a cood deal of water, and then drije weighed 0.95 grains, corresponding to 0.129 of sulphur. In order to obtain in like manner a quantitative estimation of the sulphur contained in the Cress-plants, Vogel then submitted a number of plants grown from 100 grains of seeds to another examination. They weighed after being dried 2,040 grains, which, treated in the same manner as the seeds, yielded $15^{\prime} 1$ grains of sulphuret of lead, corresponding to 2.03 grains of sulphur. How this surplus of sulphur may have been introduced into the Annals of Chemistry.
British Guyana.-Mr. Schomburgk, after an absence of thirteen months, has returned with bis party from the interior. He represents the climate in the vicinity of the Sandstone Hills, which stretch for several miles across the rise never standing above $51^{\circ}$; a further evidence of which is that blackberries are there found in abundance. In traversing the savannahs and forests, Mr. Schomburgk saw hundreds of acres of Plantains growing wild, and so luxuriantly that he represents some of them to be as thick as a man's body, and 40 or 50 feet high. He has brought with him suckers from these trees, which he is desirous of cultivating ; being confident that they are not tainted with the disease which affects so large a portion of S. Pand hins in a cultivated state. The bealta the whe party has been generally good throngack of fever, and suffering from want of food.-Extracted from the Guyana Herald
Very curious Fact, if true.-A gentleman living in time in order to make a compost of manure for farm purposes. The hens in his poultry-yard, which were laying eggs, had access to this compost; and as it is well known that fowls partake readily of lime, which enters largely into, and is necessary to, the formation of the shel, they fed, it is supposed, according to their appetite pon it. The consequence was, that in a few days, with to have such an intolerable smell of gas that no one could eat them.-Dumfries Herald.
Mildness of the Climate in Devonshive.-There is now rowing at Brookhill, the residence of A. H. Holdsworth Esq., at the entrance of elicate foliage, and covered with a profusion of yellow flowers. It is 20 feet high, was rgised about 12 years since, from a seed brought from the Cape of Good Hope, and during the whole time it has withstood the gour of our climate, which indeed is scarcely felt in that warm and sheltered spot--Exeter Gazette

## GARDEN MEMORANDA

Messrs. Chandler's Nursery, Yauxhall.-The extensive collec tion of Camelhas at this Nursery whl, if the weather is favourabie,
be 11 fun perfection th a few days. A great vanety of sorts are

A Treatise on the Culture of the Vine in Pots. By J. Mearns, F.H.S. 12 mo . Or,

Mr. MEARNS has long been celebrated for the success which has attended his cultivation of the Vine by the coiling system ; a work, therefore, which promises to convey the necessary information relative to this method of reatment can scarcely fail of being well received.
To render the treatise as complete as possible, the author has briefly entered upon the Natural History of the Vine ; tracing its progress from its first introduction into Britain, and instancing some of the most re markable Vines now existing. It appears that no reguta mode of classifying the numerous varieties of the Grape has yet been adopted, although the catalogue of the Luxembourg collection, published in 1802 , recorded 267 sorts. For the list contained in this work Mr. Mearns is indebted to the catalogue of the Horticultural Society, containing 183 sorts.

The author, in his description of soils, states that after numerous experiments he found pot-Vines "to luxuriate , walk for limestone rock, and which had been a sheepmany places it was only three inches deep." With this many place row were mixed road-scrapings, coataiang sichound tity "to allom the water to drain freely through all its tity arts, to the water to drain freely through all parts, and to permit

In the propagation of Vines by coiling, the author's practice, if single rods are contemplated, is not to leave them longer than four or five feet, and to remove all the builed into lone narmow These rootless cuttings are coiled into long narrow pots; being so placed that the bud of the apex of the shoot, although the highest part, is still two inches beneath the surface of the soin, at the same time sufficient room is left beneath the coll for the roots to extend themselves. These cuttings, being put in between the middle of January and the end of March, are plunged at once into a hotbed, between 50 and 100 where they remain until they require more pot-room they are then shifted, and placed in a suitable situation until again excited in November or December. When the cutting begins to grow, the shoot is trained upright, until it is seven, eight, or ten joints long, when the top is pinched off.
After this stopping, the laterals are displaced as they appear; and if the Vines have done well, two or three of the buds will also be excited at the same time, in which case the shoots are cut down to the lowest excited eye. The single shoot is then trained upright and divested of all laterals and tendrils. None of the plants are allowed to grow longer than from four to six feet, at which length the tops are pinched off ; the uppermost lateral, which is also stopped at the first joint, being left to carry off the remaining sap. At this season the plants are removed to warm and sheltered situation in the open air ; and when the leaves fall, they are headed down to one, two, or three joints, according to their strength, and are placed agamst a northern aspect. When cold weather sets in, they are taken back to a sheltered spot and plunged in the ground to protect the roots; the pots being mulche
When these yearling potted Vines are brought early into action, it is recommended to bow a piece of wire above the pot, with both its ends runnizg down the inside; of sufficient height to allow the whole length of the stem to be attached to it, as represented in the accompanying figure. The buds, from the stem being thus bent, this is effected the Tine is untied and secured to an upright stake or sloping trellis. To prevent evaporation, the stem is wrapped loosely in moss, which is kept constantly moist, until the The plants, up to this period, are encouraged by bottom-heat and shifting ; and the quantity of fruit is regulated by the size of the pot and quality of the Vine.
The author mext treats upon a more expeditious mode of culture by the coiling system, by which the shoot of a Vine is brought into bearing in the same season as it is planted. For an itself. There is one point insisted upon, which should never be lost sipht of in the production of early Grapes ; namely, to have the plants situated near the light. Upon
this subject Mr. Mearns has judiciously observed: "The will permit. At any will permit. At any other season it is not of so much importance; although at any time I like the leaves to be near the glass roof, that is, within from 3 to 6 inches, yet are placed too near the it, In most hot-houses the Vine are placed too near the glass; and the consequence is, the much injured that they very the fruit are scorched, or so much injured that they very rarely bring the fruit to perfection; they are also much more subject to the attack of red-spider and thrips than if at a fair distance from The
The remainder of the work details the author's practice in the routine culture of established Vines in pots, with remarks on Situation and Solar Influence, Watering, At mospheric Influence, and Pruning; concluding with an analytical list of papers on the Vine, to be met with in various works. The directions throughout are clear and explicit, and will enable any person, with care and the necessary conveniences, to obtain Grapes upon this system a season when those of the previous year are consumed, and before the principal early-forced crop is expected to be ready for use

Hyde Greg. Ridgway \& Son. 8vo
T There is no doubt that the general system of farming in Scotland is much superior to that of a great part of England. The Scotch are more industrious, more atten tive to minute circumstances, and they do not allow plea sure to interfere with their business. The labourers ar better instructed, and work more steadily than the English The Scotch farmer has either more capital, or bette credit, and calculates nicely every prospect of profit, by laying out money on his farm. He gets more work out of his horses and labourers, and keeps them more economi cally, in proportion to their work. All this enables him to pay higher rents, and still have a fair profit
As to the comparative produce of an English and a Scotch farm of the same extent and similar soil, we think that Mr. Greg, for the sake of argument, has contrasted some of the most slovenly farming in England with the that 70 acres in Scotland averaged 8 quarters of When per Scotch acre (or 62 per statute acre) in 1842, worth 60 s . (see note, page 8) which price must include tailing corn or light grains; while the average of 100 square miles country very near Durham gives a produce of only 1 correction of at per staw
That the only ploughs observed at work (note, page 9) in going from Hertfordshire to London had each five horses attached, in land by no means stiff, may be true, as a faet, but not a fact to found an argument on.
The French proverb "Qui dit trop ne dit rien" might fairly be applied here, and the very judicious obs
of Mr. Greg are neutralized by these statements.

We most heartily concur in the assertion
more enerally diffiused and more Scotch is the main cause of their superiority in farmine as well as in anything they undertake ; that in farming, of leases is also an advantage, and the credit given to the farmer in consequence. The objections to new modes of cultivation and to the introduction of machinery, said to be extertained by English labourers, and even farmers, is much exaggerated. Let Mr. Greg travel through Suffolk, Norfolk, and Essex, and he will find very little corn threshed by the farmers is the sobriety and greater profit of the Scotch who is chiefly paid in the produce of the farm, and also Who is chiefly paid in the produce of the farm, and also the greater attention of the farmer himself. We much doubt whether the Scotch farmer on land of the same quality raises more produce per acre than a Suffolk or Norfolk farmer, or that bis land
but he raises it at less expense.
It were much to be wished that the English farmer would imitate the Scotch in many of his operations, and he Scotch might, perhaps, not regret a journey to the best-managed English farms-not to find fault, but to learn something. There is but one degree of perfect cul tivation, which neither have yet arrived at, and all should strive to reach without invidious comparisons. Wherever the cultivation is most economical, the rents will be higher in proportion. With respect to questions of political economy, we confess our inability and our unwillingness to enter upon them. $-M$.

Every Man his own Brewer. By Samuel Child. Ridgway Thit large sale of this excellent little treatise is som ication of its value in the eyes trifling price puts it within the reach of everybody "A quarter of Malt," says the author, "with all the ingredients to make good Porter, exclusive of time and in in different families, therefore cannot be well estimated From average calculation,) cost little more than $3 l$. 10 s . From one quarter of Malt and the ingredients, may be produced five barrels of Porter, which may be sold to the publican at $1 \ell .10 \mathrm{~s}$, per barrel, equal to 7 l . 10 s ., which, letailed by the publican at seven farthings per pint, or guineas for the produce of one $26.2 s$. per barrel, or ten the tradesman, mechanic, or artificer, whose family consumes in process of time five barrels of Porter, pays ten guineas for what his own care and his wife's attention might supply him with for less than three and a half, best be done.
published,

Dunghills, Liquid Manure Tanks, and Cows and Calves As usual, the information upon all these heads'is valuable but that relating to Manure has, upon the whole, disappointed us. Considering the permanent interest of the subject, we had hoped to see it treated very much al
length in a standard work like that of Mr. Stephens Possibly, however, he reserves the matter for a fature part of his publication.

CALENDAR OF OPERATIONS for the ensuing week Euphora jacgincora stands at the head of a small group of house plants, having such a tendency to become naked at the
bottom, that it is no easy matter to form them into hands bushy specimens. The more you prune them the more straggling they become. They are more easily managed as standarcls, and In large conservatories, indeed, standard specimens are indis e, though not much sanctioned by the prevailing fashion into bushy But the difficulty lies in converting these stragglers now done flowerimens. Do not us take E. jacquinifora, which has inches long nearly dry until all the shots have grown a few

ne trial of $\mathrm{M}^{\text {c }}$ Naughten for the murder of Mr . Drumon any denated on Saturday. The defence turned, not mind when he committed it. The state of the prisoner's解 point unanimousiy deposed that the prigo ander a delusion which impelled him consequently that he was not a responsible agent at the time. The Lord Chief Justice considered this testimony so strong as to compel him to stop the case, and the jury ander his direction acquitted the prisoner on the ground insanity. This result bas been received with much as tonishment ; and a general impression is abroadstrengthened by subsequent threats of assassination ad-
dressed to Sir R. Peel and Mr. Goulburn-that some legislative measure is necessary to protect the pome from that form of partial lunacy which is now recognised as an exeroption from punishment. The subject has been submitted to both Houses of Parliament, by Lord Brougham in the Lords, and by Mr. Mackinnon in the Commons ; and the Lord Chancellor has given notice that he will bring the question before the House on Monday, with a view to some immediate provision.The debates in Parliament this week have been unusually ong and important. On Tuesday, Mr. Fox Maule brought forward his motion on the Church of Scotland, supporting the claim of the church to a jurisdiction independent of the Civil courts, and to the abolition of patronage, or at least to such a recognition of the principle of non-intrusion, as will satisfy the people of Scotland and prevent the threatened secession of a large body of ministers from the establishment. The motion was opposed by Government on the ground that the claims of the church are inconsistent with the constitution; and that if they were conceded the House would overrale the supremacy of the Law, by which the church itself was established. Sir R. Peel declared that a settlement might certainly be effected consistently with the privileges and rights of the Church of Scotland, but that it coull hardly be done if the present demands were persisted in. After two nights debate the House negatived the motion by a majority of 135. On Thursday a series of resolutions was submitted to both Houses condematory of Lord Ellenborough's proclamation, and particularly denouncing his letter to he Princes of India in regard to the gates of Somnauth as encouraging idolatry and Paganism. After a long debate the resolutions were negatived in the Lords by a majority of 58, and in the Commons by a majority of 85 . From rance we learn that the important debate in the Chamber of Deputies on the Secret Service Bill has been carried by Ministers, after a struggle of four days, by a disposed of the division gave a majority of 45 to Ministers; while the Bill itself was carried by a majority of 89 . This result was altogether unexpected, and according to the Government Papers it was due in a great measure to the speech of M . Guizot, Deputies apealed so powerfully to the reason of the were induced to become supporters of Gorernment.- Our Spanish news relates chiefly to the progress of the elections, and to the prospects of parties at the ensuing crisis. ble preparatory movemeats in Madrid have been favourhave the Government, but many of the provincial towns is considered to be extremely doubtful،-From Portugal we learn that the Government, on learning the intention of the British Ministry to suspend the negotiations on the tariff, have at length resolved to propose further reductions on articles of British produce, and there is rought to chance that the long-pending question will be learn that the Bill for the occupation of the Oregon territory has passed the Senate by a majority of 2, and has been submitted to the House of Representatives. - We have accounts from the West Indies of a disastrous earthquake, which has luid waste the islands of St. Thomas Antigua, and Montserrat, and has been felt, it is feared, in others, from which, at present, we have no advices.-The India mail has been expected for two or three days past, but we have not yet received any tidings of its arrival at Marseilles.

Turkex.- The Levant mail has brought accounts from Constantinople to the 27th February. They state that the Sultan's autograph letter, in reply to that of the Emperor, was delivered to the Russian Minister on the
13th ult. This letter contains a positive refusal on the part of the Sultan to consent to the revocation of his acts. It is also announced that Tahir, the Captain Pacha, has been dismissed, and
of the late Sultan.
United States and Canada. - The packet-ship United States, which sailed from New York on the IGth ult., arrived off Belfast on Wednesday morning. The papers received by her are nineteen The only proceeding in Congress interesting to the English reader was the progress of the Oregon Territory Bill in the Senate. The bill, it will be recollected, is for the protection of American setthers in the territory of Oregon, and for the enforcement
of the right of sovereignty and jurisdiction of the United States Government over the said territory. It had given rise to long and animated debates. Mr. Calhoun made
a long speech against the bill. He showed conclusively that the course recommended by the bill is contrary to existing treaties, and that, if attempted to be carried into effect, it would, in all probabilit, the occupancy of that territory is concerned, she would have decided and irresistible advantages over the United States. The immense armies now in India, he said, are free to be directed to any other point that is necessary to sustain her power, and on the first moment of a demonstration on the part of the United States to violate the treaty, she woses sion of the territory. This she could do in 40 days, while, sion of the United States sufficient troops and a navy necessary to their transportation, they could not reach the Co lumbia river in less than six months; and to send troop thither overland would take nearly as where the means were to be provided to sustain these fleets and armies. were to be provided to sustain "that the bill do pass," the numbers were 24 to 22 ; majority in favour of the passage of the bill 2 . The voters were indiscriminately senace to
of both political parties. The bill has been submitted to the Representatives, who are expected to reject it. The Court of Inquiry into the late mutiny on board Me Menzie has given its verdict, acquitting commander own to the 9 th ult. The last builetin issued by Sir C. Bagot's medical attendants, stated that his health has, during the last fas days, undergone a change for the worse; and he
rapidly approaching his end. Dropsy had made its appearance, and he was not expected to survive many days. Wesc Indies.-The mail-steamer Forth arrived on
Saturday evening at Falmouth, with Mexican, West India, and other mails, having left St. Thomas's on the 9th ult She brings the tidings of a dreadful earthquake, which curred at St. Thomas's on the 8 th ult., ana exther islands The Thames steamer, when abreast of English Harbour Antigua, felt the shock so severely, that all hands thought the vessel had struck. The land was suddenly enveloped in clouds of dust, and the effect on the crew is said by steamer Actæon, which arrived at Falmouth on Tuesday, has brought addelionals, as was too truly feared, that it intelligence. It appears, as was too truly feadia, Islands and that in order to ascertain the particulars, the Actæon was despatched to visit them successively, prior to taking wase the information. Distressing as the accounts are home the information. Distressag actory to know that from the different islands, it is sacrisaciely trifling, though
the injury has been most serious to churches and other public buildings, both civil and military, to dwellingouses, sugar-mins, \&c., more particies, were lost. Mort St. Christopher, two. At St. Thomas and Nevis, it appears no lives were lost. When Thomas and Nolb, deporture no positive news had been the Actæon thor from Guadaloupe, Dominica, St. Eustatia, Mar Thin though was thourt the Martinique, or Lucia, taoug thought they must have shared in the calamity
steamer, which left Antigua on the 11 th Feb. for Bermuda, will most probably be the next arrival from the West Indies, but she is not likely to bring more detailed intelligence. The Governors, Members of Council, and principal inhabitants of the different islands were actively applying ail their exertions to meet the exigencies occasioned by the catastrophe, but it was much feared the crops, which were promising and abundant before its occurrence, would, for the most part, perish, from the sugar-houses, mills, and machinery being destroyed
to so great an extent. By the mail from St . Domingo we have advices from Port-au-Prince, to the 28 th Jan., which state that a fire on the 9th of that month had destroyed upwards of four hundred houses, and among them the shops and stocks on hand of six million dollars currency. At Trinidad some apprehension was entertained that the crops might possibly be injured through the unwelcome and unusual presence od as
shower of caterpillars." Parts of the city had been visited for upwards of a fortnight by these insects, in numbers sufficient to take complete possession of the trees, and to destroy not merely the leaves but every appearance of vitality, and it was feared that their migraplantations, \&c

difficulties that surrounded the guestion, he was not willing to legislate. A setllement might certainly be effected consistestly
with the privileges and rights of the Church of Scotland, but that were insisted
 7hursduy, - A teselution on milar reat its intcution to that pro on the gencral orders of the 6 th Nov cmper, and the letter to the mitted by Mr. V. Smith. The substance of this resolution was a
declaration that the conduct of Lord Ellenborough whs unw ise,
indecorous, and reprehensible. After a speech from Mr. E. TEN ngnt in defence of the Governor-General, Mr. Macaurar sai India had knowa were caused by religious interference witht th Bangalore, in the affair of the Mosque. Now did Ministers mean Was he to govern upon Brahminical principles, and restore the
emple with its dancing girls? No doubt they would take care ocountermand him; but was it no evil thus to make announce Other Governors.General might have been hated, but now, for the first time, a Governor-General was laughed at. Turgid pas style to be imitated by a British crovernor-s with beadsand have
because the native princes deck their horses
black faces, to ride out upon a palfrey so adorned, and paint his black faces, to ride out upon a palfrey so adorued, and paint his
own face black? The Indians, whatever their own dress, habits and style, yet perfectly understood aud respected the sobriety in truth, was imitated, not from inchac eomposiry generals, who
the trashy manifestoes of the French reviutional He mas sure such
loved to talk nonsense about ancient Rome. He y any of those who understood the country and the people; but indeed, Lord Ellenborough kept those civil servants at such distance that none of them ever ventured to offer their advice.
Really the vast power of an Indian Goverunor-General was not to
be trusted to a man who was thus wanting in discretion of his own, and thus nnwilling to proit by the discretson of others. -
Mr. Hoca admitted that a Governor-Gerseral ought not to be
absent from his Conncil, but opposed the motion. -Mr. MANGLEs
 on the House to censure the proclamation on religusing gionuds. owing somewhat liindly in the wake of those whose of,jccts were than uaal numbers on the opposite benches. Hie had never
known an instance whice a rclitical paty lad so stuthously
avouled the great features of the case, and so canefally fastenel hithcrto scen in this proclamation momtent of mandititg their them now by a declaration that this document did involve such
tan insult. Its style had been said to betoken a mind unequal to an insult. Its style had been said to betoken a mind unequal to
the duties of government; but he would remind the House
that quite as bad taste had appeared in the military mani-
festoes of a man whom Europe and the world had certanly thought not wholly incapable of wielding empire. He concluded with a glowing panegyric on the services of Lord Elenboroughto defend their own policy in India; but that this was not the subtake notice of this proclamation. It would be a want of courage to abstain from expressing an opinion whect of such a censure
tained. He did not believe that the effect
would be to recall Lord Ellenborough; buteven if it should, that noble person would be less dangerous to his country in the House
of Lords than at Calcutta. - Sir R. Peer said, that what had passed to-night must have fully dissipated the suspicions of those
who had imagined the Government to have made a compromise With the Opposition on the subject of Mr. Roebuck's late motion. He then enumerated the successive disasters, of which the tidings
were then daily flowing in upon the Governor-General, and eulogised the courage with which he met those dimiculties. But
it was necessary for him to abandon Affghanistati- it was im-
portant to him to do so without dispiritmeng the Hindoos, and
therefore it was that he had been anxious to secure, for thie sake
 Sir R. Peel inveighed especially against the party hi, it which
gnimated the present moton, ald waned the House that
such a vote as this woulo stine a hea nur blow at ife hritish prow perity in India than any of our last disquers.
Iord J. Russmin, entered into a defence of Linrd Auchland's ge of the published papers, that the aband nment of Afr'hatin- dan
was a wise measure. He was not desions to dony to Lard Ellenborough such praise as properly bel, nged to $h m$, but lece con. (t generalc, irom those abe men who had nir reaint decided the po-
liey of the campangn, and restorcd the sprit of the troops. In
yegard to the preclamation, it showed in many of its passages a sort of inflation, which looked as if I.ord Enleny of its passages a and sovereign Prince. Such a man was not a fit person to su-

Charge of Threatening to Shoot the Queen and Sir $R$. Peel.- It is again our painful daty to record the appre hension of another " monomanaia,, who has been appre-
hended on the clarge of threatening the lives of the Queen and Sir R. Peel. At his examination before the Lord Mayor yesterday, he gave Lis name James Stevenson, and said that he belongs to the parish of Lochwin noch, in Renfrewshire. He spoke in a broad Scotch accent The clerk to the packet owners at Hull stated that the prisoner booked his passage on board the Gazelle for London, and said he was going to London to see the Queen, and that it was quite improper for a woman to further that he wished the woman to be put on one side -the woman was to be destroyed, and the man was taine the reins of the affairs of this nation. The the voyage told him that he had written letters to Sir R Peel, who had not answered them, but there were plenty of people who would show him Sir R. Peel, and that he prisoner in ouls saicen and Nir R'd finish them. don't think I did; but I said I'd strike at the roo om tree, if I should catch a minister of the king My attention was first drawn to the subject of Sir $R$ Peel being in power when the man shot at the Queen. rote the letter to Sir R. Peel at that time. I read of hi being in power in the newspaper. - The result of the samination lert no doubt that he mind of the prisund as quite disore Tresury Mayor to the Compter, in order that medical men might have the opportunity of examining him, to ascertain whether he could be at large without danger to others.
Threatened Assassination of the Chancellor of the chequer, accompanied by his private secretary, the Right chequer, accompanied by his private secretary, the Right
Hon. G. R. Dawson, and Mr. Maule, attended at BowHon. G. R. Dawson, amd Mr. Mad and and information, and demand a warrant for the apprehension of Mr. John Dillon, late an officer in the navy, for having on different occasions threatened, by letter and otherwise, to take away his life. The informa February bereire a bearg the name the $22 d$ Dillon, complaining of alleged injustice done him, and coutaining certain threats, which be considered did not assume any definite character. He believed the lette was sent by the person whose name it bore ; and about same signature, and containing similar threats. It mentioned in strong terms the case of $\mathrm{N}^{6} \mathrm{~N}^{\text {Naughten, and al- }}$ though the writer abhorred the name of assassin, still he considered he would not be doing wrong if he had shot any person through whose means he had suffered an an justice. On the 4 th inst. Mr. Goulburn received a third letter, bearing the same date, and signed "John Dillon 157, Strand," in which the writer made claims upon He Majesty's Government for a consideravie sum of money alleged to be due to him for boarding the Pern, and which he accused Mr. Goulburn of being the means of keeping Chanck from him ten jears ago, when he was in office as Chacellor or the Exchequer, on the ground that a mount he claimed could not be paid until such charg was cleared up. The letter also mentioned that Mr Goulburn had admitted the charge to be removed, and unless the money was paid, he (the writer) would be driven to follow in the steps of M'Naughten. The information further stated, that Mr. Goulburn never had any commu nication with the person whose name was signed to the several letters, except in his official capacity, and throug the letters referred to, and he had every reason to appreharm. He also stated, that he did not lay the jnformation against him from any malice he bore to the said John Dillon, but solely from personal apprehension of danger: Mr. Pemberton, private secretary to the Chancellor of the Exchequer, corroborated many of the leading facts of this Bernard's Inn, John Walsh, a colourman residing in and saw him one day last week in a coffee-house in Westminster, when be commenced a conversation with him respecting M'Naughten. He also referred to the case of wide difference between his case and that of M'Naughten, as Bellingham had received a bond fide injury, by which be was driven mad, whereas the other had received none justified in shooting Mr. Percival. He contintued this conversation with two strangers present, and told them satisfied, he would have a pop at some of them, and if he did shoot any one, it should be Mr. Goulburn. This occurrence took place late in the evening, and he pppared occurreace took place late in to to be quite sober, aad determined to prat his threat into but injustice." One of the strangers observed not petition the House of Commons upon the subject, and wait for a teply to your petition, after it will bo laid on
the table
He replied, "Before I can receive an answer to any petition that I may make, l'll have taken Mr . Goulburn's life, and swing for t. The warrant fo the apprehension of Mr. John Dr Goulburn immediately. Immediately after Mr. Goulburn had laid his information, and the warrant had been issued for Mr. Dillon's apprehension, the services of the police were pu into requisition, in order to discover his retreat, and in the course of the evening the insperrorted for debt, and he had in Whitecross-street prison. As lie is, under these circumstances, virtually in the custody of the sheriff, a writ of habeas corpus must be obtained for, the purpose of bringing him up beforel the chief magistrate, to answer has been lodged against him.
The Custom-House Frauds.-A numerous meeting of he operative weavers of Bethnal-green, Spitalfields, and heir vicinity, was held a fers days since, to take into conhrough the practice of passing silk manuache duty and to adopt such means as may be expedient under existing circumstances. The Chairman stated, that for year past the trade of the Spitalfields weavers had suffered great grievances ; and to add to their distress, a quantity of goods have been passed through the Custom-house without paying duty. If they had to contend with good considering that the principles of free-trade were onl partially in operation. But officers receiving good salaries had been bribed to an extent not to be conceived, and the silk-weavers had suffered to a very serions degree fffice a deputation of silk-weavers waited unon him, an e then stated them that from the returns he had ascertained that the exportations of silk goods into this country were double the amount of what was registered as imported at the Custom-house. If that were the case there was no doubt that the quantity not accounted for the Custom-house had been smuggled. It appeared that $1,000,000 l$. worth of silk goods were imported; bu with was the same amount which was not legally imp. that wicla they could not come into competho would hare ben blo 6,663 persons throughout have been employment for one of the defaulters had sold 30,0001 out of the funds a parture from the country. Memorials to the Treasury and Commissioners were then passed, declaring that the frauds practised at the Custom-house had overstocked of Bitish indures depressed silk-weny, of employment, and reducing the miserable pittance, called wares of those in employment, ${ }^{3}$ and expressing the opinion of the meeting, that, "in cases where frauds are detected, no compromise should be allowed, but that the penalty should be strictly enforced, and imprisonment added to the fine; the frauda not only Buiting the revenue, but undermino an which, in the opinion of the meeting, must be allowed to be one of the most important interests of this country." Coust India House.-On Wednesday a special general Court, of the Priar house, for the purpose of laying before the proprictors documents relative to the miltary operations Affghanquence by the Court of Directora, A long and desultory ascussion took place on the form or the they were ultimately carried as proposed by the Directors. waggons arrived at the Royal Mint, escorted by a detach ment of the 60 th Regiment, with the Chinese silver, amounting to $1,000,000 l$. sterling, being the first consig ment of the indemnity to be paid by the Celestial $E$ mpire War, which arrived at Portsmouth on Thursday, and was forwarded to London by the Southampton Railway. The procession attracted a good deal of notice, and an immense crowd followed the waggons to the Mint, and as the onter gaces closed upon them, three cheers were given. The Syee silver was contained in large wooden boxes, and on passing along the Minories one of them burst, but owing The precautions taken, not a particle was lost. On Tuesday, another train of waggons, escorted by a party Southampton Railway, with 20 tons of the Chinese silver in value 750,000 dollars, brought over by the Columbine. City Antiquities.-Several excavations for the forma hon of sewers are now in progress in the City, which have do the discovery of various relics, connected with its ormer history. In Liverpool-street, Bishopsgate, where the sewer is about 15 feet in depth, the labourers have com gainst the old Roman wall, which was continued from the London-wall, across Bishopsgate-street, to the Minories and the Tower. In Finsbury-pavement the excavations of carried to a considerable depth, and numerous bones reat pla supposed to have bees bloth-Fair sewer is ground attached to the monastery of St. Bartholomew the Great, by which numerous boues, coins, and other relic have been brought to light.

The Thames Tunnel.-The annual meeting of the Broprietors took place on Tuesday. Hawes, M.P., stated that a resolution had been com to on Monday by the Directors, requesting the Duke o Wellington, who had always been a warm admirer of the undertaking, to appoint a day between the 18 th and the 25th ingt, for the opening of the Tunnel for foot-passen fer's, and requesting his Grace to bonour the Court of

Directors with his presence at an entertainment to be given on the occasion. The interest takibuted by the fact that 4,440 persons had visited the works last year more than in any previous season. Last year upwards of The Directors had received a certificate from Sir I. Brunel, The Directors had received a certincate rom the slightest the engineer, declaring that there was not trustees of the settlement in any part of the works. The rustead in the direction of the Tunnel. It was then resolved-"That the cordial thanks and congratulations of the meeting be tendered to sir I. Brunel, for the hy himined tatent, energy, and perseverance evinced by him in tue despa,
construction, and completion of the Thames Tunnel -a rork unprecedented in the annals of science and ingenuity, and exhibiting a triumph of genius over physical difficulties declared by some of the most enlightened men to be insurmountable,"
Te Meray Fund.-The annual general meeting of Wednesday, Mr. Hallam, the historian, in the chair. The report stated that the sum of 1,255 , had been dispensed in relief to distressed authors, their widows and children, during the past year, and that no less a sum than 29,000. has been applied to this purpose since the foundation on Ambassador, Baron Brunow, to the Marquess of Lansdowne, announcing that the Emperor of Russia highly appreciating the benevolent purposes of the Institution, 155l. This is the more gratifying as a similar testimony was given to the value of the Literary Fund last".year by the King of Prussia, who presented it with 100\%. The Vice-Presidents were re-elected, with the addition of the Earl of Arundel and Surrey, and Mr. Bond Cabbell: and the vacancies in the Committee were filled up by the election of Dr. Fraser, Mr. Nolle.

The Parks.-In consequence of the recent intrusions into the parks, a notice has been issued by the Duke of Sussex, by command of her Majesty, that no haceney-
coach, or hired cabriolet, be allowed, under any pretence whatsoever, to pass through St. James's or Hyde-parks, except through the Birdeage-wak, from Great Georgestreet, to jo allowed to pass through the parks, and that the permission for hackney-chaises, conveying Government
messengers, to pass through St. James's-park, shall not extend to any otber hired carriages. That the gates of St. James's-park, with the exception of those communicating with the Birdcage-walk, be kept half-closed; and persons as have permissiou, be allowed to pass thiongh members of the Royal Family, or by the Grand Falconer, the Qucen's ride in Hyde-park, That the gates of the Birdcage-walk be left open through the night, during the sitting of P'arliament. That no stagebarrows, or persons carrying burdens, be allowed to pass through the gates of eather of the parks, and
keepers and sentinels have orders accordingly.

Mortality of the Metropolis. -The following is the number of deaths registered 145 ; North districts, 181 ; Central districts, 206; Fast districts, 219; South districts, $2 n 2$. Notal, 1003, ( 5.15 mates, 488 females.) females 442, ) and for the last five winters, 1004 .

Chichester.-At the Court of Bankruptey on Monday, an application was made by the junior partner in the
Chichester old bank (Mr. Wm. Ridge), for his certificate. It was urged upon the part of the bankrupt, and in favour of his anplication, that having been only a stipendiary of his application, that having been over the management po the bank, and that there was nothing in evidence to show that he was at all aware of those improper transacsions which had been alleged so strongly against the bank. M. Commissioner Fane, in gicing judgment, said that Mr. Commissioner Fane, in giving judgment, said, that as a partner in the public. He was an executor to his father's will, and it was his duty at that time to have looked into the affairs father's estate was solvent or not. It was impossible for the Court to consider that he was ignorant of the proceedings of the bank. For instance, in the case of Ganizant of some of the Who, althougl having em, from $7,000 l$. to $8,000 \mathrm{l}$., was yet continued in the situation of the bankruptcy iu 1841. But admitting that the bankrupt had not the same degree of control over the bouks as hiswn that a robbery had been practised upon the public. Under all the circumstances it had formed upon the application of his brother, which Was, that the certificate be delayed for three years, with the condition that all property acquired by will, or as heir
at law, or in other way coming to him, except as the produce of his own industry, should at once pass to the creditors of the bax
Halifux. - We alluded in our last to the cruel treatment of a collier-boy near Elland, which Lord Ashley had
brought before the notice of Parliament. On Saturday, Joseph Whiteley, the master, was summoned before the magistrates, charged with ill-using the lad, and an application was made on behalf of the overseers of the town ship that the indentures might be cancelled, and an adequate penalty inflicted upon the master. The lad detailed the particulars of the treatment he had rechic to examine the hoy. He found the lad full of bruises from the top to the bottom of his back. The wounds were of different colours, some appearing of an older and some of board. for a number of years, but never had such a case of cruelty come before him. He would leave the master to the compunction of his own conscience, believing that he would never be able to hold up his head in society for years to come, and that he would be shumned by every one as unworthy to associate with. The application wardens were bound over to prosecute the master at the sessions.
Heileybury.-About ten o'clock on Saturday night, a fire broke out in a room belonging to Mr. Watson, a student in the East India College, during the time of his diately upon opening the door of his apartment, Mr. Watson was met by dense volumes of smoke, which were quickly fanned into flame by the current of air thus admitted, and the room was soon enveloped in a blaze. The supply of water was deficient, and as it is not laid on throughout the building, it was estudents, bring from a distance in buckets. 1 subdued before they had spread beyond the apartments in which they broke out. An inquiry into the origin of the fire was instituted by the college authorities; but no cerbable that a hot coal had fallen out of the stove upon a sofa, the wadding of which ignited, and thence rapidly communicated the fire to the wainscotting of the room. From the defective arrangements in regard to water, it is supposed that if the fire had not been so speed.
Liverpool. Anouther destructive fire broke out in this town on Tuesday, by which the boiler-workshops, and a great part of the foundry of Messrs. Farrcett and Preston, the engineers, and two warehouses, were destroyed. The fire broke out in the paint-shop belonging to the foundry, and though the fire-police were immediately on long time owing to the want of water. At last a supply was pro cured, but not until the flames had got such a head as destroyed the warehouse, together with another on the opposite side of Lydia Anne-street. This calamity will deprive from 300 to 400 workmen of employment, and thus add to the dis tress existing in the town. Owing to the pressure of the times, the number of men employed in this establishmen had been reduced from nearly very large proportion, it not the whole, will be unable to Ma mployment until the worksiops are rebui.
Manchester.-During the last two or three years number of sik-warehouses in this towa and neighourhoon bave been broken iato and robbed of goods, the The robberi is said to have exceeded 1 , as to have defied the utmost vigilance of the police either to trace the goods or the thieves at the time, and not the slightest information on the subject has, till lately, been obtained. About a fortnight ago, it was rumoured that parties were connected with these robberies who to the
bigher in the world than the police had ventured to look -that they had been planned and effected at the instance, in fact, of master silk-manufacturers and dyers. It was sid that these parties, entering the warehouses of ass, had thus the means in the day-time, without suspicion attaching to them, of observing the fastenings of doors, and ascertaining the most valuable or most suitable good submeir purpose; that then they laid heir plans, by whom the robberies were effected; that the goods so stolen were mostly yarns, which, on being brought to that thus, with the change of colour, the possibility of detection was removed. The police have not been long in acting on their newly-acquired information, and have ob. Edwin Lucas warrants against Messis. Natbanitin business at Leigh, near Manchester, and who have also a place of business near Macclesfield. They were apprehended a few days siace in consequence of stolen goods found in their possession, and were brought up for examination at the New Bailey on Monday, when so many exexamination, that the magistrates remanded the prisoners, and refused to accept bail
Marlhorough. - The Council of the new School for the ons of clergymen and others have 'appointed the Rev and head-master of the proprietary school, Kensington, to be head-master of the establishment in this town.
Marlow. - On Tuesday night a fire broke out within the manor of Swilly Pond, near this town. The old Manor House, the property of ing of the structure but one stack of chimnies. At one time the Pear-tree, so famed in the annals of Marlow elections, was in great
danger; but from the exertions of the inhabitants not a
branch was injured. The fire is supposed to branch was injured. The fire is supposed to have been the Merthyr. -The W.
Merthyr. -The Welsh papers mention as a remarkable feat in the iron manufacture, that a bolt was rolled at the Cyfarthfa Works last week, of 25 ft . in length and 6 ft. in diameter. It was of cable quality, and weighed $2,600 \mathrm{lbs}$. The bar rolled at the Dowlais Works some time since was 14 ft . long, and $8 \frac{1}{2} \mathrm{ft}$. in diameter, weighing about 22 cmt .
Juke of er the Duke Noriolk, as lessee of the right of ferry between Holynead lstand and Cumbertana Point, near this town, established by what is calle rupted right. This gives his Grace s lessees, the ferrystraagers, and $1 d$. for inhabitants. The grant of the ferry was made by Charles J .
Railways. - The following are the returns for the past week:-Greenwich, 516l.; Eastern Counties, 824l.; Brighton, 2,110 l. ; York and North Midland, $1,290 l^{\prime}$; London and Blarkwall, $1,66 . ;$ Great North of England, 1,06 11. ; Sheflild and Manchester, 24.51.; Marrchester and Leeds, $3,63 \% \%$; Glasgowv and Pansley, $662 l$; Aldburgh and Glasgow, 1,696l. ; Birmingham and Gloucester, 1,3688. : Birmingham and Derby, 971l.: North Midland, 3,340t; South-Western, 4,0144.; Great Western, $10,465$. ; Northern ing of the North-Midland Company, held last week at Leeds, the correspondence was read which had passed between the Directors and the Board of Trade, by which appeared that the representations of the Board have been attended with good effect as regards the public safety, and that the Directors have ogreed to allow additional intervals of rest to the engine-men driving passenger-trains. -The ball-yearly meeting of the Manchester and Leeds Company was held last week. The total income for the half-year was stated to amount to $119,113 l$, including eceipts for passengers $65,985 l$., and goods 52,4331 ., out of which a dividend of two and three-quarters per cent. was declared, leaving a balance in hand of 15,500 . The Directors proposed the establishment of a reserve or de reciation fund, to meet the diminution in the value of he carriage and locomotive stock. There every ex
 he sumbirs is 1841; and the erpenditure so applying hemselies ta redaly meeting of the Sheffield and Manchester Company took place last week. The receipts during the past year amounted to $14,065 l$., leaving a balance, after deducting the expenses, of $3,944 l$. Though 512,276 passengers ha been conved upon the line, a whe work of construction no accident had taken place. The works of construction entire line, from Sheffield to Manchester, would be opened arly in 1845.-The half-yearly meeting of the Birmingbam"and Derby Company took place on Thursday. During the halr-year 9o, 00 passengers were carred on the liff had incressed at the rate of 72 per cent., and in the goods department there had been an increase of 5000 tons, or The balance in kand $8,978 \mathrm{l}$. The meeting recorded its approbation of the conduct of the Directors, in their reThe begran Eretine of the Bristal and Exeter Company was held on Thursday, it lhistul. The roport stated that the whole of the lins to Lxeter mould be ready for conteng phed period. The statement of receppts and exbentitute shonard a balance of 836,4331 , out of which lear of income-tax. - The Urrectors of the Ikacknall Railway bave announced that the increase of their fares has prodaced a decrease in the receiplis are now ahont o falle change was imtroduced; and The share-list of the Yarm chairmun and Noraich, on the 24th ult., that the works would speedily Re commenced.-The works on the That Rletway, Which we noticed passage of the trains. The goods' traffic has been commenced, and a luggage-train now runs daily between London and Colcester. Pere are upwards of seventy drains, besides numerous crossings and cuttins. The cutting at Brentwood-hill is more than two miles long, and seventy feet in depth. The first general meeting of the Pontor and South Shelds Comappeared that the Company had recently taken possession of the Stanhope and Tyne Railway, which they were now working at a profit, under the title of the Pontop and
South Shields Railway. The accounts exhibited a net revenue for the half-year of $42,802 \mathrm{k}$, leaving a balance, after the payment of $27,618 \%$. for expenses, of $15,183 \%$. This amount had been charged with the interest on the loams and Liablities of the late Company, out of which a dividend at the rate of 30 s. per share for the half-year was declared. The traffic in co
line exhibited a steady increase.

## IRELAND.

Dublin.-During the greater part of last week this city was in a state of excitement, cccasioned by a discussion
in the corporation on a motion submitted by Mr ．
$\mathrm{O}^{\prime}$ Connell in favour of Repeal．It commenced on Tues－ day，and lasted for three days．The house was crowded to excess，although strangers were admited by tickets． great length．He founded his arguments in favour of self－government on several reasons．The first，he said，
was the capacity of the Irish nation for domestic legisla． tion ；2d，the perfect right of Ireland to legialate for herself；3d，that that right was fully established by the to Ireland would follow from the repeal of the Act of Union；5th，the utter incompetence of the Irish Parlia－ tract，being brought about by fraud，bribery，corruption， tract，being brought about the fraud，disastrous results to Ireland have flowed from the Union； 8 th，that the Union might be abolished without an infringement of the con－ would follow to the British empire by the repeal of the Act of Union．He had come there to establish these propositions，and he had no doubt the assembly would consider he had opened a very wide field．He then pro－ argument by statistical and other facts．Upon the evils of absentecism，as＂s one of the disastrous results to Ireland length，and read documents showing the deplorable dis－ tress at present existing．After speaking for four hours and a half，he concluded by moving that a petition should be adopted in favour of a repeal of the legislative Union． Councillor M＇Loughlin having seconded the motion，Al－ derman Butt observed that he and those who agreed with him had nothing to complain of in the tone and mode of
argument of Mr．O＇Connell，and submitted the following amendment：－－＂That believing the discussion of the question of the repeal of the legislative Union between Dublin，as calculated to produce political discussions， prevent all cordial co－operation between persons of
different political opinions，and to prevent this body from exercising its municipal functions for the good of the citizens at large，this assembly repudiates in the strongest manner the introduction of the question， and that，therefore，the consideration of the question be adjourned sine die．＂On Wednesday the discussion was resumed，and after a long sitting was again adjourned． On Thursday several members of the Corporation spoke in a speech of considerable lengih ；after which a division took place－the result was，for the motion 41 ，for the O＇Connell＇s motion．On the numbers being announced Mr．O＇Connell assured the＂twenty－six＂that their names should be inscribed npon a column in College－ record of Irish history．He then moved that a committee should be appointed from the majority，＂to prepare the Union．The debate was conducted throughout in cood temper and with much courtesy among the opposing par－ bead，and exerted himself successfully to effect the object The meeting of the Repesl Association took place on Monday．The proceedirgs were of the usual character， Carlow．－Last week some persons broke into the church of St．Mulinins，in this county，and attempted to remove a large flag which covered the eatrance into the vault be－ longing to the ancient family of Kavanagh．Whether is not certain，for they only succeeded in disturbing it． Their design is involved in mystery，Government have offered a reward of $30 \%$ ．for such information as will lead
to the discovery of the offenders． the discovery of the offenders．
Newry．
Newry．－ assassinate a Presbyterian clergyman in the pulpit，at
Rathfriland．It appears that the Rev．J．Dickie，one of Rathfriland．It appears that the Rev．J．Dickie，one of ervice in his own church，when he preached a ser－ mon on the progress of Puseyism，and its alleged
tendency to Popery．Just at the conclusion，and hilst ithe rev．gentleman was engaged in prayer，some one fired through the windows，and wounded him severely in both arms．It is hoped that the wounds will not prove
fatal．The perpetrator of the outrage escaped in the dank－ ness of the night，but the tracks of his feet were traced in
the directiou of Lessie．The Lord－Lieutenant has issued proclamation，offering a reward of 100 l ．for the disco． Donegal assassin．
Donegal．－Some days since，while the Wesleyan Metho－ dists of Mountcharles，in this county，were holding a missionary meeting in the market－house of that place， minister belonging to the Established church，some person fired a gun through one of the windows，breaking 14 punes of glass．The assembly were at prayer

Central Criminal Court．－Trial of $M^{\prime}$ Naughten，－The pro－
ceedings in this case were resumed on Saturday．The judges ceedings in this case were resumed on Saturday．The judges
took their seats on the bench at nine o oclock，and immediately French Ambassador and numerous visitors were present 28 on the previous day，and the Court was very much crowded．Mr．
Cockburn said，he rose under a deep sense of the responsibility he had undertaken，axd his own inadequacy．He felt himself to could be placed，being called on to defend a case of so singular a description．However，he had full contidence that tie defence all the pecuilar circumstances that surrounded the case．When horror of assassination，and，above all，how that horror was inter－
voven in the nature of Englishmen－when he recollected the deep sympathy that existed for the deceased，and the worth of had paid so eloquent a tribute，and in which tribute he（Mr．
Cockburn）fully concurred－he felt bound nost earnestly to appeal to the impartiality of the jury，and he felt convinced that that appeal would not be made in vain．His learned friend had，
with his usual accuracy，anticipated the line of defence intended intention to touch for a moment it was moin feature in this case．
Hie was not there to deny that the hand of the prisoner bad in－ flicted the mortal wonnd on the deceased．No，the defence would
turn nut en the decal，but on the state of the frisonex＇s mind wh．cn ine comm．t ed t．There could be no doubt that according
to cur law msanty absolved a pernon from the consequences of farther than the law of cavissed nations－no farth．cr than reason prescribed－no farther，if he were not presumptuous in saying it
than the will and ordination of God．He trusted he should not
be thouglit fit to lay anp modvidual under the heariest calamity of Wheh human nature was snsceptible，he must have，at the same
time，released suchindividual from the consequences of acts of
which lie did nct feel or know the enormity．Therefore the ordair ed that when there was a disease that troubled and ob－
scured the very sources of reason，and converted a human being into the similitude of a lower animal，which left him the slave of
the wildest imp．ulses，and led him with ungovernalle fury to acts
which rcason would have abhorred，the individual so circum－ star ced she uld be free from all liersenal recponsiblinty．This
princip．e of th．e taw admitied of no exception，but at the same great wond be idle to say that in partzcular applications of this
 the defence for the prisoner would be his merital deficiency at the dence be intended to put forward in support of that derence would meet with their most serious attention．That evidence
would be of two sorts；it would not be such as bis learned friend had supposed－of a vague and negative kind－it wonld be testi－
mony posilive and precise．And he said this from the bottom his heart－such as would carry conviction to the minds of every－
one prescnt．The testimony of persons who had known the prisoner from his youth－who had been brought into immediate
conact with him－and the fricnds with whom he had associated． And，lest the evidence of persons so situated might be met with persons in authority in his native pace，to all of whom this un－ rortunate calamity had been made clearly known，nod to all of
whom the prisoner had appealcd for protection from the fancied
dangers which his imater show that the prisoner had been the victim of fearful delusions， which had gradually destroyed his self．control，until he had com－ raitted the deed for which he was now placed on his trial．In addi－
tion to this，l，（Mr．Cock buru）proposed to place before the jury the tion to this，be（MM．Cockburn）proposed to place before the jury the
evidence of gentemen connected with the medical profession－
men of intelligence and skill－who would tell the jury that it was men of intelligence and skill－who would tell the jury that it was
their internal conviction that the man was mad，and the
cicature of cichsic．ns and stent as wculd lelease $l_{1} \mathrm{~mm}$ from the character of a responsible ass assin．He whald impress upon the J．rry the greatimpurtance
of thas latter krid of testimony．He tristed he should not be
deemed presumptious in observing，that of all gutstions that dered，the most difficult to decide．Madness was not a disease， through the cerebral organization，apfecting the intelligence of
which that organization was the seat，aud the knowledge of such a disease was only accurately to be ascertained by those
who liad made the observation of the disease the study of their lives，and who had devoted to it their whole experience and ca－
pacity．He need not remind the jury that from the very nature pacity．He need not remind the jury that from the very nature
of this diseaze it msulated the victim from the rest of his kind， making it the more difficult for the latter to decide on the nice
degrees of intensity of which the disease was susceptible．He did not say that the Jury were wholly to surrender their judg－
ments to evidence such as he had last mentioned，he had only
such testimony，and to press on them the paramonnt necessity
of listening to it with the most patient aten ceeded at great length to lay down the law as applicable to the case，and afterwards calleri witnesses to show that the prisoner that he was followed by persecutors untable delusions，fancying hll the occupations of his life and even during his sleep．That London，and even to France；that sometimes he thought they were Cathoiic priests and Jesuits，and at others that they were Whig candidate at Glasgow．So strong was this delusion that ners of police for protection years ago a dangerous lunatic，and that he ought to have been put under restraint．The interest of the trial，however，turned on the evidence of the medical witnesses．We shall，therefore， conine ourselves to the fach stated the prisoner was coupled with the history of his past life，left not the re－ motest doubt on his mind of the presence of insanity，suffi－
cient to deprive the prisoner of all self－control．He considered cient to deprive the prisoner of all self－control．He considered
the act of the prisoner in klling Mr．Drummont to have been apon as the whist under a delusion；that the act itself he looked ason as the crowning act of the whole matter－as the climax－
as a cary out of the pre－exising idea whet had hanated him
for years．Mr．Cockburn．－ls it consistent with the nathology of insanity，that a partial delusion may exist，clepriving the sound？Witness，－Certanly；monomania may exist with gene－
ral sanity．He frequently knew a person msane upon one point exhbit great cleverness Hon all others not immedrately associ－ ticians，and architects，whose mind was disordered on one point． which the prisoner is charged，and yet be aware of the conse gad not of suced him to alter his opinion of the case．Lanatics often manifested a high degree of clevernesa and ingenuity，and exlizibited occasionally great cunning in escaping from the con－ sequences of such acts．He saw a number of such cases every day．
Cross－examined by the Solictor－General．－You liave stated that Drs．Bright and sutherland were present at the examination Yes，they were present with Sir A．Morrisonand Mr．M．Mlure， Yas，heard the examination．They were there on the part of the Crown．I asked all the questions．On the two last occasions
on which 1 saw the prisoner，Mr．Hutchinson and Dr．Crawford were present at the request of the friends of the prisoner．They examined the prisoncr almost exclusively on that occasion，aud
in accordance with the usual practice，gention en in belalf of the Crown also attender．The Solicitor－General．－Did he no Robert Peel ？Witness．－No，I think he dif not．On this poin he observed，that the person at whom he fired gave him as he passed a scowling look．At that moment all the excitings of could only obtann peace by shooting him．He stated his in an－ swer to my questions．I avoided all leading questions．The consider a person labouring under a morbid delusion of unsound mind Witness．－I do．－The Solcitor－General．－Do you think
insanity may exist without any morbid delusion？Watneso Yes；a person may be imbecile；but there is generaliy some
morbid delusion；there are various shades of insamnty．A person may be of unsound mind，and yet be able to manage the usual a moral perception of right and wrong ？Witness，－Yes；it is
very common．The Solicitor－General，－A person may have a delusion and know murder to be a crime ？Witness．－If there
existed antecedent symptoms I should consider the murder to be by Mr．Cock bursi，－Yus sdid，Dr．Motro，that a person nigint
labour under a particular form of insaity without having lits moral perceptions deranged，For hlustration－a man may fancy
his legs made of glass．There is nothon in that which could burn－－You have not the sliglistest certambthy not．－Mr．Cock ison examined by were impaired？Witness．－No．Sir A．Mor－ Ho saw the prisoner with Drs．Monro，Sutherland，and Bright during the whole of the examination of the prisoner in Newgate．
After the conclusion of that examination he arrived at an ovi－ bion as to the prisoner＇s state of mind．After having heard the fone any change．He concurred with the evidence of Dr，Monro He believed he committed the act when insane．His morbid delusion consisted in lis fancying that he was subject to a sys－
tem of persecution．This delusion deprived the prisoner of all estraint or control over his actions．He had not the slightest part of the prisoner had strengthened that opinion．His at－ soner of unsound mind？Witereneral．－Do you think the pri and examined by Mr．Bodkin．－－He said he was a surgeon，and soner on four separate occasions with Drs．Monro and Bright， and $\operatorname{sir} \mathrm{A}$ ．Morrison．He thought that the deliasions under
which M＇Naughten laboured were real，and not assumed．FIa the case，and was of opinion that when he fired at Mr．Drum． mond at Charing－cross the prisoner laboured under an hallu－ cination which deprived him of all ordinary restraint．He con－
sidered that his moral liberty was discharged．Cross－examined by the Solicitor－General，－－Did yoll ask the prisoner if he knew citor－General．－Did he not say that if he had not thought it was mond？Witness．－He did not say so．I was presert at all the meetings．Dr．W，Hutchinson sworn and exammed by Mr．
Cockburn．－－Is physician to the Royal Lanatic Asylum at Glasgow．Has had much experience in cases of insanity．He
had visted M＇Naughten whllst in Newgate in conjunction with the other Medicaughten what in Nomber morbid delusion of mind．The delusions were real，and not as－
sumed．He considered them suflictent to account for the act with which the prisoner was charged．He thougint that his state and deprived him of the power of in question．He consitered the act flowed immearately out of the delusion．Cross examined by the sollenor－Gincral，－Do you menn
 have done the bame thang in Ginsgow if the the act．We me migh had reaclied the same poms．I date his insamy y trum the period protection．I thank he was insane at that time．That was
about 18 months ago．Even at that time I do not think he could have resisted any impulse springing from the morbid de Duvesing your mind of all the evidence you have heard，and all the facts connected with the case，and forming your judgment
on the examination to which you subjected the prisoner，what on the examination to which you subjected the prisoner，what
would be your opinion of his state of mind？Witness．－I should Re－examined by Mr，Cockburn，－When patients exhibit symp
toms similar to those which the prisoner manifested, they are
generally, $I$ believe, placed under restraint? Witness.-Yes. generally, $I$ believe, placed under restraint? Witness.-Yes,
Such symptoms often gradually develop themselves, whereas many have these delusions for some time and are harmless, and
then they may suddenly impel them to the commission of crime. then they may suddenly impel them to the commission of crime, examined by Mr. Bodikin.-I am a lecturer on Medical Jurispriudence at the Andersonian Institution of Glasgow. I accompanied
the medical men last Thursday, when the prisoner was visited in the medical men last Thursday, when the prisoner was visited in
Newgate. I assisted in the examination. I have heard the eviNewgate, has said with reference to Mraughten's insanity. Mr.M Murdo,
surgeon, sworn, and examined by Mr. Cockburn.-I am the sur-
geon of Newgate. My opinion has not been reduced to writing. geon of Newgate. My opinion has not been reduced to writing. in the gaol. I fave taki $n$ prains to ascertain his state of mind. the time when he committed the offence of which, hat is charged. I have given that opinion to the parties engaged in the prosecu-.
tion. I believe that he was insane at the moment he committed the offence. He believed that he was acting in self-defence and correctiy.
Mr . A. Key, surgeon, sworn and examined by Mr. Clarkson.-I
am surgeon of Gray's Hospital. I have not seen the prisoner duram surgeon of Guy's Hospital. I have not seen the prisoner dur-
ing his confinement in Newgate. I saw him for the first time in my lite yesterday. Ihave been in cournting the whote of the unaer a delesion when he shot Mr. Drummond; that be was exempt from all responsibility; that he had no control over his ac-
tions. I have not had my attention particularly directed to the tions. I have not had my attention insanity, but Iave been engaged in judicial inquiries. sion, and yet be able to conduct the ordinary affairs of life. The
delution which impelled him to the act deprived him of ail moral delution which impelled him to the act deprived him of ail moral
control. Mr. Forbes Winslow, surgeon, examined by Mr. CiarkControl. Mr. Forbes Winslow, surgeon, examined by Mr. Ciarkduring the whole of the trial, and have not boen summoned on
either side, find have heard all the evidence on the part of the either side, and have heard all the evidence on the part of the
Crown and for the defence. Judging from the evidence which I have heard, I have not the slightest hiesitation in saying that the prisoner is insane, and that he committed the offence in question
whilst afllicted with a delusion, under which he appears to have been labouring for a considerable length of time. Lord Chief
Justice Tindal.-Will you repeat what you havejust stated? Mr. Justice Tindal.-Will you repeat what you have just stated : Mr.
Winslow again expressed an unqualified opinion of the prisoner's insanity, Dr. B. Philips, surgeon and lecturer as the Westminster
Hospital was then called, but Lord Chief Justice Tindal interposed Hospital was then called, but Liord Chief Justice Tindal interposed
and said-Mr. Solicitor General, are you prepared, on the past of and said-Mr. Solicitor General, are you prepared, on the part of
the Crown, with any evidence to combat this testimony of the medical witnesses who now have been exumined? because we ping the case? Is there any medical evidence on the ofther side?
The Solicitor-General.-No, my Lord, Lord Chief Justice Tindal. - We feel the evidence, especially that of the last two medical gentlemen who bave been examined, and who are strangers to
both sides, and only observers of the case, to be very strong, and
sufficient to induce my learned brother and myself to stop the case. The Solicitor-General said, -Gentlemenyself of the jury, after the intimation I have received from the Bench, I feel that I
should not be properly discharging my duty to the Crown and to
the public, if I asked you to give your verdict in this case against the prisoner. The Lord Chief Justice has intimated to me the
very strong opinion entertained by bimself and the other learned jurlges who have presided here to-day, that the evidence on the
part of the defendant, and more particularly the evidence of the part of the defendant, and more particularly the evidence of the man, at the time he committed the act, was labouring under
insanity; and, of course, if he were so, be would be entitled to his acquattal. I whs anxious, howeser, to say, on the part of
the crown, hat they have had hoobicet whatever but the attain. on the part of the prosecution, every tacility has been given to
the defence. There is no wish, there can be no wish, on the part be attained; and, certainly, when in the streets of thas metrothose who have the care of the public peace and safety to have
the case properly investigated. The safety of the lives and persons of all of ris requires that there should be such an investigayou the evidence we possessed of the conduct of this young man. on the doctrines and authoritres that have been lasd down in this
 soner committed the crme he was at that tume to be regarded as
a responsible agent, or whether all control of himself was taken away ? The Lord Chie Justice I understand to mean to submit
that question to you. I cannot press for a verdict against the prisoner. The learned Judge will submit the case to you, and Justice said,-Gentlemen of the jury, in this important case, Which has excited very great anxiety during the two preceding
days, the point I shall have to submit to you is, whether on the
whole of the evidence you have heard you are satisfied that at whole of the evidence you have heard you are satisfied that at
the time the act was committed, for the commission of which the prisoner now stands charged, he had that competent use of his anderstanding as that he knew ang a fhe If he was not sensible
act itself, a wicked and a wrog thing
at the time he committed that act that it was a volation of the at the time he committed that act that it was a violation of the

The first indictment charged the prisoner with stealing four
poons The first indictment charged the prisoner with stealing four
poons and one fork, the property of John Howse, in his dwel-
ling-honse. Mr. Clarkson addressed the jury, and said that the business in Regent-street. He was a member of the Junior United Service Club, from whence this property was alleged to have been stolen, and under these circumstances a question of
law might arise as to whether the present indictiment should be sustained. He then proceeded to detail the facts of the case,
which lave recently been laid before our readers. The Recorder, in allusion to the difficulty asserted by counsel in point of law, when it arose upon the evidence. Witnesses were then examined ment could not be sustained, as at expressly stated that the pro perty was stolen in a dwelling-house, a term which could not be
applied to a club. The prisoner was therefore acquitted. He as then charged upon another indictment, with stealing some the trustees of the Army and Navy Club. As the circumstances
ursder which the robbery was committed have been so fully and recently given, it will be unnecessary to state more than that it the property in question, and he was proved to have pledged it a good character. The jury found the prisoner Guilty of Larceny,
and be was sentenced to be transported for seven years. There proceeded with A large guantity of plate was, however, handed over by the pawnbrokers to the different prosecutors. The unusual length to which our report of the trial of M ${ }^{\text {c }}$ Naughten
and the Parliamentary debates of the week extends, compels un to postpone until next week the details of the trial of Mr. Fear gus O'Connor and the other Chartists at Lancaster. The prison-
ers concluded their defence on Wednesday; but after the Attorney Gerieral's reply, the learned Judge, at the request of the jury terminated. Of the 52 until Tharsday, on which day the tria M'Douall, Thomas Cooper, and Bernard M'Cartney, were found guilty only on the fourth count of the indictment, which charged gether, and having tumultuously and unlawfulty assembled tosubjects of the realm to leave their occupations," \&c. fifteen others, including Mr. Feargus O'Comnor, were sesubing "unlawfully endeavoured to excite her Majesty's liege endeavoured to persuade and encourage the said liege subject pective employment, and agree to leave their several and resthroughout a large portion of this realm," \&c. The rest were
acquitted. Judgment on those who were convicted is deferred.

## THEATRICALS.

Her Majesty's
Theatre, - The opera will open Madame Grisi, Madame Persiani, Mademoiselle Moltini, Signor F. Lablache, and Signor Mario are the recognised Carti, a new tenor, and Signor Fornasari, a new basso. Mademoiselles Taglioni, Cerito, Fanny Elssler, Guy Stephen, Camille, and M. Perrot, are among the engageMdlle. Adele Dumilatre. The whole of the opers com pany, with the single excention of Madame Grisi, will probably appear before Easter. The ballet will open with piece called $L$ 'Aurore. will make her appearance in a May, when she will appear in a ballet called $L a$ Naiade, founded on La Motte Fouque's romance of Undine. Among the operatic novelties are mentioned Linda di milla, Herold's Zampa, and an for this theatre by Costa, called Don Carlos.

## Stifiscellaneous.

Mortality.-The Quarterly Table of Mortality, in 114 of the principal districts (including nearly all the large towns) of England and Wales has just been published; whence it appears that the average total number of deaths in the four autumns from 1838 to 1841 (inclusive) was 42,003: the cotal number for the last autumn was 39,368 : the quarterly average for the past year, 40,554 . These for the corre melusive of metropolitan mortality, 11,861 , 11,631 , and 11,318 . The population in the metropolitan districts was at the last census $1,870,727$; in the entire of the districts included in these returns $6,534,535$. Some things in these statements are startling. Thus, while the mortality during metropolitan districts is in round numbers 12,000 in Birmingham was in round numbers 1,000 , with a pourlation of only 138,000. The following remarks appended possess considerable interest:-The mortality in the 114 quently much higher than in the rest of the country; hence it is believed that the districts in the return will be the first to indicate the rise of any epidemic, or any deterioration of the public health. The enumerated population The present quarter closes the year 1842 . in which 161,106 deaths were registered in the 114 districts. If we raise the average 4.4 per cent as a correction for the increase of population in 25 years, the average applicable to 1842 (1842) wre 161 , year (1842) 4842 ar 1842 we 2.42 p 57 ., of 6 per aistricts in the four average 1838-1841. The of the autumn quarter years $1838-1841$. The averago of the autan quarter $(39,368)$ registered in the quarter were 11 per cent. below
the quarterly average. The mean temperature of the autumn of 1842 was 0.7 deg. above the average; the fall of rain was 6 inches, the average being 4.6 inches. In the metropolis the epidemic class of diseases was less fatal than usual ; one-fourth of the deaths in this class was caused by scarlatina. Bronchitis and pneumonia prevailed. Scarlatina is mentioned by the registrars as still prevalent in several districts, particularly in the southern parts of the island. The districts in which the number of deaths was greater than the average of the autumn quarter in the same districts axe, Maidstone, Brighton, Norwich, Devizes, Dorchester, Plymouth, Rearuth, Penzance, Stroud, Cheltenham, Hereford, Worcester, Woolstanton, and Burslem, Coventry, Leicester, Basford, West Derby, Bolton, Halifax, Pontypool. The districts in which the number of deaths was less than the average of the autumn quarter in the same districts are the Metropolitan districts, Isle of Wight, Portsea, Winchester, St. Alban's, Northampton, Cambridge, Ipswich, Exeter, St. Thomas, Bristol, Shrewsbury, Wolverhampton, Birmingham, Macclesfield, Great Boughton, Liverpool, Blackburn, Rochdale, Bury, Wigan, Ashtorn, and Oldham, SheffieId, Huddersfield, Leeds, Hull, Sunderland, Gateshead, New castle-on-Tyne, Carlisle, Abergavenny, and Merthyr Tydvil.-Times.
Art Union Lolteries.-Mr. Serjeant Talfourd having been applied to respecting the legality of the various Art Lottery schemes at present before the public, has given it as his opinion "that all the schemes above described are otteries, or such distributions by chance as are in direct violation of the statutes," and, further, "That the parties subscribing to or purchasing shares in the proposed distributions, sud who proceed take their chances of prizes at the drawing of the lots, are liable to the penalties of

## SATURDAY, MARCH 18, 1849

When we some long while ago ventured to oppose the vulgar prejudice in favour of soft burnt flower-pots and against hard ones, we heard on all sides only one outcry, and that against the absurdity of supposing
that plants could be grown in any material except such as is porous. We, however, maintained our ground, urged the objectors to examine the guestion experimentally, and not prejudicially, if we may apply that word in so new a sense ; and the issue of the investigation has shewn that we were right-that plants can be grown in slate as well as in the softest and rudest earthenware. Thus encouraged, and seeing that what gardeners are the most certain about is not always the nother of their will venture to enter the lists against A fortnight since
ery properts alled attention to the modern plan adopted here and there, of potting young plants a once in large pots, 'so as to avoid the necessity of of the obviously good effect of the system. This, like the hard-baked pots, has raised a host of objectors, who point to their own experience as an unanswerable argument against what some are desirous of calling the one-shift system
say, "all our lives; we always adopted the good plan of frequent potting; and we are reckoned pretty good gardeners, we believe. We never heard of such a thing as putting small plants into pots as large as they are likely to require when old, and we wonder that the Editor of the Gardeners' Chronicle should allow his Paper to contain such stuffe" These correspondents do not say that they ever tried the one-shift system themselves; all that they insist upon is, that their own method being right, the other must necessarily be be worthy of that of the Professor of Casuistry at Cambridge, but we confess that such as we have literally qunted from a paper or two before us, reminds us of an Irish story worth telling on this occasion. A man was indicted at the Clommel assizes for stealing a pig; on his trial he produced a dozen uitnesses, who swore that they knew the prisoner well, that they did not see him steal the pig, and did not believe him capable of doing such a thing: unluckily one witnes appeaxed who did see him driveit away, and to the man's by the jury to the prisoner's twelve negatives. So it is with this question about the "one-shift" system: twelve men may say that they never saw it done, and do not believe it possible; but one man who has seen it, and found it answer, will be regarded by the public as the better evidence.
With these remarks we beg to introduce to the notice by a correspondent reter written upon shifting plants by a correspondent calling himself Observator. That letter seems to include all the objections that gardeners no more valid reasons against it, we shall take it to pieces, and, as we proceed, explain what we conceive "I, fallacies it involves.
been rather start others," says Observator, "have one-shift system,' as he designates description of the to consider an improved method of what he appears startled, because I have always been taught to consider that if a plant were put into a pot three or four sizes not by any means be made to thrive healthily, it could
did thrive, it would run into such a wild exuberance of growth as to be quite unmanageable; and as to its flowering, that weuld be entirely out of the question until it had filled its pots with roots, and consequently its supply of nourishment had been in some degree exhausted. I have always been taught to carefully guard against the 'over-potting' of plants: how grea was my surprise, then, to find that I and all my sage utors have been pursuing the wrong path to excel lence of cultivation; and, though we may have turned out some tolerably good specimens of plants, yet it could only be by mere chance-we owed nothing to skill! What an immense saving of labour might hav been made, had we been earlier made acquainted with the 'one-shift system'! However, it is never too late to mend our ways; and the sooner we do it, especially as our ways are not 'Nature's ways,' the better. Now that we have got a system by which we may hope to make our plants form a three years' growth, and probably a three years' crop of flowers, in one year, we have indeed a very strong stimulus to exertionto say nothing of the great saving of labour we shal effect."
Thus far, we find the usual appeal to what men are accustomed to, and nothing more; it is a good specimen of the bad way in which some people dispute when they fancy they are arguing

But," continues the writer, "however good in theory the 'one-shift system' may seem at first sight, I have some latent misgivings as to its efficacy, at leas in all cases. Nature is not always the safest guide.
Nature not the safest guide! why, what other guide are we to take? Is there anybody vain enough to magine that his knowledge of what is fitting for the well-being of a plant is better known to himself than the Creator of all things? On the contrary, we venture to affirm that there is not a single good mode of cultivation that is not conformable to Nature's ways, that all cultivation is good in proportion as these way are followed, and that all bad cultivation is in direc violation of important natural laws. Our frien "Observator" should have said, We often do not sufficiently understand Nature, and therefore we are apt ancy we are following her when we are geing the other way; but let that pass for the present.
par correspondent, in continuation, we place a plant in an artificial situation, it is by artificia means, to a great extent, that we must keep it in healthy existence. 1 do not mean 10 ase the pot-culture the laws of nature should be entirely dis-
regarded, for in our potting and watering, and other attentions to plants, we are imitating nature ; but we may exceed the proper limits, and in attempting to imitate nature too exactly, we may find that her laws are not, in all cases, applicable to plants placed in an artificial situation.
Here we have a string of phrases the precise bear ing of which seems to our apprehension rather obscure. Plants artificially grown are to be artiticiall treated-no doubt; but artificial treatment need no be in opposition to natural laws-on the contrary, it
should follow them as nearly as circumstances will permit. But, says "O nearly as circumstances wit are not to be entirely disregarded, only we may exceed the proper limits-that is to say, instead of following Nature we may run before her; and then, when w have so exceeded them, we may find that hex laws are not applicable to plants in an artificial situationwhich, being put into plain English, is the same thing as saying that 2 violation of the laws of nature produc bad effects, ergo the laws themselves are not fit to be Wosed.
We confess our inability to comprehend this process of reasoning; let us hope for more success next week, when we resume the consideration of the remainder of our worthy correspondent's letter.
The subject of experimenting on the importance of wich Profinge scale, to so skilfully directed attention and Hensiow has lately week made a few remarks, is one, the importance and possibility of which become more evident the more we consider it in all its bearings. When a philosopher works carefully in his cabinet, acquainted accuately with the nature of all the agents spread before him, and alive to all the disturbing influences tha may affect his results, he knows that one experimen is as good as a hundred, and a necessity for repeating may not be felt; for when natural causes are exactly alike, the same effects must as surely follow them as when figures are dexterously combined by the arithmetician. But the cultivator of the soil is in a wholly different position: he has to deal with materials which, although they are called by the same name, may be really very different in their nature; he knows very little about them; a thousand circumstances unobserved by his untrained eye may exist to disturb his results, and the econsequeuce is that all his experiments must be varied and repeated till a series of averages shall form a rough but sufficient check to his conclusions. We may fairly doubt whether the coarse operations of Gardening and Agriculture will
ever bear to be examined in any other way ; and if they would bear it, the new results of new practice will certainly fail of carrying conviction to the minds of the mass of the people, unless supported by evidence accumulated upon evidence.
For example: A. dresses an acre of his land with nitrate of soda, tries a cheap experiment--gains an ample return, and concludes that this substance is the best of all manures; his neighbour follows his ex ample, buys nitrate of soda for 20 acres, incurs considerable expense, watches his field with anxious looks, sees little promise of advantage, gathers in his crop and finds that his experiment is a losing one. Thi is talked of at the Corn-market, reported in the county paper, and nitrate of soda is, in the minds of many, condemned for ever. But how different would have been the resultif a hundred farmers had dressed a piece of half an acre under certain instructions, and then compared notes? Some would find that they had succeeded, others would see no advantage; but as the results would probably be almost balanced, it would be come manifest to the most obtuse understanding, or to the most prejudiced mind, that if nitrate often failed, it often turned out well; the causes of failure in the on case and of success in the otherwould then be canvassed and discussed, new experiments would be suggested, and by degrees the land where, and the times when, and the crops to which nitrate of soda can be advanlaceously applied would become understood experi mentally Every man would know the facts, because he would have witnessed them, and the evidence of our senses is, it must be granted, about the best that is procurable.
Such being our opinion, we say to the farmers and gardeners of Great Britain, with Professor Hen slow: "Trust not implicitly to the sugrestion of the most celebrated chemists, nor adopt their notions into your practice, without previously mak ing a set of comparative experiments for yourselves, in order to test the value of their suggestions. Secur co-operation; act together by hurareds and thousands in attending to directions, and in registerin, results. Such decided improvements in the art of culture will then be struck out for you, that you important interests will be able to maintain that state of prosperity which is so essential to the general well-being of the country."

But it may be asked, how is this to be arranged hence are to come the suggestions and directions which the cultivators are to follow? to whom are we to look with confidence for that superintending in telligence and skilful leading which are indispensable to secure the success of such endeavours? We migh point to the many men of science now occupied with such inquiries ; to the Daubenys, Henslows, Johnstons, Maddens, Playfairs, Sollys, and others, as safe and trustworthy guides, whose advice is easily and speedily to be procured through the medium of the weekly press. But we feel that it is unfair to impose such duties on private individuals while there are every hose officers can b readily charged with their execution. "If," says Pro fessor Henslow in one of his letters, "the arrange ments of our various Agricultural Societies were only as complete for securing abundant return of comparative experiments as they apnear to be perfect for exhibiting fat cattle and fine roots, or even for discussing good dimners and promoting good fellowshin, I should then hope to live long enough to see the farming produce of Great Britain double that which is now extracted from the soil.

Now we can discover no reason why Societies should not be as efficient for one purpose as for another: in point of fact, the Highland Society has already take up the subject by offering numerous premiums experimental researches in Agriculture, and we trus that its exampe will be thowed and inproved upon elsewhere What could a more worthy object of elsewhe. of grat reso ces of direct collate $r$ geter of england than to in a rey acap form the abstract, and publisu, results of thousands of exper ver set by the Suffoik farmers shows its pr and about its importance no one, we think, would entertain a doub
Professor Henslow, however, inclines to the opinion that it would be better to establish a new society for the especial purpose of encouraging and directing experiments. As the views of so judicious a friend o the cultivators of the soil cannot have too much publi city given them, we subjoin the following extract from letternow before us:
"Although you have repeatedly assured practical men or the necessity of experimenting for themselves, and have probably produced some good effects by so doing, yet I hope you will excuse my once again insisting upon the mecessity of something more being done than merely pointing out to them what are the experiments they should undertake There is no doubt great satisfaction in measuring the length of an invisible animalcule, and I am one
"of the last to be insensible to such a gratification;
" but I l:ope the President of the Microscopical "but I l:ope the President of the Microscopical Society will agree with me in thinking it would be Botanists, Chemists, and Geologists in London to hold monthly meetings for the express purpose of devising experiments to be conducted on some such plan as the one I have suggested to the farmers of
Suffolk. There must be some sort of organisation Surfolk. There must be some sort of organisation Schedules, and with precise instructions for filling them up. Possibly a joint association of co-operating experimenters among farmers and gardeners would be a preferable scheme to calling upon the sum be levied annually from the various Horticultural and Agricultural societies for carrying out a plan which ought not to involve the class of experi"plan which ought not to involve the class of experi" menters to whom we should apply in any personal " or two be added to the Gardeners" Chronicle, to be "expressly devoted to the discussion of the experiments proposed
In the latter part of the proposition we at once express our concurrence, if such a Society should
become desirable; but we trust, as we have already stated, that the existing Societies will render a new Association unnecessary; and that the intention expressed by Mr. Pusey of moving for the appointment of a consulting chemist by the Royal Agricultural
Society is an indication that some such step is about Society is an indication that so
to be taken by that great body.

Many have been the attempts to increase the quantity and effect of common stable and farm-yard manure by mixing it with other substances, which alone would not have had any fertilising effect, or which are supposed to increase its activity. It may not be uninteresting, both to gardeners and farmers, to consider the principles on which these composts or mixens, as they are sometimes called, are made; using only experience and common sense, and such chemical facis as are universally admitted, even by those wholhave no pretence to science.
It is well known that fermenting dung has the property of dissolving vegetable and animal fibre, dispersing its volatile elements, and only leaving those which are more fixed. Thus, a mixture of
dung and straw, especially when moistened with dung and straw, especially when moistened with
urine, produces a considerable heat, which is taken advantage of by gardeners to make hotbeds for forcing vegetation. But when the object is to obtain the most effective manure with the least loss, it is evident that the heat should not be permitted to rise to such a degree as will disperse the volatile elements which arise from the decomposition of the substances heaped
together. The process should be so gradual, that together. The process should be so gradual, that
the gases evolved may be absorbed aud condensed by some substances added for this especial purpose. The dung of animals, especially that of horses fed on Corn, very soon enters into putrefaction, and serves as a ferment to induce putrefaction in those sub-
stances, such as straw and woody fibre, which other stances, such as straw and woody fibre, which other-
wise would scarcely heat, and would only moulder wise would scarcely heat, and would only moulder
away very slowly by exposure to air and moisture. away very slowly by exposure to air and moisture,
Vegetable fibre may thus be readily, decomposed, even when united with an astringent principle, which resists putrefaction, as in Peat. A mixture of dung, straw, Peat, and any kind of vegetable fibre moistened with water or with urine, will soon heat, and decompose; and if a portion of earth be mixed with this in layers and form a covering to the heap, it will absorb the volatile gases as they slowly arise, especially if thele be vegetable mould in it. Thus, sub-
stances which in themselves would be inert bccome stances which in themselves would be inert bccome highly fertilising, arid the actual manure is increased. turning this over frequently, does not seem to add any ferulising matter to the heap which it had not before; and, unless we could show a beneficial action of these substances on the animal and vegetable fibre, it admits of a doubt, whether this mixing and turning of a large heap of manure may not be labour thrown away. Line is excellent in heavy soils, which are not exhausted; it makes the humic acid soluble, according to some: at all events, its good effect is
matter of experience. Chalk and marl improve the texture of the soil, and likewise afford calcareous matter to act on the humic acid; but these substances add nothing to the strength of the manure in the compost, more than when they are spread over the surface and ploughed in with the dung. What, then, could have given rise to this practice of making such marl a, spmpdimes called manures, and land which marl ate spmpames called manures, and land which
has thuse substancss added to it produces better crops,
with the same quantity of dung, than the land with the same quantity of dung, than the lands where
they have not ? been added, they have they have not Shen added, they have been nelves sinitar to that of dung. Hence the misMIDINOA thy liming
dressing with dung, and consequently, that it must improve the compost.
We are aware that we are opening a door to controversy on this point, on which practical farmers differ widely - so much the better, if it excites them to make comparative experiments. We desire not to lay down the law: we only express doubts, which may be confirmed or removed, when well-authenticated facts shall be brought forward for or against our position. In the mean time we will explain
our practice. As the time when the greatest part of our practice. As the time when the greatest part of
farm-yard manure is put on the land is in the spring on young Clover, and in summer on root crops, it is carried out of the yard into the field at such a
time, that, when it is wanted for the land, the straw time, that, when it is wanted for the land, the straw rating partially decomposed, the fibres readily sepaknows well how to manage the dunghill, so as not to heat too rapidly. At one time he may throw earth over it, at another he may water it; according to the state in which it comes out of the yard, he throws it
out lightly with the fork, or he drives the horses and carts over it to check the putrefactive process, by excluding atmospheric air. No specific directions can be given on this point. If he thinks chalk or marl them on the land after harvest, when it has had its last ploughing before winter, spreads it, and lets the winter's frost divide and pulverise it. If he uses lime, he puts it on after the dung is incorporated, or at the same time with it, ploughing both in together, or on his Clovers about to be ploughed up for Wheat ; in short, when he thinks it will bave the best effect. The farm-yard dung needs no other turning than what it had when carted to the field, and when it is spread over it. If there is room in the yard for throwing it together and inducing the proper fermentation, it will save much labour at a busy time of the year. In that heaped up before it is carried. The more animal matter it contains, the sooner it will be ripe. It should never be in very high heaps, so as to heat unequally; and the process should be watched carefully. A little attention may save great loss.

Humphrey Davy maintained that the farmyard dung could not be used too fresh; as in this case nothing would be lost, and the straw would slowly decompose in the earth. Theoretically, this is correct; but we find, in practice, that long, undecomposed straw ploughed into the land, in dry weather especially, allows the moisture to evaporate too rapidly; whereas short dung absorbs it, or even produces it.
The seeds of many weeds, which a gentle heat would The seeds of many weeds, which a gentle heat would
have caused to germinate in the heap and have decomposed, are thus sown in the land and interfere with the crop. Thus experience modifies theory, while theory directs useful experiments.-M.

THE CORAL-TREE AS AN OPEN-AIR PLANT. In confirmation of your Limerick correspondent's statementoming of Erythrina laurifolia in the open air, I may state that in 1832 there was a plant of E. Crista-galli in the garden at welbeck, which had tlen and which annually produced thousands of flowers. This plant was growing in a border, 6 feet square, at the east end of a frus
received was as follows
In autumn, after the frost had destroyed its beauty, it was cut down, and the bed, which also contained some Fáchsias, was covered about a foot thick with old dry $\tan$; to make a neat finish, the mound was afterwards turfed
over. The tan was carefully removed about the middle of April, by which time the young shoots, as thick as strong Asparagus, had generally protruded several inches. These were thinned out, about a dozen of the strongest being retained, which in the course of the season formed a bush
from 4 to 5 feet in diameter, being in autumn one mass of bloom. The bed was annually mulched with rich compost, and the plant was occasionally watered with liquid manure. As this plant enjoyed peculiar advantages, inasmuch as the ground was high and dry, and the situation sheltered,
the heat being also reflected during the day, and slowly radiated by ing also reflected during the day, and slow the stone pavement with which the bed was surrounded, I think a somewhat different treatment will be necessary to ensure its flowering in a more exposed locality. From what I
have observed, I doubt not but the following mode of treathave observed, I doubt not but the following mode of treat-
ment will ensure its blooming in a moderately sheltered situation.
Cuttings of the young wood taken off with a heel when about 3 inches long, and planted round the edge of a large pot, or singly in small ones, in sandy peat, and plunged in This is suitable for those cuttings which are taken from plants in heat; but cuttings from the open air will not bear such treatment. The transition to a close warm frame appears too much for them, and they become paralysed ; but frame until planted, they are placed in a moderately to a brisk bottom-heat, they will root with great freedom. Propagation may also be effected by division of the roots; but this is nota good practice., After the cuttings are rooted, they must be repotted into rich light compost, and en-
couraged to make robust growth. As it is indispeneable that the plants should become strong before they are planted out, they must have at least one season's cultivation in pots ; the flower-buds muist also be removed as soon as they are perceptible, so that the whole organizable matter may be concentrated in the young plant.
In the spring of the second season, therefore, the ground may be prepared for the reception of the plants,
and as the preservation in winter of the roots of all tender plants depends as much upon the dryness as upon the warmth of the soil, it will be advisable to give them an
elevated but not an exposed situation. and where the elevated but not an exposed situation; and where the
subsoil is not porous, make it so artificially. Therefore, where it is necessary, excavate the natural soil to the depth of two feet, and in the bottom place a layer of brick rubbish, at least six inclies thick ; over that lay some small sticks, Leaves, or moss, to prevent the soil from getting into the drainage; and in filling up, raise the bed six inches above the level of the surrounding soil, with a compost consisting of rich turfy loam, leaf-mould, and turfy peat, in the proportions of two parts of the former to one of each of the latter; to which sandstone or porous added, to the extent of one-eightl of the whole mass, This mixture will never become solid; on the contrary, it will always be permeable to both air and moisture, without plants in the fecoming saturated with the latter. The but, in the third year, half of them may be taken out to form a new plantation; and in the fifth or sixth year, square feet. When large specimens for immediate effect are desired, four or five may be placed in juxta-position. The best time to plant them out will be from the last weel in May to the middle of June, as the ground will then be a little warm, and the plants will sustain no check.
Towards the end of October the plants should be cut down, and the crown of each covered with a box or
flower-pot filled with dry leaves; the whole being 'spread over with dry peat, leaf-mould, or sawdust, to the depth of a foot, and then turfed over neatly. The latter will be found advantageous, especially if the sides of the bed have a sharpish inclination, as it will throw off much of the its protecting properties.
In spring, when the covering is removed, and the plants to the depth of the roots of the beds should be renewed to the depth of the roots with the above compost; the
whole being afterwards covered two inches thick with sandy-peat or leaf-mould. This, from its colour and good conducting properties, will absorb considerable heat during the day; but as it will part with it quite as freely when the sun does not shine, it wil be necessary to pro-
tect each plant with a bandglass after the sun is down, and to cover the whole bed with mats during the night, This covering should be continued until the middle of June, or later, if the weather requires it. Water during the growing season may be freely administered in dry weather; and if liquid manure is occasionally given, it will add to the strength of the plants; but after they are will be for the preseration the bed the better it winter

The situation in which the plant was placed at Welbeck did not show it off to advantage ; but planted on a lawn, either as a single specimen or in a group, the Coral tainly nothing inferior to Clianthus puniceus.-W. $P$. Ayres.

ON THE TREATMENT OF SEEDS HAVING LARGE FLESHY COTYLEDONS
There are many operations connected with gardening, which, although apparently trifling and unimportant in results. One of these is the sowing of a seed ; and as an Acorn will be a fair type of the class of which I speak, I shall select it as an example.
It is a general rule, I believe, to place the seed at a being regule depth below the surface of the soil, this depth cang regulated by the magnitude of the seed. Nothing every stage of growth than this treatment, the reasons for every stage of growth than this trea.
which I shall endeavour to explain.
Every one is aware that seeds, such as Acorns, Beans, Chesnuts, \&c., are composed of two fleshy lobes or cotyledons, connected on one side by the plant, the whole being inclosed by a thick outer covering. tion seed being placed in a situation favourable to vegetabecoming low of a not much sworen, shelf or covering not beling the cotyledons, bursts, and a small radicle or root penetrates the earth for a double purpose; first, in search of it firmly in its place. But the nourishment furnished by find the sua seconary source to the emory, for we find that nature has furnished other means of support to the delicate and as yet minute plant. The cotyledons are nourishans by which the elements stitable for its food and pourishment are extracted from tive atmosphere, digested, and prepared for the delicate infant tree; in short,
the cotyledons are to s seedling plant what leaves are to one of larger growth
To place a seed, then, below the surface of the soil, where is a gross hisden from the full actions of the atonosphere, is a gross mistake, and a wide deviation from the rules of nature; for when do we find a seed, sown by nature's own
instructions are seldom of such a nature as (if rightly observed) to cause us to err.
'Read nature, nature is a friend to truth."
From the observations I have made, it appears evident that the seed should be placed near the surface; indeed, if covered at all, it should be but very sliphtly, although nature always [not always; not in the Oak-Ed.] makes full benefit of light and air. But when placed at a great depth, it is necessarily some time before they can be raised to the surface; and consequently proper nourishmentr is denied to the embryo at the first stage of its vegetation; and an injury done at that stage of growth is irreparable.
I feel satisficd that when the seeds of timber-trees are treated in such a manner, it produces a great effect on the value of the timber, or at least on its durability ; the timber of trees planted naturally is far superior to that from trees artificially treated, or treated after the deep planting method. Forest-planters would do well to turn itself, is important in its results.-A. Tyro

ABSENCE OF TREES IN THE PRAIRIES OF NORTII AMERICA.
In North America, the plains watered by the Illinois and Westorn streams of the Mississipi and Missouri contain extensive grass-covered tracts, the Savannas or Prairies, where no trees will grow, excepting in Arkansa, along the banks of the Mississippi, and other watercourses where woods are occasionally met with. That plains (alluvial?) which are represented by all who have visited them to possess the richest sward should not afford growth to a single tree is a striking phenomenon; and, as such, ought, before
from geographers.
Flint, an American writer, divides the Prairies into three kinds: 1st, the heathy or bushy, which have springs, and are covered with small shrubs, Grape-Vines, \&c., very common in Indiana, Illinois, and Missouri ; 2nd, dry or tation but grass; the latter are the most common and extensive; the traveller may wander for days in these vast and nearly level plains, without wood or water, and see no object rising above the horizon; 3 , the alluvial or wet rich vegetation of tall, rank grass; the soil is deep black, friable, and fertile; ubounding in pools without issue, left by the flooding of the rainy season.
In the above description of the Prairles, as well as in many others which I have read, I meet with no particulars trees. Where the soil is represented to be dry, this would occur in the greatest degree at the surface; and since that is not so dry but that grass will grow upon it, surely a little below that surface the roots of trees would enough. But when, in elucidating a case of this kind facts are wanting, not, perhaps, in the Prairies themselves, but in the writings of those who describe them, I think, that, by turning our attention towards the known causes which affect vegetation in similar circumstances elsewhere, we question. A. Balbi, the French geographer, states that the plains of Rio de la Plata, or Pampas of Buenos Ayres, are remarkable for the absence of trees, and for the innumerable Grasses which cover their vast surface; being Mississippi, Mackect the Savania they fully Mississippi, Mackenzie-plain, which they fully equal in exten-amounting, according to fumboidt, to 1,215,000 square miles. Next, Azara (a Spanish writer) says, that
throughout the whole of this country (Pampas) there is neither river, lake, nor well, that is not brackish. Even the Pilcomayo and the Rio Grande, the two greatest branches of the Paraguay, partake of this saltness; and dried same author assures us that he has seen in lagunas dried up by the heat, a layer of Epsom salts, above three
From this account of the Pampas, and those given by the travellers, all tending to corroborate the fact that the soil is highly impregnated with sait, I think we may failly infer that one great cause why trees will not thrive in these plains (Pampas) is owing to the presence of a sait, which, whether a sulphate of magnesia, a muriate of soda, or a carbonate, still, by pervading the soil in excess, must, independently of other causes, rather check the growth of trees than that of certain herbaceous plants ; amongst which, many might no doubt be found to be benefited rather than hammed by their presence in certain quantities, and whose ronts, penetrating less deep, are confined to the surface-soil, which, no doubt, is less im pregnated with saline particles, owing to the heavy rains which visit these countries and carry off the greater portion.
Froma these statements it will be seen, that, although no travellers have as yet collected any particulars within the territory of the Prairies tending to show that, like the soil are brackish, yet the case may be suspected to be the same in both instances. Several rivers which cross the frairies of North America from West to East fow, not far from their source, through an upland district (Desert between, at the foot of the Rocky Mountains, extending markable," says Balbi, "for its and the Paduca), "reIn various parts," observes the same writer, "but more especially along the borders of the Great Plain, in Ar cansa, Missouri, and Illinois, salt is found." Waters comprised within the limits of these plainsons and
as the different species of plants indicating by their habits the nature of the soil in which they grow, would be desirmay be attributed to the icy winds which sweep over these plains from North to South.-C. W.

## ON THE CULTURE OF TREVIRANA OR

 ACHIMENES.This genus, like many others, has had its name frequently changed within the last few years. If this is to be considered a mark of distinguished merit, no one can dispute that it has been judiciously awarded to this tribe of plants, combining, as it does, neatness of foliage, regugrown singly in pots and properly attended to, it amply grown singly in pots and properiy attended to, it amply
rewards the cultivator in the profusion of flowers which it bears, varying from the bright scarlet of the old Cyrilla pulchella to the deep violet of the superb Achimenes longiflora.
The following mode of treatment I have found equally well adapted to all the species: After the plants have done flowering, and the tops die down, (generally in November), I allow the bulbs, which resemble the catkins of the Hazel, I allow the bulbs, which resemble the catkins of the Hazel,
to remain undisturbed in the pots, whicl are laid on their sides beneath the greenhouse-stage, or some other place where frost and wet cannot reach them. Here they remain until the latter part of January, when they are placed in a gentler heat, and watered, until the soil becomes sufficiently moist to encourage vegetation. When the small scaly bulbs have made shoots about two inches in
length, I plant them singly in small sixties in a mixture of leaf-mould and a small portion of silver sand. At the subsequent shiftings, until the plants are finally in June placed in sixteens, the compost consists of light rich
turf-loam and peat, or leaf-mould when peat cannot be procured, in equal proportions, and on no account sifted. The pots are thoroughly drained, a point which forms the basis of all good culture both in pots and in the open ground.
For growing several plants in one pot, I prefer the No. 12 size, into which I turn five of the plants previously the in sixties, placing one in the centre and four never ges. These form a noble mass when in bloom, but cimen. The main stem and side branches are neatly sticked and tied out as they advance in growth.
The temperature of an early Vinery is well adapted for these plants until the end of Mary, at which period they should be taken to a cool pit, where a steady moist heat can be maintained. They should be shaded in hot days between 11 A.M. and 2 P.M. to prevent the sun from overhead. The pots should be placed upon others in verted, and the bottom of the pit should be kept moist, closing up early in the afternoon and giving air in clear weather about eight in the morning, so that the damp may disperse before the rays of the sun fall directly upon the plants. By pursuing the above course of treatment my It have always been crowned with success.
It is to be regretted that this genus is not more genethe various Horticultural exhibitions.-D. $R$. vious reason is that they travel badly.]

TRELLIS FOR CLIMBERS

AMATEUR'S GARDEN.-No. XI
Althovar much has been said and written relative to the importance of arranging plants in flower-gardens ccording to their complementary colours, but litle attention, in a practical point of view, has been paid to the subject. This is the more to be regretted, because the theory of colours is not an imaginary one, but to? produce an harmonious whole, certain colours must be properly blended, we ought not to distribute plants at each other, the tout ensemble will be more harmonious
and agreeable than it could be under any other circum-
stances. "Every decided colonr, certain violence to the eye, andour, (observes Göethe,) does certain violence to the eye, and forces the organ to oppo sition; thus, let any one fix his eye intently on the brilliant scarlet flowers of Verbeas ignea, and in a few seconds the colour becomes oppressive to that organ ; but no sooner does he remove it to the green foliage that surrounds the flower than the pain ceases, and the observer experiences relief.-And why is this? because green is the opposite or complementary colour of red; and in the same manner yellow demands purple ; orange-blue; and vice versà; and so on throughout the whole range of colours, as all the intermediate gradations reciprocally demand each other, the simpler colour requiring the com pound, and the contrary.
Again, colours are divided into two classes, viz., warm and cold; the warm colours are red, orange, and purple, and their shades; and the cold or complementary colourg, green, blue, and yellow, in their various gradations; while white, which for gardening purposes takes the place of green, may be considered complementary to the whole of them; as all colours are improved by being brought in contact with it, with the exception of pale pink or yellow, to which it gives a rather dingy appearance.
Where the flower-beds are surrounded by grass, it is not advisable to introduce cold colours, as yellow and blue, to any great extent ; but, on the contrary, warm colours, as red, orange, and purple, should prevail; and the opposite when the beds are on yellowish brown gravel, which is a warm colour. For this reason it is that some persons object to certain colours in their flower-gardens: but if, when cold colours are placed on grass, the beds are surrounded by a narrow margin of the complementary colour, the effect of the flowers will be much enhanced: and the same will occur when the beds are on gravel
These remarks are offered at this time with a view to the arrangement of colours in sowing spring or planting日utumn-sown annuals, which must be got into their per manent quarters as soon os possible Good lists of annuals and perennials will be found in previous Numbers, especially at page 105 of this volume. In arranging the plants, I would particularly insist upon a due proportion in their height, as well as in the colour of their flowers The best way to sow annuals is first to loosen the earth where it is intended to place them, avoiding raking the beds at present, unless the ground is very light; then make a slight drill, by pressing the rim of a 32 -pot upon it; sow the seeds very thinly, and cover with loam and leaf-mould finely sifted, and in about equal propor tions. In borders that are viewed in the length and breadth, the colours should be arranged in the following order: red, white, yellow, purple, orange, blue,-repeating the same cout the length of the order distances throughout the lat or the border. But in all symmetrical flower-gardens, by which is meant such as have a centre or centres, the colours should be arranged symmetrically; or, in a word, one half of the platiorm
should reflect the other. For those disposed to follow this should reflect the other. For those disposed to follow this
subject further, excellent directions will be found at subject further, excellent directions will be found at
p. 291 of the vol. for 1841 ; but before the time arrives for planting out, a plan will be given with the colours for planting out, a plan will be given with the colours
arranged as they will look best.--W. $P$. Ayres. arranged as they will look best.--W. P. Ayres.

## HOME CORRESPONDENCE.

Bees.-Your columns have occasionally been occupied With the subject of Bee-keeping; and judging from what and been said by the expert, of their various practices, might suppose that nothing certain was yet known of the proper treatment of this useful little insect of the nothing had been written that could be relied on althoug so many outhors lie open for consultation, fron, Vithough Huber, and from Huber down to Triptolemus Yellowly. That great success, however, does attend the nurture of Bees is pretty evident from the large quantity of honey annually brought to market; and that there can be no great art required in the " keeping" is as clear, from the exhibition of so many straw-thatched hives in the cottagegardens of our southern connties, whose owners havo them. Two objects are lelternaty in Bee ereing-the amernately merived from ob servation of the for or proft sucespose Bees are kept, or pron, success must maisy speak), which ean one acquired by path (ife abservation, with o due repal acquired by practice and oberct. The case is the gard as in mandening moch may be legrned from a theoratical as in gardening; wuch, and much from books but study of the subec, andere ar the power of using the knowled by practice. It is on this principle that we must account for the various fortunes of principle that we must account for the various fortunes of Bee-fanciers, in their attempts to follow prescribed methods.
mode of performing little offices about the hive, constitute the essence of success or of failure. The best summary on Bees and Bee-keeping which I have The best summary to be found in the articles "Bee" and "A miary" in the latest edition of the "Encyclopredia Britannica:" these I recommend to the notice of your Britannica; liese It not my object in this communication to lay down rules for their management bur favour of the vulgar method of keeping Bees, as now practised by our cottagers, if ther are to be kept for profit. In this method, indeed, all the prominent featurea of their economy, and their most interesting habits, may

Vide Scott's" Pirate."
be almost as well brought into view as by the ordinary practices of the apiarian. The universality and antiquity of this mode of keeping Bees are, perhaps, not good pleas
for the practice, because many bad habits may claim the same inveteracy; still the constant recurrence after trial of many others, and in the face attempts at improvement, is of itself a powerful re
commendation. Beside the acknowledged advantages commendation. Beside the acknowledged advantages of the material used in the construction of the common
hive-its warmth in winter and coolness in summer-hive-its warmth in winter and coolness in summer-
the ready and firm attachment it gives to the comb, and its general congeniality, it affords the darkness and privacy so necessary to the well-being of the insect. This love of
privacy is an instinct which must be kept always in view privacy is an instinct which must be kept always in view
by the fancier in the adaptation of his contrivances for watching its operations. In fact, in everything else, be will allow, to the principles of this parent model abode. Much has been said about ventilation, but it would appear that most of the contrivances for favouring this
object have been, or are likely to be, resented as impertinent, if we may judge by the fondness of the Bee for a deavours to keep no bigger than sufficient for free ingress and regress. Any mode of ventilating the hive which, in it takes in that way, would probably destroy it, or it larver, at any other season. Again, it is scaxcely possible time and reverberated heat at another; whilst the single isolated stool and the thatched straw-hood are free from these objections, and being once well adapted require no greater facilities than these simple arrangements afford, and he will do well to observe the principle in the fitting of the supplemental hives and glass cases required for his experiments. As regards the securing the honey and the who would have most profit by them must, I fear, follow the ordinary practice of destruction, however repugnant to his feelings. The laws of animal life, which give the preponderance to productiveness over the means of subof famine it matters little whether we pase the kife the halter, or the brimstone-match-always observing Macbeth's injunction, that if the deed were done, "it were well that it were done quickly:" This industrious and prolific litte insect breeds fully up to the limits of its own bare honey yourself, unless you supply them with its only proprofit. In ordinary seasons, it is never safe to allow any but the heaviest hives to stand for " stock." It is difficult to bring even these safely through a very mild win ter; and they often perish The rich and ample harvest of the last artie artifial a good preparative for the winter we have just rienced; and, but for that provision, I doubt much half the "stock hives" of the country could have survived it
without feeding. The practices of Wildman without feeding. The practices of Wildman and others
for removing the honey in the course of the summer, and taking the chance of the Bees making up the deficiency tempted, it is doubtful if more destruction to life would not be the consequence in unfavourable seasons; at least than takes place by the common mode of autumnal
execution. In bringing these cursory observations to a conclusion, I will endeavour to remove the gloom that overshadows this part of the subject, and better bespeak the interest of your readers by the relasuperior intelligence of the Bee, abounding as its bistory does, in examples of this description. My father kept Bees in the ordinary way of the country, and when a boy it
was my task, (partly imposed, partly chosen, other ruralities, to watch their progress. It happened that three stock-hives had been left standing through the From negligence, or want of leisure to work up the comb for its wax, the dead hive was allowed to stand on its
stool till the following May, when the remaining hives began to send out their swarms. A swarm tool place from one of these, and way the usual way first they appeared take kindly to the habitation offered them; but after the lapse of about half an hour they swarmed again, and time. As it was supposed that the great heal of the sun or some such annoyance, was the cause of their rising again, the hive was this time shaded with green boughs, enticements, in a very few minutes they rose again, and without waiting the usual process of settling, they were observed to be rushing to the entrance pêle-mêle into the above-mentioned ready-furnished but untenunted (except by its own sion, they were abserved busily employed in bringing out the dead Bees, small fragments of honey-comb, dead insects, and other dirt; and by the middle of the following day a little conical heap of their cleansings was to be seen on labourers. were seen entering to repair the dilapidations and refurnish the empty cells. In the end, this hive was
one of the heaviest of the season, after giving out its swarm like an old stock-hive. We all know the story of the refutation of the philosopher's defnition of the dis-
tinctive character of the human race, their si ability to drow anctive character of the human race, their "ability to drawo
anference," inasmuch as, that, although the dragsman could not, or did not know, that, although the dragsman could, "for he could draw anything." A double instance
of this faculty is shown in this anecdote of the swarm Bees. First, their preference to the ready-furnished house, previously engaged by their scouts before swarm-
ing, to the empty one in which they were hived; and ing, to the empty one in which they were hived; and secondly, their avoidance of the usual act of clustering in
their third rising, after finding that that act subjected them to the annoyance of being thrust into the empt tenement they were not in want of; and it may be noted that, although they seemed to deliberate for half an hour after the first hiving, their resolution being taken, the rose almost immediately after the second, to betake themselves at once to their destined abode.- $P$. $P$
mary cause why Bees store up honey. "Acen the priceives that Bees store up honey that it may support them in bad or cold weatber, and would add to his atatement quoted in p. 158 by J. W., "that propagation of the species is not the object for which we keep Bees," that the Killing Insects for the Cabinet.-As "S." has, at p. 138 , inserted a clever letter in answer to mine, which was merely intended to advocate the cause of poor persecuted should appear in return. As "S." says, with reason, that if I conderon one mode of killing insects, I am bound to provide one that is quicker and less painful; this I will and 1830 in the South of France, and while 1829 walking under that lovely sky without a cloud, I was stopped by a large and powerful insect crossing my path, and running as fast he could go from fear of me (and not vithout reason), for I took him up, and held him with dificulty in a piece of thick letter-paper. His struggle that he displayed. I was near the house of a friend who was staying at Thiers at the same time, and while walking hither, I passed in one of the vineyards a labourer, whom inquired the name or the insect? He said it was nawing through their roots. I took it to the house of $m y$ friend, and asked if he knew of any method of killing riend, and anded take him to England as a specimen, I would let him loose rather than be should suffer from a lingering or painful death. My friend said he would kill him in one instant, wis head or back: its death was instantaneous ether on never done it myself, but I was a witness to this. I am rejoiced to find that "S." approves with me of using ever means to check crueity to that part of God's creation Which has not, like ourselves, the power of self-defence;
and that with all, but especially with the young, cruelty to and that with all, but especially with the young, cruelty to insects and animals only leads the mind to exercise more and more tyranny in after life; and of all tyrants ${ }^{4 \prime}$ subbope that if this has the same result as my former letter that of bringing a clever answer from "S.," that he will, with the sole motive of anticipating that happy time stil folded in the volume of prophecy, "When the wolf shall the kid, and the calf and the young lion, and the fatling together ; and a little child shall lead them; and the cow and the bear shall feed, their young ones shall lie down together ; and the lion shall eat straw like the ox ; and the sucking child shall play on the hole of the asp, and the Theyed child shall put his hand on the cockatrice den for the earth shall be full of the knowledge of the Lord, Cultivation of the Pine-Apple in France.-Havin noticed, at p. 118, Bome observations on the Royal Garden of France, which I have lately visited, fem renen remarks upon the manner in which the Pine-Apple is cultivated in that country may perhaps be interesting to places which I visited while at Paris, there is none in my opinion at which the Pine is grown to such perfection as at the Meudon Gardens, by M. Pervillian. There, quanplants are fruited without pots, on what I believe is ermed the system of open-frame culture; which is a very with the cost of pots and the trouble of potting, and in a great measure with the fermenting materials required for bottom-heat. The information which I gained upon tbi fruiting plants of last season suckers produced by the plant after the last season are allowed to remain on the phant after the fruit is cut until the following March, a which period, if the plant be a strong one, the sucker,

These suckers are not potted, as is generally the case in this country, bot planted out in a frame, previously three to four feet high, with little or no heat in it, except what is produced by linings; as at this time (March) we particularly the case in France which is favoured with clearer sky. Half the trouble in linings of dung, which are linings added in this country, is thus dispensed with. The fioned, are found to produce heat sufficient to induce the plants to form roots. These are soon followed by others into the mould on the surface of the bed, and when this takes places, the rapidity of their growth may easily be imagined. The principal attention they require after being rooted, is to syringe them almost daily with tepid water, and to keep up a humid atmosphere. As the plants advance in growth, the frame must be raised to give them
head room. By judicious treatment, I consider fruiting
plants may be grown on this system in nearly half the usual time. About the month of August, the plants will be large enough to remove to their fruiting quarters, which at Meudon, and at the Baron de Rothchild's, are a lowroofed house or pit, just wide enough for containing three rows of plants, with a walk at the back. This is heated by flues or fire-heat, which, for plants of that size, is equally as good as hot water, being only intended for drying up the damp, and keeping up a moderate warmth during the winter months. There is no doubt, however, but hot water would be the best for practising the above system in this country. The floor of the house is filled in, to the depth of 16 or 18 inches, with the best soil that can be procured. I may here mention that loam is very difficult to obtain in the neighbourhood of Paris is not to be procured by any means; so that while Pinegrowers in France have the advantage in climate, we, on The side of the water, have a decided advantage in soil. the principal part of their Pines are grown in peat at plants, all growing in that soil. When the plants are ready for removing, it is performed in the following man-ner:-the frame is first lifted from the plants, so that raised with a spade, care being taken to remove them with as much soil adhering to their roots as possible. They are then planted carefully in the pit above mentioned, three or four inches deeper than they originally were, to encourage new roots, which, by being kept close, make After the plants are thus established in their final quarters no other attention is required but the genal routine of culture adopted for fruiting plants generally, vizo, pienty of heal na have no hesitation in other large kinds may Providence, Lnvilie, Cayenne, and the use of a single pot, be made to produce fruit weighing from 8 to 10 lbs . each.-W. Dunsford, Capesthorne
Achimenes longifora.-It is now time to plant this species. It does not start as early as the old Achimeries coccinea, and it delights in very coarse lear-mould, cona large and broad-mouthed pot, drained by inverting another within it and plenty of crocks round; very sandy leaf-mould over the crocks, and coarser, with less sand above. The bulbs should be planted fully an inch deep,
foswich Cucumber Society.-Connected as I ana with the above society, I cannot allow the observations of "Justitia" to pass unnoticed. Permit me then to dixect his attention to the first line in the judges description of the prize speoimens, as inserted at p. 140 of the Gar-
deners
Chronicle. He will there find that the first prize was awarded to Mr. I. Latter, for a orace of 'Kerrison's Stove" Cucumbers, each $15 \frac{1}{\underline{3}}$ inches long, both perfectly necke, 1 enches in dioneter, dark green, with short fect, handsome fruit-in short, they were perfection, and, although not the longest, they were the best. I am glad, also, that I am able to prove that the standard of the society was strictly adhered to in every point, and I should be happy to see the arrangements and juugment of all eatisfaction. I trust the time is not far distant when the standards of the Horticultural and Floricultural Societies of London, with that of the Ipswich Cucumber Society, will be introduced into every one established for improving the cultivation of fruits, flowers, and vegetables. I woulch Cuequest "Justitia" to bear in mind that the Spsich with the qualities recognises in the standard.-Thomas Wild, Honorary Secretary
Camellia in the open Ground.-In a gentleman"s garden in this vicinity there is now in full flower a red Camellia, which has been planted in the open ground for ten years, the last eight of which it has been without covering or any protection whatever.-Stamford Hill
Leonoman Pump.-I am aware of the economy of supplying Pant-houses, etc., with water, by having the Pump placed in the back shed, and the water pumped inid corn siluated bo the arnace, where forow departments. Although not new, I consider the above system to be better ther Snowdro? (seen) which is nothing more than changing the situation of the Pump for the worse. He seems to think that there can be no ob jection to his system, except to the ornamental head of always understood that, in Gardening, disagreeable objects only should be concealed. There is, however, a great saving of labour, which, in my opinion, is the only advantage he obtains. He nevertheless finds himself in wan of a cistern, in which the water might become tepid; and he proposes that a concealed cistern should be constructed beneath the bark in the pit, and that the water should be Snoved to the other houses by means of pipes. Sowdrop can do what he proposes, he must be a conjurox, xtra Pump A pian is generally more or Iess sunk in the floor, so that the bottom of the proposed cistern would not be less than three feet below the level of the house: it is impossible, therefore, to convey water to Snor departments without an extra pump and cistern. Snowdrop ought to be aware that water will not rise bigher placed in it: if such is the case, how does be expect to convey the water, by pipes, to a situation so much highes
remarks is to caution others, lest, in following the above system, they utimately find themselves whom I would recommend to place a cistern, sufficiently elevated, in the corner of the pit, close to the pump, that he may have the it to other departments by pipes; and that the accommodation for Plants may not be diminished, the cistern should dation for Plants may not be diminished, the cistern should [How much better than all these contrivances with pumps [How much better than all these contrivances with pumps

Feeding Sheep.-I beg to communicate the result of an experiment, made according to Liebig's principles of fartening on Turnips, and of these, six weeks ago, I shut up two, in a warm roomy outhouse, and fed them in the same manner as those out of doors. Those which 7 kiled from the out-of-door flock weighed from
but of the two which were shut up; one died yesterday of the rot, and the other is pure skin and bone.-St. Faith. Musty Hay. - Having observed at p. 118 a method
Whereby musty hay may be made palatable to cattle, I beg to ask your "Leicestershire Corrrespondent" what process of steaming is necessary to insure such a result ;
whether by having boiling water poured over it, or by being placed in a basket or similar porous vessel and held over the steam of a boiling copper? As $I$, in common with many others, have some musty hay of the growth of 1841 ,
which, when cut into chaff, is refused by cattle unless mixed with corn, malt-dust, or some other more favourite food, a detailed account of the process will be very ac-ceptable.-A Herlfordshire Farmer.
Inclosing Land from the Seot-Having seen at p. 115 your remarks upon the advantages which Eingland would
derive in draining and inclosing land from the sea, I send you an account of what has been done in this island. About forty years ago there was a part of land called the Braye du Valle, containing about 100 acres, which the Governor, Sir John Doyle, applied to Government for leave to inclose it, which was granted. It was afterwards offered for sale, but as it consisted of nothing but sand, shells, and a portion of clay, the farmers would not buy it at any price. Some enterprising gentlemen bought it, Who have since cultivated and converted iazinto astle, far superior to any other. There are in England many thousand acres of valuable land, which are covered with only a. few feet of water, and were they to be embanked from the sea in the same manner, they would afford employment Effect of Food upon Eggs.-At p. 159 of the Chironicle mention is made of the smen of gas ing corgs: the ting the fact. I once met with a boiled egg (in a small ever, when there was so strong an odour of gin that I did not believe it possible to proceed from the egg: the spaon caused it. Being determined to leave no doubt upom the subject, I tasted the egg, and the flavour of gin in the lowed my example, and we all came to the conclusion that the hen had picked up something on which gin had been spilled. It is probable that if one of the eggs complained spilled. It is probable that if one of the eggs complained marked ; but though curiosity may tolerate gin, gas is marked; but though curiosity may to

## MISCELLANEOUS.

Irish Flax Sociely. - We have received a report of the proceedings of this Society for 1842, from which we col rect that the grame ory yar ahiefly through the assistgreater importance every year, chiefty through elgian flaxance offered dressers have been brought over for the purpose of teaching the Irish how to cultivate and prepare it in the manner practised in that country; and young
men have been sent to Belgium to acquire knowledge on
the spot. There is no doubt that Flax may be grown as
well in this country as in Flanders, and we should expect well in this country as in Flanders, and we should expect it to prove, under good management, very remunerating, for every part of the produce is worth money in the market. We learn that a move is taking place in the same
direction in Norfolk, where the farmers are not likely to direction in Norfolk, where the farmers are not likely to
take anything in hand which will not pay them. We take anything in hand which will not pay them. We
regret to see that the Irish Society's funds are exhausted regret to see that the Irish society's funds are exhausted has been made by the Society to the Jandlords will enable it to resume its proceedings this year with renewed energy. Not that we perceive any necessity for regarding such an association as a permanent body; all that it can do is to give a new impulse and a better direction to the Flax cultivation; that effected, the Irish farmers must do all the rest. Up to the present time the Society's operations
seem to have been judiciously directed, and, if carried on, will in a short time have done all that any society can do in such matters.
Tuckermanid maritima.-This plant, which has also been called T. califorrnica, was found by Mr. Nuttall upon the rocks at St. Diego, on the coast of California; he named it, as was stated, in honour of Mr. Tuckerman, or divided it is a Composite plant, semonts, nearly all borne towards the base of the stem, which terminates in a naked peduncle, a foot long. It will make a toterably good border plant; the leaves are very sueculent, titi
flowers few, but very yellow. It may improve on cultiva-tion.-Hovey's Magazine of Horticulture.
Large Currants.-A Correspondent of the Central New York Farmer sent the Editor of that paper as
basket of Currants, which the Editor pronounced to be the largest he ever saw, some of the berries measuring $1 \frac{1}{3} \mathrm{in}$. in circumference, and several $1 \frac{1}{2}$ in. $\frac{\xi}{}$ the clusters were also these Currants, states that he sent them to the Editor, to show what a little cultivation will do towards improving this most common and most neglected of fruits. The bushes are made to grow in the form of trees-they are, in fact, small trees. In this shape they bear for five or six least 6 ft . apart, and every spring or ausumn, the new wood, which shoots ont vigorously from the old branches, is cat off, with the exception of three or four joints. Mr. Berry prefers antumn pruning. By this method the fruit tree even to the extreme points of the branches and does not dwindle away as in the common mode of treatment intolittle, puny, pie m-shot berries, hangiug upon solitary intems in puny, pigeon-s bush.-Hovey's Mag. of Hort, Treatment of American Maize.-The land should be well ploughed and prepared, and, if necessary, manured a considerable period being allowed between the first and second plourhings in order that the soil should derive full benef from ban and atmosphere The seed should be sown in rows, sufficiently far apart to admit of a plough being used after the plants have reached a certain height. The distance between the rows being fixed (say about four feet apart), a small quan biy manure fo to be form dow on which three or four seeds suoud be placed to be covered thinly With mud, which iould be preased inches high, the ground should be carefully lioed to re nowe shortly after which it should have the first ploughing. When the topel or male blossom appears, the plough should a second time be put through the field, and on both occasions the share should pass very near the roots. The earth after the second plougliing should be gathered round the roots of the plants nith remored and shoots her ath icuned, as they weaken it and produce nothing. Ameplanted. Where this mode of culture afterwards transplants. Where this mode of culure is adopten, the plantl should be raised three or four inches apart, and an the quantity of earth should be anowed to achere to are forms wien tero tha pressure of the thumb-nail, the top and leaves of the plant should be removed, and tied up (alter drying two or three days), for fodder for cattle. The grain, when hard and ripe, shouid be gathered, well dried, and pat away in an airy place, either in the busk or shelled.- Transabions of the Agri-Horticultural Society of India.
Huano as used in Sout Americarclo Gawa, or neighbourhood of Arequipa for any land bat that upoo which Maize and Potatoes are planted, but here in is variably in requisition at a certain stage of tae growth of this plant ; as without it, the farmers say it is inapossible to get aremunerating crop of either of thesse is when the plants is about applying guano to the Nallanantity of it is dasked: round the plant on the surface of the ground; \& labouren immediately follows with a spade, throws up the earth round the bunch of stalks in the form of a mound, with. the double object of covering the guano and supporting; the plant; which, aftef being watered, is apt to fall when there is any wind. A single handful is sufficient for the roots of three different bunches of stalks. Water mustbe let on within three days after the guano is applied otherwise it does ibjury to the root. To Potatoes it is. applied after the plant rises a few inches out of the ground., in about the same proportion as is used for Maize ; butio. instead of being thrown on the ground it is placed mear. the level of the roots by first making small holes. Ther wise the roots are, if not destroyed considerably injured hy the guano."-Mark Lane Express.

## GARDEN MEMORANDA.

Dalkeith Palace.-Alterations alld improvements have been going on here lately in a most spirited manner. The old kitchen-
garden, which was in a very bad situation, has now been aban-
doned, and a new one doned, and a new one made on the bank portho of the town of
dalkeith, the extent of which is about 20 imperial acres. The length of the houses and pits, exclusive of the large conservatory, Which was built some years aro in the old flower. garden, is 1880
feet, viz., azo feet in the principar range, wonsisting of three
Peach-houses, three Vineries, one plant stove, one Heath-house, one greenho

A Cycloperdia of Practical Agriculture. By Martin Doyle. A New Edition, enlarged. How, Fleet-street, We have always expressed our good opinion of this work and we are glad to find it confirmed by the following meMartin Doyle is well known as a perspicuous and sensible writer on several popular subjects. The name is assumed, and the real author is a worthy Itish clergyman,
who has much experience in Agriculture which he ha practised with assiduity, if not with much profit, for many years. The work, in the present enlarged edition, will be are no theories in it which are not founded on weli-established facts. There is a tone of great humanity to brute creation running through it and beasionalls the brute creation running through it, and occasionally some this work to all those who are interested in practical husbandry.-M.

Martin's Thames and Meiropolis Improvement Plan (Ridgway, 8vo.) is a full explanation of the views taken by the author as to the most judicious means, among other
things, of preserving the sewerage of London, and conveying ats valuable contents to the agricultural districts. As the pamphlet is entirely one of detail, we must refer our readers to its pages for the manner in which, M
Martin proposes to carry out his comprehensive plans.
CALENDAR OF OPERATIONS for the ensulng week.
 sap to How upwards after a plant is laid down horizontally-a
subbet on whiccl I remarked last week. Side-gratting. or this
modification uf it, is not ak all new. It has heen often treated of

 surface of the pot, and make a downvard slantige cut an inch
and a haul long, and from the sixtenth to a quarter of an inch
in doplin ut cne bottom, according to the size of the stock; then
make a cross-cut at the bottom, which will leave a notch on the stock: cut the graft to correspond, resting the bottom of it on
the notch; tie it in the usual way, and lay down the pot horizontally, taking care to keyp the ,1art side dupocrmost, in order buds into chonts, It is also neecssary to prepare the graft so as
to have the back of its leaves towards the stock, in order that they may he exept in their ratural position when the stock is laid chy ing. if the stocks are placed in a close, moist hotbed or thou a handglass. In summer, many tribes will to well enough in a close cold frame, if they are kept rather damp; but in that case
the safest way is to clay them. I have seen nurserymen nue bell-glasses over the grafted portion, but they are only serviceable
in hastening the process. Perhaps it may be as well to caution amateurs not to lay down their grafted plants, unless they are grafted quite low; if the grafts are placed more than six inches Out-of-door grarting is now more or less performed in almost every garden. Nurserymen always begin with those almost which vegetate sonest. The Cherry is generally the first to be grafted in the kitchen-garden; Plums follow next; Apples and
Pears are left to the last, as any time before the middle of April will do for them.

> -KITCHEN-GARDEN AND ORCHARD.

Priskr, - For the first three weeks after potting, pay particular
attention to the bottom-heat of the fresh beds; jif they should attention to the bottom-heat of the fresh beds; if they should
get over-heated, your care for the last six months, and your hopes for the next six, as far ar pines are concerned, may in our
night be rendered useless. Keep the young stock il moist heat, to encourage their fresh young stock in a close,
fruiter and assist the fruiters to throw up strong fruit-stems.
VINBRY. buds break naturally require particular attention for till all their Probably this house, like the rest, is full of plants; but from this time its temperature must be treated to suit the Vines. Keep the
top and bottom sashes as open as they will allow, both day and nipht. Continue to watch the forced ones in their different
night stages, and see that the young wood and fruit do not get
crowded. Try the experiment suggested at page 132 with the Sweetwater and Frontignans.
Pkack-
fouse. When the fruit in the first house is fairly stoned, begin to thin by degrees, and regulate the crop according to the strengtion of the trees.
Cherrv-rouse. -If these have set thickly they must also be thinned to a fair average crop, but having hardly seen the sun
while in flower, these and the Peaches heve in thinly this season.
IIGS - A correspondent has just asked how it is that his forced
Figs always cast their first crops, \&ec. Upon this point I shall make some remarks next week. Continue the usual routine, as
already directed Melons and
they advance, and keep the shoots thin; a few leaves, if well exposed to the light, will ripen more fruit, and that of a beteler
gualits, than a greater number crowded, and shading each other. Keep a sharp look-out after woodice. To see my Melon-beds
without a toad would be like the loss of an old friend not betieve hat he destroys wooldice; he thinks they are pri-
soners like himsclf, and he is too generous to take advantage of soners like himsiff, and he in too generous to take advantage of
his saperior strength. the open air he may think and act
otherwise, but assuredy he never touches them in confinement. Srbplings. - Never let seedlings in this department remain
any length of time without transulanting them nnto fresh soil, as snon as they can be safely handled. How often do you see
Tumatrec, Capsicums, gec., drawn up by too much confinement, and ir want of heing early transplanted and inum cd sooner to a
conler sifluation. Some people prick out therr secdinine Balsams
 tocky plants, and increase their roots: this is worth trying. Although we have not yet seen any "March dust," the soil has
much improved in texture; and the weather, on the whole, has scen favourable for sowing seeds. It bas, however, received but
ittle assistance from the sun t the frrst half of the month having
ben as dull and sunless su Fcbuary. Crops in Rows.-As soon as the soil is dry, or even half dry,
all crops in rows should have the soil well stirred between them; And this should be done three or four times before the end of int want for mayrure to ply hetween the rows of Spinach, Cab-
bages, \&c. Now is the best tume to begin to apply liquid manure to standing crops. A peck or two of soot will make good liquid manure, is no better is at hand.
SuCcEssional Crops. being now finished, and well guarded from mice, rats, slugs, and
birds, the whole strength of the garden may be turned to the permanent crops, of which only one sowing or planting is required
for thie season. A weekly mention of the names of the plants for heso sowings would fill the Calendar to no purpose.
planted before the end of the month trees antrually, -nd would be a good plant to take one.third of the
with thich their trunks and main branches With thick lime paint, with a little soot dusted in it to take off
the white glare of the lime. If any of the standards showed signs
no of moss or insects under thin triennial dressing, they should be oftener painted over; while all the stone fruit on the walls
should, bount this time, , done over every year. Have coverings
fady for the Peaches, but do not ready for the Peaches, but do not use them till there is an actual

## I.-FLOWER-GARDEN AND SHRUBBERY

SToves. - Recollect that this is the best time to put in cuttings got as the different and famicies are pootted. If we had no physiology at all to direct us how to manage stove plants in winter, root-
cuttings at this time would supply the deficiency. Pieces of the oots of plants that have been in a dormant state since last Octo-
ber are full of sap, and will break forth into young plants at truggling against nature their juices and energies are alread expended, arid they will yield urwillingly even to the strongest
stimulij. If you have any doubts on the subject, take a cutting of a clecrodendroll ront now, and again from the same variety railroads for the ascending sap, not the depositories of it; but this any one can ascertain by experiment.
GREENHOUsE.-Many tribes here will and some of the -Many tribes here will now require shirting moved to the cold pits, or even placed out in a sheltered situation, to be protected with straw mats. If some contrivance of this sort is 1100 made, the finer plants will suffer daily from their crowded state. It will be better now not to admit so much air
at night, if he wind is at all cold. Athough it would be bad
mel

Ss ringe once or twice a week early in the day, and propagate by
cuttings such plants as are wanted for keeping up the stock in a oung healthy state.

The Azaleas have now a double demand on their stock of ford-to maintain their fowers and make their
poung woud; they must therefore be well supplied with moisture flower that they pelargoniums, at this season, keep so long in
fore to have green-liy on them, from standing so long without having suaticient-1Iy on themor, from stand- remerem, and
invery other infected plant, to be smoked elsewhere, if the con-
eve
servatory is attached to the living rooms. Any plant that can
be made to flower at this time is a valuate addition to servatory. Many of the hardier plants here may now be removed to more temporary shelter, to make room for others from the greenhouse, and for newly-potted store plants for the flower'every tribe now should be attended to, accordmg to the wants and wishes of the owner.
Cutuing Pir.-- This is the most essential part of this depart-
ment at present. For cuttings of all solt-wooded plants, use ment at present. For chttings of all solt-wooded plants, use
half sand and half peat for the compost, and about half ani inch of sand on the top, the shorter the cuttings and the shatlower
they are planted, the more likely the are to sinceed sud, litic heedlings, the sooner they are potted off after tuey are rooted ti.e better. To saye room, you may at this stage plant many of potted singly.
Ther Rosary, from one end to the other, should now have a late bloom from the June Roses, will not prune their plants till the end of the month; those that are pruned, especially standards, should now be donie over in the same manner as the Peach trees, with lime, sulphur, soot, and soft-soap. - D. Beaton,
Shrubland Parls Gardens.

REPORT ON COVENT-GARDEN MARKEX,
The supply of Vegelables during the past week has been rather to assume a more brisk appearance. Fruit: Of Pines there is a frir supply, consisting principally of Queens; a few Strawberries are occasionally offeren, from $1 s$, to $2 s$. per oz; a small quantity
of Beurré Rance and Easter Beurre Pears are to be met with, the latter fetching 12s., and the former 20 s . per half-sieve. The price
of Apples has varied but little since our last Report. Cucumbers are becoming more plentiful, and are selling from $2 s$. to $6 s$. per
brace. Vegetalles: At the commencement of the ragus was rather scarce; it is now however more plentiful, from $1 s$. to $2 s .6 d$. per punnet. Broccoli is coot plentuful; the
white fetches from $1 s .3 d$. to $2 s .$, the purple from white etches Cabbageplants are ahundant, and sell from Is $1 s$. od. per per dozen bunches. French Beans remain scarce, and are selling from 2s. $6 d$. to $3 s .6$. per 100 . Lettuces are small, and sell from 9d. to 10d. per score. Endive is of good quality, and fetches from quantities, from 1s, to 1s. 3d. per pumnet. Rhubarb is becoming more plentiful, and fetches from 12 s , to 15 s per dozen bundles Mushrooms are a little cheaper, and may be obtained from
18. sd. to 18. 6d. per punnet. Flowers: The Cut Flowers have been exceedingly good during the past week, consisting of Calla mánnia africaná, Burchéllia capensis, Hoya carnoss, with apar ety of Pelargoniums, Roses, Camellias, Epacrises, Azaleas, Kalmias, Acacias, Anemones, \&c.

 Experimental Chemist to the Horticultural Society of London, Hon. Mem. of the Roya London: 3, Charles-street, Covent-Garden.
unprepared it is andust is good manure if properly prepared or clogitine : if putrifying animal matter, such as blood, or offal

He, burn it and use the ashes, If added to animal refuse, putri-
fying fish, or any such matter, it will decsy, and then becomes
an excellent substance,
 till it ceases to effervesce : let it stand a day; and apply itimme
 better le gurled by the price; as much as won can get for 3os. an acre ought to be enough. $\dagger$-L. G.- It is not probable that
sulphuretted hydrogen would he hurtinl to vegetation, unles
in very large quantities ; for it is continually floatinc in the air Mr. Solly has proved experimentally, and our direct experience shows, that it is beneficial rather than contrary, (see the Pro-
ceedings of the Chemical Committee of the Horticultural Soceedings of the Chemical Committee of the Horticultural So-
ciety. Neither will the Coal Tar do any harm.t. $\quad$. D . In
using Gypsum for fixing the manure of a dumehill. yon should proceed thus. Make a layer of the stable litter; soak it with water; cust gypsum over it. Add anotherlayer; soak itagain;
dust on more gypsum ; and so proceed till the heap is made. Then at one corner of the dunghill makea hole water-tight by heap, so that all that flows from it may run into the hole; let it be some one's business every day, or as often as is necessary,
to throw the drainings back upon the dunghill. If the weather is dry, add water or urine to keep it moist, and suffer none of
the drainage to escape. In this way your dunghll will be the perfection of such a thing. You must keep it wet at wall events, if it is ever to be what it should be; and gypsum will not fix
its ammonia unless it is wet. We shall treat especially of these
matters very soon matters very soon. t-X. Y. Z. - Gypsum is by no means so -Tan is not at all suitable as a manure until it is thoroughily similar substance, it will decay rapidly and become a valuable material. f H. S. Will find our opinion of Brewers' Grains as a manure at p. 105, It is a general principle, that, whace any as food, and use the dhang of the animals so fed, mixed will pigs, and Malt-conts for cows and sheep; bat if there is an abundance of these, and no an, imals to eat them, they will
well for manurc. Malt-comb has been succesfully driled w. Barley, nad win, no doubt, promote the growth of Turnips. Cumno-uqua.-Gunno, mined with water from a tank moto whith

## NEWS OF THE WEEK.

THe Overland Mail from India brings advices from Bombay to the 3d ult., and from Hong Kong to the 31st December. The news from China is the most important comprising two untoward events-the massacre of the crews and passengers of two British vessels in the island of Formosa-and the burning of the English factory at Canton, by the Chinese, in a formidable riot on the 7 t December. The massacre at Formosa has naturally excited the most immediate interest. It appears that more than a hundred British subjects, who had been wrecked on the coast of Formosa in the early part of the war, were put to death in August last by the Chinese authorities, who pleaded the order of the Emperor in defence of their proceedings. Sir H.Pottinger became ac quainted with the circumstances on his arrival at Amoy and lost no time in demanding from the Emperor the degradation and punishment of the local officers, and the confiscation of their property for the benefit of the familie which have suffered from the effects of this barbarity This demand was accompanied by a threat of the re newal of hostilities in case it were not complied with The riot at Canton had for 'its immediate cause the disorderly conduct of some Lascars, who quarrelled with the Chinese and roused their feelings of exasperation against the English. The mob became so violent that the authorities could not control them; they attacked the factories, pillaged the buildings, and finally deatroyed them by fire. Greater excesses would probably have been committed, but they were checked by the timely arrival of Sir Hugh Gough, on his return from Hong Kong to India. The authorities of Canton have disclaimed all participation in these outrages, and have expressed their willingness to pay the damages and severely punish the offenders. It is therefore presumed that the riot, although calculated to keep up anxiety and suspense, is not likely to lead to any serious differences.-The Indian news relates chiefly to the proceedings of the Governor-General, and to the festivities on the arrival of the army from Cabul. Lord Ellenborough hadibroken up the Camp at Ferozepore and proceeded to Delli, with to have some explanations with the Emperor. The affairs of Cabul are involved in some uncertainty; but it is rumoured that Akabar Khan has returned to it with the assistance of the Kuzzilbashes, and that the young Soverign, whom Gen. Pollock left there on the retreat of the troops, had fled for safety to Jellalabad. - Next in interest to this intelligence are the disastrous accounts of the great earthquake in the West Indies. As anticipated in our last, the effects of the catastrophe were felt far beyond the limits which were first assigned to it. In addition to its rayages at St. Thomas and Antigua, we have advices from Guadaloupe, surpassing in disaster all that had preiously been reported from the other islands. The town of Pointe-à-Pitre, the commercial capital of the colony, has been destroyed, and what the earthquake spared was consumed by two or three hundred fires, which broke out a few minutes after the houses were levelled to the ground. The earthquale lasted only 70 seconds, and yet in the entire town, which contained nearly 20,000 souls, not ten houses are habitable. 1800 wounded were extracted from the ruins on the day of the calamity, and upwards of 1000 dead bodies were found on the day following; but no accurate idea of the number of the victims had been formed at the date of the last despatches. To complete this melancholy catalogue, subsequent arrivals inform us that the effects of the earthquake extended to Dominica but we are not at present in possession of any particulars of the disastern it occasioned

At home, the subject of the Corn-laws has been again nder discussion in both Houses of Parliament. It wa brought forward in the Lords by the motion of Lord Monteagle, for a committee to inquire into the effects of the Corn-law passed last Session; but the motion was negatived by a majority of 122. In the Commons it was incidentally introduced in the debate on Mr . Ward's motion for a commaittee to inquire into the peculiar burdens that press upon land, and linto the peculiar exemptions which it enjoye. Sir R. Peel, in opposing the motion, declared his conviction that no further change in the Corn-laws is required by the general interests of the country, and the motion was finally negatived by a majority of 99 . We can only briefly
notice the interesting debate in the Lords, on Monday, on the legal questions arising out of M‘Naughten's trial, and to the debate in the Commons, on Wednesday, on the privilege question. In the former case, the Judges are to be summoned to a conference on the general law bearing cers of the House are to be allowed to plead in the action now pending, so that the question will again be submitted to the decision of the Courts of Law.-The concluding report of the Chartist trials which we give this week will be read with interest; the public will be gratified to learn that the prisoners themselves, and Mr. T. Duncombe on their behalf in the House of Commons, have united in bearing testimony to the moderation with which the prosecution was conducted on the part of the Crown, and to the
impartial conduct of the Judge who presided at the trials.

## 

Court.-Her Majesty and Prince Albert, the Prince of Wales, and the Princess Royal, remain at Buckingham Palace, and are quite well. During the week Her Majesty and the Prince have honoured the French plays and Covent Garden Theatre enjoyed her usual daily walk in the Palace Gardens, and took a carriage airing on Wednesday. The Countess of Charlemont has succeeded the Duchess of Norfolk as the
Lady in Waiting. Viscount Sydney and Captain DunLady in Waiting. Viscount Sydney and Cape have succeeded the Earl of Warwick and Captain Hood as the Lord and Groom in Waiting on her Majesty,
Parliamentary Movements.-Sir A. Grant has resigned Parliamenlary Movements--Sir A. Grant has resigned of the Audit Office. Mr. Fitzroy Kelly has addressed the electors on the Conservative interest, and Mr. Richard
Foster has announced himself a candidate on the Liberal Foster has announced himself a candidate on the Liberal
interest. The nomination of candidates for the repre sentation of Tavistock took place on Wednesday, when Mr . Trelawney was proposed as the Liberal candidate, and Mr. H. Vincent was brought forward by the Chartists. Thursday Mr. Trelawney was elected by a majority of 44
Official Appointments.-Col. Sir W. Lu. Herries has been appointed chairman of the Commissioners for au diting the public accounts, in the room of Mr. F. S. Lar years; and Sir A. C. Grant has been appointed a com missioner in the room of Sir W. L. Herries. It has' been stated that Lord Abinger's retirement from the Bench will take place previous to Easter Term; that Sir F. Pollock become Attorney-Gis successor;' Solicitor-General's place will be supplied by Mr. Fitaroy Kelly : but the report is

The Navy -The following are the numbers of all the flag and other officers, petty officers, seamen, and boys of the Royal dock-yards, on the 1st January, 1843 :-Admi rals, 2 ; Vice-Admirals,
rals, 2 ; Vice-Admirals, 4 ; Rear-Admirals, 1 ; Commo
dores, 2 ; Flag-Lieutenants, 11 ; Secretaries, 14 ; Clerks and retinue of Flag-Officers, 125 ; Captains, 62 ; Conamanders, 84; Lieutenants, 521 ; Master of the Fleet, 1 and Fleets, 1 ; Deputies, 2 ; Surgeons, 141 ; Pursers, 116 ; Naval Instructors, 28 ; Mates, 489 ; Second Mas 755; Engineers 118; Midshipmen, 555: Masters' A sistants, 224 ; Volunteers, 330 ; Clerks, 223 ; School masters, all grades, 10,909 .-Able and ordinary seamen, landsmen all grades, including Kromen and Chinese coolies, 19,135 -Total for effective naval service on the lst January last exclusive of Marines, 30,044 . The vote for the yea 1842-3 for the number of seamen was 30,500 ; that taren and 2,000 boys.

The Army.-The following is a return of the number of men voted for the army in each year, from 1835-6 to $1842-3$, both inclusive, the number of all ranks serving
in Great Britain, including the recruiting troops and in Great Britain, including the Ine india Company; and howing also the number of all ramks serving in India :-

## Froteign

France.-The Paris papers supply us with few topics of political interest. They are almost exclusively filled with details of the calamitous earthquake at Guadaloupe, of which we have given an account under our West Indian news. The Presidency of Vice-Admiral Baron Mackau, for the purpose of receiving and forwarding the subscriptions for the shop of Paris was read on Sunday, in all the churches of the capital, ordering that on Sunday the 19 th , during the surviving victims of the disaster. All the theatres for to give benefits in favour of the inhabitants of La Pointe
a Pitre, and subscriptions are to be opened in every company of the National guard. liberal contributions. The King has subscribed 20,000f., the Queen 10,000f., Madame Adelaide $10,000 \mathrm{f}$., the Duchess of Orleans $10,000 \mathrm{f}$. for herself and the Count de Paris, the Duke and Duchess de Nemours 3,000 f., the Duke de Montpensier 1000 f, and Princess Clementine 1000 f - It appears that the rumour of the conclusion of a commercial treaty between this country and France is premature. On Saturday the Mi nister for Public Instruction, in reply to a question yut Great in the chat tures to France for a treaty of commerce, nothing in that tespect was settled, nor did it appear that any such arrangement would be concluded for some time. It is generally believed in Paris, that the differences between France and Spain will be very soon adjusted, through the promoted, and consequently withdrawn from Barcelona and thus a principal impedi
SPAIN.- Our accounts from Madrid are of the 6 th inst. The elections of that capital were over, and terminated in ravour of Ministers. The Ministerial candidates were Opposition candidate foremost on the list only counted 505 votes, and none of the other candidates obtained more than 280. The returns hitherto received from the provinces indicated that the Ministry would probably obtain the majority in 24, and the Opposition in 17, colleges Those of five others were doubtful; but as the greates number of returns was still to come in, no decided opinions could be given as to the probable result of the elections, the Infante Don Francisco de Paulo obtained 486 votes, being one less than his most successful opponent. A Saragossa, his Highness obtained very few yotes, and the Opposition prevailed. At Barcelona, where all was quiet and are represented as favourable to the Moderado parts
Portugal.- We have Lisbon news to the 6th instan A very important decision had been taken by the Chambe of Peers, negativing the pretensions of the Popes inter depende, and pronouncing that the Royal nomonation, confer uno biso Papal confirmating in the Uppe Chamber. The deputies had taken up the subject of these negotiations warmly, and strongly censured the cover the eight episcopg the privileges of the Lusitanian Church.-In regard to the tariff question, the speculations at Lisbon are less catisfactory than the statements made in the House of Commons on Tuesday night by Sir R. Peel, who said lia vances towards Gvernment of our Government in th pending treaty, but not to an extent that could be considered as yet satisfactory. - Another month would enable
him to say whether or not we were to have a commercial treaty with Portural
Germany.-The Berlin papers give long accounts of the historical festival given by the King of Prussia on Ferrara at the end of the 16 th century, and nearly all the guests were in appropriate costumes. The entertainment Gerusalemme of Tasso; followed by a ball and supner Some idea may be formed of the brilliancy of the fête from the fact that the celebrated painter Cornelius, May erbeer the composer, and the poet Baupach, were em of the new edict on the censorship, noticed in our last which orders that the truths of religious belief shall no longer be discussed on philosophical deductions, Professor Markeinecke has been refused permission to print his lecture on the tendency of Hegel's philosophy and theology. The people of Berlin are anzious to see whether this prounderstea the the in of Saye Coburg Gotha with the Princess Clementine of France will be solemnized in May next. The Prind andrncess propose to pass the summer at oburg, from Vienna state that the Archduke Charles is dangerously ill.
Malta-By the Levant mail, we learn that a melancholy occurrence took place at Valletta on the 6th inst., in the mirder of Dr. Martin, the Chief Surgeon of the
Maltavaval Hospital. He was shot dead by a sentry of Maitan Naval Hospital. He was shot dead by a sentry of
the 88 th Reginent, on duty at the Victualling Office, as he was stepping out of the door of Sir John Louis, where he bad beea on a professional visit. No cause has been assigned for this atrocity, but the
in investigating the circumstances.
Turkey and Syria.-The Levant mail has brought advices from Constantinople to the 22 nd ult. They announce that accounts have been received from Belgrade of the detection of a conspiracy, having for its object the The conspirators have been seized, and, if their confes sions are to be believed, they acted at the direct instigation of the Russian Consul; one of them, moreover, having been found with 5,000 ducats in his possession, which he had received as an earnest of his crime. The Govern Belgrade to Crascovery of The Turkish Government and the Ambassadors have been struck with consternation at this open attempt to bring about a solution of this ques nople.-Inteliigence from Beyrout, of the 8th ult., men-
tions that Bishop Alexander was still there, awaiting the arrival of the imperial firman, authorizing him to proceed with the construction of the Protestant Church at Jeru salem. The schismatical Greeks of Lebanon had peti tioned Assad Pasha to be allowed to appoint a chief of their own religion. The Catholic Greeks had refused to acknowledge the Maronite Kaimacan.-An elaborate spe cimer of English manufacture, intended as a present from Ali Effendi, the Turkish Ambassador, to the Sultan, has just been completed by Mr. Taunton, of Islington, at a cost of 500 guineas. It is an umbrella of the ordinary size, covered with crimson satin, manufactured in Spital fields expressly for the purpose. The metal of which is composed is of pure gold. The bandle, which open with a secret spring, contains, in addition to other articles, ir gold chronometer, a sun-dial and compass, set with brilliants of th
Caina. -The news by the Overland Mail comes down the 30 Feb. It is of the highest importance, and particularly that relating to China. It appears that on the Nov., sir Henry Pottinger published a proclamation de extreme horror and astonishment that more than 100 British subjects, who had been wrecked in the Nerbuddah and Ann, in Sept., 1841, and March, 1842, on the coas off the Island of Formosa, had been put to death subs quently to the treaty of Nankin, by the Chinese authori ties, who pleaded the order of the Emperor in defence o this cruelty. The Nerbuddah had 240 natives of India on board, sailors or camp-followers, all of whom were executed or died, save two. The Ann had 57 souls on board, of whom 14 were Europeans. From this ship but six of the Europeans and five others escaped. Their ill treatment appears to have been of the most inhuman lsind It seems from a more detailed account, previously issued by Sir H. Pottinger, that, immediately on their reaching shore, the crew of the Ann were seized, stripped, an marched some distance without a particle died from exposed to a cutting north wind. fatigue and were caried on in boskets to the canital (about 90 miles from the spot where the brig was wrecked) (about 90 mies frow the spor into distinct prisons in irons." They were almost staryed, and those who did not die under this treatment were, for the most part, beheaded in or about August last. The proclamation concludes by stating that the Britioh Plenipotentiary was resolved to deman from the Emperor the degradation and punishmen of the local officers, in consequence of whose ralse repre sentations these enorwies had been con or a their property should be coniscated for tho benert and relief of the famines which had so severely sufered rom the effects of this barbarity. It is also stated that a renewal hostilities was threatened in case the demand werenplied with. In adaiton tothis, a formabla Canton on the 7 th Dec., caused, it is said, by the disorderly who were allowed to posshore without any superintending authority. The British factory was attacked, the flag and flagstaff burnt, the doors and windows forced open, and the building pillaged, fired, and consumed. How far the riots might have proceeded it is impossible to say; they were, however, checked by the timely arrival of Sir Hugh Gough in the Proserpine steamer. The merchants at Canton began a correspondence with Sir H. Gough, who remained there until the 14 th, and also with Sir H. Pottinger,' who was at Hong-Kong; requesting the latter to order a protective force to be sent to Canton, in order This they might carry on their commerce in security. Pottis application received a decided refusal from Sir on the created much distrust in the minds of the Chinese authorities by smuggling opium, and other goods, at Wharapoa and Canton To have been at Canton early in December had not arrived, and some doubt was entertained at Macao that the Em peror would break faith. In the meantime, the arrival at Singapore, on the lst January, of 43 transports, having and the Senoy nart of the China expedition, proves that the Envoy had not then entertained any serious regiments had of the renal of hostinties. Several regiments had reached Madras in January. There were, five steas, The land force then consisted principally of about $6,000 \mathrm{Eu}$ ropean troops, most of them living in the garrisons of the till bin-occupied places. rom Hong on thavour est of our or the wioly por colonial por ar a paper has been gally a cuon in he advertisenera give a Amona the announceme ts are Among the announcements are the bin soap, candles, claret, champagne, an hotel, a solcior, and the sale of A Manila horse, an Amoy mare an colt, and an omnibus! The following advertisement announcing the progress of a theatre, may amuse ou readers :-M Advance Hong-kong .... - heatre Royal Messrs. Dutronquoy and Co. have at length the satis faction of announcing to the nobility, gentry, and clergy of this flourishing and opulent colony, that their theatre is advancing most rapidy towards completion. It on a most splendid scale, and What with the pieces that will be periomed, the scesery that will be introduced and the splendid assemblage of rank, beauty, and fashion which they hope to be honoured with, there is no doub but that the blaze of splendour will darale the eyes of all beholders.-VIvat REGINA !-N,B. The actresses have
arived during the last week-their beauties and talents are only to be surpassed by their spotless virtues." other curious announcement is that a newspaper is about
to be published in the Chinese language. "We had hoped, ere this," says the Editor, "to have issued a newspaper in Chinese, but the types, which were very handsomely loaned to us by his Excellency, the Plenipotentiary, have hitherto been, and still are, we believe, employed at Macao in printing some works introductory to the study of the Chinese language." Nearly all the Chinese population, it is said, are able to read, but all classes evince any it be conveyed to them in their own language.
Indra.-The Indian newspapers are busily discussing Lord Ellenborough's proceedings, and give long accounts of the procession in honour of the gates of Somnauth, the festivities at Ferozepore. On the arrival of Generals Pollock, Nott, Sale, and M'Caskill (the latter in charge of end of the bridge of boats by the Governor-General. A salute of nineteen guns was fired as Sir Robert Sale passed the troops, in honour of himself and the "illustrious garrison." On the morning of the 2oth 0 ecenser the troops were assembled. In the evening the GovernorGeneral gave a ball, for which, it is said, 26,000 seers of sweatmeats were ordered. Shere Singh is about to send valuable presents to the British Sovereign, in token of his
friendly disposition. Bundelkund is described as quiet : friendy disposition. Juillity will be effectually supported by the force of 14,000 troops lately sent thither for the purpose. Lord Edlenborough, who received a visit at Ferozepore from the son and Prime Minister of Shere Singh, and who then sent his secretary and other official persons to Lahore to return it, broke up the camp at Ferozepore on the 5th ult., and proceeded to Delhi, with an escort of 10,000 intrigues with the Emperor. It is stated that his Lordintrigues with the Emperor. It is stated that his Lord-
ship contemplates fixing his official residence for some ship contemplates fixing his official residence for some
time at Agra, or perbaps Meerut. The Courts-Martial held on Colonel Palmer for the surrender of Ghuznee, and on Captains Anderson, Troup, Boyd, Eyre, and Waller,
have terminated in the acquittal of those officers from the have terminated in the acquittal of those officers from the
charges brought against them for their conduct during the last campaign in Affghanistan. The investigation into the conduct of General Shelton and of Major Pottinger Was atill going forward. Nothing certain appears to have been known of the state of affairs at Cabul, but it was ru-
moured that Akhbar Khan had returned to it, with the assistance of the Kuzzilbashes, and that Shah Poor, whom Gen, Pollock left in the Bala-hissar with six guns, had fled to Jellalabad. The financial prospects of India are considered satisfactory, and attention is now directed towards its internal improvement. An act has been proposed in
the Legislative Council which tends to put a final stop to the Legislative Council which tends to put a final stop to
all descriptions of slavery in its extensive districts. From Madras we learn that the transport Gertrude, with 200 of the 6th Reg. Madras Native Infantry, from China, had been wrecked about seven miles to the north, but that every soul had safely reached the shore on the evening of
the 25 th. Much loss was sustained in baggage, accoutrements, and tent equipage. The ship was within 40 yards of the shore, and had five feet water in her hold. It was expected that the surplus stores would be nearly all damaaged. We also learn that a second transport from China, the Malikel Bahor, had struck on a reef about four miles north of Pulicat flag-staff, but that being teak, and strongly built, she was on the 26 th Jan. safe at anchor between two sandbanks in seven fathoms. about 200 in number, were safely landed.
West Indies.-The anticipation mentioned in our last respecting the probable extent of the dreadful earthquake was unhappily been realised by accounts from Guadaloupe. The details of the catastrophe in that island surpass all that can be imagined in horror and disaster. Pointe-àPitre, the commercial capital of the island, with a population of at least 20,000 , not more than one-third of whom were slaves, has been utterly destroyed; and what the earthfew minutes after the houses fell. A great portion of the town was new, built of stone, and, contrary to the old cown was new, built of stone, raised to many atories; but conotrary to the old custom, raised to many stories; but enough of the habi-
tations were built of wood to supply fuel to the catastrophe. This took place at half-past ten, on the morning trophe. This took place at hak-past ten, on the morning the only piece of wall left standing after the shock, marked the hour at which it stopped. The shock only lasted 70 seconds, but it was sufficient to bury the whole popalation
in the ruins of the town. At the moment of this calamity, to complete the work of death, two or three hundred fires to complete the work of death, two or three hundred fires
broke out, and consumed all that was wood of the ruins, with the dead and wounded lying among them. 1,800 wounded were extracted from the ruins, and 600 dead. It is stated that 15,000 wander about without shelter or food. The Governor in his official despatch states that all the quarters of the colony bave shfered, as well as the
dependencies. The town of Moule is destroyed, with the oss of thirty inhabitants. The rural parts have had their Slare of this dreadful calamity. The littie towns of St.
Francois, Ste. Anne, Le Port Lonis, L'Anse, Bertrand, and Ste. Rose, bave beell subverted; there are dead and Wounded almost everywhere. The following are extracts
from letters in the Irench papers, written the day after from letters in the Irench papers, written the day after although a number of houses are uninhabitable, all remain standing, and no person has been injured; but at Point a-Pitre all was overturued, except the wooden houses.
Immediately after the shock fires broke out in 200 or 300
places together, and totally consumed the houses. At present the flames are playing over the remains, and in
the whole of the town, which contained 16,000 souls, the whole of the town, which contained 16,000 souls,
there are not ten houses habitable. No description can give an idea of this disaster. We can scarcely credit What we see before our eyes. I left Basseterre with the Governor yesterday, a few hours after the accident, and came here. We are about to set out for Moule, which has, alas! been destroyed. The number of victims is considerable, but much smaller than could have been expected. Only one soldier has perished. There are under the ruins a number of dead bodies, which are being gradually taken out, and the presence of which causes great uneasiness, on account of the corruption that must speedily take place. The number of wounded is exceedingly great. Women and young girls may be seen with two or three limbs fractured. battle. Most of the times more horribie than a and the crop of sugar-canes will be lost." A letter of Feb. 10 says, "I have just come from Moule. During the hour could passed in the ruins I cannot describe what I fit. I that I could say would give you but a poor idea of the sad reality. From the Quai dex̃la Poissonnerie to the hospital, which are to be knocked down with cannon. All other earthquakes have been less disastrous than the present one. I was witness of the disasters at Port Royal, and this at Point-à-Pitre. Upwards of a thousand dead bodies have been found, but the number of victims cannot yet be ascertained. The colony is ruined, but the fortitude of the creoles is great; no person is borne down by the blow." namber letter of heb. 11 says, at Point-a-pitre the place. They are thrown outside the passes, and the number is unknown. In several places the earth opened, and threw up water and sand." Since the receipt of the arrived we learn by the Acadia steamer, that a vessel had 8 th ult., the commander of which reported that the earthquake was also experienced in Dominica on that day, the damage arising from which was evidently very great, and on the south side of the island large volumes of smoke were visible, as issuing from the shore. This is the only account yet received from Dominica; the Actsen, lately
arrived, not having visited that colony. Three more ves sels, however, have arrived at New York, announcing shocks of the earthquake in the Atlantic. There has been a heavy shower of ashes in Missouri, and a lighter one near
Philadelphia city. These are supposed to be the aslies of burnt prairies, or of far-off volcanoes (perhaps in the Andes), brought by the late storms.-An insurrection
had broken out in St. Domingo, but had been suppressed. Its object was to make the constitution more republican, after the fashion of that of the United States.
United States.-The packet-ship Rochester, which
sailed from New York on the 16 th ult, and the sailed from New York on the 16 th ult., and the England, Which sailed from the same port on the $20 t \mathrm{th}$, arrived at Boston and Halifax, arrived on Tuesday. The accounts brought by the latter vessel come down to the 28 th ult. Congress was still in session: Mr. Adams, chairman of the committee of foreign relations, brought up a report
from that body in the House of Representatives, in which the rejection the bill per by the Senate for possession of the Oregon territory was recommended. That the bill would be rejected there existed not the least doubt. The other itens of news are the repeal of the Bankrupt Law by Congress, though hope is held out in further loans that the President will ing popularity of the project to assume the State Debts, A convention of its friends in all parts of the country is to into effearly in the summer to concert measures to carry tics of two religious communities in the United States :Communicants of the Methodist church, 1,008,001 velling preachers, 4,244; Local preachers, 7,921; Increase since 1841, 120,123; Roman Catholics in the United States, $1,500,000$; Ditto Churches, 574 ; Ditto in process ral singular particulars have transpired in relation to a recent earthquake in the valley of the Mississippi. Between St. Louis and the Ohio, portions of the bottom of the Mississippi have literally fallen out, or, at least, sunk to a depth not yet fathomed which a sulphurous vapour issues that is easily ignited Sometimes an inflammable gas, flashing with flame and emitting smoke, also proceeds from it. In several places, patches of the forest near the Mississippi have sunk down
and become swampy lakes, in some cases taking hunters down into the abyss. Other and more extensive geologiRocky Mountains, some of which are evidently volcanic. The New York Inquirer of the 20th Feb. contains a list of bankrupts, occupying six columns, printed in small type, and comprising at the lowest computation 700 de -
faulters. This is for New York alone, and is said to display, without exception, the most frightful picture of in solvency ever exhibited.-From Canada we leara, that the the health of sir Charles Bagot is improthe following ac are now entertained of his recovery. He Nowing ac count, dated Feb . 15 , has been recered lin New York from Montreal :- We understand from Nagston that most remarkable change for the better On Saturday evening his life was despaired of, On Monday morning; how-
ever, he was seized with a violent fit of vomiting, which relieved him completely-his disease having been an abscess in the stoma ch, and not dropsy. His Excellency was so much better that fears were no longer entertained for his safety." -Letters had been received from the Anerican consul at Tahiti, one of the Society Islands, dated September 11, which stated that the French admiral, Dupetit Thouars, arrived there on the 8 th, and made a demand on the Tahitans of the sum of 10,000 dollars, in reparation for abuses, and as a guarantee for their future adherence to the treaties. A negotiation was commenced, which ended in the surrender of the island to France.

## 据和íament. <br> HOUSE OF LORDS.

Monday. - The Lord Cgancrlaor, pursuant to notice, brought
frward the circumstances of M'Naughten's trial for the consi forward the circumstances of M'Naughten's trial for the consi-
deration of the House. Aft ar a Wief reference to the melancholy
death of Mr. Drummoni, 1 is Lordship remarked, that in consequence of the mpushty which had, after a judicial investigation,
been conceded to the assassin, the public mind had received ant
impresson that the crimmat law of the land required revision, to prevent a repetition of nuch outrages. He, therefore, took this
opport.unty of remmiding the House of the great difficulty which
must ever attend invectigations so delicate as those which propose to discover the existence of a latent insanty; and after ceeded to caution their Lordships against supposinc hat, evea
if the verdict in M 'Naughtes's case should appear to have been
given upon faulty or muconclusive evidence, it would therefore
 batted the op, mion that 115 eridence was insufficient, or that the
course pursued by the Lord Cluef Justice was any other than
what was fully warranted by the cumulative testimony produced What was fully warranted by the cumulative testimony produced.
His Lordship read several charges delivered by eminent judges
on trials where the plea of insanity had been urged on behalf of on trials where the plea of insanity had been orged on behalf of
the accused. In all these charges the law on the subject was
laid down in the same way as it was by Chief 5 ustie Tindal the late occasion-in all these the jury were directed to consider
whether, from all the evidence they had heard, they believed that the prisoner at the very moment in which he committed his crime was conscious that he was acting wrongfully - whether he
was at that moment capable of "distinguishng between right and wrong?" In the present case, not only did six medical even two whom the Government had deputed to examine into
his state of mind, and to scrutinize with manuteness whether his his state of mind, and to scrutinize with manuteness whether his called on, would have been prepared to corroborate the testimony
of Drs. Munro and Morrison. Was not, then, the learned Chief Justice, when he discovered that the Solicitor-General could
advance no countervailmg testimony to rebut this cumnlative advance no countervailmg testimony to rebut this cumulative Lord Kenyon in Hatfield's case, axd at once bringing the trial to
a conclusion? The strong feeling which prevailed at the time might indeed have madeit more advisable that the trial snould take
its usual course ; butno one pro was present duringits propes its usual course; butno one who was present during its progress,
or who is acquainted with the general tone of the evidence, could
for a moment suppose that this would have made any difference in for a moment suppose that this would have made any difference in
the verdict. His Lordship then combatted the doctrine of the Arch-
bishop of Dublin, bishopof Dublin, who, in laying down the maxim that "the object of punishment is the prevention of crime," states his belief that
athough a man may be under the influence of an insane delusion at the time he shoots anuther man, yct that the madman may and
ought to be hanged forthwith, bectuse "we punsh to othrs from nimitating him.' The Archbishop, after stating this
position, gives, by way ot nilustration, the case of a dog habituated
 for example's sake, the example ought to be perfect, and that it is no lesson to the guilty to panish an innocent man: it is no
Warning to a murderer to hang a man who has committed no
murder; and as to the illustration, you punish the dog, not as an example to other dogs, but for his ounn correction; so that the
illustration is as inapplicable and extravagant as the theory is in illustration is as inapplicable and extravagant as the theory is in-
correct and unfounded. H18 Lordship concluded by repeating his conviction that, whatever sertiments or opinions the result of
this trial had excited, it would be absurd to dream of altering the law, or the manner in which the law is administered; it was possible, indeed, that legislation might, if it could not wholly
preventa recurrence of such evils, at least diminish the frequency of their recurrence. With this view he gave notice that he wonld the House to take the united opinions of the Judges upon the Lord B Rovaring complained of the premature conclusion of the and legitimate termination; that every witness to its natural called; that the Solicitor-General had not replied ; and that the his belief that he had seen a most erroneous report of the trial;
for, from the account which he had read, it would appear tiat the usual rules of evidence had been entirely disregarded, and warranted by practice; for instance, one medical man, who had
been in court throughout the trial, was asked what opinion he should form upon the testimony given by the other muedical men confounded with the functions of a juryman-and whoh for that reason was expressly
trial of Lord Ferrers. In regard to the accountability of insane
persons, and the use of the terms "right and wrong," "good persons, and the use of the terms "right and said many a man
and evil," in the charges of the Judges, he
would think it right to shoot another of whom he entertained any suspicious or jealous sentiments. But, surely, this was not ness of right and wrong, was the consciousness that particular sciousness of right meant the consciousness of what was right according to law; and of wrong, of massunderstood the learned

foreigenes for its supply of food
Lord WHARNCuFR, though he fully admitted the idistresses o
or the country, could not agree in thinking that an alteration of the
Corn Law would relieve heme The question was not whethe
the present law was perfect, but whether it was not the best under the present circumstances. In his opinion the wise course
was to see how the existing law worked, before any proposition
for the withdrawal of that protection which agriculurure had so long enjoyed should be entertained. His conviction was, that if
the present system were continued, none of the evils apprehended from it would occur; and it was inportant to the safety of tur
country that their Lordships should exhibit a steadinessof pur-
pose on the subject. With the view of satisy
 selves felt the inconvenience and uncertainty of the present sys-
tem, and every day the public feeling against the law was growing stronger. The protection which the Janded interest
fancied they had secured to themselves by the liding scale had Lordship could not refuse to concur in the motion for innuiry.
free trade would be the only means of opening foreeign market for our manufactures, - Lord Ashbur ToN said he had drawn
very contrary conclusion from the extensive details with which that the principal cause of manufacturing distress was the almost
entire failure of the American market. No argument had been aul duced to show that the distress, which all admited and which a
lamented, had been caused by the state of the Corn-laws; and he warned their Lordships not to attempt an aiteration which
might spread wider the existing deprcssion, until its connexion
with the alleged canse was clearly madeont. Com-laws in some shape or other were in force in every part of Europa, and under the price of food been maintained prisperity fer hactuations than in
any other country. He combatted the opinion that by aidmitting foreign corn free of duty we should at once obtain a reciprocal ath
vantage for our manuffectures in foreign markets, and advocated to agricuiture for the charges which it exclusively sustained.
The vuke of R Rcumonn, in answer to statementby Lord Mont-
eaple, denied that Lord Grey's Cabinet had ever been divided
 fortunate competitor abroad. He the ing approvect the irmness on Frrzw ILLAM admitted that the present law was an improvemen and from the constant variation to which the Corn-laws ha appointment and distress they had occasioned, drew the conclu
sion that it would bee ever so untilithe true principes of commer cial lepisisation were acted upon, and all artincial
abolished
Lord Li
Roughans contrasted the ability and the absence of part feeling with which the question had been brought before their
Lordships with the spiritof factious injustice in which the conces-insufficient-had been received by the Leagoue, and denounced in
indignant terms the blind partisan violence which had led them to cavil at the carrying out even of their own principles. He de-
fended himself from the calumnious imputation, that he had oftered his services to the Learue, and expiained the real cha-
Tacter of the conversation which had been thas misrepresented.
Ho

 to assassination as a mattcr of merriment and st, and atemmp

 vant, who lost his life through being mistaken for himser-
He hoped in God that he would never be posesesed of other feel-
ings than those shown by the right hon. baronet He could ings than those shown by the right hon. Baronet. He could not
sleep in peace if he kriew that a dear friend had lost his life
through being mistak through being mistaken for him (Lord Brougham); for, although
he might be bound, as in this case, to call it an aecedidet, he
shoulh teel that hie was the mnocent canse of the catastrophe. right han. baronet, maut have a mind callous to all the best
feelings of human nature, or else perverted by faction: no
foll other could for a moment, coubt of the origin of the feelings by
which Sir $R$ Peel was overpowered. He supported the motion for the appoint ment of a conmittee; and atter showning by the
cనanmpl of the years in which the continental system was in
fall operation, and in spite of which there had been an extensive importation, tluat the apprehensions of those who feared a de-
pendence on the foreigne were unfounded, concluaded by ex-
plaining, tluat allhough an advocate for free trade, he would not papose the levying of a duty uaten forereign produce for the pur-
opose of revenue; he objected only to te principle of protection.

 $\underset{\substack{\text { Law } \\ \text { the } \\ \text { this } \\ \text { I. } \\ \text { an }}}{ }$ law courtan at weomplaining of the inconvenience of holding
subject of later had attracted mard Bravoman observed that attention amongst the

## members of the legal profession. Although he did not deny some of the inconveniences insisted upon, be stili confessed that he had a very stron had a very strong prejudice in favour of keeping the courts at Westminster-athl, wlere ethey had sat for time out of mind. He

 Would remark, also, that there was one great advantage in theirYemainiug where they were, namely, their contiguity tothe houses
of Pariliament.-Lord LANGDIE of Part might very properiy be inguired into.- Lord LyNDHITRsT
that
pointed out the advantage whicl resulted from the members of the bar being kept constantly in the courts in which they practised,
watching the proceedings in cases in which they were not immediately engaged, and gathering experience from all that passed before
them. He knew from his own experience that counsel would not attend the courts except in cases in which they were immetheir own chambers
tice then flow counsel in court beyond those engaged in the case
actually under hearing-all the rest were occupied in their chambers, whence they could easily be summoned to the court
when their services were actually required. He thought that this Was a decided disadvantage. He concurred therefore with Lord
Broughm in deprecatiog removal of the courts of law from
Westhinster Hail. Lord CAMPBELL perfectly coincided as to the advantare derive from compeling counsel to attend in
court. To the workin barrister aetendince in curt aford once a means of increasing bis experience and of relaxing his
mind from the severer stadies and labours of chambers. All work and no play makes Jack a dull boy," It was highly desir-
able that the barrister should be drawn from his chambers to the court, where, if he only criticised the judge, or
cracked a doke with his fews at the are hee was still in a
field to add to his practical knowledge and experience without ally severe or irksome labour of the mind. He was, therefore,
strongly opposed to the proposition for removing the courts of haw. There was a prestige in the very name of Westminstermove the law courts from within the walls of that venerable
edifice. Under any circumstances, he should strongly and de cidedly object to their being removed to tincolan's inn-fields. That
noble square was one of the lungs of the Metropolis, and was as userul as it was ornamental. He should deprecate any proposttion were to carry the courts to Alsatia, and so to sweep away
the mpurities of Whitefriars, he should not so strongly object removed from Westminster Hall. The petition was then laid Friday.-The Attorneys' and Solicitors' Bill was read a third
time and passed.-The Punishment of Death Bill was com-
 Pottinger and the merchants of Canton, in order to adopt some
legisiative measures framed to put our intercourse witl that country on a proper footing, The Earl of AbEnonRN, while
agreeing to the production of the correspondence, thoughit that it
would be unjust to Sir H . Potting without waiting for his advice and information. As soon as the
Government were in a position to legislate on this important sub jcet caimly and advisedly, they would not hesitate in doing so
The motion was agread to. Saturday.-In HOUSE OF COMMONS.
Saturday. - In consequence of there having been "to House" on
Friduy, the usual atjournment to Monday could not take place,
the House, therefore, met necessarily on Saturday, and sat for
 Eecond reading wame sixed or Aprili 10. that the Governmertt had not y et recelved any cther than inoper-
fect acounts from Antigu, but he feared that the details in the
newspapers, as to the extent of the damage from the earthquake, were not exaggerated. It might hereatter be the duty of the On the notion for going into a Committee of Ways and Means, particular evidence of Mr. Wiecoor, who had stated that he had
becn in communication with Sir $J$. Graham, and wished to know ence,--Sir J. GRABAM had received numerous communications from the disturbed districts at the time, but could find no trace,
and had no recollection of any correspondence of the nature alunder which he had been led to propose to release Sir J. Gras AdM from further attendance on the trials , yy substruting the
evidence of Whileox, and delended his impartiality in conducting
the prosecutions on the part of the Crownn. - Mr. the prosecutions on the part of the Crown. -Mr. T. DUNCombe
said that head received many communications, alil bearing tes-
timony that the impartial conduct of the Attorney-General, on

 to be crushed. Tliere had also been lately put up, in the Lambeth
workhouse, another mill, the crank of which was so large, that once in each of f ts revolutions the persons working it were obliged
to bend thememeves down to the ground. He now moved for papers and returns of the proceedings of the gerrdians of the Halifax
Union.-SSir $J$ GRAHAM said, that an lehad had noopportunity of inquiring into the suggestion respecting the Lambeth wnrkhouse,
he would abstain from any observation upon that point. But as to the Halifax case, he must say that what he had denied, in op-
position on Mr. Ferrand, was the existence of atreuth-mill at the
Halifax Union. to be, a hand-mill, and though certainly it was not, as he had
supposed, for the he apprehended this made no substantial difference. After some
forthiner conversation, the gallery was cleared for a division ; but
MR. Frrinan withdrey The House then went into a Conimittee of Ways and Means,
and a formal vote was taken; after which, on the motion for and a for mal vote was taken; arter which, on the motion
going into committee on the Registration of Vters Bill , Sir
GRAHAN, in reply to Mir. Lan been prepared in order to provide against the fraudulent perso-
nation of onters, which would be gaded the the Bill, -MI. HuMF
did not antictiate much good from the Bill, unless more ample

 Vote, he should be compelled to give notice of the oblection to
the voter. This amendinent was resisted by Sir J. GRAFAM, and

 clause under discussion in the present Bill was an amelioration
of the existing law. After gome discussion, the amendment was rejected by 118 to 58 . The amount of the penalty to be inflicted on the raisers of frivolous objections raised considerable de oate,
the amounts sugzested varying from 208, to $5 k,-$ Colonel Sis:

Thorp proposed 33 . instead of 20 s., which was resisted by 154 to
S4. Having arrive
Bil wit clause 48 , the further progress of the Tuesiday - Mand, and the other orders were disposed of. troduced his motion for a committee to inquire into the peculiar burdens that pressed upon the land, and into the peculiar exemp-
tions enjoycd by it. He could show that the power of tle land lords had been ysytematically applied to the exemption of them-
selves from traxation, and that a combination existed amongst: them dangerous to the other interests of the country - Mr . Bankrs moved, as an amendment, that the ettention of the House
should be directed to certain associations dangerous to the public peace, and inconsistent with the spirit of the constitution; and,
in duing so, took occasion to refute the charge which Mr. Cobden had, on a previous evening, made against him, of paying to the men in his employment, no higher wages than 88, a week, and of having
in his neighbourhod the worst paid, worst
rate peothed, and most ilitehis labourers received, none lower than 9s., and some as high as 255 . a week, with other advantages, the principal number ranging
between these sums. He also showed that the peasantry of his
He neightourhood were as well, if not better, with respect to wages,
clothes, and education countr, In edegacation, the subn those in any other part of the the
chis own amendment he said
the Anti. Cornalaw Leaguers, if they did not actually yiolate the law, were certainly upon the very verge of it. They raised large
sums of money; and he should like to ask Mr. Cobden, who had on the former night put so many questions to him, where that money was loded They announced that their income would
annually increase; to whom, he begged to know, was the Charn-
cellor of the Exchequer to aply Corn-law League appeared to be treading in the path of Lord
George Gortion's rioters; they announced great meetings; they
aimed at public excitement pected to work. Returned as he was for his county by the
general feeling of the yeoraanry and tradesmen, as well as of the richer classes, he did not warit the sapport of Ministers for the purpose of his seat, but lie did ask and demand of them to pro-
tect him and the other gentlemen of the country from the visits Mr. Combes explained that he had not spoken particularly of
 attention to the dangerous and treasonable proceedings of the
Anti-Corn-law Association. Such associations had been wefore; and there could be no doubt that the machinery of the
League might beappied to insurrectionary purposes.- Mr. Grimsow hoped the House would not suffier an amendiment, attacking men's
chiaracters, to be withdrawn, without a vote marking their generai
sense unon it sense
no Corron-law leaguaes exist
countenanced prod the country gentilemen never for projects were proping on even liow, and the landed proprietors
pad admited the fact their suport of the new Corn-iaw
Sir R. PEEL could not yote fup to sir R. Pget cousd not vote for the amendment, because it had
no immediate connexion with the motion, and because it would
be only right to give a negative or affirmative to Mr. Ward's
 have been previously defrauding the public. What would Mr.
Gibson have said if the same taunt hadd been thrown upon the manuracturers in consequence of their declaration, just now made through Mr. Gibson himsiff, of their willingness to abolish
their own protections He strongy denied the charge of having
ever sneered at the manufacturing interest. "II I had ever indulted in sneers against the marnuracturing interests of thls
country it woutd come," he said, "with a bad grace from me,
con as a Minister of the Crown, and with a particularly bad grace
from me as an individall, who owe all I possess to manufactures.
I may in the I may, in the lieat of delohate, and in replying to arguments to any
one who was wishing to take advantage of such expressions, hon. Member doos me the gronsest injustice in ine supposes that I tures of this country, or that I would indulge in sneers upon the
tall chimmeys of the factories, to which I can never forget $I$ owe
all of worldy well protest against that misconstruction." Though he should object,
he said, to a committee, he should not object to returns on the subject for which such, a committee was proposed. It had beenx
alleged that the land was altogether exempt from probate and legacy auty: the law was not so; the land bore a great portion
of both these duties: and of the duties on converanaces , be called for, and then the
House would see whether the land enjoyed the exemptions alleged in these particulars. So with respect to other taxes, from which profts of stock had lately been relieved from poor-rate, and the
land had leen left to make un the difference, let all this be seen from returns to be printed for the House. It had been said tllat
the hlighwys kept up the the land were necessary for the trans-
port of its usefrit to those who had no land at aul Then, as to tithe. Tithe
fixed think viriabe were, but both were burdens. Mr. Ward misht
thought they were: was the House to appoint Mr. Ricardo
formithe and for the purpose of settling whether Mr. Ward was rigit,
or Messr. Smith and Ricardo? Surey this was a proper
subject for Members to decide for themselves oren subject for Members to decide for themselves. He en-
larged upon this subject, supporting the opinions of Ricardo of protection on the mere difference of burdens. He had grounded himself in a great measure on the considerations of general bene-
fit, and of the dangers that must arise from a rash destruction o with, the landed classes. He had never applied the general prin. of it. "If the House," he said, "contemplates any further
Heap and sling dear without this qualicition
che change it would be better to propose that change at once, but I
do not think it fair to ask for a committee, and next week vote
for the repeal 1stated last session, as the organ of the Government, that our object was to attempt doing justice by adapting our measures in
conformity wint the generai interests of the country, and that it
was lieve that the panic caused by the changes then made was much more injurious than the operation of the liw itself. If I consi-
dered, or could be convinced, that any further alteration in the
Conin country, nothing should induce me to advise a continuance Higse taws. But, believing that the agricultural body have a
right to expect from mee that I will maintain those laws until I
am convinced of the posite may cheer, but if they imagiue that I make any reserve for
party purposes they are very much mistaken:-I say if I see from conviction that it is for the interests of the country at large that the present law should be altered-if that alteration
were to lose power for me to-morrow, I would not hesitate one moment to adopt such a course, for I hope Thave the courageto act now that conviction as to the Corn-laws that any change is ne
cessary; and after the support I have experienced from the agricultural body, I feel that I Ishould be axting with great injustice
towards that, body if I were to disturb their minds by agreeing to the motion.
Mr. BLAC
declaration made by sir R, Peel, of his fixed determination to satisfaction, and put and end to the hoopes that existed in some
suarters of biong able to tamper with the law. He trusted also,
that the threat of importing American corn, at a nominal duty,

 proposed, hot only to plead to the present action, but to go into

 should be directed to plead to the action, and that the cause
should betried ins Westminster Hall. By calling the plaintiff to
the bar they would be fiving him the bar they would be giving him an opportunity to insult the
Hour, and visitinge him in the way her most desired. Mr.
Howard only wanted a grievance, aud to odopt towards him the course proposed by Lord J. Russell would be playing his game
And lowering the dignity of the House of Commons.-Sir R.

Man, named Edward Colley, a working-ironmonger, from

Browsiey, Salop, was brought before the magistrate at Bow-street, charged with being insane, and attempting to the resider suspicious circumstances, an entrance into duty in Downing-street, in plain clothes, about one $o^{\prime}$ 'clock in the afternoon, when the defendant drove up in a cab to the official residence of Sir R. Peel, and on alighting from it be inquired at the door for Sir Robert, when he was informed by the office-keeper he did not reside
there. He then walked along Downing-street ing over to the Duke of Buccleugh's, rang the bell and inquired where Sir R. Peel lived who which the porter direc'ed him to the residence of the Right Mon. Baronet, in Whitehall Gardens. He accordingly proceeded to the by the porter he should make any communicationg told Robert in writing, he went away and held a short sir versation with the cabman and having then a short conin a strange manner, the policeman went up to him, and and if he was connected with the Government offices, give him paper or would write a letter for him, Tould he made no answer but his e ator her. To this witness finding he could not induce him to leave the place called two other constables to convey him to the stationhouse, where, on searching him, were found a newspaper, and several letters relating principally to religious subsaid that he did not want to annoy Sir $R$. Peel, but thought he might make some suggestions to him. Several witnesses deposed that the prisoner's manner and hereditary in his family. The magistrate did not think it safe that in bis ramily. The magistrate cid not think it him to heald be allowed to go at large, and ordered Margaret's, Westminster, where the mitted.-On Wednesday, a person of respectable appearthe L amed George Edward Blythe, was brought before Customs, and charged as a person whom of the Board of to allow to co at large. The solicitor to the Customs stated that the prisoner, who had formerly been employed urgent in his application to as an officer, had been very commissioners, and acted violently and incoherently 1840 After having remained in the service of the Customs until and his was sent home to England as an insane person, till October 1841 ence he continued from time to time On his arrival in, when was aischarged on a gratuity. noise at the Horse Guards about the Quen, and was con veged before a magistrate. He subsequently was confined in St. Luke's and at Dr. Warburton's establishment, from that morning called at the Custom House, and wished to see the commissioners, of whom he spoke in a very incothe Lord Mayor, the prisoner was unable to tell the by or his children, or whether they were boys or girls; and Mr. Phillips, the superintendent of Dr. Warburton's asyof himself. with the view of making some arrangement for his future provision.
Removal of $M^{6}$ Naughten.-On Monday this prisoner was removed from Newgate to Betblem Hospital, by order satisfaction the intimation that he was about to leave prison and walked with a quick, firm step to the outer him. The governor of Newgate alone accompanied the prisoner, and on arriving at the hospital handed him over conveyed to that of governor. He was immediately the reception of criminal lunatics, where an apartment lunatics at present for him. The number of criminal Sir George Cockburn.-This gallant officer has so far attend to public his late serious illness as to be able to On Saturday morning he left his house for the first time ince his recovery, and took an airing in the
having been found League- - The meetings of the League the Crown and Anchor, the to obtain accommodation at in the "great |Hall of Ereemasons" Tavern, and it was announced that their next weekly meeting would take since their last meeting the council of the stated that issued upwards of four or five tons in the League had which were put in circulation in all parts of the country. In accordance with the above iacinathe meeting on In the beginning of the week, the applications for admission were so numerous, ment of the proceedings, the theatre was crowded in every part. Mr. Wilson presided, supported by the leading was opened by council. The business of the evening den and Mr. Bright, who addressed fllowed by Mr. Coblength on the prospects and proceedings of the League.

Wood Pavement.-On Saturday one of the largest vestry meetings which has occurred for some time took a memorial signed by 150 ratepayers of Baker-street, Oxford-street, York-place, and Portman-square, praying the vestry to say dowi wood-paving in lieu of the present macadamized road. This memorial had opposed to it the
signatures of 90 job-masters, and 81 omnibus prontioter
deprecating wood-paring as injurious to horses, and praying the vestry not to carry wood-paving any further. On majority principles of wood-paving, as already laid dorly to test the determine not to entertain the subject of the streets of Marylebone withe subject of paving any of years." tiverpool. - The loss caused by the late fire at Messrs. Fawcett's foundry has been much underrated. Instead of amounting to only $30,000 \%$., it will, it is said, approach
$50,000 \%$. Of this aggregate loss, Messrs. Fawcett's forms an item of not less than 18,000 . - The adjourned meeting of the borongh magistrates on the state of the workhouse was held in the Town-hall on Friday, when a series of re solutions was adopted urging the insufficiency of the building for the accommodation of the inmates, the impossibility of proper classification, the necessity for an increase in the number of paid female officers, and the commencement of the new building.-A shock of an earthquake was felt here yesterday at 1 A. M. ; it awoke the people from their sleep, and extended to both banks of the Mersey. consisting of several hundreds of pitmen, was beld at Scaffold-hill, near Longbenton. The condition of the mitmen of the tyne and the Wear, which is now very speakers stated that he had been in communication with Lord Ashley, who was ready to support their cause if they would only be true to themselves, and had sent him one of the Commissioners Reports, contanes fang stan of common humanity. Resolutions were passed in favour of a national union of coal-miners for the protection of their interests; of the repeal of the export duty on coal, and of the retention of Thanks were then voted to the noble Lord for his humane and zealous efforts to improve the condition of the people.

Portsmouth. -The Blenheim, 72, and the Blonde frigate, arrived on Saturday from China. The Blonde nese indennity. She came into harbour for the purpose of landing her treasure, which was forthwith conveyed by raikay to the Mint. Fhe Erebus, cerror, and Philomel ber, the two former arrived froan Hermit Island, Cape Horn, on the 13th November, having completed the various observations there, where they had been employed for the three preceding months. The officers left at Port up the mud cottage establishment, and embarked on board up the mad collage. 6th for the Antarctic Ocean ; all hands were heallthy and sanguine of again making additional discoveries of land, and filling up the space toward the South Pole, having had the pleasure of seeing their "Victoria Land" already published in the map of the world. Capt. Sullivan was Governor Moody was laying out the lands in sections and Governor Moody was laying out the lands in sections and
town settlements; two or three of the latter bad been sold to families who had been located there for several yeara previously. He supplied beef at $2 \frac{3}{2}$ per 1 b ., very indiffer-
ent in quality; no vegetables, milk, or any supplies could be had.

Reading.-Another incendiary fire took place in this county last week, at Cutbush-farm, Shinfield. When first observed, it was found that the stable at one end of the
farm-buildings was fired, and at the same time flames were seen at the eastern extremity of the range of buildings, a distance of ninety feet from the stable; proving
that an incendiary had set fire to the premises in two places. The horses and cattle, and the stock of beans, were saved from the flames; there was fortunately no
other corn on the premises. The fire burnt with such fury, that in about an hour's time the whole of the farm buildings were destroyed, all efforts to stop the progress
of the flames being in vain. The value of the property thus destroyed is estimated at about 3001 .
Shrewsbury. The will of Lord Hill has just been proved in the Prerogative Court of Canterbury. The effects have been sworn under $30,000 \mathrm{l}$. The following to the person who has charge of the column in this town ten guineas per annum for the purpose of lighting the top of the column at night; and ten guineas per annum to the person who has charge of the light.
Teignmouth. -The religious sect which
Teignmouth.-The religious sect which sprung up a few years since in Devonshire, under the name of the
"Plymouth Brethren," have established a branch chapel in this town. Lord Congleton preached in it on Sunday last, and it already numbers a very large congregation.
Railways. Railways.-The returns of traffic for the week on the principal lines are as follow:-Northern and Eastern, Croydon, 204l.; Liverpool and Manchester, $3,685 l_{\text {. }}$; Brighton, 2,196l.; Grand Junction, 7,007 l. ; York and North Midland, 1,3596.; Blackwall, 463l.; Great North of England, 1,103l.; Manchester and Leeds, 4,060l.; $1,682 l$. ; Birmingham and Gloucester, $1,520 l$.; Birmingham and Derby, 1,1426 ; North Midland, 3,3766. ; South Western, $4,203 l_{\text {. }}$;Great Western, $10,517 l_{\text {. }}$; London and Birmingham, $12,969 \%$. ; South Eastern and Dover,
$1,295 \%$; Manchester and Birmingham, 2,253 , -The final official inspection of the new portion of the Eastern Counties Railway, from Brentwood to Colchester, was made on the 8th inst. by Major-General Pasley, the and engineer of the line, when General Pasley expressed his unqualified approbation of the excellence and stability of the works. On the following day the first cargo of live it is understood that the whole line will be spened for and senger traffic on Monday next.-The halfyearly meeting of the West London Railway Company was held meeting The report stated that in order to resuscitare the undertaking, certain creditors had agreed to take the amount of
their claims in shares, and that preferred shares had been also offered to the original shareholders and the public ; a dividend of 10 per cent. being guaranteed on the amount of money paid up. Contracts had been already com-
menced for carrying on the works from Paddington to menced for carrying on the works from Paddington to
Kensington, which are expected to be completed by August next, at a cost of 20,0002 ., exclusive of stations It was stated, in the course of the meeting, that the in habitants of Brompton are very favourable to the line and that it will eventually be carried on to Knightsbridge. Lord Kensington assured the meeting, that as far as his influence as a landowner was concerned, he would do all in his power to promote the undertaking, and the chairman intimated that no opposition had been met with from any of the influential landowners.-The accounts laid before the shareholders of the Brandling Junction Railway at their general meeting, stated the amount received for the conveyance of passengers during 1842 to have penses of working the line during that period had been 19,419l.; general management, 6,2071 . , the total expenses, interest of money raised on debentures, \&cc., amount ing to $11,175 l$, left the original shareholders defiwith that of 1841, exhibited a falling aff of 4,4041 of which diminution $2,733 l$. was from passengers alone. The station for the general use of the Manchester and Hunt'sol and the Manchester and Leeds Companies, at sive buildings of its kind in the kingdom, the Derby one alone excepted. It will be 700 feet long, and 200 feet wide, and covering two statute acres, and the roof will be mington Company, now incorporated with that of the London and Birmingham, was held last week at the Euston-station, when resolutions were passed, comfirming and purchase by the Birmingham Railway of the Warwick and Leamington branch, and a bill, now before Parlia The half-yearly meeting of the Croydon Company took place on Thursday the 9 th, when a dividend of $4 s$. per share was declared for the profits of toll and traffic for hat period. From the discussion which took place o the Greenwich and Croydon Companies, relative to the consolidation of tollage, has been made, although the meard Trade gave itertered with the view to a settle that the Board of Trade were of opinion correspondence of the arrangement would be a fair subject for a reference oo arbitration, and accordingly recommended the Green Company, of adonting that the offer made by the Croydon between them. This recommendation, however, has not been acceded to, and as their Lordships had no means further of enforcing it, they express their regret that their interposition has not proved more successful in effecting an arrangement by which the public inconvenience appre-
hended from the abandonment of the Croydon traffic might have been obviated.

IRELAND.
Dublin.-The papers give long accounts of the passive resistance shown to the Poor-law in different parts o
Ireland. In the county of Waterford it has been neces sary for the guardians to obtain the assistance of the Government and the police; but, on their first circuit, cattle were carried off by the farmers as soon as they saw the police approaching.-The subscription for the Mathew remitted $25 \%$. to the fund, Lord Shannon 106., and Lord remitted 5 2 2. A the fund, Lord Shannon $10 \%$, and Lord teuding agent of the new Roman Catholic emigration colony in North America.
ais city with the murder of Mr. Sculy's late assizes in for the present, escaped the punishment of the law. The evidence for the prosecution was conclusive against the prisoners; their counsel subsequently admitted that his cross-examination of the witnesses had totally failed rectly for a conviction; and yet the Jury, after being locked up the whole night, could not agree to a verdict and were consequently discharged. The counsel for the tion or improper motives, but he had seen so much disinclination in Clonmel with challenged juries to agree to their verdict, that he saw no prospect of any good from their protracted confinement. The prisoners are kept in Nevo
Newry.-A Presbyterian clergyman, who had been deprived of his congregation by the Rathfriland Presbytery,
has been arrested on supicion of being implicated in the attempt upon the life of the Rev. Mr. Dickie, noticed in last

SCOTLAND.
Edinburgh. - The first division of the Court of Session on Friday, affirmed, by the judgment of a majority of the the competency of this court to suspend and reduce the sentence of deposition against the Strathbogie ministers, and to give decree 'to that effect, with expenses. This was the judgment of the Lord President, Lords M'Kenzie Meadowbank, Medwyn, Murray, Cunninghame, and frey, Moncrief, Cockburn, and Ivory. In the Auchterarder case, the same majority, with the addition of the
ordinary, that the minorily of the presbytery is competent to induct Mr. Young, notwithstanding the recussincy of the majority to discharge that duty. The petition and complaint for breaches of interdict at the instance of the Rev. Mr. Edwards, minister of Marnoch, against the minority of the presbytery of Strathbogie and others, was next taken up ; and, after hearing counsel, the court unanimously found the respondents bad been guilty of the breaches complained of, and granted warrants for calling all the respondents to the bar of the court, in the first sederunt day in May next. The complaint of the presbytery of Strathbogie, against certain members of the presbytery, was postponed; and the note of suspension and interdict, at the instance of Dr. Bryce, against the presbytery of Edinhurgh and Commission of Assembly, was passed, and the teraict granted.- We Wescy an misters of London have presented a petition to the House hey maintate that while they fully and entirely recognise and ively and individually, to render a cheerful and conscientious obedience to the requirements of the civil power in all matters whatsoever which are purely civil and temporal ; they are, however, equally convinced of the duty and importance of a meek but firm and unwavering the right of every Christian church to claim, it matterg which are plainly, and in their very nature, ecclesiastical and spiritual, and especially in reference to its sacred deliberate convictions which it may have been led to form and to embody in its standing rules and discipline, as to what is required in such cases by the laws of Christ, contained in the Holy Scriptures; they therefore entreat the House forthwith to take the case of the church of Scotland into their serious consideration, and adopt such legislative measures as will relieve it from its present erabarrassments.

## THEATRICALS.

Italian Oprra.-Her Majesty's Theatre opened for the season on Saturday evening. The great stars of the opera do not generally appear till Easter; but this season
we already have Madame Persiani in the opera, and we arready bave Madame Persiani in the opera, and Fanny Elssler in the ballet; in other respects, too, the
company, in both departments, is stronger than usual at company, in both departments, is stronger than usual a," by Donizetti, was chosen for the opening of the campaign. The performance was chiefly remarkable for the appearance of the new tenor, Nignor Conti, who was summoned the opera, to receive the applauses of a house unusually crowded for the first night of the season. In the ballet of "L'Aurore," which followed, an accident happened to ments, a sharp noise like the cracking of a whip was heard, and $M$. Perrot, evidently in great suffering, rushed to the side scenes, holding one of his legs with both
hands, and was carried off the stage by the Chorus, It was at first feared that he had broken the tendon Achillis, but it appears from the surgical certificate that some
fibres of a minor muscle gave way, and thus caused the sudden incapacity of supporting bimself. It is hoped, however, that he will be able to appear again in a few days. This accident was unfortunate in many respects, her first appearance in the bullet, Mile. Dumollatre, made ably received, and justified the admiration bestowed on her by a remarkable combination of physical strength with singular elegance of action. On Tuesday night she was londly called for at the conclusion, and received those honours of which the mishaps on the night of her débul had deprived her
covent Garden.-Mr. Bunn's henefit, which tnok presence of her Majesty, wich was honoured by the crowded audience of the season. The pit, boxes, and gallery were completely thronged before the curtain rose, slips. Tat-price there was scarcely a vacant place in thing to do with this satisfactory state of the theatre, but a far more important cause was to be found in the appearof Cashmere." The recention she met with far surpassed what has been recorded of her triumphs at New Urleans and the Havannah. During the pas-d $d$-deux in the second act, the audience were in complete raptures, and there was one continued clamour from its commencemen iasm .ose. On few ccasions has such a scene of enthu

## fthiscellancous.

The Earthqualie at Antigua.-In addition to the newspaper accounts of this catastrophe, published in our last, he may be interesting to may be interestiog to our readers. After stating that th arthquake is "the most awful convulsion ever recorded the history of this portion of the West Indies, his Excel-
lency proceeds as follows :- "On the 8 th inst., without the slightest atmospheric or other indication of the approaching calamity, as nearly as possible at 20 minutes before eleven o'clock in the forenoon, an earthquake of the mostterrific kind shook the issand to its centre, and in pleasing aspect of security and prosperity into one entire pleasing aspect of becurity and prosperty wo one ent f the ground, and the majority of the remainder are irretrieva-
bly ruined. The cathedral is totally destroyed, and the other places of public worship within the city are exten-
sively damaged. The court-house is much injured, the gaol, the house of correction, the lunatic asylum, and the barracks are masses of ruins. In the country parishes, out of fourteen places of public worship belonging to the Church of England, only, four remain, slightly injured three are nearly destroyed. Out of nine Wesleyan meet ng-houses, one only has escaped without serious damage The Moravian churches are, I fear, in no better state, but Thave not as yet received any report of them; one, know, is entirely destroyed. The cantonments for the troops at the Ridge and Shirley Keights have been partially overthrown, and the remainder rendered so unsafe that the troops bave been placed under camvass. The house at Dow's-ail, in the same locality, the property of and in which I happened to be at the moment, is completely in ruins, under which the whole of my furniture, plate, and every article of private and personal property which I possess in the island lies buried, The injury to private property throughout the island is incalculable at present; but I may state generally, and in a great measure from my own personal observation, that remain sufficiently uninjured to be capable of grinding the crop, now nearly ready for the harvest, and the most promising that has been known for years; the boiling-houses are in the same state ; and every planter sotage that i have seen is either totaly ruined or uninhabitable. In St- John's the loss of the merchant and storekeepers is very great. This is a brief, but I lament to say, far from an exaggerated statement of this sudden and fearful visitation, it is impossible at the quences to the island; but the loss of property has been so immense, and so general, that without some aid is afforded from without, I am apprehensive it is involved in almost inextricable ruin. Even if private individuals (many of them are not) were in possession of funds to enable them to repair the injuries their properties hav sustained, the supply of materials and labour is wanting The latter can scarcely be supplied; there are not a suf ficient number of artificers in the island to afford prospect of any general saving of the present crop, which stands, as if in mockery, in the most vigorous and
flourishing condition, surrounding the desolate and ruined habitations and sugar-works. The visitation is equally fatal to the interests of the proprietor, the soling, however, in the midst of this scene of humilia tion and misery, to be able to turn to the thoughts people in the Iittle loss of life which has been sustaimed few lives have, as far as 1 have hitherto learned, been sacrificed-those that have perished are chiefly aged per sons and children : bad the shock occurred curing the destrustion of human life, for in most of the houses I have seen, the walls have faller inwards. It may be interesting to mention, that previous to the great shock the weather in the usual manner, and from the usual quarter, and that stil continues the sume. There have been several minor about three o'clock this morning (Feb. 10); they have alarming, but under existing circumstances they have kept up the general excitement and consternation. I have not had time to receive any accounts from the neighooumg Montserrat, which I could observe from the heights on which I then stood, was apparently covered with clouds of rising dust for two hours after this catastrophe occurred."

31, amo
Assiqe Intejiligence.-(Lancaster.) The Charist Triuls.The great length of the proceedings the these trials which occu-
ginctithe Court for no less than eight cays and the intricacies of
fletarl inse aralle from the great number of persons to the tried, nender it impossible withiu our brief limits to give an a a alysis of the evidence for the derence. Air the accounts agree in stating and so complicated was the evidence on both sides, that his he entefed the separate facts ceneral mass of testimony before the Jury, in cruer to eriabie Eliem to judge of the general question whether a conspiracy had
existed or not, but afterwards to apyortion to each defendant the existed or not, but afterwards to his acts, whether bearing for or against him. It is said by the papers of the defendants themselves, that it was impossible for such a prosecution to be more mildly condicted
by the Law Olfecrs of the Crown, or that it could bave been presided over by a more painstaktng or mpartial Judge. The post six p.M. ; butas the greater part consisted of a recapitulation orepeatit. We therefore merely give a sketch of such portions
of the address as will be interesting to the public. Mr. Baron Rolfe, in arddressing the July, said they had atiog andived at diked from the Jury the same unremitting attention which they hat hitherto accorded to the evidence produced on both sides, He shoula first cail their attention to the nature of the chas ges that desciption, and then to the eidence, as it bore generally bare on each defendant in particular. The oflence for which the originally brought clarges against them, but these charges were now withdrawn, and conspracy was the only crime with which thry were charged. It had been suggested tiat it was a very
dificult thing to explain what censtituted conspracy, but he did not feel that difficulty to the same extent which others
appeared to feel it. Cases might certainly arise in which
would be difficult to say whether certain acts constitute
conspiracy that difficulty did not arise. It was sufficient for the pur poses of the present inquiry to define conspiracy as a combi-
nation of two or more persons either to do, or to cause others to do, an uniawful act, or to bring about a legal act by illegal means. He did not inteng could be conspiracy which did not come within this definttion. For instance, any man might legally say he persons combined not to deal with that particular tradesman, and to persuade others not to deal with him, that might amount to What it was the indictment charged against the defendants. The indictment contained several counts or separate charges.
Originally it contained nine connts, but two of those counts
were abandoned, and they might be considered question, because they did not relate to the conspiracy. There Substantially, however, as far as the Jury had to consider the
iodictment, he should be able to reduce this number below iodictment, he should be able to reduce this number below
seven, because several of the counts charged the same offence.
The find The first count charged the defentants with conspiracy with
others, causing unlawful assemblies of seditious persons, and compeling persons to quit their occupations in order to create
conusin, and hring about a change in the laws and constituthe different modes of violence, was exactiy the same: it simply stated that the defendants, by force and violence, conspired to
excite alarm, and bring about a change in the laws and instituforce and violence cliarged in this count consisted in the intimidation of other persons, and preventing them from pursuing
their occupations: it was, therefore, substanthally the same as the first, and they might dismiss it from their consideration Probably the framers of the indictment count, in the event of failing to make out that the turnout and consequently declared that certain evil- disposed persons, having tumultuously assembled, and by force and threats com tions, and thereby impeded the labour of divers trades, to the great terror and alarm of her Majesty's subjects; then the de tersons, for the purpose of bringmg abont certain changes
the laws and constitution of the country. The fouth count
did fered in so sligit a degree from the former, that it might
be put entirely out of the question. The fifth count was extremely important. Th charged defendants with having conspired werk until they obtained a certain object-for instance, untll the Charter became the law of the land. This count was one on it in reality alleged an offence at all. It did not state that the the accomplisilment of their object, but that they conspired
together for the purnose of together for the purpose of persuading persons to desist from pase a criminal offerice, and if the Jury found any of the defendants
guilty on that count only they must say so, in order that the Question might be brought before the Court of Queens in the Combination Las, it was a ferrousus ofence, but within sidered out of bis line of duty when he sain a very much mor in that respect, The learned Judge then explained what was
now the law relating to combinations of workmen, and guoted the Act now apulicable to the subject. He then procceded to
notice the 6 th and 7 th counts of the indictment, the former of Which ol arged the defendants with conspiring together, aud by
force and vielence forcing others from their labour, and the
later charged ail the defendants with inciting dweers of he
Majesty's suljects to force others, by not and tumult, from their
lawtul occupations. After briefly recayintulating the different
fendants had conspired together fur some one of the objects
mentioned in the indictment, and that the evilence clearly brcught it homo to each, hefore they found hirn guilty, The turned workmen out-not that of crealeng tumult nad disc rder,
for if they were guilty of that, they were still liable to be tred couspining together to tffect that object. Nc, ow, if they did
comoline and conspre, the moment they did so their crime was complete, although they had failed to accomplish their object. plisinhent of a certain object, it was, not nccessary that the parties
should enter in a written agreement for that purpose-it was not even necessary to prove distinctly that the parties had even met
together-if their pursuit of one common object proved that there was a common purpose annugst them. Before they could con-
vict any of the delendants, they must be satisfied that all the parties whom they considered guilty were guilty of the sam
conspiracy. His Lordship then proceeded to read over the evi
dence, and in doing so occasiona.ly remarked on the mos striking points of the case, for the purpose of drawing the atten-
tion of the Jury to them. After referring to the evidence which
bad leen meelings held during the guage of some the heriendants atth who attended them fuilty of the violen, they considered those whether the language insed did not pruve that there was a com Mr. O'Connor, Dr. M'Douall, and others, which was differen
irom that of many others. They had attended a meeting in Mr
. Scholefield's chapel, with others, to the amount of about 24 , in were proposed, ave an address was agreed to. On that, for in
truth there was very little other evidence agairist them, the Jury
would have to decide whether their acts on that showed they were combining and conspiring together for the passed, on that occation, rested mainly on the evidence of an Chartist body. The question for the $J u r y$ to decide was, whether Jury to consider and deal with the varions defences that had been offered.
delegates, he would not express any opinion, as it was matter of doubt. Every man must feel the truth of what had been quoted matters of thas solt what quautum of numbers was to make
meeting for discussion illegal, or what guantum of organsatio and arrangement of deputation and representation was require fo mate to lay down any rule d priori that he would give nu opis on If the persons who attended the meeting as Chartist delegates had attended solely for the purposes and objects which they ha originally prociaimed, and ne have been guilty of any crime o Wh. ich the law would take cognizance. The object of the prosecu approve, and sty that he approved, of the ballot or annual Parla ments, or any of the points of the charter. It was not for holding
these sentiments that the defendants had been indicted, The Anti-

Slavery and other socicties would be liable to a similar indictment Judge having gone through the evidence, as it related to a con they were satisfied en the dury to retire and con sider whether existed. The Jury retired accordingly for a short time, and, on their return, having intimated that they were agreed. (he learned Baron pursued his summing
relateti to different clanses

## MEETINGS FOR THE TWO FOLLOWING WEEISS. Tueday, Mar. $88 \ldots$ Zoolagical.......... <br> 

Having, as we believe, disposed of the introductory matter of our correspondent "Observator's" letter on sider his details.

When a plant is removed from a smaller to a larger pot, its roots, finding no impediment, strike through the new layer of soil in a nearly horizontal direction, until their further progress is impeded by coming in contact with the inside of the pot; should the plant, at this stage, not soon be supplied with a larger pot, the roots for the most part will take a downward direction until they reach the bottom of the pot-still, however, keeping near to its sides, and not often pushing into the centre of the ball of earth."
No doubt. "Thus situated," says our correspondent
"the plant is almost entirely dependent on the occasional waterings which it receives for its supply of nourishmext. But if a larger pot has been supplied in time, that is to say, before the roots have become matted round the inside of the pot, the plant suffers
no inconvenience; but should it have stood too long in its pot, the principal roots will have descended to the bottom, and there will be inextricably intertwined with each other, and the plant will be a long time before it recovers and acquires a vigorous growthindeed it generally happens that it remains stunted and sickly for the rest of its life. The principal roots having been destroyed or rendered nearly useless, the plant, when it emits new ones, generally produces mere fibres, and though they may be more numerous, yet they cannot convey that volume of sap to the stem
which the larger roots would have done. The principal roots may be considered the grand arteries which convey the sap to the stem, and the fibres as indispensable auxiliaries, which, with their thousand mouths, run in every direction, sucking in all fluids which present themselves, and conveying them to the principal roots, whence they are passed into the stem. There can be no doubt of the reciprocity of action between the roots and branches; but the root does not cease to elongate
on reaching the side of the pot; but possibly, for a time at least, it receives as much nourishment in its downward movement as it would have done hadit continued its horizontal direction. But, as I have just pointed out, if the principal roots are permitted to continue this downward direction, from which, alas! they rise no more, the growth of the plant is arrested, and it will not easily recover.
fo all this we have nothing of importance to object; system of not shifting. We fear, however, our agree. ment with "Observator" has almost arrived at its termination.
"Now," says he, "with regard to the "one-shift System,' it is evident that when a young plant is transing with no shall to a very large pot, its roots meet of the pot, and thence to the bottom; some solitary will, in possibly re-penetrate the ball of earth, but it passed through it, be but of little service to the plant." Here we find as many errors as sentences. It does small pot is at all evident, that when a plantin a Young roots will gallop off to the extreme limit of their and boundary. No such growth ever takes place; and we trust to convince "Observator" of his mistake, by pushing his argument a little further. Sup-
posing the large pot to be ten yards wide, does he imagine that the little plant, turned out of the little pot, will send its little roots fifteen feet in every di rection, commanding them to grow as fast as they can till they reach the sides of the huge pot, and then only to stop? Such a result could scarcely occur, unless there was some powerful attraction between the roots of a plant and the pot it grows in ; and we presume "Observator" will hardly contend for that.

Well, then, if no sucn event as "Observator" de scribes would occur in such a pot as we describe, it is sufficiently evident that there must be a limit some where to the horizontal spreading of the roots; and upon this fact the whole argument may be said to hinge. We conceive that the reason why the roots of a plant always direct themselves to the sides of a small pot are these: in the first place, all plants spread their roots, or some of them, horizontally, in search of food, and in order to gain room to branch; if they turn down when they touch the sides of the pot, it is because it is easier for them to do so than to double
back. But if the pot were not small, they would not back. But if the pot were not small, they would not
reach the sides of the pot, consequently they would not turn down; but, on the contrary, they would burrow among the mass of earth in which they are placed. The leading roots will not pass through it, but they will throw off laterals in all directions, and profitimmediately by the fertilising ingredients with which they may come in contact; and there will be this inestimable advantage in addition, that the young and tender roots, instead of finding themselves in contact with a substance sometimes hot and sometimes cold,
dry one hour and soaked with moisture the next, will dry one hour and soaked with moisture the next, will be immersed in a medium of uniform temperature changes.

The extent of these changes Gardeners are hardly aware of: a few years ago we took the trouble to ascertain them, and we found in a conservatory, in the months of May and June, that the temperature of the soil in a small flower pot was as $\operatorname{low}$ as $40^{\circ}$ at
one period of the day, and as high as $90^{\circ}$ it another period.

Observator," indeed, admits the importance of the principal roots making laterals: "The principal roots," he says, "ought to be encouraged to make fibres by all possible means, and this they will very readily do if they receive a slight check every time that they reach the sides of the pot: this may be done without allowing the roots to become matted. It is true that the their progress, when they are not checked; but they are much more liable to do so when a temporary stop is put to their elongation, or their direction is changed from horizontal to perpendicular.
Nothing can be more true than that slight checks are favourable to the ramification of roots; nothing can be more untrue than that the sides of the pot, and the obstacle they present to onward progress, are essential to this resuit-quite the contrary; mechanical
obstacles in the earth, a little difference in humidity, will produce the same effect, to say nothing of that natural tendency which nature has given roots to ramify, in order that they may change their pasturage and visit new sources of supply. The natural branching of roots in the absence of all mechanical interfer formed in water or in wet air. In fact, the power of ramification inherent in roots is one of the most beautiful instances of design that we meet with in so fertile a field as that of vegetation, for it effectually com pensates for their want of the power of moving from place to place. This is so very obvious and wellknown a fact, that we cannot but wonder at our corre spondent adding such a sentence as the following
${ }^{6}$ In the common method of potting, this advantage at least is gained, that the roots, being checked, throw out an abundance of fibres, and these valuable auxiliaries ramifying in all directions through the ball of earth, extract all the nourishment it may contain, and hus make the most of the small space allotted them For this reason I think that the common method of shifting from size to size is likely to prove in the end more efficacious than the ' one-shift system.
Surely no gardener can be ignorant that the production of a large quantity of fibres in the centre of balls of earth in small pots is precisely what does not happen ; and if it did, of what use would it be? In the centre of the ball of a flower-pot little moisture penetrates, and that circumstance alone is an effectual bar to the production of roots in the direction of the centre, even if it were not prevented by the rapid consumption of the
organisable matter contained in it by the first roots that get there when it is still open.

Passing from these considerations, "Observator" proceeds to another series of objections to the one shift system, more valid, and requiring a separate con sideration, which they shall have next week.

Mr. Pusey on Wednesday week brought into Parlament his Bil for facilitating the Drainage of Land,
the same with"the Sewerage of Towns Bill. We have therefore to express our hope that the two objects to be effected by those bills will receive the most con= siderate attention of our Agricultural Members, and that their care will be extended to future profit as well as to immediate benefit. They must not forget that it is more difficult to cure an evil than to prevent one; and that whether or not the two measures are combined, they may severally be made conducive, by scientific administration, to incalculable advantage to the country-the drainage of land by a profitable distribution of the drain-water, and the sewerage of towns by a preservation of the refuse for manure to the land. We must refer our readers back to our former articles on this subject, when we canvassed Mr. Denton's suggestions, for an elucidation of

The increase of the population in the rural districts of the country, and the consequent superabundance of labourers, has given rise to many schemes by which the wants of the unemployed might be supplied. Emigration naturally suggests an immediate relief, and acts as bleeding does in case of too great fulness of blood in the human body. But if the blood be the life of noan, the people is the strength of a nation; and it is only in very peculiar cases that the diminution of either is conducive to the general health. Useful and profitable employment not only feeds the population, but converts labour into wealth. and if we can at the same time save the food which is uselessly consumed by the idle, and add to the general wealth by increased production, we confer a double benefit on society. The great point is to find out the best means of doing so ; for by attending only to the immediate evil to be remedied, without considering the more remote consequences, we may act like an unskilful physician, who removes the symptoms of a disease without radically curing the patient.

We shall devote a few short papers to the consideration of this important question, examining the various schemes which have been suggested, and their immediate and more remote consequences; and, without presuming to decide dogmatically, we shall suggest what appears to us, on the whole, the most useful and practical means of giving additional employment to our Agricultural labourers.

The most obvious mode of relieving those who are in want of employment is to set them to work, at fair, but moderate wages, without any expectation of deriving profit from their labour, if not with a certainty highly praiseworthy, and is the most rational way in which charity can be bestowed. By judicious management, a very small sum, comparatively, will do much more good than a much larger distributed gratuitously. By setting men to do the work which otherwise would have been done by horses and machinery, we give useful employment and feed the poor: but if this is done at a loss, it cannot be expected that the example will be generally followed, and the difference between the value of the work and the cost of it, is a loss to the community. In particular cases of distress it may be advisable, and is, at all events, a "commendable charity, to give employment to the idle at any loss; not only to relieve want, but also to keep up the moral character of the people, which nothing tends more to corrupt than great indigence and idleness, unless it be excessive riches. But, as a general scheme of useful labour, which shall give increased employment to an increasing number of labourers, somethingfmust be devised to make the labour profitable to those who employ their capital to this purpose. Manufactures generally originate in a surplus of labour, beyond what is required to feed the nation; but when manufactures have increased be yond the demand for the commodities manufacturd, and a manufacturing population has started up fully sufficient for its own purposes, there must soon be a surplus of Agricultural labourers, and means must be found for their profitable employment: the subdivision of land certainly gives much additional employment, because the occu-- all improved implements by which labur is lessented much less erect expensive machinery to supersede manual labour. But, in a national point of view, the great subdivision of land tends to general poverty and it is not a doubtful principlein pontieal economy, that the less the cost of production the greater the increase of wealth to the nation. 'This cost, however, is not to be reckoned in the money-payments to tabourers, but in the food and other necessaries consumed by them. The example of France, where landed property is subdivided by the law to the greatest possible extent, practically shows that this does not diminish individual poverty, while its tendency is confessedly to impoverish the nation. Ireland, where occupations are small beyond credibility, owes its poverty chiefly to this source. A family can exist on the produce of an acre, or less, of potatoes; but this acre cannot afford profitable emaployment for
all its members, and the consequence is much unprofitable idleness

These examples show that small occupations, although they prevent absolute dependence on charity, do not ameliorate the condition of the labourers, unless they have other means of occupying their time usefully.

The small farms of Western Flanders may be adduced as a refutation of our conclusion. We are well acquainted with the beautiful garden culture of that district, especially of the $W$ aes country. Nothing briety, their assiduity, and their knowledge of what briety, their assiduity, and their knowledge of what
their soil will produce. But they are not to be held their soil will produce. But they are not English labourer. Their habits are so different, their ideas of comfort so wide of each other, that we can scarcely
hope to see the occupier of from six to ten acres of a moderate sandy soil in England bestow so much labour upon his farm, or reap such a produce. (For the particulars, we must refer to the "Outlines of the Diffusion of Useful Knowledge.)

The next remedy, and one which has generally been attended with good effect, is the allotment system, where labourers have a small portion of land let
to them, which they cultivate at their leisure hours, to them, which they cultivate at their leisure hours, and where their wives and children find a useful and interesting employment, while the labourer is doing his usual work for his employer. This excellent plan tends much to the individual comfort of the indus trious labourer, and to his moral improvement, and that of his family. It induces him to spend his evenings in summer in cultivating his allotment, when he might be tempted to join his more idle companions at the beer-shop. His children, instead of running about in idleness, take a pleasure in working in a garden, the fruits of which they know they will partake of; for moderate labour is a pleasure to the youthful frame, as much as it is a toil to old sinews or weakened nerves. We cannot too much approve of those who, a small spot of ground near their cottages to cultivate, at a full fair rent, including all other burdens, such as rates, tithes, \&c., for these small demands annoy the labourer more than his annual rent. There is no fear that the allotment shall not be attended to, if proper regulations are made. In all the cases where
allotments have been let to labourers, we have allotments have been let to labourers, we have
scarcely heard of au instance where the rent was not scarcely heard of an instance where the rent was not
regularly paid; and we know of many cases, which we could quote, where a labourer who had no allotment has advanced the rent due by a defaulter as a premiuma to obtain the allotment. But an essential condition case shall the occupier cease to be a regular farmcase shall the occupier cease to be a regular farm-
labourer, or leave the farmer's work, except for a few days now and then, and with his master's especial consent and that he may not have the temptation of becoming an Jrish cottar, and living on his allotment, this should never exceed half an acre; in general, a quarter of an acre is sufficient. With respect to the management of the land, we would never fetter the occupier with any set mode of cultivation; he will soon find out what is most profitable in the end. A pig will be
essential, and he will soon have one. He will find it essential, and he will soon have one. Hee will find it manure, than to sell it; and while many a great farmer is doubting whether it may be worth his while to make a tank to receive the drainings of his yard and of his stables, the labourer, on the slightest hint given him, has an old tub sunk into the ground, to hold all the refuse liquid of his cottage and his pig-stye. In this respect we have always found intelligent labourers much readier to adopt new practices, which accord
with their own observations, than their employers. This may be accounted for by the simple reflection, that they do at once, and without much trouble, what the farmer or proprietor must have first planned, and then executed at a considerable expense.

A weEk or two since, a correspondent sent us some inquiries concerning the death of his gold-fish (p. 138). As this is a subject in which a great many others are interested, we have obtained from a friend thoroughly
acquainted with the habits of fish the following acquainted with the habits of fish the following
memorandum, which we trust will be found useful to many besides Agricola:-
"The death of the gold-fish referred to at p. 138 appears to have been occasioned by the hard artificial bottom of the pond and the want of sufficient soil upon it, in which the fish would have completely imbedded themselves, and would then have been
secured against the usual low temperature of our winter month. Water has a higher power of conducting heat finh That, and the more animal heat abstracted at such a cold season by a good he icsu, of which the four or five species of Carp
slan, as is tis cafted, or go to mud, if one, all of they can, during
the winter months. If the fish are not seen at this period, it may be inferred that they have imbedded themselves, and are safe ; but when one or more are seen roving about the water, it may be assumed that they have not found mud sufficiently soft and deep in which to lay themselves up. To afford them this security, in a pond with a paved bottom there should be a trench of 3 or 4 feet wide, and 12 or 18 inches deep, carried throughout the whole length, or the greater part of the length, of the pond, where it is deepest; the sides shelving towards the centre of the pond is perhaps the best form that can be adopted. In this trench some soft soil should be placed, and more allowed to accumulate till it is as high or higher than the general level of the bottom along the upper edige of the sides of the trench. In this soft soil the roots of the water-plants may be placed, and the Carp will irabed themselves in this mud during winter.

The young fish are injured before the older ones, because, possessing less vital power, they are less able to resist the depressing effect of low temperature. The green moss-like substance that appeared on the back of the diseased fish proves the death of the part beneath. Until decomposition commence, animal substance
affords no support to vegetable growth."

## FAMILIAR BOTANY.-No. XiIt.

The Fall of the Leaf. No. 2.-There are those who doubt whether the cause of the fall of the leaf can really
be that which was formerly ( $p$. 724,1842 ) assigned to it, namely, because its texture becomes "furred" with a sediment deposited within its organic cavities. The ob-
servations upon hardening, at p. 100 , were intended as a reply to these objections, but as they lave not proved satisfactory to some minds, a few additional statements seem desirable.
That the interior of plants is hardened by the slow de posit in their interstices of sedimentary matter, partly organic and partly derived from mineral substances, is too
well known to admit of any argument. It is therefore to be presumed that the objections taken to the fall of the leaf being caused by the same circumstance, are made upon the supposition that that organ forms an exception
to the rule. It is, however, somewhat singular that a dif ficulty should be found in admitting the existence of sediment introduced into the leaves from foreign substances when it is considered that they are the great seat of
clange in the nature of the fluids which plants absorb Leaves are to the economy of the vegetable what the saucepans and kettles are to that of a kitchen, the place where evaporation, and combination, and all the othe processes of change, from one substance into another, go should be so similar in both cases, and that the little cells of a leaf should be furred over, even as the larger
However, the fact of a large sediment taking place i leaves, independently of the charcoal that is formed there, ter of evidence, not of theory, and capable of demonstration by other means than the microscope. Now, too, is a
good time to examine it. Let any one take the old yelgood time to examine it. Let any one take the old yelwill find a large quantity of ashes, which burn them, he in question. Then burn in like manner the leaves, still green and healthy, which were formed late last year ; the quantity of ashes will be found much smaller, the sediment is less. Then burn the young and tender leaves as a trace of ashes or sediment, nothing is there to obstruct the free action of their internal organs.
This kind of evidence seems conclusive; and is universal in all leaves. The leaves of the Ook contain from the Beech 3 per cento, the Birch 5 per cent., the Elm nearly 12 per cent., and the Parsnep nearly 16 per cent., according to
them. $-R . E$.

## THE DIGCIOUS CHARACTER OF THE STRAW-

 BERRY.Several of the late Numbers of "Hovey's Magazine of Horticulture," an American monthly publication, conain intereang inds of Strawberries. That some plant of the Hautbois Strawberry abound in male flowers, while other plants of the same kind produce blossoms containing the female organs only, has long been ascertained in this couutry, and means have been taken to render them together. We are not aware, however, that the fact of ican species frequently producing imperfect fiowers has yet engaged the attention of English cul To suc
merich an extent has this defect been observed in America, that one writer states his plants of Keen's Seed-
ling to be so destitute of male flowers, that an acre of hem, unless mised with runners bearing male blossoms, would not produce a perfect fruit. Whe same has been observed, but to a less extent, on Wilmot's Saperb, and
on Downton Strawberries. The same writer adds, There is no Strawberry which produces abundantly perfect and in the same blossom. In some varieties only, amo others, those abounding in the female organs never pro-
duce perfect fruit. Those which abound in the male
organs sometimes bear a fair crop, and where a few fruit only are perfected, they are often of a large size. In suffered to run to ther ous, it will make 10 plants where the female forms one, and will soon root out all the bearing runners."
Another singular circumstance connected with the above is, that the wild Strawberry of America which usually abounds in male flowers, has not, when planted in parallel beds with the cultivated kinds, been found Is this to be attributed to any effect produced by altive tion upon the ours the ol whe flowers of the wild Strawhe bate others are too far gone to be influenced by them? The latter seems to be the most probable inference
The failure of Strawberries when forced early is a complaint of frequent occurrence, technically called by garden roming blima, and usuany asched to want be occasioned by the partial absence of one or other of the sexual organs, and by there being no bees to fertilize Now whe portant point may be acertained it is, when this important point may be ascertained, it is as well to call
the attention of gardeners to the subject; so that it may be determined whether their from the imperfect character of the flowers, or from the We have, in the open air
whole beds of the open air also, occasionally observed have been anything but productive, and want of moisture or poverty of soil have each been assigned as the cause of their unfruitfulness. It might, perbaps, be found, upon examination, that beds of this description were composed of plants in which the flowers of one sex greatly preponplanting beds of various kinds in proximity with each other; leaving sufficient space between each to prevent the runners from becoming mixed. Some sorts might abound in male, others in female flowers; and they
would thus be rendered beneficial to each other. $\boldsymbol{R}$. $A$.

## ENTOMOLOGY.-No. XLII.

Bruchus granarius, the Grain Bruchus of Linnaus.Mose Beetles were so intimately connected with the struction of the Beans, and they so frequently injure the Pea and Bean crops in our fields, and destroy them after being housed, that their bistory is well deserving the attention of the cultivator. On examining a sample of Beans which was sent from Essex, after having remained in them ; some were small (fig. 1), and on removing the horny husk or skin, a dead Bruchus was invariably lying in the other winch was only just large enough to contain these protruded a sort of web, covered with little feculent pellets, and inside was an excavation sufficientiy large to contain the co
woollen Moth
About 160 species have been described by the family Bruchidæ, from various parts of the world, and many which have been discovered in tropical climates are bandsomely which have shells as smooth and hard as marbles. Our B. granarius is often found in gardens in various flowers, especially in the Rhubarb and Spirea; in March, April, and May, these Beetles are alive, but do not always come forth so soon as they are hatched, and during the winter they probably lie dormant in the seeds in the pupa state. As early as February I have fornd them abundant in the flowers of the Furze, and again in May in the Whitethorn lossoms, and they are not uncommon in waste fields as
late as August ; so that there are either two broods, or a succession of them is produced throughout the spring and summer months. The female seems to select the finest seeds for the deposition of her eggs, and the there changes to a pupa; when it is perfected to a Beetle, it either eats its way out, or a lid formed in the outer hard skin is forced out, and the prisoner is at once liberated. I cannot clearly understand why such vast numbers of the Beetles are found dead in their cells, unless, as De Geer
suspects, they return to the seeds to feed after having left suspects, they return to the seeds to feed after having leth
them. In seeds imported from warmer climates than ours they may be killed by a lower temperature, but this would scarcely account for the multitudes that have been found dead in the various samples of Beans that I have examined in England.

I have understood that the Bean and Pea-fields in Kent Bruchus very severely sometimes from the attacks of the Bruchus granarius, which appears to have been confounded
in this country with the B. Pisi ; the former is thickly in this country with the B. Pisi; the former is thickly
punctured and black, the underside and legs grey, with fine punctured and black, the underside and legs grey, with fine
silky pubescence ; the head is rather smail and drooping, the month formina are prominent, with a deep notch, at the entrance of which the antennz are placed; they are not longer than the
thorax, a little thickened towards the apex, 11-jointed, the 4 basal joints brighted and much broader than the head, especially at the base, which is sinuated, and forms two acute angles, and on each side is a little tooth; it is variegated with aslicolnured pubescence, baving a whitish patch before the
scutel, which is also whitish; elytra much broader, scutel, which is also whitish; eytra much broader, somewhat quadrate, the apex rouncied, leaving the extremity of the body exposed; this is grey, with two, and
sometimes with four, black dots: the elytra have 10 sometimes with four, black dots: the etytra have
punctured strize on each; they are variegated and spotied
with whitish pubescence, and behind the scutel is a long ochreous patch of hairs ; the anterior legs are small and bright rust colour, excepting the base of the thighs; the hindel legs are considerably the longest, with thickened thighs, having a tooth beneath towards the apex; all the feet are 4 -jointed, the 3 d joint bilobed, the 4 th slender, with two little claws, (fig. 2 magnified; fig. 3 the natural lenglh.*)
Another species, equally injurious, has found its way from North America into the southern states of Europe, Where it $s$ now naturalized, and proves very destrucGermany and Russia, in samples ithave seen from by them. It is recorded as a mative of Great Britain, but I have never found it alive in this country. From its in habiting the Pea, it has been named by Linnæus, Bruchus Pisi ; it is larger than B. granarius, covered more with ashy-brown hairs above, and is at once distinguished from it, by having two large oval black spots at the tip of the ablomen, instead of two minute ones. Fig. 4 shows this portion of the insect in a Pea.

I find by De Geer that the Bruchus Pisi was so abundan during the early part of the last century in North America, especially in Pennsylvania, New Jersey, and the southern part of New York, causing such havoc amongst the Peas, that the inhabitants of those countries were obliged to abandon the cultivation of that useful crop, as reported by Kalm. This traveller states that these Beetles pair in summer, at the time when the Pea blossoms, and the pods are formed, and lay a little egg in almost every Pea as soon as it is produced. Outwardly, these Peas do not seem damaged when arrived at maturity, but in opening them ne generally finds o very littie larva there, which, i left in repose, would rest there all the winter and a part of the following summer, consuming by derrees almost the whole internal substance of the Pea, so that by the spring there remains litcle more than the rind or busk, fter which it is transformed into a Beetle, which pierces hole itl the rind of the Pea, from whence it emerges, and the females resort to the fields sown with that legume, to ay their eggs in the young pods. The remedies I mus the Beans infested by the Bruchus, many specimed from minute parasitic fly, being a species of Bracon. ${ }^{\text {T }}$ Ruricola.

AMATEUR'S GARDEN.-No. XII.
A short time back, when speaking of the advantage of striking cuttings of plants for bedding out in the autumn, I recommended them to be potted off early, in order that ready to plunge into sand at this season in temporary pits, so as to set the frames and pots at liberty for more useful purposes. As the season has now arrived when plants wit only require protection from frost and heavy rains, I turned out without further delay.

In forming the pit, it is only necessary to excavate the ground in a sheltered part of the garden to the depth of one foot, placing the earth so as to form an embankment round the, sides of the pit; on this may be placed some mats, poles, to form rafters to support straw-frames the plants. This is a rude contrivance, that can be use in plants. This is a ruce contrivance, that can be used practised, it would be well to have something of a more permanent character, such as brick or turf walls, with wooden shutters to protect the plants. A turf wall nine inches thick, if formed in summer when the peat is dry, will resist much more frost than a brick one of the same dimensions, and consequently I should recom be found exceedingly useful at all seasons-in winter to protect autumn-sown annuals, and in the summer for in numerable purposes-as there is no doubt but that plants for kids pots would be raterily benefted if placed tected from currents of cold dry air, which is so injurious to them by abstracting moisture from the pots, and at the same time communicating a chill to the root
After the pit is formed, the bottom must be made pretty whicha if convenien, covered aver of this must be praced about tiree incbes of fine sand. In suffise plants may be placed, thking care to allow them sufficient room to form themselves without being crowded Tabour advantages of this system are the great saving of formed by the plants than could be the case if they were exposed to the alternations of drought and moisture in pots, and, what is of still greater importance as a matter raily disfigures them so long when lurned out in the ordibary manner.
The potting of greenhouse plants must be proceeded wive as the plants require it. No general rule can be given for this operation; the state of the plant will be the est guide to its proper management.

After this mild weather insects will make their appearor dissections, 8 \&cc., see Curtis's Brit. EE
$+\quad$ Ibid., pl. and fol, 69.
ance in most greenhouses. The best remedy for red plue, as recommended by Mr. Knight, of the Exotic Nursery; but for the green-fly, the old system of fumigating with tobacco is the best resource.
An easy and less unpleasant method of fumigating, is to place a garden-sieve on three pots, six inches high, in the path near the entrance to the house. On the sieve place a with damp tobacco and wet siraw, fresh from the brable In this manner a house may be filled with half the tobscco usually used, and with a mere tithe of the trouble usually attending the operation.-W.P. Ayres.

## HOME CORRESPONDENCE.

Fixing Ammonia,-As fixing the volatile salts of am monia is a subject of great importance, allow me, through the medium of your pages, to solicit a further communication from Mr. W. H. Potter, on the subject, as it is one in which I, as well as many others, no doubt similarly circumstanced, feel great interest. Having the superintendence of a manufactory employing nearly 1,000 persons I have had constructed a large cesspool, into which the water-closets connected with the works empty themselves, and with the contents of which all the ammoniacal liquor from the gas-works around the place is also mixed. With the view of making this as valuable as possible, by fixing the ammonia, I have had a regular quantity of ground gypsum put into each water-closet daily, or every other day, in proportion to the number of people likely to use it ; and I am disappointed to find that it does not by any means fix all the ammonia. A chemical friend suggests that $I$ ought to use the sulphates of iron and magnesia; but I am afraid of using the former, as, in excess, it is very poisonous to vegetation; and as it would persons, there is the fear of overdoing it. I believe that sulphate of macnesia is very rood, but it is too expensive here to be used in the necessary quantity. Howy much sulphate of iron would it be safe to we dilly for auch a purpose, with such a population, one-half of the day, that is, 12 out of the 24 hours?-T.G., Clitheroe.

Experiments with Manures.-The following is an account of four experiments on the growth of Wheat, made in the parish of Wraxall, in the county of Somerset, 1842

N.B.-All the land was prepared for Wheat-sowing in the Fall, but the seaso

Waste of Manure.-There are in this place about 250 ottages, and under all the streets there runs a large ewer, 11 the suds, the staets and carries off into th vers of all kinds, which flow ing, it fromourings, and lops of for the sum of 01 it from all these cot tages wid hold a large quantity of thisk might be made nd a nd a pup por bor cart would require to be cut whioh. It trub drain wour this 0. ores it sigo carries off the drainage and surfaceothages, but and dditional drain would be mal for wour rive dditional dion the experiment ?-T. G., Chitheroe. [Certainly it is.]
Rust on Grapes. - Your observations at p. 132, upon he rust on Grapes, lead me to believe that the term is applied by different persons to distinct diseases. If your definition of rust, that it covers the berries "with a tough I have always understood it to be. What I call rust is rather a discoloration of the skin of the berry, arising,
apparently, from a rupture of its tissue; and this is certamy produced by external causes, such as forcibly dashng water from a garden-engine against the young fruit, or handling the berries with rough or sweaty hands. In nagement of a following instance:-I ornce had the mathe fruit occupied three or four men as many days, and on one occasion a person employed in that work happened to be extremely near-sighted, which defect of vision occasioned him to handle the bunches very much in order to bring them close to his eye; the consequence was, that every bunch thinned by him was afterwards more or less affected by what I call rust. It is possible, however, that in this case the disease was not caused by the perspiration but by the roughness of his hands, which would injure the tender skin in the same way as violent syrinuing the it not prohable that excessive and dry heat is the most frequent canse of rust in Grapes? The worst case of rust I ever sam was thee or four years ago, in Vinery of ruse Iev ar Museat Tines were planted at one end the remaining Vines being Black Hamburgh me rar the remaining and the hovee win frequat of the season, about February; the result was, every single bunch of Hamburgh was destroyed by rust, and the Vines much injured, but the Muscats ripened a better crop than I have ever seen in that house before or since, which may be thus accounted for: the Muscats requiring more heat, did not start till some time after the Hamburgh, and were not in flower at the time when the Ham= burgh, being as bic as Peas, were scorched to death The gardener, seeing the mischief his dry heat bad done, took to watering, so that the Muscats, when set, were not exposed to the same trial as the Hamburgh, while they had the benefit of the strong heat, which they enjoy.- J. $R$. Pruning Pear-trees.- 1 am induced, after twenty-five years attention to training and pruning ruit-trees, and partouly the Pear, to make a few observations upon this subject, as I have followed a pian by no means generally practised, and, 1 have reason to thrk, wh coasiderable advantage. Having always in view the way in which bearing-wood is produced upon a standard Peartree, my irst object was to turn to use, and at the same time to reduce, the usual abundance of foreright shoots visible on all Pear-trees trained against a wail; and by laying in as many of these as possible, to bring my trained trees as nearly as I could to the character of a btandard, fy retaining tan wood which in a standard would in a few years produce fruit, and which by being cut out from wall-trees, in most instances, renders them barren in the centre. It would be unnecessary to describe the nature of the wood which produces fruit on standard and untrained trees; my object having been to obtain wood in my trained trees similar to that which prodnces fruit on the untrained; and which wood, except upon the extremities, is usually cut out anuually before it is perfected to produce fruit, leaving all the middie of the tree quite barren. In most gardens I see little fruit excepting at or near the extremities, alhough some sorts of pears blossom so freely, that no kind of pruning will stop them. The Crassane is one of our best Pears, and is of a very different character; seldom bearing but on the three or four year old wood, and at the extremities. I have one over the tree, and had noore in the middle of the tree than on any other part. It shows equally well for bloom this season. The plan which 1 have adopted, is, never to cut of a shoot which can be laid to the wall; for by cutting on the foreright shoots, you only produce a succession of the same, without a chance of producing fruit. By laying buds, either on the oId wood, or any short spurs which otherwise would have produced only wood-shoots, c.ntinue to bear a succession of blossom. After following this plan for some years, and having got my trees into a good bearing state all over, I direct moy gardener to remove some of the weaker shoots entirely, and cut the ends of others, to throw more strength into the bearing part of the tree. But this is not carried into effect, until I think it may be done without forcing more buds than I wish to break into wood. I had a large Pear-tree (Aston Topn), ing the foreright shoots cut off: ss the Pear was so forced by being against a wall as to be of little value, though as a standard the best grower, I did not like the appearance of the tree, and therefore directed my gardener to treat it in the same manner as the others. He began three years ince by laging in all the foreright wood; and the larger part of the tree, which had borne scarcely a Pear, was last year quite loaded, and promises equally well for next seaon Having rot the tree into a bearing state, a preat par of the reak shoots are cut out; but a few are lut on part branch to draw up the sap, and to prevent a large nam ber of buds from breaking into wood. I should state th ber troin many more branches in than is uruall state tha have a Gansell's Bergamot, wich hes not been phated above ten years; this was last year full of hlossom and his year the sume. It is a jur of hlly more ive when young, to make strong wood han to produce fruit. -Tebroe.
Grafting Camellias.-Mr. Beaton tells us, at p. 104, with "Grafting Camellias in spring never answers well experioy one. He certainly cana ham writen from mellias welias may be grafted in spring with almost a certainty of success. Ihave seen scores grafted at that season, and sarcely one in a score has fanled. For grafts, wellipened young shoots should be taken when they are just beginning togrow, and before the buds are far advauced. These
are to be porked upon lealthy young stocks, which should
afterwards be set under hand-glasses in a stove or forcinghouse, where a temperature from $60^{\circ}$ to $70^{\circ}$ is kept up grafting without the tongue is perhaps the best method, and it is advisable to retain a few leaves upon the stock above the graft, to draw up the sap. Not only Camellias, other things) can be readily propagated in the same way. - Hortulanus.

Physianthus albicans.-I send you a specimen of the fruit of this plant, as I am not aware that it has hitherto fruited in the open air in this county. six years since against the south-west front of my howse, where it has been exposed without any protection from that quarter in the blighting winds which prevail and has grown vigorously and flowered freely. Last autumn for the first time it formed seed-pods, which Last autumn for the irenst until now. There are six upon the plant. -Wm. Tweedy, Alverton,

Pelargoniums.-In an answer to your correspondent "Truro," p. 161, you mention some Pelargoniums as being unknown to you, but about which I can give you
some information. Acme of Perfection is a first-rate shaped flower, with a fine spot on the upper petals; Fascination is a very bad-shaped Rower, centre to the under petals; Countess of Cornwale is a first-ras the same character as the preceding one; Reward (Russell's) I understand to be good, but I have not seen it.
-Patience. -Putience.
Polatoes-It is a great pity to spoil so good a thing as
a good Potato. "Rus," p. 117 , will find his Potatoes much improved by being spread under an airy shed, where they cannot be frostbitten, and by having a
taken into the kitchen two or three days before being used, to get quite dry. If there is reason in roasting eggs,
there is quite as much, and more, in boiling Potatoes. It may be the cook's fault; but they were most likely taken
up before they were quite ripe, without being exposed to the air before they were housed.-Breadfruit. Another Problem in Cookery. -Much learned matter cup and Currant-juice, I beg to propose another to philosophical correspondents, the solution of which may possibly save the waste expenditure of Currant-juice, and anxiety by those who cultivate these and oe manufacture of good Currant jeily, Strawberry, or Raspberry jams,
that these fruits should be gathered quite dry? You are aware that in seasons when St. Swithin labours at his watering-pot for 40 consecutive days, how difficult it is to get these fruits dry; and by waiting one drizzing day
efter another, they soon deteriorate and often completely ppoil. I have, during the last 30 years, lost many bushels by such means. Though gathered moist with dich, or wet soon after subjected dissipate every particle of water? Again-Is not water in some degree a constituent part oi ous as a little rain or dew on their exterior surface? If some artiste would test the matter and tell us the result, it would possibly save both vexation and loss. I am bempted Elder-flowers, tion generally is, "Be sure and get them dry," "Oh, they must be gathered dry. crammed into a still and immersed in water. Will you answer another query-vize, is the Pine-Apple a mucilaginous fruit? wallent fruits contain pectin, the substance which constitutes the jelly of fruits.] eggs is at hand, the following simple recipe may be useful to your readers :-Take a tub, pail, box, or jar of the size you require; lay fine salt on the bottom of it, and place the eggs with the small end downwards on the salt, so as not to touch each other. Then strew more salt, so as to cover the eggs, shake all gently, and add a layer of eggour cellar, and you will find the eggs good during the whole of next winter.-H. $\mathrm{H} . \mathrm{S}$
Bees.-"M. A. P." will be much obliged if Dr. Bevan will kindly give her advice on the following subject:- She had an old straw hive of Bees given her in 1840 , nve them is now very much decayed, she wishes to remove them
into another hive, and would be glad to know the best time and manner of doing so without injuring the brood comb; also, when supering or nadiring is reso
which live ought the external entrance to be
June, in mn-shaw Beetle.- There commonly appears in the common seven-spotted Lady-bird, with brown and somewhat glossy wing-cases, locally known by the name so abundant in the neighbourhood of Stroud, in Gloucestershire, that they became quite a formidable pest in lawns and gardens, devouring, like the locusts of Egypt, everything green. The larve seemed to exist in myriads beneath the surface of the ground, whence the beetles, on attaining their perfect form, were seen to arise in swarms. witnesses and victims of this plague. If your correspondents can suggest any practicable means of destroying
the larve of these beetles, before they have commenced their work of devastation, they will confer an obligation on many, and especially entitle themselves to the grattude

Beetles complained of are the Anisoplia Horticola; we
are unable to suggest any remedy for the destruction of are unable to suggest any remedy for the destruction of
their larve, which live beneath the turf. If rooks and starlings be suffered to search for them, they will destroy vast quantities; but in the opinion of some persons, the
birds do more mischief than the insects, by pulling up the loose turf. $-R$.]
Our Prejudices.-Amongst these, I think, may be reckoned the opinion so generally entertained, that hard and soft-wooded plants cannot be grown together in the same house, and under the same system of management. I know I am now treading upon delicate ground, and that Ishall have the judgment of men of great experience ment the treatment hard-wooded plants require. Take Heaths, for example; exclusion of frost, plenty of air, a the nearer training, cs the better when in free draisage, to preserve the colours :- can any better rules be laid down for the successful cultivation of Pelargoniums, Calceolarias, \&c. ? The fact is, few of us are wise enough boldly to discard such a portion of our col-
lection as shall give the remainder the room they require to ensure their superior frowth; and so the houses crowded, shelves are stuck here and there, light and air are excluded, and the result is found in the succulence of the one and the mildew of the other. No one who may attempt the cultivation of the two species together need e discouraged if the mild wn is ther Heaths alone, that must not be the same? I never yet isited a collection of this tribe of plants where I did no hear this pest complained of, or witness its effects. I may erhaps add that gardeners are often placed in situation of considerable difficulty, by their employers purchasin additions to their stock, without permitting them to dis card older varieties, and thus collection of space. With very few exceptions, repletion is a disease
with which all Horticultural buildings are affected, $-K$.

## FOREIGN CORRESPONDENCE.

知and.-We are making rapid advances in our Horticultural pursuits. At a late meeting of our Horticultural sociey, the pleasing information wa Col. Wakefield, from the directors of the New Zealand Company, to be placed at the society's disposal ; and that a packet of valuable plants and seeds had been received from the Botanical Gardens at Sydney. The plants consisted of Olives, Limes, Pomegranates; China, Provence nd other pose ; ite Cedars, Oleanders, two pecies of Hibiscus, the Coral-tree, English Oak, Hydrangea, Ficus elástica, and various other things. It was moreover resolved at this meeting, that a sum not exceed-
ing $10 l$. should be devoted for the purpose of preparing two sets of drawings of the most interesting, indigenous Botanical objects, and specimens of native woods; one the New Zealand Company, and the other to the Horticultural society of London. A Mr. Lyon is represented Mechanics' Institute, that good Coal was not to be found in New Zealand, although it was not improbable that ou brother-colonists at Taranaki might discover rich beds of Lignite or wood-coal, similar to those found on the Con tinent of Europe. To this, however, I believe the mos positive contradiction may be given, as an abundance of good bituminous coal exists in Massacre-bay, and probably The Bish aces sented by M. Murphy, Esq., upon his arrival at Wellington, adverted in a complimentary manner to the magnificence of the country, now undergoing the great change of colonization ; and remarked that under Divine aid and the exertions of the British people, New Zealand would one day
 dently of any superiority of climate or soil, from the prospect and practicability of preserving and civiizing an aboriginal race of natives. By the wisdom and forethought of the New Zealand Company, the system of native reserves not only at once provided for, the safety of the tainty of leading the New Zealander to prefer the blessings connected with a civilised life; and he had no doubt but the natives would one day bless the happy period when Britons first settled amongst them. The following brief list will give some ides of the prices of provisions : Bread per 2 lb , loaf, 7 d . ; fresh Beef, per lb .9 d . $\mathrm{Mutton}, 9 \mathrm{~d}$
 Cheshire Cheese, per lb. 1s. $6 d$.; Potatoes, per ton, $4 l$. to $6 l . ;$ eggs, per dozen, $4 s$;
is from 500 . to 900 . each ; working Bullocks, per pair, from 40l. to 60l., and Sheep from 23. are selling from 8s. to $16 s$. per pair, and are from $2 l$. to $3 l$., and of labourers from $1 l$. 10 s , to $1 \%$. 16 s .

 surface of the ground in latches two fect apart, to be afterwards
thinneco out as the plants grow 6 or 7 feet hell. The herbage
thould not we pre should not be grazed, but reapector corly by pigs, who tear it up to
it is lable to bc injured, particula get at the sweet, nut- like roots. The wild west conat Mr. Goode,
would, no doubt, be well adapted for its cultivation. gr, to Mrs. Lawrence, cxhibited a collection of plants, containing
a very well.grown specimen of phaius Wallichii, a pretty variety of Epacris impressa, clothed with countless numbers of crimson flowers; a dine plant of Erica bicoior, with light-green and
crimson blossoms; Burclicilia capensis, in a vigorous state of health, bearing clusters of beautiful orange at the end of every
branch; with the old and much-neglected, but nevertheless pretty, Granch; with the old and much-neglecrous heads of delicate white Howers: a Knibhtian medal was awarded for the Phaius and Burchcilia. 1rom Mr. Giaines were three pretty hybrid Rloodo
deledrons, called Princess Royal the Prince of Wales, and Vicing the throat marked with well-defined dark brown spots; several seeding Cinerarias, the best of which were Ne plus Ultra, resen-
bling the King, but with larger flowers, and True Blue, of a deep purple colour, with a reddish tinge in the centre ; with these exhe $\begin{aligned} & \text { ening the peculiar mottled character of that variety in great } \\ & \text { perfection, and C. Nicholsii, a small, well. formed, light-red flower, }\end{aligned}$, also spotted in a slight degree, and well worthy of cultivation; ${ }^{\text {a }}$
Banksian medal was awarded for the two latter. From Mr. Smith, beeatififl dwarf and free-blooming character as thosg ex-
sabited at the preceding meeting ; a specimen of the rose-coloured
hible hibited at the preceding meeting; a specimen or the rose-coloured
variety of $R$. arboreum, and an Azalea, called A. aurantia superba, of a dark arick-red colour, but rather deficient in
form. Mr. J. Wells, gr. to W. Wells, Esq., of Redleaf, brought
two two seeding Azaleas, raised from seed presented by the late
Lady Amherst, and stated to be that of the Nepaul Rhodo-
dendron arboreum; one of the plant exhibited, howerer dendron arboreum; one of the plants exhinited, however, bore
a great resemblance to the ellow Chinese Azalea, and the other was an exceedingly pretty variety, with large, finely formed yellow flowers, tinged and spotted with reddrsh brown; Mr.
Wells also exhibited some very fine blooms of Camellia reticu-
 sian medal was awardect for the Azalcas amid hybrid Rilodotiten-
drons. From Mr. Beck, a larce collcetionot drons. Prom Mr. iseck, a large collection of plants m slate pots,
comprising well-bloomed specimens of Acacia armata, Cytisus racemosus, Leschenáultia formosa, Cineraria, Urania, Unique,
Madonna, and several others, in the most perfect health, with a Mad easily, moved in any direction, and made watertight to prevent any inconvenience which might arise in such situations from the
drainage of the plants. From Mr. Appleby, gr. to J. Dobinson, Eranage secchng pachasia, stated to have been raised between, Ficorarter species. Fixom the Very Revereng the the least from chester were a seeding Camellia, called follolosa, of a very brilflower, being composed of an exterior row of petals, densely filled up in the centre with othors of irregular form, and a Mus-
cari, raised from seed gathercl in tne Durrood Pass, iear Meshed in Persia, and apparently a small variety of M. racemosum. a cer of Wifcate was awarded for the camenilia. Messre haves and Co ling Carmellia, raised from the seed of C . Colviliii, fert lised with the pollen of C. reticulata; in the foiage it resembles the older sorts, but the flower, which is large and well filied up, partakes
of the form and colour of its male parent; $\mathbf{a}$ cortificatc was awarded for it. From Mr. T. Williams, of Oldford, a cut speci-
men of Cyrtopódium Andersonii. From Mr.J. Pamplin, a pretty dark blue Cineraria, called Royal Purple. From Mr. Hally, a
large plant of the Camellia called Monarch, with mottled flowers occasionally coming well filled up in the centre. From Mr. W. Lee, of Bradmore, Hammersmith, several forced Provence and
Moss Roses in a large pot. Sir
y. T. Tyrrell, Bart., exhibited some very fine White Versailles Lettuces; A certificate was
awarded to them. M. R. Ayres, of Chicksands Priory, sent of the Society was a collection of plants containing Spiranthes orchioides, a pretty terrestrial species with pink flowers; Acanthoedged with deep crimson; Phaius bicolor, bearing lofty spikes of ellowish brown and white; Boronia anemonefolia, a handsome roe-b specimen of Euphorbia splendens; Acácia mucronata, a
showy sort with dissima, a small species, bearing a great resemblance to A. pulchella, is well adapted for a limited greenhouse. Cuttings were
distributed of the following Pears: Comte de Lamy, a middlesized, very sugary and rich fruit, ripening in Octaber; Eyewood, in October and November; Thompson's, a highly-flavoured Pear resembling in that quality the Passe Colmar, and ripening in Nov.;
and the Pearson's Plate Apple, so called from a piece of plate having been presented to Mr. Pearson, a nurseryman, of Notting sert, Apple, nearly equal in point of flavour to, but larger and a better bearer than, the Gg
from Decenber till March.

ROYAL AGRICULTURAL SOCIETY OF ENGLAND, were elected. The Duke of Richmond stated that a successful preration had been performed by Mr. Simmonds on the cow hernia had excited so much interest, it was decided that Prof. Journal Committee. ${ }^{\circ}$. Hart, Esq., gave nutice of his intention to introduce the Dyock Oat on the Derbyshire hills. K. Iling-
worth, Esq., suggested the publication of cuncise practical tracts on particular topics of agricultural interest, as the best morde of of a foal, whanch had. Eied from obstruction caused by the accuand 13 inches in circumference. This, as well as the specimen, was reterred to Prof. Sewell. Prof. Johnston transmitted copies
of the third Number of his printed " suggestions and Experiments in Practical Agriculture," contanung the results of experments made in 1843 . These papers were considered of great value, not
merely for the actual information they contaned, but on account of the new suggestions to which they gave rise, and the hopes
they held out for the future. Mr, kuller, M.P., Col. Challoner, Sir J. Johnstone, and Mr. Browne, having reported their expedifferent management of and with different manures, the Duke of Richmond explained the success which, in Scotland, had attended the trials made with bones converted, at a cheap rate, into a
manure of a modified character, the details of which he had comLINNEAN SOCIETY
Mareh 21.-The Lord Bishop of Norwich in the chair. Mr. A.
Henfrey was admitted an Associate, Capt. Jones presented specimens of a rare Lichen, the Placodium canescens, found in Sussex. Janson, Esq., exhibited living specimens of the afforded the description read a short time since to the Society. A collection of 19 Ferns from the Himalayas, and not in the soci-
ety's Herbarium, was presented by T. Edgeworth, EEq. A paper was read from Prof. Forbes on several new species of

Star－fishes，belongirg to the family Ophiuridæ，which he had
discovered in the IEgean sea．A continuation of Mr．Grifith＇s paper on the Development of the Ovalum of Santalum，Viscum， and allied genera，was also read．A packet of seeds of the Cæsal pinia coriaria，the Dıvidivi or Libid
distribution amongst the Fellows．

FLORICULTURAL SOCIETY
Marche $21,-\mathrm{Mr}$ ．Mauger in the chair．Mr．Orson read a pape upon the properties of the Carnation and Picotee，in which he
statea that he should not enter into the linfanical characters of these flowers，but proceed to point out that although the Carna－
tion was originally divided into three classes，viz．Bizarres tion was originally，divided into three classes，viz．，Bizarres，
Flakes，and picotees，yet that the latter were now considered a distinct variety，Bizarres were distinguished by having two colours，aud Flakes by baving only one colour，upon a white
ground ；these two principal classes being subdvided into scarlet，
crimson，pink，and purple Bizarres；－scarlet，purple a and crimson，pink，and purple Bizarres；sicarlet，purple，and pink
or rose，Flakes．In some counties，pink，purple，and crimson
Bizarres were all classed under the head of pink Bizarres， Whereas in other parts of the country they were known as crim
son Bizarres．The author considered that a good Carnation son Bizarres．
should possess the following properties－The calyy，or pod，
should be long，firm，and entire，of sutfient substance to sup？ port the petals，which should be thick，broad，and sulstantial， smooth，and free from indenture on the edge．The guard petals
sbonld rise gracefully above the pod，and turn in a horizontal direction，having a gradual disposition to cup，but not terminat－
ing in an abrupt curl at the outer edge；the whole forming complete circle．The minterior petals should rather docrease in
size as they approach the centre，each row being reculariy ay alternately arranged above the other，so as never to be crowded， nor，on the other hand，to have $日$ loose and gaping appearance；
in fact，the spaces should be only sufficient to display the col our－ ing distinctiy．The number of petals in a first－rate flow er should
not be less than 17 ，three of them being placed in the centre，to form a crown．The whole would then，if welt arranged，prodice
the formo the half of an oval，or elliptce，wlent held on a side view；having，when sech from alove，a chrenlar appearance．
The colours，whether hizare or Fiake，shmple be strong，but
liant，and distinct throughout．The ground colour should be a pure white，free from speck，spot，tint，or tinge of any sort．
The Flakes slould be broad and boll，commencing at the ex－ treme edge，of a proportionate wid to the petal，running
through to the centre，or so far as the eye can discern，and
diminishing in breadth as they apploach the centre，in the same ratio as the petal．The distribution of culours should be equal in every respect；in a flake，not less than three divisious on each
petal ；in a Bizarre，not less than live divisions ；and when pro－
perly arranged，their respective and united beanties should be strikingly apparent．Size should not be lost sightt of，though it
should never take precedence，unless the other general properties loose，mutilated，or split petal；a petal having no white on the on the upper side；a petal upon which（if a Bizarre）there are not
two colours apon the white on the upper side；if the pod be split down to the sub．calyx，or cut away in any part，Orson then
proceeded to state that size was the only material point upon proceeded to state that size was the only material point upon
which there was any great difference of opinion．Iri sume places
two rows of petals were thought sufficient ；while some writers upon this subject argued that a Carriation should be as double as a Dalnia or a Ranunculus．A statement was put forth last
summer to the effect that the height of the former flower，when
viewed sideways，should represent the half of a ball，a word Which did not convey any definte meaning as to circularity，
and further，that the beauty of the Carnation and Picotee would
be increased tenfold if they possessed the fulness of the pailia． A flower possessing the latter property would，however，pre sent Picotees were not shown with a single row of petals，it did not Dahlia．A flower with orly two rows of petals was quite as fied with them．One of the fowers most in nute was Brooks＇s
Flora＇s Garland，possessing fulness and size，pecularity of colour， its fulness，has been overlooked，viz，irregularity of marking； edge to the centre of the flower，but appearing in stripes and his account objectionable．Mr．Orson next read a list of the number of the last season in the neiglibourhood of London．From this it Brooks＇s Flora＇s Garland，Mansy＇s Beanty of Woodhase，and
Roi de C＇apucms；and that not more than 10 or 12 uf the whule
 Burns and Bomme Bess；Twitclett＇s Jon John and Queen o Chadwick＇s Brilliant，Marsden＇s Jolly Angler，Bates＇Braser竍 Levester．The propertien of the Pice tee were next descinbed Carsation，with this exception，hat as the colenur of the Picotee degree of fulness wan admissible，proportmate with the lightusess
or narrowness of the marking．The colour should be clear and
disturt coufinct to the edge of the petals，and not rinnning
 degree run through to the edge of the petal，but whether
lighty or heavaly marked，the colour should be regular，at lighty or heavily marken，he edge all round the petal，eath
an equal distance from the
petal having the same regularity of colouriug throughout the flower．Athough a full tower was not so objertionalile as in
the Carnation，yet a very full Picotee was not to be advocated； a Carnation，yet a very full Picotee was not to be advocated repard to the petal and pod，nere applicable as to the carnation．
Mr．Orson concluded with hoping that the tume was not tant，when any flower in which the colour suns in the least from munication was also reat from Mr．Bates，relative to the properties of the Carmation．In this，the ooscrvations were
divided into four gencral heads： 1 ist，form；2d，white or ground size．Forn：The guard or outer petals should be broad，firm，
smooth，almost flat，having when expanded their base sufficiently long to throw themselves out of the calyx，so as air－ballond fron生 to $1 \frac{1}{2}$ Inch from the centre；an indated air－valloon，cut proportion which each quard petal should bear to the diameter
of the bloom should he two－fiths．The most objectionable petals
were those wheh and mose wheh were serrated，as
Twitchett＇s Don John；and plaited or crumpled，as in Water heuse＇s Rising Sun．In the general form of the flower，the guard petals should be six in number，wearly equal in size，and arranged five petals of a complete circle；the next tier should consist o stices of the guard petals：four petals would complete the thir tier，within which should be two or three，to form a centre or
Crown to the flower，which would thus contain 17 or 18 petals． leaves，which might petals might be taken to follow the guar 25 petals；thus showing that 25 may not be too large a number，

## nor 17 too few，for perfecting a first－class flower．Ground colour Th his should be pure，as in sharpe＇s Defiance，not freckled as in Warmsley＇s Wijlism iv Warmsley＇s William IV，nor flushed as in Wallis＇s Beauty of

 of colour two classes were distinguishable，In the distribution flower，in the latter，three fifth，the remaining portirds of th White．When properly diffused，these proportions approached the nearest to perfection；it was difficult，however，to find flowerspossessing such rare qualities．In a large petal there should be possessing such rare qualities．In a large petal there should be
at least five and not more than eight divisions of colour，each bold and distinct，commencing at the outer part of the petal and a bizarre might differ materially from that in a flake，inasmuch as in the former a large portion of colour is sometimes distribu－
ted on one side，with perhaps only one stripe of an opposite colour on the petal．This，though not Very ohjectionable in a bizarre，
would be most decidedly so in a flake；in which latter class the five，stripes on each petal．Every petal，whether bizarre or should disqualify the thower，as well as a petal in a bizarre having only the white and dark colours developed．Size：The write
stated it to be desirable，with regard to the minimum size of show－flower，that a standard should be fixed，and that he thought a stand of 12 ．In summing up his observations，he endeavoure to convey his sentiments on the qualifications of a perfect flowe
in the following manner ：－Take the size of Puxley＇s Albert，com posed of the rigid petals of Brutus，exhibiting the pure unsullied Count Paulina，and displaying the brilliant colours of Roi d Capucins and Paul Pry．As a flake，if Willmer＇s Solander pos Princess Chariotte，Simpson＇s Marquess of Granby，or Hitcher＇s
Duchess，those who were fortunate enough to possess such concentration of ex
highest perfection．

## MISCELIANEOUS

Nitrate of Soda．－In February，1841；some old worn－out garden R，oses lad a portion of this salt applied to them，at the rate of one cwt．per acre，or $\frac{3}{3} \mathrm{lb}$ ．to the is easily done by mixing it with drysand．About the end of A pril，the ground became covered with a greenish ap pearance，such as is frequently seen in damp situations in the autumn．As the dry weather advanced that appear ance ceased．The plants became much more healthy，and of a fine dark green；in the autumn they appeared far more robust than those adjoining ：they were also less in－ fested with insects than the latter，but this may have were also tried with nitrate of soda，each plant having about $\frac{3}{2}$ oz．given to it，mixed with water．The plants operated upon became like the Roses，of a fine dark green rather more freely，compact in their growth；flowering nitrate：it had no effect on the colours of the flowers．A supplied with an additional ounce，mixed with water as be－ fore；but without any additional effect being perceptible，nor plants bad a third I or alministered to the same month after．Some Verbenas，Petúnias，Pentstemons， and various other plants，were watered with the nitrate， at the rate of $\frac{3}{4} \mathrm{lb}$ ．to the rod，and with the came results except that they seemed to become exhausted in th the nitrate．This，however，may have been owing to the long wet autumn．Nitrate of soda acts very quickly on plants；some stunted Oaks and a Silver Fir in pots be came of a fine healthy green in about ten days after is application．It should be given in all cases where plants are beginning to be in full vegetation，and not when they It should also be always given in damp weather；if applied It should also be always given in damp weather；if appled
in dry weather，and over－head，it acts in the same way as common salt，by destroying the leaves and young shoots． It has been found very effectual for killing slugs，of which the ground has his season been so full，that the entire crop market－gardens near Londes has been destroyed in the soda is more efficacious than lime－water whe it can be applied without touching the foliage．－Proceedings of the Hort．S
Large
Large Pear－tree．－About 10 miles north of Vincennes， Indiana，in the United States，there is a remarkable Pear－
tree，said to have been raised from seed about 35 or 40 years ago，which at one foot above the ground measures 10 feet in circumference，and $6 \frac{1}{2}$ feet at nine feet above the ground．The diameter of the space covered by the bushels of Pears ；in the year 1839 it produced 80 bushels and in the year 1840 it produced 140 bushels．The tree is a rapid grower，a constant bearer，and an enormously productive kind．The fruit is about the size of a turkey＇s Pegg，rating，as to quaiity，with the third grade of dessert Agri－horticultural Society of India．－We learn from Indian papers，brought over by the last mail，that Mr． Hume has been elected Honorary Secretary of this Society On account of some irregularity in the proceedings， how another day has been appointed for reconsidering the matter，when it is expected that his election will be dis puted．

## GARDEN MEDORANDA

Horticulturul Society＇s Gavden，Turnham Green－At this early the hardy department．Upon the sonth wall，however，the whit variety of Cydonia japonica，with blossoms varying from white to rose，and the sweet．scented Magnolia conspicua are biooming olia，fascicularis，dulcis，and trifoliata；the latter，a species of re the winter unprotected without sustaining the slaghtest injury Many of the Mexican Coniferge have also survived two seasons folia，apulcensis，macrophylla，Teocote，Montexumpe，Hartwégii，

Leiophylla，Ayacahuite Devoniana Russelliona pitula oocarpoides，and pacahute，Devoniana，Russelliana，pátula，fliirolia
appear to have suffercd． A Abobus：of these the three later only manner，was killed by the first severe frost in autumn．Cupres－
sus thurffera and fliccida， sus thurfera and flaccida，both Mexican speries，have stood un－
protected ；the former has suffered severely，but the lated not appear to have been much affected．Euonymus jater does a handsome evergreen，seems likely to prove hardy，a lapge plant
having stood out withont being in the least injured．In the cont servatory the plants appear to be enjoying the most perfect
health．The Camellias planted in the health．The Camellias planted in the centre are producing fine
hlooms，those of elegans in some instances being as much as six time forms the most striking feature in the house，A．tristis and
hybrida bearing their golden rod－like shoots hybrida bearing their golden rod－like shoots erect，whilst those of the elegant A．pubescens appear to droop，from the weigh of
the numerous feathery spkes of bright yellow with whint they
are loaded．A．dilmeans，a specjes whose stem－and foliage hase are loaded．A．dibncans，a specses whose stem，and folage have
the appearance of beng covered with a white powder，is pro－
ducing its dark golden flowers in great profusion；A hetero－ primrose colour．Numerous other species of equal beality are resting Podalf ria styracifolito，with pale lilac and white pea，shape fowers ；a tall standard of a variety of Rhododendron arbo a cluster of purple flowers at the extremity of every branch ：P grácilis，a more delicate and free－flowering species，of a deeper
colour；the singular Eucalyptus cordata；Clianthus puniceus colour；the singular Eucalyptus cordata；Clianthus puniceun， a bush．The beautiful Kenıédia Marryattoe，frained npon chains on the south side of the house，is growing luxuriantly，and pro－
ducing its clusters of bright scarlet in great profusion．In other parts of the honse Camellias in pots，withi Cinerárias，double greenhouse and curvilincar stove，which have recently undergone some important alterations，noticed at p .640 of 1812 ，have given
perfect satisfaction；in the former is placed the collection of ieaths，amongst which several pretty species are now in flower．
The latter house is heated by two of R＇gars＇s Inprove．Comeal Boilers．Which have given some trouble ront had settugg， but scent now likels to answer，the ilants are in a good state
of healh；Euphorbin splendens，Hinseus hnintorus，with bright
rose－coloured Howers ；Melastoma heterornalla，purple ；and Begonia crassicauls，with thick flesily stems and white blossoms，
slightly tinged with rose，are flowering freely．Amongst the Orchidaceous plants in bloom are，Phaius bicolor，reddish－brown with a white labellum，afterwards changing to yellow；Acan－
 pale green，having the throat marked with briyht purple，Epi－ dendrum virgatum，chocolate colour，with a yellow labellum；
the large and small varieties of Onciuium amplatum；Spiranthes orchioides，a terrestrial species，with pink flowers；Catasetum Numinatum，and the beautifully－Inarn poing forward with different manures uxperment in the taining a rod，being marked out upon the lawn for that purpose． liquor，in chfferent quantities，or fixe chy means of variuus mate－ rials，and diluted in six times its bulk of water．In all cases the rapidy recovers．Its effects appear most beneficial whert sulphuric acid s when fixed with 2 oz ．of sulphate of iron，yot were used．Ammoniacal liquour，acted on by chloride of itime
seens also to be advantageous；the Grass looks well， the Moss is totally，and Clover partially，destroyed．Where grass in many places it quite bunte of 4 ，gallons to the most useful propor－
toon appears to be 2 gallons．To show more clearly that this quantity is the must serviceable，six other experimeat，lave been
mate withamomacal hiquor，fixed a in suphuricicid， 2 gal．
tons being applied to the first rod，and the quantury used to each successive one dimimshng，to that the lant only received one
quart．The effects were strikingly vasion an the first，while on from grass－swecning and leares，wer wheth 30 galicins e，
ammoniacal liquor had been thrown as the matter was maixed， the ammonia being fised uith a barrowful of es nsum，the
drainngs of the heap were collected 10 a ponl at whe end， a large heaj，contaising 30 couble lorse cart．Ioads of pex erth

## 2Rebielus．

On Guano，as a Fertilizer．By Cuthbert Johnson，F．R．S． 1843．8vo．pp．44．J．Ridgway．
Science with Practice，or Guano the Farmer＇s Friend． By J．Trimmer，F．G．S．8vo．pp．30．M．Fothergill， An Account of the Manure Guano，and authentic Eape－ riments made with it，Elc．1843．8vo．pp． 15. Liverpool．
There is perhaps no substance proposed as a manure which has excited greater interest than Guano，and of this the number of pamphlets published respecting it is evi－ dence．Allhough Guano has been known for a very long time，and indeed used as a manure for centuries in South has been imported and employed last few years that aitude in this country． in all parts of England were furning their attention to the subject of manures，and when the greatest eagerness We Guano of shown to try new fertilizing subsiances， Guan of south America was introduced，and large quantities were purchased by expermental farmers，who， having heard much of the wonderful effects attributed to as a manure．Thoir oxperiments here led to so newhat contradictory conclusions，for whilst some have laudedit as the very best of manures，athers have met with nothing
but loss and disappointment from its use. Guano has been analysed both in this country and abroad by skilful chemists, who have shown that it consists of certain ammoniacal and earthy salts, together with a small quantity of animal matter; but the proportions of the different substances of which it consists, appear to vary very con-
siderably in the different samples which have been examined. It is evident that if the nature of this substance is variable, the effects which it produces on vegetation must likewise be variable and uncertain.
Amongst the most recent publications respecting the use of this curious natural manure are the three at the head of this article; and each, in its way, is valuable, as collecting or recording experiments which have been made with i
Mr. C. Johnson commences his account of guano by some geueral observations on the nature of those vegeexist, though in small quantity, in the water of rivers, and to the presence of which much of the fertilizing powers of such water is due. He points out the early use of the excrement of birds as manure, and then proceeds to sketch out the nature, extent, and situation of the guanocoast of Peru. The chemical composition of guano, and coast o Peru. The chemical composition of guano, and
the probable mode in which it acts as a manure, are next discussed ; and lastly, numerous experiments which have been made with it are described. The experiments appear to be well selected, and present a mass of useful information. Mr. Trimmer has taken up the subject in a
more general point of view. He draws attention to the more general point of view. He draws attention to the
present state of Agriculture, the general want of manure, present state of Agriculture, the general want of manure, farmyard dung. The value of the most important natural and artificial manures is then discussed, together with the principles on which the action of manures is supposed to depend; the superiority of compound over simple manures is pointed out, and numerous experiments are quoted to illustrate the comparative effects produced by the use of these substances generally, and guano in particular
The general conclusion to be drawn from the experiments which are described in these three pamphlets is that guano is a most valuable fertilizer, possessing the good qualities of farmyard manure, but far less bulky and more easily applied to the surface of the land. It is to be
regretted that the composition of guano is so uncertain, regretted that the composition of guano is so uncertain, tion, which renders its use far less convenient and certain than it would otherwise be. On this point, however, all that can be said is that farmers must only go to respectable dealers, whose interest it lis to supply them with the genuine article. The natural variations in its composition cannot be guarded against, but artificial adulterations may thus, to a certain extent, be avoided.
Guano is a strong manure, and therefore, in many cases; when applied by the drill, or when used in too large a quantity, it is found to burn up the plants and destroy when it was sown broad-cast in moderate quantities, or well mised with about four times as much earth and drilled in. The uncertainty which exists respecting the strength of the manure is, as has already been stated, the chief objection to its use. It was with the view oble first prepared. This is certainly an excellent material, but it could be to beopesed as a manure. That an artificial fertilizer of this kind, uniform in nature and strength, will eventually be found more economical and useful than foreign guano appears to us beyond the reach of question.

The Emigrant's Hand-book of Facts (McPhun, Glasgow, 1843,) is a well-arranged little pocket companion, containing good maps and very useful information, relating gration is flowing. Mr. Butter seems to have selected his graidence with judgment, as he certainly has condensed it with skill. Everybody who is thinking of emigrating should provide himself with this little volume.

Popular Cyclopadia of Natural Science; Meohanical Philosophy (Orr and Co.) ; This volume, which forms the third of its series, is, in our opinion, the best. It is well written, clearly arranged, and skilfully adapted to the comprehension of those who are seldom capable of understanding such subjects as the properties of matter, and the
laws of force and motion. The work is the best we laws of force and motion. The work for schools or mechanics libraries, or for young gardeners, who wish to know something more than their neighbours about the mighty, though unseen, physical powers which surround them and control their operations.
Of Jesse's well- lanown Gleanings in Nutural History Mr. Murray has lately brought out a small edition, arranged
and adapted for schools. It forms a pretty pocket-volume, and adapted for schools. It forms a pretty pocket-volume, and will, we doubt not,
for whom it is intended.
CALENDAR OF OPERATIONS for the ensuing week,

 by Which the Brown Turkey Fig is better known in our rumperies.
esteemed in this country, the varieties have not been duly
studied, and we know less of the different Figs than of any other studied, and we know iess of the different Figs than of any other
fruit which we cultivate; the consequence is, that many spurious varieties find their way into our forcing-houses, and hence the ipe. The English traveller, after tasting "such delicious Figs, in the south of Europe, forthwith sends home cuttings to his titioner, who knows how ill-suited our climate is to the bes from his old trees in throws then away, anu tahes culngs farther. Not so, however, when they get into the hands of the highly as the famed Melon-seeds from Malta, Beyrout, or Cabul; and before the last of them are proved to be quite worthless for
our climate, and unsuited for forcing, arresh batch of cuttings finds its way here, by a similar route, to go the same round, and to produce simiar disappointments.-(See vol. .i., p. 579). All this have oren winnesse, and more than once have a acted the part
of the old gartener, by geting rid of seeds and cuttings that
have cost considerable expense and trouble to procure. Half have cost considerable expense and trouble to procure. Hait
grown Figs, which now show symptoms of dropping, in remain ing stationary or turning yellow near the stalk, may be made to
hang and ripen by the process of caprification (described in vol. in, 1 . 317 , which I saw successfully practised last season by
a genteman in this neighbourhood. The best cure, however, is bear regularly, and there are many such trees cultivated all ove the countr

## -KITCHEN-GARDEN AND ORCHARD.

Pringrt,-If aul has gone on well since these were shifted routine of heat, air, and moisture continued
Viverigs.-All the Vineries are now in andoving state, not excepting even the Vines in the greenhouse and in the latest house,
the two latter require the most attention from this time, to see hat the top eyes are not over-excited. It is more essentia should be laid horizontally as low along the front of the house as they can be bent down. This keeps the whole plant in an equal
temperature, and equalises the force of the ascending sap in all temperatu
Pach-hovse.-The swelling fruit and young wood will now draw liberally on the roots; see that these are well supplied
with moisture, and imitate as far as possible fine mild summer days, with genial showers in the afternoon. The ease with which secret of our success in arardening. Crikrry-houss. - The atmosphere of this house may, like the
last, be rendered similar to those moist, mild days, so congenia Vegetation out.of.doors in the beginning of summer.
Fros.-Although the
Fig requires an abundance of water when swelling its fruit, yet, unness the pots are well drained, this only
agravates thi evil of dropping fruit, of which $I$ have lately heard aggravates the evil of dropping ruit, of which I have lately heara MEL LNS AND Cucumbrrs.-The earliest Melons should be kep much thinner in the shoots, and nearer to the glass, than later
oness ine should also extend farther over the bed tefore they
are allowed to set their first fruit. If weeds appear in the fresh解 hot long endure the hea without getting sickly; they will thus encourage a brood of
insects. Anythung that tends to this result should be care fully guarded against
or the next threc weeks, in circumstancear require it fow let them them to a cooler place, to come on more slowly. are collected, a new bed may be made to succeed the one now in bearing.
 spring-sown of these and other seedlings of this date must be
thinued as soon as you can get hold of them, otherwisis they
become drawn up, and so tender that you can do little good with ecome drawn up,
 the following trite advice to all young gardeners when he sent
them out to their "first place." Sow thickly, thin in time, and
the keep on good terms with the cook." All kitchen-garden seeds are the exception of Carrot-seed, those plants having been blighted
last season, when ripening seed. Carrot-seeds must therefore be last season, when ripening seed. Carrot-seeds must therefore be
sown thicker than usual this season; indeed, I agree with the above advice, to osow all seeds rather thickly, and to thin in time. AsPARAGQUS- About the end of March is the best time to make
new Asparagus beds. There are many useful papers on this sub new Asparagus beds. There are many useful papers on this sub
ject in former volumes of the Chronicle. Sisa-kale and Rhuparb--New beds of these ghould be
finished before the end of the month, especially of Rhubarb, which begins to grow earlier than Sea-kale.
CARROTS. - As there are some doubts about the soundness o Carrot-seed this season, see that the ground for it is in a tho
oughly pulverised state. Where the land is stiff, or otherwise uncongenial it would be grod plan to get two or three barrow loads of light sifted compost, to conver the seeds with. A careful which he coald sprinkle along the drills as fast as the seeds were sown.
Sucerssionar Crops.-The last March sowing of these must now be put in.
CRLRRY. -The early sown must be pricked out as soon as they form two rough leaves: the last of the Lettuce and Caulifinwe if ary of the autumn-sown cabbages remain in the seet-beds, plant them out, and sill up any blanks in the youngest rows. Where young Cabbages are in demand throughout the season
a few seeds sliuuld be sown every fortmight or three weeks unti the end of June.
Wrend. - Instead of pointing out the great advantage of to page 555, vol. and sudden changes, weather continues dry, and free from gales
 to put over them in case of hard frost, Any trees or bushes transplanted this winter should not remain much longer without

> 11.-FLOWER-GARDEN AND SHRUBBERY.

SToves. - The temperature here should now range from $60^{\circ}$ to
$65^{\circ}$ in the morning, and air should be admitted as soon as the sun-heat raises it to $70^{\circ}$ or $75^{\circ}$. More frequent syringing and a
moister atmosphere shouid now be kept up. Potting and promoister atmosphere shoudd now be kept up. Poiting and pro-
pagating must now be added to the routine of this departrnent
for the next two months. As all our gartening eriodicals teem with notices of menths. As all our garidening period notice only some of the best old plants, many of which are fully as fine and
 one of these, and when trained on some kind of trellis and wel whit
covered with bloom, it is as tine a plant as can be brought into the conservatory; where it will flower ireely for two rothre months. It is or a succulent nature, and requires sess ped Gresniouse. -The same routine of potting and propagating
must also be proceeded with here for some time to come, and
the house must be kept damper and warmer. Syringe in the mornings, and damp the paths only in the evening
Conservatory.- From the middle of March to May is perhaps the gayest time in the year for the conservatory Noining seems to be wanted but the flowers of the climbers. Musk, ${ }^{2}$, fyacinths, Lilacs, Roses, Wall.fowers, , Sweetbriar heir prime, and fill the air with their odours, The finest of al he Musk-scented plants at this time is Mímulus Denhámii, which Is among the seeds given out by the Horticultural Society. The the Papilionacoous tribe furnishes many plants for early forcing $\mathrm{P}_{\mathrm{B}}$ have not yet been thought of. PopdgatiNa Pir. - Danlias and Chrysanthemums shouk
now be propagated, to have stout early plants. Every young shoot of the Gardénia should be pronagated; there is scarcely
sufficient uumber of them in any estaulishment. Any shelte hat will do for Fachsias will suit them in winter, and they will standards of them, by way of curiosity, graft $G$. radicans on the tallest plants of G. florida; they will unite in two or three weeks
and may be trained with fine bushy heads. and may be traina
 arrangement, should also be finished without delay, indeed,
every sort of planting should now be got tlirough with as every sort of planting should now be got lirough with as soon
as possible. Sow Mignonette, where the soil is light, for the first crop; it wow cover the ground, before dry weather sets in, in places where it could not otherwise be easily estalished.
Every gentle shower will encourage worms, and unless the grass tidy as possible, to make up for the dearth of flowers, and as an earnest of what you would like to do at a later period if you had
the means,-D. Beaton, Shrubland Purk Gardens.

State of the Weather near Lhandon for the Weate ending Mar. 23,1848 , 24 ob-

## Remman Report ON COVENT-GARDEN MARKET,

The late genial weather has considicrably increased the supply
of Vegetables. Foreign fruits are abundant, lut those of home growth, with the exception of Apples, are rather scantily sup Dited. Fruit: The supply of Pines is limited ; their price ha
advanced to 6 s, and 105 , per 1 b . Strawberries appear in smal quantities, at $2 s$, per oz. $;$ Easter Beurre Pears, of which a fow still remain, are selling at $15 s$. per half-sieve. Apples are abundant; the supply has been augmented by great numbers which
have 1 Iately been imported from France, and which render th trade in this department rather dull. Non pareils fetch from 48 to 138 . per bushel; Cockle Pippins, from 4s. 6d. to 7 s .; Ston Pippins, from 48. to 6s.; and there are a few Ribston Pippins, in good condition, from 5s. $6 d$, to $7 s$. per busthel. The best culinary
kinds are the Gooseberry Pippin, from 4s. to $6 s$. 6d, French Crabs, from 35 . to $45.6 d$. ; and the Hanwell Souring, from 35 . to 6s. per bushel. Good Cucambers have made a slight advance and fetch from 4s. to 108 . per brace. Vegetabues: The quality o sparagus continues good, and 1 to dant, from 9 d. to $28,6 \mathrm{~d}$. per punnet. The late warm weather has nereased the supply of Broccoll, which is excellent; the white
 bunch, Cabage plants are seling from 15. $6 \pi$. . to 3 s . per doze keport. Spinach is tolerably plentiful, from 1 s. ©d. to $2 s$. $6 \pi$. per
sieve. Onions, which the warm weather has caused to grow, ar
 Mer score. Rhubaro is plentiful from 6d. to 18. per bund Moshrooms are somewhat cheaper, being from $6 d$. to $1 s$. per Roses, Azaleas, and Camellias of various kinds abound, wht

usual, many letters have arrived too late for answers this week.

## NEWS OF THE WEEK.

The Parliamentary proceedings of the week present Ew subjects for comment, with the exception of Lord Palmerston's motion ou the Ashburton Treaty. The chief features of this debate were the speeches of Lord Palmerston and Sir Robert Peel on Tuesday night, which may be regarded as an epitome of the great questions which for half a century have endangered the relations between Great Britain and the United States. Lord Palmerston contended that, instead of resting on the case established by the decision of the King of the Netherlands and by the investigation of the British Commissioners, viz., that the St. John was a British river, in accordance with the terms of the treaty of 1783,-Lord Ashburton had granted to Mr. Webster concession after concession, surrendering a tract beyond that river to which the Americans had not a shadow of title, and obtaining no concession in return for advantages gratuitously bestowed. The effect of this weakness, in his opinion, was manifested in the tone assumed by the United States with respect to the disputed boundary on the shores of the Pacific, and if the Oregon bill had been passed by Congress he considered that it would have amounted to a declaration of war against this country. Sir R. Peel, in reply, claimed credit for Lord Ashburton and the present Government, in having settled a question "the festering sore of half a century," which Lord Palmerston, although ten years in ofice, was unable ta adjust. Its settlement, he said, was essential to the security of Canada and to the maintenance of peace ; and in adopting a conventional ine, Lord Ashburton had obtained a boundary better calculated to protect our Canadian provinces than that awarded by the King of Holland, while it secured to us much greater advantages, and a larger amount of the eleb territory. He disclained the reference to the celebrated map "with a strong sed line" in the archives of the Foreign Office at Paris, and contended that there Was no evidence to connect the map with Dr. Franklin's despatch. After some remarks from Mr. Macaulay on the tone assumed by Lord Ashburton in his correspondence with Mr. Webster, the debate was adjourned. It
was again resumed on Tuesday by Sir C. Napier; but shortly after its commencement, the House was counted out, and the motion, as a matter of course, fell to the ground. Lord Palmerston on Thursday explained that it was nothis intention to renew the subject; he was anxious only for discussion, and was satisfied with having elicited the opinions which had been expressed on both sides of the House. Mr. Hume then gave notice of a motion for the 31st, expressing the thanks of the House to Lord Ashburton and the Government for having brought the boundary question to a satisfactory settiement. On Thursday Mr. S. O'Brien brought forward a motion for a
select committee on the Irish Poor-Law, but it was opposed by Government, and negatived on a division by a majority of 85 .

From France, we learn that the Secret Service Money Bill, which was so recently the object of angry discussion in the Chamber of Deputies, was passed by the Peers on Tuesday by a large majority. The seizure of Otaheite by the French squadron is officially confirmed, and there is some pro the supremacy of France. - Accounts from Spain mention that the results of the Elections are considered on the whole satisfactory to the Ministry, and that the British and Spanish Governments have agreed upon the principle of a commercial treaty.-Our German news Charles, the heir presumptive to the Crown of Austria has somewhat rallied from the effects of his late illness, and that hopes are entertained of his recovery.-Further advices from the West Indies give additional particulars of the recent earthquake; slight shocks were felt at
Barbadoes, Trinidad, Demerara, St. Lucia, and Berbice, but they appear to have been unattended with destruction of property or loss of life.

## 3 ${ }^{\circ} \mathrm{mme}$ Nefos.

Cotrt.--Her Majesty and Prince Albert, accompanied by the Prince of Wales and the Princess Royal, left town on Saturday for Claremont, and remained there unhin
Thursday, when they again returned to Backingham Thursday, when they again returned to Buckingham
Palace. His Royal Highness Prince Adalbert, of Prussia, Palace. His Royal Highness Prince Adabert, of Prusia,
arrived in London on Monday, from Lisbon and the Brazils, and immediately proceeded to Claremont, to pay a visit to her Majesty. On Tuesday his Royal Highness over the works of the new Houses of Parliament and Westminster Abbey. On Wednesday the Prince em barked at the Custom-house for Hamburgh, on his return to Berlin.-Notice bas been issued from the Lord Cham berlain's office that Prince Albert will, by the desire of her
Majesty, hold Levees at St. James's Palace, on behalf of her Majesty, on Wednesday, the 29th instant, and Wednesday, the 26 th of April next, both days at o'clock. It is her Majesty's pleasure that presentation to his Royal Highness at these Levees shall be considere equivalent to presentations to the Queev. Addresses to
the Queen may either be forwarded to her Majesty through the Secretary for the Home Department, or may be re served until her Majesty shall hold a Levee
Parliamentary Movemen/s. -The Cambridge election has terminated in the return of Mr. Fitzroy Kelly, by a majority of 18 ; the numbers at the close of the poll were
for Mr. Kelly, 703 , for Mr. Foster, 685 . Mr. T. B. C. Smith, the Attorney-General for Ireland, has been elected Member for Ripon, in the room of Mr. Pemberton, who has retired from public life. The Athlone election committee have concluded their inquiry, and reported to the House that Mr. Farrell had not been duly elected, that the election was void, and that he and his agent, Mr . French, had been guilty of treating. A new writ has accordingly been ordered for the election of a Member. The Nottingham election committee have reported to the Hoase that Mr. Walter was not duly elected; that the last election for the borough was a void election; that treatingiter, through his ageno, wased that such bribery was committed with the knowledge and consent of Mr . Walter. The new writ was ordered to be suspended fo a week, until the evidence be printed.

The Mint.-By a Parliamentary paper issued last week, respecting the transactions of the Mint during 1842 , the Consolidated Fund for the purchase of bullion for coinage. 2. That the total amount of purchases of silver bullion and dollars was $191,924 l$. $18 s .2 \frac{1}{2} d$., the Mint

and copper coin delivered into the Mint-office amounted to $192,852 l$. of silver, and $1,344 l$. of copper. 6. Pay ments of silver and copper coin were $190,472 l$. 13 s . 3d ceived for silver and copper monies, $175,317 \mathrm{l}$. 0 s . 4 d .

## fforetgn.

France.-There is little news of general interest from Paris. The Chamber of Peers has been occupied for some
days with the discussion of the Secret Service Money Bill, which passed on Tuesday by a large majority. .The only
event of the debate which requires notice, is the speech of
M. Guizot, which is admitted by all parties to be fully M . Guizot, which is admitted by all parties to be fully
equal to his former orations on the general policy of France. We can only quote the following remarks in reference to this country. "In England you know the
difficulties of onr situation during the last two years. You difficulties of our situation during the last two years. You
know the efforts that were necessary to maintain amicable know the efforts that were necessary to maintain amicable relations between the countries, and prevent them being
disturbed by disturbed by passions, national and legitimate even in peril. Notwithstanding the difficulty, the desired result has been obtained. Not only have the friendly relations between the two countries been maintained, but a great been solved, and in a manner conformable to our interests and our desires. In fine, it is at the present day evident to all the world, that the passions so livelily awakened amongst us, have begun to grow calm ; that a more jus and that thanks to the perseverance and moderation of our policy, as well as that of England, there is every reason to hope that the amicable relations between the two ber of Deputies there bas been little novelty, excepting on a motion for abolishing the vote by ballot in the house, Much was lost on Wednesdey by a majority of eight, officers of the National Guard, which commenced on Tuesday. The tranquillity of France depends 80 greatly on the tranquillity of the capital, that the feeliggs of the National Guard towards the Government are naturally watched with solicitude when about to be manifested in the selection of its commanders.-The Moniteur officially confirms, in the following terms, the taking possession ment has received despatches from Rear-Admiral Dupetit Thouars, announcing that the Queen and the chiefs of Otaeite had asked to be admitted under the protection of th King of the French. The Rear-Admiral acquiesced in thei demand, and had taken effective measures for the purpose
until the receipt of the ratification of the King, which is until the receipt of the ratification of eme possibly soon hear of the Sandwich Islands having also acknowledged the supremacy of France, for the Quotidienne mentions
the arrival at Paris of an Envoy from them, of the name of Thomas Halillo. This personage is stated to have
of Thal atis on come on the subject of reparations required of the Kin of the Sandwich Islands by the commander of the French ship of war L'Ambuscade, also for sundry injuries done
to French missionaries, and other offences against a treaty entered into with France in 1839.-It appears that defini ive arrangements have been made relative to the railroa from Paris to Amiens, and from thence to Lille and to Calais. The Government has entered into terms with
Messrg. Rothschild, Mills, and Co., a company of French and English capitalists, to have all the road completed in five years. The Chambers, last week, rejected the demand of Ministers for a grant of two millions of fralles for the completion of the Bordeaux and La Teste Railroad.- The town of Les Andelys, in imitation of other towns of France which have erected statues to such of their towns-
men as have distinguished themselves in arts or science -as Rouen to Pierre Corneille, Paris to Molière, ChateauThierry to La Fontaine, and Montboliard to Cuvier-ha determined on paying a similar tribute to Nicholas Poussin the painter. A subscription to this effect has been opened under the auspices of the Minister of the Interior
hat the British and Spanish Governments had at length agreed upon the principle of a commercial treaty. As far been election returns had been pubished the nts althoug MM attempt to be returned for Madrid. The Infante Don Francesco de Paula has been returned for Saragossa, and much curiosity was excited as to the part his Royal Highness would enact in the Cortes. Considerable attention was also bestowed on the presence of Prince Napoleon young Queen.

We have Lisbon news to the 13th inst. brought by the Montrose steamer, in which Prince Adelhad been spane cassenger from Lisbon, where he Bahia on the 6th in a Sardinian frigate. A great number of important projects of law had been submitted to the Champortant projects of law had veen sub 10 and scheme of primary and secondary instruction througbout the kingdom; another for improving the navigation of the Tapus near Santarem, and cutting a canal through the valley of Azambuja; and a third for the construction of a passed the Deputies. The accouchement of the Queen passed expected daily, and prayers for her safety bad been directed to be said in all the churches of the country
Belgium and Holiand.-We learn from Brussels that it is in contemplation to establish a Belgian colony in the Sand wich 1slands, and that the Belgian Colonsal Company of St. Thomas is in negotiation with the King, M. Halillo, lately arrived at Brussels from the United States, and has sioce proceeded to Paris. The emigrantship Theodore has sailed from Antwerp for the new colony in Central America. The Brussels papers state that Holland has just lost one of its most honourabl citizens, and the house of Orange one of its m M1., who
servants, in M. Falck, minister of King William servants, in M. Falck, minister of King died on the 16 th , at Brussels, of an attack of gout.
died on the 16 th, at Brusbels, of an attack the 12 th inst., state that the illness of the Archduke F. Cbarles, the

Emperor's brother, and presumptive heir to the crown, assumed so serious an aspect last week, that he sacrament within the last feridays, and hopes were entertained of his ecovery. The Archduke was one of the most distinguished commanders of the Austrian Army during the last great struggle with Napoleon. They also state that intelligence has been received from Uppeis, in the Bannat of Hungary, of a crime which has excited great indignation, the victim being a member of one of to
moste families in Germany. Count Ferdinando Nieperg, captain of hussars in that town, had forbidden those under his command from going to visit the inhabtants of a village, because there had lately been som affrays between the military and citizens. But going him self to the place, to see if his commands had been obeyed, he was attucked by two subaltern officers who were present, and who at once fired two pistols at him, by which two mortally wounded, and died in a few hous appear that the reaction against the liberty of the press is ing rapid progress amiong The Rhenish censorship is become mase to after the lst of April. The Allgemeine Zeitung of Leipsic is refused admission into Prussia, and the Augsburg Gazette has lost its importance in consequence of the proscription en mention Bavaria and Prassia.- Letters from Prague of the Duke of Friedland (and erroneously called Wallenstein), have commenced an action to rever the wreat tates, on the ground of the imperial rescript of 18 th July 1628, which confirms the testament of the Duke per ex tensum. The Imperial Exchequer has report the suit as a matter already decided, bat the does not recngnise this objection ; and thus this remar jected, and again taken up, will be brought to a legal decision. - Another German railrond, that from Magdeburg to Halberstadt, is to be opened in its full extent on the 15th July next. This will be of great convenience to route english tourists who choose Hamburg for their steam-boats proceed from Hamburg up the Elbe to Magdeburg, and the railroad from Magdeburg to Halberstadt will carry the tourist at once into the midst of the xomanic beauties of the Brocken and the Harz Mountains, with Berlin, Dresden, Leipsic, Stettin, Frankfort-on-the-Oder kc. Magdeburg bas been for some time in constant railroad communication.-A Accounts from Hanover state that rary inia (sire on ber rary insignia (given on the occasion of the marriage of the Malisa.-Letters from Malta give further particulars of the melancholy death of Dr. Martin, noticed in our last. It appears that the shot was almost immediately entered at the lower part of the back, and completely traversed the stomach, so that nothing could be done to save his life. The murder was committed by the sentry at保 little earlier hie Admiral s steps. Had his visit been a inels at were changed at twelve o clock. The solater was been examined by the magistrates, and says that his has ket went off by accident but this contradioted by the evidence of an eye-witness, who saw him the instant after the gun went off, holding it still presented, in the way a soldier takes aim. The result of the coroner's inquest is Malta known.-A Court Martial was lately held at Formidable, which rata ashore near Barcelona, " to be more careful in future in reference to the use of the lead and line," and reprimanded the master on the same grounds.
Greece.-The accounts from Athens relate chiefly to the death and funeral of Theodore Colecrotoni, the most remarkable of the Greek chiefs who fought for the nathe independence during the revolution. funere of 74 , on the 10th, of an attack of apoplexy. ing the was attended by several thousand persons, ground, about half a mile beyond the temple of Jupiter, by the entire population of Athens, and by the carriages of the whole corps diplomatique, except that of the French Minister. Even the Turkish Ambassador was not ashamed of being seen doing honour to the warrior, though he had fought against the country he represented. Among the pall-bearers was Sir Richard Church, the former Colonel of the deceased when in the English army.
West Indies.-The mail steamer Tay has brought 16 th, St merar 19th February. The papers do 0 aford much news in 19thition to They are, of course princinally occupied with the details They are, of course, principally occupied with the details the Northern West India Islands, the particulars of which re alreil We Io linh felt at Trinidad, Demerara, Berbice, and' St. Lucia, but it does not appear that they were attended with destruction of property or loss of life, though the populace bave been in a complete state of consternation, owing to the great damage done in Antigua, Nevis, Guadaloupe, and Martimique, by the late awful visitation. The Barbadoes the calo express with much sacisfaction ther esope and add, that the prospects of the crops were good, notwith-
standing the sultry state of the weather. The canes ar
said to present a luxurious appearance, while the agricul said to present a luxurious appearance, while the agricul-
tural population were working with the greatest activity in carrying out the operations of the fields. The repre sentatives of the Legislative Council of Barbadoes, sympathising with their fellow colonists of the neighbouring islands, who have suffered by the earthquake, prayed the Governor to make a grant from the public treasury for
their relief; and, in compliance, a sum of 15,000 dollars was voted by them, to be applied in such proportion and in such manner amongst the sufferers in the neighbouring From Trinidad we have accounts of the may see ft.emigration from the shores of Africa, to supply the wants of the colonists with labour. The Kroomen were the class of people mostly engaged. A fire had occurred on diary: It is remarked that the crime of arson is much on diary: increase, and that the local authorities do not exercise proper vigilance for its suppression. The Tay does not Guadaloupe than bearer of more recent accounts from nor of anything new from Cuba since the conflagration at Port-au-Prince, on the 9th January. A Court-martial has been held upon the Hon. Captain Elliot, of the Spartan irigate, for inflicting corporal punishment on Mr. Delacy Capt. Elliot guilty of the charges alleging the infliction of corporal punishment; but in consideration of the duced by the prisoner-the extraordinary and parental anxiety manifested on all occasions for the well-doing and general instruction of all the young men on board his ghip, and particularly of Mr. Gleig himself-and also ooking at the nature of the punishment complained of, whe circumstances under which it was inflicted, the feeling all under his command, as proved in prisoner towards decided that the authority and the rules and regulations decided that the authority and the rules and regulations of her Majesty's service, and the dignity of the law, as dicated and upheld by merely adjudging that the prisoner be severely reprimanded. Upon Captain Elliot's return to, his own ship, the crew received him with loud and in harbour and in Port Royal.-An extraordinary phenomenon was observed from the Tay to the W. and SSW.
daring the homeward passage on the 6th, 7 th, 8 th, 9 th, $10 \mathrm{th}, 14$ th, 15 th, and 17 th inst. In appearance it was like a bright sunbeam, resembling in shape a comet's
tail, but more parallel, the altitude of the upper limb being about 32 degrees, and terminating downward about 8 degrees above the horizon in an oblique direction; it evening. This is, no doubt, the comet we have noticed under our Miscellaneous article. Among the passengers by the Tay were a black prince and princess, the Prince Louis Napoleon Christophe, of St. Domingo, brother of
Christophe, King of Hayti, and his wife. They had been visiting the West India Islands for pleasure, and have come to England in the same pursuit.

## hood. This statement, he anal, was evidently fabricated for the purpose not only of bringing him into contempt, but of exciting

 hostile message had been sent:iby Lord Lynedoch, and that the
retractation which he (Lord Brouoram) was to make was the consequence of that message. This paragraph, than which no-
thing would be more ridiculous as well as false, had been copied
 the bar of that House.
The Duke of WrLLinaron, in reply to Lord Beaumont, said
that it was the intention of Government to bring in a bill to give effect to the Act of the Canadian Legislature, with respece to to the of ss., and into this country as chrongh Canada, at a fixed duty Thurrday. - The Sudbury Disfranchisement Bill was read a first
time; a committee was appointed to arrange and control the finure proceedings, and it was ordered that one set of counsel
only should be heard on each side, for and against the dis Franchisement of the borough.
Friday, Liord Brovink gave notice that he would ley on
he table his Bill for the suppression of the sigit day or Tuessay week aupre move othe second reading after
Easter. -Lord CAMPBKLL brought in a Bilu to effect, by means on a short and simplef form, the conveyance of freehod properts, in
lieu of the present lengthy and verbose form of lease and release

## HOUSE OF COMMONS

Monding. - On the motion for going into a committee of supply
Mr. T. DUNCOMBE adverted to the treatment of the Chartist prisoners in Knutsford Gaol, and read a letter from the chaplain consequining of ine comact of the magistrates towarts him, in
 going on in the pait, instead of commandicating what he thought facts of the case should be made known.-Sir JAMES GRABAM complained that this proceeding was premature, as it was his in-
tention to lay the report of the prison inspector on the table of pointment or removal the therr in the magistrates.-Mr. Witirinums asked why the rate of in-
terest on Exchequer bills was not reduced, seeing the current terest on Exchequer bills was not reduced, seeing the current
rate for money in the market was not more than one per cent.The Chancrllor of the Exchequer replied, that the rate on fluctuating and temporary rate in the mark
The House having formed itself into a committee of supply,
a vote was taken of $18,182,0001$. to defray Exchequer bills. The votes for the commissariat raised some debate, Mr. HUME andl Mr. WriLiAMs objecting to the extravagant scale of our
military establishments. Sir R. PBRL, Mr. BRRNAL, and other members argued that these establishments. were reduced to as
low a rate as was compatible with due relief to regiments servIng abroad, and to the effiective protection of our colonial emment of the civil condingencies, on account of not having had
time to consider the
 were hurried forward, that it was no wonder, seeing that the
Government had taken the House by surprise at he extent of the reductions which they had been enabled to effect, and had
thereby commanded universal acquiescence. The House then resumed; and transacted some rountine business, inc'uding a lisansion, in commmittee on the Coast of Africa Bill; the third
Jeaning and passing of tlie Sudury Distranchisement bill ; the
appointment of a committe, appoinment of a committ motion of Mr. HUM 's, for a return relating to the Munt, on which cluding the private emoluments of the ofticers, were sulusequentiy granted by the Government
buted to him in reference to the dord chief the expressions attrilate debate on the errivilege to the Lordion. Thief Justice, during the
said said on that occasion was that that noble and learned person had

stead of by astronomical observation. The King of the Nether. stead of by astronomical observation. The King of the Nether.
lands, in making his award, had decided that neither the British and he chose an intermediate line; and though it was felt that this sward was very disadvantageous to England, it was nevertheless submitted to by the British Government. But the Guvernment of the United states had rejected if, and it was thereapon
intimated to them that the Government of his country had with
drawn its ofter of adopting it. The toundation of the British
claim lay on the decicion of the question, wh.ctl cr or not the St.
John, falling into the Bay of John, falling into the Bay of Fundy, was an "Atlaintic" river,
according to the etems of the treaty. It liad been reternined in
our fang in

 laboriously discharged their duty, and had ascertained that
the line claimed by this country conformed with the
conditions of the treaty, while the American line did had not, indeed, the additional evidence in their
the not. They the map marked by the "strong red line ;" but the American
Government were aware of this corroboration of the justice of our claims. Instead, then, of resting on our case, and concucet-
ing it through the erdinary intervention of our ambassador
Washington Washington, a special mission was resorted to, which in itself Washimgton, a special mission was resorted to, which in itself
was disdrantageous, because a futhetionary so ooing out with
pomp and parade would have the natural reluctance to return
empty-handed. The individual selected was an additionalim. portant consideration. He spoke witth wall respect of Lord Ashthe esterem of all; buthe telacter anted private virtues comananded
arising from his connexion with America, disadvantalis unactavaines, ness witn diplomacy; while there were other indivituals, some
of whom On Lord Ashburtiones, sarrival, he whas nuet by Mr. Webster with advantageous position, by which he ultimately "check-mated" which he unskulfully termed an "t ultimatum,", but the American
whe played with hint, obtaining,
Waska settlement and all,
to a stand-still, and asce
 be a natural one by Mr. Webster: yet he refused to abdide by it,
and claimed a tract of territory north of the St, John, to the Anhericans had not a shadow of a title. Here Lond Ashbur-
ton should have frankly taken his ground; the negotiation had Webster had the concession of mutual equivalents; and if $M$ r Webster had insisted on drawing the boundary line to the st.
Francis, soas to secure this territory north of tie st. John, there
were various important considerations which Lord Ashborton might have bargained for it. But by the time the negotiation
had been brought to this point, all these advantages had ben given up; they were gone; Lord Ashburton had turown the bag containung them at Mr. Weuster's feet, ald the American minister
had coolly picked it up, with a profusion of thanks, but as
coolly refusing any concession John's was indeed secured but the concession of the navigation of the St. John brought the Americans, in time of war, close to
it. After referring to other points in the boundary, the noble Lord proceeded to that portion of the treaty which relates to the
slave-trade, expressed his conviction that since the accession of the present Government to office we had made a retrograde step
with respect to this great question, and gave a sketch of the proceedings annected with the refosal of the Fren to sign the Right of Search Treaty-a circumstance of which the
Americans took advantage, through their agents at Paris, in order to raise more difficulties in the way, The letter of Lord slave barracoons on the coast of Africa, had been another dis-
courapement ; and the correspondence between Lord Asflutton the "Creole," Lord Ashburtou appeared to adme thatt s.aves on
board American ships in British ports were to be regarderl as not be conceded, butican that slavestory, He trusted that this would would be regardet as human beings. The effect of our conces-
sions was visible in the tone takern with respect to the disputed
bommdary on the shores of the Pacific; had the Oregon bi l lassed against this country, He concluded with commenting on the him in Boston, when he termed it the "cradie of Amen to
liberty "" and though he could not suppose that a treaty so deli berately settled should not be ratified, he hoped that this surof indisposing them to equitable arrangements hereafter.
Sir R. PpBE said that Lord Palmerston had occupled upwards
of three hours in attacking a treaty and its negotiator, though he had been ten years in office without being able to effect gny manly course of impeaching the treaty or its authors by a epecific resolution, and contented hamself with moving for papers 4 hich
he knew could not be produced. Addressing himse, if, in the first instance, to the Jatter portion of Lord Pamerston's speech, ho
contended that, insfead of having made a retrorrade steu on the question of slavery, by the treaty with the Cimted states, the
present government had made a step 111 advance, and nne which the late government had been unable to make. Lord Palmerston
had blamed General Cass for nbstructung the conclusion of the treaty with France for an extended right of search; but the cause
was not General Cass; it was the nole lord himself whose policy had prevented the conclusion of that treaty. With respect to the law in suppressing slavery, but it was impolitic to go beyoud it; case of the "Creole," Lord Ashburton had enterefintolits. stip the
tions on British territory were entulled to then freedom. Lord Ashburton had not undertaken to adjust every cause of dispute, because he
was anxious to conine himself to the one great question, the festering sore of half a century, and which had, on the accession war. As to the Oregon terstory, nerctiations were going on,
which promised that in a few months that question would be amiceably settied, if no attempt were made to excite and exaspe-
rate nutual anmosity. As to the north-eastern houndary, years had elansed without bringing us nearer to a settlement. It
had been attempted by the treaty of Ghent: the King of the
Netherlands, after several years'consideration, had declared it to Netherlands, after several years' consideration, had declared it to
 three successive years afterwards Lard Palmerton, beng y under
no obligation to abide by the award, had nevertheless continued to press its acceptance on the United States-a boundary which
he now thinks would have endangered the securits of Canada,
From 1835 what had been the Fromion to this question, having skiled date government with
relation at then
command, drected by the "master-mind" prearang in the Foreign Office: In 1838, despaining of effecting a scttlement on
the terms of a treaty, they hadl suggested a congentional nne, by
 they felt that it was desirable to settle this question, whithout the
proposed additicnal expense and delay of a convention, e-pecially as Lord Palmerston, on the eve of quatting office, had leit icego-
tiations more than ever embroled, by the peremptory and cavaluer terms in which he had rejected the latest proposith ns of the
American Government. Nay, more, Lord Palnierston had made the preposterous proposition that the limgs of Prussa, Sardina and Saxony should each appoint a scientafic man to arrange an
arbitration, while Mr. Fox, the British Minister at Washington
exclaimed, "For God's sake, if you go to arbitration, don't have
professors!
The noble Iord relied stonhaugh; but Mr. Webster had his Mudge and Featherston-
haugh; while the expense of another survey might have cost nore than the worth of the entire territory in dispate. There
were questions which admitted of no delay and this was one were questions which admitted of no delay; and this was one
of then : thie tide of population was pressing ouwards, and
Sin Sir Howard Douglas, to whom he appealed, would bear testimony
to the dangers whicl arose from the unsettied boundary, one of them being described by the late Lord Sydenham as the strange
anomaly of an armed body belonging to a foreign power beiug anomaly of an armed body belonging to a foreign power beiug
placed within a territory over which her Majesty exercised juris.
diction.
The settlement of the question was essential to the diction. The setllement of the question was essential to the
security of Canada, and the maintenance of peace and Lord
Ashburton in effecting it, deserved well of his country, not only for undertaking the mission, but for the mamner in which he had
accomplished it. The American people were strongly persuaded of the justice of their claims, and in adopting a conventionalil line the British Goverrmentaims, atter consulting high military autho-
rities, had agreed to a boundary which would be better calculated to secure our Canadian colonies than the boundary awarded tys the
King of ITolland, white it secured to us much greater advantages.
 gained two-fifths and America three-fifiths of the disp ted territory;
while by the Ashburton treaty, seve.twelths are iven Ao America and five-twelths to England, After contending that the great
bulk of moderate men in both countries were in frovor of the treaty, and that it had given especial satisfaction to the inhatio
the Telations were secured by it, he passed to the map with the
"strong red line," which had been found in the archives of the this reference to maps. A map existed in our royal library, which this reference to maps. A map existed in our royal ibrary, which
had belonged to the late King, on which was traced a red liue,
accordung to the boundary as claimed by the Americaus, and Which was set forth as being the bouudary as settled by the BriYranklin had been soupht for in 1820 , on the rcquest of the British
Government, who were then seeking for information on the subject; it had not then been found, because it was preserved,
not in the poititical, but in the historical department, where it had Leen found by Mr. Jared Sparks. Yet there was no evidence to
connect that map with Dr. Franklin's despatch. He concluded Withr avinitication of Lord A shburton, dnd called pupon the House
to stamp its approbation of the Government and its representative by negativing the motion
feelings towards disclaimed everything inconsistent with friendity Lord Ashburton, and also admitted the importance of a settle. ment of the question. But the corresporidence between Lord
Ashburton and Mr. Webster indicated, on the part of the English plenipotentiary, and derogatory to the country, to an extent unpa-
his position, and
ralleled in the history of diplomacy. of this he quoted speciments from that portion of the correspondence rettuting to theci-
cession of the Madawaska settlement, aud contrasted them with the tone and spirit of Mr. Webster. The eighth article of
the treaty, relating to the slave trade, had beeu ratified in opposite senses in London and Washington, for in America it was other. What a settlement of a question was that which rend ered

 rica was the country which was able to deal with thee proud
islanders, and bring them ch their knees. 1 this great country,
the envy of others, did not find peace in firmness and dignity, she would never do so in submisioul aud shame.
Sir Hown \&D Douctas narrated his experience, as Governor of
New Brunswick, in the controversy which had arisen between New Brunswick, in the controversy which had arisen between

 sited encreachment, but he funly approved of the conventional
line adopted by the treaty, not as the nost desirable onall plonnts negotiations, which'the value of the disputcd territory dud duot war-

 on grounds very similar to those on which the appoint ment of
Lord Ashburton had been questioned and sapported. He concluded with a criticism on Lord Palmerston's foreegn policy--
Mr. HAwes proceeded to address the House, but there not being forty Members present, the House was counted out, and the
motion, as a matter of course, fell to the ground.

 correcting a statement he hed made with respect to Lord Ash-
burton- yamely, that he was not only 8 British

American citizen. He had been apprised by
that he was in error, and he now acknowledged it Mr. Wituiast moved for a specific return of public money expended on each of the royal palaces, gardens, and parks, \&c.,
with the salaries or other emoluments received by the frangers and deputy-rangers, from 1811 to 1842 . The Earl or Lincolv was
willing to give all the information in his power, but objected
to a return to a return for the long period required, and recommended tha
it should be limited to an account from 1833 to the present time - After some remarks from Mr. HUNE, Sir R. PRRE deprecated with the regular busineess of the departments, and defeeter the
objects of the advocates of economy, by rendering extra aid requisite. The adoney expended on the royal parkz was as much
spent for the enjoyment of the people as the gratification of Her Majesty. Hampen-palace was open to the public, and it Was untair to hold up the necessary estabisthments essentiail to cessary burden on the people. - Mr. W Whitrans accepted
of the moditied return, which was acorrdigly ordered.
After some conversation respecting the production of After some conversation respecting the production of docu-
ments, which Mr. Huare was desirous of obtainink, in order to
 inquire into the manuer in which the Irish Poor. Law Act has
been carried into operation, and also as to the reanuls of that measure upon the condition of the poor, and of society at large
in Ireland, with power to report their opinion to the House in reference to any modification which may appear dessireble.
While he was addressing tie House noticc was taken that there were not orty members present, , but it tarraed out that the re-
quired number was within the House, and the honourable Mem ber expressed himself indignantly on the attempt which he considereer to have bee made to interrupt the discossion of an
important Irish question. He entered into considerable detail important Irish question. He entered into considerable detaill,
particulariy objecting to the workhouse test as unfitted for freparticular predulection for or apainst the law, but he had received very general testimony from influential individuals as to the
fact of its working well. No doubt considerable dissatisfaction prevailed in Ireland respecting it, but that arose from certain
defects, to remedy which the Government were about to intra defects, to remedy which the Goverament were about to intro-
duce a Bill, until which he would postpone any general discuss
sion on the subject. There were 35,000 paupers in the worksion on the subject. There were 35,000 paupers in the work-
houses in Ireland; and though it appeared that the Irish poor would not go into the workhouse except as a last resource
these establishments afforded an asylum to many of the most
隹 wretched in that country, and were beneficialin conducing to
habits of order and subordination. After defending the management of the Poor-law Commissoni in Ireland, he connended that
 by the proposed measure of the Government, and he therefor
resisted the motion.-A debate ensued in which Sir D. Norreys Mr. Shaw, Mr. S. Crawford, Mr. Escott, Sir Mr. Barron, Lord C
Hamilton, Mr. French, Mr. Gregory, Sir R. Ferguson, and Lord Bernard took part.- Sir J. Grathan reminded the House tha
both Lord Eliot and himself, in answer to questions, had re peatecly intumated the intention of the Government to bring in
a remedial measure, for tie introduction of which leave would b asked before the Ea ter recess. That measure woull not circum secribe the powers of the conmissioners, and would affirm the
workhiouse test as the only safe one which could be adopted in
Ireland Ireland, Admitting the defects of the law, and proposing th
remed them, hey were yet determined to uphold it generally and therefore the grant of a committee of inquiry would ony
serve as a delusion, by tending to excite doubts in the minds the drish people as to its stability. - Mr. Ross was sats whised wit
the declaration of the Government, and could not, therefore, sup
, his motion was rejected by 108 to 23 .

New Houses of Parliament.-The Select Commitee of the House of Lords have met, and considered the subject of the delay in the progress of the building to which we tion:-That considering the great incouvenience of the present House of Lords, and that such inconvenience will before the commencement of the session of 1844 , no delay should take place in building and preparing the new House of Lords beyond what is absolutely required for the safety of the work; that the architect be directed so to conduct his operations as to secure the occupation of the new House of Lords, with temporary fittings, at the commencement of the session of 1844, that in case the architect, in the progress of the work, shall find that more
time will be required, in consequence of any apprehension of injurious consequences to the building, he shall report the same to the Commissioners of Woods and Forests, in order that such report may be communicated to the House in due time; and that it does not appear to the Com miltee that it is advisable that any aiterations in the present House of Lords, which would lead to additional expense, should be adopted.
Christ's Hospital.- His Royal Highness Prince Albert, donation to this Hospital, the sum of $500 \%$, which the Alderman immediately transmitted to the treasurer. In reference to the previous donation of 10000 . presentea by her Majesty, and which was stated to be the first bestowed by any sovereign of these realms since the foundation of from the Feb. Number of the "English Journal of Education," showing that the name of the "Merry Monarch"
ought not to have been forgotten as one of its Royal benefactors. "The institution was enriched by a succesion of pious benefactors, most of them citizens of London. te 1676 , with a gift of $1000 l_{\text {. yearly }}$ for seven years, to endow Mathematical school for 40 boys; and an annuity of $370 l$. was added for the purpose of educating and placing out, East India House-On Wednesday a Quarterly General Court of the Proprietors was held, for the purpose of considering various subjects of importance contook the chair, and acquainted the Court that certain papers relative to appointments in the civil, military, and ecclestastical services, which had been laid before the table, for their information. He had also to acquaint the Court that the Board of Control assented to a proposition, granting a pension to Captain John Charratie of $150 l$. per Several motions were then brought formurd and discussion ensued, but the details would have little interest The Thames Tunnel.-On Saturday, at a meeting of the directors, it was definitively arranged that the ceremony of opening this national work should take place this day, the 25 th inst. The Duke of Wellington was exected to officte ompelled by public business to decline the invitation. The irrst stone of the tunnel was haid in 1824, by parliame oph, whe the occurrence of the first casualty obliged the directors to apply to Government for aid. The time during which the works have actively proceeded is scarcely more than ten years, and 600 feet, or nearly half the whole distance, was completed in the first cwo years. The circuar starcases and elapse bere the thoroughf Both archways are perfectly dry. At the conclusion of the ceremony, the directors will dine with their friends at the London Tavern.
Bethlehem Hospital.-At a meeting of the Governors of this Hospital on Friday, Sir Peter Laurie, the President, in the chair, it was moved by Lord Sbaftesuury, and
agreed to unanimousiy, that when visitors go through the wards, the attendants be ordered not to mention the name of any patient, even if requested to do so by the distinction the cre made in the tratment of a Scottish Hospital.-The election of Secretary to this attention of th, which has for some weeks occupied the minated on Me soth bers stood thus :-For Major Adair, $186 ; \mathrm{Mr}$. Bernie, 153 ; Mr. Blair, 130 ; Mr. Aitken, 106. Major Adair was therefore elected by a majority of 33.
Exeler Hall. - On Wednesday the first choral meeting of the Upper Singing Schools took place iu Exeter Hall. There must have been at least 3,000 persons present. Amongst the visitors were, the Lord President of the Cholmondeley, the Earl of Auckland, and Mon. Misses Eden, the Earl of Bandon, the Bishop of Norwich, \&c. After the performance of the national anthem, Lord Wharncliffe, who was on the platform, addressed the classes, complimenting them on their improvement, and expressing his hopes that they would continue to practise and progress. His Lordship's speech was received with great enthusiasm.
Monument to John Bunyan.-The daily papers state purpose proposed to raise 500. by subscripter the place where the remains of this extraordinary man were interred, in Bunhill-fields burying-ground. The tomb and tablet that once marked his memory are now crumbling into dust. made to the Duke of Bedford by the promoters of this monument for permission to erect it on the south side of Bloomsbury-square, opposite Southampton-street. His Grace has submitted the memorial to the ithabitants of pressed the, who, with only one disseatient voice, exis no doubt of his Grace withholding his consent. The ground of opposition was the annoyance to the inhabitants, would probably thecome property, from a mofll the movement mobs of the metropolis.
Artists' Benevolent Fund.-The annual meeting of that branch of the corporation of the Artiste' fund called the Benevolent Fund was held on Monday at the Freemasons' Tavern, Mr. R. H. Solly in the chair. From the report, it appeared that the institution still continued ocured the patronage of Fing of Prussi past year thepor or five who had attsined the age of 16 ye age 16 years, were 28 idows 06 ormerive relief The and the expendists, during the year, were, , 2n hand. The and the exper anniversary dinner was announced when Lord John Russell will preside.

New Churches.-It is announced that the Archbishop of Canterbury will consecrate the new Chapel Rayul at Buckingham Palace in about ten days, Fench Protestant the ceremony of consecrating the new French prote the church, in St. Martin's-le-Grand, was perfor Prurch, presence of a very crowded congregation. This church,
in 1550 , by King Edward VI. ; but in the beginning of nients consequent upon the rebuilding of the Royal Exchange, and upon its site the present Hall of Commerce ras been erectert. $\Lambda$ plot of ground was subsequently ture was commenced thout eighteen noonths ago. It is in the Gothic style, and is capable of containing from 300 to 400 persons. The cost of the erection bas been
defrayed out of the funds granted to the church by the charter of King Edward VI.-A subscription is in the gress, under the patronage of the Bishop of London, for the enew street now forming from Oxford-street to Holborn. So. Patre on Friduy last an the festival of St. Patrick Prince George of Cambridge in the chair. More than nsual imtercst was attached to this year's festival, from the
fact that it wis the first occasion on which his Royal llighness had presided at a public dimmer. In returning thamks for the mamer 1 n пhich his health was drank, the siding on such an occasion. Ife would ever look back with pleasure on the time he had spent in Irelund, and
would never forget the bospitality and kindness with Anli-Corn Law Leated in country. f the Anti-Corn-J.aw League was held on Weednesday at Drury Lane theate; when the house, in boxes, pit, gallery, and stage, was again filled to overflowing. The when Mr. G. Wilson oonk the chair, and gave an account of the proceedings of the League during the past week P. Viliers, Mr. Christie, M.P., Mr. Leader, and Mr. Moore, all of whom spoke at great length on the prospect Woolwich - Repeal.
Woolwich.-On Saturday morning Wool wich presented Duke of Wellington to inspect the 7th the visit of the previously to their embarkation for the Cape of Good before 12 o'clock, at which time the Duke arrived accompanied by the Marquess and Marchioness of Douro. The 7th Dragoon Guards formed in line, and his Grace, as he honours. After parade, the public were allowith all the in to the inner square, to witness the evolutions of the troops, who passed in close and open review order, and clusion of the inspection, his Grace rode up to the conand complimented the officers on the efficiency of the regiment, bidding them a hearty and soldierlike farewell
$H$ is numerous suite; and it is much to be doubted whether any period of his career of glory, he met with more sponwas formed of carriages, private and public. The square arrived from London by steam-boats, railroad, and on dragged off his horse, his accoutreme one private being the next horse, but he escaped uninjured. Mortality of the Metropolis. - The following is the day, Mar. 18 :-West districts, 149 ; North districts, 226 ;

## Liverpool, - We briefly noticed in our last the occur-

 previous day, and extended to both sides tiverpool on the The particulars had not then reached town, but the following details since received will show that its effects Were much more extensive than was at first imagined. The most precise narrative is that of the bead ce, A, Tho was in the parlour of his house at the time, when he suddenly heard and felt a violent agitation of the windows and of the floor. Being accustomed to hear loud explosionsfrom the works in Albert dock, now excavat not much surprised at the noise; but in less thang a minute afterwards another shock followed, more violent than the noise was heard shook from top to bottom, and a rumbling trains had been running through a tunnel underneath. The shock and the noise were so loud and violent as to awaken all the family, who assembled on the stairs in a
state of great alarm. After this, the house was examined,
and had been forced that the windows on the second floor received a trifling displacensent; but no damage was done and the alarm scon subsided. The head constable adds, that the shock appeared to him to proceed from east to ceptible. The policeman ond duty at George's Dock-bridge was leaning against one of the pillars there, when sudbridgge, and the ground rumbling a carre run rapidly across the This officer perceived two sho and shaking around him. duys officer perceived two shocks. The policeman on first observed some ensks, of Canning Dock stated that he hers observed some casks, lying on the quay, move as if they
Were alive: they tumbled and shook as if some men were coneealed in them. The first shook lasted from three to at first it appeared as if from seven to ten seconds; and tance had fallen down at one crash. Not the least remark-
able circumstance was the agitation of the horses in the stables throughout the town, particularly in the south individuals. Some felt the bed rise like the heaving of a vessel, and heard a noise resembling that of a coach running along the street; others describe it as like the report of a cannon. One man compared the noise to that of a large dog running round the room; but the accounts was accompanied it lasted for about four seconds, and starting-stroke of a locomotive steam-engine. The motion was vibratory, horizontal, and vertical, lifting those who were sufficiently awake to discern it, like the motion of a coach in swift movement on unequal ground; and many Custom-house, decidedly the heaviest building in. In the the keeper of the bouse, who sleeps at the top, felt it severely, and became alarmed, but could not account for below also felt it simultaneously and state the building the windows and the doors shake and rattle in it made manner. The shock extended to the Cheshire side of the pool combe Whe inhabitants of New Brighton, Egremont, Sea it, and its effects were strongly felt were much alarmed by Preston, and their immediate neighbourhoods. The guard of the London mail, when waiting at Parkside, sam ire line undulate very visibly, and remarked upon the circumstance to another person in the employment of the
Manch
Manchester.-The earthquake was felt severely in this about 20 minutes a ater 8 ', ciolk so day week, through a considerable the north-eastward of Manchester, its of the district to being in the chain of hills which separe Yoparently Lancashire bat it was felt by severa faili this immediate neighs felt by several families residing in Cheetham Hill. The shock on Friday last was somemhat more violent, and appears to have been generally fel throughout the suburbs, particularly in the neighbour hoods of the Cheetham Hill-road and Crumpsall. Strange ways, Higher and Lower Broughton, Kersal Moor, and Rusholme, Moss Sid and Longsight; Greenheys and ford : Pendleton, Pendlebury Irwell. Almaton, Pendlebury, Eccles, and Barton-uponconcur in stating the pprons who noliced the time minutes before 1 A.M., and, in one or two instances a sensation is said to have been experienced for hour previously of an oppressive heat and closeness in the atmosphere. There was but little wind, and that rom the south-east ; the barometer exlibited no remark about an hour previous, the moon, which was full , that A.M. on Thursday, although shining unclouded, presented a dim and filmy appearance, as though a thin veil of cloud were drawn over her whole disc. In connection with this earthquake which caused so much alarm in this bere the earthquake which caused so much alarm in this town in Sunday morning, and causing the people to rush affrighted ut orh churches and other places of worship-the sun, he so a shining in a clear unclouded sky, was observed to without dazzling the vision, and immediately after the without dazzling the vision, and immediately after the Lancaster.-About one o'clock on Friday morning, this town and jts vicinity experienced several smart shocks of the earthquake, which continued for about 50 seconds, and created considerable alarm. The force of the beds, whilst windows many persons were shaken in their every direction, and the houses trembled to their foundations. The river is likewise reported to have been considerably agitated. No personal injury has been sustained, though considerable damage has been done amongst the china, glass, and other brittle materials. The fetters and other prison implements hung up in the gateway tower of the castle, clanked against each other with great violence. A few hours previous to the earthquake, three men, belonging to Bolton-le-sands, were engaged on they were overtaken by the flotion of slirimping, when The tide appears to have set in a considerable time before the usual period of high water, and the circumstance is supposed to have been the precursor of the eartiquake. than in me earthquake was felt here more severely was intimated by towns of Lancashire. Its approach increasing louder and unnatural buzzing noise, gradually convulsion passed a given point and then the sound and the effects produced on the instant became very alarming; windows and doors rattling-and the very bouses appa rently staggering to their foundations. The watchmen of the town and the public officers on duty describe the sensations which it excited as appalling the ground appearing to them to be sinking under them, and themselves fecing as though they were descending to a great depth. The bells rave in several houses, and great alarm was experienced in many families.
Man of Mam. -The earthquake was felt in the Isle of Man at the same time it occurred in Lancasbire. The following letter, dated Douglas, March 18, describes the shock :-"A slight shock of an earthquake was felt in o'clock, and its vicinity yesterday morning, about one some cases, produced considerable alarm to the in, and, who were amoke by the oscillation felt in their houses. I
was preceded by a rumbling noise, and followed by a sen. shocibration from east motion wherved in the suble the waves daslued violently arainst the adiese After the lapse of a few minutes the wind resent shore a siff breeze. From all ne can hear, the earthquake appears to have been felt throughout the island, and partilearly at Clarlestown, where the inhabitants of the colWe are alarm to the timid, and general surprise to those who wan disturbed in their midnight slumbers by it ose who were Carlisle.-The earthruake was distinctlo lisle about l vocock oriday morning The Carunusually close and there was morning. The night was the time mentiond ane whe at indows in of herthe liasses und pieces, ratled in and even the articles upon the mantelnot list more than few seron it is shock did curious fact, in connerion with this actioned as a time of the great earth wive time of the great earthquake at Lisbon, a siciniar shock rose to an unusual extent
Kendal.- The earthquake occurred in this neighbourhood, and in other parts of Westmoreland, about 20 minutes past one on Friday morning. On the previous evening the air was sultry and the clouds lowering, and the night was so unusually dark that it might be likened to a cotal echipse or the moon, although a full moon robe at the shoch the datkness still continued, and there was a yell in . of wind. The violence of the shock was so great as to cause the inhabitants to suppose they were rolling out of bed, and all agree in the testimony that the doors and windows of their babitations rattled as shaken by a whirlwind, and the furniture of the rooms, especially those of a light brittle description, were violently agitated by the collision of one piece against azother. Numbers of persons simultaneously arose from their beds, who had become suddenly awakened by the rumbling of the earthquake and the tremulous motion of their houses, About two miles from Kendal, and at a village called Sedgwick, are extensive powder-mills, and several soothed themselves with the calamitous consolation, that it was only the powder-mills that had blown up! In severul houses the inmates became so alarmed as to make a sudden egress into the street, and when the cause of their fright could not be ascertained, were seized with the ptmost fear and dismay, At the Nelson Tavern the proprietor and family had not retired to rest, and the shock caused the greatest terror. The decanters and wine-glasses on the shelves bean to dance and knock against each other. At several of the other inns the bells were suddenly rung, and the inmates, Who had retired tost, awo in great consternation The shock appears severity in all parts of the county. At Kirkham, Black pool, Poulton, Fleetwood, Whitehaven, Ambleside and Keswick, the shock was very sharp, and caused considerable alarm.
Guernsey and Jersey.-The earthquake was distinctly Fris island a little before 1 o'clock on the morning Friday. It was accompanied by a noise resembling the rumbling of a carriage, and is described by those who felt to have proceeded vertically from the earth. A gentleman residing at Mount Durand states that he distinctly saw the furniture in his bed-room agitated by the shock. The Jersey papers state that the shock was felt in that island nearly at the same time
Carmarthen.-The local papers continue to give acer daughters." On Tuesday nithted by "Rebecca and they visited Nanty-clawdd turnpike abate, eleven o' clock, castle Emlyn and this town, and gave the toll-keeper notice to quit, which he did without any further ceremony. They afterwards unroofed the toll-bouse, demolished the Thursdey, and broke the gate and posts to atoms.-On Thursday, at the Penobroke Assizes, Thomas and David persons, riotousily and tumultuously assembled together and for haring demolished and pulled down the tollthere of Williom Reen Thed and pulea case which -wouse ready fill cutor and by an reaice, named Griftiths bo inse sequence of the jury disbelieving his testimony, both prisequence of the jury d
soners were acquitted.

Cardiff:-The Welch collieries are again in such an unsettled state, that at Aberdare, last was considered necessary to call out the military. In Monmouththe number of about 5000 , and continue metitrike, to rious pats the hills. In Glomereeting in raon strike are those of Gelly Gaer of Porks Duffryn Works, and one or Gaer, of Pont-y-Preed, the Monmouthshire having nows others. The strike in number of the Monmouth collions inued for ten weeks, a 700, came from Monnrouthshire, to the number of about Taaf Vale Railwas, Aberdare Wors a and from this the strike Gelly Gaer Works to strike; ieries colliers and by the magistrates, but been held, both by the tory nature has yet been arranged. A large meeting of colters was held last week at Cross Penmaer, which was attended by deputations from forty-two collieries. On neighbourhood of Dowlais, but on their arriving at the Duffryn Aberdare Works, they were met by the mea and
their wives, and attacked in a violent manner with stones, $\& \mathrm{cc}$. , and driven off the ground. Warrants were obtained
against some of the ringleaders, who have been appreagainst some of the ringleaders, who have been appre-
hended, and sentenced to various terms of imprisonment. hended, and sentenced to various terms of imprisonment.
Railways. The returns of traffic on the principal lines, Railways.- The returns of traffic on the principal lines,
for last week, were as follow :-London and Brighton, for last week, were as follow: London and Brighton,
$2,176 l_{\text {. }}$; London and Croydon, 203l.; London and Greenwich, 705 l . ; Sheffield and Manchester, $320 l$. London and Blackwall, 499l. ; Manchester and Birmingham, 2,2901. ; Eastern Counties, 903l.; York and North Midland, $1,866 l_{0} ;$ Hull and Selby, 891l.; Birmingham and Gloucester, 1,609l.; Liverpool and Manchester,
$3,575 l$. ${ }^{\text {a }}$ Great North of England, $1,362 l$. ; Birmingham 3,575l. ; Great North of England, $1,362 l$. ; Birmingham
and Derby, $1,056 l$. London and Birmingham, $13,003 l$. Grand Junction, 6,833l.; Glasgow, Paisley, and Kilmarnock, 9132.; North-Midland, 3,6091.; Great Western, 10,669l. ; Northern and Eastern, 1,1691.; Newcastle and
Carlisle, 1,360l. S South-Western, 4,099.; Manchester and Leeds, 4,1102 . ; Edinburgh and Glisgow, 1,8272 . The report of the railway department of the Board of satisfactory they have jet issued. They state that the number of railway accidents of a public nature, attended with personal injury, during the last five months of 1840 , cases of injury were occasioned; while during the twelve months of 1841 , the number of accidents of a similar description amounted to 29 , with 24 deaths, and 71 cases of injury. During the past year (1842), the number of accidents of deaths five of which oeen only ten, the passenger while travelling by a train and observing the proper degree of caution, and the number of cases of
injury were only fourteen. These do not include accidents which happened to individuals owing solely to to servants of the company under circumstances involving no danger to passengers, neither of which can be fairy classed among railway accidents of a public nature.
With respect to the comparative safety of railway travelling, a comparison of the number of accidents attended with death or injury to passengers with the number of it would appear that the science of locomotion, as far as the public safety is concerned, has arrived at a very high degree of perfection, seeing that out of more than $18,000,000$ passengers conveyed by railway in the course of the year 1842, only one was killed while riding in the
train, and observing the common degree of caution. The frain, andobserving the common degree of caution. The Railway on the 7th December last, and the other recently on the North Midland Railway. While the Board of
Trade admit this great improvement within the last two years, and are sacisfied that a degree of security has been attained upon well-managed railmays, decidedly superior to that of any other mode of locomotion; they,
same time, think it right to state that the nished by tie official returns shows that the extrict exemption from fatal accidents during the past year cannot be expected to attend upon future years, if there be any relasation of vigilance on the part of the directors and officers of railways, or a diminution in the efficiency of
their working establishments, which on the contrary will very probably engender ace whenc Cn the whole, it appears that, although decidedly safer
than the modes of locomotion which it has superseded, railway travelling is still exposed to certain sources of danger, some of which can never be entirely obviated. The
report then enters into an analysis of the causes of railway accidents, classifying them under two separate heads:first, accidents resulting from management, ; and secondly,
from unavoidable causes. Under the first are placed accidents arising from collisions, level crossings, and fences; and under the second, those arising from the breaking of axles, slips of earth, and other causes. After some strictures upon the recent accidents and reductions on the North
Midand Railway, and an allusion to some complaints of a trifling chilway, and an allusion to some complaints of lines by character being made against two or hare stating that the total numid Ways during twelve months, from the 1st Joly, 1841 , to the lst July, 1842 , amounted to $18,453,504$, of whom class, $5,332,301$ first-class passengera, class was not distinguished. The returns of six railways are not yet completed, which, if added to the above, about $19,000,000$, of whom 18 per cent. travelled by the first-clase, 50 per cent. by the second, and 32 per cent. by the third class. The gross receipts during the same period on the above fifty railways, from passengers, amounted to
$2,731,6877$; and from goods $, 1,088,835 l$. The appendices of statistical returns, reports, \&cc., present a voluminous mass of information, of which it is impossible to give an abscompany took place last week at Derby. The net profit for the half-year amounted to 70,7381 .; out of which a divideud was declared at the rate of $30 s$. per share tor the half-year, waster the payment of all expenses. The total reduction affected in the expenditure for the half-year amounted to 6,4361 ., and further reductions will be carried out, so far as is consistent with the safety of the public and the effi-
cient working of the line. The old directors were re appointed by a majority of 437 , and their proceedings in regard to the question at issue between the company and the Birmingham and Derby, relative to the right of tranfic the Birmingham and Derby, relative to the right of traffic the Sheffield and Rotherham a dividend cony took place last and $6 s$, on the half-shares, was declared. The directors
stated that they have determined upon a plan whereby the
North Midland traffic and trains North Midland traffic and trains will fall in with the
Rotherham up-trains at the Holmes station, and the downRotherham up-trains at the Holmes station, and the down-
trains will be detached at that point By this arrangement trains will be detached at that point. By this arrangement
it was considered that a saving of at least 1,000 . per annum will be effected, without diminishing in number the trains between Sheffield and Rotherham, and without materially interfering with the cotherbam, and wintic -The meeting of the Lancaster and Preston company took place last week, when a dividend of $16 s$. per share on the whole shares, and of $10 s .7 d$. per share on the threequarter shares, was declared, subject to deduction for the income-tax. The bill for the extension of the line to Carlisle has been given up for the present.-It appears that there is at levgth some probability of an arrangement between the Croydon and Greenwich companies, on the basis of a proposal entered into during a recent interview
between the contending parties at the Board of Tradenamely, that the opposition of the Greenwich company to the bill for an extension to the Bricklayers' Arms should levied on the principle of a proportionate toll according to distance; the South Eastern and Croydon companies of atanteeing to the Greenwich company an annual income them for that portion of their railway used by the Brighton, Croydon, and South Eastern companies.

## IRELAND.

Dublin.-St. Patrick's Day passed off in this city with great éclat. The people assembled in great numbers at the in the presence of the Lord Lieutenant and several officers of the Court. It is remarked that there was not a drunken pan in the multitude. The usual St. Patrick's ball took nearly 1000 persons. A plan is in progress for expediting the communication between this city and England; and several meetings on the subject have been held in the metropolis. A company of capitalists propose to make expense, provided the Government consent to make Hoyhead and Dublin the sole mail communication between England and Ireland, and pay the Company for the conveyance of the mails what it now costs. By this plan, don mails expedited to Dublin in fourteen hours instea of twenty-four, and the country will receive a corresponding benefit.-The Windsor Castle, Indiaman, which was abandoned by her crew near Ireland, has been brought into Scattery Roads. She is very richly laden, and is valued Monday it -At the meeting of the Repeal Association on rican sympathisers had been held at Washingtou, at which Mr. Tyler, the son and Secretary of the President of the Uited States had made a remarkable speech in favour of epeal. He referred to Bunker's Hill, and said, "Who religious liberty had imparted to a great people? A free constitution would bring home similar results to the doors of the Irish people, and when we see that people amount field, eloquent in the senate, wise in the cabinet, united and determined to be free, we cannot suppose for a mo ment their freedom is impossible or even difficult. The
libation to freedom must sometimes be quaffed in blood. The Irish heart he looked upon as true freedom's pole, ue as the magnet to the norm, aad their lives are given cheaply in the purchase of liberty. Such being the cha-
racter of her people, we have no fears but she will soon racter of her people, we have no fears but she will soon it might bo speedy and comprehensive." The thanks of for this demonstration, and after a long speech from Mr. Connell, the week's rent was announced to be 3512 . Waterford.-We noticed in our last the opposition made in this county to the collection of the Poor-rate. In ncursion into the barony of Gaultier, that the collector abandoned all idea of enforcing the rate. During the progress of the mob along the quays, Capt. Newport
deemed it pecessary to read the Riot Act; and subsequently the mayor, the high-sheriff, and other magistrates, brought out the military; but fortunately there was no occasion for their services. The accounts since received state, that the Government, disapproving of the course adopted by the local magistrates, have determined to resume operations for the enforcement of the rate, and that the military have been called out for that purpose.-The Waterford papers announce that the alleged miracle at the convent of Youghal, which has obtained some "celebrity under the name of the "Munster Estaticu," has been investigated by four Roman Catholic clergyme
Tuam.-Mr. Michael Ward, the gentleman wh
time since was fired at by his wife, is quite recovered from the effects of his wounds. On the night of the occurrence, the lady deeming that matters were much worse foot, without taking rest, to the residence of a near relative in the mountains, 30 miles from her own house. It is said that all further proceedings have been stayed.

## Ithiscellameotis.

Earthquakes in England.--The daily papers state that it is exactly 800 years since the first earthquake is recorded to have taken place in this country, it baving happened at Worcester and Derby, in 104s. Four similar following half-century. An earthquake that was generally
felt throughout the country occurred in 1090, and was followed by a scarcity of food. In 1199, the county of
Somerset suffered from a like cause; and St. Michael'sSomerset suffered from a like cause ; and St. Michael's-
on-the-Hill, without Glastonbury, was thrown down by shocks that were also felt throughout the country in 1247 . Earthquakes were experienced in England during each of the three succeeding years. The greatest earthquake ever known in this country occurred in 1318; ant in April 1580, another caused great damage in various directions. It lasted only one minute; but the shock was so severe,
that many clurches and houses were much shattered, and that many churches and houses were much shattered, and many lives were lost. According to the quaint phraseology of Stow-"The great clocke bell in the Palace at Westminster stroke of itself against the hammer with shaking, the livers clockes and belles in the city and elsewhere did England; and in Kent there were three distinct shocks that caused much damage. In 1583, one occurred in the county of Dorset, that removed a considerable piece of ground. Earthquakes were felt at London and several other places in Britain, in March, 1749 , and in 1750, and attributed the phenomena, not to vapours or fermentations generated in the bowels of the earth, but to elecsound. On one of these occasions it is stated that a bar, just as the electrical snap precedes the shock." In 1750, the same counties now visited suffered from an Chester, Manchester, \&cc. ; and in the beginning of 1761 , great alarm was excited throughout the metropolis and its neighbourhood by two shocks, on February 8 and March 8. in 1786, earthquakes occurred in different parts of the counties of Bedford, Leicester, Lincoln, Nottingham, \&c., in March, 1792; at Shaftesbury and Salisbury, in earthquakes that are recorded to have visited Eugland The New Comet-The following letter, doted Colli wood, March 19, has been addressed by Sir John Herschel to the Times - "I wish to direct the attention of your astronomical readers to the fact, which I think hardly admits of a doubt, of a comet of enormous magnitude being in the course of its progress through our system, and at present not far from its perihelion. Its tail, for such I last doubt it to be, was conspicuously visible, both last night and he night eath the stars kappe and lamb (Kal 1 ) L ( $\kappa$ and $\lambda$ ) Leporis, and thence strotching obiquely westwards and downward, between gamma and delta ( $\gamma$ and $\delta$ ) Eridani, till lost in the vapours of the liz. The cisely through the place of the Sun in the ecliptic at the present time, a circumstance which appears conclusive as visible on Eriday evening was fully 30 degrees in length, and the head must have be would add at least 25 degrees to the length, it is evident that, if really a comet, it is one of the first-rate magnithe ; snd it it be not one, it is some phenomenon beyon markable. 8 p.m., March 19.-The tail of the comet, for such it must now assuredly be, is again visible, though much obscured by haze, and holaing very nearly the sam position." In a second letter from Sir John Hersche of the 21st, he states that the line of the axis of the
tail has evidently advanced northward, and that shall very probably soon see the head. - On Tuesday ter to the Times from the Observatory at Kensing ton:- "The brilliant train of light of which notice Friday evening at a lititle after 7 , and had very much on apearance of the tail of the comet of 1811. Its highes point, when I first saw it, nearly reached theta Leporis, and passing through the constellation Eridanus, became nvisible to me from interposed trees when about 2 degree rom the horizon. More than 45 degrees of tail were measurable; stars of the 5th magnitude were visible through it by the naked eye, and with a 42 -inch achro matic of $2 \frac{3}{4}$ inches aperture, those even of the 8th were perceptible. At 7 h .33 m .22 sec . (sidereal time) a bright meteor issued from the very tip of the tail. No trace of Sunde light could be detected here eituer Naturday, Sunday, or Monday nights, in consequence of cloudy weather. This evening (Tuesday), at about 10 minute rain o, the clouds cleared away, buh or bad illumined on Friday night; but a diffused and amorphous light, commencing at the Pleiades, and spreading over the entire constellation Aries, even through the haze, was too conspicuous to escape obervation. If this be the tail of the comet, it indicates a very rapid motion of it northward. By a letter church, Hampshire, he has seen it earlier than any one I have yet heard of, inasmuch as he observed it three nights previous to the date of his letter, which is the Th inst. ; hence he saw it Thursday, Friday, and Saturday." -The Bristol Journal of Saturday has the following hout meteorwas observed in the heavenala thirty degrees in the sky shedding a line of brilliont light following the diretion, the ang armere lot Madrid Madin - that the meteor seen last night was the tail or a comet. dated the 1 becomes visible there at sunset, appearing in the west;
and that it disappears in the west at night.- A letter from dinary change has taken place here in the weather. We diary change has taken place here in the weather. We of July; but the most extraordinary thing is the sudden, and it appears, unexpected, appearance of a comet yesterday evening, the largest, says the Univers, ever known. I say he has seen it; but a singular appearance in the say he has seen it; but a singular appearance in the
heavens was noticed by hundreds. According to the heavens was noticed by hundreds. According to the a tail extending over a space of sixty degrees ; viz, withea tail extending over a space of sixty degrees; viz., one-
fourth of the heavens. It proceeded from the constellafourth of the heavens. It proceeded from the constella-
tion of Orion, which it crossed at an angle of forty degrees. If the moon had not risen so early, or the daylight had been less, probably a brilliant sight would have been witnessed by all Paris. Several geatlemen, astonished at the 8tatement in the Univers, as they had no suspicion of the
appearance of a comet, went to M. Arago this morning, at appearance of a comet, went to M. Arago this morning, at
the Observatory. He was in bed, but he had charged a member of his family to inform all who came to make inquiries, that the account in the Univers was substantially correct; and that he intended, with his colleagues, to watch its appearance closely this evening, and publish
un account of his observations. The nucleus of the comet was not visible, on account, as is supposed, of its immense distance." A subsequent letter from Paris, of the 21st inst., states, that M. Arago on that day had announced to the Academy of Sciences, that the luminous meteor is a new conet, as stated above on the authority of Sir J. Herschel and Sir J. South.- "Such being the case," says the Journal des Debats, "how can a comet have suddenly appeared in such way as to attract public attention at a
large number of places at the same time, without having been previously announced by professional astronomers? The tail of this comet extends in the shape of a narrow lumanous train, on a space which contains no less than forty and odd degrees; the cloudy state of the weather, no doubt, did not permit astronomers to observe the heavens from the 10 th to the 15 th of this month; but there is, nevertheless, good reason to wonder at the phenomenon mers by loungers and badauds." has the following account, communicated to it by Roma servatory of the Roman College:-"The comet of M. Laugier, on its return from its peribelion, at length presented itself on the 6th March, at three in the morning, in circle of Cauchoix telescope. The clouds, which have permitted its being seen during two or three minutes; and it has been impossible to take a regular measure of its position. This comet preceded a little the middle of Scorpio, and was very near the place assigned to it in the
ephemeris calculated by M. Petersen. The britht light it emits gives us reason to hope that we shall be enabled to follow it for a long time to come, if the sky become clear.'

FUCHSIAS, CINERARAS, VERBEAS,

FLORISTS TO HER MAJESTY THE QUEEN DOWAGER.

B EAUTIFUL AND DISTINCT FUCHSIAS.for 1843, take the preesent opportunity of drawing the ettention of admirers of the above eleganit tribe of plants to therr select and superb Coliection. They have spared lio espense in fermmng a
selection of such as selection of such as are reaily good, to the exclusion of many
that are mere nomina. varieties; and they would refer to the nnmerous testimonials of successs which attended their mode of selecting, last season, collections for Amateurs for competition at the various Horticultural Exnibitions throughont the Kingdom. peculiar method of eeculdesirous of calling attention to their namely, that they will deliver them free of postage (on the re ceipt of a Post-office order), to any part of the United Kingdom, in the first week of April, in collections, upon the following terms Twelve fine Show varieties 128.
Twelve extra fine do.
108 . The selection being left to YousLL \&

This magnifcent Fuchsia was raised by Mr. Meehan, gardener to Colonel Harcourt, at St. Clare, Isle of Wight, from whom
Messrs, Youklu obtained the entire stock Messrs. Younli, obtained the entire stock. Hi Nay last it was
smbmitted to Dr. LTNDLBY for his opinion, whict will be found rıd we have seen, the flowers being three inches in length, with the tube and sepals of a bright carmine colour, and the petals of a rosy purple.
If, as you say, it is a strong grower and a free bloomer, it will prove a valuable addition to this beantiful genus."
As a proof of its being a most profuse bloomer, Y. \& Co. had a plant in flower Sept. 13th, 1842 , on one branch of which were apwards of av blooms, forming a splendid object for the green-

bedding out.-old Brompton, March $29,1 / 43$.
$\mathrm{N}_{\mathrm{SA}}^{\mathrm{EW}}$ EW AND SUPERB SEEDLING DAHLIAS on HACKNEY, LONDON:winca, widman, pure white, cap peta.s, targe size, the centre
well up, very deep Hower (having form 25 to 3 orows of petals,
first-rate form, of excellent habit, and very free bloomer : the frst-rate form, of excellent habit, and very free bloomer: the first-class siower by the floricintitural society of Loodon, Aug.
$3,18+1$; obtained a second prize at the South London Floricultural show, Sept. 14 and a first-class prize at the Floricultural Soc. of London, Sept. 23; a first-class opinion was pronounced
 finwer by the Fir 1 cultural Sce. of Londth, Sept. 2 , when 24
blooms were pronducet, although that society very farry quali.fied their appribation npon other occasions, when the ilower, for perfect state. OpiDions of the Press:-See Gardeners ${ }^{3}$ Gazette, Sept. 24, p. $625:$ :" This flower has been-unfortunately very
badly grown during the season; being exclusively cultivated badly grown during the season; being exclusively cultivated tition at either of the shows for the cup. The blooms produced or the early part of the present, gave promise that it will be a decidetly first-rate variety, when it comes into the hands of
country growers, the centre being in every instance perfectly ap, the petals cupped, and the flower well formed." See Report up, the petals cupped, and the flower well formed." See Report
in same paper, Dct. 1, p. 639 : "Wildman's Bianca, which has
searcely produced a bloom fit for showing until the latter part searcely produced a bloom fit for showing until the latter part being shown, the whole of them first-rate." See Report in the paid a visit to Messrs. Smith's Nursery, at Hackney; the with the smoke, ac., of that confined district. Too much redit cannot be given to these gentlemen for the collection which is large, we particularly noticed that beautiful white, Wildman's Bianca; there were several plants of it, and all held good flowers." 108.6 .
DUKE OF WELLINGTO petals, the centre well petals, the centre well up, is of great depth and substance, a Sept,-See Editor's opinion in the Gardeners' Chromade, Sept. 3, 1842 : "In the Duke of Wellington, rich scarlet crimson, the well arranged: it is a desirable flower, and rich in colour."
10s. 60 .
GENERAL, SIR R. SALE, Smith, crimson parple, cap petal,
well up in the eye, of good siza, and great depth of petals, well up in the eye, of good siza, and great depth of petals,
very profuse and constant bloomer, with long upright foot: stalks; and is considered by competent judges the best flower of its colour yet offered to the public; it Was pronounced a
first-class fow 1 , first-class fower by the Floricriltural Society of London, Aug.
15, 1842; obtained a prize at Salisbury Plain, Aug. 31; a prize at South Essex, Sept. 8 ; a prize at Kingston, Sept. 15 ; a prize
at Salt Hill, Sept. 16 ; a prize at Victoria Gardens, stepney, Sept. 19; a prize at the Floricultural Soc. of London, Sept. 20 ;
a prize at Sunbury, Sept. 22 ; a prize at Hammersmith, Sept. "So far as we have seen, during the present season, the growers appear to be aware of the properties required, in a
sbow Dahlia, and most of those exhibited on Tuesday possessed them in a considerable degree. Decidedly the best of flower shown at both meetings but not adjudicated on by the Florrcultural Society, on account of no more than one binom being shown."-See Editor's opinion, Gurdeners' Chronicle,
Sept. "Your crumson pupple Dahlia (Sur R. Sale) is a flower of first-rate properties, fine, general form, centre well np with great depth of petals"' $108.6 d$. yellow, fine cap petals of great substance and depth, the centre well up, of excetlent
form, very constant and good habit. This Dahlia is warranted the best of its colour yet offered to the public. As the stock is many orders having already been received; no allowance on this variety, $10 s$,
RAINBOW, Smith, yellow, beautifully edged with rosy purple of good form, very constart, free bers have long straight footstalks, quite a pew habit tinct variety from any other in cultivation. The form of this fower improves as the aeasonadvances, sufficient to constitute it a show tower. 10s. bid, cupped petals, of good form, very Constant, and pror Forster, deep lilac, of fine form; it has
obtained a first-class prize at Hexham, and was in the second stand of 18 , ard the second of 24 blooms at the same place was placed first in its class at the Dahlia Show near Corbridge, mond, near Newcastie. This variety is very constant, of medium siz
EARL OF LEITRIM, Ogilvy, deep purple, cup petals, large SULTANA, Appleby, dark maroon, occasionally striped with light purple, fine form. $108.6 d^{2}$. GREAT ; WESTERN, Bragg, shaded purple, very large, good PERPETUAL GRAND, Brown, maron, fine form, 10s. 6 d . BELSIZE RIVAL, Pipe, rosy blush, cup petals, fine form, goo
habit, and very constant; 4 ft . $10 s .6 \mathrm{~d}$. SURPRISE, Oakley, crimson, tipped with white ; 4 ft . $108,6 d$ very dwarf grower; 2 ft. 10.8 .6 d .
CONFIDENCE, Cook, shaded orange, good form, very constant, fine habit; 4 ft . 7s, $6 d_{\text {. }}$, WINDMILL-HILL HERO, Miller, rich deep crimson, cup petal round shape, good form; $4 \mathrm{ft}$. 108. 6 d .
show flower 3 ft lles, fosy luac, good shape, and constan show flower, $3 \mathrm{ft} .10 \mathrm{s}$. . 6 d .
NORTH MIDLAND, Evans, deep crimson, cup petals, and fine
 mine; $4 \mathrm{ft} . \quad$ 10g. 6 d . ally tipped, good form, has taken several prizes, 4 ft . $108.6 d$.

MIRANDA, Brown, blush white, shaded with rose, MIRANDA, Brown, blush white, shaded with rose. 78. $6 d$.
QUEEN OF SUMMER, creamy white, with crimson purple tip and dark centre, good form. 10s. 6 d .

${ }_{3} \mathrm{ft}$ Ne, Forster, white, tipped with yosy pink, fine form ${ }^{3 \mathrm{ft} .}{ }^{10 \mathrm{SS} .6 d .}$
$\qquad$ maroon, 4 ft . 108.6 F. and A. S. and Co. take this opport of it, that thming those being grown in the immediate vicinity of London, they cannot advantage of a country situation; added to this, their Plants were from August to the end of September so infested with the
thri, that they could not produce even a tolerable specimen of thrip, that they conld not produce even a tolerable specimen of
Bianca, to compete at any of the three shows for Mr. Wildman's prize; as a proof of this, at the first show there was no competisecond), and the Floricultural (the third), the Plants were no sufficiently recovered to compete with effect; as the season ad-
vanced, the Plants produced fine blooms in profusion, so as to enable them to exhibit twenty-four fine blooms at the Evening Meeting of the Floricultaral Society, when it was pronounced a
irst-class flower. In conclusion, they recommend Bianca as white of first-rate qualities, and second to none.
The same observations as regard the thrip may be applied to portunity to compete for prizes.
YERBENA SPECIOSA, Kyle, colour bright vermilion, with blush or rosy eve, large trusses, and very free bloom of strong
upright growth, it obtained a certificate of merit at the Exhiupright prowth; it obtained a certificate of merit at the Exhi-
bition of the Horticultural Society of Loncon, July 9,1842 . The Verbena is handsome and very briliant; it it no doubt a
good variety. See p .425 , Gardeners' Chronicle, Editor's fion. Plan

## AT THE GARDEN OF THE HORTICULTURAL SOCIETY OF LONDON, FOR THE YEAR 1843

The Exhibitions will take place on the following Days: viz., Saturday, May I3; Saturday, June 17; and Wednesday, July 13.

## EXHIBITORS.-All persons, whether Fellows of the Society or not, will be at liberty to send subjects for exhibition.

DELIVERY OF OBJECTS FOR EXHIBITION.-Exhibitors are earnestly requested to notify in writing, previously to the day of meeting, what plants they intend to supply, in order that due provision may be made for the proper distribution of the specimens on the exhibition tables. The best places will be secured for those who comply with this request. As it is necessary that the Judges should proceed to consider the respective merits of the exhibitions by $10 \mathrm{~A} . \mathrm{M}$, and as it is absolutely indispensable that the tables should be arranged by that time, it has been determined that no subject for exhibition shall be admitted into the Garden after half-past eight o'clock in the morning ; and if the owners of any locked-up bozes, or other cases, should not be in the exhibition-tent at the said hour, such cases or bozes moust be excluded from competition for medals. All specimens whether of fruit or flowers, will remain untouched until after six o'clock, when they will be delivered into the hands of the exbibitors, who are most particularly requested not to give away their cut flowers in the tents, as much confusion has been found to arise from that practice.
ADMISSION OF EXHIBITORS, $\rightarrow$ Exhibitors or other persons required to assist in bringing in the objects for exhibition, will be admitted before half-past eight at the Carter's Xard Entrance Gate. Every principal Exhibitor of subjects for which medals are speciftcally offered may be furnighed with one pass-ticket, which is not transferable, for which he is requested to apply before ten o'clock, AT WHych hovr fhr garden will be cleared of ali Persons not officially detained there. Exhibitors may re-enter the Garden after one o'clock, when they will be required to give up their passotickets at the Carter's Yard Gate.
FLOWER-STANDS.-Exhibitors of cut flowers must SUPPLY THEIR OWN BOXES OR STANDS. No box or stand shali exceed ight inches in height at the back, or eighteen inches in depth from front to back. The lids of all bozes must either be loose or made ounhinge.
MEDALS AND REWARDS.-The Society distributes the following Medals and Rewards; uamely,
SB. Silver Banksian Medal
SK. Silver Knightian ditto

value | 0 | 8. | 10 |
| :---: | :---: | :---: |

SG. Large Silver Gilt Medal GB. Gold Banksian ditto
LS. Large Silver ditto
value
$\begin{array}{lll}20 & d \\ 4 & 1 & 0 \\ 7 & 0 & 0\end{array}$

Exhibitors to whom any of these shall be awarded can exchange them one for another, or may reacive their value in moner, or plate. If within one month after the thivd Exhibition of the year no intimation shall have been received from an Exhibitor of the manner in which he desires his Medals to be disposed of, all the Medals due to him will be prepared and transmitted to him through the usual public conveyances, without further notice. In case an Exhibitor shall receive a First Prize in any one Letter, he shall not be entitled to reccive any other Medal in the same Letter; except in $Z$, AA, and BB,

## SUBJECTS OF EXHIBITION.

These will be divided into Classes, as explained further on. No articles not of horticultural produce will be allowed to be placed upon the tables, Exhibitors will do well to make themselves acquainted with the arrangements described in the following list, as they
will IN ALL CASES BE REQUIRED TO SIGN A PRINTED FORM OF DECLARATION TO BE FURNISHED TO will IN ALL CASES BE REQUIRED TO SIGN A PRINTED FORM OF DECLARATION TO BE FURNISHED TO
THFM IN THE GALDEN stating under what letter their plants are to be shown; and they are particularly requested take notice,
that if errors in the awards of the Judges should occur, in consequence of mistakes on the part of Exhibators in filling up suck declarations, the Society cannot undextake to rectify the errors afterwards.
Names fairly written are to be attached by Exhibitors to all Florists' flowers; and the Judges are reatrained from awarding say
Medal to such Exhibitions, whatever their merit may be, if this regulation is not complied with. By Florists flowers are meant not Medal to such Exhibitions, whatever their merit may be, if this regulation is not complied
only flowers usually so named, but also Fuchsias, Pelargoniums, Roses, and Calceolarias.

## Che Gaxueners' Cyronicle.

SATURDAY, APRIL 1, 1843.

We have so continually occupied our pages with discussions concerning manures, that some, we fear, regard the subject as more than exhausted. The question, however, is, in our own opinion, but just opened; most of the experiments that have been recorded are rather to be regarded as incentives to further inquiry than as satisfactory solutions of one of the most important-if not the most importantquestions connected with cultivating the soil. Gardeners and farmers are alike interested in it, and alike is, that more expense may be profitably incurred by the gardener than by the farmer-or at least that seems to be the case.
Whatever the value may be of the many artificial manures-and we are the last to question the efficiency of the phosphates and nitrates and sulphates, of guanos, home-made or sea-borne, and all the remnants snatched by the chemist from corruptionwhatever the value of them may be, it must never be forgotten that they cost money. The cultivators of the land cannot make such substances: for them the true laboratory is the farm-yard-their pneumatic farmer will use up what he has got before he goes to market for more. He will spend his money upon labour, and only extend his outlay when all the resources of labour are exhausted; then such agents as antificial manures become invaluable, and not till then. It is most improvident to poison cattle by draining
away the strength of manure into a horse-pond and then to run to market for artificial compounds; it is unreasonable, after wasting money thus, to cry out for protecting duties, upon the ground of the peculiar cost of English farming.
We are led to these remarks in consequence of finding that the country is at last becoming alive to the importance of such considerations, and that gentlemen are in many cases strenuously endeavouring to persuade their tenantry to turn their attention to the bet-
ter preservation and preparation of manure. In Cheshire, Sir Philip Egerton is about to offer three premiums to his tenantry "For the most economical and effective system of collecting, improving, and employing the solid and liquid materials within their reach, adapted to fertilise and improve the land." We understand that one premium will be for tenants under 20l., another
for those under 100 l , and a third for tenants above $100 l$. a-year. We doubt not that so excellent an example will be quickly followed, and therefore we shall at once proceed to state what we conceive to be the most advisable steps for the competitors
The gxeat principle to start from is, that all the The first are seen in the fluids that drain from ordi nury dunghills, the second may be discovered by the sense of smell : for the offensive exhalations of manureheaps are produced in consequence of valuable fertilising substances flying away in an invisible condition. nor smell.

A second and not less important point to be remarked is, that everythiny is a manuring substance
which has ever been alive. The dead remains of animals and plants are each in their way equally valuable. People often forget what the origin is of substances in very common use, and do not recognise the fragments of plants and animals, though they are every
day before their eyes. For example, coals are the remains of plants; soap is composed of certain parts of plants and animals, its potash or soda having been obtained from one, and its fat from the other. Manchester goods are made of threads taken out of plants, just as woollen cloths are prepared from threads pulled off animals ; therefore, cinders, soapsuds, cotton and woollen rags, are manuring substances just as much as charcoal stable-litter, or bones
The third point to attend to is, that all manuring substances must decay, before they can act as food for plants. If a man, in his zeal for gardening, were to all his life, his Grapes would make him no return for so uncomfortable a position. But let the surgeon cut it off and bury it there, the effect would be presently seen in the deeper green and stronger wood of his Vines. Now the obvious reason of this is, that, in the first case, the leg remained alive and could not decay while in the second it had lost its life and "immediately began to rot. So it is exactly with all other things; they must decay before they can become manures. Fresh straw is not a manure, rotten straw is excellent: fresh sawdust is useless, when decayed is of considerable value.
These three principles seem to be those on which the whole art of preparing and economising manure depends. Matter which once had life, whether the carcase of a horse or a basket-full of grubs, an ermine robe or a bundle of rags, will equally become manure; but they must be made to decay, and that being effected, nothing must be allowed to run away in the form of fluid, or to fly away in the disguise of a smell. We conceive that the following plan will effect these objects in the most economical manner

Mark out the piece of ground on which the dunghill is to be made, on a good slope if possible, and close by a pond. Cut a gutter all round, 6 inches wide and 4 inches deep, and puddle it with clay, so as to make it water-tight. Then, at the lowest part, outside the place where the dunghill is to lie, dig a good-sized sink-hole, about 18 or 20 inches deep; let this also be well puddled, and connected with the gutter already spoken of. Things being thus prepared, throw down a layer of such manuring substances as you may have, about a foot deep, and tread them well down; theris sift or scatter over it some fixer (what that is will be explained presently); and finally, water it well. Then add another layer of manuring substances, tread down, sift on the fixer, and water well as before. In this manner go on with layer after layer, till the heap is of the desired height-always treading and watering as directed. When the work is completed, a firm mound of manure will be formed, surrounded by a gutter communicating with a sink-hole

Probably during the operation of making the ma-nure-heap, some water will have drained away; in that case, it will have run into the gutter and collected in the sink-hole. If so, let a labourer scuppet the water out as the work proceeds, and throw it back upon the dunghill. Every morning the sink-hole should be examined, and the drainage that has collected in it be scuppetted back over the heap. If the hole is not large enough to hold all the water that drains off, another can be made near it; none of the properly made. it will heat gently, not strongly ; but If it becomes very hot, plenty of water must be thrown over it, caught up in the sink-hole, and scuppetted back, again, and again and again ; and, whether heats or 6 weeks, a good quantity of fluid of some kind thrown upon it, so as to keep it thoroughly wet, it being at the same time well drained. Pot-boilings, soap-suds, or such refuse, are much better than common water; but urine is infinitely preferable to either. If it were possible to collect this fluid and use it instead of water, from the beginning to the end, so much the better.
By these contrivances nothing is allowed to leak away or drain off, but the dunghill is enabled to become a soft pasty mass, holding fast all that belongs to it, except what might fly away. To catch the latter is the purpose of the fixer, which is as indispensable to the operation as the gutter, and sink-hole, and scuppeting, already insisted on. Now there are many kinds of fixers : oil of vitrio, greether salt or lime by hemselves on any account ), gypsum, and other substances, may be used when they can be had cheap; but some of them at all times, and in some cases all of them, have the fault of costing money. A substitute for them, which costs nothing except labour, is therefore to be sought for. Such substitutes exist in cin-der-siftings, charcoal-dust, good black earth, peat or from the bottoms of ditches and ponds, the smail fragments of wood from the bottom of woodstacks, soot, the brick-dust of brick-fields, or the powder of burnt clay. Some or all of these materials may be had in most places.
Such we believe to be practically the best way of preparing a dunghill, so as to saye everything that is
saveable. It is essentially the same as the method saveable. in Alsace, of which an account has been given
followed in our Volume for 1842, p. 191.- It must be obvious that no harm at least can arise from following our recommendations, which are to be carried out by a sazing of both material and money. Supposing the plan does not answer, it will have put the person who tries it to no other charge than a little labour ; and to so little; even of that, as to be of no moment in either garden or farm. The manure-heap must be made, at all events, and a boy will form the gutters and sinkhole, and keep the heap well moistened while the substance is in preparation.

What we have hitherto said about the "one-shift system" of potting has been in its favour ; and there can be no doubt that, under good management, if the object is to make a plant as vigorous as possible, it is better to avoid all the endless, troublesome details of shifting it from one sized pot into another. No better evidence of this is needed than what we see in nature A plant in the open ground, or in the border of a wellmanaged conservatory, grows fast, acquires a rich deep green healthy colour, and produces its flowers and fruit as soon as it has arrived at the proper age: on the other hand, the same kind of plant, under the same circumstances, managed by the same gardener, but kept in a pot and tormented by shifting, although it may be healthy at first, soon ceases growing becomes yellow and lean and starved, and when it flowers brings forth notbing but apologies for blossoms.

Nevertheless the shifting system has its advantages, "It is not the wish of every cultivator to have his Pelargoniums as large as Gooseberry-bushes, especially when a varied collection is kept up; nor does every one desire to grow plants for Horticultural exhibitions. Beautiful as large well-grown specimens may be, it is not in every garden that they can be properiy accommodated; and where that is the case, it is worse than useless to attempt it, for small well-grown specimens are quite as interesting. For anything that I have seen to the contrary, a plant may be grown quite as quickly by the common method as by the "one-shift system,' with a much better chance of its being established in its pot, and of its blooming in the while.
Now here lies a real objection to the system of putting small plants at once into large pots; they grow too fast for the space of persons having but little room, and it is scarcely to be expected that the possessor of a greenhouse will sacrifice the interior to a small number of large specimens. He would soon weary of their sameness. The lover of flowers wants variety: the diversified forms of nature are what he delights to feed his eye upon; and that he cannot do in a small greenhouse, unless he cramps his plants by frequent shifting from one little pot into another.

While, however, we freely concede this, and admit that it may be more convenient in general to treat plants like a Chinese lady's toes, it does not at all follow that they will be so healthy under such circumstances: the contrary, we are persuaded, is the case. The force of circuunstances may compel a gardener to stunt his plants by frequent transfers from one place of confinement to anothex; and he may, as he often does, by skill and care, preserve them by such means in good health, but he does it at the expense of much labour, and at the sacrifice of all that vigour of constitution which we see in plants whose roots have unobstructed freedom.

We, in concluding this matter, print the remainder "Observator's" letter, in order that he may not have to complain of his arguments having been misrepresented; but in doing so we have been obliged to enter our protest against some of the statements he makes, even in this part of his communication.

Allowing," he says, "t that by the 'one-shift system a plant will fill its pot with roots, yet before that can take place, a great portion of the nutritious substances, by the frequent waterings which the plant must receive, will be washed away." This is far less likely to occur in large pots than in small ones; and is of no consequence, because nothing is more easy than to restore to the soil such matters as are washed away,
"This objection," he continues, "may be removed by liquid manures; but plants that have been long used to liquid manures are like irreclaimable drunkardsthey have become so accustomed to stimulants, that upon their discontinuance they soon begin to exhibit signs of decay, What is here described is very bate, as well as an immoderate, quantity of food given it in a liquid state?
"Should the drainage in the 'one-shift system ' become obstructed, the soil, by the stagnation of the Water, will be soured; and unless the plant be removed into other soil its health will be greatly injured." The same thing happens when the drainage is obstructed upon the common system, and does not affect the argument one way or the other.
"I can say," concludes Observator, "that the practice of inverting a small thumb-pot over the drainage-hole
of the large pot very often proves injurious, for it sometimes fits so closely on the bottom, that a very small space is left for the water to escape, and in spite of the moss, it will carry to the bottom fine particles of soil, which will in most cases effectually prevent the escape of the water, excepting through the hole in the bottom of the thumb-pot. It is preferable to use three or four rather large potsherds, placing the concave side_downwards, and putting a rather thin layer of moss over them, not more than a quarter of an inch in thickness, or it will act the part of a sponge and retain the water." All this may or may not be the case; but it has no more to do with the question of frequent shifting than pruning has.

Since we first directed the attention of our readers to the state of the labouring poor, and the destitution which so frequently results from mere want of employment, without any fault in the individual, we have had numerous communications on the subject from many of our friends and correspondents. Our limits would not permit us to publish many of these, which are replete with excellent practical observations; but we have not neglected to peruse them carefully; and as they one and all confirm the opinions we entertained before on the advantage of letting small allotments of land for cultivation to Agricultural labourers, we shall only extract from some of them such facts as will clearly show the result of numerous experiments of this kind, which have now stood the test of many yearg' continuance. We add them as a confirmation of our own experience, and as a guide to those who may be inclined to follow such laudable examples:An Account of numerous Allotments let by the Marguess of Lansdowne. - The quantity of land let out to the poor by Lord Lansdowne in the parishes of Colne and Burnhill is 500 acres, in allotments from half an acre to two acres each, the number of tenants being nearly 700 . The price per acre is the same as was given by the farmers previous to giving up the land, and varies from $40 \%$ to $60 s$. per acre. The crops chiefly grown are Potatoes, the Cabbage tribe, Wheat, and Barley; the grain and green crops alternately, and generally winter Tares are sown after Wheat, and dug in for Potatoes in the spring, with or without the assistance of manure. The rents are regularly paid, with very few exceptions, and the produce of the land is invariably good. A Horticultural duce of the land is invariably good. A Horticultural
Society in Colne has been the means of promoting Society in Colne has been the means of piom amongst the cottagers by giving prizes annually for vegetables, fruit, and separate prizes for allotment-cultivation and specimens of Wheat and Barley in the ear. From the interest taken in this Society by the neighbouring gentry and landowners I have no doubt that from 30l. to $40 l$. will this year be distributed amongst them."
A much-valued correspondent, Sir Henry Bunbury, who is most zealous in the cause, writes thus:-"Five-and-twenty years ago I began to assign some small portions of land (for I had but little at that time) to a few labourers. In every instance I found that the man improved in his circumstances, and as his circumstances became more easy he became more domestic and respectable in his conduct. With this encouragement I gladly seized opportunities of letting pieces of ment I glady seized opportunities of leting pieces of within my power, I extended the practice very widely: nor have I ever seen the slightest reason to doubt of its beneficial effects. I do not tie myself down to any fixed quantity of ground; generally, I Iet but little (eay one rood) to a beginner: for the young labourer has no money laid by, and rarely owns a pig (that rerum necessarium). But there ought not to be any dry rules about the exact quantity of the allotment, or as to the mode of working it. One sharp active fellow will turn his bit of land to double the profit that could be earned by a dull one. But the crops of the former soon render his practice an object"of imitation, and all around him make progress and improve When there are one or two pigs in the sty, and the land appears in good condition, the advancing labourer gets half an acre instead of his original rood, and so on. Some few of my people have come now to hold one, two, and even four acres-and industrious and thriving fellows they are. But as you ask particularly concerning the size of an allotment, I should recommend half an acre. I find that the man, with the assistance of his wife and children, can keep it in very good condition : nor is he so much occupied by it as to be diverted from his daily labour under the farmer. I am inclined to suspect that gentlemen make the mistake of meddling too much with their allotments as to details. I should say, do not cramp the labourer-let him feel the pleasure of being a free man-stop him when he is going decidedly wronggive him useful information-and encourage a pride in him as to his crops, and his pigs, and the neatness of his ground."

A lady, who has devoted much of her attention to the letting of land in small portions or allotments to poor people who otherwise would have been a burden as paupers, kindly communicated her experience, im
answer to some questions sent to her, of which we wil here give a short abstract. She began with 50 allotments in 1830, and they now amount to 404-varying from eight poles to three, four, and five acres each. Each occupier signs the following conditions:-

> Allotments of Land. rees to let. and

Mrs. - agrees to let, and
to

> of the
of the estimated at
in the "parish and if this rent is not, tend, at the rent of $£$ following, he sgrees to forfeit belore the 11th of Oct. possession of land, buildings, and crops, without imiate notice from the owner of the land.

Also to give up the same at any season of the year if convicted of a misdemeanour before a magistrate, or three householders not renting more than himself.
Also, if the whole or any part is assigned or under-let Also, if more land is rented of any of the land.

Also, if more land is rented of any other persons except the garden of the house he occupies, and to forfeit
double the rent till Michaelmas. double the rent till Michaelmas.

Also, if he removes, or suffers to be removed off the premises, either any hay, straw, or manure, and to forfeit double the rent.
Also, if any land has been' ploughed with horses, and to pay twopence a rod over the rent for every pole so ploughed.
Also; if two crops of the same or different kinds ripen their seed without a green or root crop intervening, to be consumed by the Tenant's family and cattle, or other person's cattle, fed off on this land; and in no case be sold off the premises.
Also, if Game is killed, or permitted to be killed.
Also, if Furze is cut on land not hired.
Otherwise, the land to be occupied till one of the parties give notice in writing to the other to quit and leave, on the day of
Any damage done by a gate being left open to be made good within one week, or his goods or crops seized to the To forf the valuation of two allotment tenants.
To forfeit sixpence for getting over the wall, or a hole
Do. for leaving manure or rabl
Do. for leaving manure or rubbish on the road
Do. for trespassing on each other's or the adjoining land.

Forfeits to be kept and divided between the tenants of the same piece.
In any of the above instances the Landlord shall be at
liberty to re-enter without any process of Law.
Witnessed by Signed by
There have been only four defaulters in the whole number in twelve years: no legal steps are taken against them; the only consequence of default being: the loss of the allotment-they are even allowed to take off their crops. Only eight of the number, who have a cottage and four or five acres of land, and keep a couple of cows stalled up all the year, and some pigs, Live chiefly from the produce of the land. All the rest are day-labourers, and for these from 20 to 40 poles are sufficient: 20 of them have manure tanks. A peculiarity in the granting of allotments by this benevolent lady is, that previous good conduct is not essential to their obtaining allotments. All that are willing to subscribe to the conditions and belong to the several parishes are admitted; and she has found that regular occupation and profitable industry have generally been the means of correcting vice, when not too deeply rooted, and greatly encouraged honesty.
But all this, however satisfactory, is not intended as a remedy for that superabundance of agricultural labourers which we desire to see usefully employed: we must show how the proprietors and occupiers of land may employ more manual labour on their land, not only without loss, but with a certain profit ; thus, ao doubt, increasing the expense of cultivation, but also increasing the produce so much, as to repay the additional outlay with a fair and ample remuneration. If we can do this,

## HEATHS.

IF the following advice to the young Amateur, and a detail of my plan of Heathngrowing, be acceptable to your readers, they are much at your service. Supposing, then, grown Heath, and prefers a bushy, thickly-foliaged plant to one resembling a timber-tree, he will no doubt be desirous of obtaining 100 of the best and most beautiful varieties. He ought therefore to procure two of each; travelling or other incidents may cause the loss of a single plant, and for this reason it is best to have a duplicate. One may be grown for a specimen, and the other to propagate from ; but the latter may live to see better days, when cuttings repretty numerous. In making a selection of plants at the nursery great discretion is requisite, and it is seldom that
those in large pots can be recommended. I would advise those in large pots can be recommended. I would advise ing the sort which he requires; if the foliage is healthy and clothes the stem as well as the upper branches, and if on turning it out of the pot the roots are of a silvery white, it shows that the plant is in a growing state. Such a plant may be set aside, and the remaining 199 should resemble it. I would, however, caution him against a large plant in a small pot, with a tolerably healthy appearance, but a thick woody atem, which when turned out discovers the roote, matted together, and for the mont part of a mandy
colour. Nine times out of ten such a plant will bloom and die; but occasionally it will recover by being repotted, decay not having reached the centre roots. It will, however, lose the foliage for a considerable distance along the
stem, in which case it is advisable to cut it back. Even then the plant in the 48 will have the advantage, having then the plant in the 48 will have the advantage, having
fresh roots, and nothing to check it in its onward course. When your plants are unpacked, supposing it to be March, which is the best time for the purpose, it will save much trouble if they are examined before being placed in the house,
to ascertain whether they require shifting. In this particuto ascertain whether they require shifting. In this particu-
lar the greatest discretion must be used. If the roots are evenly distributed round the pot, it seems reasonable to suppose that a larger pot would suit it. I confess I have lost many a healthy plant by my anxiety to push it on and shift it before it was ready roots of plants, when repotted, seek the sides of the pot in filled up. Therefore, examine the plant closely, by taking out the crocks and turfy drainage; and if the roots do not make their appearance in the same strength in the centre as the exterior, be assured that the plant had better remain as it is, with the addition only of a little fresh drainage. Experience may, however, prevent this trouble, for
there is a peculiar lightness and elasticity to the touch that will show when the exterior and interior of the mass of and an important question then arises, into what sized pot they may be shifted.

There are some gardeners, who, anxious to spur on their favourtes, would not scruple to give them a second size larger; and with some of the freengrowing sorts, 1 admit that not the means of discrimination, and the safer plan is to shift from size to size. In some cases you may obtain August; but if you attempt to force on Erica Massonii, aristata major, depressa, and some others of the slowgrowing 'sorts, which, owing to their tardy movements, cause but a slight demand upon the roots; long before
the latter reach the sides of the pot, they become exbausted the latter reach the sides of the pot, they become exbausted by the continual wash of the water; the mould becomes E. aristata major is in a 48 , be content if, on shifcing it into a 36 in March, it fills the pot during the summer, after having increased two inches in the length of the shoots. Not so, however, with E.trícolor, elegans, and 8 or 10 ins. The former has made a growth wanced two sizes. Bu. in a year, althougting the plant from the 48 to a 36 :-Let the pot be perfectly dry ; make the hole at the bottom rather larger, and place over it a piece of crock; add some smaller pieces half an half an inch. Select some inch in depth. Having collected some small round pebbles of the size of a Horse-bean, mix a dozen with the first handful of mould, that is, before you place the plant in the pot; then insert the Heath, having divested it of fresh mould, and firmer than with other plants ; be very particular that no fresh soil covers the stem, but that it be raised above the level of the sides, so that in watering, the moisture should fall to the sides, and on no account lodge in the centre. Do not water for one or two days and during that time place the plant in the shade. The smal
pieces of crock, drainage-peat, and small pebbles must be pieces of crock, drainage-peat, and small pebbles must be advise that before the plant is placed in the house, it should be staked out in the form in which it is wished to
grow. The tender twigs may be brought down, but when grow. The tender twigs may bey become stubborn and inflexible.-Erica.

DESCRIPTIVE LIST OF CARNATIONS AND (Continued from p. 156.)

Mango (Ely's).-One of the best in its class, the pod being good, and the white pure; of medium size, and the colour, violet purple, well laid on ; it flowers early. properties; with me it is rather deficient in purple; the stripes are broad, and white very pure, Bellerophon (Leightom's). -This stands first in the Lanimpurity of the white being a serious drawback. Princess Charlotie (Turner's).-An old flower, of large size and fine colours;
safe sort to depend on.
Premier (Milwood's).-Raised a few years ago at Derby the white is apt to flush, but the petals are large and well-formed : When clean it is a fine flower. quire Meynell (Brabbin's).-One of the best we have the flower is large, pod good, form and colour excellent. ther loose in its habit; with me second-rate.
British Queen (Elliott's).-White pure, but often deficient in a fair proportion of purple. defect noticed in the preceding variety; when grown strong, however, the colours are better distributed. Major (Spray's).-
short of colour
Miss Thornton (Hudson's),-A strong grower ; flowers large and well marked; although esteemed in Lancashire, it is considered rather thin for Nottingham. Enohanter (Paarron's). - Guard leaves rather too large
in proportion to the others; whit
Rev. T. Gisbourne (Brabbin's).-Raised the same year and by the same person as Squire Meynell, but far in arior Magnificent (Ely's), -A full and large-sized fower; stripes
dark and numerous, crowns well; white not pure. dark and numerous, crowns well; white not pure.
Queen Victoria (Ely's). -A useful flower, though not first-rate.
Cleopatra (Weldon's).-Stripes very dark purple, flowers large and confused, white rather impure; second rate. First-rate (Pollard's). - Well named; the pod is rather short, but the petals, with a little attention, get out
well. The fower is large and finely formed; white very pure, ribboned with broad flakes of deep parple it appears to be shy in rooting, and is very scarce. Platoff(Hall's).-A compact flower, with fine petals; the purple very dark ; white sometimes slightly tinged.
Major Cartwright (Hall's). - This is an old variet whose day is gone by ; occasionally a decent flower is seen. The petals are'thin in substance, and there are too few of them; the purple also is not good.

Mrs. Horner (Ely's). Whis is often exhibited in the heavy as well as the light-edged class. The pod is good, and edging distinct; it is a favourite in
Miss Bacon (Wollard's).-Neatly edged, but too small. Little Wonder (Wollard's): - Very much akin to the foregoing, under-sized
Duke of Wellington (Sharp's): -White pure, and ver finely feathered or plaited ; the guard-leaves are rathe Mary (Marris's). - A large and finely-shaped hea edged flower, sometimes rather too wh barred
Pilot (Marris's). As large and well formed as the pre ceding; it is, however, much clear
tinct. A decided good heavy edge.
Will Stukeley (Hufton's).-Heavy-edged: bars too much, and though still winning in some parts of the country it is certainly an interior flower
Derby Willow (Maw's).-Heavy-edged with dull scarlet, only fit for borders.
King of the Frenoh (Green's). -Much too thin, and, at the risk of being thought severe, I must say, inferior. Horner, butinferior to that flower, the white being impure; still it has a good pod, crowns well, and the edge is well defined.
Matilda (Parkinson's). A large and distinct flower, white good, edge dark crimson; not quite up to the mark. Venus (Hudson's). - Light-edged red, a full
Marc Antony (Benn's). - Rather too thin; the white is Marc Anony and beautifully plaited with dark crimson. Hector (Sharp's). - Rather light.edged, form good, white pure, edging distinct; first-rate.
Comelius (Barrants) - Liave not used much ceremony in my short descriptions of north country flowers, and here I am obliged to find fault with the favourite of the
south. It has a good pod, the white is pure, edged with dark crimson, of a different shade to most others; with me it bars too macls, gnd should it always flower in the me it bars too much, shale, I should pronounce it decidedly second-rate. Colonal Foreman (Barraud"s).-Clean, with a good petal and neat feather
Teazer (Gidden's).-A large and rather coarse flower ; it has, however, fine guard petals and crowns well ; it
stripes down too much, but when in its best state is undoubtedly a "Teazer."
Casar (Gidden's).-Heavy-edged, rather thin, in the way of Marc Antony; an inferion flower.
Criterion (Sharp's). -Neatly-edged, but with a short awk ward pod; flowers medium size, and apt to expand confusedly, requiring much ca
Catherine (Hardy's').-Under-sized, white impure, raised near Nottingham from Bowley's Ann; neatly edged, tingham.

The Figwort.-The fetters of ice in which the earth Fas shackled a few weeks ago had hardly been broken ; a few scanty sunbeanss had but just been playing upon the ground beneath the old oak-tree before our door, when the turf began to sparkle witll the surfaces of a thousand glassy emerald teaves, while myyiad or gogen stars were
to be seen glittering amongst the herbage. It almost seemed as if the wand of an enchanter had struck the ground and suddenly commanded the slaves of lis will to appear
A walk among the thickets of our landlord's park and the deeper recesses of his woods brought more of these
gay visitors to our knowledge, and showed us that no enchanter had been at work, but that the teeming womb of nature was everywhere producing some early and joyous herald of the spring. The lingering days of autumn, protracted into February, had produced no effect upon the hardy wilding which sturdily awnited its appomted time,
and refused to be awakened till the customary frosts lad given it energy to spring into vernal life.
The old herbalists knew the Figwort well, and thought if imbued with great medicinal qualities ; some noixed it
with honey, and drawing it into their nostrils, thought it cured their headache ; others found it hot and dry in the first degree : more sober people pounded it into a paste, and used it as an astringent; the scurvy was driven away by it, as a few said ; and many boiled it as a Spinach, which they found agreeable. Some, however, declared it was an acrid, poisonous thing, blistering the skin and causing leprosy. All these fancies are, however, long forgotten, and nothing now remains of the plant but its beauty.

The Figwort is a sort of Crowfoot, called by some Bo tanists Ranunculus Ficaria, and by others Ficaria ranunculoides; but although it belongs to the same vile race as the Sardoan herb of the ancients, whose blistering poisonous qualities have gained them an unenviable notoriety, it is more than can be said of all fair flowers. It derives its common name from its roots looking like a cluster of small Figs. It leaves are similar to those of the Arrow. pallid spots. The smaller, and delicately mottled sitn der angular stalks; they have three leaves, or rather scales, on the outside, and eight or nine glittering golden petals, dull at the back, but almost metallic in front, where a scale is found near their foot, the sign of the clan Ranuuculus. Many are their yellow stamens, many their grass-green ovaries heaped upon each other in the middle of the flower, and promising an abundant increase. Yet, strange to tell, the seeds are seldom ripened, and that ready mode of propagation, in forming which nature seems to have taken such infinite pains, is thrown aside as worthless, another mode of multiplying its race being given to the Figwort. According to Vaucher, the cuber cles of its roots are of three sorts-the one long and withered, which nourish the plant, another, diated at the lower end, and afterwards producing other plants; and a third sort, which sprouts out from the crown of the root ; besides which it produces in the bosom of its
leaves certain bulbs, which disperse themselves as leaves as the leaves have perished. In the early spring these bulbs are not to be found, but in the autumn they may be seen lying near the bottom of the leaves, shut up in two furrowed sheaths, in the midst of which is a perfect little leaf, bearing at its base a fourth, which itself gives birth to a fifth, and so on. The ground is said to be filled with these little bulbs at the approach of autumn, and they certainly produce an abundant crop when the spring-time arrives.
The flowers of the Figwort hail the sun like the fireworshippers of old: as soon as his beams strike them, " and pour their soft luxuriance on the morn," they unfold ; but when a cloud interqoses, they close apain ; so that you may find the turf enamelled with sparkling stars in the morning, and as joyless as the " mournful, sobersuited night" in an hour afterwards. Gardeners are its sorn enemies, we know not why, destroying it whenever and Dandelion are permitted to flourish; so that its life is and Dandelion by perils, for which its harmless nature gives surrounded by perils, for which its harmiess nature gives
no cause, and from which its short life might have preserved it, for it springs up in March and perishes in May. -R. E.

## ON VEGETABLE MANURES

(By Proprssor Charles Sprengerl. Translated from the German.)
Under this name are comprised not only different sorts of straw or litter, but also those vegetable substances which are used unmixed for manuring fields. I shall first treat of the dufferent sorts of litter, and then of those plants, or remains of plants, which, without being mixed with animal excrement, improve the fertility of the soil.
a. Of Plants used for the Absorption of Animal Excre. ment, and which, thus miwed, serve as Manuren-Those
plants which have to absorb animal fluids, and which are also employed as a soft litter for cattle, are (with few exceptions) used in a un the liquid part of manure In this objects to soak ? way, however, it happens that the materials used for litter are rendered more capable of being decomposed, and of thus becoming a noursheat to crops. The decoraposition of dung, on the other hand, is accelerated by its being loosened by means of the litter, and of a free access for the oxygen of the atmosphere, without which no chemical decomposition is possible. The products of the complete decomposition of vegetable substances are, humic acia, carbonic acid, mineral acids, earths, oxides, and alkalies and since all these belong to the nourishing substances of crops, it is necessary, if we would know the value of different sorts of litter, to make ourselves acquainted with their chemical constituents.
The chief constituent of dry vegetable litter is carbon, which amounts in all cases to more than 50 per cent. It forms, combined with hydrogen and oxygen, humic acid, a substance which every fertile soil must contain in great abundance, not only because it furnishes plants with carbon, but also because it dissolves and conveys the the carths, oxides, and certain saits contained in the soin the requiralisation of alkalies, which easily destroy vegetation ne -as, muca so, that in substance qut indispensable for regetation. Now as humic acia is moshy genera litter, it is evident an they camo agriculture, except in cases where humic acid may be obtained by manuring with mould, mud, peat, ac.; for no amount that could be afforded by the decomposition of solid excrement would be sufficient. Litter is also indispensable, because it improves the soil mechanically; it keeps a clayey soil loose as long as it is not decayed, and thus not only facilitates the access of atmospheric air, but accelerates the evaporation of superabundant moisture.
Besides these great; advantages which the crops receive from litter, 'it ingredients are of equal importance. The effects of these have hitherto excited little notice, for it was not generally believed that mineral substances form the nourishment of plants ; and this explains the reason why litter has either been undervalued or insufficiently appreciated. The true value of litter can only be determined by chemical analysis. If we compare with each other the mineral substances contained in litter, we shall find pretty neary what we have to expect of each in the way of manure, and rega of any sort of sal may matical accuracy. If we next determine the chemical constituents of the food of cattle, and deduct this from that which remained in their bodies, or has been exhaled by the se shall be able to calculate even to pounds, all by the whe from the for But, in order to arrive at that, many experiments are still But, in orde
It is beyond all doubt that that sort of litter possesses the greatest value which contains the greatest quantity of these ingredients in which soil in general is most deficient; amongst these are potash and soda, lime and magnesia, chlorine, sulphuric acid, phosphoric acid, and especially nitrogen. Carbon, which as we have just seen is ang the most important ingredients of out of consideration, because is anoun within a few per cent. more ar all dry litter contains more tban it is equaily unnecessary to take into account the oxygen or hydrogen of litter, as all crops can take up the water of the soil ad libitum.
As some sorts of vegetable matter contain substances either detrimental to vegetation (like tan), or decomposed with great difficulty, such as rosin, wax, and fibre, such substances require a particular preparation previously to being used for litter, or carried on the field, mixed with dung. They require to be well heated, without, however being carbonised, as it is merely requisite that the tannin should be destroyed, and the fibres rendered more tender If this is not attended to they will remain for years in the soil undecomposed, which (as manure is to be considered capital desirable to be quickly circulated), is attended with nuch loss ; besides which the plants whose growla we in tend to acelerate, will derive no advantage from them. have stated before that those sorts of litter are easiest of demosh mitrogen, phosphorus, and containing much mucilage or other substances easily extracted by water. Dry green plants always arrive easier at a state of decomposition than those which are dry and ripe, not only because the texture of the former is more soft, but also because they contain substances which bring on a speedier putrefaction. It is said that litter which has become mouldy is of less value than when fresh; if this be really the case in to evaporated Straw of Corn Plants.-The straw of Cereal plants , most farms, the only litter used, and as far as keeping dry the beds of cattle is concerned, it is the best, because its hollow straws enable it to absorb the greatest quantity of moisture. Its value however as a manure is by no means so great as that of other sorts of litter; there is moreover a great difference between the different sorts of straw in respect of thexr manuring qualities. It may be generally assumed that the straw waich is most nutritious is also the best manure. It manures the better the less it has been subjected to maceration by rain-water

* Humic acid is composed of 36.700 parts of carbon, 4.789 hy
drogen, and 38.512 oxygent

If, therefore, it has been long exposed to wet in a ripe state, it is of far less value than if stored up soon after it has been cut. It is also better if cut green, for in tha case, less of the manuring substances passes into the grain the straw of leguminous plants yields better manure than that of Cerealia, because it is rich in phosphorus, sulphur chlorine, potash, soda, nitrogen, lime, and magnesia.
a. Wheat Straw.- $100,000 \mathrm{lbs}$ of Wheat straw, drie in the air, consist of from 50,000 to $52,000 \mathrm{lbs}$. of wood fibre, and from 48,000 to $50,000 \mathrm{lbs}$. of substances suluble in akali and water, which consequently are also nutritious and soon yield humic acid. Amongst the latter, however there are (according to Boussinganit) but 300 lbs . of nitrogen The mineral substances contained in 100,000 parts o air-dried Wheat straw are :

### 0.241 parts of lime.

| 0.240 |  |  |
| :--- | :--- | :--- |
| 0.032 | parts of lime. |  |
| 0.020 | maguesia. |  |
| 0.029 | potash. | sodi. |
| 0.090 | " | oxide of iron, alumina, and oxide of |
| 2.870 | " silica. |  |
| 0.170 | phosphoric acid. | [manganese. |
| 0.037 | pulphuric acid. |  |
| 0.030 | s chlorine. |  |

3.518 parts of mineral substances or ashes. As therefore 100 lbs . of Wheaten straw contain 3 3 ybs. of mineral substances, $96 \frac{1}{2} l \mathrm{lbs}$. must consist of carbon, hydrogen, oxygen, and nitrogen. The quantity of nitrogen however, is very small; in $100,0001 \mathrm{bs}$. of straw there are merely 3lbs., or in 100 lbs of straw merely $\frac{s}{10} \mathrm{lb}$. ; whence it is evident why this straw is of so little value as fodder aitrogen being essential for animal nutriment.
On account of its woody nature it decomposes slowe than Rye, Barley, or Oat straw; but quicker than the straw of Beans, Rape, or the havim of Potatoes
6. Rye Straw. $-100,000$ parts of air-dried ripe Rye straw contain 48,000 parts of ligaeous fibre, and 52,000 parts of substances soluble in water and alkali; the latte nitrogen, whence it follows that Rye strat 200 parts o ess nourishing then that of When ess nourishiog han concerned, it cannot yield such a good manure; on the f its its greater quantity of potash; but there is less lime magnesia, and phosphoric acid in it.
The mineral substances contained in 100,000 parts of ye straw consist of

| 2.297 |  |
| :--- | :--- |
| 0.978 | parts of silica. |
| 0.012 | " lime. |
| 0.032 | magnesia. |
| 0.011 | potash. |
| 0.025 | " soda. |
| 0.170 | iron, alumina, and oxide of manganese. |
| 0.051 | sulphuric acid. |
| 0.017 | phosphoric acid. |
| 0 | chlorine. |

## $2 \cdot 793$ parts of mineral substance

As Rye straw contains much less phosphate of lime than that of Wheat, it is not so good a fodder for young animals, which require much of this substance for the formation of their bones
-Among the different sorts of Corn straw, that of Rye and Wheat is the best adapted for the absorption of the fluid parts of animal excrement, because it retains for the longest time its tubular consistency. The straw of Barley and Oats is beaten flat by threshing. According to Block, if Rye straw is put under cattle in due proportion to the fodder, and if the dung remain eight days in the stable, lo0ibs.of it yield from horses 961 bs ., frem cows 97 lbs . and from sheep 951 lbs , of dry manure.
. Barley Straw. $-100,000$ parts of ripe air-dried Barley straw consist of 50,000 parts of woody fibre, 1000 parts of wax and resin, and 49,000 parts of substances soluble in water and potash; the latter contain (according to Boussingault) 260 parts of nitrogen
100,000 parts of the straw contain of mineral substances,
3.856 parts of silica.
$\begin{aligned} & 0.554 \\ & 0.076\end{aligned}, \quad$ lime.
$0.076 \quad$ magnesia.
$\begin{array}{lll}0.180 & \text { potash. } \\ 0.048 & \text { poda. }\end{array}$
0.146 " soda.
0.014 " oxide of iron.
0.020 " oxide of iron.
0.160 " phosphoric acid.
0.072 " chlorine.

### 5.244 parts of mineral substances.

As, therefore, 100 lbs . of Barley straw contain 5.2 lbs . of mineral substances, the remaining 94.81 bs . consist of carbon, hydrogen, oxygen, and that smaller quantity of nitrogen. It contains (as is seen) much more time, magnesia, potash, soda, and chlorine, than the straw of Wheat and Rye, and must consequently yield a somewhat better manure. As its texture is not very woody, it is easily decomposed either on the dunghill or in the field. The manure obtained by Barley straw being used as litter, consequently operates for a shorter time than that obtained from Rye or Wheat straw ; but Barley straw is mostly used as fodder, because cattle eat it more eagerly than any other straw of cornplants. According to Block, 1001 bs , of either Wheat, Barley, or Oat straw yield 2lbs. less manure than Rye straw-consequently, from horses 941 lbs , from cows 951 bs .s from sheep 931bs.
(To be continued.)

## RIDGE AND FURROW PIT.

In our Garden Memoranda, we some time since (p. 855 1842) gave a short account of a pit of a somewhat nove construction, which has been in use for the last two easons in the garden of Mr. Allcard, of Stratford Green Our description was then necessarily incomplete, from the absence of any drawing to render the explanation more clear. To supply this deficiency we have been favoured with the accompanying plans by Mr. Croucher, the gardener, who states that this pit will be found well adapted for small places where ground is an object no room being required for drawing off the lights at back and froat, as is the case with pits constructed upon the ordinary principle. It is particularly suitable for preserving through the winter those plants which re-
quire a free circulation of air, because both the back and quant ventilators can be opened in wet weather without any
fron

fear of drip. After the plants are removed in spring, the interior of the pit can be filled with dang or other fermenting material for the growth of Cucambers, Melons, ac. The pit from which the drawing was taken is 40 ft . ong, $9 \frac{1}{2} \mathrm{ft}$. wide, $5 \frac{1}{4} \mathrm{ft}$. deep at the back, and 4 ft . in front. ts anded lato taree compartments, and is heated by a otwater pipe, passing along the front and conuected with A represents
A represents a light open, with the iron-stay pierced with holes to regulate the opening. B, plau of rafter, ander each pair of lights, with a concave centre to carry off the water into the front pipe. c ce, small gutters on each side of the rafter to carry of water caused by evaporation. D, plan of hinge, to which the lights are secured by a bolt which can easily be removed. E , movable board, for placing plants on in winter. F, wooden ventilator, closed. G, the same, open. H, movable shutters, made of painted canvas, to protect through winter the Alpine plants, growing at the back of the pit, in a raised border. The lights shut together at the top with a rebated and tongued joint, which renders them perfectly watertight.

## GRAFTING VINES.

As the period for grafting Vines has now arrived, a few remarks upon the manner of performing that operation may not be out of place. The facility which it affords of changing an inferior kind without the necessity of removing it, by which a delay of two or three years would be occa-
sioned, is sufficient to render its adoption desirable. It is true that inarching offers a surer means of effecting the same object, but it is not in the power of every gardener to procure a young plant of the kind which he wishes to increase; consequently, he must either resort to grafting,
or to the more tedious method of propagating by cuttings or eyes.
Several modes of grafting the Vine are practised, but none appear preferable to that adopted by Mr. T. A. Knight, and recorded in the Transactions of the Horticultural Society. He there states that upon calling to mind the practice of the ancients in employing cuttings, consisting partly of a year old and partly of two year old wood, he conceived it probable that their success in grafting the Vine might have arisen from their selecting grafts similar to their cuttings. He therefore chose three grafts, each having at its base one joint of two year old wood ; these he fitted to branches of nearly the same size but of greater age, and all succeeded perfectly. The clay which surrounded the bottoms of the grafts was constantly kept moist, and the moisture thus supplied to the graft acted very beneficially, if indeed it was not essential to the success of the operation. Another method somewhat similar was equally successful. The grafts were prepared in the same manner, but instead of clay being placed around them, a flower-pot, filled with mould heaped sufficiently high to cover the graft, was placed under each, and they were thus kept supplied with moisture. The and five inches of annusl wood by which means and five inches of annual wood, by which means the junction of the old and new wood-the point at which cuttings most readily emit roots-was placed close to the
head of the stock, only a single bud being exposed to head of th
vegetate.
In the same work there is an account of another method pursued by Mr. J. Braddick. That gentleman found that the stocks of Vines, when grafted in the usual way, bled profusely; and it therefore occurred to him that the proper time for grafting them, without incurring any dange of their suffering from bleeding, would be when they had ceases to flow thinly and rapidly. He accordingly cut the branches of several in that state, and whip-grafted them with cuttings of the preceding year, binding the joints up with bast, and surrounding the latter with grafting clay. The whole of them grew, and he was thence led to conclude young ealthy that the shoots of the stocks upon which the grafts are to be placed have made four or five eyes, until Midsummer Mr. Braddick also found that Vines out-of-doors might be grafted with shoots of the same summer's growth worked into the rind of the young wood, from the time that young bunches of Grapes became visible upon the
stocks until July; while those under glass might be grafted a month later. In neither case, however, should the one ration be deferred after the periods mentioned, on accoun
Che time required for ripening the grafts before winter
Chaptal, in his treatise on the culture of the Vine states that the following mode of grafting is practised in the vineyards of France to replace those stocks which die from age or other unforeseen accidents. "Having selected a healthy stock, it is, just when the sap is beginning to flow, taken off with a clean cut an inch or two below the surface of the ground. The upper portion of the stock which must be perfectly free from knots, is split evenl down the centre and pared quite smooth within, of a sufficient size for the reception of the scion. The latter is pruned to three eyes in length, having the lower part cut in the form of a wedge, commencing about an inch beneath the lowest eye, and gradually tapering to the bottom. It is then inserted as far as the lowest bud into the cleft in the stock; the second bud is level with the surface of the ground, which is drawn close around it, and the uppermost is quite above the soil. Great care is necessary in adjusting the scion, that ite bark may touch that of the stock in every possible point. The whole is then bound round with a pliable osier, which retains the scion in its proper place. The best season for grafting the Vine is just when the warmth of spring sets the sap in motion and it should be performed when the sky is cloudy, with the wind blowing from the south-east or south-west. Whenever a northerly wind or great drought prevails, it is Whenever a northerly wind or great drought prevails, it is wind would arrest the course of the sap by drying up the vessels at the point of union. Neither is it advisable to graft in rainy weather, because the water will trickle down into the incision, and prevent the union between scion and stock. The best time for taking off the grafts is in a dr day towards the end of antumn, when the sap is still They should be cut off with a portion of the old wood ad hering, which will ssist in a porving them until wanted for use. They shasist in preserving them until wante deep in darnp should be plagged two or three inches neither heat nor frost aid kept in a cool cellar, where previously to beinst can penetrate. Jwenty-four hours that part which bing used, they should be taken up, and in water." Chaptal moreover states, that the Vine is thus grafted with so much facility, and the union between scion and stock is so perfect, that no plant appears more adapted for this mode of propagation. $-R . A$.

AMATEUR'S GARDEN.--No. XIII.
A Correspondent has requested information respect ing all the pretty annuals that can be cultivated in this country, with the height and general appearance of the plant and colour of the flower. To give a list of them all would be only to bewilder the Amateur. I have most dere made a selection of those The height of the culivation, especilly small gardeas. several species of the same colour in the same genus, the darkest are placed first; and the character of the plant is
described by letters to the right of each name, as $t$ for trailing. $b$ for branching, and $u$ for upright.

it appears to me that the tuberous roots spread rapidly by the formation of lateral eyes; so that after some years, if the plants have not been removed, they will form large, handsome bushes. The seeds ripen in August, and if sown
immediately they will come up the following year. They immediately they will come up the following year. They
may, be sown either in the open ground, in a shady peat may, be sown either in the open ground, in a shady peat
border, or in pots. The stronger seedlings will bloom in the third season. From what has here been said, it may be seen that there is no difficulty in cultivating this hand some tribe of plants. It is well worth the trouble to grow the better species for our flawer-bord the beauty of spring nosegays.

HOME CORRESPONDENCE.
English and Scotch Farmers,-Is it not too much the fashion of the day to eulogise the Scotch at the expense of the English farmer? Before writers embark in such adulation, they should make themselves well acquainted making the comparison, do they consider the causes the difference of rent paid by the farmers of the two nations? Do they allow for the difference in the size of the acre, the Scotch being about a fifth larger than the English? Do they allow for the difference caused by tithe and poors'-rate? Both heavy it a almost unknown in Scotland. Do they allow for the great advantages the Scotch farmer reaps from his long lease, which enables him to turn whatever capital or energy he may possess to the greatest benefit?-a position of which the English farmer is debarred. I would, in the next place, inquire what great discoveries the scotch armangements or plans of operation? Thorough draining and subsoil-ploughing are claimed for Scotland. Have they not been practised in some of the southeastern counties of England for English English are deserved so long to these few counties? because the English character is not national enough to spread the lilo inion, ar Scotch pursue a different course, and one that deserves to be imitated: they no sooner hit upon a discovery, or adopt an improvement from their neighbours, than it published in all their local newspapers, and claimed as a proof of their national ic benefit. Did they not so borrow and appropriate tile-draining, wedge-draining, drill -husbandry, and green crops? Have they at all improved on the plans thus imported? In the hot southern counties of England, Turnips cannot be grown advantageously on drills; and how a scotch farmer lag h knowing, that broad-cast, forgetting, or rather no north of England and Scotland to grow them in drills. Witness the effects of last summer's heat on these roots in Scotland, where they were as much injured by blight as usually they are in the south of England; and no doubt, were the Scotch farmers annually subject to such summers, they would be glad to resort to broad-cast tillage to have a crop at all. In this case the climate, not the mind, directs the practice. By-the-by, is blight in Turnips the red spider that so annoys the gardener? I almost fancy 1 is, as moisture kills the attar in the Melon frame. Then as to Wheat. Non the Carse of Gowrie, have not the Scotch farmers nearly riven up its culture? Have they not found it a loss rather than a gain? Next, let me introduce their ploughs --their far-famed ploughs, of which they boast so much. Were they not tried at the great agricultural meeting the year before last at Liverpool, and last year at Bristol, and in both instances found wanting? requiring nearly twice the draught of the poor despised English plough. Next, com pare the cheese, the butter, and the hams of scotland with per cent. lower in the market? -the place of all others where quality finds its level. I might go farther, and show the deficient practice of the Scotch farmer in breed ing and feeding; but I hope I have already said enough to induce reckless writers and speakers at public meetings to reconsider the subject before advancing such erroneous comparisons.- [Our opinions upon this subject are recorded at page 160 , of the present year.]
Cattle .-I observe at p. 157 that "C.D." says, "that heep kept in the same pasture with cows do not injure the butter." In this he is much mistaken, for a housekeeper, who has had 30 years' experience in the dairy informed me that she could tell by the nauseous flavour of the butter, when sheep had been feeding in the same park as the cows, particularly if it was dry weather. In this case there was neither an

Enclosing Land from the Sea.-Having lately perused two interesting articles upon this subject, at pp. 115 and 175, it may perhaps not he uninteresting to your reader to know what is going on on the eastern coaster tract of In the reign of King Charles the said to contain 2,200 acres, situate in the marsh, in land, said to contain Somercotes, in the county of Lincoln, the parish of North Somercotes, was granted to Endimion the royal bedchamber, which Majesty's gentlemen of this day, its name of "Porter's marsh land retains, to marsh was subject to inundations, Marsh. This land or the year, (the Equinoxes,) by the at particular times of the year, sea; but by an act passed in the year 1630 , an embank ment was made by which the sea was electuary kept out was recovered, a part of which forms the subject of this
article. This property has at various times fallen into different hands, and amongst the rest, a considerable portion, say 900 acres, came into the possession of the Ear of Yarborough, who a short time ago offered tract of land called the "Titties," or derelict land, said to contain 400 acres and upwards, for sale, when the whole was purchased by Messes. Pyr and Waite, two solicitors of Louth. They soon made the property change hands in convenient they to pretty considerable profit to themselves, reserving about 100 acres of "Porter's Marsh," and the whole of the "Titties" or rich "Salt Marsh." These enterprising gentlemen are now about to inclose the whole of these "Titi" "Salt Marsh" by raising a considerable "Fifties," or "Salt Marsh," by raising a considerable embankment; $M r$. Cor the purpose of surveying and levelling the same; and it is understood that he has already ling the same; and portion of the works. A public notice completed that portion advertising the works to be finished has likewise appeared, advertise g commenced early in the by contract. They are to be com ne slightest doubt but that this marsh, as soon as iuclosed will beacon of first-rate quality. This part of the coast is supposed to take its name from the circumstance of the first body washed on shore on that part after a severe storm. When the embankment is finished, it is determine to inclose a similar but more extensive tract of land in the adjoining parish of Granithorpe; thus affording ample employment for some time to come to a number of poor, and a considerable profit to the undertakers. -An occasional Reader
Effects of Ammoniacal Liquor on Grass.- About this time last year I tried the following experiments with ammoniacal liquor from the gas-works, and I send you the result for the Chronicle:- watered my lawn with ammoniacal liquor, diluted from half-and-halfoed. In many places, as might be supposed from the strength of the mixture, the grass also. Not so the daisies, plantains, and other weeds. Those places where the grass was de stroy far far this might have been fores be spain, in so short pate that the tor do l perceive the grass in thee, covered any part to be improper what it was before the application. stances, I now propose ind Curly (crested) Dog sur it. Can yougest anything better? I presume that wood-ashes would be detrimental better? I presume that wood-ashes would we detrimental after the dressing of ammoniacal liquor, which 1 take to have the like qualities.- ${ }^{\text {and }}$. The effects of gasour andre wo r transient, but always, as far as our water, unfixed, are transient, but
Soot as a Manure for Pines.-Hzve any of your care soondents ever tried soot as a manure for Pines? I am induced to ask this question by observing the other day whilst shifting my Pines, a plant with the roots very much matted at the bottom, and altogether in a more vigorous state than the others. On further examination, I discoversed that by some oversight it had been placed in a pot containing a small quantity of soot. -Scrutator.
Bees.-To know that Bees' eggs are transmutable is of greater importance to Bee-keepers than they are aware of. Were I not about to make a few remarks on the managemont of Bees, I would not now place my opinion in opposition to that of Mr. Wighton, who, with Bonner, seems th think that different food or treatment cannot change the sex of Bees. Perhaps be is not aware that proprietors f sheep means of different food of seep an ce increase of male than of female and the "Quarterly Journal of mon " it said whet When animals are in good griculture it if sully supplied with food, and kent from condition, plentifully sup do they, and likely to breeding as far if they in or produce printed pasture, No human ace, and prov w ark in changing being can un ar
 . Our question 15, however,- Are Bee likely that the mutable? Mr. Wighton says, "It is more likely that the queen owes her development to the size of the cell in ell H she jelly, administered by the Bees; still it is open to obection," \&c. Very open, indeed; for the queen Bee is 14 days only in the cell, whereas the common Bee is 21 days. Hence I affirm, without fear of having my position overturned, that there is something put into the cell that accelerates the growth of the queen. Mr. W. says, "Bees may have eggs in store that produce queens; this, however, is not very likely;" for, he might have added, that the Bees could not sit on them without hatching them. "Huber asserts," continues Mr. W., "that working Bees deposit eggs which may, in such cases, produce dead Bees." One experiment will suffice to show that the change of gender takes place from something added to the egg or grub by the Bees. When from one of the first two swarms we take away the queen, the day after they are put into empty hives, we find that the queenless swarm, after searching one, two, or three days, begin to make royal cells by adding wax to common cells (Mr. W erred in saying that they are not so deep as royal cells generally are) and put a white, milky, gelatinous substance around the er grubs, which substance is never used for common Bees. And now comes the cimax. This queenless swarm rears a queen or queens from an egg or eggs in 14 days -7 days sooner than the

Bees of either swarm when the old queen is not taken from them. I may state that the Bees cannot produce a queen sooner from a grub three days old than from an egg one day old. Both are 14 days in the cell after the gelatinous substance is added ; and that if the substance is not added on or before the foarth day, before the grubs are four days old, no queens are produced; which proves I will hereafter point out the great advantares that Beekeepers may derive froma a knowledge of the transmutability of eggs.-A. Pettigrevo, Wrotham Park, Barnet. what is the Agrimary cause of Bees storing up honey, I shall, according to promise, make a few remarks on his previous communication at $p .129$ respecting them. He
says, "It appears to me that Bee-keepers do not make sufficient allowance for their own bad management, when sumcient allowance for their own bad management, when
the system which they adopt fails of success." It is true that no one has a right to exclain againsta system until he has given it a fair trial, but afterwards he is free to do so.
I was, perhaps, amongst the first to find fault with Nutt's I was, perhaps, amongst the first to find fault with Nutt's
system of Bee-keeping; since then, many other persons system of Bee-keeping; since then, many other persons
have done so, and though we occasionally hear and see have done so, and though we occasionally hear and see ways put faith in them? For aught we know, such statements may' be made by those interested in the sale of
Bee-hives. It may be said that 1 am strspicious - but then Bee-hives. It may be said that I am staspicious; but when
doubtful statements appear under fictitious signatures, doubtful statements appear under fictitious signatures,
there is room for suspicion. Again, "A." states " that he there is room for suspicion. Again, "A." states, "that he
is not so well pleased with his oid straw-hives," because he lost a swarm from one of them, "after his servant and himself had a run of a mile." This might also have happened with his collateral boxes, although he seams to think
otherwise. The next and most important part to notice, is otherwise. The next and most important part to notice, is
where "A." says, "I think that the Bees, in closing the ventilators, really display great sagacity ; they know that if the hive is very hot, the Queen-Bee will deposit ber eggs in the cells, and thus the species will be increased.
But the propagation of the species is not the which we keep Bees." Respecting the "sagacity" of Bees, I have, at present, nothing to say. It is enough to mention that they cannot construct their cells, nor rear their brood without heat; and experience tells me that But supposing that the highest temperature were required for the brood, and that the hive were kept cool to prevent it? assuredly not. On the contrary, more would remain at home to increase the heat, instead of being amongst
the flowers collecting honey. As regards "t gation of the species," if Bees were long-lived, there might be truth in "A. ${ }^{\text {'s }} \mathrm{s}$ " statercent; but as they are plies the places of the dying Bees, a strong bive moreover, to the number collecting honey. I wish what I have said I may mention that I differ in opinion froma "Agger," respecting the primary canse of Bees storing up honey he conceives that it is solely "to support them in bad o cold weather :" though this is the common belief, still it may be asked, if we had perpetual summer, would Bees
neglect to store up homey? it is almost useless to say they neglect to store up honey? it is almost useless to say they
would not. As Bees in hot climates collect honey during the whole year, so they would with us if we had no winter. Hence I conclude that they have no real instinct, or foreknowledge of winter, and that the primary cause why Bees atore up honey is to enable them to increase
their species. I am sorry to say that their increase is their species. I am sorry to say that their increase is
often weakened by the Bees breaking off (swarming) into small communities, at certain times, when there is no chance of collecting store for winter. Though this propensity does not show much "sagacity" in Bees, still it tavours what I have just stated, viz., that they have no
instinct, or forethought of winter. I may add, that it is a great obstacle to keeping them. Although so much has been said about cooling Bee-hives, I may safely state, that more injury is done to Bees by damp and cold than by especially weak ones, ought to be kept warm by extra covering and feeding. Since the above was written, gentleman who has kept Bees for twenty years informs me that he has "set Nutt's boxes aside, and laughs at me that he has "set Nutt's boxes aside, and laughs at obtains."-J. Wighton.
Bees. - Dr. Bevan begs to inform "M. A. P." that the dislodgment of a family of Bees from a common cottage hive, at this season of the year, is an operation which fore recommends "M. A. P." to postpone it till the latter end of summer, when, if the family be populous and the hive well filled with combs, it may be readily accomplished by driving, a full description of which is given at
page 185, of the "Honey-bee." Whether a family be page 185, of the "Honey-bee." Whether a family be
supered or nadired, the entrance should always be in the inferior box or in the floor-board.- Llanferry.
Toads,-I am surprised that Mr. Beaton has never seen toads destroying woodlice. That they do kill them, When confined in a Cucumber frame, I am certain, be-
cause I have repeatedly seen them do so in the heat of cause I have repeat
summer.-J. Smec.
On the Education of Gardeners, No. 1.-In the earlier periods of our history, when extensive combinations of fessional rights, the bond by which large bodies of youth were united to a trade for a certain number of years, was rencered subservient to the purposes of the nation or a stituted a powerful engine in the hands of enterprising
leaders. At a later era, the more legitimate object of the system was adhered to, and modern exigencies have exprofessions, and to those engaged in gardening. It is difficult to ascertain at what precise period the plan men of London are known to have employed appren tices so early as the thirteenth and fourteenth centuries
but gardening must have been greatly raised in import ance above the position it occupied at that time, before apprenticeship could have been adopted as a mode of instructing its agents : and it is only since horticulture has become so widely spread, that the influence of apprenticetion. To determine the evils or benefits of any system, necessary to acquaint ourselves with the ends it is intended $t 0$ answer, and its efficiency in producing the results con templated by its establishment. Horticulture, both as
a science and an art, is one of the most intricate professions which at present exists, and involves a knowledge of greater variety of subjects than almost any other isolated
occupation. The numerous details of some of these are continually changing, and others cannot be mastered in whole life-time: but the general rudiments on which all
are based, and to which every minute particular may be referred, may, with the ordinary operations needful to be understood, be successfully acquired in rather less than 10 years. A desultory mode of studying any subject is universally admitted to be bighly injudicious, and calculated to cause failure. Gardening is not exempted from this rule. By working in several places, according to circumstances, and pursuingthe same or a very remote branch of inquiry in each, without passing through the regular routine of labour and investigation, the young beginner is completely uneminence in his profession which he might otherwise have attained. Hence will be seen the value of apprenticeships. They secure, in the first instance, a qualified teacher, who young man committed to his charge. They next afford guarantee that the moral conduct of the pupil will b strictly watched, and that, at a season when he is mos exposed to danger, and especially susceptible of injurious of these, and the employer will be attentive to the add tional advantage is gained by the fact that the apprentice is placed in each department in the proper order, and that he thus Anxious to anticipate all that may be urged against ap that they render the profesion too erclusive ad, if ten that they render the profession too exclusive, and, if gene
rally regarded as a passport to distinction, shut out those who have not gone through this preliminary stage. We entirely disagree with such an opinion. Nothing is mor to be desired than a clearance from the ranks of gardeners late in life, either from misconduct or vacillation of purpose, and who very rarely bring anything but discredit and disgrace on the majority of the profession. We should b sorry to insinuate that there are not some respectable in
dividuals of this class; but it is not to be doubted that dividuals of this class, but it is not to be doubted that those only who have begun to gather information on its different heads at their nirst starting into the world, when the mind is most vigorous and apt to receive impressions, can ever hope to excel in an art which requires such long and assiduous study. And we are of opinion that both means of at which apprenticeship commences, and tho ductive obtaining knowleage to mitions can supply It will perhaps be objected that gardeners seldom per sonally concern themselves with their apprentices ${ }^{\text {wel }}$ hese eilher morally or professionally. On the former of tain beforehand the character of the gardener to whom he confides so serious a trust as the management of his son; and if he neglect this, it is easy to decide where the responsibility rests. Of the culpability of gardeners in neglecting their apprentices we may hereafter have to speak. A present, we shall observe that too much is sometimes ex pather than an active agent in his own tuition.- $K$.
The Names of Flowers and their Pronunciation.The introduction of many new plants, and the production of many varieties by bybridization, have called forth much ingenuity in the invention of names. Even to learn all these requires some attention and a retentive memory Moreover, the old-fashioned names, by which, in my younger days, 1 was accustomed to call my flowers, have I ano quite au fait at calling my ancient Heartsease Pansies, and I never think of applying to a Princes' Feather a name less than Amaranthus. I have also discovered and my Convolvulus major has become an Ipomea. offer no complaint either against the more correct clasel
fication of plants or the application of their specific names fication of plants or the application of their specific names; the use of old ones, would teach our gardeners how to pronounce them ones, would teach our gardeners how acquired some knowledge of the classics, which I have not altogether forgotten. I say unfortunately, because my ears are sorely grieved by hearing these names so should be on the last syllable but two, (the antepenultimate, to place it on the last but one (penultimate) ; thus, your gardener has Tropæólum, Arbútus, Eutóca, Periploca, \&cc., all wrong ; and when, on the other hand, the accent should be on the pennltimate, he lays it on the thepenultimate, giving us E'rica, OEn6thera, likewise
wrong. Our fair friends trust for their mode of pronun-
ciation to the gardener and nurseryman, on the principle the who knows most concerning the flower should know best what it is called and how to cail it. I once nouncing a name, and her gardener chose one, she should choose the other: this, I grant, is rather too sweeping. When we see what complications of Greek and Latin are called into existence, and how they are forthwith mision. Had Sheridan survived to this day Mrs. Mancia would have transferred her "allegory from the banks of the Nile" to "oracular" pronunciation in a garden.-Agger blame gardeners for noeping a charge. It is very unfair to hawe gho her not having a classical education; and when they are wrong. We will answer for it sem right would be very glad to be instructed in such matters. Besides, it must be recollected that gentlemen themselves ften make a pretty hash of quantities. Did our corres pondent never hear Arbūtus or Anemöne in good society;

## $f$ Burke ?

Forcing Roses.-With this you will receive a small box tion they may be grown by the cheapest and simplest medns.: They were cut from low standards, worked on the Dog Rose (Beaton says, never use the Dog Rose stock for foroing. ! D. and forced in a pit 20 feet long, by 10 feet
wide, kept quite close; under which treatment the folige is well developed. "Prince Albert" is the very best and earliest forcing Rose I know ; plants placed in the forcing pit on the 12 th of December were in full bloom on the highly fragrant. The pit in which these were grown is just high enough to allow one to walk along the centre, ighted about seven in the morning, and excent in cases of sharp frost, is suffered to burn out towards the evening Before being lighted in the morning, water is poured in through the rose of a watering-pot, 80 as to saturate the ashes, by which means not a particle of dust escapes. being kept cool at night. The lighting of the stove in the morning is like sun-rise to the plants; they are syringed every morning at nine, and in the evening at four. An ron pan of water fits on the top of the stove, and creates March 16 . TThe blooms received from Mr. Rivers were extremaly beautiful, and consisted of the following ter - Princesse Helène, pale cream colour, very swe ; tolus, like the last, butless sweet and not so fine a flo Duchesse de Meckenburg like Jaune Desprez and smell Dy mote like Provins Rose : Gererat Allaid a fine sent double, deep rose olour very iuret ; Prince Albert a dan rose, resembling the Tuscany, and sweeter than any; Elize Nauage, arres not sweet; Charles Reybaud, like a pale China, pretty,
but not very sweet : a nice flower: Moiré, somewhat fleshcoloured, a fine large flower, not very sweet; Bougéri, a good flower, of a French pink colour; Nina, something like the last, but not so fine a flower.]

Euphorbia jacquinifora.-The treatment of Euphorbia jacquiniflora recommended by Mr. Beaton at p. 160 , is, I have no doubt, a good one, where Iarge specimens are desired; but where the houses are small, as in my case, I have been obliged to adopt the following plan, which bas answered remarkably well. As soon as the plants have done flowering I cut them down to within six or eight eyes of the bottom, and keep them rather dry until they have made shoots about an inch long, when I shake the mould from them and repot them into 32 s , the same ize as they were previously in; I then let them grow until they are about two feet high, when I bend down all the newly-formed shoots, and tie them to the original stem, which causes them to break forth again at the principal bends: not a naked stem is to be seen, but the plant is covered with foliage and flower from top to

## Trope'olum tuberosum.-If your correspondent "A. K."

 desirous of flowering Tropæ'olum tuberosum, he may be tolerably sure of succeeding if he plants the tubers in rich, deep, retentive soil, not too much exposed to the sun. In my last place, I tried it in every variety of soil and situation, in doors and out, and I could only succeed in flowering it by the above means. It was planted in the border of a south wall, but owing to the proximity of shrubberies, backed by a number of Oaks two hundred years old, notwithstanding the confined situation, and the dampness of the soil, a row of them grew luxuriantly and lowered profusely till cut off by frost. At the same time I profusely, patches, some ood south wall ; all of which plants became only ax inumbrance a dozen flowers; while a third lot, in trellis pots in the greenhouse, showed no symptoms of flowering at all. They should be planted about this time, and provided with good strong branchy supports, which they will soon cover when they begin to grow. Before planting, the ground ught to be well broken to the depth of 18 inches or two reet; from want of this precaution the beauty of many a good flower is lost.-J. Halliday, Lee's NurseryThawing Plants.-Although agreeing with Mr. Ayres as to the injury produced on frost-bitten plants by a too
sudden transition from cold to heat, I doobt whether what he recommends has half the virtue ascribed to it; and 1 should be glad to learn whether any of your readers have actually determined it by pursuing the system as others in similar circumstances were left to themselves.
J.'s evidence about his Heaths is not conclusive, since is well known that this tribe, if not in full growth, can their favour, for when frost is not charged with vapour it does far less injury, as any one may have remarked who witnessed the mischief sustained by Evergreens in the winter of $183 /-8$, in low situations, compared with others on higher grounds. As I live in a low locality, there is not autumn frosts; and I invariably water French Beans, Dahlias, \&c. ; but I oannot decide whether it has the desired effect or not; if the plants thus treated recover, severe frost in January, 1841, I had a great many Pelargoniums placed in a large Vinery, and the flues not being clean, I was unable to keep a sufficiently high temperature to prevent those near the glass from being frozen; I watered them with water of the same warmeth as I generally perature in the body of the house was several degrees above the freezing point; the plants did not all die nor hat I judged it best to throw them away. I have had Pelargoniums repeatedly frozen without sustaining any injury, but on such occasions I apply no fire to them, unof Mustard in a cold Vinery, which, on the morning of the 6 th inst., were both frozen; I watered one of them that which I did not water recovered, the other did not. I am in the habit of placing pans of water under my Apricot-trees while in bloom, having heard it recommended is derived from it Is such a custom common, and in what manner does it operate ? - J. M.

Climate in the North of Scotland.-Mr. Proctor re marks, at p. 117, that one would suppose the climate of Edinburgh to be milder than at nverness. Ithink, as favourable as those near Edinburgh, and that our fight sandy soil is more suitable to tuberous-rooted plants that sandy soil at Holme lying upon gravel must be well suited for tuberous-rooted plants during winter ; and I think, from the following facts, that Tarbet Gardens in Rossshire are, with few exceptions, as favourable to general
vegetation as any in the north of Scotland. In 1835 , Almonds and Mulberries ripened; Apricots and Peaches bore well ; there was a good crop of fine Figs: Maurán dia Barclayana, eight feet high, survived the winter; Mag nolias flowered, and Dablias lived through the winter without protection. Asparagus was cut from the open
ground ten days earlier than in the neighbourhood of ground ten days earlier than in the neighbourhood o
Edinburgh. His Grace the Duke of Buccleuch pronounced the Figs, Peaches, and Apricots to be as fine as his own at Dakkeith.-John Ross, folme Gardens. Pinus Laricio.-I find rabbits destroy this species, while they do not touch the common Scotch Fir; neithe do they, as far as my experience goes, attack the Wey mouth Pine] or st the Silver Fir, but they eat the Pinaster $-J . R$.
The Aucuba Japonica.- This beautiful plant is no grown half so extensively as it deserves. It is easily
propagsted, and is well adapted for the purpose 0 covering the ground under trees in extensive shrubberies with a dense and beautiful foliage; and when planted in masses in a rather sheltered situation, or mixed for the mon and Portugal Laurel, Ivy, or Laurustinus, it forms one of the most pleasing objects in nature. $\quad . J . T$

Vine Borders.-Although aware that your columns ar too valuable to admit of many repetitions, yet I am tempted to offer a few remarks on Mr. Roberts's Treatise on the Vine, review is composed of 3 loam: this, in commended by Mr. R. is composed of $\frac{3}{4}$ loam: this, in my opinion, is excellent advice. Manures are too absorben of moisture for this chmate, as well as too valuable, to be used with an unsparing hand; top-dressings ultimately are altogether another affair. Loams, however, in point of range, that something more explicit is necessary-espe cially with the young amateur; and is is to be lamented that, in the present imperfect state of Horticultural know ledge, we have sot a more defince mode of conveying our ideas on that head. Mr. R. recommends "strong loam." By this, I presume he means loam in which the clayey principle predominates. I much doubt the proviz., 30 inches. Water percolates but slowly throug strong loam," and I cannot but think that, in capricious seasons, the depth is too great by a foot. The rest of Mr. R.'s directions as to compost are, as I think, very good. I see no reason, however, why the turfy loam should not be thrown into the border as it comes from the field, if in a dry state; more especially (as Mr. R. very justly observes) "atmospheric air is of incalculable benefit the depth of fermenting material recommended by some practitioners for covering the roots. Mr. Roberts, for one, recommends 30 inches; I find also in a description, of the course of culture pursued at Oakhill some few years ago, from a diary kent by Mr. Forsyth, in "Loudon's Magazine," that the gardener used a foot of Leaves, with another foot of hot dung, and that the whole was covered with reed mats ; the heat of the fermenting matter, after the Vines had ber remained in the border until the Grapes were nearly mipe How can this be reconciled with the necessity of a free admission of air to the riled with the necessity of a free trees and bushes killed, or seri have known repeatedly, earth above their roots. Will it be argued that the com
parative porosity of the material makes the difference? extent above the roots of Vines, why not force early Cucumbers, Seakale, Asparagus, \&sc., on the Vine border, and thus kill two birds with one stone? I remember about 20 years since, going with a friend to see the forcing for 4 early Black Bamburgh Gares - was then note for early Black Hamburgh Grapes. Here we actually
found the very thing alluded to, viz., forcing Asparagus, \&cc., on the Vine border. The houses were in a dilapi dated state, and several panes of glass were represented by wisps of hay and rags. Yet the early Grapes certainly
looked very well. I have little doubt but that "shanking" is caused by a sudden lowering of the temperature of the soil, by heavy rains, or by a series of unusually cold weather, at the very time when the greatest demand is made on the catering roots. The young spongioles in most important period, the soil becoming lowered, in all probability, after heavy rains, 10 or 15 degrees. In conclusion, let me ask, is the "shanking" of Grapes known
in the vinevards of the South? - Robert Errington, Oulton, near Tarporley
Garden Frames.-For the encouragement of those cottagers who are anxious to possess garden frames, but by caxnot go to the expense of having their cig glass may be had of glaziers for a very triffing sum-(indeed a good deal may occasionally be gathered from the refuse which the glaziers throw away, and may afterwards be cut alcost as evenly as with the diamiond, simply by holding he glass on the even edge of a piece of red-hot iron-a stand this] ; when they are easily put into the frames with little glaziers' putty 'me of whing and linseed oil Th "i it f , 6 mide an
 o lator fixed in it ; by which means the expense of heating in this part of the country is not more than $2 d$. per week. - Cottagers' Friend, Dewsbury.

Fonomical Pump-"Airiculs" at 174 , asserts that the pump, for supplying forcing houses, which he there describes, is superior to the one alluded to by myself at p. 22, and states, moreover, that it impos sible for water to be conveyed to the adjoining houses without. an extra pump and cistern. In this he is mistaken, as the pump referred to discharges the water cises my idea of covering an ornamental object with creepers; but where harmony is concerned, such an occurrence is by no means rare. As for his cautioning others, lest they should fall into a similar error with myself, I can only say that the pump has answered our one upon his principle would be at least three time greater than mine-Snowdrop. [Here this correspon. dence must end.]

## PROCEEDINGS OF SOCIETIES.

 elected. Sir F. Mackenzie presented a statement of his plan for by public subscription, at an estimated sum of 117,297l.-H. R. Sandbach, Esq., communicated his offer of any quantity of land in mental farm, provided it were managed under the direction of the the recent loss of Turnip-feeding sheep in Northampton, in co sequence of an accumulation of red-water in the abdomen; and
that he had understood that the following recipe had been em ployed with the greatest success : 6 oz . Epsom salts, 4 oz. nitre when new-milk warm, add 4 oz. spirits of turpentine, $\frac{1}{\text { a }}$ oz. bole Armenian in powder; mix and shake the whole well together The sheep must be bled before administering the medicine "When it is to be given to a large number of gheep, they
must be taken from the turnips, or whatever they are feding on, and put into a pen or fold yard for two hours before it is
given. Then a small horn should be provided that will just hold given. Then a small horn should be provided that will just hold
the quantity proper for eack sheep. Let the botlie be well shaken each time it is poured into the horn. This method of giving dime. They must be kept from food two hours after the medicine is given; after which, they may be put in their pasture as usual.
When this disease is so severe that several die every day, it will times or more, if thought proper, and to change their diet, and bleediss, has been found a powerrul preventive to most inflamma tory complants wheh slreep are liable to, while feeding on tur nips, of of recent experiments made with Grano in varrous parts of the comintry, Capt. Shedden having presentea a box contaiming
some fine lied-Peas grown by him last year, a request was mad that he would favour the Society with information of theur his
tory and cultisation. Mr. E. Solly, Jun., presented a copy of his Rural Murray, his Trials and Efrects of Chemical Fertilizers; Mr, A. T.ow, his treatises on the Potato Crops, and the Cultivation of

Dec. 16, 1842.-Dr. W. H. Willshire in the chair. Donations o British plants were announced from the Liverpool Natural His
tory Society, Mr. J. Tatham, and Mr. W. J. West. Mr. A Gerard presented a small conection of plants from
Dr. Lhotsky read a paper on the limits of vegetation.
following donations were announced:-British plants from the Royal Horticnltural Society of Cornwall, Dr. Ayres, Mr. J. Mer-
rick, Mr. J. Brown, Mr. W. Baxter, Mr. T. Twining, jun., Mr. T Beesley, and Mr. J. Goodlad, jun. British Fungi, from Mr. A
O. Stephens. The Rev. W. H. Coleman presented a specimen of Carex Boennhausiana (Weihe), found by him in trerts.
Jan. 20.-A. Gerard, Esq., in the chair. Donations to the library were anmounced from the Boston Natural History Society,
the Manchester Geological Society, the Academy of Natural the Manchester Geological Society, the Acadeny of Natura
Sciences, Philadelpbia; from the President, and from Messrs, E

Doubleday, W. Baxter, and S. P. Woodward. British plants had
been receeved from Mr. J. Buchanan, and British Mosses from Mr. W. Gardmer, jun. Mr. R. Embleton presented a specimen of Majanthemum bifolium (De C., Convallaria bifolia Linn.),
found by him at Howick, in Northumberland, A paper was read found by him at Howick, in Northumberland, A paper was read
from Mr. W. Gardiner, jun,o, on the localities of the rarer Alpine Hypna. Thapaper was accompanied by specimens.
ROYAL CALEDONIAN HORTICULTURAL SOCIETY
ROYAL CALEDONAN HORTICULTURAL SOCIETY.
March 2.-The spring meeting was held in the new hall of the
Experimental Gsrden, Inverleith. The followng prizes were Experimental Gisden, Inverleith. The following prizes were
awarded - For the six finest and newest varietses of Camella, the silver medal was awarded to Mr. Alex. Smith, gr. to W.
Forbes, Esq., M. Po', for C. Sweetiz, Donckelaeri, conspicua, Ber-
nardi, splendens, and americana: 2 , Mr. J. Young, gr. to T. nard, splendens, and americana: 2, Mr. J. Young, gr. to T.
Oliver, Esq. For the three finest-1lowered New Holland plants,
the silver medal was assigned to Mr. Young, Newington Lodge for Pultenæa subumbellata, Epacris impressa, and Hóvea Celsi The display of Hyacinths was splendid, all being grown in pots.
For the sIX finest the medal was voted to Mr. Young, the kinds beng La grandc Vidette , tall, with wery large bells, La Dame
clu Lac, tubifora. Blandina, Prince of Orange, and eclatante du Lac, tubiflora, Blandina, Prince of Orange, and eclatant
parfate. a second premium was assigned to Mr. J. Thompson,
or, to W. Keith, Esq., for La grande Blanche, Lord Wellington
prince Prince of Waterloo, Porcelant Sceptre, L'Ami de Cœuur, and
Minerva: a third premium to Mr. J. Addison. gr. to the Earl of Wemyss, for Hercules, Lord Wellington, Quentin Durward per basket, filled with numerous sorts in flower, for exhibition only, from the Leith Waik Nurseries, was much admired. For
notice relative to the desirable properties of Helleborns odoratus, and Cýclamen vernum and coum, as very early and hardy sprin Forrester, gr, to Capt. Falconar. A number of other fine plants decorated the hall, and added to the interest of the meeting Some beautiful fruticose exotics, in foll bloom, were sent for
exhibition from the inverleith Nurseries, particularly Hóvea pungens, Epacris microphylle, a double-flowered Azalea, and a hybri Rhododendron, between $\mathbf{R}$. arbóreum and catawbiense. Mr. Addison exhibited a plant of the lovely Dodecátheon Meádia, in fall
flower. Mrs. Brown, Primiose Bank specimen of Acacla affinis; Mr. MacNaughton, Edmondstone
fiow and Mr. Smith, seeding Camellia, having the habit of myrtiolia and Mr. Snith, a seedling Amaryllia, marked as hybrid between
Johnsoni and psittacina. Several curions specimeng Epiphytes aad Ferns, and cultivated in inverted positions, were saspended from tri angles, and attracted much notice. These were from the
Society's hothouses, under the charge of Mr. J. M'Nab, A col
N. Nater lection of 20 select kinds of Apples, preserved in dry sand, and
having the Baxnes atrached to them, was from Mr. W. Sharpe, Pitfour Garden, for which a premium was voted. A seedlin master, Drleton; the tree was described as beng very producculunary purposes, A premium was awarded for this production culnary purposes A premium was awarded for this prodnction,
which will now be known by the name of the Durleton Apple, The principal kitchen vegetable in this day's competition wa forced Rhubarb, and the specimens were all very large, consist
ing chiefly of the new lind, called Myatt's Victoria. For the heaviest sta is, the silver medal was awarded to Mr. J. Goodall,
gr. to the $\mathbb{M}$ rrquess of Lothian: 2 , Mr. W. Thom, gr. to Alex M. Innes, Esq. : 8 , Mr. R. Watson, gr, to D. Anderson, Esq.
For specimens of well. grown Onions, of different orta, with a
communication detailing the mode of calture a medol wes communication detailing the mode of colture, a medal was vote to Mr. W. Findlay, gr. to the Hon. Mrs. Cochrone. The secretary
called the attention of the meeting to a section of the trunk of the Huon Bay Pinc, Altingia Curninghami, presented by T. Hay, Esq:- close to it was piaced a living specimen of the same tree, from the Society's collection. The section was brought home by
Capt. Gibson, of the U1.swater, from the banks of the Clarence in the reading and discussing of several papers on horticuitural subjects. One was on the planting, tranning, and general
management of the finer kinds of wall Pearntrees, by Mr. J. Macdonald, Riccarton. Another was on the advantages of peat moss
compost for fertilising dry or sandy soils, by Mr. P. Mackenzie compost for fertilising dry or sandy soils, by Mr. P. Mackenzie,
West Plean, and was read by Lord Murray (who was in the chair). Dr. Nell read an important communication from Mr. J.
$\mathrm{M}^{\prime} \mathrm{Nab}$, curator of the Society's garden, on the superiority of Mpan-rofed plant-houses, extending south and north, over
lean-to houses, fronting the south. W. Jameson, Esq., Saharun-lean-to houses, fronting the south. W. Jameson, Esq, sanarun-
pore, Director of the Hon. E. I. Company's botanic gardens in

## MISCELLANEOUS.

Swan River.- From a Swan River paper we extract the following letter, written by Mr. James Drummond, who, with several other persons, had just returned from ex-
ploring the country in the direction of the Moore River: "We left Hawthornden on the 22 d Aug., 1842 , and prosix miles we reached some rorth, and in about five or
apon which, in some pools of rain-water, we found a
small but cuxious freshwater shell, and two plants which
had not seen before. In about 11 or 12 miles we is excellent grass. A few miles from Yoolgan we reached Yeinart, a Tea-tree swamp, where there is grass and water to be had throughout the year ; the nipht threatened to rain, and having covered our house with Tea-tree bark, determined to stop until it cleared up; this ook place about ten oclock, when we visited a brush tiful kangaroo with a dark-coloured fur, overtopped with silvery hairs, called by the natives Marnine. On the top of a hill north of the swamp I found two distinct species of Dryandra new to me, also a fine Eucalyptus in flower, distinguished from the Matilgarring of the natives, the Eucalyptus macrocarpus of Sir W. J. Hooker, by having lengthen bserved two observed two new species of Acacia near Yeinart, and
found some curious aquatic plants in pools of water awong rocks at Badgee-badgee. From some mutilated specimens of plants brought home by a portion of the
party, with accounts of others left behind, I determined to party, with accounts of others left behind, I determined to vicinity of the Mouranpool, where I found a fine glaucousleaved Anadenia, specimens of the blue kangaroo, and several small new quadrupeds-one of them apparently a On the 27 thostas large and mischievous as the Norway rat. Which 27 th , 1 found a species of the common poison Which I had not seen before, and a beautiful Conosper wam, with panicles of blue fowers varying to white. tubular flowerg a plas on the top of a stony hill to the north where I found the plant, which belonge to Scrophularines. I also found a Manglesia, allied to tridentifera, but having the leaves more divided; with a beantiful blue climbing species of Pronaya, on the splendid species of Everlasting 28th, I fell in with two yellow flowers varying to white, having the flowers in heads different from any I have seen before, and which will, I think, form a new genus of Compositæ; the other with pink flowers, growing two feet high, something like Lawrencella rosea, or Rhodanthe Manglésii, but if possible finer than either. Nine or ten miles to the north of Boorbarna, we crossed a curious country, covered wit what $Y$ consider a variety of quatz, which breaks with a flint; in many places the pieces were large, with sharp angles. This tract produces some interesting plants; splendid Calothamnus, with leaves 9 inches long, and With regard to new, of which I got plenty of specimens. had been found here, I was not so fortunate as to procure specimens. After crossing several miles of this quartz ormation, we came upon an extensive flat of strong Acacias. We crossed a brook running some curious west, and in about two miles from this, we made the river we were in quest of a place called by the natives Murarine. Near it I found a splendid plant, which I expect will prove to be a species of Solanum ; it grows two or three feet high, with large purple irregularly shaped, acuminate, about two inches long, and an inch and a half wide at their broadest parts; the stems are prickly, and all the leaves covered with down, as in Lasiopétalum. I am uncertain about the genus, not having seen the seed-vessels, but whatever that may be, it is one of our finest Australian plants. In abont four akes, called Dalarn and Maradie Luo freshnwater bens were here in thousands, and I found a fine Béckia, with a curious new plant belonging to Compositæ, but not et in flower. The appearance of the country about these akes, and the plants about them, which are generslly met with at no great distance from the sea, seem to prove that the lakes are at no great distance from it, and that the Darling Range does not extend so far to the north. No hills of any description appeared to the west. From the op of a hill to the east, two other remarkable ones appeared, about 30 miles to the north; one of them was supposed to be a remarkable peaked top; these were On the 29 th we returned on our track for about seven niles, until we reached the first running river we met on our journey to the north. Our guides agreed to take us back curious kangaroo called "Damar" wonld be met with. We therefore ascended this river, and soon came upon a grassy country; three or four miles up we stopped to dine at a place called Nugadrine; several pairs succeeded in shooting. We travelled on for 10 or 11 miles through a fine grassy country, and met with a large men-before; they were friendly, and offered us some of their favourite root, the Wyrang, which grows abundantly among these grassy hills. In the morning of the 30th, we started for our station on the Moore River; and travelled, try I have whole day, over the most splendid grassy counwe could see in every direction, were covered with beautiful grass, and of a golden colour, from the flowers of the beautiful Everlasting described above, which is only found in the richest soil. After reaching our station, I employed myself in drying specimens. A beautiful new Dryandra, discovered on the top of a hill near the Mouran pool, was shown to me; I have named it Dryandra floribuna, from its numerous blossoms, which almost hide abundance, that the side of the hill actually appears of a
golden colour for several miles. I consider it the most beautiful species yet known

## RURAL SONNET.

## Fre equinoctial gales are lull'd to rest.

The early singing-birds uplift their strains,
And timid April, by the suus caress'd,
And timid April, by the sum caress'd,
Now, with her breath of Violets, walks the plains
And, when her lord, like some enamoured youth,
Dwells on the clangeful colours of her brow,
She, hike some maid, heart-certain of his truth,
Smiles through her tears for bliss to share his vo
The days extend-in many-tinted green
Which, promptest, bloom along the rural scene,
The swallows re-appear-and, hour by hou
Both still and moving life mark Spring's engendering power
The Gypsum Experiment. - The following has been published by Professor Henslow, in further explanation of his views :-Mr. Hitchcock's Experiment: I went to the
ground, accompanied by the experimenter, his brother, ground, accompanied by the experimenter, his brother, and my own gardener, and there found that preparations had been made by shooting down a tumbril-load of soil under the name of "good ditch stuff," a tumbril-load of littered straw, a tumbril-load of clean and fresh horsedung, two pails of house-urine, with a ditchfol of water to dilute it, and a bushel of gypsum in a sack. Over these materials was presiding a labourer, apparently some what puzzled to account for our proceedings. The first step was to mark out two spaces, each ive feet square tuff? is a scarce commodity in Hitcham just at present, and so we were obliged to put up with such as had been soaking in a cow-yard for two months amidst all the et ceteras of hat description of locality. Some sort of rough calculation had been made of the amount of this straw, and so of the horse-dung, by weighing a bushel skep of each at looked grave at the idea of our being satisfied with and so the steelyards were sent for. It is not necessary to weigh the whole of the materials used, but four or five basketsful at least should be woighed in order to obtnit n averace for measuring out the rest. I suppose it is not necery to remind ony one to he weicht "th in alo I find it ful should not je altered afterit has been prepared, in orde ons are filled by like as ar divided by the mat for further thate Our zeal, however, on the prese ferion hours, and through two or three snow-storms, until we ad weighed out the whole of the materials and completed ur task. We began with the dunghill to be gypsumed, and placed it to the S. of the ungypsumed, and finished one first before we began with the other. Two basketsful of the straw were spread over the bottom, each weighing beween 40 and 501 bs . Then two basketsful of the horsedung were spread out, each weigbing somewhat less than the wetted straw. A pint of gypsum was then sifted ver the horse-dung; and the coarser particles of the sypsum which did not pass through the hair sieve were preserved in order that they might be weighed and deuncted from the weight of a pint of gypsum, for the purpose of ascertaining the exact weight of the gypsum used. A gallon of liquid, half urine and half water, was then poured over this first layer of materials through the rose of a watering-pot. Seven layers were thus prepared in succession, except that the topmost had only two gallons of water, there not having been any urine left. The whole was then covered over with two basketsful of the wet straw. The other dunghill was then prepared in the same way, except that no gypsum was used, but the amount of materials employed was exactly the same. The two stood now about hree feet high, and their appearance was such that it was presumed they would certainly attract any one curious in Cucumbers to step out of his way to examine them. The experimenter was also of opinion that they would be objects of curiosity to his cows; and therefore he thought fit o inclose them with hurdles, lest these gentle quadrupeds should amuse themselves by poking them into the peighbouring ditch. I think it right to record his precaution bere, becanse it seems that a cow is a very inquisitive and experi menting creature. I well remember that a cow once made a olerably successful attempt at devouring a waistcoat of Ccupied owhich I had thrown off in a field whilst I was ccupied in chasing the splendia swallow baternies, possibly one, with the reelings of districts can ever possibly resist running after in the districts about Camridge, where they are to be met with. My waistcoat stomach, and required only a little further ruminating to render it sufficiently digestible for being re-swallowed. But, besides the precaution against cows, the experimenter found it necessary a day or two afterwards to protect our hillocks against the rooks, who had taken a fancy to them, and were doing their best to pull them to pieces. A covering of "good ditch stuff" stopped their proceedings. until condition, then, the hils are intended to repose to landext October, when they an Tn Pilgrim's Experiment. Here I found two bottoms, each 7 feet by 5 , had been already prepared of fresh turf and mould. There were also on the ground two tumbril-loads of very wet loads from the farm-yard, two months old; two tumbril supply horsendung, with a little litter also intermix what high in odour, which had been collected in a tank Forty pounds of ready-sifted gypeum was an inproved
mode of bringing this material to the field of action; but only 201 bs . of it were used. Four large baskets of the wetted straw, averaging $62 \frac{1}{4}$ bs. each, were spread out as a bottom layer; and upon them were sprearl four baskets of the horse-dung, averaging bylbs. each. An improvement was introduced in the mode of applying the rypsum, by continually sifting it over the straw and dung as they were spread out, so that it became more thoroughly incorporated with these materials than in the former instance. Two waterpots of the liquid, each hoiding ton pints, were proceeding at the same time, as we did not weigh out more than the materials for one layer, and could measure out the rest sufficiently rapid to allow of this improvement also. LEach was composed of ive lat straw The experiment occupied about one hour and a half in preparing, under the engineering of five pair of hands, preparing, under hills were covered over with turf and earth; and are intended to be applied in June, to land which is to lie fallow till next spring, when it is to be sown with Barley. Mr. Carter's Experiment: Here we found some clean traw bundles, each of which weighed 61 los. Notwithstanding the very great difference between the weight of this clean straw, and that of the wetted litter in the former experiments, we built two hills with it of the same size, or hitchcock. The bottoms, of five feet square, those of Mr. Hitchcock. The bottoms, of five feet square, Were prepared with soil taken from a Mangel warzel proved to be rather an awkward subject to deal with in preparing so small a heap; and the resul sadly affronted those notions of propriety which good workmen possess about turning out a job in a workmanlike manner. It may, therefore, be as well in other cases, where clean straw can be got at, to chop it up into three or four leagths, to make it more manageable. The straw was spread out into five layers, and on each were placed three bushel baskets of horse-dung-the gypsum being continually sifted among the materials as in the last experiment. One water-pot of pure horse urine from a stable-tank was poured on each two of the layers, and two water-pots of mach diluted drainings from the farm-yard for the whole quantity of dung used, was made by weigh ing out six basketsful, at 2741 bs ., which gives an average of 45 L lbs . for each basket. The capacity of the watering pot used was ascertained to be 19 pints. These heaps vere hurdled in and covered over with mould, and are to this rough mode of performing the experiment will serve our purpose, I strongly recommend to all who possess the opportunity, to be careful in obtaining the separate paaterials as pure as possible. Clean straw, is in Mr. Carter's experiment; clean dung and pure urine as in Mr. Hitchcook's: sifted gypsum previously weighed out, as in Mr. Pilgrim's and Mr. Carter's. Attention to these sort of minutix always enhances the value of the experiment; and I dare say that the chemists who are preparing schedules B., C., \&cc. will be more posiIve on such poiats than 1 bave been in ther will be five separate occasions for referring to the schedule as the experiment progresses; and the memoranda have consequently been arranged under five heada, host of the memoranda under the first head seen to be somple to need a comment, and a mere reference to readily may, perhaps, seem to be unnecessary ; but once for all, I must request that experimenters will be content to submit The noticing whether A. lies to the N., S., B., or W. o B., is to avoid any error or doubt that may hereafter arise as to which of the two dunghills was gypsumed Some people have very short memories. No.11. The whole should be secured of the same quality by mixing in one vessel. No. 15 will need a little explanation. The chances of fixing the ammonia will be increased in proportion as the gypsum is more finely powdered. That which I have seen is rather coarsely so, and on sifting it through a flour sieve many large particles are left behind These coarse particles may be thrown into a tank, where they will probably be useful. I shouid very much ike to with gypsum artificially prepared. I have been asked by more than one correspondent whether he could not pre pare gypsum for his farm by dissolving chalk in diluted sulphuric acid, which is a very cheap substance; but I bave replied that I should conceive there can be very few localities where the native material might not be purchased at a still cheaper rate. It would, however, be very easy to prepare artificially the small quantity required for some of you to try our experiment with gypsum procured in this way, because the particles would be in a much finer tate than we can hope to procure them by mere grinding No. 19.-I do not wish it to be supposed that I have been deluding the experimenters to attempt more than I originally proposed; but it has occurred to me that the value of the experiment will be very materially enlanced without much additional abour, by dividing each dunghil into two equal parts, and then proceeding to apply these halves in the manner set forth in the schedule. Nothing further need be done to the two halves of A. But one half of B. may be thoroughly mixed up with half as much gypsum as was employed on A., so that we shall be, abie.to compare the effect of applying gypsum (as in half of A.) before decomposition, with applying it (as in half of $\mathbf{B}$.) after decomposition. Also, there should be six pieces of land marked out of equal size to one of which "nothing" should be applied; and whilst one half of A. is applied to one
pieces. Still I do not press this mode of performing the experiment, though $I$ most strongly recommend it No. 20. The column headed "Nothing" means where nothing has been done to the land. If A. and Bade to that divided into halves, the entries can easily be made to 2 will be twice as much as under any of the others, provided al the pieces of ground are exactly the same shape. Nos. 21 22. The usual terms in which these are expressed in prac
tice is all that is required. No. 25. It will be better to xperiment on seed crop, if convenient ; but still little varietyin this respect is advisable. Nos. 27, 28 The columns headed "Leaves on" refer to a root crop which should be given, if possible, both with leaves off (under the first columons) and leaves on, No. 30, 31. In using the more general term "stalk," I mean it should of flax, fodder, \&

a a valuation his horses, cattle, sheep, and even some of his farm implements, which were not too bad for use; and then I determined to give an example of the best husbandry to all my temants and the gentry around me. went to work-with a set of books at my elbow, as if the were an infallible cabinet council. The first thing I did was to sell off Hogg's long-legged and long-tailed native sheep, and to buy in trieir pace a lot of heavy Leicester, with ron that me 50),-Steady. What ! betore your land was able to feed them?-Sam. Even so. I got rid of the common breed of cows, which I thought were disgrace to my farm, and sent off to the north of England for a short-horms, includiog a high-bred never had less I paid line?-San. Never, sirnever; and as to fat cattle for the market, I had not a single one. My whole stock of short-horns was hals tarved, and they got the distemper vou have expected steady. But, my dear sir, how con cattle on your bare maintain that large descriptin artificial summer green pastures, and before you had any artincial sumer greent ood for them; and not a turnip, I belleve, in prospect or author persuaded me that they could be kept in good condition during the winter on straw.-Steady. And so they could, and be fattened on it, too, provided they had plenty of oil-cake with it.-San. But I had neither straw nor oil-cake; for, having given up the notion of sowing more than a very fittie corn that year, $I$ concel the ground was heartily tired of it, I had hardly any straw, and what I had was consumed before the beginning of February, when I found it impossible to purchase any; and hay was enormously dear, and scarcely to be haderen or a high price.-Stectdy. But you neglected to sow Turnips?-San. I did not. I had commenced in Spring the thorough-draining of a field, containing 20 acres, for the purpose of growing a crop of Swedes, but unluckily the weather was very wet, and besides this, some necessary alterations, which I made in the draining, and a disppointment afterwards in the arrival of a cargo of tiles from Glasgow, prevented me from finishing the work until rom months after the crops should have been above round. - Steady. The produce, of course, was --San. round.- Nteady. The proace, of say in his returns. Steady. May I ask about the nature of the alterations Steady. May I ask about the nature made in your mode of draining? - San. I had which you made in your modrains should be cut across the fall and my field sloped a good deal, and I had the whole anf and mat and at right pales to the descent. Well, just as I was preparing to angles to the descent, Weil, just as f was preparing to have them lowered, should be made obliquely, at an angle or about 45 degrees with the inclination or the land, and 1 did not wish ta have the farmers of the comprod i had those draing for my ignoran of filled up again with the earth that had been thrown out, and I set the labourers at drains.-Steady. These answered your purpose, however ?-_San, They might have done so, no doubt; but (I have not yet concluded my story) just as they were finished, I got hold of Mr. Smith's pamphlet on thoroughdraining, and was immediately convinced by his reasoning that the oblique drains were wrong also, and 1 had them filled up again with earth [Mr. Steady shake. his head, and made new paraliels directly up and dow the sape, 12 feet apart ; so, altogether, Mr. Steady, the draining of that field cost me a pretty round sum, and besiden air I weat to the expense of carting off all the yellow clay that had been thrown out of the drains ; though I now see clearly that it might have been tarown over the stones or tiles, as the water mould have entered into the drains at the sides. Then, sir, I sent to Drummond's for one of Smith's cubsoil-ploughs, and found that the smail horses which $I$ had boutht from Hoge were not able to draw it ; so that I was obliged to buy six Clydesdales, and when they arrived at my farm some other work pressed so hara thy I could not subsoil for that season, and was obliged to employ thase fine horses in petty farm labour, and drawing materials for my new building.-Sleady. Which Hogg's horses would have done equally well -- San. Nowg I see clearly that I was wrong in incurring so much unnecessary expense at starting ; but the truth is, that I wished to see well-appointed teams as soon as possiblewished to see well-appointed me a good deal to replace Hogr's old carts and drays with new Scotch ones, though Hogg old ones would have done for all my rough work nearly s well--Steady. Gentlemen often waste much capital by as well.-Nie of this kind ; in the purchase of high-priced arching there is a great want of judgment very frequently, By the way, you have a threshing-mill, and if quently, to dispose of it --S San. You may have it at you wish to cost me; I put it up before I had a bushel of bar what it and the very first day on which I tried how it would work, an unfortunate labourer, with a large family, lost one of his hands, by awkwardly letting his fingers slip etween the rollers-poor fellow? amputation of the wrist was neceseary, and I could not do less than settle an annuity of $20 l$. a year on him for his life,-Steady. Well, that at least was not money thrown away - San. No, but it is an item to the debtor side of my farming speculations, Steady. But surely, though you mismanaged your draining so much, and lost your crop of Turnips in the arst instance, ou had a splendid crop in the eusuing seasoa on the same field, which I suppose you had manured in the previous year for the expected Swedes?-wan. There again I was unfortamate, and entirely owing to books. I had been studying Sir John Sinclair's essay on the manufacture of farina from Potatoes, and the modes of preserving Potatoes rom Jear to year by kiin-drging. Mine had been kiln dried; and when the season same round for plantiog

Iome of my work-people, who had been unaware of what out-house, cat them for sets, and planted Potatoes in an entirely ignorant that the vegetating principle bad been entirely ignorant that the vegetating principle bad been
destroyed, felt no misgivings on the subject. No Potatoes grew, as you must know; and when the matter was inquired report that the crop had failed from dry propagate the Well, sir we tried Turnips early in July, and they came up well, sir but in order to secure them from the fly, of which I had read much, I applied a solution of salt in such profu-
sion that I killed every plant.-Steady. (Laughing). Well, this was certainly a sad blunder ; but you must admit that Sir John Sinclair gave you no reason for supposing that
kiln-dried seed of any kind would grow ; and I suspect that you made your solution of salt vastly stronger than the prescription warranted. I remember that Hogg used to make a good deal of money by the orchard of Crofton Apples; that, of course, has yielded as formerly? - San.
Bless you, no; I'll tell you all about that too. Hogr always let his cows have the run of the orchard in winter and spring and they ate off or broke down all the lower branches, so as to prevent the trees from wooding too much. This system I put a stop to, and closed up the gate by which the cows used to enter, and the consequence was that the mode of pruning with cows' mouths and horns had been really efficacious, though no one could have supposed that such rude and unscientific practice would have succeeded. -Sleady. Whoever takes this farm now will reap the bave been, I suppose, ploughing a good deep furrow, and to my knowledge Hogg never gave anything but a scratchhim crops which my deep ploughing hatching brough Steady. How? -San. Unfortunately, I insisted that the ploughs should go deep into the under till-which is the worst kind of yellow clay-and bring it to the surface, and the consequence is, that I have poisoned my land. In short, my good neighbour, I have had no return at all for my expenditure ; and I leave my malediction on all writers on husbandry, from the greatest to the least, from Jethro Tull down to Martin Doyle,-Steady. Oh ! pray except no crotchets in him. I myself have just bought the tenth number of the new edition (in monthly one shilling numbers) of his Cyclopedia. If you will follow the plain and well-selected advice which that experienced writer affords- Sch. Hang me if I do-(in a violent passion). No, sir, I shall make no exception whatever; they are all a parcel of humbugging, ignorant- Steady. My dear Mr. Sanguine, be composed; believe me, you have misapprehended many things, and not exercised discrimina instead of looking at the whole; and you have ventured to act for yourself in matters requiring skill and experience, without possessing either of those qualifications. If a surgeon writes an able work on surgery, does it follow that a man who has been minstructed in that art can not so much to blame as ye, or the for they all presuppose knowledge of farming to be possessed by the readers them.-San, Yet, if they give erroneous directions, even professional farmer may be misled by thections, even stance, I read somerhe the a be sufficient to sow ane that a few stones of Wheat would be sumfient to sow an acre, and that thick-sowing is worse than waste of seed, and 1 tried four stones of Bariey to an acre, in drills-why, sir, I had not more than the third part of a crop.-Steady. At what distances were your rils :-Nan. Sighteen inches.-.Steady. No wonder that you were disappointed. Now, I will venture to say that the writer referred to Wheat only, and that he intended horse-hoeing, on Tull's principle.--San. Exactly so. But if this treatment was good for Wheat, I took it for granted it ought to be good for Barley.-Steady. By no reeans : there was your ignorance (excuse me), and not the error of the writer ; you applied to one kind of grain the in structions given respecting another, and under peculiar circumstances: did you horse-hoe? - San. No, for I sowed Clover seeds with the Barley. - Steady. Well, even if you had, your field would not have yielded half a crop, because Barley does not tiller, as Wheat does, on every fresh stirring of the earth, and acquire the same invigoration and extension in consequence. The book was not to blame in this instance, nor is it the science of agri-culture-as far as I can judge from what you have stated -that is in fault, but your misapplication of its prin ciples. Writers on this subject, as on others, no doubt often publish a great deal of nonsense : bot a prudent reader cannot be misled, if he has discretion enough to receive new-fangled opinions, which are in opposition to uniform practice, with great caution, to weigh well all the circumstances, and to adopt the new suggestions slowly, and not until the test of experience has established their correctness. One should begin with experiments on a small scale, and not change the entire system in a moment as you have done : you drained too extensively at starting, and that before you had ascertained the best method o young had commenced it-your work as inconsiderately as you had commenced it-you abandoned the system of falTo take all at once, without having a better to succeed it: To take two or three Buccessive Corn crops is contrary to all good theory and practice; but you contrived it so as to have hardly any crops at all. You went at once to an had establisere, and deserted the old system before you transition-state should bew, without reflecting that the portions, to the new and slow, and suited, in all its proportis to nass. A new and untried circumstances to which should be effected as a manafactarer changes from one
branch of manufacture to another: he cautiously and prudently makes his pre-arrangements, and does not
abandon the one manufacture until he is ready to commence the other in a well-organized and effective manner he calculates his probable profits at the lowest rates, and his losses at the highest, with an ample allowance for unfavourable contingencies. - San. I have unfortunately quence in every item, in proportion to my expectations. For instance, I anticipated from the field which I drained in so needlessly expensive a manner a insisted on deep furrow-slices, in defiance of the advice which my ploughmen gave me and the infertility of the tions.-Steady. Just an immediate inds me producthat you ought to have brought up the subsoil very atmosphere and manures to fertilize each thin for the clay brought to the surface, and not to have incorporated he shallow surface-earth from mass of bad matter with have had a good crop of Oats. Then, again, Mr. San guine, in attempting all at once to bring in the alternat ystem, you made great mistakes ; for example, in buyin growing state, and in rejecting Corn crops before you had made adequate preparations for replacing them wit artificial green crops.-San. Between the two stools have fallen to the ground completely.-Sieady. And believe that yout dismissed a very intelligent and prudent foug ofarioned stewara, though you had not expe rence yourself to undertake such great land improve ments without a practical guide at your elbow; but, as you have very candidy said that you have fallen to the ground, I must be permitted to express my deep regret at he circumstance, both from apprehension of the consequences which may result to this country-where agri cuiture is so defective-from your failure of success an loss which T inast to rural improvement, and from the so kind and valuable a neighbour [Mr. Sanguine bows, h could hardly do less] from this district. The conse quences to which I advert are these;-the obstinate and unimproving farmers will be now more than ever con vinced that their old plan of fallows and crops of Corn while the ground can yield them, is the best, and that all innovations on this practice, however really necessary an excellent in themselves, are to be avoided. They will oll to your mistakes as unequivocal evidences of the ony of new schemes, and triumphantly say nothing would satisfy Mr. Sanguine but deep ploughing, and the mischie blade of Corn he had for his pains,--he must have misguided rentleme was his crop? and then, the poo the end of it? Why, he had not the third part of a copp, whe cattle of the country were the pood part and the big ones he brought here were star for sarcely save a sup of milt, and he wes ofton obli cur butter for his breaks, a he forlised buy wither the o was uery true the pressions of good-will and recret pand in obout mal afterwards, on unimproving school was established in the form which Mr. Sanguine so hastily relinquished ; and from all that the former (who was not bound by any obligations as to a routine of cul abe percened of the proprietor's mismanagement and was an unequivocal and perpal record of the advantage of complete draining, -he was confirmed in his opinion that the old and now almost exploded method was the best.-I conclude with the rather too brilliant similitude deavoured sensible French writer, whom 1 have en sketch :- ${ }^{6}$ In agriculture, manently good can be effected in a moment. Time does not spare what is done without him. Imitate Nature in her order of the seasons and the development of her phenomena. Between the rigour of winter and the heat of summer, she has placed autumn to harmonize between these two extremes. Between dapbreak and noon there are many intervening hours: the sky is tinged with many shadowings before it appears in all its brilliancy. So, in order to bring a farm to perfection, it must pass through many stages. Agriculture, like many sciences of inquiry and observation, consists in a perpetual investigation, and while all its principles and fundamental rules could be comprised in the smallest duodecimo, ten quartos would not contain all the exceptions. To observe-to feel ones to enlarge-to contract, with due regard to the ruality the soil, the temperature of the seasons, and the success of different crops -why, this is the whole art." "-From the Quarierly Journal of Agriculture.

## GARDEN MEMORANDA.

Kensingion Gardens.-On the west bank of the Serpentine,
nearly the whole water-frontage has been converted into two magnificent beds for flowering trees and shrubs, Rhododendrons, diges have just put in six hundred named varietios- so that Lord dens, in seems determined that these grounds shall be real garHyacmintlis Aurecru, Chphan hass. - The extensive collection of
 the cleepest shatles of rose and purple. An assortment of the
deserving of notice are-Hercules, single white, shaded wit
pink; Boaquet pourpre, double, dark bue; ; Dibbets, a single
 flower; La plus Noíre, vers dark blue, approaching to black;
Emilius, single, light blue; Diana, single, light red ; Staten Gen neral, single, delicate white; Madame Talleyrand, a beautiful single white; 'Triomphe Blandina, double, pale flesh-colour,
Pasquin, a very fine druble flower, light blue; La Majesteuse,
sinple, blue: Croon Van Indien, double, dark hiue; and Appesingle, blue; Croon Van Indien, double, dark blue; and Appe-
lius, single, ilght pink, The show-house is moreover enlivened
with a variety of Camellias. Amaryllis vittata, Magnolia conspiwith a variety of Camellias. Amaryllis vittata, Magnolia conspi-
cua, and other flowers. The Tulips appear to he in good condi-
tion, and the Auriculas, of which Mr. Groom has a preat number, are beginning to throw up their trusses. We noticed here two
 them are Cliveana, a tolerably-good variety, the two exterior
rows of petals being deep rose, having the centre filled up with smaller veariegated ones ; Monarch, a middle-size fill flowed, red,
and sometimes coming mottled; Rossii, not unlike Cliveana in villis in shape, but surpassing it in the brauty of it rarnat,on
stripes; and Leeana superba, dark-rer, well cul perl, lut ratici
thin of petals. Epacrises of various kinds are hlonmine; in the
 here extenswely cuitivated. In the opell ground is a conlection
of Hyacintis, which are fowerng excectingly strong. A'la and very double, La Déesse, double, cream-cult, inred; Lia Vertale,
fine double white ; L'Or végêtale, a beautiful double yellow Groot Voorst, light pink, very double; and Princesse Marianne,
a single, deep, rose-coloured flower. Annongst the herbaceous lants we observed a singular Polyanthus, of a blueish colour, March 30 .

## 2Rebíebos.

Rural Chemistry. By E. Solly, Jurr, F.R.S. 12 mo . He universal attention which has been directed toward the Chemistry of Agricultare and Hortieulture since the appearance of Liebig's work has produced a plentiful crop of books intended to teach the principles of what may'be almost regarded as a new branch of science, at least in this country. Among such works, Professor Johnston's Elements of Agricultural Chemistry," published last more Blackwood Co., deserves especial a coil and of fertilising agents. But it has always appeared to us that, in general, such elementary books have placing clearly before their readers those simple facts and aws of Chemistry, upon which all reasoning and practice absolutely depend. Some are too geological, some to learned for ordinary apprehension, while others are inge nious discourses, from which much may doubtless b collected, but not exactly that which the reader requires in the first instance. As to general introductions to Che mical Science, they are quite unintelligible to those who merely deaire to understand clearly the exact nature of the gaseous, fluid, or solid bodies they have to do with in their cultivation
was in consequence of this inconvenience that we asked Mr. Edward Solly when the Gardeners' Chronial first appeared, to favour us with a short and simple expo sition of common chemical facts, for the understanding of which no apparatus beyond a few glasses or cups, an such substances as are to be found in any country village would be necessary. This gave rise to a series of excel lent articles, headed "Rural Chemistry," and signed $E$. respondents were,ound to be exactly what they wauted. the work now before us is epablication of those articles much altered and improved e considerable addition of new matter. They at pre Inder a duodecimo or 1.69 pages, with a very complote , Liebic, much less useful than they might be
Independently of the omission of all superfluous matter, is, as we thiok, so very good a feature in Mr Solly's Rural Chemistry, has the additional merit all statements founded on doubtful or ill-under stood experiments. Theory, unsupported by positive writers ; and thas by him which Chemists do not admit to be umquestion ably true. If a doubtful point is admitted, it is cautiously distinguished from acknowledged facts, so that no confu sion may arise between the certaire and uncertainmerit of some value in these days of speculative reasoning
further merit which this book certainly possesses is its chemical accuracy. It is of the first degree of im port that after he has mate and hime find theies himself ready to go on a fix in his mind must be corrected and amended ; in short, that what he has been learning is wrong. This capital error in many elementary works Mr. Solly seems to us to bave entirely avoided.
atthor faders are so familiar with the manner in which the armerly dealt with this matter in our columns, that Whom the chemical part of the work seem unneces. duction therefore select a passage or two from the intro Chemistry In trang the history of discoveries in the

The first Chemist who wrote on Agriculture was, believe, J. G. Wallerius, who in 1754 'published a book on the Cause of Fertility. He was succeeded by several other authors, amongst whom ought to be mentioned Gyl*Tig, Einhof, and Dundonald; but the speculations of
Agricultural Cheme contounded with Mr. Cuthbet Johinsun's
these authors (though ingenious) were for the most part crude and incomplete. At the commencement of the
present century, when Organic Chemistry was rapidly present century, when Organic Chemistry was rapidly advancing, Berzelius and Davy endeavoured to apply the
conclusions to be derived from chemical experiments to conclusions to be derived from chemical experiments to
Agriculture. If the deductions which they made were not always correct, and if the plans which they proposed did not always produce the effects which they anticipated, it must be remembered that they were amongst the first to take the subject up, and that though they did so under did, yet that even then the science of Organic Chemisstry was in many xespects very imperfect and incomplete.
"During the last forty years many important additions have been made to this department of Chemistry; improved and more accurate modes of chemical investigation ent varieties of organic matter ; the composition of those substances which constitute the bodies of animals and plants has been accurately and carefully ascertained. At the same time, many valuable observations have been made respenting the functions of plants, the conditions
requisite to germination, the formation of flowers and seed, the chemical changes attendant on the ripening of sed, thit, the office performed by roots and leaves, and a vari-
frem ty of other important subjects of inquiry. The names of Liebig, Schübler, and Sprengel, in Germany; Braconnot, Boussingault, Chevreul, Colin. Chaptal, Dumas, Edwards and Payen, in France; and of Daubeny, Johnson, Pepys,
Turner, and Christison, in our own country, deserve espeTurger, and
In another place, speaking of nitrogen, the existence o which in plants some people, whose Chemistry has stood still for the last 20 years, disbelieve, Mr. Solly says-
"It has long been known that plants consist of carbon, oxygen, hydrogen, and nitrogen, and also that they invariabiy contain a small quantity of inorganic, or earthy and saline matters. The presence of nitrogen was formerly greatly overlooked in analyses of vegetable substances; it ocontained in less quantity than the other three element being merely accidental, and not a necessary constituent of plants. Improved modes of analysis have established that it always exists in the same proportion in certain constituents of plants; and as it appears that these substance it becomes a question of the first importance, whence do the plants derive their nitrogen? They obtain it principally, if not wholly, from the air ; they do not absorb it in the free and uncombined form, but they absorb it it bined with hydrogen in the state of ammonia portance of the earthy substances in plants was likewise greatly overlooked formerly. It has been proved by repeated experiments that these substances are of the great ial to their development."
The Author concludes his introductory remarks with an bserwation in which we entirely concur :-

Although Agricultural Chemistry is in this imperfect tate, and though much still remains to be done in that ranch of science, yet it is so far advanced as to be able to ender substantial assistance to the practical agriculturist. It can teach him the principles which govern the growth
of plants, and consequently guide him in the application fartificial means to produce the most beneficial results. He must, however, not expect too much from the aid of Chemistry, nor give himself blindly up to speculations os theories. Whilst he gives due credit and belief to wellauthenticated facts, he must always receive theories with caution and doubt.

Perhaps the most important advantage which a pracical man may at present derive from a knowledge of Agricultural Chemistry is connected with the use of manure If he knows what it is that gives the fertilising powers to anure, and is aware of the nature of those substances, them ; he will then understand how to make than using the various sources of manure at his disposal, and he will be enabled readily to save much that for the want of such knowledge would otherwise be lost."
But our limits forbid all further extract. We can only add, in conclusion, that if a man really wishes to under. stand the Chemistry of nature, this work will enable him 0 do so better than any other with which we are acquainted.

The" Quarterly Journal of Agriculture.-No. LX. one of considerable interest. In the first place, it deenshire, containing much useful original information. Dr. Dickie regards the mountain Scotch Pine, or the true Scotch Pine, as some bave called it, as a mere variety of the comation sort, produced by accidents of soil and so unfortunately subject, is referred to frost, and we have ome good tables of the rate of growth of this valuable or ander favourable circumstances. We bave only room "TThe regarding the latter subject.
different average annual increase at the thickest part, at
34 years $=3.8$ lines ( 3 trees at Wardhouse).

As it is well known that the Larch is of very rapid and steady growth, it seems very evident that the trees in the above table, of 34,45 , and 60 vears, are not in a thriping condition. Exclusive, therefore, of these, the
others show that the increase of the Larch continues steady to a considerable age; at the same time it may be
stated, that the comparison would have been more valustated, that the comparison would have been more valuages, growing in the same place and similar soil."
Other papers of general interest are "Von Thäer's Principles of Agriculture ;" a capital quiz of injudicious Mr. Bell on an economical Tile-work adapted to Forms f an ordinary Size," well worth perusal ; and an official statement of the preminms offered by the Highland Society for 1843. We sincerely rejoice to perceive that ments on the influence of soil on vegetation, on manures, on excretions by the roots of plants, on planting, on feeding, on mising soils, \&cc. \&cc., as well as for the ordinary topics of agricultural routine.

Agricultural Chemistry for Young Farmers. By C. W. Johnson, Esq., F.R.S. Ridgway. 12 mo His consists from the Author"s "Farmer's Encyclopædia," our opinion of which as already been expressed on former occasions. The trifing price will render it accessible by persons who
are unable to pracure the larger work. are unable to pracure the larger work.
The Third Part of the Second Volume of Torrey and Gray's excellent Flora of North America has just reached most troublesome part of the authors ${ }^{\prime}$ task is completed.

CALENDAR OF OPERATIONS for the ensuing week. Hosk who have sown any quantity of foreign seeds six weeks or two months ago, will now begin to be impatient for the pp-
pearance of the last portion of their young seedlings. Unless oreign seeds vegetate within five or six weeks after they are may lay in the ground for twelve months, although the seeds in the meantime may be perfectly sound. The quantity of bottomheat which many of these seeds will endure is astomishing, and wad it not been proved that they could be immersed in boilingWater without be laughed at, were they to tell how they had often experimented on doubtrul seeds with bottom-heat. A few years did not vegetate within a reasonable time. I placed the pots on the top of a hot-water pipe, where they were supported by an and the pots required to be watered three times in the 24 hours. In less than ten days many seeds vegetated : part of the same packet of seeds having been sown and kept in a hotbed in the
usual way, never vegetated at all. Those that did not vegetate on the pipe in three weeks were removed to the iron cover of a large square hotwater boiler, where the pots had 8 constant
bottom-heat of nearly $200^{\circ}$ (for the water was often boiling) and the pots for many hours every day were so hot, that they could hardly be handled; yet, I have reared many plants from seed on small as dust. Aithough I do not advise people to go to such extremes with seeds supposed to be valuable, I would recommend
a very powerful botton heat for such as are unwwiling to come up y the ordinary modes. More hardy seeds from temperate zones when they must be removed to a cooler place. These auxiliaries may be useful when seeds will not vegetate under more ordinary circumstances. I.-KITCHEN-GARDEN AND ORCHARD.

Pingry.-About the end of spring and beginning of summer, more especially, the young stock, which, if they get their leaves browned at this time, will make little progress till after the turn
of the season at Midsummer. A slight shading will therefore be months
Vinger.-The earliest crops will require a little difference in
management from this time; a constant strong heat of $70^{\circ}$ to management from this time; a constant strong heat of $70^{\circ}$ to well, and improve their flavour. All laterals may be cut off, with any weak shoots that do not promise well for the next crop.
Psachec.--With a moist genial atmosphere, the same routine hat is pursued in summer with out-door Peaches will do for hose in-doors from this time.
CHFRRIRS. - The
will suit these als
Figs.- Where these have not a house for themselves, they must now be brought to the less shady part of the house, as the irst crop will soon make its appearance. In either case more light is requisite than can be afforded by most Vineries, or even Pine-stoves, where Vines are growing on the rafters. They are more liable to the attacks of red-spidy.
STRAWBERRYES.-The treatment for these is 80 easy and uniruit is ripening daily, it may be as well to say that they should have less water and more air; and if placed on the highest
shelves near the top ventilators, it will be better for them. shelves near the top ventilators, it will be better for them. Exto give air by the front ventilators while plants are making theur young growth.
Cucumbras and Melons.-The grand secret is to keep these hin by pinching out the young laterals entirely, where more hoots are not wanted, and above the first joint, from which you on the walls will suffer from snmmer pruning if all done in one day, after having allowed it to make a profusion of young shoots;
how much more then must a tender annual suffer from a similar treatment! Foresters say, prune often-that is annually-and prune little at a time. In these frames
Seedinnas.-All the half.hardy plants belonging to the forcing department, that are raised annually from seeds, require pretty nearly the same to as ones, so as have them frm, stocky, little plants ready to turn out when all danger of frost is over. The more pains taken noww to get up these
I think Mr. M'Intosh, in one of his works, said that he always made a point of running the Dutch hoe over every part of the kitchen-garden and slips, whenever the ground was in good condition for the work, elis is not an easy task, but it shows the reat importance which the best gardeners attach to the subject. In the flower-garden weeds are disliked most on account of their the kitchen-garden for their exhausting powers. A few shillings might entice a boy or two to pull up all seed-weeds after working were not wanted at home to help their parents with their garden
work or allotments. A boy can pull out in one hour as many
weeds just coming into fower as would afterwards if left to weeds just coming into fiower as would afterwards, if left to Asparagus Bens should now have their spring-dressing ; if not yet inninen, ins the edges of the beds, and cover over the ground on the beds.
Artichoxes.-If not yet done, lose no time in giving them their spring-dressing; thin out the suckera, dig in a good dressing of dung arnong them, and plant a few rows of the spare
suckers, to succeed the general crop.
SEA-TALs AND RHUBARB.-Finish planting these without delay.
 been fortunate enough to save your own seeds of it. It is quite a few early Cabbage-seeds every fortnig Poratoss.-In many parts of the country people put off plant-
ing their Potatoes until too late? the whole crop should be in before the middle of the month, and the soomer the better.
Endive.-Where the last autumn -sown plants have stood the Endive,--Where the last autumn-sown plants have stood the
winter, they will now require to be tied up in succession, like wettuces, to blanch; they will come in very useful with the
early Lettuces, a few of which should also be tied up, if they are opening too much in the heart.
Onions and Spinach sown last August should have the soll
well stirred between the rows: let one bed of these Onions well stirred between the rows s let one bed of these Onions transplant the rest, if not already done.
Chivis.- No garden in the kingdom should be without this
useful little plant; a row of it planted along an alley will be a useful little plant; a row of it planted along an alley will be a
substitute for young Onioms all the year round, and when chopped, they are excellent things for young turkess.
gronnd was dug carly in winter you had better stir it whth a tork. Hoe also between the Raspherries, Currants, and Goose-
berries, if only to loosen the surface of thie ground. Watch carein blossom; these you may begin to disbad.
STove,- Where the Orchidacese are to be shaded by climbers,
which are now fast advancing, it will save trouble, when the latter are to be thinned out, if they are now trained in a regular manner, like Grape Vines. This remark applies also to climbers in general at this season. Although nothing mars the beanty of strong climbers planted in the borders so much as keeping them
tied up stiffly, yet they may be so trained at firat as to allow of their being thinned at any time without trouble. Pansum- finwers
are the bert for thins purpose, as they can endure scorchng heat, and are foct affected by misects. Pottiog, tranining, and shading, If you fare a few plants of the two varietues of the Madarascar and by the end of May they may be taken to the conservatory,
where they will grow and flower until the end of September. No stove plant is better suited for the conservatory during summer. Gresnhouse,-A few of the smaller plants of the common enable them to flower early next spring. Potting and propaga-
tion, with a more liberal supply of water and less air, must be tion, with a more liberal supply of water and less air, must be
attended to. Consmrvatory,--See that the more common sorts of plants, the good specimen plants. Azaleas and many other things are now makng the y young growth, and if choked up with a protusion
of forced piants of little value save for theis flowers, it will soon injure them. It may be necessary soon to use blinds, to guard
ind ong as p Pits and Frames, - Propagating plants for the flower-garden,
and hardening them by degrees, are the principal points to be attended to here; many half-hardy plants may also be raised should now be looked to, and the plants potted singly in very small pots, to be ready for planting out in the borders of the
Rosary next May. Auriculas must be carefully kept from cold winds and strong Oue. Department

## to look to any defects in the grass, arising

 from pow so.1 or ntherwise. Look over x hat has been said in heen kulled shoutd be turfed, and upon places where the crass is poor and scanty, some good soil should be sifted rather thickly, neatly dressed, to show off spring flowers, to the best advantage; arady for the frst mowing or two, wheh wreuld spod new ones,ancerder them ungt for the fincr work durng the whole
season. If you contemplate any different arrangenent of your spring bulbs, they shonla be marked thle in flower, to enable you to group them, or dispose of them in any regular scries,
without mixing the varieties; this cannot be done after the flowers are over, as many of them are so much alike in foliage.-

REPORT ON COVENT-GARLEN MARKET
For the Week ending March 31,1843 .
Except in a few instances, the supplies have been good during
continue scarce, at the same price as in our last Report. The
supply of foreign Grapes has been limated of late, and they have
convequentiy made a slight adrace concequentiy made a slight advance, Some very good forced
Straw jerries are offered, from $1 \delta$. to $2 s$. per oz. There are still a few Beurer Rance and Easter Beurre Pears, the Theter of which
are sellug at $20 . s$. per half-sieve. Apples have mate a trifling advance, and the demand for them has been somewhat brisker:
the kincts offcred are the same as named last week, to which may be added the Newtown Pippin, from 3s. to 48 . per doz. The
smpply of Cutcumbers is on the ircrease ; they fetch from $2 s$, to 12s. per brace. Vegetables: Asparagus is of good quality, but
it is not plentiful, continuing to fetch from 6 s . to 108 . per bunch. Seakale is excellent, and much more abundant. White Broccoll,
some of which are very fine, sell from 18 , to 18 . 6 d. per bunch. 3 s . per 100 . Turnips are tolerably gi od, from $1 s$. to 2 s .6 d . per
dn7ens bunches. Spinach is much cheaper, being from $1 s$, to $1 s \mathrm{kd}$. per sieve. New Frame Potatoes may be had from $18.6 d$.
to 3 s. $6 d$. per 1 lb. a package of early Potatoes, principally Kidneys, have also arrived from Lisbon. Cabbage Lettuces are selling
from $4 d$ to $8 d$. per score; and Cos, which are much hetter, from
$1 s .6 d$. to $28.6 d$. per score. Endive is small, and heginning to ram becmming more abundant, and fetch from 1s, to 2s. per doze
hands. Flowers: The display of cut fowers has been very fine
her during the past week, consisting of Hibiscus rosa sinensis, Magnolia conspicua, Calls zethicpica, Deatzia scabra, Amaryllises, Auriculas, Calceolarias, Pelargoniums,

## NEWS OF THE WEEK

## Tre occupation of the island of Tahiti by the French

 Government has been considered of sufficient importance to be the subject of discussion in both Houses of Parlia ment. In the Lords, on Monday, the Marquess of Lans downe called the attention of Ministers to the position of the English missionaries, to whom the natives of that and other islands in the Pacific are indebted for conside able advancement in the arts of civilisation. He did not regard this acquisition on the part of France with unnecessary jealousy, but he thought that the interests of the British residents should be protected. Lord Aberdeen concurred in the opinion that the establishment of the French in these islands is not likely to produce any in jury to the commercial or political interests of Great Britain ; and stated that the French Government had given our Ambassador in Paris the most satisfactory assurances of protection and encouragement to the missionaries. Sir R. Peel made a similar statement in th House of Commons, adding, that stipulations had been expressly made in the convention for the protection of all religious worship. Lord Campbell last night brought forward his motion, embodying a series of resolutions on the subject of the Scotch Church. The object of these resolutions was to express the desire of the House to protect and confirm the Church in the possession of her legitimate privileges, but at the same time to uphold the system of patronage, and affirm the impolicy of conceding the claim of the Church to a jurisdiction in civil matters superior to the common law of the land. The motion was opposed by Lord Aberdeen, and withdrawn without a division. In the Commons, on Monday, a long and desultory debate took place in a Committee of Supply on a variety of miscellaneous votes, the discussion of which involved many questions of general interest. Several divisions took place on particular items, but the votes were ultimately carried by large majorities. On Tuesday, Mr. T. Duncombe brought forward his motion for a select committee to inquire into the alleged misconduct of the magistracy during the disturbances of last General, who contended that the conduct of the rioters was little short of high treason, and that if any charge should be brought against the Government, it ought to be that of having exhibited too much leniency in the prosecution of such offences. After an animated debate, the motion was ne gatived by a majority of 164. On Thursday, Mr. Ferrand ob waste leand in Ering in a bill to compel the allotment we must refer to our Report.Our Foreign news is not of great importance. In France, the Ministry have again been successful in a division in the Chamber of Deputies on a motion for pretion during the session; the motion was opposed by Government, and rejected by a majority of 26 .-From Spain we learn that considerable uncertainty prevails in regard both to the actual results of the late elections and
to the prospects of the Cabinet. A change of Ministry is confidently talked of at Madrid, and it is supposed that the Regent will find it necessary to modify the Cabinet before the assembling of the Cortes. - The accounts from Lisbon are still unsatisfactory; the
tariff question continues in an unsettled state, and business is in a great measure suspended by the uncertainty in which it is involved.-The German news Cuounces the determination of Austria to accede to the Customs Union, the Cabinet of Vienna having been coninced of the political influence obtained by Prussia in
placing herself at the head of the Confederation. The esult of this measure, which is characterised in diplomatic circies as a skifful manoeurre, will be to transfer all ques. tions relating to the tariff to the Diet at Frankfort, the residency of which belongs to Austriz.-The Levant mail and Russia on the affairs of Servia, but they add little to the information received by previous advices.

Court,-Her Majesty, Prince Albert, the Prince of Pales, and the Princess Royal, continue at Buckingham Majesty and are in excellent health. On Tuesday ber he French plays with their presence.-.Sunday was the birth-day of his Royal Highness Prince George of Cam-
bridge. The Prince and the Duchess of Canobridge visited Primajesty at Buckingham Palace. His Royal Highness risited Prirt, and other members of the Royal family, visited Prince George at his residence in St. James's

Palace. The Viscountess Jocelyn has succeeded the Countess of Charlemoont as the Lady in Waiting on the
Queen ; and Lord Byron and Captain Meynell have succeeded Viscount Sydney and Captain Duncombe, as the Lord and Groom in Waiting on her Majesty.-His Royal Highness the Crown Prince of Wurtemberg and suite ar rived in town on Thursday morning by the Netherlands steam-boat Batavier, from Rotrerdam. The Prince has
taken up his residence at Mivart's Hotel, where he has taken up his residence at Mivart's Hotel, where he has
been visited by different members of the Royal family. Official Appointments.-The office of Inspector Prisons, vacant by the death of Dr. Shortt, has been con-
ferred by the Secretary of State upon Mr. J. G Perry ferred by the Secretary of State upon Mr. J. G. Perry, the Royal Medical and Chirurgical Society of London Mr. Clark, son of Sir James Clark, physician to ber Majesty, and Mr. Cole, son of Sir Lowry Cole, have been junior clerks in the Treasury.- It is announced on authority that there is no foundation for the paragraph copied a short time since from the Greenock Advertiser sident at Hong Kong.-The Marquess of Anglesea has received from her Majesty the gold stick of office as Colonel of the Royal Horse-Guards, vacant by the death of Lord Hill.
Parliamentary Movements.-The representation o Nottingham, vacant by the decision of the committee which unseated Mr. Walter, is likely to be warmly conGeorge Larpent and Mr. Gisborne were proposed, and after a show of hands the numbers were declared to be five to one in favour of Sir G. Larpent. Mr. Gisborne has since issued an address, announcing that be will stand if a majority of the electors desire it. The Chartists have decided on bringing forward Mr. Feargus O'Connor, and the complete suffrage party intend, it is said, to propose Mr Sturge.-Capt. Beresford has announced himself as the Conservative candidate for Atblone, in the place of Mr Farrell, who was unseated last week by the Parliamentary committee, and Mr. Collett has come forward on the Liberal interest. The election was appointed to take plac yesterday.
Education, Science, and Art.-By a statement just laid upon the table of the House of Commons of the estimate for 1843-4, for the purposes of education, science, and art, $1 t$ appears that there will be required for public education in Great Britain, $50,000 \mathrm{l}$. ; ditto in Ireland, ford and Cambridse, 2,0062 , : University of London, 5,1482. ; Universities, Catholic College in Scotland, 8,928l.; Royal Irish Aca demy, $300 \%$; Royal Hibernian Academy, 3001.; Roya 1,950l. Society, 5,6002 ; Belfast Academical 2576 ditto buildings, $37,485 l$. ; ditto purchases, $5,275 l$. ; NaGallery Gallery-purchase of pictures and expense of the and Scientific Works and Experiments, 4 , total for the year $1843-4$ is 210,967 . The total for 1841-2 was 212,524l.; and for 1842-3, 210,8891 . In the expense therefore, of 1843 , as compared with 1841, ther will be an increase of 6,4436 . ; and as compared with 1842 ,07.
, trpenses of Public Departments.-The sums require for these services, for the year ending March 31, 1844,
will be-Two Houses of Parliament $67,350 \mathrm{~h}$. Treasury will be-Two Houses of Parliament, 67,3506 . Treasury, 66,273l.; Cotonial ditto, 25,557l. ; Privy Council-offic and Office for Trade, $33,000 l_{\text {. ; }}$ L Lord Privy Seal, 2,0002 , Paymaster-General, 35,893l. ; Comptroller of the Exche quer, Paymaster of Exchequer-bills, and Paymaster o English Ecclesiastical Commissioners, 3,000l. ; Poor Law Commissioners, ह1,608l. ; Mint, incluaing coinage, $50,958$. . ; saiaries and expenses of public records, 11,775 . inspectors and superintendents of factories, 8,880 . offices in Scotland, $1,815 l$. ; household of the Lord Lieu tenant of Ireland, 6,464l.; Chief and Under Secretary's office, and Privy Council-office, Ireland, 22,2601.; Pay of Public Works Ireland 2400l. Secret Service, 39,200l printing and stationery, $232,533 l$. ; printing proclamations, 8 cc . in Ireland, 4,950l. The total expense for the year 1842 it was 760,1671 . In 1843 there will theretore ; an increase of $33,264 l$. as compared with 1841, and 11,569l. as compared with 1842.
Royal Commission of the Fine Arts.-Several meetings of the Commissioners appointed to consider the de corations to be adopted for the interior of the new Houses all of which Prince Albert has presided. The following notice was issued on Saturday: -1 . That the cartoons or rawings intended for competition, according to the notices pubisised Hprim and July, 1842, will be exhibited in Westminster Hall, whither they are to be sent between
the hours of ten and five on any day, Sunday excepted, the hours of ten and five on any day, Sunday excepted,
during the first week in June next, when agents will be during the first week in une next, when agents will be in attendance to receive them; but no drawing will be Wequired to put a motto or mark on the back of his drawing, and to send, together with his drawing, a sealed letter, containing his name and address, and having on the outside of its cover a motto or mark similar to that on the back of the drawing. The letters belonging to the drawings to which no premium shall bave been awarded, will be returned unopened. 3. The quotation if subject of each drawing, togeffed either to
the back or front of the drawing. 4. Erem drawing is to be sent upon, or accompanied by, a stretchagg-frame; but no ornamental frames, in addition to the streturing-frame, will be admissible. 5. The artists, or their agents, may attend to examine the works sent by them, ana to re stretch such drawings as shall have been detached from their stretching-frames, and rolled for the convenience of carriage. .6. No drawing will be allowed to be retouched atter having been received, sxcept to repair an injury oc-
casioned by accident, and then only by the artist himsolf.

Every possible care will be taken of the works sent but in case of injury or loss, the commissioners will not be responsible. 8. All the drawings will be exhibited, and catalogues will be published. 9. The names of the judges appointed to award the premiums will be made known.

## fforetan.

France.-The principal topics of interest in the Chamber of Deputies are the discussions on the motion of M. de Sade, for preventing deputies from accepting the propriety of promotion, during the session ; and on letters. the former question was disposed of on This 181. In the motion was rejected, by 207 votes agans Finance said that the pegotiations for a reduction of the postage on letters between France and this country had made considerable progress, and were likely very shortly to yield a result which would facilitate the correspondence between the two countries, and promote the interests of both. With regard to the establishment of a moderat and uniform rate of postage in France he admitted the simplicity and other advantages of a uniform postage, but contended that the increase of letters in England has not been, during the last two years, equal to the rise of the first year of the experiment; and that the increased num ber of letters has required a more considerable service and that service is daily inereasing-as it cost $750,000 \mathrm{l}$. in 1839, and 938,0001 in 1842. -The papers give some further particulars of the manner in which the possession of Otaheite was accomplished. The English missionaries strongly opposed the native women going on board any vessels which arrived. The French admiral, says a lette from an officer of the frigate, most certainly would not have admitted the women on board, had not the English missionaries opposed it; but hearing that they did oppose it, the admiral had 100 women on board, dancing and ceasting till a late hour-the result of which was, the acknowledgment of French supremacy,-It uppears that so powerful an opposition to the Paris and Calais railroad treaty had been raised, that the affair was on Saturday nearly as far from being arranged as ever. The demand of the inhabitants of Boulogne, that the railroad should pass through their city, was resisted by the projected company, on the ground that the intercourse with Great Britain alone would not indemnify the proprietors, whose with thequired that the line should contemplate a union Monday of Lille and Belgium.-The Quotidienne of escaped the same that the Duke de Nemours narrowly July last:-"Driving in a low carriage irawn by four horses, one of the leaders fell, whicl caused the carriage to be overturned; but the Duke previously jumped out, erecting the tomb of the Emperor Napoleon has decided that the baldachin of the altar in the church of the Invalides, with its gilded columns, shall be suppressed that the equestrian statue of the Emperor shall be erected on the Esplanade, and not in the Cour Royale, as designed by the architect; and that the figure of the Emperor shall be in his historical dress, and not in the Ruman costume. - On Monday morning several persons of the suite of Prince Augustus of Saxe Coburg arrived at the Tuileries. The Prince is to take up his residence at the Palais Royal. It is stated in some of the German papers that, by the contract of marriage between this Prince and
her Royal Highness the Princess Clementine, the bride s to have an income of 300,000 francs per annum, and the Prince 100,000 franes per annum.-The Magdalen by Canova, in the Aguado Gallery was sold at Paris on Tuesday for the sum of $59,500 \mathrm{f}$., to the Duke de Saraglia. It is said that this treasure of art is to be taken o Italy.-Some excitement has been caused in political circles by a recent publication of Prince Dolgarouki, conlaining biographical sketches of the principal families in Russia. The Prince has incurred the anger of the Emperor by this work, and has been summoned to retarn the Finisterre ste the following details of some curions discoveries lately made at Crozon, in that department. The immense quentities of sand drifted away by the violent winds of January, and which blocked up several villages, left bare a solid hillock, of about thirty feet in circumference. Some bones, observed on the surface, created an idea that it was an ancient tumulus, and induced the curious to explore it. It was soon found to contain a great number of skeletons, both male and had been perfect preservation; and the north-west side eanjectures hope bepropriated to children. Various cumulus, but formed as to the origin of the fumulus, but the indications subsequently found, though Roman. These are Roman. These are two medals, or coins, one of silver and the other ofribed, being perhaps too much defaced, put in enabling them to pay Charon for their passage over of Styx. It bears on one face the name and effigy of the god Mars, and on the obverse, Romulus and Remus
being suckled $3 y$ the she-wolf. This opinion is strengthened by the znown fact of a Roman encampment having been soms time ago traced in the immediate n
Soaln.-We have accounts from Madrid to the 20th 15. They state that the results of the elections were still doubtful; but that, although the belief prevailed that they were unfavourable to the Government, the Cabinet seemed determined to meet the Cortes. The speech to be delivered on the occasion was under discussion. The list of the Senators to be appointed by the Government was already drawn up, and it included none of the cancidates of the Moderado party. Acherer talked of, and Gen. Chacon mentioned as likely to be selected to form a new Cabinet. Three of the Ministers-Rodil, Almodovar, and Zumalacarreguy-had been returned neither as Senators nor Deputies. The election of the Infante Don Francisco de Paula had given
the more displeasure to the Government, as the extreme fraction of the Opposition intended to raise him to the Presidency of the Chamber of Deputies. Mt was expectiod that the Regent would do his utmost thave his election annulled.-It was reported at Madrid that Mr. Abton, ,ord Mahon.-Private letters state that the Government, intent upon its own safety, pays no attention to the innumerable assassinations, highway robberies, kidnappings, false coin" ing, and hundreds of other atrocities. Almost every province has now its dominant band of brigands, who mock the pursuit of the troops, and commit all kinds on enorFrancisco de Paula's bousebold, who had arrived in Madrid for the purpose of preparing a residence for the Prince, was robbed on the road of all his wardrobe.
Portugal. - We have Lisbon news to the 20th ult. Lord Aberdeen's answer to the Portuguese ultimatum had arrived at Lisbon. The latter was not considered sasas. What the Portuguese Government intended to do had not transpired, and much anxiety existed, business being in a great measure suspended by the uncertainty.-The Cortes before the Chamber of Deputies. The latter had given the Government a vote of confidence, empowering it to cary ind enect, for fiving an account of its proceedings at the commencement of the following session
Holland.-The Dutch papers give extracts from the Java journals, containing the following singular account from Rambang of 31 st Oct. :- We have lately had extraordinsry natural phenomena several times, but always in the daytime. In different places, at some distance from each other, there have been heavy storms of hail, accomof tamarind-stones, not round, but angular. On the whole, but little damage was done, except to some tobacco plantations. The natives, who had never seen so strange a phenomenon, shivered when they took up the cold hall-
stones, and were quite annoyed when they melted in their hands.
Germany.-The Cologne Gazette states, that the
Gend Austrian Government, having at last become convinced of placing herself at the head of the German Customs Union, has resolved to accede to this union as soon as the northern states shall have done so. The Zollverein will then be This arrangement will operate advantageously for Austria, as the questions of the tariff will be decided by the Diet at Frankfort, the presidency of which belongs to Austria, and the Prussian Government, which aspires to the firb The accounts received from Vienna state that the ArchThe arcouls is much better.-The King of Prussia ha heen pleased to transimit, through his ambassador in been pleased London, a gold medal, bearing his portrait, to tie autho of "Frederick the Great, his Court and inches, "in nied this present, "of my approbation of your meritorious work." The great establishment in Berlin, known by the name of the Coliseum, was totally destroyed by fire on the 21st ult. The origin of the fire is not known. The presence of several members of the royal family encouraged the firemen.--The Fanover Gazette of the 17th ult., states that Madame Caroline Herschel, sister of the celebrated astronomer, the late Dr. Herschel, resides in that city, and, though arrived at the advanced age of 94 cuished reputation in the scientific worla. It is unders tood that the King of Hanover is expected to arrive on a having been received to prepare his apartments in th Ambassadors' Court for his reception by that period. The King is expected to remain six weeks in town. The government of the kingdom during his Majesty's absence Bernard of Solms Braunfels is President.-The comet bas been observed in Germany. The journals are filed with details from astronomers beyond the Raine, agreeing very
closely with the observations made in Paris.-Letters from Vienna were received in town on Thursday, announcing the accouchement of the young Princess Nicholas Esterhazy, the daughter of the Earl of Jersey. She was conaccounts left Vienna both the Princess and infant were
Iraly. - By a letter lately received from Rome, we learn that the aport afforded by Lord Chesterfield's fox-
some admirable runs in the Campagna; and almost all the aristocracy of Rome were assembled, either to witness pack to the society there, and a large subscription has been raised to keep it up.-The Diario di Roma says :"As it is well known that the great number of paintings
composing the gallery of the late Cardinal Fesch must equire several successive sales, it has been decided that hey shall commence on the 17th of April.
Const between Ryple, which refer chiefly to the contention of Servia, and to the course pursued by the French and British agents in that course purssued but they contain little that would interest our readers. They state that the Greek the adinent has consentediminary questions, which have hitherto rendered a definitive settlement impracticable. letter from Semlin, March 6, states that the Sultan intends this spring to visit Belgrade, and from thence to proceed grade, as conspirators in the recent plot for overturning the government of Servis
th the Good Hope-Advices have been received, by the Blonde frigate, from the Cape, of the 23 d January flicting. Some state that no resistance will be made others exactly the reverse. A messenger from Philipolis, wrought information that the Boers were assembling in that neighbourhood in force, and that if the troops should disputed to cross the nel Hare had determined to cross the Orange River. The Kaffirs are said to be anxiously watching the movements of the authorities as regards the disaffected farmers, and only waiting the result to decide upon their own measures, Marauders were lurking on every part of the colonial bor der, and carrying off catte. Apprehension had been en tertained that the Kaffir chiefs had organized an extensiv combination of their tribes to attack the colony, but it seems to have been postponed or abandoned, 1, , maeed, $t$ had ever been sexiously entertained. At Cape Town an unseemly display of feeling on the part of some of the Dutch residents had taken place, during the festivicies of a dinner given to the officers of the Netherlands ship Pana bang, the healths of the Court at the Hague and to while that having been most enthusiasticany resphtingly treated, and by several absolutely unacknowledged. This dinner, it is stated, was presided over by M. Van Breda, one of the Legislative Council of the colony, and several of the party were subordinate officers of the civil service. The Cape papers are much occupied in canvassing the merits introduced to give weight to the arguments they bring to bear upon it.

## HOUSE OF LORDS.

HOUSE OFLONDS.
Monday. The Marauis of LANSDWR aked information of
Lord Aberdeen respecting the ocupation by the French GovernLord Aberdeen respecting the occupation by the Fis acla Govern-
ment of the island of Tahiti. He did not view this acquition of
territory on the part of France with any unnecessary jealousy, but wished that the interests of a number of British subjects who
had taken up their residence in the islands of the Pacifc, and to whom the natives were indebted for considerable advancement In the arts of civilisation, might be protected,-Lord ABRRDLEAN
was also of opinion that no injury to the commercial or political
$\qquad$ he had already caused representations to be made at Paris, and they had been met by the most satisfactory assurance of protec
tion and encouragement. An artic e to that effect had, indeed, beens appended to the convention which had bech entered into, French and of M. Guizot for its due execution. for the Housc of Commons, and read a first tume amilst much laughter. , intended to propose on Friday, on the subject of the Scotch the church should sreely possess her riphts and libertues, that and
shock which may endanger its great national establishment would be regarded by the Honse as a national calamity, and tha the House, should be conceded by the Legislature, as far as they can be safely granted consistently with the permanent welfare o ment in the country. 4. That, considering that patronage ha in the most venerable authorities of the law of that country, that the preservation of patronage was made an express condition
on which the present Reformed Church of Scotland was established and endowed by the State; thatit has been confirmed by Several subsequent statutes, that the present Ministers of the of patronage; and that if this law be ander due superintend secure the introauclion, as pastors into an endowed church, men of learning, piety, zeal, good mond, that patronage shall be abolished as a grievance, is in the opinion of this House unrea
sonable and unfounded, and ought not to be conceded. 5. Tha this House acknowledging the independent, exclusive, and
supreme jurisdiction of the Courts of the Church of Scotland in all matters spritual, is of opinion that the demand of the
Church of scotlana that the law sha, be ramed so as to give to
the Church Courts absolute authority in every case to define the the Church Courts absolute authority in every case to deln civil
lanits of their own jurisdiction wihout any power in any cidins Court in any way to question or interfere with their procesdings, und in suits prolessedly spurtual, may treat of cinal and te mporal
matters, and may violate the statute or common law of the land, and that no action or proceeding shall be instituted against any mombers of the said Courts for a refusal to do acts reqs subjects are prejudiced in their civil rights; nolwithsianding that such
demand be under the qualification that the decrees and orders of the Church Court shall not be binding in other courts, or fette them in any way in the regulation of their conduct, according to to decide, is.unprecedented in any Cbristian Church since the Re-
formation, is inconsistent with the permanent welfare of the Church of Scotland, and the existence of subordination and Thersidyy. - The Consolidated Fund (8,000,0002) Bill was read a land Island Government Bulls passed through committee.-The Eat of Wrixizow moved for reutrans relative to to te amount of
duty from the distilation of spiritsin Ireland. He did not blame duty from the distilation of spirits in Ireliand. He did not blame
dhe Government for imposing the additional duty on Irish spirits, he Government for imposing the additional duty on Inish spirits,
ss it had been considered as an equivalent for the income.tax. as it had been considered as an equivalent for the income-tax.
But the experiment had proved a fatlure, for it had yielded only sation of society, by the encouragement which it gave to illicit Wein Gornment would retrace their stels.- The Duke of Ward betore all the innormation on the subject nad been laid on
the tabie of the flouse. The reverue had been increased by a arger sum than 15,woll., tor a large quantity of spsits had had increased in Ireland during the past year; on the con--Lord Mon'rable affirmed that crime had increased concur ently with the increase of duty on sprrits. Many of the distillers in lreland were, he said, in favour of the existing state of
things, in the hope that illicit distillation would have the effect of breaking up the temperance system, by which, on the reduc-
ton of duty, the trade would fall into ther hands. The tax pro luced nothng, and was ne equivalent for the income-tax ; but even if it were, it was better that the property rather than the he were Ireland should suffer.-Lord Firzobrald said that, if ion were the result of this increase of duty, he should not for a produced these mischievous effects; and the Government wer Earl of Wick Low replied, and the fayers were ordered. gave notice on Tuestlay, and which are fully described in our report of that day,-Lord Absrinbis opposed them, on the
ground that their adoption would aggravate the difficulties of Parlament in dealng with the subject. He moved the adjoumnent of the House as an amendment.-Lord Brovaham,
the Earl of HADDNoton, Lord Cotrenmam, and the Lord Chancmlion, censured the conduct of the majority in the Kirk,
after which Lord Campbell replied, and said he would not press his resolutions to a division.

HOUSE OF COMMONS.
Monday. - The first order of the day was a committee of supply, the civil and miscellaneous votes being the subject of considera-
tion. The first vote was one of 110,4000 , which being made up of a great variety of items, some of them very small, led to a long and despltory conversation.-Mr. for embassies with the amount expended by this country. It was a disgrace to the nobility of this country that none of them would taxed people of this country, Sir G. Cleres said that the mission
of the Earl of Wilton to carry the order of the garter to the King of Saxony was an example of the desiderated disinterestedness; he received no recomperise, and it was but reasonable to way the Capt. Peciers, drew attention to the state of the relations
between this country and France with respect to the mutual right of fishing, which has so long excited ill teeling. Thereupon and Lotd Palmerston as to whether the Whig government or the Tory governtaent which preceded it were to blame for leaving Pses assuring the House that Government was labouring to settle Mr. HUME commented upon some of the items of the vote, coutending that they should be referred to a committee. There was hardjy one item which ought not to be the subject of separate
aud mature deliberation. He found a charge in the civil contingencies of more than 1,0100. for the mission of Lord Wilton to objection to the dibtribation of such baubles among those who to the country. Then there was a charge lor the chrnstenng of
the Pnece of Wates; and, moreover, a cuarge for altcung his arms-the aims of a chuld m his cradic i Why was nut this de-
frayed from the large revenues of the Duchy of Cornwall He
objected to other items, individually small, but constituting a arge aggregate burd
Sr R. Pexqe explained, that the items objected to by Mr. Hume
were not estimatcs of the futwe expenditure, but accounts of the past. He contendea that there was a much more cfficient con-
trol over expense when estimates were summited on the responsibil ty of Government than there would be if they were introor his seryin to Saxuny, Lord a charged with no expense for the noble Lord except that of his conveyance, and, houghr. ifume noight think the Garter a bauble, yet, as long us its insignia were En object of ambition to the greatest sould hardly like to see them packed up in straw and sent in a deal box by coach. The hon. Member had ponted present Prince of Wales, had divested herself of the whole of Those revenues, and assigned them to trustees for the Prince. The expenses of his christenng own funds; and the only charg to the country was for the fittings of St. George's Chapel, her Majesty having thought it proper, at whatever inconvenience to herself, that the sacred rite should be performed in pubilic, for the rake of the Privy purse at the cost of the people, that she had voluntarily submitted her owx private revehue to the meome-tax.
Captain Bernas objected to the ftem for the expense of conreying the Bishop of Jerusalem to the coast of Syria, which was
compart with the staller item of the expense of conveying comvartd with the suinaller item of the expense of conveying cursion, and, on a division, the vote was antirmed by 112 to 37 .
Sir $G$. Ccmer then proceed to move the miscellaneous csti-mates.-Mr. HUME took occasion to blame the practice of closing the National Gallery for six weeks of every spring.-Sir R. PEEL
answered, that it was necessary to allow some veation to the officers having charge of the pictures, and that there was great difficulty in tinding ternporary substitutes to whom that charge attended the opening to the problic of places where national whiste
couid be mptoved, and stated, that in $1 / 4$, crls, durg which the Bnatish Muselm I ad now been generally accessible, the only
damabe cone liad been the breahage of two panes of glass by the
 mucurrect in the partual consticetion of a calculating miaclane
unfler the superntendence of Mr. Babbage. The new disco-
 llanks thedicated the expenditure already meuricd icr thls
object. The prosecution on thad led to the miventicn of several beahtitul mstruments, which had been found highly serviceable in the cotton manufacture; and the importance of a process by
which tablea of logarithms could be pecured againgt the popisi*
bility of error would be best understood from the consideration,
thaty one mistake in a deeimal place might cause the shipwreck
of a cargo three times as costly as the machine Mr . BOME and other members should restore the fountain in the park at Bushy, and allow the public to drive through the park at Richmond. At present only pedestrians were admitted, except by special leave from the
Ranger.-Mr. HAwss added, that at some periods of the year even pedestrians were warned off the grass, and restricted to the
 Primose - tull- Lorili Livo oun expressed bis hope, that when the an arrangement might be effected for that purpose,--Mr. HorsBAM mentioned an application made to Lord Sidmouth, the Deputy-
fanger of Richmond-park, by a member of Parliament living in the neighbourhood, for liberty to drive through the park, which
had been refused- - Lord Lincoun declared his survise at this statement, as he knew that such accommodation had been very
generally given by Lord Sidmouth to families in that vicinity. He believed that Mr. Hawes himself, as being a gentleman of gates. MT. AoLIONBY, complained that the public, who contri-
buted to the expense of the park, should be excluded from the enjoyment of it, unless this enclosure were preserved, which it
was not, for the private use of the Queen. - Mr. Hums said, it seemed to be, not a Royal park, but a siumonth park, - Mr.
Hawes bore testinany to the libctalyy with which Lord Skdmouth
grantect the passace throurh the park to centlemen havine resigranted the passage through the part to gestlemen havinge re
dences, pven though but temporary, in that nerhhbourhood. of Parliament, Mr. HUME objected to the site, which ought, in cumstances, however, the only satisfaction they condd the cirto complain-The Earl or Lincoun expected the Houses to be bo
far forward in two years as to enable the Lords to ocupy their far forward in two years as to enable the Lords to occupy their
neww chamber. 12.0000 . were granted for the improvements in the officers of both Houses, Mr. Hume called for $a$ statement in detail of the e grant for the House of Lords, and moved the post-
ponement of the sum until it was furnished. The House affirmed ponement of the sum until it was furnished. The House affirmed
the vote by 135 to 47 . On the eote for the Exchequer department,
Col by which Lord Monteegle was placed at its head. He paid some subject of Lord Monteagle's office, announced his intention of provoing, on a future day, an address to the Quen for the noble for the ecclesiastical commission, Mr. HuMs cousidering that
the expenses should be defrayed out of the property of the Church. The vote was carried by 140 to 33 .
The vote for the salaries and expenses of the askistant poor-
law commissioners being brought up, Capt. Pcgakit spoke in
reefence of the Glle denounced the conduct of the assistant poor-law commissioners, pronounced them to be swinding and oppressive, and dared the
Government to thrust the new poor-law down the throats of the people of the north of England. - Sir C. NAPIRR was afraid that Keighley or Bingles union, He moved that the chairman report progress, which was agreed to, and the House resumed. that it had been determined to postpone proceeding with the enLord R. Grosvenor, gave some statements to show that the saving under the Ecclesiastical Courts Bill would be greater than had at first been calculated. -Mr. HuM , not having been able to
obtain precedence on Friday for his motion of thanks to Lord Ashburton, fixed it for Tuesday next.
Sir G. GRyY put a question to the Government similar to that
asked by Lord Lansowne on Monday in the House of Lords, on
the protectorehip lately the protectorship lately acecpted by the french Goverment in the nominal sovereignty of Otaheite war offered to the French Government, the territorial possession and actual administration still remaining with the Queen Pomaree. Stipalations had been Eious worship, and for the free exercise of their functions by the communications to the French ministers on the subject of
these British residents, and the assurances received had been Sir R P Pmater
Sir R. Prgi, in answer to Mr. Hume, stated that though he did
not wish to speak with too much confidence, he hoped our com mercial negotiations with Naples would soon be brought to a sa tisfactory conclusion.-Mr. Ewart gave notice that, when the Factory Bill was brought forward, he would move an instruc-
tion to the committee to to clauses separately. brought on his motion for select commit tee to ninquire mito the allegations of surdry petitions respecting
the conduct of the magistracy duriug the disturvances in August last. He knew he was not addressing an mpartial andieise ;
the benches of the House were covered with justicus of the wicie perform "in bringing the subject forward. He Have a sketch of the orignu and siread of the disturbances, especially as to the circumstances attending the entrance of the mob into Manchesteen great oppression and nilegal nie asures resorted to mo order
to repress tive outbreak. Good and snlbstantial bail had been refused on the score of pollt, cal opurnon, seemingly as the resulat of a conspiracy ox the part of the makistrates, and acted on m
cabes whicre the accusations had eether bech abandoncd or Dot substantatated, and the spy system had been resorted to,
policemen in plaum clotice hav nig been employed in order to en trap individualas. Something should be done 1 order to sccure
the liberty of the subject, and to prevent the occurrence of simi-
 Clivivilals: at Preston and llacklurn the magistracy had need-
lessly and wantonily emplos ed the multary, auu had causcd loss
of or life, and many severe injuries, and at Halifax an unoffending
or man had been deliberately shot, and no investigation had TVer been made into the circumstances by the local authorities There was a strong feeling in the country that noc justice was to be obtained for the poor man; the people looked with strong
anxiey to the course which the House would pursue; and he hoped
he ehad to quiby satisfied them that he had made out a strong case for in
 nugastory and that a committee of inquiry would therefore be
unconstitut remedy for the refosal of bail, or for illegal and an appeal to the law, whin hed megistracy, investipate by by and to award heavy damages, if the cases swere proved, The by the Government, and if sympathy was of any use, the suffererers fact of tedly possessed it. But he did not believe in the alleged Rease for a jurry : the intilividual who conmmitted such an outrage
Twas amenable it anfammatory placard (a copy of which he exhivited) which had that publiched at Preston, exciting the people by the allegation
while the blood of their brothers ग, bad been causelessly shed the prisone subsequent trials it had been admitted, on behalf of Very trifing circumstances, Wan free from blame police, under

 the fave, in orte cace a bull for tigh treasinn hat beccl tould, but the Chartist delegates вaid, in their own words., that "centuries
might roll by "before another such golden opportunity might be might roll by" before another such golden opportunity might be
afforroded them to effect their object by aid of the general excite--
ment the severity with which the magistrates treated the cases was
undoubtedly under the just impression that they were dealing with the crime of high treason, and that the Government would
consider it as such. If any charge should be brought against the Government, it ought to be that of having exhibited too much
 charged by Mr. Duncombe with acting cruelly and unjustly.-
Mr. FikLDEN and Mr. Soort supported the motion--C Rurk ilay said be would yote for the inquiry, on the ground only
that, being himself a magistrate, he desired investigation into his conduct.- MI. G. W. Wood said the motion was ill-timed, un-
supported by facts or arguments, and a stigm
 full, complete, and spirited answer to any case had never been
made in his presence than that which had been given to this mo
tion tion by the Attorney-General. In the Dudley case, though the
general conduct of the magistrates had been approved by the Court of Queen's Bench, yet, as they had been wrong on a point
of law, damages were awarded, and the wrong was satisfied The other cases have been completely explained, and left no evening, had said that " 'monomania was the order of the day;",
whenever the words Poor-law are mentioned, the bon, and
 Whenever an Assistant Poor-law Commissioner is named, up soul haunted by the terrible imageses of Mr. Mott, the Bimgley Union, and the oppressed poor of the North of England. Now
Mr. Duncombe he always considered to have a mind clear and an
 idea that alt the Judges of the land are urong in their law - that
all the malrit, ates are tyrants and oupressors-that all ury mer are neglect full of their dutice, and that the Chartists are the mont i11-1ued and innocent persons in the worlic. A dangerous state
of things had been happily terminated, and though the Preston
case was an unhepyy one, the anthorities had been fully yindi cated by the verdict of a coroner's inquest. The motion was
itl-timed and unsnstained by faets, and he trusted it would be voted for the motion had it not bee for the proceedings in the
Court of Queen's Bench in the case of the Ducley magistrates which showed that the law would not tolerate such conduct.Atter some observations from Mr. V. STUART, Mr. AINsworth,
and Capt. VITIN, Mr. T. Duxcom br, in reply, sald that if he man out of the House.-On a division, the motion was rejected by a majority of 164 -thenumbers being for it, 32 ; against 1t, 196 . the House was adjourned antil Thursday.
Thursday - Mr. Escorr called attention to the heavy fees exacted from dedendants at quarter-session, when de
sirous of traversing, and the inability to pay which compels GRAAM apprehended that courts of quarter-session had the
power to puta stop to the abuse ; and if not the Government
 seconded by Sir R. H. IN GLLIS.-The Earl of Lincoor. had no intenelection having been declared void on the score of bribery, he had the hands of Memberg, more especially as he had limself been witness of demoralisting and disgusting seenes at former elections kreat improvement, and circumstances had come to his know in the improper practices for which he had been unseated.-Co Woon (Brecon) thought that some precaution should be taken to prevewing their practices at the next one, and again causing a Member to be unseated- - Mr. T. Duncompr had last session
made a similar proposition in the case of Ipswich, but it had not been approved. "he blamed the "democratic section"
correspondence, had thed House for causing the suspension of the writ for Nottingham. Duke's nearest relative (the Earlo of Lincoln) and the Government
who had cused the suspension of the who had caused competent for him to move that Mr. Walter be permitted to stand as a capdidate at the next election.-Mr. Hooe
dieclared that, as chairman of the committee, he had acted with 1 lipd sense of responsibility, and that the evidence dincelosed
not a tew casual or 1solated cases of bribery, but afforded prool of an orgamised system in the town. Mr. Walter had unfistur
nately, perliaps uncconsclously, mixed himself up with the party Whose practices had benl the cause of his being unseated. - Lord
W. Russkil was glad to hear thins statenient, for the perusal of going to oppose the issue of the wrtt, the Honse hatin vevertineless practive of bibery would recelve a severe check 11 commattee
Vid tlier duty, amu the law were resolntely
 It was a dispute que been, could stand again, and it ought to be

 crred to the case of the clection last star of Newcast.e-underLyne, where
frlvery, by himeff or agent, could not tand again. - After some
further conversation, Lord J. MANNER moved the adjournment of the debate until next day, in orrier to eniable a motion to be
made which would settle the question as to Mr. Walter being enabled to stand again. - Mr. Humr approved of this course ; and move as an amendment for leave to bring in a bill to enable Mr.
Walter to stand again. - The Sprakir informed him that it would not be competent for him to do so, as he had already spokem in
 consideration, to vote for the PREL havisue of the made up his mit, art, arter
to alter his determination heard nothing to alter his determination. By the statute of George the Second, it would operate as as salutaris checents, could not stanstruency, whien a ware
that their Member was lunbe deeds. - Mr. Hooe explained the sense the whenaity or their mise-
expression of "an organised system." The used the cencession or nature, and disclosed not t few isilatede cases, but a
cystem of bribery, by people acting in combination. remarked that, by the recent statute, an eliection comminttee was
required to revort whether or not $a$ Member wan replied that this involved no anomaly, as the Member thour prevented from standing again, was not exposed to the criminal
consequences of the acts of his agents.-Some other Members addressed ofew observations to the House; after which Lord J. ordered. - Sir R. $p_{\text {skL }}$ stated that he would move the adjourn-
ment for the Easter Recess on Wednesday next allotment or waste land in England. The people in the manufa extending into the agricultural distratiots, and The country stood on
a volcano t the House was shortly about to seaparate for the Easter holidays, and what could they zayt the thir constituencies?
Nothing had been dowe; no practical measure had been brought dition of the people was the allotment system, of the efficacy of out of everry hunctred various of watements; and he proposed that
there should be one-twentieth part, or five beomging to a parish,

 land; cottages to be erected, the rents to be appropriated towards
repaying the expense incurred, and when a surplus shall accrue the amount to paid into the poor fund. The Tithe Commissioners see Mir. Ferrand 's Bull introtuced; ; bat in the present depressed
state of
 ture.- Lord Wonstiey was afraid that the proposed bill would be
tur whons impracticable bot he would not be so urgracious as to
oppose its introduction. - Sir $J$. GRA HAR could not see in the proposed scheme anything eise than a project for maintaining the
working population at the public expense. These waste land Were in general distingulushed for thenr sterility; and he enter
tained the greatest doubts of the practicablity of a measure io he wished to guard himself from encourating the expectation of
any benefit being likely to arise from it.-Lord J. MANNBR believed that there was arowing feeling in the country in favour
of some such measure as that proposed by Mr. Ferrand. He adduced the example of the religious brotherhood of Charlewood Forest, who are successfally reclaiming a warrea and stony moor
and declared that he would mot give up the belief that it was
possible, by careful cultivation, to produce sofficent this country for the maintenance of its entire population; and he
thought that in the present entire deaduess of the public mind to all
 to any chance of profitable. xeturn. It was usulese do waspertionec money
on cultivating the barren soils of Emgland, when we could more Sir J. Hanmez believed, that instead of there being an entire
absence of political feeling amongst the people, that there was a growing spirit of discontent, only to be abated by practical mea-
sures for their relief, of which he considered the present measure certain we though not a promineut one. But free trade he was we might as well try to stop the sateliltes of Juppiter, - Mr H . Bro-
Timaroon wished to know if these waste lands were proposed to

bill would benefit the poor, and therefore he would support it.-
Mr. A A LIo NBY was desirous of seeing the bill introduced, in order
 cultivated. They might not return a productive outlay to the
capitalist, but in the hands of the working man they would yield was iven to bring in the bill. Sir $A L E N T I N E$ BLAERE moved for leave to bring in a bill to ment, on taking their seats, except the oath of allegiance.-Sir J.
GRAABM did not think it ot be either politic or expedient to disstrong feeling on the subject of oathe, and suported it.-A Atter a
few observations from Mr. Bo PEEL reforred to the term 8 on which the question of of Catholic
emancipation was setted in 1829 , and declared onat it was jossible for him to accede to the motion.-Sir T. Wilds', considered that the oaths now taken did not bear the construction
which had been put upon them by Sir V. Bhake. Dr. . Frocr added
a few observations; and on a division the motion was rejected Mr. Elphinstons then moved for Teave to bring in a bill for

 TFriddy. - The consideration of the Miscellaneous Estimates was
resumed. On the vote of 56,500 . for the Poor Law Commission, an mendent ror reducing it to 20,000 , was moved and negatived by 93 to 14 . Votes were then taiken for the Mint, the Public Re-
Cords, Secret Service, the Treasury, the Mudel Prison, and the Milbank Penitentiary. A discussion arose on the item of 15,0001 . for teed to postpone it until particulars were before the Ho
agren

Money Market, Friday.-Consols; for money and account, closed at $96 \frac{3}{3}$ to $\frac{7}{8}$; Three-and-half per Cents.
Reduced, 101 , ex div, for the opening ; New Three-andhalf per Cents., $102 \frac{1}{8} ;$ Bank Stock, for account, 186 ;

## Fitetropolís and its Vicínitn.

Consecration of the New Chapel Royal. - The ceremony of consecrating the new Chapel Royal, at BuckingCanterbury officiating. At half-past eleven, the Bishop of London arrived at the Palace in his episcopal robes ; his
lordahip wa mhortiy followed by the Archbishop of
terbury, attended by his chaplain. At twelve o'clock the Queen and Prince Abert entered the royal closet, accompanied by her Royal Highness the Duchess of Kent. In attendance were the Duchess of Buccleuch and the ladies in waiting; the Lord Steward, the Lord Chamberlain, and other members of the Household. The pers in the side aisles of the chapel were filled with company, consisting of the lords and ladies in waiting, and the ladies of the principal officers of the household. Among those present were the Duke and Duchess of Norfoik, the Countess Delawarr, the Earl of Lincoln, and Mr. Blore, the architect. The seats in the centre aisle of the chapel were appropriated to the household. On her Majesty's arrival, the Archbishop of Canterbury, attended by his chaplain, proceeded to the communion table, where her Majesty's warrant was presented, commanding him to and directed the registrar Mr. Dekecerat it and the same having been read, his Grace declared that he was ready to consecrate the chapel. The Archbishop then proceeded to the consecration and dedication, and walked Chapel Royal, down the middle aisle, and returned up the came to the comamunion table, attended by his officers, the Right Hon. Dr. Nicholl, vicar-general, the Bisbop of LonRight Hon. Dr. Nichol, vicar-general, the bishop of Low dou, the Bishop or Norwich, clerk of the closet, the Rev, Dr. Hodgson, Dean of Carlise, and the Rev. Dr. Seath, didean. The chapel onserntories. hae interion divided from the centre by appearance; the side aisles are divided from the centre by ceiling divided into compartments, and ornamented in stucco. It is lighted by windows at the sides, finished with architraves, and surmounted by pediments. The Queen's closet is elevated on Doric columns across west end of the chapel, The communion table had a cover ing of crimson velvet embroidered with gold; the back o the altar, the seats, and the cushions, were likewise of the same materials. The front of the Queen's closet, the pulpit, and the reading-desk, were also covered with crimson velvet edged with bullion fringe and bordered with gold lace. The royal closet is lighted by a number of small circular-headed windows, and corresponding windows are also introduced at the other end of the chapel, over the altar. The pews in the side aisles, occupied by the lords and ladies of the household, and the seats in the middle aisle, are covered with crinison. After the ceremony, the Archbishop of Canterbury, the Bishops of Loudon and Norwich, and the clergy, and the ladies and gentiemen of the household present at the consecration, parMajesty and Prince Albert the officers of the household Majecty a The Bishop of London preached the sermon, toking hi The Bishop of London preached
Her Majesty's Levee.-His Royal Highness Prince Albert held a levee, on behalf of her Majesty, day afternoon, at St. James's Palace. His Royal Highness and suite arrived from Buckingham Palace shortly before two o'clock. The levee was the first this season, and
was numerously attended. Several presentations took place in the foreign diplomatic circle, and at the general levee. The Prince was attended by the principal officers
of his household, and by several members of her Majesty's of his
suite.
Opening of the Thames Trunneb.-The ceremony of opening the Tunnel to the public took piace on Saturda last. The rendezvous was the Rotherhithe shaft on the Surrey side of the river, where two marquees had been erected, one for the accommsaaion the other for the recep ton of visitors. The hoisting of flags and the ringing of bells naturally drew a great crowd of iders to the spot a an early hour of the day, but it was not until 4 o clock in the afternoon that the ceremony commenced. The profollowing order : First came the band of the Fnsilier Guards, and persons carrying various flags and banners, the clerks, engineers, directors, and other officers, and, lasty, visitors, an immense number of persons, including of the tunnel, on arriving at the shaft at Wapping that was ascended and paraded and then the procension tha turned by the eastern archway to Rotherbithe. The watermen hoisted a black flag at the Tunnel-pier to indicate their feelings upon the occasion, considering that by the tunnel the "Redriffe Ferry," and consequently thei interests, have been whermined. Amor the the present at the ceremony were the Earl of Lincoln, Lord Clay, the Hon. Mr. Byng, the Lord Mayor, Mr. Hume M.P., Mr. Roebuck, M.P., Mr. Hawes, M.P., Mr. War burton, Mr. Rennie, Mr. Babbage, Dr. Wollaston, Mr.
Faraday, Mr. Maudslay, Mr. Field, and other scientific parsons, Mr. Maudslay, Mr. Fild, and other scientheir friends at the the evening yen, and upwards of 100 guest gat down to dinner. Mr. Hawes, chairman of the directors, in the chair.-The number of persons who visited the tunnel from six o'clock on Saturday night to six admission money being a penny each, realised would be about 125\%. On Sunday, the vicinity of the tunnel was immensely thronged, and many were disappointed in obtaining admission into it. Several who Were on the Middlesex side proceeded by boats to the the entrance, but with no better success, as on each side the crowds were almost equally numerous. In the course of the day, is order to prevent confusion, a body of police
attended. On Monday the access to the tunnel was much more eas

Metropolitan Improvements.-In the House of Commons on Monday, on the vote of $£ 140,000$ as the expenses of the works of the new Houses of Parliament, Dr Bowring wished to know whether any determination lad been come to by the Commissioners as to the internal decorations of the houses-whether fresco painting were intended to be adopted or not? Sir R. Peel replied that
the Commissioners had not come to any decision as to the Commissioners had not come to any decision as to would be exhibited in Westminster-hall in May or June next, and the decision of the Commissioners was sus-
pended until that exhibition had taken place. Mr. Hume said that it now appeared that the new houses, the ex pense of which was estimated at $£ 770,000$, would cost was right in saying of these new buildings that "they would look well on paper, but were not fic for use."

For half the money they might have had a dry, good building, instead of being buried underground. For his part, all the satisfaction he now had was to complain--On the $£ 12,000$ for the improvements in Trafalgar-square, Mr . foduce the said he understood it had been determened to of the insufficiency of funds to carry out the original deign ; under these circumstances, he suggested that a por on of the sum now proposed to be roted should be a propriated to the completion of the pillar. The Earl of Lincoin explained that the height of the pilar had ber on grounds connected with public safety. In regard to , navigation, Mr. Gladstone, in answer to Dr Bowring, said that the subject of the necessity of adopters on the Thames was worthy of attention, and he would direct the attention of a committee to it which is now sitting on a collateral subject. In reference to the roads of the metropolis, Sir James Graham replied to Lord emplation for the better lighting of the metropolitan roads. For some observations on Richmond Park, we must refer our readers to our Parliamentary summary Street Sweeping.-The first exhibition in the metro polis of the self-loading cart, or street-sweeping machine, which has for some time been in use in Manchester, toak place last week on the wood-pavement in Regent-street, and attracted during the day crowds of persons to view its novel apparatus. The machine has been brought up from Manchester under an arrangement with the Commissioner of Woods and Forests, and under whose auspices the experiment was made. The cart is drawn by two horses otatory motion of the wheels to raise the loose soil from ae surface of the wood, and deposit it in a vehicle through Regent-street, the cart left behind it a well-swep ract which formed a striking contrast with the adjacent ground. It filled itself in the space of six minutes, it being of a threefold nature, that of sweeping, loading, and carrying at the same time; which under the old process formed three distinct operations.

Female Orphan Asylum.-On Thursday a special ge neral court of the guardians of this Asylum was held a the institution in the westminster-road, for the purpose Mr. Goode. There were originally 11 candidates for the Wylde, of Trinity-chapel, Lambeth, and the Rev. W Jowett, of Stockwell-chapel. At the close of the poll th numbers were-for the Rev. Mr. Wylde, 373 ; Mr Jowett, 328 ; majority, 45 . The close of the poll having been announced by the chairman, Mr. John Curling protested against the election generally on the ground of the untair conduct of the committee in issuing an advertise ment a few days before the meeting recommending Mr. Wylde, and also because the election was void, on account of unuaified votes having been receid before the Bishop of Winchester on an apneal to his decision.
Bethlehem Hospital.-A warrant was issued from the Home-office a few days since, under the seal of the Secretary of State, directing the governor of the Compter to renove monomaniac James Stevenson to this
Seamen's Hospital- Majesty's pleasure
his this benevolen large num the Hon Sydney Her anniversary of its foundation. The Hon. Nydney Her bert, secretary the Ad prapor great number of naval offcers. The donations $000 /$ The number of patients admitted during the past year amounted to 2,737 ; and relier, medicine, and advice had been given to 1,982 out-patients, making 62,608 seamen of all nations since the foundation of the asylum

Canada Company.-The annual meeting of the Ce nada Company took place on Wednesday. From the re port of the Directors, it appears that satisfactory prin ciple of allowing emigrants to pay by annual instalments thereby affording them longer credit, and enabling persons of small means to acquire property by the exercise of in the industry. So well has this principle that the Directors have determined on throwing open the greater portion of their Crown reserves upon simalar conditions in order to expedite iprosperous settlements in the North

American colonies. The sales of land by the Company
for 1842 produced $66,270 \%$. currency, of which 37,477 acres of Ciown reserves, at the average of $12 s$. 11. . per 11 s . 7 d . per acre, gave $40,430 \mathrm{l}$. currency. The remainder of this sum was for the sale of town-lots in Guelph and in the Huron tract in addition to saes on annur for twelve years, on the new system above alluded to

The British Colonies.-A memorial has been got up within the past week, addressed to Sir R. Peel, as the head of ber Majesty's Government, by the shipowners, merchants, bankers, and others, of the City of London, calling upon him to propose some extended scheme of ystemat colonigntion So areat is the interest it has excited in the City, that it had, up to five o'clock on Wednesday evening, upwards of 1200 with the prayer, stretched over 13 skins of parchmention double columas. It is understood that it will be pre-
sented to the Premier upon the earliest convenient day. Anti-Corn-Law League.- The third weekly meeting of the League was held on Wednesday night in Drury-lane theatre, when the house was, as on the two former occasions, overcrowded in every part. Mr. G. Wilson took the chair, and commenced the business of the meeting by offering the apology of the council to those parties who had experienced a difficulty in procuring admission to the theatre. he applications were so numerous, that the council felt that had the theatre been twice its size, they would still have been unable to supply all those who had requested tickets of admission. The first speaker of the evening was Mr. James Wilson, of London, who was followed at and Mr. Cobden

Public Meetings.-On Tuesday a meeting of the watch and clock makers of the Metropolis took place at the Crown and Anchor, "To take into consideration the best means to be adopted with reference to a bill before Parliament, called 'The British Watchmakers' Company." There were nearly 2,000 persons present. Mr. Watson, of King-street, Cheapside, was called to the chair, who pened the business of the evening by alluding at great ength to the several companies in France and other laces, which had been rop under the superintendence of Mr. Ingold, and who was to be the head of the new company, which, in his opinion, was one of the many bubble ones almost daily coming before the public. A committee of their trade had wished to see the machnery only answer they could abtain was, that the new company intended to begin and finieh a sentlemen having addressed the meeting at great length it was resolved to petition Parliament against the bili This is now unnecessary, as the bill was thrown out las ight in the House of Commons.

Mortality of the Metropolis.-The following is the day, Mar 18:-West districts, 148 ; North districts, 214 Central districts, 184 ; East districts, 225 ; South dis tricts, 224. Total, 995 , ( 529 males, 466 females.) Weekly average for the last five years, 903, (males 461 , females 442 ,) and for the last five winters, 1004.

## 羽robimcial 20ems.

Incendiary Fires. - We regret to observe that several ncendiary fires have been again reported, although all tenced to the full term of transportation. On Tuesday, notice was issued from the Secretary of State's Office tating that on the night of the 7th insto, a cottage at Thornhill, Wits, to which two other cottages adjoined was maliciously set on fre by inserting combustible mate rials in the thatch of the building. Government offer a reward of 100 l , and the union and parish-officers a fur ther reward of $50 l$, for the discovery of the incendiaries and a promise of her Majesty's pardon is held out to any one concerned (except the person who actually set fire to the premises) for such evidence as may lead to the same result. Another reward of 100 l . Was also offered on Tuesday for the discovery of incendiaries who, on the Wiment., set fire to the lambing-sheds at Merly-farm, harvest, in the parish of West-Bergholt, near Colchester, occurred on Saturday night, the ]8th inst., on the farm of the late Mr. Bradbrook. A cart-lodge near the house was discovered to be on fire, but fortunately in sufficient time to prevent exterisive damage. It is mentioned Saturday night
Aberystwith.-A public meeting was held in the townhall of this place last week, for the purpose of conveging to the Duke of Newcastle the general regret consequent upon his determination to part with the Hafod estate, and thereby dissolve his connexion with the principulity. An address expressive of this feeling was unanimously carried Bath.-On Saturday morning this city was in a state of alarming riot, in consequence of the acquittal of a man called Parsons, lately tried on the charge of having killed his wife in this ecity. On his arriving after the trial, he was followed by the execrations of the populace, in num ber about 2,000, to his house, whence he was forcibly dragged out, and nearly killed, before the police could succeed in extricating him. The rin
Brighton.--The process of boring the Artesian well fo resh water under the sea is still in operation at the oute head of the Chain-pier. The workmen have reached depth of about 100 feet, but have not yet accomplished the desired object. A small quantity of water has been obtained,"but it is said." to be rather brackish.-n.A melan"
choly accident occurred here on Monday afternoon, by hich Miss cranve, a young lady, daughter of Mr. W. Granville, of Bedford-square in this hat whe diad a fer hours. It appeare that Misg Granthat she died in a few hours. It appears that Miss Granville, who was on the point of being married, was riding
on the Dike-road with some friends, when her horse ran on the Dike-road with some friends, when her horse ran away with her; she became frightened, and threw herself soon afterwards. The jury at the inquest returned a verdict of accidental death, with a deodand of 1 s. on the horse. Carmarthan. - On Friday last, two more gates were
evelled to the ground by Rebecca and her daughters They appeared about midnight at the Narberth east gates, and commenced the work of demolition, which wrs completed on the two gates in the space of about 20 minutes headed by an athletic female on horseback, who gave the command with considerable coolness and promptitude. man, was witnessed by interfered; and Rebecca and her children, having fired the town as if they had done good service to its inhabitants by having thus asserted their own supremacy ove the laws.
Cheltenham.-The Manor of Cheltenham, last week, underwent a change of owners-Lord Sherborne having Agg Gardner, for the sum of 39,000l. The negotiation for this tramsfer has been going on for nearly two years. on the copyholds of the manor and the tolls of the mar kets and fairs, the market-house and arcade, as well as the interest possessed by Lord Sherborne in Trinitychurch, together with some other properties pertaining to his Cheltenham estate. The manor fomily for 225 year Joln Dutton, an ancestor of the present peer, having purchased it of Charles, Prince of Wales, in 1618 , for the um of $1,200 l$.
Exeler.-We learn from Woolmer's Gazette that the Bishop of Exeter bas been under the necessity of seeking W. H. Tucker, who has been several times in the Asplum in this city, and in other lunatic establishments. It appears that during several weeks past he has addressed letters to the Bishop of Exeter, containing threats of a
very violent description, and has also expressed similar threats against the Bishop in letters written to the Chan cellor of the diocese and to the Archbishop of Canterbury It is said that the Bishop was under the necessity of wemoving Mr . Tucker from the charge of a parish into whicia he had been irregularly introduced as curate, and hostility. He was examined last week before the magis trates at Torquay, and, as there was no doubt of his
insanity, he was sent to the Lunatic Asylum in this city for safe custudy.
Marlborough.-The new School for the Sons of Clergymen, founded last year under the patronage of the Archbishops and Bishops is expected to come into operation approximate as nearly as possible to that pursued at Eton and Harrow. When the axrangements now in progress pupils complete, there will be ample pupins, exclusive of apartments for the head masters, scribers, a great number having qualified as life governors, exceeds 14,0002 . It is calculated that about $3,000 l$. will cover all costs of outfit, the residue being converted into stock.

Portsmouth.-The new steam-yacht, the Victoria and Albert, building at Pembroke for her Majesty's private use, is shortly expected at this port. She is to be rigged as a polacca, a style of rigging very prevalent in the
Mediterranean, and much admired for its beauty. It consists in the lower masts, topmasts, and top-gallantmasts being all formed of the same spar, and all ber yards will strike. She will be fitted with Smith's wire-rope. Her
breadth of beam will be 33 feet, and her length 200 feet. breadth of beam will be 33 feet, and her length 200 feet. has The Hampshire Telegraph states that Mr. Abbinett has again been successful in his process of raising sunken Vessels, having last week raised the brig. New Holland, o
167 tous, with the whole of her cargo ( 330 tons of coals) on board. The vessel took the ground on the 19th inst. while under repairs, in consequence of the late extra ordinary low run of the spring-tides, and slipped off the a... was promptly afforded by the government authorities, and a party of seamen and marines, from the St. Vincent, having volunteered their assistance, under the direction of ing thobinett, the object was accomplished, notwithstandthe nature of the of the brig's position, her stern, from than the bow, in the short space of 48 hours.

Rochester:-On Wednesday evening, in consequence of information given to the police of this city, a young man, who gave his name John Richmond, was brought to charge of threatening to take the life of the Queen and Sirg. Peel. On Thursday the prisoner was brought up
Sing before the borough magistrates. He is a young man about 27 years of age, and has the appearance of being a
tradesman. He said his name was John Richmond Ellis, that he was a native of Margate, and by trade a confectioner. The charge was fully proved by the evidence of several witnesses, and the prisoner was remanded, in
order that the Mayor
Graliam on the subject
Railutays.-The returns of traffic on the principal lines or the past week were as follow:-Northern and Eastern 1,199l.; Greenwich, 753l.; Eastern Counties, 965l. Croydon, 213l.; Liverpool and Manchester, 3,505l. Brighton, 2,177l.; Grand Junction, 6,728l.; York and Orth Midland, 1,714l.; Blackwall, 5876 . ; Great North England, 1,236l.; Midiand Counties, 2,119l.; Man$1,948 l$. ; Birmingham and Gloucester, 1,708l. ; Birmingham and Derby, $1,038 l_{\text {.; }}$ North Midland, 3,637l. South Western, 4,5601. Great Western, 11,028l. ; Lon don and Birminghara, $12,873 l$; South Eastern and Dover,
$1,437 l$. The periodical meetings of railway companies 1,437l.-The periodical meetings of railway companies one or two of minor importance, the particulars of Which may be briefly noticed: At the meeting of the Lancaster and Preston Junction Company, on the 15 th ult. dividend of los. was declared on the whole shares, and Os. 7d. on the three-quarter shares, subject to deduction of the income-tax. -The Aylesbury Railway is abont to pass into the hands of the London and Birmingham Company, and a committee has already been appointed to negotiate the terms of sale. In the meantime a dividend of $8 s$. per share is to be paid to the proprietary.-At the
Ulster Company's meeting a dividend of 10 s. per share was declared, leaving a small sum to be carried to the reserve fund for the balance of profits of the half-year, stated to be $5,336 l .7 \mathrm{~s}$. 10 d . The management of this ts various having a proper $a$ steady increase in its revenue, and a good development of traffic. Considerable excitement prevails at the present moment ne railway world with reference to the contest now ghos forward between two of the principal companies extension through the county towns of Cambridge, Peter borourh and lincoln. The London and Birmingham Compa, Lin Bing Company and the Northern Eastern advocate an extension from their present terminus at Bishop's-Stortford-first to the town o Newport, in Essex, a distance of ten miles-and thence on to Cambridge. In support of this latter project a public meeting was held last week at Cambridge, for the proposed line of railway from Blisworth to Peterborough and for taking the necessary steps for an extension of the Northern and Fastern line from Bishop's-Stortford to Cambridge, and from thence on to Peterborough. The
Earl of Hardwicke, Lord-Lieutenant of the county, took the chardwicke, Lord-Lieutenant of the county, laok number of the landed The meeting resolved that the bill now in progress for making a branch railway from the London and Birming ham line from Bisworth to Peterborongh would give to the London and Birmingham Company an entire monopoly of conveyance to the north, and interfere with the extension of which would, in the opinion of the meeting be more serviceable to the whole of the districts ex tending north. After a long dionosed extension an the part of the North-Eastern Railway, another resolution was passed, recommending the raising of capital for the purpose of carrying out the undertaking.-The engine the manslanghter of Mr Hervey, the Bamsley station f the North Midland Railwuy has been acquitted station fastern Counties Railmay Wednesday, for the first the throughout the public on Wednesday, fren it was trave first the, throughout the eatire line, when it was traversed by a passenger-train from London to Colchester. The mayor and town-council of Colchester celebrated other guests from the metropors of the company and other guests from the metropous, to an enter Brentwood and Colchester, it appeard as if between Brentwood and and villages in the neighbourhood had poured out thei whole population to welcome the train, and on its arriving at Colchester, it was welcomed by the cheering of thou sands, who had collected near the station-house, waiting for its approach. The guests afterwards formed int tained by the corporation. Sir H. Smith, M.P. for the borough, in the chair. The ceremony passed off withou the slightest accident.

## IRELAND

Galway-At the late assizes for this county, a criminal proceeding was tried before Judge Perrin, arising from that once fertine source of blood and violence, a faction feud, and ending in a homicide. The parties engaged on both sides were proved to have been inflamed with drinkThe lude The Judge publiciy noticed a circumstance so remarkable he inquired of the witnesses whether the Temperance Society lad been introduced into that part of the count where the riot occurred; and in his address to the jury declared that auch another case had not been brough before him for the last four years: or, in other words since the date of that reformation by which Father Ma thew has accomplished so much for social peace and the orderly submission to law.
Cork-About fifty gentlemen, members of the com mittee appointed to conduct arrangements preliminary to the approaching meeting of the British Association a number of gentlemen resident in England and Ireland distinguished for their scientific and literary research
intimating their determination to attend the neeting. The to be good authority on the matter, that it was really the intention of her Majesty to visit Ireland in the present vear, he bad written to Lord Delawarr on the subject, from whom he had received a letter, stating that Lord Dela. warr had no reason to know that the Queen would visit reland in the month of August. It was then resolved to commence the sittings of the association on Thursday, the 17 th August, thereby it was hoped, securint the presence of the Judres at the Summer Assizes, and of the country entlemen in town.-The Earl of Roden steamer was lost W Wedueder weok near Poorhesd, on her voyace from Papaye to London. The crew and passengers were saved together with the vessel is likely to go to pieces.
Waterford. -The collection of the poor-rate at Gaultier commenced again on Tuesday week. A troop of Hussars, company of Infantry, and about 150 police, stole a mourneying about 30 or 40 miles, brought home two cows, journeying about 30 or 40 miles, brought home two cows, wo pigs. The alarm was given the instant the military were seen, and the cattie vanished as if by magic. But or the interference of the Roman Catholic clergy it is said that there would have been a great loss of life. There appears the wortuer apprehomsion that any actuar resistance will be offered to the authorities; but there is a general impression that passive resistance will continue.

## SCOTLAND.

Edinburgh.-The action of damages raised by Mr . Clark, against the majority of the Presbytery of Dunkeld, or refusing to take him on trial, with a view to induction was brought before a jury last week, and damages to the mount of more than $2,000 \mathrm{l}$, were awarded to him. A petition has just been presented to the Principal and Professors of the University, praying for the restoration of the academical costume, or conege gown, as formerly worn in the University of Edinburgh, and still in use in the Colleges of Glasgow and Aberdeen, and recently atroduced into Durham University, King's College and University College, London. This petition has been gned by 380 of the matriculated students of the Univer sity, and has been received in a favourable manuer by Glasgow.-A journeyman shoemaker, named M'Cole man, whose insanity would appear to have fixed upon Sir R . Peel as the objecr of his delusions, made his appearance last week in the Sheriff Clerk's office in this city. His business, he sata him to Sir R. Peel on important business. He talked unconnectedly on different subjects With the persons in the office, but always ended in something about going up to London to Sir Robert.". He insisted also upon his being the father of M Naughten, and threatened, if his wishes him. Finding that he was undoubtedly insane, the athorities conveyed him to the lunatic usylum
Dumfries.-We learn by the local papers that the earthquake which was so generaliy felt in the north o England on the morning of Friday fortuight, was experienced in many parts of Scotland. In Dumfries, the ahabitants, in some instances, were awakened from their sleep, and got up, under the belief that robbers had entered their houses. The shock was felt as far as New abbey and Kirkbean. It is zaid that, with the exception of a sligat vibration along the range of the Tinwald bills, bout 12 years ago, no earthquake has been felt in this locality for upwards of sixty years. The loch at Closeburn was observed to be much agitated on the day of the reat earthquake which devastated Lisbon ; und a slight shock was felt in the same spot about two years aso, which extended at that time over the north of Scotland. In he present instance, however, the shock appears to have throughout various parts of England at the same hour.

## 1ffiscellanpous.

The Aerial Steam-Carriage.-Our readers perceived by our Parlismentary Report of lest week that a Bill, constituting a Company for the working of this inven. The had been brought forward in the House of Commons. Che respondent, may therefore be interesting to our readers: -"When it was announced sone time ago, by the ordinary monthly lists of patents granted, that Mr. Heason ad invented a machine capable of conveying despatches and passengers through the air, the general impression was, that some moody and enthusiastic projector was bout to exhibit the produce of his day-dreams. Ou this is in truth no visionary scheme, but a design of very scientific conception, carefully and perseveringly wrought out. It would perhaps be too much to affirm (what yet ve cannot deny) that the machine in its present state will certainly succeed; but the least which can be said is, that the inver has most skifully removed the diff cuities which have hitherto debarred us the possession of the long-coveted faculty of fight, and has made its evencertainty. All former attempts of this kind have failed through the want of a source of power whose energy bore a sufficiently high ratio to the weight of the requisite machinery. Could this source of power have been found, here was ingenuity enougi to turn it to the desired ac first divided it. To set a machine a-going, and bring it up to a given velocity, is one thing; to maintain that velocity against opposing forces, is another. Now, in the
case before us, the power necessary for starting is much Henson, therefore, starts his Aerial Carriage by mean of an apparatus which he does not carry with him, and then embarks only the smaller power and lighter machinery Which are sufficient for keeping up the original velocity
But even this happy device would not have succeeded if he inventor had not also effected an extraordinary reduc tion in the weight of his steam-engine. Our engineering gine of 20 horses' power now in preparation for the aerial but 6001 bs . To the united effect of these different branches of this important invention must we attribute pur present prospect of making our paths in the air. We flight:-Its car, inclosed on all sides, and containing the passengers, managers, burden, and steam-engine, is structed as to combine great strength with extreme light hess, and is covered with any woven texture which is oderatery light and close. This main-frame or expanded as wings ; yet it is perfectly ointless and without vibratory motion. It advance hrough the air with one of its long sides foremost, and oined the tail, of 50 feet in length, beneath which is th udder. These important appendayes effectually contro he flight as to elevation and direction, and are governed edge of the main-frame are two sets of vanes or propellers, of 20 feet in diameter, driven by the steam-engine.' We ave aireaay said that the mparted at its starting. This is effected by its being ade to descend an inclined plane: during the descen reaches the bottom that covering is rapidly spread: by this time the velocity acquired by the descent is so great that the yesistance produced by the oblique impact of the sloping ander-surface of the wings on the air is sufficient $t$ sustain the entire weight of the machine, just as a brisk wind upholds a kite. But while the pneumatic resistance thus procured by the velocity prevents the falling of the car-
ciage, it opposes also its forward flight. To overcome this latter and smaller resistance is the office of the steam-engine The chief peculiarities of this important member of the carriage are the respective constructions of its boiler and condenser. The former consists of hollow inverted truncated cones, arranged above and around the furnace they are about 50 in number, and large enough to afford 100 square feet of evaporating surface, of which half i exposed to radiating beat. The condenser is an assemby the flight of the machine. It is found to produce a team is employed in two cylinders, and is cut off at one fourth of the stroke. Our engineering readers will be able to gather, from these particulars, that the steam-en ine is of about 20 horse-power, supposing the evaporatin power of the boiler to be equal, foot for foot, to that o mination of the resistance to be overcome. Mechanical cioue impact of solids and flat relates to the on the points involved in this subject. Experiments do not supply the lack of sound theory; for, not only has heir purpose been to ascertain the effects of large angle fmpact to the neglect of the smaller ones here con Hutton, Borda, \&c.) have always required the determina ion of the resistance in the direction of the moving body o the neglect of that which is perpendicular to that di rection; while here their effects are so intimately connected that one cannot be determined without first knowing the hich supporta the vehicle, $h$ which the smallest reliance can be placed. Mr. Henson, we understand, has formed his conclusions from the best obe has don could make on the fight owever, that the re sources of mechanical art are by no means exhausted by the present construction of Mr. Henson's engine, and that recent inventions are available by which its power may be doubled with little increase of weight. The area of the 4,500 square feet ; the weight to be sustained, including the carriage and its total burden, is estimated at 3,000lbs. The load is said to be considerably less per square foot of our non-mechanical readers, to add that the general ap pearance of the machine is that of a gigantic bird with in its support are stronaly exemplifed in the kite ; and that its progress is maintained by an applica tion of power like that which propels a steameperations of nature, particularly in the flight of birds will be found many striking illustrations of the principles ne matever may be he immediate issue of the present attempt, we think it is mpossible not to award to the inventor the highest credit ue to the removal of the great difficulties which have hitherto defeated all similar inventions; nor do we doubt that in following out the path he has opened, complete inlar, as we wish, early and entire, or whether it will be delayed and gradual, depends on the facts as to oblique pneumatic resistance, which have yet to be ascertained of careful inguiry and chearful hope what will be the
changes, commercial, social, and political, which the pos The Comet. Sir power will necessarily bring about." ollowing letter to the Times, dated Collingwood, March 4.- I obtained a very good view of the head of the comet this evening, as near as I could identify the stars in he strong twitight from the roof of my house, near one of the stars of (rho) Eridani. Its appearance was that of o sharp nucleus. I could only use a very low magnifier o that the tail appeared to rise at oace from the nucleus, Without interval or any appearance of division into two
streams. It is a much less conspicuous object than might ave been expected from so superb a train; but there will be no difficulty whatever in observing it with fixed instru ments."-Sir James South, on the 26th, wrote from Wimbledon Park as follows :-"Last evening, at a few righter eight, the comet 8 tail was here visible. The Orion par o me more below these stars than when I saw it at Kenheta of the Canis Major as I then did In its direction from Rigel towards the horizon, I at times could trace it Fithin six or eight degrees of the horizon. Its actua determine, from the presence of overwhelming zodiacal or other light, to which also I refer my inability to trace lower, for with a night-glass $I$ could frequently per$t$ the mallest vestion Wing have no doubt whatever that the brilliant light seen in the western hemisphere is the tail of a comet, M. Foster, an astronomer of Bruges, in a letter in the Antwerp paper of the 23d ult., says he has no doubt that the phenomenon
is the sodiacal light. Mr. John Taylor, of Liverpool, in letter published in one of jounals of that fow maintains the same opinion. The following letter on the subject has been addressed to the Morning Chronicle by $f$ the translation of a very old Latin work, entitled "The Sphere of Marcus Manilius,' printed in the year 1675 phich contains records of a yast number of comets which have appeared, I was much/surprised to find the following entry, which Mave copied verbatim:-क्' March, 1668.On the 5th and 10 oth of March a comet was observed by sig. Cassini, at bologne, about the first, hour of the night (after the Italian why of counting). The head or body us length, being extended, a Lisbon, in Portugal, over almost the fourth part of the visible heavens from west to east-from the Whale, hrough Eridanus
Lopus, as observed at Bologna, by Sig. Cassini. This the present visitor is completely identified, or rather, I uggest this to the astronomical authorities. If this
The late Dr. Southey.-Our obituary of last week conained the announcement of the death of Dr. Southey n Tuesday, the 2lst ult., at his residence at Keswick Although our readers were in a great measure prepared appeared in our columns a few weeks since, (ante, p.110, e do loubt that the following particulars, extracted rom an article in the Morning Chronicle, wil be acbeen in a state of mental darkness, and a twelvemonth go he was not able to recognise those who had been his companions from his youth. Scarcely could his wife er. Excess of mental labour in overy department of iterature-poetry, bistory, biograpby, criticism, and philosophy, continued from year to year, without cessationowed his strong spim at last, and obscured the genius which had solong cast a glory upon the literature of the age. In early life, when his powerful and brilliant imagination was imping its wing for the daring flights that it fterwards took, he formed the most exalted notions of the perfectability of man, induiged in the most generous aspirations for the welfare and improvement of the hunan race, and seriously thought, with other kindred spiits, of founding a colony in the back woods of America here guilt and sorrow should be unknown, and perfect equality, freedom, and happiness, should reign for ever. better knowledge of the world soon dissipated these Utopian reveries ; but his ardent imagination, that could Confine itself to no middle course, went to the other exreme, and Dr. Southey soon became as violent in his Toryism as he had been in his Liberalism. As a poet With an exuberance of imagination seldom equalled, nd a mastery of versification never surpassed; and as will endure as long as the language in which he wrote. The "wild and wondrous tale" of "Thalaba," and the almost equally wondrous "Curse of Kehama"" are the poetical pieces on which his fame will principally rest a a prose writer he was a perfect model of style--easy but not feeble-btately but not cumbrous, and learned but not pedantic. Besides innumerable articles in the Quarterly Review, to which he was a principal contribur, we belke, for nearly 30 years, his chief prose works A Hitie of Nelson," The Book of the Church," Spain and Por the Peninsular War, Letters from Prospects of Society," "A History of Brazil," "Lives of the British Admirals," \&c. He also wrote biographies of Kirke White and Chatterton, and edited their works

English poets. He was appointed Poet Laureate in 1812 He was twice married-first in very early life, and again intellect to Miss Careline mournial overclouding of his intellect, to Ma Caine a a poetess had been long and favourably known to the public, and who in the last sad and blank years of his life all that the most deroted fection could do to lighten he heavy load of his existence. In all the relations o life Dr. Southey was universally allowed, by those who amily he best, to be truiy exemplary. by his own hat the bas adored; and we have always understood cenius, whose irregular habits ill qualified him for the discharge of the ordinary duties of life, chiefly devolved on Dr. Southey. Till his mind was unhinged, he reained his habitual kindness of disposition ; and the genteman who accompanied him, a year or welt with fond affection on the many amiable traits of is character which broke forth amidst all his suffering. Dr. Southey was a gentleman in the best sense of the vord. His house at the Lakes was ever open to all who resented themselves with suitable introduction, and through that picturesque region who have not partaken of his hospitality.

## 伍am

Arches Court. - 2\%e Braintree Church -rate Case- - Sir Herbert well-known church-rate question, of which we are compelled to
confine ourselves to the following brief abstract: The case came before the Court on an appeal from the Consistory Court, churchwardeng of Braintree, against Mr. Gosling, in a cause of subtraction of church rates. The vestry called to make the rate voted that no rate should be made upon principle. The church-
wardens and the minority made a rate of $2 s$. in the pound, and wardens and the minority made a rate of $2 s$. in the pound, and
Mr . Gosling refusing to pay it, he was cited to the Consistory Court. Dr. Lushington held that a rate so made was invalid,
and rejected the libel, which virtually put the churchwardens out of Court. Sir Herbert Jenner Fust on Saturday reversed the decision of the Judge of the Court below, and admitted the libel.
If not appealed from, and the decision stands, it will legalize church-rates, though made by the minority and churchwardens in vestry. Sir Herbert Jenner Fust held that common-law right inposed upan parishioners the duty to repair the church-they
had no legal right to vote that a rate should not be made, and
thet could reduce the amount of a over the estimated expense of the repairs required, but not get deferred. Norforiz Circuit.-Assize Intelliokncg.--(Cambridge),--
John Frederick Mortlock was arraigned, and pleaded "Not John Frederick Morthock was arraigned, and pleaded "Not
gulty "to an indictment which charged him with having dis-
charged a pistol, loaded with powder and bullet, at his uncle, the charged a pistol, loaded with powder and bullet, at his uncle, the
Rev. Edmund Mortlock, with intent to murder him, or to do him some grievous bodily harm. This case, which has excited the
greatest interest among all classes in this town and University,
came on at the sitting of the Court, and occupied the greater portion of the day. A few years agn the same ndivitud who
was now charked with attempthig to shont has uncic, the Rev. attempting the iff of annthcr uncle, Thomas Mortlock, Fal., of occasion, after the trial, certain arrangements were entered into by the uncles and friends of the young man, by which it was duct, and abstain from a system of annoyance which he had duct, and abstain from a system of annoyance which he had
before indulged in. For some time matters went on comafortably, and though the conduct of the nephew was not such as was
worthy of approbation, he yet did place such a check upon his wayward temper and habits, as to excite a hope that he would
natimately become a worthy member of society. This state of amendment, however, did not long contmue, and it would appear that latterly he renewed his former course, threatening to infict some lasting injury on his uncles, sometimes by letter, and somein fear of their lives from his violent behaviour, though the most earnest atternpts were from time to time made, by complaance
with his demands and submission to his caprices, to avert the langer of an outbreak. At length matters came to a crisis, and ast, the prisoner suddenly made his appearance in the rooms of and produced a pistol, which he snapped at the body of his relative, saying he would shoot him. Upon this Mr. Mortlock poker for self-preservation. The prisoner then, addressing himself to that person, said he had better not interfere, and brandished dagger in his face. Taking the hint, Mr. Mitchell withdrew from he room, when the prisoner seized his uncle by the throal, and resenting another pistol at his heart, asked what there was to act would do more njury to the actor than the sufferer," and warned him against the perpetration of such a deed, which he from his uncle not to prosecute him, but before he could be well was go ropped the pistol to the level of his uncle's stomach, and dis charged it in a direction across his body. Mr. Mortlock then
left the room, exclainang, "Oh God! i am shot !" and was
fotioweal hy his friend, who ran for medical aid. The prisoner oow left alone, bolted the outer door of the rooms, and, the hoot the first man raised in the college, loudly threatened to eing carried into execution, caused a demur of some fow inutes among the anthorities, during which time the prisoner whips tofether. Hasing thus descended from his uncju's bert
room into the garden, he scaled the wall and made off towards the Cam, along the banks of which he wandered till nightitill, were watching their eel-traps. Upon being challenged by these men, he ran off, but had not got very far when he turned round
npon his pursuers, and suecessively fired a pistol at each. apon his pursuers, and suecessively fired a pistol at eacho
Strange to say, however, though pach pistol took effect, yet neither of the men received any further injury than a smart rap kept till the following morning, when he was committed to take his trial on this charge. The above facts being proved, Mr.
Fickin, surgeor, who had been called in to attena the prosecutt,r, fleposed that on examining his person he found that the slightly injured the outer skin, producing a scarcely-percejtitile alirasion thereof to the extent of a
Bmall quantity of blood. - Mr. Justice

 which he didid in a 1ong and energelic appeal to the court and jury.

 of the jury, who would say by their verdict whether that count
was proved which charged the prisoner with having fired at his nacle with intent to do him some grievous bodily harm. No
injury indeed would appear to have been received by that gentleman, but the prisoner right well have intended to inflict some
signal mark of tis anger or passion upon the prosecutor, though signal mark of his anger or passion upon the prosecutor, though should be of opinion, as he had now asserted, that the only
object of the attack was to frighten and annoy his uncle, they
would say so by their verdict, and convict him of the charge laid Would say so by their verdict, and convict him of the charge laid
in the second count. The jury, after a long dellberation re-
turned a verdict of Guilty on the second count, and the prisoner, after a suitable exhortation from the bench, was sentencel
years' transportation.
 Was sentition. This trial commenced on the 20th March, before
Mr. Justice Erskine and a special jury, and was only brought to a close on thursday last. The evidence on both sides was give in a brief abstract a clear notion of its, bearings. In the Corn-Law League. He proceeded to read from the "Quartery
Review" passages from speeches by Mr. Cobden and other
members of the League, and also resolutions of that body agreed to at their conferences of a violent tendency. He dilated upon they cuuld be gualty of the injustice of convicting the three humble iodividuals before them, whilst the members of Parla after inciting the people to acts of violence and outrage. Tho
menwith whom he combined never burned houses, or committe any acts of vinlence, but he and hus friends contended that they
had a perfect right, while they denounced all volence, to advise the suspension of labour intil the Charter was established as
the law of the land. That was a strictly constitutional mod
of proceeding. But there were viners in the forn of men they wre the real incendiaries. He meant the agents of the
Anti-Corn-Law League. He wnuld estabhsh this by the most
incontestable evidence. Was Ridgway to escape-was Masor to cscape - was Cobden to escape - was the editor of the ists like himself, who were the sincere advocates of peace, lence, the defendant said, he would next state to the Jur
what really were the doctrines which he entertained, and what ings. The larned Scrjeant (Talfourd) in his opennig address, ple of this country had a constitational right to mect and discuss
the experlicncy rimexpedicncy of adoping the charter ; but the
learnct counsel had said, that a cessation of labour would lead ers after wealth, the really gulty partics, be pmanishea, and not
the immocent Chartists. Who were they who cansed a censation
of labour in the Potteries? Why, those who reduced the poor man's wages-those who, when a partial turn ont oceurred, altwere desirous of plunging the country into revolution. He would now tell them what he really had taught them in the
Potteries or elsewhere. He would admit that, on the 15 th Aug., there was a conspiracy; but that conspiracy was not for sedi-
tious purposes, but for the maintenance of "peace, law, and order." The defendant went on to show, that his sermon, de.
livercl ons the 10 on A prii, was a mere exposition of facts as de-
talied in Englush history, and from these he argued the nagt of the people to annual Parliaments, and the nther ponnts contaned
in the people's Charter. After advertury to some facts in lis personal history, he nwelt, with scerrion Thm ; the latter, he said, had been assisted hy him in certan clections at Mincoin,
and promised to present, to his owni pulliscr, a Ms. of a
romance written by the prisoner, but had not redeemed that promise. When he proved to them, he continued, that he was oot
in the Potteries on the 12 th August, when he showed that, althongh on the 15 th he did conspre, bit not to efficet wrolence,
but tur preserve peace-when they bore in mind the practices of Chartists were guilty of agitating in support of their principles,
they were only following, in a humble way, the example of others occupying high places in the country-when they recoloffence imputed to them. No, they would never return a ver-
 were allowed to go at large, umprosecuted and unpunishedspiracy, daily beardme Parlament itselt, and such as before was
never allowed to exist in this country. No, whatever their re-
 viduals then upon therr trat. Let, however, their vertict be
what it mught, lie should bow whith due recpect. 7 his, however, he mipht be allowed to say-a verclict of guity would not sub-
due the spirit of a Chartist, conscrus that, in all he had clone, possible to put out the light of democratic truth in this coun-
try. The defendant concluded an energetic speech of upwards of ten hours' duration by expressing his confidence in a verdict of acquittal.-Rıchards and Capper then addressed the Jury in
short speeches, principally resting their hopes of a successful deFence upon ahhes, which they prophsed to prove, and character considerable length. Their examination did not terminate until
Wednesday, when Mr. Serjeant Talfourd replied on the case Wednesday, when Mr. Serjeant talfourd repled on the case
generally. His specch occuped four hours, he conclucied by
expressing a hop of the prisoners (and he confessed he thought the evidence agaunst
Capper was slight), they woud give them the benefit of it. Mr his summing up on Thursday morning. He concluaed at 80 'clock Home Circurt.- Capper to mercy. Judgment deferred till next term. cergyman of the clumges for a libel, brought by the plantiff, ${ }^{\text {a }}$ caration alleged that the the archdeacon of Lewes. The dewhich letter was sent to a lady named Gilbert The damaiff

days, when the Jury, after one hour's deliberation, returned a verdict for deferidant.
Mintand CirculT,-(Leicester.)-Trial of William Jones the
Chartist Leader.-William Jones, who had been out on bait, was placed at the bar upon an indictment, charging him with having the people against the police force and the army, at a large asturbances in August last. The case excited great interest, from the fact of its being considered that Jones had heen sent to rical quinty of the defendant, Who, it was expecten, would make
a powerful appeal to the jury. Mr. Waddington for the prosecu-
tion commenced by implorng the jury to dismiss from their minds any vrejudice they might entertain towards the defendant, and bring to the case a fair, caim, and just consideration, He dant with having; on the 28th of August last, in the borough of most seditious nature, calcuiated to excite his hearers to an
opposition to, and resistance of, the police. He (the learned counsel) admitted the right which Englishmen possessed of as sembling together and freely discussing pubic grievances, and
if they were of opinion that the assemblage in question was of
a peaceable character, and that the defendant-although with mistaken and intemperate zeai-intended tor lay before his fellow
subjects grievances of a nulbic nature, which demanded redress, then he would at once tell them that he was entitled to an acander circumstances of great delicacy, and sometimes pub volate the laws, they were bound to give him the benefit of
such an opinion, because the charge against him was, that he athe surrounding circumstances-at the state of the town and of the country at the time when the defendant delivered his ration, as well as to the persons to whom the was acdaressed, he ap must have been actuated by the motives ascribed to him by the inber of the lower ortcrs when ohelience to the laws even with-
difficut to kefy them in ond
out such inflammatory speeches. A proclamation had been issued by the Queen on the gth August, in consequence of the public peace; and a proclamation was also put forth a few days after, by the magistrates of the borough of Leicester, declaring yeomanry cavalry had been called out. A portion of them had
been quartered at the county gaol, and the police officers had been insuited in the execution of their duty, about ten days before defendant came to Leicester. On the evening of Sunday
the 28th of August, a most improper day, the defendant attended as prancipal speaker at a meeting of some housands, and deliwas an itinerant lecturer, and a perfect sfranger in the town into Which he lact most impreperly intruded hinse if upon that occarangung them. The learned gentiemat then procecded to state
the words complained of, and called witnesses to prove the facts The defendant then delivered a very eloquent adichess to the situation in which he was placed was not only novel, but painful; for although he
had been born and brought up amid the wretcledness which is with an offence against the laws of his country, and his charac
whe in that situation. He had to grapple with many difficulties, with
the ingenuity of counsel, with legal technicallities, yea, even with longed. He stood, however, at that bar the representative of
great principles, and he was proud of the honour of being se lected as a victim of persecution, because of his political opi-
nions. He did not lament his not having the aid of counsel, for legal quibbles. Some persons in his situation had been liherate on their consenting to enter into recognisances to keep the
peace, and thus compromising the freedom of discussion, which was the birthright of every Englishman. He would not accept for himself and for his country, in the name of the great Being by whom they had sworm to act justly. It was notorious that
for many years the class to which the Jury belonged had had no sympathy with his class; and the darkened tuedium of prejudice and feel a strong pre-inclination to convict him. But they did not sit there as the representatives of any political body-they
did not occupy that Jury-box as members of either the Whig or Tory faction-they were placed there as the arbitrators between or had not inflicted an injury on society, and all political considerations and opinions should be discarded from their considerathe language attributed to him; both of the witnesses who spoke mories; they had been schnoled into the part which they had played; they had heard the whole of his address, they could not comprehending the meaning of any sentence which possessed
the least profundity of thought, and it would be great injustice to rely upon the eentences which they had given, concocted, as
thes had been, from one or two detached phrases, and torturcd by the ingenvity of those who had sent them to the art proceederl to condemn the police force as an innovaiton
on the origural constitution of the country, copied from despotic povernments, and stated that he would not purchase an acgustal ways advocatcd jeace and order, but it was true he had de-
nounced the government as tyrannical.-Mr. Baron Gurney (with vehemence): Then you have done wrong, excectingly wrong.
We koow nothng of von, sir. The delendant: That was my conviction, my lord,-Mr. Baron Gurney: You may hold your
convictions as you please, sir ; but you have no right to hold out to the people that the government is tyrannical : that's a crime. -The defendant: I will contrast my language with that used in of the agite the language attributed to me is much less inflammatory than that which 1 can show was used.-Mr. Baron Gurney: I cannot allow it. I will not allow anything you are supposed ther people. I have nothing to do with that.- The defendant. I am merel entlemen, even supposing that what the whe which I flatly deny. I ann wot going to put them in as evitrue, which I flatly deny. I anm not going to pell. It cannot be defendant continued: If he had expressed his opmon of the defendant continued: If he had expressed mpanity. Had they
polce, his own class had been vilified with impur not beelt called a dirty, unwashed, swinsh mulud been dragred paltry evidence which the Jury had heard he hat mis bed at midnight a ganl, and kept four weeks in con-
taken place. But there was a secret cause for this presecution-
he was a Chartist.-Mr. Baron Gurney : You are not charged with being a Chartist here. The xeason why there was no further distody. -The defendant: It is of so use for me to proceed further with my defence. I would convince you, gentlemen, of zny in-
nocence, if allowed to adopt the line of defence which I had marked out for myself. What became of the boasted right to assemble publicly an
be crasked away to
would justify the government in any attempt which thoy migit

## che Gatomers' Cytonicle.

## SATURDAY, APRIL 8, 1843.

WE last year gave our readers some information (p. 299) concerning the new Fruit and Kitchen Garden which is in course of formation for her Majesty at Frogmore. Having recently had an opportunity of again inspecting the works, we are sure that every one will be glad to know what progress has been made.
The departments intended for dwarf trees are in almost all cases planted. About 4,000 feet of wall have been erected, and these are all planted with the choicest fruit-trees. The great range of forcinghouses, with a dwelling house in the middle, is in an advanced state, and will-in part, at least-be ready to receive plants in a month or two. A low terracewall, parallel with the main range, cuts off the quarters of fruit-trees and kitchen-garden produce from a turfed border, laid out in parterred flower-beds, which roadway in front of the forcing-houses but gepalled roadway in front of the forcing-houses, but separated
from them by the necessary Vine-borders. At the barn them by the necessary Vine borders. At the structed fruit-rooms, mushroom-houses (one of which is at work), slore-rooms, lodging-rooms for men, potting sheds, and other useful places. Then, in rear of this large range, is a vast quantity of pits and small houses for succession Pines, Cucumbers, Melons, Strawberries, and all the infinite variety of forced produce required for her Majesty's table.
present, be premature to enter into greater details finished, we shall he trust that hereafter, when all is of the whole arrangement. There are however, some points to which attention may be at once directed. In the first place, all the heating is effected with evaporating pans; the boilers are of the waggon shape, and the fittings of the furnaces and ash-pits are on the same plan as that adopted from Mr. conservatory at Chiswick. In porating pans, hollow copper tubes, pierced with the range of pipes a little above , are carried along water can at any time be turned the pans, so that Ventilation is effected by sliding of of. by pierced shutters in the back wall down the sashes, pendicular sashes hinged at the upper by front perare some beautiful mechanical contrivances connected with these arrangements. A screw on the back wall will slide backwards and forwards, at the same moment all the pierced ventilators alternating with 15 other front by means of a rack and quadrant the 1.5 or less without any necessity to may be elevated more borders or to touch necessity to walk upon the Vinethis in preventing the sashes. The importance of saving of labenting the destruction of glass, and in the The of labour, need not be insisted on.
which is in los and rafters are of metal, and the glass, the lo is in long lengths, and cut to a half-lozenge at rial fors, is of British sheet glass, by far the best matewith for garden purposes. The laps are constructed With lead, and a hole is left at the point of the lozenge for the escape of condensed water.
far as it has general design of this regal garden, as judgment of the noble Lords who have hanour to the plans of Mr. Ingram and the architect, we are also Jones, of Birmiat the beautiful workmanship of Mr. metal sashes Bingham, who constructs the iron roofs, who have thes, and mechanism, of the Messrs. Baileys, Who have the contract for the heating apparatus, and of fully who have been engaged in the builder's work, them by the Commissionere that has been placed in

that as it Potato aroy, everybody is now thinking of their tion a few , and therefore it is desirable to mention which have hattested facts relating to their cultivaclusive of suche come out during the last year, expeared in such notices as have from time to time apIt appears from ancle.
a pamphlet recently published by

Messrs. Gibbs and Co.,* that guano has been found a very useful application. Mr. Robert Bell, of Gunsbro', near Listowel, states that this substance, drilled in at the rate of $2 \frac{1}{2} \mathrm{cwt}$. per acre, produced an extraordinain heavy crop, the most abundant indeed ever seen very efficient, but guano was found nitrate of soda however, writing anonymously in the Galloway $R e$ gister, asserts that guano, with him, was inferior to farm-yard dung on light land; the produce of the latter being 12 tons 8 cwt., while guano produced only 10 tons on the same quantity of land, although he used 6 cwt. an acre; but then his Potatoes obtained with dung, cost him 14s. 2d. a ton, while those from guano cost but 7 s . $2 d$.; so that the crop obtained with guano was most profitable. In these results, however, there is nothing like the precision that is found in some capital experiments, recorded by Professor Johnston in the last Number of his valuable suggestions $\dagger$ for
For the details
For the details of the experiments we must refer to the pamphlet itself, which should be, and from its
cheapness may be, in the hands of every farmer and cheapness may be, in the hands of every farmer and master gardener in the kingdom. They were con-
ducted by Mr. Fleming, of Barochan, and are model for imitation.
In a light loamy soil, with a hard subsoil retentive of water, the following produce was obtained :-

In this case, an amount of produce, very unusual under any circumstances, was obtained by mixing its ffects when employed separately; and, according to the table, at the cost of 29 s. only, in addition to the ordinary dressing of manure. The farm-yard manure was spread at the bottom of the drills when the Potatoes were planted (April 18), and the saline matters were added aterwards (June 1) as a top-dressing; the sort employed was the Early American, and the dis-
tance between the rows was 26 inches. It is herd tance between the rows was 26 inches. It is hard to
say, in this case, what the action could have ber say, in this case, what the action could have been;
we cannot well refer it to the sulphate of although that agent has been strongly recommenda, by Liebig, combined with cloacine; for when used by itself, it produced, in the experiment now recase monly 13 tons and a quarter; and in another case, mentioned by Mr. Fleming, not quite $11 \frac{1}{2}$ tons were obtained from it. Nor does it appear clear for whil for, accordingate of magnesia should be so useful; for, according to Sprengel, magnesia in good mealy Potatoes, analysed by him, did not exist to the amount of more than 0.104 in 100,000 parts of the fixed matter, nor did this earth exceed 0.488 , in a case whed Potato parings were analysed by themselves. Neither is the mystery in any way explained by a curious case mentioned by Professor Johnson in another place, where produce at the rate of 30 tons ${ }_{i 6}$ gathered from a small plot of ground, top-dressed with a mixture of $\frac{1}{3}$ nitrate of soda and $\frac{2}{3}$ sulphate important, whatever the explanation of it may to be.

In another experiment by the same gentleman, guano, used at the rate of 3 cwt . an acre, brought a and $n$ shen put in with the sets being used, and 36 s. an acre. In a second case, under the same circumstances as the last, when a different sort of brought only $6 \frac{3}{4}$ tons, 4 cwt . of guano, worth 48 s produced rather more than $14 \frac{1}{4}$ tons; 4 cwt. of guane with 25 bushels of ashes, $15 \frac{53}{3}$, and the same quantity of guano with 20 bushels of charcoal, $17 \frac{2}{2}$ tons ; on acre, only yielded $9 \frac{3}{4}$ tons of produce.
What the subsequent effect of these substances on the land may be is an important point to determine, but cannot be at present stated. This valuable fact

## experiments. <br> Saggestions for Experiments in Practical Agriculture, No Blackwood.

seems however to have come out, namely, that sets taken in 1842, from Potatoes treated with the nitrate and sulphate of soda in 1841, produced a better crop than sets obtained from the same variety, which had not been so dressed, to the extent of $\frac{3}{13}$ tons per acre.
"In so far, therefore," says Prof. Johnson, " as this experiment is to be relied upon,- for we must not be hasty in drawing general conclusions, - it appears that the benefit to be derived from a skilful treatment of the Potato plant does not terminate with the greater immediate crop we reap, but extends also into future years, improving the seed and rendering its after-culture more productive.

This idea is worth pursuing, were it only for the purpose of making out the possible existence of so important a physiological law-how much more when But thus so pregnant with important practical results. But thus it is in all cases, that the prosecution of experimental research, with immediate reference either to purely scientific or to purely practical results, ends in improving and benefitting both abstract science and economical practice.
"I am unwilling to follow out or to reason upon this possible law, as if it were really established; but the possibility of its truth appears to throw light upon such questions as this-why the seed must occasionally be changed if large crops are to be continually reaped. One soil may be adapted to give the plant a large supply of this or that substance in which the other soil is comparatively deficient: and it may be possible to medicate our seed-corn, while growing, so as to give it the qualities which at present it can acquire only by a change of soil. subject.

We are much pleased to find that our own opinion With respect to the advantage of small allotments ceived on the subject. All those who have tried the system, without exception, are satisfied with the result. It is to be regretted that some tenant farmers are still prejudiced against it; and we should rejoice their fears. They think that the labourers' time and attention will be too much taken up by their gardens, and that they will neglect their regular work. Experience has shown that this is a gloundless fear. The farmer should make the occupation of a small portion hire him by the year, with the condition that any wilful neglect or misconduct which would justify the diemissal of the labourer, would also deprive him of his garden ; the value of the growing crop, according to a fair valuation, being paid him. There must be a mutual tie between the farmer and his labourer, and this can never exist where their intereste seem opposed to each other. If the labourer knows that whenever his employer can do without him and save the wages which he pays him, he will discharge him, he can feel no interest in his master's prosperity; but when he sees that the master strives to find constant employment for his regular men, and that it is only when driven by absolate necessity, from their misconduct or his own losses, that he discharges any of them, the labourer will do his utmost to do his work well, and will feel the same interest in his master's success as farm-servants living in the family used to do. His master, on the other hand, will rejoice to see his men comfortable, and will encourage their industry, allowing them now and then a spare day, if they require it, to work in their gardens, for which they will gladly allow a day"s pay to be deducted from their wages. But the great advantage of small allotments is, that the labourer's wife and family can be usefully employed, and will, in general, suffice for the lighter, but most important, part of the work, which consists in hoeing and weeding the crops, gathering the produce, feeding the pigs, and wheeling out the manure to make composts. Children, under the guidance of the mother, delight in such work, and learn early in life the advantages of industry. We would that, besides the allotmentwhich, if possible, should not be far from the dwelling -every labourer's cottage had a neat, small garden, with patches of flowers and beds of culinary vegetables; for this purpose, 10 poles (the 16 th of an acre), are sufficient. The allotment may be from a quarter to half an acre, according to the number in the family; and int this may be raised such crops as suit the soil, a certain portion being provided for the pigs, which not only add to the food of the family but provide the manure. Far from interfering with the master's interest, this occupation will fill up that time which is now too often devoted to the beer-shop. An uneducated man has few resources in himself ; active employment, without too great fatigue, is a recreation to himo and the more comfortable his home is, the happier he will be, and the more cheexfully he will perform his duty.
Fully impressed with the truth of what we have here asserted, we will most readily concur in the amelioration of the condition of the agricultural labourer
by giving all the information which we are possessed ing the laying out and the management of small allotments，which may be considered as some－ thing between a kitchen－garden and a field；and if
we can induce proprietors and occupiers of land to we can induce proprietors and occupiers of and and honesty in the labouring population by a proper attention to their welfare，we shall be amply rewarded for all the pains we have taken to investigate the sub ject and to collect information，－M．
［In our notice of this subject in the last Number we regret to find that＂Colne＂has been incorrectly printed for＂Calne，＂and＂Burnhill＂ ON THE TRANSMISSION
ON a former occasion（p．539，1842），you published an account of the attempts which had been made to trans mit cuttings of fruit－trees to India，when the partial suc－ cess with some，and the complete success with others， detailed．It was then stated that almost all the cutmby of the Jargouelle Peary，had rooted，and were very flou－ rishing till the hot season came on，Bombay is 6000 miles from Falmoun，ant leaving the steamer：having the cuttings reach，ater leaving the steamer；having however，made a short journey across temperature at sea be－ ing much greater than on land，the trial is much severer when seeds or cultings have country like India．

In the former communication，it was also stated，on the authority of Dr．Falconer，that the cuttings of fruit－trees， especially of a Jargonelle after making a further journey of 900 miles from Bombay to Saharunpore，had arrived there in a more or less vigo－
rous state；and that when put into the ground，there was every prospect of the dep being effected．These cuttings had had their ends dipped in sealing－wax，were rolled up in cotton，and after－ Wards wrapped up in an envelop orl moisture of the cut－ the object being to retaing，and to prevent theirg dried up by the exposure to great heat．
So much success having attended this trial，it was de－ termined to repeat the experiment at the favourable sea－ son，that is，in November last；when the cuttings are in a fit state to travel，and the temperature is iower than at any other time of the year，if we consider the time of their departure from this country，and that of their arrival in
India．Some modification was made in the mode of packing．Instead of the ends being dipped in sealing－ wax，the whole cutting was coated with bees－wax，then rubber cloth．
The packets were made up at the India House on the 30th of October，and must have left Falmouth on the 1st of November．From Bombay，which the mail usually reaches in about 40 days，the cuttings had to be carried a
land journey of about 1320 miles，to the Botanic Garden at Calcutta，which they reached on the 30 th of December． A letter from Mr．Grifith states that three out of the five Apple－cuttings seemed quite fresh；of these，two were
Golden Pippins，and one Duchesse d＇Angouleme．The ground baving been carefuliy prepared for their reception and the season favourable，it was hoped they would suc－ ceed；but a postzcript of the 15 th of January states that the seeds sent were almost all coming up beautifully．This experiment was made rather for the purpose of ascertain－ ing how the mode of packing would answer，But that has been learnt for future trials with cuttings of trees better suited to the Calcutta climate．
By the same mail a number of cuttings were sent to the Botanic Garden at Saharunpore ；these arrived on the of the Garden since Dr．Falconer has been obliged to leave in consequence of ill－health，writes on the 20 th of January the following report of the state they arrived in －1，Duchesse d＇Angouletme，one specimen alive，the other dead，probably owing to the lateral twigs having been cut off and not sealed up．2，Goiden Pippin，with faint vitality，the pith discoloured，and the liber faintly green．3，Glout Morceau，one dead，owing to the lateral branches having been cut off and not sealed in fine condi－ tion．5，Gansel＇s Bergamot，upper end faint vitality two specimens dead，the lateral twigs having been cut oft and not sealed；three specimens in good conelle ；eight Colmar，＂faint vitality upper end．＂From the above state－
specimens，all in good condition． ment it will be seen that this transmission may be con－ sidered a most successful one，and if cuttings void of 1 ateral branches are
in good coudition．＂
解 tional experience，with the adoption of Mr．Beaton＇s sug．
gestions（vide Gardeners＇Chronicle，vol．ii．p．558），will mo dout e enable future trials to be made with complete rescies nhimsent to Bombay do not seem to have raseles nh masi god order as last year，nor indeed so razare the reasons for which do not appear；but great
surease hes atend an attempt to send some seeus， is，the Spunibl Cbesuut and Fibert：these in previous travela aigt only became decomposed，but destroyed every
thing else that was contained in the same package．On the present occasion，the Chesnuts and Filberts were en veloped in a coat of Bees－wax，so as to elements，and all
tically sealed from the influence of the element tically sealed from the influence of the elements，It was at the same time to retain their natural moisture．
intended to have enveloped the Chesnuts，\＆c．in a coating of gum，but the mucilage not being thick enough，ran off and required some time to dry；bees＇－wax is prefer able．Resnecting these，Dr．Gibson writes on 23d Jano：
＂：The cuttings look dry，but I do not despair of them． ＂The cuttings look dry，but I do not despair of them． Most of the Chesnuts were in good，and I tasted one，and ing，order；so also the Filberts，whereof I tasted one，and trusting them to the dry Deccan air at this season of the year，I have taken the precaution of putting them in pots
before sending them up the Ghauts．＂If these vegetate， the success will hardly be less important than that with the cuttings，for we may not only send such seeds to India，but also obtain from thence others，such as the Acorn，which we now find 80 m
in a vegetative state．－J．$F . \boldsymbol{R}$ ．

Buds．－If any part of the curious economy of plants writer，it may be found in the beautiful order and admir－ able contrivance manifested by the buds which are now evergwhere pushing out from the branches of trees and expanding into leaves．
since，these bodies were seemingly dead；they were dry tubercles sitting close to the branches， and scarcely istinguishable from the bark．Some were Poplars ：others were coated over with varnish，like the Horse－chessut and Tacamahac tree；while others were guarded with serried rows of shelly scales．Now that the warmeth and the rain and the sunny aays of spring slumbers，and the wool，the varnish，and the guardian scales themselves，are disappearing．
It was not without a motive that in the autumn the trees were caused to clothe themselves with wool，or to exude a varnish impenetrable to rain，or to form shell within shell，as an outer coating of their buds．An in spection of the latter just at unis season of The year explains the cause dits are the points whence vegetable life is extended；they are the cases that in－ close the tender organs which afterwards become the branches and the flowers．And most wonderful is the their winter receptacle．Every tree affords a study most worthy fontation．Those，indeed，who look with idle eyes on the fair works of the Creation can perceive nothing extraordinary in a bud；for them it is a lump，a wart，an anything，rough and dingy，hard and dry－as little wart，an anything，rough an know nothing of the admirable symmetry with which its interior is arranged ；they dream not of its contents being as perfectly organised as the most complicated parts of their own frame．And yet an in spection of the first tree that moves in the spring migh read them a lesson well worthy their remembrance．
Take the Abele tree ：there wave dry，brown，downy scales，eack which intercepta tho coll．Mund ether，and buried pair of tiny leaves rolled row in wool ；if they are turned back and yet smaller，again roled over each er pair，ach smaller hese another and anothe and like thith peced han the last，but each exactly $i t$ ，until the eye is unabie to soparate the wing pros of these half－invisible forms，each will by degrees expand trelf into the likeness of that which went before it ；the centre of the bud will lengthen out to make room fo hem and so from the dry brown，downy tumour of the winter，a living branch will by degrees extend
Ier，ang branch where．Chesnut，－－Its bud consists of large，shining，varnished scales，impenetrable to rain these by degrees revel each other and drop off；even the outermost and smallest of them are placed in opposit pairs，crossing each other；their successoss inand the same position，but are thinner and greener；and bardly be logether by their natural glout tearing；yet at the command of the sunbeams they readily slide over each other，and at last form a green rosette of many parts， looking like an early flower． 1 no in case paite crossing and covering each other，departed from．But as we approach the centre of the bud，the varnish disappears and is replaced by a wool，thin at first，but thickenis greatly as we approach the interior．Arrived beyond outer circles of the scales，we come upon hittle parts，foed in like a lady＇s fan，and looking like tiny hands clasped in prayer，but enveloped in the sofest wool ；these and so diminishing towards the centre that at last they become
too delicate and fine to be separated from their downy coating．
nd so it is with all buds；they are always organs con－ taining the beginnings of leaves or flowers，most curiously disposed one within the other，and gradually unfoiaing as the powers of growth are renewed by the genial each bud，of all the myriads that are borne upon a tree， is exactly like the others，in all their minutix of struc－
bud，upon that exact plan are folded all the other leaves and every leaf，in every bud，of every branch，of every individual of that same species，is the same．There is no error，no deviation，no uncertainty in this matter， the rule is universal and without exception．Cand admirable plan in the wonderful evidence of act as this？Can any conceivable circumstance exceed in beauty that of millions of bude on tree suddenly starting at once into leaf，each being 00 exactiy like its fellow，that no one shall be able o detect a difference among them＇？The mind can imagine othing more mof study than these curiou faers ； they belong to a field of observation of which the idle world knows nothing，they onen out a source of admira－ tion，the stream from which is deep and wide，and inex－ haustible．The quiet enjoyment which they supply， how infinitely is it beyond the unsatisfactory and painful pleasures of the idle throng of fashion ！

Thy pleasures many，and each pleasure new．
Ah！worle experienced！What of thee is toid？
How few thy pleasures，and those few how old！
R．E．

## HEATHS．

The next but principal item in 20. ．隹 don Cour Lo sopider，and considered absolutely indispensable；within these few years，the Shirley peat has been greatly preferred．The former has caused the dissolution of several of my best plants， not only Heaths but other things．I can only designate it as a clayey peat，which，when wet，retains the wisture for a long time．The Shirley is an ioprovement upon ，，but 10 requires to be keplot before the fibrous or rooty portion of the This and amalgamated with the peaty particles．This peat consider also to have its defects；these are－a to be carefully removed．I have found that the thin layers of peat found in woods on a gravelly substratum， varying from three to eight inches in thickness，and con－ taining white grit，is extremely light and porous，being composed of much vegetable matter．The wood growing on such soil is generally Oak underwood．R have found this peat，when mixed with a 12 th part of Reigate sand， particularly adapted to the growth of Feaths，and and for most other porposes for which this soil is used，as it will bear to be prested． In watering Heaths 1 do not regard the temperature ； have never discovered any ill effects from using water from the open air，provided the front sashes are open，which it maintain a height of $35^{\circ}$ in the house．The quality of the water is the main point，and rain－water only should eused．The following will show，however，隹的 nete，my careless gardener did not prepare sganst frost oapected change curing the night，a very son ctually rozen without injuring the Heaths，of which I had some 60 or 70 sorts．My maxim is to avoid heat if possible； therefore my gardener was partly exonerated，although a careful man should be on the alert for change of weather， if the night should be clear and cold．But when com－ pelled，by unusualiy severe frost，to shut up the hoase，be careful on the return of mild weather not to expose the plants too much at first．It will be found that the shoots check therefore，produced by wind and air，will be liable to turn them brown．
Having described my mode of choosing，potting，and watering Heaths，as well as selecting Peat－mould，I will subjoin my plan of treating these plants in summer，about which different opinions exist．Some collectionsare，abo the middle of June，taken out of the house and fally es－ posed to wind，rain，sun，damp nights，\＆c．，during the flly mainder of the summer．Others 1 have observed parthile exposed，having the shade of trees from miday sun，The first collection is wholly kept within the facility which it affords in wateringurserymen， together，they fare better than you would expect，and afford a ing sun of July Auguet，and part of September，with the succeeding hesur dews，has the effect of depriving the plants of their leaves．hence those unsightly things which phhibit bore for three parts of their height．From first to last，the preservation of the foliage is the main ob－ ject of the cultiz．Full exposure to the sun is certainly not the cay to preserve it ；and wholly depriving the plants of it，encourages the mildew，or turns them pate． My house is lofty and in a very airy situation，with the stage near enough to the glass to allow plants three feet high to stand on it；yet at its lowest side，it is ive from the fiooring of the house．I have a the glass，at－ tach and this the tached to specimens stand．Another bench is placed over tommend to be as low as possible，that the plants behind may have the full benefit of air；whereas，if they were placed on a level with each other they would intercept the drying breeze．I prefer the old flue to hot water，as，being a tached to the brickwork，it certainly dries the house flue know it may be said hal the with Heaths，within 100 or is injurious to plants，but widom oblized to use fire in a house perfectly closed，althpugh in very sharp frost
it is sometimes necessary; yet, during the day, the sun will run up the thermometer, without any fire-heat, to 50 or 65 deg. In very damp weather, I heat the fiue, and open ant the sashes, for the purpose of air; the lower sashes on the roof also slide up.

The benches in front on which the specimens stand, I recommend, during the summer, to be filled up on either side with planks, so as to form a trough, which for 8s or larger pots should be one foot in depth. This may be filled with cinders, and gently sprinkled in very hot days yet not damp, for any length of time; and constant drenching is thereby avoided. On loot sunny days I shade and open every sash and door. It frequently happens, however, that in June, and even July, we have a brigat sun, yet not accompanied with intense heat; in which
case I give the Heaths the full benefit of it, and a slight syringing early in the morning; but this must be done with syringing early in the morning; but this must be done with
judgment. About the first week in August the house judgment. About the first week in August the house
should be cleaned; putting the plants, arranged in the same manner as in the house, on a bench and stage of a same manner as in the house, on a bench and stage of a north wall, and in an airy situation. From the sides of the north wall, and in an airy situation, From the raise two or more upright supporters, upon which fit on some canvas blinds, notonly to protect the top, but the sides, when high wind or heavy rains are likely to prevail. I recommend the top to be waterproof. In the third week in September, house the plants, but give night
and day all the air possibie. By degrees the wood will beand day all the air possible. By degrees the wood will beThis plan I have partly pursued, and would carry out enThis plan I have partly pursued, and

### 3.203 parts of mineral substances.

100 lbs . of Buck-Wheat straw consequently contain 3.2 lbs . mineral substances. As these are principally such as are most nutritious to plants, and as the quantity of nitrogen is also considerable, it is evident that BuckWheat litter will yield better manure than that of Barley, Oats, or Rye. The straw of Buck-Wheat forms an ex-
ception to the peneral rule, that the manuring qualities of plants are in the same ratio as their nutritive qualities, it being a bad fodder; this, lowever, is caused by the presence of a peculiar substance, which is apt to injure cattle.
Indeed, some other species of Buck-Wheat, such as Polygonum Hydropiper, Persicaria, amphibium, lapathifolium, and minus, are also noxious to cattle.
Buck-Wheat straw, under favourable circumstances, undergoes speedy decomposition, for which reason manure Likained from its litter will only act for a short time. used as litter, so that more of it is required than of either liye or Wheat-straw, for keeping the beds of cattle dry.

## ON THE CULTIVATION OF CHRY SANTHEMUMS.

A correspondrnt, signing himself "Amateur," writes as follows: "I had a pretty good show of Chrysanthem mums last season, but yet not to my mind, and therefore I should like to know the best way of beginning with them, so as to produce the finest flowers-the shape and bushiness of the plauts being no object, as they are placed close together on a stand when in flower. Should the greenh wich are growing thickiy on the or allowed to grow on, and the stems made into cuttings afterwards? If taken off now, should they be 'stopped'-if so, when should this be done? I grew a flower of Magnet to $5 \frac{1}{4}$ inches diameter, but there was only one upon the plant.
There is one error in the cultivation of Chrysanthemums ando which the inexperienced Amateur is apt to be led, his plants after the flowering season is past. They are his plants after the flowering season is past. They are into growth, or they are thrown aside and neglected until late in the summer, when he recollects that they are wanted for winter flowering. Like the greater part of herbaceous things of this description they are tenacious of well, a regular system of management is necessary. After the flowering season is past, and the old steas cut down, the plants should be removed from the greenhouse or conservatory, and placed in a cold frame, where they are merely protected from severe frost. Here they should have plenty of air, and on fine days the lights should be have plenty of air, and on fine days the lights should be
drawn quite off, and the plants fully exposed. When the winter is mild, they will stand very well unprotected; but owing to their having been grown and excited in the greenhouse, they are more apt to suffer from severe weather greenhouse, had been planted out in the open air ; for this reason it is always better to have the means of giving them some slight protection. If they are kept too close
and warm in winter, they begin to grow fast, the leaves and warm in winter, they begin to grow fast, the leaves
are yellow, and the stems weak, and consequently they form bad cuttings when the season of propagation comes round. But if they are merely protected and attended to as
has been already described, they grow slowly and make has been already
excellent cuttings.
The proper time for striking cuttings depends upon the objects which the propagator has in view. Nurserymen Who want a good stock of a particular kind may propagate it at almost any season, and generally begin very eariy in
spring. But for ordinary purposes, from the middle of March to the middle of April, is quite soon enough, and the Amateur can then do so without any artificial heat, which is of great consequence to those who have very
limited gardens. It matters very little whether the cutlimited gardens. It matters very little whether the cut-
tings are taken off with roots or without them, as in the lings are taken off with roors or without case they will form them in a few days, and soon begin to grow rapidly. The frame should be kept very close, moist, and shaded, until the cuttings have formed roots for their support; when this takes place a little air
may be admitted gradually as the plants will bear it, and may be admitted gradually as the plants will
then afterwards they must be fully exposed.
then afterwards they must be fully exposed.
The slifting of the plants in the earlier part of the summer should be particularly attended to. If this is neglected, no good after-management will save them rom losing
their leaves and looking badly in autumn and winter. As soon as they are fairly starting into growth, the top of each should be nipped out with the finger and thumb, which will cause several young shoots to spring from the under part of the plant, and thus form it into a compact bush. This may be repeated two or three times with flowering kinds; but after the plant is fairly formed it should be discontinued, otherwise the flowering will be injured. The cultivator must exercise his own judgment in this respect, as it may suit the purpose in some parts of varieties only. For example, about London the system answers admirably ; but it is very doubtful whether it would do about Edinburgh, or further north, particularly in at the commencement, should attend particularly to this part of the treatment, as his plants would probably fiower better if not "stopped," or, at most, only once, as he does not care about handsome specimens. The size of the pots into which the plants are shifted will depend entirely upon and 8 s , for the last shifting, answer well for those who wish to see fine leafy plants, in preference to others with naked stems, but whin maller pots-they may be flowered thell in 32 s and 24 s .
The soil for their growth can scarcely be too rich ; about equal parts of loam, dung, leaf-mould, and sand, make an excellent compost. Manure-water is also an or thrice a week during the growing season. Exposed ss they are, fully to the sum, they require a very abundant supply of water, which ought never to be neglected, because if it is, the under-leaves will fall from the plants and make them unsightly. An abundant supply of water, and particularly manure-water at certain times, rich free soil, judicious "stopping," and ordinary management in other respects, will always ensire an abundant bloom upon these plants in autumn and winter, when we have little else to render our greenhouses and conservatories gay. And as they are grown all the summer in the open house in the autumn, can easily have plenty of flowers at that season, with but little extra room. They may be removed to the house about the middle of October, when some of the earlier kinds are just coming into flower.
is a bad plan to take them in too early, as the leaves generally begin to fall soon afterwardso
Those who wish to make very large specimens of these plants with little trouble, sometimes plant them out in a rich border in April or May, as soon as the cuttings are rooted. Here they grow with great luxuriance, and are very large and bushy when the time comes for taking them up and removing them into the greenhouse. In autumn they are taken up very carefully, and placed in a sladed situation for a few days, until they recover from the effects of the operation, and are then taken to the greenhouse. There is another plan for making small dwarf flowering specimens, which deserves especial notice. The young shoots which have grown to a considerable length bave their points "layered" about the month of Augus in small pots. As soon as they are well rooted they are cut from the parent stock, repotted, and placed for a short time in a shaded place until they recover. They are then subjected to the same treatment as the others, and generally flower on stems about a foot or 18 inches in height.--R. F

## AMATEUR'S GARDEN.-No. XIV.

6. The secret of obtaining a brilliant display of flowers throughout the season lies more in cultivating a great quantity of good plants than a great variety of sorts. Thus,
at this season, the garden should be gay with Polyanthuses Auriculas, double Primroses, the lovely little Omphalodes derna Drabas, common Wallfowers, various species of A'rubis and Aubrétios and many other Alpine plants thile smong shrubs nothing can be more beantiful, at his seato than the various kinds of Ribes and Bérberis, with the sho Mo colin consicue. whose pure werlike and del shog frow fore pare wax-like and whil out whe on come mese are plants compar the casily obtained, yet in the in fact, las gins Dahlias and other ephemera, which require great pains to Dahlias and other ephemera, which require great pains in bloom than they are cut down by the frost. This is neither good taste nor cood management, and therefore the Amagood taste nor good management, to set about increasing his stock of spring-flowering plants. Flower-gardening, indeed, will never be well done unless the arrangement is made as the season passes on; thus, at this period th should be determined what plants are to be put in the beds next spring, and preparations should be par ingly ; and be made for the summer and autumn display, in the coming year.

Gardening is an occupation wholly dependent on forethought, and allhough cannot be expected that the Amateur, who only cultivates fiowers as a little recreation, and to vary the moin lect an that requres be gron yet, by making memorandums at the proper lime, and by referring to them occasionally, he miglat provide himself wholly forgotten until the season arrives when they shoald have been in bloom
What can be more beautiful than a large bed of common garden Anemones? These, when selected and grouped in separate beds, according to their complementary colours, are brilliant objects ; yet how rarely do we see them extensively cultivated. This is a good season to sow them and, in fact, biennials of all kinds. The Anemone delights in a strong rich soil. The best way to sow it is to make the soil fine and light, and then to mix the seed with a quantity of dry mould; scatter it thinly over the prepared border and cover it wilh sifted soil from the potting-shed. Seed sown now will produce floweringplants this time next year, and there is an old saying with some truth in it, viz., that if you sow every montly you will have Anemones in bloom throughout the year.
weed of Auriculas and Poryanthuses must be sown in pots and transplanted into rich light soil, and those who are partial to Gladioluses could not do better than sow some seed in heal, and transplant the towards the end of May into very rich soil; part of them will make flowering plants the first season, and the whole of the fully the secoud. Whis subject wil $\begin{aligned} & \text {. Ayres. }\end{aligned}$

## HOME CORRESPONDENCE.

Fixing Ammonia.-At p. 205 of the Chronicle I observe some excellent remarks an the heaps; which, if they were only generally acted upon throughout the country, wouid speedily compel us artin-cial-manure-manufacturers to curn our hands to another trade. I do not, however, consider, that we have any immediate cause of fear on this point, for no one has watched the movements of the pubic mind without observing ats slow progre the tho most condacive to its weltare. trust I am not so selfish or so narrow-minded as to set my separate interests against those which affect the happiness and well-being of so many mimions of my fellowcreatures, or to refuse to give all the information I can on this important subject, because it may perchance tend to injure me, ultimately, in my business. You will bear with me, then, for a few moments while I make an observation or two on the substances you have named as of Vitriol. I know of only one objection to this; which is, if it he used in slight excess, it will retard or altogether arrest that fermentation which it is so desirable to encourage; for it is known that while aikalies and the alkaline earths favour eremacausis or natural decay, the
acids and chlorine check or stop it altogether. Green excess, is an caiousiy used-taking care to avoid a large tage over almost every other-that it fixes uncombined or caustic ammonia, and the other volatile salts referred
to in my former letter; viz., the Hydrosulphate and Hydrocyanate of ammonia, decomposing both and forming Sulphate of ammonia. Wherever Sulphate of iron is used, the compost should be long exposed to the air and frequently turned before it is laid on the land. The price of Blue Vitriol is against its use, even if it could be proved that the copper-salts formed are not injurious to
vegetation. It acts in the same way as Sulnhate of iron but, unlike it, it forms very readily a soluble compound but, unlike it, it forms very readily a soluble compound
with ammonia, possessing highly poisonous propertiesat least to the human frame, and probably also to plants.
[Experiments, now going on in the garden of the Horticultural Society, distuctly show that blue vitriol is not poisonous to plants, unless in excessive quantity.] Iron, ashes of plants; from whence it may be inferred that it acts in presence of copper has not been satisfactorily demonthe presence of copper has not been satisfactorily demon-
strated. I conld wish you had left out Salt and Lime from your list of fixers ; for if there is one thing more than another likely to give ammonia notice to quit, it is this, It is true, that you caution the farmer not to Salt and Lime so perfectly decomposed, even after months had elapsed, that it might be safely added to an ammo-
niacal compost. These two substances act very imperniacal compost. These two substances act very imper-
fectly on each other, and it is only under certain conditions, fectly on each other, and it is only under certain conditions, difficult to be realised in practice, that they act at all. long, very long, exposure, the free lime may be pletely converted into carbonate of Lime (chaik). It is Lime, under the favourable circumstances referred to, may bave mutually acted the one on the other, the mo-
ment sufficient water (and that not a large quantity either) is added, the two new compounds revert to their original state-excepting only that the Lime is now combined with carbonic acid, taken from the atmosphere. It is
not necessary that $I$ should say a word upon the Gypsum, not necessary that $I$ should say a word upon the Gypsum,
it having lately occupied so much of the attention of both farmers and chemists; nor upon the Salt, as that is already adverted to in my last letter on that subject. In conclusion, I would propose that Muriate of Lime (chloride of calciuno, which can be bought at about 3l. per Potter, Chemical Works, Upper Fore-street. [When we montioned Salt and Lime, we intended that coarse Muriate of Lime, which is now prepared by farmers by saturating chalk with brine. Muriate of lime, in its manufactured state, is an
Vine-borders.-I notice that, at p. 211, Mr. Errington has made some allusion to my method of forming and heating Vine-borders, as detalled in my Treatise on the
Vine. He there states-" The soil recommended by Mr. Roberts is composed of $\frac{3}{4}$ loam: this, in my opinion, is excellent advice. Loams, however, in point of mechanical texture and tenacity, have so extensive a range, that someamateur ; and it is to be lamented that, in the present imperfect state of Horticultural knowledge, we have not a more definite mode of conveying our ideas on that head. Me means loam in which the clayey principle predominates. I much doubt the propriety of using adhesive loam at the depth recommended, viz., 30 inches." I give Mr. E, credit for his remarks, but at the same time I make myself better understood: My Vine-border, as stated in the Work, is composed of two parts-strong loam, the parings of old pasture land, i.e., the furf paring-spade could prepare it; one part turf, with 4 inches paring-spade could prepare it; one part turf, with 4 inclies preparation for the above could not reasonably be called a strong loam in which clay predominated. I have so learn that a strong loam is that in which clay is most learn that a strong loam is that in which clay is most clay did predominate, I should have called it a strong clayey loam; or had I been asked what constituted a very clayey loam; or had I been asked what constituted a very strong loam, I should have reported a loam approaching to ciay. But by an impartial perusal of my Treatise, it which clay predominates, I wased one-fourth loam of a loose texture. Therefore, when the two distinct loams
became blended together in the border, with a portion of became blended together in the border, with a portion of
the scrapings of roads, I am ato a loss to know how clay the scrapings of roads, $I$ am ato a loss to know how clay
could predominate. Before I leave this part of the subject, I may state, from the successful practice which I have had in the culture of the Vine, that to grow Grapes well ( $2 . e_{0}$, well-swelled fruit) the greater part of the bor-
ders should be composed of strong loan. I now beg to refer Mr. E. to the conclusion of my hints for the formation of horders, at $\mathrm{p} .12 ;$ I have there distinctly stated as an improvement in my future practice, that I would
not allow the borders to be deeper, when filled and settled, than from 15 to 18 inches, still bearing in mind that the majority of my naterials is composed of strong loam. Mr. E. cannot reconcile bimself to the quantity of fer-
menting material laid on the border for the benefit of the roots; but I would remind him that it is not a mass of I find of the greategular congenial heat so applied, which I find of the greatest benefit. I always leave my borders
exposed, or nearly so, from the beginning of Juiy to the
heated material being laid on the roots during the time the Vines are in action, has a strong tendency to encourage the roots to the surface of the borders; so that from solar and atmospheric influence during the two warmest perfeth in the year, viz., July and August, they become as ordinary matured as the branches, and areable to bear any begin to force. I wish, before I conclude, to inform Mr. E. that the Vines at this place, only planted light, but heavy crops. In a second house were counted the other day upon six Vines, trained with single rods on my systen of spurring, 422 perfect bunches; some of James Roberts, Eshton Hall, Skipix.

Grafling the Vine. The methods of grafting the Vine ever, another good mode of doubt, efficient; there is, however, another good mode of doing it, which is performed in
the following manner:-A graft of last year's wood is spliced by the middle, with or without a tongue, after the manuer of inarching, to similar wood of nearly the same clayed over. One bud is left above the clay, beneath

out. The stock should be in leaf, with shoots six or eight inches long, and the graft
must have been carefully kept, must have been carefully kept,
so as to have good swelling buds at that time. The growth of the grafted portion of the
stock should be encouraged stock should be encouraged
until the graft seems to have taken, when the latter must be favoured. The whole tree may fruit as usual, but it in the autumn; the next year it will make bearing-wood of great length. I prefer the green wood for grafting, provided the desired sorts have not to be brought from any great distance, and practised with the bottle, \&cc. in the
same way as the last. This succeeds best about June, when the young shoots will cut firm. In this case several buds and leaves should be left above the clay. I have many in bearing on both methods in a cool Vinery; Grapes.-A friend of mine had a fine crop of Grapes too much heat advised him as they were colouring, to "give air." He accordingly opened the front lights, and more than half of his crop shrivelled. The soil is light sandy loam, and very well drained.-Jemsheed.
in the Chronicle queries as to the practicability of growing Figs on the back wall of a Vinery, I may mention that a day or two ago I counted nearly thirty dozen of fine wellsized Figs on one plant, on the back wall of one of my houses. I do not expect them all to come to maturity for last year I gathered at least twenty dozen fine Figs from the same plant. My Vines did not suffer from this dener gained the first prizes for Grapes at our Horticul tural meetings, and one bunch of Black Hamburghs which I weighed myself was upwards of $2 \frac{1}{2} l \mathrm{lbs}$. The promise of that a bag of Guano has been standing in the Viney add above a month in a barrel which has no lid. A flower-pot with some Guano in it, was accidentally left on the top of On looking at the flower-pot yesterday some matting. find it covered within and without with a beautiful incrustation like frost on a pane of glass. I send you a specimen of this curious production,- Query- 18 the beneficial to the Vines? That it is not hurtful is proved by the remarkably healthy appearance of the Vines at this think it probable that it is not an exhalation so much as an absorption and efflorescence which has been observed. Upon submitting it to Mr. E. Solly, he ascertained it to
be principally phosphate of ammonia.] be principally phosphate of ammonia.]
enter into a discusaion as to wher inclination be as double as the Dis wher long as florists' flowers are cultivated, there will always be "tot homines tot sententiæ." I should, however, feel obliged by Mr. Orson's explaining (through the medium properties of the Carnation, read at a late meeting of the Floricultural Society "One of the flowers most in note was Brook's Flora's Garland, possessing fulness of size, peculiarity of colour, and pureness of white, but having one
imperfection, which, from its fulness, bas been overlooked, imperfection, which, from its fulness, has been overlooked, not running through from the eope to the centre of the fower, but appearing in stripes and spots, and termirating abruptly midway in the petal. Upon this account, extreme fulness in a Carnation is objectignable." Does Mr. Orson mean to lay down as a general principle, that because a Carnation is very double, as a natural consequence, it must be imperfectly marked? From reading the article to draw ay . sion than the foregoing. I would also ask Mr. Urson Whether, supposing a flower is regularly marked, with good
extremely full would be objectionable? From Mr. Orson's statement, it appears his only objection to a very double Carnation is, that Flora's Garland and some others come contused and imperfectly marked; but sarely this is no really substantial or valid argument against very full flowers, provided they are as well formed and striped as semi-double ones : and there is no reason why seedlings may not be raised with good centres quite as full even fuller than Garland, coupled with regular, bold, and clear striping, equal in the latter respect to the best vari eties at present in cultivation.-C. $\boldsymbol{K}$. weather do not succeed so well as when sown in dry weather, (quickly followed by rain) is, that in the former instance there is not a due adherence of the soil to every portion of the surface of the seed. The inconvenience nd waste experienced in sowing seeds in wet weathe rould be obviated by placing both above and below them a layer of finely-pulverised dry soil. Thus would the dvantages of both desiderata be combined - $C$. [We agree to the plan, but we doubt the reasoning.

Bees.-I do not know whether your correspondents who treat on the subiect of Bees are awure that the cultivation of the Dahlia is incompatible with the success of the Beekecper. For many years I was very successful with my Bees, having upwards of twenty hives yearly, and, of comre, abundanced growing Dahlias, the Bees declined, and I had, at last, 10 give up those useful insects altogether. They became inticated by feeding on that fower; many of hem I found dead in the blossomes, or lying on the ground underneath, aad those which got home formed tittle ox honey, I have heard the same remark made by many persons to whom I have mentioned it both in England and 1 reland; and certainly, in this part of the latter coun try, honey has become a scace article, which is here atributed to the above-mentioned cause.- $W$
Eggs.-Some little while since, a correspondent re marked, that the eggs of some hens, which had probably eaten of something containing lime from gas-works, tasted strongly of sulphuretted hydrogen. This is not more strange than that hens, which by chance have eaten onions, or the tops of them, should lay eggs which tast trongly of onions, as i have frequently remarked; and this occurred, indeed, only a few days since, when the growing tops, ofions were thrown into the stable-yard to which my fowls have access.-Devoniensis.

## PROCEEDINGS OF SOCIETIES

April 4.-Dr. Henderson in the chair. The Rev. G. C. Bethune and G. F. Gird wood, Esq., were elected Fellows. A Communica-
tion from Capt. Dwyer, Commandant of the Island of Ascen tion from Capt. Dwyer, Commandant of the Island of Ascension,
was read, containing an accourt of the success or failure of
various kinds of European veretales, various kinds of European vegetables, seeds of which had been
transmitted to the island. From this it appears that the islant is subjected to what are there called "blackwins that the islanu tallerctive to Haricots, several kinds of Lettuces, and all the de Hollande, and Nain vert petit, stood the climate well, with the
Versailles, Sugiar, and Alphange Cos Letuce Batevian Portinguese Cabbage, and Vegetable Lettuce, Batavian Endive, Amongst annual are such as $h a v$, it is remarkable that those which succeed best or from other comparatively cool climates, comprising Nemó phila insignis and atomária, Lupinus Hartwégii, polyphyllus, and grandifoilius, Erysimum Perofskianum, and Campannula Lorel. A the sashes in fightsbridge, relative to a new method of arranging the light may not be intercepted by one sashoverlaying the c,ther. thatect this, it is proposed (allowing the roof to be 15 feet wide) upper sash 3 feet; and that the rafters should be contined for short space at the same angle over the back-wall of the house in giving air, the lowermost bash will slide downwards, the
middle one will either remain stationary or move up or down as may be required, and the upper one will, by means of a pulley attached to the back wall, be drawn upwards along the project-
ing rafters-or, by having the sash secnred at the back by hinges,
it may be raised vertically by iron rods to any desired height. From Me Mr. Goode, grally to Mrs. Lawrence, was a collection of
plants, containing an exceedingly beautiful specimen of Erica plants, containing an exceedingly beautiful specimen of Erica
transparens; Dentrobium densifiorum, bearing two dense ra-
cemes of cemes of gorgeous yellow and orange flowers; Jasminum ligustrifolium, trained to flat trellis, and covered with sweet-
scented white star-like blossoms; Aschynanthus maculatus, forming a dark green bush, studded with clusters of ver
mhlont and orange; fine plants of the lovely and fragran
Cition Cy tisus filipes, Caméllia êlegans, and Epacris pungens: a
Kuightian medal was awarded for the Dendrobium, Ksightian medal was awarded for the Dendrobium, Erica, and
Aschynanthus. Mr. Green, gr. to Sir E Antrobus, Bart., ex hibited Erica aristata, potted npon the "one-shift systera," forming one mass of bloom, and being, in fact, a perfect murtel of
cultivation; with E, Willmoreana and Limmooides, and a handcultivation ; with E . Willmoreana, and Limmaoides, and a hand-
sonie specimen of a variety of Tropzeolum tricolor, with smaller sonie specimen of a variety of Troper olum ricotor, with smaller
and longe flowers, having more orange about them than those
of the old varie:y : K Knightian medal was awarded for the latter and Erica aristata. From Mr. W. Lee, of Bradmore, Hammer smith, several forced Pelargoniums, Mrs. Wray, of Cheltenham, sent a magnificent cluster of the beautiful, large, white, furnelwhich three years ago was only a few inches high, but waich on being put into a box, and placed at the back of a cool stove, for the first time, Je,th, on the old spurs and upon the young Yurners: a Banksian medal awarded. From Mr. Paxton, gr, to the East Indies, probably new, and called Devonianum; although not possessed of much brilliancy, it differs in colour, as well as
in foliage, from other cultivated species : a certificate awarderl. Mr. Beck, of Isleworth, exhibited apecies: a certificate awarderd. Calceolaria, called Premier, of good form and colour. Mr. Jackson, of Kingston, scut an extremely fine specimen of Erica trós-
sula, clothe with large tresses of snow-white flowers; E. phy -
 cut Camelta flowers; a handsome secting Camellia, callici
Alhutui, whth flow es a Almutti, with flowers of a clearer white than those of the old
double white; C. ochroleuca, white, with a tinge of yellow Allnuttit. From the Very Rev, Dr. Garnier, Dean of Winlis, and Soulangeana, several hybrid varieties of purpurea, gráciawd R, campanulatum, from plants in the open air: \& certificate

Block, Esq., a collection of plants, amongst which were well-
grown specimens of Polygala oppositifolia, Leschenaultia for-
mosa, Bossimea ensata, and the double purple Azálee a a certificate mosa, Bossize ensata, and the double purple Azalea : a certiticate
awarded for the three latter. From Mr. Low, of Clapton, small and reddish-brown flowers, and a pretty species of Bossieea, both raised from Swan River seed a seedling Epacris, raised from
seed of E. grandifiora, which it resembles in habit, but not in the form or colour of its flowers; and a beautiful seedling Ca
mellia of a dark carmine colour, with finely-formed back petals, nellia of a dark carmine colour, with Enely-1ormed alack ped fo the two former plants. From C. B. Warner, Ess., a well-grown
specimen of the lovely Dendrobum pulchellum; Rpmictun macranthum, a beautiful hardy plant, with singularly formed medal awarded for the Dendrobium. Mr. Conway exhibited seve-
ral seedling Azaleas, of a dark salmon colour, with well-bloomed plants of Pelargonium Lánel. From Mr. Rivers, of Sawbridge larly of Pactolus, a yellow tea-scented variety; Madame Bureau a white China, with salmon-coloured centre; and Duc d'Aumale, a crimson Bourbon, finely cupped: a certificate awarded. From Roses in pots, comprising Eugene Beatharnois, an exquisiter a flesh coloured Bourbon; Duchess of Sutherland, Comte de Paris, and Madame Laffay, hybrid perpetuals; Messrs. Lane also exhibited
two boxes of cut Rose blooms, and a gocd specimen of the double white Chinese Primrose a Banksian medal awardcd fo
the Roses. From Messrs. Paul, of Cheshunt, there was also the Roses, From Messirs. Paul, of Chcshunt, there was aiso a Was awarded; with a singular and rather handsome seedling
Cineraria, showing a disposition to quill, by the purple rays of bases, and thus forming a tube having a silvery appearance: for mersmith, sent several pretty seedling Cinerarias. From Lady Rendlesham were some handsome and well-flavoured Oranges Grown in a greenhouse, Mr. C. Ewing, gr. to O. F. Meyrick, for which a certificate was awarded. From Mr. S. Hooker, spe-
cimens of the Scarlet Nonuareil and Gooseberry Plppm, in an excelient state of preservation. From the garden of the Societ small specimen of Dendrobium Heyneanum, a pretty species,
very lately received from the West coast of India, with delicate white flowers, having a lemon centre, the beautiful Oncidiun Mridum guttatum, several species of Epidendrum, a fine speci-
men of Cyrtopodium punctatum; a new species of Spirea, called lanceolata, from Japan, with corymbs of pretty white flowers,
bearing considerable resemblance to those of S chamzedrifolia; Acácia alata, blooming profusely; Saxifraga ciliosa, and a blue Cineraria, called Unique
ROYAL AGRICULTURAL SOCIETX OF ENGLAND.
Mare不29.. T. R. Barker, Esq., in the chair. The Hon. C E. G. D. Pennant was elected a Governor, and 25 gentlemen ment Society of Ireland was transmittcd, with intormand that the next Cattle Show would be held in Belfast on the 31 st of
August. Mr. A. Nicholl transmithed a statement of the adyan-
tages attending the use of the Concrete Furrow Oraining of Lord
Hay. Mr. Baker transmitted a collection of facts, illustrated by coloured plans, relative to the capabilities and cultivation of the

## MISCELLANEOUS

Tests for Doctored Clover Seed.-For Coloured Red suspected seed, and fill it up with muriatic acid diluted suspected seed, af rain-war. If, after standing three or with two parts and four hours (being frequently well shaken), the liquor be coloured green, or greenish yellow, the seed is doctored; or, provided the seed be clean and free from dust, and the acid is made cloudy or opaque, it is doctored. The acid, remain perfectly transparent; therefore, if the acid is not clear the seed is doctored, although no colour may appear, Seed.-Fill an ounce phial one-third with the suspected Seed.-Fill an ounce phial one-third wiac until suspected seed, and add spirit of sal ammoniac until it be two thirds full ; cork and shake the phial, and for if it stands few seconds, not exceeding half a monute, for if stands longer the genuine seed will colow the hquid. If the liquid be coloured either yellow or yellowish green, the seed has either been dyed, or its natural colour has oeen brought to the surface by some artifice. For Bleached
Red Clover, While Clover, and Trefoil. -Take a fonr ounce bottle one-thurd full of the suspected seed, fill it up with boiling water, frequently shake it, and when it is paper, or of the leaf of a cabbage red, the seed is doctored. N.B.-You may obtain the spirit of sal ammoniac, the muriatic acid, and the litmus paper, at a trifling cost of any chemist or druggist, and the cabbage-leaf used naust be that of the red cabbage.-Mark Lane Express. Directions for Planting Melons.-(Extracted from a Letter written by Robert Godschall to the Hon. Alex. Stanhope, then British Minister at Madrid, dated Sevila, Feb. 13, 1691.)-"Put the seeds 6 or 8 hours into IukeWarm water, and after into a blanket, and let them lie about 24 hours in the sun wrapped in the blanket; in which time they open, and seem to sprout at one end. They plant 3 or 5 together in one hole; and when they grow up, with an instrument of iron they rake towards the root every day, so as that the earth lies loose about them like the earth of a molehill.'
Prof. Henslow's Letters.-We are glad to find that these useful Letters, addressed to the farmers of Suffolk, are now to be published in a separate form, as we learn from the following paragraph in the Bury Post:"More than one person has expressed to me a desire under the form of a pamphlet. The following considerations have determined me to do so. Although I believe I have not allowed the interest I have felt in this correspondence very materially to trespass upon my attention, thached to my position as a parish priest, yet it is evident that whatever of thought, time, or money, I have allotted to this subject during the past three months, might have been otherwise deroted in some way advantageous to my parish. It seems to me, then, that I may possibly be able to make some amende for such deficiencies by appropri ating to some parochial utility or other, whatever may
accrue from the republication of these letters. I have, therefore, no very delicate scruples about requesting any of you to promote their circulation, if you think them cal culated to excite the farmers of other counties to cooperate, after the example of the farmers of Suffolk. see no reason why we should not have at least 100 distinct experiments performed every year; and each carried on by between 30 and 50 practical men, whilst each man need not be called upon for more than a single experiment annually. I propose inserting in this pamphlet my Ad. dress to the Hadleigh Club, and to add a few explanatory notes, or some sort of commentary and glossary, which may give them a more general character, and enable them to serve as a precursor for inducing the farmers of other counties to listen to any future suggestions which may ising a complete system of experimental co-operation throughout England.

Weight of Manures.-We have been favoured by Mr. Fothergill, the extensive dealer in artificial manures, with the following statement of the weight per bushel of those kinds most in use :-

> Dahlias.-At the request cessful during the past season. From the ime most sucner in which many of the Country Shows are reported, it is impossible to give a correct return, but the present will be found sufficient to answer the purpose.

North-West America.-We are glad to announce that Sir William Hooker has arranged for a Collector to go to North-West Am's Bay, and on reaching the Rocky Mountains, next spring, will strike due south into California, and reach the coast at San Francisco.
Evergreen Beech.-This beautiful tree, the gloria e decus of the most southern regions of South America, has reached England alive, and now exists in the Royal Boseph Hooker from Tierra del Fuego. If it should prove hardy, it will be an invaluable acquisition.

## GARDEN MEMORANDA

S. Rucker, Esq. West Hill, Wandsworth. - It is questionable Whether, even in their native clmates, Orchidaceous plants preMay of the specimens are of gigantic size; Acanthophippium bicolor, Peristeria elata, and Plaius grandifolius, being grown
in 2-sized pots, together with Maxillária Harrisoniæ, whose beautiful and fragrant wax-like flowers, freely produced, are bium fimbriatum, grown amidst broken pieces of peat and potsherds, forms quite a mass of brilliant orange, the labellum of
each blossom being surrounded with the most delicate fringe each blossom being surrounded with the most delicate fringe sphagnum, is a healthy specimen of the purp le variety of Dendró bium pulchelium, of a light violet purple colour, having the inte-
rior of the lip strongly marked with orange. A specres of Gonrior ot the Mp strongly marked with orange. A specres of Gow days, be fully in bloom; it ap pears likely to prove new, inasmuch as the ninexpanded buds, some resemblance in form to a common garden Bean. The lovel Epidendrum Stamfordianum, of a pale green colour, beautifull streahed and spotted with pur,le, in also m flower, with the ras
Epidendrum aurantuacum ; the finely-formed Dendroum aggregatum, with light yellow flowers, having orange centres; the
singular Mormodes atropurpureum, the small variety of Oncidium mpliatum, Deudróbium macrophylum, with racemes of viole purple ; the pretty Oncidium pubes; Epidendrum pictum, with
por base to the summit with yellow and nlive-green flowers; the swect-scented Kpidendrum Clowesianum, ard many others,
Several species of Aérides and Saccolabium, cultivated in basket Several specium, are in a most vigorous state, throwing out roots ike sinall ropes. We noticed here a thriving plant of Nepenthes ampullácea, with broader and shorter pitchers, and of a lighter cover differ in bemg spotted with furple, and in beng furmshed Azallea variegata has here been found to force well a small p,lant wheh was last spring growing in a 60 -sized pot was placeun stove-beat and regulan to a cold pit to rest; it has slnce been returned to the stove, and is now a hawers in abundance. In the greenhouse are a fine plant of Camélia reticulata, and severa other varieties, with numerous Heaths and Epacrises in ion A convenient, $\begin{aligned} & \text { two compartments, has lately heen, erected, principally for the } \\ & \text { hat }\end{aligned}$

## IRebípos.

Trials and Effects of Chemical Fertilizers, with various Experiments in Agriculture, \& \& C. By Sir J. Murray, We are told on the title-page of this pamphlet, that it contains an account of experiments in Agriculture for gerating soils and composts, increasing the food of plants, improving irrigation, and abating the ravages of insects. What ærating soils may be, we have been uas to expericover, unless it is Irish for aerrating; and as to experiname. It is true that there is a certain number of statements, to the effect, that where Sir James Murray's fertilizers, which it is the object of the pamphlet to recommend, have been tried, they have produced stronger crops, and better crops, and more luxuriant crops; but they are all too vague and destitute of distinct results to be worthy the name of experiments. If we turn to another place to ascertain what the fertilizers are, about which the pam phlet is written, we are equally perplexed. We only learn that they consist of "soluble superphosphate of lime, with ammonia and silex, combined with several chemicats, hownat these chemicals are, the Sir James Murray's patent fertilizers are to be sold in barrels, one red and acid, the other dark and alkaline. What their value may be remains to be ascertained. They may be good mate rials, in spite of the bad shape in which they are announced, just as the pamphlet itself contains some statements worth attention, notwithstanding that it has far quack medicines We the puifs col to have the opportunity of announcing the results of some authentic trials with these substance, which have at all events the merit of cheapness, so that no great cost will be incurred in trying them.

CALENDAR OF OPERATIONS for the ensuing week. In-door Department.
Pinery.-Increase the quantity of water to the fruiting plants, and let it be good liquid manure every other watering while the
fruit is swelling. A brisk heat of not less than $65^{\circ}$ in the morn-
ing ing, a humid atmosphere, and a steady bottom-heat, will also
greatly assist the swelling of the frait. If the bottom-heat for the succession-plantsts steady, the common routine of watering;
shading, and giving air is all that will be uecessary for some thine to come. Wines in greenhouses, where the temperature is
Vrwarss - Vines
made to suit the plants, require partacular attertion now. Within made ta suit the plants, require partucular atteritinn now. Within

susual, a host ofletters has arrived too late for answers this week.

## NEWS OF THE WEEK.

## Tere overland mail from India and China has brought

 advices from Bombay to the Ist March, and from Canton to the 21st January. The Indian news is of great importance, containing the accounts of a hardfought battle between the British Army under General Napier, and the Ameers of Scinde, in which $22,000 \mathrm{Be}$ loochees were totally overthrown by a corps of our Indian Army, amounting to no more than 2,800 men. The loss of the enemy is estimated at 5000 men, 1000 of whom were left dead on the field, togetber with the whole of their artillery, ammunition, standards, some treasure, and a considerable quantity of stores, The loss of the British amounted to upwards of 200 , including several officers, who conspicuously distinguished themselves in the battle. Three days after the action, the Ameers surrendered themselves, unconditionally, as prisoners of war, and the British colours were hoisted over the city of Hyderabad. The Governor-General arrived at Delhi on the 5th Feb., and was preparing to go to Agra, where his presence was considered necessary to put an end to the disturbances in the Bundelkund territory. It was rumoured that the Brahmins of Somnauth had declined to receive the celebrated gates, on the ground that they had been polluted by their application to a Mahommedan tomb; it was therefore necessary China the news is satisfactory so far trophies. From assurance of continued tranquillity, but in otner respects it is comparatively unimportant. The Emperor and his Comnissioners had slown the strongest desire to maintain friendly relations with the British Officers; and the prudent measures of the Municipal authorities of Canton bad successfully repressed the angry feelings which led to the riot of the 7 th December. The high Imperial Commissioner, deputed by the Chinese Government to conduct the commercial negotiations with Sir H. Pottinger, had arived at Canton, and the first conferences were arranged to take place on the 21st January.-Our French news is chiefly of domestic interest, and our intelligence from Madrid adds little to what was known last week on the constitution of the New Chamber.-The Portuguese Govermment have refused the terms offered by Lord Aberdeen on the tariff question, and it is expected that the British Cabinet will at once break off the megotiations. -From the Levant, we have accounts of the remarkable fatality which has attended the commission appointed to arrange the differences between Persia and Turkey. Both the Persian and Turkish Plenipotentiaries had died suddenly; the two English Commissioners narrowly escaped on accidental death, and the two Tatars sent with the intelligence to Constantinople had died on their way.From the United States we have the President's message in reference to the disputed construction of those portions of Lord Ashburton's Treaty which relate to the right of search. Mr. Tyler declares against any pretension on the part of Foreign Powers to visit vessels sailing under the American flag; and hints, in no very obscure terms, to the disposition of his Government to maintain this principle by the aid of its whole naval powerr. The message of President Tyler has naturally occupied attention in both Houses of Parliament; Lord Aberdeen and Sir R. Peel have declared that the difference of construction to which the message referred was more apparent than real ; and the thanks of the House of Lords were voted last night to Lord Ashburton for the conclusion of the treaty. On Tuesday, Lord Ashley brought forward his motion condemnatory of the continuance of the trade in opium, which he characterised as aconsistent with the honour and duties of a Christian kingdom. The motion was opposed by Ministers and altimately withdrawn, on the ground that negotiations were now in progress on the subject of this trade, the fate of which might be risked by any hasty resolution of the House. On Thursday Mr. C. Buller moved an address to the Queen, for an inquiry into the best means of exten-
sive and systematic colonisation. He did not propose any specific plan, or an alteration of the existing system, but urged the Government to extend its principle and investigate every point of the subject, in order that the best course might be adopted. Lord Stanley opposed the motion as unnecessary, because an enlarged system of emigration was already in operation under the superintendance of Government. After a long and interesting debate, Mr. C. Buller expressed his satisfaction that the motion had excited so much attention, and consented to
leave the question in the hands of the Executive. The leave the question in the hands of the Executive.-The
revenue returns for the past quarter have been published revenue returns for ; they confirm the anticipations of the productiveness of the Income Tax, and show a steady increase in the Post-office; but on all the other branches of revenue there is still a falling off. The results, however, are more satisfactory than those exhibited by the quarter ending in
January last, and they may be considered to indicate that the country has surmounted the worst of its embarassments.

## 390me Nefos.

Court.-Her Majesty and Prince Albert continue at Buckingham Palace. Her Majesty during the week has taken her usual daily walk in the gardens of the Palace,
and is in excellent health. All the arrangements have been made at the Palace in anticipation of her Majesty's accouchement, which is expected to take place almost daily. - Lord Charles Wellesley, clerk marshal, has suc-
ceeded Colonel Buckley in the duties of equerry in waiting on the Queen, and Colonel Bouverie has succeeded Prince Albert. -The King of Hanover is expected to arrive in London on a visit to this country, in the course of the present month.
Ourcial Appointments.-Capt. Fitzroy, late member for It is rumoured that Mr. Pemberton is to have the seals of the Duchy of Lancaster, as Chancellor, and that the Hon. J. Talbot, son of Earl Talbot, is to succeed Mr. Pemberton Wordsworth has been appointed Poet Laureate, in the room of the late Dr. Southey.

Parliamentary Movements.--The contest for the representation of Durham, vacant by the appointment of Capt.
Fitzroy to the Governorship of New Zealand, terminated on Tuesday in the return of Lord Dungannon; the ${ }_{406}$ The Nottin Lord Dunganan, 1 , Mr. Bright Mr. Gisborne, the Liberal candidate, was returned when 1848; for Mr. J. Walter, juner, 1731. The Athluene election has terminated in the return of Mr. Collett, the 114 ; for Capt. Beresford 108. A petition has been presented by the liberal electors of Cambridge against the return of Mr. Fitzroy Kelly. A vacancy has occurred in
the representation of East Suffolk by the death of Sir the repre
B. Vere.
The Revenue.-The official returns of the revenue for the year and quarter which ended on the 5th inst. have just been published. They more than confirm the anticipations of the productiveness of the Income-tax, which
causes an jncrease in the total amount of the returns ; causes an therease ith the the Postion of the Pice, they still show a falling off on all the other branches of revenue. The total ordinary income for the year ended April 5,1842 ,
was $45,363,827 l$.; that for the year just ended was was $45,363,827$. $;$. 4 that
$46,078,810 \mathrm{l}$ - showing an increase on the year of $714,983 l$. The total ordinary income for the quarter ended April 5 , 1842, was $8,720,5322$.; that of the quarter just ended was $10,469,477$ l. - showing an increase on the quarter of
$1,748,945 l^{2}$. The following are the details:-The returns for the Year exhibit an increase in the Income-tax of 2,456,2887. ; Post-Office, 103,0002. Miscellaneous, $425,969 l$. ; to which must be added, Imprest and other
moneys, $154,913 l$; Repayments of Advances, $65,614 l$.moneys, $154,913 l$.; Repayments of Advances, $65,614 l$.-
making the total increase $3,205,784$. Thiere is a decrease in the Customs of $1,076,3361$. ; Excise, 1,059,093l. ; Stamps, 146,7901. ; Taxes, $146,0826 . ;$ Crown-Lands, $62,500 l$-- making a total decrease of $2,490,801 l$, which, deducted from the above increase of $3,205,784 l$., gives, as
stated above, a total increase on the year's accounts of stated above, a total increase on the year's accounts of
714,9832 . The returns for the Quarter show an increase in the Income-tax of $1,885,232 l$; ; Post-Office, 2.0001 .; Miscellaneous, $218,363 l$.-making a total of $2,105,595 l$. They show a decrease in Customs of $275,516 l$; Excise, 1,789\%.; Stamps, 6,361l.; Taxes, 8,055 .; Crown-Lands, $15,500 l$; Imprest and other moneys, 8,8077 . ; Repay-
ments of Advances, $40,623 l$. making a total of 356,6502 , ments of Advances, 40,6232 . making a total of 356,6502 ,,$~$ shows a total increase in the quarter's accounts of

Colonial and Consular Services.-The estimates for the year ending March 31st, 1844, are:-Bahamas, 3070l.; Sable Island, Nova Scotia, 400l.; Sierra Leone, Gambia, and Gold Coast, 13,680l. ; St. Helena, including allowances to late servants of East India Company, 11,5006. ; Western Australia, 77851. ; Port Essington, Heligoland, $1023 l$. ; Governors and others, West Indies, 18,667l.; Clergy, North America and New Zealand, gration, $11.286 l_{\text {. }}$, Justices in the West Indies, Mauritius, \&c., 49,700l.; Negro Education, 18,000l.; Captured Negroes, Support, \&c., 35,000l.; Commissioners, for

104,7002.-Total, 403,336l. The total for the year 1841, was $381,212 l$. ; and for $1842,392,154 l$.; thus showing an increase, as compared with 1841, of 22,124.; ; and the
$11,182 l .$, as compared with 1842.-The charge for the establishment in China, which has usually formed part of this estimate, will be submitted in a separate estimate, as soon as the arrangements are completed.
${ }_{H}$ Houses of Parliament. - A return made to the House amount already expended for building the new Houses of Parliament is 380,4831 . $10 s . ;$ the amount voted has been 438,5007 . ; and consequently, $58,0166.10 s$. is in hand gress of completion. It is estimated that a further sum of 578,4241 . 12 s . 9 d . will be required to complete the buildings. The total amount of Mr. Barry's estimate will quired for completing the landing-places, making good the pavings, furniture, and fittings, and for decoration

Yeomanry.-A parliamentary return of the number and expenses of the effective yeomanry of Great Britain, in the containing 831 officers and 13,358 men; the total expense connected with whose maintenance was $101,8316.8 s .11 d$. The amount voted by Parliament was $82,458 l$., thus showing the excess of expenditure beyond the vote of Parliament have been 19,373\%. 88. 11. The reaso porps called out in aid of the civil power. Six yeomanry corps containing air containing sid from the 1st of this month ; and seven additional corps, to consist of 16 troops and 935 men, are expected to be raised for the present year.
paper, just published, shows that in the year ending the paper, just published, shows that in duty paid for legacies, probates, and administrations, was-in England and Wales, 2001,960l. 7s. 8d.; in Scotiand, 150,2132. 11 2d.; in Ireland, 114,923l. 15 s . $6 \frac{1}{2} d$. ; total $2,267,105$.
 in Ireland, $1,664,853 \mathrm{l}$. $8 \mathrm{~s} .0 \frac{1}{4} \mathrm{~d}$. Total duties received since the 1797 amount to $64,596,1901$. 6 s. $4 \frac{1}{4} d$.

## fforeian.

France.-The recent debates in the French Chambers have been mostly of domestic interest, and M. Barrot's notice of a motion, for limiting the jurisdiction of the Correctional Police, occupies the chief attention of the Correctional Police, occupies the chis journals of Monday. In the Chamber of Deputies, on Friday, M. Desjaubert expressed an apprehension thąt the Government was about to commit a great imprudence in reviving the old claims of France to the Istand Madagascar. M. Guizot, in reply, entered upon a full
eapose of the system pursued and contemplated by the French Government in the Pacific, and now in the Indian Sea; and which, he explains, is "not to compromise or commit France by endeavouring to form extensive colonial establishments at a long distance from home, and to incur by such proceeding the danger of involving her in serious forcign powers generally. That which is advantageous to France and indispensable for her, is to possess points on the globe destined to become great centres of trade and navigation, and which will prove secure and strong maricommerce by affording harbours and shelter for our shipping, with means of refit, without our being compelled to resort for those objects to foreign ports."
relative to the organization of the Privy Council, and the bills for confirming the provisional arrangements entered into by the Minister of Public Works wathe caleis and Lille, and from Avignon to Marseilles, were presented to the Chamber on Monday. - The nuptials of the Princess Clementine of Orleans are fixed for the 20 th instos and
will be celebrated at Fontainebleau. Accounts from Algiers state that General Bugeaud is making immense preparations for another campaign, which is to commence about the 18th April, and is announced as likely to consolidate the domination of France before the end of the fighting in almost all directions. General Lamoriciere is engaged on the Upper Oued-Riou, near the margin of the desert ; General Gentil is strugging with the enemy at Mazonna; Generals de Bar and Changarnier are actuely fighting in the Dahra and the Beni-Menacer Mountains; the Medeal column has perpetual conflicts with the Kabyls of the east ; General d'Hilliers and two Colonels are comConstan Kabyls of the mountains between Bo recently yielded the Duke d'Aumsle a splendid tribute in the Moniteur, has returned from the expedition in such a now in exhaustion,
Spatn.-We have advices from Madrid to the 29 th
The new chamber is said to be composed as follows: 18. It is expected that the 103 will support the Regent, and all the measures of the present ministry. As to the ezact men they may desire, some doubt still exists it is, however, reported as certain that the Governminister in London a courier to General ately to Madrid, the Regent being desirous to consult him on the organization of a new Ministry.-The contract for the quicksilver mines of Almaden was on the 28th ult.
adjudged to Messrs. Rothschild. The price ( $81 \frac{1}{2}$ dollars per metrical quintal) is 21 dollars higher than that fixed
by the contract which is to expire in November next. The by the contract which is to expire in Nov
new contract is to endure for four years.
Portugal.-Accounts from Lisbon to the 27 th ult., mention that the ultimatum of Lord Aberdeen on the tariff question has been rejected by the Portuguese Government, which will not consent to any reduction on English woollens beyond their former propositions. It is therefore expected that the English Cabinet will at onco break off the negotiations, and that the convention is virtually at an end. -The comet had caused a great sensation at Lisbon, many of the inhabitants believing that the end of the world was come. All the confessionals of the city were crowded with penitents for many days, and several
people were so much affected that they have been sent to people were so much affected that they have been sent the public madhouse.
SWixzerland.-On the morning of the 25 th ult., at Basle and its neighbourhood. The barometer fell at the out one line, but a sudden change of weather followed immediately, it having been nnusually mild for the season
afterwards.
Germany. - The Diet of the States of Prussia was opened on the 16th ult., at Künigsberg, by a speech from the Royal Commissary, remarkable for "its liberal expressions. "A powerfal spirit," he said, of a benencent in the present age; and, therefore, is it the more necessary for all who have the true welfare of their country at heart to keep a clear, unclouded view before them; not to permit theories-specious perhaps, but nevertheless superficial in themselves, to misguide them; not to into an all-consuming flame fina good we enjoy for doubtful or deceiving hopes in prospect." According to a circular from the firm of Brockhaus, of Leipsic, as proprietors, the German Allgemeine Zeitung reappeared on the lst inst., Professor Bulau having consented to become the editor; and with this chavge to The Carlsruhe Garette states that a shock of an earthquake was felt in the district of Loerrach, in the Grand Duchy of Baden on the morning of the 25 th ult. The Duchy or baden, on the houses were forced open, and furniture was thrown down, but no house fell, and no furmion was injured -A suspension-bridge, surpassing all phat has been seen is to be constructed at Vierna, across the Danube It will be 1,470 English feet in length, with only spreading in Germany, from north to south. Anstria and Saxony have concluded an agreement by which 6 kreuzers shall be cher for every distance short of ten German miles, and 12 kreuzers for every greater distance. There are cases, however, in which slight augmentations take Treves, from Holland, was the occasion of a great fête on the 17 th .
.-Advices from Rome mention that the Pontifical Government had abolished, to a certain extent, the exorbitant privilege which hitherto insured impunity to male-
factors who sought an asylum in the churches and convents of the Pope's dominions. A recent legislative enactment provides, that hereafter the secular authorities may cause to be followed and arrested, wherever they may take refuge, all individuals guilty-1st, of relics, or images of the saints ; 2d, of profanation of
the churches ; 3d, of insults by words or violence against clergymen dressed in their costumes ; 4th, of high treason; 5 th, of murder; 6 th , of highway robbery, either singly or with the aid of accomplices; and 7 th, of coining.
A letter, dated Milan the 24 th ult A letter, dated Milan the 24 th uit., states that four earthquakes had been felt in Calabria since the 27 th December.
The last occurred on the 13th February, but fortunately No ste that the nucleus of the comet had been distinctly seen there. Turkey and Persia.-We have intelligence from Constantinople of the 17 wh, and from Smyrna of the 19th ult. The arrangement of the difference between Turkey and Persia is said to have made no progress since our last accounts from the Turkish capital. The Trebizond packet had brought despatches from Persia, from which it appears that Meerza Jaffer, the Persian Plenipotentiary to the Conference at Erzeroum, had died suddenly at Tabreez, a few days after the death of Nourri Effendi, the Turkish Plenipotentiary, at Erzeroum. A most extraordinary fatality has displayed itself on this occasion, and no Eastern story-teller, who delights in marvellous coincidences, could have imagined a series of disasters more astonishing than those which have distinguished these ill-fated conferences. Before starting from Constantinople, Captain Williams, the English commissioner, wass immediately after his nomination, taken dangerously thl, so as to necessitate the appointment of a coadjutor, the
Honourable Mr. Curzon. Shortly after the arrival of these gentlemen, accompanied by Mr. Redhouse, their interpreter, at their post, the whole party narrowly escaped suffocation, having fallen asleep in a room heated from Nourri Effendi, and the Tatar sent from Tabreez Ne news of Meerza Jaffer's death, had both died on the way.-The news from syria is not important. sive evening
India.-The Oriental steamer arrived at Malta froma Iexandria on the 30 ch ut, bringing the Overland India Mail, despatched from Bombay by the Victoria steamer on the despatc from Bombay, and to the 22d January from China. O
the 17 th February，General Sir C．Napier obtained a bril－ liant victory in Scinde，near Hyderabad，after three hours of a desperate struggle ； 22,000 Beloochees were entirely including 18 officers．It appears that the Biitish Govern． ment，having introduced civilisation into a portion of Scinde，and taker possession of the Indus，the navigation Scinde，and taken possession of the Indus，the navigation
of which became a matter of general benefit，a demand was made on the Amaeers to give un，for the use of that was made on the Ameers to give up，for the use of that They，feeling that they could not immediately refuse， They，feeling that they could not immediately refuse，
temporized，until at length their troops were collected， when，on the 14th February，they sent word to Major Outram to retire from their city．Major Outram，who did not suppose that they would proceed to extremities，
delaged．On the 15 th，the residency of the British Po－ delayed．On the 15th，the residency of the British Po－
litical Agent was attacked：it was gallantly defended by litical Agent was attacked：it was gallantly defended by
100 men for several hours；but at length，their ammuni－ 100 men for several hours，but at length，sheir a retired，
tion having been expended，the British soldiers retin with a small loss，to the steamers，and proceeded to join
Sir Charles Napier，then at the head of about 2,700 men，at Sir Charles Napier，then at the head of about $2,700 \mathrm{men}$ ，at
a distance of 20 miles from Hyderabad．The Ameers，in a distance of meantime，hastened to attack the British force．On the following day，Gen．Napier marched to Mutharee，
and，on his arrival there，ascertained that the Ameers and，on his arrival there，ascertained that the Ameers
were in position at Meeanee，distant about ten miles， to the number of twenty－two thousand men．Being
aware that any delay for reinforcements would both strengthen the confidence of the enemy，and add to their numbers，although his own force was not one－
seventh part of the enemy＇s，Sir C．Napier resolved upon making an immediate attack，and，accordingly， marched towards Meeance at four ${ }^{\prime}$＇clock in the morning
（the 17 th）．At eight，A．M．，the advanced guard of Gen． Napier＇s force discovered the enemy＇s camp，and at nine oclock the British troops formed in order of battle，being composed of about $2,800 \mathrm{men}$ ，of all arms，and 12 pieces destructive fire upon the British troops，and，during the action which ensued，with the most undaunted bravery repeatedly rushed upou them sword in hand．After a most resolute and desperate contest，which lasted for up－ and put to flight，with the estimated loss of about 5,000 men， 1,000 of whom were left dead on the field ；together With the whole of their artillery，ammunition，and stand－ The following day，Meer Roostum Khan，Meer Nusseer Khan，and Meer Wullee Mahomed of Kyrpore ：Meer Nusseer Khan，Meer Shadad Khan，and Meer Hoossein Khan of Hyderabad，came into the camp of Gen．Napier， of war ；and the British colours were hoisted over the city of Hyderabsa on the 20th February．The Governor－ General，in his official report，states，with regret，that particular，he mentions the following officers，who，after having conspicuously distinguished themselves，died on the field of battle：－Major Teasdale，commanding 25th Reg．，B．N．I．；Captain Tew，her Majesty＇s 22d Reg． Jackson，12th Reg．，B．N．I．；Brevet－Captain Meade 12th Reg．，B．N．I．；and Lieut．Wood， 12 th Reg．，B．N The intelligence from Affghanistan is，that anarchy con－ master of Crevall there．Akhbar Khan is said to be ceeding from Lahore towards Peshawur，as if to join him． Peshawur，and to take it from the Sikhs，but the of treatment of Dost Mahomed by the latter may prevent that Sufter Jung had been compelled to quit that and to seek safety in flight．Lord Ellenborough，who had Agrived at Delhi on the 5th February，was preparing to go not only on account of the deatly of Scindia，the powerful heir of $G$ walior，at the age of 27 years，to whom an adopted parious arrangements，to put an end to the disturbances on the 18th February，on © Malcolm left Bombay deliver the ratified treaty to the Plenipotentiary．The Courminated ial on Gen．Shelton and Major Pottinger has C．nated in their acquittal．
an．，but the news is anvices from China to the 20th ues to be preserved in Canton，and the discontented Which still in led to the riot of the 7th December，and seems still in some degree prevails amongst the populace sures of likely to be entirely subdued by the prudent mea－ made to the municipal authorities．An attempt bad been the promptow up one of the public gates of the city，but ouchedpt issuing by the government of proclamations， preventing any decided tone，and which had the effect of sood feelinatiety of the Chinese officers to confirm the $A_{B}$ feeling now subsisting between the two governments． that in fuer proof of their sincerity it may be mentioned ouncement is made that the＂strongest imperial com－ Che Keang，Fukeen given to the governors，\＆c．，of the － by the Chinese the high imperial commissioner，deputed negotiations with Sir H．Pottinger arimed commercial He imath January，and took up his residence in the city． ral，and it inely apprised the plenipotentiary of his arri－ $\mathrm{b}_{\mathrm{o}}$ held it was arranged that the first conferences should

Elepoo reached Canton，the Hono merchants expressed their desire to have an interview with him，which he de－ chined，and it now said that he has demanded from them，by next June，the whole amount of their
which is to the extent of three millions of dollars．

United States．－The packet－ship Philadelphia ar rived off Dover on Friday，with American papers to the 4th March；and on Saturday the Great Western steam－ ship arrived at Liverpool from New York，which place she left on the 17th ult，，having experienced very rough
weather in the Atlantic．The Oxford and the Patrick weather in the Atlantic．The Oxford and the Patrick
Henry packet－ships also arrived at Liverpool on the same Henry packet－sinips also arrived at Liverpool on the same
day with the Great Western，but the news by the steamer being several days later，embraces all that was conveyed by the other vessels．On the 27 th February a message tives，in reply to a request from the latter body for a copy of any communication received from the British Govern ment as to the construction put by the President on those portions of Lord Asinburton＇s treaty which relate to the
right of search question．Mr．Tyler，in his message， strongly declares against any pretension，on the part foreign Powers，to visit vessels sailing under the American fag．Mr．Webster，the Secretary of State，supplied the Mr．Fox，the British Minister in Washington，wherein his Lordship protests against the supposition that any one of the principles，in respect to this question，heretofore con－ tended for by Great Britain，was in the slightest degree
compromised by the late treaty．The President regarded the eighth article as removing a possible pretext －on the ground of mere necessity－to visit and detain onr ships upon the African coast，because of an alleged
ai use of our flag by slave traders of other nations．We had taken un marden of preventing any such abuse by stipulating to furnish an armed force－re garded by both the high contracting parties as sufficient to accomplish that object．Denying as we did and do， the flar right to exercise any such general police over Great Britain any formal renunciation of her pretension Still less had we the least idea of yielding anything our－ selves in that respect．We chose to make a practical set－ already of the question．hais we owed to what we had try called for it，the honour of its flag demanded the should not be used by others to cover an iniquitous traffic． This Government，I am very sure，has both the inclination and the ability to do this；and，if need be，it will not content itself with a fleet of 80 guns－but sooner than any cuting its of which is to protect its flag alike from abuse and insult －it would， 1 doubt not，put in requisition for that Government is faithfully to fulfil the treaty on its part and it will not permit itself to doubt that Great Bri－ tain will comply with it on hers．In this way peace will me best preserved and the most amicabe relation dential campaign is fairly opened．The following are named as candidates for the office：－Mr．Tyler，Mr Buren，Mr．Calhoun，Mr．Cass，Judge M ${ }^{\text {Lean，Mr．John }}$ son of Kentucky，and Mr．Buchannan．The great contest thouglit， struggle will end in his nomination．Mr．Webster，it is anderstood，is on the point of retiring from the Cabinet， and Mr．Cusbing，it is said，will succeed him as Secretary appointed Minister at London，in the place of Mr．Everett， who is going to China．－The comet，the sudden appear－ ance of which in our hemisphere has excited so much in erest，had as suddenly appeared in the western hemi－ excited as much interest in America as in Europe．On the 11th，the head was observed considerably elevated bove the horizon，and close to the well－known star Beta hour 43 minutes，and its declination 117 degrees．＂The nucleus presented the appearance of a bright central spot nveloped in a misty haze，elongated in the direction o the train，the whole somewhat resembling a lamp seen through a shade of ground glass．

HOUSE OF COMMONS．
MIonday．－Lord Jo日N RUSELL，with reference to Mr．Hume＇s approacching motion upon the Washington treaty，desired to notice the great difference between the British and American
Governments respecting the construction of the
wht article e（that which regards the Right of Visit，and to ask for the production of
some of the papers relating to that ajjustment ；observing that
the Huuse could the House could not very conveniently discuss the merits of the clearly apparent．－Sir R．Peene declared has muteation to preant burton had not been authorized to negotiate at all upon the right of vistt，the British Government having in no degree departed
from the principle afirmed in Lord Aberdeen＇s communication beenanswered by the Amerrcan Guvernment． 811 ，and hail
On the
bit

 its re－commitment pro forma．Had these clauses aivesting the
House of its final control，been contained in the bill as unginally drawn，he was not sure that he could have consented to the
second reading．－Sir J．Gsaram said that this alteration had been regularly introduced，while the bill was under consideration in committee，but as it was now to be reconsidered，any objec－
tions night be made to this appellate jurisdiction，the object of which was to refer to the decision of a court of law，not a ques－ tion of fact or of evidence，but one strictly of a legal nature－－
After a few observations from Sir Gnores Grey and Mr．Hume． by clause．A consersational discnssion arose on yanoms clauses，
but no matcral difference of opinon arose nuntil on airnnig at the 5 sth clause．Lond J．Rtaspla renewed hat onject，ong to
the bestowing an appellate jurladiction to the Court of cinmon Pleas，and hoped hat the ciovernment would，at al，crents，
postpone the period of parting with the power of the Hh，use
of commons．He ohjected t，hestowing this pulser con the
 that there was a tenuelicy in lawy ers to mincreret the law man the
narrowest possible spirit，especially in matters conneted with
the liberty of the sphje the liberty of the subject－－Sir J．Grasam contended that in prominent part in protectiog the xigits and liberties of the people．The noble Lord，in the Irish Registration Ral，had
fecognised this very priuciple，and to a greater extent，for the
Judges of Assize in not only in questions of law，but anso in quentinh of fact and
evidence．－After some observations by Mr．Darby and Mra Ruthbrpord，Mr．Robbucs said that they were about to thrust
on the judges a mass of business which，overwhelmed as they
were already they would never get through without neglecting their more leg,timate avocations. The ATTORNEY-GRMERAL
contended that the courts of law were the fitting judges of a ponit of law, which he would refer to their consideration, not
with the slightest intention of diminishine the anthority of the
House of Commons, but for the more effectual settlement of disHouse of Commons, but for the more effectual settlement of disproof of the great Mr.convenience appealed to actual experience in
to the decision of the judgesm decisions would apolitical mater anter poted according to plolitical bias. Instead of parting with their

its ju
that

Bench, and nobody thought of impugning the impartiality of the
judges.-Sir $G$. Grev, considerine that some appellate jurisdic-
tion was necessary, was disposed to view the one proposed as the best.-The committee then divided, affirming the clause by
164 to 51 . The rest of the evening was occupied with discussing the Wes,cyan, Bal tist, and
 merc, and utterly inconstentent with the honour and duties of
Christ and that cteps be taken, as somon as possible
with dueregard
 on the moral nff
destroy our infuence with the better classes; and adduced com
parative statistical statements to show the injury done to kegi timate commerce. Some remarkable tables showed that, as th ple, when dissnaded from the use of intoxicating liquors, spen were in all respects a happier and a tetter population. But
though the commercial aspect of the question was important the moral bearings of the case were much more so. the Chines
rious effects of the drug on the minds and bodies of the Chfluenc
were testified to by various witnesses. In India its infle was equally pernicious; it was converting the inhabitants of Assam into a treacherous, cowardly, and crue peopie,
characteristics, as appeared from old accounts, were those of
and vation of opium in India was oppressive in its administration, an generally obnoxious to the ryots, who would prefer the cultive required rich and fertile soil. An individual who had reside
seven years in China had furnished him with the details of $h$ experience: and he asserted that the opium-clippers were garded by the Chinese as being practically vessels of war engage in our service. The East India Company did not, however,
stand alone as the supporters of the vile traffic, for a committee
of the House of Commons had declared its opinion that it was not expedient to disturb the trade, as an equal amount of revc-
nue could not be so conveniently raised from any other soure. which tended to degrade Curistianity was treason against the civilization of the human race. This traffic did prejudice the sionaries was why their countrymen brought them this obnoxions
drug? Even so late as last Wednesday, the Baptist Missionary
Society had come to the conclusion of not sending a missionary Society had come to the conclusion of not sending a missionary medium of the American missionaries, because the feeling was
so strong against the British, on account of the opium traffic.
Persons conversant with the details of the trade, said that the mere abolition of the monopoly would at once abate nine-tenths Who had given their opinion that the prohibition of the growth
of the opium in Britisly India would strike at the root of eve evil.
It was alleged that the Chinese were not sincere in their efforts ggainst the opium trade. But that was a matter we had nothing
to do with: if the Chinese Emveror, instead of prohibiting the importation of opium, were to lay an ad valurem duty on it, he
mightr realise a million sterling in duty. But as he did not do
this, we were not warranted in charging the Chinese Governthis, we were not wartanted The noble Lord after adducing the
ment with insincerity. The
names of our most eminent medical men, who have given their

wrong could never be polity
people of China, as well as of this country- for the interests of commerce and morals, he hoped the House would interfere and
stop the opium trade.-Mr. Binghan Baring said that the evils
tiad been greatly exagecrated. If the growth of the poppy were given up in the Company's territories, he feared that tit wonld only
give enrouragement to a systen of smuggling opium from the
neghbourng states, whach it would be as impossille for the the drug out of their market. The fffect of the monopoy wat
beneficial to India, for it confined the growth of the poppy to
particular districts, in which opium was not consumed. He did not mean to contend that the revenue shouid be maintained in way to put a stop to smuggling, was to induce the Emperor of
China to legalise the trade, and there was no reason to suppose
that the despatches now on their route to this country would that the despatches now on their route to this country would previous question.-Sir G. STAuNToN observed, by way of preli-
minary, that the owners of the confiscated opium in China were
entitled to full and fair compensation. A fallacious analogy had entitled to full and fair compensation. A fallacious amalogy had of China from one end to the other, and from his oficial station annoyance from its police than he has frequently experienced on and were sensitive to the importance of a commercial intercours
with this country. Bat unfortunately we were unpopular with
them, especially at Canton, where the feellng against us hat risen to hatred; and this was not mitigated by the smuggling of
pium; for so strong was the feeling amongst the bette
classes, that it was beifeved that the Emperor throne, for a month if he were to legalise the trafic. Ite was
anxious that the opium trade should be discountenanced by this
country before it inyolyed us in another war; and he encouracil

## 

 Wilberiorce.- Lo pers Jocrevyn in haid efforts by the example of Mr. mosal withessed frely bore nut the picture of the physical andmoral of the which had been exhibited by Lord Ashley; and if he believed that the motion would tend to put
down a trade derogaory to this country he would support it.
作 But he considered that the monopoly of the growth of opium
kept its production in check, though he edmitted that for selfissl urposes the chan bovernment had recently too much stimu hat both in a commercial and financial point of view, we
shonkl hesitate before adoptirig so decided a line of policy.Captanl I, AXAnD had visited china, and had withessed what had
led him to condemn the opium trade. True, we had triumphed despise them.- Mr. Hoce asked what substitute could be no ro-
posed in place of the present strict monopoly of the cultivation of the poppy? Would they inflict on Jndian a body of Excise
officers, the orost obnoxious to the natives that can be onceived ?
Not only did the monopoly act as an effective check, but its evils were grossly exaggerated. The prohibition of the trade by the
Chinese had made it an objectionable traffic; and if we entered held by the chinese responsible for auy infraction of their fiscal with hatrours. The only legitimate way or putting down the
contraband traffic, with its acompanying evils, would be by legalising the trade, which he expected that early intelijigence
would have communicated.-Sir E. Courbiookr contended that we could not hold any middle course-we must either legalise o
prohibit the trade - Mr. Luvnsay opposed the motion at some length; after which the adjournment of the debate was moved,
but on a division was resisted by 118 to 26 . ency of an adjournment, but the debate was ultimately resumed Ashley's resolution, and deciared that no precarious revenue
like that derived from this traffic, could justify its continuance -athorized to mated that our Plenipotentiary in China wa negotiation was at this moment going on, The fate of this ne-
gotiation might be risked by any hasty resolution of the Houses deprecating altogether the growth of opium in india. He aske to give the es abject that cautious deliberation whicll it deserved
He said he did not recommend the House to reject the motion, nor to neglect the subject of it; bat he only asked them, in th the question in the hands of the Executive.-After a few words
from Mr. Acuann Lord Ashley withdrew his resolution, on the anderstanding that it would interfere with pending negotiations. - Lord Livcous ohtained leave to bring in a bill to empower the purposes the areas of Thatched-House-court, and to widen and leave to bring in a bill to authorize the Legislatures of the Aus tralan colonies, including New Zcaland, to pass laws requlating Wednesday. - After the presentation of petitions, the Sudbury other business was transacted. Among the petitions was one
or from certain electors of Cambridge against
Mr. Fitzroy Kelly, as Member for that borough.
Thursday.-Mr. C. Bulbrr moved an address to the Queen, praying her Majesty to take into her consideration the means by
which extensive and systematic colonisation may be most effect ually rendered a vailable for augmenting the resources of hit empire, for pivng aditional employment to capital and labotr,
cause of the cistres in th this conintry was phanly ye constant
accumulation of of coth capital and labour within
of estricted field labour which yearly increased, were provided, the distress would the competition of capital against capital, and of labour against He did not propose it as a panacea, but sa a remedy that ought others. He proposed colonization as subsidiary to free trade, and as another means of obtaining the same object. He did not
bring forward any specific plan for carrying out his views,
canse what system, but an extension of its principle. What he wantcd to
urge on the (ioverament was, to follow up the system begun in 1832, and which had been consolidated by the emigration com-
mission; and that they should investigate every point of the mission; and that they sorse which appeared to them to be the yord moved, as an amendment, that the resources derivable from the Jands, manufactures, and commerce of the United Kingdom,
if fully brought into action, are adequate to afford the means Mr. GA employment and supply ing food to the whole population he said, their duty to leave nothing undone which might appear
in any way calculated to alleviate the evils under which the country suffered.-Lord STANLEEY, concurring in the ge got go
principles laid down in his spech by Mr. C. Buler, could not
with him in the proposition with which he had concluded his speech, for a larger and more extensive system of emigration,
under the guidance of Government, than that which now is, and Yor some time las bea in operation. The motion was une the
sary, because 2 very enlarged system of emigration, under the
superintendence of the Government was already in operation ; and it was mischievous, because calculated to lead to expectation on the part of the public the fulfiment of which would be forn
to be impracticable. The noble Lord then entered into a statement of the progress of emigration, and the means adopted by
the Government of late years in promoting and assisting itstatement containing information which cannot possibly be con
densed. In Canada, such were the arrangements made by the gents appointed by the Goverum extremities of the colony, he was never from under the care and thouglit it unadvisable for the Government to encourage tha paeper in proportion to the meanis of employment. Canada was
ciont the place for , ersons to go to, who haal notling but their alabor to depend on ; neithcr was it a ylace for those whio ha
large capitals to turvest in weighty speculations. With ressect to vances as that of New Shuth Wales. Under the system of lana New South Wales had rupidly progrcsscd. 1rom 1832 to the exceeded a million pounds; and or this large sum not less than
900,0002 had been given in aid of emigration, the remainde

 counted for the diminution of the sales by the bursting of a spe-
culation bubbe, similar to what had taken place in the land sales of the United Sta fobbing. which fictuny details, deccriptive
employed in
 moved by Mr. S. Crawford, he should vote against it; and then,
ss he beilieved the system of remedy proposed by Mr. C. Buler
was already practically in operation,
vious question on the original motion,
Lord Howick and Sir R. INGLIs th air subject for inquiry-Mr. Hume and the motion opened a curred in their approbation of Mr. C. Buller's ability in bringing he motion forward, - Lord J. Rusbebli, joined in the compli-
ment, but without a more specific plan he could 20 join in pressing the motion on the adoption of the House. He recom
mended Lord Stanley to diffuse information on the subject mended Lord Stanley to difuse information on rest subjec with what had been done; meantime he thought it best that it should be left in the hands of the Executive Government. Though believing that there was much distress still existing in the counry, he drew encouragement from the revival in the manufac
uring districts, and was satisfied that we should get over on difficulties.- Sir Howard douglas and Mr. S. Worteey nex in reply, and the motion as well as the amendment were with Friday.-On the House going into committee of supply, Mr. cation in Ireland. Lord ELIOT defended it and Sir $\mathbf{P}$ PEr contended that the system was producing the happiest effcct ensued, after which the vote was agreed to. A division took place on the vote for Maynooth, which was affirmed by 120 to 40 . On the vote for the British Museum, Sir R. Pres adduced the great
increase in the number of visitors, as a proof of the manner in which it was estimated by the public, A desulory discussion en
 was then agreed to, with several others of minor interest.

Min Min Misters and a distinguished party at the Mansion House. Those pre sent were Sir Robert and Lady Peel, the Lord Chancello and Lady Lyndhurst, the Speaker of the House of Com mons, the Duke and Duchess of Norfolk, the Duke of Buckingham, the Earl of Ripon, the Earl of Liverpool, the Earl and Countess Delawarr, and about 150 other guests. After the usual toasts, Sir R. Peel proposed the
 chiefly to the usual complimentary subjects, and few of them presented matter for extract, excepting that of Mr. Everett, the United States' Minister. He said that one of the most important duties which be had to perform, was to cherish by every means in his power a good understanding and kind feelings between England and America. Eighteen months ago the prospect seemed a dark and agreeable feelings to what might be the issue. For the change which had taken place, they owed much to the conciliatory policy of her Majesty's Government in taking an important step towards the adjustment of matters in discussion between the two countries; and he was desirous naturally sasion so say, that, although his claims in the late dispute it seemed to him that the adjustment brought about by ord Ashburton was equally honourable and ad vanta to He thanked them for the kind feeling whith they had manifested towards himsel and his country, and could assure them that he believed the he for the preservation of a good understanding between the two countries of Great Britain and Anerica.

Altempted Assassination in St. Paul's.-An attempt at sassination was committed, on Saturday afternoon be tween three and four o'clock, during the performance of residing at Bayswater, called Augnstus Sintzenich. The two arnons from nd was br Hardy, and was observed by M. Man, one the cogation who saw the prisoner draw fom his brat we a first mistook a book, but upon the ight shining upo diat rony some distance from the prisoner, and could not get at him Mr prisoner was seized immediately, Mr. Howton, succeeded in getting the pistol from hi hand, atter some resistanc. The momeat which the ac cused chose for carrying out his purpose was immediato doubt ohbexists whether the pistol was snapped; Mr. Har the spark, and Mr. Howton, who seized him, states that he snapped the trigger, but it missed fire. On examining the pistol, it was found to contain powder and five shots but no wadding whatever. The prisoner was then conif ducted to the dean's audit-room or vestry, and a brief xas first was there made brol the marked, "Yeu need noner trembled very much, I have noth After the Bighop of Llandaff had satisfied himself of the truth of the charge, the prisoner was conveyed to the station-house in Black-horse-court, Fleet-street, whe he wrote a letter to his brother, which leaves no doubt it head to have a voo at the clergyman at St. Paul On Monday, the prisoner was examined before the Lor Mayor, when his counsel said he could prove his insanity and suggested the propriety of the Loord Mayor's direct of the Queen. The Lord Mayor said he considered the
case ought to go to a jury. The prisoner's counsel pressed the suggestion very strongly, and stated that the prisoner had imbibed ideas of the legitimary of certain sovereigns,
and would insist that the Stuarts ought to reign instead of the House of Brunswick. The prisoner was strongly excited by the performance of Rob Roy at the theatre and seemed to believe that James Stuat, a Seotch piper scent from that unfortunate family. The prisoner enter tained thoughts of raising the claim in favour of the piper His principles were high church and state principles, of the rinht the Duke of Bourdeaux to the throne o France was also strong. The Lord Mayor said a jury must determine the case; it was the duty of the niagistrate to commit. He would, however, postpone the case for a day or two, in order to make more particular inquiry. American Bondholders.-A deputation, consisting of William Leslie Melville, the Eon. G. F. Hotbam, Mr Marshall, M.P., Mr. B. B. Williams, and Mr. Redfern, waited on Friday last, upon Mr. Everett, the United States' Minister, with a memorial, signed cy upwards or replying to this memorial, Mr. Everett promised to forward it to the President, and expressed deep sympathy with the bondholders. "I concur" with you fully," he which has pledged its faith and resources, can release itself from the obligation, however burthensome, in any way but that of honourable payment. Fatal delus ions, in times of great distress, occasionally come over the minds of belief that the number is exceedingly small of those who have in any form advanced the idea of what has been called 'repudiation. I am convinced that those states interest due on their bonds, have done so under the heavy pressure of adverse circumstances, and not with trine so pernicious, unworthy, and immoral. The memorrialists are pleased to give me credit for sympathy with their sufferings. There is, pethaps, no person, not himmyself to feel deeply all the evil effects-the sacrifice, not merely of material prosperity, but what is of infinitely greater consequence, of pubic which it has brought on the American name has been the only circumstance Thich hus prevented a residence in the land of my fathers being a source of unmingled satisfaction to me. You may well believe, therefore, if any opinion of mine can
have an influence, (as you suppose) over any portion of my countrymen farourable to the great end you have in most emphatically expressed. * *** The general Government of the United States, after having paid off lars, has found itself unable to negotiate a triffing lown in this great metropolis of the financial world, whose superabundant capital, but for the default of some of the states, would have continued to be for those states themselves, and for individuals, a vast gold mine of unexhausted capaand for In addition to these public embarrassments, private fortunes, almost without number, have been destroyed in the general wreck, of which the failure of the States, as cause or effect, is one of the principal elements. I doubt a transition has been made from a state of high prosperity to one of general dithing, and yet, gentlemen, the elas ticity and power of recovery in the country are great beyond the conception Even within this disastrous period personal observation. Enen win and to which 1 lave alluded, a prive coillions of pounds ster ling, has been paid by the American merchants, with as little loss to the creditor as would attend the collection

Royal Institute of British Architects.-A special meet ing of ihis institute was held on Monday, to present the medals awarded during the session, When his koyal High-
ness Prince Albert took the chair. Mr. Fowler, honorary Becretary, having read Bacon's description of a princely palace, Mr. Arthur Johnson was presented to the Prince as the author of the best design founded on that description, and received the Soane medallion. In like manner his Royal Highness presented to Mr. E. Chamberlain the medal of the institute, and to Mr . J. W. Papworth the medal of merit, for essays on synchronism, in connexion With architecture. Mr. Bailey announced the subjects for essays and drawings, for which the council proposes to offer medals next year, and then read a communication from Mr. C. Parker, on the methods employed in con-
structing foundations in Venice, the soil of which city is of a nature to require the greatest care, and yet where failure is seldom if ever seen. Thanks having been voted to the anthor of the paper, Mr. Barry addressed the Prince in the name of the institute, and assured his Royal Highness that the remembrance of the day, and of the kind manner in which his Royal Highness had fulfilled its duties, would long remain in the memory of the members. pleasure to have this opportunity of meeting you." The Prince examined the collection of casts and models belonging to the institute, and seemed to enter fully into all the matters which came before him.
Metropolitan Improvements.-A general meeting of the committee of the Metropolitan Improvement Society was
held last week, Lord Robert Grosvenor in the chair. A
discussion took place upon the merits of a plan submitted discussion took place upon the merits of a plan submitted
by the executive committee, for a new line of road to by the executive committee, for a new line of Lodon. This line proposed in the plan was to commence in the Strand, opposite Duncannon-street, where it would be carried by a short diagonal street down to the Thames it would then follow the hine of he projecteald divide into two branches-one branch leading to the Bank, another to the terminus of the Blackwall Railroad, and hesolu-
joining the great Essex road at Whitechapel. A resol tion was adopted, to the effect that the object proposed ras one of great practical importance, and that it would be desirable to invite the Goverument com mission now
siting to inquire into the practicability of thus rendering the Thames embankment subservient to the formation of a new and broad foot and carriage way, by which the
narrow streets of the city might be relieved of some portion of the traffic at present liable to continual obstruction. Mr. Walker addressed the meeting on the state of the burial-places of London. The many serious evils arising from interments in the beart of chyded cities had been repeatedly laid before the public by him in various pubin. cations, and a great body of evidence bad been collected Mue subject by the committee of the House or Com from Much opposition, however, might be anticipated ising the existing practice. At Enon Chapel, Clement's-lane, as much as youl. had been received within six years, for intermenta, in a space of grcund only 59 feet by 29 . This would give an idea of the vested interests that would cemeteries against any project or cor therefore anxious that the society should aid in the efforts which had been made to obtain the interference of the Legislature on the subject. Dr. Southwood Smith said it would be ajmost impossible to exaggerate the evils occasioned by the pracliving burying the dead amity the metropolis might be greatly diminished if a few simple eanatory precautions mere adopted, and one of obvious necessity was the abolition of interments in the existing churchyards. Numerous deaths, and a general shortening of the average duration of life, might be distinctly traced to this cause. Mr. Hickson gave some details of the management of the Paris cemeteries ; and Lord 1 . Grosvement to abolish interments within the metropolis. This suggestion was adopted, and referred to the executive committee to be carried into effect. In connection with his subject, we Com mon Council last week, when a petition was', presented calling upon the corporation to prevent the proposed Act rom being applied to Bunn. Jones said the object of the petition was to make the corporation fight the battles of other people in Parliament-to fight, in fact, for those inHe cedl in all the burying-grounds in and row such work a once, and moved an amendment that the petition be laid upon the table. After considerable discussion, which trongly proved the established opposition of the Court to amendment was carried by a very large majority
Colonial Church Society.-A meeting of the West London Ladies' Association, connected with this society was held on Tuesday at the Hanover-square Rooms, for the purpose of considering the kest means of extending he chair, and said that the society had been formed in 1836 for providing for the spiritual wants of the inhabitants of the colonies, as well as for the wants of those Englishmen who might be residing on the Continent of Europe, and he considered that on those grounds the society had trong claims on the Christian portion of the inhabitants of his country. It was the duty of Government to provide not only for the temporal welfare of the inhabitans of colonies, but also for heir spiritual welare, and ne conhad been done in that respect. More than 1,500 persons annually emigrated from our shores for the colonies, and it was a lamentable fact that no provision whatso been made by smaliness of the amount which had been Looking to the charge of that society, he thought a nirustad been done. He understood that the sted deal me did not amount to more than 5002 , annually income did hats upon the institution were upwards whil He trusted that by the exertions of the sup ,0002. He that society every inhabilant of the colonies pould possess the means and opportunity of attending a place of divine worship. It was then resolved, on th motion of the Rev. Mr. Hanson, seconded by the Rev, B. Noel, that the spiritual condition of the British colo hat the society offers an excellent channel through which the members of the Church of England might ssi
Temple Church.-His Royal Highness Prince Alber on Saturday attended a rehearsal of the choir at the Temple Church. His Royal Highness proceeded there on foot attended by one the doorkeeper refused him admittance, at the same time offering to take his card to the choir-master. An explanation, however, soon ensued and in a few minutes eeveral or Highess over the dhan , church, at The choristers sang several compositions, with
ration. The
be performance of which his Royal Highness expressed himself highly gratified. After
The Wilkie Testimonial.--The daily papers announce that Mr. Joseph has just completed the model for the statue of Sir David Wilkie, which was exhibited to the subscribers in the beginning of the week. In likeness, the head of the statue is said to be admirable. The position The left foot is slightly The left foot is slightiy advanced, and the left hand of the figure rests upon a shoulder, and falling bebind the right foot, serves as the principal support of the figure.
Wi. ood Pavement.-On Tuesday a meeting of the Commissicness of Sewers for the City of London took place at Guildhall, for the purnose of receiving a report of the sub-committee appore with wood. The chair was propriety of paving Cheapside win wood. deal of interest appeared to exist among the members, upon a question affecting so important a thorougbfare. The report of the committee set forth that the petitions from-seral to pave with wood St. Martin's-le-Grand ; from General to pave with Kood Stl Martret, Princes-street,
the inhabitants of King William-street Bishopsgute-street, Cheapside, Cannon-street, Upper Thames-street, St. Bride's, Tokenhouse-yard, the Poultry, snd at least twenty other places, to the like effect, having been duly considered, the committee recommended the carrying out forthwith the principle of wood-paving throughout Cheapside, the remainder of the Pcultry, and Bishopgate Within; but feeling it impossible to comply with the prayer of the whe remorial without raising the rates to the highest amount allowed by law, they did not deem it advisable to adopt the principle of wood-paving further during the present year.
Sir P. Laurie opposed the recommendation of the subcommittee, upon the grounds already so frequently discussed, viz., the danger to man and horse, and proposed, as an amendment, that no wood-pavement should be
introduced for one year. Alderman Copeland seconded he amendment. Mr. R. L. Jones denied the statement of Sir P. Laurie, that the Woods and Forests were adverse to wcod-paving, when they nere still carrsing it out to a lage er hey had obsy the last wefk made a large Kensington with that material. He contended that as many horses fell down upon the stone-pavement as on the wood After a discussion which lasted several hours, the question was put, and sir P. Lauries amedament negatived by a majority of at least two to one, and the report adopted. Mr. Obbard then gave notice that he should move, at the Fetter-lane to Chancery-lane.

Cathotic Institute.-A meeting of the Catholic Institute Great Britain was held last week, to take into consideration the educational clauses of the Factory Education Bilf, now in progress in the House of Commons, Lord geeting at considerable length, and contended that the present bill, as regarded Protestantism and Catholicism, was a measure fraught with evils and danger, especially with regard to the education of factory children of the Catholic persuasion, and called upon the Catbolics in general to come forward and make a firm and determine stand to protect themselves in their religion. A variety of resolutions were proposed, against the various clause of the bill, as it relates to the Catholic population. In structions were then given to form a committee to draw up a petition against the bill, which was to be immediatel forwarded to the Catholic clergy throughout the country for signature by their respective congregations. A vote of thanks was given to the Earl of Arundel and Surrey, for his Lordship's advo
Anti-Corn-Law League.-The fourth weekly meeting of the Anti-Corn-Law League took place on Wednesday evening in Drury-lane Theatre. The attendance was fully as great as on the three preceding occasions. There werm a great number of ladies in the boxes, and the platrened was unusually crowded. Mr. Wison presided, air progress. The meeting was then addressed by Mr. Hume, M.P., Mr. Brotherton, and Mr. Milner Gibson.
Anniversary Dinners.-The anniversary dinner of the Covent Garden Theatrical Fund took place on Wednesday, in Freemasons' Hall. The Duke of Cambridge presided and address was delivered by Mr. Bartley, and the donation address was versary of the Marine Society took place on the same versary of the Marine at Tavern, the Earl of Haddington evening, at the coorted by about 70 gentlemen. The list in the chair, supporte close of the dinner was about 700 l Accidents.-On Tuesday morning, at four o'clock, an accident occurred to Mr. B. Ferrand Busfelid, late of Magdalen Hall, Cambridge, a near relation of the members for Bradord and Knaresburoagh, which terminated on a visit to his mother at. Bath, left town at an early hour, for the purpose of going on a cruise in her Majesty's steam-ship the Brunswick-wharf, at Blackwall, and upon arriving opposite the Hotel Tap it was necessary to cross a bridge over the railway, which leads to a narrow path coment ing the bridge, further, when Mr. Busfeild alighted and walked along the path leading the wharf, and immediately afterwards
right. The cabman drove towards the wharf, and hat
just reached it when he heard Mr . Busfeild bailing the just reached it when be heard Mr. Busfeild bailing the
steamer moored ooposite, and directly after a splash in steamer moored opposite, and directly after a splash in
the water was heard, and cries for help. The cabman imthe water was heard, and cries for help. The cabman im-
mediately raised an alarm, a boat put off from the Vulcan, mediately raised an alarm, a boat put off from the Vulcan,
and drags were procured ; but Mr. Busfeild was never seen afterwards; and it is concluded that in stepping from the wharf to the barge he fell into the river and was drowned. The Commander of the Vulcan gave directions to the boatmen in the neighbourhood to continue their search for the body, and offered a reward of $10 l$. for its recovery, but it is not probable that the body will be
recovered for several days. The Commander was Mr. Busfeild's intimate friend, and had invited him to join the vessel on her intended cruise. It is only a fortnight since that intelligence was received of the death of a brother of the deceased, in Canada, by drowning.
The Thames Tunnel. -The'curiosity manifested by the public to view this interesting work remains undiminished, and the number of visitors on Sunday last fully equalled that of any day since the thoroughfare has been thrown open. The neiglibourhood of Wapping has been materiand the shops are deriving a large accession of business. On Monday the archways presented the appearance of a fair-several stalls having been erected in the shafts by permission of the directorg, where refreshments are supA printing press is also erected in the western arch, where a brief account of the undertaking is struck off, 76 feet below high-water mark. The average number of visitors last week exceeded 11,000 dail.
of 30,000 paid for admission.
Greenurich. - OnWednesday morning about one o'clock, the inhabitants were aroused by an alarm of fire in the bouse. The flames spread with great rapidity, and for a Jong time threatened the destruction of much of the sur-
rounding property, but a good supply of water being obrounding property, but a good supply of water being ob-
tained, their ravages were eventually confined within the limits of the building. The alarm occasioned by the conflagration was very great, and the whole of the officers of the spot to render assistance in extinguishing the flames. The College brewhouse is detached from the hospital, and is a bandsome building, seventy feet high, extending to a length of fifty feet. The fire is supposed to have origi-
nated through the overheating of flues. The damage is nated through the overheating of flues. The damage is
estimated at $8,000 \mathrm{~h}$, and the whole of the property is uninsured.

Mortality of the Metropolis.- The following is the number of deaths registered in the week ending Satur-
day, Mar. 25 :- West districts, 136 ; North districts, 220 ; day, Mar. 25 :-West districts, $136 ;$ North districts, 220 ;
Central districts, $198 ;$ East districts, $225 ;$ South dis-
tricts, 207 . Total, 986 , ( 512 males, 474 females.) Weekly aterage for the last five years, 903 , (males 461 , females 442 , and for the last five winter
Derby.-The three men, Bonsal, Bland, and Hulme, convicted at the last Assizes for the murder of Miss God-
dard, were executed on Friday. No less than from
30.000 to 40,000 persons were present. Bonsall 30,000 to 40,000 persons were present. Bonsall acknow He stated that Bland stood outside the murdered lady's door, and that he and Hulme were in the room; that
while they were engaged "rummaging" the drawers, Miss Goddard sprang out of bed, and ran to the door,
where Bland stopped her, and pushed her back into the room, and that Bonsall then killed her with the crow-bar. Falmouth.-The Famouth Packet states, that by far
the lurgest engine ever constructed is now in process of manufacture at Hayle. The piston rod, which was forged last week, is 19 feet long, 13 inches diameter in the mid-
dle, and 16 inches in the cone, and weighs 3 tons 16 cwt . It will work in an 80 -inch cylinder, which will stand in the middle of another cylinder of 144 inches diameter.
Five other piston rods will work between the inner and Five other piston rods will work between the inner and
the outer cylinders. The 80-inch cylinder was cast last week, and the large one will be cast soon. The pumps
are to be 64 inches in diameter; a measurement which are to be 64 inches in diameter; a measurement which
may afford some idea of the size and power of the en. gine. It is intended for draining the Lake of Haarlem. Kingston.--The borough magistrates have been actively
engaged in an investigation of a charge against Samuel engaged in an investigation of a charge against Samuel
Stone, a lawyer's clerk, and Christopher Wardell, of having stolen a quantity of Bank of England notes, gold, and silver, the property of Mr. Andrew Dunlop, of the
Dolphin Inn, in this town. The magistrates were engaged nearly nine hours on Tuesday in the investigation of the case, and it was then adjourned until Wednesday morning. In order that the charge against the prisoners should be understood, it may be necessary to explain that the robsoners were taken up at the time and underwent two examinations, and a strong case of suspicion was made out against them. The magistiates, however, did not feel themselves justified in committing the parties to take diately commenced an action against Mr. Dunlop for false imprisonment, to which the defendant pleaded that much as he had really committed the felony; and the jury, after a long trial, the point being distinctly put to
theno by the Lord Chiel Justice, confirmed the plea by finding for the defendant. Stone and the other man, Wardell, were immediately taken into custody, and, after sary to state fully the circumstances under which the sobbery was coromitted. A person, described as a tall
man, with very bigh shoulders, went into the house of
the prosecutor, and under pretence of getting a $5 l$ note for silver to the same amount, ascertained where the prosecutor kept his money in the bar, and soon afterwards two other men went into the bar, and by various pretexts succeeded in inducing the prosecutor and his daughter to stealing the money. tively by the daughter of the prosecutor as being the men in the bar, and who must have committed the robbery, Several other witnesses confrmoment she saw them. proved that the prisoners were her testimony, with the tall man, and that they all went away together after the they resembled two set up for the prisoners was, that committed the robbery, and that they were perfectly innocent; and, although it was admitted that they were in been near the house of the robbery, that they had never supposed to have been committed between one and two o'clock on the 21st July. After witnesses had been said that, under the circumstances, they felt Wednesday, other course to pursue than to commit the prisoners for trial. The witnesses were then bound over, and in the
course of the day the prisoners were convered county gaol.
Mellon Mowbray.-An extensive robbery was comEarl of Wilton, at Melton Mowbray, under circumstances which at the present moment are enveloped in mystery. Among the property stolen are Bank of England notes to the amount of about $200 l$., notes of the Gran ham Bank
to the value of 1002 . ; and a box containing a gold watch, gold हnuff-boxes, and various articles of jewellery. The exact circumstances under which the robbery has been committed have not transpired; but the matter has been Rochester. - The man, named Fulis,
Rochester.-The man, named Ellis, who stood re manded on a charge of having ihreatened to assassinate
the Queen and Sir Robert Peel, was brought up on Saturday before the magistrates for further inquiry. The Mayor said that he had received a letter from the Secre-
tary of State respecting him, and that Sir J. Graham advised the magistrates to require moderate and reasonable bail for the period of 12 months. The prisoner said that
he had last worked as a confectioner at Gravesend and he had last worked as a confectioner at Gravesend, and
that his father, whose name was Edward Ellis, had been a captain in the navy, and had been dead 21 years. The Court consulted for some time, when they required the prisoner to enter into his own security of $£ 10$, and to
find two sureties of $£ 5$ each, to keep the peace toward her Majesty and all her subjects. Bail not being forth. coming he was committed to prison for one year.
Southend. -An inquest has been held in this town on
he body of Capt. Edward Jobnson, who was found dead the body of Capt. Edward Jobnson, who was found dead
in his bedroom, on Thursday week, from the shot of a pistol, which was supposed to have been accidentally dis-
charged. The evidence showed that the unfortunate genwound was fourd deluged in blood, without any apparent
work of violence. His lips were closed, and When the surgeons arrived they were at a loss to conjecsearcla being made, the pistol was found, which had re cently been discharged, and upon opening the lips of the tered, the ball having lodged in the back of the head, but was subsequently extracted. The witnesses were con-
fident that the deceased never intended to commit suicide, but that his death was caused in accident. He was described as a sensible, gallant officer, and the last man in the world that would commit selfdict that the deceased was accidentally shot.
Windsor.-In consequence of some recent investigations by a medical gentleman at Windsor, in the case of one of the whippers-in to the Royal hunt, who was labouring under the effects of paralysis, the cause of kennel lead in the water found to proceed from the presence of by means of pipes composed of that metal, through which the water is conveyed for a considerable distance. Since Royal pack, the water has been analysed by Dr. Ryan, of the Polytechnic School, and by Mr. Phillips, the chymist, by order of the Commissioners of Woods and Forests.
The results of Dr. Ryan's two experiments are as follow -The first examination was made from a sample of wan ter taken from the source or spring-head, before it had deg. was found to be $1,000.18$. The imperial pint, on
diter evaporation to dryness, yielded 2.37 gruins of solid mat Dr. Ryan to bantexts of an imperial pint were found by of magnesium, 0.71 grains ; sulphate of lime, 0.128 grains; and a trace of carbonic acid. The second exammation Royal kennel at Ascot, when the specific gravity was found to be 100.42. Upon an imperial pint of this water being, yielded two grains of solid, exterated to dryness, lead, 164 grains ; organic matter, and traces of chlorides of sodium and magnesiam, and sulphate of lime, .038. It has, therefore, been calculated by Dr. Ryan, that every after passing through the leaden pipes, contains 1.312 grains of the carbonate of lead. Railwayg,--The following are the returns of the prin-
cipal lines for the past week:-London and Birmingham,

13,6001. ; Great Western, 11,4081. ; South Western, 4,9466.; South Eastern, 1,600.; Eastern Counties, 1,027l. ; North Midiand, 3.620l. ; York and North Midland, 1,586l. ; Greenwich, 762l. ; Croydon 259l. ; Brigh Grand Junction, 6,506l.; Midland Counties, 2,276l.--I appears from the report of the railway department of the Board of Trade, that during the year 1842, nearly 200 miles of railway communication have been opened to the public throughout England and Scotland. Among the principal lines which have been opened, or only parto the may be mentioned the Birmingham and Derby, South Western 15 miles: the Gospore brand Glasgor 46 miles ; the Manchester and Birmingham, from Stockport to Crewe, 26 miles; the Oldham branch of the Manchester and Leeds, 2 miles; the Bristol and Exeter, from Taunton to Bridgewater, $11 \frac{1}{2}$ miles; The London and Dover to Tonbridge, 42 miles ; the Sheffield and ManStortford, 3 miles; and the Eastern Counties, to Colchester, 31 miles.- The half-yearly meeting of the Bristol and Gloucester Company was held last week. It was stated that the receipts to the 31 st December had
amounted to $325,974 l$., and the expenditure to 222,2651 leaving a balance available for the shareholders of $96,509 \%$. From this it was intended that a dividend equal to $2 l$. per From this it was intended that a dividend equal to $2 l$. per
share should be paid on the joint stock of the Bristol and Share should be paid on the joint stock of the Bristol and
Coalpit-heath Line. It was also resolved that the negotiation now in progress with the Great Western Company, in regard to the construction of the line from Stonehouse to Gloucester, and the terms upon which it should be leased to the Birmingham and Gloucester Company, should be continued under the superintendence of the committee of management. This committee was also empowered to raise further sums upon loan notes, for the completion of the line, not to exceed 260,0006 . in the whole, nor at an the future, the members of the committee of management should be but fourteen in number.-At the half-yearly meeting of the Neweastle and Carlisle Company, held at meeling of the a divaste and Carisle Company, held at was declared out of the profits for the half-year, amountto $15,063 \%$.

## IRELAND.

Dublin.-The merchants and inhabitants of this city have held a meeting, the Lord Mayor in the chair, for the purpose of aaking ") the subject of the withd wal from Ireland of the mail-coach contracts conveyed in the most effective manner to the Lord Lieutenant and the Lords of the Treasury. Considerable excitement presubject. It House of Commons, that the question is already settle and that the contract has been given to a genileman of Glasgow.
his title Ardnuscher, diocese. For this purpose he has nominated the Rev. The Cram Crozier, vicar of Rathconnell, to the benelice. sively to the living. Perhaps when the 200 years succespended 20,000 l. in voluminous pleadings and trials at the clergym in courts of stated. The House of Lords, testing Killucan with Lord Clanricarde cost Bishop Alexander $12,000 \mathrm{l}$. It is now partly through the same title that the Marquis of Downshire is claiming Ardnuscher.

Cork.-The arrangements for the approaching meeting of the British Association are the general topic of attenintention to be present, Northampton has signified his intention to be present, and during his stay his lordship
will be domiciled at Castle Mahon, the seat of Sir Wm. Chatterton. - The Barbadoes, which put into this port in distress, with emigrants, bound for Prince Eduard's Island, is to be sold for the support and maintenance of the passengers, who were engaged to be landed at their destination by a London company, under the name of the British American Associstion, which was lately the subject of discussion at the London police courts.

## SCOTLAND.

Edinburgh.-The Scotch papers state that several ministers who had joined the Non-Intrusion party in the Church, have signified their intention of withdrawing from that body, on the ground that the recent demands have not been justified. The "Edinburgh Constitutional" M'Farlat they have seen a letter from the Rev. James amnounce that he has "withdrawn from the Convocation because they refuse to accept a settlement on the prin. ciple of the Liberum Atbitrium, plainly offered by Parliament, when their spiritual jurisdiction would be sufficiently, secure." ccident to the works of the Caledonian Canal. About eight o'clock on the evening of Friday week, one of the stone aqueducts, or culverts, erected in the western district for the purpose of conveying the mountain streams under the bottom of the canal, gave way, carrying with it a considerable portion of the embankment on both sides. In the course of a few hours all the water in the reach between the Bannavie locks and Gairlochy, six miles in length, was poured from the breach into the valley of the Lochy. The canal banks, to the eastward of the culvert, have been undermined by the action of the water, and the material deposited in the bed of the river, to such an ex tent, that some roonths must elapse before the damags
done can be repaired, and the navigation again opened from sea to sea. This accident, the papers observe, is trifling compared to what it might have been. Had the culvert gave way, been in the flooded state at which it stood during the winter, the Gairlochy lock, on the drying of the reach, would, in all probability, have yielded Loch Lochy, from twenty to thirty feet in depth, would have forced its way to the sea. It is difficult to estimate What might have been the effects of such an inundation.

## 显am。

Cowrt of Chancirp.-Devever. v. Mawdestey.-In this cause
the Honourable Thomas Erskine had been appointed xeceiver of the tithes fir the beneit or the creditors, and har acted as such
 appearing to be due by the revort of the Master, Mr Grskine was
directed to pay that sum forthwith. This sum, with other moneys from the same source, had been deposited in the bank of uccount, ard on the firm having proved insolvent, two dividends
of 4s, tand 2s. Weree warded to Mr. Erskine. These divndenis he
ofroposed to pay, but the Vice.Chancellor held that he was an. proposed to pay, but the Vice-Chancellor held that he was an-
sperabe for the thote amount, and made an order accordingly
for immediute payment for immediate payment. Mr. Bethel and Mr. .lleyd, in support
of an mplieal aganst that order, observed tlat Mr. Erskine had

two vaults and monuments of great antiquity, and particularly posited sinc, in which the remains of his ancestors had been de-
had thine the time of Edward IV. The owuers of the Hall charche exempt from church-rates. Of late years thi charch hexempt from church-rates. Of late years this old parish
the parishilenen out of repair, and upon application by some of parishioners to the commissioners for building churches, the
latter had agreed to advance 2,000l. towards building a new
church for which the plantiff and the rest of the parishioners
subscibed subscribed liberally. At first the plaintiff wanted the new church
to be built on the site of the old church, but when it was stated to be buit on the site of the old church, but when it was stated
to him that the commissioners could not advance money for
such a purpose, he proposed that the new church should be built such a purpose, he proposed that the new church should be built
on a piece of fand which he offered to give on his own estaie,
and he declared tis and he declared his readiness to pay for a chancel for his own reason, however, he seemed to change his mind about giving
the site; and meantime Mr. Pugh, who resided in the same borough, offered mantime at arother part of the parish, which was
finally acented The aitaint the chancel, and insisted he had a rijht to have the same pri-
vileges secured to him in the new church which he possessed in the old ${ }^{\text {s }}$ and it was contended that the new church would become substantially the parish church, and that the old church to whom his rights in his ancient parish church were an object of great attachment. Mr. Twiss and Mr. Wray, on the part of
the commissioners, contended that the whole argument on The commissioners, contended that the whote argument on
behaif of Mr. Evors turned upon a mistake in fact, an assumption of an intention by the commissioners to rebuild the parish missioners. The money placed in their control was intended for building additional churches in parishes where the population
had grown much too large for the church accommodation commissioners hat only lent therr assistance in building a district chureh. Over the parish chirch they hat no power,
ithey had assumed none, nor did they intend to build a church they had assumed none, nor did they intend to build a church
which should be a new parish church, or a substitution for the old parish church. The learned coussel then commented on the as a sufficient answer to an application for an injunction. His Honour observed, that besides the four Acts of Parliament which on the same subject which had not been cited. He would, therefore, take time to consider his judgment.
Rosus Coupt
Tripp, on Court. - Marquess of Herlford V. Lord Lowther, -Mr. that the late Marquess of Hertford, by his will and codicils, had asked that this sum, together with 1222. . 14 s . 88. , for interest, the late Marquess, said that the present petitioner was domiciled at Naples, and he was not aware that there was any authority to
receive the money. Lord Langdale directed that the money
should be carried over to the separate account of the petitioner, with liberty for all parties to apply to
Assizk Intriligencie.-Midlann Circuit.-(Warwick.)swer an indictiment for sedition and a fiotous and unlaw fol ansembling at Birmingham in August last. The bill had been found
at the Birmingham Borough Sessions, on the $22 d$ Octor which time the defentant was in custody under the commintment into the Court of Queen's Bench. On the 29th October a summons had been taken out brfore a Judge at Chambers, and the loth Novermber, when recognisances were entered into by himself in 200l., and four sureties in 50l. each, that he would appear
and plead to the indictment, and appear on the return of the and plead to the indictment, and appear on the return of the
postea in case he should be convicted. Mr. Serjeant Adams
stated the of the fears that extensively prevailed in the town and neigh-
bourhood, of the meeting of the magistrates on the 20th, and of their notices by placards and aavertisements in the public papers things which rendered it necessary for the magistrates to apply In, and the Government to supply, a reinforcement of mintary, Birmingham, a force of Infantry and Horse Artillery had been
procured. The Warwickshire, W orcesterstire, and Stafurdshre regiments of cavalry had been also on duty in the neighbour-
hood of the towz, and of the iron and coal districts. The pensloners, too, had been embodied and drilled, and great numbers
of the respectable inhabitants sworn in as special constables. The learned counsel observed upon the extremely mischievous
tendency, especialiy in times of popuiar excitement, of such proceedings and conduct as the clefendant stood accused of. The
gentlemen of the Jury, he said, would pronounce whether the made out to their entire satisfaction. Witmesses were then were amined in support of the prosecution, and on Saturday night, addressed the Jury in his defence; his speech occupied one hour chief difficulty he confessed he laboured under was, not his want tory of the description of that before him, persons moving in a difforent sphere from that to which he himself was accustomed,
and who, probably, had imbibed prejudices against Chartism,
with which lie should find it dificult supported by the belief that the indictment upon which he had been arraigned, and which had been removed into that Court by Government had thought fit to adduce in its support. He com-
plained of the way in which he had been treated. When before the magistrates at Burmingham, he had been told bail would be when he got to Warwick he found he was requred to fin d bail in considered hirself as simned against rather than having simped
He had been taken from his home, his family, his friends, incharacters of the very worst description and all felons an ready with the good and suffieient bail which in the first instance had been required of him. The Learned Serjeant who conwithed, notwithstanding the police of Birmingham had done their utmost to bring that charge home to him; while with regard
to the terrer it was said he hat inspired in the minds of the praceable inlabitants of Birminghan, he allecation: whingle the contrary, he could, if need was, call many persons to speak
to the reverse. There was no evidence to support the count for riot-that, in fact, had bere equally destitute of proof. But it was the other counts laid were equaly destitute of proof. But it wa
said he was a Chartist, and that was enough to jusify every vagatond who might be in the police to go piying round corners,
watching his movenients, wistigh fe were the roguc thicy with the condition of the thousands he knew were starving
around him. Their wretchedness it was that had moved his soul to pity; and was he to be hunted out of the pale of civilised society on that He chailenged his persecutors to show anything against his claracter. He had always done his duty as -an
honest man, and acted decorously and well. He had injured no man, his name or property; nor had he ever been the base indisiougled out as an object for persecution? If the petty jurymen then in Court, who had come from the town of BirminghamIf they were asked whether he had ever been he means of in-
juring them in their vocation by any mectings he had held-they Would say, to a man, "Nothing of the sort;" and so would
every respectable inhabitant of the borough. He held certain
political every respectable inhabitant of the borough. He held certain
political opinions-these were Chartist opinions. He did not
deny $1 t_{\text {: }}^{\text {Bat was it to be said, the intention of himself and }}$
others holding these opinions was to rob and plonder
they they knew the working classes of their country befter-they
were an industrious and cor tented set of men wile
work then work to do, and willing to work they were-oh! how willing; but how could they be quiet or happy when they had empty stomachs?
It was not their wish to injure any one; but they th tught It was not their wish to injure any one; but they thought, and bour of the poor was as mach entitled to protection as the pro-
perty of the rich; while, as for himself, he was to he pot rid his political opponents, because he did not clonse 10 make one
of their politicul chessboard. The defendant, after making a few other observations, proceded to remark uynn the evidence,
while in respect of the Birmingham police, he aversed the force was composed of the greatest black guards, thieves, and ruffians that had ever disgraced humanity. In conchasion, he stated no case with confidence in the hands of the jury. Mr. Baron indretment, to four only ol which would it be necessary for the seditious languge, aud to convening uniawful assemblies. In order to make out that defendant had been guilty of using
seditious langaage, the jury must be satisfied the words Imputed charged. With regard to unlawfilassemblies, his Lordship told them what the law was. Where large bodies of men met togeexcite slame private purpose, which was conductens of ordinary firmness of character-not mere timid women-that was an dence, pointing out what he considered to be the points therein favourable, or otherwfse, to the defendant, and after a most their verdict, and ultimately returned with one of Guilty on the guage. A second indictment against the same defendant, and begum when the former jury retired, was now August, which up, it being stated by the counsel for the Crown that the verdict, obtained Mre Baron Alderson was about to pronounce sentence, but upon judgment at, the instant) it was postponed, and the defendant will have to be brought up to the
receive the same in the ensuing term.

## SATURDAY, APRIL 15, 1843.

As the department called "Notices to Correspondents" is increasing at a rate which threatens to encroach inconveniently upon the space required for other matters, we should be greatly obliged to our Correspondents if they would not put questions to us Which have been repeatedly and recently answered in previous Numbers. It would also save them expense if they bore in mind-lst, That names caunot be given to bad, or badiy-packed specimens; 2nd, That unknown plants must have flowers attached to them; 3rd, that Cryptogamic plants, not having any connexion with cultivation, are not included in the subjects to which we furnish replies.
It should also be remembered that many questions require some consideration; occasionally, indeed, a good deal of inquiry before a satisfactory reply can be returned; and that many of our advisers upon practical matters live in the country, when some time is requisite to obtain their answers; this is more esperially the case with Agriculture, in which we profess little knowat a ourselves, but rely upon a friend whose farm is that if replies to practical inquiries are not given by experienced persons, actually engaged in the operations to which their answers relate, the latter can never be trustworthy, and would not have that authority which those who obtain them from us well know that they possess.
Our practice has hitherto been to answer all reasonable questions, however trifling they may
be; upon the principle, that, if a man of what he ought to know, he will never be is ignorant by the "pooh?" of those who happen to possess better information. Those, indeed, who are well informed on one subject are continually obliged to go to others for advice, upon what may appear to those others very trifling matters.
A judge might think a man very ignorant who asked him the difference between the jus civile and jus gentium ; but if that judge were to ask whether it is true that sugar is only charcoal and water, he might fall rather low in the estimation of a chemist; and from Rye would be despised by the farmer, who could not himself distinguish Epsom salts from oxalic acid. The truth is, we none of us know much of anything, except that which has frum accidental circumstances, formed the great object of study all our lives, even if we are so fortunate as to understand that. When bound we receive trifling questions, we feel as much We are not among those quos janua clausa juvat; on expandedry, we wish to see the gates of knowledge expanded wide, and are quite satisfied with the humble situation of their janitor. We therefore repeat that We have no intention of departing from the plan which do trust hitherto pursued; but, at the same time, we will trust that the good sense of our correspondents whill prevent their making inguiries about matters to back to our can obtain a sufficient answer by looking frequently given to others upon the same subject.
$I_{T}$ is probable that one of the reasons why natur simple mane so much more valuable than any of the ingredientinures, is their consisting of many different crop another that if one does not take effect upon a guano, cloaciney. Thus we see that farmyard-dung, ably a cloacine, and compost-heaps, produce invarisoda, and the other saline ingredients now so pre tensively employed, sametimes succeed, sometimes
fail, fail, and always succeed best when used in addition plants ardinary but inanures. Experiments show that When they can litte improved by simple substances when the soil get nothing else, and that it is only and still soil in which they grow has been manured, introduced, that a quantity of the organic matter so come advantageous.
This is to some ex
experiments by Mr. Fleming exemplified in the valuable We last weel by Mr. Fleming, of Barochan, to which We last week alluded. _ On a soil which, without
being recently manured, produced 6 哥 tons of the Red Don Potato, 50 bushels of Wood-ashes (which' may be regarded as a simple manure) raised the crop only three quarters of a ton at the expense of $25 s$.; but 4 cwt. of natural guano, a very compound substance, added more than $7 \frac{3}{\mathrm{t}}$ tons at the total cost of 48 s . (reckoning guano at its present price). But when 25
bushels of Wood-ashes were added to 4 cwt t. of guano, the crop rose about $1 \frac{1}{2}$ ton further at the additional cost of 12 s .6 d . So that, where wood-ashes were used alone, the small quantity of Potatoes obtained by them cost 33 s .4 d . a ton, while, in combination with guano, the same substance furnished Potatoes at the expense of only about $8 s$. a ton.

This strikes us as an important fact, and one upon which it would be well to experiment further in the present season. But it is rendered still more remarkable by another experiment. To the guano and woodashes 20 bushels of charcoal were added, at a cost of 7s. $6 d$. , and the effect was to add $1 \frac{3}{4}$ ton more to the crop; so that now the additional crop cost scarcely
This may be stated a little differently in the following manner :-
Where wood-ashes (a simple manure) were used alone, the Potatoes, obtained beyond what the land would yield without any manure whatever, cost But wher per ton
ut where wood-ashes were used in addition to more complicated manures the crop was largely augmented at an expense in manure amounting only to from
6 s .3 d . to 6 s .8 d per ton of extra produce. 3d. to 6 s. $8 d$. per ton of extra produce
These things seem to prove conclusively that the best way of using saline or simple manures for the
Potato-crop is to apply them in addition to common manure, and not on any account to trust to them by themselves.
Probably influenced by a conviction that the true way of preparing artificial manures is to compound them of many different substances, Mr. Fleming was led to try two other experiments, with the view of
determining how far cconomical mixtures may be made to supersede farm-yard dung in the growth of Potatoes. The first was as follows :

Remanks.-The above mixture was sown in the dinis at the
rate of about 5 cwt . per imperial acre, at a cost of little more Yate of ainout 5 cwt. per imperial acre, at a cost of little more
thar st sterling, and produced a fair crop of potatoes of a re-
markably fine quality: 43 bolls per acre of imperial Renfrewshire markably fine quality: 43 bolls per acre of imperial Reufrewshire
measure, weighing 5 Cwt. each, upon a poor and light, although measure, weigning 5 owt , each, upon a poor and light, although
new soil but not worth more than 25s. per acre. Great caution is required in using this minixture, sa it is very apt to burn the cut
sets if lisid directly upon them. A little earth should be put In
In this instance the crop was $10 \frac{3}{4}$ tons an acre, and the cost of the manure was rather less than $2 s$ a ton of produce.
The other case was the following:-

Remanks. - The potatoes planted with the above mixture came quickly through the ground, and were very 1 lnxuriant in foliame.
They were lifted 15 th October, after heing cut down by frost They were lifted 1 tht October, atter heing cut down by frost
whilst still unripe and growng. On bellg taken up, they were
 which welghed from 24 to 30 ozz each. N.B. This mixture, after
heine put together, fermented, and was frequently turned, but being put
kept dry.
Here the crop was 14 tons an acre, at the expense of $2 s$. 11 d . a ton.
All this seems strongly in favour of mixed manures, and especially of that which is naturally compounded. It seems too to show that the best way of using simple saline substances is not alone, but as an aid to those in common use. We trust that many of our friends will investigate this point and communicate to us their results.

When a proprietor is inclined to benefit the labourers by letting them have small allotments of land, he naturally considers what fields can be most conveniently spared from his farml. These are
generally the noost distant from the farm-house, If the cottages of the labourers are scattered, as is fre quently the case, it may be difficult to find a situation which shall be central, and not too far from the cottages. Unless very great inconvenience should arise to the farmer from being deprived of a field very near his farm-house, where he cultivates green crops to feed his horses and cows, the convenience of the labourers should be first consulted. Every farmer reluctantly gives up a convenient field, and fears trespasses, if the allotments lie amongst his fields; but an easy access from a public road is essential to an allotment-field, and if this be secured there will be little fear of trespass. The field should be well fenced in, and the occupiers of the surrounding fields should have the care of the hedges and ditches, for which a proper allowance may be made to them. We shall suppose a field of 10 acres, abutting on one side on a high road, and centrally situated, not too far from the village or most populous part of the parish. This may have a road laid out through the middle of it, entering from the high road by a double-paled gate. The width of this road should not be less than 15 feet. It may be ploughed lengthways, and the top earth thrown up on each side in a long rilge, leaving a firm bottom to the road. When this has been trodden for some time it will be sufficiently hard to bear the wheels of a light cart occasionally, when the crop is taken off or the manure carried on the land. If the field is a rectangle, the road will divide it into two equal parts, each nearly 5 acres; and by dividing the length of the road into 20 equal parts, and making a narrow path at every division at right angles to the road, we sinal have 40 allotments of nearly a quarter of an acre each. The soil should be at least of a medium quality, naturally dry or well drained, so as to be worth, to let to a farmer, about 25 s. or 30 s. per acre: adding to this 10s. per acre for tithes and all other burdens on the and, the gross rent will be $35 s_{0}$ or 40 s. per acre, or $10 s$ per allotment ; but as some expense is incurred in the road and paths, we will set them at 12 s each. The earth heaped up on each side of the road is intended to be mixed with manure into a compost, and wheeled over the allotment adjoining, or it may be used at once to fill up any low places to lay the whole level. The paths should be at letst two feet wide, and a foot below the surface of the allotments, so that these shal have the appearance of a long raised bed. They should then be trenched as deep as the soil is good, and a little of the subsoil may be brought to the surface. The mode of cropping must be left to the judgment of the occupier of the allotment-with these restrictions only, that no Potatoes shall be planted without manure of some kind, to the amount of three wheelbarrow loads per square rod, at the least, and that two white straw crops shall not be taken in succession. All other details to be perfectly free.
When the field has been prepared, as before described, a general notice may be given that application may be made for allotments ; and when a sufficient number of applicants are found, the allotments should be distributed by drawing lots, each having its number. A set of regulations should be drawn up, and read to the men, to which they are to assent by signing their name or making their mark.
The Ist and indispensable condition is, that the rent shall be paid on a certain day.
2 d , That the allotment shall be cultivated by manual labour only, except the carrying of the crops or of manure.
3d, That any occupier convicted of a misdemeanour, or higher offence, shall lose all right to the occupation of his allotment, and to all the crops upon it.
4th, That any tenant of an allotment shall quit possession at any Michaelmas-day, on having notice three months before.
5th, That any trespass on another allotment shall cause the immediate forfeiture of that which the trespasser occupies, the value of the growing crops being paid him by the landlord, deducting the rent: the fact to be proved to the satisfaction of the proprietor and of three indifferent occupiers of allotments.
6th, That any infringement of the rules agreed to shall cause a forfeiture of the possession and of all the crops on the land.
These are some of the rules which have been found practically useful, and to which the labourers willingly have agreed, in most cases which have come under

DESCRIPTIVE LIST OF PICOIEES.
(Concluded from p. 207.
Nulli secundus (Mansley's)...White very pure, and the edging remarkably neat; petals well formed ; much too thin for growers in the south, and certainly not baving a petal to spare in this part of the country; it is nevertheless a variety that will be much grown.
Bloomsbury (Clegg's). - A large and coarse flower ; petals much serrated ; only fit for horders.
Mr. Judson (Wisaters).-This variety has two seriou drawbacks : vix., it is late in plooming, and has a phort
awkward pod; it is, however, a full clean flower, with a heavy and well-defined edge, and crowns well.
Lady Peel (Pullen's).-A vigorous grower, with a good pod and fine petal; rather coarse.
Vespasian (Gidden's).-A delicate and finely-formed flower, requiring very little dressing ; the feathering is neat and distinct; one of the best in its class.
Fictoria (Muscroft's). - Large and of good colour, but rather apt to stripe.
Queen of Sheba (Wakefield's).-A very large and fine flower, with a good pod; it blooms rather early, has a deep feathering of purple, and is sometimes coarse.
Nollingham Hero (Robinson's).-A large flower, with a very fine petal, crowning well; much in the style of espasian, the edge being
Mr. Mugglestone (Robinson's).--Very large; extra fine shape; petals pencilled with dark purple: this and the preceding have only been let out this season.
Hope (Brinkler's).-A full and good-shaped fower, of medium size; edge very neat, and white pure.
Trip to Cambridge (Dickson's).-Heavy edged purple. The first fiower I had of this sort was superb; quite up to the mark, and decidedly first-rate. The late up to the mark, and decidediy frst-rat.
Grace Darling (Ely's).-Rather heavy-edged; white pure, an
Pluperfect (Wilson's). This variety throws many old orts into the shade. With me it is fine; the petals are good, and the purple lace well defined.
queen Victoria (Kirtland's),-Rather small, but of fine form and good petal; the edge is very delicate: when the buds are
very pretty. Vehemiah (Hufton's).-A fine old flower, and a general
favourite in this part, where it is scarce: it sometimes favourite in this part, where it is scarce: it
bars, but when in its best state is excellent.
bars, but when in its best state is excellent.
Delight (Jackson's).-A vigorous grower, with a good pod; the purple edge is heavy, and of a lively colour Fic :p ( 0 b, and fine clearly-defined flower, rather Vctoria (Crask's).-A fine clearly-defined flower, rather too thin for the south, but in Lancashire a decided favourite. In order to show the difference of opinion and the necessity of some fixed rule for judging, I will quote the memorandums of two eminent florists. The one residing in the north says, "Crask's Queen Victoria will beat Nulli secundus in a canter," though the latter flower is there much esteemed; whilst my south
country friend observes, "Crask's Queen Victoria I country friend observes, "Crask's Queen Victoria I
bloomed two or three years ago, and did not much like it. I consider it an inferior flower."
Isabella (Hufton's).-A rather pretty sort, but barring too much : it is now completely distanced by many other flowers.
Miss Hunter (Hufton's), alias Toone's Miss Garle.-A. large and finely-shaped heavy-edged flower, vigorous in its habits: a desirable variety.
Mary (Lee's).—Good-shaped light-edged purple Picotee ; white pure, edging true. It is said of this variety by the raiser (though I do not vouch the fact) that it will vary, according to situation, in the length of its pod, observed this peculiarity in any other variety. rose picotees.
Few of this class are grown in this neighbourhood; the following are amongst the best:-
Queen Victoria (Green's),-A large, finely-shaped, heavyedged flower, distinctly marked, and crowning well ; first-rate, but with me rather late.
Favourile (Gidden's).-Beautiful light-edged, extra shape, good size, and I am sure will be a " favourite" with many others besides the rais
Fanny Irby (Wilson's), -Flowers of medium size, rather heavily-edged with rosy salmon-colour: a desirable heavily-ed
Murchioness of Westminster (Evans's).-A large and rather late flower ; white pure, edge heavy; sometimes rather late flower; white pure,
inclined to Bizarre: a fine sort.
Queen Victoria (Wain's).-White pure, and edge distinct; Queen it opens, however, in a confused manner.-T. F. Wood, The Coppice, Notingham.

## ENTOMOLOGY.-No. XLIII.

The Lackey Moth, Bombyx (Clisiocampa*) Neus-tria.-During the winter and spring curious hard rings are not unfrequently found closely and firmly embracing the naked twigs of fruit-trees and bushes (fig. 1); they are of a greyish colour, and composed of spiral lines of little horny globules, each hiaving a minute dent in the centre ; the mass is scarcely half-an-inch long, yet it often contains 300 eggs, for such they are, and produce about the beginning of May, or earlier, small black hairy caterpillars, which immediately cover the ring of eggs with an exceedingly fine web, and this they keep extending until they change their skins the third time; into this web which eventually becomes very conspicuous, and forms a tent sufficiently large to accommodate 200 caterpillars, they retire at night, and remain secure in wet weather, and if disturbed whilst feeding, they either retreat into their tent with great alacrity, or if too far from bome, or violently agitated, they let themselves down by silken threads 7 bich enable them to find their way back when
the danger is over. They continue to feed until about Midsummer, when they are full grown, and are sometimes an inch-and-a-half long, and upwarda; they are
clothed with clothed with longish hairs, and are very gaily dressed, their livery being blueish-grey, ornamented with
stripes, and a white line down the back, all edged with black; the bead is slate-coloured, or blueish, with 2 black spots like eyes, and the first thoracic segment is not striped, but blue, with 2 black spots, and a scarlet space between them; on the rump is a black tubercle; the 6 pectoral
feet are black, the 8 abdominal, and 2 anal feet are feet are biack, the 8 abdominal, and 2 anal feet are
brownish as well as the underside (fig. 2). At this period brownigh as well as the underside (fig. 2 ). At this reriod
of their lives they are not gregarious, but each one shifts for himself, and when about to change to a chrysalis they wander about until they find some secure retreat, wher they spin a pale-yellow silky cocoon, powdered with yellow, and loosely enveloped with the hairs from their skins; within this the larva becomes a slate-coloure
pupa, the abdominal rings being powdered with yellow. The Moths, which hatch in July, are very variable i colour, especially the males, which are much smaller than the females, they are either ochraceous or rust coloured the antennæe are bipectinated; the wings are rather short, the superior having two oblique rather wavy lines across the middle, which form a bar, and in the dark specimens the lines are edged with ochraceous, and the fringe is 1 ways variegated with a few rusty, spots; the abomen is much at the apex (fig. 3), in the female the antennax are others, narrow, and is often of a darker shade than the rest of the wing ; the abdomen is large, ovate-conic at the tip; expanse of male $1 \frac{1}{4}$ inch, of female 13 .

The Lackey caterpillars will feed upon various trees, as the Oak, Elm, Birch, Poplars, and Hazel, but in England the Sloe is most subject to their attacks, and occasionally our frut-trees suffed by these web-spinning larva in this our favoured isle in France, their ravages are represented as most appalling; for miles sometimes the Apple-trees are defoliated, and in former times they must have been even worse, for there is an old law to enforce proprietors to exterminate the inhabitants of these webs, by cutting them off with a pair of shears, having long handles, and this was termed dechéniller, literally to uncaterpillar.

There are two powerful Beetles on the Continent which live unon these Caterpillars : one is the splendid Calosoma sycophanta*; the other, C. inquisitor: the former is only an occasional visitor to England; the latter is sometimes more frequent in our woods and forests. Protected, however, as the Caterpiliars are by their webs, frow from the attacks of other enemies, especially of a fine Ichneumon, called Cryptus cyanator, Grav. ${ }^{\text {forms a case within the body of the larva, and instead of }}$ the Lackey-moth, this fly issues from the cocoon. A smaller fly named Microgaster Gastropacher also infests the Cater pillar, and forms pale yellow cocoons; but one of the most valuable parasites is a minute fy called Teleas ovulorum by Bouché. Hard and horny as the eggs are, and cemented together with a glue which hardens by exposure to the air, and resists the effects of rain, snow, and frost, it seems astonishing how the eggs of the pigmy fly can be introduced into those of the Moth; Bouché, however, has thrown some light upon the subject; he says, "The they are quite soft Several times 1 have seen that out of the whole ring of eggs, nothing, with scarcely an exception, but these little flies have come forth;" and I may lated ath little maggots inside, which are in that state at this time of the year, and no doub change to pupa so as to arrive at their perfect state in deposit their eggs.
Chaffinches and sparrows are very serviceable in the destruction of this pest, and when orchards are infested, the best mode is to search for the rings of eggs in the Winter, to cut off the twigs and burn them. As the upon the trunks and branches, and the nests should be collected by holding a sieve or bag under them; the cocoons may likewise be detected between the leaves of trees and shrubs in helges, on the tops of walls, under the ledges of rails, \&rc. As the Moths seldom fly, especially the females, but remain concealed amongst the herbage and leaves upon the ground, little good can be effected by pursuing them.-Ruricola.

## TREATMENT OF PHLOX DRUMMONDI.

In consequence of the desire expressed by a corre spondent to become acquainted with the mode of treat meat by which Prox is 's beatifuly in the Horticultural society's Garden, we The $\frac{\text { procured the following information }}{\dagger \text { Curis's Brit. Ent., pl. } 330 .}$
seeds should be sown about the end of March in pots filled with a light sandy soil, and placed on a moderate hotbed, or in a Cucumber or Melon-frame. In this siluation they will soon germinate, and before the first rough leaf apnears they should be potted off, three or four together, into a large 60 pot, placing the plants at equal distances into a large 0 pot, phach the phould be returned round the sid and lopt the trame and xept close for a few daya to cradually hardened off by giving them plenty of air during gradually hardened off by giving them plenty of air during che day in fine weather ; finally, about the begioning of
May, they should be removed to a cold pit or frame, May, they should be removed to a cold pit or frame,
where they can be fully exposed during the day, covering where they can be fully exposed during the iay, coverch them with the lights only at niglat, and in vad or cold
weather. About the end of May, when all danger of late spring frost is over, they may be planted in the open borspring frost is over, they may be planted in the open bor-
der. The soil into which they are transferred should be der. The soil into which either a light rich sandy soil or peat, with which a little either a light rich sandy soil or peat, with which a little
well-rotted dung has been mixed. The plants will require well-rotted dung has been mixed. The plants will require
to have a little water once or twice after they are planted, to have a little water once or twice after they are planted,
especially if the weather is dry at the time; but it is adviespecially if the weather is dry at the time; but it is adv-
sable not to water them after they are once well established. The chief causes of failure are-sowing the seeds too soon, or allowing the plants to get very dry or potbound before they are planted out; if once they become stunted they whin never make good plants; and the same may be said of those which have been kept in too warm a place.

ON VEGETABLE MANURES
By Professor Charles Sprengel. (Translated from the German.)
f. Bean-Straw.- 100,000 parts of not quite ripened air-dried Bean-straw contain 51,000 parts of woody fibre, 1,000 parts of wax, and 48,000 parts of substances soluble in water, and the ley of potash ; the latter most probably consists of 1,000 parts of nitrogen, as Boussingault has found in 100,000 parts of Green-Pea straw 1790 of nitrogen. This great quantity of nitrogen in Bean-straw is same natural family of plants, and because experience has same natural family of pore as 100,000 parts of the straw contain of mineral sub-

##

| 0.005 | " | oxide of manganese |
| 0.134 | " sulphuric acid |  |
| 0.226 | " phosphoric acid |  |
| 0.008 | " | chlorine |

3-221 parts of mineral substances.
100 parts of Bean-straw consequently contain somewhat more than 3 弪 1 bs . of mineral substances, and amongst them, several which are most powerful manures. When we add that Bean-straw is also very rich in nitrogen, it is obvious that the manure obtained by its litter must be much better than that obtained from Rye. If $3,000 \mathrm{lbs}$. of Bean-straw (contained in a certain quantity of manure) are carried on one Magdeburg acre, the land will receive 20 lbs . of nitrogen and nearly 50 lbs . of potash, which is in itself a powerful fertilizing agent, whilst the same area would receive from $3,000 \mathrm{lbs}$. of Rye-straw only 6 lbs . of nitrogen and solb. of potash. We cannot then doubt that the manure of Bean-straw is much more valuable than that of Rye, especially since the amount of phosphoric acid, chlorine, lime, magnesia, and soda, is as abundant as that of nitrogen and potash. But Bean-straw is very woody, and therefore more difficult to decompose than any of the sorts of straw hitherto mentioned. Manure from Bean-straw is therefore best adapted to clayey soil, which it keeps loose for a longer time than Rye or Wheat-straw. g. Pea-Straw. - 10,000 parts of rather green air-dried Peu-straw consist of 29.500 parts of woody fibre, 1.500 parts of wax, and $69 \cdot 000$ parts of substances soluble in parts of wax, and $69^{\circ} 000$ parts of substances soluble in water and potasin, which latter con
nitrogen, according to Boussingault.
100,000 parts of Pea-straw contain of mineral sub-
stances:-
0.296
parts of silice

$$

| 0.337 | $"$ | sulphuric acid |
| 0.240 | $"$ | phopphoric acid |
| 0.004 | " | chlorine |

4.971 parts of mineral substances.

100 parts of Pea-straw, therefore, contain nearly 5 lbs . of those very mineral substances which the plants generalis do not find in the soil in sufficient quantity. If we corsider, moreover, that Pea-straw also contains a consider-
able quantity of nitrogen, and that with $3,000 \mathrm{lbs}$ of straw able quantity of nitrogen, and that with 3,000lbs. of straw 54 lbs . of nitrogen are carried on a Magdeburg acre, wo see clearly why this kind of straw is so valuable. Pand straw is, however, chiefiy used as fodder, not as fiter, heir only the more woody parts, rejected by cattle, find ford cattle will be better than that from Rye-straw, \&c. It does not remain longer in the soil than Rye or Wheat-straw
(To be continued.)

## AMATEUR'S GARDEN.-No. XV.

IN addition to the plants noticed in my former article, I would earnestly recommend the cultivation of the various of $G$. psittacinus; in fact, $G$. floribundus, blandus, cardinalis, Victoria, and the whole of the genus, are beautiful. No time should now be lost in procuring and sowing the seed, which would, indeed, have been best sown treatment are, Tigrídia pavonia and conchiifora, andAnomatheca cruenta: the two former make showy groups throughare planted in a pot, plunged in a bed when in bloom, is a gem for the flower-garden in May. The Tigridias may be reated like Gladioni; but the A A soil, and sheltered in a frame until well established.
The following, though not new, may be regarded as some of the most showy plants that can be grown, and ought to glandulosa, gl. rubra, formosa, canadensis, arctica, (a suleerb plant), grandiflora, sibirica, and speciosa; Campanula carpatica, persiciolia, p. alba, pulcherrma, pyra-
midalis, and médium, or Canterbury-bells (both blue and Whitis); Delphinium azúreum, americanum, chinense, elatum, grandiflorum, speciosum, Barlowi, and many more; Dianthus collinus, hispánicus, h. splendeus, fim-
briatus, superbus, púmilus, aggregatus, and barbatus; Digitalis (the new spotted variety), D. purpurea, and purpurea alba; Lupinus élegans, nootkatensis, poly-
phyllus, p. albus, grandifolius, ornatus, and tristis; phyllus, p. albus, grandifolius, ornatus, and tristis;
Enothera macrocarpa, speciosa, Drummondii, and taraxacifolia; Papaver bracteatum and nudicaule; Pentstemon atrorubens, atropurpúreus, campanulatus, digitalis,
gentianoides, g. coccineus, róseus, and speciosus; Potengentianoides, g. coccineus, roseus, and speciosus; Paten-
tilla arguta, Hopwoodiana, Russeliana, formosa, and atrosínguinea; Stachys coccines and speciosa; Gentiana acauks and guttata; Guillárdia bicolor, Drummondi,
picta, and Richardsonii; Ononis rotundfolia ; Antirrhinum caryophylloides, majus album, and pictum. To these may be added Hollyhocks and the Marvel of Peru; and with the plants named last week and a few more
alpine plants, such as Saponaria ocymoides, Scuttellaria alpina and garganica; Erinus alpinus and hispánicus; Myosotis alpestris, Pulmonária virgínica, Sanguinária canadensis, Saxírraga granulata, Soldanella alpina, and
the dwarf Phloxes, such as verna, subulata, setácea, nivalis, amoena, and a few more of the taller kinds, a garden may be kept in a blaze of beauty throughout the season.
The whole of the first-named plants may be sown in any favourable situation in the open air; but the alpine
plants would be better sown in pans, and placed in a warm shaded place until they begin to grow. Perhaps some difficulty may be experienced in procuring seed of some of the plants, and if so, take cuttings or layers, or divide the plants when they are ou
thing to multiply the stock.
The seed of most of the plants must be sown very
thinly; and if the seedlings are thinned, or some of them transplanted when not too large, they will most of them bloom next season.-W. P. Ayres.

## HOME CORRESPONDENCE.

Fixing Ammonia.-I trust the interest that is now felt, and the inquiries that are being constantly made, on the subject of fixing ammonia, will be a sufficient excuse for my troubling you again. I now propose to make a few
observations on the fixation of ammonia by common salt $;$ and as there seems to exist much diversity of opinion on the subject, I will give you the results of some practical trials, made with the express view of ascertaining to what extent, and under what circumstances, the carbonates of Thmonia are decomposable by salt (chloride of sodiun). carbonate of ammonia, (the volatile salt of commerce, will, after a short interval, in the cold, decompose it, forming, an insoluble bicarbonate of soda, has been known for se veral years; but it is not so generally understood that a patent for the formation of carbonate of soda, based upon is generally known by the name of Dyar and Hemming's ratent. T'he undertaking has, I believe, been abandoned not on account of faultiness in the principle, but it could in re worked profilably, from the difficulty experienced decomposition the ammonia, after it had served for the tually employed by the patentees may not be uninterest ing to your readers, as it bears directly upon the subject practical considering, and may serve to throw upon it some lected for the ammonia was the common gas-liquor ; but pose; it was, thasefore, distilled in a wrought-iron still pose; it was, therefore, distilled in a wrought-iron still,
untill about one-third was lorought over ; sometimes this product was not strong enough; it was then re-distilled, sirable was when the liquid had a specific gravity of be deand required, in the liquid had a specific gravity of 1.040 , of vitiol for its saturation. In this state the gas-liquor large quantity, in the caustic or uncombined state, with
lath and comparatively little carbonate of ammonia. But, as with mpsum, so with common salt, the whole of the ammonia decomposition state of carbonate (bicarbonate) for perfect to seek a supply of carbonic acid. This was obtained by Dorting atmospheric air through a cole fire, in which a was obter chaik was always kept, and by this means a gas carbonic acid, and usually from 18 to 22. As much salt
was added to the strong gas-liquor as it was known it could hold in permanent solution, and then by a force pump, the air from a coke-stove, previously cooled by passing through cold water, was introduced by various nlets, which put the whole into brisk agitation. This state of things was allowed to continue until, when a sam ple was drawn and allowed to stand, much of it became solid by the deposition of bicarbonate of soda, which had occasion to remark is insoluble in a strong solution of salt and sal ammoniac. At this period the whole was let out on a linen filter, and allowed to drain as dry as possible. What remained on the filter was pressed in an a condenics, and carried to close ovens furnished wit of soda ash, or impure carbonate of soda. The ash pro duced by this process, when good articles are employed, per cremely pure, sity; and this nothing but common salt, from the brine which the cake contained after pressing The liquid which ran through the filter contained most of the ammonia originally employed, in the state of muriate, impossible, by any excess of carbonate of ammonia, quite to decompose the chloride of sodium. The mode adopted for the recovery of ammonia was as follows :- the liquid from the filter, combined with that from the ovens, was nings smelt iron stills, and distilled so long as the runover again instead of fresh cas-liquar. What remained the stills (muriate of ammonia and salt) was either diluted with water, mixed with sufficient quicklime, and distilled as before, or evaporated to dryness, removing the common salt as it formed and fell during the evaporation, and then mixing the dry residue with twice its weight of chalk; being afterwards sublimed, to produce the carbonate of ammonia of commerce. This was either sold in the market, or dissolved in water, and salt added as before mentioned. These processes for the recovery of the whole of the ammonia are bad in principle, or require such perfection in the apparatus, and carefulness and dexterity on the part of the workmen, that they very imperfectly answered the purpose. But however badly the purpose of the deluded proprietors was served, we may make their experience useful in solving the question with which we not fix caustic a mmonia at all, nor will it in any other state but that of bicarbonate (the salt of commerce is a mizture of carbonate and bicarbonate), and even this only imperfectly, and under favourable circumstances, and not at all, if beyond a certain proportion of water be present.
 reaction soon takes place, which goes far to restore the substances to their original state. Such things are not uncommon in chemistry. But I said I would add some prachical result, which if 1 omit doing, your readers may The following experiments were made to discover the in fuence of varying quantities of the iugredients: viz carbonate of ammonia, salt, and water, also of time of con-
tact, and the applicution of a stream of carbo -

In 4,5, and 6 , carbonic acid (pure) was passed througb the carbonate ofammo in fine powder, added: much cold was produced. When agitated, a slight effervesconce was observed; and at the end of the hour (agitating all the time), it was thrown on linen, the soda pressed and It apuears from thesen saturated exactly by oil of vitrio. able circumstances, and with a large excess of carbonate of ammonia, we cannot decompose much more than half
 When licarbonate of ammonia was used, the result

We here see, in a striking manner, that varying the quat the diminishcd quantity of water has considerably increased the amount of decomposition; perhaps, also, the shorter period of time was not without its influence. shorter pasa trials in many other ways, which it would tedious to mention ; but the conclusion of the matter is, I llinks, plain, and it is this;-that the farmer is not to think, pom, salt to fix his ammonia as it is evolved from the stable and the dung-heap. Salt is good in its way, and answers a thousand purposes of atity; but nature to support any theory, how plausible soever.perties to support Chemical Works, Upper Fore-sireet. Druining.-In those parts of Gloucestershire where the soil is stiff, clay-draining is extensively practised on grass.land, for which it is most effectual, answering ant the purposes of tiles, at a much smaller expens. plan is as the shape of a weige; at the resembling tiles are placed,
and attached to each other by two half-links of a chain, acting as a hinge. On the top of these the clay is thrown in small quantities, and well rammed down, to the depth of twelve incties; the remainder of the soil is then filled in, and the turf replaced. The wooden models are withdrawn by a strong lever being fixed at the outer end, by which means the drain is lert perfect in form, and as smooth as a polished table. This will last for years, and will carry the water off admirably. In draining as small orchard last year, a drain was cut across which had been in use 18 years without exhibiting any signs of damage. The price including all charges is, I believe, about $1 \frac{1}{2} d$. per yard. -W. W.
Improvement of Land,-He who provides additional employment for labour, and by that employment produces more food, and at the same time increases the retura for his capital, is a sincere friend to himself, his country, and to the cause of humanity. Entertaining this opinion, and having some spare capital, I said to myself, Shall I with this thousand pounds purchase a few more acres of land and thus increase the competition for it; or had I no much better invest it in improving one of the farms now have-about 130 acres? I determined on the latter course, and how gratifying to my feeling has it been to see about 20 men and boys employed in draining, others in making tile-pipes $(300,000)$, some in carting them, and again some in collecting and carting stomes to fill the drains, besides those engaged ill putting down and removing the timber, and trimming close the high, unsightl fences, taking in the waste-pices, \&c. When twelpe months shall have completed these improvements, am not to look forward to the permanent employment of more bands by an improved rotation of crops and increased produce? My plens rever withont difficulties and objections. My tenant (atels worthy person) had prejudices and five yeors of his ruse worthy person, had prejudices, and five years of his lease were unexpired. Al said, Your lana, in its present He replied "I farm clean and regulau and carry off all the top-water ; but I don't believe under-draing are of any use in our strong soil, although I agree as to putting down timber and ") "W Wen "T plid " agree to this :" the whole expense shall belmine, taking as my remuneration, two-thirds of the extra-produce over and above what your books will show as the produce of the lhis he readilys ; the other third shall be yous. of the imple of of the importance of perfect drainage, low fences, and Iittle timber , and of the prospect his farn beng very quickrys Let capitalists, insten of buig a great national service, and we shall hear but little of over-population and the necessity of removing our ableI should add, (having three cottages on the property) I mean to adopt your excellent recormendation of allo ${ }^{+}$ ments to the deserving lebeniero--J. J. M., Stam ford hill. Steaming Hay for Catlle.-Atp. 175 "A Hertfordshire Farmer asks information respecting the process of SteamShould your Leicestershire correspondent not answer his inquiries, I shall be very happy to do so, as I know of nothing so desirable and economical, even in a small farm (and no large one ought on any account to be without it), as a Steaming apparatus. I will with pleasure send him the size and cost of my Steam-house, \&c., which is calculated musty Hay-tops and bottoms of stacks, the parts which horses and cows reject from their mangers, \&c.-palatable, and, I believe, nutritious food. 1 likewise get a great deal of Straw eaten by horses. The same apparatus steams sufficient Turnips or Potatoes for from 100 to 200 pigs, as well as horses and cows. The cost of fuel is about $4 s$. a week (coal 8s. 9d. per ton). Perhaps the plan of a Steam-house would be acceptable to some of your readers, as few have an opportunity of seeing well-regulated farms, except those situated in our best agricultural districts,
and even there Steaming is little practised. A small farmer in this vicinity keeps up all day an enormous fire in his kitchen, that he may boil Potatoes for 2 horses and 2 pigs. An eighth part of the extra coal would steam four times the quantity. - W. D. F. [We shall be much obliged by the promised information.]
Cellar for Rools.-What is the best mode of making a root-cellar or room, so as to avoid the wasteful and clumsy mode of clamping Potatoes, \&cc.? I propose to digg out pave it, and then to build up a very thick clay wall, abouk 4 feet high, and thatch with Furze at least 3 feet thick, This I consider will effectually keep out frost. The bottom part I propose for roots, and the upper part is to be windows with shelves for Apples and find no description of a mode, formerly in use, of building with rammed clay, something like the mud walling of the chalk countries. Is complete or economical mode, or inform me how the Russian cellars are constructed?-Totty.
Potling Plants on the One-shift System.-It does not astonish me to see that the "one-shift" system described at p .135 has already called forth the doubts, misbeliefs, and opposition of people who have been so long accustomed to practice-and that with the best success-a very different mode of shifting pot-grown plauts. If 1 had not entertained certaince in the practical knowledge of the writer, I Bhould have tributed and known the death or ill-healcu or a plan a being removed or shifted out of a small pot into a much
larger one-though not so large as recommended in the article in question. As there is, however, aright and \& wrong way of doing everything, success or failure must depend upon which of these two opposite modes guides the operation. Few of those persons who sift soil for their pot-plants will adopt the one-shift system, or allow of its being successfully practicable, and they are quite right. Roots, from their nature, diverge out horizontally, will always (be the pot ever so large) extend towards, and soon reach, the side of the pot, and that often in sifted soil, without making scarcely a lateral fibre or spongiole; because it is only at the sides that they can receive the necessary quantity of air and moisture, and without sufficient of both a plant cannot do well. It is the absence of air excluded by handwatering, that in a pot prevents the formation of roots and fibres in the centre of the ball of earth; which circumstance, joined to the tendency of a body of fine but the death of plants shifted into too large pots by the com mon mode. But whosoever will read the article again will observe that instead of these evils, the best and only cure for them is detailed. Uneifted soil is recommended; thus providing for the admission of air, and guarding against the possibility of the soil running together (as it is called) ; moreover, pieces of porous stone are intermized with the soil, to form reservoirs of moisture and air, and at the same time barriers to make the roots deviate and divide in their course before they reach the side of the pots. To this is to be added attention to proper drainage, without which but comparatively few terreatrial plants will do well. The system is worth trying
Top-Dressing for Orange-trees.-Last year I purchased abox of Oranges, many of which proved to be rotten it occurred to me that they might be turned to some account as a top-dressing for Orange-treen ; and I accord ingly applied a number of them to a large plant which had been in a stationary state for two years. The result has answered my eupectation, for nothing can exceed the igour of its present growth; it is covered with fine young hoots, and promises to flower freely. I am so satisfied with this experiment that I mean to follow the same plan with other Orange plants this year ; and with this view all [An excellent idea this.]
Cape Corms.-Will any of your correspondents kindly mentioning any differences in genera or Cipe Corms, are sadly deficient in real information on the subject; all they state is, that Cape Butbs (including Corms) require so and 80, and they may be increased by seeds or ofrsets, tivating each individual plant-should the offsets be taken off or not, and if so, at what season should bottom-hea be employed in inducing them to root before they shoo sary protection during Jan̄ū̀̄Tラ;) or for other reasons ranking next I would say, to Orchidaceæ in loveliness, although perhaps wanting their grotesque forms and deticious odours, -principally I believa from a want of sufficient knowof this and that order or genus ; but what we require to know is the habitudes with regard tollocality and climate Roses. - I wish your correspondent who writes the interesting articles entited The Rose Garden would give us a pretty full and explicit account of the propagathe best catalogues-say that of Mr. Rivers for this year. He would thus concentrate this very material department of Rose-growing, so as to admit of ready reference; for elthough be gives many excellent hints in his papers, yet to. He should treat of each division separately, e. $g$., Provence, Moss, French, Hybrid Prove detailii and situation to grow them in, the time and manner of propagation-Whether. by buds, layers, or cuttings-and their various management ; pointing out any peculiar treatment required by any of the varietien; the proper mode of pruning, and the
season for it, noticing any particular variety which is an exception to the general rule; and the best mode of protecting the tender sorts during winter. Such a paper would, in fact, obviate any necessity for entering into these details fhen writing upon the varieties themselves. When Mr. Rivers first published his Rose Amateur's Guide, I, know. ing his celebrity, was most desirous to possess it, coning his celebrity, was most desirous to possess that, when a nurseryman quits his grounds and takes up his pen as an author, he is bound to furnish every information on the subject on which he writes, and every thernes " modes of culture" in the title-page that the expresion "modes of culture, in the tile-page, included the whole process of inserting the bua, making the layer, and putting in the cutting. You may therefore judge of my dinappointment, when bought the second edition, and hoped that the idea conbought the second edition, and hoped that the idea conveyed by the asying of a late nurseryman of my acquaint-
ance-who amasied a large fortune in his business, and ance-who amasied a large fortune in his business, and
who was most communicative on all matters about the Wreatment of plants-that "the day was gone by for secrets treatment of plants-that the day was gone and that he never sold a plant less for telling all he hew, would have occurred to the omission in the former edition would have heen sup-
plied. Not so, however. True it is we have some excelplied. Not so, however. True it is we have some excelasuured that " ingtructions for budding, grafting and other moden of propagating Rosen, are given in every gardening
book;" and lhat "Roses may be struck from cuttings, and budded and grafted from March to September, if the buds, grafts, and stocks are a proper state nstead, howser, ${ }^{2}$ and sanguine Amatear, ansous "it iry his hand," is deterred by the preventive check,-"it is only incessant practice hat can give this nowledge, -coupied with a deferred Mr. R. grows Roses for pleasure rather than profit. I hope that that time is not far distant, and that long before the "hoar frost of age sets in" a third edition may be called for, in which we shall find every deficiency in this respect supplied with a liberality and minuteness which will most assuredly meet with their reward. Depend upon it, no nurseryman wil ever be a sufferer by so doing. The new varieties, at all events, must pass through his hands ; and there are few who will lay themselves unde obligation, either for buds or cuttings of Roses, that,nur serymen need care about retaining as customers. It is the satisfaction of knowing how to manage and multipl his plants that induces the Amateur to cultivate them; and to contribute to his success in such matters. Once mak him a successful Rose-grower, and he must prove a good nt will favour 0 with the result of his experience as a Rose propagator ac., and add to the obligations he has already conferred ppon all lovers of the "Queen of flowers,"
Destroying the Eggs of Insects on Roses.-Mr. Beaton has suggested (p.176) the application of the mixture which is used for destroying the ova of insects on Vines, Peach-trees, \&c. to the shoots of Rose-trees ," the bud" pruich prey on these plants are deposited by the femate in the autumn of the previous year on the bark, and especially around the buds; and I should say that it is in this stage of their existence they should be attacked. As the vicissitudes of the weather, I would recommend that be made as adhesive as possible. Probably glue or size would answer, but I hardly kno
Forcing Roses.-It is generally asserted that Roses a not succeed, if forced, two years successively. This I find from practical experience to be an erroneous opinion, as They forced the same plants five consecutive seasons be, namely, shifted as they incressed in size and thi year they have bloomed more profusely then they did the first enen. in fact, they hav annim in number and beauty of their blossoms. My collection consists of Moss, Sping Cabhe Uni Wellition (Hybrid Chinas), Crimson Pabage, Unique, W' Yo Noisotte which Crucceeds merpethen, a Garden Rose I stances respectiog forced Roses from the failure which perceive in that department, in many gardens where ther is every facility for procuring them; and there is no flowe so highly appreciated, even by non Amateurs, as a forced Yeast Plant. I
.-I aend you a drawing of a seed (natubelongg. It was brought from America by a friend, who, when at Wisconsin, about 200 a cottage making bread, and using the dried
stead of yeast ! tan witer, he could not ob tain a freph specimen, and all the flowers had been cu search among the withered store that was hang up fo use, he found one capsule that had been left on by chance, and it fortunately contained seed. He was not sufficient botanist to ascertain the correct name, but he thought it was a Scabious. I should be glad to know if you or any property of yeast, as, in remote parts of any country, it would be worth cultivating for this alone. After such seed as this has been committed to the soil, is it
usual for the pappus to become elongated? I had but two given to me, and having occasion to disinter one of them, I found to my great surprise that the pappus bad grown nearly twice as long as it was when put in about [We days previously.- $A$ Lady, and constant Readen ance, the fruit of some composite plant allied to Verbe нime,
Kitchen Garden Economies, No. 1.-A very delicate vegetable, quite equal to Seakale or Asparagus, and of a taste intermediate between the two, may be easily raised in any quantity by any one who has a few square yards of garden ground, at several different times during the winter and spring, according as the succestion of crop is required. Plant ten or twelve Turnips (any delicate kind) as closely as possible, and cover them with a box or Seakale pot: heap fermenting stable litter over and around, as for Seakale; and in about the same time or a fortnight more, a crop of blanched Sprouts will make their appearance. The crowns of the Turnips should not of course have been removed too closely. In dressing them for table, when they are about half done, pour away the water and give them some fresh; when cooked, serve them up with melted butter on toast.- Sprouts.

Preserving $r$ in answer to "Quercus," p. 190, I beg to state that good Currant jelly may be made from wet Curranta, I think the objection is to their being packed wet in baskets and having to stand some hours in market. They mayy, if desired, be strewed an a dor, to dry,

Strawherries and Raspberries are more objectionable when rathered wet; but boiling the pulp five minutes, previously to adding the sugar, is the best remedy. Pine-Apple jelly would be an expensive article, as it worl los. of Pines to make 1 lb. of jelly; inf ridy jelly of Pine-jam never partakes of the firm character of jelly of Pine-jan

Cydonia japonica.-I have tried the fruit of Pyrus, or Cydónia, japonica, mixed with Apple in a tart and I find it a very good
sort of Quince.

Bees.--Stocks of Bees should now he carefully examined, by lifting them up gently from their stande, for the pur pose of clearing away any filth or dead Bees, moths, \&c, which they are light and the population numerous, is a liberal feeding. It has often been found to give them a liberal feeding. the $t$ can only be obtained by them in the field in smal quantities, will save them from starvation. When th spring is wet, cold, and unfavourable, they may be fed with great advantage even until the middle of May, by mixing a pound of the best honey in a wine-glass of pur armth , and incorporating them together by a gent saucer in their hives, and the liquid can to covered with piece of perforated paper. If "J. T. A." will take the ars to plaster her old straw hives with Roman cement ears. They may be made ornamental, and will do well as stocks to swarm in. The Bees and combs should by no means be taken from the old hives.- W. Savage,
Swaff article on "Bee-Books," a recommendation to paint the inside of straw hives, with a view to save the Bees the trouble of smoothing them. Will Dr. Revan kindly say if he approves of this suggestion $-A$ Bee-keepp Fumbaing Greenhouses.-in Mr. Ayres drections to he amateur, at p. 189, he speaks of a plan adopted by one for many years, and would refer him to a description of it by me, in p. 49, vol. viii., of the "Floricultural Cabinet." I merely light the tobacco with paper placed
PROCEEDINGS OF SOCIETIES
 elected. Col. Challoner presented the Monthly Report of the
Finanece Committee, hhowing that the receipts during the month
of March had been 1, 130l; and that the current cash balance on
the last daay of that the last day of that month amounted to $2,1165 l$. The Committee recommended a further purchase of 1,000 , stork in the New $3 \frac{1}{2}$
per Cents. Mr. Pusey reported that the 202, offered for the best
Essay on Essay on the Rotation of Crops for Heavy Lands, had been ad-
judged to Mr. W. Stace, of Berwick, near Lewes, and that
the Essay would appear in the next part of the Journal. Col.
Cle
 Show Yard, Dinners, Trial of Iunplement Field \&ce. Mr. Colville,
Mr. Po, Cpairman of the Committee, stated that the Directors of the Midiamt Counties Ranlway had decided to supply any number of
special trains on that occation, requirng only the usual fares for
 half-volumes twice in the year, containing the same amount of
matter as heretofore,
Dr. Lyon Playfair was elected Analysing matter as heretofore, Dr. Lyon Playrair was elected Analysing
Chemist tot the Socety. Mr. Puse stated that Dr. Playrair was
engaged in estabishing at Mancheeter a chemical aboratory for
the

 certain sccle of charges, which would be left with the secretary
for the information of Members. The following gentlemen were

 scc., and had been ern a sci, and had been grown on a sharp mould on a gravelly sub-
soil, at their experimental garren at Brompton: the Lucerne
appearing from appearing from this trial to be eariier than the Bokhara Clover. He further stated that he had orireed some fresh Bokhara Clover that it had refused to eat it; that he then offered to the same
horse a portion of the Lucerne. which was taken with avidity;
the the two being mixed, the horse picked out the Lucerne, and only
ate two mall portions of the Clover.- Mr. . Brittain, secretary ral Society, communicated a memorial from the chairman and com mittee of that society, soliciting tha
the anpual country meeting of 1845 should be held in that city.

April 4.-R. Forster, Esq,. In the chair. Mr. Sutter, of Para-
matta, New south Wales, was elected a Fellow. A collection of
 Finmark, was presented by Mr. N. Lund. MT. Cuming
presented several specimens of fruits and seeds from the Philippine islandid, amongst others the true St. Ignatius Bean, or col-
leolonga seeds, which are used by the natives as a remedy in
ind cholera; alas A Acorns from a species of Quercus, unknown. Mr.
Parkinson presented a specimen of the Ambigo, or Navel Orange, Parkinon presented a specimen of the Ambigo, or Naver Orange,
brought this country from Pernambuco, Where it it cultivated
in considerable ouantities; it is seldom seen in the British in considerable quantities; it is seldom seen in the British
market. Prof. E. Forbes presented a specimen of Goniaster market. Prof. E. Forbes presented a specimen of Goniaster
abbensis, a new British Starfish, discovered by Mr. Maclaurlin

 Experimental Chemist to the Hirticural Society，and Le
Hon．Mem．of the Royal Atriculturn
on Chemistry at the Royal Intititution． on Chemistry at the Royal Institution．
ondon： 2 ，Charles－street，Covent－Garden．

Daxining－There is no objection to your pipes placed orer the stones，except that thpre a common flit tile wourd If expense
same purpose of keeping the soil from washing in． is no object，your phan in not the be ponipes were lower own they would carry
still think，that if the of the water better，and the stoncs
which oozes from the sides of the drains into them，$t$ by the drains．Seventeen inches below wer have had them to
little for the pipes：at all events，we never less depth than 22 inches，in order to keep a sufficient quantity of firm earth undisturbed over them．$M$ ．
ANUR
ans．$-J$ ．$W$ ，- Your plan of mixing gith weeds soil，and refues vegetable matter，and ong used，is a very gond be turned over several timest of ammonia，appplied when plants
one．$\ddagger$－I．B．H．－Sulphate of are beginning to grow，may be usec at the rathate，instead acre．li，however，you use the mpure supphate，instead o
the clean crystals，you should mix it with carth if you apply it broadcast，it it is，，however，like all such saits，best adminstered
in solutioni．We are nut acquainted with the effect of Watson＇s Granulated Manure ；it contains some ammonia，and is pro－ bably a good material．t－$R$ ．R．A．－Your plan o managing cloacine 18 good；by all means adel the thid 3 ol m mention，that
 much to your land，limme－rubbish from old bulldings will do
mole
more．The quantity of gypsum is not material，for an ercess more．of service in your case．Prof．Henslow＇s letters are about
 your cloacine will be，to disinter into the places that centain it．That will entirely remove itt
place it in a heap，mixing it continualy with peat，until the place it in a heap，mixing coter it wwith carth ard leave it．If
whole if packed away．
cot this is done，and rain is not allowed to wash away the sol
parts，you will have a very powerful compost heap． as well daring the summer to watch it，and if any fiuids are
seen to soak away，to cause them to be promptly restored，as directed at $p$ ．205．The mixture will be very strong，and a
litule will goa long way．If in making up the heap you can add straw，stubble，cinder－sitturgs，or any substance of that
kind to weaken it，so much the better．The cloacine will very
 shonlil putriy，it will be rich in saline matters that are soluble，
and that will give it its chief value．Nerther is it very impor－ shad that will give it tits chief value．Nother be cficected by mix－
and
tant to fix its ammonia furtler than wound ing it with soot，or some such absorbent material．As your
land is poor and sandy，yoir will find it netesary to add or－ ganic matter，and soot will go some way towards furnishing
this．Your best whan would be to use the surplus wnter for
to moistening a dungloy the mixture for your sandy land．t－－
 muriate of lime，in which the mimainctich called salt and lime is a
ferred to the lime，will do so．What very imperfect sort of muriate of hime，formed by sith brine
layer of chalk，or still beter of hime with very strorg brine
nitil

 gieat exthat this＂salt and lime＂to which we alluded， 18 a prett good fixer，and it has certanly the gond property or toing no wood－ashes，they consist of small particles of coal and cinders， whine wood－ashes are composed exclusively in burnt away．We do not remember cyer to have saud anything of Peat－ashes， they are the same as wool－ashes；Gut peam will only fix the
will retain ammonia by absorplion．Gypsum carbonate of ammonia in gas－water；not the caustic amminniu；
 renders it peculiarly useful when mixed with rich manures， abonnding in ammonia，as action of the air it yieldis certain
 those sulstances which render wood－ashes valuable as ma－ nure．In general，charcoal is too dcar cheap cost，there is little doubt where it can pe wilh great advantage，and especially in connexion with ammoniacal or stiong animal manures． In making a compost，and converting saw－dust，\＆c．，into mould such as charcoal，with the saw－dust；it is desirable to decom－ charcoal would only retard it．In order to fix ammonia it is better to take sulphuric acid，or some convenient sait，such as green vitriol，or common muriate atever the result of some these substily＇s experiments at the Horticultural Gardens showed that 10 gallons of the strongest mineral acts per acre produced no evil effect whatever on1（irass land．The tar of
the wood－distulers is，no doubt，acid，but it is hardly probable that it could be used advantageously to fix anmonia；at the same time it is always worth while to try the effects of refuse
matters as manures，but they must be used in small quantity and with caution．E．
aquid Manure．－T．$W$ ．－To prepare guano－water，mix 4 lbs，o guano with 12 gallons of water，and let it stand for 24 hour
before bein used．The same guano will do for mixing again with the same quantity of water，after the first in drawn off． manare－casks is oil material for fixiol．Dilute it in domble its quantity manure－casks is oil of vitricl．Dilute it in double its fuanity
of water，and keep adding it a time to your liguid manure，until the effery

Hzating．－Frank，－If you do not take your flow－pipe from the
upper part of your boiler，you will pet no ciralation；or，at upper part of your boiler，you will get no eircalation，oriler－ the best，a very imperfect one．Possife，you might succeed in
lid down，and apulying a powernl fire， overconnine the difficulty；but it is far wiser to use the ordinary
means．Tlis rule is to place the bover a lathe lower than the means．Tue rule is to phace by a pipe from the hybest part of
tank or piljes，and to foch the
the boiler．Whlue the latter is refilled by a pipe passing into it near the bottom，
Grapks．－An 0 rizinal Subseriber．－The Claret，or Blood－red Grape，has the decpest－cninured juice of any cultivated in this throughout the pulp．This and the Tinta are the principal sorts grown ；although many varietics have a purplish juice， yet they only $p$
with the skins．if INBS．$-\boldsymbol{F}$ ．L．L．Previousty to removing the roots of your Vines
from the interior of the house，to a border on the ontside，there from the interior of the house，to a bordier on the outside，there to encourage the formation of fresis routs，unless those upnit which the vines by laying the stems for the length of a few feet nudier a grasel walk，rumning elose to the front of the Vinery，
provided you cover them sumferently with soil to prevent their is just after the leaves have falenn．We do not kuow sufficient of either the victoma or secting the m．I cenlária integrifolia，and viscosissima，Jysimachia nummulatia，
and Pansics，whll do for filling beds required to be yellow．For white onts sou may take Verbena pulchelia alba and teucrioides and ficathy．－H．e．－Your Erica is E．cirnea，from which， are also hardy：E．ai Dórea，multifiora，mediterránca，vagans， cliaris．士－G．H．L．－Swet－scented annuals and biennials are extremely rare，L．－Sweet－scented annuals and consist aimost entirely of Sweet Peas， Mignonelte，and Stocks．Centaurea suavéolens and moschata，
with CEnothera suavéolens are alsu fragrant in a slight degree． rimenidic．－Winton．－Twelve good herbaceous perennials are Delphinium Barlowi，Pentstemon gentianoides，Phlox barbata，Potentilla Hopwoodiana，Uninothera speciosa，Dode－ and Aly ssum saxátile．$\ddagger$ ， Rhododrndruns，－Sarrah．－The north side of a dwarf wall win
be a suitable situation for choice Rhododendrons，if they receive the full light of the sun after attaining the height of 3 or 4 feet． A border of prepared soil 3 feet wide and deep will be capacious portion of leaves and ohd cow－dung，added to the soll，wimbect Mr．Smith informs us that he beheves the pormar a state was from thendron lollison a grafted plant，and from its having been sub． jected to greatheat dunng the presious summer．I all similar plants with underground stems，the constant cut off as often as they appea
LTsFout．－C．G．－There is no means of extirpating this plant When and has once takenstant destinction of the foliage．It is of no use to cut off the leaves once or twice unless their removal is ffected as strong as ever．$\ddagger$ ． by cuttings or by uividing the tubers，with a bud attached to
each，as with Dahhias． obreidis．－Rusticus．－Einds on a slight hotbed，or in a pot or pan，covering them very lighty with soil，and placing the pot in a warm greenhouse． They will sominatus．$\ddagger$ ． RATHS．－Perseverunce．－If Heatis nnd Epacrises receive a good
shift now，there whil be no necessity for re－potting them in autumnit．$J$ ．G．S．－Verbenas delight in a compost of half decdyed matiure．＇1 hey will thrive however，in any tree sollif gardchs are really hardy，altiough $m$ any favourable situation kinds，possessing fragrance，are V．Nenlii and teuctionles．$\ddagger$ more light and Amuterr．－Pri bahly your Camellias require After the plants have bloomed renot them and place them in a moderately warm and moist atmosphere，where they should size of Pens upon the ends of the shoots；they may then be removed to their winter quarters．$\ddagger$ Coma JAsminoxibs，－A Lady．－Técoma jasminoides and in a mixture of turfy loam and heath－mould，and is only seen in perfection when planted in the border of a conservatory．$\ddagger$ Srros．－T．S．H．－Sow your New Holland seeds in pans，in a of loam and pand place the pans in a moist and gentle heat， and when the yourg plants are sufficiently large，transplant them into separate pots，five or six ill each．Aiterwards you may pot them off separately，and give them the ordinary treat－ ment of greenhouse plants．t． beneath a frame，for the purpose of keeping the pots from being heated to such an excess，in summer，as to be injurious to the
roots of Pelargoniums，we would recommend you to keep the plants as near to the glass as possble withuat injury，to keep
the hights well tited，and to throw over them，in bight days， some time canvas or close netting，to break the force of tho mitute quantites，is bencficial to the growth of Pelargomums； but if used in exeess，it will destroythem．found whid in the hediges Anuneures．－John．Inorticolo．－it is too late now for planting the roots of Ranunculus．lf required for eary
ing，they should be planted in November；if for later fowering，in the beginning of February．Ne do not imagnes provided the roots were not crowded；the soil should be rich and rethe roots bepin miow． ANMMONE．－John Horticola，－The roots of Anemone may be panted at almost any period of the year．If you are destrous inches decp，and of any required width and length tet tep and not closer to each other than 5 mehes．In order that they may nower well，give them plenty of water，and let them bo they should then be shaded during the heat of the day．$\pm$
（1）Buiss．－S．D．－Ot the bulbs which you have recejved
Brunsvigla Josephinx，multifora，and falcata；Cyrtanthus
obliquuti and odorus，and Hæmanthus tigrinus．They shouldall
be planted in wall－diained pots，in light loam，with the necks
of the bubs barely above the soil．They should be watered
sparingly until roots are formed，but wlien they begin to grow sparingly until roots are formed，but when they begin to＂row
watershould le freely supplied．After the three former bulbs have water should be freely supplied．After the three former bulbs have
flowered or made their annual growth，they should beremoved
保 flowered or made their anme to yest．Cyrtanthus oblinnus and
to a dry part of the stove
odorus should be kept near the glass，inn cool part of the house ； odorus should be kept near the glase，inn cool part of the house；
and instead of allowing them to rest with the otice，herp 1 inm and instead of allowing them to rest with the other，hecp thlata
gently growing by a sparing supply of water．Nerine mand
and Yallota purpirea are greenhinuse bulbs，requuting the same

 same tratment as that plant．The general inle the rate of
cases should be to water them in proportion to the ret Growth，and to withhold it entirely when they are not growing．$\ddagger$
Frns．J．Hr．Haying romm for only one Fig－tree against the
hack wail of a Peach－honse hack wall of a Peach－house，you cannot do better than plant
the Brown Turkey．Youmay perhaps succeed in erafting Fifs
imnediately after they have burstinto leaf．The French prefer
 is distinguished from all others by its very dwarf growth，cleal
chesnut－coloured shnots，and small fibrous roots，which epread
年 near the surface．The English Paradike may be either referred in English Nurseries，trees propagated Bn either has the darkest

## NEWS OF THE WEEK

The customary adjournment of Parliament for the Easter Holidays took place on Tuesday，when the House of Commons was adjourned to Monday the 24th，and the Lords to Tuesday the 25th inst．Prior to the adjourn－ nent，Lord Brougham introduced prevention of the Slave Trade．Thatory act，that a British subject residing in a foreign country，who buys slaves and transports them to bis own plantation，is guilty of felony －to legislate respecting the transmission by legal means of foreign slave plantations－and to prohibit tue buying and selling of slaves by joint－stock companies，established in England for the purpose of carrying on the trade abroad． In the Commons，on Monday，Lord J．Russell laid upon the table the resolutions relating to Education which he proposes to bring forward ater lats they embra Government in deciding on the modifications they have introduced into the Fac－ tories Bill．The Bill giving to the Court of Common Pleas an appellate jurisdiction on the subject of disputed motions passed，athe jurisdiction of the court of law the motion for making ta bill was negatived by a large ma－ jority．The second reading of the Ecclesiastical Courts Bill was opposed by Sir Robert Inglis，on the ground that it was a deliberate step towards the separation or the Chirch年 J．Graham defended the bill，and refused，on the part o Government，to withdraw or refer it to a select com mittee．An adjournment was called for，and carried，on Dr Bowing brought forward a motion respecting the Bishopric of Jerusalem，which was opposed by Sir R Inglis，Sir R．Peel，and Lord Palmerston，and withdrawn without a division．On the motion of Mr．Cooper，a committee was appointed marlisment，to be let out in mall allotments to the labouring poor of the district．
From France，we learn that a new post－office treat has been concluded with this country，by which the rates at present in force will be reduced one hal． Cortes on＂the $3 d^{\text {inst．The royal speech alluded chiefly to }}$ the state of the national finances，to the insurrection a majority．The rumours of a change of Ministry gain ground ；but it is understood that no change will take place before the Chambers are regularly constituted．－In Portugal a partial modification of the Cabinet is also talked of，in consequence of the expected retirement of the Ministers of Foreign Affairs and Justice．－The affairs of the Levant are still the somrce of much uncertainty，and the disputes between the Porte and Russia on the recent revolution in Servia are likely to lead to still further em． barrassments in Turkish policy．－From the United States we learn that Sir C．Metcalfe，the new Governor－General

## 

Court．－The Queen and Prince Albert，the Prince of Wales，and the Princess Royal，continue at Buckingham Palace，and are in excellent health．Her Majesty has taken her usual morning walk during the week in the gar－ on Tuesday．The Duke of Sussex has been indisposed for some days at Kensington Pulace，and still continues un well．The Crown Prince of Wurtemberg，on Sunday， drove as far as Hampstead，and visited the Zoological Gardens ；in the course of the present month his Royal Highness intends to set out on a tour in the provinces． The Countess of Mount Edgcumbe has succeeded the Viscountess Jocelyn as the Lady in Waiting on the Queen； and the Marquess of Ormonde and Mr．Ormsby Gore have succeeded Lord Byron and Captain Mes in Waiting on her Majesty．
Official Appointments．－Lieutenant－Colonel Chenney
who was employed in the Euphrates expedition，ond se－ veral other important missions，has been appointed to proceed to Hong kong，－Lord Rendlesham hes Prriamentury Movpments．－Lord Rendiesham has folk，in consequence of the death of Sir C．B．Vere； and Mr．Shafto Adair（who contested the eastern division of the county in 18 \＃1），has cone forwarutoned ha likely to come forward on ．The actual number of ships of all The Royal Navy．－The actual number or the 1 st day classes of the 1842，was 233．The total number of the complements of these ships，officers and men，was 30,050 Of the above ships there were with 4700 officers and fficers and men； 6 second－rates men ； 7 third－rates，with 1,000 om 12 fih－ses， 4,000 rates，with 3，801 officers and men； 12 ， 000 fec， 1,000 officers and men；and 14 sixth－rates， 2,00 one comple men．There were 41 sioops，the totar of whose 39 pla ments was 5，458．The gun－brigs，\＆c．，were 3 ， 0 off 1，602 officers and men；and 7 packet．．brigs，with cers and men．There were 14 vessels engaged 14 station ing，with 1,014 officers and men．There were 14 station－ ary or guard－ships，with complements amounting to number of sermessels in commission was 66 ，and these had 3,666 officers and men．The total number of ships of all classes laid up in ordinary on the ist of December 1842，was 240．Of these there were 16 first－class， 15 second－class， 46 third－class， 33 fourth－class， 64 fifth－class， and 10 sixth－class．The sloops were 8 ，brigs 15 ，packe brigs 11，cuttera 6，and steam－vessels 16．The total num ber of all classes in commission and in ordinary is 473. East India Pensions and Appointments．－A return of the pensions granted by the East India Company to per－ sons in their civil，military，marine， 1842 ． and whe shows the following results：－The amounts paid at the three Presidencies of Bengal，Madras，and Bomby during the aforesaid period，was，in the civil Bombay，during the aforesald period，was，
service 700 l ；in the military $96,269 \% .17 \mathrm{~s} .5 \mathrm{~d}$ ．；in the medical， $26,21 \backslash l$ ． 12 s ． 6 d ．；ecclesiastical， $5,274 l$ ． 5 s ．； Lord Clive＇s fund， $1,316 \%$ ；Bengal pilot service， $1,8786^{2}$ 300l．During the ame period the appointments made by 300．During the same period the appollows：－Volunteers for the Indian nsyy， 99 ；volunteers for the pilot service， for the Indian asy，cadets， 2,255 ；assistant－sur－ geons， 415 ；civil service， 132 ． Sycee Silver．－A Parliamentary paper delivered las week shows thay in Janury 1842 China in her Majesty＇s ship Conway，in January 1842 amounted to 2，001，200 sdwt．gross，the standard wely $40 z$ ． 2 dwt ．This sold from the 10 s .6 d ，at the respective prices of $59 \frac{1}{2} d ., 59 \frac{1}{8} d$ ，and $59 \frac{5}{4}$ d．per ounce．There was no charge for melting the silver，Mr．Mathison，the Mint refiner，under the sanction of the Treasury，having undertaken to derray all expes in consideration of being allowed $3 \frac{2}{2}$ grains of gold（les 10 per cent．）on every pound weight gross or sis $2,530 \mathrm{oz}$ ． gross weight of gold extracted Mathison，after deducting 10 per gr．； 940 oz ． $13 \mathrm{~d} w \mathrm{t}$ ． 9 gr ．，leaving $1,5890 \mathrm{z}$ ． 8 dwt 8gr．gross，which produced in standard from 21gr．The expense of was 200l．15s． 8 d ．Gra tuities to Mista to the for extro tuities to Mint officers，clerks，porternt which the gold produced，at $3 l$ ． 17 per az，was 6723 ． 1 ．B sending the silver to the Mint，instead of selling it in the market，at the estimated price of $593_{4}^{3} d$ per ounce，the Mint obtained a profit of 654 l .12 s .9 d ．
fforetain．
France，－The principal domestic topic referred to in is the projected railroad between Pario Pars to which the Opposition offer a strong hos－ tility．In the standing committees of the chanibarded Deputies the undertaking appears to have been declared themselyes on Saturday desirous to induce a modification thenselvan the presaling belief abroad was，that the plane form，receive the sanc－ the measure wornce Augustus of Saxe Coburg， the Princess Clementine of The intended Ras at the Pais Royal on Thursday Oreans，arras complimented on his arrival by the Court and the Corps diplonatique．A new postal treaty between France the Count de St．Aulare the French Ambassador ast，by the Cource，and the Earl of Aberdeen on the解 part of the weight of half－an－ounce，will be a uniform one of er francs，the present rate，for on one from England，when not pre－ those recei or as pre－payment from France to England paid there－or ander nd tenpence Instead of the the treation A petition was presented to the Chamber of pe set at liberty bas，praying that Don Carlos mig heard the liberty，but explanations given by the President of the Council and the Minister for Foreign Affairs，which were considered satisfactory，rejected Surday that the telegraph brought news to Paris tower of Valonciennes， 210 feet high，had fallen
down and killed eight persons. It appears that the struc been voted, suddenly sunk down about two hours after the labourers who had been working at it alarmed by the falling of some loose stones, had quitted their dangerous position. Most of the persons occupying the houses at save their lives ; but the scene of destruction in time to save their lives; but this was not the case with all. The
wife of an officer of the garrison was killed, and the man Wife of an officer of the garrison was killed, and the man
posted on the top of the tower came down with the ruing, and was taken out dead. The occurrence excited a good deal of alarm in the town, and the more so, as a fire broke out among the ruins immediately after the fall.
Spain.--The opening of the Spanish Cortes took place
with due solemnity on the 3d. with due solemnity on the 3 d . The Regent repaired to costume, were where the peers and deputies, in full Her Majesty, accompanied by the Regent, by the Countesses Mina and Altamira, went in a carriage drawn by eight horses, superbly caparisoned. The ceremony took place in the Senate-room, where the Regent read the royal speech. The topics it notices relate chiefly to the ing period when the Queen will assume the approachvernment. As regards the state of the finances, "it requires," the speech states, " the most particular attention the admintres. lmportant reforms have been made in -as well as in the system established for the sale of national property; but, without the necessary means of eovering, not only the ordinary and current expenses of the public service, but also the obligations successively equilibrium between the reccints effects of a want of treasury, every day the difficulty of obtaining a complete and satisfactory organization of that vital part of the administration of the State must become greater." On the affair of Barcelons the speech observes that "Various advantageous modifications as respects economy would have been introduced into the army, and several had insurrection suddenly broke out and paralysed those insurrection suddenly broke out and paralysed those great an evil by the co-operation of all the public forces. On that occasion, as on all others, the army proved a pattern of subordination, discipline, loyalty, and valour.
Thanks to its virtues, and to the noble and frank co-operation of the National Guard, the come and rrank would have proved so fatal, bad it been suffered to gain ground, was stifled at its conmencement, and tranquillity
was completely restored. to the effects of the reform Owhing to this tranquillity, and the material interests of the country are daily increasing our communications are developing themselves; agricul-
ture and industry impart more activity to our commere and public instruction is considerably improving." In regard to the Queen's majority, it says-" The happy moment has come when the Cortes are about to have the opportunity (and their patriotism will not suffer it to escape them) of accomplishing the wishes of the nation, young Princess who is now seated on the throgust ahd forefathers. Laws calculated to consolidate the State on its foundations-laws that will open the sources of public prosperity. Such is, Gentlemen of the Senate and Deputies, what the country demands, and what the dignity and welfare of our native land and of Queen Isabella II. require. May her Majesty, on assuming the reins of Government at the approaching happy period, encounter is preparing for the nation. May her Majesty find, in the blessings and applause she will reap, the precious of this speech, the Queen, Regent, and their suite, left the hall in the same order they had come. The speech heard. It was rumoured that MM. Cortina, Chacon, and Sanclio would form part of a new Ministry, but it was generally understood that no change would take place until about the 20th of the month, when the Chambers presidency will, it is said, be between Senors Cortina and presidency will, it is said, be between Senors Cortina and
Gonzales. The Infante Don Francisco was not present at the opening of the Cortes, nor does he seem to enjoy much popularity at Madrid. The Gazette publishes the decree of the Regent, appropriating the necessary fund for the regular paymen of the interest of the Three per Cent. Stock, from the Ist January nest. The promulgation of that decree had created a most favourable impression in financial circles.
Portuast
Portugal.-We have accounts from Lisbon to the 3 d inst. It was reported that a partial change in the Ministry was not unlikely to happen before long, the probable retirement of the Ministers of Foreign Affairs and of Justice being spoken of; in which case it was thought that Senhors Silva Carvalho and Magalhaes would come in. The Chamber of Peers had been occupied with the Douro Wine Company Bill, and had adopted the basis of
the measure sent up from the Cbamber of Deputies. the measure sent up from the Cbamber of Deputies. The Lishon in favour of the tariff convention. Power in carrying into effect ats own law, the noble Inord moved
that curred in Lord Brougham's concluding remarks, buturely conwas extremely desirable, tristed that the country wouldit not be nations--Lord Camprech contended that the slave trade had
 more widely would his opmore the subject was consudered, the the slave trader were by natural law constituted public encmies,
felt the necessity of obtanning the co-operation of other coder too strongly to recommend any departure from the letter of our
treaties. He vindicated the decisions of the American judges on
the subje. the subject, be vindicated the decisions of the American jad thes on
of the navas only by a general combination of the naval powers that the abolition of the slave-trade could be
effected. The bill was then read a first time ; and on the motion the Duke of Wribington their Lordsitips adjourned until Tues-
day, the 25 th inat.
with means to enable them to establish and maintain a sufficient
number of training and model schonls in Gireat Britain. 10 ,
That the said commititee ourylt likewise to be enabled to grait
gratuities to deserving scloolnlasters, and to affurd sucli gid to That the said committee ouipht likewise to be enabled to grant
gratuities to deserving sclooblnasters, and to afford sucis aid to
schools, established ly voluntary contributions, as may terd to the more complete mstruction of the pcople in relligious and
secular knowledge, white at the same tume the rights of conSir James Gramam said that several of the points embraced in the resolutions had been under the consideration of the Go-
vernment, and that in consequence important modifications will be introduced into the Factories Bill.
complaining of the treatment he had expersenced from the Govertment with respect to the carrying ont his plan for the esta-
blhsmment of a penny postagc. After setting forth the events which
led to the reduction of the postage the pettion states that Mr. Hill was cmployed for a limited period to superintend the working of
his plan, and then proceeds as follows:- "But your petitioner
has now to state to your honourable House that since the month of August, 1841 , scarcely any progress has been made towards
the completion of your petitioner's plan, on the contrary, one late Treasury Board, and which would have been highly bene-
ficial to the rural districts, and in all probability advantageous to the revenue, has, your petitioner is led to believe, been in-
definitely postponed. That certain inquiries essential to the inquiries were about to be prosecuted by your petitioner under
the authority of the Treasmry Board, as at present constituted, were, by the interposition of the Post-office, prevented from
taking ylace; and the authonty whereon they were to be made Was withdrawn, That all your petitioner's efforts to promote
economy and the public convenience, by introducing the remain.
ing parts of his plan, have been ultimately frustrated. That at thg parts of his plan, have been ultimately frustrated. That at
the expiration of the third year of your petitioner's engagement,
viz., on the 14 th of September last, when many specific improvesavings of public money, were actually in progress, the Lords of priving hin of every chance of compreting his appointed task.
That the plan of Post-office improvement, thus left incomplete, following parts:-1. A uniform and low rate of postage ; 2. In
creased speed in the delivery of letters ; 3. Greater facilities for their despatch; 4. Simplifertion in the operations of the Post fully carried into cffect is the institution of the penny rate. That dispatch of letters, little or nothing has been done. That with economy, though many important and successiul changes have
been made, yet little has been effected in proportion to the oppor-
tumitics afforded by the adoption of miformity of rate anul prepayment. That the opinion which your petitioncr expressed,
both in his pamphlet and in his evidence before the committee of
your hourable fouse was to the effect that the of the Post-office revenue, even to the extent on which he calcu-
lated (about $1,300,000 l$, y year), depended on carrying into effect the plan as a whole. That the opinion adopted by her Majesty's
Government, that the further progress in Post-office improve. ment may be left to the Post.office itself, is contrary to all past sought the extent of hundreds of thousands of pounds pelve savings to advantage to the revenue entirely independent of that augmentation of letters which the whole experience of the Post-office
shows may safely be anticipated frum the adoption of those
meastucs inercangg the ut.lity of the pent-oflice to the purbic That not.
withastanding the extreme depression of trade whelh existed when the penny rate was cstallished, and has comlmued to prevall
ever since, and nutwithstanding the very imperfect manner in
which your petitioner's plan has been carried into effect, the to the measure entertained by many of those persons to whom its must necessarily have had on its success, yet the results of the
third year of partial trial, as shown by a retum recently made to
the House of Lords, are a pross revenue of revenue of more than one-third of the former amount. That the
present tross revenue, as shown by the same return, is almost
exactly the same as it was under the fourpen net revenue of the Post-office increases from year to year, while
every other branch of revenue appears to be deceasing. That,
looking to these results, your petitioner trusts your honourable House will see no reason to dount that a few years with a revived
trade would suffice to realize all the expectains which he held out, yrovided the whole plan be carried into effect with zeal and
cconimy. Your petitioner desires to submit the truth of the
forcringr

the undoubt In teply to Lord Palmerston, I ord STANtiEY said that in the Governor of the Batramas, with a view of providing for any future
hypothetical case, but that the confidential opinion of the law-
officcrs of the Crown has been transmitted to him; and the House in a British assured that the right of slaves to their freedom, when report that Mr. Ellis was on his yeturn to this country from the
Brazils without accomplishing his mission.-In reply to Stuart Wortley, it was stated by Sir R. PkE i that a slave trade
Was carried on by Arabs in the territories of the East India Com-
pany, chiefly pany, chiefly on the Bombay ccast, and that individuals had been however, of wheli the credit was duc to Lord Auckland, was just
coming mino crperation, which would cffectually cleck the traffic.
The third reading of the Registration of Voters Bill was phssed, and then Lord C. Litranov moved the addition of a clause, in to by Sir J. GrariAm, and withdrawn.-Mr, Convins proposed personated the exercise of his right, so that it shall be received clanse; hut as the Solicitor and Attorney-Generals expressed Sir, as. Were one or two other additions.
give then called attention to the provision of the Bill
ho the Court of Common Pleas an appellate jurisdiction on the subject of dispputed votes. In 1004 the House of Comamons hise, which had not since been questioned. He pointed out what of the revising barristers to the judges: such a ppatronage had a to injnre the interests of the public, so far as an, independent bar wis concerned; and he objected to lringing the elective franchise
of its juriaduristiction of a court of law at all. The preservation Peel's bll fort with their right, and it was gone for ever. Sir $R$. eived a fair trial; it was capable of great improvement. At all
events, he thought tbat it was too grave a matter to be disposed
of in the present manner; it ought to be made the subject of
separate bill, and so receive a more deliherate consideration, Sir J. Grabam compimented Sir T. Wilde as the intrepid defender of the privileges of the House; but he denied that the vileges. The argument of the learned gentleman was based on E misconception; the clause did not go so far as a provision o
the Irish Registration Bill, which had been proposed by the late Government. The power of an election commsittee of the House
remained intact by the present bill; and he could not see what danger could be dreaded from the reference of a point of law to
the Common Pleas, which could be adjudicated upon in the face superin court of law, than assessors to be appomited by a
majority of the Honse, or even by the more impartial judgment of the speaker. - Lord J. Russkif, could not allow the privileges
of the House to be parted with without a further protest, and the There, the judges had given a legal decision relative to the franclise according to their known political feeling, Tories de-
callng one way, and Whigs another. They were now proposing from the revising barrister's court, binding on a committee o people, and trial by jury, were the two safeguards of the liberties of the people; and here they were about to submit the rights o
every elector in the kingdom to the conficting and varying opinions and decisions of the judges there was an appeal, in Ireland, from the revising barrister to the judge of Assize. After the passing of the Irish Reform Bill, it
was a conflicting and disputed question as to the right of election committees to open the registry in Ireland, and the late Sir M to render the decision of the judge, on apveal, binding on a com mittee of the House of Commons. By the present bill, the deci-
sion of the Common Pleas was merely made binding on an elecsion of the Common Pleas was merely made binding on an elec
tion committee in the particular case, and on the point involved pinion should have expressed himself as distrusting the judge of the land, in a matter where political feelings could not pos-
sibly operate. There was nothing given up by this bill which House; it was merely carrying out an original intention of the
Reform Act, only substituting as the court of appeal the four judges of the Common Pleas, instead of three revising barristers - On to division, the motion of Sir Thomas Wilde was rejected by 102 to 26 . -The bill then passed.-The second reading of the
Ecclesiastical Courts' Bill was next proposed, and Sir $\mathbf{R}$. H Inolis said the opposition to the bill was various in its character go far enough; butall repudiated this particular measure. It was
the destruction of ancient institutions- proposing at one Cell swoop to extinguish no less than three hundred and eighty peculiars were to be destroyed; the changes in the proving and principle that justice should be brought home to every man's door, it was important that they should be enrolled as near the
respective localities of the parties interested as possible; and after reviewing at some length what he considered would be the effect of the various alterations contemplated hy the bill, such
as that it was a deliberate step towards the separation of the Archbishop of Canterbury, \&es., he recommended its withdrawal as it was impossible to carry it during the present session o
Parlament. He concluded by moving that the bill be read a
second time that day six months.-Sir J. GeAram would no shrink from the responsibility of pressing this measure on the
consideration of Parlament, becaune he was fimmly convinced it
was fur proposed on higher authority, ecciesiastical, judiciad, and legis-
lative; and until he heard the argument of Sir R. Inglis, he was not prepared for the fact that any Member of the House could courts whose numbers and decisions had led to such extensive
litigation. The highest legal functionaries had given their opinion that the expense of probate of wills would not be greater in
London than in the country ; while the convenience of centralising the cas mainly adjudicated all the great disputes on pro importance, and of the great public, utility of which they were
convinced, even thourli they admitted that sume private interests mirit be affected by it. In this spint, the diuvernment
would nelther withdraw the bill, nor refer it to a select commattee,
and they would view its rejection with the regret whinch their sincere conviction of its importance involved.-Mr. Jravis con-
tended that the boll perpetuated, instead of reforming, the munopoly and alhuses of Ductors' Commons, in which 34 proctors had
the sole privilege of taking rpprentces, with each of whom a fee
of a thousand pounds, or thereabouts, was required. He strongly objected to the centralisation of wills in Lonston; and as for the
registry, if that were all that was required, they had already all
隹 legacy duty. The most objectionable parts of the criminal ju-
risdiction of the Ecclesiastical Conts were retained by the bill, as the Bishops' Courts, with the trials for schism, heresy,
brawling, \&c. - while the increase of salaries and patronage to the functionaries in London, and the necessary withdrawal of sacrifice of their established business, rendered the measure as objectionable on private as on public grounds.-Colouel Sig-
THorP protested against this addition of salary and patronage rich enough and idle enough. The bill was an infringement of
vested rights, and of the rights of the people.-The debate was vested rightk, and of the rights of the people. - The debate was
proposed to be adjourned, but a division was called for, when Tuesday.-Sir JAMER GRABAM, in answer to Mr. Hindley, Government on the subject of education were under consideration, though not yet matured. He declined to say whether or not any adopted.-In reply to another question, put by Mr. M. Gibson, the provisions of the Factory Bill to the lace and cutron print
branches of manufacture. He also said he had not yet had an opportunity of seeing the report of the commission of inquiry Eseott, Mr. Vrecirss stated that it was his intention to follow up, in the present session, his motion on the subject of the im-
portation of foreign corn, which stands for the 4 th May.-Sir J. Graham, in repiy to ma. Roebucs, stated that the Government mended by the commissioners in their report. A commission to
do so, if appointed, should, he thought, be appointed by Parliament rather than by the Crown.
On the motion of Sir R. PEEL, the House, at its rising, was ordered to stand adjourned to the e 24th inst.
Mr. B. COCHRANE gave notice, for the 27 th inst., to move for a select committee to mquire into the system of edication adopted
at Maynooth College.-Lord J. Ryssele fixed the 2d May for the proposition to the House of his edncation resolutions.--Sir R.
Pexl gave notice that, on the 4th May, he would move for leave England in certain populous districts.-Mr. F. Kgis 4 gave notice
to ask for leave, on the 27th inst., to bring in a Bill to amend the

Wales.-Mr, ScBolsprzin gave notice of a motion declaring the expediency of laying a forther tax on income arising from pro perty, as a substitute for the existing taxes on tea, malt, and
sugar.- Mr. Ewart gave notice for the 9th May, to move for leave to bring in a bill to abolish transportation as a punishment. select committee to inquire into prison discipline.
further adjourned to Friday, the 28th inst.; and the Factory was gulations Bill was fixed for Monday, the 18t of Mary.-Mr.
EwArt postponed his motion on the subject of National Edreation. Warse moved for leave to bring in a bill to amend the
sir $\mathbf{J}$. Wasis
act, commonly called the Hobhouse Act Act, commony cailed the Hobiouse Act, for the regulation of
the Metropolitan vestries.-Mr. Galr KNyoht, Sir B. Hall,
Capt. Rove, Mr. Hawes, and Mr. Hume opposed the motion. tempted to go too far, but would not oppose its introduction.Dr. Bowning then rose to move for the correspondence of the British Government with the Porte on the subject of the Bishop dicious salem. He considen, inasmuct as that Dr. Alexander was an inju-
liable to be associated with feelings of contempt in, he was minds; and on his arrival, his wife and family excited much as-
tonishment, celibacy being associated with sanctity in the East. The sanction of the Porte, solicited by this counlry, to the erecmedan mosque in this country. In the existing state of the Holy Land, the establishment of the Protestant bishopric was only
calculated to excite prejudices and fanaticism, - Sir R . Inaris and said that it was no reproach to him that he was of Jewish
descent, seeing that the first bishop of Jerusalem was St . Jamea [Here a motion was made that the House be counted; but a exactly 40 Members were present, Sir R. H. Inalis continued.]
He aproved of the political expediency of having in the Holy City a representative of the Protestant Church: and read an ex
tract of a leter from Bishop Alexander addressed to himself in which the Bishop stated that many of the sccounts respecting
him in the public prints were fabrications.- Sir $R$ PbEI. Thought of hostility towards the Bishop of Jerasalem, and had spoken added to the force of reaspns, on public grounds, led ham to refuse eived with cordiality, and had received marks of respect fron the showing of Dr. Bowring himself, who had said that many Christians in Syria nominalty professed Mahomedanism, it was
desirable that a bishop should be stationed there, in order to have prevent the erection of a Manomedan mosque in this country and Dr. Bowring might even indulge his apparent predilection
for that faith by preaching in it. Nothing was asked from the porte which was unreasonable, in giving its permission to th
erection of the Protestant church in Jerusalem, and much exar geration had been used with respect to the subject.-After s
remarks from Mr. Hume, Lord Palmergron concurred in view which had beent taken by Sir $R$
prised that it had been made a matter of comment that Dr churck, priests were under anobligation to marry, though bishop were not. He approved of the policy which had led to the estations on which had comamenced before he left office, and though ticism, and in promoting good-will,-Dr. Bowrine disclaimed select committee wa appointed to inquire Mr. W. Cowper, a select committee was
of all waste lands which shall be incly of setting apart a portion to be let out in small allotments to the labouring poor of the disHouse at this perior was counted, and forty Members not being
present, it stood adjourned to next Monday week, the 24th inst.

Money Market, Thursday.-Consols left off 967 to 7 for Money, and 97 to $\frac{1}{8}$ for Account ; Three per Cent. Red., $96 \frac{1}{4}$ to $\frac{1}{4}$; Three-and-balf per Cent. Red., 101 s Bank Stock, 183 to 4; India Stock, 269 to 70 ; India Bonds, 76s. to 78s. prem.; Exchequer Bilis, $68 s$. to
70s. prem. Yesterday being Good Friday, the Market was of course closed.

Innprovements in st. James's.-The bill now before Pariament to empower the Commissioners of Woods and Forests to appropriate to building purposes the area of St. James's-street, has just been printed. The preamble sets forth that the buildings in Thatched House Court having been, or being now in progress of being pulled superion and there being no longer need for keeping open the ares or entrance to the court, which is vested in her Majesty, it is desirable to include the space in the site dische now erections. The bill accordingly proposes to diction of the Paving Commissioners of St. James's, so far as regards paving and lighting, the jurisdiction of the commissioners as to rating being retained, and the rights of certain lessees of part of the property being regarded.
The bill further empowers the Commissioners of Woads and Forects to widen the entrance to Little St Joods street from 10 feet to at least 24 feet throug Jamess additions being thereafter considered as part of the public street
Dinner at the Mansion House.-The Lord Mayor on tinguished circle of gave an entertainment to a diaof the late Ministry. The including most of the Members Lord Lansdowne returne company behalf of the House of Peers, Lord Palmerston on behaif of the House of Commons, and Lord John Russell on behalf of the City Members.
Death of the Master lof Dutwich College.-The daily papers announce the death of John Allen, Eaq, , the
master of Dulwich College. He was distinguighed by

Lord Byron, as "the best informed and one of the ablest men be knew." He was elected Warden in 1811, and succeeded to the Mastership in 1820. A vacancy having thus occurred in the mastership, by the statutes of the College, the master must be elected on the lst day of May next, and any candidate for this valuable appointunmarried.

Explosion of the Waltham Powder Mills. - On Thursday afternoon an explosion, attended with fatal consequences, took place at Waltham Abbey in the gun-
powder-mills belonging to Government. Four mills were powder-mills belonging the and seven of the workment were killed. Five were carried over the river to a considerable distance, and fell lifeless in the marshes; the other two were buried in the ruins. The shock was so severe that the windows of the charch and numerous houses were shattered, and Metropolis.
Chartist Meeting.-A very crowded meeting of Chattists was held on Monday night, for the purpose of presenting nn address to Mr. T. Duncombe, thanking him for calling Lord Abinger. Mr. Feargus $\mathrm{O}^{\prime}$ Connor was in the chair. Lord Abinger. Mr. Feargus $\mathrm{O}^{\text {Connor was }}$ ( C in the chair. A
resolution having been passed expressive of regret that the resolution having been passed expressive of regret that the
House of Commons had refused an inquiry into the conduct of Lord Abinger at the late special commission, it was resolved that the thanks of the meeting be offered to those Members of the House of Commons who voted for Mr. Duncombe's motion of inquiry, and an address was presented to Mr. Duricombe expressive of their admiration of his
conduct. Mr. Duncombe, in his reply, said that he had conduct. Mr. Duncombe, in his reply, said that he had Leicester by Judge Gurney ; and whenever an opportunity
offered itself, or ia petition should come from Jones before offered itseff, or a petition should come from Jones before
the House of Commons, he should have no hesitation in stating to the House his opinion of the conduct of that judge.
Anti-Corn-Law Leagus. - The fifth meeting of the The house, as usual, was crowded in every part, and the attendance of ladies was greater than on any former
occasion. Mr. Wilson presided, and the speakers of the occasion. Mr. Wilson presided, and the speakers of the
evening were, Dr. Bowring, Mr. Elphinstone, M.P. for Lewes, the Rev. J. Burnet, of Camberwell, and Mr. Heyworth, of Liverpool.
day, at Exeter Hall, of the friends of the Pednesmissions, for the purpose of adopting measures said to be required by the recent aggression of the French on Tahiti, and for securing the general interest of British missions
in the islands of the South Pacific. Mr. Hindley, M.P., presided. A series of resolutions was entered into con. demning the conduct of the French Government, and America to join in restoring to the Queen of Tahiti the independence of which she has been deprived.
Street Sweeping. - On Monday an exhibition of the self-loading cart, or street-sweeping machine, which is vicinity of Oxford-street, for the purpose of enabling the paving boards of various metropolitan parishes to judge were practical operation and utiity. The hao machines the rotatory motion of the wheels acted upon a series of brooms, hung behind the cart by a light framework of
irou, so that the brooms successively swept the surface of the ground, carrying the soil up an inclined plane, at the behind a smooth and well-swept track. The machines proceeded through Vere-street, Henrietta-street, MaryleIn traversing these streets, the machines had to pass over three different species of pavement, viz., the Macadamised, the stone, and the wooden pavement, where a sort of artithe streets. On reaching the wooden pavement, the machine swept an area of upwards of two thousand yards in the space of about fifteen minutes, leaving it in a state of perfect cleanliness. They performed the work of about eighty men in the space of three-quarters of an hour, and combined the threefold process of sweeping, loading and carrying in one operation. During the day, the in ventor explained, by means of a model, the mechanical action of the machine, and stated, that by an experiment recently made before Sir J. M ${ }^{\text {s }}$ Adam, the machine had proved its applicability for sweeping Macadauised roads upon which filled itself in the space of five minutes. establishment of a new Hospital for the Marylebone and Paddington districts. A meeting was held recently, Mr. B. B. Cabbell in the chair, at whin thas esolved, "That the north-western district of london having grown inamensely in point of population and wealth, and remaining
destitute of any adequate means of relief for its poorer destitute of any adequate means of relief for dispoorer becomes the duty of this wealthy and increasing district to provide against casualties and serious illness occurring among its poorer population ; and it is the opinion of this meeting that this desirable object can in no way be 80
effectually and permanently attained as by the foundation and maintenance of a Hospital, of a size adequate to the necessities of the district; and that in order to render the proposed Hospital as efficient as possible, an Opthalmic and a Maternity Department be attached to it, in addition to the usual Medical and Surgical Departments of Hospitalg." A Committee was appointed to receive subscriptions, and from the list already published, there is reason
to believe that the benevolent object of the meeting will soon be carried into effect.

The Nelson Monument.-Admiral Sir Robert Stopford,
the Governor of Greenwich Hospital, has consented to
allow a number of veterans from that establishment to allow a number of veterans from that establishment to
attend the ceremony of placing the statue of Lord Nelson upon the column in Trafalgar-square, "because he is sure it will be as gratifying to the feelings of the men themselves as interesting to the assembled spectarors." The Admiral also promises "to furnish the committee with the number of the present inmates of the hospital who fought under the great naval hero, eitber in the glorious batle of Trafalgar or other of his naval victories, and ", present state of health will enable them to attend."
Colonial Society.-An adjourned general meeting of the Members of this Society was held on Wednesday, for the purpose of framing a memorial to the Secretary of State for the Colonies, urging the propriety of adopting immediate measures for the encouragement of systematic colo-
nization. The Earl of Mountcashel took the chair, and opened the The Earl of Mountcashel took ene.chas lately exhibited with reference to emigration and colonization, not only by the citizens of London and our large commercial communities, but within the last few days by Parliament itself. It was, therefore, thought desirable, that comprehending with in important as the Cors connected with our colonial possessions, should give some defirite expression to their feelings, Acter a good deal of proposed, ${ }^{\text {, it }}$ was resolved that the subject be referred to a committee, and that a memorial be presented to cocty Government will take up the consideration of colonization us a question of vital importance to the country.
The late dccident at Blackwall.- Since we noticed the fatal accident at Blackwall, to the brother of Mr. Ferrand, M.P. for Knaresborough, the river has been dragged ; and apparatus lias been used for the purpose of recovering the body; but all attempts have been [ineffectual. It is now considered very doubtful whether the body will ever be found, as the the ras probably carried out to sea great rapidity, and the body was probably carried out to sea. hrough the Tunnel on Sunday was 22,215 , and the place, in addition to this influx of visitors, presents a busy appearance from the circumstance of stalls having been put up by various parties for the sale of fancy articles, not the least curious being the small ornaments made from the clay of the Tunnel itself. A large number of workmen, emploged on either side of the river, avai themselves, morning and evening, of the shortened communication now established between the two shores
Inquests. - On Saturday an inquest was held on the body of the Earl of Hopetoun, who was found dead in a hackuey cabriolet, wh her had the House of Lords, where he had been in' attendance Stevens's Hotel, New Bond-street. The cabman denosed that at one o'clock on Saturday morning he was waiting
in Palace-yard for a fare, when the deceased gentleman in Palace-yard for a fare, when the deceased genteman from the House of Lords. At the time when the deceased gentleman called the cab, he was walking with an umbrella in his hand, apparently quite well. Witness opened the door, and the gentleman got in, teling him to drive to stevens's Hotel. The gentleman spoke well, and the a farm tone. When witness got the hotel he opened the gentleman did not getting down from his box, Fint he dismounted, and looked into the cab, and saw the gentleman's head leaning down on the right side. Thinking he was asleep, he pulled him twice to awaken him, but as he did not move he porter. The porter got a light, and made another attempt to wake the gentleman, witness and the porter being stil under the impression that deceased was asleep. felt the pulse of the deceased, and then found that his master was dead. Dr. Seymour deposed that Lord Hopetoun had repeatedly consulted him during the past year He complained of symptoms which appeared to witness to denote disease of the heart, or the immediate great vesalarm as their orig. to several members of his lordship' family. His lordship had recently improved in health, but, from the nature of his complaint, witness was by no denly occurred. There could be no doubt whatever of his lordship having died from the complaint under which be laboured. His lordship had told wituess that whenever he made any considerable exertion he felt great pain unanimous convin of the heart. The jury expressetoun's death, and concurred in a verdict of "Died suddenly by
Criminal Statistics of the Metropolitan Police.-The annual returns just published by the Commissioners of the Metropolitan Police, giving an account of the trades or occupations of the persons taken into custody during the year 1842, show the following results:-Out of the f 5,000 persos- 5,00 or wher whe custody 82 artists, 487 bakers, 128 brushmakers, 52 barmen, 183 brassounders, 12 brewers, 529 bricklayers, 43 brokers 240 bookbinders, 611 butchers, 11 buttonmakers, 1,008 carpenters, 4 clergymen, 440 clerks, 1,068 coach and cabmen, 118 coachmakers, 198 corkcutters, 43 compositors, 67 clockmskers, 98 curriers, 96 culers, 141 carvers and gilders, 138 drapers, 229 dyers, 256 engineers, 5 excisemen, 05 fishmongers, 76 glovers, IIl goldbeaters,

88 greengrocers, 111 grocers, 197 hairdressers, 303 hatjer and trimm ind interpreter, 60 ir 087 lers, 99 77 masons, 158 medical men, 13 millers, 1,043 milliners, 68 musicians, 10 opticians, 463 painters, 301 papermakers and stainers, 18 pawnbrokers, 2 postmen, 312 printers, 32 publicans, 6 reporters, 1,445 sailors, ,
sawyers, 125 sadders, 871 male servants and 1,133 female samyers, 125 shadiff's officer, 66 shopkeepers, 1,115 male and 309 female shoemakers, 822 smiths, 366 soldiers, 17 ${ }_{317}$ surveyors, 296 sweeps, 1,290 male and 435 female tailors, 317 tinkers and tinmen, 31 tobacconists, 48 toolmakers, 50 turners, 152 watchmakers, 172 watermen, 424 male and 189 female weavers, 19 woolsorters, and 12,626 males nove, there were in the whole number of 65,000 persons 45,000 males and 20,000 females, the 65,000 persons, offences ranking principally under the heads of drunkenness, larceny, asssault, and misdemeanour. Of the foregoing number, those under 10 years of age were, mates,
54 , females, 16 ; under fifteen years of age, males, 1,316 , females, 134 ; under twenty years of age, males, 4,310, females, 1,381 ; under twenty-ive years, males, $4,6.38$, under fifty, males, 1,919 , females, 769 ; and under sixty, males, 823 , females, 313. Of the 65,000 persons taken into custody, 13,000 of the males, and 6,000 of the females, could neither read nor write; 26,000 of the males and 12,000 of the females could read or write but imperfectly; only 5,000 of the males and 987 of the females could read and write well, while but 516 of the males and 145 of the females had received a superior education.
Out of the 4,431 persons, male and female, committed for trial during the year, against two males only was sentence of pronounced and carried into execution; 20 males and 1 female were transported for life; and 512 males and 234 females acquitted. The total number o murders during the same period amounted to 25 , of which 18 were committed by males and 7 by females. There were 26 cases of shooting at, stabbing, and administering poison; 15 cases of concealment of birth, 13 of manslaughter, one of treason, 22 of rape, 28 of bigamy, 5,193 ceny, 639 of forgery, 119 of suicide, 48 of the latter being of males, and 71 females. It appears, from a comparanumber of persons taken into custody during the forme period amounted to 68,961, and during the latter to 65,704 ; the number of persons discharged in 1841 was 36,708 ; and in 1842, 33,609 ; the number of persons committed for trial during 1841 was 4018 , and in 1842 , 1841 ; the number of persons convicted and sentenced in acquittals in 1841 amounted to 618 , and in 1842 to 746 Woolwich.-A large mortar, cast at the foundry of Messrs. Walker and Co., for Mehemet Ali, and weighing Arsans, was proved lan woy Arsemal. The parge of powder was 80 lbs , weight.' The ball fired on this occasion weighed $1,010 \mathrm{lbs}$., and required number of men, with a powerful pinion lever, to move it into the mortar. On being fired the ball entered the butt, throwing the earth to a great height, and the piece of ordnance itself, notwithstanding its immense weight, mortar after it was fired, it appeared quite perfect. mortality of the Metropolis.-The following is the number of deaths registered in the wert districts, 168 Central districts, 209 ; East districts, 194; South diz tricts, 232. Total, 946, ( 461 males, 485 females.) Weekly average for the last five years, 903 , (male
females 442 ) and for the last five winters, 1004 .

Incendiary Fires.-An incendiary fire occurred on Saturday last, the 8th inst., at Hartesl, Suffolk, on the property of Mr. G. W. Poley, which destroyed two barns,
outhouses, and several dwelling-houses. The Sufolk Fire Office, the overseers of Hartest, and the local Association for Prosecuting Felons, have offered a reward of 1002. for the discovery and apprehension of the incendiary
Aylesbury.-On Saturday last a meeting of the electors, freeholders, and inhabitants of Buckinghamshire, conven the purpose of considering the distressed state of the agricultural and labouring classes, occasioned by the new tariff, and of obtaining for them that redress which justice demands and the present condition of the country renders indispensably necessary." The meeting was attended by Earl Stanhope, Lord Nugent, Sir J. Dashwood King, Sir Harry Verney, and a numerous body of leading farmers. The resolution proposed by Earl Stanhope, was that the
agricultural, the manufacturing, and the other industrious agriculural, the manufacturing, and the other industrious tection of their industry to which they are entitled ; that they have already been grievously injured by the effects of the new Cora-law and of the new tariff, and have a right to demand from Parliament that they shall be fuily and effectually protected in the home market from the compe tition of foreigners, who, being far less burdened was proposed by Lord Nugent and another by Sir Harry Verney, but they were negatived, and Lord Stanhope's resolution carried. It was then resolved that a petition be presented to both Houses of Parliament, embodying the terms of the resolution. Lord Nugent then aduresse ff the meeting, and said that looking to the circumstance of Lord Stanhope's motion being carried by a comparatively
sirill majority, he inferred a short life to the present Corn Law, and frmiy believed a that they had not free trade be elected to give it to the people.
Bath.-On Saturday night the walls of Bath were placarded with notices, having attached to them the names of London printers, stating that, at" the request of Mr.
Roebuck, the "aerial steam-coach" would commence its Roebuck, the "aerial steam-coach" Would commence its proceedings on Monday, by making a trip from London to half-past one 0 "clock, "Bath time," after a journey of Cliff were crowded, at the hour named in the bills, by some hundreds of persons-all eagerly watching for the appearance of the flying visitor from town. Large numunder the conviction that the delay in the arrival of the machine was most probably caused by some mishap incident to its first journey, and that it would certainly arrive lower part of the city also displayed numerous groups of anxious espectants, who at length discovered that the Brighton, -The workm. Well, at the head of the Chain Pier, have succeeded in obtaining a plentiful supply of fresli water, at a despth of 200 feet from the level of the Marine-parade. The directors intend erecting an ornamental fountain in the
centre of the promenade, affording a continual stream of spring wate
Deal.-During the past week, owing to the prevalence and coasting yessels great accumulation of outward-bound day morning, the wint hating chopped round to the eastFard, a fleet of 500 sail got under weigh, and proceeded down Channel with a favourable breeze. About nine o'clock the line of ships stretched from the South Foreland towards Dungeness, in length about five or six miles, prein the Channel. Indeed, it is said that the oldest Inliaibitants of those shores never before witnessed so many vessels in full sail in so narrow a space. It seemed to the eye of the spectator, that at many parts of the fleet the did they appear to be ranged together. the wreokers consequence of the plunder perpetrated by loss of the schooner Francis, off Dungeness Lighthoune the Lord Warden has commenced triminal proceedings against the ringleaders ; and their trials are expected to depredations, that the tallow which formed the cargo of the wreck was carried into the adjacent towns, Lydd and per lb. Many of them, on the strength of the wreck, purchased moulds, and

Kingston,-We noticed in our late the patiticulars of a charge of felony, preferred under remarkable circumstances, against an attorney's clerk, called Stone, and an inakeeper money from the Dolphin Inn, in this town, on the 2lst July last. The case was tried on Tuesday, at the Surrey and continued so until the conclusion of the trial, which was not until near one oclock in the morning, having last week, when we stated that the whole strength given prosecution rested on a question of identity, the prisoners persons by persons by whom the robbery was committed. They and, after a searching investigation into their case, they Were discharged. Stone then commenced an action against Lord Dord for false imprisonment, which was tried before days, the jury returned a verdict for the defendant In consequence of this verdict the prosecutor caused the prisoners to be again taken into custody on the same charge, when they were taken before the Kingston On behalf of the prosecution, the landlord's daughter swore in the most positive manner to their identity, and ostlidence was in some manner corroborated by the ostler. There was, however, a great discrepancy in the shepositions, and an evident contradiction in the evidence Khe gave in July, and the testimony she gave last week at soners, and accurpoke confidently to the dress of the priWhich the prisoner Wardell wore at the time of the robbery $;$ it was proved, that on his apprehension he had a
similar ring on his finger. The girl, and her father and Mr. Chamderwent the most rigid crossexamination by of all of them was considerably shaken. The prosecutor admitted he would not give them into custody, for he them. Several were not the men, being. unable to identify secution, but their testimony did not in any manner strengthen the case. Mr. Chambers addressed the jury hours, and delivered one of spoke for upwards of two speech he was court of justice. At the conclusion of his dered that such soudly applauded that the chairman orchecked, or the court should be cleared. The chairman had occupied an said the case was a very peculiar one, and two points to the jury, which we weave leare soners at the bar were the same persons who entered the

Dolphin public-house, it being admitted that they were place ston on that day ; and then again, isme two men who joined the tall man on the bridge. There was one Wemarkable circumstance, that of the ring-the prisoner by the child, at the time of his being taken into custody. The jury returned a verdict of Not Guilty
so frequently hen in this district occure-blasts whic so frequently happen in this district occurred on Wednesliery, which belongs to Messrs. Grace and Co. At"the time of the explosion there were upwards of 50 men at work, and so slight was the effect of the shock, that the some of the survivors, who escaped by reaching the pitshaft. On the filarm being given; every exettion was hours elapsed before it was deemed prudent for any one to venture into the mine. During the course of the day 24 bodies were brought up quite dead, while 8 more, who since died. The others are expected to recover. There was only one horse killed, and the damage sustained by the workings is inconsiderable, the explosion being very
limited in its rante. The jury, at the inquest, returited limited in its ranfe. The jury
a verdict of Accidental death.

Northleach.-An inquest has been held at Cheltenham, on the body of Richard Jones, a prisoner, who died a few days since in the Northleach Honse of Correection: The inquiry exciited great interebty, and was three times adjourned ; on the last occasion it was continued for seven hours. Both coroner and jury closely examined the witnesses, with a view to elicit the particulars of the mode of
discipline practised at the prison. The coroner recommended the jury to forward a memorial to the Secretary of State, praying for a still farther improvement in Northleach prison. The jury during the long inquiry, repeatedly declared their cornviction that the hard worts and scanty fooid of the prison \#as the cause of the evil then complained of; and that it was the system, and not the particular individuals who administered the law, that was
to blame. Several witnesses were examined, and the jury, after an hour's deliberation, unanimously agreed to the following verdict: "That the deceased, Richard Northleach House of Cotrection, from hard labbur, waht of food, and from bo other calises." The jury in addition, wished it to be recorded that they had unanimously agreed that the authorities of Northleach were deserving of censure for their conduct throughout the affair.
Reigate.-At the Surrey Sessions, on Saturday, the case of Mr. T. Colson, appellant $v$. the Justices for the Croydon division, came on, as ath appeal from the decision of the dustibes, in refusing to grant to the applicant, who is vietualler's license for his house, known as the Annersley Tea-gardens. The appellant's house was built three years ago by the directors of the Railway Company: The license; after a long inquiry, was granted. This is sxid to be the first time, within twenty years, that an appesal of this kind hirst been successful.

Wakefield.-At the quarter-sessions for the West. Riding, held in this town, on Thursday, Joseph Whiteley, a collier, from Elland, near Halifax, was tried before the magistrates, for having assaulted and ill-used dames Whiteley, his apptentice. As it known to our readers, it is not necessary to repeat
it. It was considered by the jury conclusive against the prisoner, and they accordingly found him Guilty. The Chairman, in passing sentence, said that he had been
found guilty of one of the most atrocious offences ever brought before a court of justice. He had illatreated in host chely else but him to relation of his own, who There could be no doubt of the fact, that without any reason whatever he had ill-treated him in a way that no person in court could have heard, and that no one could
read of, without horror. He was sorry that the lav did read of, without horror. He was sorry that the law did not allow the Court to inflict a severer punishment; but the House of Correction for 2 years they could not sentence him to hard labour, or inflict any severer punishment.
Railways,-The following are the returns of the undermentioned Railways for the past week:-London and
Birmingham, 14,0391 ; Great Western, $11,360 l$. SouthWestern, 5,2831 ; South-Eastern, 1,724l. © Eastern Counties, $1,535 l$. ; North Midland, $3,518 l$. ; York and ditto, 1,4166.; Greenwich, 661l. ; Croydon, 204l.; Brighton, 2,526l.; Blackwall, 609l.; Hull and Selby, 9361.; Grand Junction, 6,860l.; Midland Counties, 2,208l. - At the Carlisle Company, held on the 28 th ult., a dividend was declared of 4 . per share of $100 \%$. each, and 80 on in proportion for the quarter shares payable to the shareholders on the 21 st iastant. To meet this dividend the sum of years; but the reserved fund will still amount to 49,3776 . The accounts of revenue and expenditure for the past year exhibited a profit of $15,063 l$., which, considering the depressed state of trade and commerce, the directors berectors of the Durham and Sunderland Company held their half-yearly meeting on the 24 th ult, and declared a dividend of $10 s$. per slare, clear of the haif. year's incometax. The receipts from ordinary traffic on this line, for the half-year terminating on the 28th Feb., were 15,3651., being 1,368 l. less than the corresponding half-year of 1842 ; but the working charges were $1,103 l$. less than they
were during that petiod of 1842 , and there has been ot considerable increase of passengers. - The Kilmarnocle branch of the Glasgow and Ayr Railway was opened on Monday the $3 d$ inst.-It is understood that on Easter Tuesday another grand blast of the cliffs on the line of the South-Eastern Railway, near Dover, will take place. The operation will be on an extensive scale, as it is intended to explode sixteen mines simultaneously, by means of the galvanit battery. The time appointed is four o'clock in the aftertion, in order to give an opportunity for the scientific mea and others who take an interest to these remarkable works, to arrive by the morning train from London.

## IRELAND.

Dublin.-We noticed in our last the excitement occasioned by the mail-coach contracts baving been given to a \$cotch gethtletiat. The accounts received this week state that the most lively interest fis felt throughout Ireland on the subject, and that memorials ind thderable against the new contract are in course of signature. $=\Omega$ the weekly meeting of the Repeal Association on Monday, Mr. Steele, in seconding a resolution of thanks to the American repealers, announced that he had been appointed by the Association to go from one end of America to the other, to agitate the question of repeal; and he wished now to state that he was reay and who to fuln that engagement whenever he was called opoti,-Mir. $O^{\prime}$ Connell said that before the resolution was put, he was Mr . an tede Mr. Steele to Amefica, to assist in obtaining independ
ence for his country. He then announced the repeal retit ence for his country. fe .

Monaghan.-On Monday, the 3 d inst., an outrage took place in the Barony of Farney, near the town of Carrickmacross, part of the estate of Mr. Evelyn Shirley, M.P. A multitude of people, to the amount of 10,000 or 12,000 , of whom very few were tenants on the estate, assembled in Cartickmactoss, and there seized Mr. Trench, Mr. Shirley's agent, who had cone for ward to zadrês them, and dissuade them from violence. This gentleman they dragged with them to Lough Fea Castle, where they supposed Mr. Shirley was staying, endeavouring by menaces and ill-treatment to extort a promise from him that be would use his influence with Mr. Shirley to obtain a reduction of their rents, by 25 , or an some say, 50 per cent. This promise he courageously refused to give; and after receivitig some severe bruises ftoth his assailants, he was surrendered into the hands of a neighbouring gentlemati. The papers add that the great majority of this mob con-
sisted of strangers; that Mr . Shirley has always treated his tenants considerately and kiodly; and that similar and greater outrages have before beer perpetrated by the peasantry upon persons who had devoted their capital to the employment-of native labourers and the improvement of native produce. Large rewards have been offered for the apprehension of the offenders.

## SCOTLAND.

Edinburgh, - The Duke of Sutherland has addressed letter to the clergy of Sutherland on the affairs of the Church of Scotland, from which the following is an et. tract:-" I deeply regret to find you and other frienddy
adopting measures which in my conscience I believe in adopting measures which in my conscience 1 believe injurious to the welfare, and likely to impair the nans and usefulsess of thst establishment, and detrinoental to all the interests committed to her charge. Whenever the application which you mentioned as proposed to be made
to the Lepislature may be brought before Parliament, it to the Legislature may be brought before Parliament, 1 shall not fail to endeavour to discharge my doty as a peer of Parliament. I cannot, however, refrain from expressing my hope that in the meantime further consideration on the part of yourself and other friends may prevent the crisis which now seeths impending. It is not for me to endeavour to control or moderate the feelings which, on jour part conscientiously entertaiked, bave much effect in maintaining and increasing the uncertainty of the connection between the State and Church-of which I should much lament the separation. Having always admired and respected the piety and moral and religious principles of the people of our Highlands, I have been disposed to assothe labours of their pastors, and considered that under the present system we have enjoyed the very great advantage of having men fearing God, and well qualified to give diligent care and labour in the parishes committea to their ance, I Therefore, not desiring innovation an encouragex agitation anong our congregations, and I consider it a melancholy proof of the instability of our buman under standing.' His Grace has addressed a similar letter to the elders and parishioners of Farr, expressing his conviction that the maintenance of two Kirks and two manses in the parish would be fatal to the establishment wher amount of funds might be reised to support them, and hoping that they will remain as they are and thath ful minister will continue with a pious established Kirk.-In connection wh the Dr. Chalmers in his valedictory address to his students last week, observed-" It is impossible to predict the issue of the crisis now at hand. Ere we meet again, the church of our fathers will have separated into two great will be entitled to the name a question which of the two the church minus the stipends, or the church minus the people. It now only remains for me to bid you farewell; I confidently confidently look forward to our meeting again; and, some consolation to think that we will not have to give
tterance to the complaint, which others will, that ours till be a college minus students.
sle of Skye, The Tsle of Skye has within the last 40 ears furnished for the public services-21 lieutenantgenerals and major-generais; 45 lieutenant-colonels; 600 majors, captains, lieutenants, and subalterss; 10,000 foot soldiers; 120 pipers ; 4 governors of British colonies ; 1 goternor-general: 1 adjutant-general; 1 Chief Baron of Thgland; and 1 judge of the Supreme Court of Scotand. The generals may be classed thus:-8 Macdonalds, 6 Macleods, 2 Macalisters, 2 M Cashills, 1 M'Kinnon, 1
M'Queen, and 1 Elder. The Isle of Skye is 60 miles long, and 20 broad.

## fliscellaneous.

The Blessings of Peace.-During Sir Robert Peel's fecent speech on the distress of the country, he alluded in remarkable language, to the exertions of Marshal Soult and the Duke of Wellington in order to counteract the
efforts of the Paris papers to bring about a rupture efforts of the Paris papers to bring about a rupture
between the two countries. After describing this feeling between the two countries. After describing this feeling tine that that feeling has certainly existed, it is a remark whie spectacle for the citilised werld that the two men in the governments of their respective countries-are the two men the most distinguished in each for their military genius and fame. Those men have learned the art, and they have learned also the miseries of war in the fields of
Toulouse and of Waterloo. They have stood opposed to each other in the plain of battle-

## Contulimusque seta aspera contra

And those men, the best judges of the sacrifices which wat imposes upon nations, ate now exerting all their itfluence in the two cotintries to inclilcate letsons of peace. It is a glorious occupation for their declining years. The life of cach has been protracted beyond the ordinary term of human existence, and may God grant may each in their own land exhort their countrymen to lay aside all national animosities, and enter into a more glorious and honourable competition for increasing the amount of human happiness. And, sir, when I compare the conduct and example of these men, who have seen so many of whom were to be laid low in the grave before that sun should set-when I see them teaching lessons of peace, and using their salutary influence to discourage their countrymen from war-when I contrast their object the public journals, who are doing all they can to exaspe rate the differences that have prevailed, who misrepresent every action of two governments desirous of cultivating peace, who represent in France that the minister of ministers of England are sacrificing the honour of England in fear of France-- 1 do trust that the example of these tho inustrious warriors will neatralize efforts such as those to which I have referred, efforts not directed by encouraging national animosity or promoting personal or party viewn.'
Insanay.-It appears that within the last twenty years the above dreadful malady has more than tripled. The total number of lunatice and idiots in England is as follows: Lunatics, 6,806 ; jdiots, 5,741 ; together, 12,547 . But 14,000 ; an average of one to every thousand of the population. In Wales-lunatics, 133 ; idiots, 765 : total, $896 ;$ and adding for parishes that have made no returns, they may be set down at 1,000 ; a proportion of one to eight hundred. Scotland has 3,682 insatue persons, or one to
about seven hundred. In Ireland the number of lunatics and idiots exceeds 8,000 . In one thousand male patients insanity has been supposed, by an eminent authority, to bo traceable to the following causes relatively:-Drunkenness, 110 ; consequences of disease, 100 ; epilepsy, 78 ; ambition, 73 ; excessive labour, 73 ; born idiots, 71 ; misfortunes, 69 ; old age, 69 ; chagrin, 54 ; love, 47 ; accidents, 39 ; religious enthusiasm, 29 ; political events, 26 ; poisonous effuvia, 17 , ill-usage, 12 ; crimes, remorse, and despair, 9 ; pretended insunity, 5 ; malconformation of the skull, 4 ; other and unknown causes, 115.

## 亚abu.

Court of Cainciriv.-Attorney-General V . The Earl of StamWhich, he said, was one of great interest, as relating to the sube, which had afforded the means of training up many eminent men. His Lordship first disposed of the objection to the jurrisdiction of the Court, that an order having been obtained under Sir $\mathbf{S}$,
Romilly's Act, the appeal lay only to the House of Lords. The Romilly's Act, the appeal lay only to the House of Lords. Th
Court would alpays interpose where an abuse existed, and here the Attorney-General had taken no part, and he must have order must be atiirmed. His Lordship also agreed with his
learned predecessor, in thinking that cluidren of the mont tender years must be admitted, the origual fonndation directing them
to be taught therr "A B C." Ihe Lord Chancellor sart lio also agreed with Lord Cottenham, that the trustees must be chosen
from Manchester alone ; the original statutes enjoining that they of Manchester", 12 honest gentlemen and persons within the parish the other way, but the words were strict and must be so con
strued. No objection was made to the master taking boarders,
so that it was unnecessary to remark on that sulject. But by
the order mas the order now appealed apainst, they were deprived ot the bene-
fit of the exhibitions to the university; a very probable mutive
for their beeng placed at this school, and it was a prohibitiun
which defeated the ohject of allowing hoarders to be taken at
all. It was clear that no partunity was shown in selectugg the
candidates, and the feoffeeshad the power to alter the ordinances
exprensly conferred upon them by the founder of the school,

This part of Lord Cottenham's order mast, therefore, be omitted, to be received. His Lordship said, it had been argued that the education at this sthool ought to be ehtirely of a commercial conclusion. The tendency of classical literaturre was to sotten and humanize the minds of men; and establishments like that
under consideration afforded opportunities to the htimbler classes, by the exercise of dilligence, activity, and intelligence, to force ther, by the closest ties, all the various ranks and orders of society. Welsh $\nabla$. Gludstone. - This was a petition of eppeal on a ques.
tion of construction to be put on the will of Mr. Blundell; of Ince Blundell, which has before been paticed in this was Mr. Blundell's butler, took an annuity of 200. a a year;
but at the death of the testator he was in possession of but at the death of the testator he was in possession of
a sealed paper, which he had received some time before, with directions to present it to Mr. Blundells
death of Mr. Blundell. This paper contained checks for 500l. in Herbert Jenner, in the Ecclesiastical Court, admitted these checks to probate as testamentary papers ; but the Vicc-Chan-
cellor, in the surt for the administration of the estate, declared then to be revoked by a clause of revocation in the will, and also on a sound construction of the will itself. Hall then pre-
sented a petition of appeal. Mr. Roupel and Mr. Rult, in support of this petition, argued that the Court of chancery had no two papers: The act of the Vice-Chancellor amounted to a
declaration that the instrument which the Ecclesiastical Court declaration that the instrument which the Ecclesiastical Court Without annulling the papet. There was no pretence for saying
that there had been a substitution, nor dld the court say so: it merely declared that the gift was revoked; or, fh other words,
that the instrument giving it could not be held valid, although that the instrument gerbert Jenner, the competent authority in a court having to be entitled to probate. It had been said there was a revo-
cation, but, in point of fact, that was not so. The clause of revocation said that, "subject as aforesaid, and except as is
herpinafter mentioned," the testator gave all his personal property in such and such manner. Now, the checks in question
had been declared by the Ecclesiastical Court to be testamentary, and althotgh neither a part of the wall nor codiclls, they came
clearly under the hcad of exceptions made by the testator in the siastical Court had decired in their favoter; and would, if applied to, order payment of the checks, the Fice-Cbancellur had no power to xeflise it, by a decleration that the instruments were
void. Mr. Stuart and Mr. Fleming supported the order of the court, in construing a will, had the power to say whether, in its opinion, a gift was not revoked or satship that the papers in ques-
Roupel, in reply, reminded his Lordshi tion were clearly admitted to be testamentary, or else there
could not have been an argument. The questron was, could a court of equity say they had been wrongly admitted as such, for
it could not say they had been satisfied. The Lord Chancellor said he thought the question had taken a shape of some delicacy and difficulty, and he must consider it.
Vidil and Hurel.-A commission having been issued to the
Sheriff of Mifdlesex, to inquire whether and what amount of debt in the shape of duties upon goods imported from foreign
parts was due to her Majesty by Edward Vidil and Charles
Hurcl, the inquisition was held on Tuesday before Mr. Wilde peared from the statements of counsel, that the goods imported hy the defenclants were gloves, the duty upon which was very upon small-sized or ladies' gloves, $5 x$, a dozen for men's gloves,
and $6 \ldots$, a-dozen upon lasies' long gloves. The duty upon those articles being so very high, it wass of course, of considerable ad-
vantage to the public that it should be protected against such and Mr. Hurel, the other defendant, who resided in the Old
Jewry in this city, was his partner. They had been for a
considerable time in the habit of importing large quantities of gloves from Grenoble, and the inquisitiun was held for
the purpose of ascertaining the duty due and payable upon the purpose of ascertaining the duty due and payable upon
their importation. Mr. Bullock, a gentiman in the office
of the Solicitor of Customs, deposed, that of three cases of goods brought hy the karlequin, in 1840 , one which held
704 dozen pairs of causing a loss to the Crown of 1344 . 1228 . $6 d$. , ; and another, which
held 924 dozen pairs, and which ought to have paid 2311 . duty, in reality only paid 702. 128. 5 d, by which the Crown lost up-
wards of $160 l_{\text {. Again, that upon several cases of goods, which }}$, duty peyge whe 405 , the paid 130l.78, 2d., thus cheating the Crown out of 3641.1 . 138. 10d. On the 11 th of January, 1841,
the defendants cleared from the Selfast goods on which the duty payable was 185, , but on which they did not pay more than 432 .
$4.4 d$. The inquiry was adjourned to Thursday, when after a long inquiry Mr. Comnissioner Widde summed up at consider-
able lengtl. He explained the nature of this proceeding. He anid it was instituted by the Crown to ascertain the exact amount due. It was a preliminary step to a proceeding elsewhere. This
was the way in which the verdict would affect the parties. If they returned one for the Crown the defendants were at perfect
liberty to plead to the action and offer whatever defence was in their power. But if their verdict was against the Crown, it would be an estoppel to any further proceeding. After pointing
out the issue in dispute to the jury, they retured, and in half an hour returned a verdict in favour of the Crown for $6,322 \mathrm{~h}$. . charged with the wilful murder of a person anknown, at Zapzibar, in the dominion of the 1 manm of Muscat, on the 26 th August,
1842. It appeared that the prisoner, then a sailor belonging to the Earl of Clare, and one or two others, were drinking at the house of an Arab, and that some disturbance had arisen. Shortly viously, returned, saying, that he had stabbed a native who had made an assaut on hima On search, the body of the dead man British Government, prefersed delivering. Dawson up to be tried by the authorities in England. The evidence was not such as to
warrant a conviction, and the prisoner was accordingly acquitted. Tis Circuit.- (Norwich).appeal from the decision of Mr. Matthew, one of the tithe commissioners, allowing a modus of 68 . in lieu of the tithes of 660
acres of land, in the parish of shipdham, the property of the de-
fendant. Mr. Matthew considered that mudus to be satisfactorily established, and the pentifi brought the pregent issue to try the vallity of his determination,-The solicitor-General appeared for the defendant. The plaintiff is rector of the parish of Ship-
dham, and defendant is a gentleman of large fortune, and owner a considerable cstate in the same parish. The lands in respect of which the modus is payable form a portion of that estate, and
were in very ancient times a park, though in comparatively modern times they had been brought into cuitivation as a farm The plaintiff traced up the existence of the lands as a park to the
time of Edward VI. In the fift year of that reign the Bishop of Shipdham, with the lodge, parri, and hord's clone, parceln of the
demesne wrst of the park, and a certain pond in the park.
Between that year and the third of Elizabeth the estate passed
out of the Bishop of Ely into the Crown, she having in that and out of the Bishop of Ely into the Crown, the having in that and
a subsequent year of her reign granted the lands to the Wodehouse frmily at a fee-farm rent of $21 l .65 .5 \mathrm{~s} .5$. During the Com-
monwealth the Pariament bethought themselves of raising monwealth the Parliament bethought themselves of raising
money by the sale of this fee-farm rent, and in the particulars f sale it wras stated to be eharged upon these lands, whed wer Bishop's lease. The estate, having remanged in the Wodehrsuse family for some years, became vested in the noble family of the Cornwallis, the last possessor of that title. In 182d, the trustees the Marquess sold it, together with other property, by auction. of Shipdham. In the particulars of sale the lands covered by the
modus were described as free from the payment of tithes in kind, and liable to a modus not exceedrog 10\%, it was, thers added they found them, and not require any covenant as to the title-
exempton. At this sale the plaintiff became the purchaser of the adrowson, and the defendant of the estate in questions a and was less than it would otherwise luave been had nut these jands other hand, paid a highar price for the lands in consideration of the payment of the tithes in kind. Indeed, the advowson of the Iiving, which is said to be worth $1,00 v l$, a-year, was purchased
by the plaintiff for 9,000 . In order to
thove the exenption from tithes, it was shown by defendant that in 1707 one Mr. 'Nuwns-
hend was the incnmbent, having been presented by has relation, Lock, his son-in-law, in 1754 ; he by Dr. Edrldge, in 1804 ; and
the reverend doctor by the plaintif in 1826 , about two years atter the time of his purchase. The names of the successive occupiers of the lands so often mentioned, Which are at this day re-
spectively called the Park Farm, Cordy's Farnm, and Peck's Farm, were then shown; and a series of accounts in the lyand-
writings of Mr. Townshend and Mr. Bullock was theo given in evidence, by which they, the then rectors, acknowiedgea to lave
received the sum of $6 s$. . $\mathrm{rom} ~$
7444 to 1804 for tithes of the land and the payment made year by year by the respective uccupters.
One of the occupiers, who was also tenaut of other lands, held under a tit derived from sir Ralpha Hare, paid tithes for those same accounts which contained the entry of the 6k. The same thing also took place as to the "Lord's close, which was leased
with the park by the Bishop of Ely in the reign of Edward VI.,
and is tithoule. A letter, written in 1799 by Mr. Bullock, the then rector, was also proved and read. it was written to an agent of Lord Townshend, then owner of this estate, thu stated
that the lands held under the title from Sur R. Hare, and also he
"Lod's cluse," were subject to tithes in kind, but that tie undcrstood that the lands in question formed a portion of the ancient
Shipdham Park. The motrus was sait by defendant to be payable annuaily at Lammas, and that lact was showt park were very
rectors' recenpts. The boundaries of the anclent
clearly defined and described, and the site of "t the pond in the park," mentioned in the bishop's lease, is sthl traceabie, thougi the dury on behalf of the plaintiff, contending that the case of to prove, in order to deprive the rectur of the rigit to titice in
kiad, to which he was entitled at combuon law. Lorit chef Justice Tindal summed up the evidence withe the sary to say whether it sathsfied them that the modus
and decided it to De payable; observing, that prima facie the ind kind, and that it was on the defendant to estaibish the mudus
relied upon by
defenclant, thus
 bringrug it to trial, was brougit on last week, and, aiter a coln-
saderable delay, 11 was found that only six syecral jurymen wore
present iendant not agreeing to have a common jury, wint thicw de the
record. Thit is the fourth time that this cause has come to these Assizes for trial, and in one instance only has a verdict been
returned. The first time, the case was abruitiy closed on the ridge) who presided, being obliged to leave inmedately to open of Gulty was returned, thus determining the xnght of the putlic for a new trial, which was granied, aunt was to have taken place guard against the recurrence of such a contingeney, the judges, curing to themselves the whole of the niterval betore the commencement of Easter Term. But a misunderstanding alose as tu on purpose for the trud, it is again postponed. This matter has ously was, because old wrinesses die off, as many are preav to toon, and a view is had, of course every few months will tend to
diminish the traces of its existence, and in this case the defell dant has inclosed the whole of the ground, so that no one cau
use the path, and the public are enturely excluded. Auother
remarkable circumstance is, their case; they must, therelore, have all thear witoesses 14 ntcase, bring them to kxeter for some days. It seems dulbilul
whether the care will ever be tried. Fither the judges will not spectal jurors in attenuance, because the jurur would ratiser give 10t. than sit in a jury-box for a week, to say nothung of the
amount of his tavera bill. In the meantime he paih is clused, aud the public have lost the use of to Northbre Cibcuit.- (Liverpool.)-The trial of Mary Hunter,
on a charge of murderimg john Hunter, her husband, at Manchester, which commenced un Thursdoy morning, concluded on
Friday, and ended in the prisoner
the acquittal by he direction of several of whom were examued; and which, colapled with the
fact that no poison was detected in the stonach of the deceased in his Lordsluy's opiniun, lett it too doubtiul a matter to convict Elizabeth Buckicy, at St. Helen's, on the 27 th Novenober last.
 excited leelages; hiat in pripustion as the cueceased was fond o jealuosy, |lor which, as the evidence dimonstrated, she had too
inucuscason. The learsed Counsel procetied to show that the field had a hlorungifare where the body was found, ath was of

J.WEEKS \& Co., ARCHIXECTs, \&c., Gloucester place, King's sroad, Chelsea, Hothouse. Builders and Hotand Gentry that their business, which has been extensive throughnut the country for many years, is entirely confined to description, and the HEATING of them by HOT WATER.
CONICAL and other BOILERS of all sizes; their largest sumes but a small quantity of fucl, only renuiring attention once jength.
Their improted plan of BOTTOM-HEAT FOR PITS, by means of an open trough under the bed, is now being universally adopted.
References may be had, and their works secn at most of the of the London Nurseries, and a great variety of Horticultural Erections and Hot-water Apparatus, Morels, Plans, Estimates,
\&e., at tbeir Horticultural Manufactory, Gloucester-place, Cliel sea, near sloane-square.

HOT WATER FOR BOTTOM-HEAT.

J.WtEtS \& Co., Architects, \&cc., Gloncester-Place, Apparatus Manufacturers, seeing that several parties pretend to lay claim to the Open Trough Tank, or Gutter system of heating,
J. W. \& Co. here lay before the Horticaltural world their practice respecting it, they having fixed and circulated water in open be seen that have been fixed that time, at David PuGh', Esq.,
Welsh Pool, Montgomershire; the Dulk of BrDFond' Woburn; Sir EDMOND AnTrobus, Cheam: and up to the present
time they could give a list of 200 names, where they have fixed that principle, or their improvement on it. The above sketch
represents a pit, shewlng the principle for the purpose of BottomHeat, which answers well. J. W. \& Cor solicit an insprection of
their improvements in Building, Heating, and Ventilating, at IH OTHOUSES, CONSERVATORIES, \&c., Made two, and three-light cucumber and Meion-Boxes and Lights of
 Claremont-place, Old Kent-road. ${ }_{*}{ }^{*}$ Reference given.

When buildings for the shelter of plants in winter Were first thought of, large rooms with upright windows were the means employed; and hence the oldfashioned conservatory (or hibernatory), such as still exists at Kensington Palace, Hampton Court, Kew, and other old gardens, and as was but a few years since contrived in the ditch of Windsor Castle terrace garden. But as gardeners gained a better insight into the nature of plants, they found that light was as necessary to healthy vegetation as protection from cold; and then arose the glass sheds with
lean-to roofs. Afterwards, when Priestley, Senebier, and others, had explained the nature of the solar action upon plants, ingenuity was taxed to secure the greatest possible quantity of light in plant-houses; first, a southern aspect was regarded as indispensable; then was calculated the angle of slope which would enable the sunbeams to strike the glass roof most directly at all seasons; next, rafters of wood were regarded as curvilinear roofs, with all that lightness and beauty of curvilinear roofs, with all that ightness and
appearance for which they are so well known

But there has long been an opinion in the gardening world that span-roofed bouses are in some respects better than lean-tos; probably because of the impossi-
bility of turning to common greenhouse; and buildings of that description are now becoming common. It has even been modern inventions are specially directed to secure, is as advantageous to plants as has been supposed. But common sense tells us that under no circumstances can plants in glass houses receive so much light as nature would, with certain exceptions, give them out of doors; and experience shows that, with proper management, the health of plants is generally in pro portion to the amount of light which they receive. Many plants, indeed, grow naturally in woocls and secluded places, and to them brignt sun-light is plants. But they form the exception, rather than the rule, and in no degree invalidate the law, that if plants are to be kept in the best possible health, they must have the greatest possible natural light
It may, however, happen, that strong light is dan-

 hime

 Saloming praxienhas
In the opinion of Mr. Macnab the span-roofed sume rumning north and south is not only better in ${ }^{6} \mathrm{~F}^{2}$ or example, in a span-roofed house, extending air can be freely admitted, from whatever direction

 scarcely at all required; for if there be a free circula-
tion of air during the autumn and winter months, and if the tables or shelves be carefully kept dry and clean, and water be sparingly given to such plants only as require it,-cold, even though it should extend to will occasional freezing of the surface-soil of the pots, wil fire-heat. Mr . $\mathrm{M} \cdot \mathrm{Nab}$ has found the same kind of
of plants to become soft, spongy, and drawn up, in the lean-to house, which continued hard, woody, and dwarfish in the span-roofed house. Last season he kept a number of fine Cinerarias and Pelargoniums in houses of both forms. Atter a severe frosty night in
January, they presented in the morning much the same appearance in both houses, the leaves drooping and being covered with a white rime, resembling hoarfrost. By ten o'clock the sun shone forth. The plants in the lean-to house were subjected to the full influence of the mid-day rays; and, although air was given, they blackened and perished. In the spanroofed house, extending north and south, theinfluence of the sun was much less felt; for as he proceeded towards the meridian, the intercepting astragals and rafters necessarily formed a screen or shade; and air
being given, the plants survived, and soon recovered.
"Amateur cultivators, who like to possess a small greenhouse, and to manage it for themselves, ought to prefer the span-roof form; and from Mr. M'Nab they may learn this important lesson-that by an night in the beginning of winter (a common fault), they not only incur unnecessary trouble and expense, but do real injury to their plants, which would suffer little from cold, provided air were made to circulate freely among them, and damp were guarded against. The beautiful tribes of Erica and Epacris will suffer little or nothing in a cold greenhouse, although the thermometer in the open air may indicate several degrees below freezing, while the sudden application of fire-heat will probably kill them.

Mr. M Nab mentioned that the superiority of the span-roofed form was strikingly exemplified in the Society's Garden about the middle of February last (1843), when the self-marking thermometer in the open air, during different nights, indicated $20^{\circ}, 15^{\circ}$, whatever $10^{\circ}$, Fahr. During these frosts no heat contained a general collection of soft and hard-wooded greenhouse plants. On the mornings of the 17 th and 10 th February, the mercury in the thermometer within the house stood at $25^{\circ}$, or seven degrees below freezing; yet only two or three plants, which were
standing near the upright glass of the south end of standing near the upright glass of the south end of the house, and were thus exposed to the mid-day sun. suffered from the intense cold to which they had house alected. The temperature in the span-roofed the lean-to house. This was signally remarkable at 1 P.M., of the 14 th February, when the thermometer in the open air indicated $56^{\circ}$, in the lean-to house $70^{\circ}$, and in the span-roofed house $43^{\circ}$. In the lean-to house, therefore, where the whole glass roof was fully exposed to the sun's meridian rays, the temperature thus becoming 14 degrees bigher than the open air, and 27 degrees higher than in the span-roofed house.

Having enlarged on the advantages of this form of greenhouse during winter, we shall only briefly
state, in conclusion, that, in the warm weather of state, in conclusion, that, in the warm weather of
summer, the span-roofed house admits the freest possible circulation of air, by means of upright sliding sashes on both sides of the house; while the rafters and astragals of the glazed roof break and intercept the sun's rays, and help to shade the plants from their direct influence; and that in such a house the plants, instead of being drawn up and weakly, continue firm aild bushy-that they remain much longer in flower -and that the colours of the flowers are generally brighter.

Although, as is apparent from the observations with which we introduced this matter, we do not feel disposed to assent to the justice of some of the latter statements, we freely concede that north and south span-roofed houses are very convenient, and that, in so far as abating the injury from frost is concerned, they are far better than lean-tos. But we must at the same time cantion our readers against assuming, that, because such span-roofs have these merits, they may be applied so all purposes with advantage. We do not think they can be used at all for early forcing, and we nuch doubt whether they will suit any kind with similar habits.
Ir the intersection of a country by good roads, formed upon correct principles, be-as it surely isone of the greatest means of rendering the resources of a country available, and of civilising its inhabitants, so, on the other hand, is a universal and cousistent
construction of water-courses, to drain the land, second only to the former in impurtance. If the first enables the inhabitants to move their produce freely from point to point, the second places within their reach the means of obtaining the greatest attainable amount of
produce to be moved: if the one softens their manners by the facilities it gives to the spread of metropolitan refinements, the second no less efficiently contributes to their comforts by the removal of insalubrious vapours. The drainage of a country, however, not being attended by such self-evident advantages as its high-roads, is much more slowly appreciated ; and it is only when the exhausted soil refuses to yield the tenant and the landlord their accustomed profits that its real importance begins to be felt. That people are now aware of it in this country is sufficiently shown by the many drainage associations which are rising into vigorous existence.
But in an old and densely-peopled country like England, it will always be found that the very best measures are thwarted by conflicting wishes or personal prejudices. If one man is enlightened enough to understand his real interests, his neighbours may not have arrived at the same point of information, and their opposition will then thwart his measures wher ever co-operation is required of them. We have no right to do men good against their will, still less are we entitled to compel others to enter into plans which they dislike, however advantageous they may be to them. And hence a great difficulty in carrying out any general measure of public utility: so great, indeed, that nothing short of legislative interference can reThe
The general drainage of the country is exactly such a case. A man who chooses to sow his garden with Blackberries can do so if he likes, and his crop will be neither better nor worse for his neighbours' acts. If he succeed, their assistance was not necessary to enable him to do so; if he fail, his ill success is nothing to them. Cropping, then, and all the general details of cultivating the soil, are without the pale of legal interference. But drainage is a very different affair. A may be anxious to drain his garden, but his neighbour $\mathbf{B}$ cares nothing about the matter, or perhaps has a spite against him, and will neither help him nor allow him to do so. A's land is a little higher than $B$ 's, or $B$ lies between $A$ and the outfall, and then the opposition of $B$ puts a stop to A's plans. A is an honest man, working hard for his living, and perhaps with a family suffering in health from the swampy nature of the soil. B, on the other hand, is a lazy careless fellow, and does not know the look of a doctor's bill ; but B's acts compel A to put up with scanty crops and pexpetual sickness. This is so manifestly unjust, and so frequent of occurrence, that the law has long since attempted to provide a remedywith what ill success the state of the whole country can tell.
