 ciples, and at jery moderate charges,
EDWARD BALEY, 272 , HOLBORN.
D. and E. Barlys having devoted much time to the consideration of this subject, and had much experience in the erection of
apparatus for the above-mentioned purposes, have, $y$ in mprove apparatus for the above-mentioned purposes, have, by improve-
ments suggested in their practice, rendered their mode of ofeating not onty very efficient, but verf, simple, and have combined
durability in the apparatus with economy in the charge. Ther
 many noblemenp and gentlemen, and have had the honour to be employed by the Horticultural Society of London, in execating the Works of their splendid Conservatory, iately erected at Chiswick. D. and E. BArlery also construct in metal all desctiptions of
Horticultural Buuldings and Sashes, and invite noblemen, gentlemen, and the public to an insinection of their yarious draving and models, at 272, Holborn, where they have the opportunity of xhibiting, amongstother metal works, an extremely complete and onvenient kitchen apparatus, or range, adapted for the continued plete than has hitherto been brought before the public. D. and E. BAileEX were the first to introduce metallic curvilinear houses to horticulturists, and can refer to the Conservatory
attached to the Pantheon as one of their works, besides many attached to the Pantheon as one of their works, beaides many
others in this country and on the Continent. D.and E. Ballesp have prepared a quantity of the Galvanic Plant beg to introduce to public notice a new Trough Pipe, for ; Orchi aceous or other Houses where tapour is constantly, or at interMHE CONICAL HOT-WATER BOILERS invented SHEWEN, Ironmonger, \&ac., Sevenoaks, Kent. PENN'S SYSTEM PERFECTED-FOR OBTAINING A FREE THROUGHOUT HORTICULTURAL \& OTHER BUILDINGS. Horticultural suildings of every kind-to command the above nessed the gradual improvernent in the adaptation of this prin ciple to almost every variety of Building, begs to announce to
the Nobility and Public generally, that he erects CONSERVA the Nobility and Public generally, that he erects CONSERVA-
TORIES, HOTHOUSES, PITS, \&c., \&c., upon the above system, great perfection, and leats the same by HoTwATER Appagatug,
with improved Tube or Conical Boilers. W. Hinl also adapts Dr. Abnott's New balanced Regulator to the Boiler apparatus, by which an immense saving of fuel is effected, the greatest
regularity of Temperature preserved, and much time and trouble saved. PRNN'S SYSTEM only requires publicity to be appre-
ciated. The Pablic are therefore invited to inspect its efficient woiking at the Inventor's Residence, Lewisham. The great end gained by adopting this system, is a perfect and rapid Circula-
tion, producing consequently an equable temperature throughuut tions, proucing consequently an equabe temperature throughout
the building (of whatever construction), and renders access to it at all times safe and agreeable, ladies of the most delicate constitution being enabled to remain for hours in a temperature
greatly exceedmg summer-heat, with as much comfort as could possibly be derived from an out-door temperature equal.y high. system to Forcing-Houses in particular, to Mr. JobN Wilc.not system throughout his extensive Establishment. Dosigns, and any further information,

## SATURDAY, JANUARY 7, 1843.

$W_{E}$ some time since mentioned Mr. George Crawshay's late Grapes, produced without fire, at Colney Hatch ( 1842, p. 608 ). At the meetings of the Horticultural Society in November ant December they were exhibited, and were allowed by all the Grapegrowers present to be as good as Black Hamburghs can be, and much better than they often are. We had the good fortune to receive bunches of these Grapes again on the 1st of the present month, and they were still as fresh, as plump, as sweet, and in all respects as excellent, as they were two months before; not shrivelled, not decaying; but firm, covered with bloom, their fruit-stalks green, and in quality all that a Grape can be.
Mr. Crawshay says, that, to preserve Grapes thus long on the Viness, and in such perfection, nothing and plenty of fresh air. To excess of heast during the spring and summer, particularly during the month of May, when the shoots are tender, and to an insufficlency of air, if the weather is damp or cold during the months of October, November, and December, he These are the general failure of the late Grape crop. These axe important facts for the Grape-grower to bear in mind.

Let us return to the all-important subject of employing the poor in the work of drainare; for every week is adding to the inmates of the Unions.
Draining, whether considered as a means
or as a rational benefit, is of the highest interest and of the most urgent necessity. It is in actual evidence that by the mere removal of stagnant water, without
further outlay, land which had grown two or two-and-a-half quarters of Wheat per acre, has at once produced three-and-a half and four quarters. This well-ascertained fact renders all reasoning as to causes superfluous in a practical point of view. The necessity of doing something is, in fact, admitted; the dif. any one takes to drainage independent of his neighbours, the acts of one man, or his inaction, may render other proceedings ineffectual. What we trust will be done is the passing of some general Drainage Act, which shall give consistency and union to one general operaBion all through the country. Upon this point, Mr. Bailey Denton's views appear to us extremely well Worth the consideration of Government, which, we suing session of parliamerst the initiative in the extLet us, how parliamelit.
Let us, however, not be misunderstood : we do not
desire a measure which shall compel everybody to desire a measure which shall compel everybody to do so or not ; all that we wish for -all, indeed, that it would bo prudent to propose - is some neneral enactsuent, which shall facilitate the effectual drainage of moposition to compers drayay desire so to improve. Auy Snet by a direct neçative from the landed interest ; but fion is from experience, that, so long as the nperafion is ulfull. dependent on indivitual exertions, will feel. Look such propess made in it as the nation 1840 , which Look, for insiance, at Mr. Misey's Act of lands. noo moy by way of mortgage to drain their which this very of our readle measure know a single case in vautage of?. IH cknow of none; and from this fact legislative pelled to infer that there is wanting some the gradual and completh shall induce, tot compel, Among the sugd complete drainage of our heavy lands. Anowg the suggestions that have been offered with a chicroaching on general system, of drainage without seems the most priacticable. This gentlemaur recom. mends that means should be immediately taken to which now stagnate on the surface, during floots, in wet seasons; and he is of opinion, that if this were once effected, under-draining of neighbouring lands
would certainly follow; for the effect produced by the
one would render obvious the advantage and case of one would render obviou
To do this with the greatest bencfit to the country, it would be necessary to clear and improve all the more important of the watercourses which now intersect thosc valleys. where, in collscquellec of some barrier, or the insufficicucy of size in the channel of such
streams, the accumulating waters or erflow, aud, becoming slaynant, sour the atjoining pastures, and destioy the alumm-sown coril. In those valle!s where there are no natural Watercourses, and where the waters collect on the surface, producing even worse effucts, open public drains would have to be made, connecting such valleys with enme natural strean. public mains, and would form over all the country a general network of ready-formed outlets for the use of the cultivators of the lands through which they pass at any time when the price of labour and pectuniary means may induce them to undertake such work. This would be a prodigious advantage, and might be economically obtained. There would then be no cases in which a want of outfall, or the ill-feeling of It neighbour, would stand in the way of draining. It could not háppen that one person's land would be deluged by the refuse waters of his neighbours. An enterprising, sensible, market-gardener could not then be inundated by the unwillinghess of a man on a different land, who refuses to join in the work of drainage. But in this undulating country such instances must continually occur, if nature, unassisted by art, is to guide descending waters to their matural outlet.
Our readers have only to turn to Mr. Chadwick's Sanatory Report, p. 305 , (where he relates a case that may be taken as the type of many) to find evidence of these evils. They are however so common, that few will read these remarks without feeling their application to some instances with which they are peronally acquainted.
Difficulties like these would cease if the principle, that every landowner, large and small, should have outfall for injurious water, were made the basis of an Act of Parliament. The amount of compulsion involved in such a measure would be merely the authorized entry of scientific officers to direct, and of labourers to
construct, the main drains, which, with few excer construct, the main drains, which, with few exceptions, would be confined to the valleys; those exceptions being along the junction of the out-cropping of clay overlies the chalk, a drain along the junction would intercept the water running off the clay, which water would otherwise drop down into the chalk tentil it reached the subterranean level of the water in that formation; and, vice versa, where the alluvium of the valleys outcrops along' hill-sides upon porous strata, the springs which exude at the junction would be caught in a receiving drain for after application.
The present state of the country bears ample testimony to the necessity of a preliminary public mea-
sure for the improvement and preservation of outfalls and watercourses upon the thiree fundamental principles of drainage laid down by Sir John Rennie in his vindication of the plans of his father, of Smeaton, Telford, Milne, and others in the Middlefen drainage, viz., "The improvement of the outfalls and channels of rivers; the judicious construction of inferior drains for low-land waters; and
catch-water drains for high-land waters." When this great engineer used these expressions, he was alluding, indeed, to the great work of fern-drain-
age, which, as requiring great engineering talent to carry out effectually, has ever been considered as a distinct matter from the drainage of heavy uplands; but we think the present season, and indeed all prethat there exists some analogy with the two works: and that with all the under-draining in the world, the valley lands will not become as profitable as they are capable of becoming, so long as the water
hagher lands may stagnate on the lower lands.
The worst pastures are the lowest lands; and since all evidence goes to prove that there is not an acre of mand a "ready outfall for its superfluous water, and which consequently is not susceptible of thorough draining, a fresh field for the employment of the poor opens itself to the view of agriculturists.
Let us suppose that by a general meas
mprovement of outfalls the landlords and tor the became united in an earnest wish to make the most of an advantage which would then be readily attainable, and that they set about underdraining in good earnest : the immediate effect would be to convert into arable land all those low, inferior pastures which are now overflowed; the tillage of these would create a
large instant demand for labour, and a wide extent of land peculiarly fitted for the growth of Wheat would be gained to the nation. These are points in themselves of no small magnitude. In addition, we may with certainty anticipate that, as, in the case of parish and turnpike roads, emplos, as, mo the case of paxisurn
hands is found, so would the parish drains, if under skilful management, create a like dernand.
We cannot but think that, with such security atid assistance as the measure we this addocate would afford, the landed intertst would be aroused capital, and to supanies would be formed to find capital, and to superintend great works of underdraining; and the Unions would be relieved of the present excess of inmates; while the cost to the country would be repaid by the profits on the uses to which the waters thus obtained might be applied, if made the velucle of carriage for the refuse of towns for irrigation, and as a moving pozoer; thus turning a present evil into a future benefit. To these points we shall again advert.

WHEN, about a twelvemonth ago, we noticed an account by Mr. Potter of his Artificial Guano, we expressed an opinion that it ought to be a very power-
ful manure, and recommended our readers to ful manure, and recommended our readers to try it.
We have now lefore us some returns which show that our expectations were frot unfounded. Mr. Cotton, of Hildersham Hall, near Cambridge, used it for Barley, and obtained 6 quarters per acre; on Grass land the ordinary produce of Hay was doubled. On Orange Mavgel Wurzel the result was still more yard manure a square yard dressed with common farmyard manure produced 27 lbs., another, dressed with Potter's Guano, 40 lbs ; the heaviest root of the latter weighed $15 \frac{3}{4} \mathrm{lbs}$., others 12 lbs and 13 lbs . The soil was light, with chalk close to the surface. The following was also the result of an experiment on rich old meadow land, resting on limestone-rock, at Aske, the property of the Earl of Zetland:-
"Tive separate plots of land, a quarter of an acre each, were was staked off, containing 150 square yards. They weere preated was staked
as under:
ist plot,

"The following was the weight of the Hay on each separate plot,

These are very remarkable results. At the rate of weight obtained by Mr. Cotton, 87 tons an acre of Mangel Wurzel were produced, which is more than double the usual maximum. And the quantity of Hay in Lord Zetland's experiment was sufficiently great to show that this substance may be employed on Grass lands with very decided advantage.
ON MANURING WITH GREEN CROPS.-No. IV. (By Prufessor Chafles Sprengel. Translated from the German).
of 1542 .)
The Velold (Vicia sativa).-This plant is also sown for green manure, especially in the south-west of Germany. But, considering that this is best accomplished by plants yielding an abundant herbage, it is advisable to select that sort which is a hybrid between the Pea and the Vetch and which yields a far more abundant herbage than the
common Vetch, especially if the land has been manured common Veto
with gypsum.

If tire common Vetch is not sown too late, the Magdeburg acre will yield, on an average, 6500 or 700016 .;
whiist the hybrid Vetch will yield $80001 \dot{b}$. and more, herbage and roots taken togetber.
10001h. of green Vetch consist of
750.0

## 4.3 " watrogen (containined in the vegetable subpotash. soda. linie. <br> magnesia. <br> sulphuric acid. <br> phosphine. <br> carbon. <br> hydrogen, oxygen, silica, magnesia, alu- <br> [mina, manganese, and oxide of iron.

## $1000,01 \mathrm{~b}$.

If then green Vetches, ploughed in land, will weigh 70001b, the furrow-slice will ubtain about 301b. nitrogen, 231b. potush, $1 \frac{3}{4} 1 \mathrm{~b}$. soda, 281b. lime, $5 \frac{1}{4} 1 \mathrm{~b}$. magnesia, 71 b . suiphuric acid, 211 b . Phosphorus, 21 b . chlorine, and 8751 b . carbou. That this manure is not equal to that of the Lupine is seen at once from the above, and is confirmed by experience
If Vetches are to yield any considerable quantity of fofder, the soil mast be pretty fertile. In the Rbenish it for (wreen manure in most flourishes) the farmers sow Wheat, Rye, and Spelt, and it is not ploughed in till late in aatumn, when bitten by frost, because in this case it in atunn, when bitten by frost, because in this case it
decomposes better and fuacker. In the following spring Barley is sown, and this green. In the following spring is considered equal barley is sown, and this green manure is considered equal
to a small dressing of dung. The soil of this province consists of a fine humous loam. Before ploughing in, the well huried. It will not be advisable in northern coun-
ries to sow Vetches as a fallow crop, because they require, sven in the midst of summer, 10 or 11 weeks ${ }^{3}$ time to come into blossom. If they are sown in the beginning of April, they can be ploughed in by the middle of June, and the land can be fallowed by a second crop of Vetches, or still better, of the larger sort of Spurry. The objections to sowing Vetches are, that they often fail; that their roots do not reach deep; that they suffer from wire-worm, and that the seed is expensive. I do not much recommend them, and there are other plants preferable for green manure. At times they are sown with Beans, when a greater mass of herbage will be obtained; the latter, however, require a yet stronger soil than Vetches. Beans, however, have this advantage, that their roots reach 6 or 7 inches deeper, and they thus loosen heavy land better. The seed of Beans, however, is still dearer
4. Buck Wheat.-Buck Wheat has been often praised as a superior plant for green manure, but I have much reason to doubt it. In the first place, its success is too precarious; it yields little herbage, and that is very watery. If it succeeds well, one Magdeburg acre orband wil yeld 1001 l . green consist of
820.01 b . of water

$$
\begin{aligned}
& \text { water. } \\
& \text { nitrogen (contained in the substance of } \\
& \text { [the plant). } \\
& \text { potassa. } \\
& \text { lime. } \\
& \text { magnesia. } \\
& \text { sulphuric acid. } \\
& \text { phosphoric acid. } \\
& \text { chlorine. } \\
& \text { carbon. } \\
& \text { hydrogen, oxygen, silica, alumina, man- } \\
& \text { [ganese, and iron. }
\end{aligned}
$$

## 10001 b

If, then, an acre yields $5,000 \mathrm{lbs}$, the furrow-slice will receive 10 lbs . nitrogen, $7 \frac{1}{2} \mathrm{lbs}$. potass, $7 \frac{1}{2} \mathrm{lbs}$. lime, 10 lbs. magnesia, $2 \frac{1}{2}$ bs. sulphuric acid, 4 lbs. phosphoric acid, and $500 \mathrm{lbs}$. carbon, \&c., which small quantities cannot produce any great result. Whenever I have used Buck Wheat for green manure, I have always returned to my former resolution, not to do so again, the result being ferred, for the seed is less expensive, and its roots penetrate quite as deep into the ground. In heath-soil, however, Buck Wheat will succeed better than Spurry. I have often found by experiment that manuring it with gypsum will not improve the former, because it obtains the small amount of sulphuric acid required for its
chemical constitution from rain-water. It generally requires only the atmosphere for its growth, and can support a great deal of heat and drought; on the other band, it is more susceptible of wet and cold than most otmer cultivated plants. It never suffers from notwithstanding caterpillar; in short, it is a plant which, notwithstas same if it its disadvantages, and and grows luxuriantly, it will destroy all Couch-grass, and grows luxuriantly, it will destroy an Couch-grass, and The latter must on no account be forgotten, if Buck Wheat is used as green manure; and if its failure seems
certain, it should be at once ploughed in. This is, in fact, a rule which ought to be observed with regard to all plants grown for greea manure. Nitrogen, potass, and magnesia, seem to be the most important agents in growvegetates most luxuriantly, which proves that, notwithstanding its broad leaves, it does not receive much nitrogen from the air.
In the middle and south of Germany it is sown in autumn in Corn stubble, and ploughed in after having attained $\frac{13}{3}$ to 2 feet in length. In the north, however this is impossible. It only acts during one season, which is explained by the small quantity of its chemical con stituents. As it branches a good deal, it need not be sown thick; 55 to 60 lbs. of seed per Magdeburg acre will suffice. Before it is ploughed in, it must be harrowed over, and a few days afterwards the crop can be sown.

> (To be continued.)

CULTURE OF CELERY IN BEDS, AND THE ROTATION OF CROPS.
In an extract from Hovey's Magazine of Horticulture, and also in the notice of the garden at Patteridgebury, allusion has been made to the cultivation of Celery in beds. As my system of growing that vegetable in beds differs a little from that generally practisea, in so prior to make the beds available for various pithout interest to planting the Celery, if in give a short detail of it.
In the autumn, after the crops are cleared, the ground which is intended for Celery the following season is marked out in beds, 4 ft . wide, running from north to south, and the mould in every alternate bed is excavated to the depth of 14 inches, being placed so as to form Endive or Winter Lettuce, which may be considered the Endive or Winter Lettuce, which may be considered the cleared from the pleasure-ground and garden, they are wheeled in to the trenches to the depth of, when pretty solid, one foot; and are occalionally turned so as to get
the various ingredients equally commingled. In February the various ingredients equally commingled. In February the leaves in each trench are collected into two or three by gradual admixture fermentation in the whole mass. This, after it has attained a proper heat, is levelled equally over the bed ; and, if the heat is not too violent, is covered
4 inches thicls with mould from the sides of the ridges,

Fern or dry litter.
At the time the fermentation of the leaves and dung commences, a sufficient quantity of Ash-leaved Kidney Potatoes to plant the beds are placed on the floor of a orcing-house, and covered to the depth of incli with eaf-mould, or any other light soil; or where there must the convenience of a forcing-house, a slight hotbed mos be made up for the purpose of starting the Potatoes, About the middle of March, all things being favourable, the Potatoes may be planted in rows, 1 foot apart and 3 inches deep, in the soil before alluded to; making choice of the crown of the Potato only, and reserving the lower parts to plant in a bed by themselves, or in the natural ground ; for it is a fact worth knowing, that in Potatoes planted on the same day there will be a fortnight's difference in favour of the crown over sets taken from any other part of the Potato, by the time the produce will be ready for table. After the planting is finished, it is necessary to rake the surface of the beds smooth and fine, to prevent as far as possible the heated air confined between the interstices of the soil from escaping, and to prepare the ground for a crop of Radishes.
When the Radishes are sown, the Fern or litter may be returned to the bed, and need not be removed again until the Radishes are up; after which, it must be removed in a morning and returned in the evening, until the Potatoes are so high as to require some more effective protection. For this purnose, common sheep- on the ridges on each side, are an excelient covering; but where ridges one expensive, method of hoops and mats may be resorted to. The Potatoes will require little will be ready for table in April and aill throw up wore tha more leaves than can he properly axposed to the light. These form the send and third crops. In the end of Tebruary a Sown along the Knight's Dwark Marrw if the Endive is removed to a house or frame to blanch, a row of autumnsown Lettuce moys blanted on each, side of the which will form the fourth and fifth crops. In June, after the Potatoes araused, the beds must be dug over, the soil being thoroughly mixed with the dung ; they will then be ready for the sixth and last crop, which will be the Celery. If Celery of superior quality and unusual dimensions is desired, it will be best to replace the soil that the Potatoes were grown in by a layer of compost, six inches thick, consisting of good mellow loam and peat-earth This must be mixed in equal quantities with the leaf mould : and it would be advisable before planting to give the whole a thorough soaking of ammoniacal liquor, or some other rich liquid manure. A mixture of vegetable matter of this kind, in a half-decomposed state, have Celery : it is not superior in flavour only, but also in size and texture. For my first crop of Celery to be ready for table in August, I sow in shallow pans or boxes about the middle of February, and place the pans in heat until the plants are half-an-inch high; I then remove them to \& moderately warm frame, to harden. They are pricked out on a gentle hotbed, in leaf-mould, at about three inches apart, in April.--Juden.
(To be continued.)
TRELLIS FOR CLIMBERS.

AMATEURS' GARDEN, No. I.
In commencing this part of the Gardener's Chronicle for the ensuing year, I shall endeavour to the utmost to render it as instructive and interesting as possible. For this purpose, in the kitchen-garden department, I shall of each vegetable as will be indispensable to the regular supply of a small family; the flower-garden and greenhouse I shall endeavour to make gay at all seasons; the management of what are designated florists' flowers will
be occasionally noticed; and the exposition of the principles upon which the practice of gardening Amateur ought to be to cultivate selections ruther than collections of plants ; for, as a small garden, well managed, affords more pleagure than a large one half cultivated, so is a small collection of plants, properly treated, "calculated to sive moch of then assortment of mere botanical curiasities. I shall, therefore, as I proceed point out such new old but comparatively neglected plants, as I consider adapted to answer the purposes of the Amateur.
From present appearances it is likely that we shall be visited by some rather severe weather ; and as the late mild season has induced many tender plants in the open air to grow with nearly the vigour of spring, some slight protection will be indispensably necessary. Many plants, such as Noisette, Tea-scented China, and the more tenin of the Hybrid China and Bourbon. Roses, are pushing even at the lowermost buds; therefore a slight frost on the young shoots, if they are unprotected, will be suffi cient to do them irreparable injury. it is not cold that plants suffer from, so much as sudden changes in temperature; for it is well known that a plant wil brave considerable cold on a northern exposure, while a similar one on a warm south border, if not protected from the sun, will be killed. Hence the ntility of the plan recommended by Mr. Rivers, via,, to take up tender Roses, place them under a northern wall, and protect them with a mat in frosty weather; but as plants-for the first two or three years at least, until a considerable quantity of fibrous roots are formed-sustain a severe check by this treatment, it will be found belter to tie the shoots loosely together, cover them thinly with dry fern or straw, and then to envelop the whole in water-proof covering of some kind, such as calico saturated with oil, and a very small proportion of white-lead, or even with oiled paper. This coveriug must not be per manent, but merely put on in case of frost ; and the fern or straw should be sufficiently loose to admit of a current o. air passing through it: the object being not to protect a plant but to retard its growth.
If the outer walls of pits or frames containing halfbardy plants are not already rendered frost-proof, place dry straw or waste hay round them, to the thickness of one foot, and thatch it securely with straight straw which, by throwing the wet off, will be found a much better protection than fermenting materials.
Greenhouses containing flowering plants of Caméllias Epacris Cioperias Heaths, \&could not be allowed to fall much below $40^{\circ}$ in temperature. Flowering plants require rather more water than those in a dormant state, especially when fire heat is used ; but be cautious, and if you err, let it be on the side of moderation.
W. P. Ayres.

## HOME CORRESPONDENCE.

Disinfection.-I am glad to observe that you have taken up that most important subject, the sanatory condition of the labouring population. Few inquiries are more worthy of consideration, as it strikes at once has been strongly drawn to this subject, in consequence of some investigations recently made by order of that enlightened sovereign, the King of Prussia ; and my inquiries have led me to conclusions very similar to some of those you have advanced. I shall say nothing of the effect of missms and putrid vapours on health, for I conceive that every one must be alive to them, although not aware how much evil they produce. The question now is, not as to the effects thus produced, but as to the best method of remedying them. Houses, streets, and whole towns, are rendered unwholesome from the want of attention to cleaniness. Refuse of all kinds is left to putrefy in the vicinity of dwellings, or within their walls ; and in populous places, where buildings are crowded together, it is frequenty found that no means are taken to prevent those evils which are sure to arise when human beings live in an the most effectual re putrid exhalations, but then what for tais is a tho Complete drains may be made to ensure the immediate removal of putrefying matters, from the places where their presence mioht do injury into rivers or the sea; or proper receptacles might be formed to receive these matters, and some of the disinfecting processe, which the discoveries of chemists have brought to light, might be adopted to destroy putrid The later must be allowed to be preferable. The value of the manure anmully lost by drainge is enormous; our of the mand of ace can a of acres, the whole of whin miff ratively to mall expe. jice thich exists against culty to overcome in the prejuadice wine way bethe use of fecal manure, but fore the necessiy of employing it, or tute. In disinfecting refuse animal matter there are three points to be attended to-first, to destroy the offensive smell; secondly, to preserve the volatile products of decomposition; and lastly, to render it portable if to be used at a distance. It is of the first importance that the process adopted to destroy smell shall not at the same time cause the loss of those substances which constitute the chief value of manure. Chlorine, the most powerful known disinfecting agent, might be prepared at a very small cost ; it would not in any way injure the manure, and it would effectually destroy putrid vapours. Other cheap substances might also be employed with advantage; but it is at present unnecessary to examine wh:ch is the best method of converting refuse matters into ma
nure，my object is merely to assist in drawing attention to this most important subject．－Eduvard Solly，jun．， 38 ， Bedford Row
To destroy Worms，－－Your correspondent＂R．S．V．P．，＂ in last week＇s Chronicle，says he has found lime－water of I can say is，that about a fortnight since I tried it，as re commended in the Chronicle，by putting quick－lime into a barrel with water，and allowing it to stand a day before using it；and it appears to have effectually removed the Spasts．－J．R．W
Number added his A Rossshire Gardener＂has in a late Number added his testimony to the utility of spirits of old practitioner，I have never until within the last two years had any complaint to make against the wire－worm， so far as Carrots are concerned．However，another
natural enemy，by name Scolopendra electrica，as well as several under the generic denomination of Julus or ring－worm，often create great devastation amongst the Carrot－crops ；these are formidable enemies to contend with in addition to the Elater obscurus，or wire－worm．Your
Rossshire friend may，however，rest assured that spirits of Rossshire friend may，however，rest assured that spirits of
tar will keep them at defiance ；but I would advise him， as these pests will in all probability take shelter at a great depth under the surface of the ground，to give a good dressing to his Carrot－beds in autumn，by digging in the spirits of tar；and also to give a repetition of the dose in spring，as he purposes．He says he has made use of practised this remedy？I would not have alluded to has had I not found spirits of tar a useful remedy in more ways than one in the Horticultural world ；but I bave no pecuniary or selfish interest in the matter． it as much is so offensive to insects，that they avoid ground in auturnn，they retreat to the surface，where they are either killed by the frost，or eaten up by their natural enemies．If applied only in spring and near the surface， of the commit their depredations underground，as the roots comme Carrot descend ；whereas，if applied in autumn，and to the surface，when they either die of want，or are eaten up by the birds，\＆c．Many persons may perhaps think monia，and of ther are of a volatile nature，like ether，am－ applied in autumn，the in athe brings forth the tap－rooted Carrot to be destroyed．I should have thought so too，had I not of late been taught inf ascertain．A neighbour of mine craved my assistance in ascertaining the cause of failure in a field of Turnips， containing 24 acres，which upori examination I found to be infested with wire－worm in great numbers．I told my friend that the season for applying spirits of tar was passed，as the plants were six inches high；but he was
anxious to try my nostrum．I therefore procured a suffi－ cient quantity，and we set to work．During the process of preparing the sand and spirits of tar，a small quantity of the latter was spilt upon my cost；the consequence is，that up to this date，if I appear inlpublic with that coat If，I am avoided，because I smell of something offensive． If man，therefore，shuns me for having only a small patch of my coat besmeared with spirits of tar，and which after a period of six months smells as disagreeable as ever， What must insects experience when this is brought in contact with them？Amongst the ，uses to which I would direct your numerpous readers to apply this simple remedy are the following－I do not，however，pledge myself that I am in each case quite correct：－lst．Mixing it with the soil as a security against all underground enemies．－2d． Sowing it，when mixed with sand，with Peas and Beans and summer secure them from mice；and also in spring jackdaws attack them．－3d．Sowing it on the surface where any of the Brassica tribe is sown，as these are Pre－ quently devoured by birds．－4th．Saturating shreds used in pailing wall－trees，－5th．Pouring a tabs it into the burrows of rats，mice，and moles a also in the entrance to wasp－nests．－6th．Painting very slighty the branches of Apple－trees infested with American blight； also various species of doccus or scaly insect．This ope－ ration must be performed during winter，las it would be strength the foliage；it might be as with reduce the Saturating the spirits，by mixing them with sand．－7th and placing them in bponge or wollen－rags with them， rooms prem branches of trees and plants infected with aphides；also near fine fruit when ripe，such as Peaches，Figs，\＆c．，\＆c． 2sa prevightly painting the stems of fruit－trees in autumn， on gravel－walke against hares and rabbits．-9 th．Sprinkling the surf－waks subject to worm－casts．－loth．Sowing on against the of the ground with Turnips，as a preventive against the fly，－11th．Washing walls against which fruit－ insect been growing，when they have been injured by haris．-12 ．steeping nets in，used for a fence against by med rabbits．Spirits of tar have also been applied y medical men as a remedy in inveterate cases of ring－ wrom in the human head，when the ordinary means have To unavailing．－C．McIn．
To destroy Mice．－Fry a sheet of brown paper（the and it the better）in any grease；this the mice will eat， easier than destroy them．Th
Experiments with－Senex．
uch of＂Guano＂Guano．．－Having read and heard so duced to make trial of it，and I have fas last spring in－ instances answer remarkably well，as the following testio Guanies will shew．J．Lowe，Esq．，of Brent，tried Guano last year，fand had a large crop of Barley and

Oats．He also sowed Clover with the Barley，which is likewise looking well．This proves it to be a lasting ma－ nure，and not like nitrate of soda，only visible just Farm，near Plymouth，states，that he applied Guano mixed with earth，and drilled it in with the seeds of Swedish Turnips；but having used it too strong，a great part of the seed was killed；but those which came up were of immense size，and were on the 10th of December very green，when compared with the other part of the field，
（manured with Bone－dust）and as heavy per acre．He （manured with Bone－dust）and as heavy per acre．He qualities．This gentleman fell into the same error a many other of my friends，some of whom drilled in the clean Guano with the seed；consequently，it was so pow－ erful，that as soon as the seed burst，the vegetative pow－ ers were destroyed．We find the best way of applying it
is to mix 4 lbs ．of Guano with a bushel of ashes earth．Mr．Shepheard，of Sutton，South Milton，says ＂I sowed 100 lbs ．of Guano，on a piece of land for Turnips，in a direct line through the middle of the field， and manured the other part of the field with the best rot ten dung I could procure；but the difference in the ap－ pearance of the crops was so great，that the country people at large could not help making remarks about it． be seen that was manured，with the Guano cong bridge，sowed 50 lbs ．on 40 yds ．of Grass－land；the re－ mainder of the field was dressed with good rotten com－ post ；but that sown with Guano was by far the best，and the cattie liked the herbage much better．It is now as green as the finest meadow．Mr．W．Moore，Kingsbridge， sowed a small quantity on a lawn for trial ；the part sown with the Guano was covered with moss，and looked very bady．Before the other parts，that were not manured equired cutting，this portion of the lawn was obliged to be cut twice；the moss was quite killed，and the herbag able men，who are well known in the South of Devon．I have found it useful as a liquid manure，by mixing 4 lbs ． in about 8 gallons of water－W．E．Rendle，Plymouth． Experinents with Manures，－The following is an account of three experiments made on the growth Swedes，with different manures：－

－Hortulanus，Wrawall，Somerset．
Food of Plants，－A fortnight since we published a

PoIsdorff，that the roots of plants emit carbonic acid，and that this agent has the power of decomposing siliceous substances．Our correspondent，Mr．Murray has written to claim the originality of this．He says that he made the discovery in 1818，having proved the fact experimentally by growing in distilled water the bulbs of Hyacinths，Per－ ian Iris，\＆cc．；that he communicated the circumstance to Mr．Edward Rudge，and announced the discovery in his lectures at the Surrey Institution in that year．He adds， that he then published the details in the Transactions of ， own， tion of the British Associationatidinburgh，in 1834，Dr．Gra－ in reference to some remarks made by Dr．Daubeny．He， moreover alleges，that nearly 20 years apo．Daubeny．He in the Germeges，thatnals of Science，ridiculed and ieg wagned is German Journals or act own discovery In conclusion，Mr．Murray says，＂E I am posse avery．hat the carbonic acid rery recarkabe the roots of the Lichen does decompose the silicated alkali of glass．It is a piece of old glass from a window at St．Cross，near Winchester． When put into my hands，it was beautifully mantled with a brilliant Lichen；which being removed，discovered the surface of the glass beneath，corroded and completely grooved or wormed．＂While we are quite ready to assist Mr．Murray in claiming what he regards as his own，we must be permitted to add，that he seems to have rather misunderstood the object of Wiegmann and Polsdorff＇s paper．They do not seem to lay much stress upon the secretion of carbonic acid by roots；it is to the decompo－ sition of silicates by this agent that their experiments are principally directed；and we do not gather from Mr． Murray that he bas published anything on that subject， until now，when he mentions the highly curious and inter－ esting fact of glass being corroded by a Lichen，
Rust on Grapes．－I certainly do not wish to encourage any Gardener，while thinning his Grapes，to handle them， however clean his hands may be，or to rub them with his head，however dry his hair may be；but I cannot allow Rust．Grapes may be thinned，either by handling the end bery means of a small deal stick，not larger than a crow＇s quill； this will render it almost unnecessary to touch the berries at all with the fingers．I quite agree with Mr．Bromley， p．853，as to the cause of the disease and its cure ；but I do not see why in explaining his method of eradicating it， he should mix up his mode of pruning the Vines，which even if 50 years old and trained on the spar system，can be easily cured of Thrip．Such a statement is liable to mislead others，and induce them to think that the old stems of Vines cannot be cleaned．－－G．C．Colney．
Preserving Fruit．－Observing in one of your late numbers a paragraph on preserving fruit，I beg to state， that gooseberries，currants，cherries，dc．may be successfully prese wide－mouthed bow， dry wide－wouthed botles as will be required，and fill them whth the gooseberries or clerjes，the stalks of which bave been previously removed；currantes should be held by the stalk over the mouth of the bottle，and the berries should be cut off singly with sharp scissors，as the less they are handled the better．The fruit must of course be perfectly dry before being put into the bottles，which should be well corked，and covered with rosin to prevent the air from get－ ney．A dry corner of the garden should be selected，where three feet below the surface．The earth should bo well packed round them，taking care however that the bottles are not broken．Those who have no garden may bury them in a dry cellar．In this manner，green as well as ripe fruit may be preserved for a length of time．－ Geo．M．J．
Transplanting Fruit－trees，－Your correspondent ＂Totty，＂at page 809，request8 information for trans－ planting large Walnut－trees．The following is the system which I have adopted with success in removing large fruit－trees：－Having in the autumn of 1840 determined on removing a row of large standard Apple and Pear－trees， I commenced by reducing the heads of the Apple－trees considerably；I then opened around each tree，at 2 feet 6 inches distance from the stem，\＆trench 2 feet wide， and deep enough to cut through the surface－roots；these trenches were then filled with leaves and left for the present．The Pears，which were handsome standards of the same size as the Apples，and from 14 to 16 feet bigh， with stems 8 feet high and inches of the top of the stem， headed down to wound in the same manner as the Ap－ and were About the beginning of March in the ensuing spring they were crown－grafted，and grew rapidly；some of the weaker sorts，sues as the Marie Louise，inclined downwards；the others were tied down，to make them assume a pendent habit，and to induce them to become fruitful．In the following winter， 1841 ，after holes， 6 feet in diameter and 2 feet deep，had been prepared for their reception，with the top spit turned in with the turf down－ wards，thus leaving the holes only a foot deep，and after the balls had been sufficiently frozen to insure their being lifted with safety，the trees were removed to their new situation with from 14 to 16 hundred weight of earth about their roots．They all succeeded admirably，and some of the Apples bore fruit．This season the Pears have formed fruit－buds throughout the whole length of the preceding year＇s wood，and promise well for an crop next season．I have never removed large Walnut－ trees；but I have no doubt that if the above plan be pur－ trees；but I have no doubt that if the above plan be pur－

## Pears.-M

Elceagnus reflexa, a new hardy Evergreen.-I possess 2 shrub from Japan, which MM. Decaisne and Morren have named Elæagnus refleza, and characterize as follows. * E. foliis oblongis acuminatis coriaceis supra glaberrimis subtus lepidoto-ferrugineis, perianthii segmentis suberec species which have proved hardy in this climate, (of species which have proved hardy in this climate, (of
London, it is the only evergreen. The large and elegant London, it is the only evergreen. The large and elegant
shaped leaves ( 4 inches Iong by $1 \frac{1}{2}$ broad, average size) shaped leaves ( 4 inches long by $1 \frac{1}{2}$ broad, average size
with the upper surface of a dark shining green, contrast ing beautifully with the bright silvery scales of the under side, would alone secure it a distinguished place amongst the hardy evergreens belonging to other genera. But this shrub recommends itself besides, by its ample panicles of small yellow flowers diffusing around the fragrance of the Violet and Pink combined. It was introduced into the Jardin du Roi, at Paris, in 1834, from the Bota nic Garden of the University of Ghent. At the first o these places I have known it to flower freely 12 ft . high in a bed of beath soil, exposition N. E. In my garden in Suffolk, it grows vigorously in a mixture of loam and heath mould, and would probably succeed in any open sail.-C. WF. [We are unacquainted with this plant No such name is to be found in books, nor does the plant occur in that part of Siebold and Zuccarinis' Flora Japonica which has reached us. The leaves reseubl
those of E. conferta. Can you let us have a plant ?] Tree Guards.- Of the various contrivances fort ing newly-planted trees from being barked, or otherwise injured by horses or cattle, \&cc., perhaps there are none so simple, and at the same time so perfectly effectual, as of Cirencester, of which a sketch and description are given in the "Gardener's Magazine," vol. xiii, p. 166 . As many in the "Gardener's Magazine, vol. xili, p. 166 . As many
of your readers, however, may not possess that work, I will of your readers, however, may not possess that work, I wil believe its merits are such as to render it deserving of being better known. I have had ample proof within the last five years of its utility, and am therefore enabled to last ave years of its utility, and am therefore enabled to that can possibly be employed. Besides its cheapness that can possibly be employed. Besides its cheapness and durability, which are not the least of its recommeada-
tions, it has altogether a much neater appearance than those tions, it has aitogether a much neater appearance than those
which are so frequently seen fixed around trees near a genwhich are so frequently seen fixed around trees near a gendisfigure and render unsightly the trees that were planted for ormament. From the following description and sketch, any labourer may soon understand the way of construct ing the tree-guards, that have led to these remarks Procure stakes of Ash, or Larch, on thinning young plantations, or cutting down coppices, 6 feet in length, or more if requisite, and about two inches in diameter; and bore holes through the tops and bottoms, about one foot from each end. Get a similar hole drilled up the centre of a stake, and saw it of in lengths of two inches, or rather less; pass a strong wire or thick tarred string through pass it through the hole made in one of the troo-inch pieces at each end, and then through apother stake; separating each stake at top and bottom by a plece oosely, unt plenty of space for growth. Place it round the tree, and fasten the ends of the wire or string. This guard is much the same as the che neck of a blis tere 1 horse, to pre vent his gnawing the irritated part The stakes merel rest on the ground and should be cut quite flat at the bottom, o preven the pround into the upper end they hould bave a sharp slanting cut with a bill-hook, an threaded with the slope towards the free. The motion of the tree will not impany degree be bark cannot be in jured, let the wind blow as it may, fo
 the guard moves in every direction $a$ represents the stakes which form the cradle; $c$ the
placed between the stakes at top and bottom. -M. E. H. [Although this method of protecting trees differs but slightly from that recommended by Mr. Bowers, at inserted it, as the accompanying drawing will render it more intelligible.]

Ccerulean Willow, -In the climate of England, few trees grow with equal rapidity to the Cærulean Willow, which is supposed to be a variety of Salix alba, Some of These trees were planted eighteen years ago, on the New
tops have twice been cut to prevent them from being blown over by high wiads, altes exceed five feet in circum ference, at five feet from the ground; one of them is five feet six inches
Mildness of the Season.-From the garden at Orwel Hall, Suffolk, the following flowers were gathered on the Ist of January, 1843. Sálvia fulgens, Verbena Thompś́globosa majo1, F. Virgata, Tropæ'olum peregrinum
 entstemon gentianoides, Phlox Drummondi, Erysimum Perofskianum, Silene pendula, Lupinus lateus, Antirrh monanthus fragrans, Mignonette, purple and white Stocks, Ten-week Stocks, Russian Violets, Wall-fowers, Pelargó-Martagon.-This inquiry
Martagon.-This inquiry has been left at p. 790 of your Chronicle, by yourself and your intelligent cor-
respondent, with the question "Why was the Plilosopher's Stone called Martagon !'" In the absence of mor positive information, I venture to offer the following conjecture :-It seems that with our older gardeners and botanists, Martagon was the generic name of a group of Lobel and others, Lilium chemicarum or chemistarum, and Martagon because of the solden hue of its bulb. This appearance, when the wits of all the world were turned toward the acquisition of the "great secret," naturally desgested the association with the object of every man's nomenclature, and are so still, as evinced by our Goldendrops, Pheasant's Eyes, Bishop's Thumbs, Elemish Beauties, Lady's Fingers, Délices des Dames, Eill de Jour, Glout Morceau, Cuisses-Mesdames, \&xc., \&onan innocent indulgence of the poetic fancy, from which men of graver sciences are not always exempt. Not having pooked into Ben Jonson's well-known drama, thinking that so grandiloquent a word would certainly find a place in the jargon he puts into the mouth of his pretended adept; but I do not find it there. Uriless, therefore, it than bhown come directly from the Arabic, I think that Martagon must be one of the mystificatias of Paracelsus, the invan of margon of the alchemy seems not unlikely that the above-mentioned worthy coined it out of Magisterium or Magisterion, the real unadulterated
red-precipitate-philosopher's-stone powder. Or, it may
have been used as a convenient contraction of Magistefion and if any of your readers find it difficult to trace the similitude, I recommend to their notice, to help their vision, the following exemplary case of our excelient friend Jonathan Oldbuck - F am clear we should read Nalmonlength for Shathmont's-length; Shathmont, Salmont. You see the close alliance of the sounds ; dropping out two $h^{\prime}$ s and a $t$, and assuming an $b$, makes the whole difference." the old folios of Paracelsus, and the collection of alchemical books formed by Salmon, without finding anywhere this word Martagon. We are, however, reminded $t$ is not impossible that the word; Martagon may come from ago, to act on anything, and that it may Stone in acting upon iron $6 Q$ as to change it into gold. 7 Shakspeare's "Pale Primroses."- Your Corresponmore successful in pointing out the distinction perbaps, the Poet and the Physiologist than in explaining the pasblance which may be fancied bebreen a younc damel and the pale Primrose seems quite insufficient to demand the specific words "s A molady most incident to maids" The matter is, however, not worth pursuing, or at all events had better wait for some new light. Your Correspondents, as is now the fashion, reject with indignation the idea that Shakspeare could possibly step beyond the proidolatry, which must be injurious 'rather than otherwise to Shakspeare's fame, and will, eventually, cure itself. as mureh feres reputation can well alfow to concede quite as nurch fallibility as can be fairly urged against it and probably his most vulnerable place will be found in an sistent al tendency to a minuteness, more than congood physiology. One instance at this moment occurs to me, though I cannot refer to it with precision. He talks somewhere of the "gnarled and unwedgeable oaks." Now, though gnarledness is an allowable poetical character, is a quality not discoverable by any inspection of the Oak in the landscape, and becomes evident only to him who follows the tree to the faggot-shed, and watches ite conversion into logs of fire-wood-M
Bees.-Having some pretensions to a knowledge of the management of bees, I will endeavour to solve the diffyour last volume. Her first complaint that her bees made but little honey in the summer of 1841 is an unreasonable one; since in consequence of the unfavourable season it There was no great error, I imagine, in not feeding them during the autuma, as they probably made enough honey for their own sustenance. Upon this point I would remark, that when bees require to be fed, it ought to be done at once, at the rate of 21 bs or 3lbs. per day for a
week or ten days together in fine weather, during the meek or ten days together in fine weather, during the
turbed, as unnecessary interference with them always does mischief. The bees will increase in weight according as they are fed. llb. of honey or good sugar mixed with llb. pose that water will answer well. It is a mistake to supespecially when in boxes afways die in winter from cold, That your correspondent erred in wrapping hers up in mats is pretty evident, from the bees having in December June. strong and brisk as they would have been in incaates of a bee-rable, for obvious rasons, to have the Instead of storning the mouth of the hive with a piece of perforated zinc when the frost begins, I prefer darkening the front with a piece of board, so placed, as entirely to exclude the sun-beams, or even the rays of light. The sad condition of her bees in January appears to have The bes wo ( to bees Were thus (articily if thisk in January, that it was most proper to feed them if they required it, but, prosably, he would not have been necessary, had no extraordinary efforts been made to prevent their torpidity (the natural state in this climate) of migh. The hign temperature of the hive complained boxes, and by removing and cleaning the tubes daily. There is no reason for believing that clustering about the foot-board always precedes swarming. The bees of your correspondent finding themselves uncomfortable from the high temperatuve of the hive, and their crowded condition, naturally took a sudden and unceremonious leave of their kind and over-anxious patroness. I have only to add further, that if "a Despairing Beekeeper" will make another attempt, and attend to the hiats I have given for her guidance, she will not find her bees ungrateful. In conclusion, I beg to mention that from a box constructed on Nutt's plan, I last year obtained two side-boxes, and two glasses of honey; one of the boxes weighed 46?lbs. net; the other 35lbs. ; and the two glasses lolbs ; total 91 品ibs.; which was allowed to be equal to any that Italy ever produced. For the former I received an honorary medal from the Ereter Horticultural Sociot correspondent wishes to have a glass filled with honey she may easily or three ince atraw-ive a by way I took one this year which weighed $13 \frac{3}{2}$ lbsog and got a fine swarm also.-C. S., Beacon House.
Gold and Silver Fish.-I beg to inform a Correspondent that the following plan of preserng Gold lost all my Gold Fish, which were Dutch, although I was very particular in breaking the ice every day around the basin. I afterwards procured a quantity from Montrose where they are bred in the reservoirs attached as condensers to thelarge engine of the Flax Mills; and instead of breaking the ice all round, I broke three small holes about 9 inches in diameter, which were covered with old beehives or boxes to keep them from freezing up. As soon as the ice was sufficiently firm, I baled out the water through these apertures until a large bubble of air ap peared beneath the ice ; continuing to do so until I had in fact formed a frozen shutter, which covered the pond and preserved the fish in good health. The bottom of mine is formed of mad, originally puddled with clay and cow-dung ; it is 4 ft . 6in. deep, with a cemented rim 2 ft wide, and 18 in . deep. Its diameter is 18 ft ., with a smal fountain in the centre, which requires about a hogshead per day to keep it playing. I have found that large Fish will never travel nor bear handling; they are also essenThe temperature of the reservoirs where they bate in such numbers, averages, I am told, from 60 to 70 degrees. I would advise your Correspondent to return his fishes into the pond, and endeavour by all means to keep up the temperature of the water, and to allow plenty of air beneath the iceif the pond should become frozen. $J . G$. Sl Johns Gold Fish - In the county of Somerset Gold ond Sil ver Fish live and thrive in ponds, without any other core being taken of them, than to break the fice so frequently as not to permit the pond to be entirely covered with ice for many hours.- $H$. $D$.

Poullry.-Seeing in last week's Chronicle, an inquiry a experience of 4 years, no hesitation in recommending the both- Malay, as being beyond all comparison the best, both or the table and as good layers. lhey are, perhaps ather careless sitters, being larg and heavy, but a expers, they may be termed tolerable, and one must not expect to find perfection even in a Hen. Thougk an enthusiastic amateur gardener, I am also very fond of my Poultry, and by the system I pursue in their management IWays succeed in obtaining a superabuadance of eggs and very fine Chickens. Between January and Decem ber, 1841, 1 obtained from 25 Hens, 3,894 eggs; and Chick hatched in March, weiged in September, when trussed fit for table, 4 lbs. My secret, is to keep the Hen-house at a regular temperate heat, by means of a small Dutch Stove kept burning for about 2 hours in the afternoon, and to give my Hens a warm breakfast of boiled Potatoes the first thing in the morning. By this fadeed, get plenty of eggs during the whole what, and for about 6 weeks in the autumn. A mixture of Malay Horse-Cher Dorking, I consider the best.-A. $E, S$ tried to feed his pigs on pounded Horse-Chesnuts, had steeped the latter in lime-water without pounding, they would have been eaten voraciously, nor would the lime of Horsenchesnuts, prepared like Potato-flour, is equally
good for tha puryose of atarch. If it were deprived of its
bitter by lime wher, would it be an unwholesome articte of food? $-M . E$. [Probably it would still be unfit for the use of man.]

FOREIGN CORRESPONDENCE confluence of the Chaddr and Niger:-We made thais the late town of Pandiaki. This topm was in a very flourishing state at the time the Liverpool expedition visited this river; but since that period it has been deobliged to take refuge on the opposite side of the Niger. The soil, upon examination, was not found to answer the expectations previousty entertained of its fertility; and
Stirling Hill, situated about two milles further up the river, was decided upon as the site for the model farm. Operations were immediately commenced in clearing land, assisted to prepare the ground for planting Cotton With regard to extensive cultivation, I think this will not be
found to answer the expectations of the African Agrifound to answer the expectations of the Africam Agri-
cultural Society, as the parts capable of tillage are confined to a few narrow valleys, the greater part of which are cultivated by the natives. From what I have seen of the African disposition, I do not think they will be inclined
to give up the whole of their good land to a stranger, to give up the whole of their good land to at stranger,
whether black or white. The soil is of a poor sandy description, the only vegetation flourishing being a species of Tephrósia, nearly related to T. toxicaria, which covers acres of land about Pandiaki and the Confluence. This plant is used by the natives to give the beautiful blue dye to their cloth. Indigo is also found, but not plentifully, neither does it seem to be taken notice of by the people. Cotton of a good quality is frequently met with in a wild as well as a cultivated state. I have no doubt but the soil is better adapted for cultivation at a short distance from the banks of the stream, as I have always found it to improve the farther I proceeded from the river. The the settlement, was siver, which I was been taken with the fever two days after the Albert proceeded up the xiver, and consequently incapacitated from prosecuting my researches Shary (Chadda) with the Niger, it is covewed with maiestic thees ; but this part is now the least wooded of any met with after entering the Nun. The only large trees to be seen at the present time are a feve specimens of the the coast, except that Palons and Orchidácere are noore rare at this place. In the former tribe there are a few specimens of a species of Areca, and at a short distance in The lovely Spathódea campanulata is plentiful in the moist valleys, and at this season they were covered witla its large scarlet flowers. On the banks of the river ful Clerodendrum. The natives prepare a red dye Confluence, tree which they find at a distance from the Confuence; but I was unfortuastely prevented from seeing it, by being taken ill, previously to the time which I village to the place at which it was found. The natives cultivate Yams, Dhourra, Ground Nubs, Capsicums,
Courds, Tobacco, Papaws, Bananas, Limes, and a small yellow fruit-a species of Chrysobalanus. They brought fowls, eggs, and honey, The manner of dyeing their cloth is as follows:-a aumber of deep, narrow jars are buried in the earth, so that the tops remain a few inches above the surface. A quantity of the Tephrosia is then
gathered, and the leaves, with the yourg shoots, after being bruised, are mixed with a certain quantity of water in those jars. After remaining for a few days, to get the liquid to the proper degree of colour, the cloth is im-
mersed, the tops of the jars are covered over, and they are left in this state for about two days; after which, the enough, it is subjected to another immersion. is not deep hesitation in saying, that the natives live nearly, if not totally, upon a vegetable diet. I could never see the goat used as food; and the Guinea-fowl is either thrown fice, I cannot say, except that it is a terrible enemy to largest trees of Adgnesnia are also objects of sume of the regard; those so distinguished haviag theis truaks stuck full of the barbed heads of arrows and spears; with the skulls of birds and animals. They have also a superto an evil snirgard to Stirling Hill, and, say that it belongs day or two after the Albert had proceeded upe the river, a Felatas, about two miles from us mas ransacked by the could not see that any blood had been shed, but many o conduts were burned to the ground. The markets ape ings ; they by the women, whe are very just in their: dealover sever are also very expert in numbers, soon counting performed by, reckoning thece at a time. I mation is tate, that I think Iwander was labouning under a mistake When he said that the Delta of the Niger produces Cedar, aps, upon the closest inspection, I could not see anything approaching to the Conifere. He puobably meant some Mant allied to Cedrela.

## THE NATURALIST'S CORNER.-NO. VIF.

23. Cereale Papaver. - Many are the reasons assigned by commentators for the epithet Cereale being applied by Jervius assigns the following :--either because it is epten like corn, or because Ceres made use of Poppies to forme her grief, and was thrown thereby into a sleep, when she had watched a long time on account of the abduction of Proserpine; or because Mycon, the Athenian, who was beloved by Ceres, was transformed into a Poppy; or be cause it was sprinkied upon bread La Cerda quotes the authority of Eusebius, in his third book, "De Preparam fone Evangelic " that Ceres was accounted the inventress of Poppies. Rudus tias the same quotation. La Cerda ives another reason: that Ceres relieved her hunger with Poppies, as appears from the fourth book of Orid's Fasti. We are there told, that when Celeus invited ick, and could betself in his cottage, his little boy was some Poppies to no rest; upon which Ceres gathere wa wares. La Cerda also quotes Brodæus for anothe reason: that Poppies were sown amongst the Corn for th sacrifices of Ceress, Again he quotes Brodreus and also Turnebus, who observe that the statues of that godides are frequently adorned with Poppies. Lastly, le eites Preason, assigned by Mancinellas, that there is a sort of Poppy, called Ouratctits, of which a wholesome sort of bread may be made. The reason assigued by Probus, that Poppies are common amongstothe Corn, waich is under the protection of Ceres, cannot be right; because the Poppy heads, which are so common on the statues of Ceres, plainly belong to the cultivated sort, not to that which grows amongst the Corn. Rudus thinks the best veason is, because it appears from Phny that the seeds of white Poppies were frequently eaten by the aneients: this, indeed, shows why Virgil called the Poppoy Veseum papaver, but does not seem to explain the epithet cereale cients to Ceres, and that most of her statues ane adomed with them.
24. Ulidity of Flies.-Lt may appear surprising how seem to serve no end but to spread desolation awh which they go. But let us be cautious in suspecting any impen fection in the. Father of the Trixerse Wary imper sight may seem only productive of mischief, wid, upon mature deliberation, be found worthy of that Wisdom which planned the most beautiful parts of the world Many poisons are valuable medicines; the storms are be neficial ; and diseases often promote life. The common flies are regarded by mankind in general as noxious, and at best as useless beings in the creation. but this is cer tainly for wat of consideration. There sme not probably in all nature animals of more ismortance. and it wonda not be difficult to prove that we should feel the want of one or two species of large quadrupeds, much less than of Mankind in general are sensible that nothing is more dist agreeable or more pestiferous than putrid substances; and it is appareat to all who lise made obsernation, that these little insects contribute more to the quick dissoluThey ano so necessary in ald hot chatien thates, thatay oven in the open fields, a dead animal, or small pukid substance, cannot be lad upon the ground two minates before it wind enteriag, quickiy devour one maggota whicf, inting the rest in various directions, expose the whote to be much sooner dissipated by the olementis.-Smeathman, Philos. Trans., 1781 .

##  <br> 

which one would hardly expect to succecd, had stood out of
doors for several winters, and had this year produced a rich
show of its gay inflorescence. The collection of Pines contains, with the more common ones, most of those which have been
lately introduced. The in-door arrangements of the establishlately introduced. Orchidacere, Pelargoniums, Camellias, Oranges, Australian and specimens seen were Pandanus spiralis and Sabal Blackburniana; the former is perfect in form, olegant in appearance, and just
beginning to show its spiral growth, the latter is also a fine beginning to show its spiral growth ; the latter is also a fine
specimen. There are several large Rhododendrons, with a fine
tree of R. arboreum; all giving rich promise of bloom for the coming season. The climbers within doors weere also remarkably
beautiful; Passiflora Loudoni having covered a large portion of the roof of the Orchidaceous house, and having produced during the eas m several thousands of flowers. Tecoma jasminoides
has also blossomed freely, as well as the scarlet Passion-flower
(P. racemosa). The latter was said not to have been a single day without flowers for the previous 18 months. Among the
 Polypódum aúreum, Adaastun
Asplenum corraceum, were
singular-looking plants; amongst them are large specimens of Cactus abnorrnis, Echinocactus Eyrésii, and erináceus, several
Opuntias, with many old Aloes and Euphorbias. Among the hothouse-plants there is a Bauhinia, received from Dr. Wallich as B. piperifolia, the binate leaves, of which, when in a young
state, are pink-coloured, Besleria elegans, several species of
Hibiscus, and among them H. Cameroni, blooming abundantly Hibiscus, and among them H. Cameroni, blooming abundantly The handsomest of the Musas was M. discolor, the underside of its leaves being of a rich brownish purple colour, and contrasting
well with the 1 ght-green foliage of M . rosacea and coccinea. The Heaths are grown here with some difficulty, in consequence off; still there were some handsome specimens of E. vestita and Its varieties, as wrell as of E . Hartnelli, A A great variety of Ca-
méllias (not less than 150 , we were told) are cultivated; all looked healthy, and even the small plants were set for bloom. with an abundant crop of frut, as well as several Orange-trees. It is, perhans, fong bey ond the province of this article, bat we
camot help, beermeg that nothing was more delightfill to consprecuous min the Museum of Natural Hractistory in the town the in
which there is an excellent Herbarium of the plants growing in the neighbour hood of Canterbury. $-R_{\text {. }}$ brid Rhododerdron is now flowering in the open air without any protection. The plant has 91 trusses of bonm upon it, and
it is remarkable, that, if the season is ever so severe, it has invariably produced its flowers within a week of the same period.

Mittheilung uber die Erfindung den Boden ohne Diinger the Ground without Manure.) By F. H. Bickes, Frankfort-on-the-Maine, 1842, 8vo, pp. 31 . Wonders will never cease! While our agriculturists are eagerly discussing the comparative advantages of particulat soils, and studying the theory of manures as propounded by Sprengel and Liebig that their labours are vain f for, if forward to proclaim he has discovered the art of growing luxuriant crops on the poorest land, and without any manure whatsoever ; and the cost of the process is so triting, that for the acre
of Wheat or Maize, it does not exceed fivepence sterling; and for Rape, Cabbage, \&ce, amounts to only about half that sum! At first we were disposed to consider such extraordinary pretensions as an effusion of quackery, and entitled to little or no credit; but our incredulity has been somewhat shaken by the numerous and respectable attestations which the author has appended to his pam-
phlet, and which tend to prove that his method has been practised with success, during the last 12 years, in various parts of Germany and Holland. Thus the certificates from Vienna, dated in 1829 and 1830 , declare that Mr .
Bickes's process, which would seem to consist in some Bickes's process, which would seem to consist in some
preparation of the seed, "renders all dunging unnecessary, is applicable to the poorest soils, and to all sorts of plants, and imparts to them a wonderful degree of vegetation and fulness $3^{\prime \prime}$ and they give the results of the ex-
periments in the Imperial Garden of the Chateau, from which it appears that Wheat raised from seed sown by Mr. B. had larger ears and more grains than that produced from unprepared seed; that the Barley showed ears with four rows and a larger number of grains, while that from unprepared seed had only two rows and a dian Corn exbibited a larger number of much stronger and thicker heads. At Offenbach, in ummanured and stems from a single grain, with larger and fuller ears Rye and Barley presented the same vigorous growth, and Flax bad stronger stems, with heavier and more numerous capsules, and was of a dark green colour; while the plants seldom fewer than ten shoots from a single tuber, and some as many as 12,15 , and even 17 strong stems ; while the green crops, viz. Grass, Clover, Beet, White Cabbage, gardens. At Büdingen, again, some plants of the Sunflower, treated according to Mr . B's method the th height of 10 to 11 feet, with woady stems grew to the inches in circumference. Ten or twelve Potato $8 \frac{1}{3}$ to 9 a large yellow sort, called Marburger, yielded each, on the a large ye, 30 good-sized tubers, with stem and branches seven feet long; and Maize, which grew partly singly and partly in rows, had eight and nine heads. were obtained in the garden of Count Isenhurg ; crops were obtained in the garden of Count Isenburg; and we tached the signatures of two burgomasters, the are at tacked the signatures of two burgomasters, the Cour
girdener, a grand-ducal councillor, and other official per gerdener, a grand-ducal councillor, and other official per-
nonages, that they were raised in ground but partially
dressed, and in the midst of tall weeds! The trials of this method in Holland, made in the summer of 1834, Were attended with results not less astonishing : prepared Wheat and Rye, though sown thick, gave from 50 to 60 , and even 80 stalks from one grain ; and a plant of Barley bore eight large ears. Buck-Wheat rose to $4 \frac{1}{2}$ and 5 feet;
Flax had 4 and 5 stems from one seed, and Indian Corn grew from 9 to 10 feet in height with 4 or 5 stems, and 4 to 5 heads from a single corn. The green crops were equally luxuriant. Red and White Clover and Lucerne grew 3 feet high; from two Tobacco-plants, 541 seed
capsples and 200 large and small leaves were cut ; and a second blossoming yielded 742 fresh capsules, and of larger size ; the seed from the whole weighing 2 hectograms, or upwards of 6 ozs. At the date of the report
(Oct. 30), these plants were budding anew; and all this, if we read the description aright, was effected in the shifting sand (Flugsande) of the downs of Holland!
The method of preparing the seed is a secret.
CALENDAR OF OPERATIONS for the ensuing week. Pingry,-If the tan was in a good working condition when the
fruiting plants were plunged for the winter, it should now give a steady fruiting plants were plunged for the winter, it should now give a steady of the pots it is quite enough at this dull season. The mean bottom-
heat provided by Nature to the roots of plants in all parts of the heat provided by Nature to the roots of plants in all parts of the
world is well hnown to lie higher by some degrees than that by which world is well hnown to le higher by some degrees than that hy which
they are surounded on the surface, and much less halle to varia.
tions. Fowever far we may devate with umpunity from this simple rule in our management of ovther stove piants, we must sirictly
adhere to it to insure success in the cultivation of this fruit. While the thermometer out-of-doors keeps above $18^{\circ}$ or $20^{\circ}$, that in the
fruiting-house may range up to $70^{\circ}$, and as the weather gets colder let it fall gradually to fl? She roots of the succession-plants, being younger and more active than those of the fruiters, are therefore
more ensily stimulated, and on that account should be kept from $5^{\circ}$ to $10^{\circ}$ lower. A humid atmosphere is at all times essential to these plants, but especially in the eariy stages of their growth.
Vinery. - I began forcing my earliest Vinery on the 1st of last
month, in the good old-fashioned way, by introducing as much fresh horse-dung as we could find room for in the house, having first re moved all plants in leaf, to save them from the ammoniacal vapour
of the dung. Not to lose the benefit of such a powerful agent in the destruction of insect life, I ordered all the Fig, Peach, and Apricot trees in pots to be removed into this house, with all other plants that
were suspected of harbouring enemies, such as lioses, Nfriums Irugmansias, \&c., which had previously heen pruned, or headed
down on purpose to undergo this general purification. The result down on purpose to undergo this general puritication. The resnlt I
shall not fail to tell your. This is the first time that this hounse has been shall not fail to tell your. This is the first time that this house has been
forced, therefore the artificial hent that have been already accustomed to this early forcing may now be Giving air is of less consequence at this stage; just enough to keep
down the sum-hent to $70^{\circ}$ is sufficient. The borders inside the house were thovered a ward deep with one-balf leaves and one-half fresh dung in a state of fermentation
above Vinery by a glass parrtition, and is heated is divided from the same boile
one of Rogers's best conical ones day as the Vinery; the weather was so favourable during the last month, that little or no artificial heat was applieed, the hourse being
closed up early in the afternoon. I have it now ahout $50^{\circ}$ in the Swollen. The trees were treated in the manner described in Mr Mr.
Errington's paper in vol, $i_{1, t}$ p. 7 . The borders inside were well
watered with watered with tepid water, that on the outside being protected by he weatler is frost pedigree and "s ponts " of a ceracumber are as leenly canvassed here have the temperature as nearly $75^{\circ}$ as get all the leaves dry once every day; and to admit as much fresh Asparagus.-This is the easiest of all plants to force; yet unless strong, healthy roots are to be had at this early period, success need
not be expect. The beds in bearing ought to have constant air
aldi a bottom heat of from $60^{\circ}$ to $71^{\circ}$.
midacale AND RIITBARB - All litter of sume solt ; if warni dung, all the better. The spent linings ip the hicat in the seakale bents, take care that it is not overdone
 the first crop of these. (lear off all dead leaves, stir the surface of Mushroons. - Lose'no opportunity of separating the horse droppings from the litter, as it is received from the stables, and place
them in some dry shed till wanted. Miscellaneous.-The Carrots sown on a warm border Jast Augrst, to come into use before the spring-forced ones are ready,
will now require a sight protection. Make active preparations for sowing Radjighes, Carrots, and other light crops requiring slight hot-
beds. The dung cannot be too well prepared and swetend for purpose. A stock of dry soils of different textures should always be the framin open sheds ready for use. Any new brickwork abou care as half-hardy phants, be protected from frost with as much
cump and water-pipes that are
in the least exposed should also be covered with litter.

Ilauts of every dinseription have never been in a worse condition and Lettuces will all require slight protection now. Cardoons and blanched Celery might be removed into sheds, with a little mois same manner, lut never more at one time than is sufficient for three "eens consumption. The last month has hoen so mild as to have
Oxits and roots into growth. Care must be taken of by the searon. Maet, Manuring, digrhaps they have also been deceived
pushed forward. with all speed and trenching should now be Ohciard, - All newly-planted trees and bushes should b mulched with the lightest portion of rotten dung or spent linings,
Unmail the Fig-trees on the walls, and Unnail the Fig-trees on the walls, and gather their branches
together in the centre; and after tying them together fasten a few of the strongest to the wall, and thatch the whole over with a straw.
After pruning see that all the trees are After pruning see that all the trees are divested of Lichen, Moss,
rough dead bark, \&c. It is a capital plan to wash over the stems rough dead barls, \&c. It is a capital plan to wash over the stems
and main branches with a paint of freah slacked lime and alittle soot. II.--FLOWER-GARDEN AND SHRUBBERY.

STovk.-Let the temperature here be kept very steady at this time: not higher with tire-heat than $60^{\circ}$, even in the warm Orchi-
daceous house. This a grod tmen to prime and regulate the heads
of the specimen plants. Many, such assustusticias Poinsettins of the specimen plants. Many, such asJusticias, Poinsétias, Aphe. for a few weeks. If you have a good stock of Euphcriblia jacquini-
flora, cut down some of them also; this will enable them to make an
earlier growth, and come into flower three weeks sooner next winter
This treatment applies with equal effect to Justicia speciosa and the
old Justicia, now Eranthemum pulchellum, and no doubt to all our old Justscia, now Exranthemum pulchellum, and no doubt to all our
winter-flowering plants. The circumstance of their not being allowed to exhaust themselves by flowering this season will enable them to do 80 with increased vigour next year. Look th the Gloxinias and
Gesneras on the dry slielves, and set a few roots of each into growth, to create a succession of flowers. As soon as the Dendróbiums and others of this tribe, that have been kept dry lately, show signs of
growth, give them a little moisture. If you have at command suf growth, give them a little moisture. If you have at command orchidaceex will require much water at thit season. They are alliso accom-
modating that tley may loe potted at any tume: but the present, and early in the autumn, are the liest seasons for so duin: All sorts of insects are fond of them, particularly woodlice, and the smauller
shell-snails; these must be constantly watched and destroyed. above in introducing my own practice in the Vinery and Peat-house Will be acceptable to the reader, I shall in future speak of these two greenhouses here are constantly ventilated day and night, except
during frost. The conservatory, on the contrary, gets only a little
air in the during frost. The conservatory, on the contrary, gets only a little
air in the middle of fine days, from, September to May; and the
to Prts and Frasegs.-Of all our plant-structures these are become of late years the most important they are the omnibuses of our gardens: everything, from the finest Heath to the humblest Alpine
plants, finds a ready nsylum here during these hard times. They require the utmost attention at the present season. A slimy green pequire the utmost attention at mouldiness on the sruface, or even a decayed leaf, if not instantly removed, may be the ruin of the moost favourite plant.
Very little watering will be required here for some time yet; see that ample covering is ready for the long cold nights.
Now that the first sharp frost has settied the womas for the winter, transplant, all sorts of shruls and trees : protect all tender ones All the tender Roses must also be protected. Mr. Rivers proved last this is of thaod liquid manure is as good for Roses as rotten dung; No doubt but other shrubs would be much benefited by a dressing of
FOH. NURSERY AND FOREST DEPARTMENT
AND CoppICE Woons.-IIt is no use flnding fault with the farmers for not employing the idle labourers, when one can hardly
ride ton miles ncrnss the country without seemg scores of acres of the finest plantations rumning to ruin, for want of thinning, pruning, and draining. Coppice Woods are like old haspberry stools, with only this difference, that a chance slloot here and there hats got the lead, depriving all the rest of their due nourishment, this should not le so.
Nursery.-Nursery grounds are, or ought to he, managed like the kitchen-garden, at least as far as rotation of crops, manuring, digging, and trenching, are concerned. The Acorn-heds, if sown last November, will now be visited ly mice, which must be destroyed.
The stool-ground should now he cleared and cleaned of all weeds, weak shoots, spurs, \&c., so as to he renly for layering a fresh stock of shoots next month. Now is the best time to cut all shoots for gtick them in the ground whth their proper number-stichs. Nothing breath at grafting-time in lunthing after the different sorts, while the graiter is kept ide half his time in waiting for them.-D. Beaton,

flowers, $\&$,

Soit, - A Constant Reader's house is situated on the North Chal of mould, overlying and passing into a bed from 3 or 4 ft ins. to 6 or 8 ft. in thickness, of hright, red clay, full of large chalk flints,
and without a particle of free lime. In ploughed fields this clay is brought to the surface, and the water lodges there; but in his meadew- land, which has been laid down many years, and in his garden, the rain-water drains away immediately. Under these cir-
cumstances, he inquires to what depth we would recommend him to dig or treach for planting trees, and for his crops in his garden. His gardener asserts that if he trenches, the clay (as in the ploughed fields) will be brought to the surface, the good soil buried, and the garden will be spoiled. On the other hand, all horticultural books
seem to recommend trenching under all circumstances. We appreseend the gardener to be right. It would never do to bring to the hend the gardener to be right. It would never do to bring to the
surface a tenacious clay which will not drain, for a free and full
escape of surfaceescape of surface-water is indispensable in a garden, and must be
secured. We sy, then, act in such $\Omega$ manner that you are sure secured. We say, then, act in such $\Omega$ manner that you are sure
of the water percolating freely In planting both forest and
orchard-trees, the Iand should be well turned over; if for orchard-trees, the land shoud
orchard-trees, the hole should be manured 6 feed in diameter at
least; but for small forest-trees it is peedless to do more than open least; but for small forest-trees it is peedless to do more than open
a hole, a foot or so wide, so as to admit the roots without doubling nip. The use of paving the bottom of $a$ hole in which $a$ fruit-tree is planted, is to prevent the roots getting intoty soil they io not life ; if your subsoil is of that descrintion, pave ly all means, if jou have
the materials. $\dagger$.-In fixing the ammonia of cloacine by the application of chloride of lime, no danger is to be apprehended from th
excess of the chloride ; but as the substance is dear, no more than is indispensable should be employed. If every day all the dung from the pigs, the horses, and the cows of your farm is carried to shed protected from sun and rain, but exposed to currents manure in the shring to drill with green crops ; but in this way you afterwards? $\dagger$ Muriate of soda is of no use whatever for fixing ammonia. Soda has $\Omega$ much stronger affinity for miuriatic acid
than ammonia has ; and, in consequence, when caustic sod than ammonia has; and, in consequence, when caustic soda, or its carbonate, are adalt is formed, and ammonia is sett free either cased, common in the state of carronate. E. - - $-H_{0}$. L. - In testing fo
free ammonia by the method recommended last week, p. 868 , it is not of much importance what sort of turmeric is inploy ed, promay be used when good is not to be had, bechuse even the former
is reddened by ammonia. The difference in colour between that so reddened, and a portion of turneric merely moistened with water, indicates the quantity of free ammonia. We are obliged for your best method of converting vegetable refuse into manure has already been stated at p . 745 of the Chronicle of last year.t- $-M$. You will find as much as we know about sea-weed upon referring to the
Index of last year. Some difterence of opinion exists as to whether Index of last year. Some difterence of opinion exists as to whether that the best way is to rot it with any animal, matter ; refuse fish would nod doubt be a good substance to add to to me fermenting mans.. -- Stullus. - We cannot venture to foretell what the effect a very good material. Your Vines will hardly suffier from the border a very good material. Your of manure provided it is well drained. $\dagger$
being to rich in such kinds of present litle information action of sulphate of ammonian it is is expected to tury out the best form of ammonia. Only, care must be taken to apply it in weet
weather, or first dissolved in water. Now is a good time to try it We slonuld use $1 \frac{1}{2}$ or 2 eut. an acre. $\dagger$
MAREH LAND. water, and overrun with rushes, you sloudd horoughly underdrain it, clean it on ploughinge The partshes, burn them, and scatter the will die of thenuselves, when the soil is thoronuphly drained and well tilled. Don't hurn the soil, however. If yout ict thus your managenent. + - Wre are certainly of opinion that $4 l$. $10 s$ s. an Diegngen. $W^{F}$. $C$. $A$-Wre are certainly
nere is enough for double digging land, $t$
nere is enough for double digging land, t a heating apparatus; that whil be best learned ly applbeation to advertise in our columins. There is no reason mhy it Iniler should mot he employed to hent a Melon-pit, and to boil weeds, $k c .$, if it
is desirahle. A common brewing looiler woutd do. pipes are on a level and large enougl.. For this, however, a plart
would have to be prepared on purpose No doult by boiling thice roots and stens of weeds, \&c., the greatest hulk of manure may be
ohtained, as well as the most mapid num nost certain deconposition. By hurnulys, the bulk, is very much dimmished: to decompose them in a heap takes some time, even if gas water is employed.
But if hiled for 5 or iminutes, wost seeds and all weeds will entirely lose their vitality. But then comes the question, of, whether
the expense of fuel is not greater than the nalue of the manure?
Besides, it os cynlent, that this opleration could only be performed on a small scale, in small gardens. $t$
Pruning V INEs, -Judex--Many men, many minds. We prefer
the spur to the rod-aystem of training Vines, because we have been more accustomed to it, and because, with ordinary care, we Girapes may no doubt be produced by the rod-method; but why thespur-system should be noore "vmatural and umphilosophical"
than the rod-system of training Vines, or the plan of pruning a Gooseberry
determnue.

## NEWS OF THE WEEK.

The official returns of the public revenue, of which we give an abstract in another column, afford by no means a cheering prospect for the commencement of the New Year. The deficiency in the last quarter's. revenue amounts to more than nine hundred and forty thousand pounds, and the deficiency on the year just ended, as compared with that which ended on the 5th January of last year, is not far short of the same amount, although the Income-tax has been two quarters in operation. The details of the returns furnish matter for serious considerathe Excise, the Stamps, and Taxes, the deficit on the year amounts to the immense sum of $2,425,5,54 l$. The greatest falling off is under the head of Excise; the deficiency in that branch for the year being $1,173,6146$., and for the quarter, 717,262l. The Customs also exhibit a similar depression ; on the year the deficiency in their returns is: $824,275 l$. ; on the quarter, $581,185 l$. The oniy compensating fact is the increase in the Post-Office for the year, of $150,000 \mathrm{l}$., and for the quarter of $14,000 \mathrm{l}$. If it were not for the new branch of revenue created by the Incometax, the deficit for the past year would have amounted to nearly $1,500,000$. The returns for the quarter are more serious than those for the year, since they mark the progressive increase of distress. The falling off in the Excise and Customs' duties shows'an alarming decrease in the consumption of articles from which those duties are de rived; and if the decrease continues, there will be next year a deficiency of $3,000,000 l$. in the Excise alone. These are"melancholy facts. They prove, by evidence Which all parties must admit, that the prosperity of the country has sustained a serious check, and that the most important interests have suffered from the prevailing important interets have sufo conjecture upon what class pressure. It is not difficult to conjecture upon what class these privations have more immediately falen ; but, at. the same time, it is impossible not to percerve in the stanch of revenue as the multaneous decline of two such bry in the middle classes of society must have curtailed their habitual expenses and enjoyments. These considerations will naturally direct attention to the approaching session of Parliament; and the public will no doubt look forward with unusual interest to the measures which will be brought forward for the relief of our financial đifficulties.
From France we have accounts of the addresses presented to the King on New Year's Day, with his Majesty's replies. The address of the Ambassadors expressed satisfaction at the continuance of peace, and declared that it was consolidating itself by its very duration, for its blessings are every day better appreciated. The King cordially concurred in this remark, and said, that everything: gave him confidence that Providence will continue to bless their common endeavours to prevent the repose of the world from being disturbed, and to insure the maintenance of the general peace which now so happily prevails. The King will open the Chambers, in persoy, on Monday next,
with a speech from the throne; the Opposition are expected to press for the Abolition of the Slave Trade treaties
of 1831 and 1833 , but the Ministry are strong enough to defeat the movement, and have no appreliension for their stability. - From Spain, we have accounts of the Regent's progress on his return to Madrid; he has everywhere been received with respect and sympathy, and his government has evidently gained additiona influence by the result of the recent insurrection. already announced in regard to Syria. The nema has acceded to the wishes of the Allied Powers by ap. pointing two native Governors for the Lebanon, and has determined to conciliate the people by the withdrawal of the Turkish garrisons. These accounts also mention the recall of Redschid Pacha, the Ottoman Ambassador at Paris; this measure was unexpected both in Paris and Constantinople, and it is supposed to have reference to some important changes in the Turkish Ministry.

## 

Coubt.-Her Majesty and Prince Albert left Windsor on Thursday for Claremant, accompanied by the Duchess of Norfolk, the Marquess of Ormonde, Major-General Wemyss, the Hom. C. A. Murray, and Mr. Anson, who be in attendance at Claremont. The Princess Royal, with her French governess, left for Clar The Prince of Wales remains at the Castle under the care of Lady Eyttelton. It is expected that her Majesty's visit to Claremont will not be prolonged beyond hursday next, Albert walked for some time in the Home Park, after which Albert walked for some time in the Home Park, after which Park. On Tuesday her Majesty and the Prince watched in the Park both in the morning and aftemoon; and the the Park both in the morning and aftemoon; and the
Prince enjoyed several hours shooting over the preserves at Cumberland Lodge. On Wednesday at 3 o'clock the Queen held a Privy Council at Windsor, the summonses for which were only issued at noon on the same day. It was attended by several Ministers, for whom a special Council, an Order in Council was passed for may. At the Admiralty and other Courts at Hong-Kong, in Chine, which have hitherto been held at Canton. The Duchess of Norfolk has succeeded Viscountess Canning as Lady in Waiting on her Majesty. Mr. O. Gore has succeeded
Captain Meyrell as the Groom in Waiting. Major-Gen. Wemyss has relieved the Fion. Colonel Grey as Equerry in Waiting on the Queea; and Colonel Bouverie has
relieved Major-Gen. Sir E. Bowater as Equerry in Waiting on Prince Albert.
the rear and quarter The official returns of the revenue for fin year and quarter which ended on the 5 th inst, have just
been published. They exhibit a considerable falling off as compared with the returns of the last year and quarter. The total ordinary income for the year ended Jan. 5 , 1842 , was
$45,252,4956$.; that for the year just completed, was $44,329,865 l$., showing a decrease on the year of $922,630 l$. The total ordinary revenue for the quarter, ended Jan. 5, 1842, was $12,426,1696$. ; while that of the quarter just ended was $11,486,10 \%$, showing a decrease on the
quarter of $940,062 l$. The following are the details:-The returns for the Year exbibit an increase in the Post-office of 150.000 l $^{\text {; }}$ Income-tax, 571,0562 . ; Miscellaneous, moneys, 157,2831 . ; Repayment of Advances, 171,912l. making the total increase, $1,531,9241$. There is a decrease In the Customs of $824,275 \%$ : Excise, $1,173,6111$. ;
 fiom then diducting the above increase of $1,531,921 l$.,
we have. Ts stated above, a decrease on the year's ac.
 of 531,$] 2 . j /$. ; in the Excise, $717,262 l$. ; Stamps, $56,763 \%$. Txxes. 2\%, it.l.: Crown-lands, 9010 l, , making a total decrease of 1 3ise, 0.3il. There is an increase in the Postofice of $14,41,17$. ; Miscellaneons, $6,185 l$. ; Income-tax,
$2.57,2122$, to $13 . . i c h ~ m u s t ~ b e ~ a d d e d ~ I m p r e s t ~ a n d ~ o t h e r ~$ moneys, 80,910l. : Repayment of Advances, 89,388l. ; making a total increase of 447,9951 ., which being deducted from the above decrease of $1,388,057 l$., shows a deficiency money quarter's accounts of $940,062 l$. If the Imprestcalculation, repayment of advances be excladed from the revenue will be for the year $1,251,825 l$.; and for the quarter, no less than 1, 110,8606
of the 23 d instions.- With reference to the Gazette Chins:-Lieutenant to be Commander-Mr. Thomas The Navy:

The' Navy:-The Navy at the present moment consists of 234 vessels of all classes, mounting in the whole 3,890 Day, and consequently there are about 7,000 seamen less in employ. It appears that there are 18 sea-going line-of5 less than last year; 39 sloops, 1 less; 36 smaller vessels, 19 less than last year; 64 steamers, 4 additional; 21 sur-
veying vessels; 10 troopuships; and 10 receiving shing veying vessels ; IO troopnslips; and 10 receiving ships.
Our force at home comprises 604 gums ; packets, 46 . Mediterraneany 1,035; Brazila, 403; Fast Indies, 886; ; North America and West Indies, 476; Cape and Coast of Afica, 309 ; surveying, 93 ; ; troop-shipes, 56 .

## Fravce-The Patherin.

with the addrcsses delisered to Lowis philinally occupied Year's Day, and with his Majesty's replies. The Marquis of Brignote Sale, the Sardiniah Minister, as senior member address of that body, and availed himeelf of the opportunity to assure his Majesty of the pacific disposition of "Peace, which so fortanately subsists, and the maintenance of which is the object of the endeavours of all the Cenance or which is consolidating. itself the its ite very duration, for
Cabine erery day its blessings are better appreciated. May it
continue to be the lot of Europe and France to enjoy it many years under the reign of your Majesty"" The King
replied- "I have been deeply affected by the share which all the Savereigns whome you repeesent have taken in the immense loss I have sustained, and I seize this opportunity of again declaring how much I have valued the testimoniess
they offered to me. Could my family or myself receive any consolation, we should find it in the manifestations
with which we have been surrounded by all France, and the universal sentiment which was everywhere evinced as to the necessity of providing against the future con-
sequences to be feared from our great calamity. Everything gives me confidence that Providence will continue to bless our common endeavours to prevent the repose of the world from being disturbed, and to insure the maintenance of the general peace, by a continuation of that good harmony which so bappily subsists between all the with His Majesty's reply to the Peers was received their demonsamations, particularly when he charactoris courage and the hope of the fiture that remains to bim. When the applause had subsided, the King continuedThis future you knaw is entirely consecrated to France The blow which has struck me was of a nature to inspite grave anxiety. Your wisclom, the fidelity of the Chambers to monarchical principles, the support which I have founc in then, and the national ardour so openly expressed for myself and my family, have removed even the dread of the evils which this immense calamity might have drawn upon France." -Public attention is now direcbed to the opening of the Chambers on the 9 th; it is officially announced that they will be opened by the King in person, and consequently there will be a speech from the throne, Although it is certain that INE. Guizot will be materially strengthened by this circumstance, rumours of a change o Ministry were still in circulation in Paris, founded on the abrogate the treaties of 1831 and 1833 . Upon this sub. ject there is no doubt that, if the attempt be made, it will certainly be defeated by the Ministry, who entertain no feeling of apprehension for their stability. The Government papers contain an additional article to the Post-office conventions entered into between France and Hollana is, to be opened, through Belgium, between Lille and Breda. -The fortifications of Paris are beginning to excite the apprehensions of the inhabitants ; and the Commerce infers, from the eagerness with which the Government is prosecuting the expropriation of the ground on which the new detactred forts ase to beerected, and the rapidity with which these operations are conducted, that the Ministry are afraid that the Chamber would not sanction the The citadel of Mont Valerien, composed of five bastions. The citadel of Mont Valerien, composed of five bastions, is to be shorthy closed. It contains already two barracks, A letter from Toulon states that the ship Mraria Annetta, sailing under the Sardinian that the faip Maria Annetta, posed of Spaniards, had been captured by the French corvette Blonde, Captain Trehouart, of the island Mayotta, being accused of acts of piracy and slave-trading. This has been placed under sequestration. The seamen have been committed to prison to wait their trial,-M. Carsy, ex-president of the insurrectionary junta of Burcelona, ult. a vindication of hiore de Mhe revolt. He particularly directs himself against a charge of dishonesty, adduced against him by a London journal, reals." "Ye then awry with no less a sum than $16,000,000$ sul from the then proceeds to exonerate the Erench Conthat "he was the providence of the refugees, and that all, without any distinction of party, found at his hands the same hospitality, including eren the families of Van Halen, Gutierrez, and Zavala." It was also France would accredit an ambassador to the Spanish Court, and that the choice of the Govemment would -The trial of Jacques Besson, for the murder of M. de Marcellange, has been brought to a close after nine days' sitting. After remaining about an hour in deliberation, the jury brought a verdict of guilty against the prisoner, accordingly sentenced to death, and to be executed: on the public square of Puy. It is said\} however, that a point Cassation to, annul the finding, and order a new triad. Major Lelievne, whose name has frequently been before
the public in connexion with the defence of Mazagran,
arrived at Malesherbes on the 22 d December. Th
inbabitants of this town, his native place, had prepared a banquet in his honour, which was presider aver by M. d by 82 guests, and an old solder of the Lelievre wee placed, as a trophy, the three swords of honour offered to him by the towns of Angers, Strasburg, and Peronne. Many toasts. were drunk-to ${ }^{6}$ The defenders of Mazagran;" to "The Army of Africa;" to "Lelievre, speech, expressed the gratitude which he experienced those testimonies of esteem and attachment. -The line at French mail-packets to cross the Atlantic is expected to commence running next June. The packets will be 14 in number; they are buitt to carry 40 guns each, and will the packet station is Cherbourg. par port selected for will run to and from New York; and the reat will coners Indies and passengers to and from France and the West passengers wils, and the Gulf of Mexico. The fares for English West India Mail Steam-packet Company. The whole of the postage paid to the English Government for United correndence between France and the southern this states and the French West Indies will be lost to menced runnimg. A vessel has already been despatched to make the necessary arrangeneents at the various station of the who hastitute, Mer Wright, the Anglo-Saxon scholar Whe has contributed so largely to our knowledge of middle age interature, was elected englisn corresponding member in the roons of the late Earl of Munster. There were two otrer candirates for the outce, via., Mur. Hamilton, vice Wilkingon the society of Antiquaries, and Sir Gardner M. W. Out of 34 members present on the occasion Mr. Wright hace 25 votes. M. Gaizot is said to have exerted himself strenuously for Mr. Wright.
SPAIN.-We have accounts from"Barcelona to the 27 th Generall Seoane has joimed to his functions of Eaptain-General those of the political chief Soiror Gutierrez, before his retirenoent, apmulled the municipal elections; and the Military Comansion has set at liberty Señor Gibert, who was arrested on suspicion of bevo concened in the liate outbreak. Several villages on the French frontier had been dusarmed. The Ayuntamiento had issued a notiee informing the inhabitants that it was the will of the Cap tain-Generaly Seoane, theat the war contribution of $12,000,000$ reals should be paid within these days, asad inviting them to: comply with that exigeney. The Regent slept at Tamagona on the 23 d , and proceeded on the pext day to Fingroz Hze was overywhere received with monstrations of respect and sympathy by the people and the National Guard. The Regent was to reach Valemcia on the 25 th, to stop there on the 26 th and 27 th and then set out for Madrid, which he expected to enter on then January. The preparations for his reception is Yat Ist were on a most triumphant scale. The citizens and Nacional Guard of that province are said to bave felt the neessity of proclaiming their addesion to the existiag Gom ernment, in opposition to the attempts of the cons and Christinites.-The official journal of Madrid digplaced in consequence of ay from obsequiousmess to that power. The papers are much occupied with the lettes written by Gen. Pastor, giving an account of the surrender of the Ataroanas, which he surrounded and distinctly stating that panied by two members of the Junta I It also contrndicts the assertions of the Christino organs, that the Englisla ships of war off Baxcelona had given projectiles believed in Madrid that Ma the bombardment: It was believed in Madrid that Gutierrez, late Political Chief of Barcelona, would be capacityfo Granada. - The conduct of Mar. Penleaze, the British Consul-a Barcelona, in refusing to compromise his frorefuge on board our ships of way duy Spaniards to take ment, bas ween much censured by the French papersi It appears, from a letter addressed by the Comsul to his re latives, in England, that when the city was threatened. with Rodney to we was requested by, capt. Maunsell of the some Spaniards board, with his family ; butt as he had ened with assassingtion pre detarmined not to desert them, ant they remained during the whole bombardment which Mrs. Pendeaze bore with great courage and ontro ness But on Sunday momine, reben everytling wa over, Capt. Neansell sent to say that Espartero had com plained that the Consul impeded his operations, and urgcoum dea point of duty to go on bowid. Mr. Penleaze bed no longer resist; and taking his wife out of a sick ste, and gomg out in a beavy sea to the ship in the road she sunk proved too mush for her shattered constitution, and if he bank urder it It appears more than probable that to do so, the life on board the Rodney when first requested served,
Portugat.-We have received Eisbon news to the tariff questiothing definitive had been done respecting the way or the other, fe foy as the pienipotentecided in one cerned, in the course of a fer days. The Suffren Frencline of-battle ship, bearing the fag of Adm. Cazey, bad arriwed brig-of-war. it the Frencli have also a corvetite and a pected; and there was a report that a Franch squadron Lisbon for some time, There are now three vessels in the

Tagus; the Relampago, the Gloria, and the Cabo Verde,
all of which were seized by General Marinho during his government of Mozambique, for their notorious design t lake in cargoes of slaves; the general has published French slaving agent at Mozambique, which leaves no doubt whatever of the illegal intention. The Gloria, although professing to be bound on a peaceful voyage to the coast of Africa for ivory and palm oil, was found at Mozambique to have a crew of 70 men armed to the teeth,
carying 6 pieces of artillery, besides a long 24-pound carrying 6 pieces of artillery, besides a long 24 -pound
swivel gun, and having on board all the apparatus of fetters, cauldrons, and other accompaniments of a slave -The economies now, completed by the Government in the large sum of $65,000 \mathrm{l}$. per annum. In addition to thase which have been already announced, the Duke Terceira has accomplished ane of great importance, which no one, less popular, could have attempted. supplying of uniforms to the Army of Portugal with the large extent of $99 \frac{1}{3}$ contos per annum (22,400l.). The military force is to be benceforth maintained on the footing of 21,000 infantry and 3,000 cavalry; of whom 6,000 are with registered license-leaving an actual subsisting force, drawing pay and receiving food and clothing, of $18,000 \mathrm{men}$. There is at once a diminution of number, and an increase in the duties and efficiency of the force. There seems to be no doubt that these retrenchments have done more than any other acts to strengthen and consolidate the power of the present Administration.
Bexarom.-Letters from Brussels of the 26 th ult., state that General Joly, president of the Belgian commis sion for running the boundary line between Belgium and Holland, has arrived at Maestricht, where the Dutch commission has likewise assembled. It may, therefore, be supposed that the treaty on the subject of the boundary line will be shortly carried into effect. It is stated that the general receipt on all the railroads in the kingdom will amount this year to about $7,500,000 f$.
Holland.-On the 29th ult., a general meeting of the shareholders of the Dutch Railway Company was held at Amsterdam. M. Conrad, the engineer, gave an account of the state of the work, and, among other things, an-
nounced that it was expected that the road from Leyden to the Hague would be completed in the spring. He de claved that there was no truth in the reports that the roads had sunk down in some places between Amsterdam and Haarlem. Dr. Siebold, the well-known author of de la fraye, ${ }^{6}$ A notice of an inedited narrative of a yornal of Duco, made in 1639 in the Great Ocean to the east o Japan, undertaken by order of the East India Company, and of authore Mathew Quast and Abel Jan of ohich Which they have probably since planted a colony, were discovered and described by those two inustrious Dutch navigators." It seems that Dr. Siebold, being led to en-
tertain some idea that the Bonin Islands had been dis covered in the beginning of the 17th contury by some Dutch navigator, he, therefore, made search in the archives of the Dutch East India Company, when he was so for tunate as to find last month several documents signed by Quast and Tasman, and a journal of the voyage, with a additional honour to the naving his expectations, and giving explore those dangerous and then unknown seas.
Gremany. -The Augsburg Gazette states that the Prussian Ambassador at $\$$ t. Petersburgh has received orders to state to the Russian Cabinet, with respect to the facilities granted to the Prussian commerce by a late these, that the Prussian Government is anxious that all mitted to enjoy the same advantages, inasmuch as its intention is not to act for itself, but for the general interest of the Union. A Berlin letter of the 25 tis ult., states that the Hereditary Prince of Prussia, being out a few days before at a boar hunt, wounded one of these animals of unusually large size. The beast, which was not disabled, turned upon the Prince, threw him down, and in all probability would have killed him, had not one of his suite fortunately come to his rescue,
and shot the boar, which fell instantly lifeless. His Royal Highness did not receive the slightest injury. Another letter from Berlin states, that the King of Prussia has ordered an architect of that city to construct at Sans-Souci 'a Greek theatre, where the masterpiece the open air in the fine season.-It is said to be the trassit duty, in order to facilitate commercial communica tion between the German Customs Union and the vinces of the Danube. The construction of railways in been concluded with the rovernment of Sam jas jus been concluded with the government of Saxony for the
construction of a railway from Prague to Dresden; and letters from Vienna of the 24 th ult. announce. a sudden rise in the price of the Vienna and Milan Railroad shares, inprovement, in consequence of an Imperial decree or daining that this railroad should be completed as quickly any part of the line which the company was unable or willing to execute. Thus the Adriatic will unable or un nected with the German Ocean by means of a be conpassing through the Austrian provinces.-The restoration of Hamburgh is making rapid progrese on the plans chiefly of Mr. William Lindley, an English engineer, chiefly of Mr. William Lindley, an Enghish engineer,
Whose services in cheoking the progress of the conflagra-
tion were acknowledged by the authorities. The streets
are to be wider and straighter than those of the old town, and in addition to these improvements, the Government and in addition to these improvements, the Government opening a navigable canal between the rivers Elbe and opening a navigable canal between the rivers the and scale of those in London, will be established; and one of the main lines is already in progress of exccution. A Hamburgh paper of the 30 th ult. states that the preparations for marriage of the Crown Priace of Hanove are in greatforwardness; nothing is known respecting the in which the preparations are executing, it aeems probsble that it will be in a short period, perhaps before the end of January.
Sweden.-Latters from Stackholm of the 23d ult. mention that the King had been so much indisposed, that it was necessary to put off the Council for two days, but
at the date of the last accounts his Majesty had somewhat at the date of the last accounts his Majesty had somewhat recovered, and no serious apprehensions were entertained.
These accounts notice the failure of the house of Gestthof and $\mathrm{C}_{0}$, of Stockholm. The liabilities of the insolvents are estimated at 400,000 thalers banco ${ }_{2}$ or from $50,000 l$. to $60,000 l$. sterling. A considerable quantity of old Roman silver coins of several Emperors have been dug up in the Island of Gothland.
Malta.-Accounts from Malta mention the narrow escape of H.M. steam-ship Geyser from shipwreck on the baxks off Cephalonia, on the 3 d ult. She struck on the Guardiana bank white on her passage from Maita to Corfu with the Ionian mails, but was fortunately got off, after throwing her heavy guns overboard, and succeeded in reaching the port of Argostoli before night. Her escape is the more remarkable, as a gale of wind came on during the night, and nothing could have saved the vessel had the machinery sustained injury.
Russia.-The fête-day of the Emperor, on the 19 th uit., was celebrated with the usual demonstrations at St. Petersburgh. In the morning a grand mass was perEmmed in the chapel of the Winter Palace, at whian Court, attended. After the mass the Emperor received the diplomatic corns in the throne-room and the ladies were admitted into the apartments of the Emperor to perform the ceremony of kissing hands. In the evening the whole city was brillianty illuminated, and an the evening of 0 th for 1811 of the $r$. Petersburg and Moscon which has just been published furnishes a serious Moscow, which has just been phich the inmates of those picturi the 1840 the children under the care of the two great houses 1840, the chin 47811 In the jear 1841 the children were in number $7,811.18$. aposied of 10 155. During the number of deaths was no less than 10, 55 . During the their parents, or dismissed from the institution. Among the later were of the universities; 14 were placed in the schools of medicine, 88 in the schools for land-surveying, nearly 500 were apprenticed to different trades.-Private letters from St. Petersburgh of the $\mathbf{1 7 t h}$ ult. state that the Minister of the Interior has communicated to all the governors of the provinces the following imperial order :-" Upon my
report of the arrest of ars incendiary, his Imperial Majesty has been pleased to order, if this criminal is convicted, $h$ is immediately to be punished by running the gauntlet six times before 1,000 soldiers, at noon, and on the very spo where he committed the crime, and with all possible publicity and ceremony; if he survives the punishment, be is to be conveyed to the Siberian mines, to suffer 21 years hard labour. It is his Majesty's wish that this punish ment shall be applied in such cases when incendiaries are taken and convicted of such crimes. In cases of incenMajesty before they are punished.
Turkex.-Letters from Constantinople of the 18th ult. confirm the news already announced in regard to Syria, and the Minister for Foreign Affairs had annownce that the Sultan, in order to conform to the wishes of thos Powers, had determined to intrust the administration of the Lebanon to two governors, one a Maronite and another Druse. These two governors are to be appointed by the Pacha of Saida, to whom they will be subordinate. The Sultan has also determined to withdraw the Turkish garrisons. In regard to Servia, the Augsburg Gazette says that the French lilippar M. de Bourqueney, has declared that loui Philippe is not opposed to the protectorate of Russia ove the restoration of Milosch family The Carsed Gazettc of the 3I stult. also states, that it is the determination of the great Powers to insist upon the restoration of Prince Michael to the throne of Servia, having resolved to defend egitimate right against the spirit of revolt. Letters from Turkish ambassador; at the Court of France. The imme diate object of the measure was not known; but it was supposed that he would immediately succeed to some high
Egypt.-Advices from Alexandria of the 16 th ult. state that the Pacha has left Mansourah for Cairo, and that after staying there a few days, he will go on to suez, where Boghos Bey, his Prime Minister, expects that he will give orders to have the canal, so long talked of, between suez and Cairo immediately begun. Private letters sement of the transif of passengers has just been made to try the capability of dromedaries for draught. "Oge of the new
carriages lately sent out by the Oriental Company was brought over here from Cairo with some difficulty, four horses being found scarcely sufficient to draw it on the heavier or sandy part of the road. It was here determined to try two dromedaries in it, and although the experiment was made under considerable disadvantage for want of proper harness, breastplates, \&c, it proved completely successful, showing that the dramedary is much more by dromedaries properly horse in this country. Drawn will form a yast properiy harnessed, these new carriages wind tha thon being far more commodious and easy than the chansy vans hitherto used. We many struco mention here that amal steam-vessel has beer constructed and prollers, intental Company with engines and patent propellers, intended to ply on the Mahmoudieh canal from Alexandria to Atfeh. The pro-
pellers consist of two small instruments in the form of the pellers consist of two smani instruments of a windmaill, working in the run under each quarter of the vessel, and by means of multiplying-wheeks are turned with great velocity ; their action on the water propelling the vessel either forwards or backwards, accarding to the direction in which they are turned. The boat has been tried on the river, and went at a speed of eleven miles an hour without causing any perceptible agitation of the water. She has been since shipped at Southampton, on board the Oriental, for Alexandria.

China. -The Great Seal of England was on Saturday. affized to the treaty recently ratified between this country and China, at the residence of the Lord Chancellor, in George-street, Hanover-square, after which it was transmitted to the War-office, for the purpose of being forwarded to the Celestial Empire, under the care of Major Malcolm. The seal is inclosed in a sitver box, similar to that used for the patent of his Royal Highness the Prince of Wales, and, together with the important document to which it is appended, is inclosed in a case covered with crimson velvet. Of the seal itself, it is expected that no trace of the impression of Mr. Wyon's besatiful design will exist when the case resches its destination, on account of the yielding nature of the materials of which it is comeposed: indeed on former oceasions, it has been discoposed that lun Scotland and lon obliterated Liout Col Mo Treaty on his return to China on Thursday lasto
West Indies.-The West India steam-ship Thames arrived on Sund with Weat Indian Mexican pames aris oa Sar mailo, 16 th bad 16th. The papers received by fitte to the beginning of December, but bley afford inttle information. for the general reader. The dates from Jamaica are to the 3 d ult., and the accounts from that inast state the legislative proceeding as worki manner, the Assembly had under coasideration laws pstates, which acministration of bankrupt and insolveat from the flagrant cases of fraud which had occurred under the present system. The Customs revenue for the year 1842 was 80,7481 ., which, as compared with former returns, proved a favourable morease in the commerce of the island. Fears prior to the late rains had been entertained for the support of the crops against the drought threatened by the continued heat; but there was every prospect of suitable weather following, and the hopes of the platers were therefore revived. The advices from Demerara, Trinidau, and Barbadoes also speak of the favourable state of the weather for the crops, and tae ino provement trade was experiencing; but bayond these facts there is not a line worth extract in the papers, which are for the most part occupied with dissertations upon the evidence lately taken before the committee of the House West Indies, on the condition and prospects of the return of the crops, in all instances an increase is expooted.

CITY. evenue has produced a decline in the price of Stock. Consols closed at $94 \frac{3}{8}$ to $\frac{7}{9}$ for the Opening, ex div.; Three
 Red., 102 ; Exchequer Bills, 172 to 3 ; lndia Stock, $261 \frac{1}{2}$ to 3

The Weather - A seasonable change tore in the weather on New Year's Day, and continued for two days, with every appearance of frost having at win whole of Sunday was one of the finest New Years' Days renembered for many years, the sun shining brilliantiy. On Mandey and Tuesday the frost contiaued Wita usthe metropolis were completely frozen un, and in many of the more exposed situations the ice exceeded one inch and a half in thickness, affording abundant emplopment to the itinerant vendors, who at this season of the year supply the pastrycooks and fishmongers with that necessary article. The larger sheets of water in the parks were partially fuozen over, but the gates were not thrown open, as the ice was not capabte of bearing. The brightness of the weather caused a very numerous attendance in the paFks, whic wand intensity of the cold. The Hume society also made the arrangements for the prevention of fatal accidents daring the prevalence of the frost. On wednesday mamiag, howeren S.W., accompanied by rain, by which the ice in the Parks another change acourred at nights, and a north wind set in with a havi froct On

Thursday and yesterday the weather continued extremely variable, presenting alternations of thaw and frost during the 24 hours, and completely at varian tions of many of the weather prophets.
Income Tax in the City. - The committee appointed at a late public meeting of the inhabitants of the ward of Tower, to memorialse on the subject of the improper increase which had been made upon the Income-tax returns of that district, had an interview on Saturday with the Chancellor
of the Exchequer. They were accompanied by Mr. of the Exchequer. They were accompanied by Mr.
Masterman, one of tity Members. The depatation presented a memorial, stating that the Government sur-
veyor had "admitted, in a letter to the chairman of the meeting, that in the assessments for income alone, no fewer than 556 persons out of 1,542 had had their inaileged by the officers that these persons did not make alleged by the officers that these persons did not make retarns; that upon indy inasmuch as some of the returns appeared to have been lost or mislaid; moreover, that the
increases under schedules $A$ and $D$ had in almost every increases under schedules A and D had in almost every
instance been made upon the suggestion of the ward instance been made upon the suggestion of the ward at the meeting, and publicly denied this, and had charged
his superior officer with having compelled him to his superior officer with having compelied him to
make the increases. That the meeting, upon this evidence, had nominated the deputation then present as a comPurposes, to whom a and presented, in, which the illegality of an assessment,
estimated or increaseduyon grounds such as those menestimated or increased upon grounds such as those mentioned by the government surveyor, without the intervention of the additional commissioners, as required by the act of Parliament, was strongly represented; and that as no deliberation could have been bestowed upon the different cases, or discrinaination exercised by the proper authorities, and, moreover, as it was quite apparent that neither the spirit nor the letter of the Act had been complied with, the memorialists prayed that the commissioners would be pleased to cause a re-assessment of the
ward, according to the original returns, to be made ; that ward, according to the original returns, to be made; that
the commissioners, in answer to this memorial, had said the commissioners, in answer to this memorial, had said that the district represented by the deputation had certainly some reason to complain, but while they made this acknowledgement, they lamented it was out of their pawer assessment-books having been signed by the additional commissioners, they were thus legalised, and that they have, therefore, no power to cause a re-assessment of the district. The abstract went on to salled to bring the case before the govern ment in the shape of the present memorial. That in doing so they had been actuated by no political or party feeling.
That the district from which this complaint emanated had ever been remarkable for its loyal acceptance of all constitutional measures, and the their fair share of any public burden, felt confident the Government did not desire that they should be forced to contribute more than by law could be required. The Chancellor of the Exchequer, after hearing these statements, said that the individual Who had been most in fault was the district assessor; and
that officer not having been appointed by the Government, that officer not having been appointed by the Government,
it was clear the Government liad no control over him. A remedy for his defects lay rather in the hands of the inhabitants of the district themselves. If a case were made out against an officer who had his appointment under the
Government, the Government could then interfere. Several Government, the Government could then interfere. Seseral mentioned many instances which had come under their personal observation. Mr. Piper stated, on the authority of the assessor, that while that officer was at the chambers of the commissioners, going over the returns for the Ward
of Tower, a junior clerk called out, from a remote corner of Tower, a junior clerk called out, from a remote corner
of the room, "Have you come to So-and-so's return yet?" adding, "I know them well; they ought to make a wapping return! Put 5002 . on to them at least.". Mr.
Hunt, a member of the deputation, informed the ChanHunt, a member of the deputation, informed the Chan-
cellor of the Exchequer that it was his case to which Mr. Piper had alluded, and offered to put the very document in his hands on which the addition was made. At the close of the interview, the Chancellor of the Exchequer said he felt obliged to the deputation for the statementa
they had made, the information which he had obtained they had made; the information which he had obtained look into the case, as regards the legality of the assessment Sunday Trading.-For some time past, the inhabitants of St. Pancras have complained of the traffic allowed to be carried on, not only on the Sunday morning, but the various the entire day. During the last rubject into consideration, and have issued printed notices, that any person opening shop on Sunday for the sale of any articles law. The itinerants who sell articles in the streets have likewise been cautioned

Metropolitan Churches.-The directions contained in the a large number of the metropoliten an are morning the Rev. Dr. Spry, rector of Marylebone, preached for the first time in his surplice. The Bishop, it will be remembered, recommended that the clergy should preach in their surpices in the afternoon and evening. At the close of gowns in the afternoon and evening. At the close of the communion service Dr. Spry ascended the puipit, and proceeded to the delivery of his sermon without the introtion is made in the Rubric or canons. At Trinity Chureh,
in the same parish, notice was given on Sunday morning that in future the recommendations of the Bishop on the
subject of preaching would be adopted -that all notices subject of preaching would be adopted-that all notices
would be read by the clergyman from the reading-desk would be read by the clergyman from the readingen of baptism would be administered immediately after the second lesson in the afternoon, and that the church would week at ten o'clock, and every afternoon at four. The rectors of the remaining district churches in the parish are expected to follow the example of the rector. In St. George's, Hanover Square, however, and so fused to comply with the proposed alterations. In the City the incumbents have held a meeting at Sion College, with tha deputation was appointed to obtain an interview hension of the clergy, that the alterations pointed oat for their adoption would give great offence to the laity, but at the same time stated that if the bishop would order plied, he would not order, but it was his charge ; the City clergy
alteration.
Hall of Commerce.-On Monday the opening of this very handsome building, recentily erected by Mr. Moxhay in under the auspices of the Lord Mayor, several of the aldermen, and sheriffs. The interior of the establishment which is at once spacious and elegant, consists of a hall Which is at once spacious and elegant, consists of a hall
of meeting, with every accommodation for the transaction of business connected with the general commerce of the ingdom; a reading-room, supplied with British and foreign newspapers ; private apartments, to which parties
meeting in the hall may retire to conduct.negotiations of a confidential character ; sample and deposit rooms, with iron safes, a register-office, \&cc. The Lord Mayor presided, supported by the chairman of the East India Company and the principal merchants of the City. Lord John Russell arrived some time after the commencement of the proceedings, and was received with loud
cheers. The Lord Mayor, after giving, with all the honours the usual routine, atter giving, "Wposperit to the Hall of Commerce." He referred to the fact that the magnificent building under whose roof they were assembled had been erected by the unaided means of one man, at a cost of more than 60,000 .; and he felt confident that every one who had looked into its arrangements would agree with him, that such an institution was calculated greatly to increase the facilities and promote John Russell rall who were engaged in commerce. Lord of the City of London, for the honour which had been done them by drinking their healths. He was sure they were all actuated by one cordial feeling of admiration of the public spirit and enterprise which had prompted Mr. Moxhay to undertake the building of that great and splendid hall, and He hoped the undertaking would be successful for Mr. Moxhay's own sake, but he felt persuaded it would be a in any way to promote the commerce and prosperity of political matters should be introduced but he trusted the pere all anxious for the promation of the prosperity of the City and of the country to which they belonged, whose prosperity, he might say, was so intimately connected and bound up with that of the City of London, that the City could not prosper without the country participating in he be rould bermed from "s Peoperity to the City of London and the trade thereof." Mr. Moxhay and several other gentlemen addressed the meeting before it boke up. Among the embellishments of this instiution attracted general admiration. It, is executed in Malta stone, and represents Whittington, the size of life, seated on the mile-stone, tired and dejected, at the moment when the merry sound of Bow bells strikes upon his ea
The Great Northern Steam Ship,--This vessel arrived in the East India Docks last week from Ireland, and wa visited on Monday by a number of Naval officers, including Capt. Sir Edward Parry, Mr. Lloyd, chief engineer of the Woolwich dockyard, \&cc. The Great Northern is fitted argest vesilh Archimedean screw, and hitherto been applied. She was huilt that principle has Mr. W. Coppin and laid down about 18 months since. The fullowing are her dimensions :- Extreme length, 247 feet; extreme 16 breadth, 37 feet ; depth in hold, 26 feet; draft of water, coals, ballast dead weight of 1,300 tons, cots cylinder is 68 inches, the length of stroke 4 feet 6 inches, and the number of strokes per minute 17 ; the diameter Northern is frigate-built, pierced on her upper deck for 44 guns, and fully rigged as an ordinary sailing vessel. The length is feet high, and its diameter 30 or 22 inches. When in full sail she spreads no less than 6,700 yards of canvas. Her speed under steam-power only was accurately tested before she left Ireland, on Loch Foyle, where she made $8 \frac{1}{4}$ knots per hour, equal to $9 \frac{1}{2}$ statute mily, from the Ower's light, near Portsmouth, to Dungeness, a distance of 66 nautical miles, in five hours. The position of her machinery is near the stern, leaving the old entirely free for mercantile purposes ; and the boilers and furnaces are all placed below the water-line. of the
vessel. The consumption of fuel is about one ton per judged from the extraordinary capacity of the ship may be he will stil the fact, that, with 600 tons of coal on board, and afford take in 1,000 tons of measurement goods, 800 troops but theps. Her destination is not at present known, in the Indis said to be little doubt that she will be engaged ttin lua trade. Thirteen large vessels are at present mentioned the Great Britain, vessel of more the Britain, now building at Bristot-a Government frigate ; and three French ships of
The Scottish Monument.-On Friday the workmen commenced the clearing of the ground in Regent Circus, which the Marylebone Vestry have granted to Mr. Hume, Reformers of 1793 ; and a long pole, showing its intended height, was placed in the centre. On Saturday morning, to the astonishment of the inhabitants and the public, the pole was found to be surmounted by a cap of liberty. Indeclined was forwarded to the parochial an Some wen tleman resident on the spot, it is stated, lost no time in missioners information Weods occurrence to the Commissioners of Woods and Forests. The result was, that o'clock the restry assembled to consider a motion of which Mr. Gomm had given notice,-" That the members protection of the persons and property of the the parish solicitor be instructed to submit his opinion in writing to the following question-'Can any proceedings, and of what nature, be adopted, and by whom, against the board of vestry or any or either of its members for a recent grant of a portion of the parish land to Mr. Joseph Hume, M.P., to erect a column to the alleged Scottish martyrs After an angry discussion, during which several vestrymen addressed the meeting for and against the moion, a show of hands took piace, when the motion whas declared to be negatived by a large majority. Mr. Gomm then demanded a division, upon which an extraordinary scene of confusion ensued. The moment Mr. Gomm mentioned aivision, those who voted in the majority were seen rushang from their seats in all dxections, making their exit as fast as possible in defiance of the authority of the chairman, who continued to use his hammer for some minutes to no purpose, the vestry at the ponents of the state of the greatest uproar. The opvision, when thenumental column insisted ou the ascarried by a majority of nine to eight. It was stated that the reason for the course adopted by those who left the vestry was to prevent their names being recorded in the event, of legal proceedings being taken.
Tes in the Metropois.-On Monday Mr. Braidwood, the superintendent of the Brigade Force, at the meeting Fine Directors forming the Committee of the London He Estabishment, made his annual report of the fires Metrecurred during the past year within the limits of the wetropolis. The report commences by stating that fires ceed 213 ing by 73 those of the preceding 12 months, and being have not been so extensive in magnitude. The following are the number of fires that have taken place since the Brigade was formed, ten years ago: In 1833 , there were 458 fires, destroying 31 houses totally, and damaging 427 other buildings. In 1834, 482 fires; 28 houses burned down, and 454 damaged. In 1835, 471 fires; 31 houses burned down, and 440 damaged. In 1836, 564 fires; 33 houses burned down, and 531 damased. In 568 f 22 houses burned down, and 479 damaged. In 1838, 1839 584 fires. 17 houses burned, ann s35 567 gea. In In 1840681 fres: 26 hense 14 damaged. In 1.a 1811 . 20 has damared and in 1842769 fires 24 . and 743 damaged : making a total of 5,774 fres within the last ten years; including 269 houses totally burned down, 1,61 partially consumed, and 3,894 slightly damaged. The number of lives lost by houses taking fire during the period is as follows: In 1833, $12 ; 1834,3$, 1835,$11 ; 1836,14 ; 1837,13 ; 1838,24 ; 1839,25$;
1840,$25 ; 1841,11 ; 1842,20$-total, 158 . These are the lives lost where the firemen were called, but many others have occurred through clothes taking fire, \&c., of the fires mole has been received. The chief portion of booksellers', bookbinders' and stationers', 79 ; bakers' 140 ; brokers', 48 ; cabinet-makers', 84 ; carpenters', 245 chandlers', 48; chemists', 40 ; drapers' (woollen and linen) and mercers', 107 ; grocers', 59 ; hat-makers', 57 ; lodging-houses, 440 ; private dwellings, 1,935 ; publicmakers, 63 ; stables, 113 ; descriptions, 325 . A great number have been proved to be wilful, and the offenders escaped punishment Fire at Somerset House.-On Thursday evening, about half-past 6, a fire occurred in the office of east corner of the stamps and Taxes, in the southoriginated in one of the apartments on the basement floor, and was occasioned by a large fire baving been lighted on the hearth (no stove being in the fire-place), which becoming overheated, communicated to the bond-timber underneath. Several engines were speedily in atteridance, but the flames were subdued before they reached the spot, and正tle damage was sustained
Mehropolitan Amusements, -The sums of money spent
in theatrical amusements on Monday, the 26th Dec., at the fourteen theatres now open in the metropolis have been calculated as follows:-Covent Garden 2501.; Drury
Lane 350l. ; Haymarket 220l. ; Adelphi 120l.; Olympic Lane 3501 .; Haymarket 220.; Adelpal Marylebone 100l. ; the Surrey 140t.; the Victoria 120l. ; Sadler's Wells $80 \%$. the Queen's 75l.; the Norton-Folgate 90l. ; the Pavilion $75 l$. ; the Garrick $60 l$. -Total, 2000 . $^{2}$. The following sums were taken at the popular saloons licensed to perform musical entertainments:-Grecian saioon 150 .
 Stingo $40 l$. making a total of $2,400 \mathrm{l}$. taken at the doors ment.
Public Meetings-On Tuesday, the half-yearly meeting of the London Dock Company was held, for the purpose of declaring a dividend for the half-year ending the 31st
ult., and for the election of directors; Mr. John Cattley, nlt,, and for the election of directors; Mr. John Cattley,
in the chair. From the report, it appeared that during the balf-year ending the 30 th November last, the tonnage 131,893 tons in the corresponding period of 1841 , being mincrease of 17,559 tons. The earnings of the company fur the six months of last year, ending with the 30 th No$1841,186,878 \mathrm{l}$. $15 \mathrm{~s} .6 \mathrm{~d} .$, or a decrease of $4,223 \mathrm{l}$. 11 s .3 d . The expenditure for the last six months was $105,482 l$. 19 s .9 d. ; and during the period ending the 30 th November, $1841,105,2887$. 17 s . 8 d ., or an increase of 194 l . 2 s . of 16.17 s .60 . per cent., being more by $2 s .6 d$. than that agreed upon at the meeting in July last. The chairman, that the Docks were progressing favourably, and that there was a balance of $191,429 l$. in favour of the company. year. Although there was an increase in the tonnage since the last meeting, it would be seen there was no augmentation in the revenue. This arose from the greater number of corn-laden vessels that had arrived, the cargoes of which were not warehoused in the London Docks. The report was then adopted, and the dividend declared as proposed by the directors. -The half-yearly meeting of Ambrose Humphrys was elected a director, and a dividend at the rate of 6 per cent. on the capital paid up was declared. The Governor said that the sales in the crown reserves, up to the 24th November last, had been 33,963 acres, whereas in the same period in the previous year
there werebut 22,538 acres, showing an increase of 10,425 acres. In the Huron tract, up to the end of October last, the sales had been 25,605 acres, and in the same period of last year 6,367 acres only. There had been also 25,000
acres of the company's land in the Huron tract sold upon acres of the company's land in the Huron tract sold upon
a new plan of receiving payment in twelve instead of six annual instalments. It was anticipated that the total sales of land in 1842 would amount to 100,000 acres, accounts having been already received of the sale of
85,000 acres. The receipts of the company had been satisfactory, being above those of last year, and the last instalment due to Government for the purchase of these lands had been paid. - The half-yearly meetplace on Monday, Mr. W. R. Collett, M.P., in the chair. The report stated, that the company had recently become lessees of the whole of the slate mines, twenty square miles in extent, situated in the districts of Curraghbally and Killaloe, in the county of Tipperary. The quarries had been surveyed by Mr. Cubitt, the engineer, and all the liabilities connected with the purchase of the railways, machinery, and property paid off. The sales at the quarries and different depots during the past year showed a considerable increase over those of the preceding year. One thousand men were now employed in the principal quarries, which produced upon an average 10,000 tons the past year, after payment of expenses, showed a balance of 2,775 l., applicable to the payment of a dividend at the rate of 6 per cent. per annum. The halfyearly meeting of the proprietors of the Colonial Bank From the report, it appeared that the losses the bank had sustained beyond the reserved fund, were calculated at abont 50,000 l. The profit made during the half- year left an available balance of $14,361 \mathrm{l}$. 1 s . 5 d ., from which the directors proposed to declare a dividend of 2 per cent. for the half-year, being at the rate of 4 per cent. on the paidup capital. A motion for postponing the declaration of a dividend, and another for reducing the salaries of the directors from $3,500 l$. to $1,500 \%$. per unnum, were negatived by a large majority, and the report of the directors was adopted.-On Wednesday the half-yearly meeting of
the Royal Santiago Mining Coospany was held. From the report it appeared that the produce of the six months ending the 31 st August was, 5,683 tons of copper, which fetched at Swansea 55,08 tast account increased to $56,365 l$. $19 s .2 d$. A diminution in the proceeds of the mine had occurred since the previous half-year, which, had calused the receipts to be the new tariff. The expenses for the same period, includ ing the Income-tax, amounted to $31,513 l$. 11 s . $6 d$., being it was accounted for by the erection of new buildings and machinery for the more extensive working of the
mine. The net profit on the half-year was $24,852 \mathrm{l} .7 \mathrm{~s} .8 \mathrm{~d}$. , from which the directors declared a dividend of $3 \%$. per share. After some remarks from Sir Samuel Scott,
Bart., Mr. Thornton, Sir Isaac L. Goldsmid, Bart, the Hon, Leslie Melville, and other proprietors, the repor
was adopted.-The Quarterly Court of the South Sea Company was held on Thursday. A long discussion arose its affospects of the Company and the management of one and three quarters per cent. be declared on the Company's stock for the last half-year, and that the dividend warrants be paid on the same day as the Government money to make up the dividend and that the deficiency woneld, as usual, be made good by Government.
Southwark.- It was announced, about a fortnight siuce, that the Bishop of Winclester had interdicted the pariormance of a concert, on the ground that no such performance ought to take place in a sacred edifice. On Friday, the Standard and other papers announced tbat calculated as the amount likely to be realised by the performance; and on receiving their reply that, on a rough estimate, they expected to have received between 150. and
200l., after paying the expenses, the bishop transmitted a cheque on his bankers for the larger sum, with a letter, stating that he would not allow the cause of charity to suffer by his conscientious scruples. Since Sturmy, on behalf of the Committee for conducting the proposed perform ance, has addressed a letter to the Morning
stating that no such donation has ever been received, and consequently giving a total denial to the statement as to the Bishop of Winchester's alleged gift of $200 \%$. to the schools ; the fact being, that the Commitee have not
received one shilling towards the expenses incurred by them
Hanu

Hanwell Lunatic Asylum.-On Christmas Eve, 'the matron gave her annual musical entertainment to the female lunatics in this asylum. Nearly 300 patients were present, with a large number of visitors, among whom were two of the visiting magistrates and Mr. Mainzer, who melodies in the cest of the festival by singing the patients had partaken of tea and cake, they danced with the attendants, and were then amused by listening to several simple ballads sung by the matron and others. At balfafter ehhich refreshments were distributed to each pationt o'clock they all retired in the most orderly manner. These entertainments to the insane, simple as they are in themFor five years the experience of the officers at Hanwell has proved them to be powerful moral agents for the good government of lunatic asylums, and for the improvem
comfort, and happiness of their unfortunate inmates
Woolwich.-On Saturday last a meeting of the inhabitants was held for the purpose of making a rate for the churchwardens. The probable expenses of the ensuing year having been submitted to the vestry, it was moved pound corchwardens, that a by Mr. Colquboun, that the churchwardens be empowered to pave the path leading from Church-street through the church-yard to High-street, and that a rate of threepence in the pound be granted, to enable them to carry this improvement into enrect. reference to the last rate, that many had not paid it on account of poverty, and only two or three had objected on principle. The rate of $3 d$. was then carried, only one Mortality of the Mainst it.
Mortality of the Metropolis. - The number of deaths registered in the week ending Saturday, Dec. 24, 1842 was 833 :-males 395 ; females 438 . Weekly average, 1838 this mortality in the different districts was as follows:West Districts 1.28 ; North 144; Central 149; East 205 South 207.

## 

Incendiary Fires.-On Sunday week, about 11 at night, the rick-yard of Mr. Hine, of Newnham, near Baldock, in farm, with the exception of some hay, was entirely consumed, consisting of five ricks of wheat, two of oats, two of barley, and one of clover seed. The damage is estimated at upwards of $2,000 \mathrm{l}$. In Derbyshire, on the same night, the stack-yard of Mr. Naylor, of Pleasley, was containing about 40 loads of wheat, and 5 stacks in the yard, were destroyed. In Lincolnshire, on the previous Friday, three stacks of straw, from which the corn lad been threshed out in the course of the day, were burnt on of hay and some straw were fired, on Monday week, on the farm of Mr. Brackenbury, at Aswardby, in the same county. In Suffolk, on Wednesday week, the Red Brn, at Polstead, near Hayland, was fired and destroyed. This
barn obtuined notoriety about eighteen years ago by the barn obtained notoriety about eighteen years ago by the
murder of Maria Marten by William Corder. The amount of property burat is calculated at about 300l., and the autho rities of the district have offered a reward for the appreout at Tingewick, Bucks. Farm and other property to a considerable extent was destroyed. The Duke of Buckingham attended from Stowe, and exerted himself in arresting the flames; his graoe's engine and fire-brigade were also on the spot. The flames were visible for miles round. Claydon, a few miles from Tingewick.
Ashburton.-The filteenth annual distribution of the
Christmas bounty of the ate Wm . Giiford, the translator
poor of the parish, on Christmas-day, immediately after
morning service. 2wenty poor aged persons morning service. Twenty poor aged persons, 10 men and 10 women, were presented with $50 \%$ each, and 200 shilling loaves of bread were given to as many poor persons: thus providing a seasonable relief to 220 poor families every year
Aylesbury.-The Aylesbury News of Saturday states that the assessments of the Income-tax in that neighbour-解 great deal of unnecessary trouble. "Parties from all the surrounding vilages (some of them labourers, earning the Court-Louse on Monday, and were kept waiting two or three days, thus losing their time, and being put to expense and inconvenience. In many cases the costs of the appeal amounted to more than three years' payment of the tax sought to be imposed.
Birmingham. - The National Conference held their last sitting on Friday. In the morning of that day they neMinisters ineliqibl rendering tate clergy and after tiog discussion of the details, adopted the "People's Bill" withont a division. - In the evening, they resolved that Mr. Sharman Crawford be requested to move in the House of Commons at the earliest possible period, for leave to bring in the bill aded this Conference, with an unders those detsils of the mesure which necessary to secure the ja represea of the Kind electoral districts-rote by ball porification, payment of members, and annual Parliaments. Another resolution was passed, requesting Mr. Duncombe to support the Biil: A plan was then adopted for the future operations of the Conference, which included public meetings in the various towns of the country, or the pose of circulating adaresses to the electors, ard earain ing them to vote only for such candidates for seats in Parliament as may advocate complete suffrage. The plan included a form of address, setting forth the grounds of making the appeal, and urging considerations to indace electors to pleage themselves to the course proposed. form of pledge was also given, and suggestions for bring ing it into public favour. The general object of the plan was to zadess the elecors, ahd by this means to obtain a register of the friends of complete suffrage, and consolidate the movement.-On the same day, the Chartists held the last meeting of their Conference. The conduct of the complete suffrage party in separating from the Chartist members of the Confer ence, was strongly condemned by Mr. Feargus O'Connor and other speakers, who characterised it as a want o good faith," and endeavoured to pass a resolution to that effect. After a long discuasion, this resolution was with drawn and another adopted, in which the words "want " was then were substituted. The "peopl it was re solved to keep pace with the complete suffrage agitation, by promoting in all parts of the country an agitation in favour of the charter.-On Monday, the Anti-Corn Law League had a festival at the Town-hall, at which from M. P. presid and other uctive members of the League. Mr. Sturge also me heppat but the pro ceedings. The meeting was addressed at some length by the Ch. by Mr Cobden and other he Crain by ion as commenced at which gentiemen, and a solscted.
Brighton.-The last sale of the property of Messrs. Wigney, the bankers, of this town, took place last week. The property being fully mortgaged, realised but little arg the sums lent unon it, although the amount came up to the expectations of the assignees. The competition was spirited, but very few of the particulars have any general interest. One item among the shares is cions as a proof of the little value of American speculations t consisted of "Four certincates of Shares in This ouri and Arkansas Clamorgan Land Associacion, States, for 366l. each." For this lot there were six com Bury.-On Saturday last the Rev. Jonathan Ackroyd was brought before the Petty Sessions of this town, on two charges-first, for being a rogue and vagabond the Vagrant Act-ond, secondly, for havis oblained money under false pretences. It apperations in various quarters, by representing that near Halifax; that the church wr chapel at sards of $2,000 \mathrm{l}$., owing on a mort gage ; and that he was obtaining contributions to liquidate the debt. He furtherstated that he had performed the church duties and services there for a period of ten years gratuiLously, and that the builuing was still in consesion with the Church of Eugland. The police, on receiving intimation of these proceedi received upwards of 300 archaeacon, who regarding the prisoner ; and from these and other circumstances, it appeared that he had been receiving great numbers of contributions in the neighbourhood of Bolton and Bury. The Archdeacon further said, that not a penny of the contributions had been paid to the funds of the church, and that the prisoner had received a large amount not in the books. When he was apprehended, a book was found in his possession, entitled, "A list of the names of minor contributious towards the liquidation of a debt Christ Church, Skircost, Halifas, Yorkshire,
ing to upvards of $2,300 l$." The amount received but prisoner, as stated in chis book, as $792 l$. 11s. Bd .;
stated the aggregate receipt to be 2,249l. 19s. bd. Other in custody at Manced to show that he had been previous! of a false bill of Exchange. After a long inquiry, the Chairman satu the Bench had a painful duty to perform, but they were compelled to execute it, inasmuch as the
prisoner had not lately alone been going about in the manner described, but had been doling so for many years. It Was time, therefore, to put stop to uuch deeds. The prisoned in the House of Correction at Salford, and there first charge, and that he should be committed to the Sessions for trial on the second.
marble statue of Diama, executed for the Kapers that the by German artists resident at Rume, and which was on Coard the galliot stranded about a fortnight since on the Cefn Sidan sandbank, has been recovered from the wreck.
It appears, from the letter of a correspondent of the CarIt appears, from the letter of a correspondent of the Carlation. The wooden case, part of which was four inches in thickness, had, in consequence of the top being off,
become nearly filled with sand. This, added to its own waight, had made it so ponderous, that, not being able to raise it from the hold with the tackle then in the vessel, process which would certainly have brcken it into fragments. Ropes had been actually placed for that purpose
under its legs and arms, when Mr. under its legs and arms, when Mr. Rees, of Kilmaenllwyd,
arrived at the wreck; after consultine with Mr, Mansfeld, of Llanelly, as to the possibility of its being raised entire, he gave him directions to let the statue remain for tlat day, and to bring on the following day the tackle, scc. necessary for rating it in the case. Accordingly, Mr. Kierban, of Ecrew-pump; and; under the directions of Mr. Mansfield, the statue was hauled by horses out of the hold, placed upon two palt of wheels, and conveyed to the storehouse at Pembrey, with the loss of part of a finger only. In cases of marbles of smaller size, all of which hamerous recovered without much injury.
Cheltenham.-Mr. Newton, the som-in law of the late Sir Robert Ricketts, who recently brought himself prominently before the public by charging Lady Ricketts and baronet, has again made his appearance before the borough magistrates. Ot the former occasion, his case completely broke down, and not one of his chatges was substanttated. He has now caused thie valet of the late baronet to be apprehended on the charge of being a party
to the alleged poisoning. The accused was browght beto the alleged poisonimg. The accused was brought beover, and the chairman, when the fnformation was read No anstwer was returned, though the question was re-
peated three times, and the prisoner was thereupon orpeated three times, and the prisoner was thereupon or-
dercharged. Mr. Newton then rose, and said he was the complainant in this case, and demanded that
it should be proceeded with. The magistrates said the it should be proceeded with. The magistrates said he
ought to have stated this before; and as the man had been discharged, Mr. Newton must procure a fresh information if he intended to proceed furtber in the matter.
Chichester.-The affairs of the Chichester Old Bank have been again brought before the public by the applica-
tion of Messrs. Charles and William Ridge, the two tion of Messrs. Charles and William Ridge, the two senior partners, to the Court of Lumkrotey for their bers, in behalf of the assignees, on the ground:s that
the failure was cansfd by the fravdulent trading of the Lathrupts, in r'seiving the custoniers by manner in which they kept the accounts of the bank, and prosperuas, when they must have well known they and
 inwsinercy of their business, and also hy the fraudulent disof administering to their father's will, by which mean they paid large legacies to their own family out of the funds deposited in the bank. These allegations were supported by a minute history of the affairs of the hank, in 189.9, the partners who now appried, without ascertaining the amount of 12,5006 , and drew out $9,000 \%$, each for themselves, showing a total of 30,5001 , they had taken from their customers funds ; and, according to the examcone without ascertaining whether the father was indebted to the bank or hot. Their annual balances were never properly ascertained; and, ass a principle of bookkeeping oy Messrs. Fry and Chapman, their London agents, to compound interest on those bad dehts fromerest and year.. No distinction was made between good and bad
debts, and by this system ja course, to the casual observer, appeear that they were Iransacting a profitable business. It was also stated that annum for years, when the bank was insolvent. A statement prepared from the accounts of the estublishment
put before the Court of Review gave the actual deficiency
tor encl year since 1828 . From this it an

stopped payment, the deficiency was $83,000 \mathrm{l}$, and yet 1 Was fonnd that they had drawn out large sumas of money persons proved debts, noany of whom were sufferers to the extent of the whole savings of a hard-worked and frugal life. Mr. Missing, for the bankrupts, replied to these charges, and contended that the bankrtipts having made certificates. Although fraud had been alled to their them, no such motive had been discovered upon reading the examinations which had taken place. The erroneous method of keeping the accounts did not involve frad, neither could it be said that the world had been deceived tion of the customets or the public. It was error judgment, and out of the fallacious system of making th accounts, the payment of the legacies was made. In conclusion, he argued that the bankrupts were innocent of any intended fraud, believing, up to the period of their stoppage, that they were solvert, and as they had made a full discovery of their estate and effects, they were in bis opinion entitled to their certificates. Mr. Commissioner Fane took time to consider his judgment: He should, he said, before he gave bis decision, carefully read over the either side.
Coventry. -The papers have lately noticed the measures faken by the Bishop of Nowich for tlie removal of pews fitting ono the bodre festoration of the ancient custom o now find that sindilar efforts are making by the Bishop of Archdeater, and that his lordship, in conjuaction with the Church in this town, that the tarish charch is eringly property of all the parishioners; that any chatge for pews or sittings is decidedly illegal ; and a practice which the bishop; as the Ordinary, cannot sanetion. In consequence of this communication, the wardens have allotted the pews and sittings indiscriminately to the parishioners on application, and free of any charge.
Durham.-A petition has been forwarded from the Bannockbura Colliery to the Marquess of Londonderry, for presentation to the House of Loxds, praying for an alteration in the Collierles.' Bill of last session. In acknowledging the receipt of this petition, Lord Londonderry recommends "that efforts should be trade by all the other collieries in Scotland; and that petitions shduld be prepared in like manmer by each of them, disapproving of
the late bills" He also states that, in order to effect their the late bill" He also states that, in order to effect their purpose, "the petitions should be very numerous, and active exertions should be made by all colliers. "\$ From this it is evfdent that ati attempt will be thade in the ensoing session of Parliament, on the part of the owners of Ashley's Act

Halifas.-An extensive system of forgery on the provincial banks of the Midland counties, and also on the Bank of England, has recently been discovered in this town. Eight persons were apprehended as the principal ness was one of their accomplices, who had been in cus tody at Nottingham on three charges of uttering false notes, and who now appeared to give evidence against Wirkworse notes which were forged there those of the and Huddersfield Bank. There appears to be to doubt that the system has beek carried on for a considerable time, and to a large amoutit. Sèpen of the prisoners hext assizes.
Harwich - The corpotation and thbubitan op own have addressed a memorial to the Lords of tle Treasury, representing the rapid changes which are daily taking place in the harbour, caused by the fall of the cliff bour; and stating that further and more extensive change are daily taking ptace in the sonthern point of the beach below Landgutrd-fort, the point Raving encroactied so far into what was formerly the deep-water chanel, thit the ights erected but a few yeurs sirice, at a great expense harbour. They foud be safe leading-mark into the arise principally from ther belio that these change marice shore for the purpose of making cement, many thousand tons being antoually removed and converted, with the consent of the Board of Ordnance; so that, in a few yeats, unless a stop is plut to such proceedings, Harwich must inevitably become an island and the harbour blocked urely destroyed, will be so much deteriorated and a harbour of reforender it; in a great measure, useless as lass of vessels whe, to the injury and danger of a numerou conclude by prasing for an inguiry into the statements of their memorial, in order an inquiry into the statements of sures for preventing the resnlts to phicht may adope tefer. IIertford.-The General Quatter Sessions for this in the Chair. The of Tuesday, the Marduis of Salisbury in the Chair. The prineipal topic of discussion related to police. It appeared from the Parliamentary documents, which were quoted by several of the magistrates, that the ford greatly exceeded that of other conties in England. Durham, with 80 police corsstables, cost the county 750 l. less than Hertford with only 70. In Suffolk, which had 67 constables, the cost of the rutal police was $2,000 l$. less than that of Herts; and in Worcestershire, where Two or three cases were brought ander the consideration of the Cowst during the day, where members of the Rural

Police had made offers to offendert to compromise, for trifing pecunfary returns, charges which had been preferred against thetr: In the opinion of the chairman, it was the bounden duty of the coluity to prosecute with rigour all such cases. After some discussion, with reference to the sale by auction of the Berkhampstead and Hitchin Bridewells, and the proceedings advisable to be taken to obtain a more equal assessment of the country rate, the sessions were adjourned.
Jersey.-We Wearn by the Jersey News that the Mayor Commerce in Guernseysed letters to the Chamber of Government are abonzey and Jersey, intimating that Channel Islands to be conveyed by contract from South ampton, and that the beasels nob rurning between port and the islands had been surveyed and spproved, in consequence of which he requested theit infineped, vent the removal of the packet station. The Cbamber of Comtherce in Guernsey having already voted in favour of Weymouth, decline any further interference, but that in Jersey have decided in fapour of Southampton by a ma Sority of 7 ; the numbers being, for Weyrouth, 18 , and Liverrool
of newspaper dest Liverpool papers mention, as a prool brought by the Independence, was received int's Message, the afternoon of Sunday the 25 th, at three o'clock. A express it was forwarded, at a quarter past four, by Edge-hill station of the Grand Junction Railony the town ( 97 milés) stoppares mes having been performed, including the 30 minutes to and second expre From Brminghan, it wals forwarded by a and express engine to Lotidon. There it was set up and copies of the Times containing it were received in noon-just at quattexic to fout o'clock on Monday after noon-just 24 hoirs frond the time it left Liverpool, and Thursdaving travelled; tup and down, 420 miles.-On Thursday evening this city was the seene of another ex tensive ire, It broke out suddenly about half-past five, in in the workshops of Messrs. Foster and Stewart, the extensive jomets and builders; in Lawton-street. The yardin whicl the workshops biood extends from Lawtonbreadth ewngton, and is 112 yards in lergth by 60 in all of the shop was filled with timber and new work, havinge, with the building; were destrojed; the flames WInd extraordingry were completely destroyed about ninie years agó by a similar calamity

Norwich.-The local papers inforth us that the number of presents sent by the different coaches from Norwich to London during the Christmás week, atmounted-by the Phenich mail to about 400 ; by the Newmarket mail, 400 Mack's Van, 280. Total, 3,076. - They also state the the amount already subscribed to the public monument to the memory of the late Earl of Létcester, is 4,4401 . 6 . 0
Pembroke.-The Naval papers mention that the Admi raity have given orders that the Royal steam-yacht now entered in this dockyard for the tse of Her Majesty be and Albert Ye Navy List, under the title or The Victori of $100,000 \%$, and is expected to be ready for sea in the course of the ensuing spring.
Portsmoullh.-Óa Sutiday morning Admiral Sir Charles Rowley hoisted his flag (white at the main) às the Comunder the customary salutes por Codrine hat sunset, having in the course of the day murday evening a comset, having fat the course of the day mustered the ship' company and tasen his leave of them. On quitting the
ship, the men gave fint three cheers. Victo the mave gint three cheers; and as he passed the clieered him - The Archduk cheered hmo-- he Archduke Ftederick of Austria, whose a fortnithe length ont his bepartare, the wind having hitted the Imperial Highness had only larded once since he left the hatbour on Thursday ortight.
Reading.- Early in thè ensuring spring, a new church ground arected at Somairig, niear this town, oth a piece of estimated cost y Lord Sidnothth for the purpose. The amount has been alion is 2,000\%, and neatly that tiè of the been already subscribed. Mr. R. Palmer um of 200 l incers for the comyty, has presented the of Soming very of the undertakirg. 'Ine popadation tended that the new edifice shall afford accommodation for about one-fourth of that number
Southampton.-The annual testival of the Gipsies of the New lorest was held on the with ult. on the Rev. these grounds the fam thes a mile from this town. On forest were trvited, according to the yearly custom, partake of a dinner, and to receite vatious articles of winter clothing. These presents are furnished by ous of subscriptions of the residents in all parts of the couthy At two o'clock neatly 200 mipsies, consisting county women, and childreti, sat down to a dinner of of rren and plum pudding; and were waited on by the gentry of the neighbourhood, who issenobled in lar the gumbers witness the scene.-On Monday, the 26 th uit., a party of match at from Lea and Romsey assembled at a shooting the evening a fight ensued between fle people of the of rillages, during which an old man named Savage, 70 years vage, 70 years
hours. An inquest has been held, and a verdict of Manslaughter returned against 14 persons, who have been
conamitted to Winchester gaol to take their trials at the next assizes. to the state of the Welsh bishoprics, by the contemplated union of the two dioceses of North Wales. It appears the net value of the diocese of Bangor is $4,464 \%$. In the former see are 143 parishes, in the latter 131 parishes-
making together 274 parishes, which is far below the Rverage number of parishes in any English diocese, while
in respect of population the inferiority is yet more strikin respect of population the inferiority is yet more strik-
ing. In the diocese of St. Asaph there are 52 livings under 200l, in the diocese of Bangor there are 61 livings in the gift of the respective bishops, who are in many cases the impropriators of the great tithes. In the dio. Iivings, the total revenue of which is 4,668 ., and in the diocese of Bangor, the bishop is the impropriator of 7
livings, the total revenue of which is 1,201 . From the former see, therefore, is required $932 b$, and from the later 280l., to raise the value of these livings to 200l. each. Warwiok. -The excitement produced in the Western
Districts of Warwickshire by the melancholy occurrence at Spernall, of which we gave the particulars in our last, adduced merely substantiated the facts already published, and proved that the father of the young man, a respectable farmer at Spernall, was the person against whom his acting was a principally directed; that the deceased was Crowley, and that while deceased was approaching for the purpose of apprehending the son, the young man shot open day. The jury returned a verdict of Wilful Murder against James Crowley, and a reward has since been offered for his apprehension.
Winchesler. - The Quarter Sessions of the county commenced in this city on Tuesday, and were more numerousli attended than, on any former occasion, no less than 124
magistrates being present. The cause of this attendance Was the election of a chief constable of the county police in the room of Capt. Robins, who had resigned. At the close of the poll the numbers were-for Capt. Harris, 64 ; for Capt. Morant, 57. The former gentleman was then declared duly elected. tary Church, of which Priace Albert laid the foundation in April last, was fixed on Friday, and the arrangement of
the interior is now in progress. The body of the church will be fitted up with open bencles, without pews. In addition to the accommodation afforded to the Military, there will
be about 1,000 sittings for the inhabitants of Windsor and Ciewer. The principal feature of this church is the tower stone, rising 48 feet. The cost of the building will be about $10,000 l$., nearly one half of which is already sub-
scribed, Her Majesty and Prince Albert being tributors. The building is designed by Mr. Blore, and When complete will form a striking object from the Castle
$\qquad$ city on Monday, Mr. Pakington, M.P.,-in the chair. For
some time past considerable disapprolation nifested throughout the county, on account of the alleged expense and general inefficiency of the Rural Police, but on the agricultural districts, as compared with those of the manufacturing towns of the county. At the present meettheir report on the propriety of re-organising the county police. The report stated that the committee had made and the number of paid constables appointed under the Parish Constables' Act, commonly called Sir James Graham's Act, that tliey were not prepared to deny that some expect that the main objects of a constabulary force would be secured by the operation of that act. The committee constabulary force. Several gentlemen then addressed Constables Act, if carried out with energy, would parish answer the purposes which the present Goverument con templated by the introduction of that measure. After long and desultory discussion, it was resolved that the re
nort be reeeived, and that a corimittee be appointed to obtain information with regard to the probable effect of
the New Parish Constables could be efficiently carried out in the county of Worcester It is generally considered that the report of this commit-
tee will be preliminary to the abofition of the Rural Police force in July next.
Fork.-A meeting of the sharsholders of the Yorkshlre Agricultural and Commercial Bank was held in this city, :tated that the whole of the origimal capital had been lost, and that the liabilities of the bank amounted to upwards
of $179,000{ }^{2}$. After a very stormy mectiner,
$\qquad$
share, in addition to the two calls of a call of llo. peach lately granted, should be made for the purpose of razeting the
deficiency, and that the affairs of the company should be Wrevails in this soon as possible. The greatest distress
and the details which have been made public show a case
even worse than that of the Bank of Manchester. It
appears that the Bank was projected in 1836, and started
appears that the Bank was projected in 1836, and started
with a paid-up capital of $70,000 l$. for the towns of York, Whitby, Driffeld, Malton, Hull, Leeds, and Pocklington, The amounts since added make up a total capital of
211,0000 ., all of which has been lost, and a heavy amount of liabilities remains to be met by the shareholders in addition to their present loss. At the outset an error was provincial bank. The directors took the business of the for the good-will, and took accounts to the amount of
$80,000 \mathrm{l}$., for which they paid down Bank of England $80,000 l$., for which they paid down Bank of England
notes. On this $80,000 \mathrm{l}$. there has been a loss of about one-half. All the dividends, which have been regularly
declared, are now said to have been paid when in fact there was no dividend to declare. The effects of the failure will be severely felt by the agriculturists;
and the Leeds Meroury observes that it is a painful feature of the case that many of the shareholders are success of two other banks in York, invested their money in this undertaking, and have lost everything.
Railways.- The following are the returns of the principal railways for the past week: Newcastle and Carlisle
1,3402 ; Liverpool and Manchester $3,698 l$; Great Western 13,691l.; South Western 5,5166.; Birminghama and
Derby $1,322 l$. ; Birmingham and Gloucester $1,719 l$. Hull and Seiby $882 l$. © Grand Junction $7,741 l$.; Great North of England 1,332l. ; Midiand Counties 2,718l.
Manchester and Birmingham 2,477l.; Manchester and Leeds 3,966l.; North Midland 4,330l.; York and North Midland 1,706l. ; Blackwall 569l. ; Croydon 222l. ; Brighm
ton $3,379 l$. ; Eastern Counties 947l. ; Greenwich 825l. Northern and Eastern 1,3316; London and Birminghano 16,886l. - The engine-driver and firemen on the North Midiand line struck work on Saturday, the 24th ult., in
consequence of a regulation by the directors, that the men should in future be paid only for the days on which they work, as is the practice on the Manchester and Leeds
Railway. The directors took immediate steps to procure fresh hands, and a sufficient number of drivers from other lines have been engaged, so that the trains have continued to run without interruption.-On Sunday evening, an
accident happened to the train on the Glasgow and Edinburgh railway. When near the Polmont station, being the first west from Falkirk, the engine was obstructed by an empty truck, which some malicious person had drawn
across the line. The collision shattered the truck to pieces, and threw the engine off the rails, upon some soft ground, into which it entered without sustaining any
damage. The carriages, 5 or 6 in number, and containing from 25 to 30 passengers, kept the rails, and although the shock was severe, the passengers escaped without in-
jury.-A young lad was brought before the Mayor of jury-A young lad was brought before the Mayor of piece of iron on one of the rails of the Great Western
Railway, for the purpose of throwing the train of the line. The policeman on duty discovered the obstruction it had not been removed in time, the engine would probably have been thrown down an embankment, 24 feet in
depth. The prisoner, a farmer's labourer, pleaded guilty to the charge, and was fined $5 l$., and in default of payment committed for 3 months.-We are informed by a correspondent that a serious accident occurred on Tuesday at
North Shields, at the works now in progress for the form-
ation of a street from the river to the terminus of the
Shields and Newcastle Railway. Whilst the work Shields and Newcastle Railway. Whilst the workmen
were employed in excavating the new road, a large body of earth unexpectedly fell trom the face of the cutting, and buried tive of the workmen, who were loading the carts. The men were soon dug out, when three of them were
found to be quite dead ; while two others were seriously bruised, but hopes are entertained of their recovery. The foreman of the works was on the spot at the time, and
narrowly escaped with his life.
IRELAND.

Dublin. -The proceedings of the Lord Chancellor in re gard to the Irish magistracy, by removing from thie commis-
sion those whom he considers toshow unfitness for the bench continues to attract great attention. Since the removal of Lord Lucan and Mr. $\mathrm{O}^{\prime} \mathrm{Mally}$, the Chancellor has super-
sede in consequence of his having, in strong and ungarded brother magistrates, in a case in which one of them was plaintiff. This led to a long recriminatory correspondence, which was submitted to the Lord Chancellor, who
has ordered Mr. Lawton to be superseded, and an inquiry to be held into the conduct of Mr . Townsend. - A Mr.
Egan, of Moate, formerly a director of the National
Bauk, has been charged with having of conveyed ational a parcel belonging to the company, which contained cash the charge is the result of a conspiracy, and was only in-
tended to draw away attention from the real delingrento He will, however, have to take his trial upon the accusa-
tion. The following letter has been received by the managers of the National Bank, containing part of the $1,200 \%$; ; bank post bills to the amount of 5002 . ; and amount of cash retained by the thief, 1,770 l $^{2}$. The letter
ran thus:-" You have enclosed who I sent by a person 1 met here, do not blame any person ; I left one in place published in the Dublin papers convening a meeting, to We held in the Theatre Royal, on Thursday, the 26 th inst.,
for the purpose of taking step to erect an "enduring
testimonial" of the esteem in which the labours of the
Rev. Mr. Mathew are held by all classes of the commuaity. This document is signed by 2 dukes, 4 marquesses, names; comprising the leading gentry, merchants, and several clergymen of all religious persuasions. meet with great success in all parts of the country. The Limerick Chronicle says-" We are exceedingly happy to announce the gratifying fact of not a single drunken person
being taken up by the police in the streets during the Christmas week-an occurrence unprecedented in the perance should feel truly proud." We learn also by the
Cork papers that seven non-commissioned three hundred privates of the 45 th Regiment accepted the
pledge of total abstinence last week from the Rev, Matbew, at his residence in that city, The Belfast pa-
pers also mention a circumstance of the same kind. On Sunday last, being New Year's Day, about 90 soldiers of
the 54th Regiment, at present stationed in that town adopted the total abstinence principle. Among these with about 400 of their comrades who have already taken the pledge, to commence the new year by abstaining Gatway -
Ganway.- The inquest on the suffierers by the late was brought to a close on Friday, after a very long and minute investigation. The coroner, in summing up, said
the evidence might be compressed into a very narrow compass. The same facts were detailed by the several witnesses examined, and, with few exceptions, they cor-
roborated each other, and established beyond doubt that the cry of the gallery's falling originated in the body of the chapel, under a gallery where it happened considerable
confusion arose from the pressure occasioned by a vast crowd of persons collected on it. Some of those underneath the gallery, through timidity and nervousness,
dreaded an accident ; for which, it appears, there was no ground for apprehension, and labouring under that impression, innocently raised the cry-immediately caught
up and echoed through the building - that the gallery was falling. He was glad that the case was so publicly inthe shadow of foumdation, deeply affecting the character of a few individuals, differing in religion from the con-
gregation assembled in the chapel on Christmas morning. It was but justice to the individuals alluded to by the reports to state, that it appeared in evidence, that their demeanour, while in the chapel, before the alarm was
spread, was not only decorous, but that their conduct afterwards was praiseworthy. The jury returned a ver-
dict, that the deaths of the persons killed on Christmas morning last were caused by the rush of the congregation to gain egress, on a cry being groundlessly raised, by falling-and that the alarm was created without any mancous intent. Since the first accounts were pubwho perished by the catastrophe. SCOTLAND.
Edinburgh.-Among the projected improvements upon the Palace and Park of Holyrood, public attention is now
directed to the re-edification of the Chapel Royal, as a matter of the first consequence. Independently of its value possesses a higher interest as the depository of the relics
of theancient Scottish monarchs; and the Edinburgh papirs of the ancient Scottish monarchs; and the Edinburgh papers
state that it has long been a reflection apon the country, that a structure devoted to such a purpose should be left
in a state of neglect and desolation. They state that tire in a state of neglect and desolation. They state that tire
late Government incurred some expense in procuriug plans for its restoration, and that it would be most gratifying to the national feeling that these or similar plans
should be carried out, as a sequel to her Majesty's late visit to Scotland.-In the High Court of Justiciary, on
Saturday last, Alezander Mackenzie, cattle-dealer and
far farmer, at Drumbead, Forfarshire, was indicted on a
charge of assault, by means of loaded fire-arns, with
intent to kill Mr. James Duff, a intent to kill Mr. James Duff, a grazier, at Whitefield,
Perthshire. The prisoner pleaded guilty, and threw himself on the mercy of the court. Sir James Ramsay, of had the highest opinion of him previous to this event.
 show plainly that no lower confession could or would
be taken off his hands; le confesses, that from motives,
if wot of of maliguant, yet of a wretched pad sordid
nature－from regard to some pecuniary advantage－he formed the purpose of assassinating his friend；and that he， as far as he had the power，executed his purpose；that he waylaid him，and fired at him with intent to kill him． As Her Majesty＇s Advocate had found it consistent with his duty to restrict the libel，the court had not to execute the capital sentence；and he therefore proposed that the prisoner should be transported for life．Lord Medwyn and the Lord Justice Clerk coincided in this view，and the mental suffering had been apparent througbout，was then removed．He is deseribed as being between， 50 and 60 years of age，of tall stature，which anguish had bent almost double；avd every feature in his counterance betrayed the misery which for the last few months he had under－ gave their testime Rev．Mr．Wather sir Jastrnined，and gavivg the time the judges were speaking，his feelings were equally apparent．His pitiable condition is said to have moved the compassion of every one in the court， which was crowded to excess throughout the whole trial． Glasgov．－－On Friday night，about nine o＇clock，the embankment or breast of Glanderston Dam，near Barr－ head，gave way，and the contents of the chen resistible velocity，
down the The first place which suffered from the flood was the The first place which suffered from the flood was the
Print Works of Springfield，occupied by Messra．Hardie， Ptark，and Co．，where three entire houses and a young lad employed on the premises were swept off．The works of Springfield are entirely suspended by this occurrence； the whole of the machinery，the goods in course of finish－
ing，and the vessels and stock of printing materials，in－ ing，and the vessels and stock of printing materials，in－ by the current，inflicting serious loss on the owners．The next place which suffered from the fiood was the Print Works of South Arthurlie，occupied by Messrs．Hays
and Sons，and situated about a quarter of a mile below Springfield．Here the destruction of property was sot so great as at Springfield，but the loss of life was much more serious．Two dwelling－houses，a large out－shed，and a byre，with all their contents，were instantly carried away， and with one of the houses，the entire family of occupants
were drowned and buried in the ruins．With the excep－ were drowned and buried in the ruins．With the excep－
tion of the husband，the other family shared the same fate tion of the husband，the other family shared the same fate as their neighbours；and nine persons have perished in
the two houses．Besides this damage the current also the two houses．Besides this damage the current also House，the property of Mr．Lowndes．At two farm steadings further down，a good deal of property was like－
wise carried off，and the bridge at Darnley was destroyed．

## THEATRICALS． <br> Covent Garden．－Miss Rainforth made her first

 appearance in Semiramide on Monday night，and though perhaps deficient in physical capability for the part，shewon the good opinion of the audience，and established her won the good opinion of the audience，and established her The part of Semiramide requires no ordinary qualifica－ tions，and Miss Rainforth displayed an energy in over－ coming its difficulties which was bardly expected even by those who have long appreciated her merits as a very
accomplished singer．At the conclusion of the opera she was loudly called for，and was cordially applauded by a house full in every part．－A new farce called the High－ vayman was produced at this theatre on Wednesday．It
is not remarkable for any novelty，being manufactured out is not remarkable for any novelty，being manufactured out
of old and well－used materials ；but it is，nevertheless， full of incident and absurdity ；the audience are kept alive by a succession of ridiculous scenes；and the object of producing a laugh is attained．As the piece is made up with mere conventionalities，there is no plot worth un－
ravelling，－but we may state that Mr．Bartley personates an old country Squire Jolly Boy，and that the other princi－ pal characters are sustained by Mr．Harley，Mr．Meadows， and Mrs，Humby．

## fftíscellaneous．

Winter at St．Petersburgh．－－The following account appeared lately in one of the Paris papers：－＂Winter is more variable at St．Petersburgh than at Moscow，that is，the cold does not reign there with such continued severity． at Moscow to find a fruit－peeling，or any other matter， thrown by chance from a window，catch on the balcony， and，becoming imamediately frozen，remain there suspended for the rest of the winter．Such a case could not occur
at St．Petersburgh，where，although the thermometer often descends to 30 degrees of Reaumur below zero（ $35 \frac{1}{2}$ below zero of Fulhrenheit），the neighbourliood of the sea combats the icy winds of Siberia，and unexpectedly brings on the most strange changes in the temperature．It has
never rained，in the memory of man，at Moscow，during the montins of December and January．At．St．Peters－ burgh，on the contrary，rain frequently falls during these two months，and at that period it has been constantly the
custom to replace carriages by sledges．This latter kind of vehicle，which no person gives up，becomes the moat inconvenient in the world，being driven in the midst of count of these sudder winter at St．Petersburgh，on ac－ rapid，is far more formidable than at Moscow，and to strangers who bave not experienced its effects is particu－ larly serinis． October the Russians，and all who have been long in the country，assume fur clothes，and keep them ing continual Wear until the month of April，after the ice has broken fanily lays in a stock of birchwood，the braise of which
is more abundant than of any other wood．There is a servant specially appointed to attend to the stoves， and his duty is to keep up，as much as possible，an equal heat throughout the house．The best stove－keepers，whose fame procares them a high salary，are generally from Moscow．Twenty degrees of cold do not appear asto－ nishing to an inhabitant of St．Petersburgh，though he then casts a curious look at the thermometer．At 23 or 24 degrees，constant rounds are made during the night to prevent the police and sentinels from fulling asleep on
their posts．Should the cold．bring on drowsiness，and the sufferer not be able to prevent himself from yielding to its influence，he must perish，as he can only wake from his sleep in the other world．At 25 degrees，the theatres foot，closed，and alt those who are obliged to go out on looking at the noses of all those whom they meet in the street．If a sudden paleness－of which no intimation is of the face，the passer－by rushes forward，and commences rubbing the afficted feature of the alarmed passenger with snow，to produce animation．The sume thing may At 30 degrees of cold，the populace alone go ont of doors； entire families shut themselves up；and not a single sledge of any appearance of fashion is seen in the streets．Yet even then the military reviews are not interrupted，and the highest dignitaries，up to the Emperor himself，repair oldem wino a cloak．It must be evident that，with dreadful ；yet it may be affirmed without exaggeration， that the lower classes，in winter，suffer less in Russia than in France．There are placed in the various quarters of every large town of，the empire public establishments，
heated by large stoves，where every person that pleases may take refuge．

Court or Cbancrry．－In re Hartley．－This was a petition to
discharge an order of the Vice．Chancellor，by which certain Cornish miners were to stand committed for a trespass on the land of which a Mrs．Hartley is the receiver．It appeared that there is a custom in the stannaries of Devon and Cornwall，under
which men may stream or board for tin，or open a waste land or on land which has been already streamed．The ground in the parish of Wendron，on which the alleged trespass took place， Wes supposed to have been aiready streamed by a defunct com－
Rany called the Royal Duchy Mining，but this was denied pany called the Royal Duchy Mining，but this was denied． case，was of opinion，that the order for commitment，as against the petitioners，ought to be discharged．There was no pretence
for charging them witls any iotention to commatt a trespass． for charging them with any iotention to commit a trespass．
It was clear that the object of the parties who employed them
was to try a rieht， was ito try a
might be had．
In re Shore．－In this matter of the Lady Hewley＇s charity，a
reference to the Master was ordered by Lord Cottenliam，for the appointment of new trustees．Those trustecs have been ap－ pointcd，and a petition presented to the Vice－Chancellor to con－
firm the Master＇s report．A petition has also been presented against the confirmation of the report，on the ground then the
selection of the trustees from so many different classes of dis． eiection of tine trusteectrom so many difierent classes of dis－
 ortain the consent of his lordiship to the hearing of all the peti－
tions before the Yice－Cliancellor on the ground of the expense And loss of time which must ensue if the Vice－Chancellor heard cellor afterwards heard the thrrd petition，and rendered all the
proceedings nugatory by discharging the original order of refer－ proceedings nugatory by discharging the original order of refer－
ence．His Lordship，after hearing counsel on both sides，di－ ence．His Lordship，after hearing counsel on boti sides，di－
rected the hearing of all the peritions before the Vice．Chancelior
in the same manner as if one of them had not been a petition of appeal．Cancellor＇s Court．－（Before Sir L．Shadwell．）－ Imrryy．Ve．TgE．－Mr．Bethell moved，on behalf．of Mr．Tegg，
the bookseller in Cheapside，to dassolve a special mjunction

 mut be cissolved with cosis．
CENTAL CRIMTNAL COURT．The third Session of the present Mayoralty commenced on Monday，before the Lord May or，
Recorder，Sherifts，snd other city authorities．The only point Recorder，Sherifts，snd other city quthorities．The only point
in the Recorder charge to the Grand Jury which ofrers any
interest for our readers，is his exposition of the liw io reference to a charge of cutting a holly－tree，which involves a charge of
felony under the tatute．He said，that，with respect to the law felony under the statute．He said，that，with respect to the law
as bearing on the case of robbing trees from gardens，pleassure－

 to come within the provision of the statute．The Grand Jury
ricturned a true ond on this char fe．－Willam Ewerton and James Phooks were then incucted tor filonoustry cutting a certain
holly tree，the property of Mr．Brown，and thereby doing damage to the tree above the value of 20s．A second count alleged the

 known that he must be taken the rext daay．The p．is．mncr then at last secured．There was as mucl holly cut off the tree as two men could carry．The gardener stated that he was aiarmed on
the night of the igth by the barking of the dog．Soon afterwards
the policeman came up with Ewerton in＇his custody．Witmesss
after assisting the constable to handcuff him locked bim up after assisting the constable to handeuff him，locked him up．
Witness estimates the damace done at 2 stated，that he occupies a house and grounds at the village of Wanteat，in Essex．The tre e in question was a very valuable one．It stoor nearly 20 feet high，and had several descri， 1 tions of
variegated holly grafted on it．It could not be replaced under variegated holly grafted on it．It could not be replaced under
20
giveas．For the defence，Mr．Doane sulbmitted to the Court that there was no case for the jury，as there was no decisive proof that the intrinsic value of the tree was above 20s．The tree was not the property of the prosecutor；he had only the
control over it for the time being，and could not limself remove it from the parden．Mr．Conmissioner Bullock said that in his opinion there was a case for the jury to consider，as the value of the tree had been distinctiy stated to be above the sum required
by the act．Mr．Doane then addressed the by the act．Mr．Doane then addressed the jury at some length，
and argued that the rpon $n 1 s$ own ardm．ssion lie know weir lute of tarem to the statement of the prosecutor，that he woult not take 20
gunneds tor tic tre ，that amount guincas for the trse，that amounted to nothng：as the value lie
might place upon it，as a man of taste，nighit be，and was，cery considerably above its real value．The Commissioner having prisoners．ny，Mre Commissioner Bullock baid，that the offence of which the prisoriers had been convicted was worse than an ordi－
nary felony，for，besides the actual theft，there was man nary felony，for，besides the actual theft，there was much wanton
mischief done．The sentence of the Court was that they imprisoned 18 months，and kept to hard labour．
Michenel Meaghan was placed at the bar，charged with the wilfol murder of thhoman Leary．This cese，which has been already noticed，arose out of a drumken quarrel on Christmas Day，causcd，
it is supposed，by jealousy．The evidence was not of any public interest，and Mr．Baron Gurney，in summing up，observed that it was the opinion of himself and Mr．Justice Wigbtman that the evidence carried the charge no further than manslaughter．The jury brought in a verdict accordingly ；and Baron Gurney，after Urnk，sentenced the prisoner to imprisonment，with hard labour for 18 calendar montils．

TATTERSALL＇S，Thursnar．－There was a small attendance a brief record．Thr Dkn British Yeord，TARE Dkr8．-7 to 1 agst．Mr．Blakelock＇s A agst．Col．Peel＇s Murat（taken）； 1000 to 45 agst．Lord Eghinl ton＇s Aristides（taken）； 1000 to 30 agst．Mr．Bell＇s Winesour

PATRONISED by all the principal Architects and PHALTE. - In consequence of the daily attempts made to imitat thys valuable mineral production, and of the name of "Asphalte being given to most of the spurious and "cheap" materials, the
Dinectors of this Company particularly recommend Arclitects
 Asphaite, Claridge's Patent," and not merely "Asphalte" o Bituunen,", as, in many cases where these terms have been used,
gas-tar and otber worthless and offensive compositions have been introduced. For the ioformation of those residing at a dis-
tance from London, and of those who, having employed the tance from London, and of those who, having employed the
spurious composition, may, from its failure, have become prejudiced against the use of Asphalte, the following are mentione
as some of the distinguishing qualities of the genuine material The Asphalte of Seyssel is of a light colour, closely resembling Yorkshire stone, has a smooth surface (without being slippery),
and joints almost imperceptible; it is also free from smell, is not acted upon by change of temperature, and is at all times dry and Warm, and remarkably pleasant to walk upon, and, from its elas dark and diuty-loukinm fictutious material, on the contrary, has surface, and, from its irtitteleless, is liable to crack, partic cuarly an frosty weather. In consequence of the above quallties, the used with great advantage for roôing ; it can be laid down to any extent, presenting one uniform surlace, and is far superior to
lead, as it is not liable to expansion or contraction in consequence of any change in the toexpansion or contraction in consequence prevent the percolation of wet, it is invaluable, the Greenwich Railway Company alone having covered upwarls of 400,000 superficial feet, , thas also been used on the Great Western, Birmint other Raiaways. the South Metropolitan Huyhrate, and Nunhead Cemeteries. A proof of the great durabillty of the genume Asphalte, it ineed only
be mentioned that the first work executed in this Country with this materlal, (amountur, to 3,932 tect,) w as at Whitehall, oppo although onky half an inch in thinckness, has remaned n, to this time (a period ol four years and eight ronths) in the niost per-
fect condition. Books of Testimonials with scale of prices may be obtaiued on application to Seyssel Asphalte Compary's Depot, Stangate, London. the works at the Mudel Prison, at the A bney-park Cemetery (whicl trom its failure has since been removed), or at the Hotel at the
Stoogh station of the Great Western Raulway, were executed by his Company.

SATURDAY, JANUARY 14, 1843.
MEETINGS FOR THE TWO FOLLOWING WEERS,

Wre are reminded by a correspondent that the principle of giving every landowner an outfall from occupied the attention of Mr. Pusey, to whom the country is already so much indebted for his exertions in the important work of drainage. In fact, notice of a committee was given by that gentleman last session, and evidence on the subject was prepared; but the discussion on the Tariff frustrated his intentions. We have reason to believe that Mr. Pusey intends to renew his notice in the ensuing session, with a view to some general legislative enactment; and we most sincerely trust he will receive the support of the whole anded interest. The two chief difficulties are-1st, the existence of old corporations of sewers, and of
local acts; and 2ndly, the want of a competent board to which appeal might be made. The latter would have to be provided: and we cannot but suppose that where measures of such paramount importance are concerned, the former difficulty would be easily removed

Since the cultivation of the Cucumber has become matter of such general interest; that societies have been established for the sole purpose of testing its merits, it is desirable that there should be laid down some reasonable and fixed rules from which an universal standard may be formed for judging of the qualiies of this vegetable. This is the more necessary, since the standard of almost every society at present formed differs in some respect from that of its neigh bour.
In all these, the superiority of the fruit is made to depend upon its length, combined with certain other qualities, some of which indeed are of importance while others, in our opinion, are of little or no conse guence; and one, which requires a fruit to be ribbed, is most absurd. Why a ribbed Cucumber should be preferred to one with an even surface, we cannot imagine. In peeling such a fruit, the portion of it beneath the rind must necessarily be cut away and consequently great waste, as well as a loss of the best part of the fruit, is occasioned. It is equally in comprehensible why a black-spined Cucumber should be peremptorily declared to be superior to one with white spines. Qualities such às these are perfectly arbitrary, add nothing to the appearance of a Cucum ber on the dinner-table, and have no relation to its good quality as a salad.
Then we must have Cucumbers grown to an enormous length; everybody wants to have his fruit longer than his neighbour's; and if it is so long that no dish can be found to hold it, so much the better. But is there any common sense in this? Of what earthly use are these long fruits, except to make people stare? Are they better flavoured--better bearers-better seeders? Quite the contrary: they are simply longer. They are too long to be placed on a dinner table, too long to be eaten by a small party, too coarse to suit a cultivated palate, and are, in fact, fit for nothing, except to excite the admiration of the servants' hall. If such things must be had to stare at, why not cult. If the Patagonian Cucumber or the Snate Cound ate once? The fact is, that a Cucumber 10 or 12 inches extraordina better in all respects, only it is not so

Let a Cucurand will not make folks stare so much. thickness, with a flower still fresh upon its point; let it moreover be shortnecked, fresh bron its point; let bearer, and you have nearly all that it is possible to sire. If of the old prickly race, bloom possible to de-artificial-should be insisted on carefulness on the part of the on; because it ensures looks better ; but as of the grower, and the fruit Turkish breed but as Cucumbers of the Smyrna and the best for the have no bluom, and they are among non would be to exclude some of the most useful sorts be cultivation. Finally, no Cucumber-show should be held later than June. In proportion as the season dimances does the difficulty of growing this vegetable diminish; and it must be some very extraordinary
circumstance indeed that can render any Cucumber worth a prize after June, in a society especially instituted for its cultivation.
We have been led to make these remarks by having received from Mr. James Reid, gardener at Bretton Hall, near Wakefield, some very handsome Cucumbers, of the Sion House kind, accompanied by a brace of seedlings from the same sort, with a request that we would give our opinion respecting them. The latter were certainly more uniform in size, and superior in the extra care which most persons bestow upon sorts o their own raising, we do not think that the seedlings are preferable to the old variety.
$W_{\mathrm{E}}$ understand it to be the intention ${ }^{\text { }}$ of Mr Crawshay to exhibit specimens of his Grapes on Tuesday next, at the meeting of the Horticultural Saciety in Regent-street. This will give our readers quality.

Some time since we recommended the members of Hammersmith Mutual Instruction Gardeners Society to alter their rules, by substituting, for fines, expulsion in case of drunkenness; whereupon our good friend Feter Mackenzie, himself a gardener, and well acquainted with the brethren of the gentle craft, mad some general observations, directed at nobody in par ticular, which we thought very proper ; but which, it seems, people have been wise enough to apply to dressed to : as Mr. W. L, of Hammersmith, who seems to have taken Mr. Peter's letter in dudgeon calling it scurrilous, and so forth

We are not sorry that Mr. L. has addressed himself to us, because it gives us an opportunity of speak ing our mind about certain things, concerning which we might otherwise have been silent. On the othe
hand, we do regret that it should be necessary to ani madvert upon the letter of a man who seems to be well-intentioned, and, in some respects, right minded. It is evident that the great offence that we and Mr Peter have been so unfortunate as to give to the Hammersmith Gardeners' Mutual Instruction Society consists in our recommending the expulsion of menn bers who get drunk; and it is the more surprising tha these good people should have proved so sensitive because other Societies of the same kind have thanked us for the advice. How is it then that the members point? Is it because it tocuched them home? We hop not. Mr. L. says, "It does not follow because you meet with a drunken man in company that you are to become a drunkard,also; a man that would suffer himself to be led away must be a person of very weak intellect-of very little self-command. I would rather allow him to remain, that by seeing the actions of the good man, and the success that attends his exertions, the drunkard may be induced to amend his former errors, and for the future walk in the paths of industry and sobriety. This is all very fine; but, good Mr. L., "fine words butter no parsneps." If, indeed, these drunkards were likely to be amended by your plan, we would have it tried-not by sitting night after night with your sot, but by expelling him, and putting him on his gond behaviour. If he mends, it is easy to re admit him ; if he remains in your society, it is not so easy for raw young men to avoid imitating his exam ple. The truth is, that tippling is the bane of gar deners, as it is of so many other classes ; and no measures short of the most stringent are at all likely to

W.
We say nothing of the members of the Hammer smith Gardeners' Mutual Instruction Society, and we are bound to believe all that is good of them, for we know nothing to the contrary. It is, in fact, because we wished them to remain respectable that we gave But he lnows quite as well as we do, that there exists among gardeners a set of low fellows, who spend their evenings in pothouses, and their days in cheating their employers. These persons, the dregs of the craft, may be known by a swaggering demeanour, which the simple mistake for know-
ledge. They are men of assertions, talking down the really well-informed gardener with loud words, slang and braggadocio. In the morning you will see them dirty and unshaien ; by noon they are muddled, and may be found at the nearest public-house, laying down the law to the sots around them: in the evening they are drunk. At the meetings of gardeners, they appear in greasy clothes, foul linen, hats and shoes, like their hair, unacquainted with the luxury of a brush and they strut about, the very Parias of Horticulture On such occasions you may observe them in clusters, perplexing their scanty brains by foolish arguments about nothing. By way of showing their inportance, they jostle the ladies who may have the misfortune to be near them at Horticultural Shows, and eventually are consigned to the police, or are threatened with it, when their insolence is quieted, and they sneak away
to their more congenial tap-rooms. Would out Ham mersmith correspondent keep these in his Society?
Experience has brought us acquainted with many of this sort. They are at once a nuisance and a disgrace to gardeners, and should be unceremoniously expelled from all decent associations; for gardeners as a body, are the reverse of this description ; and for their own sake they should not allow their credit to be compromised, or their society to be contaminated, by the admission of such people. No one knows better than we do the excellence of character which is found in the great body of gardeners ; their painful efforts to improve themselves with most inadequate means, their self-denial, their struggles against difficulties, and the patience with which they bear the sad reverses to which they are too often exposed; and, let us add, the strictly honourable conduct that marks their lives. To virtues such as these we bear our willing testimony and because we know of them and honour them, we are the more anxious to draw a broad line of distinc tion between gardeners of respectability and the people just described.
It happened, not long since, that a very worthy young man was induced to join a party of gardeners in arranging some meetings for mutual instruction, and for other purposes connected with their prothought, would have met with approbation, if not assistance, from every gardener who deserved the name. But no, Nimothy Cackle, one of ridiculed every proposition that was made, bullied everybody, and, by mere force of impudence, contrived to upset the business of the meeting. In doing so, Mr. Timothy Cackle no doubt thought himself a tine fellow : but his master did not estimate him so highly when he knew of his proceedings. Would Mr. L. keep this man in his Society

A second case was reported in the Times a short time since. It appears, that, among other ruffians apprehended for torturing a bull, was one Isaac Ransom, a gardener of Sudbury. It was proved that this worthy had been among the most active in settirg dogs on the bull, and that the animal was tormented about an hour, during which language of the most filthy and disgusting description was indulged in. The magistrate very properly sentenced Mr. Isaac Ransom to imprisonment with hard labour in the House of Conec-
tion for two months. Is this man the sort of person Mr. L. would keep in his Mutual Instruction Society? Now we affirm that these men, Cackle and Ransom, are only a type of che class which we shall continue to call low gardeners; that such occurrences, or others very similar, are by no means uncommon among them ; and that their brutal habits can, in fact, lead to no other results. Nevertheless, well-meaning men, like Mr. L., are apt to regard such conduct as of no consequence to themselves ; and to think that, so long as their own acts are unimpeachable, they have nothing to do with those of others. We can assure them that in this they commit an error seriously prejudicial to themselves. It is the interest of all gardeners to watch over their profession; not by their own conduct alone, but also by influencing and controlling that of others beneath them. If they do this effectually, the character of gardeners is raised; and, as their importance advances, remuneration will keep pace with it. On the other hand, if no means are taken to eradicate the evil portion, it, like weeds upon a dunghill, will grow rank, and flourish, and choke the good seeds that are sown among them. Cure the Cackles and Ransoms, good Mr. Lo., by the most gentle ot measures, by remonstrance, by showing them your own gove example, by persuasion, by kindness, by any other tender and affectionate process, if you carn. But, in the our advice.

We are no enemies to conviviality. We should be the last to require gardeners to stinence. All we contend for wishout getting drunk: briety; a man may be happy in the and gardeners, above all men for the charge entrusted be prool aga is teat and will not bear neglect. Howto their care is graid enough upon the subject for the ever, we have if we have not, we shall surrender it into presents of a correspondent, who signs himself "A Gardener," and whose experience in these matters will be found in another column.

## HEATING.

Our attention has lately been called by Mr. Beck, of Isleworth, to a somewhat novel method of heating by hot water, which appears worthy of being more generally known. The apparatus now in use at that genteman's residence is upon a very small scale; but the principle upon which it acts is capable of being carried out to any extent, and is at once so simple and economical, that we shall attempt to describe it briefly to our readers.
The originality of this invention lies with Mr. Rendle, of the Plymoth Nursery, who, in June last, forwarded to the Horticultural Society a paper upon the subject, which pas read at of their meetings, and of which an ab-
stract was given at p. 422 of the Chronicle of last year. The main point in which it differs from other methods is, that the hot water, instead of circulating round the house in pipes or open gutters, is contained in the centre of the building in a wooden tank, upon the lid of which is a layer of bark or saw-dust, raised 3 or 4 feet above the floor, for the reception of pots of cuttings, plants, \&c. This tank is divided lengthways by a partition in the centre, with the exception of about two inches, which are left open at one end to allow the water to circulate; its opposite extremity is connected with a small boiler by means of a pipe. The water upon becoming heated in the boiler flows through the pipe into the tank, and after passing round the latter returns to the boiler by another pipe ; in this manner the circulation of the water is kiept up.
The tank in Mr. Beck's house is about 11 inches deep; but he is satisfied that 6 or 8 inches in depth would be amply sufficient. Its lower part is formed of wood and the upper of slate, one portion of which is covered with
tan for plunging in cuttings, \&ce the remaining part is left bare, so that on sprinkling it with water a copions left bare, so that on sprinkling it with water a copious
vapour is obtainable. The waste of water in the tank is vapour is obtainable. The waste of water in the tank is
triffing ; when, however, it requires to be replenished, it trining ; when, however, it requires to be replenished, it purpose in the slate cquering.
purpose in the slate cavering.
The boiler, by which this comparatively large body of water is heated, is of diminutive size, and, perhaps, we cannot give a better idea of it than by supposing one of Rogers's to be divided crossways into two ; the lower portion, hermetically closed, will then represent the boiler in question. As in Rogers's, the fire is contained in the centre, and is supplied with fuel from the top. It
stands upon a grating raised a few inches from the floor, stands upon a grating raised a few inches from the floor,
and is surrounded at the distance of two or three inches and is surrounded at the distance of two or three inches by an iron case, from one side of which the smoke makes its escape through a small chimney. This outer case or covering is almost double the height of the boiler; and
the more effectually to prevent the radiation of heat from the more effectually to prevent the radiation of heat from its sides, an iron cylinder slides down through the opening
by which the fire is féd, and fits exactly within the top by which the fire is fed, and fits exactly within the top
of the boiler. This answers the double purpose of con. of the boiler. This answers the double purpose of containing a body of fuel, which settles down and supplies the fire during the night; and, when the lid is placed npon the outer case, of checking the draught of the fire, which is only continued through some small passages cut in the sides of the cylinder. A smail opening also communicates with the fire from the outside, through which the former can be stirred when necessary. In a boiler of this kind, many improvements could, doubtless, be suggested, Mr. Beck is of opinion that a great advantage would be derived by laving the boiler, as in Rogers's improved, in the form of a dome above the fire, and by having the latter fed on one side by means of a shelving hopper, covered in, and placed as nearly as convenient to the top of the apparatus.
During the time in which this system has been in working, the water has never been within many degrees of the boiling temperature, yet the thermometer within the house has seldom, on the coldest nights, fallen below 600 or $65{ }^{\circ}$. Its great advantages are, that the tank in which the water circulates, will; with such modifications as circumstances may require, serve as a stage for plants, either in the centre or round the sides of a house, by which the expense of hot water-pipes will be dispensed with ; and its extreme simplicity, which is such that any person situated at a distance from engineers might, with a little ingenuity and the assistance of a carpenter and blacksmith, erect an apparatus of his own; since any boiler which would create a circulation of water would answer as well as the one above described, although it might not be equally economical. We may also state that the atmosphere of the house, in which this system is adopted, is remarkably pure.

## VICAR OF WINKFIELD PEAR,

Synonyms. Le Curé, Monsieur le Curé, Clion, Dumas.
The following account will, it is presumed, clear up the confusion which has existed respecting this Pear, of which the accompanying is an outline from a specimen forwarded by the Rev. W. L. Rham. It was found growing wild in a wood by M. Clion, a French curate, and hence obtained the name of Monsieur le Curé. Subsequently, by French authors, it was erroneously made synonymous with the Saint Lezin, which it resembles only in external appear. ance; the Saint Lezin being a firm-fleshed stewing pear. Trees under both names were obtained from France by the Horticultural Society; the Saint Lezin was correct; but being under the name of Monsieur le Curé proved false, two wasmall round pear. The difference between the M . Vilmorin sent inence not ascertained till 1832, when fruit from a tree specimens on purpose. With these, under the name of Dumas, was found to agree. In the mean time, a tree of the sort in question had been imported from France by Mr. Rham, to in quis garden at Wink field, Berksliire; and some cultivators havis garden at Wink obtained cuttings from this importation, the variety was propagated in the neighbourhiood of London under the name of the Vicar of Winktield. For this, the familiar appellation of Vicar of Warceieldiong, or of a somewhat truncatituted. Fruit very Nrat oblong, or or a somewhat truncated pyramidal form; buttery, rad -molting in all seasons, and rich in such as are
farōrdble;- In point of flavour it cannot compete with
 mannyautumn varienss,
there are few at as it keeps till January, when axcount. The tree; grows very vigorously, and requires to be kept thin of branches; it is hardy, and
bears as a standard. The leaves are large, roundish, shortly acuminate. Flowers large with roundish petals.-
Robert Thompson. Robert Thompson.

ON MANURING WITH GREEN CROPS.-No. V. (By Professor Charles Sprengel. Translated from the German.)
5. Rape.-Rape may be used as a green manure on all soils which are strong enough ; but on a poor soil it yields so little herbage as scarcely to be worth ploughing in. It is valuable because the seed is cheap, and it grows both late and early, and consequently feeds on the atmosphere, which costs nothing: its roots, moreover, penetrate to woody roots and stems will loosen heavy land. In the Elsass it is planted for green manure after early Peas and early Potatoes, even on very sandy soils, and is followed by Rye or Whest, which then succeed exceedingly well. If, when sown after these two crops, it does not yield any great amount of herbage, it still, nevertheless, is better than nothing; to which must be added, that the soil, if of grest importance in green manuring; because, even if of great importance in green manuring, because, even if grown of either as fodder use of the soil a considerable quantity of carbon and give the sol a considerable quantity of carbon and nitrogen. If Rape is sown in autumn, it is left till the apring; after which the field is planted with Peas, Pota-
toes, \&C. The amount toes, \&c. The amount of herbage and roots which an acte will yield, may be stated at 7,000 or $8,000 \mathrm{lbs}$; ; but if left
till it is in flower, it ill it is in flower, it will yield twice as much.

1000 lbs . of green Rape consist of
$\begin{aligned} 770 \cdot 0 & \text { " water in a fluid form. } \\ 3.5 & \# \text { nitrogen (contained in }\end{aligned}$

If, therefore, the acre yields $8,0001 \mathrm{ls}$. of green leaves and roots, the furrow-slice will receive 28 lb , nitrogen, 32 lb . potassa, 13 lb . sulphuric acid, 8lb. phosphoric acid, 1120 lb .
 carbon) a good effect may be anticipated. In localities where wireworms occur, Rape is best sown with Oats, when 8 inches high, and between the rows, because the

Rape will then grow in the shade of the Oats, and be better protected. If not too high it is rolled down before being ploughed in, otherwise it is mown and drawn into the furrow ; 10 to 15 lb . seed are used per acre.
6. Rye--Professor Giabert, at Turin, some years since, recommended Rye for green manure. New things
are mostly overrated -and so it believing that it would supersede manure altogether. But although Rye will not effect all which has been expected from it, still it possesses many rood qualities as a green manure ; it will succeed on very indifferent land, and is one of the earliest plants in spring. On the other hand its roots do not reach deep, and consequently do not much enrich the furrow-slice, except with a little nitrogen and carbon; the seed, moreozer, is axpensive The amount of mavuring substances contained in equal to the ripe Rye, straw, and ripe groin taker wil be equ is, therefore easy to calculate how much it will bett the soil. A small quantity of potash soda sulpurio cid and common solt must, howerer, be sdded, becic acia, in ripening loses artion Rye is used for areen manure, choice should be When fields which for grein wane chore should be made o fields whe 1 has been lost at stass seed less seed mine quira. 1000.01bs.

If, therefore, $10,000 \mathrm{lbs}$ of the tops and tails of Turnips are left on one Magdeburg acre of land, the soil will receive 22 lbs . of nitrogen, 500 lbs . of carbon, \&c. To this are to be added the excrements of the sheep, which are at least worth a quarter as much as the Turnips.
In the Palatinate and the Elsass the leaves of White Turnips are used as manure, being a very indifferent food. After the harvest they are scattered over the field and plloughed in, like the leaves of Mangel Wurzel.

## CULTURE OF CELERY IN BEDS, AND THE ROTATION OF CROPS.

I Do not approve of nursing early Celery plants in pots, as I have invariably found them more apt to run prematurely to seed than those pricked out in the usual manner; and this I attribute to the alternations of drought and moisture to which they are necessarily exposed, and to the spiral direction given to the roots by their confinement in the pots, which induces a stunted habit of growtb, ill suited to lusuriant vegetation. For the main crop, I sow in a warm sheltered situation in the open air, in the beginning of February; and for late crops, about the end of March; pricking out the plants, when about inch-high, six inches apart, on a well-prepared border of leaf soil and good garden mould : they are removed to the trenches with a good ball to each when six inches high. My early crop I plant in the beds early in June, my main crop in July, and successional crops at intervals of three weeks, until the middle of September. For the early and main crops I plant three rows in each bed, placing the rows at one foot apart, and nine inches between the plants in the rows ; for I find that I can grow a greater weight of Celery with plants at that distance, than if a greater number of plants were planted in the same space; but for late crops four or even five rows will not be too thick. To the early crops I apply water very copiously, at least once a week in dry weather, making use of pond water, if I can procure it, and, if not, of spring water mixed with soapsuds or liquid and, if not, of spring water mixed with soapsuds or liquid
manure. I give sufficient to soak the beds thoroughly and then on the following day, as soon as the leaves are and then on the following day, as soon as the leaves are
clear of moisture, I place an inch of dry mouid over the clear of moisture, I place an inch of dry mouid over the
beds, to prevent as far as possible the water from being beds, to prevent as far as possible the water from being carried off by evaporation.
I am no advocate for earthing Celery a lithe at a time I never earth up until the plants are at least a foot in height, and I then tie each plant loosely with matting, removing the suckers and small leaves at the same time and applying four or six inches of mould at once. I find this the safest plan; as in earthing a "little and often" the soil is very likely to get into the heart of the Celery plants, and they are then useless. Where a great quantity
of Celery is required, and it is not necessary of Celery is required, and it is not necessary to occupy all the beds with Potatoes, they may be planted with early Lettuce, Cauliflowers, or French Beans, or sown with
Turnips, Carrots, or any other crop that is required so Turnips, Carrots, or any other crop that is required so soon as it can be produced.

The advantages of this system are-first, there is no space lost, as the ridges are useful for Salad plants, and
the beds for early crops；secondly，a greater quantity of grown 4 ft ．apart，while three rows are by this plan grown in 8 ft ． aphirdly，the Celery having by this plan tity of healthy pabulum for the roots to work in than is would have in single trenches，attains a larger size，and table matter added to the soil prepares mass of vege－ table matter added to the soil prepares it admirably for tap－rooted vegetables in the following seasons；and 5thly， the nuisance of wheeling manure on prepared in the beds， are turned for the season is avoided．Indeed by proper managencent，no garden ought to require dung to ber Theeled into it from the time the walks are turned until I generally sow m
with Carrots，Parsneps plants without manure；in the third year，Cabbage well manured ；in the fourth year，Onions without manure but manured for Coleworts in the autumn ；in the fifth year，early Peas and Broccoli ；and in the sixth year，Po－
tatoes．Thus by dividing a certain tatoes．Thus by dividing a certain portion of the garden into six equal compartments，the rotation of crops is re－ duced to a regular system，and each crop is six years be－ fore it again comes to the same place．By a little manage－ ment of this kind，the crowding of two or three crops we need hear no more of the complaint that＂ground will not grow Celery．＂It is not to be expected that it will， unless it be properly prepared．In conclusion，I may state that，in my opinion，Seymour＇s Superb White is the Celery in cultivation．－－Judex．

## AMATEURS＇GARDEN，No．II．

The principal requisite in preserving tender plants in cold pits or frames through the winter is，to keep February；for as the growth of a Octaber until the end of heat and moisture than upon other agents of healthful existence，it is obvious that the more cool and dry plants are kept，provided they do not suffer from an excess of cessful in or drought，the more likely are we to be suc－ plants and pits should be kept dry，by placing the pots on some material，such as dry ashes，that will absorb mois－ ture，and by admitting all the air possible in favourable wes ture is give air at all times when the exterior tempera－ remove the sashes entirely on dry mild days．Water I never apply，unless the plants are flagging，and then only thus treated will scarcely be injured by the same amount of frost that would kill them in a growing state paovided they are kept closely covered until they are thoroughly In prony thawed
touch protecting cold pits，the covering should never from the pit，and gives it off again to the atmosplere theat if it is raised $l$ inch above the glass，it repels the radian heat，and thus a stratum of confined sir is the radiant which forms an excellent protecting medium．For this， reason，wooden shutters，frames thatched with straw and hence canvass，or tarpauling，are superior to mats of placing it above and not between the usual covering and the glass．
actual need rooms should only receive water when in as possible．Pelargoniuns mutht be kept as near the glass be desired must have the point of each shot bushy as may and the same may be done with other plants of loose good plan to place nights become very severe，it will be a the ground by a large woollen cloth ；and as a funthed precaution，when necessary，a stone jar or two furthe ing for the night． In the night．
ing，except inen－garden proceed with digging and trench－ nailing of hardy fy or frosty weather．The pruning and as possible ；but puit－trees must be concluded as quickly until the end of February．Apricots will be best if left must hember appear above ground，a second croan sown none were som at the first favourable opportwity；but if without delay．At that time a crop of each must be got in be sown on any A small crop of Early Frame Radish may up．Protected by haulm or litter until the plants are are plentiful，dung，or dung and leaves，where the latter Cucumbers and frequent turnings，for beds for forcing ${ }^{\text {are }}$ ．dry they should be watered ．Where these materials

vision appears to be omitted in the 5th and 6th This pro ch． 50 ；but might，I think，be re－enacted with advantage and，if vigorously enforced，would tend much to remove What is now generally admitted to be the greatest impe An Old Subsoriber．－－With reference to your sugges－ tion of a General Drainage Act，in a leading article public utility，I beg leave to observe that it it much conscquence to many were some steps taken to prevent the use of mills，or the making pond－heads to work to make that necessary ，beausginis done without great injury to the land adjoining and above the pond－head ；such preventing its proper drainage by procured to buy up the interest of those now having mills on such streams，and the right to thereof，is more than I can suggest；but I cannot help tion of any one who would give his attention to a General Drainge Act，as suggested by you；inasmuch as by wind， or by steam，the wheels of some such mills might be water ；and institutes for them，instead of by running mills in use at present necessarily occasion injury to other roperty．－B．C．H
When properly conducted As these are institutions which， mable advantage to the rising generation of gardeners am happy to find that two new institutions are springing ap in the neighbourhood of London，and in parts where， if the gardeners are so disposed，they may be well sup－ ported．If，however，there is one thing more than another calculated to militate against the prosperity and respecta－ bility of such gatherings，it is the practice of holding the meetings in public－houses ；for no matter whether liquor sure to be indulged in afterwards，and when members become pot－valiant they are apt to ridicule or jeer at statements which in the room they had not the courage to combat．The consequence is，it creates ill－feeling and future debates，young members from taking any part in ings which are anything but creditable to either dividuals or societies．Thus，on mentioning
gardener of a nobleman that there was a Gardeners
society at the Thatcled House Tavern，at Hammer－ wou，he replied，＂If you said a convivial society you inserted at nearer the truth；and certaiuly the ruie is strong evidence that such is the case．Far be it from my wish to raise a prejudice against the society ；but this that the respectability from no very limited experience， hind will be much augmented if the meetings are wholly projenected with public－houses．So convinced were the of this，that at its comnencement，and during the whole of the time its meetings were held at Ifammersmith，they paid seven shillings per night for a private room，though of expense；and I believe to this principally，and to the untiring assiduity of the leading members，may be attri－ attained among the societies of the metropolis．Rules as o the conduct of members and conducting the discus－ sufficient interest in the prosper if members do not fee their institutions to conduct themselves with coubility of towards each other，and if the charman of the evening does not possess suffient influence to chepl the evening of feeling there is but litle hone for the prony ebuilation ociety，or the intlectual adyancement of it Fines are of no use；to and vince his reason that he has done wrong ；and unless his reason is convinced，it is not very likely that he will amend his ways．In the excitement of debate uncivil ex－ pressions will escape even from the most guarded；but will do than fifty fire Ian finy fines．I can speak feelingly on this subject ；for pression，that I would willingly have given my whole week＇s wages to have escaped．While I fully accord with Mr．Peter Mackenzie in what he has advanced respecting the＂dissipation of gardeners，＂and would avoid a drunken one as much as I would a contagious disease，I cannot agree with him，that they should be thrown on the
world as outcasts，or monsters which ought to be avoided No；the spirit of philanthropy and benevolence，on which all societies for mutual instruction ought to be founded， forbids it．We ought not to say to poor erring humanity， Go and beg your bread from door to door as a vagabond exhortation should be，＂In your sober moments come among us，and we will endeavour，by the force of our your ways，and by making you taste of the sweets of intel lectual pleasures，make you a good and useful member of society．＂Few unfortunately are there who have not at and the orther stepped beyond the line of sobriety， it，therefore common charity should prompt us to pardon it，and as much as possible prevent it in others．The解erings which generally take place before a young man年路 to a situation，and yclept＂foys，＂are，to say the where a man spends several pounds（which in the majority of cases he cannot afford）for the purpose of seeing his
piece of harleaiatances make beasts of themselves．Th without which a man is not＂Making a Gardener，＂

Bletting．－Although a prolonged discussion of this sub－ ject promises to partake more of the philological than of
the horticultural or botanical character，your readers robably not be sorry，as the hunt the mawkin doon；＂and so I make no apology fo replying to the observations of your correspondent＂T F ．＂ ate Chronicle．＂IF．＇s＂lively communication has of the word turn to the inquiry respecting the meaning The word bletting；or rather the subject divides itself the cha braches：－one seeks to explain the nature of ceous fruits，and phe pace in the maturation of the rosa－ dea of that change：－ the other the derivation of the word itself．The first of these was the prime object I had in view when I preferred the question prime object 1 had in answered it most satisfactorily．You say that you part De Candolle in the adoption of a word por to express over－ripeness，mealiness，or the in France， stage between ripe and rotten－－the druxinese intermediate drossiness of the Sussex people．The word answers very well，and is not likely to be mistaken or misapplied as 1 still think that the ripeness of the Medlar（taken as the exemplar of the tribe）in chemical nature，as well as in taste and flavour，differs as much from rottenness，as Peach doe condition or perfect ripeness of a Noblesse， as＂7F．＂says are valuabs，precision and copiousness，＂ is very convenient ar thang it Medlap bletts．To follow out the other branch of the inquiry，the etymology of＂blette，＂will，perhaps，lead me out of my depth ；but I will endeavour to reply to some of the observations of my fellow－correspondent．He supposes that there has been a misprint in my quotation from the poirvée ；and de la langue Francoyse，＂of pourrée for for the word in bliton）beto in Frech poirne i Greek found in in found in our language，as the name of wat is，I believe， in the seal will find On requel thater is not quite so easily settled． On referring again to my author，I find that the spelling the word，I find on low use the word blette looking further，hat he does not pourrés＂ pourree be and an de pourriture，as I took it and answering to the trop－mure of later Dictionaries，but Pourrer，the bitum or blete of aur older herbalista． －blitum＂（Blitte effilee，or Strawberry－blite of the pore， sent day．）You，Mr．Editor say，at p． 838 ，Bnitov is Bupposed to have been the plant now called Amaranthus Now，in Jaume St Hilaire＇s＂Plantes de la France，＂I find two blites beaulifully figured，La Blite effibée，Bli－ f thus Blitum of Linneus．The clustered scarlet axillary inforescence of the former of these，shews it to be the rue Strawberry－blite，and no Beet at all．If we come back to the English herbalists，we find in Gerard a whole host of＂Blites；＂including almost all the Chenopodiacere， with the Orach and Atriplices ；and the following quota－ Language＂（pooth s Analytical Dictionary of the English Lavguage＂（p．235）will shery that several wild and cul－
tivated herbs were anciently associated under this name． The generic name Chenopodium（Greek $\chi \eta \nu$, a goose， nous，a foot）was given on account of the form of the lenves of the early included species ；of those，the best noodn are the Bonus Henricus，wild spinage，or all－ urbicum leaves of which are often eaten as greens；the Frost ，or upright Blite；the allum，common orach，or Frost－bite；the viride，Green－blite；the vulvaria（olnam） Allseed Hort ；and the marilimum，sea－bsfoot Grown－ ground，or among rubbish；and the name Blite is from the Greek $\beta \lambda \eta \tau \tau \nu$ ，fit only to be cast away，worthless． The genus＂Blit um＂includes some foreign species，or，if may be，varieties of one species known in this country by spinach，and Berry－bearing orach．A species of Bloody－ thus（polygonoides）which grons amongst rubbish by the roadsides in tropical countries，is by some Botanists called the Amarunthus Bhan．The well－known culinary herb Spinage or spinach（for it is written both ways），the $S_{\text {pinacia oleracea，was formerly included anoongst the }}$ blites．＂Gerard includes the Beet amongst the blites； asing the word＂Bl to have done the same，sometimes Betráre．The other name of Poirée or Pecie）for their have been given it from its pear－shaped，or perbaps， eek－like root；for I strongly suspect that the derivation this word is from Poureau or Poirean（ v ．Boyer）a Leek， and＂Poirée－rouge＂red－Leek：－－and thus comes＂espéce de pourrée（＂Thresor＂loc．cit．）a species of Leek．But the Blites（the Amaranthus blitum included）in the Greek
bliton, are at once set at nought by Paxton, who tells us
that Beet is from the Celtic Bet, red. Here then a new that, Beet is from the Celtic Bet, red. Here then a new
light breaks in upon us, and we find another instance of light breaks in upon us, and we find another instance of
the imperfect knowledge of the Etymologists of the last century, who traced everything up to the Latin, Greek, or
Hebrew tongues, forgetful of their cognate, congeneric dialects. To say that Beet, Blitte, or Blite come from Bliton, is as much aside the truth as to say that Vater
and Mutter come from Pater and Mater or marnpand $\mu \eta \eta \eta$. Again, it would be as unreasonable to suppose that the plan or plants, by the Greeks called Bliton (whether Chenopodium or Amaranth), one of which our ancestors caled Alayood, and severalof the which were potherbs (it is reasonable to suppose) in the time of Theophrastus, were so called be"as men would serve a cucumber," to the dunghill. While we thus dispose of the French and English blette and blite as substantives, we are still in the dark as to the use of these words (the forncer of your correspondents, tively. "I. K. Sol ( $\beta \lambda$ itov, espéce de legume insipide,),-plante. Adj. : Poire
blette, -molle et presque pourrie." As the author of this Vocabulaire has not given the derivation of the adjective, you are left to suppose has probably hit on the right soil,
adjectively. "Fil and la Langue Romane" informs us that blet, blette, bleque, \&c., signify "soft." We must look for some other origin, therefore, for the adjective, than the blette of the Greek
bliton, or of the Celtic bet. The softness and mealiness of some of the Chenopodia help the conjecture of a figurative application of the term. But the speculations of the etymologists are a byword and a jest, and we must wait
for further information. Having already occupied so for further information. Having arready occupiath " droxy, subject, I must only briefly notice some other "f my fellow correspondent's remarks. "comes from the Anglo-Saxon blectha, which he translates "scurf, leprosy, he rest, beside the affinity of sound? Lye defines this
word by vitiligo, which, I believe, is not leprosy nor a scurfy disease. "Scurf" exists entire in the Anglo-Saxon ; and for "leprosy," Lye introduces the Gothic (quoting
St. Matthew) thrush or thrustfill -literally, "breakingout." Blectha comes nearer to "blain "or "blotch." If " blight" be Saxon, it is most probably from "incestanrate popular idea of blight from atmospheric causes. My fellow eorrespondent concludes his remarks with a " smaa nota bene" on the nse of the verb "gwerve" in a passive
sense. I dare say he is quite right; and I shall not look for authorities to gainsay his dictum : for if "swerve" is not a transitive verb, it deserves to be made so, and tue soner
it is done the better, for the sake of the "copiousness and precision" of our language. In the foregoing quotation from Booth's Analyt. Dict. it will be observed that he
spells the Greek name with an $\eta$ instead of an $t$-evidently with an eye to the root $\beta a \lambda \lambda \in t y$, to cast, or fling.- $P$. $P$. Rooting.-I have two Hyacinths in flower-glasses, one dark blue; the root in the latter has grown more than double the other in strength and height, and is showing a fine flower, which glass, excluding the light? -A Young Lady. [Roots are formed with more difficulty when exposed to light than When in darkness. The first effort made by a young plant when it begins to grow is to force its rootests down-
warda into the soil, and although this may be prevented by art, yet a plant will never form its roots so willingly nnder the influence of light as if buried in darkness.]

A maryllis Belladonna.-I am not surprised at all that $s 0$ few persons should cultivate this plant (a very great
favourite of mine), as it is such an uncertain bloomer in the open ground. It has been in the garden here many the open grocencly ever flowered till I got Dr. Herbert's years, but scarclas of bulbs; since then, I have had the pleasure of seeing its delicate and fragrant blooms every autumn. It is the are exceedingly hardy, but two things are necessary to their flowering, -a atrong growth of the
leaves, and absolute rest from Midsummer until their leaves, and absolute rest from Midsummer until their period of flowering in September. If the leaves sprout rigorous growth does not ensue in spring, or if they are preserved green by a wet summer after the per to promote the blossoming, it will fail."- "A stroug previous growth of the leaf seems necessary to its formation dect decay; the seasonable drom the leaf at the time of the be the requisite circumstance, if followed by a sufficiently high temperature. In a pot it is very easy to regulate the points above atated ; in the open ground, it can only be done by putkeep off the rain in a wet summer." "A south wall prowith me in the middle of the garden." In pursuance of these physiological principles, mast of the bulbs here are now kept in large pots of boxes; and they well repay the
trouble by their delightful flowers. Probably the reason trouble by their delightful flowers. Probably the reason of their not being oftener met with is the frequent failure
of the bloom for want of attention to their nature. - C. $D$., of the bloom for want of attention to their nature.-C.D.,
Sussex.
[Plant them at the foot of a warm south wall, well drained, and leave them to themselves. There will be no failure of bloom, we will warrant.]
The Season. I have in my possession a Cowslip in full bloom, lately dug up in this parish. It is no teatreling
but a fine fellow, with a fat, tall flower-stalk, and some wenty flowers upon it; and treading, quite as nearly as ature will allow a Cowslip to do, on the heels of its elder brother, Oxlip. My parishioners, who bave spent their proof of the mildness of the winter. C. W. Bingham, Sydling Vicarage, Dorset.- - [We think so too; but we also have a Cowslip now before us in full flower
London clay : which is still more remarkable.]
Cucumbers.-About 12 months ago, 1 paid a visit to Mr. Mills, at Gunnersbury ; where $I$ siv the best Cucumbers that had ever come under my notice the benefits of his system have reached this neighbourhood. A few days since, 1 saw the Cucumbers at Woolverstone Park, whice in Mills' treatise. There were six lights of various sorts, both black and white spined, all looking well; that is to say, they are young, strong, bealthy clean plants, with leaves from warance of spring rather than winter; with an abundance of frut, is every stage of growth up to 16 inches in length. Some complaints have been made of the expense; but as it is well without (aud very frequently not with) expense, I say, until some more economical and equally certain method, can be devised, follow Mills' system.-Thomas Wild,

Economical Pumps in Hothouses. - Having been at considerable labour in carrying water to the plant-house at Holme Gardens, our employer had a pump, occupying only six square inches, placed in the corner of the barksupplith in summer anc winter wate highland pump are frozen. If the ornamental head of such a pump is objectionable, it might be covered with a creeper, such as Hoya carnosa, a Kennédya, or some such plant. The water may be rendered tepid by constructing a concealed cistern beneath the bark or leaves; and it may be conVeyed by means of pipes to any of the atjo such a pump will be found still more advantageous. The expense of its erection is 57 , which is soon repsid ; as two men in one erection 1 than could formerly be performed by three men in double that space of time. Snowdrop.
The Onion Maggot.-Notwithstanding the great failur of the Onion crop in various parts, I have adopted th foss - Immediately on the appearance of the maggot in my Onions, I take advantage of a dull or rainy day, and with a watering-can and rose, 1 atarate the beas well with strong soap-suds. I then pull up all those which are in arised to find that your valuable corresponden (Peter Mackenzie) states that the salts contained in the suds keep the maggot from the seed, when it is well
that it does not originate in the seed. $-W . \boldsymbol{B} . \boldsymbol{T}$.
Problem in Cookery.- What is the reason that fruit and liquors become, when heated, more acid, and, on solution of this seeming mystery will oblige a subscriber and occasional contributor.- $K$
Experiments with Manures.-Impelled by your o servations last spring, I tried many experiments with various kinds of manure as a top-dressing to Grass land upon a tenacious clay subsoil. Among these were the ammoniacal gas-liquor from the gas-works, sulphate of soda, of lime. They were all applied in the beginning of May, but, except in the case of the gas liquor, without aiy perceptible effect. Wherever the water-cart passed by the dark green of the Grass; but at the Hay harvest, the prodark green of the Grasse, from the average quantity yielded by other parts. I likewise tried the mixture recossisting of so strongly for Potatoes by of soda; but the ridges so sulphate of soda and nitrate of soons ridges on which no manured were very inferior to tot help attributing this universal failure in the application of these manures to the suffered manure for T'urnips, and where it was sown broadcast it yielded an excellent crop of Swedes; but where it was drilled in with the seeds, the Turnips tween the drills there was, however, a a capital crop of of weeds. I also succeeded ith geal-ashes, according to Swedes from cloacine dried with coal-as as to give in reply to some former queries of mine.-A. H.

Effeets of powerful Smells upon different Insects.The wasp appears to be sooner affected by puagent scent than some other insects, since the fumes arising from Cayenne pepper thrown on hot iron will kill them in less than a minute; while the aphis, though infinitely more delicate, can bear them in a closed box witu mpur do not an hour. The fumes arising from burnt sulphur which were covered with scale, to these fumes in a close box not a foot square; and I found that neither the plan or the insect were affected, although half an ounce of sulphur was burnt.-Flora.
Svirits of Tar. - In the article on spirits of tar at p. 5 or this year's Chronicle, I perceive that your correspondent recommends that it be mixed with sand, and sown wice and pheasants. The mice I can deal with, but I have never
been able to preserve my Peas and Beans from those beautiful adjuncts to a gentleman's mansion, the pheasants. I have been so ofeng bat would at straw caught at the ilea, as a dion orrimus, said I I am Hic est, aut nusquam, qua ${ }^{2}$ My object in witio determined to try the experiment. My object in writing is to ask how much spirits or whe with sand, to sow with 12 quarts of Peas? Can overdose them? will it prevent the pheasants prom pirking them off after they are up?-J. W.C.- Mr. Mntosil uses a gallon to 60 or 70 square yards; and we apprehend the best plan will be to water the soil where the sown, if pheasants are to be thus driver away. The in employed, we presume it must be well wetted. The tar will not burt the crop ; probably it will act as a manure. We, however, have no idea whether the plan will be effectual. May we beg our correspondent to report the result of his experiment when be has tried it ?]
Experiments with Nilrate of Soda.-The following are the results of a few carefuly-conducted experiments with in the spring, the effects were not visible ; Carrots, sown in the spring, large increase in size; Seakale, great in crease in size and prominence of bud for this year's forcing ; cut on Christmas-day. Brassicas of all kinds, deep fuxuriant colour and vigorous growth; Asparagus produced the most extraordinary effects, as compared with
 tops were of yery dark green and kept growing late into the autumn. Onions in 1841 kept growing too late; they were very large, but did not harvest; in 1842 there was no perceptible difference. Coniferx, increased depth of green and vigorous growth. Turnips, sown with the sed, which came up with unususl rapidity, and continued grow fal they arrived at maturity; they were ader and proven fin foril is a remark bly friable low on and bickith lath gravel, having a great tendency to burn in dry summers. The quantity of nitrate sed 10 the 10 the the rase of he 1 apat the rate $\frac{1}{2}$. the land masured, but onitrags, the who allers in every instance, phas put in the alth the seed, apl the Turaips, where th was arr in it was appred when the plasts wha being strewed on the ground and allowed to bo wased io It appears to me that, wherever discrepacio its action, it must ciccer be arth plants to which it is applied, or to the time and mode using it. I, of course, mean on the same soils.-J.
Lichens.-In the Travels of the Abbe La Lande, who visited Italy 1765, I find an observation, of which I add the following free translation:-"There is a manufacture at Rome of a powder called Cyprio, because the secret of making it was derived from the islana or cypros upon trees delicious scent." Is it at all known to what kind of Lichen he alludes?-R.E. $\boldsymbol{K}$. [We do not find any account of this Lichen; but there are many which are fragrant. Lecidea aromatica ise fragrant when moistened, and Parmelia fragrans has a similar quality.]
Advantaue of Buying Corn.-I am enabled to confirm Mr. Loudon's statement respecting the benefit to be derived by the labourer from the purctase of corn instead of four, or bread; having made inquiries of parties, who at the present time adopt the system. The following fact, duce 130 speaks for itself. A quarter of wheat whi produce the figure quoted is better than that of which cheap bread is made the the metropolis is made; the general price
from 5娄 $d$. to $7 \frac{1}{2} d .-C . K$.

## FOREIGN CORRESPONDENCE.

Cape Palmas.-We reached this settlement on the 18th of July. For neatness of houses, \&c., this must rank next to Sierra Leone. During our short stay at this place, was so fortunate as to meet with Mr. Minor, an American missionary, who assisted me greatly in my researches. In a ramble through the bush we met with a fine species producing abundance of large white flowers, with some noble specime of Butter and Tallow tree (Pentadesmis butyrice) which is very ornamental, with large, entire shining coriaceousleaves, and pendulous fruit. Upon beingound and from it this tre grows to the height of 30 or 40 feet; the fruit is known to grows to the
Lapanee. The order Anonáceæ is very abundant; one species was growing about the settlement, and is sough after by the people for its delicious ruit-the appelles iven a brought from the 1 of Fair Hope, Cspe Palmas. the oach, the leaves of ound a bot dives this, when cuty into narrow ships, are plateld the seamen visitine then converted into hars, them the name of visiting this port: this is Sennite. The Oil Paim is aso plentin, Buetion much notice of by the settlers. Imay also wenor, the dried aronática, another plant of the Anonaceous country as the seeds of which are known in the shops of Cone Palmas : Piper æthiópium. The seeds are usee at C and but in the interior, at the confluence of natives, though
growing on the banks of the river in great abundance, A
beautiful Cinchonaceous plant is found about Fair Hope, which possesses a climbing habit, and bears large corymbs of light pink flowers. A species of Coffee, introduced from Prince's Island, has taken possession of the soil, and flourishes exceedingly. In the more open places are found a Cardiospermum, and a Violaceous plant, with small white flowers, and a species of Jonídium. The order Capparidáceæ is plentiful, especially in the genus
Cleome; the Commelináceæ are abundant in the genus Tradescántia and Aneilema; and Euphorbiáceex in the genus Phyllanthus. The tribe of Ficus is plentiful, but the fruit of none of them is sought after. The species of about the settlement that hogel, is growing in the lands back, and upon which a young vegetation is springing up, is a plant of no beauty the colour specimens in flower; it lovely species of Loranthus is very plentiful, the flowers of which are of a rich scarlet and purple colour. In wet
situations are two species of Lycopodium ; one possessing situations are two species of Lycopodium ; one possessing with four kinds of Ferns; a a climbing one is plentiful, as Well as a species of Polypódium, but the other species are rare. A plant of the Araceous order is growing abunThe stagnant maters ; so also are several Cyperacer. The stagnant waters produce a Nymphæa, which, I was informed, bears beautiful yellow flowers. Amongst the
cultivated plants, the settlers have Cotton, Coffee, Indigo (found growing also in a wild state), the Sugar-cane, Cassava, Yams, \&cc. The fruits consist of Cocoa-nuts, Bananas, Plantains, Papaws, Oranges, Limes, Guavas,
Sweet and Sour Sop, Pine-apples, Vines, and Mulberries, The Vines do not thrive; but the Mulberries are doing well-the species is Morus multicaulis. In the garden of a missionary, a very pretty Amaranthus was cultivated, Which was obtained from the interior. A small quantity of Camwood is imported from this settlement-that and Palm oil being the principal articles of commerce. Was the only place in this part of Africa where I saw bees found in hives for the sake of their honey, as they can be at $80^{\circ}$ at noon; the wet bulb hygrometer indicating $6^{\circ}$. dryness.- $J_{4}$. $A$

placing a smaller ome in its centre in an inverted position. It does not require a great heat, and but a scanty supply of wate
winter. It is a native of Brazil. $\quad$ Puxton's MIM ag of Botany.

## MISCELLANEOUS.

Contrivance in the Creation a Demonstration of the Existence of the Deity.-One of the mostirresistible arguments by which we demonstrate the existence of a God which we gather fyom a minute investigation of his works. The region of Nature is full of God; and the deeper our researches are into its wonders, the foller and the stronge does the conviction become that all its parts have had the independent in its own being of the various objects over which it presides, and a Power which in all its operations has followed a specific plan, purpose, and design. The declare consmo ment of matter cannot come of chance. The fortuitous concurrence of atoms, of which ancient sages pitiably philosophized, could never have organised such mechanism as chanism before him, owns no and he who, with that me chanism before him, owns no God, is, we affirm, but a
melancholy witness of the truth of that saying - that no melancholy witness of the truth of that saying -that no
man is so credulous as an infidel. I pass by a throng of facts which, in answer to such a question, seem to rus forth from sbove us, and beneath us, and around us, to fix on one particular class of evidences of Designing Power Which pre-eminently claims attention: it is that class Which so plainly contemplates the condition of this our
world, and especially of our own species-not as God made hem at the firt ing, disease, and pain Now thatour race, in common with all animal existence, has become liable to physical suffering -and that suffering of 80 various and often opposite kinds -we look the resonces oreation, and what do we discover? We discover the fact, that all this state of things has been foreseen, anticipated, and provided for inasmuch as here are stores laid up in all the vast repositories of the mineral and vegetable kingdoms-yes, and even in the secret properties of animal substances alsostores of every kind, exactly adapted to meet the wants and ease the pains, and often altogether to remove the diseases that our "flesh is heir to." So that here is design and contrivance shown in the most affecting manner God our Maker has been under the necessity-a necessit ings upon us. Yet how do these provisions of nature exhibit Him before us? Even while, as it were, with the one hand He wounds, with the other He ministers, if not the cure, at least the mitigation of the pain. Here are antidotes to those ills already prepared. Now we ask-Is this chance? Comes it of chance that the world should prove one great depository of medicines for its own ma-
ladies? No, we reply: here is intention-here is foreknowledge of special circumstances-here is preparation to meet those circumstances. And the contemplation of such a coincidence between the world's physical woes, and the other-enforces the recognition of a Mind that to foreseen, and anticipated, and determined to provide for a condition of suffering existence such as earth now ex-hibits.-From a Sermon preached before the A pothecaries Society, by the Rev. John Harding.
Productions of the Valley of Herat.-The winter a Herat is not so severe as that of England, although snow December and January, and occasional frost occurs until early in March. The summer months are much botter early in March. The summer months are much hotter quence of a very high wind which blows steadily from the North during the months of June, July, August, and September. Little rain falls except in.winter and early
spring, the cultivation of the valley being carried on by spring, the cultivation of the valley being carried on by
means of canals cut from the river. The climate may certainly be considered as a very dry one. The principal trees in the valley are the Elm, Ash, Fir, Plane, Poplar, Willow, and Cypress, Of fruit trees there are the Pear, Apple, Quince, Peach, Apricot, Plum, Cherry (sour) Mulberry (red and white), Pomegranate, Walnut, Filbert, Berberry, and the Fig; the Pistachio flourishes in the district immediately north of the valley. Of Melons and Grapes there is every variety in perfection. The vegetables are Cucumbers, Beet, Onions, Lettuce, Brinjals, Carrots, Turnips, Spinach, Knol-Kobl, and Beans ; all, except the three first, of very indifferent quality. The garden flowers are few in number : the Rose, red, white, and yellow, the Jessamine and a species of Lilac, the common Red Tulip, the Narcissus, Blue Iris, Pink and Marigold ; the Sunflower, Hollyhock, and Cockscomb, are common. Amongst the wild fiowers, are the Butter-cup, Poppy.-Transactions of the Agri-Horticultural Society of India.
Conversion of Starch into Gum and Sugar.-During germination, a great change has taken place in the chemical has passed into the condition of quancar and become soluble, while the gluten, or azotised portion, has undergone partial decomposition, giving rise to a certain quan-: tity of a most extraordinary substance called " diastase" starch into Grape-sugar. illustrating the specific property of this corious body is to add to a quantity of warm thick gelatinous starch, a little infusion of common malt made with tepid water, and then maintain the whole at a temperature which does not much exceed $160^{\circ}$ Fahr. In the course of a very few minutes,
the starch, before so thick that the vessel might be inverted without spilling any, becomes as limpid and thin as water. between ordinary starch starch-gum, a state intermediate be still kept up, in the course of some hours, depending upon the quantity of malt-infusion used, the liquor will have acquired a sweet taste, and have become, in fact, a solution of Grape-sugar. This is the principle of the first step towards the manufacture of beer, and which is celled ceptible of fermentation. The practice is as follows :-The malt, roughly ground, or rather crushed, between rollers, is placed in a spacious wooden vessel or "mashfurnished with a talse bottom pierced with small holes, like a colander, and raised a phe spe above the true bottom. A stop-cock, plat a propo communicates with an exit-pipe. . regulated of course by the quality the liquor required which bas meanwhe been healigs to pron ture in a large copper boiler close at hand, is now let on, and the misture in the tun, after due agitation, either by machinery or by hand, is closely covered up to prevent rarying from to four hours. In this interval the gre unaltered during the malting, is, by the action of the diastase before mentioned, converted into soluble mucilaginous matter and sugar ; the liquid, or "wort," acquiring a degree of sweetness incomparably greater than could in the malt itself-F Protecting Plants.-At the last sition of the Paris Horticultural Society, M. Victor Paquet made an interesting communication relative to a mode of protecting, on the open ground, delicate plants from the frost in winter The branches are to be tied together, and, if necessary two sticks are to be fixed in the ground as supporters Some litter is to be spread over the ground round the plant, and a sack or other covering is to be placed over the whole. This covering is to be made thoroughly wet, so that it may be frozen the interior a cold so intense as itself, the plant is in a comparatively warm temperture Guano.-The superintendent of the hardy department ceported that he had tried several experiments with guano upon plants in pots. In loam, containing one-fiftieth part of this substance, Verbenas and Sálvias became luxuriant in about the same degree if potted in rotten dung The same plants also flourished exceedingly in sand containing a similar proportion of guano. The same effect, or even a more beneficial action, was produced upon them when peat was substituted for sand. But when rich garden soil was employed with the samee proportion of guano he plants became languid and died. It was therefor pon the soil with which it is employed, and that a quan tity which would be highly beneficial in poor soil will become deleterious upon land previously frch and well Bacon.-As it is of some importance to cottagers now how best to preserve their bsed the following receipts from an old lady whose bacon is never rusty. For the bacon of a large plg take 14 lbs of misture rub the bacon thoroughly, and then put it down tightly into a tub kept expressly for the purpose, havin Iid to fit tightly on, and also an inner cover, which resta on the bacon, and presses it down as it diminishes. Becold boiled water. If these precautions are attended to the bacon will preserve its colour and good flavour for 18 or 20 months. As soon as the weather becomes hot, the brine should be poured carefully out of the tub, be boiled and well skimmed, and when cold be again poured over the bacon.
To boil Lecks.-For the Cottager Leeks make a delicate, economical dish, end are very beneficial in case of colds. In boiling these vegetables, it may be well to stare that hey are much improved by changing the water when hate bolled. It is commonly supposed that, Leeks are strongers havorr than Onions : this, however, is aider
Mildness af are, on the contr ary, nucn from the Londonderry Journal, that, as a proof of the mildness of the weather in that neighbourhood, some ripe Niaberies were, a few days ago, gathered in the garden of Mr. R. Stewart, of Altrest, near Donemana, which lies in rather an exposed situation. In various pasparrows have commenced to build their nests.

THE NATURALIST'S CORNER.-No. VIII.
25. The Pconias, a verv conspicuous genus of herbaceons and suffruticose plants, were highly esteemed by the ancient Greek physicition. Moir praises are, too extravagant for sober repetitio. Modern times, however, are not altogether free from some remnants of absurdity. The anodyne necklaces," says Burnett," still sold to prevent convuisions in children, and to ease dentition, Pxony, ${ }^{26 .}$
North The great utility of the bark of the Bivch-tree in Nor America is very remarkable. Not only are the canoen in which the Indians trust themselves on lakes sufficienily all sorts of sme miles from the shore, Besides it burns like pitch ; splits into threads which serve for twine ; and the filmy part, riear the outside, may be written upon in
pencil, making no bad substitute for paper,-Ifead's Forest Scenes.
27. Dr. Cheyne remarks, in his Philosophical Conjec tures on the preference of Vegetable food, that he believes a good natural philosopher might show, with great reason and probability, that there is scarcely a beast, bird, reptile, or insect, that does not, in each particular climate, instruct and admonish mankind of some necessary truth for their happiness, either in body or mind.
28. In Civil History records are consulted, medals examined, and antique inscriptions decyphered, in order to determine the epochs of human revolutions, and verify modern events; so in Natural History we must search the archives of the world ; draw from the bowels of the earth the monuments of former times; collect the fragments, and gather into one body of proofs all the indices or phyages of nature. It is thus only that we can fix some points in the immensity of space, and mark the progress-
ive stages in the eternal march of time.-Jameson's Geological 1 llustrations.

## Rebiems.

Verhandlungen des Vereins sur Beforderung des Gartenbaues in den Königlich Preussischen Staaten Transactions of the Royal Prussian Horticultural Society at Berlin. Vol. XVI., Part II.
Tre greater portion of this Part is taken up by a very detailed article on the culture of Heaths, by Mr. E. Regel Inspector of the Botanic Garden at Zurich, followed by a cultivation. The first portion, occupying 54 quarto pages, cultivation. The first portion, occupying 54 quarto pages, is devoted to the cultivation of this appears to be the result of long practical experience and careful comparison of the directions given by previous writers, especially of those contained in Mr.
M.Nab's treatise, with the practice of the principal M.Nabs reatise, with the practice of the principal
Heath-growers in Germany, as well as of those of this country, as tar as Mr. Regel has been able to ascertain them. After devoting the first chapter to the soil, a long one follows on propagation; this is closed by an enumeration of species classed according to the length of time and dif-
ficulty of striking cuttings under various modifications of soil and temperature. In the third chapter, on transplanting, the English practice, recommended by M•Nab and others, of filling the bottom of the pots for large specimens with stones, brickbats, cinders, or bits of wood, is contrasted with the opinion of Jaunack and most German growers, that this practice is not only unnecessary, but prejudicial. Mr. Regel advocates the German practice, but admits that the greater humidity of the British climate may require a different treatment. The fourth chapter contains directions for pruning; the fifth for watering; and the sisth, long details as to Heath-houses or stages for summer, with reference to aspect, temperature, light, and ventilation. The directions in this chapter are drawn up chiefly for the climate of Germany, where the Iong drought of summer has more to be guarded agalnst than the continued damp of our climate, which it is Heath-houses for winter, detailed plans for which accompany the paper, Mr. Regel warmly advocates heating by or any iron work in contact at once with the outer and inner air. For, as the internal temperature should not be kept in winter above 3 deg. Reaum. ( 39 Fahren.), Fahren.) the internal vapour condenses and cools so ra pidly on the iron sashes as to fall in the form of suow. cold draught being allowed to pass over the Heath-plants. He recommends that all light should come from above, and not from the sides; that the plants be as near as posvery small. At the close of the chapter, the Heaths in coltivation are again enumerated, and classed according to their relative hardiuess to bear cold in winter. The seventh and last chapter is devoted to the diseases which attach to cultivated Heaths, and which are chiefly attributed to defects in cultivation, with the exception of the Fungus named by Klotzsch Clavicularia destruens, which, if not stopped in time, will soon overrun whole plants and, every year Mr . Kec considers powdered sulphur, either alone or mixed with slaked lime, to be the best remedy.
The second division of the paper occupies 130 quarto pages, and contains detailed dir classification, Mr. Ree adopts the four subgenera established by Bentham in De Candolle's Prodromus, and many of the sections of Klotzsch, or of Bentham, with others, either entirely new or modified, with special reference to the facility of deter335 , besides varieties ; but Mr. Regel includes as species many of the garden bybrids, which are now multiplied almost indefinitely, so as to render almost fruitless any attempt rised from the same paper. Of two hybrid seedmore of the character of one of the , one will often have and thus a coinplete description of all the hybrids in cultivation would have to include a separate account of almost every individual raised. It appears to us that it would merated as species only such permanent ones as are really so in a Butanical sense; and after each species to have that species as one of their parents, or have such an affiThe_Naturatist's Pocket Almanack is an attempt to
render this sort of book useful to those who are more in terested in Natural than in Political History; the plan is good, and we wish the work success.
The Ombrological Almanack is, Mr. Legh, its author, informs us, founded partly on admitted principles, and partly upon observations and discoveries recently made on the influence of the planet Jupiter and his satellites on our atmosphere. We cannot congratulate the author upon the success of his weather predictions, as far as the present year has gone. We are now writing with the country covered with snow ; but the Almanack, which says nothing of that, tell us the weather will be fair and cloudy ; while the 3d of the month, which was one of the loveliest of bright sunny days, was announced to be frosty, sleety, and cloudy. The Polytechnic Review. No. I.-If we notice this new periodical, it is certainly not for any merit that we of A priculture It professes to treat, among other things, has, in that department, "facilities st his disposal which have not yet been possessed by any similar periodical;" and then, as if he could not say enough upon this point, he repeats that "in this department unusual facilities and assistance are at his command." Upon looking to the
nature of these unusual facilities, we find they are derived from plunder of the "Gardeners" Chronicle," and from nothing else. All the Agriculture that is produced consists of Dr. Playfair's first lecture on the Animal Chemistry of Farming, misprints included, purloined without acknowledgment, from our columns. It is fortunate that the worthy gentleman who rejoices in the name of editor of this wise, we might, in our simplicity, have fancied that his trumpet-tongued announcement of prodigious facilities and peculiar advantages really possessed some meaning.
CALENDAR OF OPERATIONS for the ensuing week. year, and the changeable nature of the weather since the first year, and the changeabie natare or wie weather since the first
new moon the sasin, coupled with the fact that the wind
bew from the south-west on the last shortest day are lelind by blew from the south-west on the last shortest day, are held by
our weather prophets here as sure indications of a mild open our weather prophets here as sure indications of a mild open
winter. Good news this, if true. We must not, however, on this account, relax our vigilance; for although the last two months of plants, yet the next six weeks are by no means free from trials of a different cast. The large fires necessary to meet sudden depres-
sions of temperature, and the heat of the sun on frosty days, are sions of temperature, and the heat of the eun ond frosty days, are
sure to bring on vegetation too quickly, and, if not guarded amanst, will as surely bring disappointment at a fature period,
Thick coverings at Dight, as litte firing as is consistent with the safety of the plants, and judicious ventilation, are the proper
remedies. Besides the routine business of the season, such as wheeling duag, digging, pruning, sweeping and rolling grass, gathening leaves and materiail for composts, , had lately some
of the best hands on the pleasure.grounds doing work which is often neglected in many places, and sometimes never thought of
at all. They were examining the roots of all our finer trees and shrubs planted on thic erass or er exewhere within the last dozen years forking over the original composts in which these were
planted, tracing out and bringing nearer to the surface such planted, tracing out and bringing nearer to the surface such
roots as went too deep; others that rambled too wide were cut back to different lengths, and after removing a portion of the old compost, and adding fresh in its place, a zone of good soil, about
a foot or eighteen inches wide, was placed round the outside care being taken to have an inch or two or poor soii on the top to
prevent the roots of the grass from penetratiog into the new palace to the smallest garden.
The early forcing of flowers is become more and more general every year, and is now a regular and profitable branch of busi-
ness at many of the nurscries round London cellent paper on this subject, by Mr. Green, in Vol. i., p. 148 , with and Narcissuses have never been strouger with me than they have
been this season; the earliest Hyacinths, on the other hand, are not so strong as usual; perhaps the general drought overtook
them last season before their leaves had finished their office. The whole race of tea-scented Roses ought to be forced, or other-
wise encouraged to bloom early, in order to enjoy their delicate wise encouraged to bloom early, in order to enjoy their delicate
fragrance, as in summer they can hardly be said to be sweet.
 fases; best and sweetest, provicing they are on their own roots
or worked upon thin Boursaut - The latter is so easily excited
p into growth, whereas our native Rose stocks are ent
for forcing purposes.

Pingrr.-Continue the top and bottom heat, especially by
are, as steady as
Pines and fire, as steady as possible for some time to come. Pines and
Orchindicee suffer less from confined air than other stove plants
out the air in pinestove with exhalations from the fermenting materials, must be changed With exhaiations from the fermenting materiais, must te changed
as often as the state of the weather win permit. When the quantity
of hot-water pipes in any of the houses is barely sufficient to keep of hot-water pipes in any of the houses is barely sufficient to keep
up the requisite temperature, they must always be epty ery hot;
and thus, besides drying un the moisture, they deteriorate the and thas, besides drying up the moisture, they deteriorate the
air in a maner not yet sufficiently explained. Vinery.- If the stems of the Vines have been painted with any
composition for destroying the eggs of insects. ce ., the longer it
 this forns a hard cruss, and prevertst the paint from scaling off
untio it 15 cracked by the growth of the tree-of course I never allow it to he washed off by the syringe. Vineries that are to be
forced next month should now be shut up, and the outside
 from $50^{\circ}$ to $60^{\circ}$, acconstantly keyt monst, with a temper their states of forwardness.
Prach nouse, - During this
Prach rovss.- Duriing this changeable weather some nicety are beginning to force th, or yourt trees are coming into blossom, and moisture are the main points to be attended to until the
 with merely the she erer of the house, that it would be dangerous
to leave then now exposed to frost. Very little forcing is required for the Cherry at any tume, brost they are even more susceptible
of sudden changes than the Peach, and also more liable to the attacks of insects. Any Cherry, trees als pots may be brought always more manageable in pots or boxes, and being liable to
failures not easily accounted for, a good stock should be kept on failures s10t easily account od for, a goo
hand to replace accidents of any knid.
 answer so much better in pots, whicla car readily be brought into
any house at work and in succession. Before they come into feaf they can stand in any out-of-the-way corner: they delight in a
mild moist atmosphere.

Crccumars.- Those in a bearing state require a constant,
brisk heat, and plenty of air, especially if they are surrounded by
ferm
 out upon, should be thoronghly sweetened before the bells are
made; but few people think of beginning so early with this troublesome system
any of the pits or a very early crop, seeds should now be sown in Mrsurooms.-Keep the bearing beds free from woodice, and continue to collect droppings for succession beds.
ABPARACus.- Where a constant supply of this useful vegetable is wanted, a few single rows ought to be sown every year to meet the demand, without encraching on the permanent beds. and I advert to it thus early that rest for raise in in disposing of the ground for future crops.
in the pots in which frinter use, these should always be sown materially check their growth. Liater in the season they may be sown in boxes and transplanted with safety. Pots of 32's are
large enough for the early crops; the soil, ;f well drained, hardly be too xich for them. Mersc, and small salading, may now be forwardel Ons, Lettuces, beds. I always pot the earliest crop of Potatoes in 48 gits, place them to a cold vinery to harden, and are well up, then remove in turf pits, covered with reeds and with a little hot dung
under them.
All the early crops of Peas
now be safely sown on dry, warm borders, and wetll of these Whinting. Therer vegetables has bcen recentiy given by Mr. all crops that require it; neither has there ever been a finer time for pruning and nailing, planting, and getting forward with the siness of this department.
H.-FLOWER-GARDEN AND SHRUBBERY

SToves, -Many of the Orchidatace are now enjoying a com-
fortable repose, while others, less fortunate against our long niie othts and less fortunate, have to struggle ont this last class by giving them as much light as you can, and do not excite them to too rapid growth. Another portion which
have just returned from the drawing-room, where they have been showing off their beauties, will, in, all probability, be
in want of a refresling draught, look to the care that the water is not too cold for them; a little atten-
tion will soon bring them to their regular habits. also over soon bring them to their regular habits. Look shelves, and start a few roots into growtht to prolong their sea-
son. No plants are more fragrant or more suitole servatory, when in flower, than H. máximum, coronárium , and Gardnerianum; but the latter is unfortunately of sllort duration, so that a great number of plants would be required to kecp up a succession of flowers for any length of time, Out of 16 species
of this genus which I have fowered, these three are all that I can recommend for general purposes, If the plants are clean,
there is very little work in the stoves at present All sorts of foreign stove.seeds, or of any other descrivtion from abroad, may now be sown with safety. This is the best time to sow seeds of
fine Rhododendrons, Azaiceas Kilmis. Graviouqk- - Keep the temperature as low as possible on

## NEWS OF THE WEEK.

Tue news received by the Overland Mail gives a deailed account of the closing events of the campaign in Affghanistan, and of the return of the British troops through the Khyber Pass, which was successfully accom plished on the 7th November. From the date of our last dvices to the evacuation of Cabul, the troops were em ployed in demolishing the principal towns, and in leaving behind them an enduring mark of vengeance. After destroying Istalif, they razed to the ground the celebrated Bazaar of Cabul, and spared no portion of the city except the quarter inhabited by the Kuzzilbashes. The Bala Hissar was left standing for the purpose of affording to Shah Poora, a younger son of Shah Soojah, who had mounted the throne, a means of defending himself against the attacks of the Affghans after the departure of the troops. On leaving Cabul, the Army laid waste the country on their line of march, barning the villages and forts, and showing, as the Indian papers tell us, no mercy either to friend or foe. They destroyed Jellalabad, with its fortifications and gardens, and arrived at Peshawur on the 6th November, having passed through the most difficult defiles in Asia without the occurrence of any important casualty. They were to commence their march o the British provinces on the 6 th, and on their arrival Dost Mahomed and all the Affghan prisoners who have fallen into our hands since 1839 were to be restored. Lord Ellenborough had issued a proclamation, couched in the pompous language of the East, announcing to "his brothers and friends" the native princes of India, sandal-wood gates of the Temple of Sompauth hav been recovered after a captivity of 800 years, and to the Juggerbe restored with great ceremony and pomp to The ponat temple, to which they originaly bed by the Indian ey or measure is much quese offence to the Ma papers, and it is expected to givegra we have accounts to ore 13 th importance had occurred in since the date of the latile ratication of the treaty had fairs was suspended until then. The monopoly of the Hong merchants was completely at an end, and samples of te had been sent to Hong Kong direct from Nankin. The captured junks had been restored, and trading on a small cale had already commenced between the English and Chinese, who were daily becoming more sensible of the Iue commercial intercourse.-Our European new arains to assume a more important character. In rance, the Chambers were opened on Monday by speech from the throne. The King, after alluding to his recent bereavement, refers with satisfaction to the prosperity of the country as attested by the rapid increase of the revenue. He alludes to the pacific relafons of foreign powers, and to the harmony prevailing mong them in setlement of the Syrian question. His Majesty deplores the disturbances which have recently agitated Spain, and deciares that in his rela tions with the Spanish Monarchy his sole object has been
to protect the legitimate interests of France. The
speech touches liggtly on the occupation of the Marquesas Islands, and on the negotiations now in progress for improving the trade and industry of the kingdom by commercial treaties with Foreiga Powers. The question of the Right of Search is not mentioned, but it is said to be the main point upon which the Opposition will make their attack on Ministers in the debate on the Address.-From Spain we have accounts of the return of the Regent to Madrid, and of the dissolution of the Cortes. The Regent's reception by the people was cold, and little enthusiasm was manifested by the troops or National Guards. The dissolution of the Cortes was not unexpected, as it had become evident that the Ministry could
not hold office while the Chambers remained so hostile to its measures. The new Cortes will not assemble until the 3 d of A pril.-From Lisbon we learn that the Portuguese Cortes were opened on the 2 d by the Queen in person. The speech mentions with satisfaction the arrival the anxiety of the Government to give additional development to its foreign relations by means of treaties of commerce and navigation. The necessity of equalising the receipts and expenditure of the State is again adverted to, and the negotiations with the Pope are described as advancing towards a favourable settlement.-From
the United States we have no political news, public attention being exclusively absorbed by the details of an attempted mutiny on board one of the ships of the American Navy. The object of the conspiracy was to convert the ship into a piratical cruiser, and intercept all vessels passing between Europe and New York. It was headed by the son of the Secretary at War, who was summarily tried and hung at the yard-arm as soon as the conspiracy was discovered. If it had succeeded, the packetships from London and Liverpool might for some time have been the scenes of fearful atrocities. The accounts from Canada describe the health of Sir Charles Bagot as much worse, and give slight hopes of his Excellency's recovery.

## Theme Nefos.

Court. - Her Majesty, Prince Albert, and the Princess Royal continue at Claremont, and are quite well. The Prince of Wales is at Windsor Castle, and is still suffering from the effects of teething, but in other respects is in good health.
During the week her Majesty and Prince Albert have taken their usual walks in Claremont-park, and the Prince taken their usual waiks in Claremont-park, and the Prince
has shot over the preserves at Oz-shott Common and at Stoke whenever the weather has permitted. The Court is expected to return to Windsor on Monday next. by Sir. R. Peel to all the supporters of his Government, informing them that the meeting of Parliament having been fixed for Thursday, the 2d of February, public business of importance will be brought forward without delay, and expressing an earnest hope that it may be consistent of the session.-A rumour has been current during the week that Mr. Barnard is about to retire from the representation of Greenwich, but there is no foundation for the report, and Mr. Barnard has given it an unqualified con-
tradiction. -The election for North Shropshire will take tradiction. - The election for North Shropshire will take
place on Monday; the only randidate is Viscount Clive, who will be returned without opposition
National Debt.-The Lords of the Treasury having certified to the Commissioners for the Reduction of the
National Debt that the actual expenditure of the United Kingdom exceeded the actual expenditure of the United the 10th October last by the sum of $2,523,8233$. 13 s . 11d ., the Commissioners for the Reduction of the National Debt have given notice that no sum will be applied by
them on account of the Sinking Fund, under the provithem on account of the Sinking Fund, under the provi-
sions of the Act, between the 7 th Jan. and the 5 th April in the present year

## - Foretan.

Francr.-The opening of the Session of the French looked forward with unusual interest, took place on Mon. day with a speech from the throne. The streets were progress from the Tuileries. The King was accompanied by the Queen, the Princess Clementine, Mademoiselle pensier. The Chame de Nemours, and the Duke de Montand Deputies, and by all the very fuily attended by Peers matique in full costume. The reception of the King was
very cordial ; the lond and repeated cries of "Vive rose to welcome him with much affected, and after a few minutes' pause delivered puties-The affection and the sympathy of the French pution have sustained my courage. My My heart, ever suffering from grier, $\begin{aligned} & \text { in calling you myself together to resume in your devotedness } \\ & \text { me }\end{aligned}$ labours, I wished to conclude to-day what my grief had cempeniled You have already achieved much for the security and future prosperity of France; I thank the security name. Whatever may be our trials, $I$ and may family her devote to her service whatever strength and life the public order and peace, the national prosperity, attested
by the rapid increase in the public revenue, manifests itself beyond our most sanguine hopes. The solid empire of the laws is the best security for the well-being of all, as it is for the power of the state; and the conviction every-
where established, that the laws will be religiously exwhere established, that the laws will be religiously ex-
ecuted, renders less frequent the enforcement of their penalties. I congratulate myself on our having obtained those happy results. I feel confident that our prosperity
will pursue its course without either interruption or will pursue its course without either interruption or
obstacle. My relations with foreign Powers continue to be pacific and amicable. The good harmony prevailing amongst the Powers has strengthened the repose of the East, and procured in Syria for the Christian population the establishment of an administration I deplore the disturbances which have recently agitated Spain. In my relations with the Spanish monarchy my sole object has been to protect our legitimate interests, to
preserve for Queen Isabella II. a faithful amity, and to testify for the rights of humanity that respect and protection which honour the name of France. By the occupation of the Marquesas Islands I have secured to our navigators in those distant seas a protection and refuge, of persevering efforts of our brave army, our dominion in Algeria becomes everywhere stable and respected. The vigilance and regularity of the administration will complete the work so gloriously prosecuted by the courage of ou which will have the effect of imparting to our agriculture our commerce, and manufactures more active development, and to procure for our national interests additional racilities. Laws of finance, and various bills intended to improvements, ahall be immediately presented to you Gentlemen, the world is at peace! France is free, active and happy My object has been, and ever shall be, until It is with your constant and loyal co-operation that I have succeeded. You will aid me in maintaining and in consummating the work which we have commenced in common. This will be for all the most worthy recomafter hope for." The paragraph referring to the Spanish question was slightly applauded, but the cheering was more animated at the conclusion. The King looked well,
but seemed to have a cough, which impeded his free readivg of the discourse. His voice faltered at the first and last paragraphs, but by an effort he regained his composure.
After the usual forms, the Minister of the Interior After the usual forms, the Minister of the Interior
declared the session opened, and the King retired amidst the acclamations of the assemblage. The Chambers have since been occupied with the usual routine business. In the formation of the bureaux, or monthly standing committees, the Ministers have obtained a signal triumph, not only over the Opposition, but over the party of Count
Molé. Only one member of Opposition, M. Barrot, has been appointed; all the others are of M. Guizot's opinions. The Sugar Bill and the Budget were then presented.-We learn that the King has made a proposition to sell
Versailles to the state for $18,000,000$., stipulating to employ the money, and more than the money, in the completion of the Louvre, which will require, it
is said, a million sterling. - The opening of the Chambers is of course an event of so much importance that it occupies almost exclusively the attention of the Journals. The affairs of England, however, and particularly the retreat from Affghanistan, afford them state of the public comenve in Great Britain with that of France, and observe, that whilst the former shows an alarming deficit, the latter has improved during the year 1842 to the amount of $60,000,000 \mathrm{f}$. In regard cuation news, they all unanimously declare that the evais more disgraceful honour, than any event of the present century. The Ministerial Journal des Debats contrasts the conduct of Gen. Pollock with that of the French generals in Algeria, adopting measures of extreme rigour, they are rescuing the country from barbarism, and laying the foundation of future civilization, while Gen. Pollock has had no other object than the gratification of mere revenge. "What," fered, a city which opened its gates to Sir R. Sale and gave him provisions? Near 100,000 inhabitants have thus been left without babitations in a climate almost as cold as that of Russia. It is frightful!-but what is most odious is, that the English have avenged themselves upon
the inhabitants of the towns instead tribes who destroyed Gen. Eiphinstone's army in 1841. In Affghanistan, as well as in Algeria, the warlike part of the population is that which wanders with its flocks in search of pasture. The towns are only inhabited by Jews, Armenians, Hiadoos, Cashmeerians, Tadjiks, Elaves, meir-chants-that is, by strangers and peaceable people, who
have never taken up a gun since the beginning of the war. These are the people who are to support the weight of the revenge of the English. Those whom they ought to have pursued were the Ghilzies, the Afridis, the Channaris, the Pollock has taken care not to go and seek in their mountains. General Pollock has done what a French general would do, who, having to punish a revolt of the Flittab, or the Beni-Amer, would go and burn Mostaganem or Mascara, He has committed inexcusable cruelties. Public opinion, however, has already pronounced itself in England also, they will raise the indignation of all gener-
ons hearts." -The official Moniteur states that the Hon Capt. Grey has arrived at Toulon, in H. M.'s frigate Belvidera, to convey to Vice-Admiral Baron Hugon the ex-
pression of the gratitude of Admiral Sir E. Owen, pression of the gratitude of Admiral Sir E. Owen, Mediterranean, for efficient assistance piven on the 30 th November last, to her Majesty's ship-of-the-line Formida ble, by the vessels of the French station at Barcelona. Spatn.-We have accounts from Madrid to the 4th inst., bringing the important intelligence of the dissolution of the Cortes, and of the return of the Regent from Bar celona. The Regent entered the capital on horseback on the lst, accompanied by the civil and military authorities, who had gone out to meet him. The assemblage of people was very numerous, and the staff extremely brilliant Among the latter were Generals Rodil, Grases, Ferraz riarte, and many others. Two squadrons of the cavalry of the National Guard constituted the escort of the Regent who proceeded straight to the palace of the Queen. The troops afterwards defiled before her Majesty and the Resent, who had taken their station on one of the balconies of the palace. At 3 o'clock, the Regent, who was suffering from fatigue and indisposition, repaired to his residence of Buena Vista. His reception by the people was cold, and little or no enthusiasm was manifested by the roops or national guards. In the evening, the city was the new municipality took the oath of office in presence the Political Chief, by whom they were formally installed rol the pres ferent towns on his line of march, his reception appears to have been everywhere satisfactory. In every town and village he passed through, the corporations, provincial de putations, national guards, and even the clergy, vied in demonstrations of respect and adhesion to his regency and overnment. He was waited upon on his arrival in the confines of Valencia by the Political Chief and the pro vincial deputation. At Almanaza he took his seat in carriage, drawn by six mules richly harnessed, which con reved him to Valencia, escorted by the National Guard He entered the city under a triumphal arch, and proceeded the hotel prepared for his reception, amidst two line or National cuarde, and sale by ebia mations of the multitude. A telegraphic despatch from Barcelona, dated the $2 d$ inst., announces that Genera Seoane, on the $29 t \mathrm{th}$, annulled the division of the forcea war contribution which had been made by the municipality, because it weighed too heavily on the Moderadoes, who were not engaged in the outbreak. The commercial classes are to pay one-half, and the tax-payers the remainder The first payment was to be made on the 5 th inst. The decree of the Regent dissolving the Cortes is dated on the $3 d$; it announces that the new Cortes will be convoked on the 3d April. The projected treaty of commerce with England still excites great interest in Barcelona and in Madrid. In the latter city the editors of the Opposition papers drew up and signed on the 3 d a strong declaration against the conclusion of the treaty.
Portugal. - We have advices from Lisbon to the 2d anst. The new year was ushered in with the opening of the Chambers, and the recommencement of the legislative business of the kingdom. Her Majesty opened the Cortes in person, with the following speech from the throne:-"Honourable Peers of the Kingdom, and Deputies of the Portuguese Nation-lt is always an object of high satisfaction to me to see the representatives of the nation united in this respectable place. I congratulate myself with you on this solemn act, and trust that, animated with the most decided desires to employ al your solicitude in the honourable effort to consolidate the representative system, you will adopt for this purpose all the means and provisions that your wisdom may suggest. With the arrival at this court of the ministers of Austria and Prussia, and with that which has Iately taken place of the representative of his Imperial Majesty the Emperor of Russia, the diplomatic relations of this country with the great powers of the north are completely restored; and 1 have the satisfaction of heing able to commpnicte to you, that I continue to receive from all the friendly and allied nations the most decided proofs of friendship and harmony. My government seeks with anxiety to maintain these political relations, and to give greater development to the commercial ones, by meaps of treaties of commerce and navigation, with which it is unceasingly occupied. I trust that it will not be long ere the opporthe occasion arrives to make known to you the resul of Holiness : and that, withert any breach of the prof his tives of the Crown, the necessities of the Lusitanian Church may be attended to. The budget for the future economical year will be presented so you, and I ought especially to call your attention to the urgent necessity of My Ministers will pise you account of the meate. which they judg giv to the the legislativey jugged urgen ill present to the which of the public ${ }^{\prime \prime}$ "The arrival of the "anches of the public service." The arrival of the Suffren vessels w-o-bathe there, had excited susicio other the French ordered the had some sinistericions that carry into Government hame sinister designs to absence ofl Minister there The Rodney Brit part of the French Minister there. The Rodney British line-of-battle ship remain there for the present. The and was expected to tinued one the present. The negociations still continued on the tariff question, without anything further Belgrua
Bregrom,-The Government papers have published a Royal ordonnance, dated 6th January, approving the
definitive convention between the State and the City of Brussels for the purchase, by the Government, of the real property, and of the museum, with the natural history, the cabinet of medals, 8cc., belonging to the city. They have also published a list of honorary members of the Royal Academy of Medicine at Brussels,
approved by the King. The following are the English physicians and surgeons in this list: Dr. Abercrombie Dr. Bright, Sir James Clark, and Dr. Marshall Hall; Messrs. Samuel Cooper, Guthrie, Travers, and Lawrence. The Belgian Colonisation Company intend foud its first settlement in Central America.
Grrmany.-The Prussian papers announce the death of the Archbishop of Posen and Gnessen, M. Martin de Dunin; he died on the 26th ult., aged 69.-Letters from Berlin mention the expected arrival of the Countess de
Rossi and her husband, late Sardinian Ambassador at St. Rossi and her husband, late Sardinian to fill the same post at Berlin, the Countess having been unable to endure the cli-
 mate of Russia. The Counters de ross, once the seene of her early fortune and artistical fame, and be received as an Ambassadress in those saloons in which she gained the first tritors of the Asylum Life Assurance Company in London tore of that institution in Berlin and other parts of the Prussian dominions; this report is confirmed by the announcement or the daren, two of the Sir James Law Lushington and Mr. Farren, two of the directors, have had an interview with Chev. Bunsen ou the
subject. - Letters from Trieste state that the English Commissioners for inquiring into the practicability of conveying the Indian mail through ained that the journey from London to that place by Ostend, Cologne, Frankfort, Munich, Augsburg. Innspruck, \&c., may be performed in 135 hours and 25 minutes. This would enable the correspondence to be forwarded from the railroads, now in construction, shall have been finisbed, a considerable additional saving of time will be possible.-On the 21 st
ult. the St. Pauli sailed from Hamburgh with 120 Gerult. the St. Pauli sailed from Hamburgh with
man emigrants, bound for New Zealand. Of these 100 may be said to belong to the labouring classes; the remainder consist of a physician, some missionaries, and the
numerous family of the agent. This is said to be only the commencement of an extensive system of emigration, Which is likely to be organised in Germany, under the auspices of the New Zealand Company.
ITALY.--Letters from Milan announce that the railroad from Venice to that city has been opened as far as Padua, and that the event has excited the greatest interest in the north of Italy. -From Rome we learn that the Pope has
determined to send a Vicar apostolic to China, in compliance with the wishes of the Roman Catholics resident in that country.-Letters from Catania mention that the eraption of Mount Etna continues with more or less violence, and that all the towns at the foot of of Italy by the imposing spectacle. The lava continues to flow in a broad stream in the direction of the Val del Bove, and there is some reason to apprehend that it will take the direction of Milo, in which case it will make a descent on Zafferano, and probably destroy Giarre and Mascali on the sea coast,
north of Aci Reale. Up to the present time there is no north of Aci Reale. Up to the present time there is no
reason to fear for the safety of Catania, which has so often been destroyed by previous eruptions.

Russia.- The last official census of Russia gives the following as the populations of the chief towns of the empire:-St. Peterburgh, Cronstadt, 54,717 ; Wilna, 349,068; Odessa, 60,055 ; Cronstadt, 54,717 ; Wilna,
54,499 ; Toula, 51,$735 ;$ Kiew, 47,$424 ;$ Astracan, 45,938 , Casan, 41,304 ; Sebastopol, 31, 3 , 155 ; Darpat, 12,203 ; EGYPT. - Private letters from Alexandria state that the murrain still continues among the cattle, and that the Pacla has dismounted all his cavary and artilery, and sent their horses to the plough. A plan is now being of a Barrage across the Nile, at the head of the Delta, of Sciences at Paris for inspection. Should their opinion as to its feasibility and usefulness be favourable, there
is every probability that the Pacha may decide on is every probability that the Pacha may decide on car-
rying this great undertaking into execution very soon The probable cost is estimated at about 250,0000 . sterling, and the great advantage anticipated is a constant supply of ater, by means of canals, to all parts of the country,
even during the lowest periods of the Nile-thus allowing a great portion of the present waste though rich land, to be brought into cultivation almost as easily as the fields on plation for yeare, but it is said his highness now think plation for years, but it is said his Highness now thinks striously of commencing It, although nothing will cerby able engineers in Europe. Indta, -The Overland Mail arrived on Saturday with accounts from India to the 1st December. The return of
aill the British troops through the Khyber Pass was fully completed on the 7th November. The first division, under General Pollock, succeeded in effecting their march without much difficulty. The second, commanded by General M. Caskill, was not equally fortunate, in consequence of the neglect of crowning the heights over a most dangerous part of the defile. The mountaineers were on the watch, and, finding this division embarrassed in its movements near Ali Musjid, during the night of the 3d, they made an
attack on the baggage, a considerable quantity of which ia
said to have fallen into their hands. During the skir mishing two officers, Lieut. Christie, of Native Infantry Ensign Nicholson, of the 30 th Bengal Native killed and were killed; upwardumber of canp-followers. Two cannon were also taken by them, but one of the guns wan taken on the following morning. With enis excep in the nothing of consequence appears return of the troops from Jellalabad to Peshawur through the most difficult defiles in Asia. The third division, under General Nott, which formed the last one of the army, arrived at Jumrood, the frontier station of the Sikh territory, on the 6th, and it was intended to commence From the date of our advices by the last mail, to the evacuation of Cabul, the troops appear to have been employed in demolishing the principal towns, in
order to leave behind them an enduring mark of vengeance. After the capture of 1stain, M-Caskill's brigade burnt and destroyed it, giving men were spared, and no quarter given. They treated the women with respect, but every other living being was put to the sword. They returned to Cabul on the 7th October, and General Pollock having received from Lord Ellenborough positive instructions to leave the country without delay, preparations were immediately made for carrying should be performed from the fact of snow having made its appearance on the hills, and ice in the camp, it was evident that, unless they resolved to pass the winter in Cabul, a longer stay coid not be made with safety. The 12n, 9 the a party of sap pers and miners, under Captain Abbott, the chief en gineer, protected by a brigade commanded by colone Richmond, was marched into the city for the purpose o effecting its destruction, together with the Chah Chatta, or Granil Bazaar, a splendid structure, 600 feet hack as th rign of Aurungzebe, by the celebrated Ali Murdan Khan Two days were occupied in conducting these operations, and by the morning of the 11 th the whole of the houses, and with were loid in roins, while the bazaar was utterly he mish adjoined it levelled witi the ground. This act of vengeance is much censured by the Indian papers, and it is said that the parties who will suffer by it are not Affghans, but the merchants of Hin dostan, who thought themselves safe in our protection The Bala Hos Shah Sooiah, having mounted the throne of Cabul, and taken possession of this place, and it being considered advisable to leave him with the means of defenc ing himself against any forces that might be brought againg him on the departure of the troops. Greakhbar Khan, and directions to hang him, if captured, had been received by General Pollock; but the Sirdar effectually eluded the vigilance of his pursuers, and has now, it is reported, succeeded in reaching Baika. The roopa Jellalabad by the the 12th and. 15th, and had ance the country burned 26 th October. Chey had ravge the villages and forts, and spread Th and ances everywhere along the was shown ; that "impartial slaughter was dealt on friend und foe, on those who sued for pardon as well professed those who The rear-guard was attacked, and five officers wounded, with about eighty sepoys killed and wounded, near Gundamuck. They were employed on the 25 th and 26 th in destroying Jellalabad; and having blown up the gardens and vineyards of the inhabitants, they proceeded in the direction of Dhakka, reached Jumrood, below the mountains, on the 2a November, and Fulteh Jung, with many hundreds of friendly Affghans from Cabul, and multitudes of women, accompanied the an ful drama which may now be looked for at Cabul Some apprehension appeared to have been entertained of a collision between the Sikhs and the British troops near Peshawur, and positive orders had been issued to prevent village near the camp, and from going to Peshawur. The Governor-General has issued a proclamation, intimating that so soon as the British troops return to India, Dost Mahomed, and the whole of the Anghan prisoners who bave come into our hands since 1839, will be restored in safety, but requiring that, prior to their obtaining permis sion to rern to their own country, they should atten his Lordshin's Levee at Ferozepore, which is intended to rival in magnificence any display ever made by the Great Mogul. This order contains also the remarkable statement that Akhbar Khan, prior to the late advance of the British armies, had refused the offer of the Governor Generl to exchange the British prisoners in his custody even for his father and his own family. The politicas agencies established in Scinde, appointed by Lord Auck land, had been abruptly terminated by an order of Lord Ellenborough, who has placed the whole management of those districts under the care of General Sir Charies Napier, now commanding the Bombay army statiofurther stipulations urge upon the Aneers of Hyderabad, ther stipulacioss urged upolling to assent. Great activity to which in the cond the Government of Bombay. A notification has been
published to the effect, that troops will be maintained on a line of posts from Kurrachee, by Sukkur on the Indus, to the Murkurda in Sinhind ; that war and other steamen will continue to ply on the rivers; and that a lighthouse will be constructed at Kurrachee. In announcing this foct the proclamation states, that " As late as the time of Aurungzebe, the Indus is known to have been navigated by large vesseis drawing very little water, adapted to the convenient conveyance of merclants and their goods; and the Right Hon, the Governor-General will be disappointed indeed, if the British Government, with all the skill and science of modern times, cannot at least restore the com merce which existed upon this river io the time of the Ma hometan Emperors." A proclamation hasalso been issued by the Gov.-Gen. "to all the Princes and Chiers and people of India," expressing his gratitude to Providence for the the events, and announcing that the sandal-wood gates of the sult of 800 years is a last avenged, and that the gates are to be replaced in the Juggernaut temple of Somnauth with every circumstance of pomp and ceremony. The gates are to be escorted by 100 men, and a proportion of Europeans rom Gen. Nott's division, to which will be added 25 troopers from the Governor's body-guard, under Captain Herries, the Aide-de-Camp. The men forming the escort are to bave double batta while employed on this duty ; the proession is to beceived with every demonstration of respect in the various States through which it may pass en route to Guzerat, when they are to be again fixed to the temple, from which they were removed 800 years ago. Her Majesty's 41st regiment was about to embark for Curope from Kurrachee, for which purpose transports had been ordered from Bombay. - It was rumoured that six of the officers who were in the hands of Akhbar Khan are to be tried by Court Martial; they are Gen. Shelton, Col. Palmer, Capts. Waller, Eyte, Boyd, and Anderson. Madras mapis by a severe thunderstorm on the 24th Oct., no less than five vessels having been totally wreeked. There had been a heavy fall of rain at Bombay on the 15th Nov. wich unusual and unseasonable event hat caused the cholera to rage among the natives for several days. The health of the island was restored when the man the despatched. The accounts from. Bur its ravages which the choiera was making among its popita tion. Whole villages lave beco being driven to seek shelter by fiying ap the cours eat ofr by this dreadrul malady. At Amernphe the $10,000 \mathrm{had}$ died of it. From singaporo we lean with ship Belvidera, which lett Bombay for the phat precious cargo of pearis, cotcon, opia we there The completely destroyed by fire in the police had received intimation that she was one of the five ships doomed to destruction within the last few the It was believed that the parties concerned in the destruc tion of this vessel were native dealers of Bombay, who ha shipped goods in her, and succeeded in efiecting fraudulen insurances. From the evidence which bas been eilit there is every reason to think that the charge wil be brought home to several of the delinquents. In the interior of India tranquillity prevailed, with the exception of the mountainous districts of Bundelkund, to quit direction.
-The news from China comes down to the 13th Oct. It was said that a clipper had brought news to a later date of that month, that everything was treaty by the Queen, and that opium had risen in price. The news in regard to commercial affairs opens a cheering nemspect to British interests in China, and is calculated to give confidence to our merchants at home, in regard to their future operations. The Hong merchants monopoly is at an end, and samples of tea from Nankin have been forwarded to Hong Kong by her Majesty's plenipotentiary; the price is moderate, and the report on their quality generally favourable. The imperial commisintiary Lo ave onted the acenty junks have been restored, and trading between the English and Chine Chinese mperial comminion It is a singular document regard to the least so as recognising the n many respects, and government for the opium they liability of the Chersed possession of, and for hat so uceremone six millions paid after the cap which they same compensate. The com ture of Canton was the English "barbarians;" and missioners still the Emperor the importance of while pointing out to the fleet, they dechare that obtaining the wised and found what are the unwarrantthey have exam the said barbarians, which they 80 im able denans and they are deserving of the utmost hatred." They state that the Shewei, an officer of the Emperor's body-guard, and his colleagues, who conducted the negotiations with sir $H$. Potinger, again author tively questioned him as to the difficulties, but the said bar barian ouly stared at him indignantly, the sbewei wa not fistentares of show that the sums which will be received from our merchants in payment of duties will meet the expenditure of the Imperial family; they admit also that "comparing English io English it is as taree to ten; ama as there it is better to adopt plating, without the hith of an ever plans in accordance They then detail the efforts made to ind ber of places which he demanded as ports of trade, and
say - "If we again prepare our armies to maintain those places, it is a difficult matter to engage with them on the
waters. Though near to each other we have been idle waters. Though near to each other we have been idle
(there has not been any fighting) for many days; and as to (there has not been any fighting) for many days; and as to
those places which they have taken and keep possession those places which they have taken and keep possession tory, and allow them to trade, since they are willing respectfully to pay the duties? Just now they are sensible, and repent of their errors, and are as obedient as if driven by the wind, and when again united in mutual friendship,
benevolence, and truth, all things will go on well. And benevolence, and truth, all things will go on well. And
since they will guard their own market, and surround and protect the sea boundaries, there will not be any necessity for recourse to our interference, which will be to the
advantage of our country." The commissioners conclude advantage of our country." The commissioners conclude
by declaring that they have "examined, and found, that with reference to equal official intercourse, it may be un reservedly granted; and as the affairs with the foreigners are finished (the war ended), the prisoners may also be released, by which harmony and good understanding will be strengthened; for a state of peace will bring repose and gladness, and overthrow factious parties
Unifed States.-The packet-ship New York, which
sailed from New York the 19th ult., arrived at pool on Wednesday. The papers brought by this conveyance are four days later than those received by the mail steamer. There is no political or commercial new. of moment; public attention in New York is almost exStates brig-of-war Somers, just arrived from the coast of Africa, of an attempted mutiny on board that vessel, the object of the mutineers being to overpower and murder the between Europe and New York. At the head of the conspiracy was a midshipman, Mr. Philip Spencer, son of the American Secretary-at-War, who, with two of his most active confederates, were summarily tried at the drum-bead and hanged from the yard-arm of the brig, as soon as the conspiracy was discovered. The details of the plot given they were to board every vessel off the harbour, and no on was to be left to tell any tales. They were to proceed to the Rey must hate been a long time in so that the con spiracy must have been a long time in embryo, and the
confederate has yet to be arrested. The Somers is stated to be the fastest sailer in the American navy, well manned, and carrying 10 guns ; and had not the design been so fortunately frustrated, frightful crimes might for some fortunately frustrated, frightful crimes might for some American packets.- We regret to state that the latest American packers. - aceived New York from Kingston describe the health of Sir Charles Bagot as much worse. Only slight hopes, it is added, were entertained of his Ex-
cellency's recovery. The immense ship canal, which cellency's recovery. The immense ship canal, which completed; and on the 30th Nov the inhabitants of Kingston were surprised by the arrival from Corrwatl of
the steam-boat Highlander, the first vessel that had passed the steam-boat Highlander, the first vessel that had passed
through the canal. Although one of the largest steamthrough the canal. Although one of the largest steam-
boats on the river, the Highlander met with no dificulty in passing through the locks. She left the mouth of the canal on the previous day, and ascended the rapids between that and Prescott with the greatest ease.

The Weather.-The weather still continues exceedingly changeable, alternations of frost and thaw daily following
each other. During Monday night the wind blew with each other. During Monday night the wind blew with
great violence from the S . W ., which continued up to about $80^{3}$ clock on Tuesday morning, when there was a fall of snow, which lasted only ali-an-hour, and during which the wind suddenly shifted to $\mathbb{N}$. The after part of the day
was extremely fine, although the wind was keen and cold. As midnight the thermometer stood at the freezing point, and the mercury in the course of the night fell considerably lower, so that by day-break on Wednesday morning ice nearly half an inch thick had formed; yet at 8 o'clock
the thermometer again stood no lower than $32^{\circ}$. The frost, however, continued through the forenoon; but between 1 and 2, P.M., a rapid thaw took place. The wind 6 also shifted to nearly due S ., yet blew very cold, and at 6 o'clock a fall of snow commenced, which by about 7 , depth of 3 or 4 inches. Throughout the last 12 hours the wind has blown a perfect hurricane ; it commenced yesterday afternoon, and continued during the whole night without intermission. Several fine trees in St. James's and Hyde
Parks, Kensington Gardens, Cliswick Park, Zion Park, and at other places near town, have been torn up by the roots, and several barges and small craft have been sunk on appears to estended as faved this norning, the storm no doubt hear of its effects in other parts of the we shal The IIouses of Parthament.-A number of workmen are employed, under the Woods and Forests, in prepar ing both houses for the approaching meeting of Parliament on the 2 d of nest ing and otherwise renorating the body of the houses, and the libraries, committee-rooms lobbies, \&cc. No material alterations are to be made in The City of the houses.
The City Sewers. - A report has been published by the City Commissioners of Sewers, containing the result of the

City of London. The report of the Poor Law Com missioners on the inquiry into the sanatory condition of
the labouring population of Great Britain, contained the labouring population of Great Britain, contained
several severe animadversions on the present Commissioners of Sewers. The system of operation, the fitness of the commissioners for their situation, and the work that had been accomplished, were alike the objects of un-
compromaising blame. The surveyor's report is made in obedience to an order of the Commissioners of Sewer made on the 4th of last October, and it is to furnish these commonssioners with an opportunity of exonerating them. sioners have brought against them, that the facts in thi report have been collected. The following extract con--"Previous curious historical information on the subject drainage appear to gre been superficial and fortuitous at that time the main sewers being the Fleet-dike, the Walbrook, and the Tower-ditch, the highest point of that the sas atdersgate. It was not till after this event tude; but it not being deemed that there was sufficient adventurers, commission taking charge of their cleansing and maintenance, and suffering no one to extend or communicate first common sewer was built by the Dean and Chapter o St. Paul's, down Ludgate-street and hill, but its exact was has not been recorded. In 1668, that of Fleet-stree continued to be laid down through the enterprise of Wrivate individuals, among whom was Sir Christophe George Wyatt, as surveyor of sewers, that the manage ment of the old, and the formation of new, sewers was centlem on in a workmanlike and efficient manner. Thi sewer, five feet high, and three feet wide, as an auxiliary to the Walbrook-the waters pouring into the latter having so increased that it had become overcharged, and the foundations of the wharf at its mouth were undermine and below the church tower of St Stephen' and extended to the end of Beech-lane, where it obtained a depth of 14 feet, being 4 feet 6 inches high, and 2 feet 9 inches wide at the head. In 1775 , the same year this sewer was completed, another main line, 5 feet high and 3 ide, was commenced along Bishopsgate-street withou of the same dimensions was also built in 1777 from near Moorgate to the city boundary in Ropemaker street, which, in 1779, was continued along Finsbury road to Tindal's burial-ground. The increase of build ings in the county, and the additional quantities o
water poured into the city sewers, rendered it necessary that some more capacious outlet should be formed, and the Walbrook sewer was accordingly enlarged to a average of 7 feet 10 inches, by 4 feet. This was, how-
ever, only a palliation of the evil, which was not effectually combated until, at the building of the present London-bridge, Mr. Samuel Acton, the then surveyor, proposed that advantage should be taken of it, and then
was commenced the London-bridge sewer-a work which has contributed more than any other to the health and welfare of the City and the Finsbury division. This work was, through the resignation of Mr. Acton, intrusted to the present surveyor, and it was therefore incumbent upon him to enter into a defence of his operations, which he has done at great length, showing that the line so formed which it intersects in several places. Within the last 13 years, (that is, since an outlet at London-bridge was oh-
tained, and places; and the map of the city sewers shows the following sewerage lines as complete in that district:From the Temple gates along the river side to Tower-hill; bars tompe-bar nearly to Tower-hill; from Holborn line, to Tower-hill -born-bars; from the Thames to Aldersgate-bars; from mak maker-street ; from London-bridge to Finsbury; from
the Thames to Nortonfalgate." The Report adds that, "Although it cannot yet be said that not a street, or court, or alley in the whole City is without adequate will elapse before so desirable for hope that but few years be made."
The Fleet Prison.-It has been recently stated, that a on the central Criminal Court would probably be erected Fleet now stands. under the consideration of the civil authorities, and the daily papers state that it is not unlikely that the improvement will be realised.
Cuy Antiquities.-Among the most important work ment, is the extension of the connected with its improve connected with the main leading sewer in Prince's-street during the last week exhibited some interesting deep, have to the early history of the City sinteresting facts relative Antoninus, and a few interesting fragments of Roman and Samian pottery, with household utensils, have been found bome ve buildings. The most extensive of these was found last week opposite the Swan-with-two-Necks, where the excavators arrived at a wall composed of flints, about
18 feet below the surface, which was between 5 and 6 feet
in thickness, and through which they had some difficulty to penetrate. A contiguous line of wall was also found in the excavations for laying the foundations for the ware. houses of Messrs. Pickfords, which are adjacent, and others have been found in other excavations in the neighbourhood, which lead to the idea that on this spot there formerly stood a castle or other extensive building. A passage was also found running in a parallel line between this and Cateaton-street, about 12 feet wide. At the lower depth there was a fine stratum of vegetable mould, apparently belonging to an ancient garden site, which supposition is strengthened by the appearance of gravel, profound this was found houses destroyed by the fire of London, the rubish which, without the aid of concrete, formed the foundation of the more modern buildings. Opposite to the church large quantity of human bones was found there existed here a place of sepulture, which must have been coeval with the time of the Romans.
The Wellington Slatue.-The committee of the sub scribers to the city equestrian statue of the Duke of Wel hington, begun by Sir F. Chantrey, and completed since inspect the progress of the work. The horse is already cast in bronze, and the figure of the Duke, in clay, wa placed upon it, in order to judge of its effect before it aro cast. The head of the bo ears pricked forward; he is standing on all four legs, and with the head uncovered, his left hand holding the bridle, and the right holding the marshal's holding the bricle, in very simple the whole body from the the to to being clothed in one unbroken pantalon, whilat a short cloak covers the shoulders, and is skilfully draped over th back, and partially down each side. The entire height is Chantrey stated 12 feet, and the executors of Sir Francis Chantrey stated that it will be ready next June
The Model Prison. The first

Pubbic Meelings. - On Tuesday, a meeting of the in 1836, was held toguese Bonds, issued for a loan raised rights, in respect to the advances made the Govern ment at Lisbon, on the collateral security of the debt due from Brazil to Portugal. The meeting was convened by the corn trom the Portuguese Government. The chai was taken by Sir Isaac Lyon Goldsmid, who said he had taken some pains to ascertain the feelings of the bondholders as to the last offer made by the Government a Lisbon for the arrangement of their claims under the loan raised in 1836, and the major part of them had agreed to the proposition he had now to submit to the meeting. It , hower, be important if the bondholders were o Barous. He then read a long letter addressed by him ment of the various financial going through a statePortuguese Goverament and the British bondholders, contained a proposal accepting the terms offered by Por-
 e placed in the proposed that the Brazilian stock to reckoned at 75 instead of 85 per cent Several of the bondholders addressed the meeting in supherat of the of Sir Isaac and his friends, who hold about $600,000 l$. of the bonds now circulating, among whom was Mr. Tasker, who gave it as his opinion, that in this instance the exertions made to get from Portugal what she really owed her inters, would prove to other foreign states that British down as there not so inclined to have to think they appeare thagne bargain" with Portugal; and, therefore, moved that the terms of the proposal should be accepted. He endeavoured to show that the interest of the other class of cre ditors of Portugal would be interfered with, if the terms that he represented holders of wetween pressed. He said millions of money hoing himself nearly 000 and eleven bonds of Portugal ; and he was glad to be enabled offered, Mrat, as respected the security of Brazil offered, Mr. Ellis, the British Minister at Rio, was negotiating a treaty to admit Brazilian sugar and coffee meeting, however, at a moderate rate of duty. The result, when thever, was nearly unanimous; and the mover, and his nephew Mr. T. Thornton, were found to be the only supporters of the view be had taken. The proposal of Sir I. L. Goldsmid will be forthwith for wared to the Finance Minister, Baron de Tojal, and meet with is entertained that the terms it contains will Lagos, the sanction of the Cabinet, especially as Baron the fair and was present, expressed himself in favour of been the Anglo-Mexican Mint Company was held meeting a week for the purpose of taking into consideration the propriety of raising additional capital. The directors in the having entered into a contract with the Government of
Mexico for working the Mint of Zacatecas for a period of
fourteen years, they had, agreeably to the powers vested in them, determined on the creation of 10,000 half-shares of 5 l. each, to be appropriated preferably to the prodirectors to make a further issue of shares to thewing the -The general meeting of the shareholders in the London Joint Stock Bank was held on Wednesday. The report stated that the affairs of the bank for the half-year ending the 31st ult. slowed a net profit for that period of apply 18,000l. to the payment of the usual dividend of $6 l$. per cent. on the paid-up capital of the company, and to The guarantee fund would then the of the guarantee fund. $2 d$. Anli-Corn-lau Meetings.-On Tuesday
electors of the borough of Marylebone took place, for of Anti-Cor completing the formation of a Central Borough Anti-Corn-Law Association, to carry out the objects of
the great League Fund. Mr. Bagshaw presided, and was supported by Gen. Sir De Lacy Evans, Mr. Ewart, M.P. and other gentlemen. The meeting was addressed by
Mr. Henry Waymouth, Dr. W.C. Taylor, Mr. Ivemey, and others; and resolutions for the formation of the proposed Association were adopted. It was also decided to hold a public Meeting at the Colosseum on Thursday, the
26 th inst, for the general purpose of the Leaseue Weth inst. for the general purpose of the League. On Metropolitan Asseciation, comprising the division of St. Luke, Islington, and Clerkenwell, was held, Mr. P. A. Taylor in the chair. The meeting was addressed by Mr. M.P., Mr. Martineau, Mr. Buckingham, and other gentlemen connected with the district; after which resolutions Were adopted in favour of the League Fund.
Churoh Pastoral Aid Society.-On Tuesday evening a society was held, the Hon, and Rev. Montagu Villien of this chair. The report stated that the society by its grants now maintained 243 incumbents, having under their care and The charguptintendence a population of $1,832,552$ souls. Were without parsonage-houses, was $21,110 l_{\text {. In }}$ In addition to this number, 194 clergymen and 31 lay assistants were supported in their labours by the funds at an annual charge of $17,705 l$. It was expected that after the ordinations to curates would the present and ensuing months, 15 more requiring a further sum of I,300l. The contributions recently received amounted to nearly 2,0001 ., to which was After addresses by the Rev. Dr. Dibdin, Rev. Mr. Hughes, and others, resolutions were passed in support of the objects of the society.
Royol Hul Humane Society.-The half-yearly meeting of the cociety took place on Tuesday, Mr. Baron Gurney in
their. Among those present were Lord John Russell and several other influential members of the society
The 85 cases tatated that during the preceding six months mittee ; of these 78 were successful, and 7 beyond recovery; 14 were attempls at suicide, and six beyond been re-
ferred Hyde-park, and of these 11 were succesful, 2 beyond 13 case in very, and 3 attempts at suicide. 21 silver medals, 18
bronze rellum madals, and three votes of thanks engrossed on pecuniary rewards. On the motion of Lord John Rusberland fote of thanks was passed to the Duke of NorthumGrace was he-elected liberal support of the charity, and his the current year amounted to 3,4896 . $1 s$ s. 7 d ., and the balance from year mounted to $3,489 \%$. 18 . , gea, and the ba-
for the year $136 l .2 s .4 d$. The general expenses alone $561 l .3 s, 4 d .752 l$. 1 s . 3 d ., and those of Hyde-park Medals were thend the balance in hand was $51.4 s$. $1 d$. Asds were then awarded in the cases above alluded to. in 1/93 y general meeting of this institution, established and dumb children thert and education of indigent deaf port stated that during the ast 50 years of the Society's to read, w, 1,800 deaf and dumb children had been taught means of signs, and cipher, to correspond with others by tian religion. During the lost 12 ment thuths of the Chrisproposed that 30 the asylum, and the committee now e elected, believing that tha list of 93 candidates, should and clothe them would be afforded. Nearly 300 children
were now maintained being instructed in the school, and clothed and that instan by the charity. The list of candidates showed born deaf and of three and four children having been occurrence. In one in one family were not of unfrequent containing four born deaf and dumb; in another family, containing six, there pere thre dumb; in another family ng six, there were three; and in another, contain-
ing five, there were three. The receipts arising from sub scriptions, legacies, dividends, \&c., during the past year,
amounted to $11,575 l$, ; the disbursements to $10,772 l$, leaving a balance in hand of $802 \%$.

Election of Chicf Rabbi.-We learn by the daily papers that the Presidents of the various Jewish synagogues n Great Britain have been requested to proceed immediately to appoint delegates from their congregations, and to report their names to the secretary of the Great Synagogue, preparatory the their assembling in London to elect a
room of the late $\mathrm{Dr}_{\mathrm{r}}$. Hirschel. Several eminent men are said to be mentioned as candidates for the office.
The Scottish Monument.-We noticed in our last the proceedings of the Marylebone Vestry on the 31st ult, in adopting a resolution to ascertain how far their grant of a
spot of ground in Regent's Circus for the erection of this spot of ground in Regent's Circus for the erection of this On Saturday last there was an exceedingly full attendance of the Vestry for the purpose of deciding on the confirmation of this resolution. Mr. Clapp moved the non-con-
firmation of the minute. He contended that the Vestry had just as much right to erect this monument to the Scottish Reformers as they would have to erect one to
Lord Castlereagh, Mr. Pitt, or any deceased Tory nobleman. Mr. Gomm thought the Vestry would find out that the course they had pursued was no joke. In the first place, the Vestry had no right to give the land for such a purpose at all; and, secondly, they had no right to allow ters. Mr . bedkisgraced by a monument to such characmen, and declared (amidst great confusion) that they were Jacobins, and justly-convicted traitors. Mr. Walpole Eyre thought it a disgrace to the parish, and little credit to the memory of these men, to put up a monument Hume under the pretence of its being a lamp-post. Mr. the pretence of its being "" lamp-post;" he should indee consider himself, and the Reformers whose memory it was to commemorate, disgraced by the erection of a lamp-post. He assed for its erection as an ornament to the parish; Who now sought to set that erection on attached side. He was sorry he had ever brought the subject before the Vestry, as had created a party spirit be had not anticipated. He digging out the foundation, and he wished the Vestry for decide at once whether they could proceed or not. After considerable discussion a division was demanded, when tion, 14 ; majority in favour of proceeding with the monument, 21. The surveyor announced that the foundation already dug came in contact with s manhole belonging to a sewer, and the Commissioners of Woods and Forests dared them to build over it. The architect of the monument therefore, desired to move the foundation four or five feet more northward. An angry discussion again ensue
the application of the architect was complied with
Hoxton.-On Saturday night a murder and suicide, committed under circumstances of a distressing nature, caused much excitement amongst the inhabitants of Hunt This street, Hoxton Old Town, and its neighbourhood This double crime was commitled by a man named Giles, thaker of hooks and eyes, who had resided some time in form street. Pulmonary consumption in an aggravated form had lately rendered him so weak and infirm that he after parting with almost every article of furniture, and everything wherewith he could raise money to purchase
food for his family, he became very much distressed. On Saturday evening, in the absence of his wife, he cut the throats of his two younger children, and then destroyed himself. One of the children was found to be still alive, quest was beld on Monday, when the jury returned erdict of "Yemporary Insanity.
Woolwich, -The 16 gentiemen cadets bclonging to the first class of students at the Royal Military Academy who have been detained at their studies beyond the usus period as a mark of disapprobation of their conduct in joining in some street disturbance a few months back, belln considered sufficient punishment, and a warning to others not to follow a similar course, they have obtained leave of absence, and will be immediately appointed to commissions.
Hanwell Lunatic Asylum.-We noticed in our last the entertainment given on New Year's eve to the female
unatics in this asylum. A similar festival was Iwelfth Night to the male patients, and with the same satisfactory resnlts. The scene of the fête was one of the long galleries on the male side of the house which open nto the great central tower, and the circular gallery on
he same floor within the tower. tastefully decorated with festoons of evergreens, inter spersed with drawings and numerous mottos in ornamental borderings. The greater part of these decorations were the work of patients; the paintings and the mottos, some of Which were in Latin, were exclusively their performance. and added to the iuterest of the scene by occasionally presiding at the piano, selecting a sufficient number of pratients to form the chorus. A band of music, composed parth of the house, filled up the intervals between the singing and the dances, which were kept up with great spirit and frequently renewed, After "God save the Queen" had been sung in good style, the whole party joining in the chorus, they sat down to supper, which was
followed by pipes and tobacco. After this, the music and
the dancing were renewed until nine o'clock, when the party broke up, the patients being evidently as much dein large numbers to witness the visitors, who assembled Mortality of the Metropolis interesting festival. egistered in the week ending. -The number of deaths registed 1004 : males, 523 ;- females, 481. Weekly average, 1838-9-40-1-males, 467; females, 445. The occurrence of this mortality in North, 190; Central, 194; East 222; Sout districts, 129;

Incendiary Fires.-The following fires have been re. ported this week :-In Surrey, two barns fited with wheat and barley, and the stables on the farm of Mr. Woodward In Lincolnskire, on the dithed on Saturday evening. the form Mr , the farm of Mr. Peacock at Thorpe Tilney, 10 miles from Sleaford, were consumed. On Saturday last a great part of the farming-stock of Mr. Rusher at Heckington, was fired and destroyed ; and on Sunday, 7 stacks of wheat, 2 of barley, and one of hay, were burat to the ground on the farm of Mr. E. Cooper at Ramsby.-In Cheshire, on
Thursday week, the stacks in the farm-yard of Mr. R. W. Barton, and 1,100 feet of the farmber, valued at $1,000 \mathrm{l}^{2}$., were entirely consumed. A labourer residing in the neighbourhood of the farm has been apprehended as the supposed incendiary, and committed to take his trial. totally lost on-COn Saturday last the Monk steamer was The vessel was on her and struck on the north bank of the bar about 6 P.M., on Saturday, when the engine became immediately disabled. She soon sluck fast on the sands, as it was then within an hour of low water. The master, being in hopes she would float off with the flood tide, endcavoured to pacify the passengers to await the event, but made signals to the life-boat station, by exhibiting lights and burning a tar barrel, in hopes they would come off. The boat, however, could not be made available, as she was in such a position that sle could make no way against a strong tide and head wind, and consequently no assistance could be rendered. The vessel went to pieces during the night, and only four of the crew succeeded in saving themselves in a small punt, after much danger and exertion; they were once capsized on approaching the bank, but, fort wnately secerine the boat, they bauled her on the bank, and launched her a considerable distance over it to get into the channel between it and the main, which they were enabled to reach by the use of the bottom boards, having lost the orrs when she capsized. As day came on, a life-boat from Lland dwyn was able to remained on the sands, and found two other persons, who were brought away in safety. The body of the captain has been washed ashore ; and, so far as can at present be ascertained, the number of lives lost is not less than twenty-four.

Carmárthen.-The local papers observe that the state of society in Wales may surprise some of their English readers, when they acquaint them with the fact that there St. Cleass a mome months past in the neighbourhood of the clears, a mor depredators amounting to about 600, Who assemble nightly for the purpose of destroying the curnpike-gates on the various lines of roads. They are headed by a very tall man, dressed for disguise as a female, and known by the name of Rebecca; and as many of his associates are likewise dressed as fermales, the whole gang have been christened "Rebecca and her daughters." These men are nearly all of them ably mounted, and are the terror of the neighbouring country. The Pwlltrap gate has been destroyed several times, and as frequently replaced by the trustees of the road; but immediately after its re-erection, the confederates have invariably assembled in greater force than before, and levelled it to the ground. They are well organised, for although so nume rous a body they disperse immediately afterwards in different directions, and completely elude the vigilace of the local police. Rewards have been offered for their apprehension, and some of the London police have been sent down to assist the constabulary in discovering the parties, but hitherto they have been entirely unsuccessful. Ipsutich,-We noticed last week the proceedings of che chure zuthorities of Coventry in abolistom of open harches, and adopting the ancient cusen with St Margaret's, Ipswich, it may not be uninteresting to our eaders if we give the following letter addressed to Mr . Fonnereau of that town by the Bishop of Norwich, who has done so much to introduce the ancient praying benches in other parts of his diocese :- Palace, Norwich, Dec. 6.-Dear sir,-Agreeing wincy of pews, by which the be nefits of our church services are, comparatively speaking, confined to the higher and wealthier classes, to the ex clusion of the poor, I sincerely hope your appeal to the inhabitants of Jpswich may be successful, and that they may be amonggt the first to express, as a collective body their disapprobation of a system so adverse, in my opiprofesses to have so much at heart the spiritual we fore the poorer and humbler clases of our population. Im persuaded, indeed, that one of the prominent causes of dissent, as well as utter disregard and indifference to religion, manifested by too many of these classes, is attributable, in a great degree, to that exclusive system of pews yet seen for so many years prevailed. If you have not yet seen a charge delivered, Nov. 1842, by Archdeacon Samuel Wilberforce, I would recommend it to your notice,
as containing much paluable information and able remarks

## foull so important

Liverpool.-On Saturday last the Collegiate Institution in this town, of which the foundation-stone was laid by Lord Stanleg about two years since, was opened
with unusual ceremonies. This building, which is of great extent, and one of the finest specimens of architecture in Liverpool, has been erected by the private
subscriptions of the inhabitants at a cost of 24,0000 . The great hall was crowded with visitors, among whom The great hall was crowded with visitors, among whom
were the Bishop of Chester, the Right Hon. W. E. Gladstone, several ber of the local clergy. In the absence of Lord Stanley,
Mr. Gladstone, Vice-President of the Board of Trade, Mr. Gladstone, Vice-President of the soard of the
delivered the inaugural address. He said "At the opening of an institution intended mainly for the benefit of the middle classes of society, he, who was himself claimed to belong to that middie class-felt that he might be expected to entertain some sympathy with the principal object of this institution; that he might desire to open and smooth the way for those who might be inclined to enter in the path of honourable advancement, and
that upon this account, if not upon personal qualifithat upon this account, if not upon personal qualitications, be might with sincerity and earnestness address
them on the question which had assembled them together. He said that there was no class of men who ought to take a livelier interest in the progress of all schemes connected with public education than that class which was connected with political office. What was the condition of the institutions of this country? He should now speak of facts not open to dispute. He rejoiced sion ; but it was admitted on all hands that we had arrived at a state in the progress of society in which we must give a broad basis to public institutions, in which we must feel interest in them, and challenge for them the approbation and support of the mass of the intelligent appointed to watch over the laws and institutions of the country ought to know best of all men-that inasmuch community for the means of upholding our institutionsof supporting the throne and the aristocracy-of supporting the church-of supporting all which some men deemed to be relics of dark ages, but which others be.. lieved to be sound in their principles and deeply rooted in best the necessity of training the minds of the populabest the necessity of training the minds of the popula-
tion in sound and useful knowledge-in knowledge which tion in sound and useful knowledge-in knowhedge whit and
would bear the criterion of a searching examination, not in that which too often passed for sound and useful the reality. It was, therefore, acting on those convicthe reality. It was, therefore, acting on those convic-
tions that, so far from desiring to see education restricted in the country, he trusted that every year that passed over our heads might, on the contrary, witness its
freer and freer diffusion on sound and true principles. Did we not live in an age when everything was made subject to question and doubt when men's minds were stimulated into an activity which was salutary, no doubt, in
many respects, but which required the guide both of many respects, but which required the gude both of
sound Scriptural principles and enlarged habits of thought? It was a critical period in the history of nations when men began to question themselves with respect to things about them-when doubts were suggested before the means of solving those doubts were at hand-when there was a great disposition to question the merits of this and that institution, and when there was not the same power to examine the merits on which such institutions might depend. This was eminently an age of criticism, and, in that sense, of scepticism. Did we bold it desirable to check that spirit of inquiry? No such thing. It was a
certain state which belonged to our condition and circum-stances-it came upon us as a dispensation of Providence that everything should be subjected to discussion. Let that discussion be continued; but let it be fairly and fully felt as approaches to a right understanding, not under delay or haste, not under prejudices and party feelings, but with right habits, and, above all, with all those reliances higher power, which Christianity alone could give. With those advantages let us meet discussion, and we need not fear for its issue. And here he came to that great question, that question of questions-what was an education? What was an education, if it was indeed to vindicate for itself that title for a being like man, who had faculties, Who had hopes, who had temptatous, and wers? There were two systems which werreconcilably divided, and the audience were the adherents
of one of them. They did not come to disparage the efforts of those who thought differently on the subject of forts of those who thought differently on the subject of
education, and the ends to which it should be directed ; but they were the ends to which it should be directed but they were ready, he trusted, to do justice to their be-
nevolence and their zeal nevolence and their zeal; ready to acknowledge that in that men of sounder views might profit in practice by the example of persons who, though they possessed less light, yet seemed to make a more sincere and earnest use of the light which they possessed. He paid who took other views on this vital question; still he felt that there were two systems irreconcilably divided,
There were those who thought-and he admitted the There were those who thought-and he admitted the opinion to be a plausible one to men at first sight, and
that many would say it was the true one--there were those thiat many would say it was the true one-there were those
who thonght that the first object of education was to give who thonght that the first object of education was to give to a man such information as should serve the purposes of his temporal advancement-as should enable him to
pursue with efficiency and success the calling to which he
might be about to devote himself; and if they had that view of the nature of education-if they felt that education was merely designed to put toois into the hands of a man, which toois he might employ in order to shape all the materials which earth afforded-if they held such a belief as this, the natural consequence was, that they could not see the necessity of founding education on the definite basis of religion. They said we were unhappily perplexed by religious divisions, and they were led to add, ${ }^{\text {P }}$ Let us avoid all those difficulties, let us found our pub. lic education upon the communication of a description of knowledge about the utility of which there is no doubt, and let us leave religion to be dealt with by other men according to their will and pleasure.' He hoped this was not an unfair view of the question. He hoped this led to take, and be was bound to say, under the influence as he thought, of a most unfortunate delusion; but still from motives which we were bound to respect, and by no means implying an indifference on the part of such indifirmly believed that reli and value of religioncluded in the firmly ber andion and that religion should be one item among many, one head in the long catalogue of accomplishments, but that it should be the ruling and pervading principle, the principle to which all others were ta be matated, and all its ends directed and arranged. It was a great truth, that ducation to be valuable and to deserve the name, must be a religious education, and to be religious must be founded on the dennite reselatem which should present to mankind all branches of knowledge save the one that was essential, they would only be building up a Tower of Babel, which, when they had completed, bury those who raised it in its ruins. He believed that those who rased human being in his youth, and make they could ane a man in natural philosophy, in mathematics, or in the knowledge necessary for the profession of a merchant, a lawyer, or a physician,-that with any or all of those endowments they could store his mind,-if they could endow him with the science amd power of a Newton, and if they had concealed from him, or rather if they had not given him a knowledge and love of the Christian faith, he would go forth into the world sovereign purpose of our existence." The Rev. J. Conybeare, the Principal of the Institution, here briefly explained the principles upon which it would be conpronounciag the apostolical benediction. In the evening the Mayor entertained a large party of the principal supThe Liverpool Chronicle mentions as a remarkable fact, that Capt. Nye, of the packet-ship Independence, which arrived at that port on Sunday-week, in above a hundred times, the last was the only voyage he did not see a solitary sail the whole distance from New York to Liverpool.

Manchester.-The weekly meeting of the League was held on Friday, and was attended by an unusually large number of members. The chairman, Mr. Geo. Wilson, stated, that large subscriptions had be s that on the pre vious night meetings had been held at Warrington and Bolton; that 300 l. was subscribed at the former place, and upwards of 7002 . in the latter, before they quitted the room Edinburg hed, the the fred of Edinburgh had conferea the in promoting the cause o Mr. Cobden, for his exertions in promotang then read a long list of places from which cuntributions had been received, after which the meeting was addressed at great length by the Hon. C. P. Villiers, M.P., Mr. M. Philips, Mr. Cob den, Mr. Brotherton, the Rev. Dr. Hewlett of Coventry, and other gentlemen. It was announced that arrange ments had been entered into for holding a meeting on every evening up to the 30th inst. all of which would be the League, including the most infiuential members.
Plymouth.-We learn by the Plymouth Jowrnal that the arrangements and surveys for the formation of a line of telegraphs along the coast, from the Lizard to Ports signal stations will be completed and in operation in the spring. The stations, as far as practicable, will be along the coasts of Cornwall, Devon, Dorset, and Hants, to Portsmouth, whence the telegraphic communications will be made to the Admiralty as heretofore. In consequily so of the stations of the preventive service being generaline o siaate that each com the superintendence of lieutenant in the navy, it is intended to have a number of them fitted with telegraphs, as was the case on the coast of Keat anc Sussex, when Admiral Sir H. Pigot commanded the coas comparatively trifing as an addition of only one man to each station will be required.
Reading.-We learn by the Reading papers that Aldermaston House, the fine old mansion of Mr. W. Congreve, was totally destrut by fire on Saturday morning last, the fire the attic over the drach head that it was impossible to suppress it had gained such header, and a large portion of the furniture, were saved. At 7 o'clock the whole building was enveloped in flames, which were seen at Newbury and
other places for many miles round; the roof fell soon afterwards, and for some minutes completely smothered the flames. The engines from Reading reached the Hall soon after 8, and before noon the flames were in some
measure subdued; but the principal rooms, the hall, and my far the greater ; art of the building, were totally destroyed. by far the greater part of the building, were totally destroyed. day week that Whitley-hall, the residence of Mr. A. F. Halliburton, was on fre The report caused a great sensation, as the hall is one of the finest mansions in the neighbourhood of Wigan. The fire was occasioned by some lighted coals falling from the grate in the study down a back flue constructed for the purpose of increasing the draught in the chimney from the cellar. Some straw in the cellar underneath the study caught fire, and, had a timely discovery not been made, it is more than probable that the mansion would soon have been destroyed from its elevated situation and the time. The flames were soon subdued, and very little damage was sustained
Windsor.-A military funeral took place in this town last week, when the body of Lieut. De Winton of the 2d Lite Guards, who died at the cavalry barracks on the 31 st uit.g was buried in St. George's Chapel with the usual
military honours. The aisles of the chapel were lined with troops, and a large number of ofticers of high rank took part in the imposing ceremony.-The daily papers announce that forms of proposals for a contract have just been isstred from the Office of Woods and Forests, for the immediate erection, in that portion of the Home-park, near Adelaide-lodge, situate between her Majesty s prvate dog-kennel and the dairy, opposite Frogmore-oriated exclusively for keeping the varied and peculiar breeds of domestic poultry belonging to her Majesty.

Wrexham.-A case of embezzlement, somewhat similar to that which occurred at Richmond a few weeks since, has wary of the Savings-Bank, having been found to be defaulter to the mount of sbove 570\%. A meeting of the trustees has been held, at which all the particulars were discles and the result been the apprehension of the delinquent. It appears that Mr. Dillon was formerly wine merchant in Wrexham, and failed for a large mount Being a good accountant he has filled several offices of trust, and was actuary to the Savings-Bank and auditor to the Union. His occupation of accoustan brought bim a considerable income, sufficient to place sustain no loss by the defalcation, as he gave a bond, sustain no loss by the defalcation, as he gave a bond,
signed by two sureties, for a part of tis liabilities, and the signed by two sureties, for a part of
remainder will fall upon the trustees.
York.--The Yorkshire Papers still dwell on the recent failure of the Agricultural and Commercial Joint stock state that the effects will be severely felt in York and in the surrounding districts. Not only has the paid-up capital of $211,000 \%$. been totally lost, but the shareholders have now to meet a call of 3 . per share, in order to wind up the concern, which will make anotber loss of 102,000 . It appears also that litigation in a business of this sort is hardly to be avoided, so that the uitimate loss of the shareholders has yet to be determined, nor io it pretended half. The list privately distributed of the proprietary who are, during this long interval, to be kept in suspense, contains the names of 562 shareholdere, a large propor tion of whom, exclus
Railways.-The following are the returns of the prin cipal railways for the past week:-London and Birming ham, 11,5596 .; Great Western, 10,0816 ; Northern and and Derby, 1,2483 . F Hull and Selby, 6711 ; Grand Junc tion, 5,546l.; Edinburgh and Glasgow, 1,604l.; Midland Counties, $2,212 l$; Blackwall, 5516. ; Great North of Eng Mid 950 . Sheffield and Manchester, ovsi. 8301 Eastern Counties, $876 l_{\text {. }}$. It is stated in the Railway Magazine that the Great Western Company have determined to make the Box tunnel an open cutting, and that the contract for carrying this important improvement into effect has been already taken. A meeting of the inbabitants of Calisle in sid of the proposed railway from that city to Lancaster, was held last week. Mr. Errington, one of the engineers of the line, stated that thele are no engineering difficulties; and that with respect to gradients, the obstacles were not 80 great as had been upon several others now is successful operation. From Carlisle to Penrith and from Lancaster to Kendal, it is proposed Penrita, and line double ; but the middle dislance, that is, from Perrith to Keadal, a single line only will be laid down in the first instance. The distance from Carlisle to Lancaster will be 69 miles; and Mr. Errington stated that he had no doubt that the railway could be laid down, stations built, carriages supplied, and the whole put in working order for one million sterling. The plan proposed for raising this sum is this :-The different railway companies, that is, the London and Birmingham, the Grand Junction, the North Union, and the Preston and Lancaster, will take shares at once to the amount of half a million. The value of the land required is calculated at $90,000 \mathrm{l}$., and it is stipulated that the landowners shail in 50l. shares, among the inhabitants along the line, the sum of 160,000 . A capital of $750,000 \%$. will thus be provided, and this being three-fourths of the whole estimated cost, it is believed that Parliament will at once grant a bill. The remaining portion of the money will be raised
either by the sale of shares in the usual way, or by loan. -On Thursday morning a fatal accident occurred on the North Midland Railway. From the official report it appears that while the train which left Leeds for Derby at 5 o'clock was waiting at the Barnesley station, it was run into by a goods train, by which a Mr. Harvey, a traveller for the Fortunately he was the only passenger, or the results would have been more serious, as the engine and carriages were smashed to pieces.

Dublin.-The Lord Lieutenant and Council, upon the recommendation of the Ecclesiastical Commissioners for
Ireland, have suspended the appointment of a Provost to Ireland, have suspended the appointment of a Provost to
the Cathedral of Tuam, vacant by the death of the Hon. G. D. Beresford. This was the only remaining instance of
the existence of the office of Provost in a Cathedral che existence of the office of Provost in a Cathedral the office. The income of the Provost of Tuam, amounting to about 300\%. a-year, has been transferred to the Ecclesiastical Commissioners; but memorials, signed by the clergymen of the parishes out of which a part of that sum, acoounting to 1800. a-year, is derived in rent-charges, have ers, presented to the Privy Counc this sum in angmentation of their for the distribution or this sion has bment duced ip legal circles, by the appearance of a general order from the Lord Chancellor, requiring the names, ages, duties, attendance, or non-attendance, as the case may be, the Court of Chancery deriving salaries or emoluments in order that there are some officers, with very high salaries, who seldom appear personally, and that others have been abseat, from illness or other causes, during a whole year. equity and common law courts, that a similar order will be immediately issued, with a view to important modifications in the whole system.-The extensive establishment of Mr . Busby, the distiller, has stopped payment. The amount of the liabilities do not exceed 26,000 ., and the movement, three-fourths of the spirit retailers in Ireland Mr Geo Cornewall Lewis, the second of the three Puor-Law Commissioners, has succeeded Mr. Nichols as resident compeal Aer in Dublin.-At the weekly meeting of the Repeall, Association, a long letter was read from Mr. O'Con-
nell which he seeks to combine all Irishmen in the struggle for the Repeal of the Union. They constitute, he says, the great national compact upon which he calls upon Irishtain national independence and prosperity for their native land. The following are the measures :-1. The total abolition of the title rent-charge--2. Fisity of tenure for the occupying tenants.-3. The encouragement and
perfecting of Irish manufactures, 4. Complete suffrage end vote by ballot.-5. Abolition of the present poor-law, and augmentation of well-regulated charitable institutions, Such, he says, is the basis of their repeal agitation for the year 1843. The rent for the week was $142 l$. $14 s$. The
Morning Reyister newspaper, one of the leading organs of the Repeai party, has been discontinued, and is henceforth to be incorporated with the Freeman's Journal.
Tyrone,-A requisition, signed by peers, deputy-lieuShants, and magistrates, has been forwarded to the High Sheriff of Tyrone, calling on him to convene a meeting to which, consideration the working of the hill and ill-suited to the wants of the destitate. A similar re quisition to the High Sheriff of Fermanagh is in course to petition "for une of Tuam has ase present unwise for the Relief and of enactment, denominated :A Law benevolent measure, which would have the effeet of dimimishing pauperism, by developing the rich resources of for the relief, making, at the same time, a special provision munity, in accordance with the true interests and comof the Irish people." Such is the wording of the rabits sition, whioh is signed by Dr. M Male, the Roman Ca-
tholic tholic Archbishop, Mr. Bodkin, one of the Members for Gal way county, and by several magistrates and PoorGelfost

was this morning greatly gratified by receiving a very kind and flattering letter, signed by the ladies and offcers who were lately prisoners at Bameean, and I hasten to request that you will express to them my sincere thanks for the very handsome terms in which they have spoken of my poor services. I shall ever consider it one of the happiest events of my life, tbat I should have bad the good fortune to have been in any way instrumental in effecting your escape from Affghanistan. I remain, dear Ladies and Gentlemen, your obedient servant, R. C. Shakespear. Camp, Jellalabad, Oct. 26,1842,
one Three Sovereigns,-The following anecdote, according to the Paris Papers, has often been told by the
Emperur Alexander, and is amongst the traditions Emperor Alexander, and is amongst the traditions of the Russian Court :-1n 1814 , during the period when the Allies were masters of Paris, the Czar, who resided in the hotel of M. de Talleyrand, was in the daily habit of taking a walk (in strict incognito) every morning in the gardens of the Tuileries, and thence to the Palais Royal. He one day met two other sovereigns, and the three were returning arm-in-arm to brealfast in the Rue st. Moreatn, when, on their way thither, they encountered a provincial, evidently "Greshly imported to Paris, and who had lost his way. "Gentlemen," said he, "can you tell mo which is the Tuileries?" "Yes," replied Alexander ; "follow us, we are going that way, and will show you." Thanks on the A few minutes sufficed led them soon into conversation. here minutes sufficed to arrive at the palace; and, as ere their routes lay in opposite directions, they bade ancer reciprocally adieu. Parbleu! cried all at of persprovincial, " should be glad to know the names of persons" so amiable and complaisant as you are?"
"My name ?" said the first- "Oh, certainly you have perhaps, heard of me; I am the Emperor Alexander!" "A capital joke" exclaimed the Gascon; "an Emperor pou bou," addressing the second individual, "whe may you be?" "I ?" replied he; "why, probably I am not of Prussin you, what are you, then looking at the third person "I am the Emperor of Austria!" "Perfect, perfect !" exclaimed the provincial, laughing with all his might. But you, monsieur," said the Emperor Alexander,
 honour to speak to ?" "To be sure," replied the man, The
He Human Voice Automaton.-The Paris Constinemonnel states that a mechanician of a little town in Bofectly the ham vice particularly the sopreno note it
 sings several andeal airs whe accuracy. surping pronounces certain words, so as to be easily understood. The inventor hopes to arrive at such a point of perfection as to bring his machine to pronounce all the words of the best operas. He intends shortly making a journey to Prague and Vienna, to give concerts, and from thence to Paris and the other cities of Earope.
Statislics of Marriage in Paris.-The following account of the married women in Paris has just been published in the French papers, although the facts were collected from the registry books of the 18 years from 1813 to 1830 by his work on Life Assurance of and published in there were 14 laife Assurance. Of 121,625 marriages, 1,190 ; at 117 years, 3,$959 ;$ at 18 years, 5,816 years, years, 6,957 ; at 20 years, 7,610 ; at 21 years, 8,047 ; at 22 or 23 , between 7,000 and 8,000 ; at 24 or 25 , upwards
of 6,000 ; but at 26,27 , and 28 , they scarcely exceed 5,000 . This decreasing progression goes on, so that up to 31 years there were only 3,651 ; thence to 41 years, 1,798 ; at 42 years, 1,015 ; at 48 years, 586 ; at 56 years, 226 ; at 60 years, 126 ; and during the 18 years there were 578 marriages of women aged 61 years and upward. Another account shows that out of $1,000,000$ married Paris, 521,365 , being more than one half, wer
before the commencement of their 26 th year.
The Porcelain Tower of Nankin. The following extract from a letter describing one of the greatest curiosities in China, is taken from the Bombay spectator:"Numerous as you may conceive, have been the pilgrimages made to the far-famed "Porcelain Tower." For the first time in inspecting any of the monuments of this country, no disappointment has been experienced, while comparing what they actually are with what the legends of he indeed, a most elegant and singular structure, as remark able for its correct proportions as for the fare material of which it is 'partially coraposed. I say partially, becauze the mass of building is not of porcelain, but is composed of common brick, with a facing and lining of beautifu white glazed porcelain bricks or slabs, fixed into the masonry by means of deep keys or shoulders, cast like a bale $T$, on the brick. Its form is octagonal, and runnios up each of the angles is a moulding of large lites of very fine clay, glazed and coloured red and green alternately round each story runs a light balustrade formed of green porcelain, upon which four arched doorways open, set to the four with large plazed the arches being elegantly fancies of design glazed tiles, cast in all imagiaable wild beasts on aniegation of colour, representing wild beasts, demons, deities, monsters, \&c. It appears there are priests among the Chiaese themselves, for here are priests or bonzes attached to the building distributing in order, who earn their consideration by distributing to the visitors lithographed elevations of the tower, with descriptions attached, and who seem have the daty entrusted to them of illuminating it on gala occasions. This is effected by means of lanterns made
of thin oyster shells, used in lieu of window glass by the Chinese, which are placed at each of the eight angles on every story, and the effect of whose subdued light on
the highly reflective surface of the tower must be most striking and beautiful. The walls of Nankin are more remarkable for their extraordinary height and great extent than for the strength which has been given to them by the builders; in some places they are not less than 70 feet in height, and at very few points along an
enceinte of fully 20 miles in extent, are they less than 50 . There are, however, several points at which they are open to escalade with 26 feet ladders; the Chinese engineers, though they have evidently bestowed extensive repairs upon the fortifications this year, having, as usual, the ground alter the levels of their foundations. From the peculiar features of the country adjoining the town, and from the situation of the Tartar city or citadel, Which is separated from the great straggling mass of the the place could at any time be readily carried by a comparatively gmall force, and retained against a very large one of undiseiplined troops, as long as they had the means of procuring supplies, which, in consequence of the goodness of the road and its inconsiderable length, I think, must have wisdom enotrg to know that our stay here, and our examinations of their city from the heights and from the summit of the Porcelain Tower, have taught us this secret; and it may therefore be considered as an additional reason to the many that exist, why they should not too soon again tempt the "devil's children," as they call us, to measure strength with their bravos. Three to four thousand seasoned troops, with a few guns, some powder bags, mining tools and scaling ladders, would have Nankin under their command and a dozen junks or
sung, with four or five steamers, and decked boats to be towed up by them against the stream; lity in large quantities here, we may always reckon upon lity in large quantities here, we may always reckon upon
being able to keep steamers constantly employed in bringbeing able to keep steamers constantiy employed in bring-
ing in supplies from all points on the river, whither they can be drawn.

 giving judgment in this case, which had been twice argued. Mr.
Baron Parke gave judgment as follows :-The great importance Baron Parke gave judgment as follows :- The great importance
of the principal question in this case induced those of their
Lordit Lord hlpph whin heard the first areviment to request that a second
might take place before the meerle eand nther members of the

 defendant Carson as Speaker of the House of Assembly of New
foundland, by other defendants as members of that house, and by one as messenger in
ardid of the Serfeant-at-Arms, upon an
and commitment for an alleged breach of privilege of the House. Several objections were taken of a formal nature to these pleas, which it is unnecessary to state, as the cpins. The main question raised by the pleadings. and applying equally to bly had the power to arrest and bring before them, with a view
to pumshment, a person charged ly one of its members with having used inmolent language to ham out of the doors of the - In other words, whether the Pariae
possessed by both IIouss of Parlame England, to adjudi-
cate upon a complaint of contempt or breach of proviege. It is, ine other defeniants, members of the Huase, that something oc-
curred which might amount to a contempt committed in the face of the Assembly, by the 18 en of vinint and thrcatening
werds to one of the members then present in his place: but
each'plea also justifies the original arrest of the plaintifi below upon a warrant issued by the Syeaker, founded on the complain
of a breach of privilege cornmitted out of the House; and if of a breach of privilege cornmitted out of the House; and if
the House of Assmbly liad not a power to 1ssuce that warrant
this part of sucls plea 19 bad; and as each plea is entire, the whole 15 bad. The question, therefore, whether the House opt
Assembly could commit, by way of punishment, for a contempt
in the face of it, does not arise in this case. Their Lordships are in the face of it, does not arise in this case. Their Lordships are of arrest, with a view to adjudicatich on a complaint of con-
tempt committed out of its dors, and conser, ienty that
the judgment of the court below must be reversed. In
order to determunc this quetion, and to ascertain what the legal powers of the Assembly were, it is proper to consider was the legal origin of its powers, to such colony therc is
tled, not a conquered colony, and to subt and
no doubt that the settlers from the mother country carried with them such portion of sits common and statute and also the rights and
applicable to their new
inmunities of British subjects. Their descendants have, on the ne liand, the san e liws and the same rights (unless they have
been altered by Parliament ; atal, in the other hand, the Crown possesses the same prerogative and the same powers of covern
ment that it does orcr its other subjects; mor has it been disputed
in the argument before us, and thercfore we consider it as con ceded, that the sovele.gn hat not merely the right of apponting

 case invest the local legislature with such a privilege. If $i t$ did,
a further question would arise $\rightarrow$ whether it had power to do
law. If that power was incident as an essential attribute to a
legislative assembly of a dependency of the British Crown, the legislative assembly of a dependency of the British Crown, the
concession on both sides that the Crown had a right to establish such an assembly, puts an end to the case; but if it is not a legal
incident, then it was not conferred on the Colonial Assembly, unless the Crown had anthority to give such a power, and actually did give it. Their Lordships gave no opinion upon the important question, whether, in a settled country, such as New the Legis-
the Crown could, by its prerogative besides creating the lative Assembly, expressly bestow upon it an authority not incidental to it, of committing for a contempt-an authority materially abuse. They do not enter upon that question, because they are
of opinion, upon the construction of the commission and of its of opinion, upon the construction of the commission and of its
accompanying document, that no such authority was meant to accompanyitig document, that no such authority was meant to
be communicated to the Legislative Assembly of Newfoundland ; and if it did not pass as an incident by the creation of such a consicleration of the instruments. By the commission for the , with time to summon and call general assemblies of the freeholders and householders within the island, in such manner and form, and according to such powers, instructions, and authorities, as
were granted or appointed by the general instructions accompanying the commission, or according to such further powers, instructions, or authorities, as should at any time thereafter be granted or appointed under his Majesty's sign manual and signet, or order
in Council, and that the persons thereupon duly elected should take the oaths, and should be called and deemed the General Assembly of the Island of Newfoundland; and the Governor, the major part of them, respectively, should have full power to make, constitute, and ordain laws, statutes, and ordinances for its dependencies, and the people and inhabitants thereof, and such other as should resort thereto; ; which laws, \&rc., were to be
as near as might be to the laws and statutes of the United Kingas near as might be to the laws and statutes of the united to gh
dom, and subject to the approbation of his Majesty, and to the egative voice of the Governor. Accompanying this commission containing instructions to the Governor for vie regulation of his conduct, upon which some reliance was placed iu the argument
at the bar, as affording evidence of the intention of the Crown to confer the power in question upon the House of Assembly, The Commission itself, where such an authority is entirely silent upon this subject, nor does it grant any of the conducting business, and the forms of procedure, which are to be assimilated to those of the British House of Commons; at all events, terms 50 vague and general conld never have been used
with the intention of giving the powers of commitment, and other privileges of so important a nature, if the authority of the Crown question, then, is reduced to this - whether by law the power of committing for a contempt not m the presence of the Assembly
is incident to every local legislature. The statute law on this law is to govern it, and what the common law depends upon principle and precedent. Their
Lordships see no reason to think that on the principle of the common law any other powers are given than such as are neces-
sary to the existence of such a body, and the proper exercise of sary to the existence of inch a body, and the proper exercise of granted by the very act of its establishment-an act which, on both sides it is admitted, it was competent for the Crown to per-
form. This is the principle which governs all legal incidentsQuando lex aliquid concedit, concedere vilitior et idem sine quo res ipsa ease non potest." In conformity to this principle, ing itself from all impediments to the due course of its proceed-
ings. To the fall extent of every measure which it may be really necessary to adopt to secure the free exercise of their legislative
unctions, they are justifed in acting by the principle of the commonlaw. But the power of punishing any one for past mis-
conduct as a contempt of its authority, and adjudicating upon the fact of such contempt, and the measure of punishment, as a
judicial body uresponsible to the party accused, whatever the jeal facts may be, are of a very different character, and by no toons may be well performed without this extraorsinary investigate and punish contemptuons insults and interrate or other bodies assembled with authority to make by
laws for the government of particular trades or limited numa
lat a ligher character, and it is engaged in more impurtant oljects questum. It is said, however, that thas power belongs to the
House of Commons in England; and this, it is contended, afords common law to an assembly with analogous functions. But the reason why the Iouse of Commons has this power, is not because
it is a representative body with legislative functions, but by virtue of ancient usage and prescription, the Lex et Consuetudo and according to which the High Court of Parliament, before its division, and the Houses of Lords and Commons since, are contempt being one., And besides, this argument from anslog
would prove too much, since it would be equally available in
favour of the assumption by the council of the issland of th would prove too much, since it would be equally available in
favour of the assumption by the council of the island of the
power of commitment exercised by the House of Lords, $s$ well as in support of the right of impeachment by the Assembly--
claim for which there 18 not any colour of foundation. Nor
ca this power be said to be incident to the Legislative Assembiy by
analogy to the English Courts of Record, which possess fit. This
Assembly is no Court of Record, nor has it any judicial functions Whatever; and it is to be remarked, that all those bodies which mary manser, contempts of their authonty, have judiciai fons
tions, and exercise this as incalent to those which t ey possess,
except only the House of Commons, whose authonty in this fsplect rests upon ancent usage. Their lordships, therefore, are by the respondents as ant, incident to, aud molucled int the grant
of a subordinate legislature. It was, however, argued that in other colonies the Legislative Ahsenthies cxercise the power of

this case we have the simple question to decide, without any
usage, any acquiescence, or any sanction of the courts of law, except in the very case in which we are now called apon to affirm or reverse the judgment of the court below.
It remains to be considered how the question stands on It remains to be considered how the question stands on
express authority, and unless there be some satisfactory
authority expressly in favour of the power, we must hold that the common law does not confer it. There is no dethe right, except that of the case of "Palmer $v$. Barrett," decided Brougham Mr Justice Bosanquet, Mr. Justice Erskine and my self. Their Lordships do not consider that case as one by which they onght to be bound in deciding the present flucstion; the opi-
nion of their lordships, delivered by myself immediately after thic rgument was closed, though clearly expressed, that ground on whicly the jnderment was rested ; and therefore was in some degree extra-jnithcial; but, besides, ; wass wated to be, and "Was founded entirely on, the dietum of Lord Ellenborough in burdett $v$. Abbott, which dictum we ali think cannot be taken body has the power of committing for contempt. The observation Was made by his Lordship with reference to the pecnliar powers of ther. We all, therefore, think, that the opinion expressed by my self, in the case of "Palmer $v$. Barrett"" ought not to affect our decision in the present case; and there being no other authority on the subject, we decide according to the principle of the common law, that the House of Assembly have ho power con sonally necessary for the proper exercise of their functions and duties; but they have not what they have emroncously supposed themsclves to possess, the same exclusive privileges which the
ancient law of England has ammexed to the Houses of Parlia ancient law of England has amexed to the Houses of Parliabe a writ of inquiry of damages, unless the parties can agree amongst themselves. They ought to consider it as a mere ques-
tion of right to be tried, and therefore not a case for damages.

D OUBLE ITALIAN TUBEROSE ROOTS, 4s. per fragrant BULBS has just been received at Arthur Cobbert's,
late Mr. C. Barnon's, Italian Warehouse, 18, Pall Mall. Where also may be seen a Choice Collection of Orange, Lemon, Citron,
Lime, and Cypress Trees, Catalonian and Arabian Jasmines \& just arrived from Italy. - N.B. Importer of choice Honeycomb,
Parmesan and Gruyere Cheese, New Salad Oil, and other Foreign Parmesan and Gruyere Cheese, New Salad Oil, and other Foreign
Produce, \&t. Lists, with Prices, may be had. CAMPERIAL NURSERY, CHELTENHAM. SAMmirers HODGES begs respectfully to inform the plants left of his unique seedling, Oberon, at 42s. each. Those that have not seen Oberon, will tind the following a faithrnl des-
cription. It has the habit and size of bloom of Foster's Aliciacription. It has the petal is a large dark spot, with a clear and distinct
in thite
white margin about the eighth of an inch wide; the lower petal is as brilliant a white as the upper margin, aud forms a beautiful PATRONIZED BY HIS GRACE THE DUKE OF RUTLAND,
THE LORD BISHOP OF LONDUN, THE EARL OF HAR' 'HE FASTOLFF RASPBERRY, -For many years past there has been cultivated in the neighbourhood of YarRaspberry of a most extraordinary size and rich flavour. The
Nobility who visit the sea-coast here have invariably expressed their astonishment at the exceeding fineness of the fruit of this variety, and until ately Youkls, and Co. have not been eliabled
to obtain a sufficient stock of it o bring it into public notice; bat having now obtained a supply (although limited) of fine Canes,
beg to offer them on the following terms, and they can be sent with safety to any part of the United Kingdom, on the receipt of Packages containing 50 Canes, 25s.-Packages containing 25 Canes, $14 s$. - Package included,
The few to whom Your $1 . \mathrm{and}$ Co. have sent it, have expressed their high admiration of its superiority over, other varieties;
and a letter just received from a Gentleman in Derbyahire, to whom this variety was sent, states that it invarially takes
prizes at the Hort. Shows in his neighbourhood. In conclusion, Youbli and Co. beg to state that they have not, or do they
intend to recommend any article but that which they can do intend to recommend any article but that which they can do
with confidence; and in this instance they feel fully assured of with conadence; and in this instance they feel fuly assured of
HARLY PEAS, \&C.-HENRY D. CORMACK Gentry, and others, of Manclester and its Vicinity that they can be supplied with the following Kew and early articies :-Cor Taylor's New Improved Windllor, and Johnson's Wonderful
Beans; Manchester and Giant red and pink Celery; Hamilton's White Spine and Walker's Prize-fighter Cucumbers; Incompararal, Agricultural, and Floricultural Seeds, at his Wholesale and James Murray's Patent Fertilising and Guano Manures.

To NOBEEMEN, GENTLEMEN, NURSERYMEN, \& OTHERS, Cap elasses, Rockwork, sunary
ME ESSRS. PROTHEROE \& MORRIS are instructed
to sumbit to public competition, by Auction, mises, Cotham-road, near Bristol, on Wednesday, Jan. 25th 184, and following day, at 11 o'clock, by order of the Trustees
of Mr. John Miller, under a deed of assignment, the whole of
the valuable Nursery Stock, consisting of Frait and Forest-trees Evergreens and Shrubs, Hothouse, Greenhouse, and Herbaceous Plants, a choice Collection of Carnations, Picotees, Auriculas,
\&rc. May be viewed prior to sale. Catalogues may be had of
Mr Price Solicitor, No. 1, Stephen-street, Bristol ; Mr. T. P Wilicox, Builder, Bristol; of the principal Seedsmen in London
on the Premises; and of the Auctioneers, American Nursery,

GARDENERS' ENTERTAINMENT, - ING, will take place at his Horticultural Manutactory, Gloucester-place, King's road, Chelsea, on Thursday the 2nd of supporters, and who will honour him with their company, are

PATRONIZED by all the principal Architects and PHALTE. In conseluence of the daily attempts made to mitate

 genume at ticle, to insert in therr specincations "Asphate" or "Bitumen,", as, in many cases where these terms have been used, bens introduced. For the information of those residing at a distance from London, and of those who, having employ ed the
spurnuus composituon, may, from its failure, have become prejudiced against the use of $\Lambda$ sphnite, tive following are mentioned The Asphalte of Ses ssel is of a lightit colour, closely resembling Yorkshire stone, has a smooth surtace (w, thout beng slippery), acted upon by change of temperaturr, and 15 at anll times stry nud tictity, never cracks. The fictutlous mater.a', on the contraly, has a ourk and dirty-looking appearance, presents a rough und coarse surlace, and, from its brittleness, is liable to crack, particularly in frosty weather. In consequence of the above qualthes, the
genvine material (being periecty impervious to wet) has beer genuine material (being pertiectiy impervious to wet) has been
used with great advantage for roofing; it can be laid down to any used with great advantage for roongs stice, and is far superior to lead, as it is not liable to expansion or contraction in consequence of any change in the temperature. For covering of arches, (to
prevent the percolation of wet,"; it is invaluable, the Greenwich Yrevent the percolation of we,y Rulway perfical feet; ;it laas also been used on the Great Western, Birmithgham. Midland Counties, south Western, Brightem, Black wall, ant other Rasways; at the joint stations, London- britge, and at the South Metropolitau, Highgate, enulne Asphalte, it need only proof of the great durability or he genane in this Country with this material, (amounting to $3,9.52$ feet,) was at hitehant, opposilthough ourse ha, faur inch iut thicknicss, has remanned up to this although only har ain cirs aind months) in the most per fect conditinn. Books of Testimoniails with scale of prices may be obtained on application to

meetings ${ }^{\text {meday }}$

There are some points in forcing which are perfectly consistent with theory, and undoubtedly advantageous in practice. There are others which the custom of good gardeners sanctions, and which appear to lead to advantageous results, but of which theory
offers a less satisfactory explanation. And there is not a few which are at variance with theory, the best practice, and common sense. We shall now proceed, practice, and common sense. We shall now proce
As we are bound to believe that all created things have been stationed by the Almighty in those places for which their habits render then best suited, the first object of a gardener, in his artificial processes, should be, to imitate as nearly as he can the natural conditions to which the plant to be forced is exposed in the countries where it thrives the best. If this were skilfully attended to, and we knew each circumstance to which a given plant is naturally exposed, we have the power of exactly imitating all of them, except light. We can secure any amount of tempera-ture-we cal apply moisture with the greatest exact-ness-and we may compose artificially every sort of
soil. Thus, heat, food, and moisture, the more essential of the conditions of vegetable life, are wholly under our control; and light, which is beyond our imitation, is naturally furnished in sufficient abundance to maintain the health of plants, if not to secure the greatest possible amount of those secretions which constitute flavour
But although we thus possess so large an amount of power, we fear that it is very often most unwisely
applied ; and hence it is, that, while one cardener never applied ; and hence it is, that, while one"gardener never fails with his early Grapes and Strawberries, or with his Peaches, and Apricots, or Raspberries, others can
hardly ensure a crop of the former, regard the latter as almost unattainable, and would be ruined outright if the condition of holding their places was the production of forced Apples, or Currants, or Gooseberries.
Among the many causes of failure, the foremost, we apprehend, is a mismanagement of temperature by maintaining forcing-houses as warm at night as by day, and an idea that, provided a certain number of degrees on the thermometer is not exceeded, any temperature below the standard will do. Mr. Knight long since pointed out this fatal error : "Few garden-
ers," he says, (Horticultural Papers, $p$. 213), "if any, have ever believed plants to be at all endued with powers of sensation and perception similar to those of animals, or to be in any degree susceptible of pleasure or pain; and yet it is very questionable whether there has ever been a single gardener, who, in the management of Fruit-trees in a forcing-house, did not in some done if he had supposed them to possess such powers. Being fully sensible of the comforts of a warm bed in a cold night, and of fresh air in a hot day, the gardener generally treats his plants as he would wish to be treated himself; and, consequently, though the aggregate temperature of his house be nearly what it ought to be, its temperature duxing the night, relatively to that of the day, is almost always much too the night are, I have reason to believe, heat during highly injurious to the Fruit-trees of temperate climates ; for the temperature of these is, in many instances, low during the night. In Jamaica, and other mountainous islands of the West Indies, the air upon the mountains becomes, soon after sunset, chilled and condensed ; and, in consequence of its superior gravity, descends and displaces the warm air of the valinjured yet the sugar-canes are so far from bing the sugars of Jamaica take a bigher price in the market than those of the less elevated islands, of which the temperature of the day and night is subject to much less variation."
But it is not merely in the West Indies that this it is diminution of temperature at night takes place; it is universally the case in all climates whence our Fruit-trees have been derived. When we consider how sible that the is in the lands of the East, it is imposturnal radiation, the effect of which will necessarily be to cool down the air to a very considerable extent, especially in the spring ; and when we look at the registers of temperature kept in such places, that which was before a matter of inference becomes established
by direct evidence. Take Malta as an example : in the month of January, according to Dr. Davy, the at night ; and even in July, the difference between the day and night amounts to $16^{\circ}$. In the Ionian Islands, Zante, Corfu, Cephalonia, fine Grape couniries, the difference is not less considerable. Now we
hardly dare inquire how many gardeners, when they begin forcings early Grapes, venture to maintain, a low night temperature. We know that with some it is a maxim to keep the thermometer above $60^{\circ}$ at night. But what does nature do where the Vine thrives best ? In Lante, whence come the Currants,
or Corinth Grapes of the shops, the Vine pushes in March; ant it is a common saying there, "that after the 10th March (Old Style), not even a dog withou a tail should be allowed to enter a Vineyard", (Davy's
Iomian Islands, ii., 34.5) because of the risk of his Ionian Islands, ii., 345) because of the risk of his
breaking off the young and tender shoots. Now the average temperature of Corfu, at 8 A.M., in the month of March, we learn from the same authority, is only , and of course it must have been some degrees lower during the night; in April it is not more than Grapes are ripe in August, the berries must be set. There can be no doubt, then, that $48^{\circ}$ is quite high enough at night for Grapes in the first month of their growth, and $54^{\circ}$ in the second.
The reason why a low temperature at night is desirable, seems to be this : If much heat and moisture are applied to a plant in vegetation, it must of necessity grow in proportion to the amount of those agents; now it is in daylight only that plants can digest their
food and harden their texture ; and the amount of digestion, and consequent hardening, will be in proportion to the intensity of the light they receive. If, hen, they are compelled to grow in the dark, they are filled with undigested sap, and their wood becomes watery and soft. Even where they can be excited nature exposes them to no such risks-although one might suppose that beneath a southern sun the mischief caused at night might be repaired during the day. How much more, then, in these dull, northern
regions, where we never behold the sun in all his brightness, and for weeks together in the spring only as he struggles through clouds, how much more ought we to avoid that nightly growth for which our daylight can bring no help !
We have now before us a letter, dated last October, from a Gardener, complaining that his early Grapes vould not colour, and that most of them shanked off; the other half of his house, which was not forced, coloured well, and did not shank. To be sure, he says, he could never get his house warmer at night than $60^{\circ}$, and he fancied that if he could have commanded more heat he might have been more successful. Now it is perfectly clear that, in this case, it was o nothing but his unwise striving after a temperature that his Vines could not bear at night, that he owed
his failure, and his master the loss of his crop. By keeping his Vines growing fast all day and all night, there was no elaboration of sap; nothing was stored up for a supply of the materials of colouring or filling the berries; but most of the organisable materials in tended for those purposes were consumed in foliage and bad or useless wood. Then, when the time came for the Grapes to draw upon the stems for nourishment, there was none for them, and they necessarily withered, or, as they say, shanked off; and still later, when the few that escaped from this starvation required colouring matter, that too was absent, and entire failure was the result.
We would, at 'this season of the year, recommend Gardeners to consider these things well, and in addition to study carefully the chapter on temperature in the Theory of Horticulture; more especially of The fing paragraph :-

The effect of cold is, as has been seen, to diminish excitability ; of heat, to stimulate it : but, if the latter stimulus were constantly equal, it may be conceived that the excitability would soon become impaired or expended. Nature has, however, provided against this result, not only by the fluctuations of temperature that occur at different periods of the day, but more particulariy by the periodical fall of temperature at
night, and its rise during the day: an arrangement intimately connected with all the vital actions of vegetation. In the day, when light is strongest, and its evaporating and decomposing powers most energetic, temperature rises, and stimulates the vitality of plants, so as to meet the demand thus made upon them ; then, as light diminishes, and with it the necessity for excessive stimulus, temperature falls, and reaches its minimum at night, the time when there is the least demand upon the vital forces of vegetation ; so that plants, like animals, have their diurnal seasons of action and repose. During the day, the system of a plant is exhausted of fluid by the aqueous exhaiations night, when little or no perspiration occurs, the waste
of the day is made good by the attraction of the roots, and by morning the system is again flled with liquid matter, ready to meet the demand to be made upon it on the ensuing day. No plants will remaine in healthy state unless these conditions be observed. ${ }^{\text {." }}$
We hope our readers will not think that we have finished our observations on Drainage. Our remarks are only interrupted by other things, and will be continued next week. In the meanwhile, we shall is thankful for information and suggestions upon a matter which must occupy the attention of Parliament very soon. We have already received many communications on the subject, some of which, we regret to say, represent the obstinacy or selfishness of individuals to be a greater bar to the carrying a good bill through Parliament than we could have anticipated.
We trust to be able to show, that, if a judicious distribution of the waters to be obtained by drainage is effected, we shall secure, at least, an equivalent for the mills on rivers, and for the weirs and dams across streams, which now impede the natural drainage of low districts. The after-application of water is just as important in one way as the removal of water is in another.
Sinces the notice of Mr. Bickes's alleged "Discovery of the Art of Cultivating the Ground without the Aid of Manure" appeared in our Paper (p.8), a German friend, who has lately arrived in this country, informas us that he has inspected the crops raised by Mr. Bickes at Kastel on the Rhine, where he resides, and has found them to possess all the luxuriance ascribed to them in the Pamphlet. We have also been favoured with the perusal of a MS. letter from Mr. B., in which he mentions, that last year, notwithstanding the great drought of the summer, his method was equally successful as in former years. If these statements are to be relied on (and the manifold testimony in their favour will not allow us to reject them hastily), they would seem to afford stronger proufs than ever of the position of Liebig, viz., that a large pro-
portion of the solid matter of plants is derived from the atmosphere.
We trust that some of our readers who are in communication with Frankfort will endeavour to gain some further information relating to Mr. Bicks extraordinary statements. preparing them is kept a secret.
ON MANURING WITH GREEN CROPS.-No. VI. (By Professor Charles Sprengel. Translated from the German.)
8. Red Clover.-In some countries (for instance, in the Rhenish Palatinate) Red Clover is only used as green manure, ploughed in before it has begun to blossom. 1000 lbs . of Red Clover dried, contain-
> $\begin{array}{rll}17 \text { lbs. of nitroge } \\ 20 & \% & \text { potash } \\ 5 & \text { s } & \text { soda. } \\ 28 & \% & \text { lime. } \\ 37 & \% & \text { magnes }\end{array}$
> magnesia.
> sulphuric acid.
> phosphoric acid. chlorine.

Silica, iron, alumine, manganese, oxygen, and hydrogen, make up the remainder
When Green, it contains 79 per cent. of water, 12 per cent. of carbon. It cannot be doubted that Red Clover is a very valuable plant for green manure, as its roots reach, even the first year, two to two and a-half feet in the subsoll, and may weigh perhaps one-third as much as the leaves and tems taken together. If, therefore, the Magdeburg acre will yield 9000 lbs . of the latter, the whole amount of Green ing substance would be 12,0010 and is allowed to be 8 inches high before it is ploughed in. If the Clover is uxuriant, the succeeding crop will, in the main, be equally rich; which may be perhaps explained by the land being then clean, and containig a half of the leaves and stems, which amount at times to constituents as the herbage possessing probably the 9. White Clout Whalia) for greem some places (for instance, ind more than one-third as mure t does not, hower? it is arwise inferion is much as Red Clover, to which penetrating more than 12 or 15 quence of the ground. It is mostly used as manure after having been pastured for two, three, or four years.

hydrogen, oxygen, alumine, silica, oxide of iron, and of manganese.
$1000^{\circ} 0 \mathrm{lbs}$
IIf. 4000 lbs of White Clover, with the roots, are ploughed
in on one Magdeburg acre of land, the soil will receive
14 lbs nitrogen, 440 lbs . carbon, \&cc.; whence we might 14 lbs nitrogen, 440 lbs. carbon, \&cc. ; whence we might conclude (even if experience did not prove it) that crops cannot be as good as after Red Clover. If, however, they
do prove good after this sort of green manure, it may be do prove good after this sort of green manure, it may be rost which the soil has received.
10. Roots of Lucerne and Saintfoin. - Both these plants act on the fields where they have been ploughed in by their roots, whicls are sometimes 20 years old; and their strong effects may be judged of by the luxuriant state of several crops grown after them. We must, howby the leaves which have fallen during that long time. It would perhaps be possible to bring to the surface a large part of the deep roots, which are of no use to the subsequent crops, by means of such instruments as are
applied in England to draw the roots of Thistles and coltsfoot. It however remains to be seen whether the roots thus obtained would repay the labour. At any rate, idle hands might be employed about it.
idle hands might be employed about it.
11. Roots of Grasses (turf manure). -When an old pasture is broken up, the soil is manured by the sward, which soon decomposes, and whose effect will last the longer the older the sward is ; because, in that case, it forms a close mat of rootl, in which the strength of the furrow-slice has been collected as well as that of the sub-
woil, if such deep-rooted plants as Dandelions, Plantain, Koil, if such deep-rooted plants as Dandelions, Plantain,
Milfoil, and Thistles, are in the turf. An old sward of Grass is, moreover, a very superior manure, because it keeps the
soil' (especially if light and dry) in a moist and cool consoil (especially if light and dry) in a moist and cool con-
dition. Such soil, therefore, if laid down with a mixture of Grasses, White Clover, \&ce., although used for several years as a pasture, when ploughed is followed by $3,4,5$,
crops of grain, which (after the decay of the Grasses) will grow as luxuriantly as after a full manuring ; provided, however, the soil, when originally laid down, was in tolerably good condition; otherwise these very Grasses which were intended to manure the soll, will grow ill and form anything but a dense turf. It may be assumed that the roots of a pasture 4 to 5 years old, contain as much manuring substances as the roots of Red Clover two years old.
To the plants already mentioned may be added the stubble of Spurry cut green, Vetches, and other vegetables used as fodder, the weeds that grow on fallows or in stubble. The latter are most useful when their roots reach deep in the subsoil, and so bring substances to the surface of which the furrow-slice is deficient. The green stems of Tobacco are very valuable, as they are rich in alkali and nitrogen. The stubble of plants mown green should be ploughed in as quickly as possible, in order that not be dissipated.
$\qquad$
FLOWERING HYACINTHS FOR SHOWING. Having seen in the Chronicle several modes of cultivating Hyacinths, I am induced to send you the method
which I adopt for obtaining a fine spring bloom for the purpose of exhibition; a point on which none of your other correspondents have remarked.
In the first place, it is important that a proper selection be made in the choice of bulbs, which ought to indicate great strength ; for as the best sorts sometimes make poor flowers, such only should be chosen as show the greatest substance. The soil which I make use of consists of good free loam and well-rotted cow-dung, with a small portion of sand; yet I would remark that this is not of great importance, as the matter to be developed is the secretion placed in favourable circumstances to forward its proper placed in favo
The bulbs being planted in 32s (proper Hyacinth pots being of the same width as those, although much deeper), I place them in a cold pit or frame, with a dry flooring, and cover the whole over with dry saw-dust, at least six inches deep, above the pots. This material being kept perfectly dry, the bulbs are secure from frost, and likewise from premature excitement. When spring arrives and the leaves begin to push, I raise the pots above the
saw-dust to prevent that blanched appearance which this saw-dust to prevent that blanched appearance which this tribe often present when brought from the old tan-heap, which is but too often theirabode until wanted for forcing. As soon as the plants begin to grow I expose them as much as possible, merely protecting them from frost
and rain. and rain.
When nearly in flower, I remove them to a shaded
place, and fix over them hand-lights, elevated upon inverted place, and fix over them hand-lights, elevated upon inverted
flower-pots under the corners, for the twofold purpose of flower-pots under the corners, for the twofold purpose of
making room for their tops and giving them all the air making room for their tops and giving them all the air
possible. When the day is fine and calm, remove the top of the light entirely. In such a situation, they will deve. lope themselves in their greatest perfection, and may be preserved in full beanty for double the time which they would be if exposed to the sun.-A. Dawson.

A MACHINE FOR PREPARING OIL-CLOTH.
This design represents a small machine for manufacturing oil-cloth, which will be found essential by those who have much glass to cover. I need not enter into any details respecting the economy in using oil-cloth in preference to garden-mats; enough has already been stated in the Chronicle upon that subject.
My opinion is, that oil-cloct is an excellent covering for various purposes. If a light triangular frame was made, various purposes. and covered with this cloth to any required length, it
would answer for covering early Peas or Potatoes during would answer for covering early Peas or Potatoes during
frosty nights. After the danger of spring frosts was past, it would serve for placing over any newly-transplanted
Cauliflowers, Celery-plants, \&c., provided the weather
was unfavourable when they were removed. It would also be serviceable for sheltering Celery during the winter from
frost and rain ; and would assist in preventing the Celery frost and rain ; and wo
from becoming'rotten.

Frames of a conical form, covered with oil-cloth, might be made of strong wire, with the ends fixed into a round hoop of wood, to stand upon the ground. These would answer for covering Gooseberry and Currant bushes, and,
if placed over them sufficiently soon, would keep them from breaking too early in spring. These frames, with proper ventilation, would also serve for protecting the fruit in autumn from birds and heavy rains.
The following machine has been contrived by me for preparing this substance:-

$A$ is a side view of the machine: the frame and the three rollers are made of wood; the latter are 6 inches in diameter. The frame is of wood, $2 \frac{t}{\text { in inches square, }}$, and machine, exclusive of 10 inches for the boiler and frame, will not occupy more than 2 feet 6 inches square. The boiler, of block tin, is 3 feet 3 inches in length, 9 inches deep, and 9 inches in width; or made in length according fire-place are fitted within an iron frame screwed to the bottom sill at $C$. An iron supporter is screwed to one of the uprights under eache the iron frame in which the boiler is fixed.
Two rollers, one on each side of the boiler (fig. 1), are fixed upon the iron frame; these are intended for the cloth to be rolled upon, previous to its passing through of the boiler, so as to cause the cloth to be saturated by descending from roller 1 and ascending from 2 to 3 . The descen passes over the roller 3 , and then between the double rollers. At each end of the roller (fig. 3), a flange is fixed so as to direct the cloth between the two rollers ; it is requisite that the double rollers should be covered with cloth. The post, to which the top roller is fixed, is to be
made so that the axle will rise and fall according to the made so that the asle will rise
thickness of the cloth prepared.
thickness of the cloth prepared.
When the cloth has been conducted between the double rollers, it is placed upon the single roller and turned round by the windlass. The passage of the cloth is shown by the dotted arrowk. 4 is a fire-place under the boiler, made either of bricks or cast-iron, heated by charcoal, with a small tube at the extremity to allow the gas from the charcoal to escape and cause combustion. 5 is a box drawer made of sheet-iron, with a round handle in front to push in and out when required. This will answer as a
ventilator, and will be much safer than if left open, as the ventilator, and will be much safer than if left open, as the sparks of charcoal are liable to fly about. 6 is a tin dish, placed under the bottom roller to pravent the oil from being wasted by falling upon the floo
To every gallon of cold-drawn linseed oil one pound of bees wax may be added; these should be placed in the boiler till the liquid becomes quite thin from the heat of the fire; it will then be fit for use. When a sufficient quantity of cloth has been prepared, it may be conveyed to some convenient place to dry, and may be s
together as required.-Thomas Sellers, Pennoyre.

RENDLE'S 'TANK SYSTEM OF HEATING.
I READ with pleasure your notes at page 19 of the Chronicle, respecting a "new plan of heatiag, you do me the justice to ascribe the originality of its invention to me. As you have now brought it prominentiy before the pubiic, acceptable.
It is a plan which can scarcely be recommended too strongly'; for not only is it adapted for the smallest pro-pagating-house, but also for plant structures of the largest ratus to your readers; therefore, description from me would be superfuous. My tank or cistern is about 20 ft long, and 5 ft . broad; it is situated in the centre of a house, and except at the end where the boiler is fixed, is
surrounded by a walk. The boiler is one of Rogers's, and acts admirably. The depth of the tank is only 6 inches, and this is quite sufficient. On the top I have placed jarge slate slabs, cemented so each ing the house.
superfluity of steam from escaping into

When first Ithought of this excellent mode, I imagined that to keep 1 a sufficient heat in the house, I should be obliged to up a sumicient heat in the is, If the fire is lighted for two hours in the morning and evening it is quite sufficient to maintain a steady and genial bottom-heat, as the large body of water in the reservoir, when once heated, remains warm for a consider-
able length of time. The thermometer is generally on an able length of time. The thermometer is generally on an average at $65^{\circ}$.
In a small house this principle can be adopted for less than $5 l$; and in larger ones, at a cost at least one-half
less than that of hot-water pipes. As you justly remark, a common blacksmith and carpenter are all that are required to put it up. I doubt not but before many year it will be universally adopted by all those who grow Pine-Apple, Melon, Cucumber, or even stove and Orchi daceous plants, when we shall find dung, leaves, and other fermenting materials excluded from the Pinery and Stove, and used only for manures. Even I, who can procur tan and dung at a very low rate, am a saver of at least $20 l$. a year by this discovery; therefore the saving must be very great in a larger establishment, where hundreds of loads of dung, tan, and leaves, are consumed annually.
On the 28th of December last, the apparatus was set a rork, and my foreman commenced propagating Dahlias which are potted and placed on the top of the slates, and surrounded by sawdust. They are now breaking luxuriantly; hundreds of cuttings are already taken off, and plunged in sawdust in another part of the tank. I have used the apparatus for more than 8 months, and have been highly successful in striking some thousands of plants. Thous. $C$ Rendle Plymouth Nursery. $\qquad$
AMATEURS' GARDEN, No. III.
As the present weather is not inviting for out-door operations, advantage should be taken of it to regulate the greentaus aring growth. That the health of plants, men well and is materially influenced by cleanliness is weilas from the difference between the growth of the same species in the country, and in the smoky atmosphere of large towns. In the country, plants grow with vigour : wheress in the town, although enjoying the same advantages as to soil and water, they only drag out a miserable existence. This is caused by the respiratory organs bocoming choked by the accumulation of dust on some foliage, and as the plant is thus unable to breatie, some derangement or its system must be the resul. In che collysis failed to detect any material difference between that of densely populated towns and open places; but that it is less transparent is obvious to those who have ever observed it from an eminence. There is no doubt, therefore, that the want of light and the dirty state of the foliage are the principal reasons why plants do not thrive in towns; but the success that has attended their cuitiva-
tion in Ward's cases proves that they can be grown in tion in Ward's cases proves that they can be grown in such situations, provided they are kept clean, have all the light that can be procured, and are not parched up by an arid atmosphere; for it is to keeping plants free from dirt, and to supplying them with an atmosphere containing moisture proportionate with the temperature of their habitations, that we may attribute their successful cultivation in glazed cases. From the above observations the window-gardener will see the necessity of keeping his plants clean, especially in dull weather ; and the possessors of frames and greenhouses the propriety of washing the glass frequently.
In regulating the plants, it will be well to wash the foliage of Oranges, Caméllias, and other smooth-leaved plants, with a sponge and clean water ; and the dust may be removed from Pelargóniums, and other woolly-leaved plants, by brushing them lightly with a soft brush. After the plants are cleaned, the pots should be washed, and the surface of each replaced with fresh soil ; and if they require it, they should be neatly tied to fresh stakes. It is not an nncommon occurrence to see a stick as thick as a man's thumb supporting the delicate stem of a Calceolaria, or forming part of a trellis for a fragile and elegan climber. This is bad taste; and it should be recollected that, as a support of this kind is only a necessary evil, the more slender the slicks are the better, provided green thread, or painted twine are good substitutes for green thr
matting.

Carnations, Picotees, Aurículas, and Polyanthuses in frames, should have all the air possible in mild weather but they must be protected from wet. It is a good plan to have the frame raised upon a brick, placed beneath each corner, with movable boards to fit around 1 , so that they may be let down in mild weather, to admit a current o air among the pots, and be replaced in case of frost. Re move all decaying matter, so as to keep the atmosphere
within as pure as possible, and prevent the attack of milwithin as pure as possible, and prevent the attack of mildew on the plants.-W.P. Ayres.

## HOME CORRESPONDENCE.

Salt as a Manure.-I am one of those who consider little fact worth a great deal of theory ; consequently feel no hesitation in relinquishing my theoretical opinions concerning salt as a manure, after the statements made by one of my objects was to bring out facts, if such could be
produced. The bearing of the quotations from the sacred books led me to infer that an article so often chosen to
indicate sterility and desolation could not be a fertilizer of the soil ; this was merely a theoretical inference, having never tried it by experiment. Now as Mr. Brewis has stated the beneficial effect of salt on a "damp soil," I should feel obliged if he will inform us, through your columns, whether his ground is of a clayes, adhesive quality- or what is usually understood by a "strong" or "heavy" soil ; what proportion of salt he uses to a given breadth, and how frequently applied? Mr. B. says I seem." to plume myself on my acquaintance with Scrip-
ture." If such was apparent in $m y$ remarks, I am sorry for it, for it is not true. He moreover asks me the meaning of salt having "lost its savour," to which I offer the following solution. In Palestine are saltrocks, the clif-like parts or peaks of which, from long exposure surfaces, lose that property which, when applied to the palate, we call saltness, otherwise "its savour." gravel; hence it is "trodden under foot of man." These saline rocks, their effect, use, \&c., were doubtless present to the view of Christ, and those whom he taught by so apt
an allusion. I have heard that our culinary'salt may be dean allusion. I have heard that our culinary'salt may, be de-
prived of "ite savour" by a similar process, but I cannot prived of "its savour" by a similar process, but I cannot
vouch for the truth. As to the practice of the Northumbrian farmers in manuring with "Wrack" (Fuci), as it is called, I was not only aware of it, but have been engaged
in doing it, though not in Northumberland. It is, howin doing it, though not in Northumberland. It is, how-
ever, worthy of notice, that it consists of a mass of vegetable matter besides salt; and that its entive efficacy is not derived exclusively from its saline particles. Mr.
Brewis rather triumphantly inquires, whether a land of lime, guano, \&c., would not be equally uninhabitable with a "salt land?" I answer, undoubtedly; but we never find the articles spoken of symbolically to denote sterility and desolation, by the sacred or any other writers with versed in northern practices, he may also be acquainted with northern words. Suppose, then, he were to relish or try to flavour his porridge with the long-exposed detritus of atill "Wersh," (a northern term that has no equivalent in English, but the negative saltiess) ; it would have "lost there is an article upon Salt by "Quercus," who appears to have formed an unfavourable opinion of it as a mauure; and I think some of his texts have been somewhat
strained to support his views. If geological history of common Salt, we shall find it occur in almost every formation of rocks; so that nearly every paxticle of earth must at one period or another have been haugh, salt is found in America in the old transition she rock; we are also informed that in the English coal-mines, there are Salt-springs ; and the rock-salt of Cheshire is situated in the new red sandstone. In Wurtemberg, it is said to exist in the upper members of the same series,
called the Muschelkalk. According to Buckland, it is found in the lias of Switzerland. Sedgwick and Murchitrian Alps ; and at Wieliczke, near Cracow, it is found in the tertiary series. Any-one would be led to suppose that such a wide-spread article must have been intended for the good of organised beings, whether vegetable or animal. Of late, many portions of alluvial soil have been taken
from the dominion of the sea, which for ages have bean from the dominion of the sea, which for ages have been
steeped in salt-water ; but I will only notice one spot steeped in salt-water; but I will only notice one spot,
which frequently came under my observation. It was formerly a small bay, near the town of Kincardine, on the Firth of Forth. For an account of its embankment and cultivation, I would refer your readers to the 6th vol. of
the "Prize Essays and Transactions of the Highland and Agricultural Society of Scotland," where a report of it is given by Mr. Menzies. It appears from the report that
the first vegetation which appeared to take possession of the mud after the tide was shut out, was the Pua maritima and Aster tripolium, with Agrostis stolonífera and alba, along the course of the fresh-water runs. The abundance of salt which the mud contained appears to have presented Corn-crops from growing well al first; but it is
stated in the report, "Commencing with Grass seems to be by much the cheapest and best method for extracting salt from lands thus reclaimed from the sea; the overquantity of which seemed to be the cause of barrenness at
first, as it hecame productive in proportion as the salt was Extracted from it. Sheep and cattle throve uncommonly the cn these fields while they were in pasture, and both fields advanced bestial pastured thereon improved as the taken from the soil by means of the crop that grew upon would produce the effect lately pointed out by Dr. Play fair in his lectures; namely, "The Chlorine of the salt goes to form the gastric juice, which is so important an agent in digestion, and the Soda forms the bile, which is a compound of soda." In America, the salt licks which herds of buffaloes and deer frequent are commonly referred to, when salt is recommended as a condiment in the food of cattle. To point out the beneficial effect of salt upon vegetation in general, when properly applied would extend the present article to as undue leng applied, greatly state, in conclusion, that the quality of graiu is been often grea, and that Pentoes and Clover-grass have Mackenzie. [No doubt salt, judiciously applied, is as good a manure as saltpetre or nitrate of soda. There is pienty of evidence of this.]

Destroying WVorms on $G$

Grich have been recommended for destroying worms on cious. By means corrosive subimate the most ef ficawhich it seemed almost impossible to eradicate the worms, the surface being always covered with casts, and presenting the most slovenly appearance; but for nearly a year and a half after this was applied, there was scarcely a singl cast to be seen. It mixit at the rate of searce a cor rosive sublimate to about 40 arllons of no the cormate being first beat quite small and dissolved in som hot wer. The pared, the whole should be well stirred each being premencing at one end of the lawn with a watering-pot without the ground is missed, the worm-casts will soon be as bad as ever. Directly after the sublimate and water is applied, the woms make their appearance, which 1 hav trong to kill th. The dose may be made sufficienti) but the is hep on the surace, or en in the ground but this is attended with danger to the grass, parti-
cularly on light soils. I therefore consider nicking them up to be the best. If possible, the ground should be gon over a second time after an interval of three or four days.
Attention should also be paid to the state of the ground, which should neither be soaked with rain nor parched with drought, but in a medium state. Great care is at all time necessary in using this deadly poison. I applied it last
spring with much greater success than lime for destroving slugs on young Peas.-A. Dawson. one of the readiest and best means of destroying worms, Pruning Forest Trees.-Allow me to thank Mr. Bil lington for his answer to my request at p. 789, which ing. Mr B says I have "raised doubts and misconce tions of his system of Pruning," \&c. The latter probable; but my object in taking up the subject has and managers of plantations, where timber is the object to a rational consideration of the injury which they commit by following those pernicious systems which have den laid down by theorists; and followed in 100 many onishing, with a confiding pertinacity which is truly as have proved in my former publication, that the increase I imber in trees is in proportion the number and "heaithiness of the branches and leaves." And again leaves is the true cause of the increase of timber in theath Now this is precisely my opinion, and what I have contended for from the first; so that, after all, we are like the camelecacres that contenaed about the col sthings in different lights youl thus :-

Mr. B. sees fine timber flourishing through the medium any (pruning) system at all. The intervening sentence between those above extracted from Mr. B. is precisely an amplification of what I mean by "reciprocity"-a term
which he seems to dislike, although he does not furnish one more expressive. I also wish to say a few words I shall put them in the form of a query. How is Pruning by any "system" likely to increase the timber of a tree that increase depend on, and is produced by, the number of branches and leaves? I cannot think of any "sysMr. B. is mistaken in thinking I am an adrocate for the "Prune-not-at-all system." Pruning in many cases in
beneficial; but in pruning forest-trees systematically beneficial ; but in pruning forest-trees systematically, certainly retard and not accelerate the end. I am for employing both "labour, reflection, and expense," whenand wherever it can be done with beneficial results increase their stems. When Mr. Bullington presents his proposed Essay to the Royal Agricultural Society, I hope corecthe cruae notions respecting long since reviewed by you. After all Mr. B.'s enlightened views and long experience, I fear, however, thas Were is still some latent clinging in his mind to the old aid on the stem ; for he remarks, "Mead is necessarily ing is simply to regulate those parts according to Science, so as to aid those properties in accelerating the elongation and regular increase of timber in the stem, and not to expend itself in making useless branches. How can onches be "useless if the increase of the stem depend 588 , says, that he is no convert to this no-pruning sys-eme,- and what arest, he sets that trees on looking same species do not grow all alike, some producing fine tinober, and others wasting their energies in producing parks and forests would look, if the trees were denuded from Mr. Billingtot, and firewood. Mr. F. must learn in "proportion to the number, \&c. of branches and leaves." This is beyond all contradiction.-Quercus.
Summer Pruning pear. others, I tried the breaking or rather, halforeaking, the luxuriant shoots of myy young Pears, and Apples, which were not sufficiently ry the buds below the fracture are larger, fuller, or more ripened than on the unbroken branches; but the buds on the parts above the fracture appear full and large. This would, I conceive, fracture appear full and large. This turning sap being kept in the upper part of the shoot;

Inere being more leaves at the tôp than on the lower part. In many cases the fiacture has healed over, and I mean to Disease in Scotch Firs.
Chronicle, the Rev. R. Wirs.-In a late Number of the pecting the urusual W. B. requested information respecting the uxusual decay and weakly appearance of are Scotch Fir-trees of grounds. At West Plean there unhealthy arpearees of the same age and having the same unndent Apter pelieve that the 1 have every reason to believe that their decay is occasioned by the Hylurgas Grafing Vines.-In
respondent, who has an Escholata Grape p. 824, to a cernot approve, you advise him to plant another in it he doess but when the ease with which an inferior Vine can be grafted with another sort, is considered, I thinl it a wasto of time to plant one to supply its place; a far better way is to select a shoot, as low as possible on the old Vine, and to inarch it with another kind either from a potfor from a neighbouring plant; this however should be done when the vines are in full growth. In six weeks they will have become sufficiently united, so that the engrafted shoot may be severed from the parent plant, and if allowed plenty of light and air, it will mature its wood susficientiy to take the place of the old bearing stem, which may be cut away the following season: or if the graft is not thought strong enough, it may be cut down and allowed another year's growth, whilst the original stem may be retained; I have treated several Vines so, and it appears to have the effect of hastening or retarding the ripening of or sarlye Grape, accordingly as the stock map be of a late know know; one was a very late Grape with bunches and bẹrries the other whish is Portugal, but of a grizzly colour; white Grape, about the size of a hollowed at the end like an Orane verg awest but hovin a disagreeable thick skin. These I inarched from neighbouring Black Hamburgh; the fruit from the early stem ripened first, and the leaves dropped off some time ago; whereas, on the late stem, the leaves are still green; heir parent is in an intermediate state - Vitie,
Rust on Grapes.-The disease mentioned by "W. Bromley" was evidently caused by insects, and was quite different from what I suppose to be meant by rust; which, in my opinion, is an induration of the cuticle of the fruis at heing ear stage of its growth, and is caused by the house being oly heale, and by the ard cold air period of aje than a caring a period of more than twealy years experience in Grape Black Hamburgh, and that but slightly. Although I am certain that the less and the more carefully they are handled the better, still I think he goes beyond experionce when he states that, after being touched by the bair of the head, they will cense to grow.-A.
Preserving late Grapes
Preserving late Grapes.- A correspondent from Cork hay for reat succerving late Grapes has been practised with that county. At Christmas there were in one Vinery nearly 200 bunches in good condition
Hardy's Cantaloupe Melon.-I have grown Hardy's Cantaloupe Melon, and I find it to be a good and early ind. The later point 1 tested by growing it with one of prepiest sorts. In order to give them both a fair trial, paying to bothof them every attention, six fruits were set upon the Cantaioupe before my own sort showed any inclination to do so. The result was, that I cut fruit 23 days earier from the former, and obtained three crops from the same plant. Both the flavour and size of the intend to grow it this season upon a much larger scale.Norton, Bath.
Rhubarb.- If my experience of the superiority of early Rbubarb is of any service to a "Young Gardener," I beg to state that 1 grow the Tobolsk, and another sort called dis 8 Scarlet Admirable. Both kinds have been treared Admirable sioce the middle of last month. On uncovering the Tobolsk, I find it to be only just sprouting. The Scarlet Admirable may also now be met with in abundance Covent Garden Market.-S. G., St. John's Wood.
Mills Improved Cucumber Pit.-Last autumn Ihad a ange of Mrlls' pits erected here, but too late in the er-forcing at the time mentioned in his treatise. Being anxious, however, to test the heating power, and to keep the frost from the brick-work, llined one of the pits on The seed was then sown, and from that time to the present the pit bas never been without air night or day, although without corering of any kind. The lining was made with dung and leaves, having been turned, and a little fresh dung added every ten days thermoneter ranges from $70^{\circ}$ to are healthy, and the of air left on at the back all night. I was surprised on the thermometer in the pit shat superiority of the improved pit over the old system with and the cats and hay. The saving of dung is also great ; them from the changes of the weather, which those merve exposed are liable tos of the weather, which those more exposed are liable to. The pit which 1 am working has
hardly had a fair trial, as it is filled up with soil above the loose material to the top of the air-flue; much less of the
heated chamber is thus left for warming the pit; but being obliged to use it for a seed-bed, I was compelled to keep the plants near the glass. It is, I think, of great importance to have some boards on the lining at this season of the year, as they afford protection against heavy rains. bave also a gutter for the front water to passaw to the Earl of Powis, Walcot.
Fork for Leaves.-I send you a sketch of a simple and useful leaf-fork which has been used here for some years ; I bave neither seen it in use anywhere else nor yet mentioned in any publication; but I am certain that it only requires to be known to be generally adopted wherever
there is any great quantity of leaves to be collected. One person with this implement will take up with greater facility more leaves than two persons could do with any
other tool which I have seen used for that purpose. It is simply a large four-tined fork, made of wood, shod with iron; the tines are 18 inches 1ong, and are morticed thick. The tines are 1 inch in width and $1 \frac{1}{2}$ inch in depth at the head, gradually tapering to a point with a curve or
bend upwards (fig. 2). The wood of which they are bend upwards (fig. 2). The wood of which they are
formed ought to be hard and tough; either Oak or Ash formed ought to be hard and tough; either but the Robinia Pseud-Acacia is preferable to either. The head should be made of Ash, with a T handle of the same, and should be two feet four inches long
(fig. 1). It the leaves also do nothang upon it as on a common fork, the large size of the tines
Toward, Bagshot Park.

Light Frame for Protecting Annuals, \&c.-I could not help being much struck the other day at what $I$ at first attributed to the ingenuity of a little boy, who, in de-
rision of a clumsy brick trap which had been set for catching sparrows, collected a number of pieces of wood, of which he constructed a kind of frame-work, having the appearance of a square roof; with the sticks so disposed as to admit sufficient light, and yet so near together as to answer the purpose of a trap. This little fabric being raised on one end, similar to the sieve when applied to
the same purpose, falls down upon displacing a small the same purpose, falls down upon displacing a smail piece of wood, and entraps its unfortunate victim, which is at the top. This lattice-work, at once so light and easily constructed that a dozen of them might be procured for a few pence, I find so admirably adapted for protecting
annuals, the forcing of Seakale, Rhubarb, \&e., that I hope a few words as to its construction will be acceptable. To lay the foundation, procure four pieces of Hazel, or any and half an inch thick; tie them together, at right angles, so as to form a square, two pieces only touching the ground, the other two being laid upon them. Upon this base place four other pieces about an inch siorter than sion, until you have reached the apex of the miniature roof within about five or six inches, according to the size intended; cover the aperture that remains with a piece of deal or tile, and you have the figure in the form of pyramidal frustrum. I cannot better explain the manne in which the pieces are secured together than by stating ing the bow itself across the frame-work, and then tying ing the bow itself across the srame-work, and then the the mide of the two parallel pieces that were first laid down, as described above, gave to the whole the desired tension and firmuess. The obvious utility of such a contrivance as a screen from excessive rain, and the protection it would afford, with the advantage of light and air, to the smaller kinds of Hower
seeds, united with its neat appearance and simplicity of seeds, united with its neat appearance and simplicity of
contrivance, will, I trust, recommend its adoption.contrivance, will, I trust, recommend
Adam Keys, Plumb's House, Whiston.
Salvia patens.-In Holme Gardens, near Inverness, Especimen of the above plant survived last winter in the open ground. It flowered from the lat of June until
November, and was only 3 ft . high, and 4 ft . in diameter, November, and was only 3 ft . high, and 4 ft . in diameter,
being densely covered with flowers. The crowns of the being densely covered with flowers. The crowns of the
tabers were 3 in . beneath the surface of the ground. I think it will prove quite hardy in any dry situation; I have left one plant out this winter by way of experiment -ue resuit I will communicate hereafter.-J. Ross, autumn than I wanted, I cut open several, to observe their mode of growth, and I found that the buds are formed at the first shooting of the leaves. In a plant of Brunsvígia Josephinæ, which had just flowered, and whose leaves were about three or four inches long, there the new leaves, about three quarters of an inch high. I discovered buds likewise in bulbs of B. multiffora and in Nerine. I am induced to mention this, as Mr. 276 , that the bud is probably formed at the drying of of the leaves, and it will account for growers being so often disappointed by the non-appearance of any
flower-bud, after a vigorous growth of leaves in the preceding year. To obtain flowers from these difficult Cape
bulbs, the plants must oot only be well grown during the bulbs, the plants must oot only be well grown during the
preceding season, but also in the year before that, to preceding season, but also in the year before that, to
induce the formation of a flower-bud. Amongst your Notices to Correspondents in a late Chronicle, "Bulbosus" asks for information respecting his bulb of B. Josephinæ. If he examines his plant he will probably find the roots decayed; such effects as he describes often arise from this cause. Should this not be the case, his plant must bave been kept in too moist a house, without a due circulation of air. Where a proper circulation of air
is kept up, I feel satisfied that bulbs may be grown withis kept up, I feel satisfied that bulbs may be grown with-
out either rotting or being buried. "Bulbosus" may pull ffer rotting or being buried. with caution, or he will cause the bulb to bleed. Cyrtanthus obliquus I find to flower more freely in the conservatory than in the stove, which is probably too close for it.-J. $\boldsymbol{H}$.
Indian Corn.-In3 March last I sowed some seeds of the tall Indian Corn separately in small 60 -pots, and kept 2 ft . apart, plant from plant, and 3 ft , between the rows. Each plant produced on an average 3 fine ears, and the I gathered the crop in October ; thus, from 12 plants I got 361bs. of fine Corntan from any other Corn crop.-Charloniensis,
Problem in Cookery.-Sir, I think I am philosopher enough to answer the question proposed by "K.," in reference to the diminished sweetness of hot fruits and other things. The true statement 1, believe to be, no that the sors ing thes the sweetness is vours are 10 ar a beral sul 11 lours and are developed by warming the matters from whicin they are developed by warming the matters from whica they is great in proportion to the volatility of the subse Thus, most dilute acids being more volatile than syrup, are by heating rendered disproportionately prominent to the plum tart. The effect in question is most strikingly shewn in the case of sweetened grog, if your readers know what that is. A glass of sweetish rum-and-water ake hot, will appear to have a full flavour of the spirit; let it
cool, and the taste of the sugar will so completely prevail cool, and the taste of the sugar will so completely prevail
over that of the rum, that it would not be thought to be the same mixture. I need scarcely voint out that alcohol and syrup being at opposite ends of the scale in regard to volatility, this instance is more decisive than that of the plum-tart. I have thus endeavoured, according to my you received the inquiries in a somewhat similar matter of An Old Lady.
To Preserve

Fruit with Water only.-Fill your bottles necks in cold water ; put them on a brisk fire, and heat the water to $160^{\circ}$; keep it at that temperature for half an hour, and have some boiling water ready with which to fill your bottles to the neck; afterwards cork them down tight. Peas will neither keep good when done in this year's Chronicle.-W. P. K. KThe samples of cherries, currants, and gooseberries which accompanied this were Currants, Cherries \&c. in the same manner recommended by "Geo. M. I." at P. 5 ; as well as some Peas, which continue green, and are at this season To Expel Rats.-Rub some tar about all the holes and places where the Rats resort. To this they have a great are not able to remove it. This is a sure and cheap way of driving them from buildings in which they are trouble last year's Chronicle. If, instead of a wooden top, your correspondent were to cover the cask with a sheep-skin, or some old parchment well wetted, and drawn tight; and
after it bad become dry, and the Rats had been induced to feed upon it, if a few triangular cuts were made in it, sufficiently large to allow the Rats to fall through, I think it would be an improvement. A friend of mine has cap-
tured them in that way.-R. G. Pheasants. - Being much troubled with pheasants, Which destroy my early crops of Peas and Beans, I
usually place Pea-sticks on the rows directly after the seeds are sown; these baffle the birds until the plants are up, when the sticks require to be removed. I have afterwards placed bowed sticks down the rows, with a net runthereforg the top; but this is too much tome twir cradles, to be made in the shape of a half-moon, 17 inches in width, and 9 inches in height. These $I$ intend to have tarred over, and I have no doubt that they will last six or seven to fit W. Brown, Merevale.

Poultry,-I should feel obliged if "A. E. S." would inform me whether the Malay Hens are white or coloured, and in what part of the country they name here. I should be glad to procure a pair of them. "A. E. S." does not mention whether the Dorking Hens recommended are the white or the grey variety. large, whilst the former are preferable from their unitorm white colour at table. Perhaps, some correspondent can also give me some further information regarding the best A Subscriber, Renfrevshire they can be obtained.-

NUTICES OF NEW PLANTS WHICH ARE EITHER Lycaste visinal istor ORNAMENTAL. Monándria. This plant is nearly allied to the Maxillaria, or Lycaste, macrophylla, of which it has quite the habit. It differs sepals being much more exactly oblong; the tubercle on the kip is also much more obtuse. In colour too they are different. $L$. Laucrophylia has olive green separs, and petals elmost colourlesss petals are richly tipped with crimson- - Botanieal Register. buceous Plant). Gesneraceex. Didynámia Angiospermia.- With the most ample and nobie follage, and particularly bililiant flowers, this plant combines unnesual dwarfness and compactness. It was introduced from Brazil eight or nine years ago. Cuttivgs should inches long, in the same way as Dahlias; only not removing the base, but leaving it attached to the old tuber, that fresh stems
may be generated. If struck rapidly in a brisk heat, they wil form excelleat blooming plants in the iollowing season, and will pronerous treatment in regard to soil and atmospheric moisture The compost in which it is potted should be enriched with leafmould or decayed mannre ; and it must not be stinted for potplunged in fermenting bark, or some such material, so that the supply of moisture may not depend on variable sources. The tubers should be well preserved from
 It inhabetty little herbaceous piant, seldom seen in cultivation. north as Pennsylvania, frailing North America, from Texas as far place of resort. In our gardens it is treated as a greenhouse plant, and then it forms pretty patches of lively purple flowers.
It is, however, seldom seen.- Botanical Re cister. Odontoan.ossum citrosmum. Lemon-scented Odontoglossum.
(Stove Epiphyte.) Orchidáceæ § Vándeæ. Gyadadria Monund This plant was imported by Geo. Barker, Esqu., of Birmingandria,Mexico, and given to T. Brocklehurst, Esq., of the Fence, near great meetings of the Horticultural Society at Chiswick, in 1842. It has large snow-white and rose-coloured flowers, of great beauty,

a member. It was announced that at the ensung meetings, the disccussions uporn florists' fowers would be renewed; the first to
take place on Feb, take place on Feb. 7
paper upon the Daky

## MISCELLANEOUS

Chinese Flower Gardens.-The Chinese garilens are of a peculiar character, and differ altogether from ours in their arrangements; while the care bestowed on them by foir possessors exceeds anything of which we could bave
formed an idea. To each branch, often even to each leaf of a tree or a shrub, the utmost pains are taken to give sitting constantly beside the plants, and employed in binding and pruning them, in order to accomplish the contrast of colours is the chief object of the Chinese flower-gardeners. Strangers to refinement and the tender emotions, the Clinese have no taste for the pure and tranquilenjoyment ऊhich the perfumes of sweet-scented flowers skill in developing singular growths, that the Chinese gardener exoels. Long and straight alleys run directly one and the same species. We visited these gardens [in the vicinity of Canton] in the month of Novernber, and remarked the following objects: close to the entrance were
large masses of Chrysanthemums, the blossoms of which had attained an extraordinary size. Then followed whole plots of Citrons and Shaddocks, which were raised in pots, and loaded with fruit; and it was remarkable that all these fruits were divided into segments, and thus formed permanent monstrosities, which were further propagated
by grafts. It is by such mis-growth that they acquire a finger-shaped appearance, which occurs also occasionally in our conservatories. In China these fruite are cultivated assiduously, not only for the adornment of the gardens,
but also for the sake of the well-known Chinese preserved Citron, of which large quantities come to us by commerce. For this purpose they use chiefly the smaller fruits, 3 or 4 inches long, which are boiled in refined sugar. The larger fruits of monatrous shape are of the Shaddock kind, and often
from 10 to 11 incheslo while the several segments extend from 10 to 11 inches long, while the several segments extend singly in all directions. In the gardens these odd-shaped
fruits, as well ss the sweet Oranges, with which whole plots are planted, have a neat appearance, as they do not ailow any trunk to form, but force them at once to spread
into branches. Large borders are to be seen planted with Camellia japonica, and others with Cockscombs, some With white, others with yellow or red flowers; the yellowflowered plants had shot particularly high, and they were 80 arranged that all the plants in a bed were of one and the same colour. We also saw in the gardens a species of Scilla, very like Sc. maritima, which showed the samesort of monstrosity as the Cockscomb. We observed Bamaboos in pots, the stems of which were 2 or 3 feet high, and were Wound into a spiral form from below upwards. Ameng the various , the Lee-chee, Banana, Averrhoa carambola, and trained. The on the stems of which Epidendrums were very large, contain beautiful fish, which are fed by a disgusting but common method among the Chinese, which is said to render them very plump. The stools in the pleaporcelainses art, for the most part, of a coarse sort of by wooden frames ; which, by their coolness in summer to the very agreeable to sit upon, when one is accustomed small-leaved Single borders are frequently edged with a by hedges of Averrho ; and the long walks are, bounded which wes of Avershoa, O'lea fragrans, and other plants, the planting in regular masses of the large-flowered Chry-
santhemums, with Oranges, Camellias, Kálmias, and tall Cockscombs, is not altogether devoid of beauty; but a stranger can hardly reconcile himself to an arrangement which must appear to him so contrary to the rules of good
taste. Hydrangeas and Asters seemed at this time to be taste. Hydrangeas and Asters seemed at this time to be
out of fashion, for we saw very few of them.-Dr. Meyen's out of fashion, for we
Reise um die Erde.

Orchidaceous Plants.--The collection of Orchidaceous plants in the garden bas been much increased of late years by the introduction of many rare and beautiful species from the high lands of Mexico and Guatemala. When these were sent home, Mr. Hartweg informed us in his letters, that the thermometer was sometimes near the freezing point where many of them grew; and this was confirmed by the quantity of small mosses, which we found growing upon some of the branches to which the plants had attachad themselves. I, therefore, about two years ago, removed many of them into a house, which is succeeded than the Orchidaceous stove, and they have which were allowed to remain in a high temperature Many of those which are most unmanageable in the Orchidaceous house succeed here without any trouble; it is evidently the most natural place for them, as in other languid, forming smaller pseudobulbs and leaves every year, and finally perishing.-Mr. Loddiges, and, I believe, is, therefore, a circums'ance which cannot be too well kuown because many persons have been deterred from growing Orchidaceous plants by believing that they re quire such a high temperature. The house in the Garden where they are grown has no artificial heat during the greater part of the summer, and in what 55 lert at moist than in a common greenhouse. $M$. Fortune, in the Proceedinys of the Hort. Soc., No. XVII.

Assam Tea.- The Planters' Journal (an Indian newspaper) notices favourably some Gunpowder Tea that had
been produced in the hilly country of Assam been produced in the hilly country of Assam. The speci-
men is declared to have a strong, high flavour, and other qualities that will recommend the article strongly to consumers in England, where it can be delivered at a cheap rate. We learn from the same source that the shares in at auction met hardly any bidders, and that the prices offered were very inadequate to the amount already paid up. The Company are making another call on their of rs. 178.

Agri-Horticultural Sociely of India.-We learn from Planters' Journal that the Secretaryship of this im portant institution was not filled up at the departure of dates, Mr. Griffiths had offered himself for the situation. tender Celery. - Celery stewed in plain water tin ter, exactly like Seakale, is an admirable auxiliary to a mutton-chop, \&c., and for those who cannot masticate GARDEN MEMORANDA.
Henderson's Nursery, Pine-Apple-Place.-The show-house is
already becoming gay with fored flowers amongst which the delicate bue corymps of Rhodia canadensis are very con-
spicuous. Another humble out interesting object, and one
whicl coum, the rich rosy colour of its droon, ing forching, is coyctamen
well and Hyacinths are blooning freely ; of the lattiler, few are better
 also promises an abunciant hloonn: in appearance it does niot
differ greatly from S . ticolor ; f s iny thing, its hat.t is stronger. insignis , its clear pink flowers, which are abundantly or produced and its elegant drooping mode of growth, render it worthy of being more generally cultivated. Begonia parvifora, with small white flowers nid of compact habit, is another pretty specics genus thrives best in a soil not toi) retentive of moisture; and in the it beneficial during the growing season to let the mould ggain watered 7 his streatment tends to make them more bushy, and this habit may be increased by occasionally nipping out the tips of the young shoots. Erauthemum strictum, an old and
neglected plant deserves a place in every collection; at this
sceason, the deep blue volour of its flowers form a strik trast with the scarlet panicles of Gesnera elongata and the more virid tints of the terminal leaves of Poinsêtia pulchérrima Several plants of $J$ acaranda mimosserfia wers pointed out to

its elegant foliage renders it at all times a handsome olject. It is siod to succeed best when treated like Erythrina Cristat. galli namely, by being cut down annually, and by allowing the whole
strength of he plant each season to be conflined to one or two
shoots. Catesbrea parvifora, a small prickly shrub, with white fowers, is also blooming freely in this honse. Amongst the
plants which pretty variety, somemewhat in the style of E. Limneana, but not
nite so quite so highly-coloured; E . Lambertiana rosea, a free-blooming
winter variety E. Exs.ens cocinea, another good winter
variety, with much of the habit of E. vestita; E. scabriuscula, littie E. hyemalis, and many others. A new climbing species of Thecolour of the petals is sald to be a French-white, while that of the centre inclints to pink. Dendrobium monilforme is here producing its lovely violet arid purple flowers in great perfection. and scarcely less beautiful are the del.cate tints of 1. .e' ita ancep ${ }^{2}$ ²
Many othersequally worthy of notice are also in flower; amongst which we may name Oncidium ampliatum, with panicles of bri, fht
 ing 1 ranches loodded uith delicate primrose and blush coloured
flowers: Phallss Woodfordii, litht yellow, having the labellum rettly carled and marked with orange; the heanti in Zygupsta-

 cultural buildings, now putting up by Mr. Clark, of Birmingham,
nearly completed; and the frame-work of the other wing begins
to indicate the extraordinary length to which the entire range of
buildings will extend, and which we learn will be little short of one thousand feet. A neat and elegant structure, in the Eliza bethan style, occupies the centre of the range, and is intenued
for the residence of the Royal Gardener, whose time and talent are almost exclusively deyoled to superintenting the formation of the new and very spacious garden, upout which tome scores of
werkmen have long been most actively employed. The chief
feature of the place, howeve feature of the place, however, will be the long range of horticulural bunce, bid fair to aurpass any existing structure of the kind with which we are acquainted. We hope to be enahled to
give our readers a more detailed description of these buildings when the range is completed.
Beak Sjour, Guetnsey.- A plant of the variegated Camélio
Japonica is now flowering in this garden in Japónica is now flowering in this garden in full perfection, being
clothed with from 1500 to 2000 blossoms. It has attained the commit of a wall which is 11 feet in height, and is fully 40 feet in breadth. Several kinds of Camellias are thriving, with equal
luxuriance, at Mr. Dobree's; amongst these is a double white, luxuriance, at Mr. Dobreess; amongst these is a double white,
which extends about 50 feet, the blossoms of which are about to make their appearance in countless numbers. What more triking proof
Guernsey Star.

## Journal of an Affghanistan Prisoner. By Lieut. Eyre.

Ir as literary critics we had to pronounce an opinion upon this book, we should describe it as one of the most interesting that it is possible to conceive, and infinitely eyond the fictio which it unfolds. We, however, regard it merely win re-
pect to its uatural history, of which there are scraps here and there. Frequent mention is made of a plant called the Holly Oak. In the valley of Jugdulluk, a formidable wenie through which the troops had to struggle on their way to iers, formed of branches of ihis prickly Holly Oak, stretching completely across the defile. The same plant is men tioned elsewhere as growing on the hills.

At the Pass of Udruk-budruk, the author gathered que of co a curious herbaceous plant, the under sur dewy-lookin ease was the Affghen ladice use a rouge." II one of the branches of the Tezeen valley yellow Dog-Roses and white Tulips are mentioned, and the travellers in the heat of the day refreshed themselves in shady bowers formed of Juniper. On the hills near Cabul, the Gum-ammoniac plant is spoken of with the oung fowers clustered together not unlike a small Cauliflower. It is described as an umbelliferous plant, growing to the height of six feet, and in its general appearance and mode of growth, resembling an Heracleum. In the same place, that is the captives' prison, in the valimant, and the cultivation luxuriant. The common trees were the Poplar, Willow, Mulberry, and Elpeagnus, whose yellow flowers scattered a powerful and delicious perfume thraugh the surrounding air. Purple Centaureas adorned the Cornflower, enlivened the border of every field and water-course. while a delicate kind of Tamarisk ornamented the banks of the neighbouring river; and in the garden was found a very beautiful Orobanche, growing parasitically from the roots of the Melon
Can any of our readers tell us what the Holly Oak and the Afghan Rouge plant are?
Introduction du une Flore Analytique et Descriptive des Environs de Paris, par MM. Cosson, Germain, and Weddell, is a little list of the plants found about Paris, pages, and gives the localities in which the species occur.
The new Number of Marlin Doyle's Cyclopredia of ractical Husbandry begins with Manures, and ends with Paring and Burning. As usual, it is full of good, usebad specimen- "Lord Meadowbank's mode of rendering Peat a profitable manure is by far the best. His suggestion is to form a layer of peat which had been previously in dry state, a little longer than the intended midden, six inches thick : and on this to lay freslo dung and peat in Iternate courses, diminishing each layer of or four feet ncles in thickness undia the ends (whice sould be formed to overlap for the purpose) and the sides hould be formed to overiap for the $p$ is, one load of dung ith peat. His lordship s proporind a little more dung to three of peat, in mild or warm, an full and general ferin cold weather, so as to produll mentation, which in suman il as to require an additional applad thoronghly mixed arep hould be turned upside a all the lumps broken a few weeks before using, after wents the appearance of garden-mould, and equals farmyard manure in strength."

AGricultural Corrispondents.-As this class of Correspondents is increasing, we beg to say that we are endeavouragriculture, to whom such inquirtes can be referred; and we hope in a week or two to be able to discharge all our arrears
under this head, in a manner satlsfactory to ourselves as well as our Correspondents
Anums.- Agricolu- - It is much cheaper to buy gypsum than the manufactory of pate. The candlatter is, however, a refuse in makers of them.-An Original Subscriber-It is stated that a is equal to its bulk of stable dung, and more permanent in its effects. Lievig, Amo your peat, it will become a valuable fer-
or wod-ashes to
tilising material, without any stable manure at all. Ammonia tilising material, without any stable manure at all. Ammonia
will be largely absorbed by the peaty matter. Mr. Rennie's book is no authority whatever. When fermenting materials are covered over with mould, it is not to prevent the escape of absorbed by the substances it is in contact with, and to keep ap the heat questions. If not, you must blame yourself; for who but a young lady can read crossed writiog. one-half of which is obliterated by the other half. $\dagger$-J. Wollaston. $-1 \frac{1}{2}$ or 2 cwt .
of guano will be a sufficient annul dressing for an acre of Grass land $\ddagger-$-II. MI. - Since you want to use your manure sulphuric acid. Guano must be used in mixture with 3 or 4 times its bulk of peat, ashes, cinder-siftings, gypsum, or some
such material ; not lime. it is too strong in its pure state ; old tan is a lad material. The guano is best applied to Grassland when the grass is beginning to grow, and in damp
weather ; 1 d cwt. an acre is enough. We shall be infinitely
 render sawdust fit for manure it must be rotted ; the best means of carmon and saline matters, but as a medium for condensing the volatile matters around it. Cloacine is a good material to mix with it. We do not anticipate advantage from mixing it
with gas lime, which, however, is a good manure in itself. It is absurd to say that sawdust creates wire-worms. The dust produced by singeing bombazeens ought to be a sood manure: agent. But we never hearcl of its being so employed. Its
value has to be determined by experiment. $B$. We do not find phosphate of ammonia quoted araong the articles solid by dealers in manures; it must therefore be obtained of the wholesale manufacturing chemists. Sulphate of ammonia is
sold by all the dealers in manure; and will no doubt become a sold by all the dealers in m
most important substance. $\dagger$
masrr.-A Cantab writes thus-"About 70 years ago a smal wood of Oaks was cut down from a dry bank in the county of
Cumberland. The shoots from the old roots grew up very thickly, and were repeatedly thinned, but not sufficiently, as the trees springing from them grew straight, tall, and thin, with
hardly any top. For the last 20 years they were observed to increase very little in size, and by the advice of those on the spot I cut the whole down again in the spring of 1839. The
first year's slioota were generally sponled in getting away the timber. and by the last two year's growth they have become having died off in many ciscs for a few inches dhring the wintef of 1811 . May I ask your opinion as to their future management? Ought they next spring to be thinned out, leaving
only two or three of the best shoots at each root; or ghould hey be suffered to take therr own course for one, two or three years longer? I saw them in August last, and was much diss lead of the rest; each old root had formed a regular bush." The diately cleared to two or three principal shoots, and kept and the event of a season waited. If they, next autumn, appear to be getting on, we woutd go on for a second yeur in the same if, after the first year, they still continue scrubby, we sinould cut them down once more, and take care to wateh the young shoots carefully, allowing only two to spring from each stock;
and as soon as one of these has fairly taken the lead of the other, we should remove the latter, the extremity of a pipe may Rating.- $A$ sufferer.-The joint at the extremity of a pipe may
be made water-tight at its point of junction with a brick or slate tank by what is called an "union joint." A series of such tanks as are described at p. 19 might be connected by means of short pipes, but then the pipes must lue large, and the last
tank only must have an incomplete partition. We can, howa ever, see noadvantage in such an arrangement. White lead and -It would lead us away from our objects if we were to admit much discussion as to the method of heating dwelling houses. stove, at p. 723, of last year's volume; and state in addition that another excelient method of obtaining heat is from small Water-pipes connected with a boiler at the back of the kitchen fire. The cost of your "cockle" is too great. t-Amaten"hardly recommend it. Nevertheless, if you adapt a pipe to glass, you may possibly find it answer your purpose.t ines, - F. Lamb. - We cannot recommend you a better recipe
for destroying the scate on Vines than a mixture of clay, lime,
soft-soap, thick paint. This must be applied over all parts of the Vines, after the rough bark has been removed from them. The steam of fermenting durgg might assist in the destruction of the
insects, but as you say the roots of your Vines are in the house, and near the snface, it would be dangerous to place
a large londy of fermenting material alove them. Should the heat of the dung raise the temperature of the soll bencath higher tian $4 i^{\circ}$ or $50^{\circ}$, it wonld he laghly prejudicial to the weak.t-J.D.-There are two was s, and two ways only, in which a Yew hedge will injure a Vme lorder. ## NEWS OF THE WEEK.

The discussions in the French Chambers during the past week afford a good insight into the state of parties and the opinions of their leaders. Although the debates ere merely introductory to the appointment of the Commission on the Address, although no definite question * before the House, men of the most opposite shades opinion seemed eager to seize the opportunity for de nouncing the Right of Search. The extreme party com tended for the immediate abrogation of the slav Treaties of 1831 and 1833; while others, feeling tha England, proposed a negotiation for their gradual abolition. It was contended, on one hand, that the last Chambers having compelled the Government to refuse the ratification of the treaty of 1841, it was impossible for the present Chambers to sanction any other treaties which were almost identical with it in principle; while M. Guizot declared that the treaties, though merely temporary, and contingent on the suppression of the slave Trade, weal executed. The result of this excitement will probably be the introduction of a passage into the Address, recommending increased vigilance in the execution of the treaties. Their abrogation by a legislative vote rould not only be subversive of all the prises would diplomacy, but, by the admission of all parues, it not amount to a declaration of war with Estrong enough in supposed the course they ave taken thus early in the session may be received as a significant indication of Freach feelings on this important subject.-From Spain we have accounts of the enthusiastic interview between the Regent and the National Guara or Madrid and of the rumoured negotiations between the King of the French and the Austrian Cabinet for effecting a marriage of Don Carlos. Letters from Barcelona state that, athough the time fos mall proportion has yet been collected and that many of the inhabitants are leaving the city to escape the operation of the decree.-From Poraral there is nothing new; the Chambers have been oce cupied with routine business, and with a consideration of the measures adopted by Ministers during the recess, with a view to a bill of indernity. - In Prussia, public attention is entirely occupied by the recent proceedings of the Government against the freedom of the press. One of the leading journals of Leipzic had lately published a letter addressed to the King of Prussia by the poet Herwegh, whose recentinterview with his Majesty will be in the recollection of our readers. The language in which this letter was couched is admitted on all hands to have been indecorous and dis-
respeciful; but the offence was considered so serious by the Government, that they have prohibited the circulation of the Paper in every part of the Prussian States, and have thus virtually crushed'it. The affair has caused great excitement throughout Germany ; more particularly as so harsh a measure was not expected from a Government which had apparently identified itself with the progress of free institutions. - The affairs of the Levant are again unsettled. The amicable relations between Turkey and Greece have sustained another check, and the interference of Russia is likely to produce additional complicaw
tions in the Servian question. The election of the new Hospodar of Wallachia has terminated in the triumph of the Russian candidate, and thus one of the most important provinces of the Danube will continue subject to her control.
At home, we have received from all parts of the country distressing accounts of the recent storms. The great extent over which they prevailed had in some measure pre-
pared the public for this intelligence, but the disasters on the coast, which every day of the past week has made public, have perhaps been unparalleled in their amount. Our Paper contains the particulars of many of these calamities, and there is, unhappily, no doubt that a great number have occurred of which we have received no
tidings. The shipping-interest has not for many years sustained so severe an injury, and the unusual loss of life has added to the general depression which these disasters have produced in all classes of society.

## 駺ome Netws.

Court.-Her Majesty, Prince Albert, and the Princess Royal returned to Windsor Castle from Claremont on Monday last, and are quite well. The health of the Prince of Wales has considerably improved within the last few
days. Prince Albert, attended by the Duke of Buccleuch and the gentlemen of his suite, came to town yesterday, and transacted business at the office of the Duchy of Cornwall.-Tue Earl of Morton has succeeded Lord Rivers as the Lord in Waiting; and ceed Mr. R. Ormsh, Gore ss the Grileer Guards, has suc on her Majesty. The Duchess of Norfolk, who has been in attendance on her Majesty as Lady in Waiting, left the Castle on Thursday for Town, in consequeace of the continued indisposition of the Duke of Norfolk, who had for several days been expected at the Castle. The Viscountess Canning has Norfolk as Lady in Waiting on her Majesty.

Parliamentary Movements.-Lord Clive was on Monday elected without opposition member for North Shropthe Peerage hy the death of the late Commander-in-Chief. The sudden death of Col. Clements creates a vacancy for the County of Cavan; the Hon. Somerset Maxwell has issued an address to the electors, soliciting their votes in favour of the Hon. Capt. James Maxwell, of the 59th Regiment, and third brother of Lord Farnham, who is at present at Jersey with the depot of his Jegiment.-An An leader of the Opposition, informing the Members of Opposition that quil the country will be brought forward at the commencement
of the session. - Sir R. Peel gave his first Cabinet dinner on Tuesday, and has issued cards for the usual full-dress Parliamentary dinner on the 1st Feb., the day previous to the meeting of Parliament.

## $\sqrt{F}$ oretan.

Francr.-The news from Paris is almost exclusively devoted to the discussion of the Right of Search, and to speculations it wive rise hereafter. The on the divisisions to which it will give ise the address the ates introductory to the Commissin on the adders were nominated favourably to Ministers, are peculiarly interesting to English readers, since it is generally considered that the abrogation of the slave-crade treaties of 1831 and 1833 would be a declaration of war between France and England. The arguments employed against the maintenance of the treaties of 1831 and 1833 are various. The extreme party would abolish them, from pure hostility to England. Others, like the members for the great seaports, oppose them, because they are the pretexts by which England secures her domination of the seas ; and the mildest foes of the treaties would abrogate them, because they threaten to produce collisions. The chief speakers against the treaties in the debate on the
Commission were M. Barrot and M. Dnpin. M. Barrot Commission were M. Barrot and M. Dnpin. M. Barrot
denied that the refusal to sign the treaty of 1841 was enough. The amendment voted by the last Chamber complained of the principle of the treaties of 1831 and 1833, and the present Chamber could not ganction those treaties. He did not want to abrogate those freaties at once, or break with England: he merely wished for advised the Government held the same language, and M. Lanyer, a follower of Count Molé, went farther, and argued that England had broken the treaty of 1831. The 9th article of that treaty obliged her to make efforts to induce all countries to join in the right of search. Instead of acting up to this article, Lord Ashburton abandoned it, and waived all such pretensions in his treaty with A merica. France was, therefore, doubly entitled to imitate not abandoned the principle of the treaty whenever she found it
impracticable. M. Lacave Laplagne, Finance Minister, declared he had been against the treaty of 1841, and
would gladly see that of 1831 repealed. But it could not would glady see that of 1831 repealed. But it could not had pressed the negotiation of the treaties. They had been ten years in course of execution before she complained, although the acts complained of had long taken place. the way in which the English Government listened to and received those complaints, left no cause for saying that the spirit of the treaties would not be respected. M. in refusing to ratify the treaty of 1841, without bringing about any interruption of harmony between the powers. upon no nerotiation with regard to the treaties of 1831 and 1833. M. Guizot said that the treaties existed. They were not perpetual in their nature, as they related to what was temporary, viz., the Slave trade. When thensel
supses. At present they exist, and ought to be legally executed. He admitted that certain regulations, tending to prevent abuse ventioen neglectea. One of cruisers. This regulation would again be put in force. It was the subject of pending negotiation, which would prevent any abuse of the right of search. -This debate will show what is the prominent doubt that the Commission will introduce a paragraph, either suggesting an increased vigilance in the execution of the treaties, or expressive of the wish of the Chamber that accomplished by the means of negotiations. All the leading partiee, however, disavow the notion of wishing a rupture with England by a demand for annulling the treaties of 1831 and 1833 ; but the feeling is strong and universsi for some arrangement similar to that concluded win the dimted convinced of the value and importance of the alliance between England and France; and that, although opposed merly Minister of Marine, still that he would religiousiy observe and execute all existing treaties. M. Thiers, also, although cautious in his language, manifests the desire that no attempt may be made to come into contact with European diplomacy by the attempt to break up solemn treaties by the expression of a legisiative vote. -It appears that the Sugar Duties Bim win be the feld a serions attack upon the Government. The Chamber of project, and adopted a report against the subject. It deprecates, as does the Journal des Débats, the suppression of the beet-root article, and insists on the equalization of duties at 40 francs on boch sugars. M, tion, whilh when the Right of Search is will be the prominent topic of the ensuing session.The Minister of Finance has laid before the Chamber of Deputies a comparative statement, showing the difference budget yotween the estimates or According to that document, the increase in the receipts rose during the last 12 years to $361,576,999$ f., and the diminution to
$60,190,774 \mathrm{f}$., leaving an augmentation of $301,386,225 \mathrm{f}$. The augmentation in the expenditure, during the same period, has been $498,638,012$ f., and the diminution 380,421,498f. The administration of Customs has also presented to the Chambers the general returns of the coasting trade during the gear 1841. This trade occapied 2.424,246 48 Vons. 1842 amounted to $751,257,000$. ( $30,000,000$.) As compared with those of 1840, they exhibit gn increase of $68,622,001 \mathrm{f}$. ( $2,720,0001$.), and exceed those of 1841 by
$35,584,000 \mathrm{f}_{\text {, }}(1,440,000 \mathrm{~s}$ ) -The Miscellaneous news may moured that M. Lacave Laplagne, Minister of Finance, moured that M. Lacave Laplagne, Minister of retire because he is hostile to the treaties of 1831 and 1833, and that the Minister of Marine has been authorized to establish armed factories on the coast of the Gambia, The Toulon papers state that the crew of
H.M.'s frigate Belvidera, Hon. Capt. Grey, were beaten in a rowing match in that harbour a few days since by the crew of the French line-of.battle ship Friedland. The statue voted by the Council-General of the Tarn to the memory of la Perouse has been cast at the foundry of M. St. Denis, with complete success. It is to be erected at Alby, the birthplace of the celebrated navigator. The two townetween Calais and Boulogne, as to which of the coast with the nould form the point or cons said to have been decided by the Ponts et Chaussés in favour of Boulogne. inst. Thin - We have accounts from Madrid to the 9th opinions state that the deputies of different poilisal the purp had held frequent meetings in that capital for contests which doubt, of preparing for the electoral The solemnity of Twelfih-day had attracted a large concourse of the nobility, ambassadors, and visitors to the Palace of Buena Vista, where the Regent received them on that day. Since the time of Ferdinand VII, no reception at Court had been attended with so much éclat. The Regent replied to the address presented to him on the Guard, hat heneral derires, of the nation, and that he had no other interest than that of defending liberty, the constitution of 1837 the throne of the Queen, and the independence of his country After praising the patriotism displayed by the militia of Madrid
in October, 1841, the Regent added:-"I am the chief of the State, the Regent of the kingdom, during the minority of our august Queen. In the course of twentytwo months ber Mojesty will have attained her majority, and moy heart tells me that I shall then be able to say, - Madam, on me devolves the glorious mission of com. mitting to your hands the destinies of a great and independent nation; so great, Madam, that not only is it respected, but dreaded, by foreign nations. My heart, I am sure, will not deceive me. This object once achieved, I will retire into private life, amidst my fellow-countrymen : I have no other ambition. But if, when seated by my family fireside, I see the throne shaken, and the constitution we have sworn to maintain exposed to danger, Inll again fly to their defence, offer my breast once more to save liberty, the throne of Isabel II., and the constitution." The Regent was interrupted here by the enthusiastic applause of the National Guards. He then re-sumed:-" Nationals! Such are the sentiments of a true Spaniard. Should the enemies of our glory and our hberty attempt to tarnish the honour of that soldier, of
the Spaniard who now addresses you, I anthorize tell them ant who now ailansses you, 1 aut anze you to have read the heart of a man who knows no deceit. Time passes over rapidly: time will show the sincerity of that citizen-soldier, of that old Spaniard, who desires nothing beyond the glory of his country." This speech was rebattalion of the artillery of the National Guard, M. Villabriga, having stepped forward, protested, in the name of his comrades, that if there existed men he might depend on all the National Guards of Madrid sacrincing their lives in defence of his person. Since this took place, the officers of the National Guard have presented an address to Government, praying for the presin measures against the calumnies of the daily ress against the Regent. The National Guard of Madrid and hentizens; its oftcers are elected by those citizens, citizense this document is virtually a protest of all the city of the capital against the journalsof the same daity in state affairs there is nothing new, except the busily neasing conviction that the French Court is It is believed in secret negotiations respecting spain. bent hat Louis Philippe and Queen Christina of Queen Isabell negotiating, at Vienus, the marriage that Prince Metternich is disposed to give his sanction to the scheme.-Letters from Barcelona of the 8th inst. state, that the greatest effervescence prevailed in that city in consequence of the bando issued by the mumicipality at 27 desire of the new Captain-General. Not more than 27 citizens had, in compliance with the General's injunc extraordinary contribution, of which only quota of the had as yet been collected, leaving no less than 112,000l. to be paid up. Many of the inhabitants were determined to leave the city rather than obey the orders of the authoresistance, and allowing their property to be seized, sooner than submit to the exaction. The rebuiding, sooner citadel was proceeding very rapidly, and so desirous were the military authorities to accelerate its completion, that the works were not even interiupted on Sundays and other holydays, which is very unusual in Spain, where the Sabbath is strictly observed.
Portugal.-We have advices from Lisbon to the 9th samuary, and ketters and journals from Madeira by the Lisbon had been occupied with routine business and the verification of the late elections. The Ministers were submitting to the Chambers a statement of the various measures adopted by them during the recess, preparatory to the proposition of a bill of indemnity, and the Queen's French and Enclish taken into consideration. The wrench and English line-of-battle ships still remained returned to Don report report of the commission on the subject of tariff reducWere in the Government was expected to adopt. invalid not for the unusually large number of 400 English invalds ad stangers now wintering at Funchal, and spending large sums of money, the shops, and even the Custom-house, would be closed, and the island literally ruined. The weather had fortunately continued fine. Hanovany.-From Berlin we learn that the King of Hanover arrived there on the 10th, from Dessau. On the previous day the Crown Prince set out for Altenburg to spend a short time with his bride; and it is expected that the King will join him there before his return to Hanover. The Prussian Government lately issued an ordinance against the Leipsic Allgemeine Zeitung, not only prohibiting its circulation in Prussia, but at the same time prohibiting the forwarding of the Paper through any Prussian post-office. The number of subscribers in Prussia is estimated at 2,400 , in addition to which all the subseribers in Mecklenburg, Hambargh who were accustomed to receive the paper through the Prussian Post-office, will henceforth be prevented from receiving it. Under these cir cumstances the decree will have the effect of complety extinguishing the paper. The reason which drew down upon it so severe a measure of anger, was the puich a letter from the poet Herwegh to the King of Prussio, a let ter which is spoken of on all sides as having been couched in highly indecorous language, but which Herr Herwegh contrary to his wish. It seems that he is a young man, a
native of Zurich in Switzerland, and consequently by birth a celtizen of a republic. He has acquired a good deal He had been connected with the Leipsic Gazette, although he resided at Berlin, and he was about to undertake the management of an Opposition paper at Konigsberg. A report was current that this new paper would be the organ of extreme opinions. The Prussian Government, the letter which has produced all this excitement. Our readers are already acquainted with the interview between the poet and the King of Prussia a few weeks since, which this affair is likely to make famous throughout Germany striking proof of the advance in public prosperity caused by the introduction of railroads. Since the completion Altenburg, the population, which was before only 43,000 , Altenburg, the population, which was before only 43,000 ,
bas increased to 55,000 , or a quarter more. The business of the fairs here, which five years ago amounted to 40 millions of thalers ( 144 millions of francs anyear), at pre-
sent has reached the sum of 70 millions of thalers ( 252 millions of francs) per annum."
Turker.-Accounts received by way of Vienna from Constantinople, dated the 21 st ult., announce a fresh rup-
ture between the Ottoman and Greek Governments ; and it was feared that the Turkish Minister at Athens would
demand his passports. The election for Hospodar of demand his passportt. The election for Hospodar o
Wallachia took place at Buchorest on the ist inst The national Wallachian party brought forward Styr Bey as their candidate, but the Russian party triumphed; their
candidate, M. Bibesco, having succeeded in obtaining the absolute majority, and was declared duly elected Hospodar of Wallachia, A rumour was current at Constantinople that Col. Stoddart, formerly attached to the mission in count of his travels in Central Asia, and who was at Con. stantinople in 1837 or 1838 , have been beheaded in BokBokhara as spies, and could have got away through the favour of the Russian political agent, but refused his assistance; and after a number of trials and sufferings, they
were at last taken from prison to the market. place, where Colonel Stoddart was first beheaded. That when this was done, Capt. Conolly could still have saved himself had he offer, and also immediately fell under the headsman's ofer, and also immediately fell under the headsman's knife. Such is the account as given in letters from Con-
stantinople, but it is hoped that it may prove unfounded. Btantinople, but it is hoped that it may prove unfounded. Bey had, of his own free will, proclaimed the freedom the children of slaves hereafter born in the Regency.
Cape of Good Hope.-We have advices this week
from the Cape of Good Hope of the 26 th Nov. brought by the unfortunate East Indiaman Conqueror. The papers dwell at some length upon a declaration of war, or
least a denunciation of the British government, and renunciation of allegiance, by an assembly of Boers in the Vicinity of the Orange River, close upon our border, in the presence of Mr. Justice Menzies, chief puisne judge
the colony, and other authorities. They also made ove tures to the Griqua chief of Philippolis to unite with them in the revalt. The Judge had taken formal possession of
the district on account of the English government ; but this act had been repudiated by the Governor as unnecessary, the whole territory belonging already to the
Crown, The affair, however, is treated in a very serious light by the Cape press, which laments that the government had for some time past been "letting down its authority "" "and says that the natural result of this behaviour "has been open rebellion, bloodshed, devastation, and pluader, and is now a more extensive rebellion than has ever been known in South Africa under either
the Dutch or British government. The South African Advertiser declares that mischief has been done that will require thousands of soldiers to repress, und at an expense of not less than a million of money. The country about Graham's Town, and to a long distance in the interior, is represented as having been in a deplorable state from a protracted drought. Many farmers lad been obliged to Fish and Sunday Rivers had ceased to flow; many springs had dried up, the pasturage had disappeared, and even the hardy karoo bushes presented nothing but thin, dry, and comaned branches. The rains, however, had at last Which were rapidly failing for want of noisture, would be partially secured.

Brazils.-By the Express packet, which left Rio on H, Ellis, Nove, We have intelligence that the Right Hon. most favourably received by the Emperor and his court, and though there was a good deal of opposition to the Was in its favour, andit is fully anticipated that the Envoy will be able to come to such an issue as will improve the intercourse between England and the Brazils. Mr. Ellis arrived in H.M.S. Salamander on the 11 h inst., and deliYered a long address to the Emperor in French; to which Your Imperial Majesty replied as follows--"Yon may assure fruendshust Sovereign, that this additional proof of her Tiendship is very gratifying, and highly esteemed by me."
Unrted States and Canada. - The mail-steamer Britannia arrived at Liverpool on Sunday night. She felt the full dreadful weather during the passage, and notwithstanding, made the voyage in less than 14 days from port to port, and brings papers from New York to 31 , mat port to port, and brings papers from New York to 31st
ult., from Boston to lst, and from Halifax to $3 d$ inst. Whe proceedings in Congress were of the ordinary kind.

The subjects before it were purely domestic, though allubeing made for papers concerning it. The Government seemed to be blamed for having passed the subject over in the negotiations between them and Lord Ashburton. trieval of the British arms in India from the disastrous campaign in Affghanistan, had excited lively feelings of astonishment, mixed up with a portion of jealousy, on the part of the American commercial classes. The inquiry Somers, the details of which are already before our readers, was sitting at Brooklyn, opposite New York, on board terest. The court consisted of three of the oldest com manders in the service, and of the Hon. Ogden Hoffman the Judge Advocate. The three days' proceedings before had not terminated ou the York papers. The inquiry had not terminated on the that the commander and officers had performed a perfectly justifiable act in condemning and hanging the cbief paries implicated in the conspirac give a more favourable account of the Governor-General.s
health, indeed much more so than was anticipated. There is not the slightest doubt that he will return to this country as soon as possible, and his medical attendant are of opinion that by the change
will be thoroughly re-established.

Altempt to Assassinate sir R. Peel's Seoretary.-We are concerned to announce that an attempt was made yesterday afternoon, in open day, and in, a crowded
thoronghfare, to assassinate Mr . Edward Drumond, the private secretary of Sir Robert Peel. Very few particulars his name, or explain his motive. It has, however, been ascertained that he is called Daniel M'Naughten-a native, it is supposed, of Glasgow. The crime was perpetrated in It appears that Mr. Drummond had left Sir R. Peel at the Council-office, and had been at his brother's bank at Charing-cross. He was returning to Downing-street, in company with a friend, when $\mathrm{M}^{\circ}$ Naughten came behind him and discharged two pistols almost simultaneously other entered in a slanting direction, and passed from the right thigh. The assassin was inmediately seized by the bystanders, and the wounded gentleman was supported into Messrs. Drummond's Bank. On the arrival of a surgeon, Mr. Drummond was removed to his own house, in Grosvenor-street. Bransby Cooper and Mr. Guthrie, and although a portion of the linen which was
forced into the wound still remains there, the surforcens have declared that no vital part is injured, and that they have every reason to believe that Mr . M - Naughten had been seen Jurking about the residence of the Prime Minister for several days past, and there is, therefore, reason to suppose that Sir Robert Peel was ble to imagine any personal motive for the commission of a crime hitherto so un-English in its character In private life no man could have been more generaly courtesy had so completely gained him the respect of all who were brought into communication with him in his official capacity, that all suspicion of the assassin having been actuated by private vengeance is at once removed. The man's dress and appearance resembled that of a gentlemains of course in the custody of the police.
The late Hurricane.-The daily papers have give long accounts of the damage done in the neighbourhood of town by the hurricane of Friday night. The streets of the Metropolis and the suburbs were strewed on Saturday morning with fragments of broken chimneypots, tiles, slates, \&c. ; while, out of town, trees, palings, \&c., have been blown down in all directions. In St. James's and Hyde Parks the promenades were covered with branches of trees. In Keasington-gardens, an ancient elm, on the border of the Bride of the spot, was tor up by the roots. On the Bayswater side of the gardens a lofty lime shared the same fate, and an oak in the long avenue was blown down, while all parts of the ground were covered with branches of trees. On the Palace-green Sussex, a large tree was also torn up by the roots. At Brompton-row, in the Fulham-road, two ash-trees, which ave for years formed part of a row skirting the edge of he footpath, were torn up by the roots; fortunately though numenes no accident occurred. At Hackney Islington, and Kingsland, many trees were blown down and several walls and fences were destroyed. At Notting hill, Shepherd's Bush, and other elevated and open parts nearly every house suffered more orless. in the Addisonroad a green-houne, on the premises of Mr. Jackson, was
blown down. Up the river, about Chelsea, Fulham, Putney, Wandsworth, Hammersmith, Richmond, \&c., several barges, some heavily laden, with boats of every
description, were drifted from their moorings, and although the greater part of them ran on shore, several were surik Along the shore on each side, the walls and palings and some fine trees, were blown down, and considerable damage was done to many of the market-gardens by the influx of the tide. In Chiswick Park, the seat of the Duke of Devonshire : Ealing Park, the seat of Lady Carr " Zion Park, Duke of Northumberland's; Osterly Park, Ear Jersey's; Hanworth Park, Mr. Perkins ; and Stanwell Park, Sir J. Gibbons; several fine trees were uprooted, and limbs and branches torn off; while the roofs of sheds, outhouses, and stacks were blown off in other quarters In the course of Saturday alone, intelligence was receive at Lloyd's of the loss of 22 vessers, and 66 other losses were reported on Monday, exclusive of partial injuries. It would fill a large portion of our Paper if we gave even catalogue of these disasters, and of the others which have since occurred. The loss of the Conqueror Eastthe other wrecks on below, and the most important of our Provincial News. Eoglish coast are noticed under heavy falls of snow at intervals during Saturday, which was followed by a slight frost on Sunday morning. The wer in the changeable, and has continued to present alternations of rain and frost.
Loss of the "Conqueror" East Indiaman, -In our brief notice in our last of the destructive hurricane which visited the Metropolis on Friday night, we expressed our from sat from various parts of the country. The great extent over which the storm prevailed has in some degree prepared the public for the inteligence of wrecks fromali quarters and we regret to say that the most gloomy apprenensions have been more than realised. A list of disasters, perhaps unparalleled in their extent, has been already pecen and there is reason to fear that the catalogue will even jet be greatly augmented by subsequent arrivals. Only six weeks have elapsed since the attention of the country was painfully excited by the loss of the Reliance off Boulogne, when nearly all the passengers and crew were lost. Another East Indiaman has now to be added to the melancholy list of wrecks on that coast. The Conqueror, a finevessel of 800 tons, belonging to Messrs. Wigram and Green, bound from Calcutta to London, and commanded by Capt. Duggan, after beating aboust in the Channel during the heavy gale on Friday night, was driven on shore off Lornel, a small town on the French coast, only six miles distant from Merlimont (where the Reliance struck), at about half-past 10 o'clock, and almost immediately went to pieces, every soul on board being lost, with the exception of a boy, named Henry Abchureb, one of cure cuddy servants. The crew consisted of about cabin passengers, viz., Mrs. Thompson, and four childrenone girl and three hoys; Mrs. Major Johnstone, with one girl and three boys; Capt. Milner, 39th B. N. I. Lieut. and Mr. Marshall ; Miss Turton, daughter of a judge at Calcutta; Master Bluke; Master Reeves; and Mr. Stephens, in command of a detachment of the 91 st from St. Helena. About the same period a Swedish ves. sel was wrecked near the spot, and all hands perished: s also an English fruit-vessel, with the whole of her crew Three other vessels were also wrecked: among them was a large threc-masted Russian, of Etaples, in which every soul perished. From the details given by the poor boy mentioned above as the only survivor of the Conqueror, it appears that she struck at half-past 10 on Thursday night off Lornel near the entrance of the Canche, where the sandbank eatend a considerable distance from the shore. puring the wine-lights, rockets, and signals of distress were fired without intermission. The wreck res ber be in the coast but such was the bois the weather at the time, that is is ber impore to assistince. The pesel held topether nearly twelve hours, and went to miece about nine Friday morning. The es was at this time running very high, and although mate seems to have been made to save the crew, and out of seventy persons believed to bave been and the boy Abchurch was the only period. He had been lashed to a spar, and was in a most exhausted spas inmediately applied, and hed state. Refore ten $\mathrm{o}^{\prime} \mathrm{clock}$ Mer shewly regained consci with one of her Mrs. Thompson was washed on who was in daily expec children. The unfortunate nol quite dead, but survived tation of being conined, The wind continued to blow nly a few momen woring the whole day, and several strongly from the N.W. including Mrs. Jenking fir bodies came on sha two soldiers. Information was children, tory forwarded to Boulogne, and Mr. Hamilton med Fiday afternoon and the consul, arres of despatches which had come on shore clarmed of the wreck and cargo were washed on shore during the day, and taken possession of on behalf of the underwriters. Mr. Hamilton directed a number of coffins oo be prepared for the bodies and a number of cols fo the proper performance of the and made arrangements the weather has pery of the funeral service. Althoge strong gales have prevailed moderated since Saturday, many bodies drifted ashored, in consequence Monday and it is generally believed that nearly the whole of the here is a remarkable similarity in the circumstances attending the loss of the Conqueror to that of the Reliance on the same shore, which
we had so recently occasion to record. A letter, addressed by, one of the seamen to his father and mother, on Thurs day week, when the ship was of Torbay, shows that the Conqueror was all well at that time, and running up the Channel with a fair wind. The coincidence between this case and that of Captain Green, of the Reliance, who
addressed his brother under similar circumstances from addressed his brother under similar circumstances from
the Lizard, cannot fail to be remarked. The ship which the Lizard, cannot fail to be remarked. The ship which
brought the letter from the Conqueror was the American brought the letter from the Conqueror was the American
liner Westminster, which was in company with her during liner Westminster, which was in company with her during tacking on each other's course. The latter ship arrived in the Downs on Sunday last. The Conqueror left Bengal on the 18th September, 1842. No advices had been
received by her owner from the Cape, but it is conjecreceived by her owner from the Cape, but it is conjec-
tured that she had made a very favourable passage from tared that she had made a very favourable $p$
Wrech of the "Sessie Logan" East Indiaman,-On Tuesday, information was received in the City that another East Indiaman had been added to the melancholy catalogue of losses occasioned by the late gales. The vessel was the Jessie Logan, the property of Mr. Logan, a merchant at Liverpool, from which port she traded with Cal-
cutta. She was 850 tons burden, and commanded by Capt. Major. On Monday last, this vessel, being on her homeward voyage, and apparently making for Boscastle or Bude Brys, on the Cornish coast, became unmanageable, and was driven aground off Boscastle, about 17 miles tress were made; but such was the fury of the gale and the violence of the surf, that none would venture to her assistance. At length she drifted on the rocks, and soon became a total wreck. she had evidently been abmaned ng been washed passengers ; but, from the long soat hav have all perished, as, up to the present time, no information has been obtained respecting them. She was a North American-built vessel. Her cargo, consisting of rum, sugar, spices, and general East India produce, has been washed ashore on the coast, but no despatches or paper the other calamities recorded in other parts of our Paper, 20 other vessels have been reported as wrecked on othe parts of the W
Court of Aldermen.-A Court was held on Tuesday, at which the question of wood-pavement was discussed with a view to its applicability to the City thoroughares. Sir P. Laurie, ith sging tar quasion orara, stated that whe agree that the shopkeepers wonld find cope mistake in adrocating the substitution of wooden for stone pavement, as few persons would allow their carriages and and e did . io going out or his wis hise life use trusted that the authorities would interfere to prevent the further extension of the new plan of paving. Very further extension of the new plan of paving. Very difficulty of checking the borses of omnibuses, and two drivers had been tried and acquitted, the jury having greed that it was impossible to exercise any control over orses travelling over such a perilous surface. On Sunday morning he had witnessed a curious sight Blues were returning from the Horse Guards to their barracks they all dismounted in Argyll-street, in which the wooden pavementis laid down, and hed their horses until recommenced, and, upon making inquiry, he learned that the extraordinary action of dismounting was occasioned by the severe fall of a soldier upon the wooden pavement, He was on the hench of any spirit could scarcely stand. bil bench whe a die of ond was tried by Lord Denman for having run over a man in Coventry-street, in which the wooden pavement was laid down, and the prisoner was acquitted, proof having omnibus to pull up on such a surface. At the last sesions, a cabman was acquitted before Baron Gurney upon similar grounds; and Mr. Payne had recently held an in quest upon a young female who was killed in the Poultry In his opinion the magistrates of London were bound to do alt in their power to prevent such consequences as pavement. Alderman Gibbs said, that, although as chairman of the Sewers ' Conmissioners, he was decidedly opposed to the introduction of wooden pavements, he was ished that the question by those who admired it. He commissioners against the substitution of the new plan for the old one, and he would give them all the support in his power. He was sorry to inform the couts, and that, on that very day, a petition had been presented to he commissioners for the introduction of a specimen. pendently of were not nithou he had been informed by medical authority, that, since the wooden pavements had come in'to fashion, accidents had increased one-third Alderman Wilson declared that he would not risk his cariage and horses in the streets into which the wooden pavements had been introduced. The shopkeepers would oon find that West-end customers rould be very cautious of hazarding the safety of their own persons, and the lives of their horses, on the wooden pavements of the City; and they would also find that the wooden pavements would be much more expensive than that to which they had been accustomed. A Griman Copeland repeated said he was frequently put to great inconvenience in con-
sequence of his reluctance to ron the hazard of driving
in the City. Sir Peter Laurie hoped that the inhabitant in the City. Sir Peter Laurie hoped that the inhabitants a magistrate of the City, considered it to be his duty to bring forward in order to rouse them to exertion.
The Scottish Monument.-At the meeting of the Ma rylebone Vestry on Saturday, in reference to this monument, the proceedings were suddenly stopped by an an nouncement from the vestry clerk that he had that instan received a document from the the Scortish monument which demanded the immediate attention of the vestry The document was signed by Messrs. Pemberton, Craws ley, and Gardner, Solicitors to the Board of Woods and Forests. It stated, that having ascertained that the ex cavation lately made in the Regent-circus had been made
by the vestrymen, or under their assumed authority, for the purpose of laying the foundations of a monument, her Majesty's Commissioners had directed their solicitors to give notice to the vestry that the soil and freehold of the
Regent-circus are vested in her Majesty, and that the limited jurisdiction which the vestrymen possess at for the purposes of paving, cleansing, and lighting, does not extend to authorize the erection of a structure which is not designed for any of those purposes. That her Majesty's Commissioners consider the erection of the intended monument upon the property of the Crown to be tors to file an information and bill for injunction in the Court of Chancery, for the purpose of preventing it. A long and angry discussion ensued, the opponents of the monument expressing their satisfaction at the result, and its supporters contending that the Commissioners had no legal power over the ground. Mr. Joseph suggested that the vestry should at once, as wise men, rerrace thet with issued by the "vestry to suspend all further proceedings relating to the erection of the Scottish monument in the Regent-circus, and that notice be immediately given to the architect to that effect." Sir R. P

Missionaries to China.-One of the largest meetings, perhiaps, which was ever held in Exeter-hall, took place on Tuesday evening, being convened by the London Missionary Society, to consider the means of extending and promoting Christianity in China. The doors were pened at five o'clock, and by six the hall was so full that policemen were stationed at the various entrances to preDr. thank Chin ond Grent Britain and for greatly enlarged China tion of Christianity into that empire. This resolution unanimously Serersl other resolutions were likewis passed, one of which, moved by the Hon. and Rev. B. Noel, stated that the Anglo-Chinese College was to b emoved from Malacca to Hong-Kong, and that the Misisland. The meeting did not separate till a late hour, and collections were made at the doors.
Fires.-One of the most destructive fires which has visited the Metropolis for many years broke out on Monday evening, about seven o clock, on the extensive floor-
cloth manufactory of Mr. Rolls, situated within a few cloth manufactory of Mr. Rolls, situated Old Kent-road. The prenises occupied a commanding situation, fronting the main road, and were well known to all persons
acquainted with the Greenwich and Dover-road, They acquainted with the Greenwich and Dover-road, They
are surrounded on the west by the Marlborough-road, are surrounded on the west by the Marioorougn-wn as Ranger-place, at the extremity of which stood the stin
more extensive factory of Mr. Goulston, also a floor-cloth more extensive factory of Mr. Goulston, also a minutes fter the fire was first discovered, Mr. Rolls' premises were in flames as high as the upper windows, being chiefly built of wood, and filled, of course, with com-
bustible materials. Notwithstanding the efforts of the bustible materials. Notwithstanding the efforts of the fire-brigade, assisted by several engines, the fire continued almost uninterruptedy until the whole factory, consisting of painting-rooms, arying-houses, store-rooms, ware houses, and the other appendages to a floor-cloth manu factory, were consumed. Some private dwelling-houses a the side were also destroyed, together with proplor-cloth actory of Messrs. Goulston, adjoining the private houses which, being built chiefly of wood, was soon in flames, and burning with great fury. In a quarter of an hour all was de stroyed. The heat from the burning buildings was at thi meso great that water had to be thrown on the house op. posite, to prevent them from catching. The fire was at leng but, being a few moments, by the fanmg of wood, they soon ignited again, and were destroyed. By nine o ${ }^{\circ}$ clock the surrounding buildings were out of danger. The Kent road was completely stopped, and no vehicles were alow found impossible to get the horses by, until their eyes were bandaged, when the coachman with some difficulty sucof $20,000 \mathrm{l}$., but all the property is insured
Accidents.-On Sunday afternoon, during the performance of divine service, an accident occurred in the chapel in Queen-street, Lambeth. At balf-past three, Sunday schools in connexion with the chapel was being delivered to a numerous congregation, a temporary gallery, erected for the accommodation of the children
instructed in the schools, fell, carrying all who were in it instructed in the schools, fell, carrying all who were
to the ground. About fifty children were seated in the time, and many of them were seriously injured.
ers for the city and liberty of Westmintor Sewers for the last week, to consider the steps to be taken with referthe sanatory condition of the poorer classes, presented by Royal command to both Houses of Parliament during the last session." A court was held on the 23 d ult., when the proceedings were almost wholly confined to the hearing an address from the chairman, Mr. Donaldson, in reply to certain charges and imputations contained in the pub lished report of Mr. Chadwick, secretary to the Poo Law Commissioners. After several gentlemen had expressed their disapproval of the reports, Mr. Leslie suggested the following resolution:-"' That the Court requests, an investigation under the anthority of Her Majesty's Secretary of State for the Home Department into the charges brought against the Westminster Commissioners of Sewers in the report of the poor Law Com missioners on the sanatory condition of the poorer classes, and roascertain the best means of cleansing the streets geous form of sewers for the public interests." This resolution was carricd by a majority of 17 to 1, the suggestisentient being Mr. Faws, the present motion becas to the Poor Law Report.
Southwark.-The inhabitants of St. Saviour's, Southwark, heid a meeting on Friday, to take into consideration the cause of the abandonment of the recently-proposed performance of sacred music in the church; to consider formower of the bishop and clergy to prevent such perthe wardens havi church." The requisition calling the meeting had been signed by upwards of 100 persons, and 103 were said be present. The statement in the Bishop of Winchester's letter, referred to in the notice, was as follows:- "Wit the minister aione, subject, of course, to his responsibility the ordinary, is the right of exercising his discretion as to the allowing the use of the church for any meeting except for the customary meetings of vestry for parochial business. The minister has a perfect right to refuse the ase of the church for such a performance as advertised; and I may add that he has not only a right so to do, but now his bounden duty. The churchwardens have no nower to grant the use of the church." Resolutions were he bishop's interference, referring to the precedent for per formances of sacred music afforded by the annual reheats at St. Paul's, and the musical festivals in the provinces and declaring that the chaplains of St. Saviour's have no right, as the bishop imagines, to interfere in the management of that parish. From the facts stated in the resolution it appears that neither of the ministers is rector of the parish. The rectory, with all its rights, privileges, and appurtenances, was granted upon purchase, by letters patent from James I., to certain inhabitants in irust for he wardens, who for the time are the rectors, and are athorized mong or wardens are to be under the control of the Bishop of Winchester only in such matters as those over whishop of legal control. In regard to the schools, for whose benefit the performance was intended it was stated that the pro fessional singers engaged for the occasion tad voluntarily resigned their claims for compensation ; and the rumou that the bishop had contributed 200l, to the charity was officially contradicte
Hammersmith.-On Monday a numerous meeting of he ratepayers of Hammersmith was held in the vestry room of the church, in pursuance of a requisition to the churchwardens, for the purpose of taking into considera tan the vexatious and oppressive nature of the Income tax, and of the machacry-aike unequal, unfair, and inquisitorial, by which this odious impost is inflicted upon too generous and too confiding public, and also, the ature for its adopting petitions to the Houses of Legis oted to the room being ing whe thold the large ne ver of an adjournment took place into the body of the church. After a long discussion, the following resolutions were adopted, and ordered to be em bodied in petitions to both Houses of Parliament:. "That the object, the principle, and the extent of all tax ation ought to be limited to the promotion of the prosperity of the commonwealth, and the equal protection and security of every individual member of the community." property as a legitimate impost, were each individual called upon to contribute towards the charge for tion a fair share of the burthen, honestly commensurate with the extent and value of his interests and possessions. "That a tax upon income appears, on the contrary to be a tax upon individuals, in very many cases distinct from all property, unjustiy extorting from the honest f labourers and unremitting exertions of individuals for the support of their families, an equal of of burthen to that assessed upon the more fortunate possessor of funded wealth and hereditary property." An amendment was moved in the course of the proceedings, "That the parishioners are of opinion, that direct taxation is better than indirect taxation, and that it is therefore inexpedient to petition Parliament against the Income-tax ;" but on being put to a show of hands, three only were held up for
it, and the original resolutions were finally carried without
Mortality voice
Mortality of the Metropolis.- The number of deaths registered in the week ending Saturday, the th inst.,
was 869 ( 451 males, and 418 females). This mortality occurred in the five districts in the following proportion, to which, being the first return for the year, we shall add the parishes included in each district. West districts,
including Kensington, Chelsea, St. George's, Hanoverincluding Kensington, Chelsea, St. George's, Hanover-
square, Westminster, St. Martin's in-the-Fields, and St. square, Westminster, St. Martin's-in-the-Fields, and St.
Janaes's, Piccadilly, 130 ; north districts, including St. Marylebone, St. Pancras, Islington, and Hackney, 151 central districts, including St. Giles's, and St. George's
Strand, Holborn, Clerkenwell, St. Luke's, East London Strand, Holborn, Clerkenwell, St. Luke's, East London,
West London, and City of London, 164 ; east districts, including Shoreditch, Bethnal-green, Whitechapel, St, George's-in-the-East, Stepney, and Poplax, 213; south districts, including St. Saviour's, St. Olave's, Bermondsey, St. George's (Southwark), Newiagton, Lambeth, Camber-
well, Rotherhithe, and Greenwich, 211. The weekly Well, Rotherhithe, and Greenwich, 211. The weekly average for the five previous years was 903 ( 461 males, Population in 1841, $1,870,727$.

## Zarobimíal Nebos.

Bristol.-The late storm, which appears to have affected Brimost every portion of the kingdom, in its progress visited and Friday with the utmost fury. During the night the Find blew with great violence, producing the usual effects partly unioofed. Among other accidents the Gothic window of St. Nicholas Church, in the clock-tower, was torn completely out of its framework and dashed in. The Vane of St. Philip's church also was torn off. From St. Werberg's Church several copingstones of large size were blown down. At the West of England Stay Factory the the roof, dashed it in, and the whole mass forced its way through the ceiling of a room in which upwards of 50 girls were at work, causing, of course, the utmost convessels in the Severn were driven on shore, and some foundered at the mouth of the river.

Brighton.-The storm was severely felt here during the hole of Friday. Some of the old fishemen declate that they never saw the waves rise so high; they occasionally covered the chain-pier, which rocked very much, but has escaped uninjured. The wind brought the Shoreham train on the railway to a stand-still. The Defiance, Portsmouth coach, which left at $4 o^{\prime}$ clock, was blown over near Shore-
ham, and the passengers so much injured that they were obliged to be conveyed back to Brighton. A boat lying n the beach at Shoreham was blown into a field, and shashed to pieces. At Kemp-Town all the fences and
hoardings were levelled with the ground. The houses on the cliffs wave leceived great injury; the Bedford Hotel presents the appearance of an attack by rioters, almos pery window in that fine building being broken. A great portion of the roof of the theatre was carried away. Mr . of his green-house blown off and smashed to pieces, damaging many of the plants. The tall chimneys in the refuge in the to and fro, and many of the inhabitants took state of alarm from the roofs being beat in. From the falling stacks scarcely a roof in an exposed situation has escaped injury. The fishing craft on the coast sustained much damage, and many lives were lost.
have bemont.-The gales during the past week, which have been generally destructive throughout the country Claremone considerable damage in the neighbourhood o down in the park, and the plantations and shrubberies in the vicinity have been injured to a great extent Nearly in front of the mansion at Claremont are two fine cedar least, supposed to be upwards of a century old, and at the 40 feet high. Between these trees formerly stood edifice. Durin, previously to the erection of the present Thursday, the top of one them was blown down, the Wind snapping the stem in truain about 25 feet from the ground. The other tree was also shorn of many of its branches; and the beauty of both is materially injured. In the course of Friday the royal standard hoisted on the Steeple of Esher church, in honour of her Majesty's visit, Was blown into chreds. At Ditton, Hook, Chessington experienced and the severity of the storm was equally numenced, and considerable damage has been cone to Liverpool.-The observers of the barometer were asto nished, on Iriday morning, on inspecting their instru hads, to find that an extraorcinary fall of the mercur This unusulace during the night, from 28.92 to 28.05 versationsual phenomenon was the general topic of con rooms waring the day. The barometers in the public novement under constant inspection, and the minutest morning of the mercury was watched and noted from had an earthquake, for the great earthquake at Lisbon Otheen preceded by an extraordinary fall of the mercury. and that as antained that it was the precursor of a storm, Ward, that was the was blowing smartly from the westtation would come All agreed that some severe visi earth was impending, but whether a convulsion of the that thy advanced, however, the wind increased, showing wat the predictors of the storm were the true prophets.

Towards evening it had changed from a gale to a storm, and from 6 oclock on Friday night till 4 on Saturday loss at sea as well as on land. The hurricane was at its beight between 2 and 3 o'clock. It was, with short pauses, terrific. People who were exposed to its fury had not the slightest doubt that it was as violent as the me-
morable storm on the night of the 6th January, 1839. morable storm on the night of the 6th January, 1839 . ing, was one sheet of form, the waves running as high as if it had been a full tide in calm weather Hundreds of families, especially those who reside in situations exposed during the night. They sat up in the lower apartments of their houses. With one exception, however, where roof fell in and buried a thole family in the ruins, the damage done to the buildings by the tempest has not been serious. This accident occurred in the London road, but the inmates were all rescued alive. Several vessels were wrecked and many lives lost in the harbour and off Holyhead.
Manchester.-The storm of Friday was anticipated in this town by the remarkable depression of the barometer observed by Dr. Dalton and other meteorologists. The fall was so rapid"and so low as to produce a general impression that it was connected with some sudden convulday, at $60^{\prime}$ clock p.m., the mercury began to descend in the barometer, and in five hours sank .12 of an inch, when it stood at 29.05 inches. On Friday ncorning at 8 o'clock it stood 28,15 inches; and gradually descended until 2 p.m., when it was observed at 28.02 , being lower by 16 of an inch than he ever observed it at Manchester. The only depression which he has found in his journal of that ations made in Manchester for upwards of 49 years, 23d Nov., 1824, when the mercury stood at 28.18 inches. The mean height of the barometer, as adduced from his observations for the last 49 years, is 26.885 , being 1.865 inch higher than the leight it stood at on Friday. At $4 \mathrm{p} . \mathrm{m}$. it was 28.10 ; at 8 p.m. it was 28.20 ; at $9 \mathrm{p} . \mathrm{m}$. it
was 28.27 . As to the wheel barometers, some of them actually went round the dial to "very dry.
Plymout\%:-During the greater part of Tlutursday night it blew a heavy gale in this harbotry, and between six and ten on Friday morning it was a perfect hurricane from W.S.W., during which several vessels drove from their in Batten Bay. The Southampton, from London to Gibraltar, went ashore, and lies apparently bilged; the General Brock, from London to Africa, drove at nine o'clock, and went ashore; the Seawitch, from London to Africa, struck soon after. They are all expected to be got off should the weather moderate, and the greater part of their cargoes will probably be saved. The Bragilla, of Falmouth, was lost in Bovisand Bay, but the crew saved The Belle, of this port, water, and a trawl sloop ran on the rocks under Feats-
hill. The Thunderer, 84 , the Euphrates East Indiaman, and numerous out the gale in safety under shelter of the Breakwater. The position of the Euphrates was at one time very perilous; she dragged her
anchors, and hatchets were kept ready to cut away her anchors, and hatchets were kept ready to cut away her has specie to the value of $150,000 \%$. aboard, and 50 tons of Congreve rockets. The Royal Adelaide, 120, during the gale, parted one of her mooring chains. She drove
some distance, but brought up by letting go an anchor. The Confiance steam-tug went to her assistance, and she was soon put in a position of safety. So great was the
force of the wind, that lead weighing nearly a ton was force of the wind, that lead weighing neary a ton was where other effects of its strength have been manifested In the citadel the slates were blown from the roof of the turned up like paper. Many chimneys were blown down in Devonport, Stonehouse, and Stoke, and in some cases the inmates were compelled to escape through the windows. The roof of Saltram House, the seat of Earl Morley, has sustained considerable damage. The oticer employed in the Dock-yard to record the movements of the barometer was nerer so low as on Thursday night on the approach of the gale, but that on Hriday morning, during the worst of the weather, it was still lower, and that there was no means left of indicating the force of the storm.
Portsmouth.-The gale of Friday was severely felt in this harbour. The William the Fourth, from Cowes to London, ran ashore in stokes Bay, but has been got off on the beach, but is expected off if the weather moderates the Two Brothers, from Weymouth to Langston, went ashore on South Sea beach, but has since been got off. brigantine ran ashore on the Woolsners, crew supposed to be saved. A sloop and a two-masted vessel were observe in the morning riding heavily, two miles S.S.W. of Cum feared all hands have perished. The mast-heads of the two-masted vessel are visible above water. Several houses at Southsea are much damaged in roofs, chimneys, and windows. Many of the large dockyard buildings are, also slightly damaged; and Lord Ashburton's new marine silla, in Stokes Bay, is severely injured. At Cowes the streets were flooded, and great damage has been done to the quay and whaf. At driven on shore a numeral unfinisl 1 the railway terminus, which sustained some damage by the falling of a stack of chimneys, and some breakage of sky lights. On Sunderland to Grenada was driven on shore, brig from Sunderiand to Grenada
and the master and mate drowned.

Ramsgate and Margate.-Several wrècks oceuired alon this coast, and in the neighbourhood of Ramsgate and Dover -the oldest man in the Coast-Guard declares that he never witnessed such a scene. Seven ships and four schooner were lost on the North Sand; the Diana was driven on
the Knock Sand, full of water. At Deal a number of vessels have arrived more or less damared, and there is little doubt that many have foundered in the channel At Sheerness the hurricane was severely felt : in fact, was impossible to stand against it in any exposed situs tion. The oldest inhabitant has no recollection of so anful a male. During the night no less than four ship awful an they will they will become wrecks. 600 tons burthen, was packet Samarang, reported to be Goodwin Sands. The ship was brake shoal, close to the Goine oil, and other soods was laden with a cargo of turpentine, oil, and other goods, ing, and was on her the ing, and was on hei way to Hull, when overtakea by the storm: The crew of 21 men were rescued by the Duke of Yorkicutter, of Ramsgate, which went of heigh would have "been fatal, for the ship went to pieces immediately after they left her

Tynemouth Casile.- The storm has produced very serious damage on this coast. On Thursday the Percy steam-vessel was totally wrecked about 10 miles north of the Castle. She belonged to North Shields, and had left this harbour on the evening previous, to look out for vessels in distress, when slue was overtaken by the stormo Owing to her pitching heavily, the engines soon becatio unmanageable, and the commander, in order to save her, brought her head down upon the shore; but unfortunately she drove upon a mass of rocks, where she subsequently became a total wreck. All the crew, excepting a boy 15 years of age, who was drowned, saved themselves by swimming ashore. Between the place where the Percy went ashore and Dunbar, five vessels are reported to have boen driven upon the beach, and there is said to be no chance of getting them off. Other vessels have been lost on different parts of the coast, and it is said that so awful a storm bas not been experienced since 1824.
Hindsor and Eton.- The storm of Friday night has done considersble damage in this neighbourhood. The wind blew a complete hurricane, several trees were up= rooted in the park, many portions of which were strewn were permitted to carry away. Public attention has been directed by'several correspondents of the Times to Dorney Church, in this neighbourhood. It was stated that two antique statues of Bacchus and Ceres, recently im. ported from Italy, had been placed over the altar, in the oom of the Lord's Prajer and Creed; that a pew built like a conservatory glazed at the sides, with a glass roof, church and that perver vessels have been substituted for the communion plate. These charges have called forth replies from Mr. Palmer, the patron of the living, and from Mr. Cauter the rural dean. Mr. Palmer says that the statnes were not those of Bacchus and Ceres, and denies that his pew is now covered with a glass roof; the rural dean states that the statues, were removed by his direction last summer, when he recommended the Tables to be replaced, and that the Bishop of the diocese fully approved of the order he had siven.
Bath.-A meeting of the Tomn Council took place last week for the purpose of agreeing to petitions to both Houses of Parliment, at the commencement of the en suing session, for a repeal of the Corn-laws; the subject was brought forward by Admiral Gordon, and supported by several aldermen and other members, in a discussion which lasted upwards of two hours, when it was unanimously agreed that petitions should be presented, and a committee was appointed to dra
them to the counch for adoption.
Briducuater.-An inquiry has been going on in this town respecting the death of an orphan girl, who was said to have been starved to death by her mistress. It appeared on the inquest that many bruises and marks of blows on the head with some instrument were perceptible. Several witnesses gave evidence of frequent complaints by the girl of a want of food, and the statement of the medical gentleman tended to confirm the alleged ill-treatment of the girl by her mistress. The prisoner, who 'Taunton jail a tradesman in the town, was com
take her trial for manslaugater. our last the extraordi ary proceedings of a party of rioters in this part of Wales, who have obtained notoriety under the name of - Rebecca and her daughters." We now learn that a detachment of Royal Marines, stationed at Milford, was despatched on Thursday morning, in carriages, from that place, under the orders of Captain Wilson, to suppress the warfare against turnpike-gates, much excitement at stased to be sworn in las constables they are encouraging their labourers in their acts of de struction. It is suid that the rioters are armed with muskets, pistols, and scythes, and fancy that they will be this way, and then attack the Union at Neorbeth, to which they have a great antipathy
Camlridge.-The approacling election to the office of the Regius Professor of Divinity, vacant by the promocreating great interest in the university. At then last meeting of the Electors, the following divines declared Christian Advocate, Chaplain Rev. W. H. Min, D.D. terbury, and formerly Principal of Bishop's College, Cal-
cutta-2. The Rev. Alfred Ollivant, D.D., late Vicecutta. 2. The Rev. Alfred. Davant, College, Lampeter. \%. The Reva Christopher Wordsworth, junis, D.D Di, Head Master of Harrow, late Public Orator. It was the inten-
tion of Dr. Graham, Master of Christ's College, to have offered himself as a candidate, but has withdrawn in consequence of one of the electors having entered a protest sequence of one of the electors having entered a protest as to his eligibility, on account of holding the Mastership
of a college. Tuesday, the 31st inst., is fixed for hearing the exercises of the candidates; and it is understood that
the election will take place on the same day. the election will take place on the same day
Ilford.-On Sunday morning, while the inhabitants of Little Ilford were assembling to hear Divine service, the roof of the church was discovered to be on fire. The supbefore much mischief had been done. The fire was ocsmoke, being in so decayed a state as to allow sparks to pass through it and rest on the timbers supporting the
roof. It was fortunate, however, that the morning was so calm, for had there been the slightest wind the buildiog must have been destroyed.
Leeds.--The local papers mention the following proofs of the physical and noral degradation of the manufacturing population afforded by the registration of births and state, that whilst the marriages at the register-office and dissenting chapels have not increased in number, those at the parish church, in 1842, are less by between 200 and 300 than in the year 1841. In the number of births resixth will be manifest, as compared with the corresponding quarter of 1841 , while the number of illegitimate children born have been trebled in some, if not in all the districts.
Nollingham-. We lately noticed the dilapidated condition of the tower of St. Mary's Church in this town; and the opinion of Mr. Cottingham, the architect, who safe in its present state. Last week the parishioners were convened for the purpose of raising a rate to defray the expenses of the necessary repairs. The meeting took
place in the church, but was so fully attended, in consequence of a rate not having been levied for many years,
that it was adjourned to the Town-hall. An amendment that it was adjourned to the Town-hall. An amendment
condemning church-rates as unjust, and deferring the consideration of the question for 12 months, was proposed and carried by a large majority. A poll was then demanded
by the churchwardens, which lasted for two days; and by the churchwardens, which lasted for
gave 145 for the rate, and 929 against it.
Oxford.-For some days past the University has been occupied with the rumoured conversion to the Roman
Catholic faith of another Fellow of Magdalen College, the Rev. Bernard Smith. The local papers had contra dicted the statement, but all doubt has now been dissi pated by a letter from the reverend gentlemsen himself, the fact, which took place on Christmas-day in last year. Mr. Smith at present holds the valuable preferment of
Leadenham, in Lincolnshire, and which be only rutains till his brother, who will succeed him, is able to receive the appointment.
Sheffield. - The old-established banking - house o Messrs. Parker, Shore, and Co., bave, it is understood, one of long standing, but it is not thought that its liabireduced of late years. The principal of the establishment, Mr. John Parker, was one of the Lords of the Treasury under the late Administration, and is a sitting member of the present House of Commons. The failure trade in Sheffeld, which is so bad that the merchants, manufacturers, and traders, are unable to realise their debts, and the bank has been led into advances,
which the parties indebted to them have been unable which the parties indebted to them have been unable

Shepton Mallet.-On Tuesday, the 10th, a fire broke
at the crape and silk factory of Messrs. Hardisty, of Dasshill, situated between this town and Wells. In about three hours and a half the whole of the premises were burnt down. The walls and roof fell in; the fiames were
so powerful that no assistance could be rendered. It is so powerful the there is $40,000 \%$. damage done ; but the property is understood to be insured. The premises are between 60 and 70 yards in length, and seven stories high, and it is one of the largest factories in this part of the country.
It is supposed that it will throw 600 hands out of empioy, and the fire broke out with such rapidity, that the poor girls and boys were obliged to run for their lives, leaving their clothes behind; it is said that out of nearly 400 , there are few who have not lost something of small value. York-A Meeting of Shareholders of the Yorkshire Agricultural and Commercial discussion, the propositions brought forward and adopted at a previous meeting were confirmed, as being, in the present condition of the conthe bank are to be wound up as speedily as possible, and a call of $3 l$. per share is to be made forthwith, in order that its liabilities may be discharged.

Railways. - The following are the returns of the undermentioned railways for the past week:-London and Western, $4,379 l_{\text {. }}$; South Eastern, 1,4051 ; Eastern Counties, $804 l$; ; North Midland, $3,407 h$; York and North Midland, 1,194l.; Greenwich, 713l.; Croydon,
B14l.; Brighton, 2,479l. ; Blackwall, 478l.; Hull Selby, 632l.; Grand Junction, 6,000l, ; Midland Counties, 2,144l.- On Monday a special general meeting of the
London and Birmingham company was held at the Euston
station, for the purpose of authorizing the directors to apply to Parliament in the ensuing session branch line from the Blisworth. the city of Peterborough。Mr. G، C. Glyn having taken the chair; pointed out the eligibility of the proposed line, which would embrace in its route the towns of Northampton, Thrapston, Oundle, Peterborough, Boston, and Lynn, and a great part of the county of Lincoln. All would be 48 miles in extent, and cost, according to the engineering estimates, $500,000 \%$. The Duke of Grafton had placed at the disposal of the company land aufficient to form a station at Gayton, and had also engaged to make traffic for pry roads in connexion with ic. Ne estimated traffic for passengers, parcels, and coningent traffic making a total of $30,500 \%$, per annum. The locomotive power of the Birmingham Railway would be applied to the traffic of the branch line, the expense of working which was estimated at between $10,000 l$. and 12,000 . per annum.
A series of resolutions was then passed, empowering the directors to raise the required sum, which was inced to form an integral portion of the capital of the main line in a certain amount of shares to be divided rateably and at par amongst the proprietors. The chairman, in reply to
questions from a proprietor, who took occasion to allude to the recent disasters on the North Midland Railway, in connexion with the reductions in the expenditure of that establishment, said it was not the intention of the stablishment; and he believed that the adoption such false systems of economy was fraught with con sequences the most dangerous, hoth to the under-Robert Harvey, the gentleman who was killed by the late accident on the North Midland Railway. After a long examination of witnesses, who proved whistle nor regarded the signal ; the jury returned a verdict of "Manslaughter" against Edward Jenkins, the engine-driver, who was accordingly committed to York ing some of the directors who were present, said "We think the railroad company are very highly to blame for employing such inefficient men, and not having a sufficient number to attend the stations. We think the arcident might possibly bave been prevent number of men the Barnsley station to get off the passenger-train in due time." On Saturday night, Wo coke trans on the same line mashed. It appears that the first colse engine, owing to some defect, could not get along; the consequencin the guard of the first train exhibited the signais, the second of the first train sprang off just as the second came upon them, and the engine was smashed to pieces. On Mon day, as a Nottingham train was leaving the station, a,
North Midland luggage-train came up from the north, and nothing but the presence of mind of an attendant prevented a collision. Seeing the danger, he reversed the point, and sent the passenger-train on another line just as sion taken place, the passenger-train must have gone over the embankment-perhaps into the river.-On Tuesday last, a Sheriff's Court was held at Reading, for the purpose
of assessing damages caused by the Great Western Railway in making a "spoil bank" on land adjoining the Lording cutting, at Early Court farm, the propery and also mouth, and in the occupation of Mr. trary to agreement. The evidence was given on both sides at great length, but it has no general interest for jury made the total claims were 1009l., and hor permanent injury to Pit-field, $419 \%$. to Mr. W. Shackell for temporary iniury to Pit-field, 58l, ; to Lord Sidmouth, for temporary injury to Mutton-meadow and Breach'smead 631 10 A table of the fluct value of railway shares has been published by Messrs. dition of the market for the past year. Taking a general view of the returns, it appears curred in all except the Birmingham, Great-Western, Bristol and Exeter, York and North Midland, and Man-
chester and Leeds shares, which have shown symptoms of advance in public opinion. Another circular of the same description gives the following as the total receipts of the undermentioned lines, in the balf-years ending the 51 st December, for the three last years:-Birmingham and Dirby, 1840, 25,7132.; 1841, 31,3351. ; 1842, 35,3532-1841 48,730l.; 1842, 49,281l.-E Eastern Counties, 1840 14,753l.; 1841, 21,815l.; 1842, 25,828l.-Grand Junction, 1840, 228,249l.; 1841, 236,987l. ; 1842, 201,570l. -Great Western, 1840, 150,925l.; 1841, 336,028l.;
 $1840,134,9691$. ; 1841, 131,541l. ; 1842, 114,387l.London and Birmingham, 1840, 403,395l. ; 1841, 428,777l.; 1842, 419,4711 .-South Western,
$138,650 l . ; 1841,149,071 l . ; 1842,167,574 l$, - Manchester, Bolton, and Bury, 1840, 14,176l.; 1841, 15,626l.; 1842, 14,537l.-Midland Counties, 1840, 43,662 F ; 1841 , 72,8951; 1841 114:3161; 1842 114.5261-York and North Midland, $1840,22,7032$. ; 1841, 43,7446 . ; 1842 , $45,482 l,-$ A special Meeting of the Great Western Com-
pany was held on Thursday, to consider a plan of the directors, for purchasing the Cheltenham and Great Western Railway. One of the proprietors having moved, as an amendment, to lease the line, the decision between the purchase and leasing of the line was referred to the
ballot of an adjourned meeting, appointed to be held on Thursday next.

## IRELAND.

Dublin.-The National Bank robbery and the trial of Mi. Egan, of Moate, on suspicion of being the party during the week. The evidence has been given at great length, but the details would have little interest for our readers. A number of coach-office clerks, and persons usually employed about such establishments, were examined; but the most material evidence was hat of fise parcel left in the coach-office, in lieu of the bank a we, was the parcel handed to him by Mr. Egan. This and other evidence established a case of presumption against the prisoner; but, on the other hand, nothing was alleged absolutely incapable of being refuted. No part of the tolen property was found upon him; he and avoid pursuit or inquiry; on the contrary, his conduct subse-
quent to the charge appears to have been candid and unembarrassed, and such as would be expected from an innocent person. The most respectable witnesses were examined as to the character of the prisoner, including Mr. Tuite, member for Westmeath, and Mr. EMr, assisithe highest terms. A letter from Lord Castlemaine was evidence as to the character of Mr. Egan, but he was under the necessity of leaving town; and he regretted this the less on account of the favourable tura of the case, as appeared from the evidence. Mr. M•Donough addressed the jury on the part of the prisoner at considerable length. He contended that the enidence addaced for gether circumstantia-very little of which ielt grounds for suspicion against Mr. Egan ; much of which was favourable orm-much equivocal ; and many circumstances apWas it likely money would, as had been done in the present case, return to the bank a bill for 711 ., for which he was liable? Had Mr. Egan stolen the money, would he not have thrown that security iato the fire, and thus terminate his hability Court from Thursday the 12 th , and closed on Tuesday. Mr. Justice Jackson commenced his charge to the jury at the sitting of the court, and did not conclude until halfpast two o'clock. The jury remained half an hour in The pica, and retaned veraict the verdict, leaned his face upon his hand and wept audibly. There was a in the body of the court, which was echoed by the crowd outside.
.-As a contrast to the accounts which we have of Han all of Hanwell Lunatic Asylum, we may cite the following to the case of a Mr. Speed. His Lordship, in giving judgment, said, "I could hardly have believed that such an outrage on humanity as is disclosed by the affidavits in this case could have been perpetrated at the present day. A gentleman of a highly respectable family, who is afflicted with insanity, was put under the care of a committee of his person. Afterwaras one of bis brothers was in Conted committee, and he piaced the lunatic in a house in Cork. This unfortunate lumatio was found by two genlemen, who are magistrates in the county, and they mmediately exerted themselves on his Dehal. Nhe hatic was found by those gentlemen in an oullouse belonging the the man with whora he had been placed, and from the rain of the roof there was access for he weather and he was stark naked his legs chained and clenched together, and fastened in a chain not more thau two feet in length, without even straw, and not able, on account of his chains, to lie down in such a way as to rest himself, and without power to move beyond the limit or the narrow circumber thattention, to say the least of it of his brother, the lunatic lived. This is a case ust mhen naturally, I have felt great pain on account of the family; but I felt bound to have it fully investigated and exposed, because I am afraid the evil exists to a considerable extent. a series of arrangements which he thought would tend to secure to this unhappy class of persons much more care heretofore experienced.

Tipperary.-Another murder has been committed in this county. The victim was the herdsman of Mr. Scully, He was so recenty assassid by two men, who assaulted him was waykaid and murde in the left side of his skull him with stones, and brose body on Friday, and a verdict An inquest was held on the
of Wilful Murder returned.

Belfast.-The atmospherical phenomena which pre ceded the late storm, and were noticed in many parts of
England, were observed also in this town. The tide of Friday morning was at its height at twenty-six minutes past 8, and rose to 11 feet 3 inches, being 2 feet 3 above the previous tide-a remarkable difference when the very In the barometer is taken into consideration the whole day in a remarkably unsettled state:-the
index of the wheel barometers，in all parts of the town， went round the circle，passing over the lowest marks， and rising the reverse way，to beyond＂fair；＂afterwards， the index came back the way it traversed，and then re－ mained at the lowest point，＂very stormy，＂The ma－ rine barometers were affected in exactly a similar way． Indications of this kind took place about the 6th of Ja－ nuary，1839－me ine in Ireland．
Newry．－At the Newry quarter sessions last week， Mr．Jones，the assistant barrister，in his charge to the gruad jury，gave the following account of the increase of distress of the farmem the protracted and still existing distress of the farmers ：－＂At the sessions for the pre－
sent quarter he had heard 3,000 civil bills； 2,000 at Newtownards，and 1,000 at Hillsborough．There would probably be another 1,000 at these sessiorf，making atto－ gether 4,000 civil bill entries．This was a larger number
of entries than he had ever known to be brought before of entries than he had ever known to be brought before
him at the sessious for a single quarter．Since he first came to this county there was a positive increase of one－ fourth in the number of civil bill entries．The extra－ ordinary increase on the present occasion he attributed
to the depressed state of the lower classes．Though the to the depressed state of luxuriant and bountiful one，yet still，in consequence of the low prices，it did not afford an adequate remuneration to the farmer，
Downshire．－In the storm of F
Downshire．－In the storm of Friday，a melancholy morning was so fine that almost all the boats from Newn castle to Analong went out to their fishing in the bay， where they had un unusually good take，About noon it came on to blow with snows Two of those nearest the together with another which went out to attempt a rescue． The men were all from the fishing village of Analong，and the pretty watering－place of Newcastle； 27 belonging drowned．By this saa event no less than 26 families have been left destitute．

## SCOTLAND．

Edinburgh．－The letter of Sir James Graham convey－ ing the answer of her Majesty＇s Government to the
memorial transmitted to Sir Robert Peel，and the other members of the Administration，by the General Assembly， has been published since our last．It is in every respect an important document．After minutely recounting the
leading facts of the questions at issue，it states，that when the Government consider the nature and extent of their demands，they find them to be no less than the reversal of the solernn judgments of the supreme courts of 1 aw；the patronage has been adeninistered in Scotland；and the concession of privileges，not such as are ascertained and
defined by constitutional law，or the recorded decisions of competent tribunals，but privileges such as＂the Church
considers to belong to her．＂It states，that the wish of the Government to heal these unhappy divisions，and to close this unseemly spectacle of a law，remains unabated and sincere．＂We are convinced，＂says Sir J．Graham， duced the best practival effects on the morals and religious character of the people．It has well fulfilled，and it con－ founded；and any shock which might endanger this great national establishment would be regarded by her Majesty＇s tion of patronage，her Majesty＇s servants believe tha they are maintaining a right which is conducive to the welfare and stability of the Church itself．It cannot be denied that the right of presentation in the Crown is a bond of amity，which intimately connects the Church o the hands of laymen has also its effect in securing to the Presbyterian establishment the co－operation and support of powerful interests，where hostility might otherwise be apprehended，and could not fail to be injurious to the
Church．The Assembly submitted the question Church．The Assembly submitted the question at jssue to the judgment of the Court of Session．They were dissatisfied with the decision－they had their legal
remedy－they used it．They carried the judgment by appeal to the bar of the House of Lords；and in the last resort the judgment of the Scotch Court was confirmed，and the Veto Act was pronounced to be
illegal．This solemn decision fixed the principle of law which rules all the minor cases which luave since arisen． The judgment in the second Auchterarder case，which found the patron and presentee entitled to redress in
the form of pecuniary compeusation for a civil wrong，was a legal sequence of the former judgment；and here again the Assembly was content to plead before the Civil tri－ bunal，and again the Assembly refuses to submit to the compulsion of an adverse decision．I am also compelled
reluctantly to remark that the Church，not content with disobeying the decrees of the Civil Courts，has inflicted the severities of her discipline，as in the case of the has been Presbytery，on ministers whece onty to be the Jaw of the land．All the other cases complained of in the memorial and declaration of right which relate to the set－ the Cht of ministers have arisen in the determination of The acts of the General Assembly（the claim，declaration， and protest，the address assembly（the claim，declaration， the repeal of the statute of Anue），bave unbappily dimi－ nished，so far at least as the Church is concerned，the hopes of arrangement；and her Majesty＇s Ministers，now
understunding that nothing less than the total abrogation
of the rights of the Crown，and of other patrons，will satisfy the Church，are bound with firmness to declare that they cannot advise her Majesty to consent to the
grant of any such demand．＂－A meeting of the special commission of the Assembly was held on Thursday，when they agreed to a minute，in reply to the above letter，on the subjects which at present agitate the Church．The minute argues at great length the right claimed by the Church for exclusive jurisdiction in ecclesiastical matters， and contends that the power assumed by the Civil Court the power not conferred by the state．It from Govern ment，and assuming that Ministers are not inclined to grant any redress of the grievances complained
states that＂the Legislature will have an alternative sub－ mitted to them，namely，whether to force on a disruption tendant evils，or to restore the Clurch to the state in which she was between 1834 and $18: 38$ ，when the Veto Act had not been declared illegal，the yower to admit quoad diction of the Civil Courts，which has and the juris－ largely exercised，had not been cleimed＂The special argely exercised，bad not been claimed．fie special commiss a fopion that claim of right shoul Assembly should petition both Houses，calling the atten－ tion of the Legislature to the grievances and applications for redress set forth in the Church＇s claim．A meeting Glasgout－Wernesday of 31 st inst

Glasgow．－On Wernesday of last week，the town coun－ cil met for the purpose of presenting Mr．Cir James Camp－
freedom of the city．The Lord Provost，Sir bell，in presenting this honour stated，that it was conferred on him in testimony of the esteem which the town with which he has advocated the principles of free－trade not only in his private capacity，but on various arenas of
public life－and especially in the House of Commons，as the representative of one of the most rising manufacturing communities in England．Mr．Cobden in the course of his reply，said：He hoped that this compliment had been paid without any regard to his political views．He believed that the gentlemen who proposed it had done so solely on As such，he accepted it．If there was one thing which he desired more than another，it was that this question should considered apart from political partisanship，or the Trade banquet took place in the evening，Mr．J．Oswald， M．P．，in the chair，supported by Mr．Cobden，Col． great length．It is calculated that nearly 2000 persons great length．
Perth－The local papers state that last week，smoke Cottage，on which the servants broke open the door to several articles burning．In a short time the fire was got under；after which，on examining the damage sustained， it was found that the coat which Lord Lynedoch wore at the battle of Barossa was consumed．His lordsaip locked．The fire was caused by the over－heating of a flue which runs beneath the floor of the room．

## ffiscellamedus．

The March from Cabul．－The following letter giving succinct account of the march between Cabul and Jella－ one of the officers of the Staff．It contains a good deal of information respecting the Affghan Passes，which will no doubt interest our readers．＂Camp，Jellalabad，Oct．26， 1842．On the 12 th inst．the whole British force then encamped in the neighbourhood of the city，marched to Boodkhak，accompanied by the Shabzada Futteh Jung， and most of the Hindoos late resident of Cabul．Here arrangements were made for dividing the troops into two columns，by taking the 2 d and 16 th Regiment Native Infantry，with Captain Blood＇s battery of 9 －pounders， from the force under Major－General Nott，and attaching them to that with Major－Generah the Khoord Cabul Pass the following morning．Major－General Sale had taken route by the（Gost Pundurrain）abs the right of the Khoord Cabul with his light brigade the day previous，so from the further side where they were more accessible． This route（Gost Pundurrah）can only be adopted by practicable for camels or heavily laden animals，and if the Affghans had made any disposition to oppose our passage through the Khoord Cabul，the detour taken ly the st brigade would have been of material advantage；as it was，however，not a shot was fired，nor enemy seen，and
we all encamped at Khoord Cabul on the 13th，some arriving there rather late，from the delay in getting our immense train of baggage through the narrow pass．On the 14th we passed over the Huft Kotul（the scene of our former glorious fight，and through the Tezeen Pass， dier Mouleath，C．B．，formed the rear－guard，and did not effect their march as scatheless as yesterday．Owing to fhe badness of the bullocks joked to the captured guns， very great delay was occosioned，and finally the bullocks very great dout and the sold．ers of Her Majesty＇s 31 st Regiment supplied their place ；the labour nas excessive， Tezeen valley until dark．The enemy，taking advantage of this，commenced a sharp fire into the column，and
masses of baggage collected there，cansing great confusion amongst the latter．Parties were ima，ediately sent up to the heights on the right to dislodge these marauders，the brigadiers，staff－officers，leading the party；but owing to the darkness little could be done beyond checking their descents into the pass ；nothing but the flash of their juzais could be seen．Finding themselves checked on the right，they tried the left and rear of the column，ath annoyed them much，killing some six，and wounding an officer，and about 11 men．However，the guns were safely deposited in camp at a quarter past 10 o＇clock，and all the baggage，with the exception of that destroyed when the cattle fell on the march．The advance guard had burnt the fort of Kooderbux Klas，the Tezeen chief，during the day；and the two 18 －pounders received from Major－Gen． Nott were burst，thus affording more cattle for the trans－ port of the other guns；indeed，but for this the captured guns could not have been taken on lhe following day， On the 15th，the 1st division，consisting of the 1st and 2 d rigades，under Major－General Pollork，marched to Kut－ targung，two marches，whilst the 2 divis Majonsisting Nott＂ 4 th brigade with that portion of Major－General M＇Caskill marched，at a late hour to Leh Baba（one march），thus separating the two divisions by one day＇s march，and General Nott＇s column took up their ground at Tezeen the same day，having suffered in the pass rather funcy by the 4 th brigade，caused in a grea country，and mey， Lelbatwo dith， The enemy followed up the rear－guard each day，and made several attempts upon the baggage of the 2 d division， but the Jugdullak Pass on the 17 thr without firig a the 18th，however，when the 2 d divion alt a ted the most decided attack yet evinced was sustained by them， rarely have the Affghans shown more courage or daring than was displayed by the Ghizies od that day．Swordin hand they more than once rusbed towards our retiring parties，when recalled from the heights by the rear－guard， but each time a shell or shot thrown from the guns，placed in a position most judiciously by Brigatier Monteall at the top of the pass，sent the Ghisies to the right－about， and saved our men．Notwithstandiag their obstinate attacks，and their following close upon the rear－guard for five or six miles beyond the pass，I am happy to say that bageare fies had their labour in vaia，nist their loss must bave been considerable；for，besides many that fell from our skirmishing parties，several round－shot dashed directly through the Gungahs，behisd which they were ensconced， killing numbers，－and our shell scattered many a group attuck upon Mojor－Gena mucla tamer from their thrashing on the 18th；but they managed to annoy his force greatly，showing them the wide difference between the Kandahar and Peshawur routes wide diference between the Kandahar and Pesk where the three divisions thived on the 19th， 20 th，aud 21 st suc． cessively our rear was followed pretty closely by the Affglans chiefis in expectation of plunder，which， 1 am glad to say they were disappointed in The divisions halted each one day at Gundamnck，and arrived at Jel－ Ralabud without any occurrence（beyond Nott＇s forces having made an example of some men ine Nema valley）on the $22 \mathrm{~d}, 23 \mathrm{~d}$ ，and 25 th ．We march hence on the 27 th as far as Ali Baghan－t hat is，Nott moving the following day．As yet nothing is known of the manner in which way we are to cross the Punjaub，but we trust it will be in brigades；for great inconvenience ensues from moving large bodies at a time．Very severe loss aas base sustained by officers and men from the falling or baggago cattie since leaving Cabul．I have myself low ； vate camels，besides property ；others even more， that our promised batta will not positively recoll be highly prized，though indeed dearly earned．The privations en－ dured by officers and men of the force therd from Jellalabad bave been beyond description，but parti－ cularly by the soldiery，being tentiess and the rof camels falling and their loads destroyed ont on arriving at often，too，rationless they have been sents，there to remain the encamping ground，up to the have borne with cheer－ fulness，and both Europeans and Sepoys have done their duty well．＂

## 显年解。

Court of Chancriv．－Blundell v．Gludistone．－This was a re－ hearing by way or appeaif，Thomas Weld，who has taken the vame
declaring that the planntif， of 13 undell，is the devise under the will of the late Mr．Blundell， of Hech Blundell．By the will，made in 1834, the testator gave his
estates to the second son of Edward Weld，of Lulwouth，in the county of Dorset．Mr．Weld，of Lulworth，is however，named
Joseph，and his eldest brother，who was named Joseyh Edward Joseph，and his eldest brother，who was named Joseph Edward，
is dead．The plaintiff，Thomas，the second son of Mr．Weld， is dead．The plaintifl，Thomas，the second son of Mr．Weld， establish has title to the property，and the Vice Chancellor di－
rected an issue，wheh was tried at，the Lancaster assizes in 1840 ， and the result of which was a verdict in favour of the plaintiff， and a decree of the Vice－Chancellor，declaring him to be the de－ cellor，assit ter the will．The rehearing before the Jord Chan－
vistice Patteson and Mr．Justice Maule

ciaim of the plaintiff, Thomas Weld. It appeared beyond ques-
tion that there was no such person as Edward Weld, but that tion that there was no such person as Edward Weld, but that
there was a person who by descripton fully answered the de-
clared intentions of tho testator might have recourse to description where the person could not quite unnecessary to advert to the cases in which it was carried the devisee, rather than declare the will to be void for uncer-
tainty; and in the present case their Lordships had no doubt, from the description, that the plaintiff was the person intended by the testator as the second son of Mr. Weld. The Lord Chan-
cellor, atter expressing his strong sense of the attention be stowed on the questio n by the learnen Jadges, c nearred most
fally in therr decision, and affirmed the decree of the Vice-Chan Vtce-Chancellor's Court. - [Before Sir J. Wigtam.]-Jesson W. Hodgsont-The bill was brouglat by the reetor of the parish of
Enfield, in the didcese of Lichfleld and Coventry, against the Rev. John Hodgson, an occupier of lands within the parish, for the
tithes of the tithable matters produced on the defendant's lands. the defendant insisted upon certain moduses, and the plainthe defendant insisted upon certain moduses, and to such mo-
tiff was wiling to accept payment according to sul
duses. The question was thus reduced to the right to the tithe thodus of and of garden-stuff. The defendant ins grown on his farm, which he alleged was "nl ancient farm, and he also insisted on a like modus for duce, but although it in some resperts thated to show the ex-
istence of a hay modus, yet the modas semed to he confuncil to hay growing on ancient meadows only, His Honadr said, the was nut establushed without it. The question in this case was, forkt to
for art of
that unity of proving his case in a different form. There was very often much more inattention to the evidence which was necesthe evidence in causes in equity was often much more defective taking the pronfs in the latter court. The defendant in this case might prove that hay had been produced on land not being anthat the rector had either not demanded it, or had made the demand and been refused. That would have been some evidence No evidence of this kind had been glven; and, therefore, had it not been for the general claim to the tithe of hay whict the bill Would have made a decree withont giving the defendant any fut-
ther oppoiturily of matity nont his defence. Ont the groand of
the general cl.aracter of the etemand, the court would direct ans ssue at law to try the title of the rector to the tith Prerogative Court.- Daw otherwise Dawee, against de Feu-
herra. This was a business of granting administration of the effects of the late sophy Dawes, Baronessithat beeneres, to her instance opposest by the Queen's Proctor, and by the Baron de
Feuchere, her husband, from whom she had been divorced by The remarkable history of the deceased lady has becr made known to the word lyy the proceedimgs in the civil tribunals of France.
Dr. Addans was alout tio open the casc, when an H. Jenner Fust sud he had rand the anlegation, the epidence, and the
axabits, and he din not see any nccessity for troubling the
learned counsl to enter ninto the details of to ecase. The deeeased was a domiciled subject of France, and had been divorced
from her hushand, who, by the taw of France, had therefore no French subject, there could be no donbt; there could be as iittle
doubt of the titte of the parties before the Court. It was quite clear that Richard Daw and Jane Callaway were married in
the Isle of Wight in 1775 , and had had several children, of whom the deceased was one, though there was no baptismal register of however, proved by an extract from the books of the House of
Industry, into which she was introduced at the age of six years, and where she continued some time. Her identity was proved
by the fact, amongst others, that she placed her mother in the Carmelte convent
case had been created hy the deceased, herself, in represcnting her
name to be Daswes, and herself to be a widow, when she married the Baron de Feucheres. She was evidently a person of very extraordinary talents, and her history was a romance of real ine
more extraordinary than any he (he Iearned Jualde) had ever
read. She became acquainted with the Duke of Bourbon, from whom she olttained the large property which had now to be dis-
tributed. The facts and documents were so strong and so clear,
 of Wight of that name. He had no hestation in presuming that
the proctor for the nrother and sister hat proved theralf gation,
 deserted her family, whom it wher great ohject to aggrandize.
The effect of this sentence will be to gre to the tanuly of the ceceased alout $2: 0,0011$. 13 lersonalty, and neary
estates, almost all in France some smanll amount of property
being the only portion secured to the Baron by the marriage sett ement.
Rouls Court. - Byng v. Lard Strafford.-Lord Langdale gave
judgment in this case, and observed that the question to be dejudgment in this case, and observed that the question to be de-
cided was, whether the plaintify was entitled to the residuary
personal estate of Lord Straford, who died in the year I 791 , personal estate of Lord strafford, who died in the year ligh,
The estate had been distributed under the direction of this court,
and an order had been made for payment of the interest of the property in question (which amounted to about $380,000 l$.) to Mr,
Byng for life, but without prejudice en any question which might
be raised with respect to his right to the capital absolntely; that be raised with respect to his right to the capital absolntely ; that question had now becn brought bef the will of the Earl of Straf-
depended anon the constuction of tated
ford, dath of October, 1774, and thirteen codicils, the last of which was dated the 19 th January, 1791 , aboat two montis
before his death. The whole of these instruments were inartificially expressed, ; but the words "all my personal and landed
cstates whatsoever," were sufficiently large to include all, and tator appeared, liowever, to have thought that his logatees should Eardens, parks, and woods, and all his landed estates, for her
life, and afterwards all his landed and personal estates, to his fore, be interred, when he intended to give a life estate, that he
understood what words were necessary. The words for fife"
were afternards omitted by the testator, who said, "and then to his niecc Ann (Mrs. Byng), and then to the cldest son and sons
successively of the Earl of Buckinghamshire, by his (the testa-
tor's) niece Caroline, but all those to be suibject to certain outhe would have all his debts paid, a and if fte legacies and conditions of his will were not complied with exactly, then he left all
the advantages of it to thenext person in successlon, subject to the advantages ond so on, unless they were diychargeific The
those ligate
plaintif was the eldest son of the first legatee, and the will cotrplaintiff was the eldest son of the first legatee, and the will cothclamed to have an absolute interest in the property-first, be calle the elt evpressed the whole interest; second, was charged
was not lumite. io him for life; third, because it wast
with the payment of sross sums of money; and fourth, because the testator had used wordiniving ant ahsolute interest, and besad that the words shoridd be construed so as $t, 1$ mint the general terms of the gift, and as there was no indication that the tes.
tatur meant to give an estate tall, it was argued that the testator mot alter the words of the will; but as to personal estate, it was a clear rule that the first legatee of a quasi estate tail would have
absolnte intereat. It was tilen said, that the estate was given upon a condition, and that it ought to be declared void. For the
purpose, however, of supporting the intention of the testator, the sistent with each other. His Lordship then touched upon the whole of the points relied tipon in the argumert, and after commenting cils, and observing that they strengthened the couclusion he bad ible, as neither the will nor coclicils indicated any futention that he should have a life-interest only; hie was of opinion, therefore,
that Mr . Byng was entitled to the fund absolutely, subject to any annurties or charges that might still be subsisting. The costa were to be paid out of the fund,
Court or Goken's Brich,--(Sitti
 of Chancery to determine whether the lands of the manor
park of Havering-atte I3ower, in Essex, the freehold of whicl was in the defendants, was or not tithe free. The issue was tried Taddy, when a verdict was given for plaintiff. The question was
whether these lands were discharged Irom payment of tithes, by whether these lands were discharged Irom payment of tithes, by
a render of a buck and doe, or $5 l$. in lieu thereof, to the Vicar of a render of a buck and doe, or 5 . in lieu theneof to the impropriators of the rectory of Hornchurch ; they appointed the minister, who was called within the limitg of the Parish of Hornchurch, but was situated partly in that parich and party in two others, the dereme park; but, on the other hand, they showed that there had was made as and for compensation for a bisk and cloe. The plairtiff insisted that this was a modus for the rectorial tithes, though such comthe render was for the whole of the park, and not merely for that part of it which was in Havering. The defendants, on the other with a payment for tithes; and they accounted for the non-payment of tithee on the ground that the park was a res and had so continued exempt, as royal property, up to within a recent peof tristees were titheabie, still they said that the circumstance of their having been considered Crown property, explained the reason why titnes had not been demanded in respect of them
until after the sale. It cuuld not be doubted that the casc tlus presented by the defendants was the stronger or the King James
of probabilily. They putiza grant of the park by King
I. to l'rince Charles and his successors, Kings of England, and I. to 1 rince Charles and his successors, Kings of kigland, and
then the parliamentary survey, which ehowed that at that timo
the therein mentioned. It was there stated that, "the parson of
Hornchurch has in every year, in their season, a buck and doe, park." There were also instruments of the endowment of the
vicarage pat in by the defendants, and documents winich were contended to be leases, and which, were produced to show that the park was tithe free. The court would not say more of these
last documents, than that in the sumoing up sufficient justice was not done to their importance in the case; and the court
could notaccord with the representations made of these documents by the plaintiff's counsel, in his mode of characterising ground. The detendants, int order to succed on thas issuc, meant the vichr, and that the payment made to him was made might liave been so if the vicar of Hornchurch had been a porionist in the other parishes, of which, bowever, there was not
cvidence. The evidence as to the payment of this composition to the vicar of Hornchurch alone, as for the whole park, though in itself, was insufficiently left to the jury, and without the proper explanations waith it did not seem to have presented itself to
ficulty connected wind of the learned judge. He durected the jury to the effect
the mind the mind of the learned judge. He durected the jury to the effec find for the modus if they were satisfied of the proof of its exis
tence, though the vicar night not be entitled to tithes from the park. This mode of leaving the question must have misled the such he had at one period been endowed with these tithes, and that at an early period this modus or composition for them had
been established. But though that might be the fact, it was one which yet remained to be proved. The court was not satisfied
that as yet this had been done. The rule for a new trial must (Sittings in Banco.j-The Quean V. Sir M. A. Shee and Others.-
(Stere The question in this case was, whether the defendants, the pre-
sident and directors of the Royal Academy, were liable to be
rated to the relief of the poor of the parish of St. Martin, in resrated to the relief of the poor of the parish of St. Martin, in resCharing. cross. The case was argued some time since, and the now delivered judgraent. Ife said that the question arose uyon
the peculiar nature, character, and purposes for which the rooms were used. There could be no doubt that, if the to was nothing specially exempting the derendants
mises which they used would presumptively be the subject of
assessment. And that would be the case independentiy of the local act governing this parish, because, although, that act con-
tained words which would embrace a larger description of property that appeared to be included in the statute of Elizaueth, no
reliance had ben placed on that circumstance; but the case had been consideredute. The principles on which the rate was made
the general statide-
had been defined with sufticient distinctness- the difficulty de-

of premisas as the mere servant of the Crown, and in no other character, and had no brreficial occupation resulthrig to himself from
that use, then he was fort rateable. Whether in suels a case as that just mentioned, the offeer could withdraw hmvelf from the rate by contracting his occupation, was a question which might of the occupation of Crown property by private individuals, who held only at the pleasure of the Crown, had come before the had held the liability to exist, masmuch as there was a beneficial occupation of private individuals. The distinction between that
case and the present appeared to be this: : Here there was no beneficial occupation tn the shape of actual residence; there such could not be said to be beneficial to an inclivadual, bit was only an occupation of pubic property the case must be treated as falling within the principle of exemption. Now, what was the natare of this
society? It was a society instituted by Geo. III, in 1768, for the express purpose of improving the arts of painting and sculpture in thls country-it was formerly held in part of the royal palace
of Somerset House, but had since been removed to the premises now in question, which were stated to be the property of the sovereign, or elected by the members of the society, subject to profits was appointed by the Crown, and his receipts were subordinary profits now enjoyed by the society sloould fail, it must fall unless supported by the Crown. The society had been placer in these Rooms by the Crown; it had no lease ; the Crown might at any moment resume possession. the Crown for the furtherance of objects which were of a public no private occupation could be proved, and consequently tha the rate could not be supported. - Order accordingly.

PATRONIZED by all the principal Architects and P Builders in this Country and Abroad. - SEYSSEL ASPHALTE. - In consequence of the daily attempts made to imitate
this valuable mineral production, and of the name of "Asphate" this valuable mineral production, and of the name of "Asphate
being given to most of the spurious and "cheap" materials the being given to most of the spurious and cheap" materials, the
Directors of this Company partitularly recommend Acritects,
Builders, and others, (for the purpose of securing the use of the genuine article, to inisert in their spectications "The Seyssel
Asphalte, Claridge's Patent,"s and not merely "Asphate" or A Bpitumen," as, in many cases where theseterms have been used, gasetar and other worthless and offensive compositions have
been introduced. For the information of those residing at a distance from London, and of those who, having employed the spurious composition, may, from its failure, have become prejuas some of the distinguishing qualities of the genuine material.
The Asphalte of Seyssel is of a light colour, closely resembling Yorkshire stone, has a smooth surface (without being slippery),
and joints almost imperceptible it is also free from smell is not and jointa almost imperceptible; tis also free fom sim, is not acted upon by change of temperature, and is at all times dry and
warm, and remarkably pleasant to walk uon, and, from its elas-
ticity never cracks. The fictitious material, on the contrary, has ticity, never cracks. The fictitious material, on the contrary, has a dark and dirty-looking appearance, presents a rough and coarse
surface, and, from its
rittleness, is liabbe to crack, particciarly in frosty weather. In consequence of the above qualities, the genuine material (being perfectly impervious to wet has
used with great addvantage for rooning ; it can be laid down to any extent, presenting one uniform surface, ardd is far superior to
lead, as it is not llable to expansion or contraction in of auy change in the temperature. For covering of arches, (to prevent the percolation of wet, it is invaluable, the Greenwich
Railway Company alone having covered upwards of 400, ,oo supericial feet, it has also been used on the Great Western, Birmind other Rail ways: at the joint Stations, London-bridlye, and at the South Metropolitau, Highaste, and Nunhead Cemeterres. As proof of the great durability of the genuine Asphalte, it need only
be mentioned that the first work executed in this Country with be mentioned (amount the to 3,952 feet, ) was at Whitehall, oppo-
this material,
site site the horse Guards, in the month of April, 1838, and
although only half an inch in thickness, time (a period of four years and eight months) in the most perfect condition. ## 

SATURDAY, JANUARY 28, 1848.

Monday, Fab, 6.
rueday, Feb ?

$W_{E}$ have already stated that during the last session of Parliament Mr. Pusey gave notice for a committee to inquire into the subject of Drainage; and we believe that evidence was prepared to establish and show the necessity of enforcing the universal clearance and maintenance of the outfalls now existing, so that underdraining might hereafter become a less difficult and costly operation. We are, however, not aware that there was an intention of making the measure universally compulsory, and placing it under scientific administration; nor do we understand that the after-application of drain-water had attracted the attention of those agricultural Members of Parliament, who are generally interested in such matters. Indeed,
it is chiefly in the pamphlet of Mr. Bailey Denton, it is chieffy in the pamphlet of Mr. Bailey Denton, already referred to, that the, subject has been examined: even more ultimate profit may be derived to the country from beneficial after-uses of drain-water than from the mere eradication of existing evils, we shall now proceed to consider that topic.
If a profitable distribution of the drain-water, which now is so injurious from its stagnation, be practicable, it must be secured by uniformity in arranging the receiving watercourses; and although that uniformity can only be worked out in districts, still it is essential that those districts should be allotted in relation to the private individuals. This systematising of the mains or receivers is the amount of compulsion to which we alluded in our former notice of the subject; and we are of opinion that, in the absence of such compulsion, the nation will never be made to feel a great and important change, but will be brought, by the desultory plams of separate individuals, into the same condition as London, so far as regards systematic arrangement of the mains, and the applica
The dislocation of the Metropolitan sewers is a matter of common complaint; they have been planned without reference to each other, and now they will not work toge-
ther ; but had all the London works of this kind been formed upon one well-considered, preconcerted plan, not only would the drainage of London and its suburbs have been more effectual but the water of the Thames would still be as pure as it was originally: and instead of being corrupted by the refuse of the town, the Valuable contents of the sewers might have been di-
rected to the large increase of agricultural wealth. By some such uniformity of arrangement as would have secured to London advantages of which we can now only regret the loss, the waters of the higher lands may, in many cases, conduce to the fertility of the lower lands. the this uniformity can never be secured if we allow regulations of a General Drainage Act stringent proVisions for regulating the dispersion of the water to be gained by its operation. There is no apparent reason Why the measure which renders clay lands dry enough for improved cultivation should not also make light lands moist in all cases where a transfer of surplus water can be effected advantageously; though such opportunities would not be general, they certainly would occur.
tural termend cannot indeed be called, in strict agriculcural terms, an irrigating country ; but, nevertheless, cases may be found in Wiltshire, Bedfordshire, and many parts of Scotland, where the benefit to be deBy combining the anse of water is distinctly shown. with combining the measure we are now advocating Would be exchanged, where localities are favourable, for urban refuse. Where towns are situated in valleys, on the one hand, the waters from the hills above into the collected (as at Greenock), and conveyed sewers, and furnileansing the streets, flushing the poses; and furnishing a supply for domestic purbe conveyed to the land, either in mixture with the being that had served for cleansing the town, or, after used by raised into flat-bottomed vessels, like the boats be floated along the connecting purpose, it would country for use as solid manure. Near Edinburgh, in the Holyrood neadows, we have a well-known
proof of the value of irrigating with the contents of worth as much as $57 l$. an acre, annual rent ; not that we are at all disposed to advocate the manner in which the sewerage is used in this instance; on the contrary we agree with Mr. Bailey Denton in regarding such a selfish use of the sewerage in the light of an abuse. We would rather turn to Mr. Roe's very recent Report on the Drainage of Eton *, because the improvements suggested by him afford a better illustration of this part of the subject. That gentleman (whose great practical experience entitles his observations to the most careful consideration) particularly directs attention to the importance of the contents of sewers for irrigating meadow land, and turning them to profitable account as a means of supplying an abundance of rich manure. We have already seen, in the report of the Poor-law Commissioners, that the contents of the ditches at Eton have been found to kill the Grass ; a circumstance which plainly shows the ignorance of some farmers, and the vaiue of
sewerage when sufficiently diluted and judiciously sewerage
applied.

With regard to the application of drain-water as a moving power, there can be no doubt that this may be effected in many places at a cost quite trifling when compared to steam; for there must be at this moment numberless springs gushing from hill-sides, having a flow of water sufficient to drive a 10,20 , or 30 -feet wheel, and therefore capable of being instantly turned to profitable account. Upon this point we would particularly refer to Mr. Bailey Denton's pamphlet. If the supply from springs were augmented by water brought together by main-drains, we should confidently look for this branch of its application being carried to a great extent. Indeed it is only necessary to turn to the instance afforded by Lord Hatherton at Teddesley, and to the mines and works in Wales, in Cornwall, Devon, and Ireland, to gain assurance of its paramount economy. Besides, as we cursorily remarked last week, the quantity of water to be accumulated by judicious management would afford means for compensating millowners and others who may be aggrieved by the removal of their mills, weirs and dams.

We think every one will agree with Mr. Deuton, that, if the after-application of drainage water should form part of any legislative measure, not only would the direction of the system be more skilful in itself, but the obligation on the part of individuals to keep their watercourses clear, would produce a result more beneficial to thorough drainage than could arise from any measure devoted to that object alone.
uniting the distribution of refuse of towns with the improvement of outfalls and watercourses, we do not advocate the execution of expensive works, like the aqueducts and reservoirs of Lombardy, Spain, and India; these, in a country like England, would not repay their cost. All we ask for,
is, such as may be constructed economically and profitably, and which in their maintenance and repair would create a continued and paying demand for labour in winter.
But it may be asked whence all this water is to come? Upon this point we shall content ourselves with referring to Mr. Denton's pamphlet, where it is shown, by fair calculation, that the force of surfacewater alone is equal to $2,000,000$ horse-power, the whole of which might, by skilful engineers, be turned to the useful purposes we have mentioned.

These considerations must, we think, be felt by every one to be of great importance to the country; they demonstrate how enormous are the annual losses fulness; they point out a new and immense field for the employment of labour profitably ; and we do trust they will lead Parliament to give the whole question the most careful consideration without further loss of time.

As we anticipated, the determination of the Horticultural Society to exclude from the best prizes at the Garden Exhibitions, Roses that are cut, and to encourage the cultivation of those plants in pots, has excited a good deal of interest, and produced a fair crop of opinions, a tolerable sample of which has already reached us. One man congratulates the Society upon the decision at which they have arrived; another doubts the possibility of cultivating Roses thus with any sort of success; a third says he can't do it,
abusing us for advocating it, and his master for insisting upon his making the attempt. We are perfectly aware that the plan will not suit the "stand stills;" and we can easily understand that those Grideners who have no notion of the reason why they do a thing, may be aghast at the very thought of having to grow a Rose as well as a Pelargonium but we also know that the thing may be done, and well done too, and that the really inteligent gaxdener

* Report on the State of the Drainage of Eton College, \&ec., in
Letter to Dr. Hawtrey.
will have no serious difficulty in the matter. Indeed, a better test of the metal that a man is made of could scarcely have been hit upon; and the only persons who have any just grounds for complaint, are the Pelargonium growers, who now stand a good chance of being eclipsed. If Roses are as well grown, and s well got up, as Pelargoniums, the tide of fashion will be very likely to take a turn, for, after all, there is nothing like a Rose. We cannot conceive anything more perfectly enchanting, in the way of flowers than a sitting-room decorated with Banksian and Chinese Roses, gracefully arranged upon the trellises of flower-pots.

That there are difficulties in the way we freely admit, that many of the first attempts will be failures we cannot doubt ; but perseverance is sure to triumph -and in what cause, let us ask, can perseverance be more worthily employed? One of the first stumblingblocks will be uncertainty as to the manner of preparing plants for cultivation in pots. One man will perhaps grow them "on their own bottoms," others will use stocks, and then will come a question as to the kind of stock that had best be employed. Upon that point, and some others, we have a welcome communication from Mr . Robert Reid, gardener at Noble Thorpe, near Barnsley. Mr. Reid, in the spring and summer of 1838 , was living in Philadelphia, U. S., where the culture of Roses in pots is carried on to a great extent, both in nurseries and private gardens, and where, at the monthly exhibitions of the Philadelphia Horticultural Society, they form a leading feature. Nothing, he says, could exceed the beauty of some of the collections. There were not many climbing Roses, except the double white Banksian Rose, which, being so very sweet, is a great favourite there; and of this he saw plants in large pots ( 16 's or $12^{\prime \prime}$ s), coiled neatly round three or four sticks, covered with Roses down to the pot, and forced early in the spring, which it bears exceedingly haps, one of the most difficult Roses to flower in a pot, many other of our beautiful climbing varieties The succed 10 the same way
The manner in which these Roses are prepared is stated by Mr. Reid to be as follows:-

The Boursault Rose, being for pot-culture superod a stock to any other kind, should be planted in good rich soll in a sheltered situation ; and, if cut down to form stools for the purpose of producing layers, it will in the second year be strong enough to which will make such rapid grow th, that they may be layered the same season. If this operation is carefully performed, and if the end of the layer is tied up neatly to a stick, it will in a few weeks be sufficiently high to allow one bud to be inserted in the stem. It is a safe plan to cut the tongue on the upper side of the layer, whereby all danger of breaking the shoot is prevented. It is, however, advisable to insert a piece of clay, or a small stone, in the opening, to prevent it from adhering before roots are formed

About the end of October, these early layers will have made sufficient roots to admit of their being taken up and potted; and it will thus be seen how quickly a fine and vigorous collection of Roses may be propagated.

The reason why only one bud should be inserted upon each stock is obvious: the latter, when headed down, furnishes its whole strength to the bud, which soon forms as fine a head as a Maiden Peach, and a much morehandsome plant than if the supply had been divided between several buds.

All the unbudded shoots which remain upon the stools car be layered in the following spring, and may be budded in the course of the summer. By the adoption of this plan, a whole year is saved ; lastad a crop of layers to be taken off for plantiog out in nursery rows, to be budded in the succeeding summer,
here is a crop of fine young plants ready for being potted the same season. Many sorts, such as Bourbon, Noisette, China, and Tea-scented Roses, will, if well managed through the winter, flower beautifully during the following spring and summer.

In this manner, plants of much greater strength can be raised, and in a much shorter thee than from cut-window-plants ; and to the Gardener they will be invaluable for the greenhouse and conservatory during winter and spring; and for planting out during summer in the flower-garden, from whence, after bloomup and xepotted for spring, they must be again taken doubt but that the market fowering. There is lithe sale for well-grown Roses in poust woul a rean is common amongst all classes; and a long bed planted and shaded after the manner of Tulips would be a beautiful sight for sumamer visitors."
A Stirling correspondent strongly urges us to call attention to a new source of manure, which he thinks must exist in our own country. He says that every that guano is oue of the best of our manaclusively

THE GARDENERS'CHRONICLE.
[JAN. 28,
that it therefore would be very important to find it nearer home than the Islands of the Pacific, whence it is now imported. As it is the deposit of seafowl, he supposes that we must have an abundance of it on many parts of our own coast, especially in the Western Isles of Scotland, which are the resort of great flocks of sea.fowl, and in the Orkney and Shetland Islands; and he thinks the collection of it would be a profitable employment for the very poor inhabitants of those places. He recommends the Agricultural Society of England and the Highland Society to offer premiums to individuals for obtaining it, in order to stimulate them to exertion.

We hardly know what to say to this proposition. If, indeed, the substance were really to be found in the places mentioned, there is no doubt that it would be very valuable, and afford a far more ample remuneration for collecting it than the premiums of societies. But it is generally understood that their wet climate and the storms to which those islands are exposed, are perpetually washing the materialinto the sea as fast as it is formed; a circumstance which does not happen in the dry climate whence the foreign guano is brought. Perhaps some one may be able to say what the fact really is respecting the presence of guano in our northern islets.
If it should turn out that, as we suppose, it is lost as fast as it is produced, we are by no means sure that it might not be saved artificially, if a little pains were
taken to do so. In Persia, the great manure is taken to do so. In Persia, the great manure is
pigeons'-dung; small dove-cotes are built in the plains, in the form of towers, in the upper parts of which the birds inhabit, and in the lower of which the manure is collected. Access to these towers is secured by a door at their foot, which can be opened for the purpose of clearing out the interior; and thus the
extensive Melon grounds are richly manured. Could extensive Melon grounds are richly manured. Could
not means be taken to induce the sea-fowl to frequent not means be taken to induce the sea-fowl to frequent
particular spots, where, by means of a little contrivance of the Persian kind, the effects of rain might be prevented? It is to be remembered, that if this substance could be thus collected, it would be more powerful than guano ; because it would be, or might be, free from sand and other impurities, which greatly
diminish the value of the imported guano. It is for diminish the value of the imported guano. It is for
our Scotch friends to consider how far such a project is feasible.

## ENTOMOLOGY--No. XXXIX.

OAK-SPANGLES AND SLLE-BCTTON-GALLS. - There are several different kinds of these singular and pretty eeasons they are exceedingly abundant, as in the autumns
of 1840 and 1841 , and at other times it is difficult to find of 1840 and 1841 , and at other times it is difficult to find year. A casual observer might mistake the brown globose Button-galls (fig. 2) for the eggs of a large raoth (especially of a Lasiocampa), the rosy spangles (7) looking
like the same expanded; and not a few persons have supposed them to be fungi. They are, however, galls, poidex.
These galls are attached to the under-side of the Oakleaves by a short pedicle, as represented in fig. 5; and
the same is shown in the centre of fig. 4 , which is the under-side of one of the globular spangles magnified, fig. 3 being the upper-side. These galls are produced
upon the under-side of the leaves, and generally on the upon the under-side of the leaves, and generally on the
south side of the tree. After the succession of heavy showers we had in September and October, $1841, \mathrm{I}$ found the Oak-leaves covered with spangles in Suffolk, when they were larger than I had ever before observed them ;
this induced me to examine some carefully, and on open this induced me to examine some carefully, and on open-
ing one I found a live shining fat maggot (fig. 6 ), with a bright yellow patch on its back, curled up and lying in a
small cavity close to the pedicle of the gall. I opened small cavity close to the pedicle of the gall. I opened
several others with similar success, but could not find any of them in the pupa state; and although I placed the leaves in a pot with damp moss, which I kept until the following year, I could not rear them, or if I did, they escaped through the fine gauze which was tied over the pot. I was, however, fully convinced that the Oak-spangles Were the work of a Gall-fiy; and upon referring to the short description of the insect which causes these pretty objects. It is a true Cynips, but it is called by the
French naturalists Diplolepis lenticularis:-"The French naturalists Diplolepis lenticularis:-"The ann tennæ are blackish, a little longer than the thorax; the
whole of the body is black and shining; the legs are yellow." The Oak-spangles are equally common in France, and M. Danthoine says that in Provence "they
are sometimes so abundant that, in autumn, when any-one are sometimes so abundant that, in antumn, when any-one
shakes the Oaks, they fall like rain ; this little gall detaches itself from the leaves in the month of October, and remains buried during wister either in the earth or in the snow. Each lentil (the appellation by which he distin-
guishes the little gall) contains rarely more than one guishes the little gall) contains rarely more than one
larva, which comes forth a perfect insect towards the first fine days of spring."
These spangles, or battons, are beautiful objects when examined under a lens, being covered with fine fibres shining like silk, and varying from a greenish to a brown colour, with a pit, or deep circular impression on the crown. The other galls, which often accompany them,
are larger, flatter, and something like a saucer or a are larger, flatter, and something like a saucer or a
depressed Chinese hat, generally of a crimson colour, the outer margin a little reflexed, and the centre slightly
elevated; these likewise arrive at their fuil size in October elevated; these likewise arrive at their fuil size in October
and Noverober ; but in July they are very minute; at elv November; but in July they are very minute; at
and
that time the centre is ochreous, and the ring deep red and velvety. I have also detected in the thickened central part of these a gelatinous maggot, but it is generally en-
tirely dried up. I can find no account of the species of tirely dried up. I can find no account of the species of
Cynips which infest these galls, and am therefore unable at present to describe it, or to give it a name.
I have observed a third variety of gall, in November, upon the Oak-leaves, which was more fleshy, and larger the shape of a deep cup ; the top was open, with a minute tubercle in the centre. These also contained minute maggots, which I was unable to rear. In June, 1841, a fourth variety of gall was sent to me from the same Oaktree which had furnished a constant supply of the Oakspangles : some of the leaves exhibited as many as three variously placed, projected but slightly from the surface, and differed from all the foregoing in being equally visible on both sides. Upon examining the under-side of the of a dull ochreous colour, surrounded by a thickened green ring, about a line in diameter ; this ring was wrinkled, and the colour of the leaf; on the upper-side ine spot was similar, witt centre ; and there was sometimes a conspicuous hole, from whence the perfect insect had escaped. On opening one which, by holding the leaf up to the light, I
saw contained some opaque object, I detected a shining saw contained some opaque object, I detected a shining
piceous Cynips, with long brown antennæ, a little clavate; piceous Cynips, with long brown antennæ, a little clavate;
the legs were ochreous and the nervures of the wings deeply coloured; by its side I saw a parasitic maggot of a grey colour, which bad seized the Cynips, and, to my great annoyance, soon ate out the body, and mutilated
the other parts. If this species be not described, $I$ propose calling it Cynips Quercus tiarce, from the resem blance of the gall to a turban.-Ruricola.

ON MANURING WITH GREEN CROPS.-No. VII. (By Professor Charles Spreng the German.)
IT cannot be doubted that many plants, not yet used, will yield good green manure, because they combine all essential properties in a high degree. The following
some with which I have made successful experiments.

Tansy (Tanacetum vulgare). -This plant, which is smell smell and taste (owing to some ethereal oil) is not eaten is only used as a green manure, its not being relished by cattle is of no consequence, and is a case similar to that of the Lupine. The qualities which recommend Tansy are of much importance, viz., its roots reach 2 to 3 feet in the
soil, and thereby bring to the surface important mineral soil, and thereby bring to the surface important mineral
substances, such as potash, sulphuric acid, phosphoric acid, substances, such as potash, sulphuric acid, phosporgh, wet,
etc. It is a perennial, and does not suffer from drought, or cold, is never attacked by vermin, grows from the earliest spring, and yields a great mass of herbage, viz.,
29,000 to $30,000 \mathrm{lbs}$ per Magdeburg acre; whilst Lupine, under the most favourable circumstances, will not yield more than $16,000 \mathrm{lbs}$. I have not yet analysed the Tansy, and am, therefore, unable to state with accuracy how
much manuring substances are added to the soil by 1000 lbs .; much manuring substances are added to the soil by 1000 lbs.; but some comparative experiments gave such a favourable
result, that I may say that Tansy is in no way inferior to Lupines. At the end of May, 1837, I carted the first cut of Tansy on a small piece of ground, which was of the same size as that on which the Tansy bad been grown; I ploughed it in five inches deep, and 8 days afterwards sowed Barley, which, from the first to the last, grew as luxuriantly as if it had been manured with dung ; nay, it cent piece of Barley which had been dressed with dung. In 1838, I sowed both plots with Oats; and here also that manured with Tansy stood much better than where none has been applied.
If we then remember that one acre of Tansy yields plant most easy of propagation, as it seeds by itself, and even becomes a weed ; that on proper soils it will grow for 10 years most luxuriantly, and that during that time it does not occasion any expense of labour or outlay expe-
seed, it will be obrious that it is worth while trying
riments on a large scale with this plant. If they be successful (as I have no reason to doubt), 200 acres of bad land would not only be improved by 50 acres of Tansy, but
also kept in such heaft, that a dressing with Tansy would only be required every second year. The only objection to this sort of green manure is, that it cannot be ploughed in on the spot where it is grown, but must be conveyed to the field. Although our native Tansy is a valuable green seems to be still anacetum boreale, a na height of 7 or 8 feet, whilst ours grows only 4 or 5 feet.

Mugwort (Artemisia vulgaris).-This plant, which tageously as a green manure, as its roots reach 3 to 4 fee in the subsoil, and thus bring substances to the surface (especially a large amount of potash), which are valuable fertilizers. It yields, even on poor loamy soils, as considerable a mass of herbage as the Lupine, as it can be mown mine a year; it lasts several years, is not attacked barliest to the latest part of the year. Still, Mug-wort, like Tansy, requires for its success a subsoil which contains (at least in some degree) all the substances required for vegetation, such as potash, common salt, lime, gypsum, and the phosphates. When either of these plants goes off, it is eviand they are then to be sown on other felds. I have not made any experiments to show how crops will grow after the green herbage of Mugwort has been ploughed in till he green herbage of sugwort has been ploughed in, sth same as those of Tansy, Parhans it would be best to amo Mugort and Tansy together as both are often grow ing so in their wild state. This culture is any rate very usul, as minel abtio very assul, as mid sub hourishmet of crons cannot be selied in large quan tities an common salt phosphate of lime, and gypsume. No doubt, besides Tansy and Mugwort, several other wild plants beides lang an Mugort sevaral the reach deep in the soil ; for instance, Mullein (Verbascum) for dry sandy soils, which yields a great mass or herbage, (Heracleum), would be more adapted for clayey soils.

GARDEN EXHIBITIONS OF THE HORTICULTURAL SOCIETY OF LONDON
With many of the Exhibitors and Friends of the Horticultural Society, I must congratulate the Prize Committee upon the important and useful alterations which they have introduced to the circular which has appeared amongst your advertisements. There is one thing, however, which I am anxious to bring under their notice; and I cannot
do it better than by asking you to print the suggestion in do it better than by asking
You are aware that the exhibitions are Jess interesting than they might be, owing to the difficulty which is felt by visitors in getting acquainted with the names of the plants. I have frequently heard them making anxious inquiries of those who were supposed to be Gardeners or Exbibitors, and in many instances getting names which were either erroneous, or garbled and unintelligible. Last year it was reported that this defect was to be remedied, by the Society's officers putting correct names to all the specimens ; but as this was not done, I suppose it nas found impossible, for want of time. I would therefore propose that the plants should be named by the Exhibitors themselves, and in order to encourage them the Society might offer a Banksian Medal, or Certificate, for the bestnamed collections. Florists' flowers are generally named by the Exhibitors, and single specimens of ornamental plants have their names written upon the entry cards by "Collections" about which there is any difficulty, and for which rewards would have to be offered.
Suppose, then, that a Banksian Medal was offered for the best-named collection of 40 stove and .greenhouse plants; certificates for the best-named smaller collections, be legibly written and correctly spelt, as well as placed upon the plants in situations where they would be easily read by the visitors. I have little doubt that by these means the visitors would be more interested than they can be by the sight of a splendid flower without a name ; for, how much soever they may admire it, they have no means how much soever they may admire it, they have no means
of asking it from a Nurseryman, or of making him comprehend what it is they wish to add to their collection. prehend what it is they wish to adi kind would not only
And $I$ also think that a prize of this kin be highly honourable to those Gardeners who might be be highly honourable to those Gardeners who might be
successful competitors, but it would have a tendency to successful competitors, but it would have a tendency to
improve them in the art of writing and spelling botanical improve them in t.
names.--Criticus. $\qquad$
BEES.
Ir there is anything more calculated than another to induce man to undertake a task, it is the appeal of a member of the fair sex for assistance when in distress. I have written many thousands of pages for the press, but never
two lines about Bees. Although very fond of Bees, I have two lines about Bees. Although very fond of Bees, I have never yet written anything concerning them; I have now,
however, out of sympathy to a " Despairing Bee-keeper," drawn up the following account of my experience with these insects during the last season only, as my avocations have previously prevented me from keeping Bees.
In the month of June last, I purchased a swarm of Bees, which had been secured in a common straw hive, and the season being favourable, they appeared to be active mitted them to go abroad. From the quantity of pollen
which I observed them carry into the hive, I judged about the end of August that it must be nearly full ; especially as the Bees, even in very fine weather, clustered at the entrance, and did not appear to proceed to the fields in such numbers as they had bitherto done. In order to afford them more room, I made a box 10 inches square, outside, of wood, I inch in thickness. At the bottom of the front side, I cut a hole $2 \frac{5}{3}$ inches long, by $\frac{1}{2}$-inch in depth, exactly similar in dimensions to the entrance to the straw hive. In the side of the straw hive I cut a hole $2 \frac{1}{2}$ inches long, by $l$ inch in depth, and having made a tube of zinc, for the salke of neatness, I fixed it to the box, and joined the straw hive and box together; the zinc ent ing about half an inch beyond the straw of the hive.
I left the hole in front of the side box open; and the all their former activity ; thousands departing through the medium or outlet of the box, but all entering the straw hive on their return laden with their fioral treasures. In the evening, from curiosity, I separated the side box, and to my astonishment, several of the Bees came along with steam from the heat of the hive, which had formed like dew-drops on the zinc. It occurred to me, that this liquid might prove injurious to the Bees, and I therefore mmediately made a communication of wood to join the I feel convinced that the white powder, in appearance like arsenic, which always forms on zinc, after it has been wetted ven with the purest rain-water, is of a poisonous nature and is the principal cause of the destruction of Bees hive from zinc troughs, or or in straw hives, when they are fed the same metal.
When the weather became frosty in the early part of November, being desirous that every care should be takem of my Bees, I closed the aperture in the side box, which I had found of great use in warm weather, as, on all occasions, it proved an effectual safety-valve, I at the same of perforated zine; but in a few minutes afterwards the Bees borated anc, but and and minutes afterwards the dently oppressed by the alteration I had made, and pearing to absorb the condensed air on the ziac, which induced me to remove it altogether. Shortly afterwards attempted to contract the entrance by inserting a piece ne and a half inch open half an ioch thick, leaving abou ne and a half inch open. The wood had not been applied t, with the object of removing it, as they fined examine egs to it and pulled with all their strey egs to it and pulled with all their strength; but failing in quen endeavours, they, with several olbers which subse quently joined them, ran about the entrance and appeared com very uneasy. As I could not bear to see them un two of them immediately occupied of wood, upon which had been minutes, as if it had been the warmest day in June
This satisfied me it would be best to let the Bees tak neir natural course, as my contracting the entrance woul only create foul air_and cause their destruction. In thi I have not been disappointed, as up to Dec. 26 I only witnessed three dead Bees from my hive, there being no or unruly members of thes must have been stranger brought ou combers of the community, as they were ach tung to death glards, thrown down in front of the hive and mmediately fine executioners returning to the hive tion as if a praiseworthy action had been performed These deaths occurred in August; but the third took place towards the end of December, as I found the body of the Bee in the side box lying near the body of an ear Wig ; both having evidently been killed by stinging, as the therefore, probable that it had been fighting.

I almost every day examine the bottom of the stram hive, which I can easily do by the aid of a lighted candle held in front of the entrance. It is remarkably, clean, appearing on it. I consider this to be the covering which falls from the combs on their being opened to supply the pinter stores, which appear amply sufficient for their sub sistence ; although the hive is very crowded, being, as Bearly as I can guess, from 40 to 50 lbs . in weight. My trance, they on the $13 \mathrm{th}, 14 \mathrm{th}$, and 15 th Dec., when the wind blew Eoft and warm from the S.W., they left the hive in such numbers that I was obliged to open the hole in the side$\mathrm{b}_{\mathrm{ox}}$ during the time the sun was near the meridian. laden why of remark that many of them came home and on these days they carried out of the hive every crumb of wax which had previously fallen, leaving the bottom bard as clean as if it had been scoured.
From the observations which I have made, I am of opiinstinat Bees will thrive best if left to their own natura after the It is bad policy to lift the hive from the board, fill up the season is past when they can collect propolis to being injured by contrary currents in the hive in inclement weather; as it is impossible to replace it in the Same position in which they, had secured it, and they cannot go abroad to procure the material to remedy the evil. but Some apiarians recommend the use of tobacco-smoke, effects of being fumigated. injure obviate any necessity for, in the slightest degree injuring these useful and truly valuable insects. It com
bines the advantage possessed by the common cottage straw hives, as a winter residence, with that of boxes of wood atached to work any quantity of honey, or to separate stocks, without allowing them to swarm, or to join stocks on the pproach of winter, or to make experiments of any kind with the Bees, as the boxes have windows to permit a ful view of all their operations. I send you a sicetch to show that it has a pleasing appearance, and that it requires no other protection whatever. Considerable taste might be displayed in making hives in which all these advantage are combined; although in the present I have studied economy in order to satisfy myself that they can be made at a moderate price, so as to be within the reach of all classes; and I shall be happy to show it to the "Despairing Bee-keeper," or any other respectable reader of the Gar deners' Chronicle, shpuld they pay me a visit.
The boxes are made of wood one inch in thickness and as your "Despairing Bee-keeper" has stated tha Bees kept in boxes generally die during the winter, I have lined the inside of my boxes with India matting, similar in texture to the straw hives. The interiors remind $m$ e of the tapestried halls of our ancestors, and must prove uxury to the Bees. The dotted lines in the plan of the base show the thickness of the wood, and that there ar pillars supporting a portico extending three inches, to protect it inches over the straw portion of the hive, The whole roof lifts off at the with the sueatest san. and is so constructed that bell-classes could be worked on the hend John Grant, Editor" of the "Army and Navy Register," Woolwich.

AMATEUR'S GARDEN.-No. IV.
As some readers may have dung sufficiently fer mented to be made into a bed for the growth of the Cucumber, I will offer a few remarks on the most simple method of managing it. Presuming that a common frame is to be employed, the first thing will be to excavate the ground where the bed is to be formed, to the depth of 3 feet, and 4 feet wider and longer than the frame to be used. In the centre place a layer of faggots o Waste wood, 2 feet thick, of the size of the frame, and upon this foundation lay the fermented dung; taking care to make the mass firm as you proceed, until the bed is 4 fee high in front, and $4 \frac{1}{2}$ feet at the back. If the dung is no well fermented or dry, it will be advisable to sprinkle with tepid water as you proceed. The bed being formed mass begins to heat, the dung inside the frame should be forked over twice or thrice a week until it is quite sweet that is, until the steam evolved is inoffensive to the smell At that time the frame must be lifted off, and the dung rom the centre of the bed formed into a wall 6 or 8 in some boards 6 in . wide, so that their outer edge will be even with the outside of the frame, and then plaster the inside all round with mortar or tempered clay, which will prevent the entrance of steam, and deprive the woodlice of a favourite retreat. Should the dung be very hot, som strong pieces of wood may be placed across the bed, with some boards and thin turf above them, on which the soi for the plants must be put. A hot-air chamber is thus ormed between the dung and the soil, by whichevery part of the latter is at all times equally heated, and all risk of chamber ras aiso be brought. The heat from this air of the frame in a case of emergency.

It is of little importance what kind of soil is used, во that it is not of an adbesive nature. Peat-earth is good, beds by the carbonic acid and ammoniacal gas which pass
through and enrich it from the fermenting dung; but are found sandy turfy loam and leaf-mould in abou qua cit sute, superior to it The son should be placed in a narrow ridge along the back of the frame, but not so as to rest against the wood work; in this position it gets rather more sun, and the young plants have the advantage of the light reflected from lie back of the frame
In planting, place two plants under each sash and within eight inches of the glass; pinch the top from one of them as soon as it has made three rough leaves; train the laterals along the back of the frame, and stop them above every leaf until they show fruit. These plants will produce a few early fruit; but the others, which are to be trained towards the front, must not be allowed to bear fruit until they have acquired strength, as they must be depended upon for the main supply
It is not necessary that the temperature of the frame should exceed $65^{\circ}$ with air by night, but by day with sun and air it should range from $70^{\circ}$ to $85^{\circ}$ or 90 . Sprinkle the plants about 2 o'clock in the afternoon of every sunny day with tepid water, and shat the sashes close down; bu give a little air at the time the frame is covered up for the night. Unless the weather is very bright, water at th root will not be required more than once a week, until the middle of March; but after that time the plants will stand in need of it more frequently. Keep the tem perature steady at $65^{\circ}$, by occasionally turning or renew ing the linings; do not allow the bed to become crowded with useless vine; keep the glass clean, and success s certain.
For early use, there is no Cncumber equal to the old Southgate for a frame ; next to that, the Syon House and Roman Emperor are the best. If, however, long fruit is wanted, Young's Champion and Dreadnought, two whitespined varieties, may be procured; which, in addition to producing fruit of extraordinary length, are of a hardy white-spined wariear profusely, white-spinth in precocity prolificacy W. $\boldsymbol{P}$. Ayres.

## HOME CORRESPONDENCE

Affghan Plants. -The nearest wooded part of the Su faid Koh (i. e., White Mountain) to Cabul is Taizeen The forests of the Sufaid Koh consist of various cinds Fir, among which the Deodar is abundant; the Cheel, Pinus longifolia, is also believed to occur, as well as the Chilghozen, which, from the abuance of the see as posed for sale, must be common. These appear exactly to resemble those of the Pinus Gerardi, a Kunawur, on the northern face of the Himalaya Moun tains. These forests likewise cof Olive; the Sch specs of Oak, the Zaitoon, a species of Ohve; the Schnee, on of the most celebrated plants in the country for its aro matic and stimulant properties, and which may perhaps be a species of Balsamodendron. This seems especially the Kojuck range. The only forests with which Mr Griffiths expresses himself acquainted are those about Olipone, in which direction the mountains assume the Himalayan features. The principal trees of these moun= tains are the Deodar, or Nokbtor; the Zaitoon, and the Baloot. There is, perhaps, another species of Oak; but, so far as known to ' Mr . G., no other Fir-tree. On the Kafir Mountains other forest-trees occur, as the HorseChesnut, and a beautiful Abies or Spruce Fir, apparently allied to the Morinda or Khutrow of the Himalayas. At Cabul, the demand for timber is supplied almost exclu sively by the Poplars. The great majority of the cultivated trees are fruit-trees; and the bulk of the vegetable fuel is supplied by the low bushes, chiefly species of Arte misia. From Taizeen, supplies of Baloot branches are brought to Cabul, as well as a good deal of charcoal pre pared from it and the Deodar. The transition from the absolute barrenness of the Hindoo Khoosh to the finely clothed Himalayas certainly takes place somewhere to the north of Pusheel, or between it and Jugdulluck. It woul appear almost sudden, both Firs and the Zaitoon ceasin abruptiy; the Baloot only straggling as far as Jugdalluck. about which it is a stunted tree, very much like a Holly This, no doubt, is the prickly Hollyoak, with which stockades were made by the Affghans in the Cabul Passes but as Mr. Griffiths has not giveu it a specife we are unab his collection and that of Dr. Falconer, no doubt, contain specimens which
ascertained. $R$.

Enormities.-People who regard Horticulture as tranquil, peaceful recreation or employment will startle at such a heading, and wonder what mast be the sequel to so electrifying an announcement. But I fact is, a one of the readers of your Chronicle, for staying, by your late strictures on instrosities, tha present rage for "horticuitural enormities -enormous Celery, enormous Carrots, enormous Cucumbers, and enormous Grapes. Any production now, to be orthodox must be in its way enormous. it generally happens, however, that flavour is herem sacrificed to appearance, and I must think, and do find, that Celery grown in well digested compost to a moderate size, is far superior to beads big enough for neat stock to graze on. Carrot should rather be remarkable for saccharine and tende substance, than for making two in a dish a full comple mont for dinner. Cucumbers grown on a single stem against a south wall in summer are crisper and moresub saccharine than others, and should be, in my opinion, of the black and white spine old-fashioned sort, just as you describe them. These will be relished by the cognoscent in gastronomy far beyond the Patagonian monsters of the present day. As for Grapes, if they are produced out of
a dry gently-manured compost of lime-rubbish and loam, although not so big in berry as a Muscle Plum, yet 1lb. of Grapes so grown will be worth a stone of the "enormity
breed," provided palate and not eye is to form the canon for supremacy of excellence.-W. Mason.
Dissipation of Gardeners.-Your judicious remarks, at $p .18$, respecting the dissipation of Gardeners, and the
excellent letter of "A Gardener" upon the same subject, mustbe cordially approved by every right-thinking person of that valuable class who wishes to see hiss, profession elevated above the degrading vice of intemperance. The objects and associations of Horticulture are so pure and unconthe imagination, that it is difficult to conceive how men who have once entered upon its pursuit can degrade themselves so far as to seek, in the vice of drinking, for that gratincation of their inferior senses for which, in their inthat this important matter will call forth an abler pen than mine amongst my brother Gardeners, that such mistaken characters may see in what estimation they are held by
those who desire to see their profession elevated to that those who desire to see their profession elevated to that degree of respectability which it deserves. ment of the gifts of a bounteous Providence. We all require a certain portion for the support of Nature, and pertiaps a hard-working Gardener may need more than I would deprecate. I would raise my voice against the frequenter of pothouses-who pours downhis throatglass after glass of liquid fire, for no other purpose apparent than to glass of liquid fire, for no other purpose apparent than to noblest of purposes, but which he converts to the most noblest of purposes, but which he converts to the most considered by all respectable Gardeners as the weeds of "probono publico."-J. W. ${ }^{\text {Co }}$.
Calendar:- I am much struck with the familiar and comprehensive style in which Mr. Beaton has written his second," "Calendar of Operations," which every gardener
I think must be pleased with. I am, however, induced I think must be pleased with. I am, however, induced to ask him, through the medium of the Chronicle, to enlarge a little on his remarks on "The Conservatory," by begging him to name some of the stove plants and Orchi-
dáceæ, calculated to create the "blaze" of which he speaks. I always fancied that stove plants would, if moved from their own edifice at this season of the year, in-
stantly droop, unless a higher temperature was maintained than is safe for Camellias, Kennédias, Acácias, \&\&c., growing in the beds. Of course $I$ am mistaken, and I think that a series of papers on the management and decorations of conservatories in a more full detail would be generally acceptable. Greenhouses of this description are now become common ; but few present that constant deficiency a series of papers would remedy. Will he also kindly say how Hedychiums should be managed? I am induced further to trespass on your or his kindness by asking how to raise Rhododendron, Indian, or Ghent Azalea seed, both in pots and the open ground. I have
raised seed-pans full, but they always perished before putraised seed-pans full, but they always perished before putting out their second leaf.-An Inquirer.
Effect of Light upon Plants. - I can
statement of Mr. Beaton at p. 39 , "that fully confirm the important agent in the growth of plants." I have two liouses of nearly the samae dimensions; one facing the been heated artificially since Nov. 30th, the temperature ranging from $39^{\circ}$ to $69^{\circ}$. The latter has never had was expected at night, perhaps not half-a-dozen times
during that period. Both houses are filled with Roses, and I have gathered the greatest quantity from the sunshine that was to be had in this dreary season.-O Oikos. Night Temperature of Vines. - If my experience in perature of forcing-houses at night, will be of any use in assisting to convince those who are still sceptical on this important point, they are at your service. When I began to force Vines some years ago, I was sanguine of sucoess, and believed that a strong heat was all that was temperature, that of the day of course fluctuating accord ing to the state of the weather, for the first fortnight three weeks ; at the end of the month I raised the tempe rature at night to $60^{\circ}$, gradually increasing which I made my standard, allowing myself a range of 3 Which I made my standard, allowing myself a range of $3^{\circ}$ below that point. The result of this treatabove and $3^{\circ}$ below that point. The result of this treat fruitful certainly, but the fruit, like the wood, was weak the branches were long and straggling; the berries small the branches were long and straggling; the beries sman, and when ripe very imperfectly coloured, and in many calquatated upon having large, compact, black bunches, covered with bloom ; instead of which, I had bunches that I was almost ashamed to send to table. I was at first inclined to attribute it to the border ; but when I reflected that I had taken the greatest care to have it thoroughly well drained, I concluded that this could not be in fault, and that the error must lie elsewhere. maentioned my disappointment to $a$ brother Gardener, clever practical mapaintment who, on observing the state of my Vines, (the fruit was then on the point of changing colour) inquired what temperature $I$ was in the habit of keeping at night. Upon detailing my practice to him, he shook his head and said, in a semperature in the earlier stages of have kept too high a temperature in the earlier stages of forcing; you have given your Vines more food than they can properly
assimilate, and have thus weakened their digestive func-
tions." Much more to the same purpose passed, which it is needless to recapitulate, as you'have so cleariy explained the principle in last week's Chronicle, and in the Theory
of Horticulture. In summing up, he said, "Begin with of Horticulture. In summing up, he said, "Begin with a let it at night sink at least $10^{\circ}$ lower than what you consider necessary in the day." By following this advice, the second season after commencing the new treatment I succeeded in obtaining from the same trees strong, shortjointed wood, and close compact finely-coloured bunches, all of which I owe to this timely advice.-I. W. C.
The Grape Vine.-An extraordinary instance of the place in the $G$ ation in the Vine is, I think, deserving a since, it was deemed requisite to enlarge a school-room in this town which had a Vine growing at the eastern end; but so unwilling was the proprietor to destroy it, that he ventured to lay the branches under the new flooring to tion, it has continued to produce fruit, notwithstanding great portion of it is in continual darkness, and consequently deprived of atmospheric excitement, except by the - N. S. Hodson, Bury St. Edmund's

Growing Vines in Frames.- The following system of growing the Vine in frames, which is well adapted for gardens where the quantity of glass is limited, is prac
tised by Mr. Dawson, Hoo, Hertfordshire. About the first week in April, a bed of partly decayed dung, to which a small quantity of made at about 18 inches from the wall in front of the selected Vines. This bed is built sufficiently deep to admit of its being about 3 ft . high after settling. The frame used by Mr. Dawson separates into two portions, so that the lower part can be first placed vpon the bed. about a foot above the surface of the dung. The upper portion of the frame can be afterwards put on and secured the frames constructed in this way is the ease and safety with which the Vine can be taken in ; since, in intro ducing the shoots of a Vine through a hole cut in the back of a frame of ordinary construation, be liable to being thinning, sec. Air is ive fired, cx cept in stopping, thinning, \&c. Air is given freely, but failed in a crop upon which he tried this experiment. severe weather a covering is put on, but this is not gene-
rally xesorted to. By pursuing the above mettod, frit good quality has been cut by the leter end of August for which Mr. Dawson has obtained several prizes a local Horticultural exhibitions.-J. A., Liverpoob
Double Yellow Rose- - In a leading article at p. 811, of the Chronicle of 1841, you have mentioned differen blossomed. Ahe Biel, in East Lothian. As this Rose is undoubtedly a native of a warm climate, I am of opinion that, where practicable, it should be grown ggainst a wall with a and 7 or 8 feet in diameter, is planted here in a similar situation, and in connection with a greenhouse. The soll in which it grows is of a light nature; and, although so far north, two very beautirul Roses were last year ga-
thered from this plant, and were exhibited at the Gardens of the Horticultural Society of Edinburgh, where they ware greatly admired.-W. Procter, Gardener at Tar-

Celery.-The mode of cooking Celery in last Chronicle I have almost daily experience of, but I am desirous of is brought to table as hot as several other vegetables in after the cover is removed it is with difficulty that it can be served round the table. Why is this?-M. $C$. - [No which there is something in the texture or therefore it cools down ranidly ponductor of heat, andected with the many large open cavities which it contains. We cannot, however, say that we have found it cool inconveniently fast, if covered with good melted butter. $]$
Charcoal a Preventive to the Onion Maggot.-At states that, half-an-inch of Charcoal dust spread over the soil 'and mixed with it just before Onion-seed is sown, will be found as sure preventive against the grub, mouldiness, sc. He also states that it is a remedy for the club in the roots of Cabbages and Cauliflowers. May 1 ask your Correspondent "as a young practitioner" the purpose if easons why he applied the Charcoal to such in a hape chace mane? It is asuredy a simple and not less easy way of destroving these pests; and when once fully convinced of the philosophy of its nature, I will try the remedy, and the result shall afterwards be reported.A Rosshire Gardener.
Sall as a Manure.-I can bear testimony to the beneployed. My or Salt as a manure when judiciously employed. My garden, when $I$ came to it, was so infested with lugs as to render it almost impossible to preserve a vege large species, half as long as a man's thumb, provincially termed the herring. back slug. By the advice of a neighdry shed; and when a quarter of the land was cleared of its crop, I sprinkled it all over with Salt, and allowed to remain for a day or two before it was dug in. I like wise on moist evenings, when the slugs were most active,
went carefully over the garden and gave it a slight
sprinkling with Salt, even amongst the growing crops. This effectually destroyed those pests, without injuring the vegetables; and my garden is now comparatively free
from them. The Salt I use is a coarse sort, which I from them. The \$Salt I use is a coarse sort, which I purchased at Scovil's Wharf, in Tooley Street, for about from South America; and is consequently enriched by matters which America; and is consequently enriched by Correspondent " Quercus" will refer to the xivth Chapter of Lake, verses 34 and 35 , he will there be led to infer that Salt, which had not lost its savour, was formerly considered beneficial for dressing land. I have used Salt with equal success on heavy and light land; and the crops Clapham.

- Lime Water:-Several Correspondents have recommended Corrosive Sublimate for destroying worms on Lawns, \&c. ; at the same time cautioning persons against more safe, imple, and Why then do they not use the The idea of using Lime-water for this purpose was duced about 25 years ago, ( 1 believe for the first time) by gardener named McDougal, who travelled over a great part of the kingdom collecting subscriptions of 10 s . $6 d$ each When he had collected as many as he could, he divulged the secret to his subscribers, and to myself amongst the number. His secret was merely to put some quick-lime into a tub of water, to stir it up well, and when the lime had subsided, to water the lawn, \&c., with the clear liquor. This is an infallible remedy, although some of your Correspondents have stated otherwise ; but I apprease fat use of state or slack hoe, that is, hone that had been from quick-lime is sufficient for an acre of ground. $-\boldsymbol{F}^{\prime} . \boldsymbol{H} . \boldsymbol{S}$. To destroy Rats-At page 853 of the Chrovicle of year, there is a description, by J. Parks, of a trap for catching rats, to which I beg to offer the following improvement. Instead of the hole being left open in the lid, a light tin trap-door should be fitted to it, and this should be fixed with a very weak wire spring, just strong enough in to the door to its proper place whenever a first, be hasshead. This door must, for a few days at some be fastened up whe a buto, darng which time frequen shoul be placed upon, to hace the to frequent it. Afterwards, the bait shoula be secured to the trap-door, so that it may not fall off when the rat drops into the water. -D.M.
Gold Fish.-At p. 857 of last year's Chronicle a correspondent inquires as to the best way to keep Gold Fish alive through the winter. I therefore take the liberty of making a few remarks on the subject. Your correspondent appears to bestow much unnecessary trouble upor, the Fish; for 1 consider once in a week, or a fortnight, is quite often enough to change the wate, for which purpose pond water is preferable to rain, which, when taken from a tub or tank, supplied from the roofs of buildings where there are chimneys, must contain particles of soot, these are no doubl injurious to the Fish. The reason why they so often die when kept in glass globes is owing are comange of water from warm to cold. The globes of the sunn in placed close to a window, where the heat make the water warm, and I believe the ceneral practice is to change it about once in a week. As the temperature of the fresh water must therefore be a great deal lower than that removed, $t$ wonder be at often fail in keeping their Fishes alive. It would be a bether plan to raise the water to the same temperature as gath is to replace. I am not aware whether it is gne thy known that there are two varieties of Gold Mish, cel Chub Headed or Dutch, the other of a brighter sevar, and more tapexing shape. The latter is bred by ponds persons in this neighbourhood, who keep thera in are more tender than the other variety, as a correspondent at p. 6 says, that he lost all his which were of that kind My pond is rather singularly situated; being in the highest part of my carden, which has a steep slope towards the north-east It is therefore one of the coldest pects that can be particularly as this part of the country is very elevated. The depth of the pond at this season is about three feet and its dimensions 14 by 12 feet; th waste water being corried of by a droin. It is formed the of the solid clay, and is supplied entirely by the rain nated with iron, is bard since the sun scarcel ereg shines upon its surfe for two or three monthe in winter About four years ago I stocked it with twent brace of Gold fish of various sizes. I have nere since fed or removed them; all that I do in frosty weather is, to break the ice every morning, or, if very severe twice during the day. I have only lost three, and that was from my neglecting to break the ice one day when the frost was very intense. The ice does not require to be broken more than three or four feet square in one place, unless the pond is of a large size; it should also be thrown out, in prder that it may not again congeal toge ther. I ought to mention that my pond is formed in the centre of a hollow space, having a narrow path round its margin, and a sloping bank five feet wide, which prevents Tt being dried up in the summer. There is a white Water-Lily in the centre, and the Fish are very fond of collecting under the shade of its beautiful round leaves in hot weather. My Fish are at this time from two to nine inches in length ; and, of various colours, from the brown to the finest gold and scarlet : and in a summer's day they are one of the prettiest objects in a garden. They they are one of the prettiest objects in a garden. They
thrive well thus treated, and breed every seabon. Your

Correspondent is advised to replace his Fish in the pond, but 1 consider that it would not be safe at this time. It would be better to keep them as they are for a mont Poullry. In answer to your Renfrewshire correspon ent, I beg to state that the Malay Hens are usually of a reddish brown colour, long in the leg, with a peculiar round-shouldered look in the form of the back. Mine
were originally given to me by a friend from India; but Were originally given to me by a friend from India; but
they are to be procured in abundance at Baker's, or indeed of any of the poultry-dealers in Leadenhail market.
My Dorking hens are coloured, as I prefer those to the My Dorking hens are coloured, as I prefer those to the White sorts. I have never found anyt
in the colour of their flesh.-A. $E$. $S$.

NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL.

## Stenomesson vitelinum. Yolk. of Egg Stenomesson. (Stove Bulb.) Amarylidácea. Hexadria Monogynia. - A bulbous plant from Lima, whence it was sent by J. Maclean, Esq., to the plant from Lima, whence it was sent by J. Maclean, Esq,, to the Horticuitural society, with whom it flowered in February, 1842. It is essentially distinguished from other known species loy its broad leaves, depressed bulbs, and the intermediate teeth of the cup being obtuse and undivided. The plant fowered in stove, where it had been kept warm and moist while gro stove, where it had been kept warm and moist while growing, but concr and dracr while at rest. it is among the prettict of the Western American bulus ; but is at present extremely rare.  Nurserymank, of Gilisul, who sent it to us in October last, in full flower, but withont any acconnt of its origin. It is a variety of remarkable beanty, looking as if $P$. suaveolens had been crossed with $P$. caroliniana, learng on a white ground a crimson evi- dence of its paternity. The appearance of the plant is beautifnl, dence of its paternity. The appearance of the plant is beautifnl, far heyond anthing yec cen in the genus Pliox; and we were almost going to say, hejond anything among the hardy peren- nimals in nials in cultivation. An approach to it was exhibited last year ever, was very pretty, and well worthe the acquisition of the jovers of gay flowers,-Botanical Register.

## MISCELLANEOUS.

Dried Plantains as a Confection.-Dr. Wallich exhibited at a mecting of the Agri-Horticultural Society of Which had been prepared at Kornegalle in Cerlon simply by colar heat, without any admixture of sugar. The mode of their heat, without any admaxture of sugar. The mode When fully ripe, and is laid on light cane-frames exposed so the sun. When it begins to shrivel, the outer skin is part of the process, as it acquires an unpleasant flavour the process it becomes covered with a white mealy efforthe process it becomes covered with a white mealy effor-
escence of sugar, as the Fig does under similar circumstances. It is evident that the fruit in this state bears precisely the same relation to the fresh Plantain that the prepared, and may be expected to keep good as long as either of them. Some samples, which were two years old, were sufficiently moist, of a consistence and flavour between the Date and Fig, and very sweet without acidity.
There are no seeds, the whole of the fruit being eatable. There are no seeds, the whole of the fruit being eatable. India.

Cultivation of Hemp, as practised in the North of India.-The seed is sown in the hills about the middle of May, and when the plants spring up they are thinned to
about four or five inches apart, and the ground is kept clear of long Grass during the period of their growth. Hemp flourishes best on the northern side of the hills, and The soil rich from the decomposition of vegetable matter. The plant ripens about the end of September or the be-
ginning of October : it is then cut down and dried in the sun, being afterwards steeped in a pond or stream for eight days; the fibre is then stripped off from the thick end of the stem, and when put together in small parcels made up into twists like yarns of cotton. There is another plant, called the Large Nettle Plant, that grows in the in. the Hemp. It frequenty grows to the height of 14 or $\mathbf{~} \mathbf{5}$
the feet. The Hill people, in prepaxing ropes from it, steep it for three days only, and then strip off the fibre; this is done in a contrary manner to that of stripping HempDulled the top of the Nettle is broken off, and the fibre is pulled down from the thin end. Strong ropes are also
made from a creeper, called in the Hills, Malloo. For suspension bridges, this plant has been found stronger than Hemp.-Transactions of the Agri-Hortioultteral cety of India.
Charcoal.-During the past year, various experiments have been in progress to ascertain what effects would be from cuttings in charcoal; or by mixing it in various proportions in the soil in which they were to be grown. "Lieb what had been published on this subject in led to expect some very decided results ; but after varying the experiments in many different ways, nothing has happened which proves charcoal to be useful as a chemical agent in the growth of plants. When pounded and used by itself, it is very apt to get too dry, and then runs together and sets very hard. Some Orchidaceous plants, succeed, evidently from the causes above mentioned When mixed with from the causedion of two thirds charcoal to one-third of soil, and also in smaller quantiand Cacti, grew very well in the mixture, but not better than others which were treated in the common way. Cuttings of the common Caper, Ficus elastica, Euphor bia jacquiniflora, Ipomoea, and various other kinds, wer
planted both in pounded charcoal, and in different proportions mixed with sand; but the results were not more
favourable to the charcoal than to the common sand favourable to the charcoal than to the common sand
usually employed for that purpose. The Caper rooted freely in both ways, but the others did best in the sand. Many cuttings, when planted in pure charcoal, or even Many cuttings, when planted in pure charcoal, or even
where that formed a principal part of the mixture, threw Where that formed a principal part of the misture, threw
off their leaves in a short time and rotted at the base. From what has come under my observation during From what has come under my observation during to be used by itself for the growth of plants or for striking cuttings ; and if it does produce any good chemical effects when mixed with soil, these will probably depend in a great degree upon the constitution of the soil, in the same way as lime and chalk are only good manures for
certain lands. But it is very possible that these effects certain lands. But it is very possible that these effects are only mechanical, tending to keep the ground open,
in the manner which renders ashes so very beneficial to in the manner which renders ashes so very beneficial to
stiff soils.-Robert Fortune, in the Proceedings of the Hort. Soc., No. 17
Penang-"
Penang-"The Great Tree." A day or two after, I visited the Great Tree. It is on the slope of a hill, so we had no great ascent to make. I recognised it as the Great Tree
directly I saw it; though I had been told that even at a little directly I saw it; though I had been told that even at a little
distance it would not look so large as it is. It is believed distance it would not look so large as it is. It is believed
to be a species of Dammar tree. The natives call it the to be a species of Dammar tree. The natives call it the
Milk-tree; because, when bruised with a stick, a milky or rather creamy substance, very white, soft, and somewhat glutinous, makes its appearance. It is said to be 30 feet round the base (I thizk it is more), 110 feet up to the first branch, and at that height still 21 feet round. It has not many branches left, and it is said to be dangerous to stand under the tree in windy weather. The cidedly worth straight, like a huge main miles from the harbour.-From the "Last Year in China, by a Field Officer." [The tree here mentioned is no doubt some kind of Fig
Substivute for Glased Frames in Hot-Beds.-In the Rheinländische Gartenzeilung a substitute for the glazed frames of hot-beds and green-houses is described. Instead cloth. In order to render this more transparent, and enable it to resist moisture, it is covered with a preparation, the ingredients of which are 4 oz . of pulverised dry white linseed oil. These three ingredients having been mixed with each other, 4 oz . of the white of eqge, and as much of the yolk, are added and the misture is then made liquid by heating. The oil combines easily with the other ingredients, and the varnish remains pliable and quite transparent. The expense of a forcing-bed arranged in this manner is inconsiderable, and it yields at the same the anxious attention required by the ordinary ones covered with glazed frames. During the strongest rays of the mid-day sum, they do not require any particular covering or shade; the atmosphere therein preserves a requires only to be changed from time to time, according to circumstances.-Annals of Chomistry.

## GARDEN MEMORANDA.

Lon's Nursery, Clapton,- to the slow-house Hyacinths and
Tuli, s are just beginuing to create a gay appearance. The
 but with consideribly darker flowers, almost approaching to
orange. We were informed that the present plant is the onse riginaily introduced into this country, and that it has been in
blost, m for seccral month. Fipacris mutínliss, a pleasing va.
riety with white campanulate flowers tipped with rose, is here bloommg frecly; it has the merit of flowerng carlier than mos other varieties. A large plant of the beautiful Camelia ticolor
will also be in bloom shortly. In this house we noticed Banksia Ingelin, an elcgant species of recent introduction, with singu-
larly suortmg follage ; the most common form of the leaves 15 however, oblong-lanceolate, with the margins deeply laciniated
the rare Dar growth, probably D. clatum, which throws out, at regular erect yals, side-branches having a droopug tendency. Showid the

Floral Fancies and Morals from Flowers. 12 mo . Tilt and Co.
ONE of the most pleasing little books wo know is Carove's "Story without an End," charmingly translated
by Mrs. Austin. Some, perhaps, think it too fanciful and
flowery ; but we, who have far too much of the real world for our liking, confess to our love for the sweet visions of Child" ind and especially for such as those of The The litlie work before us see add is in many respects a successful one. It is a series of fables, intended, we are told, in part, to convey information concerning the economy and habits of some of the most beatiful or singular productions of the vegetable king. dom, and partly to illustrate moral the vegetable king dom, and pasthe same source. Insteaths by analogies drawn from the same source. Instead of chiticising the specimen of the author's agreeable style. The subject is
THE JEALOUS WILD FLOWERS.

On the first introduction of exotics into our gardens and conservatories, many native plants grew envious of the universal preference shown to these foreign intruders. It may seem strange how the secluded dwellers in wood and wild could ever have learned what was going on in the fashionable world; but they derived this dangerous information from a vile garden outcast, who, from London in a dung-cart, chanced to grow up among our simple rustics, and poisoned their heads with news and notions never before dreamed or For a while, however, the malcontent fiowers only pined in
silent jealousy, till one fine summer's day, a large body of them met together, and consulted how they might best assert the national rights they considered so shamefully invaded. A spirited Viper's Buglos first addressed the assembly. 'I move,' said he, 'that a chosen party of us should forthwith go up to London, and make a determined stand against the insolent pretensions of these contemptible foreigners. Once fairly matched against theirs, our superior merits cannot fail to be acknowledged; and if any should dare to dispute them--by the mame of Flora! ! ! ....Here the vegetable orator concluded with an abrupt pause, as the most emphatic expression of implied threatening, and wownd up all byfshaking his formidable spike, and raising his azure crest, with the bold bearing of an old English knight, eager to challenge all competitors. His heroic resolution was warmily applauded and, in the violent clapping of leaves which immediately ensued, the opposition of two only dissentient flowers, the re tiring Violet and the modest Daisy, was completely drowned. Several of the Buglos party rose to second their leader's proposal, and branched out into fine flourishes about their patriotic desire to uphold the honour of their native soil. Nothing else, they declared, would have induced them to undertake the danger and trouble of the projected expedition. Perhaps, however, if these flowers of eloquence could have been thoroughly investigated, a few grains of personal Saveral of the individuals who Sir Viper Buglos had, indeed, long panted for a wider field pheasant-like at the rustic beauties of the Corn-field, fashed fire at thoughts of conquest over fair and graceful foreigners. The lovely Nymplsea alba daily viewed her image in her liquid mirror, and with pardonable pride, felt herself a Queen of Waters; while the poetical Narcissus, like his pearance. Then, what dress of "purple and pall" could bear comparison. with the Lady's Mantle of silvery satin, unsullied as the snow of her native mountains? Others, again of appearance less striking, prided themselves on their their lont and breeze and the a most igh on the days of Pon though his waving plumes had never been half half sufnicien actinty though clearly not, as in modern days, by post or railroad; suffice it that they arrived in lown, or its vicinity, and the day afterwards made their appearance at a grand exhibition of exotics, to which they gained admission through the interest of some reiations, who as yet continued to bold high places in the flowergarden. But, alas ! for our native candidates, when not to merits came to be weighed (how farrin we they had so imprudently challenged. Then, blighted in the bud were all their aspirations, even the lie bopes of many a sadgut on of igenius, who, having lelt his an the crowd, or metropolitan celebrity, is overlookentitors.
shoved aside by more confident competid atmosphere of a crowded show-room, and withered by the neglect or scornful comparisons of nearly all the spectators, how did our disappointed aspirants droop for the refreshing air of their quiet glades! Even their bold leader, Nir iper Buglos, was compelled to lower his azure spike before the emerald lance of an African of the bandsome Adonis sue Peacock Iris. Ihe pure the bright blas of the Nymphra alba was completely eclipsed by the dazaling charms of an Amazoman Queen of Indian waters. The white satin sheen of the Lady's Mantee found but and purnle which whe welo robes of crimonons of the Shating glowed around. The graceful evolation of the shang Grass could not exen be displayed As for the turessary he neon discovered that the breeze was noless a necessary agent in his instrumental perform ance; and, could even his wolian strains have been awakened, the prevailing taste for foreign airs, as well as oreign flowers, would have caused his silvery tones to have fallen unheeded on fashionable ears.
"Thus terminated the wild flowers' silly attempt to obtain distinction by abandoning the stations wherein
nature had placed them, and to which, convinced of their
folly, they were glad enough to return. They have ever since bloomed contentedy within their native recesses, desert air.' But in the most secluded spot, where foot of desert air. But in the most secluded spot, where foot of
man has never trodden, why should the wild flower be man has never trodden, why should the wild flower be
said to waste its fragrance? -for, even there, may not its said to waste its fragrance? -for, even there, may not its
very perfume minister to the enjogment of millions of very perfume minister to the enjoyment of millions of
sentient beings, from the bird and the butterfly down to sentient beings, from the bird and the butterfly down to
those tiny existences which dance in every mote of the those tiny existences which dance in every mote of the
summer sunbeam, and sport in every drop of teeming water?"
We have only to add that the little book is embelished with 70 fanciful illustrations, some in lithography, and others cut in wood, the latter of which are much the best.

CALENDAR OF OPERATIONS for the ensuing week. As these weekly Calendars are addressed more particularly to portion of them are much interested; namely, the paddock, or
meadow-land round the house, where a few cows, horses, or sheep, are kept, according to the taste of the nccupier. In no part
of the world are hay-making and the management of meadowland better understood than in Middiesex. While in that
county I had to forego many of my previous notions of the Scotch system of managing Grass lands. Where the paddock is grazed all the jear round, the land stands less in need of assist-
ance romm manure than where the economic Dutch system of
stall-feeding is pursued. Wh either casc, however, it is a point of good managernent to keep the land always in good heart; and
us there is a natural prejudice against breaking up such land for permanent improvement, recourse must be hart to top.dressing
it with rotten dung, rich humous composts, or, what is better than either, with good liquid manure from cesspools, The cent of January, or beginning of February, are the best periods of the
year for this work, if done later, its effects are, in a great
meanre, lost by evajoration, which becomes more powerrul as the season advances; and if applied earlier, the winter rains and meiting snow winc arry or the best portion of the dung into the
drains and ditcheso Strong clayey lands are more liable to this waste, though in a less degree, and the best portion of the manure wi the carried down too deep, by winter rains, to be of
benefit to the more tender Grasses, which, from the long-rooted It may, therefore, be laid down as a general rule, that the end of manuring Grass-land; that Grasses are more benefited at this time hy stimulants which give inmmediate effect than by such as
are of a permanent nature ; and hence, liquud manure is preferable to rotten durg. Before the land 18 rolled, after this dressing,
it would be of essential service if the whole could be sprinkled over with a suitable compost; that is, light soil with a portion soils, the small siftings from coall-ashes are aliso exxeclent for of soils, and may have taken up the current topic of draining,
would do well to get advice from the nearest gardener, or mitel. ligent farmer, on the spot, previous to any undertaking of this
nature; he may thus save both his land and has purse from useless drainage. There are thousands of acres in this country
that might easily be ruiag by drainage such as fore example,
light sandy soils lying on loose chalk or gravel, or, indeed, on any porous substratum. Instead of draining, such land, he natural motstare, suxch as clay and cooling manurea, or salts and
nitrates, which possess the property of attracting moisture from nitrates, which possess the property of attracting moisture from Where wanted, is not the grand fundaids.
mannent improvement of all our lands.
rear we must be content with the less fficient mode of surface-
draining in a general way, till the stimulus under the auspice of our r reat Agricultural Societeies and the wants of our poppla-
tion will lead us to dopt the Scotch system of long leases tion will ead a sound vasis. and other symprovements, will follow
drainage on a Grass land is the open-drain system prevalent on the clayey lanys in Middlesex. The open drains there are from 9 to 15 inches deep, according to the inclination of the ground and the depthot the re-
ceiving ditches, and from 12 to 18 inches wide. The width of all open drains must neceasarily be determined by their lengths, and
by the fall of the ground. Many fields and paddocks might be greaty improved bry this partial system, tuno great expense ; their out annually arter harvest. The roller is as essential to Grass land as dung; two or three rollings when the ground is in a half-dry
state will greatly improve it. if any rough compost has been spread on the land, a bush-harrow should be run
scatter the lumps more equally, previous to rolling it. In our anxiety with early yorceng, which at present requires
our principal attention, we must not lose sight of those plants class comprises more names than I can mention this week. This Wrill continue them occasionaliy thronghout the season. A pro-
spective Calendar is, indeed, a great desideratum in our garden spective cis but no individual, however extensive his practice,
piteratrre
will he able to do justice to this subject. Mr. Whiting has fiven an excellent hint in a late Number on this point, where he says
that the day of the month on whicla any crop is sown or planted shat
should be marked on the tally indicating the name of the crop.
I have allopted this plat for many years, ficiently to the times when the crops came into use to enable me
to construct a regular prospective Calendar. The subject, however, deserves our best attention. Gesnera elongata is an
excellent winter flower, which may be had from October to it should be kept rather dry until it is pruned; and this should be done in succession till the end of spring. Those pruned
now should flower next October. Prune the young shoots close to the main branches, and leep them in the stove with but
little water tull all the eyes are begmning to grow, then shake the mould from their roots and repot them in a light rich compost, greenhouse through the summer, they should be again potted in August, or in succession through the autumn, and returned into flower for a long time Leonotis leonurus treated thus, only Augustrned out of doors in summer, may be had in fow November. There are two species of from half
Orchidace well in the conservatory in July August, and teptember, if set growing in a smart bottom-heat and very rich soill. These

mer in our days. 1 -KTTCHEN-GARDEN AND ORCHARD.
will throw them into fruit with more certainty. If the warmest couraged to grow, with a little water
succession of fruit may be prolonged.
Vingry- Many people make a point of beginning to force February are much better for that purpose, and the expense need not be greater. By beginning thus early, you can bring on the plants more inaperceptibly, by using only a little fire in the day-
time , besides, many other plants may be brought in which
might be too late next month, such as Strawberries and store pots of plants, of which a large stock may be required for the flower-garden. As soon as all the eyes of a vine are fairly
started into growth, started ins prow forcing is often carried on rather to suit the views of the gardener than the eapacity of the plant; but tif the
interest of both were equally considered, they would have a better chance of being longer together. Until the breaking of the buds, the Vine must have its own way, otherwise the top-1
most buds will take the lead, and many of the bottom eyes will Prach-housk.-The Peach is never out of danger till you catch fit ripe in the net; success depens on the degree or atcen the trees are in blossom will assist in dispersing the pollen, and bloom, increase the sure to touch the stigma, When out of
yo green- fiy appears upon the
young shoots. fumizate the house young shoots, fumigate the house occasionally. As prevention
is always better than cure, a little smoking once $a$ week will keep these pests under till the leaves are more hardened. Give plenty
of air, a little of which may be retained on all night. No fires
 day and night. A mild, moist atmosphere, and guarding against sudden changes and insects, are the proper requisites here. Fios.-These, like the Vine, are gross feeders. Every alternate
watering should be with liquid manure. Like the Vine, also, there is no end to their growth, if well supplied in this way. You joint, and this you must continue as long as they keep growing Chey will then proauce froitat every eye. early stages of these plants, a brisk, moist heat, with 2 little air, and the plants kept
near to the class, are the chief requisites get a check from too much bottom. heat, too low a temperature,
insects, or any other cause, the best way will be to throw them away and take the next strongest plants. One failure in this way will teach a man more userul knowledge than aul the calendars
in the world. No annual plant will pay for doctoring, much less the Cucumber or Melon. no plant that is more easily injured by a sudden rise in the bottom-

they must suffer very mach, as they are now as tender as the Pe, largoniums in the greenhouse. Stir the ground about them, and
strew some coal or wood-asles ronnd them ; this will help to kee strew some coal or wood-8.
down the damp and slugs.
the main crop of Onions to is the best time in the year to sow ary or the beginning of March; but by sowing now on a slight
hotbed, or in boxes in any house at work, much time and seed may be saved, and a surer crop may be obtained next summer. hher day and week in spring to sow her Onions on the same bed on Which they were sown the beglining of this century. Peas
and Beans may be slightly forced for transplanting ; also a few Lettnces, and Potataes. seeds of the same kinds may also be Lettuces, and Potatoes. seeds of the same warm borders, with some protection at hand in incase of
sown on weather. Seeds should never be spared at this time, for
rough weather fear of losing a crop; the loss is trifing compared with the chance of an earier crop than usual.
Who would not be busy out-door Dep doprtmench a such a winter as this? proposed to do a hundred jobs in-doors this winter, all of which
minst be put off for rainy days. The Peach -trees are much earlier than 1 ever recollect them, and unless they get a seasonale
check, every one of them must be covered this scason. Naillig be got over as easily as the hardier fruit.trees. Those who have not yet ordered their fruit-trees from the nurseries should lose
no time now. We shall have an early spring, and the late planters must suffer.

> R-GARDEN AND SHRUBBERY

SToves.-Frosty weather is always best for stove-plants, because we have generally bright sumuy days; but perhaps what we The weather has been so tempting lately for keeping the men out of doors, that $I$ fear the insects are not yet subdued: but where house-plants are properly attended to, that is, where plenty of
hands are allowed to manage the houses, there are very few insects to be met with, except the annual crop of green-fy, which is soon got rid of. The cheapest way of curing a plant over-
whelmed with scale insects, is to throw it away to the rubbish heap, and replace it from the nursery, or from a top or root-cut-
ting well cleaned. This has always been my own practice, and persevering in cleaning and scrubbing their plants, till the expense of the work exceeded the price of the plants by many per cent. Cleaning the leaves of plants, however, from dust, \&cc., is a differ-
ent affirir, and will always pay its expenses in more than one way: this must be always attended to, where the engine or syringe cannot reach the plants. I can never use the syringe in the
conservatory on account of flowers; and all the plants there have their leaves washed over occasionally with a little warm water
and a piece of sponge.
G RE E NHOHESE. Any Camellins that have no flower-buds may now be sent to the stove, or vinery, or anywhere else where a gen-
tie heat is kept, and as soon as they begin to grow, may have plenty of water every day thll their growth is fisthed. I belicve if tlie
pots 5 were pots were plunged to the rims in a tank of warm water during the
short time they are making their growth, it would not hurt these plants. They may he ket in the stove till theiri flower-buds are
iormed; then, if they are hept in a cool frame all the sammer, and shaded a few hours in the middle of the day whlle the weathe will come nito towtor the greenhouse the the of end of Actober. Another lot that
are now in flower are now in flower may be put to forcine a month hence for a suc-
cession. A third lot mieht be so treated in Aprle and the remainder of the stock may be kept unforced. This will carry on the succession through the winter till the end of spring. October is
the best time to pot the general stock of Camellias; ;ut the early
forect ones may torced ones may be putted a month or six wecks atter their blos-
som-buds are formed. Good turry loam for established piants, with a handful or two of rough ground bones and a little sand; plants grow faster; but in this they will not set their blooms so well. The whole of them require to be rather under-potted;
that fs , in smaller pots, according to the size of the plants. Heliotrons Fanaies, - The whole of the Verbenas, Petunias, Heliotropes, Salvias, and all te soft plants for planting out in
flowertbeds, exeept the scarlet Pelargoniums, are best from spring propagation. Those in the store pots may now be introduced
into heat for that purposes, but many of them this mild season
can can be left till the first crop of catting are taken off; as they are
in active growth. If the sorts are not scarce, it is fully soon yet
to begin with them; as they will require too much room before we can trust them out in May. Dupartment.
There never has been such a season for planting and for
carrying on improvements. Avoid digging among shrubs after carey bepin to spread their ronts. The aunual injury done to fine trees and shrubs ly the common practice of digging the borders is incalculabie; to spread rotten composts of leaves and different
soils over the borders is much preferable, if they are in want of nee in that wa

NURSERY AND FOREST DEPARTMENT.
Fonrsi AND Coppick,-Game will, in all probability, pair this
season sooner than usual. See, therefore, that the work is also got over sooner on that account. Sparrows have been building of the season. Clear out the felled timber as soon as possible,

## NEWS OF THE WEEK

Tye discussions on the Right of Search in the Chamer Peers lave terminated favourably to the Frencli Cabinet and to the general interests of peace. The amendments proposed by different Peers in the debate on the Address, for the purpose of embodying in that document an expression of feeling hostile to the Treaties, have been negatived by a majoritllusion whatthe Ministerial Address, which contains no altut modificaever to the subject, has been adopted result scarcely less tion. In the Chamber of Deputies, draft of the Address satisfactory has been obtained proposed by the Commission in the King's Speech; it ect in answer to the passage econsideration of the treaties calls for revision or even recontelf to expression of of 1831 and 1833 , and confines the wishes of Feace may be placed under the exclusive commerce of France mal flag. It neither specifies a period or this event, nor suggests the opening of negotiations for this event, Nilishment. No one who has followed the course of French politics for some months past can fail to perceive how great is the importance of this Ministerial triamph to the whole of Enrope. M. Guizot declared in the Chamber of Peers, that negotiations with England at the present moment could only lead to an act of weakness or an act of madness; the British Government, he said, could not yield without compromising its dignity; and he considered the exist ence of good relations between. France and England, both politically and morally, as far preferable to the abrogation of the Right of Search Conventions. He was convinced that the national independence was not
involved in the question at issue, and the Government was determined not to depart from the complete and loyal execution of the treaties. These arguments have pre-
vailed over the clamour of the journals, and the danger which last week threatened the peace of Europe has for the present subsided. The discussion on the Address in the Chamber of Deputies is still in progress; and although it is impossible to foresee the ultimate decision of an assembly so uncertain in its impulses as the Representative body, it is still believed that the Ministerial party are strong enough to prevent the adoption of any hostile amendment.-From Spain we learn that the CaptainGeneral of Barcelona has adopted the extreme measures of severity with which he has long threatened the inhabitants who refused to pay the war contribution. Soldiers are now quartered on the houses of all persons in arrear, who are to defray the expenses of the Military upon a scale which doubles the amount daily until the contribution be paid up. In Madrid there is nothing new, except the meetings of electors and candidates, and the increasing rumours of Ministerial changes.-From Portugal we learn that the Address, in answer to the Speech from the
Throne, has been carried, almost without discussion, by a large majority, and that the forthcoming Budget is of the most satisfactory character. It embodies a great number of financial reforms, and shews that under the administration of the present Government substantially disappeared.-The affairs of the Levant are rather more promising than usual ; the appointment of a Christian Prince to the Government of the Christian portion of the Lebanon has given rise to much rejoicing, and has produced a tranquilising effect on all classes of
the people. The Austrian Cabinet continues to concenrate troops on the Eastern frontier of the Empire, but the affairs of Servia, to which this measure has immediate reference, will no doubt be settled by diplomacy, without the necessity of an appeal to arms.-From the United States we learn that the question of the Oregon territory has become the prominent topic of discussion in Congress, and that the President has sent a message to the House of Representatives, recommending negotiations with the Chinese Government for the purpose of obtaining for the commerce of the United States the same privileges as those ceded to Great Britain by the recent treaty.
At home, few subjects for some time past have so much excited the feelings of the public as the death of Mr. Drummond. The Papers of all shades of politics concur in the expression of cordial sympathy for his untimely fate, and of respect for his personal character. Our
readers will find under our Metropolitan News a concise summary of the facts which have transpired since our last, and will see that the assassin has been committed to take his trial on the capital charge.

## 

Covit.-Her Majesty, Prince Albert, the Prince of Wales, and the Princess Royal, remain at Windsor Castle, and continue quite well. The Prince has shot over the preserves in the Great Park during the week, and the Queen
has occasionally taken walking exercise in the Home Park. It is announced that the Queen will not open Parliament in person, but will remain at Windsor until the beginning of March. Her Majesty will then come to town, and remain at Buckingham Palace until her acplace at the end of March or the beginning of April.
Court Mourning. - The Gazette of last night contains orders for the Court to go into mourning until the 12 th Feb. for her Iate Royal Highness the Duchess Dowager of Schleswick Holstein Sonderbourg Augustenbourg, mother of her Majesty the Queen of Denmark, and great granddaughter of King George II.
Parliamentary Movements.-It is said that the Duke of Cleveland will move the address in the House of Lords answer to the Queen's speech on the opening of the session, and that Lord Courtenay, eldest son of the

Gazette Announcements.-The Queen has been pleased to appoint the Right Hon. Sir Charles T. Metcalfe, Bart., to be Governor-General of Canada, New Brunswick, and Nova Scotia.

France. - Chamber of Peers.-The Paris "paperg, as might have been anticipated, have been filled during the Theek with comments on the debates in the two Clambers. to the King's speech, has given rise to a long and interesting debate, involving questions of the highest importresting debate, involving questions of the highest importby the Duc de Broglie, contained no allusion to the Right of Search; the Opposition, therefore, proposed various amendments, for the purpose of making the address convey an expression of the popular feeling on the subject. The Marquis de Turgot moved the following:-"c Those good relations (with Great Britain) would be better in1833 , the inconveniences which their execution have re ealed were removed by fresh negotiations." of Moskowa proposed the following amendment :--n "W
hope that your Majesty will see the necessity of taking into consideration the opinion that has manifested itself treaties of 1831 and 1833 ." M. de Bripode moved the following:-"We congratulate the Government of your Majesty for not ratifying a convention which would have proved, for the independence of the French flag, an aggravproved, for the independence of the French flag, an aggrav-
ation of the treaties of 1831 and 1833 ." The arguments of the different speakers would have little interest for ou readers. We shall therefore confine ourselves to the seeches of M. Guizot in the Chamber of Peers, which are highly important, as developing the views of Govexnment on the questions at issue. In the speech of Satur-
day he confined himself to the charges of the Opposiday he confined himself to the charges of the Opposi-
tion in regard to the decline of French influence. In tion in regard to the decline of French influence. In
Egypt, he said, the position of France was far more favourable than before 1840. In Syria not only has France taken up its habits of protection, but it has also extended them, |All the religious establishments of Syria have received new succours. In the college a
Autourah, free scholarships have been endowed, and Autourah, free scholarships have been endowed, and consulate has been formed at Jerusalern. The appearance of a Protestant bishop at Jerusalem had given rise to some fears. I asked the opinions of the Catholic bishops and chiefs of the Christians in Syria, and in the empire of the East; they replied that, far from being a cause of fear, ot only the Catholics among themselves, but also to France. That is an opinion which we did not suggest to them, but which they themselves conceived from their knowledge of their situation and wants. We wish there to strengthen and maintain the Ottoman empire, and at the same time protect the Christians within it. We have done both. For example: the Greek Christians obtained permission to rebuild the cupola of the church of the Holy firman for this. We obtained the recal of the firman though it was obtained under Russian influence; and all Catholics have the right to contribute to the pious task. shall now pass to Spain. Somebody spoke of projects o lieve, nothing of the kind. Even if our relations with the present Spanish Government want intimacy-even i with regard to most important points in our relationsstill we must do it justice. I see no sign of usurpation; o power keeps 80 attentive an eye on Spain as France does. We know very well that our national interests and or honour are bound up in Spain with the throne of Isabella, and the maintenance of the House of Bourbon will forget this. In regard to the other Powers, we stand in the most true, regular, and useful position-that is, without especial intimacy with any one in particular, but in Europe as a fiery meteor, seeking its place in the geneShe hid to state. She had no place made for her ; her place was contested to her-often unjustly. Now, however, she has conquered; Europe has accepted her social and political
reforms. This is the key of French policy henceforth. reforms. This is the key of French policy henceforth
Her state, however revolutionary, however at variance with that of the rest of Europe, has been accepted and recog nised-it little matters with reluctance and ill-humour or not. This being achieved, France should cease to be fixed and settled planet, moving in the proper orbit as signed to it in the European system. The present Cabinet of 1830 and 1831. Th that was the and a pacific, a turbulent and a tranquil policy to choose between. We have chosen the pacific and the tranquil, and you will approve and fortify our choice." - On Monday, M. Guizot replied to the amendraent of the Marquis de Turgot and M. de Brigode on the right of search. He began by saying that he would not trouble himsel Tha those nice questions of theory which complained of examin of sovereignty and such things. He would at once bound the reality of the facts. The treaties existed, and other Powers, not on Thus, France had advised and obtained the adhesion Denmark in 1834, of Sweden and Sardinia in 1836, of the Hanse Towns and Tuscany in 1837, and of Naples in 1838. Negotiations to the same effect had been likewise opened by her with the Cabinets of Madrid, Lisbon, and Rio Janeiro. In making these overtures, France invariably were conformable to the real principles of the maritime laws, which France had always principles of the maritime had existed during ten years without any serious objection being raised against them. In that interval only twelve complaints were made. Several were ffound groundless, adjusted. If the treaty necessarily produced so many abuses, how was it possible that it could have been for the during ten years in silence Had it not been would ner he 1841, the conventions of 1831 and 1833 would never have been thought of. He was not of opinion that the public feeling excited by that treaty imposed upon the Government an obligation to prosecute its
abrogation. The object for which they were concluded still existed: it was notorious that French, Spanish, and Portuguese vessels were still engaged in the slave-trade. They could not suspend the treaties. They must be executed loyally as long as they existed. Bitt we are asked to open negotiationg. Such negotiations for the revision the right of search has cast the two countries, lead to no
good result. It would be highly inopportune. On a former occasion there had been, as at present, hostil press and when the English Government Cas pressed by press, and when the Engisin Government was pressed by
 repty horld yield without compromising its dignity. At certain times difficulties of this kind, were insurmountable. In the present state of people's minds on both sides of the hess or an act of madness. "And, for my part," said M. Guizot, "I can lend myself neither to one nor the other. He told Lord Palmerston in 1840,--"My Lord, you sacrifice a grande politique a la petite,--the existence of good relations between France and England are worth more than Syria;" he would now say to the Chamber, "You of good relations between France and England, politically and morally speaking, are far preferable to the abrogatio of the conventions of 1831 and 1833. We have, said M. Guizot, in conclusion, "rights to respect ; to pro pose new negotiations would be an actor levily and blameKimprudence and temerity. The Government of the deng is convinced that the status quo is not in the least quently determine nanal loyal execution of those treaties; and I repeat, it would neither be wise nor opportune to propose ally modification thereof at this moment to the English Cabinet. ${ }^{\text {" }}$ The Duc de Broglie followed in a powerful speech in favour of the Address, and on Tuesday evening the Chamber divided, when the amendments of M . de Brigode and the Marquis de Turgot were supported by 67 votes, and the oricinal Address by 118 , giving therefore a majority of 51 to Minis ters. The other amendment of the Prince of Moskowa was then abandoned. This result produced a rise in the funds, and every account describes the effect of M.Guizot's speech as perfectly surprising. In the House, it is said that his caim and dignified reasoning appealed at once to the un-derstanding-that many were convinced by his arguments and the Assembly, which had before been agitated and disturbed, became suddenly grave, and listened with ear nest attention. Even the Republican National one of the bitterest opponents of M. Guizot, pays him the highest compliment:-"4 His speech," it aays, "t was expected with impatience; and in listening to his exordium, 80 brilliant and so happy, we feared for the mament lest the miraculous gift of eloquence might not give a triumph to the worst of causes
Chamber of Deputies.-The influence of the journals which have taken the lead in the attacks on the Right of Search is obviously stronger in the Chamber of Deputies than in the Chamber of Peers. The draft of the Address proposed to the Representative body contains the following express allusion to the right of search :-" United by sentiment of humanity, the Powers apply themselves to he suppression the infamous shave-rade. We have seen win satisfaction that, by persevering in lending the asbistance of France to this just enterprise, the Govern ment of your Majesty has not given its assent to the exeasion or the existing conventions. For the honourable execation of those treaties, as long as they shall not be abrogated, we rely upon the vigilance and firmness of you Government; but, struck with the inconvenience which experience has pointed out, and in the interest of the good intelligence which is so necessary for the accomplishmen of the common object, we anticipate with all our wishes the time when our commerce shall be placed under the exclusive guardianship of our flag." The public discus sion on this Address commenced on Thursday, and is not expected to be concluded for some days.
are.-We have accounts from Madrid to the 15th a chens of Ministerial changes, but official authority. Associations of electors unpported by be formed; those of the pure progresistas, in particular were very numerous. One of their meetings took place on the 13th, under the presidency of Senator Juan Lasana. Their object was to devise means of insuring he return of the candidates of that party at the next elion. They adopted the following programme:The Constitution of 1837, neither more nor less tha illustrious Dueen Isabel II., and the regency of th the Heraldo for libel Governm the is acquittal 'by a large main ; case, a that a large majority in alort, aiter in considered very doubtfal if aury could be foun, to wa ict the cond of a jour journals of the 16 th a pubic journal. The Barcelona journals of the 16 th inst. announce that General Seoane breatened those who measures of severity with which he bution. He had whe shoul rell to pay whe whit brivan. He had consequently placed a corporal and five to pay the corporal seven france, and the soldiers five francs per day. This tax is to be doubled the second day, ind paid up. The Phare des Pyrenees states, that on the 4th inst. the Bishop of Barcelona, attired in his pontifical robes, paid an official visit to the French Consul in that city, to thank him in the name of humanity for the and iasurrection, to the population of Barcelona, and to congratulate him upon the recompense which had been bestowed upon him.
Portogal, - We have newe from Lisbon to the 16th, and from Oporto to the 17th inst. Previously to the telegraphic despatch was received on the 17th inst.,

Governor, announcing that the Address in answer to
the speech from the Throne had been carried, almost the speech from the Throne had been carried, almost
without discussion, by a majority of 69 to 21 votes. When former debates on the Address have occupied several weeks, this very speedy settlement of the question is calculated to convey a favourable impression of the strength of Goverament. The Finance
Minister will immediately bring forward his budget, which is said to be of a most satisfactory character. It embodies all the economies lately effected, im-
poses no general items of taxation except on hemp, flax, iron, and fresh fish ; recites an increase in the revenue of 200 contos by the improved assessment of the decima, and of 100 contos by giving an increased extension to the Lisbon ortroi and and substantially disappeared. A decree will be likewise made public, empowering all foreign bondholders to receive their dividends in Lisbon, by which they will save the 3 per cent. deducted in London for income-tax, and mission. The negotiations for the tariff convention re-
mer main in the same state.
Holland.-Accounts from the Hague state that his Majesty has been suffering from indisposition, but is so
much better that no further bulletins will be issued. They also state that the members of the Second Chamber of the States-General have received the preiminary re-
port of the central section to the Chamber on the project port of the central sectione to the treaty between the Netherlands and Belgium; and an answer of the Government to the objections made in the Chamber, both against the project of
law, and the treaty itself. It in affirmed that these documents were communicated to the Chambers with a request to keep them secret. In the sitting of the Chambers on
the 19 th , a long address of the merchants of Amsterdam was presented, stating their objections to the treaty now under discussion
Germany.-The Frankfort papers announce that the Diet of the Confederation held its first sitting for the year on the 19th inst., and that Count Von Drutsorft, the representative of Prussia, presided. The Leipsic papers ans of the Cologne Railroad that His Majesty, in order to enwhich, by the 38 th section of the Railroad Act, was to be paid by the company to the administration of the postAllgemeine Zeitung, in a recent Number, gives the reader of that paper the solemn assurance, 1 , That the poet Hervegh never intimated to him (the Editor) a wish that the letter to the King of Prussia \{should not be printed place till after the letter had been in extensive ciraulation for some time previously in a manuscript form. The official journals of Berlin, and are so strictly enforced that it is quite unlikely that the proprietors will be able to obdirectors of the Analt railwa of the prohibition. The directors of the Anhatt railway have received orders to see officers and the booksellers know that they are closel looked after, and that the penalty will be infallibly in ficted on any disregard of the prohibitions; accord ingly, hardly a copy of that journal has reached Berlin provinces, have received notice from the Censors, that conformably to strict directions from superior authority, they are not to insert in their columns in future any article from the Leipsic Alugemeine Zeitung, which may part, or in an abstract. The same regulation applies to all articles, whether of German or Foreign journals, in which the prolibition of that journal is bamed; articles this rigorous prohibition, which will doubtless be extended to all the journals in the Prussian dominions, $t$ is evident that it is intended to prevent the public in Prussia from
learning anything of the contents of the paper. These severe means seem to do away with the hope that the prohibition would be revoked.-Letters from Berlin state
that the King of Hanover appears everywhere in the uniform of the russian regiment of Hussarg, of which he is the Colonel, and that it is considered very complimentary by the Prussians, as such an uniform is generally inconvenient to a man of his advanced age. To seems that che marriage of the Crown Prince ds to take place in the fixed.
$\mathrm{I}_{\text {TAly. }}$-Accounts from Naples, dated the 12th inst. state, that a gloom has been suddenly cast over the gaieties of the King. His Royal Highness had during last autumn one or two apoplectic fits, and was seized by typhus fever but all the Court commands had been countermanded and, for the first time for many years, no gala would be given at St. Carlo, in honour of the occasion. These letters announce that the Neapolitan Government has determined on establishing steam-packets between Messina, Paof letters and passengers, at very low rates. The days of departure from Naples are Fridays for Messina, and
Mondays and Thursdays ${ }^{\text {for }}$ Palermo. The Mediterranean appegrs to have been severely visited by the storms that caused so many calamities last week in the Channel merchant-vessels have been lost on all parts of the coast. he wind raged with such violence at Genoa during had been obliged to inhabitants residing near the pier lives were in danger. A letter from that city dated the

18th inst., states that the agitation of the sea continued and even increased during the 13th, 14 th, and 15 th, and caused considerable damage in the port and neighbour hood. Two French vessels were lost in the waters of Spezzia, and much injury was done to the new mole and the ramparts of Mala Paga, where the foundations of the barracks appropriated to the Custom-house troops were considerably shaken. On the evening of the l5th the Archbishop, together with the Chapter, and accompanied by all the clergy of the place, the municipal authorities, and a great concourse of people, blessed the sea, from the heights of the mole.
Greece--Letters from Athens confirm our previous accounts of the disastrous condition of the country, and state that an explosion is almost inevitable. After the he was succeeded by $M$ Rilli, Minister of with insanity now Minister of both these departments. As general poverty has begun to be felt, Government have replich to the two embassies in the and Paris, the salaries of the civil engineers, and the pensions of all veteran military en, by giving them a certain portion of the public land the former prodigality of Government had exhavsted the public mer, ind it or to impose any more pubes on the already impoyerished people The King Greece has forwarded to Mr. Emerson Tennent the star Grece har of Kir. Ef Reder Order his Majesty has created him a Grand Commander, in ecognition of bis early services, military and literary, in ehalf of that country. Mr. Tennent is said to be th only commoner on whom this distinction bas bee conferred.
Turkey and Sxria.-The French steam-ship which was the bearer of the Levant mail due at Marseilles on the 11th, had not reached Malta on the 9 th, and serious apprehensions are entertained that she perished in the empest which appears to have extended from the British Channel to the coast of Egypt. We have, however, a mail from Malta, bringing dates from Beyrout of Dec. 15 , and Malta of the 8 th inst. The letters from Beyrout of the 15 th ult. state that the account of the appoint ment of a Christian Prince over the Christian part of the mountains had produced a most tranquillizing effec among all classes of the population. The Sheik Shibley-el-Arian had made his submission to Ahmed Pasha of Damascus, who had presented him with a shaw and pelisse. The marauding parties, who intercepted for some time the communications between Beyrout and Damascus, had returned to their homes, and the mail from the latter arrived on the 15 th without accident. A large council of Pashas has been held at Beyrout, in which the subject of discussion was whether or not an amnest should be granted to the Christians, and which the diffe rent Consuls were of course anxious to obtain. The dis cussion was of a boisterous nature, and terminated in a resolution not to grant the amnesty. From the Danube we learn that Prince Metternich is still concentratin pose of watching the frontier of the empire, for the pur seems to be no doubt that Austria has joined Russia in remonstrating against the deposition of the Obrenowicz family. It is said, however, that although this policy is apparently in accord with that of Russia, the design of he Russian Cabinet in remonstrating on the result of revolution in which it had taken no inconsiderable part pas Pow to support Prince Alerander a oinst Rusia pean Pow theplity the obiect of her choice. Th present course of Austria is therefore entirely opposed to he expectations of Russia.-Accounts from Bucharest tate that M. Vaillant, a Frenchman, who wrote a pam phlet against the Russian Government, and who had in consequence been banished from Wallachia, had again returned in disguise, but, having been discovered, was marched to the rrontier French Consul at Bucharest, who of gendarmerie. Whe M. Vaillant, refused to interfere, as the Iatter had not deposited bis passport at the Consulate Egypt.-We have accounts from Alexandria to the 16th ult. The Pacha is making extraordinary efforts to repair the losses occasioned among the cattle by the recen murrain. His frigates and smaller voasels bave beea em ployed in bringing cargoes of catke from larsus, and have been despatched again as soon as they have lauded their cargoes. To facilitate the importation the Pacha has granted leave to every sallor on board to purchase one sheep each on his own account, which they are allowed to sell on arrival; several Greek vessels from Anatolia have also arrived with cargoes of bullocks consigned to French merchants. A. Sardinian war-steamer had arrived, announcing the intention of the Sardimian Government to send to Jerusalem a Consul and a Vice-Consul.
United States and Canada.-The packet-ship Cambridge, which sailed from New York on the 3rd inst. arrived off Liverpool on Tuesday night. She has brought news four days later than the advices received by the mail steamer. The proceedings in Congress possess some interest for the English reader. The Oregon territory question, which now that the north-eastern bounic in the United States, had engaged the attention of the Senate. That assembly was entirely occupied on the 30th ult with the consideration of a bill for the occupation and settlement of the terxitory of Oregon, and extending certain portions of the laws of the United States over the same. The bill assumes that "the title of the United States to the territory of Oregon is certain, and will not be abandoned." The President had sent a communication
to the House of Representatives, recommending negotia tions to be entered into with the Chinese Government, to secure for the conmerce of the United States the sam advantages as would be enjoyed by Great Britain by the ceding of the four ports and the possession of HongKong. It was referred to the committee on foreign affairs. The inquiry into the mutiny and execution of Mr. Spencer and others on board the Somers was still in progress, but no new facts of importance were elicited We regret to find, by the Montreal papers received by the Cambridge, that the health of Sir C. Bagot was de scribed by his medical advisers as "in a most precarious state." The rumoured appointment of Lord Eliot as his successor was not correct, and it is now announced that Sir Charles Metcalfe, late Governor of Jamaica, has been appointed the new Governor-General of Canada.

## fitetropolís and its Vícímity.

Death of Mr. Drummond.-The favourable opinion given by the surgeons on Friday night led to the impresion that the life of this unfortunate gentleman was not in danger. Our readers will learn with great regret that this belief has unhappily not been realised, and that Mr. Drummond expired on Wednesday morning. In the course of Saturday afternoon unfavourable symptoms began to manifest themselves, and great apprehensularie for his life. It at length became necessary to open the temporal artery, inflammation of an alarming character having occurred. The copious bleeding somewhat relieved the most urgent symptoms, and Drumm tolerably well until Sunday night, when the infammation returned. a more unfavourable aspect, the difficulty of breathing was very great, and Dr. Chambers and Dr Hume were called in. An improvement took place in the evening, but it was of short duration, and on Monday morning it was evident that recovery was very doubtful; during the whole day the case maia tained the same serious character, and on ruesday morning the inflammation and difficulty of breathing had become so urgent, that a repetition of the sleding was indispensable. Towards night the symptoms were much aggravated, and the medical attendants gave up all hope. At 2 on Wednesday morning the wertaate gentleman still survived, although his dissolution was momentarily expected; he was then suffering from great oppression, but retained his consciousness and was perfectly resigned, He continued for some hours in the same calm state as from the first; and although no mitigation of the unfavourable symptoms took place, he did not appear to be aftlicted by any acute pain ; but the difficuity manifeat that continued to increase, and it now became the period of dissolynesday morning Mr. Drummond breathed his last, and died without a struggle, in the presence of Mr. Guthrie, his three brothers, and his sister, Miss Drummond, , who remained by his that Mr . Drummond appeared to suffer little pain in his last moments. The mournful intelligence was quickly disseminated at the west-end of the Metropolis, messengers having been constantly sent to inquire the state of the patient from all the public offices. A messenger was patso despatched to the Queen at Windsor Castle, her Majesty having taken great interest by frequent inquiries Majesty ligence was the all-absorbing topic of conversation at the west-end of the town in the beginning of the week. Sir J. Graham and several Cabinet Ministers, shortly after it Ja Grat has her hed his last, it was known her Pir Whitehall-gardens. Went the Premier beinginform the fatal termination Upon the reat greatly of the assass in condolence affected, and immed the mrumshould be forwarded the a 50 th year, universally mond, we understand, was in he his acquaintance, respected by all who had the pleasure of, he was courteous and, in the transaction of oma had occasion to apply to and obliging to every one who hature, however trifing it him on business of a purate Secretary to Lord Ripon might be. He had been private secretary was afterwards when Chancellor of the Exchequer, aties, to Mr. Cannins attached, by the same confidential duties, to Mr. Canning, the Duke of Wellington, and sir Robert Peel. The Duke of Wellington had such confated in the House of that on one occasion be pubhe Lords his great satisfaction that Mr. Drummond had done him the honour to become his private secretary. There has seldom been an instance in which the life of an individual has been sacrificed by the hands of a murderer that has created so painful an the community. In regara to the assassin M'Naghten, very little of an autheatic character has yet transpired. On Saturday, he was examined at Bow-street. After several witnesses had deposed to the main facts, the prisoner at first refused to say anything, but was afterwards brought back at his own request, and said, "I wish to sey that it is the Tories of my native city who have driven me to this act. They follow and persecute me wherever I go ; and they have, by their treatment of me,-already ruined my and have no rest night nor day. They have followed mee
to France, to different parts of England, and other places -in short, wherever I go. The system they have pursued towards me was such that I could go no longer. I believe I bave been driven into a consumption by them. I believe I shall never be the same individual again that I was be-
fore. I used to have good health and strength. They fore. I used to have good health and strength. They have accused me of crimes of which I was never guilty.
They have done everything in their power to harass my They have done everything in their power to harass my
mind and to persecute me; and, in fact, to murder me. mind and to persecute me; and, in fact, to murder me.
That is all I have to say at present, and it can be supThat is all I have to say at present, and it can be sup-
ported by evidence." The prisoner here paused. The magistrate then asked, "Have you anything more to
say?"-Prisoner: "Only that they completely disordered say?"-Prisoner: "Only that they completely disordered
my mind. I am quite a different man from what I used my mind. I am quite a different man from what, "Hed Was then conveyed to Tothill-felds Prison, and from the above remarks and other circumstances which have oc-
curred in the prison, there is little doubt that he intends curred in the prison, there is little doubt that he intends
to plead insanity. On Monday, several medical men of to plead insanity. On Monday, several medical men the Metropolis, amongst whom were Drs. Monro and Sutherland, visited the prisoner, for the purpose of ascertaining whether he suffered from aberration of mind. The result of their interview was the unanimous conviction that the statement of tine prisoner was a premeditated one, and that there is no mental derangement whatever. -The inquest on the body of Mr. Drummond took place on Thursday, Mr. Maule, Solicitor to the Treasury, appearing on the part of the Crown as prosecutor. The evidence consisted in the accounts of the policeman, and a man called Hodge, a carpenter, who in the testimony of Mr . Guthrie, the surgeon. The latter put in a written account of the post mortem examination, stating that the ball in its transit passed directly through the abdomen, perforating the diaphragm, and producing a large effusion of blood; and that the surgeons considered such a wound to be inevitably fatal. The M'Naghten, and the coroner issued his warrant for the committal of the prisoner to Newgate. The belief that the shot was intended for Sir R. Peel becomes more and more general, and would seem to be borne out by the whole circumstances of the case. Mr. Drummond was about more active and elastic gait. There was no resemblance of features; but he was necessarily a frequent inmate at the Premier's house, and had just parted with Sir Robert's children when he met with his untimely fate. It is said, indeed, that Sir R. Peel has now no doubt that Mr.
The Wreck of the Conqueror. -The following particulars have been obtained since our last from the boy Abchurch, the only survivor of this melancholy catasThursday night, haviag made the Lizard light on Monday. The sea was very boisterous on Wednesday and Thursday, and the captain did not appear to lave much faith in the Torbay, to steer the ship through the Channel. Abchurch says the ship struck about ten at night. The captain went says the ship struck about ten at night. The captain went
into the cabin, and informed the ladies and the other passengers that they were on the French coast, where no boats were likely to put off to their aid, nor any other assistance could be afforded, and that they must trust to
Providence for protection. During the night the men beProvidence for protection. During the night the men be-
haved remarkably well, and obeyed every order given by haved remarkably well, and obeyed every order given by the officers with great fortitude. The ship held together bottom timbers began to give way. Captain Duggan now Weat down into the cabin and told the ladies that it was
all over, and that he would see them putinto the boat, and perhaps they might reach the shore. At this time Mrs. Thompson was dressed, and sitting by the side of her children's cot; Miss Turton and the other ladies were
also dressed. About nive the vessel broke up, and although greatly alarmed, the ladies got safely on the deck; and Capt. Duggan and Mr. Rogers, the surgeon, handed them into the boat, which was suspended from the side of the
vessel by the "falls." In consequence of the tackle being entangled, the boat could not be lowered in the usual way, and the lines being cut, it dropped into the sea. Abchurch and another boy were the only sailors in the boat, and the former states that the whole of the ladies kept their seats
firmly, while they endeavoured to pull towards the shore. The sea at this time washed the deck of the veasel, and the communication between the fore and aft decks was almost entirely cut off. The boat had not left the ship more than three minutes before it was struck by a wave and capsized. The whole of the passengers were thrown children, regained the boat. Abchurch recollects nothing more after this period, except being again washed into the sea, and again reaching the boat. ${ }^{2}$ In addition to these facts, a French gentleman, M. Dupont, who went down to known some facts, which leave little doubt that many of the passengers and crew were plundered by the people of in the boat were fully dressed, whereas M. Dupont found most of them stripped. He also states that when he arrived on the Sands, he saw Miss Turton expire, and that
she had evidently been plupdered. The body of Captain Duggan has not yet been recovered, and there is reason to fear that he, like Miss Turton, met with some foul sand. This surmise appears to be strengthened by the fact, that some articles which are known to have belonged to that gentleman have been recovered from different Capt. Duggan only the day before the wreck, and also a
letter to the owners, both of which came on shore quite dry, although the body of the captain himself has not been found. No doubt is entertained at Boulogne, that when the captain was thrown on the shore, these things were taken out of his pocket by some individuals, who afterwards stowed away his body in the sand. reached the posed that many were not dead When they reached the shore, and might have been recovered by proper treatdered to any of them, with the exception of the boy Abchurch, who was taken to the Lighthouse and properly Abchurch, who was taken to the Lighthouse and properly by nautical men with reference to the neglected condition of this dangerous coast, which the recent sacrifice of life will tend to strengthen; and it is hoped that the Govern will tend to strengthen; and it is hoped that the Governerect new Lighthouses, or provide life-boats along the shore. On Wednesday a meeting of the merchants and shipowners of London took place at the Universal Hall of Commerce, in Threadneedle-street, for the purpose of taking into consideration the most advisable plan of relief for the widows and children of the seamen lost by the Wreck, of the Reliance and Conqueror in the late gales, been proposed as the most eligible mode of raising a fund for their relief, and that Mr. Moxhay, the proprietor of
the Hall of Commerce, had, upon being applied to on the subject of lending the building to the purposes of the charity, declared that he would, without the charge of one farthing, not only dedicate the great room to the accomodation of an audience, but light it up with gas, and fit it out with seats at his own expense. On the motion of
Lord Dudley Stuart, the thanks of the meeting were given to Mr. Moxhay, and a committee was appointed to make arrangements for the concert without delay.

Illness of Sir George Cockburn.-We regret to state that Sir George Cockburn, one of the Lords of the Admiralty, burst a blood-vessel in the lungs on Saturday, and was for some time in a precarious state. On Tuesday, however, the hemorrhage had nearly ceased, and the bulletins since issued at the Admiralty announce that, although

Income Tax in the Cily.-Our readers are aware of the excitement which has prevailed for some time in the ward of Tower on the subject of the income-tax, and that surcharge led to a public meeting and the appointment of a committee to inquire into the circumstances. The inhabitants of the district were again called
week for the purpose of learning the result of this inves. tigation. After a long statement by Mr. Shearman of the proceedings of the committee, in submitting a memorial to Government, a letter was read from the Chancellor of the Exchequer, regretting that any proceedings should have rise to place in assessing the Tower ward calculated to give that on reference to the act, imposing the property-taz, "lhe did not find that the Government possesses any power. either of themselves, or by direction to the commissioners, been, by competent authority. The only mode of relief appointed by law for persons aggrieved by an improper After a long discussion, it was resolved-" That it is the opinion of this meeting, that the duties of Government surveyor and local assessor, under the Property and In-come-tax Act, are not sufficiently defined; that an indistinct combination of duties thrown upon officers appointed by, and amenable to, two separate authorities, renders such officers virtually irresponsible for their acts; that this gives the possession of uncontrolled power, which comes intolerable when exercised by those who are employed in carrying out the difficult provisions of the Proployed and Income-tax Act; that, therefore, according to the present construction of this act, there is no clear and immediate remedy for the neglect or misconduct of these perpetrated, as in the case of this ward, for which the right of appeal affords no adequate redress.
Court of Aldermen.-A Committee of the whole Court met on Saturday for the purpose of determining whether certain documents referred to in the affidavit, but not
filed in the proceeding in the Court-of Queen's Bench, filed in the proceeding in the Court-of Queen's Bench,
in the case of Alderman T. Wood, ought to be printed with the affdavits. A long discussion took place, in which some of the Aldermen expressed an opinion that as these documents were referred to in the affidavits of the parties, they were necessary to elucidate the matter, and ought to be printed. Alderman Musgrove was of opinion papers bearing upon the ase, and it was probable that the exhibits were the printing of them indispensable. He believed that justice required the printing of the exhibits, and after
disclaiming all idea of prejudicing Alderman Thomas Wood, he submitted on amendment to that effect. The resolution of Sir Peter Laurie, "That the affidavits should be printed without the exhibits," was adopted, six hands having been held up for the motion, and three for the amendment. Alderman Thomas Wood then announced that in the future stages of the case, he should be attended
by Mr. Laurie, the City pleader, and Mr. Wire as his counsel and solicitor
City Improvements, At the meeting of the Court of up a report relative to the new street from Holborn Bridge street depended upon the corporation alone, it would have
been accomplished long ago; but without the consent of Government, by whom alone the delay was occasioned, the very desirable object of the corporation could not be be removed, and the moment the sanction of Government was obtained, it would be seen that the City authorities were not fairly chargeable with neglect or supineness. The report of the Royal Exchange Committee alluded to the selection of Mr. Richard Westmacott to execute the sculpture for the trmpanum of the portico, at an expense scuiptare for the tympand atated that the committee felt gratification at seeing the satisfactory progress which had been made in the new building during the last year. eamen's Hospital, established for the relief of sick and dis eased seato on board Her Majesty's ship Dreadnough was sea last, Reek. Rear Majesty Young in the chair. The wammitte committee reported that, durg the past quarter, 926 in number 704 had been discharged cured, leaving 222 still under treatment; 507 out-patients had likewise been relieved. These operations, however, left the society in debt to the amount of $441 l$. Typhus fever had prevailed to 2 great extent amongst the mariners frequenting the port of
London. Many of the natives of the South Sea Islands had fallen victims to consumption, whilst among the Lascars and the natives from the Marquesas islands great mor tality had prevaled. 150 the trrst establishment of the mstitution, 1821 , 3,541 pade and advice, medicine, and moda the do the London Orphan Asylum took the London Orphan Asylu look place, when 8 giris and 17 boys were elected from a list of 135 candidates. The Rev. Dr. Read read the report, from which it appeared that 54 children had left the asylum during the year, and that at the close of the election the number in the institution would be 389 , for which the size of the building was inadequate, and the committee regretted that the subscription for its enlargement, called the Wellington fund, had made so little progress, there being two-thirds stil wanting. The legacies and subscriptions for the year
ending the 31st December, amounted to $10,639 l$. 14. 2d., ending the 31st December, amounted to $10,639 l$. 14. 2d. Which, after the expenditure, lett a balance 10 hatnd of
450 l .8 s . $10 d$. The funded capital was about $46,000 \mathrm{l}$. Wood Pavement.- We alluded in our last to the oppo sition shown by the Court of Aldermen to the use of wood pavement in the City. On Tuesday, one of the Sergeants of Police, who had been appointed to take an account of the accidents which occurred in the Poultry attended at Guildhall with his report. It appeared from this that the number of horses that fell on the wood pave ment in the Poultry on Friday evening, the 20 th , between 5 and half-past 6, was 5 ; on Saturday, from balf-past 9 in the moraing to the same hour at aight, 3 ; on Sunday, from 2 to 8, P.M., 4; on Monday, from 8, A.M., to half-past 7 , it appeared from this report, that between Friday evening and Monday evening, there being no frost in the interval, as many as 19 horses had fallen down on that short piece nod pavement. He asked the Sergeant if som The Sergeant said it was the Norwich mail ; it was delayed half-an-hour by the circumstance, and all the horses were thrown down. When it was raining fast, or when the pavement was quite dry, the horses kept their footing ; but at other times so great was the danger, that the butchers frequently drove down Bucklersbury to avoid the wood pavement in the Poultry. Sir P. Laurie said, the dismounting of the regiment of Life Guards in Argyle-street had crossed, was proof of the danger to the most as they enced horsemen. The Animals' Friend Society, and the kindred associations, would do more good by collecting facts on the mischief of adopting the wood pavement than by hunting after the cases they usualiy brought before the magistrates. A gentleman referred to the danger of crossing from Cheapside to St. Paul's Churchyard; since vehicles now of the yard had been paved with wood, light persons crossing Sir P. Iarie said the pood upon the pould not be used at all upon declivities such as Holborn bridge and Blackfriars bridge. He had no greater pecubiary and Blackfrars brige. He had no greater pecu than of erest in promoting the use of granite pavement and if any accid pal im from accidello him from travelling over the wood pavement, he would bring an action against the parish authoricies who caused had a right to make the public highway impassable. Even a shopkeeper, he thought, might sustain an action for the damage be sustained by rendering his premises unap proachable with safety by customers who rode on horse back, or who kept valuable curriage-horses. He directed the officers to continue to register the accidents

The Soottish Monument.-On Saturday the Marylebone vestry assembled to take into consideration the Mour nication from the Commissioners of Woods and Forest in reference to the erection of the column in the Regent of her Majesty, and announcing that, if the vestry at tempted testy, and announciog into effect, an injunction would be issued in the Court of Chancery. Mr. Gomm remarked that the vestry had placed themselves in a most pitiable situation. When the question was first intro duced, they were told that they had not power to proceed with the column, when they observed they did not care for legal advice, nor the Attorney-General's opinion. Now they were dumb-founded. The present, result was the triumph of common sense, which was not
a quality, he was very sorry to say, very common in
that vestry. Mr. Gibson stated that he was glad the Government had interfered, as the vestry would now make choice of a spot which was a Roman road 30 or 40 years before the Christian zera. He alluded to Tyburn, where the column would be much more conspicuous. It was then resolved, "That the vestry having talen into consideration the communication from Messrs. Pemberton and Co., have resolved that, in consequence of the freeholder of the soil beneath the pavement of the Regentcircus, it is expedient that the sanction afforded by the vestry to the erection of the column in the Regent-circus hereby is withdrawn; but the vestry at the same time protest against there being any legal right vested in the to abridge the entire and exclusive control of the vestry over the carriage-way and footway in the Regent-circus." Public Meelings. - The Half-yearly General Meeting of last week, for the purpose of declaring a dividend. The chair was taken by Mr. Thomas Tooke, who stated that the credit-balance on the lst January, 1842 , was $120,526 \mathrm{l}$. 2s. 10d., and that the like balance brought forward on the 1st inst. was $121,184 \mathrm{l}$. 19 s .9 d ., and after making suitable provision in advance for interest upon debentures payable about to be declared, the net balance or rest would amount to the sum of $76,135 l .8 s, 8 d$., being an increase as compared with the rest at the corresponding period in trade during the past year, of a satisfactory cbaracter. The number of ships that had entered the Port of London in 1841, was 6,619, and that in 1842, was 6,381 ,
being a decrease of 238 . The amount of tonnage in 1841, was $1,313,210$, and in $1842,1,288,490$, being a decrease
of 24,720 . The Chairman after having briefly commented upon these returns said, that it was the opinion of the Court of Directors that a dividend of $2 \frac{1}{2}$ per cent.
for the half-year eading the 31 st ult. should be declared, for the half-year euding the 31st ult. should be declared,
the Company defraying the charge of the income-tax. This proposition was agreed to, and the dividend declared at the rate specified by the directors-On Monday a Bank of Australia was held, for the purpose of declaring a dividend for the half-year. The report stated that the accounts received from the colonies down to September last, were very satisfactory as respected the various branches. The result of the half-year enabled the
directors to declare a dividend at the rate of 5 per cent. for the half-year. The net assets up to December, 1842 , in the Colonies, $163,875 l$. net profit for the half-year $47,967 l$. ; making together $828,482 l$. The amount of undivided profit was 64,1097 ., to which, after deducting expenses of working, bad debts, \&c., was to be added
$47,967 \mathrm{l}$. less $4,796 \mathrm{l}$, being one-tenth of the reserve-fund, making together, $43,170 \%$. To this was to be added, ing last dividend, left a balance of 70,280l. The reservefund now amounted to $24,475 \%$. The chairman stated ing capital being called up. The amount of the reservefund was invested in the Three-and-a-Half per Cents., and the subject of the charter was at present in abeyance, in
consequence of some references now making by Lord Stanley in the Colonies.-A very numerous meeting in favour of the National Temperance Society took place on Monday, in Exeter Hail. The chair was taken by Mr. B. Rotch, when the objects of the Society, and the advantoges of the habits of temperance were advocated by $\mathbf{M r}$. Bowley, of Gloucester, Mr. Buckingham, the Rev. G. Mowley, of Gloucester, Mr. Buckingham, the Rev. Memenald, of Leeds, the Rev. Mr. Stovel, and other gen teatotalism would be an efficient remedy for the existing astress among the agricultural and other labourers, as well was made, with an appeal for contributions of a larger character, in reduction of a debt of $700 \%$. due by the society, between $500 \%$. and $600 \%$. of which sum was already Mining Company, was held on Wednesday, Sir John Easthope in the chair. From the report it appeared that the mine of Rayas was working prosperously, the ore sold having produced 157,618 dollars; the outlay
was 77,653 , leaving a balance of 79,965 , of which Was $77,653_{4}$ leaving a balawce of 79,965 , of which
the company's share was 44,980 dollars. The assets were the company's share was 44,980 dollars. The assets were
$11,168 l_{\text {. }}$ 18s. 3d. The available surplus was about $7,547 \mathrm{l} .8 \mathrm{~s} .3 \mathrm{~d}$., which, in addition to $6,500 \mathrm{l}$. expected from abroad, would make a total of $15,047 \mathrm{l}$. 8 s . 3 d ., with Which the directors proposed to pay off $11,906 l$. $5 s$ s. on the red scrip, which was about 25 per cent. The report Was considered satisfactory, and seemed to inspire the shareholders with the hope of a general dividend being declared before a very long time shall have elapsed.
East India Trade.-Mr. Stikeman, of the East India and China Association, has just published his comparative statement of the number of British ships, with their tonnage, which have traded with places within the limits of the East India Company's charter in the years 1841 and 1842. Of the number of vessels entered inwards, the re-
turns show a decrease in 1842 of 37 ships, 25,533 tonnage, and 2,126 men - the difference between 788 ships 318,980 tonnage, and $16,304 \mathrm{men}$, and 751 ships, 293,427 tonnage, and $14,178 \mathrm{mes}$. Of the number of vessels cleared outwards, the returns show a decrease of 186 ships, ships, 408,607 tomnage, and 21,392 men, and 820 ships, 346,869 tonnage, and $18,279 \mathrm{men}$. One of the most unexpected results is, that a decrease of no less than 146
ships has occurred in the clearances for the Australian colonies and New Zealand. The clearances for Bombay and Calcutta also exhibit a considerable decrease
The Corn-Law Movement.-On Monday, at the meeting of the Directors and Guardians of the Poor of Marylebone, a memorial was presented, signed by several ratepayers, calling upon the board to lend their co-operation in the movement now taking place throughout the borough in favour of a repeal of the Corn-laws. Mr.
Soden moved, that every assistance be given by that Soden moved, that every assistance be given by that throughout that borough, but throughout the country. Bread partook greatly of a parochial character, inasmuch as it concerned in particular the poor as well as all the ratepayers. Other speakers contended that the question was political, and not parochial. The motion, however, was carried, with only five dissentients.
Greenwich.-On Friday a disturbance broke out in the Upper School of the Royal Asylum. It appears that restricted the intercourse between the boys and their friends, which so irritated the pupils that they commenced a general row, smashing the windows with slates, rules, brickbats, and other missiles, and breaking upwards of 1,000 panes of glass. Five of the ringleaders of the disgation is going on by order of Sir Robert Stopford before the principal officers of the institution. There are nearly 800 boys, the sons of commission and warrant officers, in the upper school, and many of them are 15 or 16 years of age, who, on a
a volley of stones.

Mortality of the Metropolis.-The following is the number of deaths registered in the week ending Saturday, Can. 191 - Central districts, 186 ; East districts, 203 ; South 1istricts, 239. Total, 953 , ( 502 males, 451 females.) Weekly average for the five last years 903 , ( 461 males, Weekly average or the five last years,
442 females, and for the five last winters, 1,004 .

## 誛robimcial "Jobos.

Ashton.-A demonstration in favour of free trade principles was made here on Monday, at which Mr. Hindley, the member for the borough, gave in his ad hesion to the agitation of the Anti-Corn-law League for total and immediate repeal. Mr. Hindley took the chair, and the meeting was adaressen by Mr . Cobden, Mr. Brotherton, Colonel Thompson, Mr.
T. Gisborne (late M.P. for North Derbyshire), Mr. $\mathrm{M}^{\text {' Callagh, and other gentlemen. Mr. Hindley, after }}$ speaking at some length in favour of the doctrines of free
trade, alluded to the comparative merits of a fixed duty and a total repeal. To what, he said, were he and others driven who had been desirous rather to take a practical duty? duty and a total repeal ; for Sir R. Peel had declared that those who advocated a fixed duty had the worst of the argument, and that those who voted for the total and imurned about from one thing to another-to be sent ove from Whigs to Tories, from a repeal to a fixed dutyMorever, the ine, and boilea they could not do ath fixed duty at all, but they could understand a perfectly free trade. If the farmers and landlords would have nothing to do with a fised duty, why should he take the not go along with him in doing so? That was his justification for giving up a fixed duty, which he had likened to descending down the stairs, instead of jumping from the top to the bottom at the risk of breaking their necks. state, when he saw the house burning, was it a time to consider about going down stairs? The question was now practically not between a sliding scale and a fixed diate repeal. He would say, in justice to himself, and to those who had fought and acted with him, that they were not responsible for that alternative. He would take upon himself no such responsibility, now that the very farmers bad begun to say that the question must be settled, as the question of rents and engagements generally was involved it, and that they would racer in an uncertain and un had to do and suifer, settled state, which disabled Inem conclusion, he assured the mentsing that he should go along with them heart and meeting that he should go alog wian hem heart and hand in the est
of monopoly.
Barnstaple.-A letter bas been received at Lloyd's from a resident at Braunton, near this town, giving an account of the conduct of the wreckers on the north
coast of Devon during the late storms. The following is an extract:-"On the night of Saturday last, two very large merchant ships belonging to Liverpool, and bound for the coast of Africa, were wrecked near our scenes of ardacious plunder which immediately ensued, and which have continued up to the present time, are o the most revolting description. On Sunday all our opposing sects were merged into wreckites, and never was a more busy day of rest for man and beast. The shore was thronged with wretches hardened as the rocks that surrounded them, wholly intent on plunder. the day to cart off whatever they could put their hands on, and the night came without causing a cessation of their labours ; and that which is most remarkable is, the not a single magistrate made his appearance the check the
work of devastation. The collectora of the neighbouring
ports betrayed the same want of energy and promptitude. I believe the highest official authority was the comptrolam speaking of the am speaking of the wreck on the Braunton side. There was nothing approaching to a properly-organised police, and those set to watch, if not participating in the plunder, were singularly iadifferent in its prevention." The writer concluesthy offenders have been that some of the more wealliy orfenders have been more prominent, and certamys poor wretches who their proceedings, than the numerous poor wrecches Who might plead their fourteenpence a-day, the amount of husbandman's wages
in this parish, as some incentive in following the ex

Birmingham.-A meeting of the Chamber of Commerce of this town took place last week, to receive the report of a committee relative to a corres the commith has been for some time carried on between the committee and Sir R. Peel. It appears that on the 29 thuly last the committee addressed a letter to Sir R. Peel, applying for a personal conference. Sir Robert, in his answer, proposed that instead of a conference, the facts intended to be stated to him should be communicated in writing. The committee then forwarded a memorial, setting forth the state of extreme distress of the town of Birmingham and the surrounding districts, the embarrassments of the manufacturers, and the wretchedness of the unemployed operatives, but repudiating in the strongest terms the idea that the distress alluded to was at all to be traced to overproduction. The memorial concluded by urging Government to adopt some step with a view of putting matters in this document an answer was returned, stating that Sir Robert had laid the memorial before her Majesty's Government ; that Government lamented the existence measures introduced during the session would have the effect of promoting the interests and bettering the condition of the manufucturing districts. Certain resolutions were then forwarded through the Mayor of Birmingham to the Home Secretary expressive of fears that, as the causes which had produced the late disturbances were still in active peration the peace of the manufacturing districts could not be safely relied on, and intimating disticin a desire on the pard of the appicus and immediate conshould be talo under the serious and immeciate consideration of the Government. A reply was received from
 herm On from the Birmingham Chamber of Comwerce to Sir $R$. Peel. It stated that trade was still declining, and distress consequently upon the increase; that in the opinion of the memin as the prest of the curency the attempt of the Legislature to "subject the circulating system of the country to the ancient standard of value; and that the restrictions placed by foreign nations upon defective policy with respect to the currency. The memo rial proceeded to make certand reconsid. Sir upon these views, and concluded by calling on Sir R. Pee to take the subject of the currency into his immediate and serious consideration. The reply, dated Nov. 7, intimates that the Premier quite differs in his views of the currency from those adopted by the committee, and dissents from the conclusions at which they bad arrived. Another memorial was then despatched by the committee, dated the 26th November. It proceeded still further to argue the question in dispute, denying that in the previous paper the memorialists had recommended any spe cific course to be adopted; but, in general, reiterating their conviction of the soundness of the principles they had laid down, and the correctness of the facts they hai stated. They observe that, in their mature opinion, a considerable permanent expansion of the circulatich the public have contracted by circumstanceessary for safely and effectually sustaining a permanent demand for labou. On the 3d Dec. Sir R. Peel replied, maintaining the corectness of the views he had already expressed the Goquestion, and disapproving of the suggestion paper money, which should be issued as a legal tender. To this letter whe committee replied at considerable length in a memoial, still further arguing the questions at issue, and requesting permission to publish the correspondence. Sir R Peel passents to the publication, and tells the .. Feelae that he does full justice to the motives by which they have been actuated in representing to Government their opinions on the subject of the currency, and thanks them for the courteous and temperate panner in which those opimions have been conveyed "Each of an instrument of exchange, and to be made a legal pose must profess to be of a certain value, to be erri valent, that is, to a certain nominal amount of money, five pounds, ten pounds, 100 pounds, according to the amoun of the note. In what sense will the word 'pound' be used? It will not mean a definite quantity of silver or old, or of any substance intrinsically valuable, for the paper is not to be convertible, either at present or at any future period. What, then, will the word 'pound' imply? This be no answer to it to observe that the paper is based on都 the amor the quarterily dividends. The Com limit the issues of national paper to Government, and to
limit the amount issued in the manner described in their memorial, and that all other issuers of paper should be liable to take up the paper money they issue in the na" tional paper, in the same manner as their issues are now
redeemable in Bank of England paper. The national redeemable in Bank of England paper. The national
paper thus limited could not exceed the amount of the paper thus limited could not exceed the amount of the claims which Government have upon the nation; and the
Government, being bound to take back this paper in discharge of taxes, would insure to the holders of the paper
the same arantum of value which it cost the holder to the sam
Boscastle.-We are happy to find that the crew of the Jessie Legan, whose wreck was reported in our last, are safe, and have arrived at Cork in the Lynx, from Mes-
sina. The Jessie Logan left Calcutta on September 4th, sina. on the Jessie Logan left inst. was struck by a heavy sea, which carried away bulwarks and poop, stove in her stern, swep the decks, broke the pumps, sprung foremasts, and carried away all her sails. The cook was drowned in the forecastle, the carpenter and two men were much injured. them all on board. At the time she was abandoned she had 13 feet of water in her hold. Soon after the Jessie Logan drove on the rocks and became a wreck, another vessel, called the Elizabeth Aletta, was driven by the hurricane upon the sands at Cruckington Haven, six miles N.E. of Boscastle Harbour, where, in the course of an hour, she was totally lost, and all on board perished. A the crew take to the rigging, where they remained but a short period, for on the vessel striking the sands, her the crew, none of whom were seen alive afterwards. They wer
Bristol.-Among the other disasters in the Bristol Channel during the late storm, the papers aunounce the She was on her passage to the coast of Africa, and was driven on the Taunton Sands with two other vessels in the hurricane of Friday week. The crew lashed themselves to the rigging, and were saved by a vessel called the Appleto pieces during the following morning, and severe conflicts arose between the Coast Guard and the wreckers, who plundered the cargo to a great extent.
Buckingham.-The sixth annual meeting of the Conervative Association of Buckingham and the neighbour ing districts took place on Tuesday. The anniversary was
celebrated by a public dinner in the Town-hall, which was appropriately arranged and decorated for the purpose The Duke of Buckingham presided, supported by a large number of the gentlemen of the county. Atter the rouspoke at great length on the Anti-Corn-law League.
 be, under 1 . Peel), this country had power to defy the Asia, Africa, America, and Europe, that had looking to under the sway of any empire; and, if the country were properly governed, it nad the power to defy all the world and live in peace and happiness. They say that the
utmost that the kingdom produces is $16,000,000$ quarters of corn annually; and that as the population amounts to
$26,000,000$, and as it is necessary that every man should have one quarter of corn annually to live on, they infer that $10,000,000$ people are starving. But this is not the case : they forget that $5,000,000$ live on oatmeal, and
more than $5,000,000$ rejoice in potatoes. Put these together, and it will be found com potatoes. Put these kingdom does in fact support its population, and without much distress. He knew it was said that it was a good maxim "to buy in the cheapest and sell in the dearest not like. He knew he should be told that nothing was more foolish than to prefer one's own countrymen to body but his own dear self? But one cannot help doing so, and he declared that he would rather lay ou 1s. With Mr. Cobden, bitter enemy as he was to the agriculturists, than with any Frenchman or other foreigner because he knew, that if $11 \frac{1}{3} d$. out of that shilling went aire, the other halfpenny went into the packet of some othe person, and that other person was his (Dr. Marsham's) person, and that other person was his (Dr. Marsham s) the toast in honour of Her Majesty's Ministers. He said that from the private and personal communications which that from in pith Ministers, officilly sand otherwise he necessanily rom lime to bre, be country in the most extended and beneficial sense. They are aware that many of their measures must be in the first instance misunderstood-that the first effect of those measures must be to produce some individual suffering; but if time be given them to mature their measures, and to give the those men scope and effect, they do hope and tras the real beeft uitimately be found conducive to prosperity of the agricultural, not less than of the commercial interest. Mr. E. Dayrell then proposed the parliament. He said it was umbers of both Houses of Parliament. He said it was useless to attempt to disguise that there did prevail amongst them a difference of opinion with respect to some recent measures of the Government ; and, however much he might desire not to touch upon such topics, or to run the risk of interrupting the harmony of the meeting, still he thought that when the meeting of Parliament was so near at hand they ought no to allow it to go forth that all had passed off with perfect
ananimity on that occasion, as far as their approval of those measures of the Government was in question. No man ad more respect than had the difficulties of thei position ; but at the same time, he contended, they were ound to let them know what their real sentiments were and if they felt that mischief had been brought about by their measures, they were bound feenimgy on spealk tereic which they knew did not exist. He remembered that, on a former occasion in that hall, the advent of the present Ministers to power was looked upon as the panacea for every evil, and the harbinger of every good. How had those expectations been realized? If they thought they had been disappointed, should they not be candid and
straightforward enough to say so? If they did not speak out they would not deserve the remedy which, by perse rerance, they would otherwise attain. All he would hope was, that they would in future look most narrowly into the course pursued by Ministers, and endeavour so to shape it as to secure the advantage of the agricultaral interest. The Earl of Orkney returned thanks. He had been one of the unfortunate minority of 17 which had opposed the Ministerial measures just alluded to, and he could prove, passed had fully these measures, now that hich hos 7 entertained of it. He had just come from Scotland and it was of no use mincing the matter as to the effect of these measures on the agricultural interest there. One third of the agricultural property of Scotland was gone to the " poor" land out of cultivation. Speaking of Scotland, he could say that land which was now growing a very decent quantity of corn, would, if those principles were carried out, only grow a decent quantity of grouse. If we
drew our supplies from abroad, and threw our own land out of cultivation, this country would, before three years sore over, become a province orst freal arguments against frade opinions, th noble Lord went on to say, that next session he should give his votes independently and honestly, and he would say he had that confidence in Ministers to believe that, if fhey were to see that they had gone too far, they would Hon. Capt. Fitzmaurice returned thanks for the tonst "The Members of the County" proposed by Col. Hall Sir T. Fremantle acknowledged a similar compliment paid "r The Mar bor to Lord Orkney's statement that one-third of the property in Scotland was already confiscated, and that if we went on as we were now going on, we should be a province o rance. He certainly thought his noble friend had shown in his speech, that, to quote the words of the song, he was
"royally fresh." He denied the statement that the epreciation of prices in the agricnitural districts was ment. Such political economy, in his opinion, savoured ment. Such political economy, in his opinion, savoures had been languishing for the last 12 months, and if the artisans had been turned out from their work for a considerable time, was it extraordinary that, when the extent
of consumption had been thereby diminished, the agriculof consumption had been thereby diminished, the agricul In considering this subject, the state of the revenue might Exeferred to. He lamented that the Customs and the indication of a want of power on the part of the people to purchase or consume? Was it to be wondered a that the people were unable to purchase corn when
they were unable to purchase sugar and other articles Sir J. Chetwode proposed the health of the chairman the Duke of Buckingham. In returning thanks his Grace said, "The topics of this evening have been so again to enter on them would only he soing over beaten ground. As I have had already the honour to say often, and more recently at a dimner of a Conservative association in this county, I still hold the opinion which 1 have will mains mained, and which, by the blessis myself now to maintain to the grave. In sealous deter mination to maintain those feelings and opinions which I have always expressed, and with assuring you that you will always find in me a faithful advocate-ore prepared interest of the United Kingdom: I have little doubt that the members for this county will do their duty. I trust that they will steadily maintain their position, and resist any furtherfattempt-if such an attempt should be made -to interfere with the rights and privileges of the agriculcural interest. The time is now como the cover have done wrong in the course they have taken with regard to agriculture, and I think also we are entitled to all on them to stand steady where they are, to maintain way one jot further. country gentleman, I can now do no more than act heartily with you bereafter on every occasion. You will find me most zealons for your interests, and also in my
endeavours to promote the employment of the labouring population whenever it is in my power, and so long as exist, whatever may be said of me for holding the hones opinions which I avow I hold, you will never find m finch from doing my duty to myself, to my Queen, and to my country. Several toasts were then given, includ ing "The Mayor, Aldermen, and Town Council of Buck ingham," "The British Farmer, and success to Agriculture, and other appropriate toasts.
Caermarthen.-We have already noticed the lawless
proceedings in the neighbourhood of St . Clear's, and the march of a party of marines from Milford in search of the rioters, called "Rebecea and her daughters." We now learn that the troops have arrived at the spot, and that the reward for the apprehension of the offenders has been acreased from $50 \%$ to $100 \%$. Notwithstanding these pre cantions, on Monday night the rioters sent a message to the marines, that they were about to pay a visit to the rates, and that they should be glad to meet them. Between 3 and 4 in the morning a detachment of marines, accom panied by four officers, set out for the gates, to ascertain f the men intended carrying their threat into exccation. When they arrived at 'Trevengan-gate, it was found to ave bee levelled to the groun, $p$ the tollhouse destroyed. Not dispersed in different directions to be seen, as they had dispersed On each of these ex after they had levelled the gates. On each of these ex cursions the mob, consisting of a large number of men and boys, al of them well mounted, most of them dressed in women's clothes, and armed with guns, pistols, pitch-
forks, hay-knives, reaping-hooks, crowbars, or some other reapo invizh headed by Rebecca who is de scribed as being a strong tall mant, well disguised, and having unlimited authority over the rest of the party.
The farmers in the neighbourhood lave refused to be worn in as sheial constables, and many of them have paid the fine of $5 l$. for such refusal. The peasantry of that part of the county appear to be in a state of great excitement, and it is feared that the affair will not be ter minated without the effiusion of blood.
Carlisle.-About a fertnight since, a fire broke out a Cherby Hall, the seat of Sir James Graham, which, but for the successtul exertions of those on the spot, migut have been attended with disastrous results. Abou o clock three female servants, the only occtipants of de house, were alarmed by the appearance of dens moke in the room they occupied, and on proceeding to ascertain whence it issued, discovered that the carved communik of the hall was in llames. They xmmedat far distant from the house, and he at once proceeded to th scene of the fire, taking with him a small engine used in watering the garden. With this apparentiy insignifican apparatus, and aided only by his three assistants, he succeeded, after considerable exertion, in putting out the fire before it had made much progress.
Liverpool.-For some time past, the magistrates have been occupied with prosecutions for Sabbath-breaking, frst cuseination in the town. The newsyender in the Vauxhall-road, person called Shephera, an a charge of having his shop openf for the sale of tho London journalis and other publications on the preceding Sunday. This was the third occasion, during as many wharg, On the two former occasions he had been find in the penalty of $5 s$. for each offence, but on both he in ormed the court that it was impossible for him to meet the demands of his customers unless his shop were apen on the Sunday; that he was determined to keep it open even though he should thereby subject himself to a $5 s$, penalty for every infraction of the act during the nex ths. Mr. Rushton, while be admitted the Justass of this line of reasoning, declared, at the same time, hat he had only to deal with such cases as might happen to ben tren po m in the phust again fine him. Mr. shepherd, arge before the public, had summonses served upon William Snence, the mayor's coachman, for having drive his worship to and from church on Sunday; and also upon Mr. Jones, the master of the Exchange; Mr. Hughes, the maxter the Lycæum, ad 1 K mion had heir pre Sunday last. The case of the mayor's coachman was first considered: the tase orthe mayors on his behalf on thed thacera, who appeared the of a private gentleman came within the meaning of the act; and the magistrate, acquiescing in this view, decided Chat the case could not-be sustained. The other case broke down for want of evidence to prove that the partie were masters of the estabishments. Ne magistrates therefore dismissed the summon were odious, it was the duty of the public to petition for its repeal, and not for any individual to mention it odiousness in the presence of the bench; he thought the law was good, inasmuch as it was designed to preserve the Sabbath in the way it should be preserved.-The receipts at the Custom-house at this port, for the year ending the compared with 1841 , of $200,514 l$., and with the preceding year, of $\mathbf{7 0 2 , 9 4 7 l}$.
Merthyr.-About 3,000 of the Gellygaer and Monmouthshire colliers proceeded, on the 16th inst., to Mr. Powell's colliery at Duffryn, for the purpose of compelling the men of those works to strike. The police of the district having had timely intimation of the intended movement, mustered in strong numbers ; and the mob finding themselves so received, and that the colliers of the latter works were disposed to remain at work, very soon dispersed. No intimidation or threats were used toward the men composing this colliery. On the following morning the manager was at his post to receive the workmen Ser their best clothes, and refused to continue their work, assigning no reason. Another meeting was held on the 18th inst. by the colliors between Pontaberbargoed and Blackwood.
Manchester. -The usual weekly meeting of the Anti-Corn-law League was held at the Cora Exchange, on the

10th, and was numerously attended. The chair was occupied by Mr. George Wilson, the president of the council. to the United States. He said he had made an abstract to the United States. He said he had made an abstract
of the reduction which had taken place on several articles of the reduction which had taken place on several articles of American exports, and, when he visited Washington,
he presented one of the written statements he had so drawn out to the President, assuring him that in many drawn out to the President, assuring him that in many
respects those reductions would increase the trade and respects those reductions would increase the trade and
commerce between the two countries. The President, who commerce between the two countries. The President, who that he saw not how the Americans could ship corn to England under the existing corn-laws, and added-" wouder you do not take our Indian corn, but I have heard your horses would not eat our American Indian corn."
He (Mr. Thornely) assured him that he was in error upon this point, inasmuch as the English horses evinced more wisdom than their masters, because they ate all the Indian corn laid before them. It was well known that in
the last session of Congress the Americans bad been imposing duties on imported goods; but this fact made him the more anxious to bring about a repeal of the Corn-laws, in order to affect the commercial legislation of the United States, because the Congress at present sitting would come to an end upon the 4 th of March, and because it was confidently believed that the future Congress would be considerably more favourable to free trade. - Mr. Ricardo, M.P., then addressed the meeting. He said, that strenuously than he would oppose any other that might happen to exist. He would oppose any attempt to create a monopoly for the cotton manufacturer or the potter by were required, and that any enterprise which depended on protection for support was resting on a rotten foundation. He believed that the first effect of the repeal of the Cornthat "protection" meant high rents. He wished that and objectionable word had been blotted out from the tariff altogether; and he asked how it came that we had aban doned the system by which we had become wealthy? He contended that all nations were free-traders in the outset ; that subsequently they abandoned the principle; and that position. He believed that Sir R. Peel would help the man of Sir Robert's experience and unquestionable abilit could be blind to the fact that some further developility was necessary to be given to our resources and industry. The meeting was subsequently addressed by Mr. Moor Mr. Rawson, Mr. Brookes, and Mr. Brotherton, M.P. astle entertained Mr. Cobden, Colonel Thompson, and Mr. John Bright, the deputation from the League, with Mr. J. Wilson, at a public soirée. The hall was crowded and the gallery was occupied by a large number of inhabitants. The comaittee had issued 500 tea-tickets, disposed of by Thursday; on Friday they were at were al disposed of by Thursday; on Friday they were at a pre-
mium. At the doors there were hundreds of applicants, eager to obtain admission by money payments. The total number present amounted to upwards of 1,000 , of whom about 200 were ladies. Sir John Fife presided. After the usual preliminary business, it was resolvedpolicy of all restrictions on the importation of food for the people, and of all taxes which, under the guise of pro tection to one class of the community, inflict a robbery upon every other, applaud the zealous efforts of the Narepeal of the Corn Laws, and warmly welcome to New astle the distinguished members of its councli now pre sent, namely, R. Cobden, Esq., M.P. for Stockport, Col. nd Jus wion the meeting wa then addressed by these gentlemen at considerable length on the different questions comnected with free-trade, and with the proceedings and prospects of the League.
Portsmouth.-A Court-Martial was held on Tuesday on board her Majesty's ship Camperdown, for the trial of crew of H. M.'s steamer Spitfire, for losing that vessel on the Half-Moon Kays Rock, off Belize, on the night of the 10th September. Captain W. H. Sheriff, superintendent of Chatham Dockyard, presided. After examining several witnesses and hearing the statement of the Commander the President informed Lieut. Winthrop that the member fe President informed Lieut. Winthrop that the members before court, having duly considered the evidence brought had done all that could be expected under the circumtances and that it was by no fault of his that the vesse had been and that was by therefore, fully vessel him, his lost, and that they dis blame. He had areat pleasure in returning him his sword, and was much gratified at the testimony which had been given of his firmness after the disaster, and his successful exertions in saving the lives of those placed under his charge.

Preston those placed wader charge.
Preston.-As an instance of the progress of machinery, this stated that the principal manufacturing concern in provewn will, after the whole of the contemplated improvements are completed, have, besides other machinery, ,440 power-looms, each of which will be able to produce ofekly six pieces of 25 yards, making a weekly aggregate of 122 miles and 280 yards of cloth. Another account of facturer kind states that Mr . Atkinson, the rope-manuAdmiralty to manufacture 75,000 fathoms, or 85 miles 400 yards, of line for Sir E. Belcher, of the Samarang, going on an exploring expedition. Sheffeld.-The Yorkshire papers continue to give long
accounts of the stoppage of the Sheffield, Old Bank,
known as the firm of Messrs. Parker, Shore, and Co.
There seems to be no doubt that their stoppage was para of bad trade commenced, many of their customers wera of bad trade commenced, many of their customers
were in debt, and they took securities which, a few years ago, would have been considered ample, but which now, for want of trade, have sunk so low that they will not fetch half their original value. The favourable circumstance in the event of the week is, that the other banks of the town have escaped a run. They are stated to have ties of Messr's. Parker and Co. are stated at about
$600,000 \%$, and the apparent assets at $725,000 l$., but the latter sum does not include bad debts. At a public meeting of the merchants, manufacturers, and other inhabitants, on the 16 th inst., the Master Cutler in the chair, a resolution was unanimously adopted, expressing an en-
tire and unabated confidence in all the banks at present existing in Sheffield.
St. Alsaph.-A meeting of the freeholders of the county of Denbigh, convened and presided over by the High Paeriff, was held at Ruthin, on Saturday last, to petition reign, which proposes to unite in one Bishoptic the late sent Sees of St. Asaph and Bangor. Resolutions were moved and seconded by Viscount Dungannon, Hon. W.
Bagot, Sir Watkin Williams Wynn, Mr. Mainwaring M.P., and other gentlemen, and a petition to both Houses of Parliament against the proposed union of the two dioceses and the alienation of their revenues to Manchester was adopted. The local papers state that the Lord Lieutenant and all the resident gentry are unanimous in parish in opposition to the measure, and that nearly every A meeting to the same effect has also been held at Cam bridge, and a petition adopted against the union of the

Wigan.-The Manchester papers mention with satisfaction, that the Rev. W. Corbett, the Catholic minister of diffuy, pense of the fing the attendants, and furnishing it with books and papers All the incidental expenses of its management will also be defrayed from his private purse.

Railvoads.-The returns for the week on the principal lines are as follow :-Greenwich, 6896.; Northern and Birmingham, 13,186l.; Croydon, 194l.; Brighton, 2,487l.; Liverpool and Manchester, 3,4706; Grand Junction $467 l$; Great North of England, 1,121 $l_{\text {. ; ; }}$. Sheffield and Manchester, 271l. ; Manchester and Birmingham, 2,148l. Manchester and Leeds, 3,379l.; Midland Counties, 2 ,248l. Eull and Selby, 669l.; Birmingham and Gloucester, $1,484 l$.; Edinburgh and Glasgow, 1,421l. ; Birmingham and Derby, Great Western, $9,964 b_{\text {; ; }}$; South Eastern and Dover, 1,306 A special general meeting of the Birmingham and Glouthe purpose of considering the week at birminguam, for tee of ing. Captain Moorsom, R.N., presided, and stated tha the directors were by no means averse to the appointmen of a joint committee. After a long discussion it was re resolved that a committee, consisting of five shareholders and four directors, be appointed for the purpose of consipense any measures calculated to reduce the workmo ex po res, aad increase the trafic of the line ; the commitee mention to some subsequent meeng. public benefit resulting from railway expedition, that, on the 16 th, a letter having been received in Doctors' Commons from Portsmouth, containing instructions to arrest a vessel which had from the Registry of the Admiralty Court, and was despatched to Portsmouth in time to arrest the vessel at half-past: 2 o'clock on the same day the letter was received in London.-The great blast at Round Down Cliff, for the new works on the London and Dover Railway, consisting fired by means of the voltaic battery on Thursday, in the presence of an imense concourse of spectators, includine siresen eminent engineers. The battery was directed by Lieut. Hutchinson, R.E., and as soon as the wires were connected, the earth, according to the account of an eyewitness, trembled to half-a-mile distant-a stiffed report was heard ; the base of the cliff, extending on either hand non from under the superincumbeut mass of chalk seaward, and in a few seconds, not less than $1,000,000$ tons of chalk were dislodged by the shock, and settled down into the sea below. Loud cheers followed the blast, and a royal salute was fired. The sight is described as truly magnificent, and the interest of the proceedings is increased by the fact that no accident occurred. -The meeting of the proprietors of the Great Western Railway adjourned o Thursday, from last week, has terminated in the adoption of the plan incorporating by purchase the Cheltenham and Great Western Union lise with their own undertaking, as proposed in the first instance by the directors. The ballot gave an enormous majority over the opposition, the number of shares in favour of the proposal being upwards of 6,000 , and that of its opponents being less
than 600.
IRELAND.
Dublin.-Intelligence was received in Dublin on the 19th instant of the death, on the previous evening, of
Viscount Ferrard, son of the celebrated Joma Foster, first

Lord Oriel, and the last Speaker of the Irish House of Commons. Viscount Massareene, his Lordship's eldest son, succeeds to his large estates, and thereby unites in himself the titles of Baron Oriel of the United Kingdom with those of Viscount Ferrard and Viscount Massareene in the peerage of Ireland.-The four representative Spiritual Peers for the ensuing session are, the Lord Primate, and the Bishops of Tuam, Derry, and Limerick.-The Dean W St. Patricks is to be consecrated Bishop of Cashel, Waterford, and Emiy, in St. Patrick's Cathedral, tomorrow the 29th instant. His Grace the Archbishop of Dublin will perform the solemn ceremony, assisted by the Bishops of Cork and Ossory.-The Poor-Law Commissioners have issued a circular in reference to the intended alteration of the Irish Poor-Law. They request to be provided with "an account of the total number of persons rated in the last rate made in the South-Dublin Union, and the total net annual value of the property rated in the union. Also an account of the number of persons in such rate whose valuation was respectively not greater than 16 .; greater than $1 l$., and not greater than $2 l$.; greater than 2l., and not greater than $3 l$.; greater than $3 l$., and not greater, than 4l.; greater than 4la, and not greater than than 5l., carried on from a previous rate"--Lord Eliot, in acknowledging the receipt of a resolution of the Board of Guardians of the Sonth-Dublin Union, on the impolicy of placing the medical charities under the control of the Commissioners, has announced that it is not the intention of Ministers to bring forward, in the ensuing session, any measure relating to the medical charities of ireland.-At another address from Mr. O'Connell "to the people of Ireland " was read. The hon. gentleman, in this address, refers to the progress of the Anti-Corn-Law League, in illustration of the power of peaceful and combined agitation, and declares his belief ther the and combined well organised and its combination too extensive not to succeed. "It is thus," he says, "that every day develops the transcendant force of legal and peaceable combination for the amelioration of political institntion. It is for this purpose that I require three millions of enroiled Repealers. No reasonable man can doubt, that if I obtained these three millions of avowed, combined, and cooperating Repealers, the Repeal of the Union could not possibly be delayed." The Rent for the week was nearly 200 . Belfast-The Irish Presbyterian Church has resolved to celebrate its second centenary of Presbyterianism in Ireland this year, by a subscription fund, to enable the General Assembly to build houses of worship in the Roman Catho distriets of che soath anest Catholies anish employ scripture readers in the Irish language.

## SCOTLAND.

Edinburgh. -The Judges of the first division were occupied on Thursday and Friday in delvering their opinions the stewarton case, which involves the question as to the legality of the acts under which the minasters of Parliamentary churches, of chapels of ease, or of quoait sacra, extension, and secession churches, were admitted of the General Assembly to the full status and privileges have already mimisters. Of the Judges whose opinions Meado Wood that consider that the acts in question are illega, and ought to be sustained ; on the other hand present case ought to be sustained ; on the other hand Lords Moncrier, Cockburn, and ivory, support the legaily of the kens in question. The Lord President and Lord Macwere delvered their opinions on Thursday, and both quoa conclusively against the legality of the erection of ters into the General Assembly. The judgment of the former occupied two hours in the reading. Lord Jeffrey and Lord Fullarton delivered their opinions on Friday in favour of the General Assembly. The Judges have now all delivered their opinions-eight being against the legality of the quoad sacra parishes, and five in favour of the church. de effect of this decision will materially weaken stood that the roo on the Kirk question in the ensuing session of Parliament.
Stirling.-On Tuesday week a demonstration in favour of the principles of free-trede took place in this town, When about 1,500 people, including a large proportion of ladies, met at a soirée in the Corn Hxchange of the burgh. The char was tare bensive landed proprietor Polmaise and Colbraith, of Stirlings acted as vice-chair man Pr Cobden was introduced to the meeting by the chairman, and addressed them in a long speech in favour of the League and the general principles of free-trade.
Lanark.-The Glasgow papers state with expressions of dissatisfaction, that the iron-masters and coal-proprieFors of Lanarkshire, taking advantage of the unsettiled tate of the mining districts, the impoverished state of the country, and the contemplated reduction of wages that is be maineans of conveming a noeting the protection of the purpose of raising a police property in the neighbourbood of Airdrie, Coatbridge, \&c., where the principal works are ituate.

THEATRICALS.
Drury-Lane - On Saturday evening Shakspeare's play Cymbeline was revived in the purity of its original tex at this theatre. It was a bold experiment, for the play is
not a "strong" one, according to the ordinary notions of
stage effect; but it was well cast, and the result was a Fordacit appeared as Imogen with great advantage, and sus tained her difficult part with a delicacy of feeling which showed that she appreciated the character. Mr. Macready's Iachimo was a still more remarkable instance of thorough feeling for the spirit of his part. Mr. Anderson was anifeeling for the spirit of his part. Mr. Anderson was aniold lord Belarius with the homely truth which has now become the characteristic of his style. The play was well become the characteristic of his atyle. fhe play wartail got up in every respect, and on the fanc Maderson, were called for, to receive a renewal of the applause alread abundantly bestowed upon them during its progress. Marriage, bearing the title of Mothers and Daughlers was produced on Monday at this theatre with success. It was placed upon the stage with great completeness, and needed no assistance which the tact of the mas deficient in the vigour and vivacity which distinguished Mr. Bell's frst production, and seems to have been founded on the model of the well-known stock comedies of the last century. The characters are therefore not new, and though they are sketched with talent, they slow the same want of vigour which characterises the general manage ment of the plot. The lcading characters are as intriguing mother, with her head full of projects for her daughter adrancement; the daughter, an artful coquette, delighted to overreach her mother, a humble companion, suffering under the insolence of her patroness ; a scampish adven turer, endeavouring to keep up appearances, a middle aged mas, who has recently inherited a title; a young lover ; a fat baronet, Sir Gregory Plump, a suitor to Lady
Manifold ; a servant who tells fortunes in cards, and a Manifold; a servant who tells fortunes in cards, and a foppish valet. The heroine of the piece was worthily represented by Miss Vandenhoff, and the remaining cha racters were sustained by Mrs. Orger, Mrs.W. Lacy, Mr Vandenhoff, Mr. Bartley, Mrs. Humby, and Mr. Cooper Mrs.Orger's personation of Lady Manifold, the intriguing mother, was one of the most finished pieces of acting which has been seen upon the stage for many a day; it was lady-like, subdued, and perfectly true to possibility ; there was no caricature, no exaggeration, but the concepartistical delicacy which is the true realisation of natural comedy. The play went off with great applause, and was announced by Mr. Vandenhoff for repetition; after which the author was called for, and bowed from the front of one of the boxes.

## ffliscellaneous.

Archives of Barcelona. - It is known that amongst the buildings set on fire during the bombardment of Barcelona was that containing the archives of catalonias of these lowing account will show how great the mistorical point of view :-There were collected there charters and acts of the early Courts f Barcelona, from the year 844, and documents Roussilion and Cerdagne, but to the kingdoms of Arragon, Valencia, Majorca, Sardinia, Sicily, and Naples. The building contained the proceedings of all the Ministers from the union of the kingdom of Arragon with the principality of Catalonia, as well as copies or alliances, and such matters. There were also peace, aliances, deposited there the original papers of the states-Genera, in 50 volumes, from those held at Perpignan by to those held by Philip V., at Barcelona, in 1702 . in 1350 , to those held by Philip ., at Barcelona, in 1702. Not less than 856 orghe of which the dates ranged from the Pontificate of Benedict IX., in 1024 , to that of Clement XI., in 1709 . There
were 17,640 documents, written on papyrus, parchment, or cotton paper. Those on parchment or paper were rolled up separately, but the parchments were tied up in collections. At the period when paper was first made of rags, about the thirteenth century, registers were formed to copy letters patent and other acts proceeding from the sovereign authority. These registers, begun in 1214, were concluded in 1808, and comprised 28 reigns from James I. to Charles IV. They were 6,070 in number, and each register contained between 300 and 400 leaves in folio. T'he learned Capmany affirms, in the preface to the fourth volume of his "Mémoires Historiques sur Barcelone," that the archives of the Crown of Arragon were the most memorable in Europe, if their antiquity, good preservation, extent, variety, and importasce, were taken into consideration.-Galignani.

Coincidences.-"During the year 1842 there died," says the Courier Français, "the last of the Abbesses the last of the Chanoinesses of Remiremont (the Countess of Arma de Monspey) ; the last of the Prelate Abbes of Flanders (the Abbe Delvigne) ; the last of the Augus tinian Mors France (the Abbé Mollard) ; the last of the Hermits of Switzerland (the Hermit Kauffman), found frozen in the forest of Dufikon ; the last of the Council lors of the Parliament of Navarre (M. du Parage); the last of the companions of the famous Paul Jones, and the last of the companions of Cook. This

Watery Volcano.-The accounts received this week by the Lisbon mail give the particulars of a remarkable phe nomenon which from Penicho, a fortified town on the coast and distant about two Portuguese leagues from the sea A correspondent of the Morning Post gives the following account of it:-"At an early hour of the morning, the proprietor of a small farm, together with his wire and neighbouring plot of ground, detached from the cottage
occupied by them. On their arrival at the place, they were terrified by the sound of repeated claps of subterra nean thunder, which lasted for some time. On a sudden, a tremendous explosion took place, followed by a dense cloud of earth, thrown to an incredible height, which was succeeded by a column of water belched from the bowel of the land in the most awful manner, spreading as it rose in all directions. This eruption from the watery volcano lasted for half an hour, deluging the place around for miles. On examination, the mouth of the crater formed by this convulsion of nature was found to exceed six yard is diameter, and of a perfectly circular form. After the column of water, which was salt, as though fresh from the ocean, had spent its force, the gulf continued for two whole days to bubble up and overflow the land, and then the water appeared to return from whence it came. A ew days afterwards the same subterranean sounds were repeated, but no eruption ensued. The above fact, which was transmitted to Lisbon officially, has, it may be well supposed, formed the terror and matter for conjecture of the whole country round."

Ice Chancillor's Court. - [Before Sir Lancelot Shad cesun, and Prichard. - This cause came before the court pon a demurrer, put into the bill by the defendant Prichard
or want of equity in the plaintifis case, multifariousness and want of parties. There were one or two other technical
grounds of demurrer, but the substantial ground was, grounds of demurrer, but the substantia grand of want of equity. In support of the demurrer, it was contended that the defendant Prichard was admitted to be first mortgagee of one part of the property, and therefore as to that the only rellef the plaintiffs could have in equity was redemption,
assuming that the plaintiffs were second mortgagees, and that assuming that the plaintiffs were secondiy artgagees, and tand any other en enity by the plaintiffs was an allegation of collusion,
as in the bili stated; a mere allegation of collusion was nothing, as in the bili stated; a mere allegation of collusion was nothing,
unless facts were stated showing it. The allegation of collusion in substance was this, that the defendant Prichard, being a mortgagee of the sum of 1,0001 ., mortgage money and interest, ing that he should be first paid, did not defend the action. That was no collusion, because the defendant Prichard had a right to
hring his action, and there was no impropriety in the company not defending it. Prichard having obtaince a judgment, the plaintiffs, whis were mere creditors upon the tolls, had no right
to interfere to prevent Prichard from perfecting his legal remedy against the land by getting an elegit. This, besides, was not a bill on behalf of creditors for a general administration of the comathe point of equity, that inasmuch as the plaintiffs were debenture creditors under the 16 th clause of the company's act, they of elegit would get a legal title to the company's property, and would thereby destroy the undertaking and consequentiy do away altogether with the tolls, \&c., upon which the act of Par-
liament created the plaintiffs securities; that there was collusion between Prichardanfe fisf to come to this court and require the court to restrain the defendants from getting the
legal right. The plaintiffs could not bring any action at law to recover their principal and interest on those debentures, nor could they bring an action of ejectment to recover possession at
aw. All these points bad been decided in tle courts of law; every railway company had been m the habit of giving those
bonds or debentures, and many millions of money had been nt upon them, and unless a court of equity could interfere, able. Tlie Vice-Chancellor sail, that the plaintufs having taken ct, they had no claim upon the lands itherrse thectrity was only on the defendants' y 'ight to get a better security, for Prichard had a right to sue, and this court could not restrain the legal right; even if the bringing the actions was an arrangement between the which would affect the parties in equity. He must, therefore, allow the demurrer with costs. - This deciston is one of very
serious and considerabic inportance to all persons holding dethat any other creditor, by due dillgence, perfecting his legal right by obtaining a judgnient and execution at law, may come
in, and by taking possession of the land, notain priority of payin, and by taking possession of the land, notain priority
Court of Exchsaukr.-Heywood v. Beecher-This was an
action to recover the sum of 30 l . 10 s ., alleged to be due to the plaintiff for work and labour done, under the circu the "housetailed below, which afford a The plaintif is a house-agent carrying on his business in the neighbourh ood of Knightsbridge,
and defendant is a gentleman residing at Brighton, where he and defendant is a gentleman residing a Brighto, where he
holds the office of clerk to the directors of the poor, as well as others of importance in that town. The plaintiff brought his to him for having been instrumentat, in the character of a house agent, in letting a house, No. 55, Cadogan-place, and seling, the latter said that he was not liable to the charge so made, inasmuch as he had never given instructions or authority to plaintiff to act for him. In support of his case the plaintiff called Mr and the furniture sold, who proved that his mother had entered upon the negotiation solely upon the information they had obhad become acquainted with the fact that the premises were to be disposed of. Mrs. Stewart eventually closed the bargain with defendant, by agreeing to take the house on a lease for the furniture. It was further stated that defendant, or some person who represented himself to be that gentleman, had called at the office on the 3d of August last year, and had left the particulars of the ouse which in the letting book "Mr. Beecher, to be let, furnished, tive guineas a week, per annum, or unfuraished, at 1006. pe, These particulare, as thus set forth, were given to Mrs. Stewart, and thereby paved the way for the arxangement which was ult
mately made between defendant and that lady. The lease was mately made between in September, but the plaintiff did not make any application for payment, nor indeed did he send in any bill until that defendant had called at the office one day when he was the only their conversation, had desired him to tell his master, that he never paid more than $2 \frac{1}{c}$ per cent. to a house-agent. This was
he outline of the plaintifs evidence. On the part of defendant a number of witne testimony went to show that the board "to let" Whach she produced) referred the parties for particulalsintiff
cards to view to Messrs. Rogers and Near, and not to plainter She also stated that her master, who only came to
sionally, was not in London at the periods alleged by the witnesses for plaintiff. This latter statement was or two between
borne out, although there was a variance of a day
the dates of the parties, by two gentlemen who are clerks to de
fendant at Brighton, both of whom said most positively, that from the nature of the duties defendant had to perform, and indeed had performed in person, in connexion with offices he held with the airen the days when it had been alleged he flad been in London. Messrs. Rogers \& Dearalso proved that they were the house-agents who had been employed by defendant. They, however, had no recollection of having given any cards to vee had not. One o these witnesses stated that he remembered inquiries having been made of him respecting the house by a person whom he had reason to suspect was in the scrvice of plaintiff, some time prior to the premises being disposed of. This latter fact wantended to ap that it was not at all an mincommon thing for the less respecthaving obtained the full particulars of premises they might chance their have for sale or letting, then to place thic intimation that such property was to be disposed of on boards, whec they ex hibited commission, and the inference intended to be drawn was, that Ban Rolfe summedup the case, and told the jury the plaintif had made out to their satisfaction that he had been employed as his agent by the defcndant to dispose of these premises. It was
quite certain from the evidence given by Mrs. Stewart and her on that it was through the medium of the plaintiff's office they had obtained a knowledge that the premises were for sale. That
fact, however, he must tell them, did not cutitle the plaintiff to recover, unless he could prove that he had been employed by the
defendant. The jury would therefore say by their verdict whether the case as made out by the plaminf was sufficient to tions upon the subject. The jury, after a few minutes' consultation, returned a verdict for the defendant.

## Che Gatimets Cbronite.

SATURDAY, FEBRUARY 4, 1843.

Ir is very evident, from the letters that have been addressed to us by our correspondents, that the observations we lately made upon the night temperature suited to Vines were not without their use. In gene. ral, the correctness of our opinion is admitted; but, in one or two cases, the writers have doubted whether shanking and bad colouring are to be ascribed to mismanagement at the early period of forcing. In one instance, we are assured that in a house where the
Vines broke well, flowered well, set well, and where the temperature was kept low at night, the berries, although all was well with them till they began to colour, then took to shanking and shrivelling, so that there was not half a crop. Now we beg it to be observed, that we did not say that shanking is to be ascribed exclusively to mismanagement of temperature: we only pointed it out as one of the causes of this troublesome disease, and a common one. It may doubtless be produced by other means, such as a cold wet
border ; but into this we shall not go at present. Our immediate object is merely to insist upon the manner in which the atmosphere should be regulated.
We may all of us rely on this, that we cannot break the laws of nature with impunity; we may violate them indeed for a time, but in the end punishment is sure to overtake us. It is a universal early part of the year, the nights are cold, whatever early part of the year, the nights are cold, whatever of the islands of the Mediterranean: let us now turn our eyes still further to the eastward. Nowhere is the climate more sultry than in Affghanistan. We
are told that General Pollock's troops at Jellalabad were forced to dig holes-in the ground to hide themselves from the heat. The condition of Cabul must be much the same. At Candahar, we are informed by generally $110^{\circ}$; and at midday, in the sun, $140^{\circ}$ licious than at Candahar and Cabul. On the 30 th June, this traveller saw donkeys laden with panniers of fine purple Grapes; and at the same time, the paper on which he was writing curled up and became as crisp as if it was before a blazing fire. When he reached Cabul, in August, he found the bazaar filled With delicious Grapes in astonishing profusion. Now
what sort of nights had the troopsin the spring of the year, when the Vines were growing and flowering, and preparing themselves to bear fruit? Why, on the 7th March, near Shikarpore, 200 miles south of Candahar, and above 500 south of Cabul, in the Desert, We are told that the march took place in "a
brilliant starlight night; frost seemed to be in the air, it was so cool and bracing ; to be in night, the servants made up a blazing fire, "for the north wind was blowing bitter cold, and the traveller was glad of hot brandy and water."* Nevertheless, the day before, Mr. Atkinson had been plaing at Shikarpore, and the march was over level plains, and not among the mountains. Two days afterwards the weather is described as being oppressively hot at midday. Then on the 19 th March there Wras a hailstorm at night, and the air was "cold and bracing; " and so on.
Here, then, in a country totally different from the islands of the Mediterrunean, where the Grapes are varius for their excellence, we have even greater the month of March, when the Vines are shooting : the air is cold and bracing by night, and grilling by day. And this is but one of the imnumerable wise provisions of nature, which prevents the destruction lently vpurred from undue stimulus. Vegetation, viorefreshed at nightards by heat during the day, is refreshed at night by a total cessation of all excitemont; were it otherwise, the powers of life would inevitably perish. and such plants as the Vine would prevented; in like manner, plants cannot fourish if produced of rest which is natural to them, and is produced by the combined influence of coolness and

Let it not, however, be supposed that a low tem perature at night is requisite during the whole period of growth of the Vine; that the contrary is the case
when the fruit is ripening, we shall shew at an early when the fru
opportunity.
The use of all manures is to increase the natural fertility of the soil, or to restore that which has been diminished by vegetation. The idea of a universal pabulum for all plants is nearly exploded; and all the attempts to discover it are, by many, considered to be on a par with the finding of the philosopher's stone or the universal medicine. The improvements in Chemistry have discovered various and different substances in every different family of plants; not only such as are
peculiar to organised matter, and are the result of the peculiar to organised matter, and are the result of the
decomposition of vegetable and animal substances, decomposition of vegetable and animal substances,
but others likewise, which belong to the mineral kingdom. These can be exhibited unaltered in the residue of chemical decomposition, whether in the dry way, by means of heat,-or in the humid way, by means of the action of other substances, which destroy the cohesion of the parts, or change their affinities.
Thus the earths, silica, lime, magnesia, alumina, and several of the metals, especially iron, are found in the ashes of plants which have been burned; and from the regular proportions of these in plants of the same kind, whatever be the nature of the soil in which they are raised, we must conclude that they are in some measure essential to their formation. However involved in darkness and doubt the growth and nourishment of plants is in the present state of science, there are certain principles which may be considered to be fully established by experiment: of these one is, that whatever enters the body of a plant, whether by the
roots or the pores which are distributed along its surroots or the pores which are distributed along its sur-
face, especially in the leaves, when they are developed, must be so minutely divided, that its particles are invisible, not only to our naked eyes, but even assisted by the high magnifying powers of the microscope that is, they must be fuid, whether in a liquid or aeripores, or mouths, if we may so call them, of plants, substances which cannot enter into them, however well adapted they may be to serve as nourishment or increase. Mineral substances must therefore be dis-
solved in suitable menstrua before the plants can imbibe them. Organic substances naturally decompose in the state of gas, and these gases may contain various matters in solution. It is more than probable that water and atmospheric air are the chief menstrua in which the food of plants is dissolved; as we well become diseased, and die. All water, except perhaps that which has been purified by repeated distillations, contains portions of various substances in solution, so minute, that the art of the analyst has not yet found means to show their presence or ascertain their proapply to arithmetical calculations: one grain of any substance dissolved or diffused in one pound of water (avoirdupois) is only $\frac{1}{1000}$ part of the water ; yet, when we consider that many plants absorb and and that the substance diffused or dissolved in this water may remain behind in the plant, we can readily conceive a great deposition of substances which are perfectly inappreciable on an analysis of the sap; besides, we cannot doubt but minute particles of every substance which exists on the earth are continually floating in the atmosphere, and there exerting influences which are quite beyond the reach of the most skilful analyser of air. How could we otherwise account for the formation of solid meteors, which appear to be generated in our atmosphere, unless they
are supposed to be projected from the moon, which is a very improbable supposition? We may therefore philosophically lay down as a certain fact, that extreme division is an essential condition in all sub. stances which are to enter the body of plants and contribute to their formation and increase. And we need not be astonished if we find accumulated in plants subs

From these preliminary observations we may draw his conclusion: that it is not sufficient merely to add to the soil any of the substances which are found in the plants when come to maturity, but we must so arrange all the circumstances accompanying this addition that they may be presented to the plants in the state in which they may be absorbed and assimilated. No fact is more undeniable than that soils, the mechanical constitution of which is favourable to the development of the roots, and in which they can be properly fixed, so as to support the plant, are found to be fertile in proportion to the quantity of organic matter inlimately combined with the earth, within certain limits, and with certain exceptions; and that this fertility, however great, diminishes in process of time, if plants are allowed to grow in these soils, and are carinexhaustible fertility is a mere creature of the imagi-
nation; and the reduction of this fertility is always accompanied with the diminution of the organic matter. This intimate union of organic matter and the soil is the result of the slow deposition of various earths suspended in water, together with certain re-
sults of the decomposition of animal and vegetable substances. There seems to be a auliar fefaity between extremely divided earth and the residue of organic decomposition, which prevents their being dissipated and lost so long as the soil remains undisturbed; but the slightest tillage which exposes this compound of earth and organic matter, commonly called virgin earth or humus, to the influence of the air, produces an action abundantly supplying the plants which have begun their vegetation from the seed with that pabulum which causes their healthy increase. The roots increase as well as the stems and leaves: and while the former absorb the moisture and gases afforded by the soil, the latter imbibe other elements from the surrounding atmosphere; and thus, every part performing its proper functions, a healthy and vigorous plant is produced, and its fruit brought to maturity.
These simple facts, and the principles founded on them, must be steadfastly kept in view, whenever we attempt to explain or account for the action of various manuxes ; and here chemical science greatly assists us, by pointing out the probable effects of certain mixtures of substances, which either act upon each other, or undergo spontaneous chemical changes in certain in an an for our guide, and endeavour to imitate her opera-
tions. We cannot, it is true, artificially form a soil of the tions. We cannot, it is true, artificially form a soil of the
greatest and most permanent fertility : we cannot dis greatest and most permanent fertility: we cannot dis ticles, intimately blend various kinds together, and slowly deposit them to form a soil-although the process of warping, practised on the banks of some rivers, is a close and rapid imitation of the natural depositions. We have certain earths and minerals ready formed and mixed in the soils we cultivate; all we can do is to find the easiest mode of improving the texture and composition of these soils, so as to make
them more and more fertile. It is not relevant to our them more and more fertile. It is not relevant to our
present purpose to speak of the mechanical means of mprovement-of the mixture of earths of opposite qualities-or of the regulation of the moisture: these must be treated of separately. We now confine our ob servations to the simple addition of substances, which directly or indirectly furnish materials for the increase and healthy vegetation of the plants cultivated. The subject naturally divides itself into two parts: the first relates to the substances which afford the ele-
ments by which plants increase ; and the second, to ments by which plants increase; and the second, to
those which act as assistants or solvents of these substances ; and, as it were, prepare the food, bringing it to the state in which the plants can readily and gradually absorb itt. This is exactly what some authors have distinguished as enriching manures and stimulating manures. We shall see that some substances may be ranked in both these divisions.- $M$.

Whals the planting season continues, we are desirous of calling the attention of our readers to the Levant, or Turkey, or Mossy-cupped Oak (Quercus country.
It is one of the most ornamental of the Oaks, grows very fast in poor soil, and forms excellent timber for in-door purposes, as is admitted by every one; and for naval purposes also, where the climate suits it, if that opinion is correct which refirs the Sardinian Oak now so extensively employed in the Government Dockyards to Q.Cerris.
Be this as it may, there is no doubt that the Turkey Oak is one of the most profitable to a planter ; and that being so, it matters little whether it is to be con-
verted into line-of-battle-ships, floors, doors, or the shopkeepers' counters. Mr. Loudon, in his Arboretum Britannicum, gives the measurement of a few specimens, of which he had obtained information; and they, in some instances, show that the tree will lengthen even more than three feet annually.
To the cases mentioned by that author, Sir Henry Bunbury enables us to add two others: Two Levant Oaks, which had been planted (from the nursery) at Great Barton, in the winter of 1822-3, have been cut down this winter, 1842-8, when the following were No. I. -40 feet high.
No. I.- 40 feet high; girth at one foot from
the ground the ground 4 feet
8 feet
No. II.-41 feet high ; girth at one foot 4 feet
8 feet
At the same place, there are several others standing about 50 feet high, and carrying upstems which do but their sirt much as the two that have been felled;

We have lately inserted a notice or two concerning
ated with a Mr. Bickes, of K astel. In another column will be found a letter upon the subject, to which we invite attention.

Although Farming is not exactly our vocation, we are always glad to open our columns to the principles of cultivation; for they are the same in Agriculture as in Horticulture, only that the former applies them on the larger scale. We, however, like our neighbours, find a pretty considerable number of people who laugh at principles, and tell us that there is nothing like practice ; in which they are so far right that principles would be of little use unless practice carried them into execution. We cannot, however, too often assert, that practice without principles is a broken reed to lean upon, and will most undoubtedly fail those who cling to it alone in the coming storm ; and we now extract from our excellent contemporary, the Maidstone Journal, a specimen of the effects of people knowing something more than their grandfathers; which specimen we advise all the rule of thumb folks to exaraine for themselves.

At a recent meeting of the Maidstone Farmers' Club, the President, in giving the health of one of the Members, a Mr. Barnes, took occasion to make the following remarks:-" Not only was that gentleman very eloquent and instructive at their meetings, but he carried out in practice what he advanced as theory Last year, he (the President) paid him a visit just before reaping, and the difference between his Corn and that of his neighbours was such as no one would to his land, where there was hardly two quarters an acre of produce, while on Mr. Barnes' there was not less tlan four or five quarters an acre. That was a very Weald of Kent, and in such a season as that of las year, it struck him with surprise." Mr. Barnes, in reply, ascribed his success to the outlay of capital in under-draining and manuring, and among other things, stated that "he had not been a grower of Turnip for some years, baving formerly attempted it and failed However, after under-draining to some extent, he attempted again this year, and succeeded beyond
anything in that neighbourhood." We trust Mr. Pusey anything in that neighbourhood." We trust Mr. Pusey obtained the committee which we understand it to be his intention to move for as soon as Parliament meets.

## BOTTOM-HEAT.

The importance of Bottom-heat, not only for Pines and Cucumbers, but for everything else in some degree is now generally acknowledged; and since nature has es tablished it as something like a general principle all ove to its utility.
If a Nurseryman is anxious to propagate a valuable plant, he generally has recourse to bottom-heat. A gardener waters his Vine or his Peach-border inside the house with tepid water (seeing that he has no other means of conveying a degree of warmth to the ground), in order to get a fund of sap in motion to supply the demand made by the buds in the earlier stages of development. In forc-
ing Asparagus or Seakale at an early period, the process ing Asparagus or Seakale at an early period, the process
will be extremely tardy, unless we can command a bottomheat of about $80^{\circ}$.

It appears somewhat astonishing to think that the Pineapple should luxuriate in a bottom-heat of $90^{\circ}$ or $95^{\circ}$ Whilst a temperature of 709 or $75^{\circ}$ is found sufficient for the top. The discrepancy in nature does not amount to general principles, an unerring guide, yet a great latitude has beer provided for by the great Architect, both with regard to hest and moisture. Indeed, had it not been so, man, beast, and vegetable could not so readily have adapted themselves to change of situation, and the valuable Potato must have remained to grace its native hills in Quito
I see that in Dr. Lindley's "Theory of Horticulture," the average heat of the earth during each month is given;
but there needs, I think, a classification, founded on the but there needs, I think, a classification, founded on the natural divisions of the seasons. I will therefore, to draw poses in gardening, the year might be divided somewhat after the following manner:
lst, accumulating period, (say) May, June, July, Aug. 2nd, stationary period, (say) September and April. 3rd, dispersing period, (say) Oct
January,
January, February, March.
Of course the above-assumed periods refer to the heating of the earth by the sun ; and by "stationary" I mean those periods when the average temperature of the atmosphere and of the earth are nearly the same.
It will be seen at a glance that the above is a mere speculation, and therefore cannot mislead; but of course there is a meaning in everything. Thus, the accumulating period sets everything in the vegetable kingdom in motion, and progressively increases that motion up to the time that the meridian sun exhausts the tender leaf; at which period there is, and, had need be, the most complete nues until the fruit is perfected, and the bud filled and organised for the ensuing year.
The stationary period is the withdrawing of excitement
in the autumn, which allows the vegetable system to in-
cline to its period of rest; and again in the spring,
The dispersing period, in which the vegetable world no longer needing the excitement of bottom-heat, returns a part of its borrowed store to the atmosphere, there to plleviate, in some degree, the rigours of the season, if the winter is long and severe.-Robert Errington, Oulton, near Tarporley.

## TRELLISES FOR CLIMBERS.

EFFECTS OF PUTRID VEGETABLES, \&c. ON THE GROWTH OF PLANTS.
IT is well known that in adding decomposing vegetable matter to the soil, we supply to plants those substances different states of combination. When such matter is to diferent states of combinalions whose roots are confined in pots or any other given space, it must be made soluble in water; and chemical analysis plainly shows that all plants are resolvable into a certain number of simple bodies, and that these bodies enter readily into combination with water. Water, therefore, is apparently the source through which this nutriment is to be conveyed to the absorben vessels ; and wishing to have ocular proof of the effects of such a liquid, and that too in as economical way as possible, I had an upright cask, with one end taken out filled with leaves of Cabbage and any other succulent plants : these were pressed down, and rain-water was added until the mass rose level with the surface. In this tate putrefaction proceeded quickly, and in three or fou eeks it was complete; this, however, depends entirel on the
That I might be the more certain of its fertilizing effects 500 scarlet Pelargoniums were subjected to an experiment. These had been exposed for the greater part o the year to all the variations of the weather, being potbound, having literally nothing to subsist on but 0 was supplied to them in a fluid state. On the of them vere supplied with the liquid from the cam, with rain-water, and this experiment was carried on for
upwards of a month-a sufficient time to prove its usefulness.
At the expiration of that period, no one ignorant o their treatment could have believed that they were all of the same age, and had been treated alike in every other respect; the difference was so much in favour of those
that had been supplied with vegetable liquid; they had that had been supplied with vegetable liquid; they had
not only grown more vigorously, but their leaves were larger and of a
However fertilizing this liquid may be of itself, it is made still more so by the addition of animal urine in lieu of rain.water ; I also found that the vegetable fibre decomposed with greater facility when acted upon by the urine of cattle in a fresh state, at the same time that the latter forms a liquid, holding in solution all the ingredients that constitute the food of plants, and fitted to supply nutri tion in that form in which it can be received by the most minute spongioles. When Orange-trees, that had been sickly for years, were supplied with this liquid, their leaves turned from yellow to green, they bloomed freely, and set their fruit the same year.
That this fluid may not receive more than its due, will subjoin the previous treatment of the above plants. Early in spring, all the earthy matter was washed from their roots ; they wete repotted into fresh soil and plunged in a gentle hot-bed, where they made numerous fibres. The liquid was then copiously given; and at no time should this or any other artificial liquid, unless in a very fibres exists. I have supplied this liquid to numerous
stave and greenhouse plants, with very beneficial results, ime did it dest those with succuient roots, and at no acid so some or fail in its effects. Unless sulphuri liquid cannot be used in any confined apartment, on ac count of the noxious effluvia that is given off. Where a constant supply is required, two casks or cisterns are ne cessary, that the contents of one may be putrefying while the other is in use; the portion that remains after the liguid is drawn off, if mixed with light loam, forms an excellent compost. - Robert $P_{\text {a }}$ Drummond, Foreman Minto House, Rowburghshire.

ON MANURING WITH GREEN CROPS.-No. VIII (By Professor Charles Sprengel. Translated from the German.)
Bannatic Globe Thistle (Echinops bannaticus). This plant, a antive of Hungary, has been cultivated for some time past as an ornament; it is biennial, and attain a height of 8 feet. I may state that I know, from expeinment, that 8 th a armer, as well for foader as or grech mane. As fodder , be 3 feet high by the mad furnish an astonishing mass of herbage at a period when Red Clover is scarcely 4 or 5 inches high. Thave given it repeatedly to swine, sheep, cows, and borses, in considerable quantity, and have always found that it was eagerly eaten by them, even when they have had plenty of Clover. If mown when 2 or 3 feet high, it grows up again speedily, and can be cut once or twice more in the same season. Its qualities for green manure are, that its roots reach 3 or 4 feet in the subsoil, that it succeeds very well on poor loamy land, does not suffer from either frost or severe drought, is not attacked by vermin, and yields a mass of herbage nearly incredible ; the Magdeburg acre will yield, if the Echinops is 6 or 7 feet high and about to blossom, $40,0001 \mathrm{bs}$. I have never grown it to that extent ; still, from the ground I have planted, I have been able to judge of its fertility. It yields an astonishing quantity of seea. My experiment, as to its manuring qualities, succeeded as well as might have been expected; yet I observed that it decays underground more slowly than other plants. If it should turn out to be practically a good fodder, which I doubt the less because it is one of the Thistles with very soft small spines, the first cutting might be used in that way, and the second ploughed in green, Considering the Bannatic Globe Thistle such an important plant, I examined its chemical composition, and it will be seen from the following results how much manuring matter $40,0001 \mathrm{bs}$. of the green material will
urnish.

$1,000 \mathrm{lbs}$. of the dry plant contain 700 Ibs . actually nourishing material, amongst which are much mucilage $10,000 \mathrm{lb}$
, 00 los. green herbage would, therefore, bring into the furrow-siice of one acre, 801bs. nitrogen, 120 lbs potash, 68 lbs . soda, 64 lbs . lime, 281 lbs . magnesia, 4 lbs. sulphuric acia, 32 ibs. phosphoric acia, 4,4001 bs. of carbon ; consequently, the soil would from that Globe Thistle more manuring substance than from any other plant hitherto known. The small mount of sulphuric scid is remarkable
For the sake of experiment the seed ought to be sown in May, and the plants to be transplanted in July or August, perhaps best after Rye. Atthough this Thistle is a plant of easy cultivation, it must be kept free from weeds, although they are not likely to overrun it, its own growth being so very luxuriant. That its principal success depends on the quality of the subsoil does not require further explanation.

AMATEUR'S GARDEN.-No.V
As the busy season of seed-sowing is at hand, proceed with the general work both in the flower and kitchen garden, as fast as possible. Borders, containing herba ceous plants, that were not digged over in the autumn should, now that the bulbous plants are above-ground be attended to immediately. Instead of being dug they should be neatly forked over, previously dressing the ground, if poor, with rich compost or manure, and taking care to disturb the bulbs as inttle as possible. Coarse growing plants, such as Asters, Achilleas, Phoxes, Stenac tises, \&c., must be reduced in size. In doing this retain a portion of the outside only, removing the other part and the centre; or, if necessary, take the plant upaltogether and after adding some fresh compost to the soil, replant the best part of the old stool. In this way, neat compact plants may be obtained, and what is an advantage in small gardens, some of the coarse-growing ones will be checked in their growth.
Many of the more hardy of the autumn-struck plants for grouping, such as Pelargoniums, Calcellárias, com-
mon Verbexas, \&ce, may now be potted off into small
pots, and placed under the shade of the greenhouse plants until well rooted; so as to ber the greenhouse plants in temporary pits towards the end of March, and set the pots at liberty for other things. Very small pots must wh used, my object being to get a compact ball of roots, of fibres when plunged in sand, will produce a dense mass plants are placed in their permanent quarters.
For this reason, I would advocate the
the best season for striking cuttings, be autumn as day in spring brings its work, while autumn is every paratively an idle time in the garden; therefore, as three dozen plants can on an average be kept under in autumn, have them potsed let us get over these things plunged out in temporary pits, so eas to in spring, and and frames at liberty for more, so as to set the other pits or scarce plants, of which your stock may be limited, had better be placed in heat to produce cuttings for propagamerits entitle them to be, I may mention Nierembergia intermédia, grácilis, filicaulis, and calycina, Lantana Sellowi, the old Ruélia formosa, Bouvardia triphylla and splendens. Both the latter plants are readily in-
creased by pieces of the roots cut into inch long, placed over some light sandy soil, covered about half an inch deep, and plunged in a gentle bottomone inch he young plants must be potted off when about out inch high, and the strongest of them will do to bed and potted in March, and placed in heat, until they parted produced shoots two inches long ; after which they have produced shoots two inches long; after which they must dens strikes freely from cuttings, but the other kind is best increased by roots.

## A few seeds of Brachycome iberidjfslia, Schizanthus

 Hookeri, Priestii, and húmilis, Mesembryánthemum trícolor, Rhodanthe Manglésii, Clintónia pulchella and may be sown on a gentle heat to bloom in pots : and some of the autumn-sown ones will require repotting. In the kitchen-garden plant a few early Potatoes at the cat of a south wall, or on a warm border; but if they growth a little, they will be as so as to start them into hence. Make a small sowing of Lettuce, and also get in another crop of early Peas, and the first crop of Windsor Beans. Lay in a stock of different kinds of soil under cover, while it id dry, ready for potting wilh next month.
## HOME CORRESPONDENCE

To Kill Insects for the Cabinet.-Two or three paragraphs, pointing out the best methods of killing insects, have been written by aper, which, in my opinion, cannot slain teas of thousands for may cabinet, and enists. I have mode. For such Coleoptera, Dermaptera, Orthoptera, Hemiptera, and Homoptera, as have not bright colours, boxes into way is to shake them out of the bottles or boiling bot water; and as soon as dead to lay them upon blotting-paper, to absorb the moisture. For gay-coloured species of these orders, and such Hymenoptera and Dipmeans will allow of the ordinary mode of setting by plunge the bottle or box, if of them, into best plan is to or to hold them to a hot fire for a few moments without doptera, except the small Tortricidse and Tineidæ, and all the Neuroptera, Trichoptera, the larger Hymenoptera, and Diptera, and indeed any insect, may be most expespecimen killed, and with least danger of injury to the specimen or operator, by piercing, after having passed the pin through the insect in the usual way, the under
side of the thorax of the specimen with a pointed quill dipped in a saturated solution of oxalic acid, Death is in kept in a small phial, such as perfumers is most readily Wept in a small phial, such as perfumers use for oils, \&c., will a piece of a quill fixed in the cork. A single drop Will serve a lifetime, by merely adding a little water as it evaporates. Of course the quantity of water should never minuticient to dissolve the whole of the acid. To kill boxes, the best way is to elevate the lid of each barate pillmox, the best way is to elevate the lid of each boxa little pile the boxes thus partially opened under a large tumbleror Such bell-glass, and to burn a brimstone match underneath. on pieces of Hymenoptera and Diptera as are mounted into boiling water, as for the cabinet should be thrown Che eptera, \&c.; and by moving each specimen about in legs can be placed in the proper positions, and theng a slip of writing paper plunged underneath each specimen, and distan out at an angle, will bring the insect with it without
laid laid aside for a few days to dry, when the specimens will
be found in these slips of paper should be card-board. I may mention, forder for mounting on the paper ing, that he ought always to put a few pieces of soft from collected, not only box into which a number of insects tom them, which frequently spoils the villose species bing otherevent, as much as possible, the villose species, but other. Indeed, he ought to use some judgment in placing
diferen after a genera into one bottie or box, or he may find, ard day's collecting, that a Cicindela or Crabro
has industriously converted his collection of insects int against using spirits of wine and corrosive sublimate to Kill mites, , co., ; the loss or change of every bright colout will be the result. The safe plan is to bake the infected The King of Prussia's Palm-house.-The Palm-house on the Peacock's Island, near Potzdam, which was finished and opened to view in the year 1831, deserves the notice beautiful erections of its kind, and contains of the mos remarkable and interesting to botanistains much that is plants. It is 100 feet in lengtl , by 40 f lovers of and 35 feet in depth. Properly speaking, however, the depth is 54 feet, as at each end of the back front it in forms an alcove, in which the marble and the middle Indian pagoda have been erected with the requisite restorations. This large space has not been narrowed by cross beams nor supports ; and one cannot but admire execultuess with which the design has been carried into tastefully with is lighted on all sides, and is ornamented are placed in it were purchased by the King from M. Ful. cheron, of Passy, near Paris. They consist of forty-one diferent species; the nunber of them, however, amounts specimens, and some have been species there are various places. Particularly distinguished is a specimen of Chamrops humilis, which was formerly in the botanic garden at Bonn, and, was brought from thence in 183I This tree is 300 years old, has a trunk $\frac{1}{4}$ foot in diameter diamer in height to the 10 , which is 9 feet in in the winter months, and bears male flowers, with which the female fiowers of the smaller plants were fertilised in February of the year 1834, so thet they have aiready for its fine growth and the Latania borbonica is remarkable which form the crown, which is upwards of 24 feet in diameter. Zamia tridentata and revoluta have trunks of 1 foot in diameter. A specimen of the Sago Palm, Cycas plants have flowered. Chamærops humilis, with male and female flowers on different plants:-a small specimen exhibited in Feb. 1832 a female spathe of flowers, of which several ripened into fruit; but after germination male flowers.- $H$.
you express a doubt whether Cydónia japónica will b. 857 , well on a wall with whether Cydonia japonica will bloom wall two plants which bloom as profusely as any that I have seen in other situations. The buds are now appearwhich I attribute to the late unusual fine expanded,

Exhililion of Roses in Pots.- It is acknowledged upon all hands that this is unknown ground, and that exhibitors will have to contend with considerable difficulty. upon the show the ground that the best collections at the ensuing at another time mat we may reasonably hope they will be will become as much a matter of course to exhibit in this class as in any other; but there is certainly more credit due to him who shall in the infancy of the thing put upon fiting by experience, shall attain to considerable pro tion. To private growers the attempt will be attended hope the reward will not be withheld frome said above, bitor, though he be but moderately successful. Let him Wear the garland that wins it.- Rosebud. [We have no in these views Ho
Egyptian Silh.-There is a plant very common on the at Dongola. The silk of in Upper Egypt and Nubia, and factured into cords and other substances of domestic use. It usually grows 4 or 5 ft . high, has largish leaves, Which generally have the appearance of being sprinkled with white eyes, sbout the size of A when wreen but is quite empty with the excention of green Peach, but is quite empty with the exception of a small core containing the seeds (enveloped in the silk), which is attached to the skin by small fibres. It is called by the plants of it; only one of which, however, seems likely to Calotropis) J. W. [This is the Asclepias (now called by the Arabs Oschar. It is too tender to live is called greenhouse in this country. The silky substance surrounding the seeds is of beautiful texture.
the desired information respecting the kindly given us other plants alluded to by Lieut. interesting account of his captivity in Affghanistan. ' R .' sources of information are doubtless authentic, and what geological peculiarities the barren Hindoo Koosh owes its sterility, while the Ilimalayan range, of which the Suffeed Koh appears as the S.W. extremity, is covered with fine forests. It would be highly interesting to know ancient writers desctibe the Macedonians, under Alexan der, to have been thrown into an extasy of delight at the discovery of Ivy at Nysa (which is generally believed to
the East. The Silphium, spoken of by Arrian, has been conjectured by the late-lamented Sir A. Burnes to be the Assafoetida which abounds about Cabul; and from him to the cattle Grapes are there so plentiful as to be given stance is a strong corroboration of the identity of Cabul with Nysa, the birth-place and favoured spot of Bacchus. - Allas.
'J. E. M"s from the root of which it is intended to extract suce, ecal your attentions is a species of Narthecium, I beg to last year's volume, where it is stated to be an Asphoodel and in an editorial note presumed to be the Asphordelus Our Prejudices.-How many they are, and about it.] was never more convinced of this than by and how idle! Beck's. I had alpansinced or in ord thad always believed that a pot must be porous my pottery, though a account of the pots a a great and expeasive distance, on account of the pots possessing that quality. Judge, then, my 10 , filled with Epacrises, Heaths, Pelarcónitums, Calceol 2 irias, and Ciberarias all in perfect health and luxuriance growing in pots of slate-a material perfectly impervious judice ase. If any one is possessed with the same prejudice as myself, let him go and see for himself ; and if he be an observer, he may learn more than this: he will find that stoves and forcing pits can be erected without the aid of engineers; and that there is such a thing as having poting-shed an ornament, instead of a disgrace, to the from whe placed. Convert.
From the Herbage Bools of Richard More, Rector of Redenhall, in the County of Nurfolk.-(Factum est my garden about the beginning of Sept., 1600 , brought forth 101 ears, whereof 6 grew upon one stem or stalk and all the rest upon their single and several stalks, and the whole increase of Corn which that produced was followeth:-Imprimis: Gathered hereof, August 20 as 2 ears, which had in them 31 full corns, 13 withered 20 th besides 6, which were lost by birds-in all 54. corn 24 th August, 7 ears, which had in them 208 full corns bem ides 12 withered, and 4 perished eitherns, be ing before they were gathered. This one Barleycorn brought forth 96 stalks, whareof and all others only simple ears, so that in aH there cipal ears hed 31 com the second 32, the third 30 , and the mean and ordinary ort 28. So that if one indifferently cast them one with aother to have but 26 corns a-piece, it will be found that of this one corn there came 2,626-at 24 a-piece Rhubarb. $-\mathbf{Y}$.
recorded their our correspondents at pp. 25 and 37 have Rhubarb. I send for your inspection sk and Admirable Victoria ir threr a pit in December. and the ace of which were placed in these roots, after being hard pulled for the stalks are from not consider its size worthy of notice but thee 1 do and colour are equal to and the notice, but the quality as any oth aror andive mode of acquainted. The situations where pits and frames are not thought many convey throug pith in water from a stae pits and frames the waste condensing water from a steam-engine, by means of which, without force asistance, I can raise Cucumbers, Melons, or this heat under the suc. I am at present about to apply and heak under the surface of the ground to strawberries and other plants without covering; and if successful, I intend to heat a large surface of open ground-the heat Morris, Deplford. [The stalks of the Victoria Rhubarb forwarded to us by Mr. Morris, with the abore commus nication, fully support the character ascribed to it. The average length of the stalks is 14 inches, and their circumference $3 \frac{1}{2}$ ins.; that of the largest being $4 \frac{1}{2}$ ins. In the bind delicacy of appearance they equal anything of the kind which has hitherto come under our notice.] Bees.-In answering a " Despairing Beekeeper" at $p$. temperature of the hive amg other things, hat have been prevented, by giving air to the side boxes, and by removing and cleaning the tubes daily. This is partly true; but when so much has been admitted on the instinct of Bees, I may be allowed to ask-it they found the cooling tube agreaable, how came they to seal it up? I should like to know also, it the judges who awarded a prize to C. S." for 91 lbs . of honey, taken from one hive, saw that great produce weighed,-how long the Bees had been in the hive,-whether only one swarm was pat into it, and in what state he expects they will be in duing the month of March ? - J. U.--Many hives have been invented for rearing that most interesting and useful insect, the Bee, for of which are faulty in the essential point of thoroug, most lation, without which our little honey-makers cagh ventiper, To obtain a proper circulation of air, there is potive he temperature bing much more equal than in the wooden hives, and for thi, reason orif the former, the atmosphere penetrates at innumerable in the latter, ${ }^{\text {, }}$ small quantities, without draft; whereas causing currents injurions be admilted at certain places, straw keeps out fiost better then wood and can be made of any shape to suit the fancy of the amateur, without such ving the advantages of free ventilation, which is of pect of the Bertance to the industrious insectr. The asprotected both from severe weather and great I eat) should
be either North, North-east, or North-west. The warm spring sun shining on the hives often induces the Bees $t$ roam prematurely abroad in search of flowers, numbers to provide them with sustenance. The consequence is, that the Bees are exhausted by their long fligh in pursuit of food during the heat of the day, and are unable to reach home before the frost sets. Bees should never be destroyed by that cruel practice of imothering them with brimstone matches; the the purpose of rendering the B tes harmless without killing them. A light canvas dress might be made to tie round the neck and ancles, with a head-piece of the same material, with glass eyes; thus incased, a Bee-master might rob his hives after
without fear of suffering for his rashess.-W . Whird which was shot by Mr. Worthington, of Warton, near Lytham, may be seen in the shop of Mr. Sharples, of Preston. It may of a clear white colour, intermixed with spots of black, and I do not remember of this species of so large a size.-Facile.
Worm Casts on Lawns.-Observing at p. 37, the suggestion by Mr. Dawson for destroying Worms, it seemed eminently successful. I applied a very weak solution of Cominently successul. on five sublimate on feet of my Lawn, and immediately afterwards the Worms began to rise to the surface in great numbers, while others endeavoured to escape laterally towards the adjoining gravel walk. Their ger, though in diminished numbers ; the difficulty was to pick them up ast wormg cannot endure this penetrating poison, and that it may be made the means of effecting a wonderful improvement in the appearanoever, to be carefully attended to. 4 I had previously tried Quick Lime-water, which certainly drew the Worms up, but as compared with the Sublimate, only in the proportion of one to 20 , or even less.-A. A. I. M . paid Mr . McDougal for instructing me how to des troy Worms on my Grass with Lime Water.' I have tried it three successive years, and have destroyed thousands, but they are still as abundant as ever. Abce this mild ago, I applied it in the usual way ; and since this mild, damp weather, the Worm Casts have been as numerous Salt is much more efficacious: but great care must be taken not to sow it too thickly, or Grass. It should be strewn aboure do not recommend salt.] and a pump, for the use of the lodge that I now occupy, was placed over it. The workmen, in sinking to the above depth were greatly annoyed by the soil rom tho them ; and one wiseacre proposed that the well should be lined with hay. This was accordingly done to the extent although the pump has been in constant use for 14 years, the water is as bad as 7 years back. The pump brings up particles of hay in a decompused state; the water, is is is in is is skilled in hydraulics, chemistry, and geology, may I solicit some information as to the most economical means I can adopt for purifying the water and making it fit for use.except re-making the well; unless the decayed hay can be removed by some means.]
weeps.-These young gentlemen, as you remark, are not garden as you may;be desirons of giving your correspondent an answer, I submit to you the following remarks. There may be more readers of the Chronicle who deem
such petty interference on the part of the Legislature mistaken philanthropy, and that a family burnt out, or buried in casual accident to one of these young gentlemen, to which every calling is subject. I have nown thats on them instances this winter of chimneyse I have been obliged to send the sweep to the top of the chimney to cleanse the cowl from soot-an undertaking gerous than any he was aubject to, when sweeping it, rather
before the new law was made; and in proof of than return the way he goes up, he invariably comes down one of the chimneys. He argues, that the Act of Parliament certainly does not permit any person under the pretent any one from coming down. Your correspondent need not, therefore, trouble herself whether they sweep the chimney head foremost or feet foremost, as I presume her object may be attained in the way pointed
infringement of the law.-S Sambo.Jambo.
Cure for a Scald.-At p. 70 of vol. ii. green turf is leaves applied successfully to the same purpose. son relieved the pain, and ${ }^{\circ}$ II have no doubt that other kinds of green leaves would produce a similar effect on scalds, if those of Broccoli could not at any time be ob-tained.-Facile.

FOREIGN CORRESPONDENCE.
Frankfort, Jan. 27, 1843 .-Having read at pp .8 Bickes" "Discovery of the art of cultivating the ground
this discovery already reached England, without having been realised in any way in our country. In the cours of the latter end of the year 1841, M. Bickes did send some papers to be read at the meetogunications and of ral society. They consisted of certificates relating to the said discovery. Mr. Bickes proposed to make known his secret to the world, and in the first place to Germany, if a very small sum were paid to him from every cutivator throughou the whole Confederation without exception. This plan appeared to bring up $1,000,000$ florins. Nevertheless, such a sum was not estimated too high when compared with the profits in view for all generations, out che great est part of the Assembly were surprised own garden a Vienna, and some other places in our nearest neighbour hood, without having at any time before heard of these or similar woderful results. The Assembly, therefore, con sidering further, that every man in possession of the said secret might have very easily thousands of acres of the poorest land at five florins and upwards per acre ; con-
sidering also, that it would seem more profitable for this sidering also, that it on surpose to convert it afterwards for his own account into a state of the promised fertility, equal to property valued at 300 to 500 florins per acre.
 Bickes had experienced Floricultural, Horticultural, and Agricultural persons was therefore elected, and $\cdot \mathrm{Mr}$. Bickes invited to prepare a variety of seeds and plants. met for the first time in November, 1841 , when Bickes himself sowed his porerful liquor or mixture with Wheat, prepared in the same condition, with and the adjoining fid Wheat not prepared. weather continued beautiful, ing to the nature of hivgs, a flower-plants, Cabbagen, Maiz, her ing to more than 30 species, were tried under buth the Commission and prepared by Mr. Bickes ; but neithe in the course of growth, nor till the last period, one single fact was to be observed in praise of the system. The report of the Commission was read in two parts, indicating at length the judicial proceedings reative to all now the ticultural and Agricultural trials. Why should now results be or have been more favaurabe by some different means. I have seen quite enough of the "Discovery of the art of cultivating the ground without the aid of manure," that for my part I will not give sixpence for the more on the subject.-J. Rins, jun., Nurseryman, Di more on the subject.-

## PROCEEDINGS OF SOCIETIES

of the rare flowers were not indigenous; but it was not easy to
distinguish those that had at this elevation had the bappearance of an ornamented garden There was a scene of life and motion amongst the herbage, of which our sco sish ered with briliant beetles; the abundant foliage giving plentiful nourishment to the swarms of insect tribes. Larks in great numbers were caroling merrily, and ex
trels hovering on the mountain side. We dismounted, , examine the pictures and architecture of the Mount Church, dedicated to Santa Maria, and from our now elevated position enjoyed a truly magnificent view, the platform and gleteway beliong us lay the town and bay of Funchal, eastward the singular promontory Which we had the name of Brazen Nose ; and to the west, beyond
to visitors by of steep craggy rocks jutting out into the sea. In pursuing the ascent, we rode along a sharp ridge leading to the Caldeira, or highest peak of the island, on which is a well-supplied ice-house. This is the range of the Pines and Spanish Chesunts, and the greater elevation, were many species, chiefly the yawning depths of ravines, where, after a few hours' rain, the most formidable Wrere some remarkably fine specimens of Gymnogramma Lowei amongst the wet rocks of a narrow cleft, through which we
passed in crossing a watercourse; of these specimens some wer passed in crossing
singular varieties.

MISCELLANEOUS
Treatment of the tine in the Ionian $I_{\text {slands. }}$-The wode of cultivating the common tine is much the same The Vines are pruned in February and March; about the same time, or a little later, the ground around them is dug. with a hoe, and raised in heaps, which are levelled in May In June the extremities of the young shoots are broke off, and the vintape commoniy begins in September, Corfu, the 19th of September is fixed by custom for it commencement. The vineyards are not commonly ma nured, nor are the Vines supported by stakes. The latte the proprietors cannot afford to use, the low value of the produce does not warrant the expense. The Vines are kep ow and are generally treated very much in the same man ner as in France. In proportion to the poverty and poor ness of the soil, the greater is the rigour with which the pruning-knife is used. In some rocky gituations, as in he district of Erisso, in Cephalonia, where the Vine planted in the crevices of the rocks, and the rock, it is said os even hollowed out to receive it, only one or two or has year's branches are preserved, and of these the greater part is removed,--only two or three eyes or buds being alowed to remain. This severity is exercised on principle, and intelli-
from long experience of its beneficial effects. An gent Zantiote with whom I conversed on the subject, remarked, that is the propely than its roots and in conbranches mach pruning is used, the branches sequence, uniess serer
will exceed in proportion the roots, and the plant will be weakly and unproductive; and he added, that as the fruitbearing branches are strictly annuals, and derived from buds of the last year, older wood is merexpressed surather the the the commonly treated there, by being allowed to be overloaded with old wood; he mentioned too the suphie and astonisur the neishorexcited, by pruning his landady's the bood of London, accorng method. She poor Vine, caxall its bra considered ruined. Ia the autan, how or a pensation was given in a vintage or hexa. The cotion -the barren the Vine, and the early shooss whe are carefully collected. The latter are given to the cattle ; and even the dry branches are similarly used. I have often seen a bundle of dry Vine-twigs thrown before horse fo a baiting, which the poor animal, not being able to get anything better, contrived to masticate. The Currant Vine is far less generally cultivated than the common Vine ; it is chiefly confined to Zante, Cephalonia, and Ithaca. The attempts to extend its cultivation to the other islands have been partial, on a very limited scale, and attended with doubtful success. This, I believe, is not owing, as has been asserted, to any unfitness of soil in the other isiands, for their soil is very analogous, but rather to some differforce of climate, especially about the time of ripening, gathering, and drying the fruit; consisting in greater liability to rain, a heavy fall of which is ruinous to the crop, and which, in the Currant islands, during the period of the gathering, is considered as a great calamity. In confirmation, I may remark, that equally in Zante, Cephalonia, and Lthacs, the Currant Vine is planted in different soils and in different situations,-in grey marl and in red clay, in the plains and amongst the mountains, where nothing is in the pla except the long, dry, season. A certain soil and common howeyer, is considered most suitable for its culsituation; especially the calcareous marls, which are easily worked, have great depth, are easily penetrated by the worke, and are retentive of the moisture; and low situations, where wate and irrigation effecte ensily introduced ande The marl of the plain of Zante contains a little sulparof lime, and $I$ have detected suestion whether this condrants of that district. pound in a minute prop the soil may not in part denend whether the excellence reing valuable, and the on its presence. The produce being valuake, antention profit to the cultivator has been pair to the Currant phey are managed in Zante, mention the manker in wh its where, perhaps, the Currantundance of water and irrigagreatest perfection. As abundance of water Vine, mead tion are essential to the fertility of the Curran the plantsures are taken to secure this; and accordingly, the p (the ations are surrounded by mounds of earth and dhechounds),

provided with sluices, by which the admission or exclusion, and quantity of water can be regulated. Before the heavy
rains in Oct. and Now, the ditches and mounds are put in raius in Oct. and Nov. the ditches and mounds are put in order. Both the broad hoe and the spade are used, for this purpose, and almost for this alone is the spade em-
ployed. The mound is often planted with the Aloe, which, growing luxuriantly in rows and attaining to a large size, has a very stately and striking appearance, and is useful as well as ornamental. It makes, by means of its large, strong, prickly leaves, an admirable fence. The Vines are der. A new plantation is formed either by laying shoots or by grafting the Currant Vine on the common Vine. The best shoots for propagation are obtained by cutting operation, the shoots spring up very vigorously. They are cut off in December, covered with light mould, and planted in spring; 6 or 7 years elapse before they come been much in use, since the value of the fruit of the one has exceeded that of the fermented juice of the other, and especially in Cephalonia. It has, moreover, this edvantage, that the grafted Vine becomes productive in a
much shorter time ; in 3 or 4 years it is in full bearing. much shorter time; in 3 or 4 years it is in full bearing.
The operation of grafting is thus conducted :-a pit is dug, exposing the trunk of the common Vine 1 or 1 零 foot below, the surface; the Vine is amputated as low as this, and two or three perpendicular incisions are made in the stalk with a chisel near the bark, into which the last year's shoots of
the Currant Vine are inserted, of such a length as to have two or three eyes or buds above the surface. Then some moist marl is applied to the engrafted part, wrapped in leaves, and bound with rushes, and the earth is thrown
into the pit. The season for grafting is, of course, in into the pit. The season for grafting is, of course, in
spring, when the sap is ascending. The pruning of the Currant Vine is an operation said to require much judg ment, not as regards time, for that is fized by custom, but
in relation to the quantity of wood to be removed, quality and even quasition of the branches to be left. It is not corapleted at once, but at intervals. In December the Vines are cleaned ; the dead, weakly, and unpromising branches are removed; only a certain number of the more vigorous shoots of the preceding spring are left,-selected on account of their position, and the indications afforded in their buds of their fruit-bearing powers. Towards the end of February, the knife is again applied, and the remaining branches are curtailed, so as to insure active vegetation. Each eye is considered equivalent to a fruit-bearbe amply nourished, 3 or 4 being the usual number. The Currant grounds, where there is a command of water, The flooded from the latter end of October or beginning of November, till the latter end of December, when the sluices are opened and the excess of water is allowed to run off. The after-irrigation is merely to keep the ground last pruning the same time that the Vines receive their scooped out round the stems, and piled in small heaps at a little distance, thus favouring the watering of the pla and the warming of the roots, as well as the expostants the soil to the influence of the air. In April exposure of is moved a second timee, and that deeply April, the ground is levelled. Occasionally manure is used ; it is, however far from a general practice. It is said to increase the quantity of fruit, but to injure its quality. The new soil natural and most appropriate manure. The Currant Vine are nowed to grow without check; the ends of its shoots Iuxuriance of its annual shoots, in favourable vire; and the is extraordinary. They are always supported by stakes. Greatcare is paid, at allseasons, to the Currant plantations, the opening buds and young shoots ore commencing, and very susceptible of injury. If the bud is broken, the embryo bunch is destroyed. The Currant Vine is one of the earliest kinds. Its fruit is often sufficiently ripe for the
table in the last week in July: it is then of a prplish hue, not too luscious, as when thoroughly ripe, but a preeably not too luscions, as when thoroughly ripe, but agreeplain of Zaute is commonly in the middle of August and this is a very interesting and important period to the Zslandiote.-Davy's Notes and Observations on the Ionian ${ }^{\text {slands. }}$.
On Wood. - "He would if he could."-Old Proverb. head has may be divided into several heads; and my own There has consequently come in for a fair share of it. be taken to represent a living log, and of these I may foreats specimens in my own family. The woods and These woods an interesting branch of this subject. Where aboods begin at Waterloo-place and end somefar not been discovered; but perhaps they extend as far as the Fishmonger Groves at Charing-cross. These poods and forests are capable of granting leave to
persons who wish to build; but they do not seem to Woortake in any other manner of the florescent character thood pavements are an innovation on all old practices: the ancient contended that they are only an extension of rolved the necessity of walking on wood, at least instree measure. It is true there is a street called Wo in Street, Cheapside; but though I have inspected the pare ment, very minutely, and tested the materials by pave$\mathrm{ing}_{\text {factory }}$ my nails, I have not arrived at anything satisaccounted for by saying thating with wood has been approve of a practice of trampling upon whyself to reference to a practice of trampling upon what, in
own species. This I deny! It is said in favour of wood, that it enables one to go quietly on one's if one 1 had rather make a noise in the world, and least to have the luxury of hearing the wheels rattje. It may be said in favour of the antiquity of wooden pavements, that there is an old expression about "hallooing of Parliament prohibiting the itinerant vend commodities to cry their wares at halloo until they are out of the wood. I say, there is, perkaps, such an Act of Parliament, but I am bound to admit that perhaps there isn't. In conclusion, let me say, that I am not a bigoted enemy of wood paving, and $I$ am still ready to consider the 1 Antiquities of Gardening; Green Peas.-The taste for Green Peas appears to have been carried to great excess in the time of Louis XIV. Bonnefonds mentions the in his Dutch Pea, or Pea without shell ;* and adds, "Until very Dutch Pea, or Pea without shell;* and adds, "Until very
latel they were first introduced by M. de Buhl, the French Ambassador in Holland, about 1600 . The author of a Life of Colbert, 1695 , says, "It is frightful to see persons
sensual enough to purchase Green Peas at the price of 50 sensual enough to purchase Green Peas at the price of 50 kind of pompous expenditure prevailed much at the French Court, as will be seen by a letter of Madame de Maintenon, dated 10 th May, 1696. "The sobject of Peas, conthem, the pleasure of having eaten them, and the desire to eat them again, are the three great matters which have ladies, even after having supped at the Royal table, and well supped too, returning to their own homes, at the before going to bed. It is both a fashion and ead reas It is curious to remark that, notwithstanding the fashion and consequent high price of the article, to produce them in the beginning of May was the earliest period that the t of Horticulture was at that time capable of.
Mr. Weekes's Annual Dinner. - The fourth anniversary the Horticulturgr. J. Weeks to the various members of last, at his manufactory, in Gloucesterplace, King's-ring Chelsea. The room was handsomely fitted up for the occasion, and was crowded with guests, principally garhonour to their host's hospitality.
Source of Fat in Animals.-The observation by Liebig, that the fibrin of plants and animals is identical in its animal orgenisation merly modifie the stances presented to it by the vegetable kingdom, and does not form any solids, as plants do, from their gaseous constituents; or, in other words, the fibrin or curd mik exists ready formed in the vegetables which serve as blood, in like manner, are derived directly from the vege table matters which constitute the food primarily of al in reference to the formation of blood and muscle. Th anomaly whicl presented itself was in the instance of fat which, as far as experiment had carried us, did not appea thorise us to ascribe its origin to vuch a source quotes the instance of a lean goose, weighing 41 lbs ., which in 36 days, gains 5 lbs . weight by consuming 24 lbs . o Maize, and yields $3 \frac{1}{2}$ lbs. of pure fat. The latter could not be derived from the Maize, said Liebig, because Maize, according to such experiments as had been made
upon it before Liebig wrote, did not contain the sandth part of its weight of fat. The ingenious views of Liebig have led Dumas and Payen to make a series of experiments, for the purpose of determining the quantity of cent. of yellow oil to exist in this vegetable; hence they conclude, when a lean goose eats 24 lbs of Maize, it takes up $2 \frac{1}{2}$ lbs. of fatty matter, which, with the fat previously existing in the animal, is sufficient to account for the source of the $3 \frac{1}{2} \mathrm{lbs}$. of fat. Dumas adds the remark able intelligence, that Hay, such as it is met with in the trusses eaten by animals, contains 2 per cent. of fatty or oily matter.-

Truffles.-The Paris states that at the last market het at Angouleme, 2000 lbs . of Truffles were sold at 3 f .25 c . per pound. "A farmer at Dordogne," says that journal, vegs ound means of cultivating Truffies like any other or under the shade of a peculiar species of Oak. This person planted some years ago a considerable number of those Oaks, and we have been assured that he sold last to realise by their sale double that amount."
GARDEN MHAOUANDA
situated on the north, side of the town, and althongry. This is is nevertheless very interesting, on account of the a mamber of hew and beauirifur plants which have been raised in it, atid dis-
seminated throughout the country In one of the stoves we
observed a nobles specimen of the Cofte covered with berries. In the same houne there are yoart speciand various other objects of interest. Dr. Neill has been much
 to see that it is still uninjured, although the Loch by the side of it has been completely drained. Every lover of bcience and hor-
ticulture in the country would have felt nearly as much as Dr Pois sans parchemin, is a variety caltivated at the present
day, the pods of which, being destitute of tough lining, are used
ike those of Kidney Beans. day, the pods of which, beio
like those of Kidney Beans.

Neill himself had any thing happened tu thly Earden. We under-
stand that the Colectonian Horticultural society have renet stand that the Caledonian Horticultural society have requested
him to sit for a bust to her exeuted by Mr. steele, in marble,
which is to be placed in their new hall at the gaxden. - . $F$.

Popular Flowers: The Geranium; its Propagation - Tyas and Co

Tris is the first of a series of Treatises, each to be de voted to some popular fiower. In the introductory re-
marks the Author states, that "It is matter of surprise that so few of those who possess them (Pelar of surprise so little acquainted with their proper treatment, simple though it be; and the pleasure they feel in beholding droop, and die. For such these few pages are compiled." We wish we could say they were likely to answer that purpose; but the work bears evidence of not being written by a practical person, and the Author loses sight of the object with which he started; for, although some of the directions are good, others are insufficient for the purpose, extirpate the green-fly, the Author recommends the eggs to be destro green-fiy, the Author recommends the eggs "wash your plants with he and as the cheapest mode, to instruct persons so ignorant of the management of flowers as the Author supposes the generality of people to be, requires that the directions for the different operations should be much more precise and ample than those which he has supplied.

CALENDAR OF OPERATIONS for the ensumg weelo. New or well. cleaned pots, plenty of drade for sowing sedds
loamy soils, with dry sand and peat, will beindispend light, dry,
lonsabie. Nurloamy soils, with dry sand and peat, will be indispensabie. NNur-
serymen and gardeners who have command of stove-beat have
so sown many seeds last autumn, which those who have no such
 generally not sown tull this time. Inomoce rubro cerríca, with
 these are too precious in the the eyes of of the possessor to be trisked
through the vicissitudes and must be gisstitudes of a forward with alinter , but they are sate now.
hergrible speed. The Thumwarmest hotbed germinates under in three orlich it delights; Inomeea rubro-cer rulea
soon springs up, but not too quickly now for a plant which
fow flowers so late in the autumn, after all other Ipomceas have
bloomed. August is the best time to sow it, where it can be carried throught the winter on a dry shelf io the stove. Early
 will be the best plan for seeding then; at any rate, thiss, is the
easiest way to keep them through the wiuter
theid th
 the first sown, in order to have strong plants fit to turn nut in
May Independently of the brilloncy of its blue stary flowers,
it is the best of annuals for with many other small fowering Syngenesious plants it siffers much from wet. We had several beds of it here last season
blooming freely for nine or ten weehs, with scarely any aasist-
 flast year's Chronicle, sowed seeds of that lat on the autumn,
and kept them through the winter in the greenlocuse, aud they
all vegetated in the spring. The seeds of this blue Daisy, though

 t 18 a good rule to fill them up one-half witl drainage; rough
sitted coal-ashes are as good as any thing for this purpose. Tery
smail seeds, such as those of Lobeitas, Calceolarias ges smail seded, such at ane of Lobedias, Calceolarias, Gesneras,
and the whole tribe of Rhodndendrons, Azaleas, and Heaths,
require to be sown very thunly upon the previously watered. Only one kind of seed should be sown ian a
pot, as these are liable to be disturbed by mixed together. After sowing, press by watering, and thus get
imbed them in the surface, and sprinkle a littl imbed them in the surface, and sprins kle e seed itte white sand over
them; not, however, with a view of coverine the seds but to make a firmer surface, wh ch future waterings will not so easily disturb, and which will, in a great measure, prevent dampness. seedlings, and many other things, are peculiarly liable on their first appearance, keep a potful of sand on the top of the fire.
place, or over a hot pipe or flue, for the next four months, and. place, or over a hot pipe or flue, for the next four months; and
as soon as tender seedlings of any sort make their appearance, sprinkle a little hot sand in amongst them occasionally, when-
ever they show any indications of dampness. I have never found this plan to fail, Let "Inquirer" follow this plan, and
his seedhing Rhododendrons will quickly be nice plants. As his seedme Rhododendrons will quickly oe mice plants. As
soon as he cantake hold of them, he ought to transplant them into
fresh ssiil, one half peat and the other half sand. Indeed, ail seedlings in pots should be transplanted as soon as they can safely handled. When several kinds of seeds are to be sown in bear the nearest resemblance to each other should be sown in one pot; thus, for instance, seeds of common Broom, the old
blue Lupine, and Cobbett's Locust-tree are suited for the stones of Peaches, Cherries, and Plums would answer with another; Nuts and Filberts for another. However, after all the
pains we can take, some of the seeds will vegetate befura rest. All sorts of seeds in pots should merely be cor ered with
soil, especially if they have travelled far, or are at all doubtful and no more water sho
from getting quite dry,
I am sure there, are thousands of the same opinion as "An management and decoration of conservatories in papers on the detail would be generally acceptable," I shall endeavour from time to
time to point out the most useful plants for this purpose with outline of their management, in the same mamner as a few wer
 a hst of those fit for this purpose would he to reprant Messrs.

Yet been fowered in the open air in this country. They have
long, crecping, underground stems, which float near the surface of marshes in the tropics, in the same manner as our seilges
(Tris pseud-acorus) do in ponds and ditches. These creeping (Iris pseud-acorus) do in ponds and ditches. These creephe
stems are full of eyes like a Potato, every piece, however
small, with an eye, will make a plant. But to flower them the same season, take strong pieces five or six inches long, and pot then in very rich loam, plunge the pots in the cucan are
frame, and as son as they beeninto grow, recollect they are
marth plants, and can harcly have too much moisture. Thcy
 flower; rich, strong loam should be used for the pot them a little deeper each time. Later in the season it will be as well to start
them in a. Vinery, and as soon as they beegin to throw up their flower-stems, move them towards th
they are taken to the conservatory
1.-KITCHRN-GARDEN AND ORCHARD.

#### Abstract

Privery.-See that you have a stock of dry, rich loam in an open hed for potting by-and-by If you use tan, you will ind it very troublesume, uniess it is thorougbly dry and swect before putting into the heds. Strong fires have not been wanted latcly, nceither have we had much sun, so that little water and sy ringing are wanted. The plants have seltom been more healthy at this are wanted. The piants have seldom been more heaithy at tirs season, owing, no dout, to the large portions of air given and the mall quantity of coals used. Vingry. - How strongly the Vines break this season-. The borders have not becn chilide ; and, being so well draned, they thrirsty in shinmmer, tit luxuriates in a dry, warm bed in winter. Plenty of air and monture are now required. days, carryng homc leads of polien every night. Who would shut up bees such weather as this ${ }^{1}$ They have also found out the Strave berries and Kidne frightened cerkry- the Stanhopeas. Curriy-house and Figs.--Same as last week, if there is no Cucumbers and Mrlows require the usual routine of air, heat, and moisture, and a good supply of young plants to be kept in reserve, till the first crops are fairly established in the fruiting beds. I have had some letters lately aboat long cucumbers, the subject is not of sumficient pubtici interest o be notice in the Calendar: and I cannot undertake to answer letters from   frat the sow anything sut lay an inch or two of this all over the fror the o on this sow your seeds, press them gently down, and borer them with the dry soil according to their sizes.

 When the Peaches and Apricots are iust. phar, and soft soap, to paint them all over. The later this is done
the better. For the ther trees on the wail, or in the orchard,
gix weeks hence will be time enough to wash them ; but for any of thone on which you have noticed any red spider for the last
of the tor
geason or two, you must mix a portion of sulphur with the soot season or
and lime.

the climbers will have a hetter chance of success. The Kenné-
dias, Gomphoibbiums, and similar delicate climbers, are always
best near the eye and on that account are better fitted for pot culture, and trained on such wire trellises as have been lately figured in the Chronicle, than to be planted out in the borders
large conservatories, nas, indced strong-growing c.imbers in eencral, are only to be
seen to perfection when planted out in rxch well-draned bor-
des ders. the old Plumbago capensis, which will produce hundreds of spikes of fowers for four or five monthc, - say from May to Sep
tcmber? Look at the same plant in the largest pot that can be made, and ine the Calendar gets a little lifiter. PITS AND FRAars. - As the forcing plants are traken away
from these, keep filling up with plants from the greenhouse, if it were only tur keep some of them more backwart in flowering.
To have a large stock of such plants as suit the demands of
fore grand secrets in ararding; and to have the different families in
different situations, with $a$ view to have them flower at different periods is the next. Where you see a dozen or two of the same of the year, you need not expect to find the pli,iosopher's stone very near such a place. It is hardly ncessary to say that ho
covering is required for cold pits in fine weather, cxcept to kee off rain, and guard against frost.
Let not another day pass without uncovering half hardy plant winter. Let there be no delicacy at all about this matter; strip them all ; and if you find that any of the shoots or eyes have
made a blanched growth, cut them off, and leave the plants quite exposed; ; but keep the coverings at hand, to be put on
whenever the thermometer falls four or five degrees below freezing. If you hear anything about "sudden changes," say
they are very dangerous on paper, but harmless in the open air, this mild s

Jan. 27. Dens Densely overcast; cloudy; overcast and remarkably Cloudy; slightly overcast, with whitish haze; clear Overcast and windy.
Overcast, Overcast; yery fine; clear at night.
Uniformly overcast; slight drizzle; stormy, with rain $\underset{\text { Feb. }}{\text { at }}$ Very fine; cloudy; clear and fine.
Heavy rain; drizzly; overcast.
Ha temperature of the week $10^{\circ} .6$ above the average.

State of the Weather at Chiswick during the last 17 years, for
the ensuing Week ending Feb. 11, 1843.

The highest temperature during the above period occurred on
the 10 th in 1831-thermometer $65^{\circ}$; and the lowest on the 5 th in 1830-thermometer

## REPORT ON COVENT-GARDEN MARKET,

LrrTle alteration has taken place in the prices during the past week; the supplies have been good, and the kinds of fruit has been a lutle brivker. Fruit: Pines, considering the earliness of the period, are well supplied from 3. . to $2 s$. per
lb. Foreign Grapes of excellent quality contivue to be brought to market. Pummeloes are tess and the former from 3s. to $4 s$. per dozen; the latter, from 2s. to 3 sm , per dozone. Dessert Pears are becoming less plentiful. Amongst the Deassert Npples are
the American Lady, from 6d. to 1 s , per dozen; Nonpareils, from 4s. to $12 s$, per bushel, Ribstone Pippins, from $\delta s .6 a$, to 78 ; ; and
Golden Harvey, at $4 \&$ per bushel, We observed some excellent Golden Harvey, at $4 s$ per busiel, ad Alfriston Aples, both of
samples of Sliepherd's Seeding and
 a few Lernon and Blenheim Pippins remaining, from 4s. to 5 .
per bushel. A Aew Cucumbers are offered, at the rrice quoted in por bushel. A few Cucumbers are offered, at the rrice quo enisi-
our last report. Vegetalles: The supply of Asparans in consi-
deratily greater than the demand: its quality is good, and the best bunches fetch from 48. to 8s. each. Seakate contimues rood, and may be had from $6 d$. . to $18.9 d$. . per punnet. French Beann
scarce, and have risen to $3 s$. and $3 s$. $6 d$. per 100 . Brocoli is something chaeaper: the White being from gd. to 28 . per bunch;
the Purple, from $6 d$. to Is. $3 d$, per bunch. Good Rhubarb is tolerably abundant, and fetches from 6d. to 1 s. 3 sd. ver bundle. Cardoons are occasionally offeren, from 1s. bd. to 2 . each. . The continued mild weather has rendered the supply of cut flowers
unusually large. Amongst them are Acácia armata and pubescens, Passififra racemosa, Rondeletia speciosa, Euphibbia jac-
quinifora, Amaryllis vittata, Lily of the Valley, Omphalodes quinialara, Amaryllis vittata, Lily of the Valley,
verna, Chinese Primroses, Talips, Hyacinths, Rec.

## NEWS OF THE WEEK

Her Majesty's speech at the opening of Parliament will be found almost exclusively to refer to past events, and to give little indication of the future policy of Minisers. It begins by referring to the treaty with the United States, and expresses a belief that the amicable relations f the two countries have been confirmed by the adjustment of the questions which had so long endangered the continuance of peace. It announces the termination of hostilities with China, and ascribes the result to the liberality of Parliament ; it adverts to the settlement of Syria, and to the success of the Allies in securing to the Chrisian population a system of administration to which they vere entitled. The difference between Turkey and Persia and the probability that it will be settled by the joint mediation of England and Russia is the only point in which the speech makes any precise allusion to the future. It sates, with expressions of great satisfaction, that a commercial treaty has been concluded with Russia, but gives no insight into the details. It refers to the late events in Affghanistan, passing a high eulogium on the ability with which the military operations have been effected, and on the valour manifested by the European and native roops. ${ }^{\text {a }}$ After the usual notice of the estimates for the ensuing year, and the reductions made in the naval and military orces, it proceeds to the falling off in the ordinary sources of revenue, ascribing the deficiency to the depres sion of the manufacturing industry which has so long prevailed-to the extensive reductions in the import duties-and to the fact, that little progress has yet been made in the collection of the Income-tax. After a brief allusion to the loyalty of her Majesty's reception in Scotland, and to the strike in the manufacturing districts in the course of last autumn, the Speech concludes by announcing, as the programme of the session, that measures connected with the improvement of the law, and with various questions of domestic policy, will be submitted for consideration. The debates in both Houses on the Address were more than usually interesting; the foreign policy of the Government was the chief topic of discussion, but no amendment was moved, and the Address was consequently carried without opposition. The subjects noticed in the Speech, and the various questions incidentally touched upon in the debate, give abundant promise of a busy session ; and there is no doubt that there will very shortly be matter enough, and of stirring interest, to engage the attention of the public.
From France we learn that the debate on the Address in the Chamber of Deputies commenced on Friday, and that it still continues to bethe exclusive subject of terial trimmph in the Chamber of Peers seemed to esercise an important influence on the Deputies, and it was anticipated that Ministers would be equally ever, was carried in reference to the paragraph on Eastern affairs, in which the Cabinet was left in a minority of 3. The question was not one of great importance, and was therefore unlikely to lead to the resignation of Ministers; but the result is not the less significant as showing the relative strength of parties. The debate on the Right of Search commenced on Tuesday, and is chiefly remarkable for the strong expressions of hostility o Great Britain which fell from the leading speakers
M. Guizot has been unmoved by these demonstrations, and has again announced his determination to abide by the treaties, and to stake execution.-From Spain we have little news; their loyal execution.-From Spain we have little news;
the elections still occupy attention, but the result is doubtthe elections still occupy attention, but the resuit is doubtmajority. In Barcelona, the extreme measures adopted by the Captain-General have caused great sensation, and many of the inhabitants, fearing to be delivered up to the military commission, have submitted to the war contribu-tion.-From Portugal we have unfavourable accounts of the tariff negotiations; the concessions proposed by Portugal are so slight, and are coupled with such conditions, that
the British Government is not likely to accept them, and it is generally believed that the Convention is virtually at an end.-From the United States we learn that the last debate on the Oregon territory took place on the 12th ult., and that after a long and warlike discussion in favour of its appropriation, the bill providing for its immediate occupation and settlement had been engrossed.The accounts from Canada report more favourably of the health of the Governor-General than we were led to anticipate by the last advices, and state that his Excellency will shortly return to England.

France.-Chamber of Deputies.-The debate on the Address in the Chamber of Deputies commenced last tion of the public up to the present time. The four orators who commenced the debate, and whose speeches occupied the entire sitting of Friday, are men of what the in the practical qualities of statesmen. M. Gustave de Beaumont commenced by declaring that he saw no Ministry before him at all, because M. Guizot did nothing that he wished hinsself, and wished nothing that he did. A Minister was no Minister who obeyed a majority, without having a
will of his own ; and M. Guizot being in this position, will of his own; and M, Guizot being in this position, rejoiced at the non-ratification of the treaty of 1841 ; but that, afterwards, his rejoicing was turned to discontent, because the English seemed quite satisfied and made no
noise or complaint. After some observations from M. de noise or complaint. After some observations from M. de
Carné, M. de Lamartine occupied the tribune, and declared that he should fling aside henceforth all allegiance to the Conservative party. The opposition in this country, said
M. de Lamartine, is not the anarchic, democratic part M. de Lamartine, is not the anarchic, democratic party
that people would have it believed. It is like the English Whigs, a party of liberal ideas and progress, yet fraught with every really useful Conservative principle, and with all that is necessary to order and good goverament. "We
will be the modern Whigs of France," he exclaimed. He dwelt more on French than on foreign policy, and accused not merely M. Guizot, but his predecessors, including M. Thiers, of having taken a wrong direction. He denounced the fortifications of Paris as liberticide, and he remarked that it was not till the fortifications were in moral complicity in order to crush the press. He surprised the Chambers by declaring that the system (a new word with French political writers, to mean the King himself) is answerable for all the political mischief of the day; liberal in not shrink from deciaring that astic ones. The Minister of Public Instruction replied to M. Lamartine, refuting and deprecating the chief measure of foreign policy recommended by him, viz., intervention in Spain. M. de Rochejaquelin and M. de Gasperin followed; the latter declared that the Right of Search was the best by M. of suppressing the Slave-trade. He was succeeded entire cause of the difference and irritation between England and France lay in M. Guizot. He characterized him as the great culprit, the great firebrand, and great stirrer mistake He accused M. Guizot of making the great could cool. M. Guizot's policy was altogether based on this supposition : but it was a mistaken one. However the nat original cause of the present difference between be expected to sright that such causes of difference must such vast interests infuence ay between two countries or the hatred of the, month since 1840 . His has gone on increasing every treaties was that the country desired it or breaking this second reason was, that he thought England would put up with Ministrstice. M. St. Marc Girardin, the second in the Ministry of Pubic for France to abolish slavery in her own colonies, and then to aid England in closing and putting an end to
the slave markets of Brazil and Cuba. Another mode which he approved of, was that so lightly abandoned by Lord Aberdeen and the English Adrocate General, viz.
the destruction of slave factories on the African coast.
He regretted to find that English cruizers were forbidden He regretted to find that English cruizers were forbidden
to persevere in that humane and rightful task. On Monday M. Ducos, of Bordeaux, spoke violently against England. M. David, ex-consul at Smyrna, then pro posed an amendment on the paragraph respecting the East, requiring that France should claim and resume all the rights that she enjoyed in the Levant in 1835. M. Berryer moved the omission of a portion of this new paragraph, and an animated debate took place, in which rernmeot ably defended the Eastern policy of the Goformer treaties Fence, he said, had abandoned none of he privileges which she had hitherto enjoyed; the French fag continued to be hoisted on the churches and convent Syria, and, even in 1840, during the civil war, it never ceased to afford protection to the Christian population o Lebanon. France could not, in virtue of those treaties terfere alone to procure a better Administration for nia; she could only use her influence; she had laboured purpose, and she had succeeded in compelling the Porte oo acknowledge the lihertied of the Christian population of Turkey. France could not have succeeded alone and it was only when it found the great Powers unanimo this demand that the Divan had yielded. M. Janvier then showed that from 1840 to 1843. Russia has beer un easingly employed in resisting all the other Pown un Constantine that whilet the Enction ing the Syrions to fling the Egyption joke, Rusi wa negotiation at Constantinople for transfere 2 to hersel of the Christion protectorate of Syri. Tie to lhe all through 3842, Russia prevented the Porte from yield ing to the views of the other Powers respecting the Lebanon, and only joined them at the last hour, and then only from the fear of being left isolated. M. Berryer admitted that the adoption of M. David's amendment by the Chamber would be attended with inconveniences, but he could not concur with the committee in declaring that the population of Syria had received and obtained an Admi nistration in harmony with their fate and wishes, since it nistration in harmony with their fate and wishes, since
was only a trial the Porte had consented to make at the Envition of the Powers, He maintained that it was England who had opposed the restoration of the Emir Beschir, whose family had possessed the Government for upwards of 200 years. He thought that France should not congratulate herself on the establighment of an order till more that was not her own work, for fear of ruining till more her influence with the population of the Levant who should always be accustomed to look up to her exiving 206 protection. The Chamber then divided, giving 206 for the amendment, and 203 for the address hus leaving Ministers in a minority of ,3. This result is not so serious as to lead to their resignation, although it The discussion on the paragraph relating to the Right of Search commenced on Tuesday. M. Dumon, the reporter of the Commission, M. de Valmy, and the Marquis de Langle spoke. M. Dumon said-"That desiring the treaties, while they existed, to be executed, the Commission, nevertheless, expressed the wish of the Chamber that the moment should come when French ships would be under the surveillance of their own flag, and no other but it left the Governmentits liberty and its responsibility." Two amendments were presented to the Chamber in the course of the debate, differiug very slightly from each other. The first, that of M. Chasseloup Laubat, proposes to add and insert, in the last sentence, that the Chamber calls, by its vows, for the moment when negotiations, followed up with prudence and conviction, shall have replaced our commerce under the exclusive surveillance of our flag." The other, by Colonel Lespenasse, Wednesday, M. Guizot y more brief. In the debate on any negotiations for the modification of the treaties of 1831 and 1833, until he saw fair prospects of obtaining that modification from England by a common accord, and with success." This challenge to opposition was received by what the papers call profound agitation. The Minister was known to have staked his?continuance in power on the rejection of M. Laubat's amendment. The division was not expected to take place for a day or two, and the deba
advices.

Spain.--The arrivals from Madrid come down to the 24th ult. They continue devoid of any intelligence possessing general interest. The elections still occupied the public attention; but the resul of them is as uncertain as majority. Three of the Ministers were suffering from M. . M. Calatrava, and M. Zumalacarregul; though whether Arranere seriousily indisposed or not is not mentioned. Arrangements had been made by the Spanish GovernLegion paying lae arrears aue to the British Auxiliary of Buion. The papers state that the provincial deputation Sarargos had followed the example given by that of Gorgossa, and had issued a mankeso censuring the Government measures. It was not belseved that any real progress had been made in the affair of M. Lesseps was by no means arranged. The Duse of Gluckberg, French envoy, still insisted on repaiation; but, on the, other hand, the Regent had received ance benies from Barcelons sufficient to prove the alliaccounts from Barcelona Consul and the result. The recrimination between the two political parties in that city-of complaints of alleged tyranny on the one side, and of disaffection on the other. Gen. Seaone's measure of quartering the troops upon the inhabitants, which at
first was applied to only a small number of persons, caused a great sensation. The Chamber of Commerce and the town, fearing to be delivered up to the Military commis-
sion, as was threatened, have partly submitted. They sion, as was threatened, have partly submitted. They
have sent the Captain-General, in consequence, a list of 200 of the most heavily taxed persons who have not yet paid their quota. The sums paid up to the 22 d , by the and by the town, to 404,495 ; making about a sizth-part of the sum imposed.
Portugal.-Accounts from Lisbon to the 26th ult. state that the Address to the Queen was carried in favour of
Ministers, on the 16 th , in the Chamber of Deputies, by 69 to 21 votes. The debates on the Bill of Indemnity asked by the Government were immediately begun, and the Bill posals so long expected were forwarded by the Duke o Palmella to Lord Howard de Walden on the 16th. Notwithstanding the liberal offers on the part of England in proposed by Portugal are so slight, and coupled with such conditions, that there is no chance of their being accepted by the British Government, which will no doubt rejection, therefore, will be tantamount to breaking off the negotiations for a Tariff convention for the present. ductions were all that the Portuguese commissioners would make. On Salt Fish one-fifth of the duty would have been taken off ; but as the present duty is about 53
per cent. ad valorem, a reduction of one-fifth would have per cent. ad valorem, itself, quite inadequate; and even this was coupled with the condition that the Portuguese should be which is considered to be inadmissible. It is therefore considered that the Convention is at an end. The Baron Tojal, Minister of Finance, heas laving a deficit of reis $1,315,241,492$, which he proposes to remedy by fresh economies. A cecrecign bonds to be paid by the Board dividends on the foreign bonds to be paid by the Board of Public Creait a

Germany.-Letters from Dresden of the 23 d ult. state that the Chamber had come to some important votes on the mode of administering the criminal law. They had determined, by a majority of 71 to 4 , that the present
inquisitorial system should be abolished; by 68 to 8 , that inquisitorial system should be abolished ; by 68 to 8 , that
all proceedings in criminal matters should be public, and placed under the control of the Ministry; and by 60 to 15 , that, for the future, neither corporate bodies nor private individuals should be permitted to exercise any interest in Germany was recently brought before the Bavarian Chambers by some Protestant deputies, demanding the withdrawal of an ordinance issued by the Minister of War in 1838. By this ordinance, Protestant soldiers are commanded to kneel during the solemnization of the mass. This ordinance is at present attacked as a direc violation of the constitution, and strenuously supported by the Bavarian Government, the relieve the Protestant soldiers from the grievance com plained of.-As a proof of the weather now prevailing in Germany, it is stated that the bridge over the Rhine at Cologne was taken up on the $24 t h 1$ floating jce. The bridge at Nimeguen has been taken up for the same reason, and the Gazelie states, that at an assembly of the Comitat, held at Agram on the 18th ult., it was resolved to present an address to the Emperor of Austria, pray ing him to put a stop to the encroachmente of Russia. etters of the 7 th ult. They state that Capt. Williams, R. A., had been appointed by Sir Stratford Canning to proceed immediately to the Persian frontier io and as Porte, and a Russian Colonel, named by M. de Boutenieff, for the final arrangement of all existing difficulties. Redschid Pacha had been directed to return by Vienna to consult with Prince Metternich on the Servian question, his arrival at Constantinople. The Austrian Ambassador had presented an angry note to the Divan complaining of obstacles opposed to a commercial company trading with rebisond. A change of Ministry was expected at con-
stantinople. The leaders of the Anti-Corn-Law League in England have sent a copy of their circulars to the in England have sent a copte, praying that the Sultan would interest himself in Porte, praying that the sultan would interest himseif in England for the repeal of the obnozious tax. Sarim England for the repeal of the oanozious tax Effendi, who was theated it as a joke, and grapely mounication, at length treated it as a joke, and gravely informed our dragoman, Mons. Pisani, that he might shortly look for a protest on the subject-protests being
now the order of the day.- The accounts from Beyrout now the order of the day,--The account from Beyrout are of the 31st utt. They state that the most perfect tranquillity prevailed in that neig by Sir S. Canning from results of the adjustment obtained by Sir S. Canning from
the Porte were most satisfactory. Egypt,-Our advices from ult. They announce the death of Ahmed Fethi Pacha, the Turkish Admiral who delivered up the fleet to Mehemet Ali. His death is stated to have been caused by poison, but by whon administered had not been ascertained. As he was about to return to Constantinople, it was surmised that the Pacha of Egypt was unwilling to have his secrets revealed to the Sultan or his Divan. Mehemet Ali left Cairo on the 26th ult for Upper Egypt; it was believed he would proceed as far as Cosseir.

United States.-The packet-ship Abhburton, which sailed from New York on the 11th, and the Stephen Whitney, which sailed on the 14th ult., both arrived a 18 Liverpool on Sunday; the former after a passage of days. The The papers brought by these conveyances extelas had the 3 to the proceeding of Congress. The bill making provision for the oceupation and settlement of the Oreson provision for The Mr Mr. Be der of the appropriation and settlement of the territory. .we court or aquiry into the mutiny board brig-or-wa Somers, and the subed leader of whom was a son of Mr . mutineers, the reputed leader of whom was a son of
Spencer, the Minister at War, was still sitting. All the officers of the vessel hering been examined on the subject the court was engard in the examination of the seamen. The inquiry excited the liveliest attention. Some extracts from the $\log$ had been surreptitiously made by one of the New York papers, the severity adopted toward the apprentices on board, and the amount of flogging administered within six months and seven days ain to to 2,313 lashes. Captain Mackenzie hau appealed to the court to prevent such a prejudicial statement being allowed, and the court stated their conviction, that an extra degree of such discipline had, they believed, been justified and necessary, but refused to interfere with the newspaper. The widow, aiso, of one of the men erat had applied to one of the law courts, by affidavit, before Judge Betts, for warrants against Commander Mackenzie and Lieutenant Gansvorth, for the murder of her band, but the court refused the application.-A tragical affair had occurred in Columbus, Georgia. Colonel Hep burn and General M‘Dougall had quarrelled. The former sent Gen. M'Dougall a note, intended for a challenge, and then went personaliy to the office of the latter. On opening the door he said, "General, I have come; when he received a pistol-ball in his left side, just below the heart, and died instantly.-The papers mention Mrs. Dr. Lardner is starving at Philadelphia; and that has Heaviside, whom he carries of rounts from Canada state that Sir Charles Bagot is recovering rapidy, and that he will shortly leave for this country. He is believed to be quite out of danger.-Mr. Braham, the England by one of the recent packets.

Income-Tax imposedt met Income-Tax imposed to meet them had not yet come into pro-
durutiveness. UUdoubtedly there hat been a great faling off in
the Excise, mainly on the article of malt; but that had arisen in a grent degree from the very unfay ourable harvest of 1841 .
There till, indeed, existed severe distress; but let not the House infer thence that there must needs be a permanent diminution
of consumption. Another cause of the late falling of had been of consumption. Another cause of the late falling off had been
the disturbed state of the manuracturing districts.
a fit ocuss was not
and he did now discern some tavourable changes on which he could not forbear from founding good hopes. . It was complained that
the speech announced no new measure with respect to corn. He had no such great measures of change to propose age gentie
men seemed to expect. Whenever he should make a change, it would be a change accordant with the principles he had pro-
pounded : but he must always remember tiat in his country nrotection. He believed the reciuction Which had already taken place in the price of the necessaries of
life had actually verified his prediction that the Income Tax would be compensated by the general cheapness of living.
Eord JoHN ROSIIL $L$, in reference to $a$ notice, given before the debate, of a motion of thanks for the esrrices of our oficers in
India, adverted to some Indian topics apon which he deemed it
renuisite that further information should be previously yunnished -one, the vindictive excesses said to have beeln committed by
our troops; the other, the share of Lord EHIenborough in issuing the direclans whions too remarkable to be passed over. contained such a misrepresentation of a preceding Governor's
policy as was seldom uttered even in the heat of party debate policy as was seldom uttered even in the heat of party debate;
and 1t roveathed, with respect to Affighnistan itself,
of reveng spitit rather of revenge tuan of calm and statesmanike policy. The other
proclamation was so oddyy worded, that many peopie who had
iast year been taken in by the clever imitation of last year been tak en in by the clever imitation of of debate in ind
French Chambers, and were therefore much on their guard
a against asecond deception, were thoroughly persuaded this was
another hoox. For his own part, he viewed it more seriously; especially in respect of the tone which to tok - a strange tone for
a Christian Governor-of reverence for the objects of idolatrous a Christian Governor-of reverence for the objects of idolatrous
worship. These things, he owned, had raised in him some misgirings as to the judgment of the individual intrusted with the
grave and amost
rimful responsibility of governing India. With regard to the American treatys, he would savernat he did not view
it with the satisfaction which some seemed to feel ; he doubted whether any treaty would be really advantageoous which on itss
very face was detrimental to the country consenting to it.
 sliding scale, and in his conviction that a fixed duty was the thing
required. Under the present scale, the foreign wheat was poured required. Under the present scale, the foreign wheat was poured
in just as the home harvest was becoming available : the garden
wis. was watered dat the moment when it was beginning to rain. He the
had, however, heard nothing to-nighty which convinced him that Sir Robert Peel would not yet make much funther alteration in
Sthe Corn-lawe. But, on such a question, to withold alter-
then the Corn-aws, But, on such a question, to withhold alter-
ations which were really
and intended was grower and for the labourer. The agricultural members were now placed by the Government in a very awkward situ-
ation; the arguments on which they were put to defend the tarifi were arguments which forced them to condemn the Corn-
law and vice versa. He was no sulbscribcr to the opnions of the
 hear that the prospects of the revenne were more favourable
than they had been supposed; but he must say that the opulion he had always expressed, by his vore and otherwise, aganst the
Income-tax had been confirmed by the explerence of whlat had recently liappened He then put several cases of hardship and
vexation in the collection of the tax, which he contended was often overcharged, in the expectation that the party called upon Sir C. Naprir condemned Lord Ashbuyton's of teapeaty, and Mr.

Fictropolís amid its Bicinítu.
Funeral of Mr. Drummond.-On Tuesday morning the funeral of Mr. Drummond took place in the church-
yard of Charlton, near Woolwich. yard of Chariton, near Woolwich. In accordance with the most private manner, and the mourners consisted solely of members of the family. On reaching the churchyard, the body was met by the Hon. and Rev. Mr. Boschurch was fully attended by the most respectable inhabitants of the neighbourhood, all of whom appeared to be much affected by the scene. The great respect entertained for Mr. Drummond induced a large number of his friends remains by attending the funeral, which te of respect to his by the dy attending the funeral, which was only prevented private a manner as possible. Their Royal Highnesses the Duke of Cambridge, the Duchess of Gloucester, the Princess Sophia, the Duke of Wellington, and Sir Robert and Lady Peel, were among the many individuals who were desirous to testify their esteem on this occasion , but in accordance with the wishes of the deceased gentleman's family, the attendance of their carriages was gratefully declined. Mr. Spencer Percival, who was distantly connected with the Drummond family by marriage, and whose untimely death by the hands of an assassin must be well following account of the death-bed of Mr. Drummond has appeared in the Morning Post:-Mr. Drummond on being very little pain during his illness; so little, that on Sunday, he asked them phat hy his medical attendants they meant by it? Pand after laughing with pain-what it, came to the conclusion that his suffering was from oppression. On Monday he complained of shooting pain uneasiness of the oppression-a chint, bure the of anything else. This came on the first night, and although relieved from time to time, and especially by the loss of blood, was never entirely removed. On Monmanner of breathing was observed, and a change in the sent for, who, on his arrival at seven, informed his family there was no longer any hope of his recovery, and that any restriction be had placed on them was withdrawn At ten, the usual consultation took place, and as Mr Drummond was quite unconscious of bis danger, his meto be of further thought it right to declare their inability of making him acquainted with hise his farnily the duty on Wednesday morning, when a pulse could be felt nowhere, and a slight fluttering of the heart was alone perceptible, he retained the power of moving his limbs, pressed Mr. Guthrie's hand, and with that sweet smile on was past? On Mr. Guthrie's replying that all hope in God, he said "Well I hat has trust in God, he said, "Well, I have endeavoured to live honestly, doing as much good as I could, and I place my hope in
God's mercy for my redemption." Turning to his sister, whose self-devotion had been unequalled, and who was crying by his side, he said, "We have lived long and hapHe then asked if he should live mucla longer, and on being told permaps an hour or two, he said, "The sooner the better-l don't feel pain," and added, with a smile, that ugly French word mal-aise expresses most fully my tuon. Shortly after he said, "Will it be presumpand in a man in my situation to ask for a little wine given water, with soda or potass-water? and on its being final examin, conveyed it to his mouth and drank.- The on Monday. The evidence differed in no material point from that which has already been before our readers, exin a convyrsatspector of poin the coll, on being prised if he was aware who the gentleman was at whom he fired, replied, "Sir Robert Peel, is it not? After the usual chargitions had been taken, he was fully committed on the admission Wilful Murder. It is stated, in reference to his on the Queen's visit to Scotland, Sir Robert invariably rode in one of the Royal carriages, while his private carriage was occupied on every public occasion by the defor the Pre mier by the greater part of the spectators is stated that M'Naghten was yery anxious to see the Premier while in Scotland, and Mr. Drummond was pointed
out as Sir $R$. Peel; and this impression was further con-
firmed by seeine the deceased gentleman more than once firmed by seeing the deceased gentleman more
leave the Premier's residence in Privy-gardens.

Illness of Public Men.-The daily papers announce that Lord Aberdeen, Secretary of State for Foreign Affairs, was unable to attend the Privy Council at Windsor Castle on Wednesday, in consequence of indisposition, or to dine the evening. Dr. Holland is in attendance on his Lordship. Sir R. Peel, on his retura to town from Windsor it is now stated that his illness is not likely to interfere with his public duties.-The Bishop of London has for the last three weeks been so unwell that he bas not been able to attend to his clerical duties. Within the last few days, however, his Lordship has so far recovered as to -Capt. Sir T. Trowbridge, who is at present staying in Paris, has been seized with a sudden attack of paralysis, but no immediate danger is apprehended. The bulletins
issued this week at the Admiralty report favourably of Sir George Cockburn, and announce that the more urgent symptoms are subsiding-Admiral Sir the Charing-cross Hospital, for a dangerous fracture of the thigh near the hip joint, which had placed his life in imminent peril, is so far recovered as to be able to leave the Hospital. Since his departure Sir Charles has written to the Hospital inclosing a check for 200 guineas, and subseriber of 10 guineas.
Royal Society.-The Marquis of Northampton, as Pre-
ident of the Royal Society, gives his soirées to the Fellows on Saturday, the 25 th inst., March 11 the and 25 th, and April 8th, at his mansion in Piccadilly.
Meetings of Societies.-A preliminary meeting of gen. temen interested in ethnological inquiries took place on
Monday evening, at the house of Dr. Hodgkin, in Lower Brook-street, with a view to the formation of a society for the more systematic prosecution of those inquiries.
Mr. R. King read a paper from the pen of Dr. Dieffenbach, pointing out the advantages of such an institution, in combining the scattered information collected by individuals on the psychological, physical, and philological characteristics and affinities of the different branches of
the human race. Several gentlemen, in the course of the evening, addressed the meeting, and resolutions were adopted declaring the expediency of forming an Ethnological Society, and appointing a preliminary committee, with power to add to their numbers, for the purpose of
taking the necessary steps towards the organisation of the society. -The 50th anniversary meeting of the Baptist Missionary Society was held last week at the Chapel in the Black friars-road. The Rev. Dr. Prinse, who has recently returned from a mission to Africa, gave at great
Iength an account of the manners and customs of those portions of Western Africa he had visileod, and said that a number of Sunday and daily schools had already been es-
tablished, and many chapels and places of worship were tablished, and many chapels and places of worship were iion was making rapid strides, and marriage according to Clristian customs was beginning to be of daily occur-
rence. The Rev. Mr. Sherman and other ministers addressed the meeting. shd many narratives were given of the zarrow escapes and sufferings the missionaries had experienced. The business of the evening was concluded by a collection
The Scottish Monument.-On Saturday at the meeting of the Marylebone Vestry, the clerk laid before the Vestry a letter from Mr. Hume, with respect to the recent inter--
ference of the Commissioners of Woods and Forests, by a theat of injunction against the Vestry, in the event of to the "Scottish Martyrs." In this letter Mr. Hume said, "I have directed the excavation made preparatory immediately filled up; and I desire, on my own behalf and on that of the committee who are charged with the $V$ erection of the monument, to express our thanks to the Which, although frustrated for a time, will soon I trust be elsewhere accomplished." It was then resolved that Mr. Hume's letter be entered on the minutes of the Vestry, and that the committee be re-appointed to consult with erection of the column
Conspiracy on board a Convicl Ship. -Intelligence has civilians on board the Ciza Government transporters and sailed from H.M.'s Royal Arsenal, Woolwich, a few months since, with convicts for Botany Bay. It appears that, as the amsel neared the Line, a murderous conspiracy existed no doubt, in the destruction of those marked down as their Vietims. There were 267 convicts on board, aniong whom Btriking a ser who had had heen transported for 14 years for
He privately sent a letter to the surgeon, informing him of the intended outbreak on the morning of March 4 ; that the design was to put to death as offered the leastres, passengers, and such of the crew $\mathrm{B}_{\text {razilian }}$ coast. least resistance, and then to steer for the posted, and at ast. 3 o'clock on the eventful morning the pas-
senine situation was crew were summoned on deck, when their armed, was explained to them, and all, being then well
The ordered to defend their lives to the last. the sargeen was unwilling to sacrifice the life of gate sergeant, whose duty it, was to open the convicts'
gat 4 o'clock-all was breathless anxiety, when the surgeon advanced to the gate, desiring a couple of file, of
soldiers to advance and shoot the first prisoner who dared to pass except the one he named. The convicts at once perceived their plot was discovered, retired to their berths, ind threw the bolts and all offensive weapons out of the ports of Dickenson, who had been an apothecary's assistant in Thavies'-inn, Holborn. He leaped overboard imme. diately after the discovery, and was drowned. Every precaution was adopted for the security of the convicts, who Here handed over to the civil power on arrival.

Fires.-On Saturday morning, about six o'clock, a fire broke out in Lord Hillsborough's mansion in Upper constable, but before he could successfully give an alarm a body of flames buist through the second-floor windows, and rapidly extended over the building, rendering the exertions of those persons who first assembled to rescue any portion of the furniture altogether unavailing. Several engines were soon on the apot, but, owing to a put into water, some thorlly before seven the reall carrying the back fioors with it, and about a quarter before eight, the front floor also gave way and carried two firemen with it into the hall underneath. Active measures were immediately taken to clear the entrance to the hall, adivel bon were extricated; one was compaBy this sigat By this time, the flames were spreading through the lower might have been seen for several miles distant. A more pientiful supply of water was shortly after obtained, and the cffect of the engines began to be visible in arresting the progress of the fiames to the adjoining houses. The mansion was occupied by Sir George de Larpent., Bart.,
and Sir Charles Cockerell; the former with his family had started but half an hour before for Bristol. The Earl of Hillsborough, who, with his family, are at present in Warwickshire, had insured the mansion itself in the Westminster Fire-office. The losses sustained by Sir George de Larpent and Sir Charles Cockerell are stated to be exceedingly heavy, neither party being insured. The
total loss will not be less than from $10,000 \mathrm{l}$. to $11,000 \mathrm{l}$. total loss will not be less than from $10,000 l$. to $11,000 l$.
Police. The magistrates of the different Police-courts have received from Messrs. Robarts and Co., the bankers, a donation of 10l. each, being a portion of a legacy of 1,500 francs bequeathed by the late Mons. Le Montblanc, Archbishop of Tours, for charitable purposes, to be dispensed amongst the poor of London. The testator requested, that in the distribution a preference should be Friday, a man called Thomas Patterson, against whom four warrants were issued some time since for exposing certain publications at a shop in Holywell-street, tending to bring religion into contempt, was apprehended and brought before the magistrates at Bow-street. The case was fully proved, and the prisoner was fined $40 s$. for each offence. He refused to pay the fines, and was committed to prison for one calendar month.
Rotherhithe.-A contest respecting Church-rates has been going on for some days at St. Mary's in this parish. The poll commenced on Monday at eight, and closed at four, when the numbers were-For the enforcement of Greenwich. against it, 126 - majority for the rate, 159. have been expelled for their insubordinate conduct on Thursday week, when they did considerable damage to break, which was, however, easily repressed. The damage done on the two occasions is estimated at $100 l$. One the upper school, in lieu of the girls' school, which was done away with some time since.

Woolwich.-Sir James Gralam has officially commucated to the Master-General of the Ordanance, that Her mejesty has permitted the nop-commissioned ominers and Spanish Ore Royal Artillery to accept the Cross of the duct while serving on the north coast of Spain in 1837. The Master-General has announced in General Orders, that, in consideration of the gallantry displayed by the Royal Artillery when serving with the troops recently Gough on the coast and rivers of China, Her Majesty has been pleased to permit the Royal Artillery to bear upon their appointments the word "China," and the device of the Dragon, in commemoration of their distinguished services.

Mortality of the Metropolis.-The following is the day, Jan. 21 :-West districts, 145 . Week ending Satur 152; Central districts, 193; East districts, 234. South, districts; 219. Total, $960,(490$ males, 470 females.) Weekly average for the last five years, 903 , ( 461 males, 442 females,) and for the last five winters, $1,004$.

## 3Frobncial Nebrs

Aylesbury.-In consequence of considerable difference of opinion existing amongst the county magistrates of Bucks summarily convicting (as the case may be), at their private residences, Sir Harry Verney recently wrote to the Home Secretary requesting his opinion on the subject, for the guidance of the magistrates. Sir James Graham, in his reply, states, that is appears to him "that in any holding the petty sessions, to which the public have access, the most desirable course to adopt is, that the cases which heard and adjudicated; though certainly it is not illegal for the magistrates to hear cases at the office of their clerk.

Cambridge.-The Rev. Alfred Ollivant, D.D., Trinity College, Lampeter, and Prebendary of St David's and Brecon, was on Wednesday elected to the Regias-Pro. fessorship of this University, vacant by the resignation of the very Rev. Dr. Turton, Dean of Westminster. The other candidates were the Rev. Dr. Mill and the Rev. Dr. Chris. Wordsworth.-A meeting of the Archdeaconry of Ely took place last week, at which two petitions to Parliament were resolved upon; one of them, that the Sees of St. Asaph and Bangor might not be united; the and a subdivision of the larger parishes churches, latter petition contained the following parishes. This "That your petitioners would humbly submit to the thoughtful consideration of your Honourable House, whether it be not worse than useless to complain of the want of attachment to our Protestant Reformed Episcopal church, on the part of a large portion of the popufrom all participation in its benefits ; and, therefore, that it is the the tablishe Cher the estacting the lencies m y be , influence may be lost to the body politic" After the petition may be lost to the body politic. After the Warren of Orer pid 61 That as the was distinctly named, the words 'Protestant Reformed' were superfluous, and therefore nnnecessary. He proThe Rep an amendment, that those words be left out the Rov. W. Collon seconded the amendment, on the ground that the Church had never called herself Protestant. The same thing was meant by himself and the framer of the petition, but he thought unanimity was more The Rev. G. Spence opposed the suggestion. There were not many, he boped, who considered that the Church had ceased to be 'Protestant' or 'Reformed,' or who, as Ministers, had ceased to glory in her as a "Protestant and Reformed' Church. As a matter of principle, he, for his part, felt the highest pride and glory in having the honour to be a Minister of the "Protestant Reformed Episcopal Church," and he could not sit still when a proposition was made to erase the first two most significant Warren Arer some discussion the amendment of Mr. Warren was negatived by a majority of 19 to 6 , and the
words of the original resolution were retained unaltered. Chichester.-At the Court of Bankruptcy last week, Mr. Commissioner Fane delivered his judgment in the case of an application for a certificate of Mr. Charles Ridge, one of the partners in the Chichester old bank. Having complimented the assignees on the zealous manner in which they had performed their duty, the commissioner proceeded at considerable length to recapitulate the facts connected with the bankruptcy; but as they bave ween already reported by us in former Numbers, it will be unnecessary to repeat them. He commented in strong terms on the fact of the bankrupts having retained in their service a clerk named Goodem, although he had appropriated to his own use 11,500\% of their notes, the only reason for his retention being the dread of the bankrupts that he should disclose the state of their affairs. Another feature of the case which the commissioner considered to beax heavily against the bankrupts was, their having, up to the last moment, received as deposils the savings of poor and industrious persons, promising them security and $3 \frac{1}{2}$ per cent. interest, whereas on their failure for the sum of $139,972 l$., their estate only realised $68.3 d$. in the pound. Having alluded at some length to the alteration in the Bankrupt Law, which invested in the commissioner the power of giving or withholding the certificate; he proceeded to say that the conduct of Mr . without excuse now before the court, had been wholly of the bank immediately to have wound up the had sustained (nearly 50,000l.) in the failure of Fry and Chapman, their London agents, the assets of himself and partners being eatirely insufficient to meet the emergency. On the occurrence of that event the course of Messrs. Ridge was plain. They should have called their creditors together ; but, instead of doing so, they paid awny 12,5006 in legacies to keep up the delusion, and allowed their own servant to rob them with impunity of sed the evil day, bounds. By such conduct theds of persons in humble life in their ruin. It was impossible to do otherwise than visit such conduct with the marked censure of the court. The Act of last session gave the commissioner power either to refuse or suspend the certificate. Now he was unwilling in any case to refuse a certificate absolutely, unless he believed there was some concealment of property, a circumstance which was not at all alleged against the Messrs. Ridge. All he should do, therefore, was to suspend their certificate, and to make their ultimately obtaining it depend on fair and proper conditions. He would suspend Mr. C. Ridge's certificate for two years from the date of the bankruptcy, and the conditions which he should require to have fulfilled previous to granting it would be, that it should not protect any property which might hereafter fall to the bankrupt, either intestate. This wouldaw, as next of kin, or by death business, if he could indable the bankrupt to resume secure to his fus fursons to trust him, and would industry; while on the or his present creditors such advantages as the accidents of life might furnish. He should therefore sign Mr. Charles Ridge's certif

England Conservative that the Mechanics' Institute of that town is about to set a good example, by the introduction of lectures on Horticulture. The first lecture will be delivered on Tuesday next, by Mr. W. E. Rendle, of rise and progress of Horticulture from the earliest ages to the gardening of the nineteenth century, and will illustrate his lecture by choice plants in flower. The leading subjects touched upon in his synopsis are, the formation of jects touched upon in his synopsis are, the formation of the London Horticultural Society; the subsequent forma-
tion of Provincial societies throughout the country ; the New Zealand Horticultural Societies ; the Chiswick exhibiNew Zealand Horticultural Societies; the Chiswick exhibi-
tions; short histories of the apple, pear, and other fruits; tions; short histories of the apple, pear, and other fruits;
brief historical facts relative to the dahlia, the pelargonium, the pansy, \&c. ; the tulip mania; usefulness of horticultural societies in distributing prizes to honest and industrious cottagers, in thus encouraging them to cultivate their gardens, and affording partial maintenance for their families; and the great pleasure derivable from the cultivation of flowers.
Liverpool, - In a recent article on the system of farming which prevails in Lancashire and Cheshire, the Liverpool Times states that the Earl of Derby and Lord Francis Egerton have embarked in agricultural improvements, and, as a means, have given suitable leases to their tenants. The article in question states that "The farming is very fair on the lighter soils of Lancashire and Cheshire,
about Liverpool, Hale, Warrington, Flixton, Altringham, Newton-in-the-Willows, Ormskirk, Southport, and Rufford, and altogether greater and more successful efforts have been made to improve moss or bog land in Lancashire and Cheshire than in any other part of England. The field cultivation of the Potato is as well understood in Lancashire as that of the Turnip is in Norfolk or the
Lothians; the crops of that root grown in this county are superior, both in quantity and quality, to those grown in any other part of England, and the Wheat and Clower crops grown after them are also very good. It is the stiff clay lands which are the disgrace of the Lancashire and
Cheshire farming. They are almost uniformly wet, and covered with rushes, although when well drained and farmed, as on the estate of Mr. B. Bretherton, at Rainhill, they form excellent meadow and pasture land, when laid down in grass, and yield large crops of wheat, beans, is wanting in Lancashire is good effectual draining ; but there is no reason to expect that that will become general in this county until long leases are introduced in place of nable by a six monthg' notice To of our preat land holders, namely, Lord Francis Egerton and the Earl of Derby, seem to be aware of this, the former having recently re-let a great part of his Lancashire property on very favourable terms, and the latter now offering long which from time to time fall into his hands."-On Tuesday night a free trade banquet was held at the Amphitheatre, attended by nearly a thousand people. The boxes were
tilled by ladies, and the galleries crowded by persons who were admitted at a low price to witness the proceedings. The chair was filled by Mr. Thornely, the member for Dr. Eowring, Sir De Lacy Evans, Colonel Thompson, and Dr. Eowring, Sir De Lacy Evans, Colonel Thompson, and
Mr. Hindley, M.P.; and on his left by Mr. O'Connell, Mr. T. M. Gibson, Mr. Sharman Crawford, and other advocates of free trade, most of whom addressed the meetadvocates of free trade, most
ing at considerable length.
Munchester. - On Saturday night a destructive fire broke out in an extensive pile of warehouses in Norfolkstreet, close to the Post-office in this town. The warehouses, at the time of the conflagration, were crowded to the ceiling with calicoes, yarns, counterpanes, damasks, Clayton and Gladstone's warehouse. The number of persons who were drawn together on the first outbreak was 80 great, that all the efforts of the police to keep
them bsck were unavailing; it was consequently found them bsck were unavailing; it was consequently found companies of the 15 th , by forming themselves in detachments, soon cleared the mob from all the approaches to the warehouses, and protected such portions of the property as were rescued from the flames. The building was entirely destroyed, and the damage done is estimated at
50,000 . -On Friday, the 27 th, a dinner was given in $50,000 \%$.-On Friday, the 27th, a dinner was given in
this town to Mr. Emerson Tennent, M.P., for the purthis town to Mr. Emerson Tennent, M.P., for the pursigns Bill, and of presenting that gentleman with a service of plate, in testimonial of the gratitude of the calicoprinters throughout the kingdom for his ezertions on their behalf. Mr. Teanent has for some years past exerted himself in order to procure a Legislative enactment for securing a reasonable copyright of designs in various
branches of art and manufacture; and our readers are aware that an Act for this object was passed last session. The calico-printers, the parties more especially benefited by the Act, accordingly opened a subscription for the purpose of presenting Mr. Tennent with some testimonial of their gratitude; the subscription amounted to $1,850 l$,
and was appropriated to the purchase of a service of plate, containing 106 pieces, and weighing upwards of 3,000 ounces. About 70 gentlemen were present at the
dinner, and Mr . Tennent addressed them ar on the various questions connected with their branch of manufactrare.-The first great aggregate meeting of the demonstrations of the Anti-Corn-Law League in this town was held on Monday in the new Free-Trade Hall, Peterstreet. of the progress of the Great League Fund. The meeting was limited to registered members of the League, meeting was deputies from distant toms-a few seats having
been reserved for ladies-but, notwithstanding this limita tion, the hall was crowded to overflowing. The numbers present have been variously estimated at from 7,000 to
10,000 persons. Mr. M. Philins, M.P. presided space will not allow us to give the particulars of the parious speeches delivered on the occasion; we can merely state that the list of subscriptions announced as already received exceeded 40,000 ., without including Manchester, which has already subscribed $7,000 l$., and the metropolis which the subscriptions amount to about 3,000 l. Mr Bright, however, showed a long list of towns which had isit, and the result he expected would be a great addition the subscriptions. The largest sums in the list an nounced on Monday were the following:-Manchester pool, 2,200l. ; Huddersfield, 1,800l.; Leeds, $1,500 \mathrm{l}$. Adifax, $1,000 l$; Bristol, 1,000l. Edinburgh, 1,000l. ; Bolton, 936l. ; Bury, 928l. ; Not-
tingham, 850l. ; Sheffeld, 800l.; Burnley, 700l. ; Bradford, $600 l_{\text {. ; Blackburn, } 600 l . ; \text { Birmingham, } 500 l . ; \text { Bacup }}$ $500 l$. Dundee, 500 l . \% Leicester, ${ }^{\text {; }} 500 \mathrm{l}$.; Oldham, 500 l . Stockport, 5006. A singular circumstance occurred while
Mr. Massie was in the act of stepping forward to address the meeting. The whole of the gas-lights went out. The ircumstance was attributed by Mr. Wilson, the chairman of the League, to intention, and it was announced that the utmost exertious would be made to discover the author of the attempt to create confusion in that large assemblage A considerable addition to the subscriptions was made before the meeting separated.
Plymouth.-On the night of Friday, the 27th, the Greek brig Taxiarches, from the Danube, for Hall, but last from Falmouth, where she took a pilot, went on shore on the south-west side of the Rame Head, near this port. Her pilot was below at the time, having previously left instructions to have the brig steered to the south-east, thick at the time, and the vessel, having a fair wind and studding-sails set, ran on the rocks before the crew knew where they were. The crew were saved, but the vessel will probably go to pieces.
Rye.-To the list of wrecks consequent on the Iate boisterous weather, another calamity, occurring on the Sussex coast, is now added, in the total loss of the took the ground on Winchelsea-track, on Saturday night, and soon became a perfect wreck. The Arundel left Gravesend on Thursday week for the Dor Majesty the had the conduct of the squadron on the occasion of the Queen's visit to Scotland. She arrived safe in the Downs and on Friday morning was working down Channel against a strong westerly wind. All seems to have gone off Dungeness. In beating up the Sussex time she was pears that Mr. Davison, presuming on the yacht's well known sailing qualities, must have run too near, shoro
On Saturday morning the soundings were taken, and the vessel was discovered to be in shallow water. The pilot immediately put the helm down, but before the track of he vessel could be influenced by it, she struck heavily, and oon after became firmly embedded in the sand. The fou the command of Lieut. Ralph, and about 4 A.M., the captain and the crew took to the ship's boats, and succeeded in reaching the shore although a heavy gurf was rolling upon the beach. The Arundel was well known as one of he finest vessels belonging to the Royal Yacht Squadron rown buit by the late Duke of Norfolk from timber perty, she was purchased by Capt. Richardson, who intended her for the local trade in China, her peculiar build and extraordinary sailing qualities adapting her for that service.
Windsor and Eton.-On Tuesday a man named Samue Prentice underwent a private examination before two county magistrates, on a charge of being found in the stores of Windsor Castle with a felonious intent. It ap.
pears that on Friday night, the 27 th, in consequence of an pears that on Friday might, the 27 th , in consequence of an the Lord Chamberlain's department was left in the store room for the aight as a security against fire. About halfpast five in the morning he went down to the lower room to look at the clock; when there he heard some one room; his attengate of the yard in front of the store some one come up, and he then hid the lanop. He heard a key putinto the lock, and unlock it. He heard some one enter the door, and he then showed his light, and saw that it was the prisoner, who has been emplosed as the working bell-hanger in the Castle, and usually works at a had every the tower moat, opposite the store-rooms. He of the place, and of the description of the articles which were kept there. After the usual evidence the prisoner was committed for trial.
Railways.-The returns of the traffic on the leading Eastern Che last week, are as follows :-Greenwich al Manchester 3,551 ., Brighton 2,54" lisle 1,197l., Grand Junction $6,315 \mathrm{l}$., Blackwall 507 l ., Great North of England 1,262l., Glasgow and Paisley and Glasgow 1538l. Hull and Selby 7291, Birmingham and Derby 1030l. Midland Counties 2111 , North Midland $3,242 l_{\text {. }}$, South Western $4,285 l_{\text {. }}$, Great Western $10,777 \mathrm{l}_{\mathrm{g}}$ London and Birmingham $13,311 \mathrm{l}$. , Northern and Board of Trade have addressed a very important circular to the Secretaries of all the Rail-
way Companies on the subject of retrenchment. The propriety of these reductions has been often discussed and is now formally condemned by the official caution given to the management of the different lines. The cir cular bears special reference to the case of Mr. Harvey, commercial traveller from Glasgow, whose death, as ou eaders will recollect, was occasioned by a collision at the Barnsley station, on the line of the North Midland Rail way. The following extract contains the most important portion of this document :-." The experience of the last three years has fully satisfied their lordships that the com parative exemption which bas been latterly enjoyed from the alarming accidents which occurred so frequently during he infancy of railway travelling, is to be attributed mainl the gradual formation of establishments of experienced all the leading passenger railways, and that it is only by all the leading passenger railways, and that it is only by maintaining such establishments that a repetition of such accidents can be effectually prevented. This opinion has Midland Railway, and the investigations which their ford hips have directed, in consequence, have fully satisfied them that sudden and sweeping reductions in the branches of the establishment connected with the pubic safety, can rarely be attempted without occasioning great danger Under these circumstances, although my lords have no wish to interfere with the discretion of the directors of railway companies especially in cases where pecuniary considerations are involved, they think it their duty to remind them of the heavy responsibility which they will incur if they allow themseives to be influenced by a mistaken economy, so far as to attempt reductions, either in the number and efficiency of the establishment which pre cond experience has led them to consider necessary for tomed wages of the class of servarits upon whose intelligence, sobriety, and babitual good conduct the safety or the passengers depends. - A resolution was passed b the shareholders of the Bristol and Gloucester Railway at the meeting held last week, authorizing the Director orase the money to complete the line. The cost of the appears by the reports in the Provincial papers that the shareholders of the Gloucester and Berkeley Canal Com when the Bristol and Gloucester line comes into full action, the revenue derived by the carriage of coal to action, the revenue derived by the carriage of coal to
Stroud will be cut off, and therefore that the only means o create an equivalent would be the bringing of the price to enable its delivery at Stroud cheaper than could be done by the Bristol and Gloucester Company. On Tuesday, the half-yearly general meeting of the London and Greenwich Company took place, and a divi dend of 1s. per share was declared, the accounts showing net surplus of $2,207 \mathrm{l} .12 \mathrm{~s} .4 \mathrm{~d}$., after paying interest on directors were also authorized to raise $50,000 \mathrm{l}$. remainder of the capital by mortgage without power of sale, the interest, to be payable half-yearly, and the principal at the to public tender, the interest to be bonds will be offered and the lowest rate to be accepted. These bonds will have the preference over all shares. A long discussion look place on the adoption of the report, and the disputed question of the tollage was revived, the shareholders ap pearing firm in resisting any infringement of their origina pointment of a committee to reconsider the quettion, and Mr. Wilkinson, the chairman of the Croydon Company who obtain a hearing. The income of the company from the traffic appears by the balance-sheet to be $27,106 \%$.- Sub-
sequent to the great blast of Ronnd Down cliff, on Thurs day week, by means of $18,000 \mathrm{lbs}$. of gunpowder, it has een ascen by measuren that the immense mas of rock diblodged covers a surface of 18 broad acres, and not less than 25 feet deep. The shock was so slightly felt in some parts of the cliff, that the party in charge of e is said battery thought the experiment had falled Company by the saving to the South-Eastern Railway eap by this blast win be at least 10,000 l:- he hall en meeting of the Grand Junction Company was held that the last at Liverpool. It appeared from the report hat clear profit of the half-year was $119,470 l .2 \mathrm{~s}$, to previous half-year, moking a total of $125,082 l .6 \mathrm{~s}, 3 d$ from this umount the directors recommended that a dividend of 5l. per share, and proportionate amounts on the her btock, be declared; this would absorb $110,1656$. proposed to appropriate as follows ., Thich the divectors -year 3,653 .178 . $10 d$. , depreciation and renewal of stock .000l., leaving to be carried forward to the credit of the present half-year the sum of $6,263 l$. $8 s$.

Dublin.-On Sunday, the Very Rev. Dean Daly was onsecrated Bishop of Cashel and Waterford in the the Archbishop of Dublin and the Bishops of Cork and Ossory. Every available spot in the church was occupied, and hundreds had to leave without being able to obtain an entrance to the choir.-Intelligence has been received in Dublin that Durrow Castle, the family mansion of Lord Norbury, has been burnt to the ground, and that very little of the furniture or other property has been saved. A meeting, of which a very long notice had been given, to Aorward the plan of erecting some lasting testimonial to
the merits and services of the Rev. Father Mathew, took place last week in the Theatre Royal. The Duke of Leinster presided, and said that it afforded him the greatest pleasure to preside at this meeting, and in every way to show the respect and esteem he entertained for the
Rev. Mr. Mathew. The immense assemblage before him, he said, assured him that the meritorious conduct of that individual was no less highly estimated and felt by the country. The resolutions for the purpose of carrying into effect the object of the meeting were moved and seconded by the Marquises of Headfort, Clanricarde, and Kildare Judge Moore, Sir G. Hudson, Bart., Sir J. Burke, M.P. Mr. Wyse, M.P., Mr. Smith O'Brien, M.P., Mr. Tuite M.P., the Hon. Colonel Southwell, and Mr. O'Connell and were carried without a dissentient voice. Several of the boxes and galleries of the theatre were crowded to excess.-A large meeting has been held in Dublin for the purpose of expressing dissatisfaction with the Irish Poo all shades of party politics the chair being taken by the Duke of Leinster, and the resolutions proposed and seconded by the Marquess of Downshire, Lord Ormonde Lord Roden, Lord Charleville, and others; while there was a numerous attendance of members of Parliament carried to the effect that-" It being the conviction of the meeting that the law, unless to a great extent remo delled, would every year become less effective as regard the objects intended by the Legislature, and that it would tend, at no distant period, to the serious embarrassmen of any Government, a deputation be appointed to urge pean his Excellency the necessity of an immediate and searching inquiry into the operation of the whe system. ingly, and stated the resolutions to which the meeting had ingly, and stated the resolutions to which the meeting had vernment were quite alive to the importance of the sub particularly so from gentlemen of such rank and intellisence, and whose object was to improve the law; (hat th question was manifestly one of great difficulty,
legislation by observing, that it was impossible tha ering should take place earlo in the session, as th said to be in preperation - A new rrish Registry Bill is hold franchise will be retained, and a new franchise added similar to the tenant-at-will, or Chandos qualification in England, to be fixed at the annual payment of $30 l$, ac cording to the Poor-Law valuation.

## SCOTLAND.

Edinburgh. - The Court of Session was occupied las reek in hearing the arguments of counsel in the well. known with the exception of the Lord Justice Clerk Court present. The counsel who appeared for the several parties were Mr. Rutherfora, the Solicitor-General, and and the Dean of Faculty were of considerable length. The Court intimated that they would give judgment on a future day.-The Caledonian Mercury announces that they are authorised to state that the appeal taken to the House of Lords, in name of the dissentient parishioners of Culsa which, against the decision of the Court of Session, by which the settement of the Rev. Mr. Middleton wa sustained as valid, has been abandoned, by directions from the law committee of the General Assembly. The decision final court below must now, therefore, be regarded a inal and conclusive of one of the great church case Which have recently occupied so much public attention, Mr. Fox Maule, in his proposed measure for the settle ment of the troubles of the Scotch Church, favours the cews of the majority, and that his measure will probably of the Bills which have been already introduced into Parliament.-The, Lord Justice General, the Lord Provost and other gentlemen, met as a committee at Holyrood House last week, to accompany Mr. Nixon, the Master of Works for the Woods and Foresta, over the ground to be converted into a carriage-drive round Salisbury Crags and Arthur's Seat. The line is to commence near the temporary gate in the Abbey-hill, pass through Queen Mary'sogardens the front of the Palace, across the paved Palace-yard, and gain through the gardens at the south of the Palace, to proint about the beginning of the irrigated meadow Duke's-walk, and along that walk to the Watering to the Meadowbank. Another road is to be continued from the point in the irrigated meadow southward, along the botthe Posisbury Crags, till it reaches the road leading to hill, towards the shepherd's house, commonity called David Dean's cottage. It is ultimately intended to carry the road to Duddingstone by a line nearly the same as the nly foot-walk. The committee were satisfied, not the beauty of the scenery, and the of roat additionsl will in the roads must give to the city. The works will be in operation within two or three weeks, and it is in tended to have them exclusively executed by the Edin bargh labourers now out of employment.
Wardenow. The installation of Mr. Fox Maule, as Lord day week the University of this city took place on Thurs great enthusiasm.

## 5thiscellaneous

${ }^{\text {lesley's }}$ Autographs.-At the recent sale of the Marquis Wel-
lesley's library an eighteenpenny pamphlet, entitled, "A

Letter to the Duke of Wellington on the Present State of India," published only last year and still on sale, procured the enormous sum of 951 . 11s.; merely because it contained two or three MSS. notes by the late marquis, in reference to some passages quoted from Mr. Alison's His tory. This circumstance is so unprecedented, that the following account of the manuscript comments, taken from the Times, may not be unacceptable to our readers :At page 6 of the pamphlet the text says, "He (the Marquis) sent indeed a strong Army of observation under Sir J. Craig," \&c. The note thereon is, -"The Army, always, was, with all diate service, was the only preparation made against the certainly meditated, attack of Zamaun Pchah.-W. The text spells it "Schah.""] At page 15 the text quotes that author speaks of the overthrow of Colonel Monson" division, and the disastrous confidence thereby generated mong the restless and rebellious native chiefs, \&c. ; the war with Holkar, the Marquis deviated from his usua nolicy," \&c, and "these impending evils were arrested by a recurrence to those better and wiser councils, which, Marquis We exception, characterised the whole of the Marquis Wellesley's government," \&c. The Marquis, in my fixed policy; Moneon (a poor weak, thouch brave my fixed policy; Monson (a poor, weak, though brav pared him on ayed pinciple never to cast blame on pared him on a fixed priocipl, ne hon alt wh fame mitht suff ' All the phrases 'departed, recurrie mit safer. All the phras they be corrected. Monson's advance and retreat were no acts of mine. I wish the author of this letter, who seems to b a well-informed and judicious person, would inform Mr Alison of these facts. Mr. Alison's work is excellent which I could correct if I knew him or any of his friends. Well the pamphiet was purchased for the Duke of Wellington, and it is said that, on the price being men tioned to him, he evinced, not unnaturally, the utmos surprise. The competitor against Mr. Hatchard, who
bought the lot, was Mr. Blackwood, the publisher of Mr Alison's History, that firm desiring to possess such test mony to the general excellence of the work. Mr. Hatch and, if Mr. Alison's publishers had not entered the field, there were others prepared to go to a very high price One gentleman was ready to go as high as 501 ., so that
his Gruce had no chance of obtaining a bargain. The circumstance is unprecedented in the history of asles of books and autographs.
man was Mortaly. - The only occupation of the old combstones of the Covenanters, travelling from one churchyard to another, mounted on his old white pony,
till he was found dead one day by the road-side. His family experienced a singular variety of fortune. One of his sons went to America, and settled at Bultimore, where American Iady, and the latter outliving her husband, became Marchioness Wellesley! His daughter was married to Jerome Bonaparte, and after ber sejaration from Baltimedded Monsieur Serruier, the French consul a he bored a he foreseen that the widow of his grandson was to become an English Marchioness, sister-in-law of the Duke of We ington, und his granddaughter Queen of Westphalia, and sister-in-law of Napoleon !-Inverness Courier.

In the case of " "The Queen v. the wife of John Hodges," when had been presented to them against a mother for the murder of her child, and they had thrown it out, because the evidence of Alderson, who was on the bench, said, "Then, gentlemen, you did wrong; you ought not to try that question. If you are of
opinion the acts done by her were such as, if they had been done by a person of sound mind, would have amnounted to murder, it the public by the confinement of the insane perscon." That opi-
nion in no respect was any hardship upon the party accused nion in no respect was any hardshup upon the parly accused
because the Legislature had taken particular care to provide for
persons in a state of msanity, either when arrauru
 insane, a jury maght be empanelled to try his santy, and upon
being found mane, he was to be kept m sate custedy ti l her Mo jesty's pleasure should be known, and ly a previous clanse 12 the
sume statute, it was enacted that if a person was acguitted upo the ground of insanity, the jury must deliver a specjal verchict to sateffect, and the accused would then also be detamed-ayece
sary course,not only for his oun safety, but also for the satety of
the public. He particularly called their attention to these circum out a bill, if upon hearing the wituesses on behalf of the pro-
secution only, it appeared that the saccused was not in his right mind; but in a case of this description they would be pleased
to attend to the directions he had given them, and not thy the question of sanity or insanity; for, according to the provision
of the statute to which he had already alluded, that was a ques pre to be determined by another tribunal. Having made these prelininary remarks, he would call their attention to what the
law deemed the crime of murder. My Lord Coke said, " When a person of sound memory, and of the age of discretion, unlaw Kwg's peace, with malice aforethought, either express or im plied, so as the party die of the wound within a year and a day by an idiot, lunatic, or infant." And Lord Hale describes the held by law that an insane person years. could not be found guilty o partyme of murder, still it was necessary, in order to exempt a committed the offence, he was incapable of distinguishing ripht said-"In every charge of murder, the fact of kiling being first are to be satisfactorily proved by the prisoner, unless they arise
out of the evidence adduced against him for out of the evidence adduced against him; for the law presumeth
the fact to have been founded in malice until the conirary ap peareth." Some misapprel ension appeared o have been enter-
tained with respect to the words mal.ce aforethought ; but the
same learned anthen same learned authority upon that subject said, "Whers the lav
maketh use of the wordsmalice aforethought, as descriptive the crime of murder, it is not to be understood in that narrow
restricted sense to which the modern use of the word nalice i apt to lead one-a principle of malevolence to particulars; for
the law by the term malice, in this instance, meaneth the law by the term malice, ins this instance, meaneth that are the ordinary symptoms of a wicked, depraved, and malignant spirit ;" and again, "and I believe most, if not all,
of the cases which in our books are arranged ander the
head of implied malice, will, if carefully adyerted to, be found to turn upon this single point-that the fact hath been attended Wi a heart regardless of social duty, and fatally bent upon mis-
chief." To these observations lee (the Recorder), would add that if in the prosecution of a guilty purpose, another offence,
 which caused death to the individual was intended for another
the offence taking away life. If, therefore, in the course of the inventiga.
tion tion, it should appear from any expression used by the accused, some other person had been aimed at, or that the accosed had
another person in his mind, the offence was equally one of mur which would be laid before them would be short and extremely simple; they would in all probability find that the unfortunate deceased was walking in the street whilst in the occupatson dew a pistol, which he discharged at him, and that the bah, took
effect; that he then attempted to fire another pistol, but was fruc his possession. They would also probably learn that the son wounded died in a few days from the effects of the wound;
and it might also be shown that the accused mincted the
wound intentionall wound intentionally. If such facts should be proved in evidence
their duty would be extremely short. If they should be of opinind the the Recorder) apprehended they would have but hitcle
doubt that he intended to comnit the offence, then it would be their duty to return a true bilt. The accused would then be put
upon his trial, and if such ant infirmity of mind as had been al luded to appeared to exist, it would be disposed of by the petty
jury. He liad yentured to advert to the nature of the delcnce which possibly might be set up. But it might be that no such
defence would be offered, still he thought it rigut to take every opportunless a person aclually did not know right from wrong, it tl.e fact of the commission of any great and serions crime uas in
itself to be held or considered a proof of insaxity, there would be no safety or security for the public, and the consequences would bedreadful to contemplate. To a certain extent every atrociou of what might be the consequelsce that if such defences were on
hereafter. Ayain, he would say tho
slight grounds to be admitted as an excuse for crime, the ver slight grounds to be admitted as an would be shakeln and destroyed. Silould would be their duty to put it ina tran for further investigation
of it at the bands of the petty jury.
Triul of $\mathbb{I}^{1}$ Naghten. The grand jury having found a true bill \&gainst Daniel M ${ }^{\text {© }}$ - aghten for the murder of Mr. Drummond, he was placed at the bar on Thursday to taike his trial,
Aft erthe indictment had been read, the clerk of the arraigns
asked him whether he was guilty or not? The prisoner made reply. Mr. Cope, the governor of Newgate, asked him if he
heard the question? Lurd Abinger said the pren swer the question of his own accord. After a short pause, the secution." Mr. Clarkson said has was about to make ant observa-
tion. Lord Abinger said the cour prisoner had pleaded. The court could not hear him until the
soner remained silent. soner remained silent. Lord Abinger then told him that he wras to say you are not gulty of the rest of the charge, namely,
intending to murder Mr. Drummond? Prisoner: Yes. Lord Abinger: Very well, that is equivalent to a plea of not quilty,
and, therefore, let that plea be recorded. The same plea was
then recorded to Mr. Clarkson then rose audge said that he was instructed to apply
postonet to the next s.sision; and he hat also to apply for the restoration ce certain prest, and amongst others a receipt for a
sum of money lodged in the Glasgow and Shipping Bank, which
he beged mergit te delvered to the prisoner's attorneys. The
 an intimation had been given that any reasonable sum required an intimation hiad been given that any reasonabe sum required
for the defence of the prisone would b handed oorer to his
attorney, As to the Banik receipt, that certainly could not be
 session, on the understanding that sufficient funds woold be
supplied for the defence. The Attornef.General wished it to be
distinctly understood that the depositions which had been aistinctiy understood that the depositions which had been
alluded to were not taken in any way by the sanction of the
Government, but merely upon the responsbibily of the public officer at Glasgow. Lord Abinger said that it must be under-
stood that the trial was postponed with the consent of the Crown.

 Smith, in the Court of Common Pleas. The alleged forgery was
a promissory note for $2,8755 \mathrm{~L}$, , stated to have been given by the late Robert Smith to Miss Bailey, the sister of the Doctor. It
will be in the recollection of our readers that the late Robert
win Smith was rather a celebrated character, residing in the neigh-
bourrood of Seven Dials , that he war aniser, and died intes.
tate. After his death, Dr. Bailey presented the promissory note tate. After and alsor, an O . O for the same amount to the admi-
 sw ure that the note had been given to himl ly Smith. The Jury,
however, did not believe the rev. gentleman's evidence, and ree. turned a verdict for the defendant. Subsequentyy the rev. gen.
tleman was apprehended on the charge of forging the promis.

 Winl iam addressed him in the following terment, - Prisoner at the
till
bar, it is my unwelcome duty-and unwecome with preat truth bar, it is my unwelcome duty-and unwelcome with great fruth
 example, either one way or the other, was sure to be attended
with effect-a person, my equal, wh.om $I$ am compellect to address after the verdict of the jury, upon evidencee which has satisford
 now stand is the most poignant punishment for the offence you to show that the law of England regards all men as equal, and
not to break its enactments. The sentence upon you is, that
You be transported beyond the seas for the term of your natural iffe. The prosoner on hearing the sentence bowed to the Court,
and waiked frmly away from the bar, apparently not at all af and waiked firmly away from the bar
fected. The triall asted for 12 hours.

REGULATIONS FOR THE OBSERVANCE OF EXHIBITORS 1. Eximbitions.-The Exhibitions will be open to all Competi2. Time por the Reception of Subiects

Exiribition.-In order that the subjects received for competition may be promptiy arranged and displayed to advantage, exhiSitors are requested to communicate their jntentions to the Se-
cretary, previously to the several days of exhibition, specifying creary, previoussy to the eversi days of exhibition, specifying
the robable extent of table-room, in square feet or otherwise, which their plants or flowers will require.
At hall-past Etight oclock in the morro.
will be precisely the gates
after which time no subjects ior competition cann, in any account whatever, be received. Exhibitors are requested to bear in mind, that the Judges must proceed at Ten oclock to examine the merits of the sub.
jects exlibited, by which hour the setting and arranging of all jects exlibited, by which hour the setting and arranging of all
plants and fowers must be completed; and as exhibitors alone re supposed to know their own Exhibitions, they are specially requested to apply to the Clerk for Tickets to attach to them,
and to see that all their Exhibitions are marked and entered in the books with the proper letters.
At Seven $\mathbf{o}^{\prime}$ clock in the Ahen all flowers and plants will be delivered unt to the Fxlinhitors,
 morning; but no persons whose services are not required in that any persons remain after Ten o'clock who are not engaged by the society.
All persons who supply objects for Exhibition for which awards are orfered, will be readmitted to the Garden at Two o'clock, by
delivering up at the workmen's gate their Pass-ticket, for which they must apply at the office berore Ten oclock ticket, for which all plants be distinctly labelled with their scientific names, anic he places whence introduced, when practicable. ter their plants are to be exhibited; and they are particularly re quested to observe that no omissions or mistakes arising from im proper entries can be rectified after the awards have been made.
Exhibitors who shall obain \& First prize cano Exhibitars who sham obain a First Prize cannot receive any
other award in the same letter, except in F. G., and from U. to 2. Z. inclusive.
Objects of decidedly inferior quality will not be received for competition, and the judyes will be required not to make any serve such a mark of distinction. No Judge will be appointed from among the Fellows or Members occessful Competitors are requested to notify to the Secretary, vithin one fortnight ard desirous of receiving their prize N.B.- Exhibitors coming from the North. East of ofondon may approach the Gardens from Alony-street by the Cambridge Gate.
Exhibitors from the Snuth and from the West may approacla by NEW AND SUPERB SEEDLING DAHLIAS on HACKNEY, LONDON :-

|  |  |

In some observations we lately made upon the preparation of Roses for growth in pots, we mentioned, upon the authority of a correspondent, that the Boursault Rose was employed successfully as a stock for such a purpose. If this variety is selected, choice should be made of the common semi- clouble
sort, with deep red flowers, on which, as is well sort, with deep red flowers, on which, as is well
known, Roses take very freely by buds. It has, however, been suggested to us that Rose de Lisle would be still better for a stock, because, not only do buds take very readily upon it, but it is less disposed to throw up suckers. Those who are interested in Possibly each may have its advantages.

Although we are convinced that the nuisances which everywhere exist in consequence of the accumulation of stagnant filth will never be effectually abated till some such Drainage $A$ ct as-we have already recommended shall have passed, yet we entertain no doubt that in some districts much might be done by a little unexpensive contrivance. Cottagers, in particular, by which their personal comfort and the productive ness of their gardens may be so readily increased.

It is the usual plan with these persons to throw everything, ashes, sweepings, peelings, slops, \&c., upon a heap, close to their back cloor, without the slighiest regard to cleanliness or health. Now such accumulations cannot but engender pestilent diseases, Which are just as dangerous to their neighbours as to themselves. Nevertheless in a great many places there would be neither trouble nor difficulty, and a Very littic expense, in entirely stopping this sort of cottager should be furnished with the means of burying all sorts of household refuse as soon as it is formed; and that the same amount of trouble which the refuse, should the back door and to throw down the refuse, should be sufficient to bury it. It is obvious that this can only be done by means of tanks With a movable cover.
possibly put a cotrager to unusual trouble, he will gain for his garden less than the additional trouble to which he is exposed ; or if he does not think so, his thing. If and that will practically amount to the saine the sake of you ask him to incur present expense for to hime of future gain, you, in the first place, propose which, if hat which he has not the means of domg, or, Which, if he had the means, would not be so evidently costul as he knows the money to be which it would ing the Turnish a cottager with the means of avoidlang the creation of nuisances must generally be a cottager business. We belicve, however, that the the cost, if hiself might be induced to bear a part of The best his part was nothing more than labour
would best kind of receptacle that could be formed work, be an underground tank, constructed of brickwhich should with roman cement, the mouth of Which should be carried two feet above the groundcontrivance furnished with a hinged lid. But such a much tonce would probably be, in almost all cases, the following expensive. We would therefore suggest 6 feet deep, and 4 . feet in diameter, were considered sufficient, we should construct it thus: Let a hole be bottom feet deep, and 8 feet in diameter; let the and chalk in "puddled" firmly with clay, or clay and over that a chalk county, to the depth of 2 feet, done in mat place one layer of bricks on edge, as is bottom watering stable Hoors: this would make the a circular wall, in the samen upon this foundation raise only form a layer of same puddley as in building a well, and in the inner face of this, bed the bricks. From 2 feet, and on that fix the worn wall to the height of that a plan of that fix sort would be sufficiently water It would the purpose to which it would be applied and wooden a very small sum, chiefly for the bricks ing purposes, might be employed; in many places
the earth excavated would be stiff enuugh to convert into puddle; and at all events the chief expense of
clay, if it has to be procured would be the corte Clay, if it has to be procured, would be the cartag

When in possession of a tank of this sorecute. be taught to throw into it refuse of all kinds, old rags, cinder ashes, bones, soapsuds, pot-boilings, Potatoparings, especially if boiled (as always ought to be the case in a cottage, in order to avoid the waste of Potatoes), straw, weeds, leaves, refuse vegetables, and
so on. In addition, a drain should run into so on. In addition, a drain should run into the tank, were done, no water would have fluid refuse. If this whole mass would by degrave to be added, but the forming a material of the richest fertilising description. Its smell would no doubt be offensive, but infinitely less so than if exposed to the air; and one pound of bleaching powder, worth $6 d$. now, but capable of being sold fir cheaper if the demand were larger, would purify bleaching powder, the mere throwing in the absence of to time a few shovels of try that abounds, sawdust, ory earth, some peat where would take off the smell to a or any such material, improve the quality of the mixture. The contents of such a tank, when putrid, may be taken out in buckets; garden, or be mixed my be dug out and applied to the garden, or be mixed with more earth, and allowed to remain in a heap till it is wanted. In those cases the neighbouring farmers, who, if they buderstand their interest, will readily buy it. If sold at the price of common farm-yard dung, it would well repay the cottager for the little trouble it cost him to prepare. but, in reality, it would, if prepared with skill, be wort our or five times as much.
added, is, that the slops and soansuds will of them elves supply as much or more liquid than is requisite to enable the mass to putrefy properly
Long before attempts were made to analyse organic substances, and to discover their ultimate elements, experience had shown that animal and vegetable matter in a state of decomposition greatly increased the prosurprising that the exact state of decomposition which produced the greatest and most lasting effect should not have been accuiately ascertained for every variety of soil ; and that, at this moment, the question, whether, fresh, half-rotten, or entirely decomposed organic matter is the most useful and econoreason of this uncertainty is the little attention which the cultivators of thesoil are in the habit of paying tomany of their own opexations, and the contempt with which learned and scientific men at one time looked upon all the mechanical arts, and more especially the tillage of the land, generally left to servile hands. But a new era has sprung up: men of science now perceise the vast field open to their re-
searches; and agriculture obtains the rank which its searches; and agriculture obtains the rank which its
importancedeserves. We may therefore hope to see new light thrown upon every subject connected with the cuativation of the soil.
It may perhaps appear superfluous to lay before practical farmers the importance of great attention to the ranagement of the manure collected in their stables and farm-yards. It would seem impossible that a man should have farmed many years without knowing what is most efficacious and economical. Is it to be supposed that the scientific man will from his closet point out facts which the practical farmer has verlooked? Can his minute experiments, and the theories founded upon them, throw a new light on the subject? One would think not; yet when we examine the yards, dunghills, sheds, and stables of the generality of farms, we find very few in which the grossest errors and the most profligate waste cannut be pointed out. In some, the straw and dung are allowed to accumulate during all the time ing cattle are fed in the yards. In many, the surrounding buildings with every shower pour down a flood of water, which slowly percolates the mass, and often runs off by drains into ponds and ditches, and thence into rivers, carrying off the very esser.ce of the dung, as may be seen by the brown colour of the water, or else stagnates in sume hollow parts, chilling the dung, and impeding its decomposition. In the stables there is a constant pungent smell which is produced by an accumulation of the fluids formed there, unless it be allowed to escape by ample ventilation. Its presence is an evil, and its dispersion a loss: few farmers know the cause, explains the cause and suggests means of removing the evil. By a minute attention to all the circumstances attending the decomposition of animal and vegetable matter, it discovers the spontaneous changes which take place, and finds means to regulate them, checking or promoting decomposition as is most convenient and advantageous to the farmer. Thus the
oldest farmer may obtain useful hints for the con struction of his dung-heaps from men who never hannled a dung-fork. It does not follow from this that he is to adopt every suggestion, of which some may be fanciful, others uncertain: but let some attend to common sense: let him put fith in the facts which science has clearly established them according to his own judgment and experience he will soon see the advantage of some reforms in his operations, and his eyes will gradually be open to his real interest. One or two experiments will not suffice to establish an improved practice, because so many circumstances interfere with the sesult. The effects of temperature, moisture, and evaporation have a great share in producing different, and sometimes contrary, effects, in similar experiments : perseverance and patience will, however, settle many points which may stili be involved in doubt. Farmers are proverbially slow in adopting improvements: it is well that they are so; for if they were to adopt every thing which is new, they would most likely sufter many obstmate adherence We only wish to remove an clearly shown to be erroneons, practices which can be clearly shown to be erroneous, and a ready adoption of every improvement which is clearly proved, by experience as well as theory, to be advantageous. Un this principle we will avail ourselves of our owr experience, as well as of the facts discovered by science, to diffuse a knowledge of the most profi able mode of increasing the quantity of entiching manure on a farm, and of the means by which its efficacy

In the late Number of the Journai of the Royal Agricultural Society, Mr. Pusey mentions incidentally that gypsum, or sulphate of lime, has not been found to answer as an agent for destroying the volatility of This does not correspond with for fixing it in manure. This does not correspond with such information as we possess, or with such experience as we have hat on the subject, and we cannot but think that there must be some mistake in the statement: for assuredly if sulphate of lime is brought jnto contact with ammonia, under favouralie circumstances, the lime will be separated, and sulphate of ammonia, which is not vola tile, will be formed. Neverthelers, since a doubt on the subject has been expressed by such deservedly high authority, we would strongly recommend those of our readers, who have the opportanity, to determine the question experimentally; for it is of very great im portance, and cannot be too soon settled one way or the other.

Professor Henslow, in a letter full of good sense, adaressed to the Editor of the $B_{\text {inry }} P_{\text {ust }}$, recommends the following mode of trying the experiment:-
"Two dunghill's are to be prepared, as nearly alike in all respects as it is possible to make them; one with, and the other without, the addition of gypsum. To seprarate and equal portions of the sance feld are to be manured With these. I shall say nothing about the respective quantities of the materials, or the time they are to be allowed to rot. A lutle variety, umung the numerous necessary, to the speedy dur of, whll be uselul, aud indeed problem to be solved. Let the gypisum be sifted over the several layers as they are deposited in one of the baps. I would suggest there should be ubout enough to just cover the surface, witbout placing it on very thick. The returas stould give precise information of the following particulars, and any others that may suggest themselves.

1. The quantity of straw used in each heap.
2. The quantity of animal excrement
3. On what day each was begun.
4. On what day each was completed.

On what day they were carried and deposited in the soil.
The number of loads, and weight of each
The extent of land manured uy each
8. The quantity of gypsum used to one of the dunghills. N.B.-A cotrpuratively small quantity is all that can be required.
9. Any difference in the coming up and appearance of the crops on each piece of land.
10. When each arrived at maturity
N.B.-It is needless to reply to this question by guess or estimate. It must be answered by the guess or
12. Any peculiarity in the qualities of each produce." Another method where favourable opportunities exist would be to use the mowings of a lawn, this is done, the mass ferments violently, rapidly comes on, and a great quantity of ammonia and sulphuretted hydrogen are given off. We would allow one beap to decay in the ordinary manner; to the other we would add oy ssum, as pove recome mended; and we would afterwards try the beaps one ayainst the other

Although," says Professor Henslow, "these particulars may require nothing more than an orlinary degre of inteligence, and a little industry to note them, yet, if hey are correctly stated by about 50 experimenteis, without any attenopt to coax the results into accorde
ance with previous notions and prejudices, they may determine a very important problem in the present state of agricultural science."

## ON PLANTING.

OAk, Elm, Beech, Sycamore, Spanish Chesnut, and some other trees, when planted so as to stand clear of everything else, are apt to thr equal strength, which sometimes cause the trees to nearly forked, and leave no straight stem. When there are grow forken, and leave no straige, the best method is every many shoots of neary to the stem from three to five of the year to remove close to troightest and best only is left for strongest, so that hes stem or trunk of the future trees.
A person who understands the nature of this work (and kny one of common capacity might, with practical instruc tion be made to comprebend it in a few hy repeating thus thin out vast numbers in a day, years, he would train this once or twice annually for a few years, up thousands of fine trees in lieu of mese with in most plan objects
tations.
Any one who takes a pleasure in rural affairs migh effect this for his own recreation, while walking or riding through his plat instruct an of his servants or labourer now to do it, and judge when it was properly performed.
When it is considered what a number of trees a skilful person could go over in a day, and when we look forward to the value of a well-formed tree of any kind that has arrived, at maturity, compared with one of those huge ill-formed ones that have been negiecround for 50 or 100 down, after having encumbered the ground for 50 or 100 years, is of little value except for the fire; and when we contrast the difference, and reflect that a few cuts of the knife would have made it a tree of great utincy, how much is it to be regretted that such important results should be lost, from the want of applying annually so useful and
simple a remedy! We frequently see near"gentlemen's houses, where plan tations are made for ornament and shelter, a quantity of trees planted thickly for the purpose of making a blind as quickly as possible ; these are suffered to grow up without one being removed or pruned, until the side branches killed and the, trees become nak other that pruning will be of no avail, some of them should be taken out entirely. By attending to this simple rule, permanent trees, with the branches to the very ground, if required, may be obtained. Some may be left to nature unpruned, or trained the taste of the proprietor
If young persons, when they begh to plant, would but well consider these things, they might live to see valuable and ornamental trees of their own planting flourishing round their domains. In lows situations, where the soil is rich and deep, and by the sides of drains, Ash or Elm may be planted, with any of the Fir-tribe, either separate or mixed, as may be judged expedient. In high and cold situations more of the Fir-tribe may be more abundantly planted; where the Larch will thrive, however, it is pre ferable to any other.
The Sycamore thrives well on high, bleak situations and looks well as an ornamental tree on the outskirts o plantations, or in high lands, if the ground is hilly; it bushy, dark green foliage, makesit a conspicirch, Poplar Sycamore trees, more of the Mountain Ash, Bird Cherry, and Hazel should be introduced; wher coif rods and etherings for hedges or other purposes are saleable, a
To ensure success in planting, it is evident that the ground should be laid dry by draining, and that the place where the plants are to stand should be raised with good earth ; this will cause the ground to be much drier, and can be done at less expense than by digging holes previously. The tender shoots of the Spanish Chesnut are less liable to be killed by spring frosts in high situations than in low or moist places; whence it appears that this ree will thrive in much higher and colder districts than generalily imagi
The Chesnut, Maple, Ash, Beech, Elm, Sycamore, and Silver Fir, will increase in girth 1 inch to $\frac{13}{3}$ inch per year on an average of 100 years, if they have sufficient room to make branches. This must show the utility of thinning and pruning woods in proper time; Oaks, if they have sufficient room, will, on an average, increase about an inch or little more in girth every year; but by neglect or mismanagement, this may be retarded, so as not to increase more than a 4 of an inch yearly. In 20 years from planting, with early care and proper management gentleman may look forward atter taking from 20 inches to 2 feet and upwards in girth. $-R$.
ON MANURING WITH GREEN CROPS.-No. IX. (By Professor Charles Sprengel. Translated from the German.)
TThe ${ }^{2}$ mmon Magdeburgh acre consists of 180 square roods, or 25,920 feet Prusslan, which is about $\frac{9}{10}$ of an English aere.]
Plants wich are used for Green Manure without being sown.-In the neighbourhood of the sea and in similar places some of these plants, which the waves have thrown ashore, or tifich grow in lakes and stagnant waters, yield a very powerful manure.
(Lemna), Pond-weed (Potamoget Lophyllum), Bulrushes, and Fern. 1. Chara (Chara).-The species of this genus are all annual, and grow only in stagnant water, rich in saline matter, whence we may composition. Chemical anterysis confirms this, as 1000 lbe of the green Chara (C. vulgaris) consists of 158 lbs of carbonate of lime, mosily deposited on the plant itself, 8 lbs of chlorine, and 12 lbs . of soda. They contain, moreover, a great quantity of nirogen, as much as 3.9 lbs . in 1000 lbs . of the green plant. No doubt they also contain much sulphur, and phosphorus in abundance, for in their speedy decomposition much sulphuretted and phosphoretted hydrogen are developed. Although growing in water, they contain a comparati 596 lbs . of water), all which leads us to he green plam, shat even in small quantities they must be ae a pow, that if used too copiously they produce a too lux uriant growth. In collecting the Chara for manure, it is drawn out of the water by hooks used by a person standing upright in a boat. It is then collected on shore, either in large heaps, where it is left for some time, sprea thinly and at once ploughed in . The latter plan is the best; because, when Chara rots in heaps, it loses much gaseous manare, itted hydrogen, \&c. The quantity of Chara required for an acre of land is 9 or $10,0001 \mathrm{bs}$., which Chararequred equal to a strong manure of dung. The crops will grow well for the next 3 or 4 years-a circumstance easle 801 s. carbonate of lime and 201bs. herbage the Barley succeeds best after Chara. nitrogen to lead or various-leaved Crow.foot (Ranunculus fluviatilis, $R$ aquatilis). -These often grow in large quantities in shater, or in slow, shallow rivers and brooks. Like the preceding, they are drawn out of water with hooks. It is best to plough them in a greater but, as they do not act as powernily ases, they are also quantity must be used. They have not yet been chemigiven to catte
cally analyzed.
Hornwort, like Chara, is incrusted with carbonate of lime, and acts more powerfully. Duckweed deserves less attention.

TRELLIS FOR CLIMBERS.

## AMATEURS' GARDEN, No. VI

 The sudden change in the weather on the evening of he 3 rd inst., which brought on $12^{\circ}$ of frost, no doubt injured the greenhouse plants of Amateurs as well as practical gardeners, and induced a lusuriant growth, they were in consequence rendered more susceptible of injury than if the season had previously been more rigorous. them with water at a temperature of $40^{\circ}$, by which the water loses $4^{\circ}$ of heat, and the plants receive heat in the same proportion, and are thus brought to a temperature of $36^{\circ}$, but little injury will have been the result, further than that the plants will have sustained a severe check; but if the sun was permitted to shine upon the plants, or the house was suddenly heated before ruptured that theretheir tissue will have been so much ruse their tissue will have been so much ruptared to the sound
will now be no remedy but to cut them back wood, and excite them gradually into new growth. It is highly important that plants after being frosted bo excited very gradually, because it is evident thas a hrovt, sumcienty
severe to destroy the foliage, must also have acted injusevere to destroy the foliage, must also
riourly on the the interior of the pots; and therefore any attempt to stimulate the plants into new growth before they have made fresh roots must be attended with unsatisfactory results. Hence it is necessary to ventilate the house freely, and not to
attempt to force the plants until they show sigas of
growth. These remarks apply particularly to soft-wooded things, as Pelargoniums ; but with hard-wooded plants, their their not being stimulated by heat.

Tender plants in the open air generally suffer more from spring frosts after a mild winter than they do after a evere one ; as, in the former case, they are excited into premature growth ; while in the latter, they are kept in a dormant state until all danger of frost is over. Hence, s I remarked, relative to the management of tender Roses, it is not protection that they require, so much as reatment to keep them in a dormanlote shor be so eason, in mild whats, the a ders plants shoulerials so contived, and con an, sequence of the air confined in their stas, hat, by mitting a current oll will De actually colder infuence of the atmosphere, by intercepting the radiated the night, the cor will , in the heat, render the internal some degrees anstur will see exterior air. From these remaks, the Amalenr win see an $n$ dote in a nild season to keep to they shoula be protected from that to Pelargoniums which it is intended to boom in the tesuluse mas pots ; and the branches must, wor, large symmetrical plants are desire. in _ovember will fower in May, a secona at shird about be stopped to fiower in June and Jay, and a Soub For midile of April, to bloom 1 Aagust ase sopt onything owing the Pelargonium, 1 have never found anyyear equal to the parings of grass verges, or thin turf one year old, and leaf-mould and peat-earth, in the proportions of four parts of the former to two parts each the latter, roughly mixed together but not siten. Ia fact, I never sift soil under any circumstauces, uniess for the purpose of taking the fine particles out and using the tury portions only. This compost, with the admixture of a little sand if the plant is delicate, or loam, if of hax uriant growth, will answer for all kinds of greennouse plants, with the exceptionts.-W. P. Ayres.

## HOME CORRESPONDENCE.

Grafting as practised by the Ancients.- The Gar tions on the subject of biblical botany, in which, in common with several of your readers, I have felt much interosted I am induced to trouble you with the following, in the that it may attract the attention as well of vegetable ope with the interesting subject of the botany of the Bible and in the horticultural practices of the ancients. The point to which I wish to direct attention is that of graft por $n$ pomans, not in reference to the gas a particular point of it: namely whoke questio buib a peen common o grafting from wild plants on a cultivated stock. We are in the habit of poing exactly the reverse, and by this n the prestiar characteristics of our es there fruuld be no object in grafting from wild plant on any of these cultivated stocks; but where the produce of a wild plant is of a useful nature, what would be the effect of grafting on a culivated stock? would the grafted branches be more vigorous-would they be more prolific--or would thet be merely useful in filling up blanks in a tree in full bearing? These questions will perhaps be more intelligible if I adduce the Olive as the plant on which this method of grafting was practised. "We read in Holland's edition of
Pliny, xvii., clh. 18: "In Barbarie, the people have this Pliny, xvii., cll. 18: "In Barbarie, the people have this Olive stocke whereby they continue a certain perpetuity; Olive stocke, whereby they continue a certain perpetuity for even as the boughs that were graffed and (as 1 moy say) adopted first, was old and grow to decay, a second quickly putteth forth afresh, taken shew and tree, and in the same old stocke sheweth young and lively ; and after it a third successively, and as many need; so as by this means they take order to eternize their Olives; insomuch as one Olive-plot hath beed knowne to have prospered in good estate a world of yearel This wild Olive aforesaid may be graffed either with scions set in a clift, or els, by way of inoculation, with the scutcheon aforesaid." Pliny himself describes the whol much more briefly, e. g. : "Africæ peculiare quidem Oleastro est inserere. Quadam reternitate consenescub proxima adoptioni virga emissa, atque ita alia arbore ef eadem juvenescente: iterumque et quoties opus sit, it ævis eadem oliveta constent. Inseritur autem Oleash calamo, et inoculatione." The Olive is well known, and is universally acknowledged to have heen early cultivated by the Romans, and in Greece, as well as in Syria and pro lestine. The Oleaster has been a subject of dispute, cause this name has been applied to different plants, whis we need not notice on the presentoccasion, inasmuch a think the practice of grafting the Oleaster or Wild Olive the cultivated Olive, so as to "eternize" their Olive pla tations, proves beyond a doubt that the terma Oleaster of ien, if not usually, applied to the true Olive, or Of europea, when growing in a wild state, as no grafting of plants of other genera-or, indeed, of species ever could haro produced Sives, even if they had takike as grafts. The passage of Scripture which this practia tends to elucidate is that in St. Paul's Epistle Romans, xi. 17, where he warns them against selfdence, \&cc.- "And if some of the branches be browng and with them partakest of the root and fatness of the Olive-
tree; boast not against the branches," where the Jews are compared to the natural branches of the Oive-tree, and the Gentiles to those of the Wild Olive-tree, gratted in place of the natural ones, which had been broken off. again in verse 24. "For if thou wert cut out of the Olive-tree, which is wild by nature, and wert graffel contrary to nature into a good Olive-tree, how much more
shall these, which be the natural branches, be graffed into their own Olive-tree"? These passages puzzled many commentators, until Bredenkamp ascertained that it was the practice in ancient times to engraft the widd upon the given by the editor of the "Pictorial Bible;" but then
the Elæagnus is adduced as the Oleaster or Widd Olivetree. Theophrastus and Columelia are also mentioned as describing the same practice. Can any of your readers inform those interested in this subject, whether this practice is ever followed in the present day with the Olive in
the South of Europe, or other places where it is culti-vated-or is it adopted with any other tree which may bear useful produce in a wild state? I believe something of the kind is sometimes practised when it is wished to fill up a blank in trees, where branches have been broken off accidentally. Would it be useful in cases of decay, vigorous, or bear more plentifully, than if grafts had been taken from the cultivated plant? Or did the ancients only and easily procurable? - $\boldsymbol{R}$.
Timber.-It is well known that when Oak trees are felled at the usual season, i.e. the end of April, and are
stripped, the sap, or outer part of the timber, is quite useless; it being liable to decay, even when kept dry, in timber is felled in the winter, before the juices have risen at the tree, this sap, or outer part of the timber, is from experience. However, if the timber is felled in the winter, the bark cannot be stripped, and is lost. It has occurred to me that the trees might be pollarded close in the stripping season, and the bark stripped from the till the following winter, when it might be felled. Would the juices of the tree return into the ground through the stripped trunk, so that the sap or soft part of the timber might become as durable as It is a common practice to strip trees while standing, and to leave them so till the succeeding autumn, with a view to the improvement of their sapwood; and a good practice it it. It would seem taining much nitrogen, which is very abundant in trees in the spring, but disappears by the autumn.]
The Baloot Oak.-The name given by your correspondent $r$. to the Holly-Oak of Afghamistan has apparently, the local name in the Affgban, or in some other Indian dialect. There is a prickly-leaved evergreen Ouk, resembling a Holly, which is found in Spain, and which is said to extend along the conston and Mauritania, and to be found as far East as Babylon and Mesopotamia. This is the Spanish Bellota, more properly, perhaps, called the Encina, for Bellota would appear to be the name of the fruit, (which is good to eat, and when roasted is not
unlike the Spanish Chesnut,) and Encina that of the tree unlikelf, as we may learn from Don Quixote (Part I., Chap. Bi.), when the knight and commences a eulogium upon the Golden Age-a time, he suid, when no food had to be caltivated-when all that was necessary was "alzar la Greek oak, "Valonia," and the ancient "Balanos" (Acorn) from which it is derived, are not without resemblance to "Alon;" but the Affghans, although claiming descent from the children of Israel, have nothing in common with the Hebrew language. Can you tell me whether the Baloot of Affghanistan is the same tree as the Bellota of Spainand if so, to what language they owe the origin of their Ballota of Botanists, a species very nearly the same as $\mathbf{Q}$. lex, the common evergeen Oak. There is no authority although it may possibly be so, because there exists in the Himalayas the Quercus incana of Roxburgh, which is probably nothing more than an indian form of the Q. Botany of the Himalaya Mountains, (a work, by the way, which oughit to be in every public library in the country, Indian bazaars under the name of Bulloot; and further Bulloot-ool-mulik.]
Cultivation of Roses in Pots. The following plan of growing China Roses in pots, which I have successfully perly followed, the cultivation of Roses in pots will be perly followed, the cultivation as easy, and will present as few difficulties as that of any other plant. As soon as the seeds of the Common Dog Rose are ripe they should be gathered, and in the
month of February they should be sownon a bed where they may remain until the following autumn; then let the young plants be taken up and potted in 48 -sized pots, prethem in a bed in the open air, where they may remain until the beginning of July, when the weakest plants should be pinched back to thee four inches above the thia will cause them to throw out laterals, and the plants
will look a year older. Towards the end of August the plants should be budded; in the month of Novenaber and all thore headed down to with be removed. They should afterwards be potted in 32 -sized pots, and protected during winter from frost. In the month of January, I start them into growth, by placing the plants in a frame heated by dung and as soon as the buds have pushed about three inches finch of the ster once or twice until the plants have formed heads, and if any suckers or shoots from the stock appear, they should be immediately soover By fin fine weather and following By giving plentions, as fine Roses may be abfollowing the abon of May as can brown in the open ir during air durng any period the rear. be potted. After pruning them well back, shake most of the soil from the pruning them well back, shake mosia shift them into pots a size larger : under this reatment they will stand for several years. The reason why prefer the Dog Rose for stocks is, that the flowers wil last longer, and win be of anner colour apy that apon any other stock. Many perseat so early an age. It not, however, the strongest stock that produces the finest flowers, but the one that makes the most roots 1 am larta that stock can be produced from cuttings or layers which will root so well as seedings. Other kinds of Roses as wel as China will do well under this treatment, but they do not require to be pinched back, otherwise they wilter the Quatre Saisons than on any other stock: viz. th Banksian Rose, R. berberifólia, bracteata, and multifiora Many other kinds also do well upon the Quatre Saisons pres 1 would propagate from layers, rots, prefer the latter, however, which, if taken fovered to the depth of autumn, and lail in the ground covered to up plenty of sure inches, will in the spring following the in th bed until the autumn, when they should be taken up potted, and treated in the same manner as recommended for the Dog Rose. Many China Roses do well on the have they so bright a colour. If I wish to grow Iarge Standards in pots, I procure in the autumn good plants of the Dog Rose from the woods, cat and carefully remove all laterals or suckers from the roots. I then put them in 24 -sized pots, and plunge the pots in the ground, where budded. In the are cut back to about an inch above the bud, and are not allowed to flower the first

By piaching off the blooms as soon as they apjoar, the Roses Baumann.

Amaryllis Belladonna.-No wonder, though some of your correspondents are surprised at it, that this fower has appeared, as to soil, treatment, \&cc., and during six years I have never had one in flower. Can you add any new prescription to all the former? for I will not throw away my bulbs yet. I am equally unfortunate with A. spethem all in a warm S. border, but never get beyond leaves. -A Country Vicar. [A. belladonna has been growing many years in the garden of the Hort. Soc., at the foot of a south ware than being protected from wet winter by a thatched roof attached to the top of the wall; and it flowers beautifully every autumn. A. formosissima (the Jacobea Lily) must have two or three months' drought. Crinum capense requires a wet situation. See The Dean of Man Bees. - In the Chronicle, at p. $53, \mathrm{Mr}_{\mathrm{r}}$. Grant has given an interesting account of the manner in which he managed his Bees during the last season, and likewise the drawing of a hive on both, with the view of adding my mite of experience to the knowledge of Bee-keeping. The irst paragraph I shall notice is, where Mr. G. says, am of opinion thet;" of course meaning not confined own natural insturt; winter. If the instinct of Bees was not obedient to the laws which govern the climate whence they originated, this might be true; but as it is $\approx 0$, there is sometimes instinct or will, especially in winter; as they are often deceived in our variable climate by the fitful warmt of the winter's sun, whose transient gleams cause them to sally forth and fall benumbed upon the snow. Moreover it who at this season is a hungry spy upon Bee-hives will stily rap at the door and devour the inmates as they appear to answer his cunning caln. Again, Mr. G. men tions that his "Bees left the hive on the 25th of Dec. case in May." This I do not doubt; but the Bees would have been better at home, for any nourishment whic they would get at that period. mild winter would have been fatal, espacially to weak hives, by arousing them at on improper time by keeping them torpia. 0 preserve the hives cool by shading is better than to allow thees wan adopted, ${ }^{1}$ a very small hole will allow sufficient air to the Bees, and there need be no fear of their striving to enlarge it, as was the case with Mr. if the condensed steam from the hive had not rested upon
it, the Bees would have taken no harm ; indeed they are fond of sipping it with their proboscis. There is danger, however, and a great one, when there is much condensed steam ; because it makes the hive unhealthy for the Bees, and gives rise to the plan of ventilating them in winter; but in drawing oft the damp air, there is a danger also of admitting more from the atmosphere. The next thing I shall notice is, where Mr. G. says "Up to Dec. 26 , I only witnessed three dead Bees from my hive, there being no Drones to kill." If the first part of this sentence mean that only three Bees cied during the season, it is strange indeed, for Bees are short lived ; in fact, there must have been several hundred dead Bees instead of three. As to there being no Drones in the hive, Inever knew a hive without them at the usual time. By the bye, Mr. G. considered that two of the dead Bees alluded to, must have been "strangers or unruly members of the community," He was led to think so by seeing them stung to death in front of the hive. This, however, might happen, though neither was the case, for Bees have a dislike towards their sick; nay, if they happen only to lose their wings, they are cast out of the colony. This shows there is an inherent enmity in insects towards their sick, as well as in some kinds of birds. Mr. G. truly observes that it is a bad plan to lift the bive from the board after the seaon is past for the Bees cannot collect propolis to seal it on H . jurious to Bees, Now, when smoke is used, that from年家e puff-balls is the safest and best. Amateur Beelarge puif-buls is to se withont it when it can be had. I shall now I shall ion one is, that the central part is boxes are lined with India-matting. This is an improvement, for stre is a bad conductor of heat and is of course more congerinl for Bees than wood; but I question after Mr . G has tried his hive a season or two more, whether he will tell us again that it prevented his Bees from swarming, and obviated the complaint of a "despairing Bee-keeper, viz.y that Bees kept in boxes generaly die during the winter. This too common complaint is not owing to the wooden boses, but to the brood being una voidably destroyed when the honey is taken; man of the Bees left being of an age to die before the following spring.-I may subjoin that at p. 69 , We presence to wooden ones, says, "In the former, the atmosphere pene trates at innumerable orifices, and in small quantities, without draft." In a strong hive, however, this will na loug be the case, for the inmates will soon seal or fathe glaze with propolis the inside of their dwelling, to wa air-tight. W.W. also recommends robbing Bees at night ; why not do it in the midale of a fune day when many of the Bees are abroad? However, with his Beedress and glass eyes he may face Bees both by night and day.-J. Wighton.
Gold Fish.-Having latterly observed in the Chraziche some interesting communications relative to the preservation of Gold Fish, or I believe, in more scientific language, Cyprinus auratus, I am desirous of addiog my mite to the fund of general knowledge already possessed respecting much at variance with what appears to have been the experience of previous correspondents, it may be proper that i should first assure those who are interested in this mater that my object is not to call in question the veracity of their statements. I wish merely to direct their attention to a circumstance which would seem to show that the habits, or rather the hardiness of the fish in question, is would refer occurred during the winter of 1825 and 1826, which has not since been surpassed either in severity or duration. At Bretton Hall, near Wakefield, in what was calied the plant-ground, and on a level with a gravel walk, stood a semicircular storie cistern; being on the traight side, about $4 \frac{1}{2}$ feet in length, and 2 feet in depth. The plant-ground being frequently visited by the family, The plant-ground beng frequr the principal walks leading through it, three of the finest of the par fin round in which they were preserved, and placed in this cistern. Here they remained during the summer, and were entirely forgotten, until some time after the rost had commenced; and, indeed, until the jce on the cistern had become so thick that no doubt and therefore entertaised that the fish waren paid to them. The frost of further and during the greater contion very little, if any, of the part of thave remained in a fluid state. water in the cistern conter in freezing (it being confined The expansion of (he ice to be by the thrown upwards, aner by this means the fish were occe its surface, whed with air, I shall not venture to state slonally suppliedion, however, must be, that the exclusion my air by the ice was as complete as the nature of ice could of air be the rendingediately united by the frost At the ond of again $u$ months, when the frost subsided, the abou tharly disappesred, I examined the and the had nearly fish only alive but the cistern, and found cosaing not all in in excellent con dition; cer placed there al in less vigorous healt preceding summer. That all gold fish are equally they are that in cases and under all circumstances they are capable of enduring similar treatment to pretend to affirm. I am, however, quite sure that the gold fish in Yorkshire, which perhaps do not differ in
any particular from those in other parts of the country,
are so hardy as to make it a matter of no importance whether the pond in which they are preserved be covered with ice for four-and-twenty hours or four-
and-twenty days; and it is equally unimportant whether, during that time the ice be broken once a day or twice a day, or whether it be broken at all. - R. Marnock, Royal
Boturic Garden, Regent's Part Botunic Garder, Regent's Park.
Sprengel's paper, at p. 52 , forcibly brought to Pry mind since, when I took a small residence, the property of an old gentleman who cultivated Tansy as a cure for some tions on the premises was to turn under an extensive and well-defined bed of Tansy; the east side of the bed was
covered over witl fine turf, forming the half in width of a new approach to the lawn. The turf over this portion
of the Tansy-bed always presented a most luxuriant ap pearance during my occupation; in fact, it was an eyether to be cut only every other day whilst the small portion over the Tansy bed ought to have been cut daily. ing I sowed Cos Lettuce seed, where the boundary line of viewing the Lettuces previously to being pricked out must certainly have mistaken them for two
succesive crops. The soil was a strong heavy clay. Fornyth, in his "Italy," points to the value of Tansy as
a green manure, so fur back as 1802 , but without seeming the benefit to be derived from such a course. In a distriet where manure appears to be scarce, where the far-
mer is obliged to resort to the distant sewers of the city Where "they send poor men and asses to pick up dung apon the roads, und at certain resting-places on the highWhy mey spread hiter for the cattle that pass to stall for of the invention, if 1 may be allowed the expression, to
keep the land perpetually in heart: for, says he, the "rich plain of the Wal d'Arno yields usually two harvests a year ; the first of Wheat, the second of some green crop;
which last is ploughed up [in] and left to rot on the field as munure for the next." $-I . \boldsymbol{K} . S$.
Worms and Curnoce
ment with one ounce of this mineral in an experiwater on a portion of my lawn, and nothing could bucwoed better. There were gathered up from this quantity stable-bucker.-Ayger. [Capital manure these gentry Spirits of Tar,-In your volume of last year, at $p$ B21, 1 udded my testimony to the utility of Spirits of Tar as a preventive to wire-worm in Carrots. No doubt contend; yet how numerous soever they may be, 1 am destruction or expulsion of the one would produce the same effect upon the other. Spirits of Tar, as before
stated, are useful in nore ways than one in the Horticul"Uural world, yet in whatever respect your correspondent it is only by experiment that he can prove the results. For that Spirits of Thar will destroy the Elater obscurus, or wire-norm. He advises me to dig Spirits of Tar into the
ground in Autumn, and to repeat the dose in Spring (as ground in Autumn, and to repeat the dose in Spring (as
belore purposed); this, I think, would be expense incur red to no purpose. In my former account I bave stated phat achate it, consequently, if frost destroys these pests,
Spirtts of Tar are of no benefit in the Autumn preparation of land. If, however, we were to apply Spirits of
Tar in Autumn (and supposing that they are not volutite), does your correspondent mean us to apply at both seasons the quanity mentioned by him, or the one half in Autumn
and the other in Sprug? and if Spirits of Tar are not volatile, why must the dose be repeated each succeedirig
season (see p. 53, of 1841)? If C. M'I as strongly at the end of six months as it did not suffice for two crops? I am afraid that when the re-
medy is applied to its cold earthy bed, the in less than six months, prove otherwise. The third apground, convinces me that those who follow the rules laid down by me in a late Number will derive advantage from favour me, through your columns, with his opinion as to Roisshire Gurdener. Aulive Guano.-In reply to your Stirling Corresponlast year the deposit of the Solan Goose, taken from Ailsa Craig, was tried agairst Guano, and the result was
that the Guano was immensely superior pared to say to how great an extent, as my informant correct in saying that I cwt. of Guano was at least equal periment was made, I of the solan Goose. The expaisley. Ias made, I think, in the neighbourhood of
Peen told that Sir G . Warrender is to instrute several experiments this season with the deposit Belyiant Carrose taken from the Bass Rock, - J3, you have given some advice as to the cultivation of white Belgitn Carrots, with
which I differ from you as to the distance of the rows They should not be more than 12 inclince apart, and the plants in the rows should be left from six to 9 inches
apart, according to the productive quality of the soil. If
the plants are thin, they split and grow bunchy headed, and are more apt to rot upon being stored. Forking the land, as I have described at p. 869 , of vol. ii., is the best plon of preparing the soil ; and in fact for almost all gardening and farming purposes the fork is superior to consequence which I hope will generally be abandoned. In many applications for these forks from various parts of plants bring a good crop. The field was forked that thick deep and the seed sown broadcast, having been previously mixed and well divided by sand.-One rod produced 628 at the , wieighing 521 lbs , being $4 \mathrm{cwt} 2 \mathrm{qrs} 17 \mathrm{lbs} .,$. or part of the field, where the plants were not quite so thick, the weight was 3 tons per acre less. The field belongs was observed on the occasion of taking them up, as it was to determine won.-Henry Dixon, Witham.
former won.-Henry Dixon, Winam.
Drainage Bill.-Why sliould not nei
Drainage Bill.- Why siould not neighbouring proprievalue to be ascertained in the same manner as land taken under a Railway Bill? I know an estate seriously i jured by a mill-dam not worth 306 . per annum, which belongs to a neighbour, but who wil not sell it, and thereby
Wells.-If your correspondent ( $\mathrm{p}, 70$ ) will throw a which is inarcual, thoroughly crushed, into his well, which is in a bad state from the circumstance of hay tion, I think it will remedy the evils of which he complains. Should it fail of success, it can do no harm, and the expense incurred will be trifling.-R.E. $\mathbb{K}$.
Polulo Painf.-Take 11 b . of potator
well baked aink.-Take 1b, of potatoes, skinned and weight of boiling water, and then pass them through a hair sieve, Add 2 lbs . of chalk in fine powder, previously mixed in double the weight of water, and stir the whole well together. This mixture will form a glue, to which or soolouring powder may be added, which are exposed to the action of the air. This receipt is taken from Bell's Weekly. Messenyer of the 30th ult. ; can you recommend
it ?-H.B. [We never before heard of this mixture, but we should doubt its being durable. Perhaps some one can tell us about it.]

## PROCEEDINGS OF SOCIETIES.

 Feb. 7.- J. Rateman, Hsq, in the chair. Mis. Alfred Hill, J. Gray,Rnd R. C. Giffith, Esgrs, were elected Fellows, Sir G. Staunton,
Bart. Bart., exhibited portions of the stem of the Sugar Cane, from plants
grown in a stove at Lest Park, where many of them attaisedt

 best kind for ealy forcing: a certificate was awarded for it.

downwards frem the diks, the under petals will be well depressed,
but the cuppmg will be these are the opmonim be grainit, and the certre bigh. Nuw
tho have a knowledge of the flower; a lecture delivered at the Metropolitan Society a very few years
 reftex. Our notions of jerlectirn may be estimated thas: rosc up to a complete half-circle with all its present beauties? Secondly, would it be better if, instead of the present reflection of If these points be conceded, our notions of perfection are established; for certainly in the beauty and accuracy of the petals Rival, as matician improve the circular outhe of the springield that time aware, that the concession of the one point must decidedly bad, but that too short a one was equally so setal was had always set down flowers described as having shor't cupped petals as worthless. They should not be short-they should bo
proportionate-for if they be short, the centre can never be he proportionate-for if they be short, the centre can never be high,
but will be generally hard and the fower flat. All tlowers yary so much, according to seasons and localities, that, however caref ful may have been our observation, there is still some risk in select-
ing any particnlar variety as the best, In the year 1811, President of the West was decidediy pre-eminest; 111842 it was
worthless. Inst it was equally bad. The finest blomon of any Dahlid he saw a fault was to be seen, ardiled by Mr Brapg. at salt hatil not was as chse and dolicate ats the smallest Hlcwer. Those who
have grown Lady Cooper in the neighbourliond of London, where not excessive even of there), candness of the eye though
notely conceive the dif-
ference. The next point was siranger
good, wound have the effect of damaging all the rest; for the
fower being composed of rows of petals, placed evenly one above Gower being composed of rows of petals, placed evenly one above
the other, in decreasing concentric circles, it must be obvous
 in which the pettals were placed in it, would have the effect of
causing a derungement which often pervades the whole fowerone petal displacing another throughout. This defect in some
varieties occurred but seldom, in others frequently, and in some varieties occurred bat seldom, in others inequenty, andin some
constantly in some it was acientai, in olhens conntitutional;
and if, in the later case, it were at afl considerable, it must br and if, in the latter case, it were at ail consilderable, it must br
fatal to the variety, Various instances of this derangement
wire given; and it was remarked, that, under such circum stances, censors were never justifed in attributing these
octurrences, in a new variety, to accident, and that the only occurrences, in a new variety,
safo course was to be governed bo fact, nad not not bo cone jecture.
Independently of the mere arrangement of the petals, the tran sition from the fully-expanded ones to those completely closed,
stiould be regular and gradual from the centre both with shiould be regula and gradual from the centre, both Some-
regard th the size of tie petal and to their expansion. Some
times all the expanded petals were nearly of the same size, when s disproportionate space must unavoidably be left between the
expanded rows and those that form the centre, which then always appears large and coarse, instead of compact, as when
formed by imperceptible gradations The formand heighlit of the
centre was then adiverted tot) thoultha sumker cent.e was a
 readily passed over thanin a croms or misshaper cye, than which
scarccly a grater fanit existel. The highest centres were not
always the beat formed; ; in some flowers they stood upright, as
and always the best for med; in some fiowers they stood upright, as
in Metcl d, instead of ruving qeatly and compactly inwards.
The scale, if perceptibie, was bail any here, but more so un the

through to the back of the petal throgh the
to self.coloured than edged fowers, in the thater of which the
colour was too often at the back oo the petal, and not on the face. The difference, however, oocasioned for for into the distri-
fation and cause of colour be could not enter) arose from the
but nerves at the back of the petals of dark fowers beirug of a light
colour, and those in light fowers being, on the contrary, dark, the colouring bellg apparently duffused in the one throughout
the intermediate spaces, and in the other drawn fiom them and concentrated in the nerves. The culour isthen stronger at the tip,
where they all meet together. It is of course more perceptiwhere they all meet together. It is of course more percept-
ble in some varieties than in others, but Eva, Penelope and
sceveral other flowers, might be mentioned as examples. Someseveral other flowers, might be mentioned as examples. Some-
times the colour also appears as a vein on the face of the petal. is still a desideratum, most of those we at present possess
bing only moutled. or faintly couded. Size was the only
remaining point. It was the only one that courd be detrimental rempaining point. It was the only one that coud be detrimental
if carried to exeess, and had been properly considered as of
the lcast importance. It was essential, no donbt, for (ast thad beeni
 never make a fowel gool, whier cas with lesm alon, it incter can
be positively bad. Size shoult nevertheless, not be uufaily un un
 dence, To this the very best julges can have no objection, and
by them it will never be lost sightor, an long as it is pot carried an nodue weight. and the unfair share of attentiou which it at-
traets in the eye of the general or superficialobserver, that
restrictive nbservations have been sometiones directer at ent restrictive nbservations have been sometimes directed. Attempts
have been made tescribe what it oughto be. im ph-
ches, but such a plan cannot be supported, and is impracticable,
 circumstances and alteration of opinion, to both of which every
thing mast submit. Mr. Wildman then slightly alluded to culture, stating (as he said had arready been repeatedly done) that
the chief reanisites were a rich, iresh loam, well manured, the chief requisites were a rich, resh loam, well manared, ata
open situation, plenty of water frequently and abundanly
given, and a a lberal use of the kuifif, especially in distudding free given, aund ant bloomers, These were allailysolutely neeessary;
and abut
but even then, without a free and pure atmosphere all our labours but even then, without a free and $\begin{aligned} & \text { would be lost, however meritorious; for a Dablia, of all flowers, }\end{aligned}$ Would be lost, however meritorious, for a Dahlia, of all flowers,
required astrong airs - and it was in this respect that the emetro-
poititan Florists could never compete with their country rivals, ponitan Florists could never compete with their country rivals,
In fact, so
great was the difference that many fiowers, which, with the one are most desirable, are with the others, if not
worthless, absolutely useless. Hard-eyed flowers would never do in London, inor those that were thin or soft in the country--
the first requires a strong air and free growth, which the later cannot bear, as instances, he mentioned Gregory's Repiia, as a useful London flower, but worth nothing in the coantry, Cox's
Defiance, though huthierto a f favourite in country, could seldom
 falliny ere the others are blown. The samc with Hudson's Prin-
cess Royal. Witnall's Queen again, was evcellent in the one place, -notwithstanding the alguarity
tioned, which it then in a great degree loses, -has the same defect. Hope was a flower that does, welles in both phaces, so also
were Unique, Maria, and Catleugh's Eclipse (though uncertain). were Unifue, Maria, and Catleugh's Eclipse (though uncertain). Dodd's Prine, of Wales again is easily bloomed in the neighbour-
hood of the metropolis, but it is always deepll and abruptly sunk in the centre. Several others coold be mentioned. but enough
fhad been said to shew that sufficient change so caused by locality to justify yadiety in opminion, and to render it mpiperative upon
us to refrain from forming liasty or premature opininons, both for us the refrain from forming liasty or premature opinions, both for
the sake of our oun consistency and the sincerrty of those we
may may be induced to condemn. The fact, nevertheless, often im-
poses aporin censors a dificuit task, who judginy in ifnorance of
circumstan circumstanues, are erequired, on inspection of one or a few spe-
cimens to form an opnion upun seediugs, whinch, whether favourable or otherwise, may ultimately turn out to have been
delusive. But this caunot be avoded, unless the Censurs be apprise. of things caunhot be avoded, thinhess the cughe censurs be tho know, and a door
be thus opened to partialhey, whinch would be a greater evil. Raising new varieties from sed was then touched upon, after
an allusion to the disinclination of those who really possessed practical knowledge to divalige their secrets; the enittle, howevered,
that had been written upon the subject had been so erroneous,
 be refrained from. some recommend that seed be saved from,
thin, others from full, flowers; some recommend fertilitation,
others neel others neglect it; but unless the partues who give the advice
have carently marked the seed and noted the result, their re-
commendations are founded on coojecture only. If they have
taken these precautions, and really wish to enlighten the inex-
perienced, it would have been far better to have detailed specificperienced, it would have betn far better to hava detailed speciic
ally the result of their practice in each instance, than merely to aly the result of their practice in each instance, than merely to
have induliged in unsupported and vague directions. Glory of
Plymonth had, to the great astonishment of all who possessed Plymouth had, to the great astonishment of all who possessed
the slightest knowedge of the parts of the flower, been repeatChe slightest knowledge of the parts of the flower,
edy recomm sended as a good flower from which to sed.
Now Glory of Plymouth is one of the most double flowers that has ever yet been raised, and, like Glolue Crimson, full to the
cenire; and it might be asserted, without fear of contradiction, that it never had been seeded, and was incapable of bearing seed. Tis
misstatemt could be easily disproved. He knew an Amateur who, once relying upon this recommendation, had been induced
to grow twenty plants for the sake of the seed; but, as might have been anticipated, he was utterly disappointed. Mr. Wildman was limited) with many of the flowers from whicl he had saved seeds. So much depended upon accident or circumstances
over which we had no control, that it was difficult to recommend one in particular; but seeds from thin fowers generally, however was an exan luc. Constancy in the parent was, he thought, a
matter of little monient, provided defective bloons were immediately removed, and none but the best left for seed. Brightress
and clearness of colour were desirable, but no dependance coult解 sional $r$ otherwise, from which seed might be obtainable, should
be selceth the colors chosen bein distinct and opposite, aud not compound. To thone who would not take the troumber to re-
sort to artificial fertiization, he would recommend that a the very best varieties, inchuding one or two that sed more
freely, be planted together, apart trom all others; the chances then would he far more favourable. Having now fulilited his
promise, and said sufficient to answer the puryose of exciting observations on the part of others more competent than hinnseif,
Mr. Wildman concluded by submitting a brief summary fcr actop. tion or improvement by the Society. He said that he should
only make three general heads. viz., Form, in which was included most of the detail; Colour and Size; he should also a
first confine these heads to proverties only, stating defects after. wards. 1 st, Form. - The outine should be that of abnat two-
thirds of thore or shere the rows of pealas forming this plo-
bular outline should describe unbroken concentric circles lying above each other with evelliness and regularity, and gradually
diminishing till hey approach the crown. The petalsforming these
 complete. They should be broarl at the ends, perfectly free from notch or indentation of any ind, evenly and freely expanded in each row, but largest in the outer ones, gradually and proportionably
diminishing untit they puproach the crown, where they should gentiy turn the reverse way, pointing inwards and frming a
neat and close centre. 2d, colour. - If in a self, it should be dense neat and close centre. and nower, concentrated and well defined:
 of roundness or of depth, flatness of face, squareness of shoulder,
siliking in the centre. the petals in each row, or bet ween the rows themselves; broken
circles, overhanging each other or diminishing abruptly; want of arrangement, and ditatious on the edre, sharp points, angularity, cupping too dieply with uide nouths; abrupt hollows in the face or ribbi
neess, being too troad, coarse, or overwapping each other side-
ways, or being too narrow and guttery, or not touching each ways, or the rows , nuilling, or curiing, or showing the back in
other in the
any manner ; curling too much upwards, turning quite back,

 or so large as to be coars ; showing a yelow abk marner, blooms
scaly centre, cross eye, petals damaged in any
dead or decaying. Mr. Wildman concluded by remarking that the orject ought to be to obtain freedom without loosenes., bold-
ness without coarsenes, nnd symmetry and uniformity without stiffness or formality.
own conventional us?

## MSUELLANEOUS.

Stephenson's Double Cylindrical Boiler.-We have inspected this Boiler, which appears to be an improvement Chronicle. Unlike that, the fuel in the present instance is supplied at the top of the dome; but the chief advantage which it possesses is derived from an ianer cylindrifuel. The inner boiler extends from the top of the dome to within about eight inches of the grating, on which the fire rests; it is connected at its base by two pipes, with
the external boiler, with which it also has free communication around the top. There is a space of two inches between thally upon both and it is stated that a more perfect combustion of the smoke is thus attained. As in the conical boiler, the flow-pipe proceeds from the top, on
one side of the door through which the fuel is supplied; the return-pipe enters at the bottom, and the pipe for conveying the smoke away is situated on one side. The
Double Cylindrical Boiler appears to possess obvious advantages for the tank system of heating lately brought anto notice by Mr. Rendle. Being raade of copper, its
int
appearance is neat. It can be erected in any part of the appearance is neat. at pleasure.

THE NATURAIIST'S CORNER.-No. IX.
29. The Wood of the Cypress lree scarcely ever decays, or is worm-eaten; for which reason the ancients used to make the statues of their gos with it. The ies were of Cypress. The gates of St. Peter's church at Rome, which Eugene the Fourth, that is to say, 1100 years, were of Cypress, and had in that time suffered no decay.
30 . Diocletian retired from the throne into his native province, and there amused himself with building, planting, and gardening. His answer to Maximian is
vedly celebrated: he was solisited by that restless old man to reassume the reins of government and the imperial
purple; he rejected the temptation with a smile of pity, calmy observing, that if he could show Maximian the cabbages which he had planted with his own hands at
Salona, he would be no longer urged Salona, he would be no longer urged to relinquish the enjoyment of happiness for the pursuit of power.
vestern part of the North African plants of the Sabel, or western part of the North African desert, there is, among species of Acacia and the Hedysarum alhagi, or Alhagi maurorum, a thorny plant about 18 inches high, which remains green all the year round, grows in many parts of the Desert in the sand, and is eagerly eaten by the camels: it is almost the only plant that supplies them with food while they are traversing the Desert. Near the most south-western corner of the Sahel are extensive wouds consisting of Acacia-trees, from which by far the greatest part of the gum is obtained which in Europe is consumed under the name of Gum Arabic. It is collected by the Moors, and then sold to the Fiench and English merchants 32. Linncuus, one day, when coilecting plants with his pupils, covered with his hand a green turp, sayiug that he had that under his hand whose consideration might justly occupy all of them for a consideruble portion of wieir that space there were thirty-four different species, either of Grass, or Moss, or insects, or animulcules, or varieties estimate the total productions of the entire globe, when the little space that my hand covered is found to contain so many various objects?" (To be continued.)

GARDEN ME.HOLRANDA.
Mroredun, the Residence of D. Anderson, Esq. This place is pleasanty situated about turee miles south ot Edinburghic and
commands good views of the Pentland Hills, Arthur's Seat, Craigmillar Castle, and several other objects of interest in that nelgh-
bourhood. The forcing-houses in the kitchen arden are very extensive, and are managed in a clever manner by Mr. Watson the gardener. The forciug is commenced earlier here than in any other garden in Scotand with which we are acquainted, There
are three vineries and five veacl-houses, besides a considerahle extent of pits and frames for the growth of Melons and Cucum-
bers. The first vinery and peach-louse have had fires on since the ist of December, and are both now considerably advanced The earliest Vines, when we saw them, about three weeks ago,
were just showing flower, and the peacl- 10 ouse was then in one
 season there is always an abundant sapuly of Peaches and Grapes
in succession. The late Baron Moncreift, to whom the place once in succession. The late Baron Moncreift, to whom the place once
belonged, used frequantly to boast, that, from his own garden
within a few miles of Edinburgh, he could, by the aut of glass, coal, , and a good gardener, match any colnutry in Europe in
Peaches, Grapes, Pines, and every other fine rutit, excepting
Auples and Pears. The greenhouse, which is placed in a corner Apples and Pears The greenhouse, which is piaced in a corner

 of Mammilkrias ts rich the this thart of very gayy. The collection Olher part of the grounds by a fine Holly hedge, abont 120 yards
long, 9 feet broart at the botom, gard 22 feet high. Such hedges are conmon in this part of Scotand, where Holly seems to iourish crop of this excellent vegetable. Knowing that Mr . Watson was
particularly successful in their cultivation, we asked him to ex Mlaul his moue of management for the benefit of the readers of
this paper. The following is his practice. He ake up tue beds with, as is srequently done by Mush-
 bed is then beat slight,., and the spawn is civered over about 2
or 3 mehes thick wull the same kllid of dullig as was befure used. Care must 1.ow be taken to prep ent the feat from becon mg vio-
lent, which is ensily prevented by trampling or beating down the The asinal way, anco the whins is beat ifmlt town. Water is then
k2ven when necessary, and the Mushrooms, in about 6 weeks from the time of makiting up the bed, conie up in abundance.
Such is Mr. Watson's exhibited the best possible proof of its utility

## Rréríns.

Doyle's Cyclopecdia, Part X., carries the reader to Peat hich anticipater are we disappointed. In the article on Peat we have the dewe disappointed. In the article obrock's experiments in draining the flat red beritt, in the county of Galdraining the fiat red bog oh cost in this instance seems to have been to $30 l$, per later ; but in uther cases $10 l$. an acre have sufficed for completing the work. Black bog within two feet of the blue lime gravel seems to answer best; and Mr. Bermingham, Lord Considers that subsoil draiving and gravelling, would repay he cost on the wet and dry mountain land which abounds in Ireland, resting ou a firm bottom near the surface. In the account of the Potato, a good deal of space is occuphed in considering the we do not hush haw light is thrown upon that puzzling subject. More satisfactory are the from which we "In proof of the advantage of complete pulverization we may cite an experiment of Mr. Lyster, of Thurles, in the county of Tipperary. In the year 1836, after planting and managing three acres of Potatoes in the usual way, he employed men at the proper time for earthing, to dig between the rows, and as deeply and finely as possible, from plant to plant, throwing up at the same time with the spade two or three inches of earth to keep the plants steady. The result was, that he had about 190 same time he planted half an acre, treated, for the sake
of experiment, in the ordinary way, moulded with the plough, \&ec., and had only at the rate of 100 barrels per
acre in return. The extra cost of labour was 40 s . per acre. But he had another counterbalancing advantage from digging well and deepty-three barrels more of Wheat than from the part tilled with the plough in the common way. It must, however, be stated, that the this practice in the year 1838, owing, it is supposed, to the great moisture of the season. The plant deriving in consequence a greater proportion of its aliment from the atmosphere, needed not, as in the former year, to pene-
trate the great depth of land prepared for the ramification of the fibres, if so disposed; yet even in this case, the advantage was sufficient to repay the extra cost. Such and so varied are the circumstances which must combine for the successful culture of vegetables. To lay down general rules is therefore often as unwise as difficult. The resubtful question, which can be only satisfactorily solved by the results of a long series of trials."

CALENDAR OF OPERATIONS for the ensuing week It the Calendar at page 24 I stated that the Conservatory oughe
 same. It appears, however, that thiss voiume as many correspon of all the present readers or the Chronicte,
dents have demanded a smitar list from me. In supplying the the
following from my own practice, I would again repeat what I
 amep up a constant sutccession of bloom; bint such is not the or the world, amounting to upwards of 15,009 pot plants; y er ou
of this mass, I had some dificiculty to keep up a respectable ap. pearance in thie conservatory, and dadies would often think it
lost time to walk through the housees. With only two families o plants Camellias and Pelargonims) Mr. Pa.aton could kcep up a constant blaze of flowers all the year round in the large con-
servatory at Chatsworth, with only one drawback, namely, the Fant of bue and yellow colours, The latter he could supply all Acacias, Calceolariae lownto the Yellow Chrysanthemums at the
end of the season: the elue colours are not so plentiful. Will end of the season; the blue colours are not so plentiful. Will
some kind practical hand assist me in making out a list of blue some kind practical hand assist me in making out a aist of bue
flowering plants, that can be boomed in the conservatory through out the year, beginning with the forced bet have thus shown the minimum by which a blaze o
though that
boom may be kept u I I do not of course mean that we shoul bloom may be kept up, I do not of course mean that we shouid
conffeo ourselves in this way-far from it as my mist for January suficienty shows. Fron my own observations,
visiting the best-kept conservatories in this country,
nnow the that the effectis often marred by our wish to show the extent of our rich
collections, and that we have not yet paid that attention to the due distribution of colours that the subject deserves, both in conservatories and flower.gardens. In our progress towards this
desirable result, we should never rest satisfied with our own arbitrary roles of perfection, but consider the goal already attaned
as forming only a fresh point of departure. To the
Tist of lant in flower last month many others might be added, according to
circumstances. Srovz PLANrs that will iower freely in atemperatian ciosa, and coccinea, Erínthemum pulchellum, Begonia octopé-
tala, Spermadictyon azureum (sweet), Phaius grandifilius, Euphorbia jacquinifiora, Echeveria gibuntion
 Mackaii, cymbldium sinense, Cypripedium insigne and venustum,
Dendrobium nobilie, cæarulescens, moniliforme, and secundum Enidendrum nutans and cochleatum, Trichopilia tortilis, On Odontoglossum Rossii and elatum. $1 .-$ KITCHEN.GARDEN AND ORCHARD.
Pinker.-If the succession plants have been potted early last nutumn, they will probably have filled their pots sooner that usuan
earlier on that mecount. See that soil, pots, dung, leaves, or
tan are ready for shifing them soon, but do not tury them by tan, are ready yor shifting them soon, but
increased heat for that parpose. Vinsiry. - As the eyes break, increase the heat a Mitte, an
attend tying and stoping the earliest a joint or two above
the bunches; ;eep a moist atmosphere, which it is not difficult to the bunches; keep a moist atmosphere, which it
do this season, as strong fires are not required.
o this seaion, as strong fires are not required.
PEACF-Houss. As the trees go out of blossom, increase the temperature to $60^{i}$, with plenty of air, regulate the wood. buds
by rubing oft those not wanted for leadiers.or bearers next year.
As this work is always done by the princupai manager, I need not caation him about displacing the newly-set fruit. The syrunge
would now be useful, it only to displace the remans of the decayed flowers; but as long as the weather keeps damp this
should be avoided, in order that the paint with which the trees
have been brushed over for killing the egys of insects, \&e., may not be washed off
Cheraiss.-These may now have the same temperature as
the Peaches. The green and black fy are very fond of thie the Peaches, The green and black ny are very fond of the
newly-unfolded leaves see that they do not pet ahead. The
young leaves are also more table to be injured with sudden gleains of sun than those of
Fros. - The earliest have now set the first crop of fruit. The
shoots must be stopped above the fruit, and the plants well supplied with water, both at the roots and ovestead, as the Fig will Cucumbras and Mrlons.-I find these plants do better by Mr. Green's method (Vol. i, page 351, and with ten times

without injuring their roots ; all decayed roots should be cut back to where they are fresh. Get the edry pieces of peat weil
saturated before you ald fresih ones, which will save a gieat deal of watering after potting, and thus sod ening the fresh compost,
to the injury of the plants. See that the swollen eyes at the degrees of heat will then be necessary. many places be necessary to prevent damp while the weather
keeps dull, and little watering will be wanted. Corskravinis. - There is nothing more injurious to the b:oollias are the first to indicate this; a few of them placed near the ventilators should be your guide, rather than the thermometer, which at best is of little use at any time in this house. As
the forced hardy bulbs are done flowering, cut off their flower. stems and remove them to the reserve pit, turn them out of the pots, and plunge the. This pit does not require glass.
them in cold weather
Co LD ViNERIEs.- There is another family of real stove plants that will do here all the winter, and will be found very useful for they are now removed to the stove, and forced till the end of May. These are the varieties of the Hitiscus sinensis, the
double red, doubble buff, and the double fawn-colour; there is also a double white variety, but it is not very conspicuous-the
single one is gaudy enough. There is also the Hibiscus lilififorue with a dozen beautiful varieties from it, all single and free
wiowerers, howerers, one or twhas any with which I am acquainted, burt unfortunately
plants bave no trivial names, and they are dificult to be met with
they they have no trivial names, and they are diacuic
in the nurseries.
pIrs AND FrAsss. -After such a mild winter, the plants here Prest ind condition to be shut up close during snowy, damp,
 potting bench, to give them their spring top-dressing, and other wise assist his favourites by ar regular look over top and bottom. Under this head I commintted myself seriously last week, by to be relied on any more than the almanack-makers. As soon to the lawns get alittle dry after the snow, give them a thorough
as tod rolling, and send a careful man round with a barrow ful of
git good roling, and send a careful man round with a barrow hass, Piantains, and any other tussaciks which disfigure the green car-
pets, and let him cut off pieces of his fine turves to fill the blanks. Forest And Coprice.-AII that I can think of under this head is, that, where the coppice stools have all been cut down, the soil might be scratched here and there in the open spaces, and
Acorns, Sweet Chesnuts, Ash keys, or any other suitable seeds dropped in. If the mice and rabbits should not destroy these
seeds, they will come useful at some future period. $\rightarrow D$. Beaton,

State of the Weather near London for the Week ending Feb.
1843, as observed at the Horticultural Garden, Chiswick.

Feb. 3. Showery, stormy showers, partly suow; very boisterous at night. 4. Sharp frost early A.st, ; very stormy, with showers of sleet and snow.
5. Clear and frosty ; cloudy; clear, with slight frost.
6. Overcast and cold throughout.

Hazy; stormy showers; sleet and snow.
Dense fog; hazy and cold; overcast.
Hazy, with slight drizzle; densely overcast; rain at
${ }^{\text {might. }}$ Mean temperature of the week $6^{\circ}$ below the average.
State of the Weather at Chiswick during the last 17 the ensuing Week ending Feb. 18, 1843.

REPORT ON COVENT-GARDEN MARKET,
For the Week ending Feb. 10, 1843 .
THz late sudden change in the weather has not, al might
have been expected, made much alteration in prices. Although
the supphes taring the past week have not been large, yet th
great quantities of vegetables which were brought in the pre
 made a trifining advance. Foreign Grapes are well supplied : th Sisbon from is. to $15.6 d$. per 1b., and White Portugal from $9 d$. .
is. per lb. Pears, from their scarcity, are becomiug exceedingly dcar; the two pincipal sorts are Beurre Rance and Easter
Beurre, both fetching 18s, per half-sieve. Dessert Apples are als somewhat dearer: Nonpareils being from 10s, to
Newtown Pippins 38 , per doz., and the American Lady Aushel Newown Pippins 3s, per doz., from 3s. to 4s. per bushel. The Wellington, an excellent culinary Apple, fetches from 4s. $6 d$. to $5 s .6 d$. per bushel. A rew goon
Cucumbers are offered, from $3 s$. to $10 s$, per brace. Vegetables The price of Asparagus has searcely yaried since our last Report.
 Broccoli is somewhat cheaper, the White fetching from 6 cl . to 6d abudant, and of fair quality, but small, from $6 d$. to s. $6 d$. per bundie. EEndive continues good, and has advanced to
$s$. and $2 s .6 d$. per score. satading of all kinds is plentiful., MushTrufles are ore size, may be obtained from sa. to 1s. per pottle fowers consíst chiefly of Camellias, Azaleas, Rhododendrons, Brugmánsias, Amaryllises, Cinerarias, Hyacinths, Anemones, Combretum purpuream, Acáaia pubescens, and vestita.

offend good taste, by allowing captious disputes to to offend good taste, by allowing captious aispates place of gentlemanly discussion. In our opinion, turmeric. paper is not a good test for ammonia in the hands of persons unaccustomed to its nse; nor will it, in fact, under any cir-
cumstances, findicate the presence of small quantities of amp monia so well as the excellent method proposed by Mr. Solly With regard to the other question, we have already done yon
full justice, and we see no reason for troulling our readers further in the matter. We are not aware that you have any claim to the discovery that carbonic acid will decompose the
alkaline silicates; but Wiegman and Poelsdorff have shown that it decomposes even carthy silicates, which the most powerful acids would not affect. If you can claim that discovery, you ANURES.-A Country Vicar.--There is no liquid manure better adapted for Pelargoniums than that prepared from cow-dung liquid manure, let the soapsuds drain into it. If you have not add them to a compost heap, or to a dunghill. If you have a receptacic
be acted to that it matters not at all what is done with them, provided they are added to other manuring substances.
Amateur. - You have gone to a very bail marke for your green vitriol. It is not worth above $5 l$, a ton, instead of $2 l$. a hundred
weight. Where such substances are wanted in quantity they should always be bought of the great wholesale houses, and not in the shops. How much to use will depend on the quantity of ammonia in your manure. You had better ascerrain that
experimentally: a small quantity only , either dissolved in water or strewed among the manurin in fine powider, will suficice. As
or we can make out, your seed, which is crushed to preces by far as we cali make out, your seed, which is crushed to preces by
the elter-stamper, is the stone Pine or Prigno, 2 hardy tree, which will grow in almost any soil that is well drained--
S. C.-Tan rots slowly in the ground, and is by no means suited to plants as a manure till it is quite deconposed: We have seen it, when undecayed, produce very

## NEWS OFTHE WEEK．

The Overland Mail arrived on Monday，with accounts from India to the 2nd alt．，and from China to the 19th Nov．The Indian news announces the arrival of the troops at Ferozepore，and the consequent completion of he evacuation of Jellalabad．Their route through the Punjaub was unattended with difficulty or obstruction， but the troops suffered much from sickness，and many se－ rious differences arose among the officers during the march．The chief topic of discussion in the Indian papers is the proclamation of Lord Ellenborough respecting the sandal－wood gates of the Temple of Somnauth，which ap－ pears to have been received with astonishment in all parts of our Eastern empire．Even the journals which have uniformly advocated the policy of the Governor－ General declare that from one end of India to the other it has been made the subject of the severest censure．－From China we learn that the last division of the fleet with the Plenipotentiaries returned from the Yang－Tze－Kiang river to Chusan on the 17 th Oct，and that，before leaving

Nankin, the Chinese Commissioners gave an entertain ment to the British officers, during which the most
friendly feelings were manifested on both sides. The Emperor had issued various decrees remarkable for the absence of the usual expression of dislike to foreigners, and for the acknowledged wish to maintain an "everlasting peace." Negotiations are to be commenced for the purpose of settling the details of our future commercial arrangements, and it is said to be the opinion of the Viceroy, that the Americans and other foreigners will henceforth be admitted to the same privileges as those conferred upon the British by the recent treaty. -From France we have the important intelligence that the debate on the Address in the Chamber of Deputies has terminated in favour of Ministers by a large majority. In the discussion of the paragraph on the Right of Search, M. Guizot repeated the declaration he had previously made to the Chamber of Peers, that he would not negotiate for the abolition of the existing treaties with Great Britain; and in spite of all the clamour raised against the treaties by the press, no amendment was modification.-The accounts from Spain are by no means satisfactory; the dispute with France respecting the conduct of the Consul at Barcelona is still unsettied, and the affairs of that city have again become so threatening, that it has required extraordinary pre-
cautions on the part of the Captain-General to precautions on the part of the Captain-General to pre
vent another outbreak. - Few circumstances in our Foreign News have occasioned more surprise than the announcement of a fact in relation to the late treaty with the United States, which the daily papers of all shades' politics, denounce as a diplomatic fraud unexampled in modern history. It appears that a map was discovered a Paris about two years since, on which the boundary so long in dispute between this country and the United States was marked by no less a person than the celebrated Dr. Franklin. This document proves that the United States never had the slightest shadow of a right to any part of the territory in question, and that the line of
boundary claimed by Great Britain actually fell short of that which Dr. Franklin laid down as the limits of the two countries, as settled by the Plenipotentiaries of 1793. It appears also that Mr . Webster, during the negotiations with Lord Ashburton, had this map in his possession, un known, of course, to the British Ambassador, while he folemnly assured his Lordship of his conviction that the be carried to the north of the St. John.
At home, the proceedings in Parliament have hitherto been confined chiefly to notices of motions, and to incidental conversations on topics which will hereafter become the objects of more formal discussion. Among the been the declarations of Sir R. Peel that no further change in the existing Corn.Law is contemplated at present, and that it is the intention of Government to propose a noeasure for Church Extension. For the details of these pro-
ceedings, and for the particulars of a debate on Lord Ellenborough's Proclamation, we must refer our readers to our Parliamentary Report.

Court.-Her Majesty, Prince Albert, the Prince of Wales, and the Princess Royal, continue at Windsor Castle. Her Majesty and the Prince have taken their usual daily promenade in the Home Park, and the Prince has occasionally hunted with his pack of harriers, Yes-
terday being the third anniversary of Her Majesty's marterday being the third anniversary of Her Majesty's mar-
riage, Her Majesty gave a dinner party and concert at riage, Her Majesty gave a dinner party and concert at
Windsor Castle iu honor of the event. It is understood Windsor Castle iu honor of the event. it is understood the Duke de Montpensier, son of the King of the French, to visit this country, and stay about three weeks. The Lord Chmberlain has appointed Mr. G. Marton, M.P. for Lancaster, and Mr. Neeld, M.P. for Cricklade, to be gentlemen of the Privy Chamber in ordinary.
Church Preferment.-The Bishop of London has appointed the Rev. Thomas Dale, vicar of St. Bride's; the the Rev. Henry Soames, to prebeadal stalls in St. Paul's Cathedral.

## $\sqrt{5}$ oretign.

France. - The debate on the Address which was carried on with so much party animosity in the Chamber of Dy a majority date of our last accounts, closed on Friday, by a majority of 278 votes in its favour over 101 dismontients. Notwithstanding the numerous umendments moved for the purpose of compelling M. Guizot to negotiate with England for the abandonment of the Slavetrade treaties, not a single Member of Opposition persisted in calling for a division on the paragraph respecting the Right of Search; and after all the violence of language
which had been employed both by the Press and in the House, the firmness of the Minister in refusing to negotiate was completely successful. The paragraph, as drawn up by the Commission, passed the Chamber unanimously on Thursday evening. There have been few instances in been more distinguished by his frank and manly position
on a question of serious consequence to Europe, than M. Guizot has been during the whole of this debate. Though standing almost alone, he declared not only that he would not negotiate, would not promise or pretend to negotiate, but that he considered a good understanding with England indispensable to the welfare of France. He declared that the animosity created by the treaty of July was not so universal or profound; and that, in despite of journalism and party rancour, there still existed abundance of amicable sentiment on both sides of the Channel, which might re-cement the alliance between the two nations. He contended that there existed no chance that a new negotiation with England for the revision of such a negotiation would, as he had already stated in the House of Peers, end in au act of weakness or folly. For his part, he should not take the initiative of such a deep conviction that a negotiation of the kind migh obtain a favourable result. He afterwards vindicated himself against the charge of having made too many in which to england, and mentioned several instances however, having done a great deal to maintain his country on good terms with England, because he was Britain, the Parliament, and the whole nation, bore no ill-will to France; that, on the contrary, they professed the highest esteem for her, and were animated with a sincere desire of continuing at peace with her, and that it would to impair that good feeling of England towards France France, besides, was particularly interested in maintaining those good relations, if she wished to avert the formation was indipoation against her. Such a friend and ally Was indispensable for France. England required no sacri-
fice as the price of her amity. (M. Garnier Pages, a deputy of the Opposition, here stood up, and exclaimed This is an English speech !" A great tumult ensued The Conservative members loudly demanded that $M$ Garnier Pages be called to order, but the President took no notice of the clamorous invilation.) M. Guizot con avowed by the best Frenchman. He then proceeded to how that his endeavours to re-establish the good relation Thus he had concluded conventions on matters with success. Thus he had concluded conventions on matters which had ever presented insuperable difficulties. He had adjuated the long-pending affair of Portendic, and signed with Engto extradition, and a forth the French coast. The British Ministry, he would say, had evinced throughout a spirit of moderation, good-will, and equity, which had greatly facilitated the issue of the negotiations. M. Guizot then. concluded by declaring that the Government would not consent to open any im mediate negotiation for the revision of the treaties of
1831 and 1833 , bor accept a mission which be considered contrary to the honour and well-understood interests of the country.-The address having been carried, it was in his the Right of Search, nor of any point which bad been the subject of so much angry discussion; but simply thanked the deputies for their sympathy in his late bereavement and for their concurrence in strengthening the public iastitutions, and expressed his hope for their support in of peace and order, - The Minister of Marine, Admiral Duperre, has resigned his office on account of ill health, and has been succeeded by Admiral Roussin.- Rumours of a fresh misunderstanding with Spain were current in Paris, and the Funds fell in consequence, in the beginning pure inventions. Many of them, however, have proved to be France and Spain at this moment is not satisfactory but there exists nothing that would justify an expectation that the difference which has unhappily arisen will termi nate in hostiluties.-There is no miscellaneous news, if we except the announcement that our countryman Mr. M ${ }^{\iota} \mathrm{Cul}$ of Sciences, elected a foreign associate of the Academy The accounts from Alpiers atate that Abd el Kader lias again made his appeasance, and is exciting the Kabyle again made his appe
SPAIN. - We learn from Madrid that a great effort was being made to effect a union of Absolutists, Moderados, and Republicans, to turn out the present Ministry, and thereby prevent the consummation of a treaty of com-
merce with England. A letter of the 28 th states that merce with England. A letter of the 28th states that
Don Francisco de Paula would offer himself as a candidate at the ensuing election at Saragossa with every chance of success. The dispute with France in regard to the affair of M. Lesseps has assumed a more serious aspect, and it the Consul's the Regent has received such strong proof of refuses to connexion with the late insurrection that he tion. The accounts from Barcelons are of the 28 th ult They state that great irritation prevailed in that city, and but for the precautionary measures adopted by General Seoane, another and more desperate revolt would have taken place. The last delay fixed for the payment of the extra. ordinary contribution having expired, and little more than one third of it having been actually paid in, the Captain General, as our readers are aware, had recourse to rigorons means to conquer the obstinacy of the inhabitante, but Onich equally failed to produce the desired effect. issued a bando, denouncing death asuingt every individual who, by their speeches, writings, or even by songs, should
excite the people to revolt. Notwithstanding the menacing attitude of the military authorities, the agitation continued to increase. The soldiers quartered on the 200 wealthiest inhabitants were hooted wherever they appeared, and the people had in several instances removed the numbers from the fronts of the houses in order to annoy the military. On the 27 th the 25 alcades who had been summoned by the Governor to accompuny the soldiers to the houses, having declined performing that duty, had been arrested and confined in the citadel. But, after detaining them for two hours, General Seoane, dreading the consequences of this provisional deputation, on the other hand, posity. The fused to assess the ordinary taxes, grounding their objec tion on their not having been voted by the Cortes. That body even intended to leave Barcelona, to settle at San relin de Llobregat. M. Kock, a rich and influential was arr, who had soldiers billetted on him for eight days, refusing to pay his quota of the contribution. The journ alists, reassured by the declaration of the military commission, which declared itself incompetent to try offences all the press, commented in the most hostite manner on tacked the Regent himself. The Papagayo, one of the most violent organs of the Opposition, having reappeared on the 25 th, the police notified to its Editor that he would be shot if he published another Number. Extreme measures were likewise in contemplation against the Const utional and Impartial; and General Seoane, it was said, had threatened to seal up their presses. The last accounta tribution the exasperation of the public at the forced connearly an, and the manner in which it was levied, was expected to take place. Some persons imprisoned for non-payment of their proportions of the contribution were set at liberty as a measure of precaution.
Portugat.-We have accounts from Lisbon to the
30th ult. The Minister of Finance read the annua port to the Chamber on of Finance read the annual reby severe Chamber on the 28th, which was accompanied contos projects of law, one of which is a loan of 900 with which he states that he shall be able to pay off all the engagements due on the revenue and customs duties for the current year. The Portuguese government, it is stated, had not been consulted upon the last offers sent home on the tariff question, and it is therefore considered still possible, that some arrangement may be made, should the views of our goverrment, in some degree, be approximated to those of the Portuguese.
Belaxum.-Letters from Brussels state that the Louisa Maria, which is to carry the first settlers to Central America, ow account of the Belgian Colonisation Company, will leave Ostend between the 10th and 15 th of this month. The last census of the population of Brussels makes the total amount 110,760 , not including the garri--The Chatary school, and the patients in the hospital. tioned the treaty with Holland by a majority of 77 to 8 . Germany.-The Austrian Observer announces the arrival at Trieste on the 2'2d ult., in good health, of the Archanke Frederick of Austria on board the frigate Bellona, which sailed from Spithead on the 1st ult. the Leipzic Allyemeine ate, with great satisfaction, that circulate in Prussia after Easter It soid the to will be more cautious in fature, and that satisfactory promises to this effect have been made.
Iraly. - A letter from Rome of Jan. 23 informs that the cold is continually increasing and water was then freezing not only in the streets, but even in the interior of the houses. It alludes also to the late eruption of Mount Etna, and states that it bas been constantly observed that evere winters at Rome have been coincident with volcanic eruptions at Naples or in Sicily. The members of the Academy of St. Luke, at Rome, elected at their last meeting Mr. Barry, the architect of the new Houses of Parliament, as one of their members. Rome is crowded with English; lodgings are enormously dear, and the Protestant chapel is not sufficiently large to accommodate is numerous congregation. It is expected that when the infux of strangers arrive for the forthcoming carnival, they will meet with the fate of some recent travellers - Naples, who were compelled to drive out to the Cam pagna for apartmaents. Our countrywoman, Miss Clara Novello, is the prima donna of the Tordinona theatre this eason; she was not a together successful on her first ap pearance, but she has since so completely captivated the Roman audience, that on her benefit night they escorted der to her lodgings by torchlight, and continued in the street cheersig her with vivas until daybreak.-A pack of ox-hounds, belonging to Lord Chesterfield, is daily ex pected in Rome, from England, to hunt the Campagna. Horses are expected from Florence; and his lordship. said, is determined to show the Roman citizens the sports of English country gentlemen
Russia.- The treaty of commerce between Great Britain and Russia, alluded to in the Queen's Speech last week, has just been published. The general purport of the articles (which are 16 in number) is to secure for the vessels of both nations reciprocal privileges and immunities. Thus the ships of Great Britain, on entering or departing from any Russian port, will not be subjected - higher duties than those imposed on Russian ships; whilst in return, the latter, on entering our ports, will be treated as if they were British. Also, British and Russian vessels arriving from other countries than those of the contracting parties are to be admitted on payment of the ame duties as would be required of them by their respective nations. And, generally, the vessels and sub-
jects of the two nations are to enjoy all the privileges
in either country to which they would be entitled in in either country to which they would be entitled in their owu.-The St. Petersburgh papers contain a detailed
official report on the loss of the Engermanland, ship of war, on the Norwegian coast, which was fully noticed by
us at the time. From it we learn that the Gottenbury us at the time. From it we learn that the Gottenturgh
Journal, from which the first account of this misfortune was translated into the other journals of Europe, did not state the particulars correctly, but gave them merely as
they had been collected from rumour. they bad been collected from rumour. The crew is now mission appointed to try the case laid down the following questions for solution :--" "1. Was the loss of the ship, occasioned by the commander's non-observance of the the proper measures for saving her and the crew adopted? 3. Has the captain been gullty of the offence of abandoning the ship? 4. Did the conduct of the officers and the several duties?" "rew correspond in all respects with their the first question, neglect of the nautical regulation by no means be laid to the charge of Captain Tresskin, and the loss of the ship can be attributed only to an unfortunate accident. On the second question the an-
gwer was unanimous, that all had been done that it possible to do in such a case. With respect to the third question, it was also the unanimous opinion of all the did not leave the ship voluntarily. To the fourth question it was replied, that all the officers of every rank, and all the crew without any exception had completely per-
formed their duties, and that the commission could not fail to observe with satisfaction the very remarkable maintenapce of discipline, of which similar cases seldom afford example, The report contains a list of the crew,
frora which it appears that 503 were saved and 389 drowned.
Turkey.-Letters from Constantinople of the 17th nlt. bave been received. They are cliefily occupied with
two innovations, which may almost be called events in Turkey, so great is the surprise they have created. The first occurred on the occasion of the procession of the
Sultan in the Courban Beiram from the Seraglio to Sultan in the Courban Beiram from the Seraglio to one
of the principal mosques. That ancient palace, more es of the principal mosques. That ancient palace, more es-
pecially at the time of religious ceremonies, when occupied by the Sultan, is guarded with extreme jealousy by Mussulmans, the available troops of the capital being gaformer Beiram it for its ostensible protection, and at no within its walls. At he opening of the Beiram just concluded, and when a vast popalation thronged the vicinity Sultan at sunrise, Sir S. and Lady Canning, in an English carriage, with postillions and outriders, dreve up to the archway, and, after a countersign had been exchanged, at honours. The second innovation observance of milhtary rial Palace: the Sultana Vaiede (mother of the Sultan) having heard much of the Italian Opera, expressed a desire to witness a representation. A small theatre was Pera Pera Opera was ordered to premare Belisario for the gras
tification of the imperral harem. This opera was selected from its connection with the ancient history of Constantinople. The representation took place with the full dramatis persona and orchestra, in presence of the Sultana mother and all her ladies, together with many others be-
longing to the hurem; the whole, in consequence preseuce of the male performers, were veiled. The libreito Churchill, so that the ladies who could read were enabled in some degree, to follow and comprehend the story, though they could by no means comprehend the story, quivers, and embellishments of the artists. One lady was blind hero that she burst into tears, and, after exclaiming fortunes ?" threw her handkerchief to such great misfortunes p" threw her handkerchief, with some piastres, at Belisario's feet.- The Servian affair appears to be aban-
doned by Russia as an accomplished fact, which it would doned by Russia as an accomplished fact, which it would lachian Hospodar has produced no sensation in the Turkish capital. The departure of the Persian boundary commission for Erzeroom had been delayed by the indisposition of Captain Williams, who, it was hoped, would be able to proceed on his voyage to Trebizond in a few days.
Indra..-The Orerland Mail arrived in day, with accounts to the 2 d ult. The town on Monday, with accounts to the 2 d ult. The two armies of
Candahar and Jellalabad had arrived on the $2 d$ at Ferozepore, and the evacuation of Affghanistan has consequently mander-inpleted. The Governor-General, with the Com-mander-in-Cbief, and a portion of the army of reserve, Was present at Ferozepore to welcome them. The honour garrison," as a reward for their defence of Jellallastrious one end of the bridge over the Sutlej, a pavilion had been erected, where Lord Ellenborough stationed himself, with bis secretaries, while the troops passed. He raised his hat and bowed to Lady Sale, and some other ladies on elephants, who led the column. On General Sale crossing, the Commander-in-Chief rode up and shook him Warmly by the hand, The march through the Punjaub riedly that it is said to have rather resenabled a retreat than a retirement from a conquered country. Sickness Wild's brigade during their progress; dysentery, carried Off numbers daily, and disabled the majority of the force. in hoppital, seven days after the number had inereare
to 1,000 ; the other brigades did not escape; the 2d some4 thes averaging 100 sick men per reximent, and in the 4th small-pox was very prevalent. The rivers of the being provided with pontoon bridges. The Seikbs appear to have behaved in a civil and orderly manner, and to have brought in provisions for the force, which they disposed of at reasonable rates. Many and frequent differences arose between the officers of the force during the march ; and it excited general regret that those who had fought so well together should disagree while returning from the scene of their exploits. The old jealousy between Generals Pollock and Nott appears to have revived as General Nott tendered resignation of the command of refused dion, which, however, the Commander-in-Chie refused to accept. A quarrel also took place between Bri-
gadier Wild and Colonel Moseley, and the latter gentleman was for some time under arrest. The matter, however,
was evtually settled by the meadiation of General $\mathrm{M}^{4}$ Caskill. On Lord Ellenborough's arrival at Lodianah, he received Dost Mahomed, and quietly dismissed him ; of making the Chief to befar preferable to the propozed plan A mong the events which engrossed the attention of the Indian journals during engrossed the attention of the proclamation by Lord Ellenborough, addressed "'to his brothers and his friends twe prisces, and chiefs, and people of India," respecting the Gates of Somnauth, the most extraordinary commenta. It had given rise to Times with no favour in any quarter. Even the Bombay Times, the paper which has litherto supported his Lordship's policy in all particulars, declares, that "from one which has not made it the subject of the severest conal sure, of scorn, or of ridicule. The unanimity of the press has been absolute-and no marvel; that of the public has been, we have no doubt, the same. When it convulsed them with lauchter." It said to have nearly the Temple of Somnauth is in ruins. The only records of its destruction are in the Persian language, and removed from the knowledge of the Hindoos. The popula tion of the place is Mussulman, and the little that remains of the temple itself is converted into a Mabomedan mosque. The following extract from the journal just quoted gives some curious particulars on this point:The gates whose recovery appears, from the proclamataken, according the principal object of the war, were before the date of the Norman Cradition, some forty years of Somnauth, in Guzerat, where, for 400 years, a mosque has existed, and where the population is now entirely Mahomedan. For 800 years they have been attached certain, indeed, that they of Ghuznee; it is by no means state of our knowledge of the history of the reignof Macbeth will give some notion of the faith to be placed in the traditions in reference to Mahmoud of Ghuznee-a cotem porary king ! These trophies are to be sent back to the desolate ; a tit is said, they came; but that place is now Hindoo worshippers collected in the heart of an entirely Mahomedan country before the heart or an entirely of rest. About $15,000,000$ of the best-disposed British subjects in India are Mahomedan; who look upon the desecration of the tombs of their ancestors as the most moud of Ghuznee, whose sepulchre has been despoiled, regarded by them as the great light and piller, is champion and the pride of the Mahomedan faith in India champion and the pride of the Mahomedan faith in India, clamation be viewed as an indignity. It is regarded as compliment by no one ; the Hindoos know nothing what ever of the tradition of the gates-it is referred to by
none of their historians : and should we urge them wipe off the insults of 800 years, we may put them to mind of others of more recent date, which they have to avenge." A demand had been made upon the Ameers of Scinde for their assent to a treaty, by which Kurrachee and Tatta, and a strip of land extending along the bunk of the Indus, with the towns and forts of Sukkur, Bukkur, and Roree, and as far as heir tertitory reached, should be mude over to the Company. The Ameers appeared at first eager make a determined resistance, but troops had been sent been contradicted He appears narawaddie's death has convinced of the inutility, on his part of taryinghly struggle with the British power in the East. The Hindostan steamer arrived at Madras on the l9th Dec. and started on the following day for Calcutta.

fletropolís and fto Jícinty. The Weather.-The weather on Saturday was of a most boisterous character. At high water, abnortherly past three, A.M., the the previous night, was so high in the river, that the houses and wharrs on flooded. The houses Vauxhall, and Lower Fore-street were inundated to the in Upper and Lower Fore-street were fon the rapidity of the flood, much damage was done to the numesous ossels lying in the river, and also to the ground-foolice were unable to get round to the river-side to call up the parties. The overflow in the neighbourhood of York-road was usual highest ever known, and boats took the place of the at Gravesmode of conveyance. The streets near the river at Glowed; and, the ground-fioors, cellars, and kitchens of the houses were inundated, and much property destroyed ashore in coal-ships drove from they all sustained damage, and were not got off without great difficulty. Eight laden barges were sunk in the reach, aricane from the north-west, 40 watermen's boats were sunk at Greenwich. The storin increased at night, and was severely felt at
$W^{\top}$;eck of the Larkins East Indiaman.-Another vessel is added to the list of the homeward-bound, which, at the very close of their voyage, have suffered shand. The Larkins, a fine ship of 800 tons, belonging Channel. The Larkins, a fine ship of to Messrs. Haviside, of Cornhill, whived is the Downs on Thursday last, from China, after breakilig from her moorings on Saturday might, went ashore or o'clock on Sunday morning. The circumstances of the present loss differ materially from the recent calamities on then
French coast, as the Larkins had reached the Donas in safety, and was riding at her anchorage when the heavy gale sprung up on Friday night. Two steam-tugs had
been despatched from the river to bring her into the docks, been despatched from the river to bring ship, the weather
but on their arrival within sight of the impossible to make
was so boisterous that it was found impor
head against it, and they were both compelled to take shelter in Margate-roads-one of them having lost well anchor and chain. The Larkins 120 fathoms of chain during Saturday morning, having 120 fathoms of chain out; but about midnight it was discovered that it advisdriving near shore; and the Captain consts away, in order able to cut both the main and mizen masts anfortunately, he to save the ship from striking. In this, unfortunate flood. was not successful, as she sunday morning. The ship was tide about four, A.N., had only one passenge
Metropolitan Improvemens.- Wednesday, the $18 t$ measures were taken, for the first time, for the Holborn In consequence of an order from the Commissioners of Woods and Forests, many of the houses have been vacated and sold, and preparations made for pulling them Gown will proceed along the south of Phoenix-stree, across Museum-street, between Hart-street and He King' crossing the latter, and will enter Holborn at the Kings Arms Tavern, which has been purchased bemmenced for the new buildings which the benchers of Lincoln's Ind are about to erect in their garden, under the superinge of Mr. Hardwick. They will consist of a Tibrary. The structure will be of deep red brick, interlaced with bricks or dark colour. The quoins and dressings will be of stone. The style of architecture may be referred to about the middle of the Tuder period, more inclining to the highly-decorated perpendicular of the time of Henry the Eighth than the cinque cento mixture of the reign of Elizabethed of beams of oak epinging from corbels, with panels and pendents. The hall-roof will be the more decorated of the two, and something like that of Hampton Court, the hall will be 120 feet in length, by 45 feet in breadth, and 54 feet in height. The dimensions of the library will be 80 feet in length, by 4 feet in breadth, and 48 feet in height. portion of the fine occupy about two years, and a great pase of James I., and also of the avenue of trees, whished.
shade and ornament, will be demolished. Commissioners
Wood Pavement.-At the meeting of Comer
Wood Pavement.-At motion, "That in the opinion of this Court the Woodpavement in the Pouitry to be taken up and replaced by the public, and ought granite pavement. Guildhall, the foreman of the post-boy establishings at Guildall, Sir Peter Laurie, to inform him of ment has waited which had occurred to post-boys from riding over the wooden-pavement. He stated that when it was frosty the wood-pavement was totaly ans it could horsemen, for if a horse slipped whice authorities, he said, now direct the boys to go any way round to avod to pre pavement. Some tradesmen in the Cla ald Sir Peter Laurie er complaints against cived a letter from Mr. Hume, who predicted that within two years the streets would be re paved with stome.-On sent a memorial, signed by 221 ratepayers resident Baker-street and York-nlace, Portman-square, praying the vestry to have these that the One of the gentlemen remarking Sir P Laurie, he had opposition given to wood-paving oy sould soon be paved with that material. It was eventually agreed that the m morial should be taken into consideratay a special general Court of Proprietors was held at the East India House, pursuant to an intimation given by the Directors at the half-yearly meeting in December last, and in consequion of of a notice given by Mr. Lewis, to call the attention of the Court to the papers which have recently been printen and laid before the proprietors, in relation to the commission of inquiry held at Sattara in October, 1836, and the conduct of the commissioners who sat on that inquiry." Sir J. L. Lushington presided. Mr.lLewis"then brought forward his motion: "That after a full and anxious consideration of all the circumstances of the case of tice, no less than the character of the British Government in India, require that either the Rajah be restored to his throne, or a full and impartial inquiry be instituted into all the circumstances of his case." A long debate ensued, which lasted several hours, and was at length ad journed to Thursday. The question was a long and desultory debate, during which the chairman said that the proprietors could not rescind an act of the Board, a momajority of 46 to 16
Embezslement. - Within the last fortnight it has been scertained that Mr. R. W. Spearman, Secretary to the Master of the Horse, has absconded. It appears hat a short time since the Earl of Jesch, his Lordship called upou Mr. Spearman to make up his accounts, for the purpose of ascertaining the amount of mod been dis hands, and the mode in which various spearman allsente posed from the office, and a few days subsequentily wrote a letter to Lord Jersey withere of the unsettle which of his accounts, which were in an exceedingly de
ranged state, it was not his intention again to return to
the unties of the office. Mr. Spearman has never been the duties of the office. Caermarthen.-The lawless proceed. Caermare obtained so much notoriety by the name of Rebecca and her daughters," have increased rather than diminished since our last report. No clue het not a single tained to lead to their detection, and as ye civil force, offender has been apprehended, although the and a corps the yeomanry, the marines from Pembroke, and a costroy of pensioners are on the spot. Last week they days before while in the act of demolishing a toll-bar, they sent word to that effect to the yeomanry, who were stathoned at to that effect to the yeomany, ins report, the yeomanry immediately hastened to the spot, but on their arrival immediately hastem mortification, that the gate was already they foun, the ground, and the rioters fied. It was leveled afterwards discovered that the rease them to quit the gate report to the cavalry was, to inded, in order that the mob might do the work of destruction on that also, withourn molestation from the troops. Accordingly, on her daughof the latter, they discoving their absence, and had accomters had been there during letter was last week received by plished their design. A letter whed by Rebecca, informing the mayor of Haverfordwediren intended shortly to visit him that she and her chilat to be a hoax; but on him. This was at frrst thoug the top of Prendergast, on Thursday, the 2d, the gate atced into a field a quarter of the Fishguard Road, was remollouse, and there sawed to a mile distant from tening notices have been received at pieces. Three threatenge offect unless the paupers Narberth workhouse, to "Rebecca" will attack the have better food given them, Res ance, and destroyed house. A mob assemble have the Prince's gate, and the aanor sates will next be level received notice that the paroct the workhouses will be led. It is generally believed ar orders imagine that the object of attack, and the The Welchman ob"Rebecca" is a county magistrate. The circumstance in serves, that it is not the least remarion the trops appear this extraordinary movement, that when the trobly appears in one part of the country, 15 miles distant.

> in one part perhaps 14 or 15 miles distant. in another, pelly held Hull.-A meeting of shipowners was recntly Hull.-A meeting of shipowners was recentiy hey's Hull, to take into consideration Captain Fizeeving Bill for ascertaining the qualifications of persons seeking to be masters and mates in the merchant-service- Mr. Gibson, Mr. Alderman Thompson, and othe proceedings. From the shipping interest, took a pappeared that there was a great statements made, vessels have been lately lost than in formwater risk, From 1805 to 1815 , including seas from 1820 to 1825 three-and-a-half ships were on an to two ships a-day. 1826 to 1832 the loss was reduced defective knowledge These losses were attributed to the desultory discussion, it of mates. After a desulthouph they were was admitted by the speakers, opposed to the bill, get a nautical ed schools for the proand the establishment of Goverispensably necessary. A motion of education, were indrepe bill has metition signed by 94 shipmasters gan Honse fom been diarn up for presentation mons. The chief ory to be examiners, the the appointment of nayy emolument that would thereby arse mould be exerted and the Government patronage the following is a return of the relief given in Leeds and bresd to the poor of the township of Leeds including both the in-door and the out-door paupers, and also of the number of applicants for relief at the workhouse, for the last four years. The relief given in 1839 was 14,105l. 1s. 10d.; in $1840,14,934 b_{0}$. 358 . 5 d.; in $1841,17,275 \mathrm{l} .14 \mathrm{~s} .8 \frac{1}{2} \%_{\mathrm{s}}$; and in $1842,23,358$. 14 s .5 d . The number of applications for relief in the amount of relief granted to the poor from 1839 to 1842 is no less than 65 per cent. ; and the increase in the number of applications for relief from 1840 to 1842 is 326 per cent - On Sunday week the body of a female, greaty near Knutilated and the head, arms, and legs being enn inquest has been held on the body,星
dair, although a reward, with the addition of a free par any person who will give such information as will lead to Manchesler. - The murderer
Manchesler. - The great Anti-Corn-Law banquet in 3,400 ladies and gentlemen took their seats in week, when the hall, and 4120 in the galleries. Every seat was occupied, for the tickets had been at a premiam for some days previous. Twenty-one tables had been placed for the accommodation of the company-four on the dais, and sevesteen On the following morning a meing 100 feet in length. ministers was held in the Town-ball, to of consider the bear ing of the Corn-Iaws upon the physical, moral, and religious condition of the people. The Rev. Dr. Burns, of the Corn-laws were carried. The aggregate position to the delegates was held on Friday morning, in the Townhall, to receive the reports of the Commitiees and to deMermine the future course of proceedings to be ardopted. of Manufacturers was read, and a series of resolutions was carried, recommending that petitions from every part of the country be prepared for presentation as early it Induce their representatives in Parliament to vote for the total and immediate repeal of the Corn-laws-that meetings be held to ensure the return of free-trade membersand that the friends of the movement enter into some by associations, by pecuniary contributions, and by all Council of the National Anti-Con resolved, "That the mdjurn its sittings, pro tem., to London, and that it shall summon a conference of depaties at sach time as it may place on the same evening, in the Free-trade Hall, and Was attended by no less than 6,000 persons. - A meeting Monday, when some facts of importance was Leld on known. It was announced that the accounts were made manager, Mr. Burdekin, extibited a deficieney of about nuity, and the ader been conceated through bis own ingenuity, and the assistance given him in his clandestine operations by certain bill-brokers in the City, who were
supplied, for the purpose, with bills bearing the endorsesupplied, for the purpose, with bills bearing the endorse-
ment of the bank to any amount required. The directors ment of the bank to any amount required. The directors of the bank affairs at the end of the year. Fion this it appears that the liabilities bad been progressively reduced to the extent of $480,996 l$, since October 27 ; and, since liquidated. On the accounts, $120,000 l$. further has been loss bas been mereased by the sum of $29,922 l$.; a difference ascribed in past to a falling off in the value of some of the outstanding assets, in part to the discovery of more extensive frauds committed by Mr. Burdekin, and in part to the accumulation of interest and other charges. It was athe dithectors be requested, bank be not dissolved, and that the directors be requested, at the earliest practicable period, consistent with the interest of the bank, to lay before owing by eacl individual, together with a full statement of all the circumstances convected with the mismanagement of the concern.

## Morpelh.-A church-rate attempted to be levied by the

 Hon, and Rev. F. Grey, a son of Earl Grey, at Morpeth, has given rise to a division among the people of the parish and town. It has immemorially been the custom to col. lect the church-rate in the proportion of one-third from the remaining two thirds from the inhabitane parish, and The latter now wish the rate to be collected and levied in. equal proportions; but to this the country parishioners opinion of an emine questionSheffield.-As an instance of the extranrdinary depreciation in the value of property, the Sheffield Iris states that a grinding wheel erected in this neighbourbood wold for 1,0006 .
St. Asaph. - The projected union of the Sees of St. Asaph and Bangor continaes to attract attention in various parts of the kingdom. Meetings of the clergy
bave been held in different parts of have been held in different parts of England and Wales to lake into Wonsideration the proprjety of petitioning Parlisment to repeal 80 much of the Act $6 \& 7$ William
IV., c. 77 , as provides for the union of the two Sees. At all these meetings the feeling of the public was unanimously opposed to the change; and numerous petitions
have been presented this week to both Houses of Parliahave been presented

Whitby.-One of the most distressing shipwrecks that has occurred on this part of the coast for several years took place on Saturday morning at the entrance of Robin Hood's Bay, a few miles to the south of this harbour,
whereby a party of the Coast-Guard Service, Whereby a party of the Coast-Guard Service, belonging to Lingard, R.N., with the crew of the distressed vessel. consisting of six persons, were drowned. As soon as the vessel, a collier brig from London, struck, the CoastGuard went off in the life-boat, and succeeded in gallant tyle in taking the crew from the wreck. They were returning to the shore. when a heavy sea capsized the boat, and all hands perished in sight of the people assembled An attempt was made by the commander and crew of a brig. whigh happened to be within a short distance of the spot, to go to their relief, but their boat was upset, and they

Railways.-The traffic for the week on the principal lines is as follows: :-Greenwich, 7181 . ; Eastern Counties, 201l. Newcastle and Carlisie, 1, 320 . $3,6,66$. ; Croydon Grand Sunction, 6,646l.; York and North Midland, 1.350l. ; Blarkwnhl, 537l.; Great North of England, 1,065 $l_{\text {; ; Sheffield and Manchester, } 273 l_{\text {.; }} \text {, Manchester }}$ and Birmingham, 2,366l.; Manchester and Leeds, $3,646 \mathrm{l}$. Birmingham and 4,068l. ; Grert Western, 11,037l.; South Eustern, $1,509 l$. Lendon and Irirmingham, $13,330 l$. - The balf-yearly meeting of the Liverpool tind Mancliester Company took place to the continued depression of trade and manufactures and stated that during the half-year just ended the business of the railway experienced an extraordinary check by the disturbances in the manufacturing districts in August last. The period of the year which is generally relied on as most propitious to railway travelling was thus rendered comparatively unprofitable. The total receipts fror passengers had fallen off to the extent of $8,000 l$., and wrom therelandise to the extent of $5,000 l$., as compared The accounts showed the teceipts to be 123,746l. and the expenses $60,49 \mathrm{l} .10 \mathrm{~s}$. 7 d ., leaving a balance $63,696 /$. 1 Ns .9 . ; to which must be added the amoun reserved in July last for the income-tax, not yet paid, mended a divilend of $5 l$. per $100 \%$. Share, which, on 12,090 shares, amounted to $00,480 l . j$ and would leave a balance of $5,415 l$ 3s. chargeable with the income-tax for the year. residue to be carried to the credit of the next half small account. A dividend of $5 l$. per $100 l$. share was declared to be paid early in the present month. The half-yearly meeting Liverp Grand Junction Company was held last week at Liverpool. It appeafed from the report that the clear be added $5.612 l$. 4 s . 3 d ., surplus from the previous hat year making a total of $125,082 \mathrm{l}$. 6 s .3 d . ; from this amount the directors recommended that a dividend of $5 l$. per share be declared; this would absorb $110,165 l$., in accoldance with the report, to appropriate as fesolved income-tax for half a year. $3,653 \mathrm{l} .17 \mathrm{~s} .10 \mathrm{~d}$.; depreciation and renewal of stock, $5,000 l$.-leaving to the credit of the present half-year the sum of $6,263 i l .88$. 5d. A sum of the church erecting at Crewe.- The meeting of the North Union company was beld last week, when the usual dividend of 26 . 10 s . per share was declared to the pro-
prietary. The receipts were $30,1072.5 \mathrm{~s}$. penditure, $14,181 l .7 \mathrm{~s}$., leaving a surplus of $15,925 l$. 18 s . 3 d , balance of 78l. would be carried to paid. The small accounts, which are expected to be more encouraging, ing a decre of the company on the present occasion showperiod of 1841 -the late compared with the corresponding period of 1841 -the late disturbances in the manufacturing The half-yearly meeting of the proprietors of the Brighto Railway has been held this week. The report showhton ascertained cost of the line to be $2,580,645 l$ shows the ascertained cost of the line to be $2,580,645 l$., and the
further probable liabilities $50,322 l$.; makiag the total cost of construction $2,630,967 \mathrm{l}$. The amount of addi$\mathbf{1 2 0 , 6 0 0 \%}$. Under these being 29,881 . The total revenue prese the Under these circumstances, the directors exdividend to exceed 20 s . per share . The further present required, of $29,881 b$, is stated to have. The further capital expenditure at the London-bridge station the purchase of additional engines, carriages, \&c. The draft of a bill has been prepared to raise a loan of $300,000 l$. on the loan notes of the company, and to reduce the number of directors. The total expenses of the line for the half-year, including interest and expenses on debentures and loan notes, are 79,170l. 17s. $8 d$, A vote of want of confidence in the directors was passed, together with a resolution that the Whole of the present directors be required to resign after the passing of the new Bill. The state of affairs of this railway, ably in the market, and has been viewed very nafavourmuch as $2 l$. each. - The directors of the Midland Counties Complang have issued their reply to the report of the Committee of investigation, in reference to their manageproposed has state that the principle of the reductions suggestion of the report, but from the result of inquiries instututed by a sub-committee of their own board. The facts brought forward are generally considered to remove me unfavourable impression previously entertained of their

## IRELAND.

Dublin - The Lords of the Treasury have returned an Socienrable answer to the memorial of the Royal Dublin menty, praying their Lordships to recommend to Partiaand 4,000 . ; the former for the completion $2,800{ }^{\text {a }}$. alterations and buildinga on premises adjoining Leinster House, intended for a new museum; and the latter for huildings in the Botanic Gew conservatories and other Lordships refer to the rapid and progressive reply, their the members of the Society, and state that they cannot bnt view this as an indication of the little interest which
the educated portion of society in Dublin, compared with
hat of other great towns, take in the support of the objects of such an institution. It gives rise, moreover, in Societyinion, to grave doubt as to the future ability of the Society to raise any adequate revenue for the support of fore, in the words of their reply undertake what is now proposed, which is, in fact litlo short of making a new botanical garden by rebuilding be provided wind stated in the estimate, or even to that which the erection of such buildings might ultimately cost; but that would hereafter have to adopt one of two alternat either the providing the whole sum required for maintenance, when erected, and for their application useful instruction; or, after incurring all the expense building, to permit the whole entablishment expense of nical garden to fall into decay. Considering bota number and extent of literary and scientific in also the in other large towns of the United Kingam andion comparatively large amount of private congributions the for their maintenance, their Lordshins cannotions raised for a compliance with the request of the Dublin Societ would be viat of $4,000 l$. for their botanical garden grants of money have just jealousy by others, to whom cedent for unlimited concession in and be ate once a precheck to individual subscription in quarters, and a reasons, they do not deem it advisable to all." For these Parliament the grant proposed by the Society.-The opposition to the Poor Law is gradually increasing in meeting in this city, meetings In addition to the late Fermanagh, Limerick, Cork, and Claren held in Tyrone, total repeal, others seeking such amendments anding better adapt the law to the peculiar circumstances of vened, in Roscommon also a meeting hus been conparties, followed by a signed by Peers of both political clergy, Roman Cy a long list of the leading gentry and than 13 Pom Crotestant, and no less exceedingly described bevere in Dublin; the state of the Chamnel is beyond precedent, and peamen as having been dangerous many of the steam-boats from Holyheare entertained that made the land in safety.-Lord Jocelyn has resigned the ffice of steward of the vice-regal household, and has been succeeded by Mr. Seymour
Tipperary.-A man named Dwyer, charged with the rested on Sunday week. He bad only been discharged Mr. Scully's Bridewell, on suspicion of heing one of party of twelve armed men tuesiay, of last weak, Bullysheehan, near Clogheen, for the purpose of obtzining possession of some decrees which had been got by a ryman, for money due to him. The party placed sentinels at the adjoining houses; the owner of one of them, named Slattery, a respectable man, came out of his house, hearing that armed men were in his yard, when he was hearing ately shot, and died instantly. The murderers then medrthe decrees, valued at 150 l ., and have not since been heard of

Cork.-The Earl of Rosse has given notice that the next general meeting of the British Association will be held in this city in the month of August.-The Rev. T. Foley, of Youghal, has published an account of a series which promise described by Lord Snrewsbury, He states that thed and a young nun in the convent, relative of there is whose hauds, feet, and side are depicted the wounds of the Saviour; and that at the communion blood is seen to flow from those apparent wounds. He adds that many whesses will verity the miracle upon oath but the local clergy mention, that in the present state of the affair, the whether the district have anot come to a final judgment Belfast.-In compliance with
Moderator of the Presbyterion Chursitions, the ordinary 15 th inst. The of the pa . The subjects forsideration are, the state bicene pare church, the marriage question, and the atter suju. It expected in regard to the atter subject, there will be a report from all the congre gations.
.-The Bishop of Down and Connor, in reply in positive terms to withdraw from the Church refused in positive terms to withdraw from the Church Archi dope socie whe is is alleged, is favourable to th adoption of Puseyite or Roman Catholic models and ecorations. The reply of Dr. Mant is very long; and declares his Lordshin's hostlity of an individual, and declares his Lordship's opinion, that the object of a aphication was not only to vilify the society, but to position to all ecclesiastical dation of his clergy, in position to all ecclesiastical discipline. "I am bound," he says, "by a sense of duty to the Church Archntecture to the diocese in lives, likewise, gentlemen and bremren, all, to the great Head and to the Church at large, and in to suffer my aff Head and Guardian of the Churcb, not nought, and trampled on by a subordinate minised, set at

## SCOTLAND.

Edinburgh.-The Commission of the General Assembly have presented a petition to the House of Commons on the subject of the differences which have so long agitated the charch of Scotland. It gives a long and minute
analyis of the statutes of the Scottish Parliament, by

Which the Commission consider that the church is secured from coercion or interference on the part of the civil power，and declares that the late decisions of the court of Session，und other recent events，tend more and more to
confirm and inorease the conviction of the Commission， that if effectual redress be not afforded by Parliament a speedy disruption of the establiskment is inevitable． That，deeply impressed with the evils to the nation，as well as to the church，which would thence ensue，the Commission earnestly entreat the House to take into their serious consideration the true character and nature of the Church＇s claims，and the statutes to which she appeals in support of them，as well as those establishing the Court of Session，which，as she conceives，do not confer the powers， oy that Court．It prays the House to provide protection and security to the judicatories and people of the Church of Scotland in the enjoythent of their constitutional and guaranteed rights and liberties；so as to save from sub－ believe to have conferred some benefits on the country， and which is associated with the cause of liberty and order，and the extension of knowledge，religion，and piety time，to keep unbroken a solemn treaty，on the faith of time，to keep unbroken a solemn treaty，onendent legis－ lature．It concludes by praying that the House will adont some measure，by alteration of the law in regard to the presentation to church livings，as recently declared by the civil court，for securing hat no mo to will of congregation；and that the Commission may be heard by certain of their number，or by their counsel，at the bar of the House，in support of this petition．－ friendly to the church was held in Edinburght a few days since．Sir Andrew Agnew，Bart．，presided；about fifty attended the meeting，white letters of coacarrence in its quis of Breadalbane，and other gentlemen．The meeting adopted a strong remonstrance to Government in behal of the Church，which loss been forwarded to the Premier． It is understood that a requisition to Dr．Chalmers to proceed to London and deliver a series of lectures，on the independence proper and essential to a Church in con nection with the state，has been set on foot by influentia parties in London，and will shortly be carried into effect．
Fife．－The local papers state that an annual Royal lisit to Scotiand，wheh was rumoureu a few weeks ago， Windsor a few days since to offer Blair Atholl to the Queen and Prince Albert，as a shooting－place and deer－park s and although the Royal reply has not transpired，yet，as it is known that her Majesty had previously ordered inquiries to be made for an extensive shooting range，it is consi－ dered likely that the offer may be accepted．In that anticipated．

Glasgow．－The strike of the Lanarksbire colliers is now nearly general over the cc．unty．Last week a number of and 400 more，with their wives and fumilies，have since been turned out in the neighbourhood of Holytown．An－ elligence has been received of the wreck of another India－ man，the George M＇Leod of 600 tons，belonging to this sugar from the Mauritius，and was lost on a bank in the Solway Frith，a few miles north of Skenburness．

## THEATRICALS．

Covient－Garden．－On Tuesday the 1stinst．，the Lady of the Lake，an English version of Rossini＇s Donna del Tago，was performed for the first time at this theatre． pose of rendering Mrs．Alfred Shaw＇s talents available in a new character．It has not for many years been played in a complete form at Her Majesty＇s Theatre．On the last occasion it was very much cut down，and only per－ formed for a few nights．Nothing has lately been done with it on the Italian boards which would bear comparison with its production on Tuesday at Covent－Garden．In the character of Malcolm，Mrs．Alfred Shaw has added one more triumph to her list．Her opening soena，＂Mura felici，＂was one of her most perfect performances．Her execution was extremely skilful，and managed without the slightest effort．In the characters which she sustained on her first appearance，she uppeared more as the mere vo－ calist，and less as the acting singer；but in this new piece led his companions in arms，the martial ardour which in－ spired him，were perfectly portrayed；and as he darted off，sword in hand，a burst of applause was heard frorn all parts of the bouse．The duet with Elena（Miss Rain－ ＂Giornas the gem of the evening，and may rival the Gare and d＇orore＂in Semiramide．Sung with the greatest full notes of Mrs．A．Shaw blended beautifully with her own ；and the effect was one of those which at once seize an English audience，Miss Rainforth＇s Elena was sung With all the intelligence of a cultivated artist，but a cer tain want of power was manifest，and the music did not seem quite under her command ；but she improved as the opera advanced，and command；but she ioproved as the had．at first been appeared to acquire a facitity which Roderich Dhu，and Mr．Giubilei as Douglas．The chorus had been increased for the occasion，and was ex ceedingly effective．There was no deficiency of care in getting up the opera．The scenery was very fine，and the view of the lake was a triumph of sceniciarto That in
which the clan of Roderick start from the fern and heath of the hills around was also well managed ；and the effect produced by it would alone have insured the success of the revival：At the conctusion，Mrs．Alfred Shaw was nounced for repetition in the midst of great applause． nounced for repetition in the midst of great applause．
St．James＇s Theatre．－On Thursday evening M St．James＇s Teeatre．－On Thursday evening Mr．
Braham made his appearance at this theatre，after an ab－ Braham made his appearance at this theatre，after an ab－ sence of three years in the United States．The enter－ tainnoent was a concert，in which he gave many of the fine old English songs to which he gave such unexampled popularity nearly half a century ago．On bis presenting himself he was received with a shout of welcome from every part of a crowded bouse，and seemed much affected
by so cordial a reception．It appeared at once，from his hale and vigorous aspect，that time has continued to treat him gently；and this was further proved by the sound of bis voice，which has lost none of its qualities of expression and style，though its power and flexibility，as might be ex－ pected，is somewhat less than it was in the prime and vigour of his age．His son，Mr．Charles Braham，at the same time made his first appearance before an English audience，and was received with a hearty welcome

## 是的。

 obtained，calling on the Tithe Commissioners to show cause why
a mandamus should not issue to them，to command them to proceed to the commatation of the tithes of the parish of Ing－ stowe，in the county of Devon．The question intended to be
raised was，whether the Assigtant Tithe Commissioner was bound to proceed under the 37th section of the 6 and 7 William IV．， the average value of the tithes of the parish for the seven years preserve the case to he reported on，as dincrited by the 3sth section
of the statute，where a special adjunication was provided for． rescried the case fur spccial allnumeation．The Altorney－General Mr ．Adolphus，and Mr．Atree appeared for the Tithe Commis－
sioners，and contended that the cortre pursued here was the proper one．The Act gave the Asssstant Commissioner power to he did find it to be so，for that lie had not sufficlent iuformation aid before him to enable hirm at that time to make his award． Mr．Erie and Mr．C．Buller for the lendownels，argued that，i
the course now adopted were not permitted，one of the grea
objects of the statite in question would be defeated．It was found at the time of the passing of the statute that many cases might arise in which the Tithe Commissoner，either from not having such means of funnishhurinformation in one parish as in another，
might be incapable of making an award to his satisfaction，and the Legislature therefore deelared its whll that he should have mifth happen，that either there were no means to enable him to take a fair average of seven years，or the circumstances uade
which the tithes had been calculated daring those scven years might be such as not to afford a fair average；and in such case instance，the information finmished him was not sufficient，nud he had therefore determined，and properly determined，to exercise
his discretion．Sir Gregory Lewin，on the part of the incumbent，
contended that the deldy and expense of reselving the case were contended that the delay and expense of resetving the case were
unneessary．Here proper information had been afforded to the
Commissioner，by itabular Commissioner，by a tabular arrangensent of all the matters requiste
for him to form a judgment，and he ought to have made his award for him to form a judgment，and he ouyht to have made his award collung cint the tithe commissioners to procure with the commuta．
thon of the tithes of a paithealar pansh，and for that purpose to
a－certan the average value of the tithes of the parish for the last
 that they should take mitu their consideration a statement of the
clergyman of the parish，who thought inmselt entitied to recelve more than ha was L．kely to receive under tue commutation as now proposed to be settled by the Commissimers．In November，
1838, a meeting was held to sette the amount of the conimuta－ tions．No information to justify the amount now clamed was
land before the Commissioner，nor cha he receive such informa． tion as in bis discretion appeared to him sufticient to enable him to make h＇s award．He thercfore reserved the case for special
adjudication．In doing so he had exercised the powers vested in him by the statutue，and there did not appear any good reason Patteson was entirely of the same opinion．If it harl appeared
clearly that the commissioner had arbitrarily determined to make this a reserved case for special adjudicationt him in taking the a course，but when it appeared that the information yequired under that statute had not been given to hinn，then it was clear
that the 38th section vested in him a decretion wheh，in this case，he seemed to have properly excrcised．The other judges
concurred，and the rule was discharged，but without costs． Central Cbiminal Court．－Thomas Messenger pleaded guilty to an indictment charging him with unfawfully conspiring
with others tio oltain the sum of $1,400 l$ from the Accountant with others the Court of Chancery，with intent to Accoraud him thr reof．The Attorney－Genelal，who attenied y a hecendary party
sazd lie behevert that the prisoner was mere
ial the transaction，and was heting under the suburdination of i：the transaction，and was heting under the subardination of
others，who were not yet in custody．He，theref re，hegged leave to recommend hims to the mercy of the Court．Ma．Juthe
Williams，in 1 assir gentence，said that the couit was always
will wilmg to attind to anv sugrestion made by the prosecution in any case；and althongli the prisouer has h leader gulty to an of
fence of a very sertous nature，yet as the Learned Attorney－Ge－ neral had stated his opinion that the prisoner was only acting
noder the guldance of more guilty parties，he would take a lenien view of the casc．The sentence of the Court was that he be ima prisoned in the House of Correction for one month．
John foran，a private soder in ine sin Ri．Frish Hussars，was in－ dicted for felonithosly and mancim some grievous bodily harm．It ap－ peared that the proseculor，on the sttr January，accompanied by a young man named Howard，was walking in Hyde Park．Some
sonders of the 8th Hussars were sweeping the barrack－yard，and sodiers of the 8th Hussars were sweeping the barrack－yard，and
Fitch and Howard who were returing from church，stopped near the gate to look in．The pr soner，who was the sentinel un
duty，desired them to move on．Fitch said he was not aware that he was doing any harm．A person in the barrack yard called out to the sentinel to make them move on，or krock them
down with his carbine．The prisoner then again desired them down with ais Carchsaid he was centainly not going to run away，
to move on．Fitch sion and the prisoner following up his order to move on，struck him
with the barrel of his carbine on the side of the head， with the barrel of his carbine on the side of the head，
and knocked him down：The blow cut through the hat，
and inflicted．a wound an inoh and b half in lentit and inflicted a wound an inoh and a hal in
on the prosecutors head．The offence was fully proved，
and the Jury returned a werdict of Guilty．Mr．Jus－
tice Maule then aditresed the prisoner，and said that i
the
been guilty of murder．The crime of Which he，hod heep cont vinted howeter wable ohe of creat mägnitude，and renicred hid
liable to be transported for life，or for a term not less inan fifeen prisoument：and on consulting wrovide his leamed brother，they did not think it necessary to pass a sentence of transportation． They did not think that the prisoner intended to inflict any very serious injury on the prosecutor，and it appeared to have been him to use his carbine．Some provncation had been given，and there seemed to be no doubt that the prosecutor did use some insulting language，but there was no excuse for the prisonerts attack upon uim． weapons placed in their hand against thein．Wiowever，as，there was eridence of provocation，the sentence which the Cotutc
should pass was，that he be imprisoned and kept to hard labour should pass wa
Frederick Charles Burnham Blackuell，draper at Camberwell， was placed at the bar charged with feloninusly uttering a forged Constable，well knowing the said deed to be forged，The cir－ cumstances of the case were very compaidence ran to an unusual
to any lut the parties concerned．The eviden length，and nceupied the court no less than cmelick on Tuesday morning，the kecordet sultinect up；and，at a few minutes hefore 5，the jury，after celaperatin土 for
verdict，finding the prisoner Guilty of uttering the deed，well knowng it to have been forged Judgment was deferred．

The selection to YOUSI, and Co.
This magnificent Fuchsia was raised by Mr. Meehan, gardener
to Colonel Harcourt, at St. Clare, Isle of Wight, from whom Messrs. Yourle obtained the entire stock. In May last it was submitted to Dr. Lindris $y$ for his opinion, which will be found in - Your Seedling Fuchsia is by far the finest hybrid we bave seen, the flowers being three inches in length, with the tube and sepals of a bright carmine colour, and the petals of a rosy purple. If, as you say, it is a strong grower and a free bloomer, it will prove a
valuable addition to this beautiful genus." As proof of its being a most profuse bloomer, Y. \& Co. had a plant in flower on Sept. 15 ,
1842 , on one branch of which were upwards of 200 blooms formane one of which were upwards of 200 blooms, formfarden. Price $10 s, 6 d$. per plant, sent free of postage to any part

SATURDAY, FEBRUARY 18, 1843.

## MEETINGS FOR THE TWO FOLLOWING WEEKS.

We rejoice to find, from a late Report of the "Institution for the Relief of Aged and Indigent Gardeners and their Widows, ", that the funds of the Society are in a prosperous state. The Committee have been enabled to purchase 200l. Three per Cent. Consols in addition to 400 l . already funded in the three previous years; leaving, after the payment of debts, the sum of $47 \% .12 \mathrm{~s} .1 \mathrm{~d}$. in the hands of their bankers. The total amount of subscriptions for 1842 was 24.9 l , showing an increased income of $61 \% .16 \mathrm{~s}$. over that of the preceding year. It is announced that an election of two pensioners will take place on the 1st of June next, and that two more will be elected in the following January.

While we thus congratulate the Society upon its flourishing condition, we at the same time hope that, as it has for its object the welfare of distressed and meritorious individuals, it will continue to meet with that support which it so eminently deserves. Based on the best of principles-that of charity towards our
fellow-creatures-such an institution if properly conducted, as there is no reason to doubt will be concase in the present instance, cannot fail to exert a beneficial influence. We therefore earnestly renew our appeal to every Gardener who has it in his power to subscribe his mite towards the assistance of his less fortunate brethren. In thus adding to the happiness of others, he will but increase his own; and he may in some measure be providing for himself, should an unexpected reverse of fortune overtake him at a future period.

Under the present judicious regulationsit is scarcely possible that the funds of the Society should be bestowed upon any who are not really necessitous and
deserving. Where, then, can the wealthy and charitable find a more fitting opportunity for following the bent of their kind dispositions than in seeking to alleviate the distress of their aged servants, whom infirmity and other misfortunes have thrown upon the world for snpport? We feel assurel that this excellent Institution only requires to be more generally known to meet with still more extended patronage. It is conno hawks among them: and it deserves, in our opinion, not only all ithas and it deceived, but a much more ample amount of receipt-provided always that it keeps itself clear of scampish managers.

Thr slow and spontaneous decomposition of vegetable substances in the earth is the natural mode by which the soil is enriched. When the land has been long its surface, the plants which are found to grow on it are of a richer and more succulent nature, in proportion Under very favourable circumstances, wating fertility. heater very favourable circumstances, where moderate heat and moisture have concurred in producing luxuriant vegetation, where no floods have carried off the subsoil hated vegetable mould, and where a porous subsoil has not permitted the waters to stagnate, the black earth is so rich that to add manure to it would an addition it. It is already of too loose a texture, and state, would increase its productiveness. Such soils are found on the banks of rivers, in unimhabited they cons The first settlers in Virginia found what mey considered as land of inexhaustible fertility: for weeding years they had only to sow or plant, and to reap; Weeding was the only thing which required attention, Many of these spots are now abandoned as absolutely exhausted. The moisture is evaporated under ang sun ; and only the hardiest weeds will thrive in the soil. Very little cardiest weeds will thrive in the prevented this; the judicious addition of manures humus; have kept up the absorbent power of the have been and, with very little trouble, the fertility might common; maintained for ever. This error is but too properties portion of manure will keep it so. One of the properties of humus, and also of all animal manures, is
to attract moisture from the atmosphere; and on this, more than on its affording nourishment, and on this, development of the embryo plant. Seeds want only a certain warmth and moisture to vegetate; the young
plants require no other food than that which is contained in the seed, until the seed-leaf is fully expanded and the rough leaf appears ; heat and moisture then are the circumstances to be promoted. A small quantity
of fermenting dung will excite the action of a great quantity of humus, which will actually generate heat
and moisture: for it is well known now, that water is and moisture: for it is well known now, that water is produced by a combination of the hydrogen and oxy.
gen evolved in the decomposition of humus, at the same time that water is also evaporated by the leaves, and probably decomposed. Nature has provided a wonderful circle of decompositions and recombinations: we have only to watch her operations, and upon. Physiologists and chemists, by their researches, greatly assist the practical cultivator of the soil; but their love of classification and building systems of ten leads them into error. No sooner had vegetable mould, separated from the earths, become the object of experiments, than chemists discovered the composition of a substance to which they gave the name of humic acid, or Ulmic acid, composed of definite proportions of the elements of vegetable substances. Humic acid was immediately invested with the power of affording all the food plants required, and the heat and moisture produced in the decomposition of organic matter in the soil was lost sight of. The actual quantity of humic acid in any soil was thought to be the exact measure of its acid ever exists in yet to be proved that pure humic prepared from it, or from rotten wood, or from peat. Gumus, however, is not humic acid, and should not be confounded with it ; but it is simply a very compound
residue of slow decay and spontaneous combustion residue of slow decay and spontaneous combustion of action of which is excited by exposure earth, the moisture; and this action goes on till all the volatil elements of the bumus are separated, and nothing is left but the fxed salts and earths it may contain. We must endeavour to afford fresh matter for this decom position, or, if we may say so, fresh fuel for its combustion; and if we proportion our supply to the waste produced by vegetation, we shall keep up the fertility to the degree in which we found it; if we give more, judiciously, we gradually increase the fertility: but we may give too much at a time, and thus, instead of assisting vegetation, we may impede it by over nourishment, and much of our manure will be lost by dissipation in the atmosphere, or by being carried off in solution by the waters which pass through the soil. These principles should be kept in view in the practical application of manures; and if experielearer insight into the mode in which different kinds of manures assist vegetation and increase fertility in the soil.-M.
The many inquiries which were addressed to us last year upon the subject of rooks induce us to mention, now that the season for building has begun, or is very near at hand, that, in the opinion of a friend, (whose ornithological knowledge would, if we might appeal to it, carry the greatest weight with its) the
most probable means of attracting rooks, and inducing most probable means of attracting rooks, and inducing
them to build, is to send a boy into the branches of a tree with bundles of twigs, made fast to the branches in such a way that the rooks may use them for their nests without upsetting them and losing them. The bundles of sticks act in the first instance as a decoy, and afterwards as a means of enabling the rooks to establish themselves.

That failure of Clover upon land, which has given rise to the saying that a field is clover-sick, or tired of Clover, has never been satisfactorily explained. We see that the Rev. Mr. Thorp, of Womersley, near Pontefract, has ingeniously endeavoured to account
for it,* by supposing it to arise from the effects of for it,* by supposing it to arise from the effects of
frost. He is of opinion that it cannot arise from the soil being exhausted of certain kinds of food necessary to Clover; and he arrives at this conclusion from finding no material difference in the chemical analysis of good Clover land and land clover-sick. And he is unwilling to recognise the doctrine of root excretions, which some hav thought to account for the failure of Clover, partly because the experiments of Macaire Prinsep, on which that doctrine has been founded, have been disproved by Meyen and Unger ; and partly because, had they not been disproved, they would not action of Clover on soil. For Mr. Thorp's arguments in support of his own views we must refer our readers to the paper itself. We can only state that he thinks the remote cause of injury to Clover, by the action of frost, arises from the want of a certain degree of cohesiveness of the particles of soil among thernselves, the consequence of which is a diminution of the power
of the soil in retaining heat. According to the experiments of Schubler, the power of retaining heat is nearly in proportion to its weight; and consequently loose puffy soils retain it less than compact soils.

Mr. Thorp in all cases finds clover-sick land more loose than where Clover flourishes; a circumstance which he ascribes to various causes, oftet local; and hence he concludes that loss of heat, or, in other words, cold, is what destroys the Clover.
We cannot stop to examine this theory very closely, but we will content ourselves with asking how it applies to the well-known fact, that, if land is apt to become Clover-sick at the end of four years, it is not so at all if the time of rest is extended to eight years? It is the practice in some places to substitute Ryegrass for Clover every four years; and where that is done clover-sickness is not heard of, although, if the alternation of Rye-grass is neglected, the land imme-
diately becomes again tired of Clover. diately becomes again tired of Clover.

## We hasten to lay before our readers the following

To the Editor of the Gardeners' Chronicle.
Sir, -A chemical friend of mine has kindly directed my attention to the fact of a manure being advertised ander the name of " Dr. Daubeny's Sulphate of Ammonia;" and assures me, moreover, that a sample of it which be
has examined contains not a trace of the above-named has exa
alkali.
Now, as I entertain a perfect conviction of my informant's accuracy, I am unwilling even to wait until I have suc-
ceeded in procuring the article in question, before 1 assure the agricultural public, through your columns, that so far from having authorised the manufacturer to use my name, I do not even know who he raay be, and am at the present moment at a loss to know where to apply for a sample of it.
I can only conjecture, that he may have intended to follow the instructions given in one of my Agricultural Royal English Agricultural Society in which I pointed on the the manner of converting the impure ammoniacul arbo present in the coal gas liquor into sulphate of ammonia by means of gypsum.
I had no sort of intention of claiming that method as my own, as it was a mere application of a well-known manufacturer, whoever he may be, has thought fit, without consulting me, to give me the credit of the invention I regret to find that he has bronget it into some blunder he appears to have made in the mode of his manipulation. I remain, Sir, your obdt. Servant,

1 remain, Sir, your obdt. Servant,
Celarles Dadbeny,
Professor of Botany and Chemistry, in
Professor of Botany and Chemistry, in

## Oxford, Feb. 14, 1843.

P.S.-Allow me to take this opportunity of correcting an error which has crept into the same lecture, from which the unknown individual alluded to may have intended to take the method of forming the sulphate of Amongst the substances therein enumerated by which carbonate of ammonia may be fixed, common salt issmentioned. Now, although, according to Berzelius' principles, if a solution of muriate of soda be mized with one of carbonate of ammonia, a portion of the latter would be decomposed, and a certain amount of muriate of ammonia generated, yet, for reasons with which I will not detain you at present, this circumstance would not assist us in preventing the escape of the ammonia, and therefore would not enable the agriculturist to economize the useful principles of his dung-heap. Professor Henslow is quite right in questioning the utility of such au addition, as he has done in a Letter to the Farmers of Suffolk, published in a provincial newspaper.

Gnomes! whose fine fingers fill the organic cells
With virgin earth, of woorls and bones and she
Mould with retractile glue their spongy beds,
And stretch and strengthen all their fil rethread
You w with nice eye, the slow solution watch,
You' with nice eye
Wath fostermg hand
Join in uew forms, rombine w,tll life and sense
And guide and guard the transmigrating Ens.
Hardening the Texture.-Not more does the strong and vigorous ostrich differ from the soft yolk where it was engendered than does the full-groma plant from the speck of jelly out of which it is elaborately formed by the inscrutable powers of nature. Wonderful is the process in either case! In the one we have a gigantic framework of hard bones derived from a little fluid and delicate menenduring, the beginning of which was a speck of gum To the limited faculties of man is denied the prower of discovering the means by which a shapelers manimate is not given to hima to control or even to understand the bine thench comper the forms, animated , of life, covering the surface of the earth, perfore the allotted duties for a time, and then perming their the same invisible matter from which they were derived, abstracting nothing when created, adding nothing when destroyed. All these things, produced at the command of the Great First Cause, are subjects of admiration only, not of investigation. We may know the same elements comes and whither it goes, but why quadruped, a bird, a fire combined into the forms of a can say ; and it is, a fish, a reptile, or a plant, no man can say ; and it is only those who are foolish that attempt the discovery. While, however, these mysterious effects
are beyond all scrutiny, there are others of a secondary
kind, the nature and causes of which have been revealed to the patient observer. Among these, one of the most interest.
When a plant is first formed, its parts are delicate as the finest cobweb, thin as the most untouchable membrane, incapable of enduring the light of heaven. The plant is then shrouded in darkoess; and in the recesses of the
seed it undergoes its earliest changes. By degrees its parts harden, by attracting and absorbing the charcoal which, io the form of a viewless air, is floating around them. This they continue to feed on hour by hour and day by day, constantly adding something.to their texture, tin at ast the microscopical poiat, once too delicate to breathed upon, is enlarged into a seed preguant wine tree. This curious process of hardening consist mainly in lining the cavities of the tissue with layer after layer of condensed charcoal, in various chemical states; which, however, is rendered stronger and harder by adition of eartly substances, such as lime and magnesia and even of some of the metals, such as copper, which is found in notable quantity in Coffee and Wheat.
Now what occurs to a plant at its earliest period of life continues to go on during all the remainder of its existence. The seed pusbes forth a root, the texture of which but the root speedily robs the earth of its air of charcoal, and such other substances as potash, lime, or flint, dissolves them in its vital fiuids, and then, introducing them into its cavities, lines those tiny spaces with a crust which often renders the root as hard as solid bone.
The same takes place with the stem. The wood of the solid Oak was once a thin cobweb-like substance which would perish if nature did not bathe it in a gummy fluid, wherein its first growth is accomplished. Then, organized as a soft spongy substance, it serves as a passage
through which charcoal passes in its invisible form, along with all those imperishable materiais that it sucks out of the earth in its sap. The charcoal is gradually condensed upon the sides of its cavities, lining them with layer after layer of a barder substance: along with the charcoal are the heartwood of the Oak-tree is produced. At first, When the cavities are young, and nothing has been deposited upon their inside, the sap flows freely through sages are more and more choked up, and at last the heartwood of the Oak presents an impassable barrier to all further movement of the sap in its direction. If it were on the outside of the tree, the heartwood would be
thrown off like the bark, which perishes from a similar cause, but being covered by the younger wood, it is so guarded and incorporated with the stili living timber, that no separation can take place. And thus, by a wise pro-
vision, the anpetite of a tree falls off as it gro that though the whole earth were covered with forests it would still be able to feed them.

Leaves undergo the same processes ; only, in conse quence of the action of light npon them, much of the charcoal which they attract from the air arranges itself in the state of coloured masses. The tints of the emerald, and ruby, and sapphire, are there, and we cease to wonder all the colours of the precious gems are constantly derived from such a source in the laboratory of the leaf. Here, again, takes place the same furring of the cavities of the leaf, by the deposit within them of sedimentary matter. The delicate membranes become to line the sides of th passages through which the air and fluids pass; at last the delicate conduits in the interior of a leaf cease to suppl it with the food it wants; it withers and it dies.
Nor, if we turn to the fruit, is this singular process dis continued. Oa the contrary, it is here that nature exert her greatest hardening power for the safeguard of the wood, the shell of the Cocos-nut, the bony skin of Indian Shot seed, were once as tender and thin as the petal of a Lily ; but, from an early period of their existence, they Lily; but, froct their hardening substances from the they around them, or from the tree that bears them; and a few short weeks will often witness the conversion of the softest pulp into steely matier. by lining the delicate cavilis of a plant with charcoal and earthy or metalic matters, ceposited iayer
To some, these things may be incomprehensible others, they may seem incredible; and yet they are all capable of being witnessed by those who have the skill to observe.

Yet all these were, when no man did them know;
And later times things more unknown shall show. Why then should witless man so much misween,
That nothing is but that which he hath seen?
The precise manner of observing them is with the microscope, and the apparatus that belongs to it. Yet something of it may be seen by other and more ready means. Take a thin shaving of Rosewood, and throw it into aqua fortis, a little warmed; you will soon find the
dark colour disappear as the aqua fortis dissolves it ; then remove what remains, wash it in water, and dry it; what is left is the original delicate texture, such as existed before the substances dissolved by the aqua fortis had been deposited within it. Or take a piece of a deal match, that after all the charcoal has been consumed, there remains a whitish ashy film, which consists of the earthy and metallic substances that had been entangled in the char-
coal, and had, assisted in giving it hardness. In Wheat,

We may wonder how plants contrive to feed on such substances as these, or how a flint is to be dissolved in water and drank by the roots ; but such is the fact, for in It is strange enough that a flint should be dissolved by the breath of a plant; and yet we

THE ROSE GARDEN.-No. IV the diversified families of autumal Roses, none are, perhaps, more beautiful, or more deserving the especial notice of the Amateur, than those designated Bourbon Roses. A few years since two varieties one named in catalogues. These seem to have divided themselves into three or four well-marked groups. The type of one of these is a most interesting variety, viz., Gloire de Rosa mene, which I should imagine to have orginated by "Bourbon Jacques," with Rosa semperfiorens; at any rate, it is a remarkable variety, with elegant laciniated foliage, and gorgeous clusters of semi-double brilliant crimson flowers. This Rose and its congeners by no means group well with other members of the same family. It will often in one season make shoots six feet or more in length, while its humbler relatives content themseives by remaining an dwarf bushes. It is therefore only as isolated plants, either as pillar Roses or on a trellis, that varieties of this group of Bourbons are cultivated with a happy effect. One of the best, and nearly the first, raised from the type, is well known as Le grand Capitaine, with flowers of equal to be riancy, but more double the same peculiar luxuriance of habit: but this we have in an eminent degree in Enfant d'Ajaccio, lately raised at Lyons, having flowers nearly or quite double, with the fine laciniated olage and sessed of fragrance in a high degree
At Le Mons, a seedling, called La Bedoyére, with per fectly double flowers, has been raised. The colour is not fectly dower, so brilliant as that of its parent. At Lyons, also, a seedling has been originated from the same source, with a seeding form " form, "et dun effet superbe, it bas will doubtloms d'Eu. Lhis secuisition Ma an interesting acquisition. Madane Lucy Astaix is also Lyons; it is of a pale, but brilliant carmine. A pretty dwarf Rose, known as Bossuet, of this section, forms most elegant bush.
The group next in interest to the foregoing is that Which has Madame Desprez as its type. This fine robust Rose is a hybrid betweet the Bourbon and Noisette from the latter it derives its large corymbs fowers Bourbons in grouping; they form fine pillar Roses and admirable standards; in which respect they surpass all others in the family of Bourbons, uniting well with the stock, and annually increasing in beanty. In very rich soil, shoots of too great luxuriance will often make their appearance as standards, so as to destroy the proportions of the plant. These should be shortened as soon as they have made about half their growth; they will then produce numerous smaller flowering stems. The most remarkale and beautiful varieties of this group are-Triomphe de Plantier, Splendens, Crimson, Madame Desprez, Cardinal Fesch, Desgaches, Julie de Joynes, Comtesse de Coibert, Thiaffait, Comice de Seine et Maine, Paul Joseph, and a new white Bourbon, raised at Lyons, called Madame Lacharme. The latter may with justice be called "White Madame Desprez," as it has precisely the habit "For pillars, as standards, and for planting in beds, with their shoots supported by a stake, these magnificent autumnal Roses ma

The third group of Bourbons worthy of particular nolice is the coning tiose which have the Chinese and Bourbon Roses for their joint parents. The leaves of than those of the generality of Bourbons ; the lower part of their flowers more compressed, and not so exactly hemi-spherical as those of the true Bourbon family. One of the most remarkable and Proserpine, than which no Rose with its deep crimson flowers, shaded with glossy purple. Ceres is also exceedingly beautiful; its flowers are of a brilliant Rose, its petals thick and wax like. Comtesse de Rességuier, Manteau de Jeanne
$\mathrm{d}^{\prime}$ Are, Mademoiselle Rachel, Reine du Congrès, are all d'Arc, Mademoiselle Rachel, Reine du Congrès, are all Roses of the most delicate blush, approaching to white, These, with Anne Beluze and Beluze, have all been raised at Lyons by Monsieur Beluze ; and form a re markable and interesting group; Pucelle Genoise and mosa are two well-known varieties, also belonging to these Chinese Bourbon Roses. My remarks on other Bourbo Roses I will, with permission, give in another paper.
The Blush Boursault, Belle de l'Isle, Boursault Flo under on Rose de l'isle, which, I believe, is also ktock for budding on; it strikes readily from cuttings planted in the autumn. My practice in budding on the Boursault is perlaps an improvement on that given at p. 51. The trongest shoots are selected early in July for layering fower-pots of the size 48 are taken, and the aperture at shoot to be passed through. After doing this, the shoo is tongued, the pot is drawri up till the tongue is about in
the centre ; it is then filled with a mixture of rotten dung and sand in equal parts, and well pressed down. The shoot may be budded at the time of layering or afterwards, accordingly as the buds are ready. The shoots should be headed down at the time of budding to within two eyes of where the bud is inserted. The buds of all
the Bourbon, Tea-scented, Chinese, and hybrid autumual Roses will push immediately ; these may be removed from the stools in August, potted into larger pots, and forced with great success the following spring.- $Z$.

## THE PINE-APPLE

Being desirous of calling the attention of Pine-growers o the great benefit that might be derived from fruiting the same plant for several buccessive years, instead of raising a fresh stock annually, as is now practised, I beg
to suggesi the following plan for effecting that desirable object. 10 feet wide, and should be built in divisions of five lights each; the frame-work being also so constructed that the part belonging to each division could be raised separately when required. The thickness of the wall at back and front should be 4 inches, with only a pigeon-nole occasionally along the bottom, to allow he wall, and at about 4 inches fre the less in heirht should 4 inches from it, another wan, a fous in heighe, should be raised; the cavity between boing intended for the reception of a hot-water pipe, which must be fare before the inner wall is completed, and sit

The depth of the pit should be about 6 feet; the front being a little higher than the ground level, and the angle of the roof left to the builder's taste. I should recommend a cavity, 2 feet wide at the bottom, and inches wider at top, to be formed round the pit, abou 6 inches deeper than the level of the interior, to hold lining, so that the hot-water apparatus might only be called into use during severe weather. The bottom of the pit should be covered several inches deep with rough , which any common slabs, or, in their absence, pieces of turf, may be spread. This will prevent the tan, which is next to be brought in to the depth of 18 incbes, from falling down amongst the stones.
The compost in which the plants are to be plunged should be about I foot deep. The latter, when planted, should be just upon the point of throwing up their fruit. The pit will be sufficiently capacious to admit of four rows being planted out in angles 2 feet apart. After the first fruit has been cut, one or two of the best suckers should be left, as low down as possible, on each stool ; the old leaves should be trimmed off, and a few inches of fresh compost sliould be adde
This treatment might be continued annually; and as soon as the plants reached the glass, pieces of wood, about 4 inches thick and a foot in lieight, made secure at the corners by means of small bolts, might be raised upon the wall beneath the frame-work. Upon the top of each piece of wood there should be a groo
Each division of the pit being separate, the frame-work Each be taken off wenever it was necessary to add might ber of the nit being built anothetle of the ground these tiors of wood but might be continued to the height lining higher then the would but
 heat in the bed from cavity, would warm the soil sufficiently. Boards made to fit above this cavity would be beneficial in keeping the dirt from falling down between the pipe and the walls when mould was required in the pit. The boiler and fire-place might be situated at one end of the pit. I. Gray, Esher.

AMATEUR'S GARDEN.-No. VII.
THE time has arrived for the florist to bestir him self. Auriculas and Polyanthuses mus receive their spring-aressing by removing the surace with the usual com post Aroid usine rich manure for this or any flower for it may be asserted as a natural law, that as all plants like fresh soil and leaf-mould, a compost of these two in gredients with a little sand will grow plants as healthily (though possibly not so luxuriantly) as a complicated ad mixture of more stimulatiog anaterials. After the plants are replaced in the frame, they must have all the air pos sible by day and night in mild weather, but must be pro tected from frost. A gentle shower of rain will not injure them on a mild morning, but take care that the water does not stagnate in the centre of the plant, or the bloo will be injured.
Ranunculuses and Anemones should be planted before the end of the month. Some excellent observato Mr the management of the former, by Dr. Horner and Mr.
Lightbody, will be found at pp, 420 and 469 in the Vol. for 1842 .
Carnation and Picotee layera that have been stored in frames in small pots may now be removed into their blooming ones, taking care that the soil used does no When worms, which are their most deadly encurne Where the after being potted; but where there is not they frame so placed together in a sheltered situation they must be be protected from rain. Sow Carnation that they or seed-pans in light soil, and protect it from seed in pots or
In the Flower-garden, finish pruning Roses; in doing
well-ripened ones to four or six buds, according to their strength. Strong.growing kinds, such as Brennus, Fulgens, Triomphe d'Angers, and others of sinilar habit, with most of the Noisette Roses, when budded on tall stems make beautiful objects, if, instead of being shortened, the shoots are turned down and tied to the lower parts of the stem, so as to form a balloon-shaped plant. In the borders, sow Sweet Peas and Larkspurs, and prepare for the general sowing of Annuals next month; but do not rake the borders at present, or they will be readered almost impenetrable for the whole of the season. Hoe or fork them over two or three inches deep as often as you please, but
do not rake them until the dry winds of stracted a little of the superfluous moisture from the soil. For the sake of a few days' neatness in the early part of the spring we frequently do more injury to the soil and summer flowers than can be remedied during the remaining parts of the season.-W, $P$. Ayres.

## HOME CORRESPONDENCE.

Treatment of Coppice-Wood.-In the Calendar at p. 8 of the Chronicle for 1843 is the following paragraph:-
Coppice-woods are like old Raspberry-stools, with only this difference, that a chance shoot here and there has got the lead, depriving all the rest of their due nourishment; this should not be so." The following instance
will in some measure illustrate the truth of Mr. BeaWill in some measure illustrate the truth of Mr. Bea-
ton's remarks, and give some idea of the loss sustained from this neglect in a piece of coppice-wood, which befrom this neglect in a piece of coppice-wood, which be-
longed to the late Mr. De Winton, of Maeslough Castle. This Copse was situated in Cwm Neath, Glamorganshire, This Copse was situated in Cwm Neath, Glamorganshire, but very little was known of it further than from the map book, which stated that it contained 82 acres. In 1837 application having been made to purchase it, Mr. D
Winton sent another person and myself to value it. An Winton sent another person and myself to value it. An been cut down for 35 years; it was evident that no care
had been taken of it during that period. It consisted had been taken of it during that period. It consisted
principally of Oak, Birch, and Alder. The previous cutting had been done in a ragged and slovenly mannner, and in the following years no care had been taken to thin out and regulate the young shoots, which were entirely left to nature. On many of the stools nearly a score of shoots, with scarcely a branch on them, and only a few leaves at their extremities, were striving for the mastery; on others one or two shoots had been fortunate enough to get the habit of trees, whose side branches had overtopped and choked the weaker ones, which had struggled hard for many years for existence, but were eitber dead, or in a stools were quite dead, owing to the shoots from the neighbouring stools having overhung and choked them. This state of things greatly lessened the value of the copse, vacancies caused by dead stools. Even the large filling up grown shoots by no means made up for the loss of those which they had destroyed; on the contrary, they of those obtle value to cut up for any other pit wood, and of very litfrom the Iron Works stated that the copse would have been of considerably more value when from 25 to 28 years old. This was our opinion also, and after having we carefly examined the copse, we selected a part where measured off. $\frac{1}{8}$ th of an acre, we selected and marked the measured off. $\frac{1}{8}$ th of an acre, we selected and marked the
best Maiden Oaks, and other trees, at the rate of 60 to an best Maiden Oaks, and other trees, at the rate of 60 to an
acre, always preferring Oaks where they could be had. These were to remain for timber-trees. Everything else Was cut down and sorted; and after having been carried
 Cord-wood, 4 tons $7 \frac{1}{2} c w t$, at $21 s$. per ton, $\mathcal{E} 4.11 \mathrm{~s}$. $10 \frac{1}{2} d$. Or 4010 s. per acre. Total value of 83 acres, $£ 3,321$. certain regulations for cutting, clearing away, \&cc., it was certain regulations for cutting, clearing away, \&cc., it was
Yery soon after sold for $£^{2} 3250$, being 271 below our valuation. If this Copse had been properly managed, and bold when 28 years old, the value would, in all probability, have been about $£ 4000$; or even if it had been cut down and sold then ${ }^{3}$ at the above price, the next crop
would have been advanced seven years, or one-fourth of Would have been advanced seven years, or one-fourth of
the time that the above crop was in coming to perfection; and, therefore, the loss on that score cannot be considered to be less than one-fourth of
the price for which it was sold; viz., $£ 812$ 10s. Perhaps there is no greater hindrance to the proper management of plantations than game, when they are the pull down the Mansion, as to enter one of those pet covers, to thin, prune, and regulate the trees, which are generally, by the time they are 20 years old, so crowded and extensipe that they are little better than hop-poles. In culable; but in game covers, where the sound of the axe and saw must not be heard, this might be greatly obviated, by planting at a much greater distance than is gehing, and when full Boxpixt them the Portagal and common Laurels, Holly, might be ergreen Privet, and any other berry-bearing shrubs for the game. If the ground had been trenched previlent cover for the they would very soon make and excelthe trees. In such cases, there is no occasion to plant if the plants of the common Laurel, as it will do as well lengths fromings from to shrubbery are theken and cut into
any other preparation, in shallow pits; covering them about six inches deep with earth, and leaving out as many found Laurels so treated make fine bushy plants, suitable for the sbove purposes.-James Alewander, Carton Gardens.
On Yews.- What is the best season to cut Yew? able be compelled to cut down 5 Yew-trees of consider cut it to the best advantage. I presume that if cut in the course of the present month and left to die with the friage on, it would be in the most favourable state. One tree is about 2 ft in diameter, in full vigour, and I guess
them all to be about 150 or 170 years old. $-\boldsymbol{J}$. $R$. [Will some correspondent, who has performed such an operation, oblige us with his advice upon this point?]
Bees.-It afrords me great satisfaction to be able to as stated at p. 53 of the Chronicle, has been completel, successful, as up to the present time (Feb.9) I haveletely witnessed four dead Bees, in addition to the three formerly witnessed four dead Bees, in addition to the three formerly It was on that day that I found the four dead Bees on the ground, killed, as I think, in the same manner as the former, about a foot in front of the hive, at a time when to the mildness of the weather. Three of these Bees were decidedly young ones, and I observed the full-grown Bees busily engaged at the mouth of the hive, in cleaning other young ones, although at that unusual period of the year.
It has been stated, that exposure to the South causes Bees to go abroad when the sun shines upon the hive, and that many perish in consequence of the cold on such occasions. My impression, however, is, that in a well-vendanger of suffering to any extent from cold, unless they are compelled by hunger to do so. Indeed, I look upon them and their motsons as equal to the best barometer in announcing the state of the weather ; and as a proof that hive, is case, I may observe that mine only left the January, when it was very mild, one day in the middle of On January 29,30 , and 31 , and on Febain on January 28. forenoon of February 2, a few left the hive; and on the evening of the first four days hung in clusters from the combs in beautiful perspective, until at the back part of tom board. On the evening of February 2, I remarked that I thought we were going to have bad weather, as on looking into the hive, I could not observe a single Bee, the morning of February 3 was one of the brightest that has been witnessed this season, and was accompanied with a little sharp; consequently my prognostication that bad weather was near at hand was laughed at; but in the recollected that on that day, when the sun had pased ecollected that Men the one of the most rienced this season. From that day to the present not Bee has been seen, and therefore I imagine that the weather, although open, is not yet settled. I recently observed number of glasses for hives exposed for sale, with ven a metal so apt, under peculiar circumstances, to form sulphate of zinc (a poison), should be used internally in any shape in Bee-hives or glasses, when a common swan or goose-quill might be notched so as to answer all the
purposes of ventilation, when required. The fact proved by Mr. Davis, who has the charge of Her Majesty' kennel, that water passing through lead pipes was sufficient to bring on paralytic symptoms in dogs, ought, I in any shape, which might be liable to come in contact with the sensitive little winged lancers, designated at the commencement of this communication.-Since writing p. 85 , and from the good tone in which they are written the surest means of eliciting the experience of all parties, I cannot but be pleased with his observations. In reference to my statement, which he thinks "strange," that up to Dec. 26 , I had only witnessed three dead Bees from my hive, I wish to give the following explanation :-My 28, was made in consequence of a "Despairing Bee. keeper" stating, that on returning home in January after a short absence, she found great numbers of her Bees dead observed in connection with my hive, and humber I had one more-the number to the present date, Feb. 13, for the purpose of showing that my hive has continued quite of summer. I $\frac{1}{}$ do not wish it to be understood middle number of Bees I have specified are all that have died be longing to my hive. All I can state with certainty is that if any others have died, they have not died at home, as I have not only carefully examined the bottom of the candle, but I have also, on an average, once, and sometimes three or four times a day, carefully inspected the ground in front and round the hive, and on many occa sions the whole of the garden where I keep my Bees, to endeavour to find any that might have been carried or
dropped down at a distance, but I have not discovered more than the number already given. I may add that I have never fed my Bees in any way directly or indirectly; course, merely anowng the to assist them when 1 can do so beneficially. I am quite disinterested
in the observations which I have made, as it will afford me great pleasure at all times to communicate such facts insects notice regarding these industrious and valuable tously by letter any questions put by parties who may feel desirous of knowing the plas put barties who may during the swarming season. My views relative to forming artificial swarms, so as to increase the number of stocks, and to prevent swarming when preferred, are as yet only theories in my mind, and therefore I am, are as yet only they should appear in print until thes reluctant that consider myself successful in one point, namely, securing the health of my Bees during winter, I am not without he health of my bees during wiater, I am not without hope that I shall succeed equally well in my future experiments with them, as I become more fully acquainted with their peculiar habits, and have an opportunity of obfial source of pleasure to the rich, as well as a profit to the industrious, althe Foo industrious, although , poor and humble cottager.-John Grant, Ed. of the Army and Navy Register, Woolwioh. Bee-keeper" complaing difficulty that a "Despairing the temperature of the sif, (p. 837 of 1842 ), in keeping from being the maximum, that it very often rises to above $100^{\circ}$; then, if a queen be ready, a swarm goes off without waiting for the side-boxes to be filled. This temperature is reached, even although the lid may be raised from the cunnel, and the slide drawn from over the holes in the board on which the boxes stand. I also, like your correspondent, find it impossible to prevent the Bees from plastering over the holes of the ventilating funnel, with wax or propolis; and this requires to be examined every thor whe some of your correspondents, who thoroughly understand Nutt's method, tell me where I

Killing - 2 . G. Chitheroe
Kiling Inseats for the Cabinet.-I wish to say a word S.g Who writes a letter at p. 69, in which he recomI will not say cruel mode of kining insecta for your interesting miscellany were touched with pity for the poor insects, and grief at the thought that any one could sit down and recommend such a syatem any one could there represented. I would only ask "S." to remember that the God who made those insects will be his or her Judge! and that "The merciful man is merciful to his beast."

Aviaries.-The addition of an aviary to the amateur's garden increases the pleasure of his Horticultural labour, gives a cheerfulness to the scene, and well repays What ant canary and goldfinch on a bright spring morning ? -and canary and goldfinch on a bright spring morning? -and chaffinch and, bulfinch are delightful. The facility with which birds can be preserved through the winterin the:open air, and the simplicity and cheapness of their food, makes it desirable that no pleasure-ground or garden should be South by East, is Any snug corner facing the South or South by East, is the most favourable position. A birdhouse, eight feet by four, and eight high, is sufficiently capacious to contain 40 or 50 inmates; the roof should than a flat one. The back and sides shoutd be at night than a flat one. The back and sides shoutd be built up, with The fram worework, small enough to keep out mice. raised brick foundation, about 10 inches high. The flooring ought to be well drained, and flagged, to prevent vermin from intruding. The interior should be white-washed, and the wire, \&c, painted green. I have an aviaty in which I keep canaries, bulfinches, chaffinches, goldfinches, redpoles, \&cos during winter, by merely protecting one-half of the opening in front with a thick linencurtain, which may be dressed with oil to make it more durable, and is drawn at icht or during cold weather. This is all the precaution I have taken for the last three ears. A Java sparrow has been out all this winter, and does not appear the worse for the exposure. Their food consists of coarse oatmeal, canary-seed, in small quantities, white bread soaked in boiling water, which must not be allowed to get sour, and occasionally green food. The bulfinches eat barley greedily. I never indulge my favourites with hemp or rape, and I find they keep in better health by depriving them of these heating seeds. Fresh water and gravel or sand are indispensable for an aviary.

Cold Fish.-Your correspondent "T. F.," at p. 54, deserves the thanks of many of your subscribers, and my Gold mong the number, for his communication relative to Gold Fish. As one good turn deserves another, I will give him three As a of reeds, if placed endinas, without breaking the ice; and for breeding for his fond, wis fish to like a better locality than the leag, be will Lily; this he may easily construct of rockwork. The water also may be improved by spreading calcined fint, about the size of Pess, at the bottom of the pond, which, from its extreme whiteness, wil give his fish an appearRed Spider.-I see many questioteur of Fish.
about the Red Spider; but questions asked and answered. about the Red Spider; but all these appear to apply to hothouses, conservatories, \&c. I have some Damsontrees, the leaves of which turn as brown as if they had been scorched oy a fire, and drop off prematurely ; a great portion of the fruit does the same, and all that remains is poor, and deficient in flavour. My wall-trees used to be affected in the same manner to such an extent that some appears to be effectual. Most of your a remedy which
splendens, and not a single one failed : with others it has been equally satisfactory. The method is, to plunge a large 60 -pot, made water-tight at the bottom, in the centre of the larger pot in which the cuttings are to be placed. By keeping the smaller pot always filled with water, the cuttings will be duly supplied through its pores.- William Proctor, Gardener, Tarbat House, Rosshire. [There is nothing new in this; it has been practised for many
years, and is extremely useful in striking plants which years, and is extremel
are fond of moisture. 1
To destroy Earwigs and Woodlice.-I beg to inform you of a simple plan which I have successfully adopted
for years to destroy earwigs and woodlice, viz., some for years to destroy earwigs and woodice, viz., some
joints of withered Hemlock or Bean stems placed under walls or about their haunts through A pril and May. These must be examined daily; and if gardeners would give
themselves this trouble, they would soon rid themselves of these vermin-Cestus

Camellias.-At p. 56, Mr. Beaton advises Camellia growers to place those plants which have no flower-buds in the forcing-house, to induce an early formation of them were plunged up to their rims in a tank of warm water during the short time they are making their growth, it would not hurt them." As this plan might be adopted by to offer an opinion on the probable result of such an beg to offer an opinion on the prouabiment. I think that after such treatment the newlyformed fibres would be so situated, that they could formed fibres would be grow, nor be extricated from it without sustainneither grow, nor be extricated fromld be firmly fixed in a ing great injury; that is, they would be that that anything would be gained by forcing them so early as this. I might base this opinion on Mr. B. \& own exce in winter, and the at p. 39, where, in speaking, of forcing in wine is to enlarge the plant without reference to fowers or full, he saye, "But having no control over light, which is the most important agent in the growth of plants, we must so apply heat and moisture as to accord with the quantity of solar is deduced from experience, and I have for several years had Camellias in bloom by the end of October, which did not make their annual growth till Apri, (and that frequently in a Greenhouse) at which time if I can command a temperature from $55^{\circ}$ to $65^{\circ}$ with a slight shading, I in the house till the buds are well formed, and the young wood changed to a brown colour, which is seldom before the end of June. They are then placed in a partially shade situation out of doors, for about eight weels. Plants so treated enjoy the concurring aid of all he agenta
essential to vegetation, at a time when they are most needed and with increased light and heat actiog on the healthy organs of respiration and digestion, go on storing up highly elaborated sap to expend in the expansion of
flowers, as soon as impulse is given to them after their periodical rest. Whereas, in those which are forced now, and are removed to a cold frame afterwards, vegetation is for a long time suspended, and as it sometimes happens WT Sherwod, Gardener to J. R. Mills, Esq., Stam ford. Hill.

Hellow Rose.-In answer to "Philo-rosea," at p. 73 Mr. Proctor informs us that the plant referred to by him, at p. 54 , not only produced last season above profusely for several seasons. In addition to those last year exhibite at the meeting of the Caledonian Society, four flowers
were also transmitted to the Northern Horticultural Society

## at Inverness.

Amaryllis Belladonna.-Some of your correspondent still maintain that it is difficult to flower this beautifu bulb, which to me appears rather strange. Last autumn I obtained nearly 300 spikes of flowers without any dimiculty. Many persons saw them at the time; and if your correspondents will pay me a visit next September, the as closely as possible to a south wall, in a good sandy loam Possibly the failure of other persons may be occasioned by a wet soil, or by having taken up the bulbs to divide spring. It is a bad practice to part them, unless they are very crowded. I had some in pots, but they bloomed weak compared with those in the open ground. An to receive plenty of drainage, and to be filled up with good turfy loam and sand. The bulbs should then be dug up, without being disturbed more than passible; and in planted in a warm situation, I am certain there wiiotanical Gardens, Twickenham.
Virdens, Twickenham.
Vines.-The following casualty, the cure of which it may useful to some perso th kn, happened to-day (Feb. 15). I left them about 1 P.M. in good order, but on returning about an hour afterwards was had been detached from the parent plant. I was for some time at a loss to know what could be the cause, , and covering upon the border was all right. I found that the birds had scratched part of it away, and I at once attributed I got
mishap to the frost having penetrated to the roots. mishap to the frost having penetrated to the roots. I got a quantity of fermenting leaves, and some water abour inered warm ; the latter I poured over the stems, and then covered them up with the leaves; I afterwards syringere as healthy all over, and in about 20 minutes the Vines weris the night, they must all have perished.-D. M. C.
they must all have perighed.-D. M. C.
The Fastolff Raspberry.-In'the late Numbers of the

Chronicle the Fastolff Raspberry is advertised, and highly spoken of. I should be obliged if any correspondent who has tried these plants at a distance from the sea could inform me if they succeed well, as I have been told that sea-sand and burnt sea-weed have a wonderful effect on the size and flavour of the Raspberry; and if this is true, it may account for the superiority of the Raspberries in the Great Yarmouth Nursery; which possibly would
degenerate if removed from thence, or from near the

## .

Melon Seeds.- For the information of Alpha, at p. 57, I beg to state my conviction, that little or no care is required for the conservation of the germinating power in Melon-seeds; the only condition appearing necessary is,
that the seed when laid by should be capable of producing bealthy plants. The following facts in support of the above are worthy of being recorded. Some 20 years ago or more, the late W. Morehead, Esq., of Hertfordshire, rummaging one day in an old bureau, discovered a packet tafned Melon-seeds forwarded by a friend of the grandfather's from one of our West India Islands, accompanied with a high recommendation in their favour. The seeds were immediately placed in the hands of his gardener, who in the ordinary mode of cultivation succeeded in raising from them a fine-flavoured variety. The only other instance with which I will trouble you is furnished by another late neighbour of mine, who similaryy found friend 25 years previously. They had lain in his bureau, and had been overlooked during that period; from this seed, however, frooit was also produced, under the ordinary skill of the gardener.-I. K. S. [In all these cases due care to preserve vitality had obviously been taken without the parties concerned being aware of it.]

Prejudices.-"Our prejudices, how many they are, and how idle!"-Indeed they are; and I intend this line of your correspondent's (p. 69) to serve as my text in a few short communications to your readers-1 hope they will be tak . P . things disappoit grower's collection or elargoniums, Calcolas, sc., to find them nubbe abk the reason, ten to one but you are told that it is dove to prevent portions of them from being stoien, which would most likely be the case if gardeners or other visitors saw the names. You are obliged to keep asking what is the number of this and that, till you are as tired of inquiring as your friend is of answering-that is, if he has his book, which is not often the case. Now what is this but a prejudice? All my plants are marked on good-sized labels, and on both sides; and it gives me pleasure to say that I have never yet lost even a leaf. If it had been otherwise, I would rather put up with the trifing inconvenience than deprive my visitors of the pleasure of knowing at a glance the names of the different varieties. Edward Beck, Isleworth.
Asparagus.-In your observations, at p. 435, vol. ii., upon Asparagus grown in bottles at Nice, and the failure
 more rapid vegs to greater warh France. I put some Asparagus roots into my Melon pit in November, and had the thermometer at $80^{\circ}$; they soon sprung up, and I put a glass soda-water bottle (which is free from the bottom projection inside) over each of two of the heads. They grew into the bottles, turned round well in them, and began to sprout, although, of course, not strongly. I have been obliged to cut them lately, as I want the pit for Melons. The Asparagus was very hard and stringy when boiled. I failed to give them air, the heat was not regular, and in other respects they were not managed well ; but it appears to me that a skilful Gardener might suchear of the bottle plan being tried with success in the ensuing spring ; probably in a full south situation, under a wall, with a glass, and having a lining of warm litter A. P." speaks of an Irish method of growing Asparagus in tin tubes; and he signified his intention to give some further light upon the subject, but he does not appear to have done so.-s.
Onion Magyots.-Several questions have been asked respecting the Onion maggot, which for many years destroyed the greater part of my Onions until I adopted the following plan: I sow the seeds about the beginning of March, and when the plants are about 5 or 6 inches high I strew a little soil over the bed, and with a large iron roller I roll the beds until they appear to be as hard as the garden walks. After this, the Onions grow up strong ; and I never lose one either by rolling them or from the maggot. I sow my winter Onions about the last week in July, and I roll them in the same manner. My crops very light.-J. Parks, North Shields.
Refuse Vegetables.- In perusing Professor E. Sprengel's interesting articles, "On Manuring with Green Crops," it struck me that many gardeners might be, like myself, unthe farm-yard or some other place, where the unpleasant smell of their decomposition would not annoy their superiors. That 1 may prevent the loss of so much valuable manure, I make a point of wheeling at one time upon the land as large a quantity of the refuse vegetables as possible, and set a man to chop them with a spade small enough to be easily dug in, which is done directly. It find them an excellent dressing in all soils, but in stiur evidence in their favour, and neatness is in favour of the evidence in their favour, and neatness is in favour of the
direct application. If hoeing, raking, and wheeling away
the gatherings were to be replaced by pointing or forking over the ground between crops or flowers, labour would ultimately be saved, the crop would be benefited, and weeds would be eradicated. $-D . R$.
Worms.-I think that much has been said to no purpose respecting worms on lawns. Have any of your readers which has, for two or three years, been totally divested of Worms? These active little fellows are Nature's agriculsuperior to any that we clumsy cultivators are competent to perform. When the surface has an overflow of water, their works come into operation to relieve it-not to carry the superabundance of moisture away, to be useless, but to directions, so that it may be readily distributed ; and by the same ducts brought forth again when the thirsty surface demands it. More than this, they labour nightly ; and who will say their labour is useless, when they bring
up to the surface virgin earth, impregnated with animal up to the surface virgin earth, impregnated with animal
matter, as manure for the Grasses? What would be the matter, as manure for the Grasses? What would be the
state of turf without a perforation-solid as a brick, as it is in dry weather-incapable of the transmission of moisture, either by ascent or descent? Should there be
only a few showers in summer, all must quickly evaporate into a beated atmosphere but for the industrious worm, Who, aware of the fact, for he often anticipates the shower, fluid into his subterranean reservoirs, where it is preserved for subsequent distribution when the thirsty Grasses demand it.-M. A. Dun.
Catlle.-I beg to call attention to the fact, that "the depasturing of sheep on cow pastures communicates a produced therefrom." Can you or readers account for this ?-Cestus.
Couch-Grass.-I do not think it is generally known that trenching. If care be taken to bury all the roots of by six inches deep, they will never again reach the surface. I have repeatedly tried it with success, and I consider it a much cheaper and effectual method, even in field-culscarifying, harrowing, \&ce., not to mention the very great advantage to the succeeding crops, by moving the soil to

## PROCEEDINGS OF SOCIETIES

Peb. 7 .- E. Forster, Esq,., in the Chair, E. Forbes, Esq., proRev. Mr. Hinckes exhibited a specimen of Necttia a gemmivara Tro
Reve where this plant was originally found by Mr. Jas. Drummond, and on whose authority it was admitted into the Irish Flora. The
original specimen from Sir J. E. Smith's herbarium was aiso exhibited, The plant of Mr. Hinckes was much longer in the stem,
and tie flowers less crowded, than that from Smath's herbirum. The roots agree with the orignal description and drawny of Mr. Drammond. A note from Mr. Hinckes accompanied the speci-
men, in which he stated his corviction that this rare plant was still an inhabitant of Ireland. Mr. A. H. Hasssall finished the read-
ing of his paper on the reproduction of the conferver ture of the last family of Vancherer,t the trolifera, was considere coned, Band that of the branchemena exvibited by by mode of reproduction,
and mayy
nules nules, or zoospores, of this class of plants were described.

ROYAL AGRICULTURAL SOCYETY OF ENGLAND.
Feb, 1.--At the first monthy mecting, his Grace the Duhe of Richmond in the Chair, 45 gentlemen were electe.l Fellows.-
 adiditional clerks for the despatch of increasing business, and the tions, both whictl suggestions were alloptctl. Mr. Mym reported hat the arrears of subscriptionsin Bedfordshin, to his excecuton, which was ationted as the scail of the sonicidy,
and Mr. Dean having laid before the council the approved lease of the boues in Hanover-square, for 99 yearr, at an annual Ient
of 3000 , the society's seal was affixed to it, and the contract signed. The following resolutions werc carried. - 1 . That a card
of tle meetings of the council be printed fur the use of the mem.
berse bers. 2. That the Dalke of Rithmond, Earl Spencer, the Chair-
man of the Journal Committee, the Chairman of the Finance respectine, and Mr. Gibbs, be appointed a committee to more eovinomical mode of printing the jourral.
3. That the finance and journal committers be erequested to settle

 an armual a permanent house conmmittee; and Mr. Gibls, that rrears (if any) due from each member, scrijutions shall have been praid. -The Duke of Rutland placed at
the disposal ment of one of the society a cow, whose extraordinary conlarge in perfect health liad already been brought under notice by aooks for the society's library, and for the museum the model o
a new roller, invented by Mr. C. Cherry, for pressing and equal

 C. S. Giliman was reeelected Homorary Secectected Treasurer. Mhe following
addition was made to the gth Rule :- "And that any person detected in stealing or injuring any article exhibited, be prose.
cuted, and that no person so expelled shall be readmitted as a
member of the anien committee." An addition was also made to the 7 th Ruile, o'clock on the morning of exhibition, or be precluded from being shown for prizes.

NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL.

 to kill jt. It belougs, morenver, to a set of greentouse slrulbs of easy cultivation and small size, which are well adapted for deco-
rating the shelves of the conservatory. It is a native of the Swan River Cotony, whence the seeds were obtained by Capt.J.
Mangles, R.N. It first flowered in the garden of R. Mangles,
 stated by DD. Wallich (to whom -ur stoves are indifule plant for its
introduction) to bea native of trees on Mount chandaghiry, in
in
 sprecles, with rather remote oblong lariceolate leaves, having iong
sheathing bases, which clothe the entire stem. The racem
,
 and consists of from six to eight large, delicate, drooping Howers.
-Curtis's Boturical Magazine.

## MISCELLANEOUS.

Bulbous-rooted Barley.-According to M. Fleurot, Curator of the Botanic Garden at Dijon, this plant pos-
sesses the following advantages for composing artificial meadows :-1. It will grow in the most barren soil. 2 .
It tillers like wheat, and produces an abundant herbage. 3. It sows itself, so that it will form a permanent artificial pasture. 4. It commences growing when other fodder
plants are dormant. 5. It is perfectly hardy. We found that when sown in April, this plant produces throughout the summer a dense herbage. The ear at its first development resembles that of Rye, to which the whole plant may be compared, except that it is not glaucous and much more leafy. It has the merit of yielding an abundant herbage, which will no doubt prove which the ears contain, together with their ripening in succession and ite facility with which they fall from the however, think it a plant worthy of exciting general interest. The practicability of increasing it by division of the on a small scale. It is possible that the small bulbs which the old stools produce in great numbers, may prove an poor soils, the Bulbous-rooted Barley des not in pigorously, and in this point, our observations differ frona those of M. Fleurot.-Bon Jardinier

New Botanical Work.-The Allgemeine Zeitung an nounces a new Botanical Magazine, to appear weekly, ander the auspices of Professor Mohl, of Tubingen, ant
Professor Schlechtendal, of Halle. It is to contain all th Professor Schlechtendal, of Haile. It is to contain all th
newest information on Botanical subjects, and to be illus trated with many plates.
Agri-Horticultural Society of India.-The President in Council having issued an order disqualifying Govern-
ment Servants, civil, military, or medical, from holding office as Secretary of any permanent public Sociaing is understood that Mr. Griffith is no longer an eligible candidate for the Secretaryship of this Society. (See Gar-
eners' Chronicle, p. 39.)
Lindon's Patent Spade.-This kind of tool, which is case-hardened in a particular way, has been in use all this Garden of the Hoopticultural Society, where it is found the superior to the best of the common spades. The edge is so constructed that it always remains hard and sharp, Fead of wearing round, and shunt, or broken
Whox-hunters.-"It has often been said that growing it ; and not injured by a field of fox-hunters riding over light soils it does not do the injury that might be expected rom appearance; but on strong land it does great harm, cularly if going down hill, water will stand, and the plants in those holes will die."-Journal of the Royal Agricultural Society of England; Vol. III. p. 305.

GARDEN MEMORANDA.

## arebíms.

A Comprehensive View of the Culture of the Tine under Glass. By James Roberts. 8vo. Longman ic Co. 1842 The author of ,this little treatise is evidently a practical tion of the Vine. In the Prefe it have not progressed in the cult of tharked that "we for the last 20 years in the same roxtio minor fruits," This is unquestionably true the also equally undeniable thats but it is ment is less the fault of gardeners than of their employers. Among the hundreds who have the management of Vines, treat many are there with the means at their disposal to reat those Vines in the manner recommended in this We do not, however, mean to infer that the high-pressure system is the only one by imfer that the high-pressure obtained ; on the contrary which good Grapes can excellent fruit who have not the advantage of the apparenty unlimited resources possessed by Mr. Roberts; still it will in all cases be found that the principles folThese are-1st, an abundant supply of food, with numerous healthy roots to approntiate it ; 2 d , a yearly supply of perfectly-formed bearing-wood; 3d, restricting all the vigour of the Vines to the formation of fruit for the present, and wood for the next, year; and 4th, duly proportioning the weight of fruit to the strength of the Vines. Upon the judicious application of these simple principles rests the art of growing good Grapes; we will therefore proceed to examine the author's method of reducing them to practice.
With regard to the formation of the border, "so as to ensure "an abundant supply for food, , and numerous healthy roots, "upon which the production of good crops of fine fruit during successive years essentially depends, the author thus describes his own system :-" The width consider quite sufficient), cleared should be 21 feet (which feet 6 inches, upon a bottoned out to the depth of prepared, with one foot of fall from back to front. A tremity of the border with deep, ought to run along the direction leading into it, so cross-drains in an oblique in draining off superfluous water ave a perfect command essential point to attend to, so as to lay them dry (more upon the bottone the climate is humud). I then lay rubbish, to the depth of 1 foot, having a depth for very proper feet 6 inches." These directions are the natural soil retentive of moisture; in many cases,

THE GARDENERS' CHRONICLE.
however, a less expensive mode of proceeding will suf-
fice. The quantity of drainage ought, of course, to be fice. The quantity of drainage ought, of course, to be regulated by the nature of the sois the subsoil is and the climate of the district. When the subsoil is porous, and consequently dry, the cross-drains and the stratum of clay may be dispensed with. A drain along
the front, and also one at each end of the border, should the front, and also one at each end of the border, should
always be provided, to catch the soakage from the adjoinalways be provided, to catch the soakage from the adjoin-
ing ground, and for the ready passage of water during exing ground, and for the ready passage of water during excessive rains, \&c. On the driest ground a layer of stones spread over the bottom will be advisable, to prevent the
roots from penetrating too deeply; and in cases where roots from penetrating too deeply; and in cases where these are necessary to facilitate drainage, a spread over them, to prevent the soil from filling up the interstices. Mr. Roberts uses, in addition, large lime-stones, placed six or eight feet apart upon the broken stones, \&c. tain moisture in a dry season, and to facilitate the drainage in a wet one." Where the situation of a Vinery is irremediably low and wet, the border for the Vines to grow in ought to be made, nearly or wholly, according to
circumstances, above the surface of the surrounding ground
The soil the author recommends consists of - "two parts, the parings of old pasture-land, a strong loam, the form of a notato-hoc, close covered in with soil, and never turned; one part, the turf, with four, inches of the soil, of a looser texture, laid up for the same period and not turned as before; an eighth part scrapings of the and the other eighth part, half-decomposed horse or cowdung. I am not an advocate for turning over and mixing the materials promiscuously together, as, by often tuining, its fertilizing property by such repeated intermixture and unless it be of a very sandy, loose texture, the border and unless it be of a very sandy, loose texture, the border to atmospheric air, which are of incalculable benefit to to atmospheric air, which
Those who are unable to procure all these different materials will find a good substitute in turfy loana, dug from two to four inches deep, according to its texture and quality. If the soil is collected early in autumn, and from one-eighth to one-sixth part of good dung spread amongst the layers when laid up into a ridge, the that time a portion of lime-rubbish (that is, old mortar and brick-bats), or broken lime-stone, with a good quantity of unbroken bones. But whatever kind of compost may be made use of, it ought on no account to be worked
when wet. Mr. Hoare, in his admirable Treatise on the Vine, has shown that bones are a most valuable ingredient in Vine borders, as, owing to the slow progress of decomposition, they furnish nutritive matter to the root in after years, when the more soluble manures are exMr. Roberts mixes throughout the whole mass of soil a quantity of carrion cut into small pieces, in the proportion of "d one good-sized horse or cow carcass to every ing it to the surface of the border within one foot, as it assistance is not wanted the first year." Although it is feeder," we could hardly have supposed that its roots delighted to revel in a profusion of one of the most power ful of all known manures. Yet, without doubt, the author has found animal fiesh in large quantimportant elemen in the composition of the border. We have dwelt at some length upon this part of the subject, because it is of the utmost importance ; for the most scrupulous attenthe utmost ine internal management of a Vinery will avail but little unless the roots of the plants are in a condition to furnish a sufficiency of food.
to furnish a sufficiency of food. deprecates the notion of The author very properly border with flues or pipes and to protect and assist the roots while in accion, he advises the border and leaves; justly attributing a pre with fermenting dung and leaves; justly attributing a prevalent cause of failure in Grape-forcing to the great dif ference in temperare in a warm house
In his lists of sorts suitable for the various structures in which Grapes are usually grown, he has inadvertently included the White Muscat among those proper for the rafters of a greenhouse. He reprobates the system, now unfortunately so general, of sending out with a high character and a higher price some well-known or compara tively worthless sort as a "new seedling ;" and suggests the institution of "a council or committee, including some of the best practical men, to try, discuss, and give unbiassed opinions on the merits or demerits of all seedling fruit, before they are pronounced worthy of cultivation (similar to the Floricultural Society for Flowers)." [In our opinion, the Horticultural Society, of London is the right judge to select; well-informed and above all interested bias. If a new Grape is not stamped with their approbation, a man is unwise to buy it.]-W.

tivation, and general Treatment in all Seasons.;
The sacond Namber of this wo.
Ansy. Although adyancing nothing new in the cultiva. ion and management of the flower, the directions are generally good, and the present Number is compiled with greater care than tne preceding one. It has probably been looked orer by some judicious friend. These little trea-
the matter, but in the illustrations, which ought to exemplify the qualities which constitute perfection; the list
at the end should, moreover, embrace all the standard flowers of each subject.
CALENDAR OF OPERATIONS for the ensuing week Tuy reason why a Currant or a Gooseberry-bush throws up suckers is that the cutting, which now forms the bush, has been made either warr a hith it part of the latent buds generally found there. To prevent this, the propagator cuts off the lower portion of the shoot as far as be sees traces or these latent buds; he also ats off the top part of the shoot if ton weak for his purpose, and buds near the top to form the future head. No kind of cutting not even the Lilac, thus made, ever throws out suckers albove act, well known to cultivators, but the extent of its application principle involved in it has been explained by any one. A wider pplication of it, however, is all have in view at present, now pose a strong sucker from a black Currant-bush, with the buds taken out, as in the case of the above cutting, but still growing on the parent stock-lay it in the soil as you would any other
layer, and by the end of the growing season you will have a strong plant that whil never the old maxim, that a plant, propagated from a sucker, Now, if the propagator in the "s stool ground" were to apply this rule of dishuddng to the Nut and
Filbert-stools, we should hear no more complaints about these bushes throwing up suckers; more especially, if in connection with it, he were to give up the present mode of cutting down his coot or two in length, with only two or three eyes at the top to longer than six or eight inches, sufficient to have room to graft onger than six or eight inches, sufficient the disbudded part; and the same with all other layers according to the purposes for which they are propagated. These are no speculative notions; I have adopted the plan for mor
than ten years, and I have many proofs of its good effects. have not in a single instance been disappointed by a plant, s where I did not want them.
To the list of plants given last week for keeping up a succes From the Grien onouse and Pits.-Luculia gratissima, Sy
Fins phocámpylus bicolor (always in flower), Chorozema varium, rósea these supply the place of Fuchsias all winter); Primula sinensis, single and double; Cinerária Wateriousiana, and hy
brid varicties; Camellias, many sorts; Mignonette. HEATHS Erica alata, ardens, arbúscula, Blandfordiana, caffra, carinata, colorans, cóncolor, cerinthoides, exsurgens, grácilis, grandinosa, hyemalis, mutábilis, princeps, pyramdalis, prestans, paniculata,
from the Forcina-Pits.-Azálea índica alba, and varieties Rhodora canadensis, Aćcia armata, Persian Lilacs, Calla (Rich
rdia) Athiopica, Pelargoninm album multiforum, Admiral Na pier, Gen. Washington, Ne Plus Ultra, and some'scarlets ; Talips several early varieties; Narcissuses, soliel d'or and double Roman Valley, Violets. Rosss : Fairy, Old China, Tea-scented, Bourbest for bouquets at this early period; and Fulgorie, a hybri perpetual, the sweetest.

I-KITCHEN. GARDEN AND ORCHARD.
Pinary, -The carliest of the fruiters will now be showing fruit, and will require rather more water and and the the succession ones, if grown in dung heat, will want bate fresh potted by the end of this or beginning of next month. Se
\&c., are ready for them before that time
Vinery,-Those who cut Grapes next April are now thinning their bunches, and keep up a good the syringe, according to the state of the weather. The those in flower had better be kept rather dry until the fruit is set, and those breaking their buds must be gently dealt with, in order to get all the eyes forward about the same time;
quire a moist atmosphere. Prach-Inouse. - The heat here should now be about $60^{\circ}$, and rather more regnlar than in the
be given by the front ventilators; cold draughts being very in-
jurious to the young frut and foliage. As soon as the blossomjurious to the young frust and foliage. As soon as the blossom-red-spider.
Cherry-Housb. -The observations on the Peach-house are applicable here also, and the temperature in both houses need not differ much.
Fias.-These are more accommodating than the two last tribes, are in pots or tubs. Where a house is devoted to them, about $65^{\circ}$ is the proper temperature for them now. They shound
get dry at the roots when in growth. Cucumbers AND Melons.-These reque gleams of the sun whine forth; but of all the misfortunes to which they are Iiable, the steam from dung linings is the most fatal, and must oe sto with Radishes and other salads, require the routine culture formerly recommended, and a due regard to successions and the casualties of the weather.
OrCHARD.-Any newly transplanted trees should be malched on frosty mornings, if not aireary done. on the heaviest soils. Pea
nailed now without delay.
II. $\rightarrow$ FLOWER-GARDEN AND SIHRUBBERY

STove.-Another crop of the dry bulbs and roots might now
be set to grow for a successional bloom. It is too soon yet for potting to any extent, if the Orchidacere are finished. A few as to require fresh pots. There is no such a thing thonght of now-a-days as a regular potting-time; every week,
tember, will bring its own operations with it in this way. GREEN-Houss.-Many plants, in this house will now begin to grow, and though they need not be encouraged, they shes, when the weather is not favourable. All the beautiful little climbers stopping the shoots as they advance.
Conservatory. - The early Epacrises, Acácias, and forced plants of the Azalea and Rhododendron the interest here. bulbs and Pelargoniums, will weer saying that stove-plants, and I have been found
especially the Orchudaceæ which I have named, would tlower
well in the Conservatory. There never was a greater mistake in the world. Some of our finer Dendróbiums have been in fowe hardiy ever up to $40^{\circ}$ in the morning; and I am satisfied they will grow with increased vigour when move this to be the case frequently.

PITS And Frames.-If any amateur wishes to try experi-
ments in inarching Camelias, his is a good time to yemove his stocks into gentle heat, to set the sap in motion before the opewell with any one: it succeeds so much better in summers fter the young growth has a little ripened. This is the best me, however, to graftom or conservatory. The young stock ing in the crawing-room or conservatory. The young stocks gentle heat. A few Wall flower sceds might now be sown, to well adapted for forcing next winter, for which purpose they are until they bloom in the open ground. We force another plant amely as well as the Deatzias.
Some of the flower-beds should now be trenched or renewed for transplanting the autumn-sown annuals, which are to fower next May, before the half-hardy plants are planted olt for sum is the least gay time of the season in the flower-garden. Limeto many, but an ever ready mostrum in the hands of writers for that purpose. water will certainly kill worms if it gets at them, but that made Hence the different results of which we hear. Where stone-lime is difficult to be procured, corrosive sublimate seems to be the next best resource, according to the late testimonies of corre-
spondents. Lawns caunot now be too often rolled when the For is in a half-dry state. middle of March has always been the time for general planting on the Highland hills. Except pitting some of the bect ground In the warmer valhes, no other preparation was ever thought or too good for planting, nd the whole is finished, when possible,
before the end of February.-D. Beaton, Shrubland Parl/ Gardens.

## NEWS OF THE WEEK

Theservices of our Naval and Military forces in the course of the recent operations in Chins have been ac nowledged by the unanimous approbation of Parliament the vote of thanks proposed by Ministers having been carried in both Houses without a dissentient voice. In the Lords, the Duke of Wellington bestowed unqualified praise on the discipline, forbearance, and humanity of the troop and characterised the schievements of the the troops 4 the leights of Conton to the conclusion of the war, as unprecedented in the Naval and Military history of this country. The value of this praise was strikingly pointed out by Lord Brougham, who adverted to the fact that every man who would receive the ote would prefer the single opinion, the single panegyric f the Duke of Wellington to votes of thanks from both Houses of Parliament. In the Commons, the services of the united forces were acknowledged with equal uani mity by Members of both sides of the House. Jord Stanley, in proposing the vote, remarked that there had been victories which had involved more bloodsaed, butry ever any which more merited the thanks of while prais Lord Palmerston seconded the motion ; and his astac ing the forbearance of the troops, exprespaired the effion that long years of inactivity had their surords, though iency of the British forces; that his not rasted there hey had rested in their scabbards, Sir Charles Napier said that he had betaries, and knew tomed to go up rivers therefore declare that the skill What it was, and he corer unequalied in Naval hisdisplayed by Sir W. Parker ory.-The Chancelior of the Government in reference mitted the scheme proposed by Governmer Bills. He fol the holden adopted by the Commissioners in dividing lowed the por classes; the first being those to the holders andion could attach; the second and third whom no sure and prudence migh be attributed. To thene three classes he proposed that compensation should be awarded; but the fourth class, including persons anenable to grave suspicion, and implicated in dealings with the guilty parties, would be altogether excluded from compensation. He proposed to provide the sum required by the issue of Exchequer bills, so that out of forged bills to the value of $377,000 \mathrm{l}$., compensation may be awarded to the amount of 262,000 . After a short discussion, a resolution in accordance with the proposal of Government was brought in. - Lord Howick's motion for an inquiry into the distress of the country, after five nights' debate, was brought to a clone
at a late hour this morning, when the House divided negativing the motion by a majority of 115 .

The leading feature in our foreign news is the announce ment that the long-pending differences between France and Spain have been satisfactorily adjusted, the Spanish Government having formally disavowed the imputations made against the French Consul by the political chief of Barcelona. The Regent has also excused Barcelona from the payment of the remaining sum due on the war contribution, and has ordered the state of siege to be raised.
It is expected that this act of clemency will restore tranquillity to the city, and that the municipal elections will now take place without interruption.-We have accounts of another insurrection in Portugal, the inhabitants of Oporto having resolved not to pay the new taxes, which had been somewhat rigorously leried. A collision has taken place between the people and the military, in which
the former were completely successful; and apprehensions are entertained that the movement will spread to Lisbon where the taxes are equally unpopular.-From the Levant we learn that a misunderstanding has occurred between the Turkish Cabinet and the Austrian Minister, who has refused to hold any communication with the Porte until he has received instructions from his Government. The British Ambassador, however, has offered his services as
mediator, which both parties have accepted, and there is little doubt that the affair will be satisfactorily settled by diplomacy.

## 7hame Nvebus.

Court.-Her Majesty, Prince Albert, the Prince of Wales, and the Princess Royal, left Windsor Castle yesterday afternoon for Buckingham Palace, for the season, and on the Great Western Railway. Viscount Hawarden has succeeded the Earl of Hardwicke as the Lord in Waiting; Admiral Sir Robert Otway has succeeded Sir Frederick Stovin as the Groom in Waiting i and Viscountess Canning has succeeded the Countess of Charlemont as the Lady in Waiting on her Majesty
Parliamentary Movements.-Mr. G. A. Hamilton has peen elected Member for the University of Dublin, in the Knt., of Tregolls, Cornwall, has been elected Member for Bodmin, by a majority of 4 over Mr. Sawle, the Liberal candidate. It is rumoured that the Marquis of Donegal Emerson Tennent for Belfast. Official Appointments. Seaton has been appointed Lord High Commissioner of the Ionian Islands. - Captain Sir Thoras Fellowen, Victualling-yard and Nuval Hospital, Plymouth, in the place of Capt. Coode, whose time of service has expired. -The Queen has been pleased to appoint William Garnett, of Lark-hill and Bleasdale-forest, Esq., to be Sheriff of the County Palative of Lancaster for the year ensning. Sir Herbert Jenner Fust, Dean of the Arches and Judge of the Prerogative Court, has been elected Master of

Bianc.-Mr. N. Clarke, of the Midland Circuit, and Mr. Byles, of the Norfolk Circuit, have been promoted to the
diguity of Serjeants-at-Law.

## $\sqrt{5}$ oreign.

France.-The Paris papers are chiefly occupied with domestic matters, and with spectulations on the stability of the Ministry. The election of a deputy for the third district of Paris has concluded since our last report, and candidate, M. Taillandier, a Councillor in the whose candidate, M. Taillandier, a Councillor in the Cour Royale of Paris, has been returned by a small majority-
his votes amounting to 826 , and those of $M$. Lerentil his votes amounting to 826 , and those of M . Legentil,
the ministerial candidate, to 805 . This defeat was not an unexpected one, though it might perhaps have been avoided by the Conservative party concentrating their whole strength, on the first day, on one instead of two candidates. The journals announce increased activity in the ranks of the Opposition, who profess to hope that, on a question to be raised respecting the appointment Admiral Roussin to the Ministry of Marine, they will able to overthrow the Ministry. This expectation does not appear to have prevailed in political circles, more particularly as the Cabinet on Friday obtained some compensation for the defeat they sustained, the day before, in the third electoral college of the capital. The Chamber of Deputies proceeded to the monthly renewal of their much interest is attached at all times, but more especially when there is no question of any magnitude under disMussion. Out of the eighteen selections made on that day The more import sizteen, and the Opposition only two. committees thus organised will to this advantage, as the missions that are to report upon the appoint the compolice fund. It would appear that, notwithstanding the will not be allowed to rest, but sharch question will be demanded from the Ministry, as to buations they understand the paragraph of the addre whether same sense as the English journals, which the Ministerial journals of France have repeated without comment. at the Ministry of Marine as colonists for the their names Islands. On Thursday they sent a deputation Marquesas offer of their servicea to the Minister of Marine, who
replied that no plan had yet been adopted for the colonizathat by a note attached to the budget of the Minister of Marine, it appears that Government demands an increase marine, which will increase the navy budget for military 1844 to $111,000,000$ f. The effective of the seamen will then amount to 30,872 officers and privates, and the effective of the troops employed in the seaports and colonies to
20,378 officers and privates. The fleet will be composed of 160 sail, divided into three classes. The first will comprise 140 ships, of which 8 are shipss of the line, 12 frigates, guns, and 39 tenders, measuring 20,000 tons. These 140 ships are intended to be kept constantly at sea, and will protect French commerce. on the 11 following stations :-
the coasts of the Peninsula, the Brazils, and La Plata, the Pacific Ocean, the Antiller, Cayenne, Mexico, the coast o Arica, the Levant, Bourbon, Newfoundland, and Algiers.
The second class comprises 16 ships laid up in ordinary 12 ships of the line and 4 frigates. A French periodical states that a Prefect of Corsica, M. Guibega, having lately examined the registers of the town of Calvi, has disco-
vered in them the act of birth of Christopher Columbus, making him consequently a countryman of Napoleon. Hitherto Genoa, Savona, Cogoleto, Nervi, and Zuccarello, have all laid claim to the honour of being the birthplace of the great navigator.-A correspondence has been pub-
lished between M. de Tocqueville and Lord Brougham in reference to a passage in his Lordship's speech in Parliament, in which he attributed to the former gentieman Search Treaties. M. de Tocqueville states that his speec was misreported, and that he was not ignorant of the that, if the the case it Brougham, in reply, contend information to the French Chambers during the recent angry debate on the Address, and not to, have allowed erroneous notions to be disseminated.
Algeria.-Accounts from Algiers of the 5 th inst. state Regency was of a satisfactory nature the interior of the nier, who was to have returned to Milianah on the 3 d , had chastised the tribes residing to the west of that town for their participation in the last insurrectionary move of Tittery. The Governor-General, favoured by the weather, appears to have experienced no obstacle to his territory where the insurrection had originated. Abdel Kader had retired before him into the mountains bordering on the Desert. Spain.-The long-pending differences between France and Spain on the affairs of Barcelona have been adjusted,
the Spanish Government having disavowed the imputation made by the ex-political chief of Barcelodia, M. Gutierrez against the French Consul, M. de Lesseps. The official Gazette of Madrid of the IOth inst. contains this disavowal the Interior by of a letter addressed to the Minister of last paragraph is couched in the following terms:Consequently the Government of her Majesty, which ever acts with justice and impartiality, deems it just to
declare that the assertion of the Political Chief was not accurate, and had not, without doubt, any other foundation than the rumours circulated by persons flying from Barcelona-rumours which the inquiries of the CaptainGeneral had dissipated." A telegraphic despatch, dated Perpignan, the 10th inst., had also been received, announcing that the Regent has excused Barcelona from tions. The journals of the 8 th contain the letter of General Seoane to the Municipality and Cbamber of editor of the Papaing the above intelligence. The and the state of siege was to be raised on the 12 th. Prior to the arrival of this intelligence, the state of cipality had pobliscome more serious troubles of the 30 th and 31 st ; but the Military Governor had ordered it to be torn down, and he published discove, much more peremptory. A conspiracy had been were stones were flug The inmates of the houses from which of 100 , been arrested and sent to had all, to the number Seoane had addressed a despatch to the Government, dated the 30th ult., in which he describes the state of excitement prevailing in Barcelona, and which every moment threatened to lead to open revolt. He attributes that effervescence to the intrigues of "a class of individuals interested in fomenting fresh disorders;" "for otherwise," says the armed and garrisoned by 15 comprehend that a city disinstant silence all ad by 10 ballans, who could in an nstant sitence all clamour, should indulge in acts of that certain prospective of being chastised in an exemplary manner. 1 am consequently compelled to take efficacious measures against those who, in the clubs, or by incendiary speeches or writings, appear to have undertaken the task
of completing the ruin of this city." The clemency of the Regent is expected to restore tranquillity; and it is hoped that the municipal elections will take place without interruption. Prince Jerome Napoleon, son of the ex-king of Westphalia, had arrived at Barcelona. A singular state against the tendencies and falsehoods of the press, and make a declaration in favour of the Regent; whilst, on the other hand, the press menaces the Government, and becters the deepest imprecations apon General Seoane,
quence of the insurrection, he has suppressed the journals of Barcelona

Portugal.-We have accounts from Lisbon to the 6th inst., with the particulars of some serious disturbances at Oporto, the people having resolved not to pay levied. It eppesrs when han been somewhat rigorously levied. It appears that immediately after the publication (Income-tax) the assessment of the Decima Industrial (Income-tax), a universal determination to disobey took possession or all parties, owing to the arbitrary manner in torn down, and the inhabitont leviea. ene insts wero intention of resisting claims made upon them which they were unable to bear. The authorities, actuated by fear, threw all the odium upon the Government, and a conand the Governor of held betwixt the Civic Chambers announcing thor of the place, a proclamation was issued, acquainted with the Home Government had been made lists had been recalled for reconsideration. This that the mation was taken down and torn to pieces in the ProclaDon Pedro, amidst loud cries of "Long live the Queen and Charter, and down with the Taxes." At five in the formed in tineop of cavalry arrived in the square, and The scene which followed can scarcely be described - with the rapidity of lightning the whole mass fell upon the military, dismounted them, and scouted them from the square, thousands of voices vociferating, "Long live our QDueen, "Down with the Ministry," "No Taxation," after a body of municipal infantry came into us. Shortiy commander of which upon seeing the attitude aren the populace, prudently returned to the barrack At ll by the on the morning of the steamer's denarture, from the multi tudes which were congrerating from all 14 the mukntition of these scenes was expected. It is, moreover, to be feared, that Lisbon will also be the theatre of some similar commotion, as the new taxes are equally unpopular aid to be extreme, and must finally comel district is ment extreme, and must inally compel the Govern by all that theire by an, that ene refusal regarding the tariff bas brought Germanx.-Accounts ing of distrust.
week mention Accounts from Hanover received this celebrating the marriage of Prince George of Cumberland ryesterday the 17 th, with the entry of Princess Mary, and were to last, it is said, a whole week. Two operas were composed a piece for the occasion. The magistrates were to have the honour of receiving the Princess at the triumphal arch erected at the gate. It is said that the King Prusussia and all the Princes of the Royal Family of Prussia have accepted his Majesty's invitation to be preof the Marquison. It is understood that the marriage Baden, will be solemnised this with the Princess Mary of rom Berlin mention the death, in that city, at the age sixty-six, of the Baron de Lamotte-Fouque known through all the world of letters as the author of the beam tiful legend of "Undine," A letter from Vienna, in the Frankfort papers atates, that Marsbal Marmontw, was dan gerously ill at Venice, from an attack of apople was dan-Grerece.-Letters from an attack of apoplesy. us that the long expected bankruptcy of the Gorm Government has been officially announced the Cabee having notified to the representatives of the allie the an no longer attempt to pay the interest of the guaranteed pan; and this anoouncement, it appears, was accom panied by a demand for further advances. It has also its inability to the Greek Government, in thus notifying the fact that it sees no arespect not attempt to concea years to come. Private letters state, in reference to for subject, that "It remains to be seen how people in Eng and will like to be called upon, every sic monthe twenty-five thousand pounds, to pay in reality for King him in pursuin that sytem ondere, and to encourage he has not disgusted only driven to despair his own subjects but has disgusted Europe, which had reasonably expected very Tunzer the rece wab erectedinto a kingdom. This experi
ment, if it may be so called, proved successful beyond all expectation. The arrangement of the affair did great credit to the taste and judgment of Lady Canning. The ducted themselves with due decorum, and doubtless on instruments of a propagandism to which nobody can reasonably object." - The Hon. Mr. Curzon, private secretary to Sir S. Canning, who was to act as the British complenipotentiaries at Erzerum, sailed for Trebizond on the $2 \%$ th. Capt. Williamss, at first appointed to fill that misindisposition. We regret to state that the rumoured indisposition.-We regret to state that the rumoared confirmed. The Ameer had thrown them into prison on the receipt of news from Cabul announcing the disasters of our troops on their first expedition; and on Khe the Bokhara chief ordered that Col. Stoddart should be put to death, in the presence of Capt. Conolly. They were both led into a small square near their prison, whefuring to more Manotan, knife. They were buried on the spot, in graves which had been dug in their presence.
Malta.-The Levant Mail has brought recent advices from Malta, with accounts of the fleet, and the movements On the 31st ult., the inhabitants of Malta had an oppor tunity of witnessing a spectacle as magnificent as it rare;-the heaving down of her Majesty's ship Formidable, of 84 guns, in the presence of Sir Edward Owen, com-mander-in-chief, ana immense concourse of spectators. praras of 800 men were employed sielded : their noredibly short space of gracefully fell into the desired position. In an instant the full extent of her damage, caused by her running ashore at Barcelona, was ascertained, and moulds of the required repairs baviog been take, she was again righted., It is said that the plan sent to the Admiral by the ship's carpenter, who went down in the ning dress survey her at Barcelona, represented in the nicest degre firmed when she was hove down.-On Wednesday, the 31 st ult., a sight altogether new in Malta was witnessed f some 300 persons of both sexes and of all of Gibraltar the morning service had been read, the Bishop delivered an address appropriate to the ceremony. Among the persons confirmed were several midshipmen and boys from the fleet. United States.-By the Royal Mail str. Caledonia, from Boston and Halifax, we have received papers from
New York, to the 2d inst. The papers are occupied with accounts of the discovery made by Mr. Sparks in reference to Lord Ashburton's treaty, and state the particulars given in our last, confirming the fact that Dr. Franklin's given in our last, conirming map was produced by Mr. Webster in the Senate. Indeed map was produced publication of the proceedings in secret session of the Senate, upon the question of approving the New York Express, after describing the discovery of the map, observes, "After reading this letter of Dr. Franklin, it can hardly be said that Great Britain had no grounds to set up a claim to the disputed territory, and may not settled, and can never more be brought in controversy," An abstract of has appeared in the papers. It proposes the occupation and settlement of all the territory claimed by the United States north of 42 d degree of north latitude, and south of 54 degrees 40 minutes. The whole north-western coast, it is known, has been claimed by Russia, Great Britain, the United States, and Mexico. The ground of the claim of the American Government rests upon the follow br Capt. Gray, of Boston, in 1788 , of the discovery the mouth of the Cols cialised nations, follows the the universal rule among civilised nations, follows the right discovery was afterwards more completely explored by the expedition under the command of Captains Lewis and Clarke. 2d. The cession by Spain of all her rights of territory north of the 42d paralle of latitude. 3d. The French claim, to which the United States succeeded. 4 th.
Contiguity of territory. On the other hand, Great Britain Cets up her title to the same territory on the following grounds:-1st. That she can plead priority of discovery by Mears, sailing unter vancouver. 2 S . That by the convention of Nootka Sound in 1790, Spain yielded to Great Britain free and open access, trade, and settlement to British subjects, in comnion with her own, upon this coast. 3d. She claims also the Frenct rights, ceded to counts from New Orleans mention an attempt to assassinate Mr. Clay, one of the candidates for the Presidency, While he was leaving the supretters from the West Indies received at New York state, that any hope, however remote, that might have been entertained of the safety of Her Majesty's ship Victor, 16 , Commander Otway, must of her when there is not a doubt that she must have foundered, and all hands perished.

## Aarlíament.

HOUSE OF LORDS.
Monday.- The Duke of WELLINGToN laid papers on the table
xelating to the military operations in Affghanistan ; and post. celating to the military operations in Affghanistan; and post-
poned his motion for a vote of thank from Thursday to Monday next.-Lord Brouaran, on this intimation, postponed, from
Bonday till Thursday next, his motion respecting the London

Corporation.-The Earl of RIFon, in answer to Lord CuARENDON,
stated that Government intend, in the course of the present ses. staned to introduce a bill respecting the building of houses in the
sion, metropolis, and that it is is contemplation to issue a commission on the samatory condition of the people.- The Duke of WeLxingeToN intimater, in reply to Lord MowTpA1E, that Mast by which
 to be proposed in the banking laws; and that Government pur-
pose to continue the Act reating to the Usury Laws. Lord pose to con moved for a select comminttee on the law of defanmation
CAnrp
and libel, which was agreed to.-The Attorneys and Solicitors
Bill lim and libel, which was agreed to. - The Attorneys and soin
Bill was read a second time, and ordered to be committed.
Tuesdioy. The Duke of Welwing graph in the Queen's speech which related to our victories in
 important succeess had been attained. He enumerated in succes circumstancess of their achievements from the first commencement of hostilities, comparing, as he proceeded, the reawne mind
ficulties which the troops had respectively to overcome,
especially characterising the series of operations by the united sion of the war, as " unprecedented in the naval and military his tory of this country, and attencled by wond derfil ss cecess." The ex-
cellent arrangements dy which ships and osdiers had been in each Instance so combined as to co.operate most efrectualy,
good understanding which subsisted between the commanders of gon naval and land forces, deserved, in his opinion, particular
the
commendation, as it was to this that their uniform, rapid, and almost bloodidess victories were to be attributed. He enlarged
upor the advantages to be expected from the treaty which our success had extorted from the Emperor, the admirable discipline
forberanace, and humanity of the troops, znd concluded by
requesting their Lordships onanimous concurrence in the reso lutions he proposed
Lord Auck Land had the more satisfaction in expressing his
perfect accordance with the high praise which had been bestowed upren the forces, as he had selected Sir H. Gough and sir W.
uarker for the service. The noble Lord then drew aatention to
the claims of the Native Yndinn Army, which he considered to
have been somewhat overlooked ; but the omission was instantly
 Pottinger, who had acted
omitted in the resolutions. The Duke of WELLINGToN, however,
exple explained, that as the vote was one of thanks for minitary services
alone, his name could not with propriety be included.- Lord Broveram cordially supported the motion; and adverted to the
remarkable fact that the to the was proposed by a man with
 Minvo expressed their entire concurrence in the vote; and after
a few words of the ABERDERN, the resolutions were carried unanimously, including Generals Lord Saltoun, G. Burrell, Sír R. Bartley, and Sir J. H.
Thursday.-Lord brovaram made some explanations relative to the Slave-trade Treaty proposed by America in 1823 , and stated
that the exemption claimed by the United States only related to the coasts of America.
The Duke of WbLLLNGroN, in reply to the Marquess of LANS-
DWNNE, tated that his motiou respectug Lord Ellenborough and Indian affairs would be the same in substance as it originally
stood.-The Marquess of LANsDown put some auestions about the omission of certain documents from the lately-published Blue Book, on the military openations in Affghanistan.-
Duke of documents were in existence; and also stated that the proclama-
tions about the gates of Sompauth will be produced. tions about the gates of Sompauth will be produce

and WHARNCLIPFB's denial of any disobedience by Gen. Nott of orders forwarded to him by the Governor-General. - Lor 25,0002. had been raised by private subscription, and 75,0001 . in
conesequence of the Queen's Letter for the distressed manufac-
turers. The amount already expended was about 6 mon turers. The amount already expended was about $6 s, 000$. HOUSE OF COMMONS.
Nonday. - The Chancrilog of the Exerraurr, having moved
for a committee of the whole House submitted the sheme proposed by Goverrument in reference to the mode of dealing with
the holders of the forged Exchequer-bills issued through the the holders of the forged Exchequer-0ils. issued
criminality of Beaumont Smith. He divided the holders into four classes, the first being those to whom no suspicion, either of col-
lusive conduct or of culpable negligence, could attach; the second Iusive conduct or or culpabe ne to whom imputations, varying in degree, on the score of care and pruadence, might be athre con.
but not strong enough to warant their eccusion from the cont
ideration of Pariament. To these three classes, therefore, he should propose chat compensation should be awarded. But the Courth class, including persons amenable to grave suspicion, as
hose implicated in dealings with Rapallo, Solari, \&c., are to b altogether excluded from compensation. The result is, that, out of a
 Exchequer bills. While the Right ton. gentienan admitted the
weight of the call thus made on the public, he adduced several reasons in exposition of the justice and propriety of providing
compensation to the three first classes of holders named, aund reminded the House that the forgery had een committed by an
officer of the Crown.-Mr. WILIIA Ms, Mr. BARING, Colonel SIB TBORP, Mr. Hums, Sir T. WiLDE, and other Members addresse
the House, and a resolution in accordance with the Chancellor or the Exclequer's proposition, was brought in,
Lord Howrcs brought on his motion That this House do res much of her Majesty's speech as refers to "that depression of
the prevailed, and which her Majesty has so deeply lamented." H apprehended that he was taking the most regular a and partia-
mentary mode of bringing on this question, which he did not do mentary mode of hostility to the Goverment. The duration of the distress of the country was now to be rectoned, no by monting The mining and the shipping interests were aiso affected; retal
tradesmen in the country felt, in their diminishing incomes, the growing scarcity of emplopment; and not merely the We might be told that the worst hat passed, and that symptoms of improved
ment were apparent. He trusted it might be so: but we had been, and might again be, disappointed. We had no right
expect permanent improvement, without the interference of Parexpect permanent some of the causes of that distress, whose
liament to remove som
longer continuance was full of peril to our security and institutonger Ann inconvertible paper currency had been proposed as
toms.
remedy; but Sir Robert Peel had demolished that notion in alate remedy; but sir Robert peet Red demoiolished of taxation had been remarkane cor but, in proportion to its means, this country was
also proposed
as lightrly taxed as any country in Europe. Over speculation had been assigned as a cause of our distress; ; but the Government, he was sure, were in possession of infrormation wich wour coutd a
them from then an suffer from an over-supply of every thing which its popu
nation required? The English poor-law, too, had been affirmed
to be a cause of the suffering of the working classes ; but Scot-
land lad shared in the distress as well as an miland. The real
cause was the rean cause was the remarkable coincidence of a very yow rate of profit
and a low rate of wages, produced by iutense competition, which
agai again was produced by the want of an adequate field for the em-
ployment of capital and ploymentar capital and labour. To extend this field ounht to be
the great object of all our eertions; the natural field for our
industry was conined industry was conined by barriers and restrictions: there were
laws on our statute-book which had been passed for the express pursose ofr restricting-- our foreign trade, especially in the important
putticle of the food of the people. purpose ofrestricting our oreign trade, especialy in the important
article ef the food of the people. our export was measured by
our import trade. Happily, our internal trade had been practi-
Hel cally but little hampered with restrictions, and the conser , uence was a degree restrictions impeded intercourse; and this was a practical iternal restrictions inpeasid that the removal of commercial

he had advocated had been adopted and expunded by Sur Robert
peel when he sald that we shull wsell in the dewe in the cheapest market;" and if the Government were not prepared to carry out their principles, why had they unsettled every Mr. Gladstone admitted the existence of great distress, but
argued that great and peculiar exciting causes had existed during the past y yar. The Income-tax he defended on the ground not the touched by ne my other a mode of taxation. The marked in-
not
crease in the savings' banks deposits was one satisfactory subject crease in the savings' banks deposits was one satisfactory subject
of contemplation. He took the county of Lancaster as an Instance of this, and remarked, that the circuustance
to prove that though employment might be more scarce than formerly, the aggregate amount of prosperity was not tess. Why
had not the uoble Lord himself proposed lis remedy for the distress of which he so loudly complamed? For although lee
(Lord Howick) said that trade shoult be unfettered, he would
(Lor ventue to de.lare that it ought to be entirely free. The
 years, had recognised the necessity of their removs? The prin-
question was simpiy, what are judicious relaxations? ciple of the Government in their measures of last year, was to
effect changes with the least sliock to existing interests. and the new corn bull, while extending the means of employment for
capital and labour, had not materially affected established interests. What was the proposed substitute for the Corn-law? Asked why we applied to cor a a difierent principle of legislation
from that which was applied to other articles? The answer was, that corn had been differently dea.t with for ages ; and, under a
system of long system of tage-continue, which it would be ruinous suddenly to
capital had taken play
disturb. It was true in the abstract that corn and cattle should be similarly dealt with; and in the revolation of ages and of curIfe would readily admit that no commercial law could be perhe was not prepared to abandon it, bo long as protection was
applied to any interest. He agreed that an extension of the field of employment for capital and labour was the great thing re-
quired by this country; but Burke had said that the statesman who legislated without reference to circumstanees was "stark
mad, metaphy sically mad." He did not argue that an aditional importation of foreign corn wuald displace British agricultural
labour. But he was not prepared to sacrifice a certam employ-
ment of our laboung population to a speculative notion that an nncrease of our foreng trade would necessarily follow the aban-
donment of our Conn-law. The noble Lord, when he said that
the the example of this country, if she went should bear in mind tha
would be followed by other countries, sho these countries, and America in particulax, had been acting on the restrictive principle.

## and was followed by Mr. FrranND, who proposed an amend- ment, that this House "do resolve atself mato a committee of the

 ment, that this House "do resolve itself into a committee of thewhole House, to conssder so much of her Majesty's speech as
refers to 'that depression of the manufacturning industry of the country which has so long prevailed, and which her Majesty has
co dceply lamented;' and also to inguire into the effects of machinery upon the noral and physical condition of tue mdustroous
classes; and also, to inquire into the origin of the late outbreaks, classes; and also, to inquire into the origin of the late outbreaks,
which are also alluded to in her Majesty's speech."一-On the
motion of Mr. EWART, the debate was then adjourned. motion of Mr. EWART, the debate was then adjourned,
Tuesday.
Lord STAN LEY moved a vote of thank to the officers and men employed in the recent naval and military opera.-
tions in China. He would mix no disputable topics with this motion; nor had he any purty fecing connected with it, the tion. The commencement of the war in China might be properly
dated from about February, 181 , the operations 2 n 1840 having
been on a very small and partual scale. In that month it had been judged expedient to advance our naval force into the in-
terior waters of China, under the very walls of Canton. The nable as they seemed, they were forced by a comparatively insignificant squadron. A second attack on Canton was after-
wards rendered necessary by the misbehaviour of the Chinese; and whereas the former had been chiefly a naval, a military one By a force hardly amounting to 3,000 men in all, a line of bills was occupied, and the forts captured, in the manmer described in Sir Hugh Goush's despatch, Rgainst a body ond with especial assistance, had, in circumstances of great anticulty, kept at bay sequent expedition to Amoy, and enlogised the skill with which the captains laid their ships which the troops possessed themgallantry of he
selves of the town. Not less gallantry and ability had been exhivited in the capture of Chinghai and Ningpo. The good order and disciplipe or the the highest praise, and had left among the native population a deep sense of respect for the British name He then proceeded to give a narrative of Che expedition up the enlarged upon the eh had placedi in our nower Nanku the of this achevement, and forced the Emperor to a final pacification.
city of China, and
Victories there had been which had involved more bloodshed never any which more mate thanks to the of the conntry, it had forces; but here both hat been so generally and so zealousiy best to couple both in the expression of her gratitude.- Lord
PALMsRsTon, in seconding a mution upon a sub, ect with which that could cast even a shade of difference. He applanded the
 ignorance of the arts of war. He gave especias credit to our r fil a favourable opinion of, and disposition towards, the British. He rejoncy of the British years of disuse had not impaired the efit-
cested rested in their scabbards, had not rasted there.-Sir C. NApriga
bore teatimony to the merita of several of the officer mentioned
in the motion. He had himself been accustomed to go up rivers that he thought the skilldisplayed by Sir W. Parker was uncqualled
in navai history.-Sir G. STaunton and Mr. Hume wished that in nava: history,-Sir G. Staunton and Mr. Humr wished that
Sir H. Pottinger's name had been included; and Sir R. H. Ingurs desents in obtaining peace, should not forget their gratitude to
agivine Providence, agents in obtaining peace, shous not forget their gratitude to
Divine Providence, for the blesing which secured it.-Sir R.
PEEL declared his cordial concurrence in the general pratses of PEEL declared his cordial concurrence in the general pratses of
our officers. To Sir H, Pottinger he had before paid his trbute of applause. He wished it had been consistent with uage to
introduce his name; but precedent did not sanction the mention happy, however, to acquaint the House, that the Government,
sensible of Sir $H$. Potinger's high services, had offered to him whatever official employment in China he might be willing to
nadertake, with the assurance of their entire confidence in him. The vote was then passer.-Mr. Mack innon moved for leave to
introduce a bill prohibiting interments within the limits of introduce a bil prohibing interments within the limits of
towns. A pamphlet, he gaid, had been put forth, accusing him
of a wish to injure the Dissenters, which he wholl disclaimed. The pamphlet hail been indistrionsly crevlated, probably
throngh the arency of persons who now made a great profit of a few acres situate in the heart of large towns. He proposed to bill. The principle of his measure must sooner or later be car-
ried, thengh he felt that there was a good deal of difficulty in
the detaig the details, -Mr. Hums seconded the motion. The measure was
very important to the health of the poor, and would require the
best assistance of the Government to uphold it against probable opposition from private interests, The attention of GovernmentGrabam approved the principle of the bill, but had great doubts
about details. Careful inquiries were now in progress on the part of Government; but ap
hy thiem, he would not oppose the introduction of thisested bilt,
Hinping, however, as he did, for further information which might enable the Government, perhaps in this very session, to bring
forward a measure of its own, he must decline to answer for its
co-operation in the prescot bill. As to drainage in general, he intended to recommend the appointment of a commission of men
of science, for the purpose of fully considering and advising upon this matter.-Some objections were made by Mr. HAwrs
and Mr. Escotr, but Mr. MACR MNON, with the utmost disposi-
tion to attend to any remedy proposed by Goveroment, declared his intention to proceed with his own. bill for the present. Sir
W. Clas, Dr. Bowrina, and Mr. M. Phtips, endeavoured to
dissuade him, but he persevered, and leave was given to introdissuade him,

[^2]the noble Lord's own friends the greatest diffarences prevailed on ting on dissatisfaction amongst agriculturists and others out of
doors to get up a cry against Government. He Mr. EscotT doors to get up a cry against Government. He (Mr. Escort)
would trust no Prime Minister who would utter so foolish a wouid trust no Prime Minister who would utter so foolish a
saying as to pledge himself against change in the provisions of
any particular law-the Corn-law;for instance; but it would be any particular law-the Corn-law;for instance; but it would be had been so'emnly settled in the one preceding.
by the state of the country. The enormous increase of paupuerism and insolvency in Leeds and else where, the falling off in wages, the increase ins the proportion of deaths, and the spread of dis.
tress in the agricultural districts, proved that a state of more severe and general pressure was never before known in this coun-
try. All he wished Sir Robert Peel to do was what the latter had formerly required the then existing Government to do-to give
a pledge to provide a remedy for the distress. The distress of foreign demand was mainly owing to the falling off in the the restrictions which bygone ignorance had imposed upon com. merce. The diminution in the consumption of Wheat, as exhi.
bited by returns from various places, showed the frightful state
to which the people were of the manufacturers fell heavily on the agricultural interests, and in these facts lay an additional argument for the repeal of the Corn-law. There was a growing feeling among those conding scale. Let the intentions of Government be fairly avowed.
The people ought to know why the principles enanciated last year, if good in themselves, should not be applied to sugar and Government to go forward with the course they had begun. heart as well as of aim. He admitted that a great falling off in the Legislature; but the representatives of the people should
pause before they held up the condition of the country as one of exhibitent decay. Thus, in contratchion or one assertion, of mortality in all our great manufacturing and commercial towns. An unsound systern of credit was amongst the causes of mills and machinery. But though the influence of that state of things was not yet over, there were indications of improvement, and a gradual increase in the demand for employment. The
changes which had been effected by the new tariff were unquestionally the greatest which had ever been made at one time in
the commerclal legislation of this country; and though sugar had not been included, on the distinct principle of maintaining
our faith, in the face of the world, or the subject of slavery, qet the price of that article had slightly fallen, stocks were increasing, of our commerce, and the necessity of providing for our increasnone were more interested in this than the landed interest. But the utmost caution was requisite in measures affecting that facturing distress, and the greatest and most wide-spread misery
result. He cited Colonel Torens and Mr. M of his argument; and contended that no law that could be denature of the seasons. It was the duty of a statesman to apply principles to particular instances; and though not setting up the trous to the manufacturing interest than sudden changes in the
domestic economy of this country. Mr. Labouchere had said that when the regular pilot did not undertake to carry the vessel of the state in a given direction, a chance passenger migh
undertake the duty. But it was renuiste, , in the first instance,
to dispossess the regular pilot of the rudder; and if the Oppo sition sought a change in the adninistration, let them frankly avow their purpose, and try the issue of the question. He con-
cluded by a general defence of the measures of the Government, and anticipated the rejection of the motion by a commanding
and decisive majority.-After a few words of explanation from Mr. Waflace, the debate was adjourned.
the general business of the House, the adjoters connected with sumed by Mr. PsTR R Bo lTHFwise, who compared the risks and
profits of agriculturists with those of manufacturers, and severely profits or agriculturists with those of manufacturers, and severely
censured the Anti-Corn-law agitators. The Government were doing what Lord Howick wished them to do, applying restrict-
ively the principles of free trade.-Sir C. was now more severe than at any former period; but the cause, as well as the remedy, was involved in mystery. The enormous
duties we levied or Portuguese wines, and other produce, caused that country to retaliate. We imposed a daty of 700 per cent. Portugal laid a duty of a 100 or 150 per cent. on our manufac-
tured goods? not see why the interests of the entire country should be sacrilaw, he wishod the Government would come to a compromise with the Leaguc, and adopt a fixed duty, -Mr. B. Cochrans felt
that the condition of the country was full of danger. Repcal the Corn-laws, was the perpetual cry; but he looked beyonil the
Corn-laws, to the growth of luxury, the demand for wealth, consequent speculation, and their attendant evils. Confidence was essentaul instant repeal of the Corn-law would be preferable to
total and
uncertainty, and a tottering Government with firm principles was preferable to a stroug Government with vacillating ones.
He did not suppose that permanence was necessary to any particular law, such as the present one, which aimed at keeping corn vernment would inspire a feeling of stability and secure it.-Mr. Vriliegs remarked, thatin all the indications of the state of the
country there was much ground for alarm. Why did not Government carry out the principles it professed? The best part of
the new tariff was the change in the timber duties, but the remeet new taxes. Within the last 200 years there had been nout 40 different Corn-laws, which showed how badly they accomplished
their object. Why did not the Legislature adrinister the true remedy to the depression of the people? He wo uld not condeLeague, which he considered was doing a service to the country, Viscount Sandon said the great question was, how could the
largest amount of employment be given to the penple? He would was the most extensive and the most steady. If any branch of the industry of the country were to be protected, the great fun-
damental one of ail should not be deprived of it. Was it not unreasonable to ask for the repeal or aiteration of so important an An unsound system of credit, and the convulsed state of America,
had no doubt inflicted much mischief on this country. His own conviction was, that by repealing protective clutics we should
lose more than we should gain ; bit it was a miserable mockery thought the motion was not straightforward enough, but some inquiry was necessary. The Premier had deceived no one; for,
before coming into office, he stated that no legislative measures would cure the distress, He (Mr. Muntz) thought they ought to vapt of silver, - Sir J. HANMER objected to the motion, as not
vafficiently specific, but hoped the House sufficiently specific, but hoped the House would extend com-
merce, and give up the policy of protection.-Mr. P.M. STEWART
supported the motion, and condemned the sliding- scale as
main cause of the general distress.-Mr. Colqu over-production had principally led to the depression of the
manufacturers, and that if protective duties were abolished, manufacturers, and that if protective duties were abolished,
England would be met with mereased dutics by The course of gradual and moderate change adopted by Government was that best adapted to the interests of all classes. - Mr. been settled by the tariff. Could parties calculate on the existmanency for even one year, was it not silly to talk about unset tling things? The farmers had no confidence in the present law, which, it was universally believed, could not stand, In the meduct of Government in refusing inquiry.-The CHANCELtor of
the ExCBEQur replied generally to Mr. Baring, and opposed the EXCBEQURR replied generally to Mr. Baring, and opposed
Lord Howick's motion, as calculated to deceive and disappoint Friday.-After the Exchequer Forgerios Bill had been reat a Hay, and continued by Mr. Blackstonfa, Mr. M
ATrwoon, Lord F. Eosaton, and other Members said that " Sir R. Peel had it in his power to carry the nleasures Mecessiry for the people ; and if he had not that power as a
Minister, he would have it by resigning his office. Sir R. Peel should be held responsible individually, and the electoral body ment followed this speech, and Sir R. PgsL, amidst immense attention of the House to Mr. Cobdern's of manner, caration the the consequenees,") he said, "what they may" (the cherying "Bas here renewed with increased vehemence) "never will I be influent with my public duty."-Mr. Cobdse here interrupted the
right hon. Baronet, aud denied that he had said that he held hin individually responsible, but he was met by loud cries of "You did, "You did;" snd some time elapsed before order could be
restored. Sir R. PEEL then proceeded at great length to show that the present motion could not alleviate the sufferings of the Corn law, but he would give no pledpe never alteration of the adverted to a report of one of the League meetings. Dissenting Minister suggested the drawing of lots to take Sir R. threat that if he (Mr. Roebuck) took a particular courso
in this debate, a mission from the League should pay a visit Bath.-Mr. Cobden, (amidst great uproar, during which th SPRAKRR had to interfere, said that he had warned Mr. Roebuck
in friendship, that "if he interfered with the get into trouble at Bath." Lord Howice replicd on the debate generally, and the Honse divided, giving for the Motion, 191 ,
against it, $306-$ Majority against it, 115 . The House thea ad
ourned at a quarter to 4 o'clock tlis morning CITY
Money Market, Friaay.-Consols closed to 95 to $\frac{7}{8}$ for (April 11); Three ; and at $95 \frac{1}{8}$ to $\frac{1}{d}$ for the new Account Three-and-a-half per Cents. Reduced, $102 \frac{1}{4}$ to $\frac{3}{8} ;$ New Three-and-a-half per Cents., $101 \frac{18}{8}$ to $\frac{1}{3}$.

The Weather.-The frost has returned this increased severity, and Wedresday was beyond doubt the
coldest day of the season. The weather ap to 12 o'lock on Monday night was exceedingly variable, and slight showers of rain fell at short intervals throughout the day. On Tuesday morning a marked change in the tempedegrees below freezing point. The wind blew steedil degrees below freezing point. The wind blew steadily
from the north-west, and the cold became mow intent as the day advanced, and the cold became more intense as the day advanced. In the evening there was a fall of
sleet, and the night set in with every prospect of a sleet, and the night get in with every prospect of a hard
frost. On Wednesday morning the thermometer stood low as 26 derees and all metropolis grees, and all the ponds in the vicinity of the ornamental waters in the Regent's Park were completelg anozen over in the narrower parts, and several gentlemen amused themselves by skating during the day, though the in Kensington-gardens, and the water in round pond Park, are now covered with thick ice. The lateness of has period at which this sudden change of the weather ance. in almost precludes the possibility of its continuon the Thavere frost in 1814, when booths were erected which the present frost on Februa
The late Gales.-The sacrifice of life and property at sas during the last six weeks has been without parallel in the history of our mercantile marine. Upon reference to that the tootal and other authentic documents, hurricane on the night of the 13th ult., was about 180, and that the number of persons who perished with them amounted to not less than 453. On the coast of England 154 vessels were wrecked, andil 190 lives lost ; on the coast of Ireland land, 17 vessels were lost, with 39 lives; and on the coast of France four vessels and 100 lives were lost. The value of the vessels and cargoes have been roughly esticargoes at $130,000 \%$. On the three following days after the loth, numerous other wreck occurred, to the extent of nearly 60 , the losges on which wpere upwards of 240,0001 this, with the others, making a total of $825,000 \mathrm{l}$. To this is to be added the great loss of vessels that occurred in which have not been fully ascertained.

The Temple Church. -The choral service introduced at this church when it was lately opened after the restoration of the building, was unexpectedly suppressed on Sun The diminumediate consequence of the change was so great a leading members of the bar have congregation, that the the bent mors from to - benchers, from which we extract the following passage is in our establishmen of a compiete and errective choir restoration of the church, and in such full consistency
with their character, spirit, and design ; and is, moreover, so consonant with the feelings of your members, that they do not hesitate to express to you, and through you, to should have been made. The undersigned take this opportunity of acknowledging with gratitude your exertions portunity of acknowledging with gratitude your exertions excellence of your arrangements in the conduct of divine excellice there. They now beg you to continue those exerservice there. this cccasion, evince your usual consideration for the feel ings and wishes of your members at large, they respect-

restored to its original beauty and completeness.

Royal Academy.-On Friday, the 10 th inst., a general meeting of academicians was held in Trafalgar-square, when Sit Whilam Charles Ross Was elected an acade mician, in the room of the late Sir Francis Chantiey. Mr. room of the late Mr. Bromley ; and Mr. H. Timbrell was elected a travelling student
Wood Pavement.- On Tuesday a special meeting o the Commissioners of Sewers took place at Guildhall, for the purpose of considering the motion of which Sir $P$ Laurie had given notice, with respect to the question of wood-paving; and for the first time this court was thrown
open to the public, on the understanding that the public open to the public, on the understanding that the public
importance of the subject was the sole ground of the importance of the subject was the sole ground of the the opinion of the Court that the wood-pavement in the Poultry is dangerous and inconvenient to the public, and ought to be at once taken up and replaced with granite
paving. He said that whatever differences of opinion might exist as regarded the principle of wood-paving in other parts of the Metropolis, there conid be but one with regard to that lad down in the Poultry. The evidence of 55 horses had fallen down during 8 days. The Norwich mail had its whole four horses down at once; and it was happened he had had a return with respect to Newgatestreet, and the result was, that 26 horses had fallen there in 9 days, whilst in Cheapside only 4 had taken place during that period. He would not confine the Court to his own opinions merely, he would give them the opinions of others. He then went on at great length to describe of others. a round of various streets paved with granite in order to avoid wood-pavements ; and after many observations condemnatory of the system of wood-paving, he asserted that to pave London with wood would cost 24 millions of money, and that in two years' time Me Whole of that laid
down would be taken up. Mr. Deputy Gordon down woudd metion. Mr. R. L. Jones spoke in favour of wood-pavement, and combatted the arguments of the moving the previous question. Mr. Deputy Pewtress moving the previous question. Mr. Deputy Pewtress from the Common-Serjeant, Sir C. Marshall, and others, in favour of wood, was carried by a very large majority. At the conclusion of the debate, Sir P. Laurie gave notice that he should move that the future proceedings of the Court be thrown open to the public.

The Callle Markets.-The contagious disorder which has now for nearly four years attacked the cattle and sheep brought to thed violence. On every market-day bet Smithfield market and all the leading lines of intercours from it are crowded with sheep, which are seen lying in a condition incapacitated for walking. The principal effects on the sheep are shom uporation takes place, and the hoof tion and subsequent phe disease is also extremely is at last thot cows and other cattle and since Christmas the principal dairies in the neighbourhood of town have sustained great losses. The epidemic, if such it may be termed, is not so prevalent on the Surrey as the Middle sex side of the river; although Bermondsey, and part
The Docks.-The distress which has so long been felt in the manufacturing districts has began seriously to affec the shipping interes. are built than in any other port, the distress is so great, that the poor-rates ine 16s. 6 d. a year in the pound. In London, a circular has been addressed by Sir John Hall, secretary of the St. Katherine's Docks, to the owners of several vessels now lying in that estabishment, statig that the stagnation in the export trade, which retards the despatch of the ships loading outwards, and the unusual number of ships unemployed, lying in the docks and for sale, has rendered it necessary for the Dock Company to remove some of the ships to other docks on the Surrey side of the river, in order to make room for fresh arrivas.
Accidents.-On Thursday afternoon - Major Charles Jones, of Upper Montagu-street, Montaga-square, was suddealy deprived of life by the accidental discharge of a pistol. It appeared that the deceased gentleman, who had served throughout the whode-camp to the King of Hanover. Having recently received an invitation to the Court of Hanover, he was about to proceed to that country in a few days. On Thursday afternoon he took from their cases two holster pistols, which had been loaded upwards of five years, and, while drawing the charge of one of of five years, and, while drawing the contents lodged in his chest, causing instant death. An inquest has been held on the body, but the verdict has not yet been returned. Meld on the body, but the verdict has The following is the number of deaths registered in the week ending Satur-
day, Feb. 4:-West districts, 125 ; North districts, 153; Central districts, 142 ; East districts, 176 ; South districts, 184. Total, $780 ;$ ( 390 males, 390 females.)
Weekly average for the last five fears, 903 , ( 461 males, 442 females, ) and for the last five winters, 1004.

ror week. It is said to have resembled a large body of fire assuming various shapes, and its velocity was not less than fifty or sixty miles per minute.
Liverpool,-A person connected with a collection o wild beasts, now exhibiting in this town, was arrested fo debt last week. Atter some conversation with the sheriff officer, he invited him and his followers to view the animals, to which ney consented; he described each part the lin. The, and fugion of the office may be easil magi. The consteruation of the omicers may bered the company of the lions to their own, and stated his intention of remaining where he was, until after twelve $o$ cloc on Saturday night, when the strong arm of the law, for the time being, would be powerless. Threats and persuasions were alike uaavailing , all he satisfaction they could obtain was, that if they wanted him they might come and wase him. Alcr some with the for plaintif appeared, arrangement soon took place.
Leeds.-Nothing of importance bearing upon the mygterious case of mutilation noticed in our last, has been made public since the adjourned inquest on Monday week. There is little doubt that a murder has been committed in been inf its immediate neighbourhood. The Cissing from Stanley-lane-end, near Wakefield, since the 7th January; but whether she be the party whose body has been found, there is no evidence to show.
Manchester. -The promenades at the Free-trade Hall, in this town, appear to have been the favourite resort of the inhabitants for the last fortnight; no less than from 1,400 to 1,600 persons of various classes having been present on each evening. Last week the numbers of visitors were as follow :-on Saturday evening upwaras oray about 1,620 ; on Wednesday 1,487 ; on Thursday, 1,331 ; and on Friday, 1,154 ; making a total, in the six nights, of 7,322 persons.
great that $5,-120$ are
chial relief; and there are 480 inmates in the Union workhouse. In Leeds, the relief granted to out-door paupers is now $9,250 l$. above what it was three years ago fur, with the same period, the number of applis or relief has increased from 3,481 to 14,839 .
Rotherham. - The warfare against turnpike gates, which has prevailed for some time past in Wales, has lately spread to Yorkshire and the neighbouring counties; but rather for purposes of plunder, than in connection with an organised conspiracy. About one, A.M., on Wednesday week, the toll-bar house, called the Brown Bar, and, about an hour afterwards, the toll-house, called the Aldwark Bar, both in the West Riding, were entered and robbed by as gang of five or six men. In each case the leader was mounted on a horse which had been stolen from a atable in the neighbourhood. A late number of the Nottingham Journal described a precisely similar outrage committed a week previously at another toll-house, no doubt by the same gang.

The Woodchester property, near this town, one of the estates of the Earl of Ducie, is coming into the market early in the spring. It is said to be the largest estate that has been subject to public competition sinco the memorable sale of Lord Ormonde's property in 1815, when his estates were sold by Mr. G. Robins for 500,000\%. and it is said he expects to obtain for Lord Ducie's more than $300,000 \mathrm{l}$.
Windsor and Eton.-The bust of the Duke of Newcastle, lately executed by Mr. Behnes for the members and masters of Eton College, is to be placed in the library with those o the Marquis Wellesley, Lord North, Lord Greavine,
and Mr. Fox. The following are the particulars of the Newcastle scholarships, recently founded by the Duke: -There are three scholarships of the value of 500 . per annum each, to be held for three years, and open to comantition for all boys of the sixth form, and upper division of the fifth, and such of the middle division who should leave school before the next examination. The estates of the Duke at West Markham and Egmanton in Nottinghamshire hove been bis Grace with the paymentof 2062. mecuted the part, executed beshop Cu . the Provost and College of Eton on the third part, to whom the a trust for the above purposes, and to be applied accordtrust for the above purposes, an the first year $40 l$. in money, ingly. Worcester.-We have before alluded to the hostility shown in this county to the establishment of the fura police. We now learn by the Worcester papers that the rate-payers of this county have been orling to pive during the last month in calling vestry , meetiss the answers to the questions in the circuls are sad thate magistrates committee. Fhese abswr an thour the been opened by the committee las result cannot be officially known until the report has been brought forward at the next Easter sest almost ina current that it will be a decisive and ansornimous expression of dissatisfaction with the premploying at is reported that offers have been made oc empiderably more ral wages, under sir J. Graist in the rural police. These paid constables than now the abolition of the rural police in the county, and the opinion is now becoming general among all parties that in maintaine
Yoik.-The local papers mention that Mrs. Wood, formerly well known on the Loudon stage as Miss Paton, has become a convert to the Roman Catholic faith, and is at present staying at the convent of Micklegate Bar, near
this city. She was expected to make her first communion on sunday last
Railways.-The following are the returns for the past week:-Greenwich, 663l.; Eastern Counties, 800l.; Briverpool and Manchester, $3,864 l$. ; Croydon, 1996,3 North Midland, Grand Junction, 6,7411 ; York and North of England, 1,2411.; Edinburgh and Glaagow, 1,471.; Sheffield and Manchester, 282t. ; Manchester 3,901l.; Glasgow and Paisley, 738l. ; Midland Counties, 2,2826.; Hull and Selby, 811l.; Birmingham and Gloucester, 1,558l.; Birmingham and Derby, $1,2011$. ; North Midland, 3,703l.; South Western, 4,789l.; Great

Western, $11,090 l_{0} ;$ Dover, $1,262 l_{,}{ }_{3}$. Birmingham,
$13,974 l_{0} ;$ yearly meeting of the London and Birmingham Company was held on the 10 th insto, when the attendance of proprietors was larger than usual. The directors' report showed that the receipts for the last half-year were ing half-year, chiefly owing to the on the correapondunder which every branch of trade and manufacture has been suffering. The greatest falling off is in the receipts of the lst class passengers, while on the other hand there nution in the expenses of working the line bad been, during the three years, $41,397 \mathrm{l}$. The net profit to be divided among the shareholders was $248,818 l_{0} .13 s, 5 d_{0}$, and a dividend of $5 l$. per cent. on the capital stock was recommended and unanimously adopted. The balance is to be carried to the credit of the next half-year, and the incometax to be deducted from the dividend of each proprietor. tax to be deducted from the dividend of each proprietor. Company took place on Thurdday. The report stated, Company took place on Thursday. The report stated,
that during the six months ending the 31st December, that during the six months ending the 3lst December,
the receipts from passengers and parcels amounted to $35,7461 .$, which exceeded the previous half y year's receipts 35,7467., Which exceeded the previous halfoyear's receipts
by $6,760 \% .7 s, 8 \sigma^{\prime}$. After deducting 3,906 . $15 s$, , the interest on debentures, there remained a balance of
$9,702 l .3 \mathrm{~s} .4$. from which the Directors recommended a dividend, at the rate of 4 per cent. per annum on the paid-up capital, or 18s. per share, which would leave a
sum of $1,276 \mathrm{l}$. to be carried forward. A motion for a committee of investigation was expected, but it was not pressed, as the directors themselves frankly acknowledged that they could not be said to have displayed abi-
lity in their administration. They appeared rather to throw themselves upon the consideration of the share-
holders, since the point of depression was past, reminding holders, since the point of depression was past, reminding
them of pecuaiary help which two or three of the them of pecuaiary help which two or three of the
Directors (Messrs. Crawshay, Routh, \&c.) had afforded in bringing the company through its early difficulties to its present position, which is asserted to be one that will,
with care and caution in future management, enable the with care and caution in future management, enable the
declaration of a dividend from actual revenue of at least 7 or 8 per cent. The increased revenue is expected to result from the development of the goods traffic on the
Bishop Stortford district and the Hertford and Ware branch when completed. Several new directors were elected before the meeting broke up.-The balf-yearly
general meeting of the London Grand Junction Company was held on Saturday, when a resolution was passed empowering the Directors, now that the Act incorporating the Company had expired, to call in the certificates of shares, with a view to winding up the affairs, and
of dividing the balance in hand of $3,599 \%$. on the 7,600 paid up shares. The chairman, in acknowledging a vote lieved thät the termination of the Company's affairs would be more sațisfactory than its commencement, and that the expenses had been kept down as closely as possible. burgh and Glasgow Railway shareholders, the profits for the half-year being 40,8131 . The visit of the Queen to Scotland had contributed much to this revenue, and it was therefore determined to increase the reserved fund with a larger appropriation of revenue than usual. The At the meeting of the Chester and Birkenbead Company At the meeting of the Chester and Birkenbead Company
last week, it was resolved to announce a dividend of 10 s . per share for profit, amounting to 5,297 a . on the halfyear's traffic. Retrenchments have been made in the working expenses of the line to the extent of $1,781 /$. in the last six months.-Another letter has been addressed
by the Board of Trade to the directors of the North Midby the Board of Trade to the directors of the North Mid-
land Railway with reference to the late fatal accident on that line, and to the reductions in the establishment. It states that the Inspector-General, after investigating the railway, bas not only confirmed the opinion expressed
by the Board in their former letter respecting "the inexby the Board in their former letter respecting "the inexpediency of sudden and sweeping reductions affecting the class of servants upon whose skill and good conduct the safety of the passengers depends, as a general principle ;
but has also led their Lordships to regret that, in the but has also led their Lordships to regret that, in the particular instance of the North Midland Railway Com-
pany pany, the directors should have adopted measures which
their Lordships cannot but consider, from the circumstances as reported by the Inspector-General, to have been calculated to compromise, and to have, in fact, compromised, the safety of the public travelling by that line." They also express a hope that the directors will omit no opportunity of replacing the workiug establishment of the line on a footing efficient in all respects as regards the public safety, as it was before the recent reductions were enforced.- The half-yearly general meeting of the Great
Western Company was held on Thursday. The report stated that the revenue for the last six months showed an increase of 21,3111 . over the corresponding period of 1841, which wai partly to be ascribed to the additional distance opened between Bridgewater and Taunton. The number of passengers conveyed during the haff-year had been 869,444 , and the total traffic receipts 358,6646 .; of
Whtich 302,0847 . Was the exclusive earning of the Great Which 302,084 . Was the exclusive earning of the Great been reduced to 36 per cent., exclutive of the cost for was $108,482 l$; ; out of which, in accordance with the re commendation ; out of the Directors, a dividend was declared for the half-year at the rate of six per cent., leaving a balance, after deducting the income-tax, of $2,607 l$. to be carried to the current account. The board aliso proposed to reduce the remuneration_voted to the twelve directors to
1,2001 . per annum.

Dublin.-Mr. G. ARELAND. representative for the University of Dublin, in the room of Judge Jackson. There was no opposition, the opponents of national education having led the Attorney-General and the government to retire from the field. Mr. Hamilquestions, in opposition to the policy adopted by government on those subjects.-On Saturday the governor of the Marshalsea received an application from Mr. Joshua Jacob, the leader of a new sect called the White work of the Lord," with which he refused to comply. He then begged to be allowed to attend the Catholic chapel, promising "to be a silent spectator, unlens an overwhelming impuise of the spirit come upon him." the Governor, to state that this application would be acceded to, if he gave an unconditional promise not to create any disturbance. He made no immediate reply, but after staring at the deputy for about twenty minutes the power of the Lord God." Under these circumstance it was considered funadvisable to allow him to attend the chapel, more especiaily since the recent proceedings of
the sect have rendered it desirable to give no encouragement to the public manifestations of their enthusiasm.The Poor-Law Guardians in different parts of the country continue to express dissatisfaction at the removal of Mr.
Phelan from his office of assistant-commissioner. At the Phelan from his office of assistant-commissioner. At the
meeting of the board of Guardians of the Abbeyleix union on Monday, Lord de Vesci presiding, a resolution was adopted describing Mr. Phelan as a most efficient and impartial officer, and expressing an "anxious hope that his services as assistanolutor-law Commissioner may be agent to the Marquess of Lansdowne, and supported by gentlemen of Conservative, Whig, and Radical politics, who concurred in condemning the measure as one of unnecessary harshness. - At the meeting of the Repeal As-
sociation on Monday, an abstract of the accounts from the 6th Sept. last to the 26 th of last month, was produced. The receipts during this period were 2,5666 . The expenditure was $2,233 l$. 1 s . 3 d., leaving a balance in favour of the Association of 3332 . $16 s$. 5 F . Mr. that the association was never so completely free from debt, nor were their prospects for repeal ever so bright. The spirit was spreading in every quarter, and the Presbyterians of the north were joining hem ail directions movements of the Repealers, and on the present state of European policy. The leading topics were those which obtained concessions from England when she was in a of Repealers now, no one could doubt that he mould con a repeal of the Union. He dwelt at length upon the present distressed state of England in her domestic and Ioreign relations, as furnishing strong grounds of hope for
Ireland. "Many persons," he said, "s liad asked him why he did not attend Parliament now? What was the use of it? What good could he do in Sir R. Peel's packed Parliament? He had never looked for French or any
foreign alliance. He relied upon Ireland and the Irish, but he would noty refuse to receive the co-operation or
sympathy of any good and wise nation. The great missympathy of any good and wise nation. The great mis-
take in the career of Napoleon was, that he undervalued Ireland. If, instead of going out to Egypt, he had
brought 40,000 men to Ireland - if, instead of going to brought 40,000 men to Ireland-if, instead of going to
Russia, amid its snows, he had sent 50,000 men to Ireland, his/'story would have beem different. The wealthy inhabitants of the country might have opposed bim, but
the people would have asked each other if they would not the people would have asked each other if they would not do better under the sway of Napoleon than under that of have been severed in less time than he was addressing the meeting."-An action brought by the Rev. Mr. Hurst, of St. Catherine's parish, against Mr. Whaley, for local interest, and occupied many days in trial, was brought to a conclusion on Tuesday. The court was Justice, the jury returned a verdict for Mr. Hurst, acquitting him of the charge of intoxication on the days specified in the pleadings; on the other issues they found for the derendant, thas exonerating him from the imputation of malice in preferring his complaint to the Archbishop, on which the present action was founded.
Edinburgh. -The Caledonian Mercury states that the Government have raised, in name of the officers of state, for refusing to settle parish of Muckairn, and that the damages they claim amount to 15,000 , although, by a recent decision of the court, the patrons get the vacant stipend. This step on to all prospect of a settlement of the Church question, if any auch remained after the letter of Sir J. Graham.
Glangow.-The local papers inform us that a richlysilver cea and coifee service of plate, together with a kheriff of the county, by an unknown-individual in one of the commercial cities of England. The following inscription is engraven on the tribute:-"To|Archibald Alison, Esq., Author of the "History of Earope during the

French Revolution,' in testimony of the sense entertained of the benefits he has conferred upon his country. From an Unknown Donor." - On Wednesday last, at the halfyearly meeting of the Glasgow Railway Company, the question or sunday traveling was again brought forward. F. Headerson moved the discontinuance of the Sunday There appeared of those resent : - For the Sunday trains, 301 votes; against them, 323. Majority 22. Scrutineers were appointed to examine the proxies, when the gross majority, so far as could be ascertained, was 1,307

## THEATRICALS.

Drury Lane.-On. Saturday night
a new tragi drama, in three acts, called A Blot in the 'Scutcheon, theatre with complete success. The interest of the plot hinges on the anxiety of Lord Tresham, a haughty noble proud of his stainless scutcheon, and of his long tatives of the family, himself and his sister, should transnit to their posterity the lineal honour pure and untar nished as they had received it. He discovers that this sister has brought dishonour on her family, and the piece
closes with her death after her lover has fallen by the hand of her brother. The principal characters were sustained by Mr. Phelps, Mr. Anderson, and Miss H. Faucitt, who were called for at the close of the play, together with the author, to receive the applauses of the audience.
Covent Gardin.--On Monday night the most formidable uproar took place that has been known within the walls of a theatre for years-formaidmble, because there was nothing ironical on the part of the audience; the expres sion of feeling being one of unmitigated indignation: scarcely any females were in the boxes, and though the houre was thinly attended, there was from the first some thing ominous in the appearance of the audience. The public had been made aware some days before, through the medium of advertisements, that on Monday evening Mr. Gregory, known to many as the editor of a weekly op melous for to attacks os private of Hambet. He accordingly did make his first, and, no doubt, his final appearance on that night. The curto Horat and the first scene, in which the ghost is visible changed ; the King and Queen, followed by their retinue, entered in peace, but us soon as Hamlet, who is the last person in the procession, was seen, the audience broke the uproar did not abate, he commenced in the very mids of it his part of the performance. The first opening of is mouth seemed to call forth fresh elements of confusion. The play was, however, continued, but not a sylthe audience ; and the first act of Hamlet was, perhaps, or the first time, performed in dumb show. An attempt rather increased than diminished, and at length, finding it impossible to go on with the performance, Mr. Bartley, the stage-manager, came forward, but could not obtain hearing. He was, however, understood to say he was atisfied that the majority of the audience were oppose instantly discontinued in obedience to their will. With this promise the audience appeared satisfied, and the up oar ceased for a while. To occupy the intervening time before the ballet opera of he Maid a Cahmere, a par fusion was still as great as ever, although it now arose from a different quarter. A party of persons who are Mr G ave attended in order to secure the trumph of Mr. Gregory, were determined that the substitute for Hamee should be a failure. Mr. Bartley, however, per severed, and finished the piece, although the dialogue, during the whole time, was completely inaudible. With this, however, the uproar ceased, and the rest of the perfin, however, the uproar ceased, and

## ftićscellaneous

Sole.-Lieut. M'Murdo of the Terror has arrived in town from this expedition, which he left at the Falkland Islands, all well, and in the highest spirits. He reports that Captain Ross had triumphantly accomplished every object for which the expedition was undertaken, and that the Government at homee, sensible of this, had left it entirely to Captain Ross's discretion, longer period, for the purpose of exploring other object of interest in this hitherto imperfectly known portion of our globe ; that Captain Ross has made choice of the former, and that we may therefore expect the expedition home early in May. Lieut. M'Murdo states, that in consequence of the excellent discipline observed on board the to the and Terror, and the great care and attention pald lost but forth of their overboard in a gale at the Cape, another from some constitutional disease, and the other two from natural causes. Lieut. M'Murdo is also the bearer of several vaFalkland Islans of grapes and seeds, collected at the hemisphere. It appears that Captain Ross has penecoast the Antarctic cirl slong its has surveyed the and has proceeded to do the same along the eastern line The Poet Laureate.-The following melancholy extract from a communication from Mrs. Southey (formerly well
known as Miss Caroline Bowles) to Mrs. Sigourney, the American authoress, has appeared in the Leeds papers : 'Thalaba, the widd and wondrous tale.' Alas! my friend, the dull, cold ear of cleath is not more insensible than his, my dearest husband's, to all communications from the world without. Scarcely can I keep hold of the last poor comfort of believing that he still knows me. The almost complete unconsciousness has not been of more than six months' standing, though more than two years have death of his first wife, ' Edith'—of his first love, who was for several years insane, his health was terribly shaken Yet for the greater part of a year that he spent with me-
in Hampshire, my former home, it seemed perfectly reestablished; and he used to say, "It had surely pleased the Almighty's will was otherwise. 'The little cloud appeared which was in no long time to overshadow all. pass from under it only to the portals of the grave. The pass from under it only to the portals of the grave. The one sole business of my life is that which, I verily believe, keeps the life in me-the guardianship of my dear, helpless, unconscious husband.

The colossal Cabbage.-The Cour Royale, at Paris, has been occupied of late with a case which arose out of the famous colossal cabbage, that some time back excited so ginally purchased this vegetable wonder for 15 f , in the arrondissement of Mellg productions of the kind. The Royal Society of Horticul report M. Billandeau had distributed throughout France with a notice that the seeds of the wonderful cabbage
would be sold at the moderate price of a franc each. The advertisements announced that the King had taken 100 seeds, and delivered them to his head garderier ; and that
the Minister of Agriculture had offered 200f. to the Royal Society of Agriculture to try experiments on the new pro duction. As there were 200,000 seeda ready to be deli vered, it was expected that a tolerable profit might be report having reached M. Remont, an honest nurseryman of the Seine-et-Oise, he hastened up to Paris, and proposed to M. Billandeau to form a partnership with him to the proposition, and having fired the value of his cab bage at 20,000 f., received 3,000 from his new partner towards their common expenses. A quantity of the seed the Secretary of Legation, properly signed and sealed, to the effect that the seed had really been gathered from the monster-cabbage. M. Remont, after doing all this, though it could not be a bad plan to make some experiments on produced cabbages exactly similar to hisund that they produced cabbages exactly similar to his own! This but M. Billandeau refused to give back a sou. The matter was referred to arbitration, and M. Billandeau exculpated himself from all intentions of fraud; but, on the appeal, the court reversed the sentence, proclaimed the dissolution of the partnership, on the ground of its not having been based on an object of legitimate speculation, and ordered
the 3,000 . advanced by M. Remont to be returned. Galignari's Messenger.

The Eruption of Mount Etna.-A correspondent the Times, whose letter is dated, Palermo, Jan. 8, writes as follows :- "The eruptions of Etna have diminished, and the period of their termination seems fast approachderable, and they do not afford much amusement to the foreigners assembled about Catania, who are now begin-
ning to disperse. The torrent of lava has made litte progress, and the damage which the burning mass ocea sions is now very insignificant, but it always affords oppor" tunities for scientific research and interesting observation. The mountain has become entirely inaccessible, in consevery brink of the crater. Snow occupies all the other mountains, and entirely covers many other places, the vallies excepted, in which nothing can be more beautiful than the appearance of the vegetation, so remarkable for its extent and richness." The last acco
mention of any recurencer in Russia.-At a recent sitting of the Academy of Sciences, Paris, a paper was read on the recent discovery of a mass of native gold, weighing 36 kilogrammes (about 80 English pounds), on the eastern side size of any bitherto discovered, was found at a few feet beneath the surface, under singular circumstances. The establishment formed at this part of the Oural for the purpose of seeking for gold had tried every part of the pround near it, and the speculation being deemed a hone. grounc near it, and one, it was abandoned, and the buildings which had been erected were demolished. It was precisely in the ground on which one of these buildings had stood that this mass added some interest the communcation the old-mining industry in RussiIt appears that such is the prodigious increase of washed It appears that such is the prodigion in Russia, and especially in Siberia, to the east of gold in Russia, and especially in siberia, to the east of the southern chain of the Oural, that the total produce in the year 1842 amounted to 16,000 kilogrammes, of which Siberia alone furnishes 7,800 kilogrammes. This is the produce to the Russian Government; but there is reason to believe that the real amount of produce is larger, and that five per cent. in value is secreted by the agents who
are employed to superintend the operations.

## 

Court of Chancery. - The Queen $\nabla$. Viscount Canterbury,-
The Lord Chancellor delivered judgment in this case, which was
 other property, by the fire which destroyed the Houses of Parlia-
ment. To this petition a demurrer was put in by the Attorneyment. To this petition a demurrer was put in by the Attorney-
General, and in this state of the record the case was argued
some time ago. His Lordship commenced by reading a passage
at from Sir William Blackstone's Commentaries, Tol. i., p. 431, on
the subject of accidental fires, and the extent to which the the subject of accidental fires, and the extent to which the
nwners of the property on which they origiuated were liable. nwners of the property on which they originated were liable.
He said a tolerably long experience supplied no case in which
an action had been successinully maintained for such an injury an action had been successifully maintained for such an injury
as the present. The learned counsel for the petitioner had looked as the present. The learned counsel for the petitioner had looked
into the state of the law before the stalntes, and had quoted
authoritics from Rolle, Comyn, Viner, and other authors, re authorities from Rolle, Comyn, Viner, and other authors, re-
lating to the point, It appeared that if a fire occurred by he
negligence of the owner of a house, and the property of another negligence of the owner of a house, and the property of another
was injured, he was liable; but not so, if the fice happened by the
cone conduct of a stranger. If the accident were inevitable, the partr
was excused; and the argument on the other side was, that if the cause of the fire was beyond the control of the owner, he
would not be responsible. His Lordship said the statute of Anne would not be respensible. His Lordship said the statute of Anne
connined the liability to cases of negligence in houses, which was extended by 14 Gcorge 111., c. 76 , to fires arising on any close or
estate. In the recent case of "Yaughan vo Milner," \& Sco., which was an action for damage occacioned by burving weeds,
the owner of the land was held answerable, because the fire was communicated by his negligence. The Lord Chancellor said it
was not necessary to determine the portint at present, as he was Was not necessary to determine he poshat af present, as
of opinion that the petition was not sustainable, nad the demurre
by the Attorney-General must be allowed. It was admitted that the Sovereign was not responsibie personally; negligence and
misconduct were not imputable to the Crown; and if, in fact, misconduct were not imputable to the Crown; and if, in fact,
hey occured, there was no remedly. In the absence of all
autber autherity, a new rule would not be laid down on the present
occasion. Besstes, the 1 nujury beng persunal, and ocurnimin in
the time of a previous Sovereign, the present one was exempted the time of a previous Sovereign, the present cne was exempted on the ordinary rule that the right of action had ceased. Agans
this pition no authrity hati been cited. There was still a Stronger reason against ths postion :- Her Majesty had mintated territory, which had given rise to the institution of the com.
missoners of Woods and Folests; they were apponted bj the Crown, and removable at pleasure;
whose conturt thin fire con.mencel, were appointed by the Com-
missinners, and were not servants of the Crown. If the Com. missioners had been personally gulty of negingence in this case, latility could attach to the Crown. As to the remedy by petition
of ripht, if any remedy were applicable, it did not appear to have been ever resorted to, except to obtain a freehold right and
interest, which had been usurped or withheld. His Lordship said, on the most careful and anxious research, the learned counsel could nat find any authority in a similar case. The case
of "Jervase de Clifton," which was cited, went of on a point of
form, and without argument, the Chief Justice having retnrned the tenour of the verdict, instead of the verdict itself. The case
of "Robert de Clifton," twenty years before, though in a precedieg reign, related to land, being a complaint that the warders
of Nottingham Castle had caused the waters of the Trent to overflow his estate, for which he clamed compensation. His lord-
ship said, he was compelled to come to the conclusion that the proceeding then taken could not be maintained, and the de
murrer nust be allowed. He arrived at this result after careful murrer nust be allowed. the case, and he was glad to know that,
and ansious attentinn to
if wrong, his judgment might be set right by writ of error. COURT OF QUBEN's BENCH.-(Sittings in Banco.)-The Queen
r. Badger und Another.-It will be recollected that during the hended for using stafiorditious lunguage at a nieeting of Chartistg, hended for using seditious binguage at a nieeting of Chartistg,
held sear Dudiey. He was committed for trial on that chare ${ }^{2}$
he sul sequently tendered as hall two persons who were towncouncillors of Birmingham; but the defendants, Mr. Badger and
the Kev. Mr. Cartwright, befor whom lhey attcoled, refused to accept the banl, on the ground that these persons had attendes,
and talen aprominent part at (hartist meetings. O'Neil subse-
quently applich to hin Count or a rule calling upon the defendants to show cause ahy a criminal informalion should not be nisi was granted, and the pont was afterwards discussed at the
har. har. Tay Court took lime 10 deliberate on its judgrnent, asd on
 first to consier whin which no serious doutt was entertail ed.
lawflly act a p,int on whed counsel who opposed the rule contended
Nether of tho learnel that a magisirate can lawlully reject bail at his own discretion,
or is at hberty, when ball s offered, to enter into an investignthon as to the clanacter or opmons of such bail, prov.ded he is
satisfied of their sufficiency to answer for the appearance of the party in the amount reasonably requireal for that purpese. The ward l., c. 15 . Lurd Coke, in his commentary upon that sta-
tute (2d Institute, 191 ), \{ass, that 'to deny a man plevin who tute (ad institute, thereby to detain him in prison, is a great
is plevisable, and to
offence, and grjevously to be junished; and Lord Hale (c. 17), udopts the same remark, and Hawkins ( $2, \mathrm{c}$. 15) speaks of refusal of the ancient statute (4th bcok, c. 22), the
stone, referring to
Habeas Corpus and the Bill of Rights, calls it an offence against the liberty of the subject. If, hen, such iefusal took place from made sabject to an indictment or information. The affidavits on Which the rule was granted accused the magistrates of motives
corrupt, partial, personal, and arbitrary; but even the deponents themselves do not mean to charge pecuniary coriuption or
personal malice, or any feeling of revenge, in the sense of giving un unfair advantage to one hit!gant party over another. The
only censurable feelings that can with any show of reason be suspected, are a premeditaled relusal and disregard of the juat
clanm made by O'Nerl for his hueration, and a determination to clam made by O'Nen for his hueration, and a determination to their duty. The facts beigg clear, the question is, whether a
criminal information ought to be filed; and this depends on our view of the motives which influenced the magistrates. And we
must advert to the very questionable character of me line of defence, which they appear to nsinuate they They depose that some time previous to the appreheusion of as to the nature of the bail to be taken by them in the case of
persons committed for attending illegal meetings, for using seditions language, and particularly for incitibg to outrages, inin Staffordshine and in the neighbourhood of Dudley, and resistance to the laws was fomented and kept up by the inflammatory
and excling speeches and conduct of persons who were Chartists, They debated whether, if they were called uponto accept as bail for the appearance or good behaviour of individuaisca acts of sedition persons who had taken a prominent part in the proceedings of the Chartist body, it was advisable to receive them; and that these deponents and the other magis-
trates, wholly winduenced by any corrupt, perverse, vin-
then, dictive, personal, or partial motive, but, as they believea, ina ia ticn of the peace, decided that sucle perscas ought nct, in the
then state of the country, to be admitted as bail, and ought no
so to be accepted by them, They further sey, that after the
commitment of O'Nell, the same decisinn was agan considered
by the commitment of O'Nell, the same decisinn was agan considered
by the magistrates, and was agreed to by the Lord-Lieutenant
of Worcestershire, whit thougt of Worcestershire, who thought it was a proper decision.
Another margstrate, Mr. Molyueux, states also this resolution, and informs the Court that, if he had been called upon to accept he would also have rejected tharged with the same offence, of powers unknown to rendered so much the more, culpable, if de, palliated, but rather
high functioned br hight found the magrastrates wilfully adopting such a mad if we defiance of the law, the encouragement so gyen would bave conir conduct. These proceedings, lowever, Give the parties
chalicenged an opportunty of explaning the state of mind in chlich they acted; and we find the magnstrates expressly swear ing that they thougite, they were acting in the fais, legithmate
exercisc of thir office, and in the perf rmance of therr duty as magistrates. We may regret that the question of law was not ordinary text-books would have convinced these gentlemen that their refusal on such a grollind to receive proper oferformance of therr duty as magistrates, but the contrary. Their opmonis that
it was right was bastily adopted in a crisis of real danger, and most probably, from a afererce to the gencral resulation which induces us, in conformity to the interfering by criminal infor rcgulated its practice, to deche hatlot therefore discharge the rule; out as the conmation the magistrates was such as to justif
duct of the
they must pay all the costs attencling it."

PENN'S SYSTEM PERFECTED-FOR OBTAINING A FREE
CIRCULATION OF HEATED PURE ATMOSPHERIC AIR
THROUGHOUT HORTICULTURAL \& OTHER BUILDINGS. W. HILL having had every opportunity of making Horticultural Buildings of every kind-to command the above truly-desirable result-and having with much satisfaction wit ciple to almost every variety of Building begs to announce to the Nobility and Public generally, that he erects CONSERVA-
TORIES, HOTHOUSES, PITS, \&c., \&c., upon the above system, great perfectron, and heats the same by Hotwatmr Appapatus,
 Dr. Arvotr's Nsw Balanced Rigulator to the boler appasaved. PrNN's Srstrm only requires publicity to be appre-
Pre ciated. The Pablic are therefore invited to inspect its efficient
working at the Inventor's Residence, Lewisham. The great end
俍 gained by adopting this system, is a perfect and rapid circula
tion, producing consequently an equable temperature throughout the kililding (of h batever construction), and renders access to it at all times safe and agreeable, lanes on enabled to remain for hours in a temperature possibly be derived from an out-door temperature equally
W. Hink would refer any, who may desire to apply the B) stem to Forcing-Houses in particular, to Mr. Jonn Wrismot, of Isleworth, who after 40 years' experience has adopted this any further hiformation, upon application to W. Hus, Buikder HOT-WATER APPARATUS FOR HEATING CHURCHES, and MANUFACTORIES, upon improved prinCHURCHES, and MANURACTMres,
ciples, and at vCry moderate charges,
EDWARD BAILEY, 272, HOLHORN.
D. and E. Baile having devoted much time to the considera-
tion of this subject, and had much experience in the erection tion of this subject, and had much experience in the erection o apparatus for the above-mentioned purposes, have, by inprove-
ments suggested in their practice, rendered their mode of hat-
ing not only very efficient, but rery simple, and have combined durability in the apparatus with economy in the charge. They have erected apparatus in England, Scotland, and Ireland, for many noblemen and gentiemen, and the Horticuturai Society of onondon, in executing the W. and E. BABLEY also construct in metal all descriptions of Horticultural Buildngs and Sashes, and invite noblemen, gentle-
men, and the public to an inspection of ther various drawings men, and the publels, at 2,2 , Hollorm, where they have the opportuinty of convemicnt kitchen ajparatus, or range, adapted for the continued eupply of hot water, and art arrangernent of the oven
plete than has hitherto been brought before the public
D. and E. BAILEY were the first to introduce metallic curvili. D, and E. Bailey were the first to introduce metallic curvili. attached to the Pantheon as one of their works, besides many others in this country and on the Continent.
D. and E.BAr.xy have prepared aquantity of the Galvanic Plant Protectors, which are now ready for immediate delivery; they beg to introduce 10 public notice a wew Trough Pipe, for Orch
daceous or other Houses where vapour is constantly, or at inter H OT-WATER APPARATUS, for Horticultural and church-street, Inventors of the improved Conical and Double
Cylindrical Boilers, respectfully acquaint the Nobility, Gentry and Horticulturists, that they constantly keep Nobinity, Stock a variety, of sizes of these mucia-approved Boilcrs, suitable for Houses or
Pits of any dimensions. The testimony of Dr. Lindley to the merits of these Boilers (ske Chronicle, March, 1842, page 175,
and February, 1843, page 87), renders it umnecessary to offer any and rebruary, 1843 , page 87, renders it unnecessary upon them beyond the following brief description :pleasure, very ornamental in appearance, and require attention
only once in 14 or 15 hours, price $4 l$. 48 . and upwards. Further particulars, with estimates for heating any description of build-
ing, will be forwarded upon application. Iron Fencing, Hurdle ing, will be forwarded upon application, Iron Fencing, Hurdles,
Bedsteads, Wire-work, Garden Implements, de. \&c. every description.

## -meetings for the two following weers. Friday, Mar. 3. . . . Butanial

 Monàry, Mar. b.IN the event of a good Act of Parliament being try, we think, and this is the opinion of some of our correspondents, that the carrying out its objects will require tar larger funds than can be raised conve
niently through any of the ordinary chaunels niently through any of the ordinary chaunels.
would therefore suggest that, under these would therefore suggest that, under these circum-
stances, capitalists cannot do better than unite public companies, in the same manner as has to form extensively done for the formation of canals and railways, the objects of such companies being either to
execute the works under execute the works under the superintendence of skil-
ful engineers, or to advance capital at a certain of interest; long leases being regarded certain rate rity for such advances as well as actual ownershin correspondent remarks that this might be easily done through one or two arljoining counties, so that the
shareholders might have a shareholders might have a personal interest, besides the profitable investment of their money.
Another subject in which we think capital might be obtained from Parrliament, wfoulicient powers could emp,ank from the sea some of the rumerous shond and sandbanks left dry at low water at the mouthoals of large rivers, and along much of our coast. Thousands
of acres of invaluable land might be the of acres of invaluable land might be thus recovereed if
the operations were carried on by shes while navigation would in many cases be engineers, safe. In fact, a serious attempt was made a few years sirce to effect this at Lymn, by embank ang the shorcs of the great estuary called the $W_{\text {ash. }}$ Sir the Ouse and the Neneyed to examine the outfalls of and he reported in an elaborate statement the Wash; us, that it would be perfectity statement, now before us, that it wouid be perfectiy practicable to recover 150,000 acres of land worth $i, 000,0001$, at a cost of $2,000,000 \%$, besides improving the natural drainage of
900,000 acres 900,000 acres of lowlands, all at present badly
drained; and, to the extent ratively valueless in their actual state. II acre, compaject been executed, the countryl would have gained by
that one whole county of Rutact half as large again as the annually 160,0000 quarterss of $W$ heat, 200 of producing of Oats, 100,000 quarters of Wheat, $200,0 \mathrm{c} 0$ quarters 7n,000 sheep and 30,000 or 40,1 Beans, besides feeding plan was, however, stopped by private influens great the worthy corporation of Lyy private influence, and
succeeded in deprive for the present succeeded in depriving that town of the imnenensesent
vantages that must million and a half a year followed the addition of a around their port.
Such a case as this is what may be expected by those who tructive example of undertakings as we have here ventured to bark in such and we mention it in order that the to recommend, should invest their money in drainage or ermbank
ment speculations ment speculations, may take care that the Acts of Parkliament under which the operations are to be con-
ducted shall mive them them to deal effectually with the numers as will enable whom they are pretty sure to encoumterous opponents We have introduced this encoubiecter.
articles on drainage whice which have recentity sequel to the our columns ; we have, however, no inty appeared in suing it furcher. It is is for carer, no italiststention of purd not journ-
alists, to occupy thenser alists, to occupy y themselves with the details on of journ-
affairs, if they think it worth their whit affairs, if they think it worth their while.
The application to the land of amimal manure mixed with vegetable substances hass, from the earliest times,
been considered as lity in considered as the best manas of producing fertiif we trace the stestoring it when diminished ferti- and mixed manure in the soil, we shall find tion of this siples itself into humus as soon as the volatile prin-
cipe dung he ciples of the dung have cscaped, and the vegetable
portion has been completel to a black earth, which, in fact is is hised and reduced pure. A very large addition of commone or less through the first stafter it has been allowed to to sition, and Iost its tendency to heatat an and decompothe residue of hotbeds used to force early the case in
gives to the soil a manure exactly similar to that of
decayed vegetables: it never stimulates the plants too much: it is decomposed slowly, and in every respect acts as vegetable mould. If a sufficient supply
of this effete substance of this effete substance could be procured, no manure could be better suited to the growth and maturity of
all kinds of vegetable know this, and in the cultivation of Gardeners well able plants they use nothing else; the expense is not regarded, but only the healthy vegetation of the plants
they cultivate they cultuvate. But those substances that escape in a volatile form, and which form a large portion of the
component parts of fresh dunc. an extremely effective if they are fixed an rendered so that they shall only escape slowly and uniformly in
the earth the earth, and give a constant and regular supply of
the elements fron the elements from which plants are formed. They do humus is chiefly giving out moistur but while the acid, they give out ammonia, by which the plants obtain nitrogen, and add to the soil warious salts prats found bases, which are soluble in water, and being found in most plants or their seeds, may be supposed necessary to their perfection, and to enter by the roots with the water in which they are dissolved. To retain
these ell growe elements and to make them subservient to the is one of the plants and the increased fertility of the soil, science in the service of agriculture ; and the hing which chemists liave ofiven on this subject--leading to practical experiments without at once blindly adopting any new theory-have already had the most
beneficial results, and with part of intelligent and experienced froceeding on the lhope to establish a system of manuring which shall
fully confirm the discoverije founded $n$ the niscoveries of science; and, being ultimately aclopted by the most sceptical and purely The car farmer:
learn agriculture ; but in thate school in which to looked to, without reged garden, results only are market-gardeners are, it is true, men who cultivate land for profit; but their customers are mostly in the class where everything which contributes to comfort
or enjoyment is in the more or less forced nady paid for. Every growth is of market gardens near unnatural ; and the situation lities in disposing of of their produce, and unusual faciunlimitcd supply of manure. But a little observation on the practice of gardencrs in the managernent of
manure, and a comparison fit laid lown ly a comparison of it with the principles conclusions of the larger f greatly assist the practical nomy are the soul of agriculture ; and the balance of accounts at the end of the year is the criterion of the system pursued; yet this is not all: if a farme labour and manure, which imp an expensive outlay in crease in lis produce, he confers a corresponding in-
lat his country-he huce, he confers a double benefit on his country-he gives a livelihood to more individuals by the additional labour, and more food to the community by his greater crops-two most important
objects where population is reduund cinployment scarce. This is a digressiond profitable not devoill of utility, and is intinately connected wips our subject.-M.
$\qquad$
Nor that the promedimapa of the

 our ports. For more years than we can remember plaint meen a constant source of well-founded com and Livore especially as regards the ports of London Horticultural Society of London, and to all the the importers of plants, for a confirmation of our stategreat When packages of living plants arrive from the tout jrics, especially if they contain Orchidaceous plants,
they have been continually robbed they have been continually robbed, unless some active agent has been on the spot to see them opened, and to
secure them from the offcial plunderers Speific intances
e do not desire on the but as ferers to the annoyance of hand, to expose the sufCourt of Inquiry now said to be sitting ; and, on the other hand, are not prepared to poing ; and, on the quents, we shall content ourselves with mentioning
one single case of recent occurrence A gentleman was advised that
containing valuable plants had been certain packages him from Belize. Gaining no intelligence of them from the Custom House agents, he travelled to town for the purpose of inquiring after them. The people on board the ship that brought them assured him they had been taken possession of by the Custom House officers: the Custom House officers denied all knowledge of them. He, however, rummaged over

115 indeed, his plants-but the succeeded in finding-not, which had been torn off, and remains of the boxes, timony of the dishonesty and remained behind in tesAnd thisikind of robbery, we affirm, is anesty's servants. from uncommon occurrence.

## FIXING AMMONIA.

THe high interest at present attached to various pro
cesses for fixing ammonia, and the great atteation which
is now paid to the subject throughout the duce me to trouble you with a few observationsy, insome of the means which are taken to fix ammonas upor fessor Henslow has recently published a letter to the
farmers of Suffolk, in which he draws their a plan proposed for fixing ammoniaby the ase of commor alt. After describing the plan as it reached bim, he proceeds to remark on the probable value of the suggestion, pointing out several theoretical objections, and coneluding by advising them to ascertain for themselves whether or I do not possesses any practical value.
I do not think it necessary to copy the whole of the The authreppeting this new mode of fixing ammonia stantly coing it adverts to the loss of ammonia con and the remedy for this, here is, however, a cheap and simple dissolve some common salt in mater, if wole stable, say 4 lbs. of salt, dissolved in and poured through the rose of a wouckets of water stable floor an hour or so before wou beg-pan over the manure. The volatile salts of ammonia to move the fixed salts from their having united with the wariaticome of the common salt, and the soded with the mariatic atid salt will quickly absorb the soda thus liberated from the of soda; thus absorb carbonic acid, forming carbonate monia, which would otherwise have fown away and your will also have a duced, viz, the cart powerful solvent of all reta. As this is a most all manures have to be repstable fibre, and seeing that act upones have to be rendered soluble before they can carbonate of soda so it will be at once apparent that the and valuable agent,"
There is no doubt that if such a plan as this were found more generally empioyed than any of the economical, and have been hitherto proposed, but I feel very donbiful hether it would produce any such effect as that above mending farmers rejnice to see Professor Henslow recom. menaing farmers to try for thensclves the value of the against implicitly believing the properly cautioning them Ife observes, that if amme truth of the starement. bably not in consequence of the de thus tixed, it is proammonia, but bequence of the decomposi ion of salt by culbonate of ammonia. Colut reaction of common salt and ammonia; the lateria. Common salt is not acted on by salt would be of no value in finpose salt, and therefore besides which, it is not ammonia butcarbonstic ammonia, which is formed in manure. The question of ammonia salt decompose carbonate of ammonia? will it does that volatile pungent-smelling agent into a fixed solid substance? In the first nlace, it must be rememed solid hough dry pure salt is described by chemenvered that chloride of sodium," or when rombined chemists as being muriate of soda, yet the common salt ordinariter is called in commerce is by no means chemically purnty met with considerable quantity of impurities, amountine fr co several per cent. of the salt. The impuritieq frently most part, consist of muriate and sulplate of lime and magnesia; and, generally speaking, the cheaper the salt the more of these impurities does it contain. These earthy salts are readily decomposed by carbonate of ammonia; and, therefore, upon adding carbonate of ammonia to impure common salt, the impurities are decomposed, muriate and sulphate of ammonia are formed, together with carbonate of lime and maguesia; here, then, is one way in which common salt is useful in fixing ammonia The second point to be considered is, does muriate of soda. or pure common salt dissolved in water, decompose carmixed of ammonia? When solutions of these salts are tent, re-act upon eachound that they do, to a certain exof the ammonia is fixed, another is rendered portion and even more volatile than it was when in ared caustic bonate. It is possible to decompose pure sate of carbonate of ammonia : but the process pure salt by carconducted, and a number of process must be carefully to. Although, by the addition of salt to must be attended of ammonia, which would othorwise to manure, a portion may be fixed; yet, I believe that if. is lost as carbonate, portion compared with we that in is only a very small being in accordance with chemical so far from its muriate of soda will decompose the principles to say that of manure, and give rise the carbonate of ammonia ammonia and carbonate to formation of muriate of evidently opposed to of soca, it is, on the conte of muriate of ammed solutions of these salts ampose each other, and when and circums of these salts are mixed together under ordinary acquires thes, common salt is formed, and the misture escape of strong pungent smell of ammonia misture fore the more, that the more impure the aalt employed isthe more valuable will it implure the ealt employed is, will be found whilst, if pure muriate of soda is employed it value in fixing thear, of comparatively little practical

ION MANURING WITH GREEN CROPS,-No. X. (By Professor Charles Sprengel. Translated from the German.)
[The common Magdebured from page consists of 180 square roods, 3. Seaweed (Fucus). -The waves of the sea throw seve3. Seaweed (Fucus).- The waves of the sea tarow sucus ral plants ashore in large quantities; for instance, palmatus, esculentus, F. saccharinus, F. canaliculatus, F. vesiculosus, and F. serratus, which are nure with great advantage. In England, a situation to be manured with Fuci pays 20 per cent.
more rent. The bladdery Fucus (Fucus vesiculosus) contains only 16 per cent. water; and $1,000 \mathrm{ibs}$ of the dry herbage contain 32lbs. of chlorates (of lime, soda, and maguesia), 35lbs. carbonate of lime, 641 lss . gypsum, and tity of nitrogen, all which fully explains its high manuring properties, even if only $5,0001 \mathrm{bs}$ are applied to the Magdeburg acre. Its effects are somewhat increased is the wumerous small sea-shells which adhere to it. in, or is colconveyed at once to the land, and ploughed in, or is collected into heaps for rotting, in which case decomposition
soon ensues, and many fertilising gases are evolved. It soon ensues, and many fertilising gases are evolved. chlorides of lime and magnesia attract much humidity from the air, they are best suited to dry soils shore, and is, in like manner, used as manure. 4. Mushrooms and Fungi (Fungi).-The wise farmer who would neglect no means of increasing the productive ness of his soil, will permit nothing to be wasted, would do well to turn his attention to Fungi as a manure In some forests these plants grow to such extent, person may collect couble and venomous Fungi may be used, but they must be', first exposed to putrefaction. They decompose very soon; during which process they evolve much ammonin as well as their value as a manure. How powerfully in deed they operate may be judged from the fairy rings so often met with on pastures and meadows, which are
only caused by Fungi having dccayed in such places. Their use as a manure is not new ; it hasbeenknown long since to small farmers in Germany. They are usually added to the dunghill, but it would be much better to mix them with humous earth and dung in the compost heap, in which case none of the ammonia produced by the rung would be lost. From the chemical analysis of several apecies of Fungi, 1 find that they are rich is phe composed ulphur, and cose indeed, in their cheroical composition, to animal matter and we'have seen already that this affords the most powerful manures. Admitting that the large farmer can em ploy his people to more advantage than in collecting Fung, cottager, to whom they may be of great utility.

## ENTOMOLOGY.-No. XL.

The Wood-house Death-watch, named Alropos pulsatorius. -There are several kinds of insects called Death-watches, from their producing a ticking or knocking at regular intervals, sometimes for 60 or 70 seconds,
when it ceases for a short time and the beating is again resumed. These sounds being heard best in the stillness of night, and probably being noticed in sick chambers, where superstitious nurses found marvellous solutions for every uncommon occurrence, they became condemned as bad omens, as the precursors of death, and were forthwith called Death-watches. The minute insects before us have been accused of having this ticking propensity, and it i now supposed to be produced by their little horny jaws when they are feeding; but I am rather disposed to attri bute the sound to some means the females possess of discoursing with their friends at a distances and thereby attracting the males to join their socie mischievously em ployed, which is my inducement for discussing their eco nomy. No one suffers more from the attacks of these marauders than the naturalist, whose well-stored boxes and presses of insects and plants are frequently entirely ravaged by these little pests, so that the delicate wings nid bodies of the former, as collections be neglected for atter, mapths together. Fortunately, in thie favoured and we are not subject to the assaults of the numerons and, whe in the South of France and in North insects, which, it then tifficult to preserve America, render it ten times more dificult opreserve objects of natural history than it is in Engiand, where, by preserved for an indefinite period.
These tender little animals are particularly fond of damp situations, and have a great antipathy to the light of day ; on opening a box of insects, for instance, which has been shut up for a few weeks only wind and phor or essential oils, they will be seen running to and fro possible in old pin-holes, or under the specimens surrounded by little heaps of dark dust, which they themselves have deposited, and which is their excrement. It is the same in Herbarias ;birds' skins, \&c.; ; their mootions are peculiar, they seemi to glide along when disturbed
sometimes with a jerk, ilke a skip, and they move sidesometimes with a jerk, like a skip, and they move side-
ways or backwarks with équal facility, occasionally remaining perfectly quiet, when it is very difficult to detect them. In the winter deyey disappear, but as soon as the vernal sun raises the tomperature, they are again actively
emaployed and keep up their annoying operations until
the close of autumn. It has been my opinion that they breed amongst the dry paste, by which the paper is fasened down in boxes and drawers and to the wals, or the egge, being invisible from their minuteness and pale egr, may be in existence and lie unhatched in the pinholes for long periods, which seems the more wedb specimens of insects that have been for many years per fectly free from them, will, in a few days, exhio signs their presence if placed in an unprotected his "Physico Theoler close it may shut. Derna, ith dust of bread, fruits, \&c., and they appear to be found everywhere in kitchens, on old furniture, wainscot, papered walls, and window-frames, amongst neglected books and papers, in gardens, on the trunks of trees,
Fig. 1 shows the natural size of the Atropos pulsatorius, which is soft, shining, yellowish white; the head large, with two minute granulated black eyes; the feelers rather long; the antennæ slender, tapering, nearly the length of the animal, and composed of 15 joints and upwards; the collar and the thoracic segment are narrow, sometimes with a long black spot which extends to the ovate, a little head; the abdonen large black spot at the base, and hairy at the extremity, worm in size according to the quantity of food in the intestines ; the six legs are short, the hind culate, and terminated by little claws (fig. 2, magnified) at some periods of the year I believe they are a little larger and more ocbraceous.
1 once entertained an idea that this minute insect which does not agree with either of the Linnwan descriptions, was the larva" of a little Psocus " (from which genus Atropos has been separated by Dr. Leach), not uncommon in houses; but as this Deathwatch sometimes abounds inmy neglected boxes, and have never, aetect hase since though it, I have relinquished that opinion. I have sice though it not improbable that our Atropos might be the young or larva of the large species (fig. 3 ), but I never found them together, indeed the only specimens 1 ever ? of the latter were in the comb of some vagrant bees? $\dagger$

This large species, which from its size I suspected was the Termes fatidicum of Linn. is ochraceous, thas large brownish eyes; the palpi are rather short 11 -jointed; the collar is short; there are two small pilose elytra; the ab domen is large, the iacisures are distinct and rusty, as well as numerous irregular spots between them, and there are one or two black spots towards the apex; the legs are slender, the thighs stout, the hinder pair the least so (fig. 4, magnified). The large eyes, and four stout anterio thighs at once distinguish this from the foregoing insect independent of the variation in their size, and the shor horns, which may be a sexual character, or it is possibl they may have been injured in the specimen figured.
These helpless insects have a natural enemy, which feeds upon them, called a Chelifer, having two pair of claws like a lobster, with which it seizes its prey; and the most effectual way of protecting cabinets of insects and presses of dried plants from their attacks, is to keep them in a dry situation ; the cases should be rendered as arrtight as possible,"when a small supply of camphorever presst be replenished at least annually, but every six months would be better. I have thus kept my collections of insects for nearly 30 years, free from the slightest infection. I have tried experiments with spirits of turpentine, petroleum, anisecd, the fact being, that they without any permanent effect; the forly the convery soon evaporate and escape, consquiv to the lives fined atmosphere is not render ats firly impregnated of these little plagues, as
with camphor.-Ruricola.

AMATEUR'S GARDEN.-No. VIII I do not recommend the formation of slight hotbeds for raising annuals; I object to this practice-conveniently raised those requicondly, becarse most annual best when sown where they are to bloom; and thirdly, because, if a proper stock is 80 wn in the autuma, there is no necessity for the extraneous assistance of heat. To the hardier annuals recommended a fortnight back, may be added Portulaca splendens and Lobelia ramosa, two beautiful plants, with Isótoma axillaris, Ipomopsis elegans and Schizopétalon Walkérii. Thunbergias should now be sown in heat, as should also Cockscombs, Baisams, and Globe Amaranths, if wanted to bloom early; bu fortunately these formal things are little called for, as the blank they used to fill in the greenho
In the greenhouse and pits, proceed with potting plants for bedding out. Calceolarias and other soft-wooded

## plants that re

require it may also be potted,

drain the pots wel
marks next week.
The propagation of plants for bedding out may now be proceeded with, according to the number required ; but clumps should not be kept shabby for the want of a few plants, as they are readily propagated at this season. For cutting-pots I generally use 48s, prepared in the following manner :-Over the hole at the bottom I place an inverted 60 -sized pot, and round it potsherds, broken smail; per ind and lafould, in equal quaties, leaving phont half an inch at the top for white sand, which runs into theos are inserted. A stock of pots thus prepared should be kept in a frame or propagating house ; as nothing is so injurious to calugs taken oll glous
 too shallow if they are made firm in the pots.
In the vegetabie departme co of Seymorn suph
 hite Celery, also some White Broccoli. If the crops rop of impregnated early Whie no time must be lost解 last crop of early ones. Lettuce, Radishes, both long and Turnip-rooted, Dutch Turnip, and Early Horn Carrot, if wanted early, must be good braal of ear O O must be planted; and get the ground ready for Onions, Carrots, \&c., next month.
On comparing the practical part of my preceding articles with the Calendar by Mr. Beaton, there is so much ameness in the directions that, in future, 1 shall not attempt to detail all that is required to be done in the Ama eur's Garden, but confine myself to the eluciation of trust, will be agreeable to the readers of the Chronicte, as it will remove the sameness that has hitherto existed, nd render these papers more valuable than otherwise it would be possible to make them.-W. P. Ayres.

## HOME CORRESPONDENCE.

Vegetation of Affghanistan. - Your correspondent inquires of "R." what are the geological features of the Affighan mountains, which produce such remarkable barAgness in the neighbourhood almost of the richly-clothed Himalays. In this question it seems to be taken for ranted that the distribution of plants depends chiefly grane the soil. This I am not inclined to deny, nor am I prepared to admit ; for I believe that in circumstances will have a very different influence in favouring or pre willing the venting the grone cort's query. I must say that I know not Whether any precise information bas been published respecting the geological features of these Affighan mounMr Grifith in his report on the subjects conen with Affohanistan, published in the Journal of the asatis Society of Bengal, mentions it as a general remark in the Army that, if stones in 1841 could be made a source of rich wo come the structure of these mountains, but very generally their surfaces are immediately rocky. Some of the offsets are composed of sand in all degrees of softness and induration, in which last state it becomes tabular. Alternating layers of a con glomerate, often exceedingly hard, are Valley of Bamean his sandstone. On both sides or the layey materials, of the offsets are composed of earthy or clayly spaking, Mr. varied and rather G. says the Affghan mountains are not difticult of access, they may be ascended and descended the beds of the draining stre of floods. A section of an Hry, except in the season of hious, be correctly taken as wedre would be a broadly-truncated wedge. Mr. Griffith has well represented the general structure of these valleys; the mountains which bound them being usuily compor of bare rock, while their sides, composed of boudr and shingle, from their very gradual malure, hat beal glacis slopes. In the centre of the valley the either side tion of tillable soil, consisting of a strip on ethich disof the line of drainage. Another feature whin number and size of its rountains streams ; owing, no doubt, to the general dryness of the climate; and in consequence of this dryness, little evaporation can take place from the soil, and therefore little or no dew falls, which would otherwise be the case in so clear an atmosphere. The Himalayas, on the contrary, though more ateep, are clothed with vegetation, in consequence, chiefly, of the abundant supply of moisture. I say, chiefly, because great difference may be observed between the comparavive barrenness of the clay-shate raigica slate, or Gneiss of ithese, sections as well as a statement of the the Himalayan Mo. From the abundant snow which nature the mountains alls in the in furnished to the numerous rivulets and supply of water is has hardly melted from these situations, rivers. The she the tains are when the rainy (t) of or enveloped in clouds-(chose mists or ate is moist, and the bathed witu moderate and equable. These mountains, temperature moderate and equabie. C . nd W are from their oblque direction, running monsoon, which cannot, howerer, cross their lofty summits, Bo that the
country, in their northern face, is as dry and nearly as barren as Affghanistan. These rains extend only partially into the latter country, as has been well shown by Mr.
Elphinstone, in his work on Cabul. This is, no doubt, Elphinstone, in his work on Cabul. This is, no doubt, owing to the strength of the monsoon being nearly exhausted, even bo the direction of the range of mountains which runs paraliel to the Indus, being opposed to their further progress, and thus preventing the country to the north being benefited by many showers which might
occasionally extend further than ordinary, if not thus imoccasionally extend further than ordinary, if not thus im-
peded ; at all events, the dryness of this country is excessive, and the power of the sun great, and to these
chiefly must be ascribed the barrenness not only of the chiefly must be ascribed the barrenness not only of the
mountains, but of the country in general. In studying, mountains, but of the country in general. In studying,
therefore, the laws which influence the geographical distribution of plants, it is necessary to pay attention to the meteorology of a country, at the same time that we examine When we wish to cuitivate in is equally essential to do so, useful or ornamental productions of another. $-\boldsymbol{R}$.
stances that sulphate of it only under certain circumammonia, and these circumstances are not to be found in a dunghill. Chloride of calcium (muriate of lime of com-
merce) will answer this purpose merce) will answer this purpose exceedingly well, and is
cheap enough, being about $4 l$. per ton. $I$ am inclined to think, bowever, that chloride of sodium (common salt) will be found the best thing a farmer can use for fixing the ammonia in his dung. I have put it to the test in a chloride of ammonia and carbonate of soda in obtaining have frequently stated that salt will not decompose ammonia, and this is the prevailing opinion; let it, however, be put to the test, and the result will, I am con-
fident, prove successful. The manner in which you hase brought Professor Henslow's opinions before your readers is excellent; I should like, however, to see your recommend three dunghills instead of two, and one of them to be treated with common salt. I am only afraid that you will tell your readers, if you notice the matter at all, not to be at the trouble and expense of putting salt to the known and talented correspondents might assist me in this matter with you, by trying the following simple experiment, and reporting the result :-Take equal parts of carbonate of ammonia and salt, mix them, and give the likely to be subjected to in a dunghill for 48 hours and if they should report to you that they found chloride of ammonia and carbonate of soda, I think that would be sufficient to authorize you in recommending more exteaders to a letter from Mr. Solly upon this subject in another column. We presume our correspondent means muriate (hydrochlorate) of ammonia, when he speaks of Fixixing Ammonia.]
not be unacceptable on the subjectical observations may monia by gypsum. I have long been in that habit, in ammonia by gypsum. I have long been in the habit, in the
manufacture of sulphate of ammonia on the large ccale man
from the ammoniacal liquor of the on the large scale from the ammoniacal liquor of the gas-works, of using
gypsum for this purpose. It is well known that gass liquor is composed principally of water holding in solution variabye quantities of caroonate, hydrosulphate, and hydrocyanate of ammonia, and generally some uncombined
ammonia. There are some other substances present but which we need not now notice. I may here corroborate a recent remark of yours, that the gns-liquor of the country gas-works is weaker than that produced in Longoes. A few years since I contracted for the entire quantity of liqnor produced at the West Bromwich gasyearly; and the average strength was, that one gallons required rather less than six ounces of strong oil of vitriol for its saturation. The liquor of the London works (near Vauxhall-bridge), averages, according to my experience,
12 ounces oil of vitriol per gallon. that the liquor produced from inland coal (which generall albunds with iron pyrites) contains much more sulphuretted hydrogen than that made from sea-coal, which is the sort generally used in the London gas-works. When the sum in powder is added to gas-liquor, cold, the first effect is, that the water prosent dissolves a portion, which is simulpresent. This it does by virtue of a of ammonia also forming an insoluble carbollate of lime and a sox affinity, phate of ammonia. It seems quite essential thate sulshould be sufficient water to dissolve readily the sulphere sluggish ia as fast as produced, or the process grows the gypsum which dissolves, from is only that portion of upon the carbonate of ammonia. But it is only the acts bonate of ammonia that is decomposed, and its volatile and hydro. The free ammonia, and the hydrosulphate to fly off into the atmosphere, on exposure or ined, ready temperature. It was from this inability of gypsum to fix compelled me to ammonia existing in gas-water, that gypsum had terminated, so much oil of vitriol as was decomplafficient to saturate the free ammonia, and to sulphate. By these means I bucceanate and hydroWhole of the ammonia. Now the composition of the liquid and then flows away as a rich saturates the solid portion identical with gas-liquor. It certainly contains almost substances mentioned, though not, it may be, in the same
proportions. Any one may prove for himself the trath of the remarks which have been made. He need only provide himself with a little very finely pounded unburnt ammonia some solid carbonate of ammonia, and a little pure water, so the him dissolve sufficient of the carbonate in ammonia the solution may smell tolerably pungent of quently: the smell will soon go off. Now add a little the pure ammonia, enough to restore to the liquid an ammoniacal odour; all the gypsum you can now apply Mr . Peprive it of this. It is now easy to understand ans Pusey s remark, that gypsum has not been found to prin , and also to account for its failure on scientific principles. Two circumstances seem necessary for its the ammonia be combined with carbonic acid and that urine putrefies, pure ammonia is first formed, which only ment of combines with carbonic acid. In the commencecumstances putrefaction gypsum is of no use. The cirlost with as much celerity from urine with which gypsum had been mixed as from uxine in its natural state. How far its presence may possibly modify the decomposition pronounce an opinion. The two volatile ammoniacal aits already mentioned would fly off and be lost quite as therefore as entirely, with gypsum as without. I think dung-heap with dry pounded gypsum will not be found to answer, or at most very imperfectly. If exposed to the bain out of doors, the sulphate of lime would by degrees posing the liquid proceeding thence be saved, all the free mmonia and the other volatile salts would infollibly ost in the air. If the heap be under cover, the gypsum has been act to al, or very mefinciently. I think enough in retaing par show that although gypsum may succeed urine and par or the ammonia present in decomposing I think, the remark, which, though perhaps originating either from his person, which, though perhaps originating either from his friends or correspondents, experience of some of his shows that it could not be otherwise. But agriculturists are not confined to the employment of gypsum for the purpose of fixing ammonia; and what they may do, and sufficiently on this point, may, if the subject interests Chemical Works, Upper Fore-street
Manure for Flower Clumps, fe.-I have two flo wer gardens under my charge ; in both these are 40 goodsecond season cheap and easily ottained all walk-sweepings, refuse of flowers, short grass, and fallen leaves, which are thrown into a heap for a twelve month, but turned several times during that period. It is then in a fit state to be wheeled on the land, and I find it sufficiently rich to keep the clumps in good condition for the growth of flowering plants. As I never allow brought nower, ram not afraid of their seeds being Economical $M$ and, with the compost. $-R . D$.
appeared in the Chronicle of late for the preservatio accumulation of manure, 'whether by the gardener fand or cottager, I beg to offer to your notice a plan I followed of decomposed vegetables producing the muth in the theory for their respective species, a mass of manure is formed the prot with little trouble and expense. It is usually the practice to clean the garden thoroug raking and wheeling all the refuse away to the , then, of priated, fix on an open or spare away to the yard appro throw out with a spade a trench five or six feet wide, and as long as you judge you have refuse to fill up to the put a layer of fresh horse-litter on the one foot deep. Nes on a layer of your refuse, decayed haulm, stan, and whee, weeds, or any other thing you wish to layer of in a ridge similar to a Potato-nit, five feet refuse; finish the whole with the adjoining soil to prigh, and cove of stam. Violent frmentation will provert the escape the coving must occasionally be looked take place, and the cracks that will occur by the heap subsiding, and to keep in the steam ; in three months you will on the spot have a rich mass of that description of manure peculiarly fitted to enhance the growth of vegetables. pould not an old oil-cask make a good vessel for cottagers to keep their manure in, with a top to it to prevent the smell from escaping ?
soon rot.]
kidney Potes.-I last spring planted some bread-fruit and condition for table, being very mealy and properly fiavoured; but after having kept them with the greatest care in the dark in a cool and well-ventilated store-room, Which was not damp, 1 am at a loss to know why they
are now absolutely useless for table. watery and unwholesome, although apparently in as fine condition as ever. These Potatoes are, moreover, covered to a great thickness with straw. Will you or any of your correspondents have the kindness to solve this problem ?-Rus.
would inform what produce I may reasonably mexpect from my garden at this season of the year. I have 2 Vineries, each 30 feet long; 2 Peach-houses, of the same length; 1 Forcing
house, and 1 Green-house, about 50 feet in length together depth are, of course, proportiongth. The height and as many frames as he requires. The and the gardener has prises one acre of ground within the kitchen-garden comoutside, fruit and vegetables are cultivals; and round the old kitchen-garden, containing about tated. There is"an adjoining which, although rather overgrown acre, nearly outside yet being more sheltered fore by trees on the useful for early vegetables, \&c. The infor, is found anxious to obtain, is, what flowers at information I am year I may exnect to be brought in fros seaso the succession? What vegetables, roots, \&c. for household consumption? My family consists of 18 for household who require to be supplied with 18 or 20 persons, the present moment I do not find the case, or indeed much later in the year. I ought perhaps to state, that fuel being rery mence forcing till the end of December. The natural soil is chalk and clay (in some parts), but the parden soit was artificially made about ten years ago; the gardener bas as much manure as he requires, and there is abundanc of loam, peat, \&c., in the neighbourhood, besides rotte leaves, road-scrapings, \&c., any quantity of which he can always have when he requires it. The flower-garden is under his direction also ; but as it is chiefly American ana Rose garden, it is not so troublesome as a mixed garden usually is. The gardener has six men and one woma under him, for his exclusive use, all the year round. have stated all these particulars, as I am anxious that noy garden should produce as much as possible, without being oblimanable in my requests; and 1 should be muoh would [We must refer this question to soxe good practical Gardener. 1
Camellias.-At p. 102 are some remarks on Camellisa by Mr. Sherwood: I beg to say that I entirely agree with ard No, and I trust Mr. Beaton will excuse me for thes fang my testimony, and also for doubting the propsiety placing the pots in warm water. If it is bottom-hea lone which they want, by all means let them have it, in ovelty is desired, or leaves, or Rendle's Tank mode, i let them be freely watered are the root is requiren nure. Nothing is more frequent howerer, ther to with Camellias in a "pot-bound state"" in which er the old ball is frequently $2 s$ hard as a brick and if once becomes thoroughly dry, a score of waterings will not suffice to penetrate it. The only plan in this case is to plunge the pot, containing the plant, overhead in tepid water; if there is a littie liquid manure in it, so much the better. A plant, in this state, ought to remain in the water for an hour or two: in may then be removed to its with the is, that no plapout to heor is, that no plant ought to be repotted immediately on being the ball will have becone satus reason-the outer part of can have pe samated before the moisture must by penetrated the interior. The plant or planta for two . then be, what gardenersore potting; and the ball should regard to "forcing them into wood" I agree wits 'the principle, but it should not be carried too fare The midand of March is a good time for beginning this process, placed in a cool, moist atmosphere of $10^{\circ}$ to $50^{\circ}$, it will greatiy benefit them, and in this respect particularly plants excited into blossom, the excitement being carried apt, (especially if there is not a powerful action of raot) to push fer but some Camellia ; especially if the heat recammendead now recommend will give them time to break more bud and consequently become more bushy: added to which the accumulation of excitability, (the basis of forcing) wil cause them to develop larger leaves, and in proportion to the healthiness of these important organs (provided the subsequent treatment be right) will he the size ama per fection of the flowers. I may perhaps be pardoned for observing that I made some observations on Camellias at p. 139 of last year's Chroniole. When I wrote that article, I felt myself warranted in doing so, by the succes which I had met with in following the mode of culture there detailed. I have pursued througa another year similar plan, and my success has been still greater. M plants began blooming in the last week of October, have bloomed incessantly from that time, and will continue antil the beginning of March ; thus, for four months, (in the depth of winter too), a small conservatory abont 26 feet long has been in a continual blaze. 1 have, in fact, had thousands of blossoms, and the plants now are facs good a colour in the lear, that they rival the healthie Portugal Laurel. Having excellent roots, my plants are now endeavouring to push into wood: I am hlants are resolute on the other side the question, and shall erd as vour, as far as is consistent with the condition of the bloomers, to keep themo back until the middle of late when I snall manage them nearly as Mr. She March; excepting that 1 shall not place them ont of doon does, however, in a different degree of latitude from Mr. S., and of Delanin 30 miles of Liverpool, as well as on the edge quent Salvia pateshing,-Robert Errington, Oulton Park. the Chronicle, that the above plant will survive unprote in in the open ground during winter: proves otherwise. In the neighbourhood of Edinburgh where the climate would be supposed to be milder than at

Holme Gardens, Inverness, a specimen was planted out in the summer of 1840 , in a dry part of the garden. It bloomed beautifully until November, when it was cut down, close to the ground, and covered to the depth of eight inches with leaf-mould. On removing the leaf-mould, in the following summer, the root was found to be completely rotten. I have known many more perish in the same way, but I cannot pledge myself that they were planted in such favourable situations as the former.- William
Proctor, Gardener to J. H. M. ${ }^{\text {CK Kenxie, Esq., Tarbat }}$ House, Rosshire.

Thawing Plants.-My greenhouse, like that of many other persons, was exposed to the severity of the unexpected frost on the night of Feb. 3rd, without any injury well as soft-wooded things, but chiefly of Pelargoniums. On the morning of the 4 th , the temperature of the house was raised as quickly as possine coniously syringed and well steamed; the sua was allowed to shine upoa. them, and air was admitted at ten o'clock. It will be seen that my modus operandit differs very materially from that recommended by Mr; Ayres, at p.84.-J. Doran, Laverrect ; and the practice of our correspondent wrong. Mr. Ayres speaks of frozen plants ; it does not appear that Mr. Doran's have been Heavy Pine-Apple.-I have often seen in the Chronicle believe, exceeded a fruit grown 9 or 10 years ago at Wal liagton then gardener. The Pine was a Providence, and the fruit when cut weighed $11 \frac{1}{2}$ lbs, avoirdupois.

Varnish for Cotton Frames.-Amongst the miscel laneous articles at p. 55, there is one headed a "Sub stitute for Glazed Frames in Hotbeds." Will the author
have the kindness to explain to me how the proportions of have the kindness to explain to me how the proportions of cheese, lime, oil, and eggs, can orm transparent varne this winter with great success, but the cotton has only been soaked with linseed oil. As this is an economical mode of making useful frames, I should feel obliged for information as to the best varnish to use. I should like to know whether the article sold under the name of gelatine mix with oil ; and whether a small portion of corrosive sublimate would prevent the attacks of the black fungus, which troubled my cotton last autumn?-Xylinus.ot the oanvas.]
To Destroy Slugs.-I informed you, p. 653, of 1842, of the method which I had adopted for destroying slugs by placing traps (Savoy leaves) about my garden, and I stated that I had killed 36,000 in a few months; 1 likewise purpose. The result of my adopted plan this year has given me only about 3,000 , and I am persuaded that by a
strict attention to it, I shall eventually annihilate the breed.-Cestus.

Musty May.-Will you have the goodness to give me your opinion on a practice which is becoming very precattle will not eat mouldy hay, and if they would, that it would be very injurious to them. It is customary here which process the cattle eat it greedily, and appear to thrive uponit. Will you say how it is that the steam undergone this process, it is as wholesome and nutritious as hay which naturally is sweet? Though cattle may thrive be productive of some disease which might not show itself for a length of time? Cattle which are intended for slaughtering have not time to show any ill effect; but
will it be equally well for a horse who will have to Hive upon it for years? - 1 Leicestershire Farmer
[The instinct of cattle in choosing or refusing any [The instinct of cattle in cloosing or refusing any natural food is chiefly guided hy the smell, and
there it is nearly infallible. When you cook vegetables they lose some of their peculiar qualities, and in general are improved. Musty hay is rejected by cattle has been thrashed, so as to drive off the musty fungus, or washed in water, they no longer refuse it. It is, o course, not so nourishing as good hay $;$ but there is no
reason to think that it is injurious. A very little attention to the quantity eaten and the subequat conditio of the cattle will settle the question.-M.]
$T h \epsilon O w l$.-The owl is one of the gardeners and foresters best friends, annually ridding them of legions of their foes; but notwithstanding his valuable services we too
frequently see him heedlessly destroyed. In some parts of Europe, however, this most sensible bird is kept in families, like a cat, whom he equals in patience, and (if possible) surpasses in alertness. It is a well-known fact left, field-mice have increased enormously, and they, in their hunger, do peel, and of course destroy, the young Hollies and other trees in new plantations.-C. $K$

FOREIGN CORRESPONDENCE Paris.-The royal parks and gardens of France are are the King's own property; Chantilly belongs to the Duc d'Aumale; and the Tailleries, Luxembourg, Versailles, Trianons, St. Cloud, Fontainbleau, Sevres, and
Conapiegne, to the State. The expense of keeping those last mentioned in anything like decent order is very considerable; indeed, the whole, or nearly all the money allowed for their maintenance, is expended in this one
tem, leaving little or nothing for the purchase of new plants. Yet, go into salways look gay; a continual succession of delicious perfumes or beautiful colours are ever coquetting for your admiration. French artists, in whatjustly celebrated for beauty of design and exquisite taste in the arrangement of colours; the latter point is not, I believe, so well understood on the other side of the Channel. It is no uncommon thing to hear English ladies, when visiting Paris, complaining of some fasbionable modisle, who has positively objected dress, simply because it was not in harmony with their complexion., The same attention is given to grouping flowers, whether natural or artificial ; in fact, a good gardener is as much known by
his skill in arrangement as by the health and vigour of his plants. Another thing observable in these gardens, is, that herbaceous plants, as well as annuais, are grown in tunate Marie Antoinette (now called the King's Garden) in the park of Versailles, and not stop on the threshold o gaze with delight on the harmonious coup d'ceil befor him? and yet this is entirely attributable to a just know ledge of colours for scene effect. Let him examine the objects of fthis earthly Elysium-what does he find absolutely nothing but groups of the most common kinds spurs, to be the very oldest Pelargoniums. It is not, therefore, given place to improved ones in Amateurs' gardens,-bu the excellent taste in arrangement, which renders this spot so enchanting. But some one will naturally say, how can all this be done without money to purchase plants inisters and has been provided for by the formation of three dis tinctroyal horticultural establishmentsat Sevres, Versailles, and Trianons. The first supplies the King's palaces with flowers, the second with fruit and vegetables, and the last the parks and gardens of the state with trees and shrubs. uniform lindness to foreigners desirous of seeing either the nurser orchard forcing or floricultural departments is proverbial. The nursery of the Trianons is solely for Chinest and fruit-tree Ciry tory. All these are propagated in sufficient uumber to answer the demand, which is presumed to be about 20 , aud other Amerian border plants, are growing here in laxuriant vigour, and the whole reflects the highest credit on M. Breot, the chief gardener. One of the principal attractions in this establishment last summer was a spien alis, varying from 4 to 14 feet high, on one of which measured a leaf 3 feet long. There is also a noble 3 -year shown any signs of bloom. The floricultural department is at Sevres, in a most unpropitious situation, abutting on
the high road to Paris, the dust of which, in summer, is sometimes as palpably thick as a November fog in London This, unfortunately, is not the only evil: the soil is of a burning arid nature, and, moreover, exposed to the midgreenhouses are in a bad condition, and quite unworthy of such a country as France: the wonder is that M. Gon douin, the superintendent, can produce the immense number of plants and bouquets which are required 15,000 and 20,000 a year; and as the Court reside there nearl six months out of the twelve, the daily supply is from 50 small onge bouquets for vases, about These are indispensable requisites in every Parisian society from the saloons of the Tuilleries to the miserable attic of the grisette of the faubourg St.Antoine. To accomplish this number of Tulips, Hyacinths, or other bulbs, large quan tities of Roses (chiefly Rose du Roi), Jasmines, Azaleas, Mimosas, Ericas, Epacrises, Diosmas, Gloxinias, Primulas Fuchsias, Verbenas, Chrysanthemums, and a variety of ther showy things, It was in this garden that the Rose healthy state. I have often heard M. Gondouin speculat upon what his fortune would have been had he receive but 10 sous for each plant that has been sold since be firs gratuitously distributed it ; certainly no Rose ever had ailles is another, and, by a vast majority of Frenchmen arll. in the The houses and forcing-nits are not only numerous, but well sith every kind of fruitin sufficient number to satisfy the most fastidious connoisseur of comestibles. I have before given you (p. 150, 1841) the number fruiting Pines, every thing else is upon the aildings is not in keeping with the dairsties within; most of them (at least to an Englishman) have an unsightly appearance, want of paint, which, no doubt, is attributable to malgré inadequate sum allowed for their support. Bue, whether every drawback, the Potager is worthy orits fame, , indivi you consider the quantity of fruit produced or the indised dual fineness of the specimens. M. Massey is not biassed by any of those marrow prejudices of time and country which unfortunately affect so great a portion of the horticulturists of France: he does not fall to adopt any improved system that may come under his observation. The improvement in the culture of the Pine-apple, at least so
his chief gardener, M. Grisard : the utility of this plan is generally acknowledged, and almost universally followed in this country; no doubt it will ere long be as extensively practised elsewhere. Mr. Edwards, from the gardens of Chatsworth, is now in the pinery of Versall) of making himself fully acquainted with the French treatment, pre viously to its introduction in the gardens of the Duke o Devonshire. The ground occupied by these three establishments is upwards of 100 acres; and from them are obtained those delicacies and floral beauties which alike charm the inmates of the palace and the promenade of the gardens of the Tuilleries, Versailles, or St. Cloud.

NOTICES OF NEW PLANTS WHICH ARE ETTHER USEFUL OR ORNAMENTAL.

## Stuye (ipiphyte). Orchidáceac Maláxez. Gynándria Monán- Sria. - Probably there is no plant among all the species of Den-dria.- Probably there is no plant among all the species of Dent- drobinm now known to our gardens which is more delicately beatitial than tms. Its colours, too, are so singular as un that account aione to render it an object of much interest; for here we have the cyanic and xanthic tints in one and the same We have We are always prapared to find rell spots on a yellow flower. Wr ground, or vice versiu: but it is a most unusual thing to find clear yellow. In this plant, however, the combination occurs, producing a very gray and unexpectorthumberland, by Mr. Night. ingale, and flowered at Sion in August last. It has pendulous stems like those of D. Pierardi, but of a delicate purple when young; the leaves, too, are stained underneath, and at the edges

 aggregatum, of a clear fawn colour, with the tips of the segmentsand lip stained with a deep rich violet. There is, moreover, a
scar BEGON1A COCCíNEA. Scarlet-flowered Begonia. (Stove Hertonably the most beautiful of the many handsome syecies of
Begunia now known to our collections, and, apparently, a very frec flowerer. It was imported by Messrs. Veitch, of the Exeter
nursery, from the Organ mountains of Brazil, that rich storehouse of vegetable beauties; being there detected by Mr. Lobb, in recelved, and was exhibiteds at the meetirg of the Horticultural
Socicty. When the plants become larger, and the blossoms consectuently more colious, to will be a traly splendid species;
as, like mont of the liegonias, its flowers continue a long time
in perfection. The leaves are thick and flesily the in perfectioa. The leaves are thick and flesily, their miargin
being sinuated and bordered with red. The flowers are bright
searlet, exceedingly beautiful. -Curtis's Bobunioal Magtzine HLEX Paradiavennis. Paraguay Tree. (Greenhousse Shrub) -Aquifoinacer. Tetrandia Monogyna.-At Anough not possessed
of splendidy-coloured flowers, this plant must be acknowledged
to be a production of some public and commercial merest, since to be a production of some pontic a half the common beverage of
it has afforded for a centuly and
an equally large portion of the inhabitants of South America as an equally large portion of the inhabitants of South America as
the Tea of China in the old world. Yet, strange to say, till
within these few years the plant has been faite unknown to botanists. A specimen has lately bloomed in the (rlasgow
Botanic Garden; it is cultivated in a warm grecuhouse. The
flowers are pale flowers are pale green, and are produced in umbellate
the axils of the leaves. -Curfis's Butanical Matag

## PLOCEEDINGS OF SOCHETIES.

 Feb. 21,-R. W. Barchard, Dsq., in the chair. M. W. Attwood,W., Broadhurst, K. Lewis, and J. Luscombe, Esqrs., were elected
Feliows. Mr. Gonde, gr, to Mrs. Lawrence, exhibited some reFeliows. Mr. Goode, gr. to Mrs. Lawrence, exhibiterl some re-
markabiy weil grown specimens of Epacris nivalis, impressa, and a hybrid bearing considerable resemblance to E. variabilis; a
very beautiful plant of Erica melanthera, a complete mass of tiny very beautila flowers : E. Lambértia rósea, a free-blooming flesh-coloured variety; Mirbélia floribunda, interesting on account of its deep doret colour; M. grandiflora, a pretty species, with yellow and
darke brown flowers, and Coelogyne fláccida, bearing a gracefus spike of white blossoms, having the labellum delicately marked Withyellow and brown; for these a Knightian medal was awarded
From Mr. Appleby, gx, to T, Brocklehurst, Esq., were cut speci-
mens of Dendrobium Paxtoni, an exceedingly rare and beautiful species, with flowers of deep orange, having the interior of the abellum strongly marked with dark-brown, and the margin most delicately fringed ; D. nobile, the best of the group to
which it belongs, and cut from a plant bearing upwards of 100
flowers; a dark variety of Cyrtochilum maculatum, and flowers; a dark variety of Cyrtochilum maculatum, and On-
cidium longifolium, with bright yellow flowers, remarkable for being paler at the back than on the front: a Banksian medal was exceedingly fine . From Mr. Mylam, gr. to S. Racker, Esf., an with Lissochilus grandiforus, a newly -introduced terrestrial orfhidaccous plant, bearing a tall spike of sinnular, kiso new, with smooth, shining leaves, from the axils of which its fragrant, light buff-coloured blossoms, are produced separately and in pairs;
for these a Knightian medal was awarded. Mr. Jells, gr. to W. Wells, Esq., exhibited a cut specimen of Rhododendron ar-
boreuma album in great perfection, and a pretty seedling Epacris, boreum album in great perfection, and a pretty seeding epacrlat
with the habit of E . impressa, but with flowers of a deep scarlet. From Messis. Veitch, of Exeter, a new and elegant species of P. actinia, it was raised from Brazilian seed, and will probably
succelt succeed in the temperature of a greenhousce. From Mr. Redding, gr. to Mrs. Marryatt, a showy hybrd Rhododendion, apparentiy
obtained between R, arboreum and caucásicum ; and a fine plant of Bánksia Cunninghámí, bearing a multitude of its curious
orown spices brown spikes of tlowers: a cer'incate was awa shirley Park, a
From Mr. Clarke, gr, to M. T. Smith, Estl., of s. hemispherical trellis, at least $2 \frac{1}{\delta}$ feet in diameter, which it entirely covered: a Banksian medal was awarded for it. From
Mr. Conway, a seedling Pelargonium, called P. Lanci, said to be more suitable than any other variety for early forcing. From the Hony, of Strangways were branches of Camellias, from plants growing in the open air, in Dorsetshire, in different soils-loam
and peat; that from the former presented a very unhealthy and peat; that from the former presence and znargins of the leaves being completely appearance, the tips and margins or temoved a few years back
dried up; the others, from a plant res a most healthy stale. With
into an American border, were in a these were cut fowers of Helleborus purpurascens, Euphorbia
veneta, Charácias, and Myrsinites, which, although not producing veneta, Characias, and Myale on nccount of their blooming, in favourable situations, during the earliest months of the year, when few other plants are in blossom; both the latter Euphorbias are hardy, but the former, unless protected, will only stand out in
the milder parts of the country. A cylindrical guard of iron wurn, of Epsom, was likewise exhibited by the same gentleman; secured to 3 feet high and for foet in diameter, the wire being Mr. D. Judd, of Southill Gardems, Biggleswade, exhibited three exceedingly good Cucumbers, one called Young's Champion, the grown in a steep-roofed house, according to Ayres' system; the grown in a steep-roofed house, according to Ayres' system; the
house is heated by hot water, and although 20 feet long; the
expense does not exceed 18.6 . per week the temperature
being never above $60^{\circ}$ at daybreak. Fruit has been cut from
bent
 in bearing the proportion of 8 oz. to 4 beallons of water , does
unot injure the foliage of the plants, and is both an excellcut renot injure the foliage of the plants, and dis both an excellcnt re-
medy arainst the middew, and a good manure for the plants,
 Sir H. Fleetwood, Bart., was an Olive-branch with fruit upan it, having been grown in a conservatory ypon a plant, which with
severall others was imported from t taly about 15 years since, and Whichi, under or cinary treatment, annually produce an abundance
of fruit. From Mr. S. Rowell, gro to C. G. Thornton Es of Fiilerts in excellent preservation; this was effected by bainerish them in a dry day towards the end of September, when they are
laid thinly upon mats or shelves in the fruit-room, and allowed plenty of air. They remain there for a fortnight, when they are pressed town. Then-ware kept thampers, apeck in each, and not
which they are placed the end of November, after Which they are placed in tobs or boxes upon cut straw, a thin
layer of ech until the boxes axe full, and they are afterwards changed every three or four weeks. The seecimen exthibited
were as plump and free from mouldiness as when fresh pathered a certifcate was awarded for them. From J. Moormant. Esq.,
were some particularly fine specimens of Pears, consisting of Beurré d'Aremberg, Passe Colmar, Jean dee Peitte, Ne Plos Meuris lent preservation, having been kept tin a darkr hayr-10ft (ooceasion-
ally ventilated), and laid upon horsehait: a certificate was awarded for them. From the Garden of the Snciety were the
singular Huntleya violacea, the sweet-scented Lycaste cruenta,
Sug Brassavola glauca, a rare plant with pretty greenish white flowers,
Begenia cocchnee, an excedingly showy species of jate introduc-
tion, with brilliant scarlet blossoms; Hakca acicularis, an old

 ance, and in the thowers rapuly Iusing their colour attere expar-
siont with these were Dryanda armata, with curious thistie-like
blossoms,

ROYA, AGRICLITURAL SOCIETY OF ENGLAND,

the eiver, which passes the the at hheil House, that of incessant rain." - Aletter from Mr Mr. N. B. Ward, F.L.S., on the
ind introuctuan of the Musa Cavendishii into the Navigator Trlands 1839, for the Navigators, , he was anxious to take with him some userul plants, and particularly the Musa. He inquired of mee
whether Ithought that it would travel safely in one of the glazed cases; and having received an answer in the altirnnative, he
applied to his Grace the Duke of गevonshire, who kindy him a healthy Young plant. Mr. Williams left Enyland on the
11th of Apri, 1830, and arrived at Upolu, one of the Navigator his long yoyage well the following November. The Musa bore
 hundred weiiht, The parent plant then died, leaving behind parts of the isiand, and in the following May (1841), when Mrs.
Williams left the istand, all of these werc in a fructiferous state, and jroclucing numerous offsets. Supposing the plants to con May (of 1843), more than sone, 000 of therm : and as the son of Mr. vessels constantishemploy merchant at Upolu, 15 owner of two
islands in tlie sounth Pactic ind traing between the tarions islands in the South Pac, fic, and is moreover actuated by the
same benevolent disposition wlich was a striking claracteristic Inis late father, there camot be a donbt but that, in a very
short time, they will be common in all the fislands. To estimate the importance of the introduction of this plant, we must bear in
mind the great quantity of nutritious food furnished by the Banana. Humboldt has told us that he was never wearied with Mexico and the adjoining provinces, would yield ssistenance to a
family for a year, and that the same extent of ground which in Wheat would maintain only two persons would yield sustenance return of Wheat is never under seventy, and sometimes as much as a hundred.fold. The return, on an average, in Great Britain, is not more than nine for one." - Mr. Ralf's paper on the Diato-
macee, No. ITI, was then read, containing descriptions of the genera striatella, Tesselia, and Tetracy clas. - Dr. Dickie con-
ctuded his remarks upon the development of leaves, by stating
" that it canmot e said that
 tissue in a lear determines the development and positions of the
veins, and not the opposite."

## $\overline{\text { MISCELLANEOUS. }}$

Antiquities of Gardening : Lemons.-In an old MS Bouk of receipts, prescriptions, and other matters of the lowing curious notice respecting Lemons; which, judging from the style of writing and spelling, as well as from the 15 th century. "Now thou shalte undyrstonde that lemmonce ys a manr (munner) apple be yende the see of the whiche applys lumbardys make in tyme of the jere Crabbys. And therefore he that wolle herve ben, pelke to labardys other to galymen whan they come fro pene to and as some men sey the Oren they come from bryngethe have the same vtue (virtue) in effecte alymen same thynge wolle doo that lemmonce doothe but there of ame I nott certayne as I am of the lemmonce nother $s 00$ welle beleve hitt as I doo the lemmonce. Nottwythe " Lemmonce" is the spelling for Lemons, in the receipts s well as in the passage extracted. The MS, contains further a "reatise on Astrology, a Latin and an Eng-
lish Paper on "Aqua Melisse anglice Bame," and some Verses in praise of Rosemary
Spain.-We learn Dr. Daubeny and Captain Widdrington are about to proceed to Spain in a few
weeks for the purpose of examining the curious formation of phosphate of lime in Estremadura, with a view to ascertaining whether it is worth importing as a manure.
RURAL SONNETS.

Nifar " the pale Primrose,"-and, in long array Like manshhall 'd vestals of the older dya, Lo, where the modest Snowdrops deck the ground, With dove-like promise of more genial hours;
In young, and otd, the late-chili'd pulses bound In younge these herald-chastitites of liowers. Dut flakes descend- or frosts, with spangling sheen,
Feather the boughs, or spread along the land Soon the south winds breathe change upon the scene,

Winter departs: as one whose swoon is o're,
Shows a faint smile where ail of late seem'd dead, So the reviving earth, bcıumb'd no more,
Her renlicst growths in Nature's Iap doth spread. he soll,
 Thi ory is fine-his task the sower plies.
The buds now swell perceptibly-the air
Softens-the forward lambs are in the fieldo tree-top nests the clamouring rooks repair-
Gushes of fresthness woods and pastures yield
All creatures, now, the quickening Spring invites
 Fo cook Cardoons.- There is a vegetable much eate in France which is of delightul havour, and is as digestehead. In pleasant, namely, the Cardoon or French cooks. It is, however, worthy of being introduced at our tables, as it is cheap and nutritive, and may be prepared without much trouble. Remove and throw away all the stalks that are tough, fibrous, or hollow ; cut the others into strips about five or six inches long, cleansing them

Well from the prickles. Then put them into boilingwater, and parboil them; allowing less time to the heart off by dipping a piece into cold water and rubbine come the finger, it is done enough. On remoring it with from the fire, throw them into cold water, and clean them inmediately from the slime. water, and cleanse doing this, but friction with the fingers. Stept nothing, in wards in a little rich gravy, and, just before they ateroff the fire, add a lump of butter rolled in foren above is a cheap wsyy of dresing Cardo in four. The above is a cheap way of dressing Cardoons; they may, plain melted butter. The whiter the heads are the with delicate they will be when cooked.-Muscipre, the more is a good rine for cooking Cardoons, but ia.--[This emembered tha the mestest be is necessary in ing every particle of slime from the stalks; otherwise, when served up, they will be found exceedingly bitter.]

GARDEN MEMORANDA.
Royal Botunic Garden, Edinburgh, -We have had an oppor-
tunity of visiting and inspecting this garden lately, and from the high character which it bears, we have no doubt that a short The entrance, which was left unfinished for a number of years, is now completed; the stonework is plain and substantial, and
looks extremely well. Near the entrance there is a fine large class-room, in which Dr. Graharn delivers his summer course of with spccemens of plants from the garcen. Near the centre of
the garden there is a large piece of ground, planted with hardy cxotic herlaceous plants, arranged according to the linntean
system, and at one cud of this duvision there is a collection af medicinal plants, arranged according to the same plan, In ccous plants, classified according to the Natural system; the with shrubs and trees. Between, and the two arrangements there is another, composed exclusively of British plants, which, when
in flower, in summer, we used to think even more beautiful and interesting than either of the others. Persons who do not cul-
tivate in their gaadens the more ornamental native plants ean form but little idea of their real beauiy and worth. The climate
of Edinlurgh is generally much milder during the winter months than it is farther sonth, m more intand situations, and hence half-
hardy shrubs and trees staza better here than in the nemghoour-
hood of London. The plants on the sonth aypet of the noth hood of London. The plants on the solth aspect of the north
wall, and the north aspect of the south one, are particularly
worthy of notice; and it may be interestinc to mention the names of some of them, to enable the readers in the south to aspect we observed, Magndlia grandiflora, Thompsoniana, pur-
prea, and various other species growing luxuriantly; fine plants of Acacia affinis, showing flowers in great profusion, solanum glabra, Pimelea paucifora, Indigsfera Nepalensis, and Camellia deserves a place in all collections; the Camellig Just named
seems much more hardy than any other species which they have seems much more hardy than any other species which they have Chinese Azaleas, Camélias, and various other plants. Here again the Camslifa peaniflora seems to grow better than any of
the other varietios. In different parts of the garden there are some fine clumps of hardy and half-hardy Heaths, protected at
present wath stakes and mats. The mats are only on the top a the plants, and are placed there to prevent the snow from break-
ing the stems loy its weight. Scarcely any flowers can be mone with blossoms, and appear as if spring, when they are loaded from the greenhouse. The kinds are Erica australis, arborea, The paincijal range of hothouses are flaced on elevated growna,
near the north side of the garlcn, and are about 500 feet in a grand and imposing appearance. The INeaths still continue to maintain their high character; many of them are realy splen-
did planta. To give some idea of their size, we may state that landra, 12 feet in rircumference; E. Edepressa, 12 feet m ciscumalso large, handsome specimens of $\mathbb{E}$. tricolor, speciosa, elegans and colorans, were in full flower when we visited the gardea, well furnished with stems and lcaves at the bottom. In a smaller
house, behind the principal range, there are some fine seedling house, behind the principal range, there are some fine seedling
varieties, and many others of the bard-wooded and more valuable kinds, in high health. In the Orchidaceous house there were, erardi, crerulescens, and nobile; Zygopetaum rostratnm, and
Polystachya luteola. The Papaw tree (Carica papaya) is fruiting in one of the small stoves; there are also in the same houses Laurus cassia, 20 feet high; the Pitcher plant, and many other things of great interest. The large Paim louse, built a few years since, deserves a separate notice. It is a large chenar benuld the princi-
building, and standing near the west end and pal range. When it was first built, and berore he Palms were arge enough to fillit, Mr. M Nab grew theschave now, of course given place to the m. The plants have been growing so rapidly
 Rhapisflabelhforms, Chamarops liwn ; Screw Pme ; Sago Palm Cocos aculcata, Ubánia speciosa, Teak trec, and Cycas revoluta, with fine clusters of fruit, and the common Bamboo, which has grown 43 feet in six months. And well repay any one fur a visit to this gar-
mens of cultivation, and den. Here,
the boxes, in which plants are growing, from decay. preserve
In three years those which had been subjected to the process were completely rotten.
answer the purpose better than anything which he has ever tried,
besides being much cheaper.--R. F.

A Comprehensive View of the Culture of the Vine under
Glass. By Jas. Roberts. 8vo. Longman \& Co. 1842. Next follow some observations on the different modes of propagating the Vine, among which that by single eyes is preferred. His treatment of the young plants while growing does not differ materially strong enough to bear fruit in the next; but after the wood "is perfectly ripened to the length of five or six
feet (the length I recommend for outside planting), prune back to that, then disbud the whole cane, that is, cut every bud clean out (leaving the leaves uninjured), with the exception of the two uppermost, as there will now, by keeping the pit cool, be no danger of breaking, and go to the support of the remaining buds, and cause them go to the support of the remaining buds, and cause them the following spring," The Author plants his young the following spring. The Author plants his young ing the disbudded part of the stem not more than three inches below the surface of the border, and spreading nches below the sin the fan manner" Ife advises watering out singly in the fan manh, however can watering at the time of planting, which, however, car. To encourage the layered part of the stem to emit roots, he lays "over the roots and stems stable litter and leaves in a good state of fermentation, to the width of eight feet, and two feet or two feet six in the found Bearing in mind that the first years the grentest attention is paid to the summer treatment of the advancing shoots, is paid to the summer treatment of the advancing shoots, the aim being
The system of management recommended is, to begin with a night temperature of $50^{\circ}$, increasing to $60^{\circ}$ as the foliage becomes fully expanded, with a range of 20 or 25 degrees higher by solar heat, keeping up a very moist atmosphere in the day. A. good warmth
is also maintained at the roots by the means before mentioned. Caution is advised in taking off the la terals, especially after the leading shoots have been stopped, which is done when they have attained a length of twelve feet, to "throw the strength back, to the increasing and maturing the stem and eyes and increasing the roots." As soon as the wood is ripe, and while the foliage is still fresh, a sufficient number of the best-placed buds are selected to produce spurs for future bearing, and all the others are cut out without injuring the leaves; thus, in a space of 8 or 9 feet (to which length the wood retained, independently, of course, of a terminal one to give a leading shoot in the following year. So far as we Mr. Rare, the sis in conjunction with early pruning, and the timely removal of all useless growths, is strongly inculcated by him, on the principle of not wasting the strength of the plants. Po encourage the roots to the urface, he top-dresses the border in September with 'f ground bones, lasmy soil, rotten manure, and decayed ground bones, loamy soil, rotten manure, and decayed carrion, covering the whole with an inch or
In the second year, the Vines are permitted to bear fruit, one bunch only upon each side shoot. In general management, no material deviation is made from the system of which we have given an outline. Fires are applied in March, beginning with a night temperature of $45^{\circ}$, Vines are in blossom; the temperature in the day being Vines are in blossom ; alle times 15 or 20 degrees higher. After the fruit is thinmed the range is still greater-from $65^{\circ}$ to $95^{\circ}$. Among other directions for the application of heat, the author says, "Maintain your heat by day, giving a little intervene, keep up a brisk heat by stirring well your fires early in the morning, and up to mid-day, keeping up to $80^{\circ}$ or $85^{\circ}$ with a very humid atmosphere. By allowing your fires or boilers to cool down in the after part of the day, you will be able to do without fire in the night, as before; it is my practice to give heat with light, and to reduce it with approaching darkness. its application, the utmost caus is necessary to keep within safe limits, for a crop of fruit might very easily be lost by experimenting ppon temperature. Artificial warmoth is maintained at the roots till the beginning of July, when the fermenting material is wholly removed and the border exposed to the summer sun. The advantage of cod upon, and it is argued that a deficiency of warmth at the root is the great cause of that baneful disease, "shanking, about which so much has been written to so little purpose. We have always maintained that the primary cause of this defect is. want of food. When a Vine is overloaded with fruit, or when a profusion of useless shoots are permitted to ramble at will, or tied one upon another like sticks in a faggot, one leaf overshadowing the other, so that none can perform their proper funcion of asimilating nutriment; or when the soil is exhausted and poor, or the delicate rootlets checked in their action by cold and wet, the supply of food to the whole system of the plant must of necessity be diminished, and the young fruit, having less aitractive power than the lectves, is, in consequence, the first to suffer. It will always take place at the time when the greatest demand is made upon the plant for their support, which is when they are finally swelling off after stoning. At that stage the berries will, in a short time, increase to nearly double their previous aize; and for that rapid increase a great quantity of new matter must of course be required. Th quantity of ner's remarks upon thinning are very judicious. H author's remarks upon shinning are very judicious. He and cautions the operator against touching the bunches with head or hands wet with perspiration, whicla is well known to produce a disease of the cuticle called "rust." lowed, only forcing is commenced about a month sooner. method of training. Mr. Roberts prefers the spur sys-
tem, and gives sound reasons for that preterence; not bower, the spur system of the neighbournood of London, which leaves a pruned Vine like " a dressed Crab His method is to prune (before the leaves have fallen) to a promising bud, even though it should be the fourth from the base of the shoot, cutting the intermediate ones between it and the first bud clean out. Each spur therefore bears two buds, the uppermost of which is intended to produce a fruit-bearing shoot, and the low ing year. The principal objection urged against long spurring by its opponents is, that, in a few years, the spurs become inconveniently long and very unsightly this, however, is the fault of bad management rather than of the system, as it is possible to keep them very near obtain large bunches, there can be no question of the superiority of Mr. Roberts's method. We are told by physiologists that the bud for the next is nurtured by the leaf of the present year ; consequently, the perfect formation of a bud must mainly depend upon the perfect development and proper action of the leaf that feedsit. Now, th growing shoot is examined, it will invariably be found that the first leaf, and perhaps the second fourth : "therefore science as well as experience teaches us that the third or the fourth bud will produce the finest fruit. There are others, again, who condemn every modification of spur pruning; because it involves the necessity of a permahant main stem which consumes a.great deal of far for formation of fruit ; but this objection is more theoretical than practical. Taking a period of ten years from the planting of the Vines, the weight of wood cut away in pruning, including the objectionable permanent stems, would not be much greater in the spur than in the longbe in favour of spurring

It is not stated how the Vines are treated when dormant, but,it would appear that they are turned out of the house in winter, after having been pruned, peeled, and anointed with a mixture of sulphur, soft soap, tobacco, and nux vomica, laid on while warm
The leading features of the Author's practice are there ore, 1 st-the provision of an ample supply of food andly-to procure strong and well-rooted young plants 3rdly-to supply a genial warmth to the roots, so that they may be in a condition to act in unison with the leaves 4thly-by a skilful application of the agents of culture, 10 obtain solid wood and well-formed buds; sthly my the timely removal of all useless parts, such as the aliment rals, and superabundant fruit, to cause expended in the formation of fruit and bearing wood ; fthly-not to excite too hastily, but to call all the organs of the plant into gradual action.
So many points in Mr. Roberts's practice have de ably further than was at first interded. It now only remains for us to recommend every person who has the management of Vines under glass to read this little Treatise; which, if it should not teach him anything absolutely new, will at least make him acquainted with an excellent course of culture. The Author is a plain, prac-pruning-knife than of the pen ; his style therefore, although easily understood, will admit of a little improvement in another edition. -W

CALENDAR OF OPERATIONS for the onsuing week. No kind of weather hinders the operations of the gardener and trusted to the ground when the soil is very damp, particularly on when they are thoroughly wet is worse than useless. The prevalence of such weather as we have lately experienced must have thrown many of our gardening operations behind. Every
opportunty must therefore be turned to the best account, when the state of the weather whll permit us to bring up our arrears. In
many places the autumn-sown Pcas and Beans have been so formany places the autumn-sown peas and Beans have been so for-
ward and tender, as to have suffered materially from the late
frosts frosts and cold easterly winds; additional crops of these should
now beught forward in boxes, \&c., placed in a forcing-house : indeed, where there is the convenience of an early vinery, or even
forcing-pits or frames, Peas and Beans forced in these, from the forcing-pits or frames, Peas and Beans forced in these, fom the being inured to the change, will come in fully as soon, if not sooner, than those sown in the borders in November,-1 canno resist the temptation of referring to two sensible letters in the
last Chrontcle, called forth by some observations I made in the and planting, p. 101, axe so convincing, that they carry more weight with them than a volume of learned disquisitions on
planting, pruning, and thinning. Mr. Sherwood's letter, while it will counteractany erroneous impression which my remarks might Camellia. Letters like these never fail in their oiject: they instruct, without ruffing the feelings of the reader. it is much to be regretted that young gardeners should so often indulge in
personal abuse while suggesting or explaining points of practice; whatever instruction may be gleaned from their discussions, they may depend on it no advance in respectability is made by such may depen
-KITCHEN-GARDEN AND ORCHARD.
PINERX, -If the succession plants are in a forward state at the
foots, and the weather should prove favourable, they may now be potted; but if the tan is not ready, and other pressing business should require to be attended to, they will lose nothing in not
potted for the next three weeks. Pines, like orchidacea, are not very fastidious in their habits, and may be dealt with according to circumstances more than many other tribes of plants.
early fruiters will now require more water, more heat, and more arr, to assist them in throwing up firm stocky fruit-stems ; withou Vinery - The must be hadrapes hecessuyned, the shoots the up, and the laterals stopped above the first joint, the principal If the long-rod system is pursued, the advancing shoots for the
leaves from being shaded by those of the present bearers. If on the spurred system, some of the strongest spurs near the top of
the house often require an extra joint or two in lenpth to be left at first, to prevent the premature breaking of the eyes for the next crop, and if on the close spur system, the latent eyes at the only stopping the bearing shoot at the first joint beyond the the leaves.
Prach-housm,-Continue to disbud those eyes which are not wanted next season, and stop the shoots along the bearing Keep the air in a mild, moist state, and let no green-fly or other Cherry- House.-The Cherry, being produced on spurs, does not require close disbudding, like the Peach. A mild, maist atmo spheretial to them

## Figs.-Same as last week.

Cucumbres and Mrlons.- Stop the laterals of these above
he first joint, until you think the plants are strong enough to egin bearing; and keep up a uniform temperature at their roots Slight hotbeds may yet be made, to forward Radishes, Carrots, Potatoes, Lettuce, and Cauliflower seeds; ulso Peas, Beans, and some sweet herbs, if wanted early, If these auxiliary beds are after this time.

## PArsLET.-Of all the vegetable seeds, that of Parsley requires the longest time to vegetate; it should therefore be one of the

Cabbagrs.-A few seeds of the earliest and the red Cabbage may be sown on a warm border; also some more Radish and require to be protected from birds by throwing a piee of net
over the beds: hardly anything will frighten them so carly as this,
them.

## II-FLOWER-GARDEN AND SHRUBBERY

Stoves. - There will be no want of work here for the next sis detect what are the gardener's favourite plants; more, perhaps, at this than at any other period of the year. These are sure to in front of the tan-bed. Perchance some of them are removed one of the frames at work into which none belonging to the "profession," is allowed to peep at this early
period, or perhaps for the next three months. Potting and fresh abelling the plants, gentle syringing, tying and training pot Greenhousk.-Few of the mixed plants here will require potting yet; but more watering will be needful, and more atten-
tion to giving front ventilation when frost or cold cutting wind prevail. A gentie syringing early in the day, when the weathe is fine, if only once in a week or ten days, will greatly improv
the appearance of the plants, and add to their health and vigour Conser Ipomoess, and other strong-growing climbers, to begin flower ng early in the summer, pruned their plants last October an season, when families return to their country seats, will now begin to prune their conservatory climbers. 'Of all ormamenta plants, beautiful streaming festoons of free-flowering climbers excite the greatest interest. Nothing but a general outline on
any part of gardening can be given in a Calendar; and for limbers it is sufficient to say that two plants of the same speciee hould never be prun
Prts and Fanams,-Gardénias, Roses, and other plants fo are wanted for succession, and their places may be filled up wit return-plants from the conservatory, which have done flowering The rest of the permanent inhabitants require on

As soon as the soil is in a fit state, the Rosary may have the spring-dressing, and as much rotten cow-dung as can be got for pruning Roses, the same observations apply to this as are given flower, and vice verst. Walks and Grass require great attention from this time. An the perennial tribes of herbaceous plants
may now be divided and arranged for the season, according to the taste of the owner. NURSERY AND FOREST DEPARTMENT
Coppice and Forrss.-I cannot do better this week than to
refer all readers to Mr. Alexander's paper on this subject in the last Chronicle. Last autumn I wrote out a receipt of all the abominable things that have been used to prevent hares and time, kept them off. It consists of equal quantities of cow-dung thick paint ; and to mixed up with soapsuds to the consistence on of gas-tar. Use it in a flat wooden tub, and dip all the plants in em.-D. REPORT ON COVENT-GARDEN MARKET,
THe late favourable clange in the weather has somewhat in creased the supplies during the past week, and trade in som
respects is rather more brisk, Fruit : Pines are of good quality, an
consist chiefly of Envilles and Queens. Dessert Pears are becoming exceedingly scarce; the Beurré Rance, from 4 s . to 8 s ,
per dozen, seems to be the only kind offered. Catillac Pears for per dozen, seems to be the ony kind, afre more plentiful. In the
baking, from $4 s$, to $58.6 d$. per bushel,
price of Apples there has been a slight advance, Nonpareils price of Apples there has been a slight advance, Noppareils
fetching from 128 , to I8., and Golden Knobs from 58 , to 7 Is. per bushel: a few Ribston Pippins may aso e obtained at the to $8 s .$, and the Wellington at $6 s$. $6 d$. . per bushel, are excellent.
few Tangerine and Malta Blood Oranges are offered, from 2s. to few Tangerine and Malta Blood Oranges are offered, from 28. to
4s. per loozent. A small quantity of forced Strawberries have ap peared during the week. Cucumbers are becoming more
nnumerous, from ss. to 10 . per brace. Vegetables. The quality of numerous, from ss. to 10. per brace,
Asparagus has graty improved of late, and its . The qualice has some-
what fallen ; the best bunches fetcls from $5 s$. to $10 s$., and the inwhat fallen; the bcst bunches fetch rom 5 s . to $10 s$. , and the in-
ferior ones from $2 s$. to $9 s .$, each. Seakale is abundant, from 9 .
 White broccole of slight advance. Onions and Leeks are also
quently made
somewhat dearer than in our last Report. Celery is small and somewhat dearer than in our last Report. Celery is small and
indifferent, from $6 d$. to $1 s .6 d$. per bundle. Young winter Radishes are tolerably good, from $1 s$. to $1 s, 8 d$. per punnet. Mushrooms
have risen to $8 d$. and $1 s$. $3 d$. per potle, Flowers: The Cut
Flowers of late liave exhibited per have risen to $8 d$. and $1 s, 3 d$. per pottle. Flowers: The Cut
Flowers of late liave exhibited great variety; amongst them we
noticed Provence, Tea, and China Roses; Anna Boleyn Pinks, noticed Provence, Tea, and China Roses; Anna Boleyn Pinks,

## NEWS OF THE WEEK

The thanks of both Houses of Parliament were unanimously voted on Monday night to the Governor-General of India, and to the officers and men, Native as well as British, for their services during the military operations in Affghanistan. The vote was moved by the Duke of Wellington in the House of Lords, and by Sir R. Peel in the House of Commons. The Duke entered into a succinct historical narrative of the disturbances which led to the insurrection in Cabul, and traced the course of operations adopted by the respective Generals, from the arrival of Lord Ellenborough, down to the final triumph which planted the British standard for the second time on the walls of the Bala Hissar. He dwelt with admiration on the conduct of the troops, and claimed for them the honour of having vindicated the British name, and the character of the British Army, by their persevering and heroic gallantry. Sir R. Peel also eulogised the achievements of the Generals, and particularly adverted to the meritorious conduct of the inferior officers. He alluded to the heroism of Lady Sale, and paid a high tribute of respect to the memory of Colonel Dennie It was impossible, be said, to describe all these service without feeling pride in the British name. Such services had proved that it was ame which the long interval of peace had not impaired; and they were an earnest that further ffors, when should require, would continue to be made with glory and with triumph. Mr . Hume moved an amendment for the purpose of deferring the vote to the Governor-General, but it was negatived without a division, and the vote was carried without a dissentient voice, with the exception of Mr. Hume. On Tuesday Mr. Duncombe brought forward his motion for a Parliamentary inquiry into the conduct of Lord Abinger while presiding over the late special commission in the manufacturing districts ; but, after a long debate, it was negatived by a majority of 155 .-On Thursday, in both Houses, Ministers announced their intention to abide by the decision already made public by Sir James Graham's letter to the Moderator of the General Assembly, in reference to the non-intrusion question. Mr. Walter's motion for a revision of the Poor-Law was negatived on the same night by a majority of 68 .
The accounts from France relate chiefly to the speculations of parties on the approaching struggle respecting the Secret Service Bill. In the preliminary discussions on the appointment of the commission, Ministers obtained majority of 24 , although the Opposition brought all

THE GARDENERS' CHRONICLE.
their strength into the field. The division on the Bill is looked for with great interest, the result being regarded as a vote of confidence in the Cabinet.-The Madrid papers contain a long and able manifesto addressed by the Regent to the Spanish nation on the occasion of the ap-
proaching elections. After denouncing the intrigues which had succeeded in two instances, at Madrid and Bar celona, in disturbing the peace of the kingdom, he recommends the electors to bestow their confidence on none but men of acknowledged probity, and declares that his sole ambition is to preserve and consolidate the liberties of Spain, to protect the throne of Queen Isabella the authority which he exercises in her name on the day fixed by the fundamental law. The accounts from Barcelona state that the citizens have received the concessions of the Regent with little apparent gratitude, and continue to display determaned hostility to
the garrison.- The Portuguese insurrection has been effectually suppressed, and a special commission has bee issued for the trial of the rioters. The tranquillity of Oporto has not been distarbed since our last accounts, and the population of Lisbon have shown no desire to participate in the movement.-An insurrection broke out
at Genoa on the 13 th inst., in opposition to a Iaw authorizing domiciliary visits. Several persons were killed wounded, but the affair ended by the proclamation of an amnesty to the insurgents.-Accounts from the Levan nform us that the differences between Austria and the Porte are in progress of adjustment, by the mediation of the British ambassador, and that the diplomatic relation between the two Powers have been renewed.

## 7ane ATems.

Court.-Her Majesty, Prince Albert, the Prince o Wales, and Princess Royal, are quite well. Her Majesty has taken-waking exercise during the week in the gardens of Buckingham Palace. The Queen held a Court on Monday, at which His Serene Highness the Prince of Tour and Taxis was presented to her Majesty by the Bavarian Minister. Her Majesty the Queen Dowager will leave Canford on the 3 d March, and proceed from Royal Highness the Duchess of Kent has arrived for the season at Clarence-house, from Frogmore-lodge.
Parliamentary Movements.-Dr. Boyd has been elected Member for the borough of Coleruine by a majority of 22 over Sir Hervey Bruce. Mr. Leilie, M Glasslough, ha Monaghan, vacant by the accession of Lord Rossmore to the peerage. The Hon. Capt. Maxwell has been elected Member for county Cava,
Official Appointments.-William Marshall, of Treworgey, Esq., has been appointed Sheriff of the county Bond Head is to be appointed Governor of the Cape of Good Hope. A rumour prevails in military circles that $\operatorname{Sir}$ Robert Sale will be appointed to the vacan

## fforcígn.

France.-The leading topic in the Paris papers is the ection of the comsish which port upon the Bill just presented by Ministers for granting service. As this annual demand bas, of late years peotice viewed as a vote of confidence in the Cabinet, and parts animosity has seldom been more violent than it is at the present moment, the preparations for the impending struggle excite great interest. In presenting the Bill, the Wome ask for a million of francs, as in preceding years. the one just elapsed, a deep calm has prevailed in the country. No disturbance or agitation has checked the rapid progress of public prosperity; yet all evil passions linquished. An active vigilance can alone maintain the repose of society, and preserve it from fatal hazards that vigilance has become more necessary than ever. We should be guilty if we demanded not the means of exercising it to its whole extent. We have the firm confidence that they will not be denied us." The selection of the commission took place on Saturday, when 413 Deputies for the examination of the Bill, four belong to the Opposition, and five to the Ministerial party. Among the who hase M. Odillon Barrot, and M. de Lamartine, preliminary trial of strength, Ministers obtained 217 and their opponents 193 votes, although the Opposition brought all their force into the field. Whole columns of place in the several committer discussions which took of the commission. Ministers were harassed with questions of various kinds-the right of search with questhe prominent topic. Nor were of search continuing differences with the Spanish Government suffered to drop into oblivion. Though unwilling to revive the recollection of the disagreement, M. Guizot was obliged to any foreign Government, and that far, from engaging to recal M. de Lesseps from Barcelona, he had even declined listening to any demand to that effect.-
of Jacques Besson, who, as our readers will recollect, was tried and convicted at the late assizes of Lyons for the murder of his master (M. de Marcellange), and con-
demned to death. This is the third time that the case had been cath. Thish before the Cird time that the case prisoner brougat before the Court of Cassation. prisoner was first tried at the assizes of Puy, when he was at Riom, with a similar result. Some informality having been discovered in the proceedings before that Court, the conviction was again quashed, and a third trial was ordered to be held at Lyons, where Besson was again con-victed.-It is announced that the King will proceed to the Invalides on the 5th May, the anniversary of the death of the Emperor Napoleon, to lay the first stone of the tomb destined to receive his remains.

Algeria.-The column which bad marched from Cherchel, under the Governor-General of Algiers, against the inst of the west, had returned to that place on the 7 th waste General Bugeaud had begun to lay the countr weather and storm ord, but hail, during which impossible to erect a tent or make a fire, he was obliged to make as. hasty retreat into Cherchel. Steamers had gone from Algiers to supply his troops with provisions.great puties of the the to the three millions sterling ordinary, there are two mil lions sterling extraordinary expeuses.
Spain.-The Madrid papers received this week contain a manifesto addressed by the Regent, and signed by all the Ministers, to the Spaniards, on the occasion of the approaching elections. After denouncing to them the intrigues and artifices of the enemies of the country, who in disturbing th them of the thew or the he he hio for having dissolved the Cortes and convoked a new I lature. He then recommendz his countrymen, before they give their votes, to consider maturely if the citizen ey are about to invest with competent and worthy to discharge the great and gloriou mission which would be reserved to the new Cortes. The shoulant with the wants and resources of the country; it mattered little to what party they belonged, if they wer attached to the constitution, and men of acknowledged probity, averse to intrigue, and inaccessible to corruption The Regent then explains how he understands the dutie imposed upon himself by the confidence of his fellowcitizens and the constitution. "I said, and I have swor a hundred times," he says, "that my sole ambition was to preserve and consolidate the political and civi liberty of our country, to protect the throne of Isabella rity air I moss, ha to deposit an her feet the autho rity which 1 exercise in her name on the day fixed by the
fundamental law. My desires are clear, precise, deterfundamental law. My desires are clear, precise, deterRest assured I will keep my word. It is that firm resolu tion that has exposed me to the inveterate hostility with which I have been assailed- 1 , a man of the people a soldier of fortune, favoured by chance, and less indebted for my military successes to my capacity than to cause which of our troops and the goodness of the the defender of the constitution of the throne and our political institutions, could not expect to escape of which I am the tutelar regis. They have strained every nerve and had recourse to conspiracies, menaces, from Europe, to deter me from my noble object, and, if it were possible, to intimidate me !" The Regent, in presentative of that national will which 30 geasu posed the direful aggression of Napoleon, and notwithstanding the desertion of their princes, successfully maintained itself against that colossus. "I am the representa tive of that will which required civil and political liberty, in order that Spain should not be exposed a second time to such an ignominious outrage; the same which pro the efforts of Don Carlos, and finally protected her in September, and preserved her from the danters of the last insurrection. In this will is my force-in it I place my confidence; and if the lepislators which you are about to elect are penetratel with the same seniments the grand work shall be crowned withe same sentiments, let ters state that the colition of this documet is attri buted by some to S Quintana her Majesty's precentor, and by othe to s. antonio papertio A. Goz papers contaue to animadvert on the satisfaction given to a most she spish is also a subject of angry. The manifesto of thatelona we have a subject of angry comment. From Barcelona population of journals and advices of the 13th. The plittle and to disparent gratitude the Regent's recent concessions, garrison, which was sain to garrison, which was again to consist of ten battalions, or left Barcelona for Madrid and Corunna, to which latter place he has been transferred in the same capacity of pomenced an the 12th the municipal electio the menced, and were expected to prove favoarable to the Moderador, or anti-Government party. The Spanish troops were being withdrawn from the neighbourhood of
the French frontier, and marched to Barcelona, in consequence of the unsettled state of that city.
Portueal.-We have Lisbon news to 13 th inst. Oporto remained tranquil, and the spirit of insurrection appeared
to be effectually suppressed. There had been no loss of
life or limb, and but two wounded life or limb, and but two wounded persons had been carried to the hospital. One of the Opposition journals had been suppressed. Four Septembrist leaders had been arrested, and awaited trial by a special commission; while two others had been ordered to leave the Portuguese territory without delay by the military authorities. Lord Aberdeen's reply to the so-called ultimatum of Portugal had not been yet received, but in the highest political circles the belief prevalled that the tario would be speedily reduced. Memorials had poured into the Chambers from Carcavellos, Oeiras, Almada, ©c., praying for the relief of the distressed wine interests of Estremadura. The 10th instant was celebrated at Lisbon as a grand gala-day, in Bricrum - The Government wiers last
Belgium. - The Government papers last received contuin the official promulgation of the treaties between
Belgium and the Netherlands. The Belgian Coloniza tion Company baviog announced that every society ought to have religion for its basis, has applied to the Provinmembers of that order as missionaries. The church of St. Thomas will be dedicated to St, Louis, as a testimony of gratitude to the Queen of the Belgians, who has been pleased to become the protectress of the first settlers. SWITZERLAND.-An insurrectionary movement maniThe tocsin was immediately sounded, and the insurg inst. who mostly belonged to the suburb of St. Gervais, the centre of the partisans of the movement, gained possession of two of the city gates. A collision took place between have and the troops, in which 30 persons were said to were Messrs. Fournier, Major of the place, and the dead a Councillor of State. The insurgents marched. Feinst the Hotel de Ville, the seat of the Governmeot but ginst in their stempt to it An attack was equall made against the powder-mill which was virorously defended and remain the hands of the Goverument The more ment was occasioned by a law voted on the 13 th by the Council of State, antherizing the police to institute domi ciliary visits in onder to discover the hidinc-place of foreigner expelled from the Canton. The afioir ended by the Grand Council issuing, on the proposal of the Council of state, an amnesty to the Radical insurgents. The papers of the lith state that the tranquillity of the city collision and the offair is said affair is said to be distressing a nuabitants, for several of the foreign familics who, even and contribute largely to its prosperity, have naturally taken alarm, and quitted it; but in other respects it appears to have been of little importance. As regards and ine, exceed thirty.-Thed states, that at a meeting of the great Council of Argau, held on tree 8 th inst, the important question of the convents was discussed, and that a commission appointed to examine the affair, had reported to the following effect : Argau does not acknowledge the right of the Vorort tervention its interpretations; it therefore rejects its inhappen", and renders it responsible for whatever may adopte The conclusions of the commission were Giram the Council by a majority of 105 votes to 46. the Council of According to the last accounts from Berlin, the project of a new penal code for the entire kingdom, prepared by the committee clarged since 1825 with the revision of the Prussiaa laws. Among the modifications introduced in the new code are the abolition of hard labour in chains, branding and mutilation, the suppression of all accessory penalties intended to aggravate the pain of death, except as regarded parricides and regicides, who are to be throched to a cow or ox-hide, and drawn by two horses to the the principal streets of the town, from the prison sword and and and the substitution of the axe for the with account of the.-The Hanoverian papers are filled Crown Prince on the 18th; and of the reception of the King of Prussia, who arrived from Berliu on the 17 th inst Ganect - Letters from Athens of the 31t inst nounce that the Greek Government had at last prepared recular budget which had been commuicated to the Ministers of the three protecting Powers. The receints of the kingdom were alculated for 1843, at $15,669,795$ drachmas, and the expenditure at $18,666,482$, showing a deficit of $2,996,687$ drachmas. A Royal decree had been issued, ordering the establishment of post-offices.

Turkey,-Accounts from Constantinople to the 1st inst. state that the diplomatic relations between the Porte and Austrian Lecation have been renewed, and the differences that were likely to have caused much inconvenience to both parties will be finally settled in the course fow days, assurances having been given that the Ottoman Government will take immediate steps to make such arrangements relative to the steam navigation of the Black Sea by Austrian vessels, as will be satisfactory to the Court of Yienna and the parties interested. It is now rumoured that Russia has shown a determination to resume the Servian affair with pertinacity, and that the language held by the Russian Ambassador is an echo of the Emperor's letter. Hitherto this language has produced no effect upon the Porte. Captain Williams, R.A., having recovered from his indisposition, was on the point of taking his departure upon his mission to Erzeroom, accompanied by Mr. Curzon, private secretary to Sir S. Canning. EgYpt.-Letters from Alexandria of the 27th ult. state that the mortality amongst oxen throughout Egypt still prevailed, and that the Paska was about to despatch
an officer to Constantinople to solicit permission to pur－ chase oxen and horses at Erzeroom．Mehemet All had been slightly indisposed，but was oy turn to Alexandria， convalescent，and was expected of catton and corn． in order to dispose of his stock of catton trident arrived at Falmouth on Wednesday，bringing Mexican，West India， and other mails，having sailed from St．Thomas＇s on the 27th January，from Bermuda the 4 th，and from Fayal the 14th inst．，with 52,000 dollars on freight and 13 passen－

made a statement rclative to the Charch of Scotland. The appleal parishes, was yct pending bciore the House of Loras. Should afirmation have the anticipated effect of crippling the efforts of
 was Majpaty's Government respecting it had beernate placinion of
her Mpon
recorc, in itter addressed by him Sir J. (raham) on the part To the principles and omnious contanea in that letter her Ma-
jesty's Government strictly adhered and beyond the limits jesty's Government striniy a hered and beyond the limits of
these principles and opinions was impossible for her Majesty's
Government to proceed. Mr. WalTER proposed a series of five resolutions, the substance mitted by the Poor-Law Commissioners to her Majesty's Minis-
ters," there was a certain suppressed passage, indicating th
principle on which the Poor-Law had been based, and that thi
real, thouph unavowed principle involved sach a cruel and tim principle on which the poor-Law had been based; and that thi
real, though wnavowed principle involved sach a cruel and im practicable interference with the rights and comforts of the
poor, as to justify the demand that the Poor-law be so revised as to make tit "conformable to Christianity sound policy, and the
ancient constitution of the realm."-Sir JAures Gpa plained that the document alluded to had been drawn up by the
professional individual who had been employed by the Poor-Law Commissioners to give their propositions a tangible and technical siape. some a copy had been given, ander the strictest con-
printed, and
fidence, to a friend of Mr. Walter's, and, after the period of ten years which had passed, this confidence had been violated. The Lord Grey's Government, and had been distinctly repudiated policy of "feeding the hungry, and clothing the naked;" its lation; the proportion of those relleved out of-doors as com to one; the law was, tnerefore, not opposed to Christianity
or sound pollcy; and he would meet the first resolution by the previnus question, and the others with a direct negative.-
Mr. Watier censured Sir James G Gaham for athibuting im-
proper motives to Mr. Walter. It now turned out that there was such a document in. existence, and it was quite right of Mr
Walter to produce it. It was the composition of Walter to produce it. It was the composition of some monste an extraordinary opinion of Earl Grey's Government, to dare to
submit to it such a proposition. The Secretary of Stale should give the name of the writer.-Mr. Bortarrick seconded the re-
solutions, and expressed himself resolved to support the spirit of solutions, and expressed himself resolved to support the spirit o
the motion whenever the Poor Law came before the House, cument were made the believe the passages quoted from the do spirit of them appeared in the operation of it. He He could not give the go-by to the resolution proposed by voting for the previous
question.-Col. Sibruorp would be contented with mothing short of the annihilation of the Poor Law Commission, Mr.
Walter was entitled to thanks for making the exposure he had done
of the origin of the new Law - Mr. of the origin of the new Law.-Mr. STUART WORTLEx had never
pledged himself to his constituents to vote for the repeal of the pledged himselfto his constituents to vote for the repial of the
Poor-law. He was opposed to many of its provisions, and tions.-General Jounsson's greatobjection to the Poor-law was that it pat the people out of the pale of the constitution, and
placed them under three individuals at Somerset-house. Sir Robert Priz dened that the principle of the amended Poor-
law was opposed to the Acts of 3 th and 434 Elizabeth, or that it was more harsh in its provisions. This he cllustrated by citing
some of the provisions of these Acts, especially the power given some of the provisions of these Acts, especially the power given
by the 43d of Elizabeth over the children of such parents as were unable to mantain them. The workhouse test in licu of the la
bour test was enacted by the gth George 1 .; and therefore it was neither a novel nor an unconstitutional principle. No great measure was ever passed without suggestions having been sub-
mitted for the consideration of the Government; and it would mitted for the consideration of the Govcrament; and it would
lead to much practical inconvenience if such confential commu-
nications, whether they nications, whether they had been adopted, or, as in the present
instance, they had been rejected, were produced and publicly made use of. He adduced the amounts paid for the relief of the
poor, as showing that there was more expended on them than on poor, as showing that there was more expended on them than on
the poor of any other country ; and expressed his surprise at the
course which Mr. concluded by warning the haose against tampering with the
Poor-law.-After some remarks from Mr. MUNTZ, Lord J. MAN
 as iniquitous, atrocious, and blood-thirsty, and made a long
speech, the greater part of which was a vindication of himself, ar
attack on Mr. Mott, writh reflections on Sir James Graham, \&ca, speech, the greater part of Which was a vindication of himself, An
attack on Mr. Mott, with reflections on Sir James Craham, \&C.,
and on the conduct of the Assistant Poor-law Commissioncrs in
the north of England.--Mr. S. CrAwron corlially supportcil workhouse test, whicll , t had becn attempted inctfectively to
cary out in England, had been rigidly applied in Ireland,
After a short conversation, having reference to certain allega-
tionsof Mr. Ferrand, with respect to abuses in the Keishley Union tions of Mr. Ferrand, with respect to abuses in the Keighley Union,
Mr. Mictss declared his conviction that the Poor-law had saved
the country from destruction, the country from destruction, especially the agriculturald districts,
He strongly repudiated the resolutions, as asserting what was
opposed to facts. After some farther discussion, includng a con. troversy relative to Mr. Ferrand's assertions, Mr. Wal.Tize re-
phed, and withdrew all his resolutions except the Iast, on which
a division took place when it Sir V. BIAmre, amidst treat laughtec, moved the following re.
solution- "For a committee of the whole House to consulder the great commercial, poltical, financial, and other advantages whicl of its population in particular, by the adoption of the safest and necessity of giving every facility to the operation of the urgent selecting the most commodious port on the western coast of
$\qquad$ it was seconded by Sir David Rocfir ; but, upon the recomment-Friday,-On the motion for going into a committee of supply, Mr. Hume and Mr. Wrinians called attention to the state of the
rvenue and the expenditure ; and were answered by Sir R. Pees who deprecated the cliscussion, as the House was not preparcel to matters of detail were best given in committee.-Mr. F. Baris brought on his motion respecting Mr. Hoskins, and moved fo
papers relating to it, but ultumately withdrew the motion, as all the information he required was lefore the House. Mr. Mr.
BLEwITr called the attention of the Honse to the Nort Boundary question between this country and the United States.-
Sir R. PEL hoped that Mr. Blewitt would not infer the dispositron of the American Government from the specch or bill of a passing between the two Gcvernments on the subjcet.
The House then went into a Committee of Supply ; and Mr with the previous year, there is to lee a reduction of $4,000 \mathrm{men}$, and a decrease in expense of 143,0000 , ; and on the cntire estiafter which the sums were voted without a division.

CITY. both for time and Money; Three per Cents. Reduced, 96 to $\frac{3}{g}$; Three-and-half per Cents. Reduced, $103 \frac{1}{4}$ to $\frac{3}{8}$; 177 to 178; India Stock, 268를; Exchequer Bills, 64s. to 66 s. prem., and $65 s$, to 67 s . prem.

STetropolís and fts Ficimity
The Weather.--Since our last the atmospheric changes have been very sudden. The wind, which in the early part of last week had been at morth and. north-east, accompa-
nied with intense cold, the mercury being between 10 and 15 degrees below the freezing point, on Saturday veered towards the south, followed by a heavy fall of snow, which continued throughout the day. The storm was not confined to the Metropolis, but extended a considerable dis. tance into the adjoining comntry districts, rendering the roads in some places almost impassable, and causing great obstruction to the mails, stage-coaches, and other vehi-cles.-On Saturday evening, the inhabitants of the Cons-mercial-road, Lambeth, Bankside, and Tooley-street, were gain alarmed by the rapidity at which the tide was rush ing up the neighbouring streets, and inundating the lower parts of their houses. Great damage was done to the premises and stock of several manufacturers, and boats were plying in the streets to the assistance of the inhabitants.
New Houses of Parliament. -On Tuesday night a ference to the New Houses of Parliament Lords, in re many respects so remarkable that we notice under in head those particulars which do not properly come within the scope of our Parliamentary summary. The Marquis Chanicarde, in alluding to the agreement that the House of Lords should be the first portion completed aid, that he could not find fault with anything that ba been done, for he had no information on the subject; but leved the could learn from general observation, he be of, for it was generaily supposed the more or less lost sigh to perfect a merely ornamental part of the building, the reat tower ; but he thought for no tower there should be ne single hour's delay in giving peers that accommoda tion which they now stood so much in need of. If he thought that the Government would not attend to thi architect on the subject. for a committee to examine th made it his business to i-Lord Wharncliffe said he had Cound that the Victori mane into the matter, and he ound that the Victoria Tower would be the heaviest par the whole building, and that, in the opinion of the architect, there was a great probability of its settling con that the, and that, thereilding wosirable that the rest of the building should be carried on until respect to the buid carried up to a certain height. With respect to the building of the House of Lords before the est of the building, the architect said it was desirable that the whole should be carried up together ; but he said aro that would not prevent the House of Lords from being completed considerably berore the House of Comthats, and the other parts of the building. He understood had not mouse any sparific inquiry on this paint but he Brount made any specific inquiry on this point, - Lord unsatisfuctory statement just madetted to hear the very hotractory statement just made by the Lord President o use, and he pure ornament, without any pretence for pressed of it, the with the opinion which had been exGothic taste of the middle of the 19 th century. The weighty, and was likely to be so exnensive to the was so that he felt inclined to refer the architect to the epitaph written for Sir John Vanbrugh:-

Lie heavy on him, earth, for he
He wished his noble friend to apply himself to the matter and to urge Mr. Barry to the fulfilment of the absolute contract which had been made, namely, that the House of Lirds was to be completed first. togeth desirable that the whol Brain' that nothing was so desirable as to lave the bargain which had been made performed.-LLord Duncannon said that the works had now been eight years in progress, and he bad always been informed that the House of Lords would we conapleted in the course of the seventh year. He also would soon be deprived of lion to the fact that the House the new buildings. He thought a com by the progress of appointed.- The Marquess of Lasdorne satd g . the best way would be to but then that committee oub not to in which the houses were to buit With the style John Vanbrugh, he could only say that Sir Joshua Reynolds had described him as a most effective and picturesque architect. Their Lordshins had been the first to make sacrifices for the general convenience, and therefore their accommodation ought to be attended to according to the agreement. He should be sorry to see the tower laid ornamental feature, bus not only a most important and intenental featue, but woul be useful also, for was records. to be the place of reception for the public tords. But he still said, as a mere matter of ornament of fom Lordships in the first instance.-Lord Campbel Lomplained of the inconvenience of the house while the Law Suds sat there in the mornings to hear appeals; and Lord building said building should not be completed berore the exterior, and hy the new House or Lords should not be completed in ar.-Lord. Wharnclife said it was only fair that the architect should have the opportunity of stating his reasons before the committee.- The Marquess of Clanri carde then moved for the appointment of a committee which was agreed to.
Improvements of the Thames.-The Lords of the Treasury, the Commissioners of Public Works, and the and estimate to be made on embanking some nortions of the river Thames. A select committee of the House of Commons took up the inquiry upon a more extensive scale,
and engineers of first-rate eminence were employed to

THE GARDENERS' CHRONICLE.
examine the river within the whole of the jurisdiction of
the Lord Mayor, and to report upon the entire question of the Lord Mayor, and to report upon the entire question of making the river advantageous in every respect factory evidence has becn collected and laid before the Government and the corporation ; and, from the active proceedings adopted, it is reasonabe the Metropolis will, without beauty, and convenience or the mented. On Wednesday special courts of conservancy were held by the Lord Mayor
at Westminster, the Borough, Greenwich, and Stratford, at Westminster, the Borougl, Ge counties whose lands embank the Thames, with the view to commence the great work. The Recorder, in his charge, alluded with approbation to the
plan for embanking the river. The juries, he said, would be expected to recommend such measures as might be, in their opinion, best calculated to meet the new state of circumstances, and what new alterations might appear to
them most effectually adapted to advance the public utility. It was impossible not to admit that a most extraordinary change had occurred, in consequence of the progress of steam navigation: the use of the Thames as a public
highway had increased beyond all imagination. Five minutes did not elapse through the day without testifying to the energies of that power, by conveying from one place to another thousands of persons who thus found an accommodation which fetter. Those considerations having been presented to the juries, their duty, they would see, was plain and obvious. They would point out every encroachment on the bed of the river, without balancing conventence against inconwhich could be yielded in the width and depth of the stream, and therefore no permanent encroachment could be tolerated. It would readily occur to the jurors 'that in a river which, to say nothing of its prodigious commercial importance, constituted of it was essential to preserve the activity and depth of its water. When he spoke of the Thames as being the drain of the metropolis, he by no means inants on its banks would be tolerated in letting flow into it the refuse of gas or other noxious filth. Every offence of the refuse of gas or other noxious filth. every offence of punished. It was matter of congratulation, however, that by means of an improved embankment the public health activity of the stream, whatever might be the pollution to activity the water might be subjected. The juries would in their surveys find numberless encroachments which had in former days been altogether innoxious, but which had verted, very injurious to the navigation. They would present those encroachments to be dealt with according to law; and they would have the able assistance of the City Solicitor, who would afford them all the necessary faciities. It was the determination of the Lord Mayor,
under the extraordinary circumstances to which the attention of the juries had been called, to make these courts as efficient as they were capable of being made, consistently with the law'and the constitution. The 11th of Marcl was appointed for the nest courts, on which
presentments will be made by the juries.
Custom House. -The proceedings of
pointed tomission pave assumed additional importance during the past weels two officers of the establishment, searchers and landingwaiters, and a Customalouse agent having absconded. It is said that the investigation is pressing so heavily on the guilty parties, that these persons thought it necessary for Government, however, have offered a reward of 200l. to any person who may apprehend them, or give evidence leading to their capture. It is expected that Government will follow up the advertisement, and that measures wid fugitives from justice, if they have escaped either to the Continent or to America. It has been repeatedly stated that leading houses in the City were in league with the delinquent officers, and that large profits have been acquired by them through such dishonest practices. It is derpetrated, unless the guilty officers had been in league with the owners of the goods; this fact has given rise to great amxiety in the City, in every department of foreign trade, to have a full and searching inquiry, and great impatience is expressed for the speedy publication of the
Report of the Commission. It is stated by the Globe the "a firm inWat ing-street, largely implicated in these frauds, has been exchequered for $160,000{ }_{t}$. Independent of this sum, others of minor importance, and particularly one frocess served on them.'
 vernors of Christ's Hospital was convened on Monday, to agree upon an appropriate form of address to the Queen, 1000l. to the funds of this institution. The meeting of 1000. tomme funds of this institution. Was preparatory to a Court being called to vote the address.

University College. The annual general court of the proprietors of this College, was held on Thursday, in the chair. The report stated that in the session of 1841-2, the pupils in the College and the junior classes numbered
886 . Of those, 336 were students in medicine, 155 in the 886. Of those, 36 were students in medicine, 155 in the
arts, and 395 were pupils in the junior school. The amount arts, and 395 were pupils in the junior school. The amount
of receipts from students and pupils was $12,7566.4 s .6 d$ of which sum $9,081 l$. 18 s . having been paid to the profes sors and masters, $3,675 l$. $2 s_{1} 10 d$. fell to the share of the

College. The year's income from other sources was 4,039b. 11s. $4 d$., and the disbursements for the establishment department, including payment for several permanent additions to the property of the College, interest upon mortgage, \&c., amounted to $4,000 \mathrm{l}$. 17 s . 11 d ., thus showing that the expenses were covered by the receipts. the sum above mentioned, of $12,756 l$. $4 s$. $6 d$. received for
education, $5,570 l$. 10 s. was derived from classes of the medical faculty, and $2,5702.14 \mathrm{~s}$. 6 d . from those of the arts and law. To the library a set of works, 100 in number printed at the Government press at Cairo, had been prethe Pasha of Egypt. The junior school produced during the year 4,6151 ., a sum less by $282 l$. than the year belast was 1, collection made last meeting a very fine col lection of geological specimens had been offered to the College for the use of students, by Mr. Greenough; on account of the expense of providing rooms for its reception, and keeping it in proper order-an exped in in curring-they had been compelled, though reluctantly, to decline the offer. Colonel Leicester Stanhope men tioned, with regret, that he had heard that the Duke of Somerset had resigned the office of vice-president, and uroposed a resolution expressive of the great value they set upon his Grace's past services, and of regret at his resignation. The resolution was passed unanimously. Lord Brougham was then elected presiden
Anti-Corn-Law League.-On Wednesday evening the first weekly meeting of this association was held at the Crown and Anchor Tavern. Long before the hour of meeting, the great room was crowded to excess. Mr. Hamer Stanstield was in the chair, sopring, and other Cobden, Mr. Hume, Mr. The Members or Pariament. fatory observations, aluded and soid that nothing would deter the hon. Member from pursuing the course he had marked hon. Mo abolition of the Coun-lows. Mr. Cobden then presented himself to the meeting and was received with loud cheers. He was sorry the chairman had alluded to what took place eisewhere, but for his vindication of the charge brought against him, he would only ask them for favorable to him. the Times paper-an organ not over favourable to him. tating churger, but he would confidently refer to his specches before he was a Member, and they would find that he was always a peace-maker, and no person was more opposed to the use of physical strength than League was a confcderacy formed to get rid of an oppressive law, the existence of which was productive of the greatest possible Manchester, and if the people of London had joined them, the law would have been long since repealed. In allusion to what had been said in the Housa of individual of the Learue it was not fair to cast censure on the whole body for the fault of one. His Lordship might have expressed his disapprobation by letter. The hon. advocate of free trade, and an eneny to monopoly of every description. Mr. Bright, of Manchester, next addressed the meeting. He commencen wist a severe censure on the hous the heads of them perfectly agreed with the League as to the expediency of the repeal of the Cornlaws, yet for the sake of place opposed it. The meeting Dr subsequently Tuesday evening a public meeting of the inhabitants of Marylebone took place in Albany-street, for the ostensible purpose of considering the question of a foreal of the Corn-laws. Mr. John Bagshaw, ex-member ep Sudbury, was advertised to take the chair, but on his or Sin his appearance, accompanied by Mr. Hume, Sir De Lacy Erans, Dr. W. C. Taylor, the members for Marylebone, and other supporters of the League, a scene of extraordinary confusion took place. The Chartists, who had assembled in large numbers, tore up the seats, and arover a violent struggle between the parties, the platand after a form broke do meeting. The League Members immedithe body or he ens the Chartists returned to the ately took possession, bigour, and effectually drove the Leaguers from the platform, when their chairman and the borough Members quitted immediately. Mr. Smart, in dumb show, proposed a resolution endmppt in favour objects of the , proposed and carried by a large of the Charter was proposang carried by a large majo:ity. and three groans for Mr. Hume and the League, Chartis! $s$, and usermbly broke up at a late hour.
The Wrecks of the Conqueror and Reliance.-On Monday night the concert for the relier of the wows and orphans of the seamen we Threadneedle-street. The hall was crowded to the doors; and its appearance, brilliantly illuminated, and such an assembly, was magnificent in the extreme whe orchestra was led by Mr. Cramer, and the whores to the ducted by Sir George Smart. The overtures "Zauberflote and to Euryanthe, by Benedict, full of of the acts. Mrs. Shaw sung an air by Ben succeeded so well as to gain an encore. In the trio in the "Matri" monio Segreto," she was much more at home; the other
parts were sung by Miss Birch and Miss Rainforth. aco Caradori Allan gave her favourite "Una voce poco fa," with great spirit. Besides the above the most Dr. Pepusch perrormance was the old cantata Alexis, of Dr. Repusen, sung by Mr. Hobbs, with Mr. Lindey's rable: Mr. Lindley's brilliant execution produced Joud applanse. The lenevolent object of this concert must be fully answered; as in addition to the tickets sold to a rowded audience, large donations were sent by many individuals who could not attend.
Accidents and Inquests.--The Coroner's inquest on the do of Major Jones, late Aide-de-Camp to the King of Hanover, whose death we noticed in our last, was concluded on Saturday, when the Coroner, after several witnesses had been examined, remarked that the only thing which gave the slightest rise to any rienced in the use fre-arms sbould have handled pistols in 80 careless a manner. He had no doubt, however, from what they had heard, that the case was purely one of accident. The jury, coinciding in this view of the case, returned a verdich Accila ine rector of Bigleswade, Rev. Edmund Drax Free, D.D., Bedfordshire, was run over so a he died in the hospital on the following morning. The jury on Monday returned a verdict of Accidental Death.- On Wednesday night the police succecued in entering a house in st. and capturing known for some there pastas a quantity of gambling imple-
several of the players ments. An unfortunate circumstanco athed ceedings, which has terminated in the deation the house, Smarl, the son of the reputed proprietor of the house adjoining attempted to escape by fell from a bight of 60 feet into the area of the adjoining house, and was so much injured that he died on Thursday morning, in St George's Hospital. It appears that the young man was not implicated in the gaming proceedings. He was in bed at the top of the house when the police made their entry, but it is supposed he became alarmed on recerving information of what was going forward, and that, fearing he also should be captured, he climbed upon the roof to get away. The evidence given before the magistrate in the case of the parties captured was conclusive as to the character of the house; but in consideration of the calamity which had happened, lley were fined in mitigated penalties, varying from $3 l$. to $30 l$. A coroner's inquest was held vesterday, when a full investigation into te cause of the young man's death was gone in
dict of "Accidental Death" was returned. Mortality of the Metropols.- Aetiopolis for the year $18 \pm 2$ has just been published. These tables relate to a population of $1,875,493$, spread over an area of 70 square miles, and of which $8.8,76$ are males, and $96,720-$ females. Dividing this area into regard to the yearly mor-
ing are the results exhibited in regre tality in each:-In the west district, the population is calculated of 301480 , during the last year the number of deaths was 6.826 , and the rate of mortality 2.209 per cent In the north district, witio a population of 366,482 , the number of deaths was 8,550 , and the rate of mortality 2.289 per cent. In the central district, with a population or $3 / 4$, in 363 per cent. In the east disand the rate or mortaly 2.0138 , the number of deaths trict, with a population 3 , In was south district, with a population of 439,443 , the number of deaths was 11,076 , and the rate of mortality 2.40 is per cent. The total number of deaths in the Metropere amounted, for the year, $4 ., 2 \pi$, wormales, and 22,430 females ; and the annaal 231 per cent. tality throughout the whole popios under 15 years of age The number of deaths of persons under 15 to 60 years, is stated to have been 21,$266 ;$ from. The number of
14,836 ; and from 60 upwards, 9,093 . deaths caused by epidemic, endemic, and contagious areases, amounts in the year to 7,696 . The numbernts deaths caused by diseases of the nervoused by diseases of to 7,505 . The number of deaths cause. Of that numthe respiratory organs amounts toia, 1,109 from asthma, ber 3,923 resultec from pueum. The number of deaths and 7,140 from consumple diestive organs amounts to caused by diseases of the en deaths amounted to 870 . ,396. The number of and age amounted to 3,346 The number of deaths from starvation, 20 ; and from from intemperance, The following is the number of deaths registered in the week ending satuay, districts 1 I 1
 east districts 176 , south distrine 903 ( 461 males, 442 females), average for the last five years 903 (.

## 根robimíal Netos

Bristol.- In the Court of Peculiars on Saturday, it was stated that the proctor for Mr. Woolley, the Bristol timber-merchant, who was hoaxcd in the affiair of matrimony whici hause he had instituted to annul his marriage and the cause was therefore dismissed. A suit on the part of the wife, for the restitution of her rights, was mentioned as probable

## January of last year, a gentleman

 Cambridge.-In January of last year, a gentiemannamed Howwood, found neariy dead in a ditch near Chesterton, under cir" fairly dealt with. He breathed and groaned when first
discovered, but died without uttering a word. An
inquest was held upon his body, and, in the absence of evidence of foul play, a verdict of "Died by the visitation of God" was returned. It appears, however, that a young woman, now imprisoned in Cambridge jail for robbery has made a confession that Mr. Hopwood was murdery, for the sake of robbing him. The woman states that she was at Milton feast, in company with other women and man, by smothering him in the snow in Cottinghamman, by smothering him in the snow in Cottingham-
fields. The names of the parties inpilicated by this confession are at present withheld, for the purposes of justice. Carmarthen.- The Welsh papers give an account of the origin of the disturbances that at present exist in Pembrokeshire and Carmarthenshire, and in which "Rebecca and her daughters" take so prominent a part. it made between Pembroke and Carmarthen, with the view of securing a great thoroughfare by it between Ireland and
London. The Liverpool railway has, however, frustrated London. The Liverpool railway has, however, frustrated Carmarthen to Hobb's Point, or Milford, as a passage for the mail. Very little thoroughfare else exists along it, so that there is not sufficient money raised to pay the inter-
est for the capital expended, much less to keep the road in repair. The trustees have put up toll-bars on the lanes and byrroads, and thrown the expense of the main road on the parishes, which appears to have excited the pea-
santry to the late acts of violence, Rebecca has already destroyed the St. Clear, Prendergate, and Pime toll-gates, She also boasts of having an auxiliary force of 500 men,
at Haverfordwest. By order of Sir J. Graham, the Marines from Pembroke Dock-yard have been recalled, and the duty of pursuing the malcontents has devolved upon the Yeomanry, who in 1798 distinguished themselves unOn Monday, at midnight, a mob of forty or fifty persons destroyed two turnpike-gates at Trevuchan, in Pembrokeshire, one leading to Tavernspite, the other to Lampeter,
and entirely demolished the turnnike-house, which the gate-keeper had just left for the night. There is little doubt that these men were from the English part of Pembrokeshire, as they were heard to converse in English, not a word of Welsh being spoken by any of the party. It is Scripture warrant for their doings, quoting the 24th have ter of Genesis :-"And they blessed Rebekah, and said unto her, Thou shalt be the mother of hundreds of millions, and thy children shall possess the gates of them plicable to the situation of affairs near St. Clears, is expatiated upon by many itinerant preachers, and the doings.
Cheltenham.-About a fortnight since the Rev. Hugh perpetual curate of Naunton, in this countr, was shot and his wife, Mrs. Anna Maria Rennett, and Montagu Clark, a lad about 17 years of age (a son of Mrs. Rennett by before the magistrates, that Mr. Rennett and his wife had been married several years; and that the younger prisoner ments, Mr. Rennett and his wife had been for some time separated, but still resided in the same house; Mr. Rennett occupying and taking his meals in one room, and the re Thainder of the family in the other parts of the house. Thursday evening some dispute arose which attracted the found Mr. Rennett on the ground, bleeding profusely, the younger prisoner having shot him in his neck with and the reverend gentleman is still in considerable danger. The magistrates committed both the wife and son to prison to take their trial for the offence, but their health been necessary much since their committal, that it has Coventry.-It is stated that a requisition tal.
coventry.-It is stated that a requisition has been presented to the Archdeacon of Coventry, requesting him to
take measures for drawing up an address from the clergy of that Archdeaconry, condemnatory of Lord Ellenborough's proclamation respecting the gates of Somnauth,
and that the signatures of all the masters of Rugby school and that the signatures of all the
are attached to the requisition.

Hereford. - On Saturday evening a fatal accident happened to the Aberystwith mail on its up-journey from ford, the weather being very boisterous at the time, and when clearing the turnpike near the city, the wind caused the gate to rebound against the leaders, who immediately took fright and darted off at a rapid pace, and coming in contact with a donkey-cart, the poor woman who was driving the donkey was killed. The coachman, in endeavouring to rein in his horses to avoid the catastrophe, lost his seat and ppas precipitated on the road, and falling on his head, survived the injury but a few minutes. The guard and passengers jumped off the ceach the m
Hrull.-We lately noticed under this head the measures taken by the shipowners of Hull in reference to Captain mates in the merchant-service. It is from masters and of the provincial journals that Capt. Fitzroy has withdrawn his bill for the present, finding that the measure was not affected by its operation.
Lancaster.-The local papers give the detailed particuas April, 1817, at Pendleton; when the house of a Mr.

Littlewood was entered and robbed, and Mrs. Marsden, the housekeeper, and a female servant, were murdered in Richards, at the assizes of September, 1817, in this city, when four of them were convicted on circumstantial evidence, and executed. It now appears that on the 9th
inst. an old man, aged 74 , the uncle of one of the men who were hung, finding himself on the point of death, , whom he called to the bedside fo but did not commit the robbery. He died the day after he had made thisit the robbery. He died the day after as that on Sunday last a flock of sheep, amounting to no Iess than 57 , were stolen from the farm of Mr. Moffat, in the neighbourhood of Hornley, by an Irishman and a lad
belonging to Lancaster. They drove the flock into the city and attempted to sell them in open day, but the price demanded was so small as to excite suspicions ; both parties were accordingly apprehended, and after a long examination before the magi
their trial at the assizes.
the mutilated body of a a the mutilated body of a female found a few weeks since in the river Aire navigation, has led to no other evidence at racter, proving that the body found is not negative chaof two young women who were missing from the West Riding of Yorkshire. A verdict of "Wilful Murder against some person or pers
turned by the coroner's jury.
Liverpool.-At the annual meeting of the Liverpool that the loss which the cost week, the chairman stated recent conflagrations in the town had been confined almost entirely to the mercantile districts of Liverpool. They companies, that the mercantile premiums formerly charged were totally inadequate to protect them from the risk which they ran, and, though they regretted to place the been compelled in their own protection to increase the premiums upon insurance. The report showed that the Manchester.-The Quarterly
issued by the Registrar General, shows that the mortality just in Manchester egistrar General, shows that the mortality 10,555 in a population of 356,373 souls. The mortality in the spring quarter was 2,312 ; in the summer quarter 2,683. The average of the $, 2,744$; in the winter quarter, 1838 to 1841 was 2,718. It is remarkable that of the Wales, including 1842 , taking 113 districts of England and Wales, including nearly all the large towns, but excluding the metropolis, the mortality is largest in the winter
quarter ( 32,083 ) ; next in the summer quarter $(28,050)$ quarter ( 32,083 ); next in the summer quarter ( 28,050 );
then in the autumn quarter, the spring quarter showing the lowest mortality; while in Manchester, as will be seen showing the largest mortality, surpassing the winter by winter quarter by 61 deaths.--The local papers mention that the applicants in the Manchester workhouse are 740 weekly more than at this season last wear, and that man of the mills are again stopping. - In consequence of a con tradiction given by Mr. M. Philips to a statement made oy Mr. Ferrand in the House of Commons on the night protected females were said certain cruelties to which unMr, Greg, near Wilmslow, a special general meeting of the Lancashire Central Short-time Committee was held in this town on Wednesday, in order to corroborate Mr.
Ferrand's statement. The meeting resolved pnanimously hat they "are prepared to prove that Mr . Ferrand" statement gives but a very faint idea of the hardships to which those females were subjected; and that the contradiction which Mr. Mark Philips was instructed to make to Mr . Ferrand s charges is characterised by equivocation and a total disregard to truth. That the thanks of this committee be given to Mr. Ferrand for his praiseworthy and fearful exposure of the cruelties practised by the manufacturers generally on the defenceless children com. mitted to their core
Sheffeld.-The second meeting of creditors under the fiat of bankruptcy issued against Messrs. Parker, Shore, and Co., the bankers, was held on Friday. The meeting was for the proof of debts and for the choice of assignees. those proved on the 16 th inst., was $185,352 l$. 17 s , , being about one-third of the whole to be proved against the bankrupts. The trade assignees were then appointed, all of whom were residents in Sheffield.
Nhrewsbury. - The local papers state that at one of the this county, several of Blount, Bart., of Mawley Hall, in which of their families could boast of having rented for Allen satisfactod on the estate, when a farmer named either been in thy proved that himself and ancestors had family for a period of nearly or 780 years !-that, in fact, his ancestors had immigrated from Normandy with that family at the time of the Conquest, and from father to son each Stourb. ge. Whad been retained on the estate. distress at Stourbridge has become so alarming, that numbers are subsisting on turnips alone. From one field as many as from five to six tons a week have been taken or several weeks past; and the owner does not think expedient to attempt to put a stop to the peculation
Railways.-The following are the returns for the past
reek :-Northern and Eastern, $1,019 l$.; Greenwich, 6141 ;

Eastern Counties, 790l. ; Croydon, 191l.; Liverpool and Manchester, 3,456l. ; Brighton, 2,394l.; Grand Junction, 5,889l.; York and North Midland, 1,394l.; Blackwall, 513l.; Great North of England, 1,350l.; Sheffield and gow, Paisley, Kilmarnock, and Ayr, 793i. : Midland Counties, 2,197l.; Edinburgh and Glasgow, 1,437l.; Birmingham and Gloucester, $1,447 l$. ; Birmingham and Derby 1,027l. ; North Midland, $3,527 l$. ; South-Western, 4,083l. Great Western, 10,188l. ; London and Birmingham, Glones. South-Eastern, 1,3436.-The Birmingham and Wednesday Company held their half-yearly meeting on $50,310 l$, and the total recejpts for the half-year had been to the balance in Jarges, 41,69 . 129631 , added which a dividend of 25 s. per share was ordered to from This would leave $1,245 l$, to se waried over to be paid half-year's account. No general discussion was raised at the meeting, a committee of inquiry having been instituted into the general management of the undertaking. A special meeting of the Cheltenham and Great Western Company was held at Cirencester last week, in reference completing the line from Cirencester to Gompany for then leasing or selling the whole line from Swindo and specified terms. After some discussion, a resolution authorizing the directors to treat with the Great Western Company for a sale on the basis of the Great Western Company's proposal, was unanimously carried. - The report of the Directors of the Hull and Selby Railway
Company states the receipts of the half-year to have been $28,894 l$., and the expenses of half-year to have $13,689 l$, 8 . 13,689l., showing a profit of $15,205 l$. From this, howincomes to be deducted 5,0746 . interest on loans, 2276. a balance of $9,179 /$, the price of a new engine ; leaving a balance of 9,179 . available for a dividend, which it is proposed shall be 16 . per share; after paying which upon future purposes of the Company. The report mentions that the sum taken in the last sixmonths exceeds that for any former half-year.-On Monday last, the half-yearly meeting of the Newcastle and Darlington Company, by Which another important link will be added to the chain of Railway communication between England and Scotland, was held at York. The repors stated that the whole of the the Durham Junction Railway to Shincliffe, including the branch to the city of Durham, and the other from Darlington to Brafferton, comprising together rather more than twelve miles in length, have been let at prices below the engineer ${ }^{\text {s }}$ estimates; and the chairman stated his opinion, that the line will be opened throughout from Darlington to Newcastle, by which an uninterrupted Railway communication between London and Carlisle will Me accompished in July, 1844.-At the York and North Midiand Meeting, a dividend of $2 l .10 s$, on the original shares, and a dividend of 20 s . on the half-shares, were penses now amounting to $6,672 l$. The traffic for the half-year had amounted to $46,385 l$. 11s. 11d.-The half-yearly meeting of the Great North of England Company was hel at Darington on Tuesday. The balance of profit in the half-year, after deducting the usual amount for the serve fund and Income-tax, amounted to $8,538 \%$, from which it was recommended that 8 dividend of 11 , 5 share should be made. A more economical system of pex penditure had been introduced, whereby the charge for repair of way for the past six months was reduced to . and, as the last quarter showed 700l. less than the preceding, it was expected that a further reduction and be effected in the ensuing half-year. The number passengers conveyed by the rail last half-year was , It was recommended that about 2,000l. should be laid out in the erection of cottages on the banks of the ine for the convenience of the labourers employed on it s, while the rent would return the Company about 7 pe cent. on the outlay, and enhance the price of the land these dwellings would conduce much to the comfort of the men, and add greatly to the security of passengers, in case of obstruction on the line, or delay of the trains.

Dublin_Mect IRELAND
 The Guardians or modification of the present Poor-law adjourn for a month, and suspend the ordinary busin to adjourn for a month, and suspend the ordinary business, House of Lords on the Marquess of Clanricarde in the time, great difficulty sur in ollecting Mean places. In the county and city of Waterford in most places. In the county and city of Waterford and in Kilkenny scarcely anything can be collected. At the petty sessions of Carrickfergus, on Thursday week, a considerable number of persons, chiefly poor cottagers, were summoned for non-payment of the rate, in several cases Whig remarks, "are paupers, and fitter the Northern Whig remarks, "are paupers, and fitter objects them-
selves to be relieved from others." The Assizes in the different circuits to relieve menced this week, and it is said that petitions against the Poor-law will be brought forward at all the grand jnries, The Repeal Association met, as usual, on Monday, when Mr. Ray read a letter from New York, inclosing $4 \zeta .16$ s. and another communication from Judge James, of Boston, containing a bill of exchange for 50 o, being the subscriptions of "The Boston Association of the Friends of Ireland. The next document read was an address from the Repealers of Halifax, Nova Scotia, dated Feb. 3, accompsnied by a remittance of $80 l$. Mr. O'Connell addressed this meeting at great length, and explained his reasons for ab,
senting himself from Parliament. He said he was of great ervice to Ireland, and could do ere week's rent was an as it was now constituted.

## ounced to be $312 l .3$. 2 . <br> Coleraine.-The election of Dr, Boyd as the member

 for this place has caused great rejoicings among the Presbyterians. For a considerable time past, much excitement had prevaled regarding the result, not for both candidates were Conservatives, but in reasons, for both candidates were Conservatives, but in consequence of Dr. Boyd being considered fave of Scotland and Irish marriage question. This led many persons to interest themselves in the matter whose political views were opposed to both candidates. The town was guarded by troops of Lancers and constabulary, notwithstanding which, after the polling was over, the most determined mobs paraded the town, andmany persons were severely beaten. It is said by the many persons were severely beaten. It is said by the against, on the grounds of bribery, and for holding the situation of stamp-distributor.

## SCOTLAND

Edinburgh,-Dr. Candlish, and Mr . Dunlop, of Edinburgh, are now in London, on business relative to the affairs of the Church of Scotland. It is understood their object is to advise with Mr. Fox Maule on the subject of his motion, which stood for Friday last, but which was postponed by the death of his father-in-law, Lord Abercrombie, It is stated that, in the event of the prayer of the cause of non-intrusion at the bar of the House of Commons

Stirling. -In consequence of the demise of Lord Abercrombie, it is said that there is every probability that the Duke of Montrose will succeed to the Lord-Lieutenancy of this count

Glasgow.-The University of Glasgow has just conferred on Mr. Richardson, the author of the "New English Dictionary," the degree of L.L.D.--The local papers state that some of the unemployed operatives of Glasgow have been employed during the past week in breaking the ice in the streets, at the rate of $1 s$ per day. The great bulk of
them however, amounting to many thousands, are still without the means of subsistence.

Greenock.-The clergy, merchants, and other inhabitants of this city, have presented an address of condolence to Sir R. Pect, on the painful circumstances attending the Premier's reply, addressed to Archibald Yuill, Esq. :Whitehall, Feb. 15. Sir, -I bey leave to acknowledge the receipt of your letter of the llth inst., and of the address whici accompanied it. I request that you whil convey to those who have been parties to this address my
grateful acknowledgments to them for their condolence with mo on the loss of an attached and faithful friend under circumstances most painful to my feelings.-I am, under circumstances most painful to my feelin

Houser or Lords.- (Writ of Error).-The Judges were sum. moned to attend the hearing of the following case, and the fol-
lowing Judges attended. -Lord Chief Justice Tindal, Justices
Patteson, Williams, Coleridge, Maule Patteson, Williams, Coleridge, Maule, Erskine, and Creswell and Barons Parke, Alderson, and Rolfe, The Lords present
were:-The Lord Chancellor, and Lords Brougham, Denman, were:-The Lord Chancellor, and The Queen V . George Millis. - This was one of two cases
brought ap to House of Lords on error from the Court of Queen's Bench in Hreland, the alleged error being that the Cour the Establishment, but by a Presbyterian minister nunder the circumstances stated in the case, was not such a valid marriage
as made a subsequent mariage in the Church of England inis madd a subsequent mariage in the Church of englad to the
valid, and to render the parties contracting the same liable to preat length in the writ of error; after which the Attorney General, the Solicitor General, and Mr. Waddington, were heard
min behalf of the Crown, and Mr. Pemberton and Mr. Kindersley 3n behalf of the Crown, and Mr. Pemberton and Mr. Kindersley for the defcndant in error. The argament in support of the errur
was, that marriage beqg by the law of Ircland merely a cisi
contract, and not requring the presence or intervention of a clergyman in holy orders to give it validity, the marriage contract between derendant and Esther Graham was a legal and man should be deemed requisite, a Presbyterian clergyman was a clergyman recogmsed as such by the jaw of freland, was susfi-
cient for the purpose, and that therefore the marrage was a percient for the purpose, and that therefore the marrage was a per-
fectly good, legal, and valid marriage, although the parties marred were member of the Church of England, Aud no riage was invalid, and consequently the indictment for bigamy could not be sustained-that the intervention of a priest in hol matrimony, and that so far as the canon law was received int the Estaby, anded Church, it appeared to establish this point-that a person not episcopally ordained was not a priest in holy orders, hat a person not in holy orders could by approximating (no orders, so as to give validity to marriages between members of
the Established Church. On the whole, it was contended that, by the common law of Edgland, marriage was not complet man, and that that clergyman must be a clergyman of the Established Church. The Lord Chancelior put tos the Judges
 The Quecn v. Carroll.-The Lord Chancellor asked the Attorneyintended to rasse the same point as the Queen $r$. Millis. There Was not, in the special verdict, any allcgation that there was a
promise. It merely said that the Rev. Joseph Kelso performed the marriage ceremony that the ing to the rules of the Pres byterıan Church," without stating what those rules wre. The
House could not tell what was Incant by that. Lord Campbell sald, that in this cuse there must be an accuittal, for there could cause of conviction. Lord Brougham-The judgment must be affirmed, and he will be thereby acquitted. The question of

VICE.Chancelior's Court.- (Before the Vice.Chancellor of
England.)-Attorncy-General $V$. Shore.-This case, arising out of
the administration of the administration of Lady Hewley's charities, has once riore of the stake, and the spirit again to make its way to the House of Lords, upon the affirmative question, what denominations of Trinitatian Sectarians are entitled to the beneffit of the charity. By the terms of the found
tion deeds, made in 1704 and 1707 , the clarity wasintended for the benefit of poor godly preachers of Christ's holy gospel, and poor and godly widows of such preachers; and for the encourage-
ment and promotion of the preaching of Christ's holy gospel in poor phaces, and towards the education of young men designed to the class of Dissenters known after the Restoration by the name of Presbyterian Nonconformists, who were, like herself,
