It is, then, to a general Drainage Bill that we should look for that assistance which the circumstances of the case demand-to some enactment of a comprebensive character, which should merge all private and petty interests in the greater exigencies of the state, and which, compensating those who suffer, and trenching unnecessarily upon no man's right, should secure the effectual intersection of the country by water-courses, that should be as much public property as the turnpike roads. Without pretending to go into the details of such a Bill, we may be permitted to state what we conceive should be its general features. A board of engineers should be appointed, to direct simultaneously all the works that are to be executed; they should determine the lines of new water-courses, and the improvement of old ones; they should have power to take up land wherever required for their operations, compensating the owners ; and to compel commissioners of sewers, and other town authorities, to adjust their drains, wherever practicable, to those of the country. No applications from persons desirous of promoting drainage should be waited for; no deposits of money should be required: but the work should be carried on by public officers, for public interests, and at the public expense. No surveys would be required, for the Ordnance maps would supply all the data that are wanted. The cost of the operations might, in the first instance, be defrayed by Government, and be repaid by county rates, or by taxes levied upon those who make use of the public water-courses for their own advantage. The district surveyors might be charged with the duty of keeping all the water-courses in repair; and the cost of the operation might be defrayed upon the same principle as that nuw pursued with the high roads. If this were done, the whole island would be cut into a net-work of efficier : pub.ic water-courses ; and then the p(t-m) wh? $n: ⿳$ an t + dive in a quagmire would have the adva
joying it without interlerence, and without the disagreeable compulsion of exchanging his own 30 buskels of Wheat an acre for his neighbour's 40 .
It may, at first sight, appear unreasonable to levy a county rate to defray the expense of works which ale but the narrowly limite general dramage wruld nor be thus render all the drained districts more healthy, and to improve their climate: now this is a great advantage,
common to all, and one for which all should pay; besides, an increased productiveness of the land is a general, as well as a particular benefit. These are additional reasons why a general drainage, defrayed at the public expense, would, in our view, be preferable to all operations of a partial character, the whole cost of which would necessarily be thrown upon the land.
A bill which proposed such ends would be of inestimable value; and we had hoped that Mr. Pusey's, which has lately been brought into Parliament, would have been something of the kind. We regret, however, to find that it is of quite a different description. No general plan of drainage is proposed, but the work is to be executed in detail, according to the apwork is to be executed in detail, according to the applications which may be made to a doard of com-
missioners by parties interested. We greatly fear that the effect of this would be to increase the general expense and to diminish the general benefit; for it can be hardly possible to determine upon any consistent plan of operations where only a small part of a given district is to be acted upon. If, however, this fundamental error is left out of consideration, Mr Pusey's bill appears to promise a certain amount of
advantage. It is very carefully drawn, has evidently advantage. It is very carefully drawn, has evidently
been extremely well considered, and shocks as little as possible those interests with which we suppose it is necessary to be gentle, if it is to be got through Parliament. Instead, therefore, of insising any further upon our own views, we shall endeavour to point out in what manner Mr. Pusey's bill may, as we conceive, in what manner Mr. Pusey's for may, as we conpects, it seems open to practical objections, with reference to the very objects it is intended to attain. But this we must defer till another week.

Witkout interfering too much with the management of allotments as to cropping, which may generally be left to the good sense of the tenant, it may not be amiss to give a few hints, the result of expe-
rience, which may be useful to those who have never cultivated land on their own account.

The most natural course for an inexperienced labourer to pursue might be to imitate, on a small scale, the operations of a larger farm ; but he will soon find that in this way he will have but a small profit, and, in fact, be poorly paid for his labour. He must raise such produce as he and his family can consume, and which will maintan some pigs. His crops must not occupy the ground long, and he must have several in succession the same year. Those which require
minute attention, in weeding, hoeing, \& c ., and which minute attention, in weeding, hoeing, de., and which the farmer cannot attend to so well, from a want of
sheap laber best if he has a family cheap labour, suit the labourer best if he has a famil
The nature of the crops must depend on the soil. Potatoes, Cabbages, and Turnips, can be raised in almost any soil which is well cultivated; the best of these can be consumed by the family, the remainder will feed the pigs. Beans and Barley may be raised in small quantities to fatten a pig for winter provision; there would not be much profit if they were
sold. If Wheat is grown, it must be of the very sold. If Wheat is grown, it must be of the very
finest sorts, carefully dibbled and hoed, and sold for seed, so as to sell much above the market-price. Flax may be advantageously sown, if he can manufacture it into thread at home, and have it woven for the use of the family; otherwise the labourer cannot compete with the manufacturer. Every-
thing he sells should be of a superior kind, and thing he sells should be of a superior kind, and tion which women and children alone can afford, whose time is of no value when they are not at work
in the fields for the farmer. Let us suppose the soil to in the fields for the farmer. Let us suppose the soil to
be a poor sand on a subsoil of gravel: this will probably not require draining, but may be too dry in summer. The ground should be trenched and well mixed at first, but afterwards it need not be stirred much, for this will only cause it to be too loose, and let the moisture evaporate. If clay can be procured
near, whatever be its nature, it may be wheeled on, near, whatever be its nature, it may be wheeled on,
and will do good by consolidating it. Marl is still better, but this is more seldom at hand. If its texture cannot be improved by some such means, it must be frequently watered with the richest liquor at hand. Soapsuds, urine, the draining of a dunghill, will tend to consolidate it, while they will encourage the growth
of whatever roots may be in the soil, which, decaying of whatever roots may be in the soil, which, decaying
there, when dug up, will fill the interstices of the soil with organic matter, and sonn improve it. The dung
used should be well rotten and moist; that of cow used should be well rotten and moist; that of cows
will be the best, if it can be procured. The only Corn crops which may be sown on such a soil are Rye and Buck-Wheat, which will thrive in it. Turnips may be sown as soon as the Rye is cut, the ground being only slightly dug, or the stubble cut up by a
heavy hoe. They must be watered carefully till they come up, and invigorated with liquid manure: a small tank is consequently essential; a good crop may thus be obtained of the quick-growing sort, called the nimble Turnip, before winter. The Buck-Wheat
does not ripen, the haulm may be dug in before the flower is faded, and this will be almost as profitable, by giving a manuring for the next crop, as if the seed had come to perfection. Once in the way of raising
successive crops, the labourer will soon find out himself what is most profitable.

A heavy tenacious soil, if more productive, requires much wore labour in trenching, digging, ridging up for winter, and continual weeding; but it is more easily converted into a good mould than a loose sand, and the crops are surer. The great object is to dissipate the moisture by admitting the air as much as possible. Beans find here their proper soil, and so do Cabbages. Potatoes will succeed, after good cultivation, but not so readily as in a light mould; and as the crops are usually later, it is more difficult to have two in the same season. High beds, with deep intervals, are essential ; for the surface of the beds should never be trod upon, unless it be in very dry weather. Choice sorts of Wheat and Oats may be raised for seed, with a little attention, and will soon be eagerly purchased by the farmers. Mangel Wurzel and Swedish Turnips may be planted in spring to produce seed, and the little children, by keeping off the birds when the crop ripens, will come in for their share in the labour. We suppose that the labourer has a small vegetable garden near his cottage, which serves his family, otherwise he must convert a portion of his allotment into a garden. It is too much the custom of the English labourer to live on bread and meat only, without much cooking or variety; whereas the Continental labourer has his vegetable soups and stews, which, eaten with bread, are wholesome and savoury, and much more economical than bread and meat alone. His garden supplies him with a variety of roots and vegetables which are unknown to the English cottager. The thick-leaved Beet, for instance (Beta cicla,) which grows abundantly in the allied to it, are a great resource to the cottager, as well aã the close-headed Cabbages. With a small piece of sait pork, and plenty of these vegetables
stewed slowly together, and properly seasoned, a most wholesome and palatable dish is prepared. We cannot enter into particulars, but Paxton's Cottage Calendar, with two cheap tracts published for distribution by the Royal Agricultural Society of England, one on the Management of Cottage Gardens, and another who have let allotments, and who are desirous of improving the condition of the Agricultural labourer. $-M$.

We perceive, by an advertisement in this day's paper, that a new Society has been organised in Manchester for determining the merits of seedling flowers. It can hardly fail to meet with encouragement, if it is conducted with fairness, and if its judges are not
only well acquainted with the properties of flowers, only well acquainted with the properties of flowers,
but of unimpeachable integrity. This is the main point, attention to which may ensure success; but the neglect of which is certain to defeat the purposes for which the Society is established.

## ON THE TREATMENT OF SCARLET PELAR-

 GONIUMS.The first week in March, I commence propagating scarends of the branches of old stunted plants, taking them off close below the fifth joint, and inserting them either in brick-dust or in equal proportions of finely-sifted leafously been plunged in a warm frame until their contents had a genial warmath and moisture. These, when filled, any water, as I consider that to be freme cause of their turning black at the surface of the soil, especially when the nights are long and cold, and the atmosphere saturated with moisture ; they also strike root sooner without it.
Cuttings are often much injured by the vapour
Cuttings are often much injured by the vapour which condenses on the glass and falls down upon the leaves in
large drops : to obviate this, I place coarse brown paper aove the cuttings in the morning, when the sun's rays
first strike upon the frame; the lights are then turned over, wiped, and tilted at the back. After being freely exposed, they are, when dry, reversed ; the paper is taken
out and placed upon the glass, and the lights are shut down tight, as a close, moist atmosphere is necessary. When, however, a continuance of dull or wet weather occurs, and the lights cannot be turned, coarse brown paper
which absorbs the superincumbent moisture, is placed inside the frame. When firmly rooted, the plants are dipped in tepid water and planted singly in thumb-pots, sifted leaf-mould ond light loam, which had been previously warmed in the frame. Moss is placed at the bottom of the pots, which are again plunged in a as the plants require shifting, the soil is shaken from their roots, they are dipped in water, and repotted in clean pots of the same size, and treated in precisely the same manner as before. By repeatedly shaking off the soil, a mass of fibres is obtained in small compass, and the soil malke numerous rootlets. By placing Moss at the bottom
of the pots, the roots run freely amongst it, and are less liable to be broken; and by dipping their roots in water
the soil adheres more firmly to them when they are the soil adh.
fresh potted.
As soon as a mass of fibres is formed and the plants are to be shifted into 32 -sized pots, they are planted without the mould being shaken from them, in a soil composed of equal portions of fresh green turf from an old
pasture and half-decayed cow-manure, chipped with the spade and not sifted; plenty of drainage is given, with very little water at first; the shoots are all pinched off above the third leaf, and the plants are plunged again in bottom-heat until firmly rooted, when they are placed near the glass in a cold pit, and liberally supplied with strong liquid manure.
Towards the middle of June, the plants are plunged out of doors in a rather dry, sheltered spot, but freely ex. posed to the sun; here they will grow shorter jointed, and than in a wet situation. The required number for decorating the greenhouse is set apart from the rest, and the top shoot of each is trained perpendicularly, until three perfect leaves are formed ; the shoots are then headed at every second; the plants are turned, iu order that they may not grow one-sided, and the fibres are removed whenever they make their appearance through the holes in the bottom of the pots.
The plants for the flower-garden are trained so as to leaf are pinched off, and they are allowed to grow one-sided. In the second week of August they are tnken up and placed on a hard surface, sheltered from strong winds and heavy rain, but freely exposed to the sun, giving nothing stronger
than rain or pond-water, and pinching off the flower-buds as they appear. The ends of the branches are then allowed to grow, but the plants are treated in every other respect as in the two previous month. By the above mode of cultivation, they accumulate in one season the sap which they expend in bloom during the next; their
stems become firm and woody, their leaves harder and stems become firm and woody, their leaves harder and
less succulent, and they are better able to stand a severe winter without fire-heat than when allowed to grow luxuriantly until they are placed in their winter quarters.
Upon the first signs of frost they are placed in rows at right angles on dry coal-ashes in a cold pit, with their
tops one foot from the glass, and are protected from frost, first, with one mat tightened and supported one inch frome the glass, with two wooden spars placed across the lights at top and bottom, upon which dry hay is laid to the thickness of six inches, and above thât another wetted mat no difficulty in keeping out frost during the severe winters of 1839 and 1840. When the out-door thermometer stands about $40^{\circ}$ in the shade, the lights are taken off, so that the wind may blow freely amongst the plants; all decayed leaves are taken off; and as this is their season to shine on them for a short time, to dry up any dampness in the frame ; in fact, the plants are kept as dormant as possible.
About the beginning of February, the greater part of the earth is washed from the roots of the greenhouse plantBy
by laying them on a hard oblique surface and pouring water upon the balls, from a watering-pot, held several feet above them. They are then planted in clean pots of tam,
same size, in a soil composed of leaf-mould, light loam, same size, in a soil composed of leaf-mould, light loam,
and sand, in equal proportions, not sifted. The tips of and sand, in equal proportions, not sifted. The tips in the shoots are pinched off and the pots are plunged in gentle bottom-heat without any water being given. Cme dormant buds are then excited, and the plants become covered from bottom to top with leaves. When 68 , in a mixture of fresh green turf and half-decayed cowmanure, not sifted ; plenty of drainage is given, and the pots are plunged in bottom-heat until they bave rooted near thesh soin. They are then placea is given with caut tion, until the pots are filled with roots, when they are liberally supplied with liquid manure. The soil is then suddenly allowed to become dry, to check the luxaribuds. When plants and induce them to form bloomose them are ninched off, a top-dressing of sheep's-dung in fresh state is given, and they are copiously supplied wi strong liquid manure.
Early in April the
arden are fiow soil, and plunged in bottom-heat; when firmly rooted they are placed in a cold pit near the glass and liberally supplied with liquid manure. In the beginning of June they are planted out in the flower-garden, being to the surf with the fewest leaves undermost, pegge covers surface, and so placed that the branches of on covers the space occupied by the roots of another. this way they produce a striking effect, by having numeroun
heads of bloom standing at a uniform height above the heads of bloom standing at a uniform height above wind. foliage, and they are less subject to be destroyed by wit.
-Robt. R. Drummond, Minto House, Roxburghshire.

ON VEGETABLE MANURES. By Professor Charles Sprenge

## ntinueld from page 244

h. Vetch-Straw.-100,000 parts of air-dried ripe Vetchstraw consist of 41,990 woody fibre, 1,320 parts of wax, and 56,990 parts of substances soluble in water, diluted ley of potash. The hay of Vetches contains, cording to Boussingautt, in 100,000 parts, 1,570 parts than 1,000 parts.

100,000 parts of Vetch-straw contain of mineral sub-

| nces :-42 | parts of silica' |
| :--- | :--- |
| 0.955 | " lime |
| 0.924 | magnesia |
| 1.810 | " |

5.101 parts of mineral substances

100 lbs , of Vetch-straw contain, therefore, more than $4 \frac{10}{2} 100 \mathrm{lbs}$. of Vetch-straw contain, therefore, more than greatest infuence on vegetation. If we consider, moreover, that in $1,000 \mathrm{lbs}$. of Vetch-straw there is 10 lbs . of nitrogen, we shall see that one acre of land will obtain
from $3,000 \mathrm{lbs}$, of straw, besides the 135 lbs , of very imfrom $3,000 \mathrm{lbs}$. of straw, besides the 135lbs. of very important mineral substances, 30lbs, of nitrogen, which cannot but assist the growth of crops planted after being manured with Vetch-straw. This straw, however, is too good a fodder to be used as litter, so that it is only the more woody parts, rejected by cattle, that will reach the dungtill. In the field, it is more quickly decomposed than Pea-straw.
2. The Herbage of Potatoes. - 100,000 parts of the air-dried herbage of ripe Potatoes contain of mineral substances :-

| 0.801 | parts of silica |  |
| :--- | :--- | :--- |
| 2.918 | " | lime |
| 0.488 | $"$ | magnesia |
| 0.138 | $"$ | potash and soda |
| 0.052 | $"$ | alumina |
| 0.058 | " | oxide of iron |
| 0.044 | " | oxide of mangunese |
| 0.032 | $"$ | phosphoric acid |
| 0.245 | " | sulphuric acid |
| 0.010 | " | chlorine |

4.786 parts of mineral substances.

Since 110 lbs . of ripe Potato herbage contain nearly 4 lbs . of mineral substances beneficial to vegetation, it follows that this kind of baulm is more valuable than it has been hitherto considered, and that it ought to be conreyed either to the stables or the dunghill, more especially as it is rich in nitrogen ; Boussingault having found 23 ibs. of nitrogen in $1,000 \mathrm{lbs}$. of dry Potato-straw. Therefore, from 3000 Ibs. of Potato haulm one Magdeburg acre of land will receive 69 lbs . of nitrogen, which, as we shall see under the head of mineral manures, is, by itself, a powerful manuring agent. The green herbage of Potatoes contains still more mineral matter, especially potash.
The woodiness of Potato-straw renders it difficult to decompose. If it is placed at the bottom of the dunghill, where it is too wet, and excluded from the action of the atmosphere, it will be taken to the land in an undecayed state. It is, therefore, better to pack it in the middle of the dunghill, so that it may become sooner decomposed by the heat of fermentation.
3. Rape-Straw.-100,000 parts of air-dried straw, with the shells of the ripe fruit, contain of mineral substances
0.080 parts of silica
$\begin{array}{lll}0.810 & " & \text { mame } \\ 0.121 & \text { magnesia } \\ 0.883 & " & \text { potash } \\ 0.550 & \text { " } & \text { soda }\end{array}$
$\begin{array}{ll}0.550 \\ 0.090 & , \\ \text { soda } \\ \text { alumina, }\end{array}$
0.382 " phosphoric acid
0.5170 " $\quad$ sulphurie
3.873 parts of mineral substances.

100 lbs . of Rape-straw, therefore, contain more than $3 \frac{1}{3}$ libs. of powerfal mineral manures. It is more especially valuable on account of its great amount of chlorine, soda, sulphuric acid, phosphoric acid, and potash, and therefore deserves to be at least added to the dunghill, if it is not used for litter. The proportion of nitrogen in Rape-straw has not been yet ascertained; but judging from analogy, we may assume, that it will not be less than that of Bean-straw. As the straw of Rape is very woody, and consequently difficult of decomposition, it is best to place it in the midst of the dunghill alternately with layers of dung.

AMATEUR'S GARDEN.-No. XVI.
As the article on the "one-shift system" of potting plants appears to be exciting attention, I think it right to Btate, that so far from recalling anything that I have Written on the subject, I am daily more convinced of the superiority of the practice. The only point that I need notice in the remarks of "Observator" is his objection to large one. The same objection was urged against it by several of my friends before the article was written ; but as I have used it during the last seven years, to the extent of some thousands of pots, and in various sizes, from large Orange-tubs to small cutting-pots, without in one instance finding a plant injured from being water-clogged, I think I am justified in recommending it. A few days back I had an opportunity of examining some Pine plants that in the autumn were drained with the inverted pots, as a guard against worms, and I never saw plants better rooted, or roots in a more healthy state. In this case the inverted pot was used without any other drainage, and
the soil filled in to the bottom of the pot, and there was the soil filled in to the bottom of the pot, and there was

Indeed, I doubt whether we yet fully appreciate the utility of the inverted pot ; and while Observator and others may remain sceptical, I am sanguine in being able to prove
that small hollow cones, passing nearly through the soil, will be of the greatest utility in large pots.
While on this subject I may state that I did not recommend it as a cure for all sorts of evils, nor with the expectation that every one who tried would be successful. Certainly, the man who cannot grow a plant tolerably well fore of his proceedings in the management of the large one, will never perform any extraordinary feats with it ; but I believe that any person who will take the trouble to make himself thoroughly acquainted with the principles make whiceif theroughly acquainted wise the principles explain them in my former article, and as they are exemplified in some leading and other articles, will grow plants better than they can be grown in any other manner.
That many will fail, I am fully prepared to hear, and should a majority not succeed I should not be surprised, but this will not be from any fault in the system, but from its not being properly carried out. All good cultivators
acknowledge that it is a good system for most plants ; acknowledge that it is a good system for most plants;
every day experience proves ;to us that plants grow the best when planted proves ,to us that plants grow hich approximates the nearest to nature, which gives a fine porous body of healtby but not stimulating material for the roots to work in must be the best, because it is the nearest approach to nature that we can make in our pot management. It is of the first importance that the pots should be properly drained, and the soil used rough and turfy. If these things are attended to, and the plants -W. P. Ayres.

TRELLIS FOR CLIMBERS

TREATMENT OF ROSE DE LISLE FOR STOCKS.
About the first week in August cuttings of the halfripened wood should be inserted in equal proportions of finely-sifted leaf-mould and sand, placed on a gentle hotbed, and shaded from the sun. When firmly rooted, they should be potted into large sizties, in a soil composed of chopped turf, leaf-mould, and sand (in equal proportions, and not sifted), and plunged in bottom-heat in a close frame, giving them but little water, and completely shading them from the sun until they are firmly rooted in the new soil; air may then and when the plants can bear the sun and less shad , without their frome from which the liohts are removed placed in a cold frame, from which he ligits are removed during the day, and tilted, both at b
night, when the weather is favourable. Throughout the winter they watter end of April they severe frost, and tow in rows in rather poor sandy loam, should be planted out in rows in rather poor samy the plants must then having their roots barely will cause them to send up suckers ; be pegged down, which win cause them to send to stakes, the strongest on each plant must be securem foth sides and all the rest cleared away. The soif for in width, and of the rows must be taken out about a foot in wian, and two inches deep, close with soil.
Under this treatment the plants will grow freely, and make numerous fibres. Early in the succeeding spring, the tops of the braoches must be cut back, more or less, and the ends of the young shoots pinched off, so as to cause numerous leaves at the extremity of the stocks. As soon as buds can be procured, and the bark separates freely from the wood, the stock should be budded in the common way; and three or four days after, the ends of
a cord to be fastened one foot below the inserted buds, and after the extremities of the stocks are bent down, the other end of the cord is to be affixed to them, so as to form a semicircle, with the buas in the centre on the upper side. By this concentration of the sap, the buds are almost immediately excited, and if neatly inserted and carefully bent, nineteen out of twenty will succeed Two or more varieties can be grown with equal success on the same stocks, by merely giving them a wider circle.
When the buds have formed about five leaves, the head of the stocks should be cut off close to the buds; they may then be tied up perpendicularly. The young shoots must be compelled to form heads, by pinching off their extremities. The bandages should be loosened by degrees, to allow room for the stocks to expand
As the De Lisle Rose is easily propagated, no lover of standards should be without it; is is, mareover, quite as hardy as the common Dog-Rose, but superior to it for the above purposes, as it can be budded from six inches to siz feet high, with more certainty of success, and it is also less liable to send up*suckers. It answers equally well for forcing, and for growing in the open air.-Rober P. Drummond, Foreman, Minio House, Roxburghshire.

ON THE CULTIVATION OF THE ORANGE-TREE IN FRANCE, in the $16 \mathrm{th}, 17 \mathrm{th}$, and 18 th CENTURIES.
During the eighteenth century, the art of gardening made considerable advances under the especial patronage of Louis XV. This prince, who was fond of botany, in which science he bad acquired much knowledge, formed at rianon a private garden, composed of valuable plants and sarubs, which he amused himself in cultivating. This taste in the king raised a spirit of emulation among the royal gardeners, which became of the highest service to the art. Every year, by his orders, seeds, new trees, and
 various parts of the world; and France, perhaps, acquired more in 11 ing rega out tor under those our predecer pull establised 1 nurseries, ait ther hitibe distributed gratuitously to private persons such seeds, plants, or trea, as were conside bencial, bor proper to bring into general use. It was in his reign that the bothouse and the shove were ist brogh desorve operation. These are sufficiently curious to deserve a more detailed account. The great expense of the war in 1781 caused many of the above establishments to be the eighteenth century.
The inkabitants of the South of Europe must of necessity rank first in the art of pleasure-gardening. Nature having given them a more serene sky, a milder temperature, a beautiful verdure, both early and continuous, seems to have left nothing to the attention or care of man but the taste for decoration. Thus, almost everything has been invented that could enhance the graceful or laxuriou ornament of those delightful spots. But the more useful discoveries have been made in northera countries, and it is easy to conceive that the necessity experienced to struggle constantly against the severity of a cold clinate and uncongenial soil required the greatest industry
When the Orange-tree was first introduced into France and attempted to be cultivated, it became a matter of serious consideration as to the best means of protecting it from destructive froste during the winter. It was then planted in tubs, in large boxes, or in glazed earthenware
 pans, hid as the cold we ind entaled conside exp to ince this fine tree to grow had become so des elo freely like others, withoal eximaing enterprising to that some persons were found in the form of groves or plant them in the open ground, in the form of groves or thickets. The warmth of the climate in the South of France caused these experiments to succeed. Beaujeu, in 1551, represents Provence, and especiaty tae coast of Hières, to abound with Orange gris. Che same tors still exists ; the inlabitants of Hieres, Grasse, Toulon and several other aistia Orange-trees as formerly, in the open ground, and it is said that those trees a
Those in the Northern Provinces who attempted the samese tivation found the much was necessary and that they must be protected under hats covered with mats, or under conical coverings made of cork. "Good gardeners," says Liebaut, "always took care, previously to covering them up for the winter, to cut off all the flowers, buds, and even the new and tender branches."
There were some groves of Orange-trees in the garden at Trianon, at the end of the seventeenth century, which had been planted there in the preceding century, and were considered great curiosities. La Quintinge observes, that they had succeeded in giving to the cases used in covering them forms and shapes of the most pleasing decorative character. Experience nevertheless proved that such means were not sufficient to protect the plants in hard winters, and that the case, besides the inconvenience of excluding the revivifying influence of the sun, had also the effect of smothering the plant, by entirely depriving it of air. It was not easy at first to find a remedy for these disadvantages. The Elector Palatine, however, in the sixteenth century, applied one of a very expensive character. He built a large movable wooden gallery in his ards buit inclosed the entire range of his Orange-trees : this gallery was furnished with glazed frames or saghes, through which the
sun could penetrate; and it was also heated by stoves in the German fashion. In the spring, when the weather became mild, this temporary erection was removed, and enabled to enioy an autumale By this means he was and fruits at all times of the promenade amidst flowers de Serres both speak highly of the invention, and describe it as most wonderful.

The former writer says, "Nothing of this hind done at the Court of France; no doubt the low ebb of the finances of our kings, crippled as they were by foreign and civil war, was the reason. But he adds, that some of the nobility had movable or flying galleries, like the
Elector at Heidelberg, less magnificent it is true, but conElector at Heidelberg, less magnifi
structed upon the same principle."
More economical methocs were also employed, one of which is thus described by Liebaut:-" Plant your trees," says he, "near a south wall, which may be little better stone columns, 13 feet high and 8 feet apart, connecting t lem hy a sunall joist, hy way of architrave; then cover upon the joist, and the other against the wall. In the south it will suffice to close your Orangery on both sides, leaving the front facing the south entirely open. It would facilitate the entry of the sum; but in the north the whole building must be inclosed, and it must be heated either with a coal fire or small faggots of wood, which consumes without smoke, unless you choose to imitate the munifiyou may remove this apparatus, and your trees may spring you may
P. Ferrari, an Italian Jesuit, after eulogising in his work the French people for their industry and skill in having found means not only to preserve their Orange-trees, but adapted for the tree by nature, adds, "In the month of October they were removed into a large building erected for the purpose, and protected from the cold by double windows-the exterior of glass, and the interior of paper. Attached to this building was a much smaller one, in
which was built a fire-place, with a thin plate of iron let Which was built a fire-place, with a thin plate of iron let
into the wall at the back; a fire being lighted in the grate, the iron plate gradually became hot, and a genia Warmth was thus diffused over the entire building.
It is surprisiog that instead of the imperfect methods of heating already described, stoves had not been adopted, since they were in general use in Germany. They began seventeenth century. La Quintinge mentions them, but they were either found to be imconvenient, or their management was not understood; since he advises lighted lamps and torches to be kept in hot-houses, to keep up the necessary temperature. It is also still more astonishing that the French having adopted a kind of hot-house for preserving Orange-trees, did not employ it for other trees, for the purpose of producing early fruit. But it has becnalready nobslity, was considered so luxurious and magnificent, that no expense wal spared in its cultivation ; whilst other plants requiring no extraordixary care and being within very body's reach, were thought nathing of. It must not known, and the invention here mentioned could scarcely be applied to anything but espaliers; thus the use of both were adopted about the same time.
When we wish to grow Fig-trees in boxes," says Quintinye, "in the month of January a pit 18 dag at the oot of a wall focing the south, in which the boxes are then placed; the whole is afterwards covered with large wall, and these again covered up with great care, to pre-
vent the frost from penetrating." This is truly a hotvent the frost from penetrating.
house analogous
In the works of St. Gelais, 1719, will be found verses addressed to some ladies, with a present of Cherries on the
first day of May. I am ignorant as to how they could procure such early fruit without the aid of hot-houses. find only in Champier, (De re cibaria) that the inhabit ants of Poitou sent every year to Paris, by coach, early Cherries ; and that they procured them by putting lime to the foot of " "ree, or by watering its roots with hot water. I culd produce ripe Cherries by the end of A pril but in any case, if they were thus procured by St. Gelais, he would have little reason to boast of an invention which makes a tree bear fruit at the same time that it kills it. Xt is only by the use of the hot-house that early
After all, those who feel curious to know what art has enabled us to accomplish in later years, have only to compare it with what it was in the hands of Quintinye, who was the most skilful Gardener of his time, and layd all having supplied the table of Louis XIV. with Strawberries at the end of March; Green-peas in April; Figs in June Cabbages, Lettuces, and Asparagus, in December and January.
Among the good foreign fruits that have been made to grow in hot-houses, one of the first is the Pine-Apple. It was brought from our American colonies in the sevenn eenth century, and at first was transmitted from thence his Vayage des Anatilles. Certain curious collectors finally procured some of the plants to be sent home; placed them with tranos, and notwithstanding the expense connected environs had sotion, the gardens of the capital and its be sold even in the public narkets.

The common opinion as to the Orange-tree is, that it originally came from China, and was introduced into our particularly the "Dictionne d'Histern books, an states, gardens of the Comte de Saint-Laurent, the first Orangetree planted in Europe, which became the parent of all those we now possess. The fact is not absolutely impos sible. Few trees live so long as this; and we know that about the middle of the eighteenth century there existed at Fontainebleau, the famous Orange-tree seized in 1523 from the Constable of Bourbon, when, after the defection of that Prince, hil effects were contiscated. It is, however,
unfortunate for the Portuguese story that we have evidence of their existence in France long before the Portuguese of their existence in France long before the Portuguese belonging to the House of Humbert, is mentioned a cer tain sum paid for transplanting Orange-trees.
Henri IV. caused an Orangery to be built in the garden of the Tuilleries, which was not destroyed until the time of Louis XIV.; when Le Nôtre altered the plan of the garden and adopted that beautiful arrangement which is blished the silk-manufacture in France, and was desirons to encourage everything connected with that branch of commerce, originally intended this building, says Sully, hot to cultivate Orange-trees, but to raise silk-worm from eggs, which he had imported from Spain
Louis XIV. was passionately fond of this tree, doubt less the first in our gardens for its elegance, its pleasing nificent Orperme, its flowers, and its fruit. The mag the winter is still considered as one amons the $m$ drees during osities of Versailles. This building, from the designs o Mansart, formed a gallery of 480 feet in leagth and 38 feet a height, with two wings, each 360 feet in length. In the Spring, when the mildness of the season permitted the exposure of those delicate trees to the air, they were placed Jasmine, which, hiding the boxes, and allowing only th rree with its head full of blossoms to appear, exhibited the gave those brilliant fêtes in his gardens, which among oreigners made his reign almost as celebrated as his con quests, the directors, consulting his taste, always employed Orange-trees in decorating the vestibules, arbours, and of the grand Gallery of Versailles was Orange-trees, ever partition between the windows held four of them, eacis metal. Some were also placed in the billiard-room; in fact, the Monarch would have them in his private apartsecret of making them bear flowers all the year round They selected for this purpose certain trees, which they allowed to shrink or wither for want of water; when the and peculiar process; in a short time they began to put orth fresh Ieaves and flowers, and were then taken to the Palace. These could always be replaced, by employing Great lords and rich private persons adopted the same Cyle of magnificence in their gardens. "We went to clagny, says Madame de Sevigne, (in 1675,) "the gardens are finished. You know the style of Le Nôtre; he has left a little dark wood, which has a pretty effect. He has a forest entirely of Orange-trees in large boxes, here persons walk in the slaade; and in order to hide the boxes, there are on both sides palisades of the same
height, decorated with Tuberoses, Roses, Jasmines, and Carnations. It is assuredly the most beautiful, the most surprising, and the most enchanting novelty that can be imagined." The same lady (in 1679,) speaking of the marriage of Mlle. de Louvois, on the 24th November, says,-.." They had made Spring return once more-every"
where abounded Orange-trees in full blossom, and fowers boxes. At another fête, given the 9th February, 1680 the Hotel de Conde, she mentions "Orange-trees loaded with fruit and flowers," Indeed, the fashion became so iven by of Louis XIV., there is not a single one in which this favourite decoration is not mentioned.
The Orange-tree still bears the same character : there are few gardens now without them; but the climate seldom allows the fruit to ripen. The Oranges sent from while in our northern provinces they eeldom gather anything but the flowers, which forms an excellent source of profit, being much used in preserves, pastilles, marmalade, omfits, ices, and liqueurs.
The Maltese Orange is now considered the best, and those from Portugal the next. The latter in the 17 th cen tury were so esteemed that a present of them was considered worthy of being offered to the King's children. Monsieur (the King's brother) carne to see me," says the Duchess of Montpensier, in her Memoirs, "and gave
me some Oranges from Portugal." Moliere, in describing the comedy which formed part of the celebrated entertain ments given at Versailles, in 1688, by Louis XIV., mentions that in the first scene appeared a magnificent display of Oranges from Portugal, and all sorts of fruits in 36 baskets.
De Serres observes, that in his time, even in Italy, only four different kinds of this fruit were known, viz., the Orange, the Citron, the Lemon, and the poncire, a strictness reckon a fifth, called. Adam"s Apple (Forbidden
fruit)," says he, "but it is not worth eating, and is only used to clean and scent the hands." This distinction still Porta, two of Citrons, and three of Oranges- that is to say, the sweet, the bitter, and those which were neither one nor the other. L'Instruction facile pour connaître toutes sortes d'Oranges et de Citrons (in the year 1680 ) eckonsin the four classes 80 varieties. we now reckon 126 According to Lemery, 1705, the ladies of the Court, in the 17 th century, carried in their hands sweet Citrons,
of which they bit small pieces occasionally, in order to mprove the vermilion hue of their lips.
In the play of "The Miser," by Moliere (1667), Harp agon, excusing himself to his mistress, who had come to in to be brought sweet Citrons, and some confectionery, that I have sent or on your account
The students of the University were also in the babit in which thg The offering was presented in a crystal glass, and was called Laudat, from the holiday granted to the students at the fair bearing that title, held at St. Denis, near Paris.
This custom was abolished fabout 1700. - Extracted

## HOME CORRESPONDENCE

Draining.-Your correspondent " J. J. M." has acted udiciously in regard to his own interest, and generousl towards his tenant. I have no personal knowledge of that gentleman, but I probably am well acquainted with est to bim and others a few remarks on the very im portant subject of draining. His difficulties are common to many others, having on bis farm to deal with bottom as well as surface-water; with wet gravelly peat-soil, and with very tenacious clay; both circumstances requiring great judgment and care, and very different modes of proprove. In the former case, wet gravels are seld bottom under the springs of water, often from 5 to 10 or more reet deep, and requiring a much larger tile placed upon a that one drain bottom is not sound, and it often happens acres, costing much less than frequent top-drains. In sele case of very tenacions ciays as a subson, f clay (into which the water will not percolate with sufficient readiness), and to be effectual they must be placed as nent the plough as may be done with satety. And fur ther, to prevent disappointment, it is sometimes absolntely the drains, directed by a spirit level, and not left to the ye of either master or labourer. I have, this spring been deep draining some wet meadow land, and sub-
sequently irrigating it under the direction of a person from Warwickshire ; and the extreme accuracy and effect with which this has been done, both above and below, induces me, through your Journal, to invite your correpondent, "J. J. M." or any other gentleman to whom an inspection may be convenient. The expense of irrithe plan of level floats is not more than from $2 l$. to $3 l$. per acre, and but a very trifing annual outlay is in-
curred. A two hours' ride by the Eastern Connties Railway to Witham will accomplish this object.-Henry Dixon, Witham, April 19, 1843.
Effect of Manures upon Insects. - In several of your leading urticleg you have alluded to the subject of manures. It appears to me, that in all discussions on this important subject, two points of great consequence have been omitted-or, perhaps I should say, one subject with two applications to the soil have on the insect world, whose sustenance is found in the different forms of vegetation. There can be no doubt of the correctness of the principle of returning to the soil such matters as form the chemical composition of the plant; but I am led to beleve, that, whereas much of the failure of crops is due to the ravages various insects, so will their success in a great degree depend on the defence afforded thent from their tiny but owerfui enemies a is this pointrg to thilosorhers have not suticiently noticed. It is my belief that many manures (as they are called) act principally with be exit to plants, by killing slugs, worms, and the countless muriads of nameless animalculae that prey on the roots, Lrunches, leaves. map, fowers, fruit, ©c., of plants; whle another class of manures operates a diversion in favour of the vegetable, the former class are, I conceive, the various acrid salts, goot, lime, \&c., and among the latter may be reckoned grains, $n$ alt-dust, olkake, and even green crops, ploughed or dug in. Pray let us have a yarn from you on this sub-ject.- W'oodend.
Guano--At p. 52, a correspondent suggests that guano might be procured on our own coasts. Ifear your remarks on that subject are too true ; noy opinion is, that our climate is too moist, for which 1 will give the followfew trees on a small island about 60 ft diameter, which, in the breeding season (Erom April to June), is literally covered with the nests of the smaller gull and duck. I mould, at least 25 inches deep, with a few Nettles, and
here and there a tuft of Grass like Cocksfoot.-2. An ac quaintance of mine has an island in the next barony (Ennis), with a pool of fresh water on it, round which the Wild geese gather and rest; the consequence is, that more than half an acre is spoiled; that is, the grass becomes so that they are the only stock which the sea is so rough Again, the rocks adjoiaing this island (the Stags), are covered with the gullmtribe in the breeding season; and yet in the autumn, when I was on them, you would only Beet here and there with the Sea-Pink, and a species of Spinach, and when grown in a garden, serves as auch for severul years ; each plant forming a bed 6 ft . square, and nereasing by the joints like the Fioringrass. It is also me Head as of the Stams. may say the same of Downpatrick Head as of the Stags. Whatever guano there may be upon it, is soon washed away; and l should suppose the
answer from your Scotch correspondents will be to the same effect.-R. G., Ballina.
Bees.-I send you the following plan for managing Bees common straw hives, so as to obtain a portion of honey without destroying these useful insects, in the hope that it hay interest some of your readers :-Put a swarm into a ail a piece of wood, 4 in . long, 3 in . wide, and in . thick one side of the lower part of the hive, cutting a hole $1 \frac{1}{2}$ in. long and $\frac{1}{2}$ in. high through the straw and wood. Attach a similar piece of wood to another straw hive, and nsert in the latter a tin pipe, made of half a sheet of tin, the bottom by a round bit of wood, and secured at the top to a ring of wood 2 in . in diameter inside: a cover of wood, turned to fit the wooden ring, will effectually close the pipe, which is intended as a ventilator, and for the pieces of wood in contact, on a board 3 ft . long, about 1 in . thick, and 18 in . wide, with a projection in front for the Dees to alight on; the board being movable, and resting on four posts about 2 ft . high. A slip of tin must be placed second hive until the first, or breeding hive, is full. A canvas cover, 1 yard square, painted white, and nailed in above the hives ; back to wooden rods, should be spread must be cut, to correspond cover holes, 4 in . in diameter, in the top of the hives. These holes may be secured against wet by covers made like cones, with a heavy iron ring at the base, and a wooden knob at the top. The about $8 s$., which will be ade oy any person at the cost of too expensive for cottagers. In April, 1842, I fitted up, swarmed inner above described, a hive of Bees which fitted up in the same way as the parent hive. The parent hive was marked A, the swarm A a. In July I allowed the Bees to enter the side hives by withdrawing the slips of tin. The communication between the hives was cut off in September by replacing the pieces of tin. I then opened doors from the side hives into the open air, placing on the outside with a piece of talc hanging by a thread This talc formed a trap-door, which the Bees could easily push open in the hive as they endeavoured to escape, but which prevented any ingress from the outside. In a few hours all the Bees in the side or store hive of A a made the escape, excepting 12 , which flew out when I carried of the best honey, free from Bee-bread or young Bees. without destroying a single Bee. In the store hive of A, obliged that the queen was strying, and I was therefore although many Bees died. From A, I obtained 10 lbs . of honey, equal in quality to that from A a. The trap-door interesting work on Bees.- Wilse Brown, Egglestone, arnard
Bees.-At p. 174, "P. P." has stated that those who Write on Bees in these pages would benefit by perusing the Encyclopædia Britannica. It appears to me, however, that there are some things in the article on "Bees" contained in that work, which Mr. Rochet, the author, ought of the mave countenanced. For instance, when speaking the authority of Geoffroy, that "Bees first collect a certain quantity of pollen, which they knead together into a ball, miglat place at the moiddle joint of the hinder feet." This eady by the one to think that the little balls were made (not their feet), instead of being accumulated hinder legs my. I have shown how this curious process is done, in busp hunt. Mr. R , farther observes-s In me many a gather large quantities at once, the Bees are sometimes brushed to roll their bodies in the flowers, and then to dispose of as before them into two masses, which they story of the hedgehog rolling itself amongst Apples, and Bees With it, it is only pollen in that way. If they are dusted an abundance-the Frollyhock enter flowers which contain remarked, however, that there for instance. It may be species, which collects there is a rare Bee, of the wild neath its abdomen, which ale admirably adapted for such a purpose. At present, want of time prevents me from oceeding farther with this subject. I shall, however that "Long experience has taught him, that as he turns
up a hive, and gives some taps on the sides and bottom, the queen immediately appears, to know the cause of alarm, but soon returns again amongst her people." If he would wrobably say, "Yous who understood Bees, queen wonld appear, to answer your call." In giving credit queen would appear, to answer your call." In giving credit With regard to Bees closing their door-ways, the author mentions, from high authority, that Bees construct a thick mentions, from high authority, that Bees construct a thick Wall, which barricades the entrance, and resembles a re-
gular fortification-indeed, they often have recourse to gular fortification-indeed, they often have recourse to Bees. However plausible this may be, $I$ have no hesitation in saying it is founded in some mistake, and that Mr. R. ought to have had better grounds for asserting that "This single trait in their history is a sufficient refutation of the theories which ascribe all their actions to the operation of a blind, indiscriminating instiuct, and would exclude every species of foresight and reflection." To this Chave little to say, but must leave the reader to form an opinion about it for himself.-J. Wighton, Cossey Gardens.
Blue Flowering Conservatory Plants.-The following is a list of blue flowering plants suitable for a conservatory, Mexico. Sálvis patens, Aug, to Oct. ; S. polystáchya, Oct. to Dec.; Tradescántia pulchella, July to Aug. New South Wales: Comesperma grácilis, April; Solanum Oct.; Scévola suavéolens, Aug. to Sept. ; Dampiera stricta, June to Aug.; Patersónia sericea, June to Aug. Sollya heterophylla, July; S. Jinearis, June to Aug.; Har denbérgia Comptoniana, March to June; Plagiolúbum ilicifolium, and chorozemifolium, March to July; Orthrosanthes multiflora. June to July; Scutellaria húmilis ; June to July. Plectranthus incanus, July to Aug. ; Dianella longifólia, Aug. ; Hovea celsi, March to July; Dracæna nutans, July to Aug.; Conospermum capitacum, June to Aug. Temperate Parts of South America: Tweédia cúrulea, onychina, Oct. to Dec. ; Stemódia chilensis, Aug. to Oct. : Sphacele campanulata, July to Aug. ; Solanum myrtifúlium, July to Aug.; Conanthera campanulata, March; CommeJuly to Aug. ; Conanthera campanulata, March; CommeWitheríngia pinnatifida, June. N. America: Clitori Mariana, Aug. ; Stokesia cyánea, Aug.; Ruélia biflora, July. Cape of Good Hope: Lobélia carćlea, Juhe to July; Lightfootia tenella, June to July ; L. Loddigésii, July to Aug. ; Agathæa coelestis, Feb. to Sept. ; Aster fasciculata, June; Cyanella capensi6, July to Aug.; Aristea capitata, July to Aug.; Agapanthus præcox, Jan, to Roella filiformis, June to Sept.: E'chium pyramidatum May to July; Plumbago capensis, Aug. New Spain Cælestina ageratoides, July to Oct.; Erýngium serratum Aug. ; E. comosum, Aug. ; Viola Paimensis, May to July Palma; Voarborescens, April to May, Spain; Goldfússia anisophylla, June, Sylhet; Státice arbórea, Aug. to Nov. Teneriffe; Lobélia heteromalla, Feb., Dominica; L. bego to Aug., S. of France; Phyteuma pinnatum, June to Aug. Candia; Anagallis monelli, May to Sept.,'Italy.-J.K. K. Altercliffe.
Killing Insects for the Cabinet.-I don't see that "D. H. W., p. 174, has given me a peg whereon to hang a reply His proposed plan is just as feasible as the following which I offer to his serious consideration:-On bringing the captives home, either "in thick letter-paper ${ }^{3 \prime}$ or otherwise, persuade them hands, (their fore-legs $s_{p}$ ) and send a smart electrical spark decent pace, they will hardly bave time to feel pain. In both cases the specimens may be a little spoiled, but tha may not be quite so disastrous ; and after a few are unne may not be quite so disastrous; and after a few are unne cessarily though mercifuly killed, the experimenter cabinet may chance to get supplied. Sombre-coloured in a butt of malmsey (i. $e$. gin or whisky, for either would be rather more costly than Clarence's medium) ; only the specimens whil soon become greasy" when placed in the cabinet, and require renewal. I give "D. H. W." every credit for his motive in adaressing me, but to be of use he must try again. I suspect the Millenniura wont cast up to-morrow morning nor be expedited by any etherẽal receipt for killing insects, and really your useful columns tilting-match. $-S$.
Vines.-I did not stop my Vines sufficiently early last year, and moreover, when I pruned them, I left the bearthe lowerbuds this spring have broken very feebly. Finding that they continued weak, and my intention being in future to spur the Vines, I determined, in order to throw more strength into these weak shoots, to shorten the rods ; and on the 5 th inst., I cut off between two and three feet from each of the eight Vines. The Vines were in full leaf, with the branches stopped one joint above the and the blossom within about ten days of the perion its expansion. On the following morning, I period of the Vines had borne the operation well, with the exception of one, which was bleeding. I applied a hot iron to the wound, but in about ten minutes it broke out again; I repeated the operation, but met with the same result; 1 tried seand a stick of sealing-wax in readiness, and the moment the iron was removed, while the wounded part was still dry and warm, I dropped some sealing-wax upon it, and pressed it down with my finger. I then put some
more wax round the wounded part, pressing it close, so
as to form a small cap, sbout a quarter of an inch in depth, upon the end of the rod. This answered completely: not the slightest moisture again exuding. On the 7th, it appeared that two of the Vines had been bleed ing a little in the night, but had dried up again without assistance. On the 8tb, I found that one of the last mentioned Vines had again bled a litcle during the night I therefore applied the hot iron and sealing-wax with the same success as before. The woundsare now, April 10 all quite dry, and the Vines are already beginning to show that the operation will be of great service to them. The Vines are five years old-G
Shrivelling of Grapes.-" Jemsheed " complains, at p. 230, that his friend, by giving air to his Vinery when the Grapes were colouring, according to the advice of an "Old Gardener," lost half his crop by shrivelling. By this he seems to intimate that the shriveling was caused by the air given; but in this I think he is mistaken I consider that it resulted, not from the agent applied, but from the manner of applying it. It seems to have
been the "Old Gardener's" opinion, that the temperature of the house was too high, and he consequently recor mended the admission of a little air, which, if done with judgment, might have proved beneficial; but instead of位, 1 presume air was admitted so freely, as immediatel the Vines and sbstructing the fog of sap, produce shrivelling. If "Jemsheed," after living in the neighbourhood of ibe Equator, were transported immediately to Greenland, I doubt not but that he too would feel a sirivelly sensation- Tyro.
Scotch and English Farmers.-At p. 209 a correspondent complains of the injustice done to the English by praising the Scotch Farmers so much as is now done which he considers is only a fashion. He produces a long train of circumstances which be supposes to be conclusive that English farming is at least as good, if not better than that of Scotland. Into this controversy I shall not enter I slall content myself, however, (after premising that among all those he enumerates, he make no allowance whatever for the inferiority, of the climate of Scothand counties in the south, to which he seems principally to refer,) with adverting to three of the circumastances men tioned. While he states clearly the disadyantages under which the English Farmer labours, he does not once ad vert to the physical, and not moral, difficulty, against which the Scottish Agriculturist has perpetually to con tend; nor does he seem to think it any merit that the latter has mastered by skill and perseverance this difficul achievement. Yet it has heen accomplisbed; and th people of Scotland- With a naturally less-productive sol amaller quantity of arable land, in proportion to the popalation-depend less upon foreign supplies than the that, with the England. Yo the lothisns and the Carse of Gowrie, Wheat is not cultivated in any part of Scotland but is abandoned as being unprofitable. Has he never heard of Stirlincshire, and of the tract of alluvial lanc on the banks of the river Forth, amounting to about 60,000 Scottish, or 75,000 statute acres, which grows Wheat profitably, and equal, if not superior, in quality to any grown in Scotland, and to much of that which is grown in Eng land? The crop of lust year ranged from 60 to 67 lbs . the bushel : and upon the everage of years that which was brought to market ranged from 60 to 65 lbs . I also beg to state that four quarters per acre are accounted a bad rop; and if, in the spring, appearances indicate much ess than this, it is usually ploughed down, and Barley or Oats substituted that five quarters is not a good crop that six is fair and fully an average, that seven is good, and eight superior ; but that instances are known in which a field of 30 acres, in the possession of Mr . Mowbray of Cambus, yielded upon the average of the 30 acres nine quarters and a bushel ; and some particular spots, which were minutely attended to at the time, yielded at the rate of fifteen quarters an acre. As nine quarters and a bushel over a 30 acre field is certainly a very large crop and the truth of it may be questioned, I deem it necessary o explain that Mr. Mowbray was a distiller as well as a farmer, and fed with his grains great numbers of catce The urine of his stalls he collected (mark this), watered this Wheat, if I was rightly informed, with it twice during the season, and the consequence was the very heavy crop which I have mentioned. I may further observe that the same gentleman, the next year, treated a large field of grass for hay in the same manner, and he had a crop of common I do not pretend to say. It shows, however, the capability of the soil. It is worthy of remark also that all this happened before the land was drained or sub-soil-ploughed. Is this amount of crop excelled even in the south of England, upon a field of equal extent? and yet this is neither in the Lothians nor the Carse of may add that Wheat is profitably cultivated in 28 or 29 of the 33 counties in Scotland, and that not many years ago Wheat was exported from Rossliire in the North Highlands, to London and commanded the price in Mark-lane. Your correspondent, moreover, says, "The Scotch Farmer may laugh at Turnips sown broadcust, as in the South of England ; but he should remember that, owing to the warmer and drier climate, they will not grow in drills : and that even in Scotland last year there were many failures in consequence of the heat and drought." This is the first time I have heard of these failures, though living in the heart of Scotland, and seeing hundreds of
farmers in the course of the season. When 1 mentioned the circumstance to several farmers, and asked if they
had heard of anything of the kind, they all denied any such knowledge. So that in whatever part of Scotland these failures occurred, they did not take place here. On the contrary, Turnins last year, sold in the field in small lots, brought from $14 l$ l. to $23 l$. per acre; according as they happened to be white, yellow, or Swedes. Our farmers of
the South, however, wish that they had a share of the heat the South, however, wish that they had a share of the heat and drought which are blamed for broad-cast sowing in though drilled, always grew best in the warmest seasons. I shall notice one more circumstance. Your correspondof the Agricultural Society of England at Livernool and Bristol were found wanting because of their weight ; in consequence of which they required about double the amount of horse-power to work them, and tbat the light English plough was preferred to them. Supposing this statement plough in Scotland is always wrought with only two orses, white horses; while the light Euglish plough in England is
frequently wrought with three or four horses? Will the frequently wrought with three or four horses? Will the or four English ones? Certainly not.-Not a Scotch Farmer, Stirling.
Fiys. - Your correspondent in the last Chronicle,
"J. N. V.," says he finds no difficulty in growing Figs on the back wall of a Vinery. As I am so unfortunate as not to be able to succeed, after much trouble, and with success is very general in my neighbourhood,
would be doing a great service if he would state the par-
ticular sort or sorts of Figs he prefers, and his ticular sort or sorts of Figs he prefers, and his mode of growing Figs against the back wall of a Vinery, that last year I did away with the trees, with the exception of a very small, delicate, pale-green Fig, which I have brought from the top of the back wall down the rafters, and in this way succeed in ripening my second crop late in the autumn; the first crop generally fallis. But in this way, you will observe, it occupies the place of a now showin for fruit; the Figs have attained about two-thirds their size, but when ripe they seldom exceed an inch and a hal in length. From my description, can you give me th the Nerii.]

Pollers Guano.-I used some of this valuable mixture on Celery last autumn, with very good effect. I also on Celery, the latest row he planted, and strange to say, was the first for use, and the finest in his garden.T. Brock, Barking

Laws of Farmers.-Ownershipof Agricultural Fences -Where there are two fields, separated by a hedge and ditch, the hedge, primà facie, belongs to the owner of the field in which the ditch is not; and if there are two ditches one on each side of the hedge, then the ownership of the Guy v. West, 2 Selwyn's Nisi Prius, 182 . An attemp was once made to establish a common law right in the from the interior line of the foot of the bank as the reasonable width; wiz., four feet for the ditch, and four feet
for the base of the bank, if there were no ditch. was decided no such rule about an eight feet width ex ists; and Lawrence Justice stated the rule about ditching to be this-" Nn man making a ditch, can cut into his neighbour's soil ; but usually he cuts to the very extremity of his own land: be is, of course, bound to throw the likes it, he plants a hedge upon the top of it; therefore, he cuts afterwards beyond the edge of the ditch, which is the extremity of his land, he cuts into his neighbour's Reports, 137. Proof, therefore, of the ancient width of the ditch is evidence that the owner's land did not extend of a hedge may maintain trespass against his cotenant, is the latter grub it up; but a mere clipping of the hedge may be justified, Voyce $v$. Voyce, Cow. Rep., 201.-C.K. ellar for Potatoes. - Your correspondent last Chronicle, appears to have formed a very good plan
for constructing a cellar for Potatoes, \&c.; but pray allow for constructing a cellar for Potatoes, \&c.; but pray allow feet wide, as I fear that the Potatoes will ferment if too many are crowded together in a mass.-- mega.
Yeast Plant.-The seed sent you by "
Yeast Plant.- The seed sent you by a "Lady" is that of Carduus Benedictus, or Blessed Thistle, with the virtues of which I doubt not but that you are acquainted.-
Thomas Abott, jun.- IYes; and they are not the properties ascribed to the Yeast plant. We do not think the figure is intended for the Blessed Thistle, which is not known in North America, except as an introduced plant, and that very rarely.]
Soot as a Manure for Pines.-" Scrutator," at p. 209, inquires whether any one has used soot as a manure for that $I$ apply it myself with success. When used fresh, is an excellent material for preventing worms from entering the pots: but the drainage must be good, otherwise it will soon lose its volatility. If strewed over the crocks the depth of a quarter of an inch, it will answer the above purpose; the roots of the plants will grow freely in it, and their extremities (as far as my experience goes) will have it mixed with the soil, and although I cannot positively gay that it was beneficial (because I had not an opportunity of putting a plant in all respects alike and under the same circumstances, with the exception of
soot, alongside of it) yet I can confidently state that it is
not injurious. The Pines nnder not injurious. The Pines under my care to which it is
applied are of a very dark green colour, are stiff in applied are of a very dark green colour, are stiff in
habit, and produce good froit.- Polyphragmos.- During period of many years, I mixed soot regularly in my moing a Pines ; many years, I mixed soot regularly in my soil for iving those plansider it to be an excellent stimulant or I used it in the following proportions for fruting plants rour wheelbarrows of friable turfy loam, cut three or four nches deep from a common or old pasture, at least one year old before using it, and to be turned and chopped two or three times during that period; one barrowful sheeps'-droppings gathered fresh from a common, and dried upon mats in an open shed, or weather suited, and pounded fine with a quarter rowfal of soot. The whole were well mixed together, but not sifted, a week or two before being used. For succes sion plants, I added two barrowfuls of leaf-mould to the ame proportions. In the above soils my Pines renerally had a healthy appearance growing freely and producing ood fruit for the By way of trying an , a number of succession plants from a small pit with a moke flue running round the interior. I added a little reeping to the old, turned and mixa on the top of the keeping about six inches of the old tan on the top of the
bed; I then selected 24 Queen Pines, which I expected would soon show fruit, turned them out of their pots, and arranged them in three lines on the tan, commencing first with the back line, sinking their balls abour three them one inch higher than the balls, with the same compost as above mentioned for fruiting plants, but not broken quite so fine as when used in pots. When planted, they received a moderate watering to settle the earth about their roots. The pit was kept ralher close for a days, untir the heat rose in the tan, they wore hen eldomy syringed overhead during the or May, 22 of the plyured to be watered at he by the of September they were all cut, and weighed respectively from 3 lbs . to $4 \frac{2}{4}$ lbs. each. None of the plants were above two years old when the fruit was cut. The two plants which did not fruit were fine strong plants, but they had to be emoved and potted when their more productive neighbours were cleared out.-J. Alexander, Carton Gardens. that we have for some time used soot as a manure for Pines at this place. We use it either by placing a layer immediately above the drainage, or as a top-dressing, by removing a small portion of the soil from the surface, spreading a layer of soot, and then replacing the soil on the top. Whichever way it is applied, the manner in which the roots seem to luxuriate in the layers of soot and the rich dark green of the foliage, compared with that benefit derived treated, bear sufficient evidence of the added that, as a preventive to worms entering the pots, soot is not effectual; for although it acts as such at first, and after it has been in the pot a short time the worms appear as much at thei ease in the layers of soot as in any other part of the ball *Trentham Hall
Wild Flowers of Germany.-Mr. Howitt, in his Rural and Domestic Life in Germany," - a book full o curious and interesting information,-mentions, in
account of a visit he paid to the Wild Boar Park at Hüttel dorf, near Vienna, where the Emperor of Austria keep up with the greatest care the breed of the old German wild boar, of which he has there nearly two thousand head that some were so tame as to come at the whistie of the keeper, and run eageriy as he shook one of the whi Comit says "Those trees, unknown in England, are as large a Apple-trees, and in autumn are covered with fruit of coral colour, as large as Cherries, but oblong. They mak used for dessert. The wild swine are particularly fond o this fruit, and as the trees were shook, and it pattered to the ground, they came running on all sides, and stood in the neighbouring thickets eager for our departure, when you infor forward and ravenously devoured it. it is be procured in this country? Mr. Howitt talks much of the extreme beauty of the wild flowers in Germany: fo instance, near Salzburg, where, he says, "By the road-side the most beautiful flowers con for tempted the hand. The leaves of the Christmas Rose were in abundance, shewing that in early spring its larg white blossoms must have greatly beautified the scene The Dog-tooth Violet started richly between the moss stones. There were pretty kinds of white and yello Daphne, a large blue Gentian, splendid blue and yello Salvias, with very large flowers, and the rich Moun rer Pinks grew in abundance." I think it would be very desirable if seeds could be procured of the Salvias mea tioned, as a "splendid yellow Salvia" would be a great acquisition to our gardens here; as would also a handsome hardy blue Salvia, which the Salvia patens certaing is not in scotland, as $I$ have never succeeded in press hav it through the winter in the open air, although a col taken great pains to do so-and I do not live in a cold degrees more severe than it is here.-Christina. [The wild Cornel is our Cornelian Cherry, or Cornus máscula, a common plant in nurseries. It was formerly grown good deal in England, bat has given way to other things. The Salvia with yellow flowers is probably S. glutinosa, also common in botanic gardens, and a showy species. No
doubt the Salzburg flora is very gay and rich; but people have not the same feeling for wild flowers when cultivated, as when they are hanging from their native rocks.]
Manayement of Home Manure.- I have lately read, with satisfaction, in the Chronicle, those articles which rector and magement Home and is to ve regretted that so little regara is paid to so important a subject. The attention of men of science has of late years been so much directed towards the war Manures, that farm-yard manure seems to have been with litsle a alogether, and farmers Sulphate of that Guano, \&c. ; while, in the management of their farm yard manure, they are as far back as they were fifty years ago. Cow-house and stable dung is thrown into the yard as if it were of no value; it is there allowed to be renched by every shower that falls, and its very essens the field in a slovenly manner, as if the more it was ex posed to the weather the better it would be. From twenty years' experience in rural affairs, I am of opinion that in that it is necessary for the farmer to keet his dunghill as secure from rain as his hay and straw. My ention was drawn to this subject some years ago, when in the service of a late nobleman, who allowed his princilabourers to keep a cow, with as much potato-ground their cow's dung would cover. In consequence of some alterations in the labourers' outhouses, one of them convenient place to deposit the dung in, he piled it up in corner of the barn. When the season arrived for planting Potatoes, this man's cow-dung was taken into the held with that of his neighbours, and their Potatoes the the man's Potatoes whose cow-dung was kept dry were the best in the field; and not only that, but the spot upon which his manure was spread could be traced out everal years after.-Coto. [No doubt. But it will never do to keep stable litter dry; for if you do, how is it to be decomposed? We are persuaded that the true wode of managing it is that described in a leading article a few drier it is then kept the better.]
Iron Stake-holder. -The accompanying sketches are tron from an iron stake-holder, used here to support of Perékia Bleo which I had found o secure by common stakes. This plan fully answers the purnose, and as I om not aware that anythinc like is is at present in use, it may probably be serviceable to those of your readers who may be similarly situated with myself. If made of suitable dimensions to accord to the stake or plant to be secured to it, it will, I think, be also qually useful for plants in the open air, such as standard and Pillar Roses, \&c., which are often injured by the manner in which they are usually supported. The lowe ye, $a$, is made with a female screw and a smalle han the upper one, $b$ and to sive and and ower part of the sta Being passed through the upper and screwed into the lower ne, the stak is supported without penetrating the soil its utility will, therefore, be at once obvious, both as re gards diminishing the risk of injury to the roots and the greater durability and strength of the support. The po must be selected of a proper size, so that the holder fit tightly to it, and it should be placed in the pot when the plant is fresh shifted; c represents a front view of one of the side supporters, a a transverse section; ande a sid view of ditto ; exhibits the stakeholder complete.-Joh Webster, Gardener to Mrs. Huskisson, Eartham.

Coverings on Vine Borders.-I observe that in the
Calendar of Operations," at p. 231, Mr. Beaton states that the mulching may safely be removed from Vine Borders, and the latter exposed to the weather. My men on the contrary, have been busy during the early part of the week in riving the Vine-borders extra protection, by adding more fermenting material. What will noy more northern neighbours think, who have followed the above advice, especially with their early houses? My registering thermometer came down the night before last (the 1lth to $20^{\circ}$, and ewen the metting on the fined walls (with fre) bad upon them a partial covering of snow. The thermo meter fell last ipht to 270 with a cold wind N N by W The hills around Eshton Gardens, Stcipton, Yorkshire

Properties of the Carnation.-I was not surprised to find a champion in favour of the very full flowers I so much condengned in the paper read by me on the 21 st of March, before the Floricultural Society. I ana, however, shown astonished that ${ }^{\text {" }} \mathrm{C}$. K. or any other person should draw an inference the very opposite to that in tended by the paragraph selected, at p. 230, from my paper. If he will re-peruse the paragraph, he will see that I found fault with Flora's Garland on account of the irregularity of its marking." Had "C. K." read the remaining part of the paragraph referred to, he could not have supposed me to have meant that, because a Carna-

THE GARDENERS' CHRONICLE.
tion was very full, it must, of consequence, be imperfectly marked. What I said was this: "If the principal characters constituting a perfect flower, are hidden by its extreme fulness, then fulness is not a necessary property; but, on the contrary, highly objectionable." In my criterion of a Carnation, I have endeavoured to be as explicit on this point as possible, by saying that "each row of petals should be regularly and alternately arranged above the other, so as never to be crowded, nor, on the other hand, to have a loose and gaping appearance ; in fact, the spaces should be ooly sufficient to display the colouring distinctly." "C. K." moreover inquires, whether "sup-
posing a flower is regularly marked with good forms and petals, and in other respects desirable, its being extremely full would be objectionable?" It is easy to suppose a
flower to have all the necessary properties which it should flower to have all the necessary properties which it should
posse8s, but the " extremely full "flower which "C. K." has imagined, would, from that very extreme fulness, prevent the markings in the petal from being seen; so that he could only suppose them to be "regularly marked." In deciding upon the beauties of a Carnation, I never only which is apparent to the eve; and if it is so full as to prevent these the "principal characters" in the Carnation from being seen, I then say a Carnation may be too gument against very full flowers."-R. Orson, 12, Hallplace, Kennington-lane. [Mr. Orson has here supplied the sentence referred to at a greater length than is given in our Report of the Floricultural Society; which, alMr. Orson's words.]
The Gooseberry.-I have occasionally observed the Gooseberry growing freely and producing fruit on Pollard Willows and other trees in Cambridgeshire, where vegetable decomposition has afforded sufficient nourishment. They this ancient town. A more remarkable instance, however, occurs in the garden of W. Dalton, Esq., where a healthy hrub is firmly rooted in the joints of the solid brick-work, three feet from the ground, and is regularly trained wit
other wall- fruit.-N. $N$. Hodson, Bury St. Edmunds.
Euphorbia jacquiniftora.-I have adopted the following plan for restoring naked specimens of Euphorbia jacquiniflora, having tried it with success, in February last, upou a plant under my care which possessed three long
shoots or branches, trained up to stakes about 3 feet high, with scarcely a sound leaf upon them. I pinched back each of the three branches so as to leave only three or
four buds on each shoot; these buds, with few exceptions, have all made young shoots; some of them are now six inches long, and all incline to a borizontal position. I again pinched off the top of the young shoot about ten days ago, and now I see they are forming flower-buds at the axil of every leaf. I expect soon to have a fine bushy plant in perfect flower. This was done previously to Mr. Beaton's plan of laying down the E. jacquiniflora appearing in the Chronicle. My treatment was similar to that recommended by Mr. B., With the exc
Planting in Ireland.- There seems to be a great impediment to planting in this country, from the want of formed round the stem, which is frequently full of water this is equally applicable to the Cabbage, and to large the ground, it becomes like plaster, and keeps that all the soils which I bave met with. The Potatoes very often suffer severely from the early autumnal gales. Suboiling and trenching does not seem to remedy it, as I have seen the same effect produced in a new garden where the
ground was trenched nearly 4ft, deep. Perhaps some corespondent might suggest a remedy; as delicate plants Suffer severely from it.-R. G., Ballina
Daniell's Manure.-II had occurred to me that this manure might prove a remedy for Wire-worm, but my expectaticns are disappointed. On Thursday last I placed some of these insects in a box of earth, seasoned with the were still alive. Saturday I found that out of ten, four be sill alive. Hence I conclude that this manure is not Lectrelied on for the purpose. I perceive in Johnston's sisting of March, 1843, p. 64 , that a composition conbas b or nearly the same materials as Daniel's Manure indeed other ingredients are added. In the early part o 1842, I persuaded a miller in an adjoining parish, to apply for a liceuce to manufacture the manure, which he accordthe accounts of its success have been discouraging manured 12 acres of wheat with it successfully, but the I spealk was ploughed in. The crops are not yet reaped, as pleasing as that presented by the land manured with lime.- As as that

## FOREIGN CORRESPONDENCE.

## Malacca-This country is subdued Rip Van Wink

 sort of a place, situated close to the sea-shore, and divided into two parts by a brook, dignified by the name of river The place is exceedingly the southern bank of this river The place is exceedingly quiet and dull, but green and calming, and excellentily adapted for study. The country characterized as the Rice district, being opend may be berally quite flat, and throughout the flat parts decidedly swampy quite flat, and throughout the flat parts decidedly swampy. a hillock higher than the other, and of considerable extent, the view embraces on the land-side a profusion of Cocoa-nuts, and strips or plains of Rice cultivation, extending inwards three or four miles, when the Great Forest commences, the districts between the two being dendron), which, particularly from a distance, have a scraggy aspect, and constitute one of the botanical features of the province. The sea-view is extensive; to the south are seen the Water Islands, several in number, of which the largest is of some extent, and covered, espeof the Rice-fields of the Rice-fields, generally buried in trees, the villages are situated, not adaing to the did thit scenery, except by the diversity of the foliage of Atogether, however, I do not remember, excepting Moulmain, and one port near Mergui, a more pretty view than that from Booket Chine, which, I'may mention, is the cemetery of the Chinese--for although in the distance there is too much jungle, yet
some of the masses stand out boldly, and the foreground is beautiful, being cleared, presenting here and there a picturesque tree, and enlivened by the white unsepulchreooking tombs. The highest point of this hill was made into a redoubt by the Dutch, and is crowned by a grove
of indifferent Pterocarpus. The roads about the place are good but narrow, generally lined by Cajeputis; they are made of some red stuff, obtained copiously from Booket Chine, and more like Keenka in colour than anything else. The botanical features may be represented as follows :-littoral cultivated thickets and jungles, between besides last of which the Maiays positively The littoral either consists of mud, producing Mangroves, which do present any great variety-or of sand, producing This is a very prominent feature about Tanfong Ching, a well-known place; the Mangrove tracts abounding to the south, or in the opposite direction. I do not remember many Mangrove plants with which I had not previously , ora, aritie tid the Malacca Mangrove tracts do not, like those of Mergui, Malacca Mangrove tracts do not, Croduce many Orchidaceæ. Pardanus, Sideroxylon, DoCalophyllum inophyllum, Pa Taccada, Premna, Eugenia, Ximenia, Garcinia, Vaccinium (I mean Ericaceæ, with an ovarium inferum), Leucopogon (probably Malayanus), Gmelina villosa, Areca littoralis, Acrostivum fuciforme (a magnificent Fern), Ophioglossum pendulum (not an
Ophioglossum). Of these, the only feature-giving tree is the Engenia, which occasionally abounds, and in flowe becomes very conspicuous. The herbaceous plants are Euphorbia, Ipomoea pes tigridis, Convolvulus, Do The botanical features dependent upon cultivation-fo otherwise all would be usurped by Melaleuca leucadendron, are Cyperaceæ, as usual ; also Nymphæaceæ, several Utriydruna lanuginosum in profusion, Jussiæa, Herpestes monnieria, Ceratopteris thalictroides, and Pontederia \&c., among these, and dependent in many instances upon the owness of the situation, a tall Livistona, which appears characters, Licuala spinosa? Sagus, and that most beautiful Malayan Palm, Areca tigillaris, the Ins I think, Olan Belookar, are much more varied, and probably take their origin in cultivation, although the features now are proitt, where Kcenig a thered Thottea grandiflora, and about some parts of Booket Chine and St. John's Hill, and generally in all clearings. So that would seem tha in forests, but on the contrary, shrubs, the localities o which, judging from the manner in which the eye recognises thew, are probably at din dance. Belookar Jungt presents Parkajocommoniy, Castanea, Fagrea, Ficus, Connarus, Cnestis, Congea, Croton, Sphenodesme, Phy Roctlera, Gmelina villosa, Memecylon, Parinarium, Psy chotria, Eurycoma, Inga, Rhodamnia, Pternandra, the same as and prior to Blume's Ewyckia, Nelitris, Stro phanthus, with ringlets a span long. Scitaminee, Tunja, Dracæna, Thottea, Averrhoa simplicifolia, Uvaria, Hippo cratea, Ixionanthes, Rottlera alba, Erycibe, Vitex arborea Cansiera, a remarkable Santalaceous genus with
diment of a calyx; another very like Groutia, scc Then come the great, the primæval forests, which do one of the grandest vegetation. In this forest, probabl five-sixths of the Malacca flora are to be found. I have not much knowledge of the trees, which are generally to big to be climbed, or to be cut down, with any convenience, but 1 remarked a Melanorrhæa, several Dipterocarpi,
Artocarpi, Fici, Sapindaceæ, Dilleniaceæ; among them the greatest giant being a Milk-tree, and probably a Ficus, The under-stratum is not very thick but very varied, consisting of several Palms, Tacca, a host of Scitamineæ, ru cordate leaves blood-coloured underneath, Ferns, \&c. As partial features I may add the edges of Belookar Jungle, bordering or encroaching on swamps, characterisew by a shruby Hera Cunoniacers, Nepenthes, two species, undescibiug leared Guttiferous shrub, Lycopodium, a beautiful suffiuticose Wormia; and the fluviatile tract, which especially towards the sea, is mixed with the Mangrove this a mile inland is remarkable for its Pandani, Barring toniæ, Sterculiacearum nov. genus, Cerbera, Manghas,
Pothos, Tylophora, and above all a large Pancratium-leaved
thing which I never saw in flower, Nauclea, Stagmaria The cultivated trees which would, from the fondness of the Malays for shade and fruit, form a considerable feature were the country more peopled, are Semecarpus Anacar dium, the Mangosteen, Rambootan, Sandoricum indicum, the Seatool, Champedah a species of Jack, Douanne Durio, (of which there are certainly two species, ) Poolasan sort of Litchi. Num Num (Cynometra caulifiora, size, and is then very beantiful : here and therea Clove-tree Mirousops Kaki, Erythrina, Cocos nucifera, and pygmsea, Mimaso techu, Areng sacchariferum very fine, particularly in the interior; Artocarpus incisa does not come to any perfection ; the Pterocarpus Marsupium, two opposite-leaved Mangoes of the same genus with the Burmese M . opposilifia, $C$ apecies fine tree san these I will give a more detailed account in my next. The great families of the Malacca flora may be said to be Scitaminex, and Orchidacex; but these latter are not very numerous, either individually or as species; Palma of which Verbenaceæ, Sapindaceer, Meliaceæ, Leguminosæ, Connaraceæ, Terebinthaceæ. The families poorly represented are Gramineæ, Acanthacee, Labiatæ, Compositx, \&c. Of Ferns and Lycopodia, altogether I obtained about one hundred; but I do not know yet their proportion to the other families.-W. Griffith. [We would just ask our readers to compare this with the account in the "Encyclopredia of Gardening," by Mr. Main. Why the trees, which that author says give the greatest effect to the landscape there, are scarcely, if at all, to be met with.]

## PROCEEDINGS OF SOCIETIES.

## grown. The collection of Mr. Bruce wask also of great beauty

 however, excellently grown, and bloommar profusely. and con nobilis, Polygala grandinosa, Hovea celsi, Elichrysum humile ata mpendens, Azalea indica alba, gnd Erica grandinosa, sristata maior. Hartmell, and Andromedziolia. The collection
Mr. Clark had, among others, fine specimens of a Leschenaultia ormosa, covered with bioom, forming a ball of abont two fee pot; a very large Kennedya longuracern osa, K. monophylia Muraltiam mixta, Azalea indica aloa, A. Smithii coccinea, and tion was shown by Mr. Couttt, and contained fine plants of Chobium Murrayanum, Scottia dentata, Kennedya nonoplyylla tisus canariensis, Azalea Hibberti pheenicea, Genista Rhodopnrea, Franciscea Hopeana, Hovea celsi, Pimelea decussata,

 gram, Plarylubum formonm. Correa speciosa, Cyt-ns ra-
grans, Azalea indica alba and Addisonia. Mr, Hally's con producing a very pleasing effect, Smithi coccinea, speciosissima, humile, Acacia armata, Hovea celsi, Chorozema varium; and

Ericas vernix coccinea, Patersonia, and Wilmoriana. Among
the plants shown as single specimens were, a very handsome plant of Boronia pinnata from Mr. Atlee, which was recommended for a prize. An Azalea, from J, Alnutt, Esq., and a sory, of Acre-lane plant of Exica aristata major, from Messrs. Dick to these plants "was the Auriculas, the best pairs of which
were shown by Mr. Shroder, Mr. Chapman, and Mr. Lidgard Among amateurs; Mr. Plant among gentlemen's gardeners, amd Mr. Dickson and Mr. Gaines among professional florists. The Hedge's Britannia; those of Mr. Chapman were, Page's Cham-
pion; Mr. Dickson's were, Dickson's Unique and Page's Cam-
pion : and Mr. Gaines's were Hudson's Apollo and Harris's 3lucher. The best six Auriculas were shown by Mr. Chapman ington, Dickson's and Page's Champion. The best twelve were shown by Mr L.awrie's Field Marshal, Chapman's Sarah, Conqueror of Europe, Grimes's Privateer, Dickson's Duke of Cambridge, Page's Champlon, , ind one seedling. The second twelve, shown by Mr.
Willmer, were Lancashire Hero, Conqueror of Europe, Hedge's Willmer, were Lancashire Hero, Conqueror of Europe, Hedge's Duchess of Oldent, Popplewell's Cos, Page' The silver cup given by Mr. Dickson for the best four Condueror of won by Mr. Shroder with Taylor's Glory,
Mirs. Smith. The silver Page's Champion, and Smith's or the heist three, wastaken hy Mr. Dickson, with Page's Cham mon, Taylor's fitory, and Conqueror of Europe. The seedhing The flericultural Suciety's Mecting on the previous evening.
There were.everal atands of Polyanthus, the best of which were ancase were neithe the furst prize for a stand of 24 . The only froit we saw was a box
of Cucunbers from Mr. Cathil, of Love Walk, Camberwell, exceedngly well grown, straight, long, stated to be grown by ho car. Collections of Vegetables were shown by Mr. Martin, of instruments performed daning the afternoon, and the weathe being tine, the room was well filled with compa

## COUNTRY SHOWS

Canterbury Horticultural Soeiety, March 30.-The first exhibi tion for the season took place at the Corn Exchange, and was
numerously attended. The following is a list of the prizes.-Fruit.-Desger Appleg, 1 and 2, R. Francis, Esq.; Kirchen
Apples, Mr. R. Filmer; 2, J. P. Plumptre, Eqq. ; Pizant, 1 and 2,

 Basket of Salaing, Mrs. Webb. Asparagus, Mr. Filmer
Mushrooms, Mrs. Ramsay. Fxowrrg - Brsi China Rose in

NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL
Biscium arcozor. Two coloured Becium, (Greenhouse byssirian seeds sent to the Horticultural Society from Paris. It is a shrub with downy stems, ovate-lanceolate, serrated,
slightly petiolated leaves, and verticillasters of beautiful flowers arranged in short spikes. The calyx has a broad upper lip, like with a close fringe of white hairs, and terminated in front by a pair of feeble teeth. The corolla is large, white, with lilac veins,
and nearly an inch long. It is a greenhouse plant, but coming fom a warmer climate than many other kinds which we com
monly find in greenhouses, it will not bear such a great degree a cold mperature of from $40^{\circ}$. freely in the a tories which are kept about this temperatare. When potted in
號 any light common soil, it grows treely, and is very easily mul
tiplied by cuttugs.- Botanical Register. /irct.) Leguminosæ Paplionáceæ. Decándria Monogynia. A
reenhouse shrub of some beauty, imported from Swan liver by Messrs. Lowe and Co., of Clapton, with whom it flowered in hhen grown ir the grecultorse, mand sulyected to the same treat cmains in buonm thr several months in summer and autumn Lake all plants of this kinsl, it recuires an abundant supply reduced at other times. It is easily multiplied by cuttings and

Dendróbium rhómbuyn. Rhomb-lipped Dendrobium. (Stovo Eipiphyte.). Orchidácere Maláxere. Gynándria Monándria. This
 pars. It is a native of Mannlar, whernce it was sent by Mr.
Cuming to Messrs. Loddjges, with whom it last. The imported specimen is less vigorous than it may be owers will probably be aummented--Botanical Register Perrste'ria Humbolidri, Humbolde's Peristeria.
ipinytr.) plant, which has a pendulous raceme a couple of fee mingham, who imported it from Porto Calullo, in the provinc of Venezuela, about three years since. It flowered for the first
time in March, 1842. In many respects it has the habit of Peristeria Barkerf, but the leaves have longer footstalks.-

Annual.) Campanulácez. Pentándria Monogynia. A beautiful near Madrid, and in the country planes all Mogador. "It grow rom six to nine inches high, and requires a light rich sandy soll the say as ant half-hardy amnuals. If sown in the autumn it should be potter singly, and kept in small pots placed in a dry situation free from frost during the winter; when sown in the spring they may he
kept in a cold frame, but where they have plenty of air, as the lants are very delicate, and apt to damp off. The autumn-sown not before the middle of July. Thoy continue a loug time in flower. It may be grown in the opea border, if planted in a
warm and dry situation, after the danger of the spring frost is warm and diry situation,

## MISCELLANEOUS

Royal Botanic Garden, Berlin. - A circular has just been addressed by Prof. Link to all the friends of this great institution stating that henceforward the corres pondence, which has been entrusted to M. Otto, the nspect ( ine garden, will in future be concucted by it is (Prof. Link), or Prof. Kunth, the Vice-Director communications, may be addressed to pref seeds, or other ommurg mord the direction :-" Königliche Garten, Sachen, (Service du Roi)
The Respiration of Plants.-We extract the following popular explanation of this important process, from Professor Henslow's 13/h Letter to the farmers of Suf folk:- Function of Respiration: I shall be obliged
to draw a little more deeply upon your faith than was necessary in my last letter, whilst I endeavour to ex plain to you that function of the leaf which has been named respiration." Sill, I do hope to be able to se before you two or three very simple experiments, which may serve to convince you that botanists are not very far The function may be thus expressed - "that leaves decom pose carbonic acid under the stimulus of light, the oxygen of this substance being discharged from the plant into the atmosphere, and the carbon fixed as an ingredient of that proper juice' by which all parts of the plant are nouittle experimeveloped. I shall first ask you to try error that might otherwise warp our judgment in estimating the actual effects produced by the function we are tumbler full of spring or pond water before a fire, and another in the direct rar por the sun As the becomes warm in each case, you will find a number of little bubbles will collect on the bottom and sides of the umblers; and if you place in the tumblers a piece o stick, or metal, or other substance, bubbles win als water in the direct rays of the sun, and put into them differently-coloured substances, you will find that bubbles will first make their appearance in those tumblers which have the darkest-coloured substances in them; because the darker the substance the more rapidly it will become heated and so heat the water sooner. It is very evident that thes air-bubbles have made their appearance in consequence bubbles proceng of the water. But from whence do thes bubbles proced? They are derived from air which we find a piece of salt or sugar may be dissolved in water, and thes rendered invisible. When we boil water, all th air which is thus dissolved in it is driven off; and upo allowing it to stand exposed to the airit will again dissolve may thus be dissolved in water-as carbonic acid, \&e. and many springs, upon issuing from their subterrancan courses, give off into the atmosphere a portion of the gases which are dissolved in their waters, and which ar retained in them 80 long as they remain underground. Whoever has been to Harrowgate is acquainted with the ffensive odour of the mineral waters of that place of wic resort ; and whoever wishes to have a good idea of going there, need only smell at a rotten egg, and apply his nose to it. I have already ouserved in my seventh letter that common soda-water contains a large quantity of carbonic ingese cases in rather an improper sen Carbonise to convey a present everywhere in the atmosobere. Supposing, there ore, that leaves can act upon it, and decompose it under both circumstances, we may then be able to exhibit the esult of their action unon that which is dissolved in ater, even though we might not be able to do so upon tha hich is dispersed in the air; because in the former case, ine oxygen which is aet free would rise through the wate t wobles, and we shall see these, whereas, , the latter cass would be discharged as an invisible gas into the air. Le ment.-Illustration of the Function of Respiration: Fill or 3 tumblers with pond or spring water, which will be pre, in either case, to hold some carbonic acid in solution Pace a leal or two under the water in each trmbler. ind that common laurel leaves are well adapted to experments of this sort, only from their size they require large glass jars, instead of tumblers, unless we cut them haves. In order to place the leaves conveniently ander the water, I make use of a split shot, or small piece of lead, with which I nip the edge of the leaf and leave it ixed there. This causes it to sink, and yet retain a vertical position. Place one tumbler in common daylight, and the others in the direct light of the sun. In the former you will observe no effect produced; but in the latter you will soon find numerous little bubbles making their hese bubbles upon the surface of the leaves. I suspect
oxygen which is escaping through the pores of the leaf, upon the decomposition of the carbonic acid contained in them to the separation of the dissolved air, by the heating process as described above. Still I hope to show you a partial effect produced by the decomposition of carbomic of patience, so essential to all farmers and experimenters of patience, so essential and, of course, doubly essential when farmers become experimenters. In due time (per haps in less than half an hour) you will be able to distinguish certain bubbles, which will make their appearance at the cut end of the leaf, or in size more rapidly than the rest, and at length rise to the surface. After one has risen, another will imme-
diately begin to make jits appearance at the same spot. A littie attention will soon convince you that these bub bles have proceeded from the interior of the leaf, and we
may, I think, allow them to be the oxygen which the leas has separated from the carbonic acid introduced into it The interior of the leaf is composed of little invisible blad ders filled with fluid; and these bladders are so packed together as only to touch each other here and there, and thus to leave open spaces between them, which are insed
with air or some other sort of gas. Especially in the under part of the leaf the bladders are so loosely packed that a very large portion of air or gas is retained there. his is tue cause why the under surrace of leaves is gene sently palest; but if the air is expelied, as 1 shall pre enter, the under surface will then become as dark as the upper. Plunge a leaf into hot water, and the air which it from a thus driven out will be seen to adhere to the surface for few seconds, and then be suddenly re-absorbed into the the air they contain escapes in bubbles with great rapidity trom the cut end of the leaf-stalk. If you allow the will gradually insinuate itseif, either through the cut end of the leaf, or through the part pinched by the split The water will thus displace the air, and the under surface will first appear to be blotched with dark spots, wherever it has penetrated, and at length the whole will become leaves. It is after these leaves have been soaking for two or three days that I have witnessed the stimulating effect of light in exciting the functions of respiration in the most
illustrative and convincing manner. The oxygen will often issue in a continued stream of little bubbles, even with a distinct noise, from the cut end of the leaf, or from some point or other upos its surface. If the hand, or any solid substance, be interposed between it and the sun, so as to cast a shadow over the leaf, the effect ceases ; but Even whilst the leaf continues to 'be shaded, the stream of bubbles may be caused to issue afresh by throwing a gleam of reflected light upon it from a looking-glass, Whese experiments, they become very amusing and in structive ; indeed, the information you may thus draw from a common tumbler, is far more satistying and en during than any fleeting gratification that could be afforded you by the best shilling's-worth of brandy and water whic think a little about them, and the knowiedge you will thus acquire will wonderfully assist your conceptions of the When the leof has become thoroughly saturated with water, it is very curious to see the under surface graduall recovering its pale tint as soon as the tumbler is placed in the light of the sun. a piece of lead round its neck, and let it float in the tumbler or glass jar, with its mouth downwards. In a few hours, the water will have taken up all the carboni ecid, a large portion of which will. however, soon escape from the water into the air ; still, there will be enough of
it retained to cause the function to be renewed with fresh vigour, after it had ceased from want of fresh supply lave bad a little aquatic plant growing in a glass jar full of water for the last six months, on the table of my study streams of bubbles of oxygen from the edges of some o the leaves which happen to be torn ; but I do not perceive that any oxygen can be detected escaping from the sur the manner in which it is commonly asserted that car bonic acid is admitted within the leaf. That some portion of carbonic acid must be introduced with the moisture imbihed by the roots, seems to be undeniable; but tha by which the steam is exhaled and the oxygen dis charged, appears to me to be still open to further inquiry. This, however, is a subject for Botanists to look will, and one that is not suited to these letters : only you functions of respiration is no way affected by this part of the theory. It is usual to treat the effects we have ascribed to 'exhalation' and 'respiration' as the results of a
twofold action, both excited by the same stimulus of light but $X$ question whether it action by the same stimulable to con sider them as the common effiect of a single function which might be appropriately termed the "function of or ganisation.' What we really observe is the simultaneous discharge of water and oxygen from the leaf. This effect (osygen and by the fixation of the elements of water (oxygen and bydrogen) with carbon, in the form of or
ganic matter. But I must suppress an inclination I feel to discuss the subject more fully. I have before noticed the fact, and I cannot resist again alluding to it, that plants are engines or laboratories employed by the Creator in the great work of combining a few elements hopmentritious material, which is to serve for deve acquainted with any natural law which impresses me with a greatér sense of wonder than this 'function of organisation.' Here we see mere crude matter brought under subjection to the living principle. It is wonderful to riew the effects of gravity retaining the planets in their orbits
is wonderful to witness the magic changes which che mical affinity can work in compounding and decomposing a variety of mineral substances ! but to me it seems far tirely denendent upon the leaves of plauts for manufacturing materials for those bodies of corruption in which, for a little while, they are destined to live, and move, and have heir being. As the hopes of the agriculturist are so much dependent upon the healthy performance of this
important function, surely he ought to know at least as much about it as the present ignorance of science may be bis practice in accordance with the laws of nature, and not needlessly to set himself in hopeless opposition to them He will ever find nature a kind handmaid, and ready to minister to his wants whilst le woos her skilfully, but a The "Bury Post.
West-Indiar Cullivation.-We extract the following fom the Third Annual Report of the St. Philip s Agricul in the Barty, on Manure apphed to sugar Canes, corticle in our economy, my attention has been turned to ascertain what description would be most applicable to certain soils, ysis. As there are few estates on which marl or loam may not be obtained, I now offer some remarks on marl, on which certain author makes the following observation :-.."That fertility and durability, as well as its being easily obtained and applied at a moderate cost.' Bryan Edwards assert and applied at a moterate cost. Bryan edwards asserts
that 'marl is another manure of vast and general utility in Great Britain; it enriches the poorest land, opens the stiffest, and sweetens and corrects the most rank. Lands have been raised by the use of this manure from 2 s . to 21 s , per acre annual rent.' There is no country wherein a sill venture to assert that marl can be obtained here of as good a quality and as plentifully as in any other country 1 some time since saw marl applied as a manure on part of a feld, the soil of which was a reddish brown, and the substratum a gritty clay; it was planted with Canes, and
the result was a very fine first crop; the second crop did not realise my expectation. but this may have been from the unfarourable season. The land was subsequentiy planted with Yams, and, so far as marl had been applied the return, compared with the other part of the field, was considerably greater, as well as lue rotation crop, whict was Potatoes. About 80los. was thrown into eack hole of four feet square. I have seen a less quantity applied to the same kind of soil whinout success. An eacelent and cheap compost may be made from the wash from our diswith I carted 20 loads of fiela trash to my shop the mill-yard, \&c., and covered it with mould, and then saturated it with returns. I repeated it twice, snd in three gid of cattle, amounting to eighty or more cart-loads, and which, in my opinion, abounded with carbonic acid gasthe most valuable component part of manure. The canes which have had the above compost applied to them are now the most vigorous and healithy on the estate. A nother course adopted by me for raising cheap manure is this :I planted Indian Corn on my cane banks in June; the November following I covered it up in the cane holes in January it was decomposed, and I drew it to the oot of the hole and set in the Cane plant. The yea was unfavourabe, comparatively good. This I found the Canes werest manure I ever applied, costing little the then the weeding of the field. At the September meeting, the following article was introduced, on im ported manures, with the application of the same, as practised by a member on his estate. I have for a long time remarked that the quantity of manure annually produced on almost every estate in the island with which was acquainted, had become, year by jear, less and less that the state in which it was applied was crude and uncomed, and that the period of its application bective system in our plantation management, and I became anxious in my inquiries as to its cause, and in comparing our present with the olden rontine of agricultura propitions seasons, manures of the lightest kind were found to be sufficient to give the Planter a satisfactory return. A more extended cultivation of the stable (no difficulty presenting itself in the supply of the nutriment required for the plant) was the consequence, and provision for the cattle, whether in food or grazing, wasin a great measure neglected. During the favourable seasons to which I have adverted, such is the luxuriance of Tropical vegetation, it was postible to supply a maintenance, under such a system, for ithe stock of a plantation; but it was not possible to afford return of manure through this medium at all proporionate to the necessities of a soil uuder so constant a taxation. So long indeed as the 'former and latter rain'
visited us in their proper season, the impolicy of such
management would not manifest itself save in a gradual manner; but the effects would be found to be no less cer Iain in the end, by the eventual diminution of our crops Instead of a continuance of favourable seasons, three years of drought and trial have succeeded, and the consequence of the system pursued becomes at once visible. It must be admitted that the drought of the last three seasons has been materially instrumental in furthering the evil deplored, inasmuch as, in favourable weather, not only would a large quantity of matter be produced, but the very moisture would further its decomposition, and rystem of mismanagement was brought under the notice of this Society, by the President, at an early stage of its operations, and a judicious remedial course was by im recommended, and has more or less been acted upon course of and other persons. has, must necessarily elapse ere its benefits could be felt. Estates having been for several years annually extending their cultivation, and decreasing their means of proper returns to their lands, ould not in a single season recover all that seasons of ore occurred to me as likely to lasten the benefit of the system recommended by experimenting in some of the ave been found to act frectively, sua which have been the means of improving He agricultural system of the mother coun so greay within the lact $m$ in calions, havis at time Jittle jdea of the outlay attending the home manume fore to satisfy myself, and to emove the objections that were stated, I"instituted a strict scrutiny into the labour expenditure under this head, and I have found that scarcely less than thirty dollars will supply sufficient manure for an acre of Canes and I therefore determined on writing to England for some Rape-dust, which had been recommended to me hy atrial on my last crop, from which I had reaped a beneficial return. Almost at the moment of my receiving it however, I met, in the English newspapers, With notices
on Guano", which had then just been introduced, and which I found to be the manure that had for centuries been used in Peru and Mexico-countries which I knew o be scarcely ever visited by rains, and whose only memeeting with these notices, of night. Nhortly after mported a quantity of this manure, and baving a high pinion of it, as specially fitted for this country, I made up my mind to try it Having a field of about six acres under preparation, I determined on manuring it with Guano lone, and it is aratifyinc to notice that the Canes in this field have suffered less from the drought to which they have been exposed than any others on either estate, whe her manured with home-made manure, with Rape-dust, $r$ with anything else. In a field on White River, consisting of nine acres, adjoining the estate on which the bove trial was made, experiments have been made with "Guano," "Artificial Guano," "Daniell's Patent Ma nure," Rape-dust, and the cleanings of an old well on the estate, which had for the last half.century been the burying-place for dead stock; and I can only say that the Canes to which Guano has been applied, are not only higher, but more vigorous than those to which any other manure has been appliad. The Rape-dust, from expe rience, I can speak of as a good manure, having reaped during the last crop, notwithstanding the drought, nearly 3 hids. sugar from about $1 \frac{1}{4}$ acre, but it is more expensive than Guano, although not more so than our home manure. When, however, we call to maind the position of the West Indies, we must feel that the simplification of manual labour, whether by the introduction of machinery, or by purchase of manures at the same cost as the labour for the nroduction would require, and that such a course would have all the effect of an increased agricul ural population, by making more labour available for general purposes, I think no question can be raised as to he expediency of making trial of such a course as would e productive of such ends. But the objection as been anced that can only speak of the ase been manured with Gue sut that I have not yer teated the prices they will render? 'Mrue I hat have 0 moner ; bit if the mealthy developmet of ror ver those around, whether under the influence of favour ble or the produce will be superior, I know not what argument can ene in moper that is a most excellent manure, and that it is well suited to our general equirements and of every planter. Your Committee further state that the minutes of the Society contin en Agriculture; one on "Flat Tillage," from J. Briggs, Esq., and the other on the " Use of the Plough," from J. King, Esq., as well as a paper from one of the Members, hearing out the former gentleman in the system of "Flat Planting." The first communication was as follows:-- With a view of assisting your annual report of improvements in Agriculture, I furnish you with an account of my system of flat tillage for Sugar-Cane planting. The whole of my this year's planting has been by relining my fields, making the site for each plant, and simply drilling for its insertion-not having turned up the soil more than was necessary for destroying weeds. From the land that bave planted, I removed the trash last year, and the lands that 1 intend for next year's planting I have not removed any trash from; so that this year's planting labours under bad privation. Otherwise, I have afforded my plants every advantage of manuring, that the property admitted
of-littering them lightly, except about five acres, with sour grass, green Indian Corn, and the trash of a field that I have thrown up Cane planting in. Throughout the late drought all my young Canes preserved a verdure superior to those of my neighbours; this may have been from a better time of planting, or from greater distance given to the plants; the plants that had no litter are more vigorous now than those of my neighbours, that had not the benefit of that ma-
nure; which proves that flat tillage can succeed, and gives nure; which proves that flat tillage can succeed, and gives
strong grounds to imagine that it will be more productive in Sugar-cane cultivation than holing. My ideas of advantages to be derived from flat thliage, independent of saving the expense of holing and cross-holing, were, that the holes occasioned a great loss of moisture to the plants where most required, after the spongelets of the roots had proceeded a few inches from the stocks-the centres of depth of moisture; whereas the banks where the feeders had entered show only a very superficial quantity; and from the larger surface of the earth through holing being neral moisture of the fields was more rapidly evaporated than if the surface had been flat. That the centres of the all wet, was the principal cause of the loss of plantsdamped off before they could vegetate. That forming the holes $b$ uried in the banks a large portion of the humus of the fields, below the reach of the feeders of the Cane. That in littering the felds to preserve moisture and keep down flat than on a holed field. That in heavy rains more soil would get carried off the fields, where they were in loose banks than would get thrown down, and more of the soluble portions of the mould incorporated with the running the colour of the water that runs off a newly-holed field, and that of one that is not holed, when heavy rains occur. That Canes will be cut with greater facility on a flat field than Where they are to be reached after in the bottoms of deep
holes. That Canes will be carted off the fields with less labour where the fields are flat, when compared with what our starved cattle suffer, in hauling Canes across the Caneholea. In addition to the above, I beg leave, in conse-
quence of certain persons having lately fallen back to setting a Cane-plant to each eight square feet, or less, of land, instead of setting only one plant in each hole, to state, that to each of my growing Canes are allowed thirty-six square feet of land." The other communication was as his intention of planting his Canes on the system above described, and knowing the success which attended his plans, I was induced to prepare half an acre of land by ploughing it entirely; the other parts of the field being formed into
ridgelets. I found it particularly convenient in being able to cart the manure on the land, which was easily divided into basket-heaps, at 8 feet asunder, which marked the distance for setting in the Cane-plants, allowing one plant to 16 square feet of land. The renaincer of the in December, and trashed in March. On the half-acre planted withont holing, (half of it is a black soil on white clay, the remaining hulf is a black soil on a white rock; the field. Under these circumstances I have been induced this season to plant 23 acres without forming holes, 15 of which I have ploughed as before mentioned, and 8 acres with the fullest confidence of success. These expectations being realised, a new order of things will dawn on us. Many may say, Have we not succeeded highly by the
formation of deep Cane-holes, and why these innovations? formation of deep Cane-holes, and why these innovations?
In reply, I may say, Has not British West India undergone the greatest change perhaps ever known amongst civilised nations, in the measure of Emancipation? and consequently measures must be carried out with respect to Agriculture, by adopting machinery, and substituting brute force for manual labour; then, and not till then, can we expect to be placed amongst the ranks of the free country of Europe. Being interested in the success Ploughing, for the benefit of Agriculturists generally. A field containing 16 acres of land was taken by me in November, 1841, and from the state in which it then was, I am certain that no manual labour could have cultivated it in the manner in which the plough did, so as at that thereby make it yield a fair return. I ploughed the field thereby make it yield a fair return. I ploughed the field by manual labour, allowing a labourer to dig 300 holes for 25 cents ; I also allowed a ploughman and two drivers, the former at 40 cents per day, and the latter at 30 cents each, who ploughed nee $\frac{3}{4}$ of an acre per day; conse-
quently the expense of ploughing the 16 acres was 21 dollars, and the cross-holing 36 dollars 25 cents, making a total of 57 dollars 25 cents for the whole field. would also remark that this work was not performed in a
careless manner, but put out of hand in a masterly style, as will be observed by the Canes growing on the land; and I an sanguine, although we have suffered much from drought, that the return will not be less than 40 hhds :
sugar. My opinion as to what the field would have cost if prepared by manual labour, is, that the first cost of holing would have been 72 dollars 50 cents, allowing a labourer to dig 150 holes per day, at 25 cents; cross-
holing, 300 holes to each labourer, would amount to 36 dollars 25 cents, making a total of 108 dollars 75 cents; added to which, the expense of weeding, which could not amount to less than 20 dollars, would make a grand total of 128 dollars 75 cents. Now the cost of ploughing and
holing amounts to 57 dollars 25 cents, which deduct from the 128 dollars 75 cents, leaves Hop-poles. - A voluminous paper, which thad been fur-
ished by an experienced friend of one of the members of nished by an experienced friend of one of the members of
the Maidstone Farmers' Club, was read at a late meeting. the Maidstone Farmers' Club, was read at a late meeting.
The writer confined his observations to the growth of The writer confined his observations to the growth of
Hop-poles, and recommended, in rich soils, the growth of Ash, Willow, and Chesnut mixed, as the roots of thos plants derive their nourishment from different depths of the earth-the stocks being not less than 6 feet apart.
He stated "that Ash is good for clay soils, and should be cut every 8 or 9 years; that exuberant shoots should be thinned out in the second year; that the Poles should always be cut upwards; that, in young plantations, it is weeds and retain planted alone, should not be less than from 6 to 8 feet dant moisture by ditches. That Chesnut is best for ligh and sandy soils; being exceedingly durable, growing as fast as Ash in suitable soils, and not so susceptible of the Gury. That Willow is generally of little value, but that soils, with Ash and Chesnut: that the Sallow grows rapidly on wet land, but that little expense in ditching would make most soils more valuable for growing Ash or Alder will sometimes prow well where other sorts will not grow ; that the Alder is an excellent wood for trunking in drains. That the Red Birch is considered in some places a good wood for Poles, and is very productive, and that the Whice Birch is either Ash orltivating ; and the Oak makes durable Hop-poles, but is liable to bend in the first year, and is of slow, growth; but that, if grown with Ash and Chesnut, they draw it up much more rapidly than would otherwise be the case. That, Where Ash, Chesnut, and Willow would produce more. That many of the natural woods of the country, which with brambles, would pay well for Ashbbbing and planting, either wholly with Ash or with a mixture; that when the stocks are planted 6 feet apart, the Poles grow quicker and the stocks last longer thun when planted more thickly; that 6 feet apart will give 1,200 stocks to the acre, and that these will generally grow 6 or 8 Poles apiece; that
all grass, weeds, brambles, and underwood should be cut away from the thinned out in the second year, and the cut shoots lett on the ground to prevent the fallen leaves from blowing away; that when the plantation is confined at the top, height of 4 or 5 feet, to promote the free circulation of air. That the writer of the paper felt convinced, directions in planting and cultivating will enable a pame time as, one inferior crop is grown at present." The following paper was also read by a member:-"The growth and improvement of woodland is more peculim arly a landlords business, as few tenants have a term them to plant. Wise landlords, however, should, "by taking the chief expense, have their woods constautly filled up every fall. They ought also to choose plants of the best growth, and of that sort of wood to plant in. N land is more neglected, and yet none would pay better in this part of the county of Kent. I have myself helped
to plant land with wood, (not worth 10 s. per acre to rent to plant land with wood, (not worth 10 s. per acre to rent expense, has, from a nine years' growth, sold for $40 l$. per acre, and even more. The contrast between highly cuitivated and bad woodland, is almost beyond conception. poor wood is first planted, it ought not to be in foul, If foul as it generally is, but in tolerably clean land. wards, by digging and hoeing; and by Hop-bines, or by some other plan, let the land be manured. The first grand point is to choose that sor of wood which grows have seen woods planted, which, from want of care and attention, after all the expense of planting, have been wlanted, though twenty years have passed. I have seen others make a comparatively quick return. I am now speaking of woodlands in this immediate neighbourhood, as, where Hops are not cultivated, and wood is grown for land for Chesnut, where kindly for its growth, seems to need no other preparation than being tolerably clean, and not too poor. Weeds, \&c., must not be allowed, however, to choke up the plants insucceeding years. Either cover the land with bines or hoe, and keep it clean. The English landlords raise their own plants from the nut or keys, or in the best manner. On a soil not kindly for Chesnut, but kindly for Ash, I have often thought that it would be
wise first to plant Plum-tree Willow, and then, as that decays, to fill up with Ash. I know this will be a work of time; still, the ground gets more kindly for Ash, from the leaf of the Willow, or some other cause, and the Wilow pole is very good. If all Ash is planted, let the land be kept clean, or be covered with bines. There is a great difference in the value of poles; still, I think that land will pay best which is allowed to grow what wood it does grow kindly and freely, though the pole may not be
Worth so much. Many people, to avoid the expense of
planting, use layers or poles adhering to the stub, and laid in the earth. This, I think, is seldom successful As a landlord I would always find plants and plant them too, on a yearly tenure. On a lease of any length, I would allow plants and have the tenants plant them at expense, where a term of about 14 years exists, and Larc grows kindly. As a tenant, even if not having plants found and tenants fairly and justly to consider the intert each other. The growth of wood may be a national good In France and Germany it is kept up for firing or for making charcoal, where coal is scarce and dear. Fir is, in many places abroad, indigenous, and the few hop grown are generally poled with Fir. Little pains, bowever, does. The plant or keep the woods beyond what nature as thein walue is mer consisting of brush-wood, does but little mischief. In many places timber grows tolerably well and supplies the navy, \&c., but not like the (save on poor clay soils) it ought to be grown moore togeof Corn, \&c. In highly-cultivated rich land, an Ouk or Elm will do this. Landlords cannot have timber and rent trifling Though not a part of wood cultivation, or a very most old leases these useless and injurious thinga are inserted, and the covenants bind the tenants to preserve, to top, and top, instead of rooting them up as pests and nuisances thant, without one shilling of or land they root out and injure the crops. Let woods be inclosed and like timber, kept together. There is one well-known fact about hedge-rows. When grubbed, however poor the soil, Corn or aught else grows well on the land for year without manure, whilst a wood of any size, if grubbed, is sterile for years. I mention the circumstance without endeavbe grown, if landlords would allow, and tenants have the spirit to take up the waste hedge-rows, \&c., and fill up many useless ditches ! What a quantity of land now lies almost barren that might be made profitable, and how many hands might be employed that are now idle! Much has been said of draining, \&c., as a means of employment. Here is another as useful. It is the duty of every man, be he landlord or tenant, to find employment for the Labourer. Let him consider that be not only relieves and prinoys him, but he feeds his wife and children, and what them up with honest and industrious habits. In of I have here stated I have only taken up tho beads enlarge and improve. If I have digressed, the object the attention of both Here an interesting discussion ensued. On all hands it was considered that it would be best for landlords at least to provide the plants for filling up, even if they did not tions were separated by a bedge, lying on precisely similar soil. One had been well cultivated by the landlord and after twelve jears was worth from $40 l$ to $45 l$ per acre the other was held by a tenast on a short texm, and was not worth more than perhaps 5l. per acre. Many instances were mentioned where land, the fee-simple of Which was not worth 5l. per acre, had in a few years proand considerable tracts of poor land in Kent and Sussex were supposed to be susceptible of similar improvement. In reference to the recommendation to plant as much as six or eight feet apart, it was said that when planted too distant the outer poles were curved at the bottom, and the best part of the pole was much wasted in sharpening. Instances had occurred, however, where, when planted too thickly, the plantations had fallen off after the first crop. It was the general opinion that piants ought to be planted in a good sized hole, and not deeply. Difficulties had low the ports, as in some soils WilCow had outgrown Ash, and both had greatly outgrown our at. On the other hand it was contenced that al as at Nal woods were of mixed sorts. has some clays, whilst in other for instance, Chesant Crop Willows on clays had been known to produce poles in six years. Cases were mentioned where Larch had been planted thickly, and alternate plants thinned out as it had grown, for poles and use pieces, the remainder being ultimately allowed to stand for timber, and to have become of should In selecting plants it was considered that Ash feet six inches, and Chesput about the same, with a good root. Larch plants, it was said, could be procured from Scotland at about 11s. per thousand. The following resolution was then adopted:--" That the improvement of woodland appears to this club to be a matter of greater importance than it is generally considered. That in selecting the sort of wood to be planted, the best criterion is to observe those which already grow best in the soil, and to plant similar sorts ; that some members are in favour of planting mixed sorts, whilst others prefer planting only one not. What the holes for planting should be large, and looked top; that the after-cuitivation should be carefully looked to, and if sonae manure, or a covering of HopThe following communication, which arrived too late to be read before the meeting, contains so many useful hints, that we append it to the report:-" It is generally said that a tenant is but little concerned in the management of
woodland, as it is almost wholly in the hands of the landa
lord ; but I believe every tenant-farmer to be more or less interested in the subject. When we consider the higs, price underwood sells at, and that at ten or twelve years growth, upon the same soil, it varies in price from 10\%.
$50 \%$ per acre; surely ject worthy our serious consideration. I admit the tenantject worthy our serious consideration. plants to improve his woodland, but the landlord ought to give the plants, and the tenant to be at the expense of planting; and, in the event of his leaving his farm, the appraisement upon the underwood will amply repay him
his outlay ; I find woods, that have not been attended to his outlay; I find woods, that have not blants per acre to fill them up; and care must be taken to inform yourself what sorts of wod ane best ade I think the most profitable to plant upon sand or any dry soil. I would point out Cox-heath and Cressmill-head. as a proof of the soil being adapted to their growth. Spanish Nut, as they generally grow straighter Poles, though they are not so luxuriant. I would always commend selection of plants of all sorts from rather poor nursery ground, than from a rich soil ; as they do not in such case receive such a check on being transplanted as when brought from a rich to a poor soil. Ash and Willow are also good to fill up woods with, where the soil is suitable, and they will thrive almost anywhere, unless there are many rabbits and hares, which are destructive to mix Ash and Willows together, as the Ash will root upon or near the surface, and the Willow deeper in the soil. I will now describe my method of planting, which is the year after the wood has been cut, unless the wood can be cleared off in sufficient time to plant the same season, which I prefer. I strongly recommend planting by the side of streams and ditches Crop Willow Hop-pole, or use-vole, about 15 feet apart, by the side of Hop-pole, or use-pole, about the watercourse, leaving the top about 7 feet out of the ground to secure it from the bite of cattle ; it will then form a Pollard, which will produce Hop-poles and usepoles, to be cut every eight or nine years, and will be
found to stand as long in a Hop-ground as other poles cenerally of the same age. The use-poles make good light heep-gates if they are put into immediate use and not suffered to stand in the wet. The Pollards should be topped in winter, and in spring the Hop-poles and usepoles will flay easily, which is much better than shaving them. I commence by digging my holes for planting in
the woods 20 inches square and I foot deep; then, with the peak end of the suattock, grub down 6 inches more, which makes the soil loose for the roots to penetrate freely. The price of this is $2 s$ s. per hundred holes, and about 9 d . or 10d. more for planting by a man and boy, the boy to hold the plant upright, the man to put the earth round the plant, and tread it in firmly about the roots again. I find those Ash plants best the tops of which have been cut off when removed from the seed-bed as they grow stouter at the bottom' and are not so top-
heary. Where a new wood is planted, the ground should heary. Where a new wood is planted, the ground should and kept free from weeds. The second year the plants should be cut off close to the stub; each plant will then throw out several shoots. A crop of Potatoes may be taken the second year without injury to the plant. I
would recommend particular attention to the cutting of Oak, as coppice, for bark in the spring, to see that the bark is cut through at the bottom or xind ; for if stripped down the stub, lower than the wood is cut off, it is very injurious, and sometimes kills the stub. The bark should have seen the wood much injured by cutting it too late, or near Midsummer. The price of Chesnut plants this year, from 3 to 5 feet high, is from $6 s$ o to $8 s$. per 100 , Ash pon to feet high, is from 6s. to 8s. per 100 ; 100."-From the Maidstone Gazelte.

Treatment of Bees in Zante.-In a small vineyard by large apiary consisting of perhaps 70 or 80 hive , was the proprietor, who was living with his family in a stone hut in the vineyard, was at that time employed in collecting the honey, which we tasted and found very rich. The hives generally consisted of a piece of the trunk of an Olive-tree, about is foot high, hollow, with two cross sticks within placed horizontally to give support to the combs. They stood on flat stones, an inch or two from the ground, and were covered with a thin piece of stone brought from Langadachia, which from its slaty and porous texture must be a bad conductor of heat, and very
well adapted for the purpose to which it was applied. There was a cistern in the vineyard, with small troughs to Water the bees ; the supplying them with water is the most important part of the whole economy, and demands constant attention : it kept enployed two or three people. Davy's Notes on the Ionian Islands.

## GARDEN MEMORANDA.

T. Brooklehurst, Esq., The Fence Macclesfield.-At a late visit to this place I was so minche pleased with thle extensive collection
of Orchidaceows plants so successiully cultivated here, that I am induced to send you an account of those in flower. On entering
 in various modes ard situations some suspended in rustic
baskets and on logs of wood, others in neat copper-wire baskets,
and in perforated or baskets and on logs of wood, others in neat copper-wire baskets,
and in perforated or common pots. Some are clinging to branches
of trees remindin one
 shallow cistern. The gicater patt, howeyer, are growh in pots,
stading upon others, inverted over shallow cisterns filled with
water. The following wcre infor water. The folinwing were in flower: Acanthophippium striatum,
a noble plant with five large pseudo-bulbs, nine inches long, and
proportionoly proportionably strong; Aspasie lunata, new and pretty; A. epi-
dendioides and variegate; And proportionably strong; Aspasia lunata, new and pretty; A. epi-
dendioides and variegata; Aporum anceps, Batemánuia Colleyi,

Bifren ${ }^{2}$ ria aurantiaca, a fine plant two feet in diameter; Brom-
headia palustris, lately introduced from Mount Ophir, with pretty heacdia palusurtis, lately introduced from Mount Ophir, with pretty
delicate Lellia-like flowers which, unfortunately, are of short diration: Burlingtonia vennsta, white and aimost transparent; Brassavola angustata, with neat treenish-yellow flowers; Brassia
maculata, Lanceana, and verrucosa; Blétia Shepherdi, with maculata, Lanceana, and verrucosa \% Blétia Shepherdi, with
several other rpeecis of less beauty. Of Catasetuma there were
many many species, with singularly grotes
of Cytopodium Andersonii, grown
were in bloom; one variety having a more dwarf, and branching stem. A large plant of Cypripdiinm insigne had fifteen of its large flowerg expanded. Dendrobium nobile is just going out of
bloom I understood that there had been upwards of 100 flowers on each of the two large plants; D . cerralescens is in full bloom,
with with D. sulcatum, bearing a strong spike of pretty flowers, , medium
size, and fragrant; D. macrophylum, having a nobole spike of 50 flowers, remarkabie for their strong scent, resembling newly-
ground Rhubarb root; D. densifloruxa; D. secundum, and a ground Rhubarm root, , , finest plants in this country, having upwards of 30 blossoms upon color, which, although not of a briliant colour, is a fine species,
and lasts in bloom along time. Amongst the Evidendrums there are many species in flower; the most remarkable are, E. bicormutum, many species in flower; the mostremarkabe eare, e, bicomutum, fiower stems ; E. aurantiacum, and a varrety of it which opens
its blossoms better than the original species. The Fernandezias hung up in baskets form elegant plants, with small and pretty There are many large Gongoras; G. speciosa, with dark flowers, ribs of the pseurdo-bulbs flattened; it is showing a spike of fénia -superba, L Lalia cinnabarina, Maxiliária Harrisonize, are blooming freely, with many Oncidiums, of which I shall only
name the best: these are 0 . lúridum guttatum, flexuosum two var. ; 0 . paplio, one variety, whillarger and brighter How cochilum, with a spike 11 feet long ; O. Baueri, and a var. of 0 . Cebolleta; O. Stramineum, and O. pictum; to these may be added Paxtonia rosea; ; Phaius Wallichiii ; Peristerria cerina, with
pretty wax-like cups ; Schomburgkia crispa, and a variety of it with umbellate flowers, having white peduncles, dark sepals and petals, and a white labellum, An immense plant of Vanilla pla-
nilGlia covers the back wall of one of the houses; it is 30 feet long, with numerous spikes of large greenish fiowers. Zygope--
talum rostratum, a free-flowering species, is also in bioom, with talum rostratum, a free-flowering species, is also in bloom, with
Z. crinitum. A new Cyrtochilum is, moreover, showing a strong t. crinitum. A new cyrtochilum is, moreover, seowng a
flower-stem 1 1 inch in diameter, which has already reached 3 ft . thower-stem 1, the leaves are 3 feet, long narrow and tapering; pseudo-bulbs, large, compressed, and slightly ribbed; it is a
native of Mexico. Several Cattleyas from S . America rere showing hower, and some are apparently new; ;olinea schied of howering well, in a pot suspended near the giass: excess of 1 hit coloured than usual. Two healthy plants of Cephalotus folicularis are growing in small pots, in a a compost of reduced sphagnum,
peat, and silver-sand, placed in larger pots, filled tightily round peat, and silver-sand, placed in lariger pases, A pretty species of
with moss, and covered with oell-glasses. Dianella, apparently new, from the warmer parts of Australa, and
trained a apainst a wall, is now in flower.-W. Barnett, Chestertrained against a
road, Hacolesfeld.

## Reniéms

The Indian Hand-book, of Gardening.-By G.T.F. Is is difficult for those who reside in Europe to judge correctly of the value of such a work as this, which relates to the details of gardening requisite in a tropical country. As it has reached a second edition, it must have been found useful in India. The countries proceed in their management of the plants which are here known only in the hot-house ; and such information is to be expected from a book like the present. We, however, cannot say that it satisfies our curiosity, or afords any
thing like that amount of evidence which we expected For example, all the original matter that relates to the Pine Apple is the following, which, although useful enough as far as it goes, is much too succinct for our taste :"Culture, The plants should be put out in frows each other, and the earth well drawn up to the stems; in the third year they will begin to produce fruit, and as soon as the blossoms appear, which will be in February, the roots
must be laid open, and all side shoots and suckers carefully removed to plant out for a fresh supply of plants, if desired; a basket of rotted cow-dung should then be put to each plant, and above that, the like quantity of fresh
stable dung, with the litter covering the whole; this will stable dung, with the litter covering the whole; this will earth should be placed; a trench should then be dug on each side of the plants, which must be every day filled with water, a moderate quantity being also thrown from a fine rosed watering-pot, once a week, over the leaves and fruit The fruit will ripen in May and June, and by pursuing the method here recommended, Pines may be obtaized of as large size and as highly flavoured as the finest procurabie, with the utmost care, in any part of the worn. fruit is cut, and a new shoot encouraged, and no offsets should be allowed to remain round the base of the fruit whilst it is growing, as they would draw off the nouxishment, and deteriorate the flavour
What limits the utility of Mr. Speede's book even mor than his conciseness, is the want of a Table of Contents never knows where to look that part is intended to explain the corresponding names in science. rected in another edition. It would be as well, too, that
the spelling of the proper names should be revised with more care-Anunas for Ananas, Macrocenemum for Macrocnemum, arjurium for azureum, Hydeceum bisput lodis for Heaven knows what, cuncifolia for cuneifolia and so on-are sad blemishes. We cannot help thmking for cultivation ine lists of ornamental plat need of great refor cuttivation in Indian girdens stand an need of great re-
formation. We suspect it would puzzle an Indian nursery man-if thereare such people--to supply Orchis spectabiths,
Satyrium carneum, and Disa grandiflora! which Mr * In my brothers garden, in the years 1839 and 1840 , Pine * in my brothers garden, in the years 1839 and
were grown weighing from 6 to 7 tblbs, each, exclusive of the top.

Speede recommends as perennial border plants. However, as we have already said, a second edition of the work
has been called for in India, which shows that it has been has been called for in India, which shows that it
found useful by those for whom it was intended.
CALENDAR OF OPERATIONS for the ensuing week. In a short time the Gooseberry and other Caterpillars will
commence their depredations ; and unless we are previously commence their depredations; and umless we are previously
prepared for their destruction, we shall have once more to reprepared for their destruction, we shall have once more to re-
count their ravages. In consequence of what is stated in a
eadine article, vol. ii. p. eauding article, vol, fi., p. 203, I was last season indaced to try
emmoniacal liquor from the gas-works for their destruction ammoniacal liquor from the gas-works for their destruction, and

 some time to come.
will probably now be so in the late house, or in the greenhouse, the rafters, if they have been laid in a horizontal position, to facilitate their breaking regularly. Keep the house moist by the
syringe, and as there is no occasion to hurry late Grapes at this PAMCH AND CHEREY-Hotskss.-These will require all the air that can be given to them; but the atmosphere may still be kept
moist, to ensure the proper swelling of the fruit and healthy
foliage. The early cron will now be fully swelled; the plants, theretore, should have adrier atmosphere and less water at the
roots; give them abundance of air, but shut up early in the arternoon. MELONS AND Cucumbrrs.-Keep up a vigorous heat in the linings; look over and thin out the plants regularly and by
degrees.
Fertilise the Melon-blossoms until more than a full crop is stet; they can afterwards be thinned out, when all danger
of their dampiug off is over, During this stage keep the frames Mu a dry state, by admitting plenty of air. come into this house, they must therefore be kept down, by enwith moss, or by enticing them into dry corners and scalding
them with boilug water. The atmosphere of this house must be
Strawberryss and French-Brans.-These must be carefolly watched from this trme, to see that the red spider does nat not Louses where fruit in ripe or ripening.
Continne to harden off Tobacco-plants, Capsicums, tomatoes, Bazil, \&c., which should now be strong eapough to stand in a
cold, close frame, to be shut up early in the afternoon, for a week or two, after which they should have air night and day till they
are fit for plantume out.
Out-door Department.
While young crops are advancing in all parts of the kitchento keen, the ground about them can hardy be stirred tor orten, the first warm rains the young crops after this time will advance
rapidy and unless such as require it are thinned out in time, rapialy, and unless sucd as require it are thinned out in time,
they will soon be injured. Broccour.-Sow late spring Broccoli on a light border, and a
few more about 30 days hence; at planting time you will have CAULiplowsir may have the glasses removed from them
Itogether, zad see that they do not want for water. Bbrt Skirrett, SAlsify, AND Scorzonkza, may be gown towards the end of the week, or in early situations; the two latter
may be deferred for another week: if sown too carly they are apt
to run to seed.
KIDNEY-BEANS. $-A$ few of these may now be planted on a warm border, for a first crop; but if they are sown in boxes about the second week in May, and transplanted when all danger of rost is over, they
the open ground.
Succrssronar. Crops.- Peas, Beans, Spinach, Radishes, and
other salads should now be sown oftener, as they will come more other selads should now
rapidy into use through the summer.
SEEDS of any sweet or pot-herbs, if not already sown, should be g.t in forthwith.
ORCIAARD. The best advice I cazk give this week under this
 emark that every wasp now anied is as good as a nest distroyy be in a preat meabure sate from their atracks. From the enorwe may, 1 t th
numbers.

## II.-FLOWER-GARDEN AND SHRUBBERY.

Srovs.- An increased supply of waten and a strong moist heat are beneficial to most stove plants at this time, by enabling theme
to make a tree, heaithy growthy; they also require loss air doring
this stage. If the expression is allowable, all sorts of plants under protection, witit the exceptiow of Heaths and perpaps a
few other hardy tribes, should have a gentle forcing about this
time would, ss it were, lerge them to make an earlier growth, anc wood, which is one of the grand secrets towards obtaining only in a differ for these plants, as $A$ would be more ipiurious than keeping them
too cold. Whenever they begin to "draw," they are elther too
warm or too much confined. Conservatory. - As very account of the flowers, and as flowers do not last solone in a
 pouring water on the paths or under the stages. Blinds are now
indispensable in the middle of the day PITs, -lncrease middle of the day. Pris., - Increase, pot off, and hasden your stock of flower-
garden plants as fast as their different natures will permit; the
sooner the better. Most of these plants sooner the bett.r. Most of these plats are quickly inured to
stand out in sheltered places, or under hoops covered over with mats; and the longer they are here the finer they will look after
being planted out in the flower-garden.
Flowzr-Garden.--Order and neatness in all parts of the FLowRR-GARDEN. -Order and neatness in all parts of the
fiowergarde are pleasing at all times, and the more so now, in
anticipation of the approaching gay season. Late-laid turf and late planted trees and shrubs will requirc constant attention in fiower-beds require a change of soil, let it be done without delay.
Get tliriough with any extra work m any part of the erounds in
order that the inen may proceed with the regular garden work. -D. Beaton, Shrublunil Parle Gardens.

REPORT ON COVENT-GARENEN MARKET.
Tre Market, this weet, contantis some very good Hothouse
Grajes, wf the Black Hamburgh kind, the imported ones being now, for the most part, considerably shrivelled, or decayed.
Strwherries are likewewe fine of Cacumbers theere is an ex-
ceedingly varied assortmente ceeuingly varied assortment, many being large and handsome, while some, labelied at ad. each are of a most miserabe descrip-
tion, New Potatoes, of the Ash-leaved Kidney sort, are abondant,
and particularly goond. French Beans are toserably good. The and particularly pord. French Beans are toierably good. The
Kaster Benrre Pears, the Lady Apple and the eflocester Pippin Apple have a blandson.e and sound appearance. There are also a
few fine Peaches. Among the flowers Chorozema cordatum, Erica Wlmoreanaa, fiart, Inia radicans, and florida, are the most notice-
able : there bentr, besides, a great quantity of Cinerarias, Pelar-

 velloped in moss, and sparingly decorated with different-hued
everiasting flowers, are exhibited in one or two stalls.

no doubt require to find it in the soil. For the rest you had
better study Mr. Soliy's "Rural chemistry," in which you will better stuay Mrmation. $\dagger$
DRAINAGE-Buchs.-We are endeavouring to obtain some good information about burning clay, and hope to furnish it shortly. $\dagger$ Pros.-A Countryman inquires how to construct one of those
Oat-kilns used by Oatmeal makers, and costing only 3 h., which are mentioued in the latter part of "Paxton's Cottager's
arencen If this catches the eyc of $J$. $S$., or any or his
 BurTsR, - Poor Surah Skimmer! It really is a sad thing that we suspect your master has given you a bad churn. It is of no use goivg to chemistry for help y you mast trust to the en-
gine maker, or to a goor donkey, if you have one, to take the gine maker, or to a goe,
labour off your "lines."
Uuspronas.-- John Horticolu.- -Mushrooms may be grown on
the sides of Cncumber-ridges in the open Eround at the time the slidents ore put out, by burying small portions of the spawn aut inch or two deep in the dung, after the heat has begun to
sulbsude, and covering the bea with ary soll, firmly precsed subsic, ate covern period at which the Mushroms. Will appear will
down. The per
depend grown in thic ouen air without an artificial bed of some kind. PRorecrion.- Rhodon.-Old tan is goud protection for the roots
of plants; but injurious afterwurds, uniess it is wholly removed of plants; but injurious afterwards, uniess it is wholly removed
in the spring. Coal-ashes are better, and not injurious to plants afterwards. ${ }^{9}$
INES.- - MK. W. K.
You must have kept your Vinery excessively damp, and the barder must be very. Wet to cause shoots of the
Vines to damp off half their length. Have not the roots been injur the White Sweetwater, the Royal Muscadine, the Chasselas you the White sweetwater, the Royal Muscaine, tenderest. the
Musque, and the White Nice. The last is the first the hardiest. $\psi-R . E .-$ If Vines were stopped at the
length to which the shoots require to be pruned in winter, and presuming that they are sufficiently vigorous, they would burst those eyes along the shoots which only ought to pasi in would be diminishied in consequence of the privatign of sap elaborated by the leaves on the leading shoot. It maty be said
that the leaves produced on laterals would supply the loss nccasioned by the stopying of the leader; this, however, is not
the case, , for sone t time must chapse before these laterals can be produced. It will Ic cepure three weeks before the surface o foliage on thesc laterals will equal that which would be prothe loss by a fortnight at a apriod of the season when the ex.
tension of ronts, be encouraged. But at a more advanced period of their
growth, the shoots may be very properly stopped, because then proved by Mr. Knight, that leaves in a young state only elabo-
rate for their own growth, or chiefly so; therefore, all the terminal part uf the shoot that would only protuce leaves which
would never attain full size, or benefit the other parts of the platit, may be prevented from being produced by stoppint the
sloots, ab ut the tme the Grapes are full trow. The force
that would bat that would have becue expended in produchys these terminals
will be directed towards invigorating, without danker of burstAs your Vines are old and doo not set their fruit well, your best plan will be to cut them well back, and train up young wouct.\|.

## NEWS OF THE WEEK

The brief allusion in our last to the illness of the Duke of Sussex, will scarcely have prepared our readers for the announcement of his Royal Highness's death, which took place yesterday soon after 12 o'clock. The Duke of Sussex was the most popular and the most accomplished of all the sons of George the Third, and although long suffering under the infirmities of 70 years, the intelligence of his decease, at once sudden and unexpected, will bo received by the public with sincere and respectful sorrow. His Royal Highness retained his consciousness to brother the Duke of Cambridge, and of the greater part of his domestics who were admitted, by his own
desire, to witness the last moments of their Royal Masdesire, to witness the last moments of their Royal Mas-
ter. The Duke of Sussex was long known by his steady adherence to liberal opinions and by his open assertion of them on all occasions; he was also known as the constant supporter of every public charity, and there are few institutions of bemevolence in this metropolis which
have not received substantial benefits from his patronage. The long-expected report of the Commission anpointed to examine the various questions connected with the emancipation of the slaves in the French colonies has just of Jamaica, as a proof that a large slave population, when mancipated, is just as manageable as when in a state o slavery; and then develops a plan of emancipation, which though rather long deferred, will doubtless be considered a great and final measure. The Commissioners propose that slavery shall cease in the French colonies on the 1st January, 1853 , and that until that period the slaves are to coutinue in their present condition, with the enjoyment of certain civil rights, to be decided upon by Royal
ordinances. A second report contains a plan for the progressive emancipation of the children of slaves born since 1838; this object it proposes to effect during twenty onsecutive years, and by arrangements which leave the Thestion of compensation to be settled at a future period. doughter of King Louis Philippe, to the Hereditary Prince of Saxe Coburg, which was to take place on Thursday, is the only other topic of interest in the Paris papers.-From Spain we learn that the Ministry sustained a signal defeat on the 10 th inst., in a division on the validity of the
elections of Badajoz. The Cortes decided by a large elections of Badajoz. The Cortes decided by a large
Majority that the elections were illegal, and three leading memabers of the Ministerial party have consequently lost their seats. A resignation of the Cabinet followed this event, alwost as a matter of course, and the Regent has sent to London for Gen. Sancho, the Minister at
this Court, to undertake the formation of a new Cabinet. -In Portugal the final awswer of the British Government respecting the Tariff Convention is expected Oporto have anxiety, and the British merchants at tions on slight ground.-From Malta we have the particulars of an important reduction of the quarantine, at the suggestion, it appears, of the Austrian Government: The effects of this relazation will be highly advantageous to less mercantile shipping of this country, and will not be from weicome to all travellers in the Levant.-The advices of Servia, but add nothing to what is already known on that long-agitated question. The conferences at Erzeroum and affairs of the Persian frontier have been resumed, the apparently under more favourable auspices.-From pond nited States we have the details of a long corresthe American Minister Secretary of State. Mr. Webs, and Mr. Webster, the in no ambiguous terms for his ter reprimands Gen, Cass and denies that any con his unnecessary interference, right of visit, or on any other subject arising out of the
treaty, incompatible
the questions at issue.

## 

Court. - The Queen and Prince Albert, the Prince of Wales, and the Princess Royal, remain at Buckingham Palace, and are quite well. Her Majesty has enjoyed her
usual daily walk in the Palace Gardens, and has taken usual daily walk in the Palace 'Gardens, and has taken
several airings in an open carriage during the week. On Monday Prince Albert visited Sir R. Peel's collection of pictures, and on Tuesday honoured the Reform Club with a visit.- The Archbishop of Canterbury, the Bishop Wharncliffe, and the other Officers of State, have not hee able to leave town for the recess, owing to the daily e pectation of the Queen's accouchement. Every prepan
tion bas been made at the Howe (Ofice transmission of the intelligence of that event, to the different authorities, hoth in the metropolis and in the provinces; and at the Foreign Office similar preparations are presentatives of her Majesty at the European courts. presentatives of her Majesty at the European court
Death of the Duke of Sussex. -Since our
notice of the illness of the Duke of Sussex, Dr. Chambers was called in to attend his Royal Highness, and met Dr. Holland and Mr. Copland, the other medical attendants. In the course of Saturday the following Duke of Sussex is suffering under an attack of erysipelas, which is not attended with any unfavourable symptom. - In the beginning or the present week, the bulletins were satisactory; but on Wednesady the symptom assumed an unfavourable coaracter, and there was much evening. On Thursday the bulletins announced that his Royal Highness had passed a restless night ; and the wors consequences were anticipated. His Royal Highness gradually became weaker, and expired yesterday, at a quarter past 12. Although during the last two hours of his life the last, and was able to articulate within a few minutes of his decease. His Royal Highness was the sixth son of
King George III., and was born Jan. 27, 1773; he was consequentiy in his 71 st year.
Parliamentary Movements.-The nomination of canon Tuesday representation of East Suffolk took place Conservative, and Mr. Shafto Adair on the Whig interest The show of hands was declared to have fallen upon $\mathrm{Mr}_{1}$ desham, and the proceedings were adjourned until yesterday, when the polling commenced, and will not be conhave been presented against the return of Mr. Gisborne have been prese
for Nottingham.

## fForeign.

France.-The only part of the contents of the French papers of this week that presents any interest has refer examination of various questions connected with slavery and the political constitution of the French colonies. This ommishon, which was instituted in May, 1840, and composed of the Duc de Broglie, President, and of Messrs.
Passy, D'Audifret, Rossi, de Mackaw, de Tracy, Jubelin Bignon, Wustemberg, de Tocqueville, de Sade, de SainteHilaire, Galos, and Mestrow, has accomplished its task, the resuit of which, forming a large volume, has just been printed and submitted by the Government to the ChamBroglie, we shall notice theport, drawn up by the Duc de that nothing could be beter principul features, premising sion on the public, favourable to a great and final measure. most irnportant to England stress on the point which was but in a small degree so to the French. We allude to the proof, that a large slave population, when emancipated, is just as manageable, and likely to give as little trouble to the police, as whilst in a state of slavery. The Duc de Breglie dwells at length on the great example of Jamaica. have little fear of order being disturbed, the French need act of emancipation has taken place. The report proposes that slavery shall cease in the French colonies on the Ist January, 1853. Until that period, the slaves are to continue in their present condition, with some modifiby Royal ordinances. Thus, civil rights are to be conferred on the slaves during these ten years ; but exercise them in Courts of Law they must be but to sented by a guardian ad hoc. From the movable property they may possess, ships, boats, gunnowder, and fire-arms, artry, and the power of redemption got by secured to them. The freed slaves are not to enjoy political rights ; but clildren born free are not to be included in this exception. The freed slaves must, during 5 years, engage for one or more jears in the service of one or
several planters of the colony which they inhabit, and in which they will be obliged to reside $\overline{5}$ consecutive years. Their rate of wages is to be regulated every year within a maximum and minimum, by a resolution of the Governor in Council. The compensation to be given to the planters is reckoned by the commission at $150,000,000$ francs. The interest on this capital is to be fixed at 4 per cent. and to be converted every half-year into a rente of the same denomination, for the benefit of those entitled to the On the 1st of January, 1857, the capital and the interests thus capitalised are to be divided among the planters,
who shall respectivey maintain, at their expense such olaves as they may happen to possess at that period, and as age and infirmities may render incapaole of labour. They will be bound to supply them with food, clothing, shelter, and medical assistanct A second report contains a scherne for a partial and progressive emancipation, whereby the lst of January, 1838, are to be freed coionies, sinc tion suggested is to be 510 frames for tion suggested is to be foranes for children who shal during 20 consecutive yerrs: and a year before the erni during 20 consecutive yerrs; and a year before the expiof compensation to be grinted, are to be finally decided upon.-The marriage of the Princess Clementive was to Bake place on Thursday. The King and Queen of the Belgians, and the Prince of Saxe Coburg and his two sons, were expected at St. Cloud on Tuesday
inst., on which day the Ministry sustained a the 10th The Congress had been engaved in examining the defeat. of the elections, bend engaged in examining the validity protracted and angry discussiad of the Cabinet. Those elections, whereby three conspicuous members of the Ministerial party-MM. Joseph Calatrava, Gonzales, and Lugan, had been returned, were annulled on the 10 th by a majority of 80 against 55 . The Infante Don Francisco attended the sitting, and, on vot ing against the elections, was cheered from the public gal leries. It was generally expected that the triumph of the Opposition would shortiy be followed by others still more decisive. Subsequent advices announce that Ministers have tendered their resignation to the Regent, who has sent to London for General Sancho. The late political chief of Barcelona, M. Gutierrez, has been appointed DirectorGeneral of the Post-office at the Havaunah, with a handsome salary. Dr. Daubeny and Captain Widrington were at Madrid on a scientific excursion. They proposed, it is said, to visit Estremadura, in order to investigate the natural bed of phosphate of lime in that province, with a view to its use as a manure.
Portugal.-We have Lisbon news to the 10th inst The final answer of the British Government respecting the Tarif Convention was expected with some anxiety at posed. It was known that among the further offers pro posed on the part of the Portuguese to our Government,
in place of the ultimatum sent from England, a reduction of duties to the amount of two fifths was proposed on brass manufactured goods. The British merchants at Oporto had petitioned agginst breaking off the negotia tions on slight grounds. The Douro Wine Company Bill had passed the Peers without alteration, but it was ex-
pected that the Royal sanction would be deferred until the pected that the Royal sanction would be deferred until the
final result of the tariff negotiation was known.-T wo British vessels were lost recently on or near the coast of Portugal. In one case, the Feronea, from Bristol to Palermo, was wreeked off Algarve on the 19 ch uit., and all the crew the barque Dale, from Livernool to New Orleans, which went down on the night of the 7th inst., while making for Lisbon, about an hour after she had been abandoned by her captain and crew, who were picked up by a Portuguese schooner from Terceira to Lisbon, where they arrived on the 8th, having been treated with great kindness by the Portuguese captain and his crew
Belgium. - The trial of M. Caumartin before the Cin Assizes, for the murder of M. Sirey, noticed in Courier Belge gives the proceedings of the frst ane which occupy several columns in small print. On the first day after the indictment was read, M. Caumartin was interrogated at great length by the President. He persisted in declaring that M. Sirey had attacked him, and that be had no intention of killing him. The first witness for the prosecution was then called. This was M. Milard de Lavilette, a friend of M. Sirey, who was present on the unfortunate occasion, He declared that he did not see the blow struck, though he acknowledged the surcceeding dispute, and had seen M. Sirey walk towards wind Caumartin and inreaten to throw him out of the witness in he dia not immediately withdraw. The second witness was Madlle. Heinefetter, the actress ( 22 years of age). On the 13th, ten other witnesses were examined. The trial continued during the whole of the 14th, and concluded on the 15th inst. in an acquittal. The Court,
however, considering that M. Caumartin had carried however, considering that M. Caumartin had carried
prohibited arms, condemned him to all the expenses of Hocess.
Holland.-The Dutch provincial papers contain a variety of details respecting some smart shocks of an
earthcuake which were very generally felt in the beginning of the present month, chiefly on the 6th. From the numerous notices of the event, in appears to have excited Gialarm, but has not caused any very serious damage. of the Archduke Charles having received the Grand Cross of the Military Order of Maria Theresa, the whole garrison, to which two regiments bearing the name of the veneruble Prince had been added, were reviewed by the Emperor in person; after which his Majesty decorated the Archduke with the Cross of Maria Theresa, amidst the acclamations of an immense -A volcano of a novel kind has broken out in the neigha slow of Koenigshatte, in Silesia. For twenty years a slow fire, which occasioned no alarm, has burnt in the immense volumat district; but recently it has shot out the surrounding lames, whica lireal in to country. A seailans, whe purpose of diehge ine purpose of dicharging water buch the mines; but this hours with been in action, at he last accounta, for 72 hours, without producing any effect.

Iraly.-We learn by accounts rom Rome that a reAlberti of wholesale forgery of wo:ks which he had proAlberti of wholesale forgery of woks which he had prow
fessed to discover and publish as Tasso's. Some small portion of these works, which is considered to be genuine, air of authenticity. In his lodging were found an immense collection of writing tools, inks of different kinds and tints, old copybooks, blank paper ton out of old books, and innumerable exercises in imitation of the handwriting of more than fifty eminent individuals of Tasso's time. The Count's sentence was not nown on the erailroad from that city to Castellamare is increasing beyond all expectation. During the first two months it was visited by 116,912 persons. The railroad to Caserta was expect
to be soon opened. The king desires to extend it to be soon opened. The king desires to extend it
Geeta, and subsequently to Terracina; and, finally, come future period, to Rome. We learn also, that the works that have been commenced at Brindisi, under the Gafrintendence of English engineers, the object of which celebrated by its extensive Grecian and Oriental commerce, promise fair to become of considerable advantage the South of Italy.-We Wearn from Florence that the pits at Ripa, near Seravezza, it is intended to carry on the works upon a more extensive plan ; and for that purpose a company has been formed under the auspices of tal of one million of milreas, which may turn out very im portant to the Rothschild speculation at Madrid,
portant to the Rothschild speculation at Madid.
Russia. - It is stated by the German papers, that the Emperor Nicholas intends to proceed to Berlin by sea, in the course of the approaching summer, and on his reperson the government of the kingdom of Poland. person the government of the kingdom of Poland.
Malta.- On the 4 th inst., John Nailor, the murderer of the late Dr. Martin, was brought to trial. No case of the jurors considered that every man who kills another of the jurors considered that every man who kills another
must be labouring under monomania, the prisoner, on being found guilty, escaped the capital punishment, and Was sentenced to the galleys for life, with chains to his
legs. Six out of the seven jurors pronounced the crime a deliberate act of murder, meriting death. The sentence created considerable surprise, though the judges could not award the capital punishment if all the jurors did ned tion in the quarautine, at the suggestion, it appears, of Austria. The quarantine from the Ionian Islands has
been abolished, although arrivals from Athens or Syria are not included in the exemption. As regards arrivals from Egypt, the quarantine imposed on ressels and cargers has'been reduced from 20 to 16 days. No reductio has been made as regards Turkey, either in passengers, vessels, or goods; but there is little doubt she will be Greece some indulgence is granted to merchant.vessels, for on their arrival in Malta, provided they are furnished with a certificate from Her Majesty's Consul to the effect that no disease reigns in the country, their quarantine is reduced to seven days, no
discharging their cargoes.
Grrece.-Letters from Athens of the 31st ult. state that the English and French Governments had replied to the demand of Greece, that they would pay the dividend of the loan guaranteed by them, which became due in
March, but that the Greek Government must contrive March, but that the Greek Government must contrive to
raise funds for the payment of the September dividend. The two cabinets had declined making any other advance to Greece. Russia, it was expected, would return a similar reply. These letters mention that the comet had
been seen at Athens so early as the 5th ulto, and that its extraordinary brilliancy bad caused no little excitement, especially among the natives.

Turkey.-The Levant mail has brought advices from Constantinople to the 29th ult. They relate principally to the differences between Russia and Turkey regarding Servia, and show that the statements put forth by some of the German prints were premature. Although the dispute was considered to be drawing to a crisis, the Russian Ambassador had not delivered his ultimatum on the 29th ult., nor were the despatches he had received from his
Court a week before believed to contain any instructions of a decisive nature. The Erzeroum conferences appear to have assumed a more favourable aspect.
Egypt.-Letters from Alexandria of the 25th nilt. state that the British Consul in that city had declared that no British subject would conform to the monetary tariff established for the benefit of the bank. It was believed that the Austrian and Russian Consuls would adopt similar language. The Prince of the Wahabites, whom Ibrahim Pacha had made prisoner near Bagdad, and who had been effected his escape, and had not been recaptured. On the 2 ent, the officers on board the Cyclops war-steamer, lying at Alexandria, obtained a sight of the nucleus of the at Alexandria, obtained a sight of the nucleus of the the earth. When at its greatest brilliancy the tail appeared to extend half across the heavens, and in the cle atmosphere of Egypt the sight was truly magnificent. United States.-The royal mail-steamer Columbia $12 \frac{1}{2}$ days from Boston, and ten and a half from Halifax, having sailed on the 2 d instant from Boston, and the 4th from Halfax. The Columbia, it will be remembered, carried out Sir C. Metcalfe and suite, who arrived at Bos-
ton on the 20 th ; at Albany, Sir Charles received kind at-
tentions from ex-President Van Buren, the officers of the State, and the State Legislature. Sir C. Bagot still lies dangerously ill: the last bulletin gives little prospect of spondence between Gen. Cass, the well-known American Envoy in Paris, and Mr. Webster, the American Secretary of State. It occupies twelve columns oitthe largest
American papers. Gen. Cass complains bitterly of the "concessions" made to Great Britain, on the right o search question, by the terms of the late treaty and demands his immediate recal. Mr. Webster, in reply, reproaches Gen. Cass in terms not "right of visit." and de clares that the pretensions and principles asserted by both Powers in reference to this matter, remain as before the treaty. Gen. Cass is further reminded of the advantage which his interpretation of the treaty will give Great
Britain in any future negotiation upon the subject. -The finding of the Court-Martiar at the trial of Capt. M'Kenzie, of the brig Somers, for ordering Mr. Spencer and two other mutineers to be hung without trial, is said to be favourable to the accused. hees of the United Sta thip Vincennes, had shot the first lieutenant, Mr. Boyle, and letters received from the United Stales ship of war John Adams, announce a recent mutiny on board that vessel off the Cape of Good Hope. The men were all ordered on deck and asked what they wanted, when five who stepped forward and urged comsplaints were shot down, and the mutiny received in New York established betw een Baltimore and Washington, under an appropriation from Congress.
West Indies.-Letters have been received from Charleston, announcing that a sloop had arrived in that port from the West Indies, bringing advices of another severe shock of earthquake at Guadaloupe, on tly possible to vessel was so much shaken that it a dense cloud of smoke or dust rose above the town of Basseterre, which, be feared, had been reduced to $a$ heap of ruins: wis All effluvia arising from the bodies of the dead, of which no less than 4,500 had been dug out. Two days after, a shock was felt at the island of St. Thomas, and again in
the southern states of the Union on the 11th. Great alarm is felt throughout the West Indian Archipelago, owing to these frequent convulsions; and we may look forward with anziety aad apprehension for further parti-culars.-Another schooner from the West Indies re by fre early last month. -The Royal mail-steamer MedSt. Tho mas's to the 26th March. Just as she was quitting Sama her Majesty's bris Scylla arrived there, having on aica, her Majesty's brig Scyila arrived there, having no time for the particulars relative to his visit to transpire, but it was inferred that the insurgents had carried their point-taken possession of Port-au-Poriate (whion Majesty's steam-vessel Megera, Lieut. Oldmixon, for Vera Cruz, was totally lost on the 4th March, on Barebath Key, off Old Harbour, Jamaica, and one boy drowned A cournmartial had been held on tho comander, whic resulted in his being simply reprimanded.

Money Market, Friday.-Consols closed at $96{ }_{3}$ to
 Three per Cents. Reduced, $95{ }^{3}$; Mraree-and-hal per Cents Exchequer Bills, at $2 d$. per day, 65 s . to 67 s . prem., an at $1 \frac{1}{4} d_{\circ}$ per day $68 s$ s to $69 s$. prem.

Loss of the Solway Steam-ship. - The Lady Mary Wood, steamer, arrived at Southampton on Sunday from the Solway steam-ship, belonging to the West Indian Mail Company. The information has caused a great sensation in the City, and has thrown a gloom over the affairs of the Company, as this is the third ship they have lost since their establishment two years ago. The following staph occurred has been supplied by Mr. Lane, the purser, who was the first to bring the life-boat alongside the in- cha-
ghip. The detail is of a most painfully interesting racter, and cannot fail to excite the warmest sympatwas
for the fate of the unfortunate sufferers:-The Solway left Falmouth on the 3 d April, with the usual mails on board, and arrived at Corunna at twelve o'clock on Friday the 7th, having experienced heavy south-westerly gales in crossing the Bay of Biscay. She took in 81 tons at half-past nine o'clock the same evening. They passed the lighthouse about ten o'clock P. M., and were proceeding at full speed, when at about midnight the vessel struck on a sunken rock. The passengers were all in their berths at the time, but Captain Duncan and several of the oundous character, and created the utmost consternation. Immecharacter, and created the utmost consternation.
diately on the vessel striking, Captain Duncan ordered diately ongines to be backed, and this having been done, she came off apparently easy, the violence of the concussion having probably caused her to rebound in some slight having probable head degree. Her head was now purounding the ship, and thus sustained wab, however, of too serious a character to allow
this to be accomplished, and within a very few moments of the ship striking, it became evident that she was setting fast by the heac. Mr. Lane was asleep below at the moment the calamity occurred, and, in common with the passengers and crew, was awoke by the shock. He immediately ran up the forecastle ladder, and found the vesse sinking fast. The scene is described by him to have been at this time of a most heartrending character. The femal passengers were all on deck in a state of mind more easily conceived than described, every person expecting the ship to go down instantiy. She had still good way upon her the engines having apparently suffered no injury, when, while proceeding towards the shore as described above a general rush was made to the pinnace, which hung at the davits on the larboard side; 25 persons got into her and having seated themselves, cried out to those on board th "lower away." Captain Duncan, who evidently foresaw proceeding at full speed the boar but the confusion was so great on board, and his own attention so entirely devoted to the great object of getting the paddle life-boats afloat, and making the shore, tha his opposition was of no avail, and the forward tackle was let fly by the run, and the bows of the boat dropped in the water. The situation of those who had made this their hope of escape was now perilous in the extreme. A cry of "For God's sake let go the after-tackle," was answered bome of the crew as soon as possible, and the upon her, and a heavy sea struck the boat as she floated or ant and or two sailors only, who hung on the tackle, succeeded in again reaching the vessel. Ten minutes only had now elapsed since the vessel frst struck, daring whi every exertion had been made by the officers of the ship, with Captain Duncan at their head, to get the larboard lifeboat afloat. While thus engaged the boiler suddenly collapsed, and an immense quantity of steam, dust, ashes, and flames, burst from the engine-room. All on board thought that the vessel was now about to blow up, and two or three persons were so much alarmed as to jump overboard. Throughout the whole of this trying period Captain Duncan is described to have acted in the most offer and seaman-like manner, endeavouring, while giving effect to his orders, to seep up the spirits of those on board less accustomed to the dangers of the ocean. By great exercion the larboard paadie life-boa with water. The gig had previously been lowered, and ten persons had got into her and rowed away. The first and second cutters were also afloat, each filted with the passengers and crew. Mr. Wilder, the chief officer, with Mr. Lane and two or three other officers, now lowered themselves into the lifeboat, and brought her alongside the gangway. The engines had entirely ceased working from the moment the boiler collapsed. The water had now reached the fires, and the ship, it was evident, could not float many minutes longer Captain Duncan and the other officers now handed the passengers into the life-boats exerting themselves to the person to save all the female passengers. persons were already in the boat, wend "She is going!"" and giving one tremendous plunge she ant b . and gur one the pluse half-filed head-orer, rimb half-filled with water, afoal this perfectly miraculous, the suction arising from the vesse being abundantly sufficient to swamp a boat in a much more seaworthy condition than the lie-boat was at period. The screams of those on board were awful as the ship went down ; and Mr. Lane states, that the last seen or heard of Captain Duncan was an order for all on board mal to the rigging, towards which be appeared to be making himself; and it is supposed that in getting up the companion-ladder towards the upper deck he sank with many others. His conduct appears to have been most noble; he appeared to have no thought for his own safety, and when called to by some of the officers, who told him that the ship was foundering under them, he refused to leave. The life-boat now drifted away, and so great had been the confusion arising from the hope to save all on neard, that it was only then discovered that she had neither oar nor rudder. Shoes and hats were used to bail and afterer with which she was more than half filled, in with the sing about for a quarter of an hour, she fell Admiralty seant and having lieut. Hemasworth, the boat they abtained one ar, and Lieut. Hemsworth then returned to with the cutter shortly after they fell in with the first witer, They to board ther pers whe oar obtained over the made of braces and the tottom-board was similarly arranged on the larboard quarter with a silk handkerchief. By this means the boat was kept tolerably free, and drifted before the wind, Corunna-hill being all the time visible. It was still quite dark, and daylight was looke forward to with the most intense anxiety. The conduc of all on board was most praiseworthy ; not a syllable insubordination escaped, and all appearea to be resigaed to the worst that might happen. The ladies especiall (seven of whom were in the life-boat) behaved most her ically. Some of them had merely time to escape in the night-dress, and although seated in water up to the knees, not a murmur was uttered. At daybreak, the mast from the first cutter was stepped in the life-boat, and her Iugsail set, when she steered towards Cormna, and on entering the harbour was met by a Spanish launch, which
the catastrophe from those who escaped in the gig, which had made Corunna so early as five o'clock in the morning. The launch took the life-boat and cutter in tow, and brought them safely in, when the survivors were ties. Mr. Lane speaks in the highest terms of the admirable qualities of the paddle life-boat, through the instrumentality of which alone nearly 60 lives have been saved, under circumstances of the most extraordinary difficulty and danger. The French national steamer L'Erebe, Capt. Castaigne, was coming out of the harbour for the purpose
of proceeding to the wreck as the life-boat entered. The of proceeding to the wreck as the life-boat entered. The
chief officer, Mr. Wilder, went on board to accompany them, and at a short distance from the mouth of the harbour a signal was observed. The steamer bore down tobour a signal was observed. The steamer bore down to-
wards it, when it proved to be the pinnace, described above as swamped at an early period of the catastrophe. It contained a young man named Michael Bradley, a waiter on board, and the corpse of Mr. Hall, the midshipman. The steamer afterwards proceeded to the spot several packages and trunks which were floating about. It appears that the ship sank in about fifteen fathoms of Water, and about four miles from the shore. Eight or ten
persons succecded in reaching the rigging before she persons succeeded in reaching the rigging before she
went down, and as the upper portion of the main and went down, and as the upper portion of the main and
mizen masts were several feet above the surface of the water, they were enabled to hold on until daybreak, when their sitnation was observed from the shore, and some
boats put off to their assistance. The following is a list boats put off to their assistance. The following is a list
of passengers who are lost: Mr. and Mrs, Fitzjames, four children and servant, Mre. Haly, Mr. Montefiore, Miss Beadon, the Rev. Mr. Bascom, Mr. Le Main, Mr, Blake, and Mr . Burtchell, of the Royal Engineers; Mr. Hunter, Mr. Nicolle, and Mr. Cartwright--total, 17. The officers lost are, Capt. Duncan, Mr. Dicker, surgeon; and Mr. Hall, midshipman, died in the boat-total, 3. In the steward's department eight persons were lost.
Mr. Fitzjames, who has perished with his wife and four children, was proceeding to the West Indies as arbitrator of the Mixed Commission. Among those who fortunately escaped was Captain Wentworth, R, E., with his wife and children, who was proceeding to Bermuda, to superintend alterations in the Government fortifications is a brother of the Earl of Carnwath, and was on his way to Antigua. The Rev. Mr. Bascom, who was lost from the rigging, was a Protestant clergyman stationed at Barbadoes. His fate is described to have been most distressing. He had maintained his hold in the ship's rigging within a few hundred feet of the wreck, when his strength entirely failed, and be fell backwards into the water and Was seen no more. Lieut. Hemsworth, the Admiralty agent, had remained in the vicinity of the wreck during
the night, in the hope of saving the mails; but his boat was quite full, and he was unable to render any assistance to the unfortunate ereatures who still clung to the rigging. The weather was tolerably moderate, or the lives of the whole crew must inevitably have been sacrificed. Had
any attempt been made to reach the shore, there can be little doubt that the boats would have been swamped by the breakers, and every soul lost. The Solway was a Scotch built boat, and her total cost, when put into work-
ing trim, amounted to $80,000 l$. She is in 15 fathoms water; and Mr. Lane is of opinion that in her present position it would be impossible for her to hold long togecontained about 1,300 l. Captain Dpecie on board, which been one of the most skilful Commanders in the service, and to have been thoroughly acquainted with the localities throughout the route
The Eastor Holidays.-The unusual fineness of the weather during the Easter week has been productive of the usual resuls, an not been wituessed in the different places of attraction. On Monday from daybreak to a late hour in the evening, the Gravesend, Woolwich, and Greenwich steamboats were crowded with company for their
neveral destinations. On some of these boats as many as from 400 to 500 persons were on board, so closely lodged that they could scarcely move, and the wharfs from whence they started were so crowded with people anxious to get on board, that in many instances the police were obliged the most favoured resort; and although there were from 20 to 30 steamboats to carry persons to that place, they Were not sufficient for the numbers. In the afternoon the pressure at the London-bridge wharf was so great that the
large steamers began to take passengers for Greenwich large steamers began to take passengers for Greenwich,
and the City of Canterbury, after landing her passengers and the City of Canterbury, after landing her passengers
from Margate, embarked 800 persons on her spacious decks, all bound for the fair. Up to seven o'clock, at the floating pier at Garden-stairs, and the solid pier adjoining must have received double that number. The railway furnished its quota of visitors, and a great many Who landed on the Tunnel pier, after visiting the Tunnel, down the lower road to Greenwich. At sunset, the park, the fair, and the town were crowded. Altogether such an Easter Monday was never known before; and the people people were still flocking into the town, and thousands were returning home by the steamers and railway. On Monday, 5,785 persons visited the Painted Hall, and 4,476 the Chapel. On Sunday, 1,640 persons visited the on that day only opened for inspection from 1 to $20^{\prime}$ clock, divine service being performed there in the morning and

Tuesdan ; 4,476 persons also went in on Monday. On numbers to Greenwich. It was thought that the metropolis had been well nigh exhausted of the holiday-folks on sunday and Monday, and that the fair would be comfair, and the town, were nearly as full as on Monday, and the visitors to the Painted Hall of the Royal Hospital and its nobler corridors, wards, kitchens, and dining-rooms, were very numerous. Above bridge during Monday and Tuesday, the steamboats were filled with passengers; and Notwithstanding this migration to the suburbs, all the public exhibitions were musually well attended. The number of visitors at the British Museum on Monday, was 18,432; the number last year, on Easter Monday, was not a single case of robbery or misconduct occurred, nor was any one refused admission on the ground of intoxication. From twelve o'clock on Sunday, to the same hour on Monday, 28,642 persons went through the Thames Tunnel, and since the opening, upwards of 320,000 have
visited it. The holiday folks have given employment to three or four tollmen
The late Explosion at Waltham Abbey.-An iuquest was held on Saturday on the bodies of the five persons who were killed by the late explosion of the Government Powder-mills, which we noticed in our last. It seems that there were four separate explosions which followed each other in immediate succession, as but a few seconds elapsed between the first and the last. The corninghouse is situated on the banks of a stream which runs into two distineadows at Waltham Abey, and is divided buttress, twenty feet thick. In the first of these buildings $2,000 \mathrm{lbs}$. $2,300 \mathrm{lbs}$. of powder, and in the second almost simultaneously, as the flames must have communicated through the fissures in the buttress, which was not blown down, but is much shattered and shaken. The these two buildings. At about 170 yards from these these two buildings. At about two detached parts, separated by a buttress. Several startled by the explosion in the corning-house. They startled by the explosion in the corning-house. They
rushed out, and had barely made their escape before flakes of fire from the ruins of the corning-bouse burst through the roof and came in contact with the powder, which exploded, and reduced the granulating-house to a heap of ruins. About 70 yards further on is the glazing-house, fortunately escaped. These buildings, in common with others of their class, were built of very slight materials. If any massive masonry had been employed in their
structure, or any considerable force been opposed to the exploding matter, the destruction would have been tenfold. All the witnesses bore testimony to the great precautions taken to prevent accidents, and to the frequent inspection of the machinery by superior officers. The chief the precautions, that he should not have the slightest objection to work in the same mill under the same management were the works rebuilt ; he was persuaded mills than at any mills in the country. The jury returned a verdict of "Accidental death," accompanied by factory Tulloh, the inspector, with every possible precaution for the safety of the men employed under his superintendence. The deceased were all married men, and have
Dinner at the Mansion-house.-The usual Easter dinner was given on Monday at the Mansion-house. Dudley Stuart, the Bishops of Norwich ond French and Turkish A mopssadors, the and Llandaff, the and Mrs. and the Misses Everett Baron Minister Vice-Chancellor Knight Bruce, and numerous other guests. The Count de St. Aulaire, the French Ambassaguests. The Count de St. Aulaire, the French Ambassathe construction of railways, which would still further facilitate the intercourse between France and England, and unite the two countries by a constant interchange kindly feeling
Easter Parish Elections.-On Tuesday, being Easter Tuesday, the election of churchwardens, overseers, and place, but the proceedings possessed a merely local interest In several instances the opposition party were defeated Church-rates and the new Poor-law were the principal topies of discussion.
The Chinese Ransom.-On Monday, six waggons, each drawn by four horses, arrived at the Mint with upwards being million and a quarter dollars' worth of sycee silver, $5,000,000$ dollars of of the first instalment, namely Portsmouth about the middle of last week, in her Majesty's ship Herald, and one of the principal officers of the Commissary departnent of the Treasury immediately took was une of it. During Thursday and Saturday the Ferald to town by the Southampton Railway, under a strong military escort, and in the course of the day was safely deposited in the bullion storehouses at the Mint. The silver, as on previous occasions, was packed in strong tinger ; and as the treasure passed through the City crowds of persons followed the procession to the gates of the Mint.

Metropolitan improvements.-A few days since, by order of the Commissioners of Woods and Forests, several houses in Belton-sireet, Long Acre, and in Broad-street, St. Giles's, which are to be removed for the purpose of Covent-garden wine of street of by auction, so that in short time the comaunication by this thoroughfare from Waterloo-bridge will be open to the new street that will connect Holborn and Oxford-street.
City Police.-Mr. D. W. Harvey, the City Commissioner, has presented a statistical report to the Corporation on the operations of the Police force under his commana, daring the past year. From this it appears houses in the City persons the Ist Janvary and the 31st of Decemer, 1842, both inclusive, was 10841 . These of December, 1812, both in
 there were apprebended for ofences againt the person, lence, 40 ; for offences apuinst property committed with out violence, 1,960 ; for malicious offences against property 360 ; for forgery and offences against the currency, 249 for offences not included in the above classes,
Total, 5,002 . 2 . In the second class we find the following entries,-Charges not entertained for the reasons assigned on the occurrence sheets, 2,783 ; drunken persons discharged when capable of taking care of themselves, 973; destitute persons, 1,782; vagrants, 301; Total, 5,83 . Number of summonses taken out and prosecuted by the Police under the Carriage Act against public. 404 diad drovers, of which 1,098 were convicted, and 404 dismissed or withdrawn by order of the Magistrates, 1, 02 , number of lives saved by the Police, 36 ; number of fires discovered by the Police, 131 ; number of children found and restored to their friends, or sent to the workhouse, 441 ; houses, warehouses, \&c., found insecure, of resident, 892 . Were untenanted, and 360 had no nighatly persons, and restored on their liberation, $857 l$. 7s. 4d.; value of property stolen, $6,559 l .7 \mathrm{~s} .2 \frac{1}{9} d$.; value of property recovered, $1,241 l$. $8 s, 9 d$.-Of the 5,002 persons in the first of the above classes, 2,682 were discharged by the Magistrates; 1,871 summarily convicted, and 449 committed for trial; of which latter, 111 were convicted and senvarious periods. Of the and 243 to imprisonment for and 37 not prosecuted, or bills not found.-Mr. Harvey adds that there are two points in the above details which adds that there are two points in the above, detais which merit notice. Although the amount of depredations is comparatively trivial, yet the amount is greatly swelled by the exaggerated estimates of lost property. He states that it uot unfequently happens, that eiderly gentlemen great thoroughfares of the City, when the value of the watch or the ring they have lost is sure to be largely overrated ; and that nearly all the preat robberies are made upon prexises which are entirely abandoned during the night, and the key of the outer door left with persons little entitled to confidence. He adds, that in all cases in which any person is aggrieved, and in which the assistance of the Police could be expected, a letter is addressed to that party from his office to inquire whether there is any cause fur complaint; and be is able to state that of several hundreds of answers, but six persons have expressed themselves otherwise than entirely satisfied.

Mortality of the Metropolis.-The following is the number of deaths registered in the week ending Saturday, April 8 :-West districts, 144 ; North districts, 156 ; Central districts, 180; East districts, 190; South districts, 185. Total, 855, (444 males, 411 females.) Weekly average for the last five years, 903, (46] males, 442 females, ) and for the last five winters, 1004. A rumour has lately been current that an epidemic fever prevails in St. Giles's and other densely populated districts of the Metropolis. The College of Physicians, however, have issued a report announcing that "no epidemic is in physicians and subsequent observations by individual general health of the Metropolis is rather above its usual standard at this season of the year.

## 誛robíncial Notes.

Alverstoke.-A vestry meeting was held on Thursday the 13th, at the House of Industry for this parish, Archdeacon Wilberforce, the Rector, in the chair, to consider the subject of the medical relief of the poor of the parish. The Archdeacon, in stating the object of the meeting, said, the plan then existing was, that there were two medical attendants in the parish, and that they wrote prescriptions which were made up at the chemist's, the charge for which it was calculated would not have exceeded 40 \% a year. The plan had failed in this respect, that in less than half a year 36l. bad been expended for drugs. It was evident that the matter must be considered, and he should have a plan to suggest to them on the subject. He would ask them to allot a salary to the medical attendants of the parish, and it would then remain to decide whether they should have two or ove ; there woyld be mo difference in the expense. He thought two would be prefershle. He should then propose to do sway with the pregulation He prescriptions. He should suggest that it would be desirable to have two medical men at a salary of 501 ., to include medicine and attendance; labours and fractures to be paid for extra, according to the rules and scale of the Poor-law Commissioners. The question was not what had beenformerly done, but what would be fair and just to enable right-minded men to do their duty to the poor. In the adjoining parishes the emolument was greater in proportion. The Poor-law Commissioners never allow more than 15,000 inhabitants under one sargeon, and if
the parish consist of a town and liberty, they recommend a
division hetween two medical nen. Those noints applied to Alverstoke. Then as to the positive numbers requirin relief; 74 had been attended in a day, during the last six months. That would give 27,010 casees in a year. These months. $1 d$. each would amount to $112 \%$. $1 / s$. The proposal of 1002. a year would therefore be 12 I .10 s . below granting Jd. a day for each case. Now the only way in which any medical practitioner could afford to attend the parish poor was, by having wealthier patients in the same neighbourhood, who could pay him for his visits to the locality. But as no one man could see 74 poor patients in a day abd
also attend a private practice, it would be requisite to divide the parish between two. He felt that the sum proposed was the lowest humanity could allow. There could, he said, be no better citizen than the poor man struggling
with misfortune and striving to keep his children from the with misfortune and striving to keep his from the poor-house. It is the poor sick man in his garret- your fields, but whom the visitation of God's hand has laid on a bed of sickness-who is willing to work from morning to night, but who is laid up, not by his own neglect or
fault, but by God's providence, -it was this man whom fault, bnt by God's providence,--it was
the meeting had to consider; and he trusted they would not be misled into refusing that to which such a man is entitled by the law of the land, and by a much higher law -the law of Christian charity: And this would be the
truest economy as well as the best charity. If a man be neglected in his sickness, he will be longer in recery and it would be miserable economy if you have to keep a family for three months because you have beat down from three halfpence to three farthings the remuneration to the have recovered the health of the head of that family in a shorter period. Besides this, you may lead to a man' death, and you would thrs have to keep the family because you had stinted the father of that which woul soon have sent him back to maintain his family. fe
then moved that there should be two medical men, one for the town, and one for the liberty of the parish, at salary of 50\%, each : labours and fractures to be paid for Commissioners. Dr. Quarrier entirely concurred in the views and arguments of the Archdeacon, and cordially seconded the motion. An amendment was proposed by Mr. Hoskins that the $100 l$. a year should include every charge, but after a long discussion of Archdeacon Wilberfore was carried.
Barnsley.-On Friday last, shortly after the miners Maine number) had descenced the coal pit at Darley Maine, hear The alarm was rery great, as it was feare that a great number of lives must have been sacrificed. Fortunately, however, the miners almost entirely escaped injury, with the exception of two, who were se severel the pit has not been in a working atate for some weeks past, in consequence of having been filled wita water, and labour. The accident was occasioned by one of the men fastening an open candle against one of the props; he was in the act of taking off his jacket, when the draught of air which had lodged near the top of the pit
Berlford. - A woman residing at Wrestlingwortb, called Sarah Dazely, was recently committed to the county gaol liam Dazely, by administering arsenic in his food. In consequence of some circumstances which have transpired, the bodies of her first husband and child were exhumed last week, and conveyed from Tadlow to Wrestlingwnith, to undergo a medical examination. By innecled to investigate the circumstances attending the deaths of the deceased; but the inquiry was merely preliminary, very littie evidence having been adduced, when the inty of analgsing the contents of the stomachs.

Carmarthen.-TThe local papers state that Rebecca and her Daughters are still at work in the lower part of the to dis, notwithstanding implicated in their proceedings, About midnight of Fridgy Rebecca and a numerous party About midnghe proceeded to Pwlitrap, near St. Clear's,
 and in posts remaining. Rebecca and her children imgate or posts remaining. Rece London police, who were mediately disappand the time had no intimation of what was going forward until their services could be of no avail. A second attack was made about 2 A.M. on Thursday, on the Prendergast toll-gate, near Haverford west, by a party of about 24 men , who came domnind from the Fishguard road. The first movement on arriving at the toll-gate was to appoint guards at the doors of the
cottages near the gate, to prevent anybody from coming cottages near the gate, to prevent anybody from coming
out to interrupt the operations. The mob did nct desist till they had demolished the gate-posts and signboard to splinters; they then told the toll-keeper that they had
fixed on that night for doing the work because it was fixed on that night for doing the work because it was bright moonlight, which would prevent them injuring
theur batchets. On leaving they gave a hearty cheer, aud carried away a portion of one of the posts in token of thei triumph.
Deal.-On Monday afternoon the Goodwin Sands were the scene of another shipwreck, that of a fine American ship, the Hewes, belonging to New York, and bound for Hull. It appears that shortly after one o'clock the ship was observed by the Deal boatmen bearing down channel, with sails close reefed, the wind blowing a strong, gale By the colours flying at her mainmast, she could be dis-
cerned as an American trader, apparently running between six and seven knots an hour. Nothing occurred until about 3 o'clock, just as she had got abreast of Deal, inside the Sands, when it commenced snowing heavily. This for a time hil the ship from the shore; but when it cleared in the course of an hour, the vessel was discovered on the Goodwin Sands, with signals of distress hoisted. Severa boats were launched to render assistance, and a smack belonging to Dover took the crew safely on board their made to save the ship, but during the night the wind got up, causing a heavy sea on the sands, sweeping ever obstacle before it, and by daylight on the following morn ing the ship had disappeared.
Kendal. -It is stated by the local papers, that a Mr. Bird is now laving claim to Brougham-Hall and the adof Ing property, which, until it came into the possession' Nest." Mr. Bird is a gentleman from Ashton-underLyne, who says that he is the direct male descendant of the former possessors of Brougham-Hall. Notice had rent should be paid to any person except the claimant. Mr . Bird then left the neighbourhood for Ashton, and promised, if Lord Broughom took no notice of his proceedings, to return and soll up all the property on the ceedings, to return and se up is due to bim, as the for he mailed, and could the le divertad by ale or the heir-at-law, Melton Mowbray.-The late rabbery at the Earl of Mellon Mowb Wovered ; and pherm in his lordhin's service has been committed to take his trial for the affence. When apprehended at Sutton Bonnington on Monday, he had the gold watch and several of the jewels Oxford.-The Rev. Dr. Warneford, Rector of Bour-Con-on-the-Hill, and Honorary Canon of Gloucester and Bristol, has conveyed by deed, to trustees, an estate in the parish of Hellingley, in the county of Sussex, con-
taining 737 a . 70., called the Broad Estate, and also his Impropriate Rectory of the parish of Hellingley, and his Manor of Warlington, (altogether yielding a net income in future of 1,1006 . per annum,) for promoting the specia objects of the Radeliffe Lunatic Asylum, and for enabling the managers to admit a greater number of patients. Dy Warneford has charged his donation with the annual pay ment of two sums, one not exceeding 50. , as a $20 l$. for th support of a Sunday-school at Hellingley. In 1813, whe the undertaking was in its infancy, Dr. Waracford and his sister contributed 200. each towards its support; in amounted to 7,2502 .-On Wednesday, the 12 th, an appeal came before wr. Serjeant Manning, St. Michael's, was the appellant, and the churchwardens and overseers of that parish the respondents. The cirthe churchwardens had been directed by the guardians of the poor acting under the provisions of the Oxford Local Act to rate two colleges; viz., Exeter and Jesus.
One of the churchwardens, however, being the cook, and the other an officer to the colleges, they went to the Principals and Fellows, and asked if the rating would be agreesble to them, and if the rate should be passed by the justices, as the guardians hausition and they were omitted colleges objected to the proposthere the rate. The appellant thereftended, through his counsel, that he had been overrated, inasmuch as Jesus and Exeter Colleges had been excluded from the rate, or greatly underrated. The college authorities now put in various papers, stating the grounds on wion they case,
sidered that the Recorder had no jurisdiction; the cater notisithstanding, was proceeded with, and the rate was amended in accordance witla the evidence. An application was made on behalf of the appellant for coste against the respondents, which the Recorder granted, and directed the Town-clerk to tax the same. The sum of count ; and this will come out of the pockets of the churchwardens, uniess they are indemnified by the University. It is expected that upon a distress being issued against the college property, to enforce the rate, some important proceedings will ensue.

Tunbridge. - The inhabitants of Tunbridge were alarmed on Friday, the 7 th inst., by hearing a loud report, which was soon known to have been caused by Guton, near this town. It appears that one of a double mill exploded at that time, and on the following morning, about o'clock, the other mill exploded. No lives were lost, nor any
the mills.
Wallingford.-On Thursday afternoon the dinner of the agriculturists of Wallingford and the neighbourhood, Which has excited some interest in the county of Berent counts mat pulse to the agriculturista, and if being well understood puise the ag. ppinion of the agriculturists in the district upon the subject of the Corn Luw, the attendance was more than usually numerous. The Town-hall was completely filled, as were also some of the adjoining rooms; adation, were the visitors, being unable to procure accommoda ion, compelled to dine at neigbbouring inns, and were admilte after dinner was over. The menuer for the by Earl Mr. Blackstone, was in the chair, Mr. Bailie Cochrane,
M.P., Mr. Pusey, M.P., the Mayor, Mr. Dick, M.P., Sir
H. Willoughby, Bart., and many other supporters of frill H . Willoughby, Bart, and many other supporters of frill to dinuer and several speeches were delivered, but the length to the renders it im lengh tor the meeting is said possible for us to give an abstract. The meeting is said years in this district of Berkshire.
Windsor. - For a long time past the defective state of the drainage of Windsor has frequently occupied the attention wor the locat authorties, and sot of Woods and Forests, in order that some plan mit be carried into effect to remeny the exishog evis, wiver her Majesty, during the residence of the Court at Windsor has had just cause to complain. In the immediate vicinity ditche tow soverly sagan pols dond duches (wot untrequently fined win dead dogs and odbe ander, whil exal hoxis exhala some or the most popalous portions othe neigho to the serious injury of the healh and comfort or the in tants. At a ate meetng or he town counce, a cod to istee was appointed to inuire into the subject, hald a few days ago Mr, Bedborough an extensive builder of Windsor, stated that he had been requested by that com mittee to employ a competent professional person that th expense of doing so would be considerable, he thought it best to engage persons in his own employ, and tien make a report, which report would have been presented had he not ascertained that Government would send down their own engineers to survey the Crown property; and he thought it, therefore, better to defer his report unti the nature of the steps the Govermment intended to parand Forests having obtained an order from the Lords of the Tresury for the employment of surveyors have determined that the necessary survey shall take place and be oncluded at the earliest possible period ; and Captain Tucker, of the Royal Engineers (in pursuance of the Treasury minute,) with Serjeant Smith, and a party of the Royal Sappers and Miners under his aperations, Their general instructions are, to prepare a map upon a large cale, with level lines, as a basis for an improved system of drainage for the Castle and town. In order to obtain this insirable information, it is expected that the time to be occupied by the survey will necessarily extend over period of between a dome tions to be effected by the Woods and Forests, whot hy the local authorities, so as to add materially to the con and to the inmprovement of the general health and pros perity of the town
York- - A short time since we copied a pargraph from the local papers, stating that Mrs. Wood, the voculist formerly Miss Paton, bad retired into a convent nea they. The Wakefien Ga, welte announced last week that
 Moor; the pain and anxiety of beinge ahse nt from hush:, $R$ and being greater than her religious enco mons, printed, and contains some curious details. The return embraces a period of ten years, ending the 5th of January The total amount of tax paid on English railways in 1832 was only 6391. , namely, 18l. by the Leicester and Mancheste alove (the London and Birmingham) paid 25,9406. another (the Great Western), 25,8046 ; it third (the Grand Junction), $13,545 \%$; and a fourth (the South-Western) cipal companies. In 1833 the Liverpoul and Manchester tax had risen to $5,646 \%$, and ia the following year to fluctuated paying 858l., and the Grand Junction and London and Birmingh at $5,005 \%$, and the latter at $1,282 l$. They have since been as high as-Grand Junction (1840), 15,030l., and London and Birmingham (1841), 26,227l. The following tigures, taken from the returns, exhibit a serious falling off in the amount of duty during the last yea

Birmingham and Derby
Grand Junction
Liverpool and Manchester
Midland Counties
Manchester and Leeds
North Midland
Most of the minor companies have sufferedin a similar way. The diminution in the amount of tax is mainly ascribed to the commercial distress of the country during the past year. The only lines on whien there was an
increase in the amount of duty paid durmg the last year Fastern Countie

## Great Western

London and Black and Sali Newcastle and Carlisle
ork and North Midland
The returns for Scotland show a simi Elinburgh and Dalkeith
Garnkirk and Gasik
The only increase is in the
Glaggow and Greenook

## eare

宽

The Edinburgh and Glasgow line was not opened till last year, but already it has paid more for the time than any
other Scotch railway, namely, 4,941l. The laryestamount paid per annum to any of the companies for the amount ance of the mails appears to be to the Grand Junctionnamely, 17,490l. The London and Birmingham receive 14,510l., the Birmingham and Gloucester $10,156 l$., the
North Union and Lancaster and Preston $4,443 l$ 4,7456 . respectively, and the Chester and Crew, Midland Counties, and North Midland, about 2,600l. each. The Greenwich receive 50l. per annum, and the Blackwall (used on Tuesday and Friday mornings for the Dutch
mail, and occasionally for the home mail) $5 s$. per trip. A "return showing the number of mail-bags lost, or detained companies entrusted with the charge of them," has "nil", in reference to bags "lost;" but as respects "detentions, the Grand Junction comes first in mismanage-
ment. Thus: Girand Junction II; South Westera 6 Great Western 5; Birmingham and Gloucester 2 ; and North Midland and Liverpool and Manchester 1. These are the whole of the returns, and it is therefore to be
presumed that, on the London and Birmingham, Birmingham and Derby, Midland Counties, and other lines not named, no detention has occurred.-On Monday after which, another of those extensive blasts of Dover Cliffs, Which have excited so much interest, took place at Lydden Spont Coast-guard station, and proved proportionally suc-
cessful in its effects to the former one, when, with the enormous quantity of 18,500 pounds of gunpowder, the destruction of Round-down Cliff was effected. The mass of chalik now operated on formed the base of the same
cliff, the crown of which, to the depth of 90 feet, was cliff, the crown of which, to the depth of 90 feet, was
blown off, by a blast consisting of 7,000 lbs, of gunpowder, on the 2 d ult. The present blast consisted of upwards of l $0,000 \mathrm{lbs}$. of gunpowder, which was placed in fifteen cells chalky cliff; and the conducting wires the base of the placed, all were fired at once. This blast, like the others, was characterised by the abseuce of noise or smoke, the only difference being that on the present occasion a large quantity of chalk blocks and rubbish was projected through of chalk removed is overspread the abyss below that the, for so dense a fog trate from the top of the cliff to the bottom. It wasclear, however, that the mines had done their duty, from the tiemendous mass that has been thrown down were formed indreds of yards around, and large fissures crowded with come top of the cliff. Numerous steamers, occurred, although the cliffe were ofoverg, and no accident to the very verge.-It is reported, that another year will mencing the formation of a railroad being taken for comwith the Grand Junction Railway. Government have, it is rumoured, hinted their willingness to aid amoje have, it will enable the London mals to reach Dublin 16 wich hours.-At the last meting of the Royal Agricultir Society, it was stated that the directors of the Midland special trains on the consented to supply any number of whil meeture on the occasion of the forthcoming show and at half the usual fares for cattle and farming passengers,

## IRELAND.

Dublin. - We noticed in our last the excitement occa sioned by the transfer of the mail-coach contract from Scotland. In reply to the address of the Cortleman of the subject, the Lord Mayor has received a letter from the Tord Lieutenant, stating that he has made a representaion to the Home Secretary in reference to the addresse deputation of Irish Members of Parliament had seen a that day (the sth instant) Sir R. Peel and Mr. Goulburn appears to her Majesty's Government that Mr. Purcell has no well-founded ground of complaint ; that the contract hiduestion was made an open tender; that the lowest has been signed unconditionally, and in exact compliance closed the advertisement; and, finally, that the affair is standing thar as official forms are concerned." - Notwiththe operative concment, a petition has been exhibited by of thiserative coachrnakers, signed by 35,000 inhabitants immecity: it is intended for presentation in Parliament immediately after the Easter recess. Petitions have been town, Kilkded to Dublin, for transmission, from ThomasNavan, Lisnenny, Waterford, Slane, Dunleer, Drogheda, Navan, Lisnaskea, and other places.
week at Cork, it meeting of the Local Council held last should commence its session in this city on Thsociation is the August. The attendance is likely to be very large, as the raeeting commences not only at the termination of templated visit to Irreland. The resources and hospitality
of Cork will he of Cork will be thrown open to members and visitors, and are preparing for their accommodation. Those members
who visite Who visit Dublin on their way to or from the meeting exhibitions on trely admitted to its public institutions and subscriptions are going on well. The Earl of Rosse octhe
Presidept telescope will bonnounced that his enormous reflecting spection of members. Monaghan.-The
the unfortunate - The Norference between Mr. Shirley and his
tenantry has been brought to an amicable adjustment 20 per cent. off the price of lime which he gives his temantry, and has taken upon himself the he gives his entire poor-rate assessed upon his estates. These concessions satisfied the tenantry ; and it is stated that all the Poor Law valuation, which is considered a reasonableaverage

Fdinburgh,-The Edinburgh Evening Post, in notic Scotland, says the the General Assembly of the Church o on the character of that body, and that the schismatics have been entirely defeated. The Edinburgh Observer says it is authorized to state that the Very Reverend
Mrincipal Macfarlane is to be proposed as Mod the ensuing General Assembly
Civil Engineers, Mr. Mackain ang of the Institute of Water giners, Mr. Mackain, engineer of the Glasgow the various plans projected and executed for supplying that city with water. It commenced the statement from the year 1755, at which period Mr, Gibson, in his street-lights, and a supply of water, \&c, foot-pavements, that time drawn from wells in the streets. In 1780, it was proposed to bring, for the supply of the whole city, the water of a spring which is now found inadequate to the wants of a house of refuge since erected near it. At by Mr. H. Bell. pumping up the water, "because they would be a nuisance, and hurtful to surrounding property; and their concity." Mr. Telford mendation two steam-engines were erected, with reservoirs. His estimate for the requisite supply for a popuposing that 6000 families would become renters, and the produce, at $2 l$. each, would be about $12,000 l$, per andum The population in 1842 was 300,000 , and the annual in. come was about 30,5002 , making the averase pail ine about $9 s$. per annum for each family. The history then given of the gradual increase of the works until they filtersed or thirteen steam-engines, with their requisite value of thervirs, ac.; the fuctuation of the mercantile waterpany Ths, pany. The facts detailed were valuable for reference, and interesting as history. An appendix, containing an ac
count of the reservoirs and filters, was promised for count of the re
future occasion.

## THEATRICALS.

Italian Opera.-Norma was performed on Tuesday night at this theatre, and Mdlle. Grisi, after a two years absence, appeared as the Druid priestess. She was most opera, were attended and her efforts, during the whole her parts has been more frequently performed, or is mor familiariy known to the public than that of Norma. It was not to be expected, therefore, that she would give it
any new feature ; but her personation of the cher was, as it has always been, a wonderful display of impas sioned energy, far surpassing anything that has been mason the Opera stage since Mdlle. Pasta's Medea. The opera received an entirely new feature from Mdlle. Moltini's charming performance of Adalgisa, which gave insented is phly insipid S. Mario sustained the peprPollio, and the aged priest was worthily red the part of S. Lablache. The opera was thus performed in a man by that could not easily be excelled. This was S. Lablacher first appearance this season; and continued plaudits, his entrance, burst from every part of the house. The theatre were crowded, which has been the case every nigh since the commencement of the season.
this theatre were.-The Easter Monday entertainments at original Easter absurdity," called Fortuntio and new and gifted Servants, founded on the familiar fairy tale, in which the young knight, Fortunio, overcomes every dif ficulty, no matter how insurmountable, by means of one servant who could eat everything, a second who could drink everything, a third who could carry everything, everything, and so forth. The only novelty in the cast of Macbeth was Miss Helen Faucitt's appearance cas Maobeth, during the temporary absence of Mrs. Warner Moth the play and the afterpiece was well received by a crowded audience, who, as usual on Easter nights, ap-
penred determined to be pleased
Mondey arkit. - This house opened for the season on Monday night. During the recess the theatre has been much altered and improved. It is now brilliantly lighted redecorared. The performances welled, and the whole Scandal, and the burletta of Riquet with the Tuft. The cast of the former was the same, or nearly so, as last season; and, with Mesdames Vestris, Glover, Clifford, and Edwin Yarnold, and Messrs. Farren, Strickland, Brindal, Stuart, Charles Mathews, and Webster, to support the characters, the performances went off pleasantly and effectively, as a matter of course. Riquet with the Tuft is an old favourite, and the audience were so well pleased that the manager was called before the curtain to receive their applause. On Tuesday Miss Julia Bennett, a young lady, daughter of Mr. G. Bennett, of Covent Garden, made her
first appearance before a London audience at this theatre, as the Widow Cheerly, in the comedy of the Soldier' Daughter. She was, altogether, succeessful, and was called or at the conclusion of the comedy.
Princess's Theatre.-An English version of Tancredi was performed here on Monday night. Two or three daptations of Italian operas have been produced at this heatre in the course of the season with considerable success; but though Tancredi attracted a numerous audience, and received loud applause, yet the approbation appeared to be more owing to the great beauty of Rossini's music, performance.
French Plays.-The new comedie vaudeville, Les Monday evering, and is likely to meet with nearly as favourable a reception bere as it received in Paris, where it bas been performed upwards of two hundred times. The le pa De was the well-known comic vaudeville, Le Pere father of the Debulante, with a racy humour, the like of which is not to be seen on the English stage. His acting showed a genuine comic genius-a thorough perception f the ladious in character. The dress, the manner, the gesture, the gesticulation, the voice, everything was perfrom berin Mdlle Fling to end. M. Vernet was ably seconded by actors filled theirgeot, as the Debutante, and the other Every part of the house was full.

New Houses of Parliament.-Mr. Barry has presented a report to the Royal Commission on the Fine Arts, in reterence to the internal decorations of the New Buildings and other local improvernents which have suggested themseives. After stating that the walls of the several halls, galleries, and corridors of approach, as well as the various pubic apartments throughout the building, should be decountry, Mr paintings illustrative of the history of the employment Barry proceeds to show in detail that the may be advantageonsly of national paintings. He sugrests that propesel series Hall should be made the suggests hestminster of all trophies obe the depository, as in former times, and that an and the Palace Yard, and of thus the purpose of inclosing New front towards the chus obtaining a long and imposing Hall inards the abbey. By this means Westminster of Wenmion of Westminster, would be placed in a quadrangle, and
would be seen to the best advantage; and the New arw Courts, rooens for Commissions and other purposes might be provided in the sides of the quadrangle. He suggests disu that the superstructure of Westminster Bridge should be rebuilt upon the old foundations, which are now in course of repair, under the superintendence of Messrs.
Walker. On this noint Mr. in my opinnous, of the utmost imp artance, buth As it is, Whe effect of the New Houses of Parlament, when 12 vired pom the bridge, and the convenienee of the publi: in wict $\mathrm{p}^{\mathrm{k}}$ ssib.e level, I would ricommend that the farm which arches of the new bridge should be pointed, by which great facility would be afforded for accomplishing that very important object, namaly, by materially reducing
the thickness of the crown of the is considered necessary for arches of the circular fiat am induced also to recommend this form of arch, on ac it offers, namel ty, the elevation practical advantage which the la, manely, the elevation of its springing above through the bridge will he wherens bridge will be the same at all times of tide impedime at present, the spandrils of the arches offer an equal to one-twentieth of its sectional water, nearly rapid currents with a considerable much danger to cratt in passing through the bridget unes the influence of high winds. I consider it asa of ther greatest importance, in an artistic point of view, not one that the bridge should be materially lowered, but thit should be made to accord with the architecture of the positiouses of Pariament, in order that, both in comhious and weflectis style, the ensemble should be harmoformed of the cost of the new superstructure, I am sa:liscost conld be erected for about 120 ,(100ul. beyond the Walker and Burgess's design tor widening the Messestnt bridge to the extent proposed." The embankment on both sides of the river, from Vauxball-bridge to Londonbridge, he considers next in importance to the rebuilding As there would public road upon the embankment on the nurtl sidte of the wher, 1 conane my observations to the southern side cession of fine views of London, it would aftiord a sucviews of the principle of the newd the best situation for Having maturely considere new Houses of Parliament. be practicable to obtain a public subject, I think it would arches, from the termini of the road of ample width upon and the Brighton railroads, at south-Eastern and Duver to the terminus of the South-Western Railway-bridge, that would coincide with raised upon arches to a aux that would coincide with the levels of the roadways of the the waterside frontares of intersect, by which means interfered with in any material degrel wharfs need not be

wf the liank．Tre cl，arge now made agamst them was，not that they had been negligent in the discharge of theise and fraudulent representations，knowing them to be false，whe out the plaintifi＇s
the plantiff．This must be the charge，to mater
on the defendants－where the mative suggested for such conduct？ Mr．Knowles，in his opening，had said that Mr．Astitonere was not shadow of truthen，and was wholly and entirely without fouudation Th evidence，and was wholly and entirely withont inn charse resolved itself into represcntations made by the general hoard of drectors．The first was sald to be made in february， 1833 ，and the others at annual and haif－y edrly meet ngs．There was no representation made by the dill and if then action vidually－all were made hy the gencran board，ancmber of the were sistainable against the detendants，every me he subnitted， to sustan the charge of fraud and falsehood，on the evidence whish had been teadered．What was the constitution of the
Bank？There was the head bank at Manchester，and 7 local branches．There was a tocal director，a maneger，aud an ac－
countant at each branch，and there was an mspector of branches countant at euchractice was，not for the directors to examine the bescdes．The practice was，
books，but for the paid officer． $13 y$ the provisions of the ceed the
directors were to make known to the shareholders on y so much as they might think right to make pubhe．Th．cre was no conceal－ gencies As to the declaration of a durdend，what would have been The consequence to the plantif，ainf the other siasenes would
no dividenid had been recommended？Why，the shares mmedratcly have become utterly unsalenble．He would show
that the defendants，Messrs．Ashton and Furner，had strugyled against the local directors woth respect to the umount on the of subminting a mindion at the board to have the accounts indined． were aware of the state of ane dine existence of bad debts，yet they were always or an audit of the accounts．He would further sliow the whe The accounts were and $\begin{aligned} & \text { fendants，Ashton and Sopton，thought the bark in a prosperous } \\ & \text { stan }\end{aligned}$ 隹 sote，and that it was had been told by the audpors that it was able to pay five
for they per cent．，and that they expecten it woudd shorty be abrer and
a higher dividend．He contended that Meessrs．Tunter equally well apply to every other sharehoker．The General then read several of the clanses of the deed，and pro－ to the board in 1837 ，as well ns on the composilion of the buard
itself．He submited the members of the board generally were incapable of fraud，swincling，and cheating，attuough to every one al them would the charge against the defendant be equally applicable．The combited，as tar as the shareloders were con－ cerned，in the neglect to mention the bad drets；bat never given an order as to the mode in which the accordy and the clerk and managers，whon that gentleman．appoanted．He submitted
and Mucardy upon tise defend－ ants whould be exceedugly unjust．The Solicitor－General then commented upor the evidence ol the various mine the directors had themes been ming the accounts in the representations of the acturg ofticers；but this， though it might bic negl．gence，was certanly not a latud．the ureparation of therr defence，and ink not beng aliowed access to The books and accounts of the bank．He would read the repert
if Messrs．Panton and Edge，who were appolited auditns in
 afford to pay five per cent．for the next hons years，and up－
wards of the per cent．after that time．He asked whether the defenamants were who had tully examined the accumits，and pre－ sented the result of their investigations to the board．He sub－
mitted that the plaintiff had given no evidence entice of his having become a shareholder can consequence one no shad have of a ground of action．After some further observations the warned address occupying about two hours and a half）；the jearned gentleman concluded by stating his confident annipator two of
verdict for his chent．Mr．Baines addressed the Jury to the defendants（Messrs．Parm and
heens utterly rumed by therr unfore comnection with the
bank．His Lordshap having summed up，the Jury，ater an absence of a few minutes，returned into coung their opinion，that the defendants，at the same time expressinble negligence．
they had been guilty of gross and unpardonal Police．－British Ameriuan Associutiun．－On Wed，the govern－
in cunsequence of the advice given by Lieut．Lean，
 the owner of the vessel，were summoded before the Lord Mayor， to answer the complaints of several of the unfortunate persons who had broken up their establishments in the under the sanction
 crow notediced ins this paper．The justace－rou a wreat lenigth of time．Capt．lretacll，who was the first gurenonedicment to give a uil expanation as tar as he was concexned．He sald that he
 childicn．When the vessel reaclied 42 W ．long．，she errountered
 Cork，where she remained until the gis mist．，when she satled
 The emigrants never expressed ti．e slightest dissatistactuon at His conduct－on the contrary，they were conviriced he thad done all he could for their sersice，but they feit and expressed bitter disapyontment at the manner who acted for that hody．The Lort Major then，questioned Mr．Wuncan Campbellat constotrabse
 sons who et，gaged her to takeont the emigrants were the primcha，
managers of the British A merican Asocraton－Sir Fich．Arown
 fer man，and half－price for chiloren，with toon and passage out．
He woinded the shy by a contract with Mersis．Leslie and

Several of the more important of the Serial Publications in the Catalogue are rapidly approaching to their completion. The limits of these

 volumes, therefure, and the price of each completed Work, are given in the terminate. It is requested by the Publishers that the order for any selection from their Catalogue may be given through a Bookseller.

## THE PENNY CYCLOPAEDIA

OF THE SOCIETY FOR THE DIFFUSION OF USEFUL KNOWLEDGE.
This important Work, which has been in course of publication during 11 years, under the direction of one Editor, will be completed in 27 volumes, in December, 7843 . 25. volumes are already

The , gaineas. Penny Cyclopredia was derived from its original issue in a weekly sheet, when a work of much less magnitude was contemplated. A work of 14,00 pares was not in the first instance proposed. From its commencement it lias been supported by a great body of contributors, emare celebrity wherever the English language is read. The its articlec, in many of the grcat branches of knowledge, are regarded as authorices a character of the work has gradually, therefore, surmounted the prejudices which were entribution, paid for at a rate to secure, as far as payment is concerned, the highest as indicative only of its extreme cheaphess. Every at of fureign states. The literary expenditure alone upon each volume has exceeded $1,200 \mathrm{l}$, making a total of $3.3,000 \mathrm{l}$. talent and knowledge, not only of this country, hat of In addition, the work is fully illustrated with woodcuts, the cost of wion has accuracy with any existing Thorand Pounds. The Penny Cyclopeclia may, therefore, as a standard work, enter into arta and sciences are to be found according to their subdivisions in the
 alphabetieal arrangement, and yet the subjects are so treated thot labours this undertaking has been carried on:-
articles. The following are the names of the gentleme Editor-GEORGE LONG, A.M.,
Late Fellow of Trinity College, Cambridge, and Professor of Latin in University College, London

the Exchange,-The usual allowance made to the Trade.

## LORISTS TO HER MAJESTY THE QUEEN DOWAGER.

OUELT NEW AND SUPERB FUCHSIAS
FOUELL \& CO. have much pleasure in referring the elegant tribe, advertised in this Paper of last week. It com-
prises anl the really good varietres, to the exclusion of such as are merely nominal, and are now ready for sending post-free to any
part of the United Kingdom, on the receipt of a Post-ofice order,

${ }_{12} 2$ Ditro, ditto, very superior
This magnitcent Fuchsia was raised by Mr. Meehan, gardener
 Messrs. YourlL obtained the entire stock. In May last, it was
sulbnitted to Dr. Lindley for his opinion, which will be found in

 of a bright carmine colour, and the petals of a rusy purple. If,
as you say, it is a strong grower and a free blooner, it will prove a valuable addition to thls beautiful genus,",
Messrs. Yotrin, in bringing this beautifal production into
 assured of its giving the most entire satisfaction. It is of vigr-
ous habit, fine foliage; and as a proof of its being a prituse bloomer, they have a plant in flower at the present time (Sep-
tember 15tli) on one branch of which there are upwards of 200 blooms, forming a splendid object for the greenhouse, conserva-
tory, or flower-garden. Youebl \& Co. are now sending it out at $10 \mathrm{s}$. . d . per plant, free of postage, to any part of the United
Kingdom ; and all orlers they may be favoured with will be executed in rotation. Orders for the Continent will receive every
care in packing, so as to insure therr safety. The usual discount Messrs, Yousli have also much pleasure in ardered. they are in possession of the entire stock of two beautiful new Vcrbenas, ruised by Mr. Edmonds, gardener to John lacon, Esf.,
of Ormesby Hall, which were kindiy presented them by that genof Ormesby Hall, which were kindiy presented them by that gen-
tleman, -the one named "Laconii, "is a tine biue, delightiully fragrant, of vigorous but rempact habit, and the heads of
flowers measuring upwards of 3 inches indlametcr. The other, named "Princess Royal," is of the puret snowy white, the
flowers remarkably large,
and extremely fragrant; nothing can possesses that acquisition not to be found in any of its class-of possesses that acquisition not ita clear white during fading. It would be as well to as to torm a perfect hail. They are ready for sending out by post

## SATURDAY, APRIL 29, 1843.

Wedneeday, May 10

Trie objects which Mr. Pusey's Drainage Bill proposes to effect are more especially these: 1st, To grant powers to drain; 2ndly, To enable money to be raised for drainage purposes ; and 3rdly, 'To strengthen the existing powers for enforcing the clearance of drains and ditches. It is to the first and third of these points that we shall at present confine ourselves. 1st, To grant powers to drain.-This is to be entrusted to a Board of Commissioners, who are to be drained. The perorialist is to deposit money in their hands for defraying the expense of preliminary inquiries; then, when the matter of the memorial is approved of, he is to deposit a further sum with the Commissioners, sufficient for defraying the expenses of making further surveys, schedules, maps, plans, drawings, sections, and estimates, \&c. (c. 3). If the Commissioners, after making inquiry, should decide against the prayer of the memorialist (c. 6), or if all the Commissioners shall have been signified, cannot be complied with, then the money that was deposited is to be applied to the discharge of the preliminary ex penses incurred; and if the expense of inquiry, \&c. be sued at law for the difference (c. 30). A meet ing of all persons interested is to be convened by public notice (c. 19). A sub-commissioner is to schedules, \&c. (c. 11). Then the proprietors of maps, fourths in extent (net value) of the land proposel to be drained must agree to the execution of it (c. 13) and, finally, the term proprietor is declared to in clude all persons having any indirect interest in the property to be drained (c. 14, 15).
Unless these clauses undergo very material altera tion, they can hardly fail to render the bill inoperative for the conditions are such as few people would take the risk of fulfilling. According to this bill, a person who would have an estate drained must undertake to incur a large and indefinite expense for preof which it is, we conceive, impossible to foresee -in satisfying three-fourths of the varied interests hat will be concerned in his memorial; and then, if he fail, he is not only to lose his deposit, but to be liable to an action for all the expenses beyond it to which the Commissioners and their agents may have put him. He must be a bold man who will take such a risk: for where is the bold rect interest in works of drainage to stop? In the works may broperty, the effects of any extensive while rivers and their tributaries, neverer conte distance, by the rivers and their tributaries, never contemplated by the memorialist, may have to be included; and all the risk and cost of securing the good-will of half a county may thus be thrown upon the person who may correspondent the first application bearing upon a affecting the drainage of any particular water-course abuses of the whole length of the powers, uses, and It is true thole length of that water-course.
preliminary that the nemorialist is to be repaid his over all ory expenses (c. Jo, if he finally triumph neficial obstacles; but, what if his plan, however beparties? Whrough the opposition of interested aforesaid hy, then he is to be sued for all costs, as The only That will never do.
case of an application to the commeive, in the be of this kind: let the memorialist come before the Commissioners with mans and the inidence before the his own expense byaps and evidence, collected at If he make expense by himself, and state his case. Commissioners, it out to the satisfaction of the pense to the matter to memorialist, proceed to examine the meetings, settle preliminary inquiries, charging the expenses ano the
parties coming forward to oppose the proposal, if the Commissioners are of opinion that the drainage ought to be executed, or proportionately upon all to be benefted by it, or merging it in the general expense of the drainage to be afterwards executed under their superintendence. We perceive no real difficulty in this; for the preliminary examination of a memorialist's case might be as searching as the Commissioners should think necessary. In the event of the drainage being decided against, after the hearing of interested parties, then the costs would have to be paid out of the funds to be provided for defraying the expenses of the Commission. Should frivolous memorials be apprehended, provided our suggestion were adopted, they might be prevented by requiring the memorialist to deposit a fixed sum (say 100l.) in the hands of the Commissioners prior to their proceeding in the inquiry, such sum to be forfeited in the event of the final decision of the Commissioners being adverse to the memorialist.
At all events, it appears to us indispensable that the complicated machinery to be put in action by this Bill, before any work of drainage can be commenced, should be worked and paid for by the Commissioners themselves, and not by the memorialists.

3 dly , To strengthen the existing powers for enforcing the clearance of drains and ditches.-This is a point of no little practical importance, without the ready settlement of which any general drainage bill must lose much of its value. Mr. Pusey proposes that when an occupier refuses to clear out his ditches, it shall be lawful for the proprietor injured by such refusal, after 14 days' notice, to cleanse them at his own expense, and then to recover the amount so expended by suing the recusant before the Quarter Sessions. This seems to us an arrangement which can be productive of little real utility. People are not willing to bring actions against their neighbours; or if they are willing, they will be deterred from doing so by the uncertainty of the law, and the doubt they may reasonably entertain as to their power of satistying a cleansing the drains was necessary or not. We would submit that a far better mode of proceeding would be to authorize an appeal to a district surveyor, who should have power to summon a jury to view the drains, and to decide whether they require cleansing or not ; their decision to be final. The expense of such a proceeding might be made to fall on whicheve party failed in his appeal ; the appellant paying if the jury decided against him, the respondent in the opposite case. We confess that we have a great aversion to law; and we are persuaded that a clause embodying such powers as those we have now mentionea, ditches without authority, or suits at Quarter Session to recover expenses, and all the vexatious consequences to which such proceedings would inevitably give rise.
With respect to the power of raising money for the purposes of drainage, we have some observations in
type which want of room compels us to defer till next week.

My opinion," says a correspondent, "is, that large pots cannot be safely recommended in preference to small, except under certain conditions." As the reasons assigned for this opinion are different from those of "Observator," we print the writer's reasons rerbatim.

If large pots are employed, they must be filled with turfy soil, or with such other substances as will prevent the mass from becoming too compact. But some plants with delicate roots require a finer composition, others a compost rich with dung. Soils that will remain sufficiently open in a bed, or in a quarter of a kitchen garden, will nevertheless become too compact when employed in a pot. All soils, of which the particles have a greater degree of cohesion with each other than exists between them and the sides of he pot will collapse, and become more compact than the pot, whed mass. The inertia if they formed parevents the portion at the circumference from being drawn thards the centre If
be the centre of a plot of
ground in which a pot is plunged, filled with the soll of the same plot, the potted soil will be found more compact than it would have been had it not been inclosed by the sides of the pot: for, although the particles $b b$ might tend to collapse toward $a$, yet they are equally drawn in a contrary
direction in consequence of the adhesive force exerten by particles exterior to them, the more will the soil principle,
"It was above stated to the effect that the inertia of a large broad mass prevents the portion near the outside from being drawn towards the centre, and less will be the tendency of the soil which it contains to
become compact. This is in some degree the case : for if room could be found to admit of pots or boxes being made large enough, the soil contained would be in much the same condition as if lying in a bed or quarter of the open ground. But a collection of plants would occupy too much room, and would not be portable if grown in such large masses of soil. This, however, is not exactly to the point in question. A more important consideration is the fact, that before the roots could reach the outside, the soil there would have tion that are readily miscible with water would be washed down, and the compost would not be in so good a state for supplying the plant with nourishment as when first prepared. planted in rich ground, and allowed to grow in the same place, the soil being undisturbed for many years, it does not produce fruit so large as that obtained by yearly trenching and otherwise preparing fresh soil immediately in advance of the roots, as is done by the prize-growers. So also by frequent shifting, and thus affording progressively a fresh supply of nourishment, Vine in a pot, which had been struck from an eye, was grown by Mr. John Wilson, Gardener, at Millichope, to the length of 40 feet in the same season in which the eye was put in.
"It is true that although nutritive portions may be washed down, or otherwise changed, and although these may be again supplied artificially, yet the medium in which they are deposited, the bulk of the oil is the same as it was when first introduced. It is doubtful, however, if what can be done in this way will equal the effect produced by a supply of fresh prepared soil. Turning up the soil has the mechanical effect of rendering it fit for the easy progress of rootses in quest of food; but it has probably others of a chemical nature of still greater importance. Principles that are lying quiet in a heap of compost r manure are roused into powerful activity when disturbed by turning the heap. Woody fibre that was previously suffering but litte change is then soun broken in ensequence of being subjected to the decomposing effects of fermentation. What takes place when a piece of ground is dug or trencbed is not so evident; but doubtless something analogous does ensue. Portions of soil containing different substances that were before separated are brought into contact Few soils are so homogeneous as not to contain different principles, the contact of which will occasion some degree of chemical action; and the result of such action plants seem not to fail in tarning to good account."

The objections here taken by our new correspondent, amount to this:--1st, That the soil on the out side of the pot will be exhausted by frequent water ing before the roots can reach it. 2nd, That the system of shifting in pot-cultivation has some relation to that of digging in the open border, and is equally necessary Both these difficulties may, we think, be easily answered. In the first place, the objections apply rather to cases where plants are never shifted han to such as we have contemplated; but it is not fair to argue against a thing from its possible abuse. If a plant in the open ground never has the ground about it disturbed, it will grow more slowly than if it has the advantage of occasional digging; and so, no doubt, it is with plants in pots. They will require to have the soil occasionally stirred and renewed: but that is quite different from the system of continual shifting from one pot into another a size larger, to which we and others 50 much object. Undoubtedly, the watering which is required by plants in pots will have a tendency-a oreat tendency-to remove from the outside of the ball the nutritious elements of the soil ; but how much more must this be the case in small pots than in large ones? In fact, it is in part because that loss is diminished that we regard permanent large pots better than small ones used for a short time only. If the pots are sufficiently large, it will belong before the roots can reach that pat which is impoverished by the washing away of soluble materials. When the roots in large pots shall have reached the outside, it will then be necessary, no doubt, to transfer the plants to still larger.

In conclusion, we may once for all point to what has been done, instead of speculating on what may be effected. The admirable specimen of the barger bearded Heath, exhibited at the last meeting of the Horticultural Society in Regent-street, from the garden of Lady Antrobus ; and another of the Transia rent Heath, shown on the same occasion, from Ealing Park, were grown without continual shifting, and were faultless.
We must still contend that the only real objection to the "one-snif system is that it is too favourable for growth, and renders plants inconveniently large for most people's space and means.

## CAPE BULBS.

Brunsvigia (Amaryllis) Josephinæ and multiflora, and A mmócharis falcata.
The proper treatmeut of hace buibs is a subject of frequent inquiry in the Gardeners' Chronicle, and the
invariable answer is, as in the Chronicle of Saturday last, that they require or will succeed best in a stove. It would be satisfactory if the person who gives that advice would say how many bulbs he possesses-how many years he has cultivated the plants, and how often during those years his several bulbs have flowered, I have made many inquiries among gardeners, and have seen many dozens of bulbs, but I never yet met with any one who had been able to flower them in the manner recommended; and I have known bulbs of both species cultivated in that manner for upwards of 20 years without producing flower.
Five or six years ago I received from the Cape a large box containing, among others, six large bulbs of each of these species. I grew them for the first year in stove heat, and having more than I wanted, afterwards gave away three of each species. Anxious to see the flowers of those I retained, I requested the advice of the Rev. W. Herbert, now Dean of Manchester, as to their treatment, and following that advice, I had the satisfaction, within 18 months, of seeing flowers on one bulb of A. Josephinz and one of B. multifora; and one or other of my bulbs has since flowered every year, though two out of the six, one of each species, have been accidentally injured, and therefore do not flower. I reckon, therefore, upon being able to flower A. Josephinæ and B. multiflora every alternate year. If your correspondent who recommends the stove can do better, I shall be glad to have the precise details of his treatment. The management I have pursu
the instruction of Mr . Herbert is as follows :-
The bulbs are planted in sandy loam, in pots called 168 , well drained. In September, when they begin to grow, they are placed in a light situation in a light greenmometer during that period frequently being as low as $35^{\circ}$, and the greenhouse being habitually kept as cool as is consistent with the health of the hardiest greenloouse plants; during this period they receive a moderate supply of water; about the beginning of May they are removed to a span-roofed pit, made for Cape buibs, and a pan of
sand is placed under each ; this sand is kept constantly wet, and as the lights are never removed in summer, the thermometer ranges up to $130^{\circ}$ in hot and bright weather. About the end of August or the beginning of September the flower-buds appear and rise rapidly. I have had Amaryllis Josephinæ with a head of flowers 3 feet 3 inches Amarylis Josephinæ with a head of fiowers 3 feet 3 inches Under the like treatment a Cape imported variety of Amarylis Belladonaa, very high coloured and very fraAmarylis Belladonna, very high coloured and very fragrant, sent by Villet under the name of A. longifora,
flowers annually; and the affinity in constitution between A. Josephing and this species is very obvious.

Brunspigia (Ammocharis) falcata is a plant of dif ferent habits, and I have never succeeded in inducing it to flower, from the figure in the Botanical Cabinet, No. 745 , during its season of growth. I have never met with 745 , during its season of growth. I have never met with
any one who cultivated it successfully, and I believe the Dean of Manchester and the Messrs. Loddiges are the only Dean of Manchester and the Messrs. Loddiges are the only persons in England who have induced it to flower. The latter expressly state that the individual
with them was cultivated in the greenhouse.
I ought to add that A maryllis Josephinæ is planted at least half out of the ground; but Brunsvigia multinlora is covered up to the throat, and will not fourish if planted above ground. $-J$. Rogers.
ON THE CULTURE OF PERSIAN MELONS. It can acarcely be denied that Persian Melons, when grown in full perfection, are far superior in flavour to the
other kinds usually caltivated; yet it is seldom that we other kinds usually cultivated; yet it is seldom that we meet with the former, and still less frequently do we find them partaking of that rich and delicious flavour which is their peculiar characteristic. This arises in a great measure from their being treated in every respect like the more common kinds, whereas their very failure under such treatment is sufficient to show that they require a different system of management. The principal causes of want of success undoubtedly arise from a desire to obtain too great a quantity of fruit from a given space, and from an insufficiency of foliage being left upon the plants to elaborate the juices necessary to nourish and perfect fruit of so large a size as the generality of Persian Melons usually attain.
The late Mr. Knight, who is well known to have been a successful cultivator of this delicious fruit, has in the Melon-house and mode of treatment
${ }^{* 6}$ Having during several years observed that fine Persian Melons were preferred at my table to almost every other rmost exclusive culture of them by means of heat tained from fire only, under an impression that in some seasons the power of commanding a dry atmosphere and high temperature would prove highly beneficial to the quality of the fruit. This forcing-house consists of a back wall nearly 9 feet bigh, and a front wall nearly 6 feet high, inclosing a horizontal space 9 feet wide by 30 feet long. The fire-place is at the east end, very near the front wall, and the flue runs to the other end of the house within 4 inches of the front wall, and returns back again leaving a space of 8 inches only between the advancing and returning course of it. The front flue is composed of bricks laid flat, as I wished to have a temperate permanent heat, and the returning flue of bricks standing on their edges; the intervening space between the flues being filled with fragments of broken bricks, which absorb much water, and gradually give out moisture to the air of the wouse. Air is admitted through apertures in the front wall, 4 inches wide and 3 inches in height, situated level with the top of the flues, and 18 inches distant from each
other. The air escapes through similar apertures near the top of the back wall, which are opened or closed as
circumstances may require. Thirty-two pots, each 16 circumstances may require. Thirty-two pots, each 16
inches wide and 14 inclies deep, are placed upon the flues inches wide and 14 inches deep, are placed upon the flues
described above; but they are raised by an intervening described above; but they are raised by an intervening piece of stone and brick out of actual contact with the
flues. Into each of these pots one Melon plant is put, which into each of these pots one Melon plant is put 14 inches distant from the glass: and each plant is per mitted to bear one Melon only. Each might be made to bear more, but if the fruit should be as large as Ispahan Melons are when perfect, they would certzinly be of
inferior quality. The height from the ground at which inferior quality. The height from the ground at which
the trellis is placed is such that I can with convenience walk under it, and discoch that I can with convenience walk under it, and discover the
In the destruction of the red spider, Mr. Knight found sulphur applied to the under surface of the leaves, in the manner recommended at p. 164, 1841, more efficacious and less injurions to the plants than syringing them with water, which produced the most disastrous effects-upon one occasion destroying his crop of fruit. When spread or painted upon the flues, sulphur is more liable to be prejudicial to the plants, and to deteriorate the quality of the fruit. Care must, however, be taken for several days afier the application of sulphur to the leaves, that the plants are partially shaded, and that the temperature of the house is not allowed to rise too high in bright sunshine. For this reason it is best, whenever practicable, to apply it in dull weathe
Many persons will no doubt say that it is not in their power to erect or devote a house exclusively to the cul be debarred from making the attempt. I doubt not mow ever, that equal success would attend their cultivation in ordinary pits, if the principal points adverted to in Mr Knight's account, as well as of their condition in their native country were attended to. In Persia the plants luxuriate in a high temperature, a dry atmosphere, and a humid soil; their aim should therefore be to obtain for them these three essential requisites. These would probably be attained by growing the plants in a hot-water pit, having a wire trellis about 9 inches distant from the glass, the interior being filled with tree- leaves, into which the pots, each containing one plant, should be plunged up to the rims. The roots would thus be kept in a more equable state with regard to heat and moisture ; and by enlarging the apertures at the bottoms of the pots they would afte filling the interior, be allowed free liberty to range in search of that humidity which is so essential in their native climat
As it is only during one portion of the year that we can, in this country, ensure a sufficiency of light-one of the most essential pone in the sun that plar in the season, in order that they may be ready for planting
out finally in pots towards the end of A pril. The plants and fruit will then be in a condition to receive the preatest pcssible amount of light, at a time when it will be most beneficial to them.
The soil in which they should be potted should consist of two-thirds of mellow hazel-loam, and one-third welldecomposed cow-manure and leaf-mould. The pots should be well drained, first with broken potsherds and afterwards with rough pieces of turf; and the soil should on no account be sifted, but be prepared roughly by band. Each plant shouid be trained up with a single stem then be alce the branch out in slopped; is sher as Cucumber plants grown upon the same system. It should be borne in mind that the larger the extent of foliage exposed to light, provided that the foliage is in a healthy condition, the greater probability there will be of obtaining state, should be frequently looked over and divested of blossoms : and not before they have acquired strength and nearly covered the allotted surface of trellis, should any fruit be allowed to set upon them. Then, however, three of the finest should be selected, and by the time that they become as large as pigeons' eggs it will be seen which of ingly be chosen and throve the largest; that should accordfruit will be quite sufficient for each plant to bring to perfection
A plentiful supply of moisture should be given to the roots, but none over the foliage, except in the
form of vapour. When the weather has been dull for serm of vapour. When the weather has been not be exposed too suddenly to the direct infuence of the sun's
rays; at all other periods it is better to give a greater supply of air than to shade the plants. The interior of the pit should be kept as nearly as possible of uniform humidity; for if allowed to become too damp the stems
will be liable to canker, and if too dry it will favour the will be liable to canker, and if to
increase of the red spider.
$R$
on Vegetable manures.
By Profrssor Cbanies Sprenget. (Translated from the German.)
4. The Leaves of Coniferous and other Trees.-Dry leaves are, in many parts of Germany, the only litter used. In order to judge properly of the value of leafdung, it is desirable to know the constituent parts as cor rectly as those of the different sorts of straw
Leaves are valuable to the agriculturist chiefly because hey are much more rich in mineral substances than the different sorts of straw. The quantity, however, of mineral matter differs much in different sorts of foliage, on which
account, they, like straw, are of a variable degree of value.

Whenever foliage is used as litter, it should always be collected immediately after it has fallen from the tree, and placed in some dry place ; otherwise rain will wash out the saline parts, and so destroy much of their manuring properties.
Beech-Leaves. - 100,000 parts of full-grown and airdried leaves of the Beech contain of mineral substances:1.812 parts of silica

0.190 ". phosphoric acid and traces of chlorine.

### 4.496 parts of mineral substances.

Oak-leaves are less valuable than Ash-eaves for manure because they contain, as we see, less minergl substances With them, too, it is still more necessary they should be thoroughly rotted before being brought on the land; for they always contain tamnin, which is detrimental to vegetation, and must be first destroyed.

AMATEUR'S GARDEN.-No. XVII
Perhaps the greatest error which we gommit in the management of our Flower-gardens, is that of turning half-hardy plants out into the borders before the middle of May. In no case that I am aware of, can any advantage accrue from this practice ; but it is well known that plants frequently sustain injuries which they are balf the summer in recavering from. I may be told they are sooner in bloom, and this 1 grant, because the check they receive from the cold nights and dry parching winds, is favourable to the production of flowers :--but what is the bloom ?-m few miserable spikes on a more miserable plant ; and a bed not more than half furnished with fohiage; in which deplorable state the plants remain, until the genial showers of June or July excite them into new growth.
If, instead of planting out thus early, we took more if we to prepare our plants and the ground properly, and week in June, at which time we might take advantage of a few dull days for the operation, we should find the plants materially benefited, and the appearance of our gardens, on the whole, simnily improved. At that season we have the concurrent advantages of terrestrial heat and warme dewy evenings, which are of the greatest advantage to the development of vegetation. The preparation of plants for turning out has been adverted to in former articles; ought to be turned into the border, until it has been gradually prepared and inured to the open air for at lenst six weeks from the time it was taken from the cutting, or seed-pot.
Where beds are not stocked with spring-flowering plants, it will be of material benefit if they are digged or forked siderable povening of warm days; by whin and the soil be mour heat wil be nution. brought into a state of more kind of preparation is indispensable for such plants as

Lantana Sellowii and Ruellia formosa; and as most of the plants used for bedding out are natives of countries warmer than our own, there is no doubt but they would
be benefited by the beds they are planted in receiving be benefited by the
similar preparation.
Of the plants which require to be prepared now for autumn-flowering in the greenhouse or drawing-room, the Chrysanthemum is the principal one. Excellent directions for its management have been already given; but for the purposes of the Amateur, as being the least troublethe tips of the branches in August, and pot the dwarf plants in September, as will be detailed at the proper thenum, when properly attended to, makes an excellent covering for a low east, west, or south wall ; and some of the earlier kinds will flower tolerably well on a north aspect in favourable seasons, and give, with a little
tection, a good supply of flowers up to Christmas.
Propagate scarlet and other Pelargoniums for autumnblooming in pots, and make a small sowing of Primula sinensis, for early flowering
Rose stocks for budding must now be looked over, and have all their superfluous branches removed; and those iu pots would be benefited by being plunged in a gentle bottom-heat, to get the roots as well established as posthe Rose by cuttings I must defer until next week. W. P. Ayre

## HOME CORRESPONDENCE.

[Erratum.-P. ${ }^{265}$, col. 2, line 32 from the bottom, for "eithers
Paulovnia imperialis.-At page 212 of the Gardeners' Chronicle of the present year, a short notice is made of this ornamental tree, wherein it is stated that it may be propagated by cuttings, which is a fact, particulary if to about three or four inches in length; it may also be propagated by eyes, in the same manner as the Vine, on therefore containing within themselves a sufficient quantity of organisable matter whereon to exist, whilst roots are forming to support the nascent branch; but what I which it may be increased by divisions of the root, the smallest particle even having that power which very few plants possess, of generating adventitious buds. Individuals having plants in their porsession in pols may easily divest them of a certain portion, selecting those of injury rate size, without the plants sustaining the Jeast placed in provided they are repotted immediately, and the operation would be when the plants commence their vernal growth. Both eyes and roots should be potted in soil consisting of leaf-mould, peat, and sand, in equal proportions, and the pots containing them should be plunged to their rim in a dung-bed; any other fermertatmospheric temperature the same purpose; where the divisions of the root in particular will emit shoots at the expiration of three weeks, at the furthest. On account of the facility thus afforded, in a few years, particularly amon its hardihood hus ornaments which we possesoms George Bishop
Gold Fish. -Observing, in late Numbers of the Gardeners' Chronicle some entertaining notices of gold fish, resting creatures, I send some of the circumstances deep, twelve feet long, and six feet wide, and six feet with brick, well cemented all over. At a foot from the surface of the earth (and water) is a shelf all round, a foot Wide ; so that the lower five feet of the truk are, by that placed pots of the sweet-scented Rush, Buck-bean, and even with the surface of the earth, and of the water, when the tank is full. A neat fancy iron palisading, about two the brick-work, affording room for pots of flowers, Bulsams, \&c., inside. The tank is situated about 10 yards ing sundry flower-beds, or baskets, they being inclosed by movable, shower-beds, or baskets, they being inclosed by a pleasing short, iron, basket-like fencing. The tank is thus tains, I estimate, more than 2000 gallons of water. It bouring fill, five years ago, by a water-cask, from a neighdry weatherning ditch, and has never been emptied. In refill the loss by evaporation and absorption: this is done two or three times is the course of the summer. The many white originally stocked with six red or gold fish, as sum, from three inches to a foot long. In the second inch long; in the obed five very small fish, less than an this spring, April, 1843, the last brood lass increased to Those of score, so that we have plenty of little ones, long. All retain their black are two, three, or four inches Which te think are turning red. I may here remark, that others born black, or durk; some turn red while small, White; when large, others never. The red fish turn last never. Our largest red fish was dark, or black, closely. Whinge watched the progress of his turning, shining, Wealthy, fo a turn no otherwise than from a
now well stocked, for I have since brought half a dozen small red fish from Hungerford-market, where plenty may be bad, for about $10 s$, a dozen. The male may be known from the female, by the back fin; in one it is a
small fin, on the middle of the back; in the other it is small fin, on the middle of the back; in the other it is
long, reaching, lessening, to the tail. Our fish seem very healihy and bappy. At one period of the year, early summer, sundry chasings of each other are observed; at first we thought them hostile, but now believe them
amatory. Last summer the tank was much infested by amatory. Last summer the tank was much infested by
frogs; we caught more than 40 , large and small, with a hand net, and removed them to some distance. Fearing they might destroy the spawn of the fish, or be otherwise unelcome, I caused a slate, nine inches deep,
carried all round, outside the railing. It is not unsightly, and has had the desired effect: one or two large frogs did, indeed, leap and creep over. A variety is observed, in some of the fish having three lobes to their tails, two
being the usual portion. My tank cost me, on the whole, for digging, bricking, cementing, railing, \&c., over $15 l$. It is a pleasing appendage to dressed grounds, near a house, affording daily amusement for half an hour, and is
highly amusing to children. We occasionally take a piece of amusing to children. We occasion water, brings the fish more to the surface. ${ }^{\text {i }}$ During winter they are fish die- lttle ; the ice is broken daily. Nome of the float; our largest red fish did not foat; he died in the third year, having showed symptoms of decay for some previous months; inactivity and transparent projections before mentioned are very agreeable to the fish. Several neighbours have tanks or ponds stocked like mine, but I
do not think any one, on the whole, more successful than I am.-Suffolk.
Suxifraga hypnoildes for Edyings.-I beg leave, through handsome hardy native plant admirably adapted for border edging, viz., the Saxifraga hypnoides. My neighbour, quarter to apply this little plant to such a purpose. He Arthur's seat, haid by, and the idea struck him that it wns well suited for an edging. He accordingly collected a few plants and made trial of it, and he found it answer the purpose so well, that he made it the subject of a commuHorticultural Society. It excited some considerable attention at the time, and various gentlemen, members of the Society, visited Mr. Westgarth's grounds, and bore testihad applied it, though he had theu cultivated the plant only for about 12 or 18 months, and of course before he had had time to test it sufficiently. Though I had beard a good deal about it, it was only within the last three o it to me undressed and rough, just as it had stood the winter, and I was much struck whih its beautiful uniform velvet-like outline of light but untarnished verdure. There were two edgings of it, one running parallel to, and shaded fyall, and fully exposed to the sun . Botl had the ssme wall, and fully exposed to the sun. Both had the ssme ince last summer, there were but few strageling shoots or tufts rising above or stretching beyond the general height or breadth. The height is not above two inches, and the breadth (I speak from observation merely), was then about eigre it was dressed, by which operation its breadth is reduced to six or seven inches, and I will venture to assert that a more elegant compact edging cannot be formed by any native plant whatever; but if so attractive now, its it comes into flower, which it does in May and June. The flower-stems then present an elegant radiating outline of about two inches bove the filice, dy tipped with with The plant is of the easiest culture, and can be rapidly propagated by division of the roots, as well as by seed. Westgarlh very kindly supplied me liberally with both plants and seas, and wavil worthy of being communicated to the public through your columns, be has sent me a cory of tural of seeds, which I now brg to inclose. Mr. Westgarth ge subjoined a P.S. to bis communication, that he has since its date discovered from a passage in Withering, of whicl he had not before been aware, that the same species had before been applied to the same purpose.- saan
Anderson. [The following is the account of the plant with which Mr. Westgarth has kindly supplied us]:-A few years ago 1 took a plant of the Saxirraga hypnoides from among the frge's seat, uad put them in a shady south side of Arthur's seat, and put them in a shady corner of my gard f few sprigs as a border-edging, placing them two or three inches asunder. In a short time they not only filled up the vacancies, but even required some paring. I was thus encouraged to extend them all along the borders, at abundantly, and presenting a very compact line. The last of these border-edgings was planted, I think, not above 12 or 18 months ago. They seem to require paring once in summer or autumn, and again in perpendicularly with a spade, I woukd recommend scraping off the extraneous shoots with a light weedock; at least, this mode should be followed on the side next the walk,
is avoided. This diminutive plant forms a much more efficient edging than one would expect from seeing it in a Wid state. it needs no nicety management; on the myself), rateful for ang little care (if I may so express winter s in ar inter, as an elgig, or has a less pleas appearance at times when its frost Bu it is in in frost. But it is in its greatest beauty in part of April, and in May, then ecols nup in leeping cilty in seeping in may, in wetisi whe placed without injury, atter Again, it is so easily propagated, that little cuttinga dropped or left on the border take root of themselves When the ground is moist. Lastly, this edging does not suffer much from be
upon. $-J$. Westgarth.
Cellar for Roots.- Your correspondent "Totty," p. 245, asks for information as to the best method of constructing a root-cellar for Potatoes; I would caution him against trusting to his proposed thatch of furze, as I believe it will be a very poor defence against frost. Some five-and-twenty years ago, I was tempted, by the regular chamber-like appearance of a limestone-quarry, to use it as a winter receptacle for Potatoes. It had three sides, about seven feet deep, as smooth as a wall, and a good foor. I built an earth wall on the remaining side, of many feet in thickness, and for a roof I placed seven large waggon-loads of stubble; I deposited in it about 40 tons of Potatoes, and closed every opening as securely as possible. In the spring, on opening the repository, expecting to find my Potatoes kept in fine order, what was by disappointment at seeing the whole surface of the heap one mass of rotten Potatoes, to the depth of a foot or a destroyed. I was for a time unable to account for the disaster, till one windy day, as I stood in the quarry, I felt the air coming strongly through the stubble roof though it was several yards in thickness; the frost, of course, entered the same way as the Potatoes were damaged on the surface of the heap only. Unless "Totty" can contrive to place a better non-conductor than furze between it and the straw thatch, such as dry sawdust, not be frost-proof; and I have doubts of the efficiency of double windows and doors, in keeping out severe continued frost. It does not need a very low temperature to injure the flavour of a Potato, probably not even so low 8320 Fah. I believe "Totty" will find a full description of the method of building in "Pisè," in the "Encyclo-Insects.-The "s nutritive" effects attributed by some oils, and unguents, and tar, applied to the bark of old and sickly fruit-trees, are imaginary. The health thus estored is derived from the destruction of insects and heir ora lodged in the berk which they render diseased nd incer nnow thatilled oll A blices" on nfer that the same aplication would prove a remedy for ". series of years. The time of application should be immediately after pruning.-C.
Pear-Trees.-In confirmation of the method of training my Pear-trees, noticed by you 25th March last, I now eg to inform you I have a Beurré D'Aremberg, planted, a ery small tree, in 1837, which has on it 72 spikes of blossom, and a Gloat Morceau, same age, with 110 , Almost the whole of the blossom is on such wood as in the usual system of training and pruning would have been cut out.-E. Corbett, Darnhall.

Glazed Flower-pots versus porous ones.-The subject glazed flower-pots having recently been revived in the pages of the Chronicte, I am desirous of offering a few arguments in its favour. Chero are many people who, because they ba anter certain mettocause "their fathers did so before principles or not-because their fathers add so before mproveme antich may tend to explode the theory mprovement which may tend to explode the theory of their operations. This appears to be the case with hose who assort hlazed pots-the fallacy of your peaders have no loubt notice pealthy Percinm, Fuchsias, and other similar plants ealtly Pelargoniums, Fuchias, and olner simiar plants, in the windor col frish then wis rise allenco abserved the lary of these betiflo growing in hiqhly glazed pots-even in China ones. Who s there that will not acknowledge these pots to have a far prettier appearance than the rough, dirty-looking porous umble amateur proves the theory of glazed pots to be crrect. There we may behold them growing, not in ornamental Chima pots, but in a jug, a basin, or a ten-pot, minus a hacare, ot very questough arthoughe are simple and e disputed. The arguments, they are facts not to lazed nd mots over porous ones is, that they are handsomer, re, are, of courcaned; and being impervious with these advantages, who will object to their general use? - Tyro. Thawing Plants.- I should suppose from "J. M." ${ }^{\text {s }}$ been stated at p. 84 respecting the power which water
has of abstracting frost from plants. To substantiate his argument, he mentions that water when thrown on his Pelargoniums soon froze. I beg to state that this cir$40^{\circ}$ althe is, of itself, conclusive; for the water, being at "J.' M.'s" case, would be expanded until it fell to $32^{\circ}$, from the interchange of temperature going on in the Water, air, and plants; as an example of which, let "J. M." take a cold bar of iron in his hand, and he will soon have a solution to the whole question. It is true pable of counteracting must be met by other means but this does not disprove its efficacy in other cases J. M." might have expressed himself more to the purpose when writing about the temperature of the body of the house being higher than that near the glass. If by this in meant the sashes, he is correct; but it is very different air to sscend ; the consequence of which is, that plants in the latter place are seldome frozen, if even a comparatively limited supply of fire-heat is applied. With respect tively limited supply of fire-heat is applied. With respec to evaporation from pans of water by conduction, it is tion, without the surface exposed is great, and this is not tion, without the surface exposed is gh, and this is no generally applicable in connection with Apricot- wrees. result from it would counteract its good effects.-C.
Raphides.-In Lindley's Introduction to Botany, Mr Quekett, in speaking of Raphides, mentions a conjecture that these crystals may have an important purpose to fulfil in the economy of the vegetable kingdom, by being deposits to be applied towards the skeleton of the plant occasion may require. But these calcareous bodie being insoluble in vegetable acids, he considered it un tenable. Does the discovery of Messrs. Wiegmann and Polsdorff, which I lately met with in the Gardeners Chronicle, make the interesting conjecture stand good As plants are found capable of decomposing the silicate of the soil, can the same power act internally ? - Wyeside. - [It is, we think, impossible to say to what extent the powers of vitality interfere with the rules of chemical action ; and it is probable that some sorts, at least of Rhaphides, are soluble in vegetable acids. But upon the whole we incline to regard them as crystals thrown down in plants in consequence of their bases being in excess. The question is, however, open to investigation.]
Exhibiting Pelargoniums.-The Horticultural of London now offers a handsome prize for 12 new and first-rate Pelargoniums, and Amateurs may reasonably expect to find at the ensuing exhibitions specimens of the varieties which appear advertised at several guineas each, and which, if they prove "equal in merit to the price It appears to me that Amateurs, like myself, in the counions under the letter $A$, and will be influenced by it in their selection; so that it behoves Messrs. Gaines, Catleugh, Paraplin, and others, to show their choicest novelties. Private growers who exhibit have great advantages plants of moderate size leads me to hope that they will re pond to the liberality of the society by producing tweive of a higher class of excellence than have hitherto appeared at these exhibitions. Many are inclined to think the committee have made a mistake in offering the best prize for the smallest plants; it lies with the exhibitors to prove that they have done wisely. $-\boldsymbol{K}$.
Vines.-I must confess I was somewhat surprised an article which appeared at p. 230, signed "James Roberts. (1843) carrying their fourth crop of fruit, 1839 that these four crops are "not light, but heary "" seems to me that this statement is calculated to mislead ignorant persons. Dies Mr. Poberts mean mislead ignorant persons. Does Mr. Roberts mean taat he planted young Vines, such as any one would ordinarily egin a "hew "" wrop, and do so ever since? Although it may be true, I confess that I have never before heard of anything approaching to it. I cannot, therefore, forbear expressing my surprise, and wishing that Mr. Roberts would give us some idea of the Wishing that Mr. Roberts would give us some inea of the the erection of new Vineries may be so pleasantly avoided. If the Vines were old ones, or some that had been in bearing, and were merely removed to a fresh border, their producing fruit the same year would not be wonderful. I
know that Mr . R. Crawshay did the same thing, although his Vines were carried upwards of 100 miles. It would be as well if Mr. Roberts would favour us also with his system of spurring, by which he gets six bunches from - [Our correspondent will find these questions fully answered in Mr. Roberts's Treatise on the Vine.]
Grafting-Wax.-I do not find, in the way I use it, any inconvenience from the stock or scion being moist. have always applied a good deal of pressure in tying the grafts, and I found brown paper would not bear it; nor the wax was injured by so doing. I therefore apply bast as usual, to tie the graft; then wrap spirally the waxed paper, cut about an inch broad, and in order to make all tight, I tie the whole round with bast. If any one should fe puzzled how to make waxed brown paper a substitute for dirty clay, and at the same time bind sufficiently tight Die grafts, perhaps this might not be unacceptable.--Fruit-Tr
Fill "Shade of Napoleon," now at Penryn, able Paper in your Gardeners' Chronicle some time adm beaded, "General Principles applicable to the Manage-
ment of Fruit-trees, ) will explain what he means by the following-"As soon as the shoots intended to produce Fruit-spurs or buds at their base have become furnished there are three buds at the base, nearly circular; does he include these three, and pinch at two buds above them, o at five buds above them
Aucuba Japonica.-The fruit of this plant, according to Kæmpfer, is a red oblong drupe, like a Laurel berry, with a white sweetish pulp, and a kernel with a bitter tast Fruticetum abridged edition of Loudon's "A boretom the ferale state of this plant is in British gardens, and that its berries, which ripen in March, have not yet been seen in England. You have also made a similar statesend you a ski of the Chronicle, which induces me to has borme fruit at this place for several years past. The berries are considerably smaller than Kæmpfer describes them to be, but in other respects they correspond with his account. The skin is red, like that of the Berberry the fiesh is dry and mealy, rather insipid, scarcely to be kernel is roundish oblong, tapering to both ends somewhat paler than the pulp. The inside is waxy, and bitter to the taste.-Wm. B. Booth, Carclew. [We have added a sketch of this fruit, with which we have ne before been acquainted. It is all imperfect, the pericar only being formed. The abortion of the seed, in conse quence of the absence of the stamen, accounts for the
fruit being so much smaller than it is described to be by Kæmpfer.]

Guano.-Having noticed with some interest your valuable remarks on the cultivation of the Potato, I was last ear induced to make some trials, which have resulted as follows:

The soil is light and sandy, on a gravelly bottom ; and the gypsum used was calcined. The Potatoes were American in the ply of Noth The the were gypsum only was used in planting had twice a top-dressing with gypsum after showers of rain ; they came up last were always bad in colour, and stunted in growth. Th guano row came up first, grew the most top, was bot cour, and appeared to be growing und November. There was so much top to this row, and the colour distinct, that it maight be perceived as far distant as the field could well be seen ; and my impression is, that he weight of root would have been much greater if 8 inches more room had been given to the width of the row, 1 used at the rate of about 3 tons per acre, costing $5 l$. , which gave in weight of crop at about the rate of 7 tons per acre, costing $14 s_{3} 3 d$. per ton. Of guano and charcoal, about $4 \frac{1}{2}$ cwt. of the former, at 16 .., and about 7 bushels of the latter, yard manure, gave tont at $5 s$. 10 d . per ton. Ove 20 tons, at 10 s . per ton. And where to the latter about 2 bushels of gypsum were used to cut the sets into, at an extra cost of say 3 s .6 d ., the weight of the crop was at the rate of sbout 21 tons per acre, costing 9 s. $6 d$. per ton. to get on to the made no extra estimate above. These experiments, therefore, give an immense advantage in favour of guano but whether the succeeding crop (Oats) will be equal to the stable-yard manured part remains to be seen, and is an important part of the question. Gypsuma does not appear to do any good to my soil when applied as a tillage, having tried it on other crops; and $I$ have aever been able to
perceive the slightest effect from it. In sets I shall adhere to the old custom of cutting the good-sized Potatoes into two or three, accorang to the number of eyes and the size of the Potato. The application of dry gypsum on the cut part prevents its bleeding, and may, I think, preserve it from the attack of the worm. It neither takes up much time, nor is it costly, and I shall follow this practice in uture; setting Potatoes whole, or with the eyes barnt or cut out-leaving one only, does not answer.--One of you Readers, Cookridge, near Leeds, April 25, 1843.
Ammonucal Liquor.-On the $18 t$ of May, last year I caused two holes to be dug in a large heap of chalk, and the pit was then filled with fresh Tanners' Bark, wet from on the the ouer with that tough sea-weed which grows the tan strong ammoniacal November, both pits were opened both appeared nearly as full of ammoniacal liguor when first made, and the Bark and the Sea-wed were in the same state as when in six months before.-H. S., Bedhampton
Bees.-In answer to the inquiry of "a Bee-keeper," with respect to painting the interior of straw-hives, $\mathrm{Dr}_{\mathrm{r}}$ Bevan entirely disapproves of painting them either within and straw hives are, in some degree, pervious, which constitutes one of the fer possess aver wooden boses; of this advate pit pould aring painting coating a hive with Roman cement, as recommended by Mr. Savage, with whom, from some communications which Mr. Savage, with whom, from some communications which be happy to open a correspondence.-Llanferry, 17 th Bees.-I
Bees.-I perceive that "Pettigrew" has made some remarks on my communication of 18 th March, reapecting
Bees' eggs being transmutable. I mentioned that Bees may have eggs in store that produce queens, though it is not likely. To this " $P$." observes, "I might have added, them." I think that sit upon them without hatching them." I think that the last word in my sentence shows that no addition was wanted. Bees do not hato their young by incubations the warm of the hive alone brings the proper temperature, it is uncertain how would retain thperinciple flife. Hur long they whole winter, but I consider this to be very doubtful, for such tender substances would soon decay ; indeed I found they did so, in one instance, in four days. "P." says one experiment will suffice to show that the change of gender takes place from something added to the eggs or grub by the Bees. If it were an egg or grub that ought to produce a might or bee instead of a working one, then we puting or changing the gender. The experiment of pucting a headless swarm into an empty hive to make the
Bees create a queen by changing the gender, shows, I think, that " $P$." does not quite understand the subject he has taken up. It would be better to study the subject seriously, and at the apiary, before pointing out "the great
advantage Bee-keepers may derive from the knowledge of the transmutation of egg." Howem interesting the subject may be to the curious naturalist, the practical Bee-keeper may be assured that the knowledge of it will
neither add to nor diminish the produce of his hives.-J. Wighton

Bees.-The effluvia arising from the dirt collected in Bee-hives during the winter having been pronounced by Bee-masters to be most prejudicial to the health of the little honey-makers, often causing destruction to the whole family, it may be worth trying the following plan as a means of clearing away the refuse, without disturbing the hirates. Let a drawer be attacted to the ordinary wooden when (about an ioca in deptu,) which may be wor the comb being cemented to the drawer, a light framework may be constructed and placed over it, with apertures about an inch square.-W. W.

## FOREIGN CORRESPONDENCE

The Niger or Quorru River. - At the entrance of this river the banks were covered with a rich vegetation, consisting of Palms and a great variety of majestic trees; but after adyancing a short distance up the stream, these tribes of plants disappeared, and their places were usurped by the Mangrove. This tree covered the banks for about ten or twelve miles, after which it was accompanied by other kinds of trees and shrubs; while the Elais guineensis and a species of Areca began to be plentiful. The branches Of large trees are covered with Orchicin chum predorminate. As we proceeded onward, large timber-trees became more abundant, which in many in-stancer-trees became more abudal, ich many margin were covered with beautiful climbing plants. of gras the river was clothed with wetation was cleared vated ared away, and the groun was found to beond vated with Plaintains, Bananas, Yams, Cassava, Groundnuts, Goora-nuts, Eddoes, Indian Corn, Dourrha, Capsicums, \&c., and in many places Cocoa-nuts were plentiful. The river at this part is a comparatively narro
stream, with numerous collections of huts or villages on its banks, which nerous collections of huts or villages on by an inoffensive race of people, who flocked out in hundreds tole race of peope, whi hockedion. They were easily prevers belonging to the expede offer of presents. At most of these villages, the people appeared to be employed in making canoes, an operation performed by scooping out the trunk of a tree, and grathese canoes we observed to be ornamented with flagbs

Their arms consist of bows and arrows, guns, a few bay onets, spears, daggers, \&c. The clothing worn by the but the chiefs and head men are distinguished by wearing a robe or dress of blue linen of native manufacture, brought from Egga and other towns situated higher up the Niger. The scene is enlivened by numerous birds, and by myriads of insects of the most gaudy colours, diversified at times by the chatter of monkeys, as they merrily leap from tree to tree. During the night, the croaking of reptiles darting across the path, serve to divert the mind of even the casual observer, and much more so that of a lover of Nature. As we approached towards Eboe, we found cul-
No tivation to be carried to a greater extent, and more espe cially that of Yams. At this part of the river, the Silk
Cotton-tree forms a prominent feature in the vegetation. Cotton-tree forms a prominent feature in the vegetation.
After passing Eboe, the litherto narrow river expanded After passing Eboe, the hitherto narrow river expanded
into abroad and noble stream, the banks being still beautifully wooded down to the water's edge. In several places the destruction of villages and the standing trunks of charred trees presented a melancholy example of the Ebavee of man. After getting about midway between covered with healthy crops of Rice, Dourrha, \&c. The vegetation began at this part to be more scanty, and Palms were, comparatively speaking, rare to what they had previously been. We also found more traffic upon the river, many of the natives coming from the interior to the Kirree market. At this part of our journey, one or two of the blacks, who had been up the river with the Liverpool
expedition, would frequently point to the banks, and inform us that a white man was buried there; but at this time the people of our expedition were in excellenthealth and spirits. After passing this range of low hills, we approached towards Attah, and in the distance before us we beheld the majestic Kong mountains, running from east to west, their summits towering to the clouds. The banks here began to be ornamented with the gigantic Baobab, or Adansónia digisata, used by the inhabitants on the banks of the Senegal up the could not determine whether it was by the people those who live in cases the confluence of the Chadd and Niger; for the only answer that I could get in return to numerous inquiries respecting its properties was-No good beautiful Spathof the head rom the informant. The its fine habit and large terminal clusters of scarlet fiowers make it a very desirable object for our large hothouses and conservatories. I believe it is in the possession of a few individuals in this country, having been raised from seeds he was home by Mr. Freeman, who gathered them when Many of the villages were, at the time of our visit Const. water, the people crossing frome time of our visit, under means of canoes. This was more especially the case upy Lander's Island, lying was more especially the case upon of which consisted of rank grass and a few the vegetation shrubs. Water-fowl are there abundant; and I should suppose it is a place of resort for alligators, as theyld seen floating past upon pieces of grass, apparently detached rent. The town of Attah lies on the right bank curNiger, at a considerable elevation above the level of the stream. The huts are very compact and neat, presenting a pretty appearance from the river. Cobacco, of a good the opposite side of the river is situated the kingdom of Warpur, a fine wooded country, interspersed with cultilonger to be met with at this part of the river, and Palms more the Niger gracefully winding its course amono thesque ; and the rich vegetation of its isfands and fertite hills, with the stupegetation of its islands and fertile valleys, their peaks imbedded in clouds, created a sent and left, pleasure too sublime to clouds, created a sensation of vegetation on the sides of the mountains became limited to a few straggling shrubs, interspersed with the Adanmonia and Bombax. Before arriving at the confluence, we biting a varied fertile island (Beaufort Island), exhispecies of Fan Palm, growing to the height of a lofty I had feet, and producing abuadance of large yellow fruit Stirling indend returning to this spot after the vessels left fever soon a but I was prevented, by being taken with the arom soon after arriving at that point. The Habzélia beautiful Leguminous plants, and a Combretum, orna aquatic or water's edge, as well as a great quantity of fromic or rather marsh plants, which had been forced the current. As we approached towards the late town Pundiaki, the Niger gradually began to increase in width four miles across. down to the water. On the right side it was thickly wooded Pund opposite side, as a large portion of the land abous Pundirki is of a poor sandy description, covered with seems of Tephrósia; this, with a coarse kind of grass, plains. At the only vegetation which thrives upon the pater-courses which of the hills and by the margin of the the Niger, the vegetation partook of a richer parts into In those situations, thertook of a richer character. phalus esculeprofusion. The country Peach, Sarcocéphalus esculentus, was abundant, butit was not taken any Which of by the natives; a yellow Plum was also plentiful,

Was pought after by the people as an article of food.

The ruins of Pandiaki are still standing; it appeared to our visit was nearly filled ap. The vestiges of a rude bridge and gateway were, however, still remaining. The door or gate was thickly studded with large headed nails greatly resembling English manufacture. The remains of the dye-works were also to be seen; this process appear: to have been formerly carried on to a great extent at thi seek protection from the predatory incursions of the Fellatas on the opposite side of the river. Towards Stir ing Hill the soil improved a little, and cultivation wa more extensively carried on. The greater
istance below Stirting Hill, that sta. At a shor here the process of dyeing was still performed. The colouring matter which the people used was obtained from species of Tephrósia. At this part, snakes of a yellowish color and about four feet in length were numerous, as were also several kinds of hizards; and the hills formed y the termites, or white ants, were plentiful. I obtained ome very good skeletons of birds and animals by break ing away the earth until I arrived at one of the chambers of these hills, where I deposited the specimen, the skeleton of which I wished to obtain, and in a short time I found that all the flesh had been eaten off. Birds were numerous the parrots flew about in large flocks, screaming and making the most discordant noises; the Guinea fowl was plentiful, and was very destructive to the crops of Ground Nuts, Dhourra, \&c. Scorpions and centipedes also abounded. The river at this part was more lively, owing to the number of canoes which traded to the Rizzee Market, Damuggoo, Eboe, and other towns, situated below the confluence; their cargoes consisting principally of ivory, beeswax, tobes, and blue cloths, and in some instances of slaves. Some of the canoes were Jaden with small but well-formed horses, which they were probably taking downward for sale. Parties of these traders would frequently approach the Amelia during the depth of night, and question us as to what we intended purchasing; but they always made us aware of their proximity by calling aloud as soon as they came within hail. At a small town on the right bank of the river, opposite to Pundiaki, the natives were in possession used to small pieces of cannon, which they
Caloutta, Jan. 27, 1843.-The Botanic Garden here is undergoing a great change under the superintendence of Mr. Griffith. The catalogue of the plants it contains is, planned, and ground is trenching for the purpose of exhibiting the features of the systems of Linnæus, Jussieu, ample space for Mr. Griffith's plans, which, it is said, embrace the formation of medicinal and economical departments, neither of which at present exist. The whole which is not an sdvantained ine garden is about 3,800 , lication of Roxburgh's Hortus Benghalensis. The head gardener is deranged, and a successor from Europe is talked of : if a thoroughly good man, he will be invaluable. Frankfort, 13 th April.- In my way to this place I paid n the opposite side of the Rhine to Dusseldorf. There is certainly a very rich and curious collection of succulent plants there. They seem to be exceedingly well kept, and to flourish under the system of his gardener, which is, not to give much light, air, or stimulus of any sort till the summer, when they are all put out for five months. I saw the very curious Opuntia Salmiana in fruit In the plean ground I observed growing in the turf, the first German Oxlips, Primula elatior vera, that I have seen on the west of the Rhine: this is also the most northern locality I know for that species. I arrived here too late for the flower-show ; but I find the Azaleas, which are usually the best show-plants, suffered so from the drought of las sumbrid Rhododendrons, Burceravespum (purple, Three hybrid Rianum (white), and macranthum (pint , Kroplants. The Carmine red Azalea indica is also very

three feet and a half, and it somewhat resembled an ornamental grate screen formed of shavings. This being the anniversary or the semp and others present adjourned, at the close of business, to the Cafe Royal, where they sat down an elegan supper, Dr. Neill, the Greville, Mr. Ball, of Dublin, Mr. Gourlie of Glasgow, \&cc.-Professor Graham, croupier. After supper othe usual loyal and appropriate toasts were drunk, and the
proceedings were farther enlivened by occasional songs. proceedings were farther enlivened by occasional songs.
The Botanical Society met on the 13th inst,,- Prof. Graham in the chair. Numerous donations to the Library and Herbarium were laid on
miscellaneous collection of plants and fruits from Canton River and Chusan, from the Cape and Prince's Island, including a
collectlon of forty species of Erica, from Simon's Bay and Table Mountain. The following papers were read:-1. Two Botanica
visits to the Reeky Linn, and Den of Arly, in April and Juae

1842; by Mr. W. Gardiner, Dundee. 2. On the Diatomaces.
No. VI. By Mr Ralfs.

## COUNTRY SHOWS,

Dorking Horticultural Society, Aprit 18. - This exhibition was
heldat the Red Lion Inn, and was attended by most of the gentry heldat the Red Lion Inn, and was attended by most of the gentry in the vicinity. Since the first establishment of this Society
there has not been a more attractive display of beautiful flowers
than the present meeting afforded : but as it wo

## MISUELLANEUUS

Flora of Japan.-We have been favoured by a friend with the following information on this subject:-Las autumn Professor Zuccarini spent six weeks in looking fully rich, containing nearly 2,500 species, and, altogether about 30,000 specimens. They are in a good state o preservation, and of almost gigantic size, We under of Mr. Blume, Director of the Leyden Museum, procured, mongst other things, specimens of a dozen new gener some of which are very remarkable; for instance, a nuconnected stamens; an Olacaceous plant with a long talked three-celled ovary, containing numerous ovule arranged in two rows in each cell; and that that sam entleman has already drawn up a description of them The win appear in the Journal of the Munich Acad The Flora or Japan is very remarkable. Pernaps in $n$ ther country are tropical for Chiferous plants are 15 Pecies of Bamboo Twolve Coniferous plants are 15 species of Bamboo. Twelve pecies of Maple and neariy 26 of Oak are met with, associated with a crowd of Laurels of different genera The Orchidaceous plants, collection contains but few, are, for the most part, epiphytes. Amongst Leguminous plants, there are severa
pecies of Lespedézia. Ericaceous plants are not onl species of Lespedézia. Ericaceous plants are not only numerous, but extremely fine, comprising upwards of 10 under the latter name, those species which have only tamens. Nearly all the grasses have a tropical appear Carex. Palms and Cycadaceous plants are less nume Cons. Palws and Cycadaceous plants are lass nume Zingiberacæ. Many very interesting things are met with in the Herbaria procured by Siebold from the native Botanists. Their specimens are well preserved, and amongst them are many plants collected in the central parts of Nipon, and upon the lofty mountains which no European has hitherto attempted to explore. The draw-
ings made by Japanese artists also give a good idea of the plants which they are intended to represen
Sale of Orchidaceous Plants.-We understand that the Orchidacere from Bombay, which were sold last week by Messrs. Stevens and Co., produced altogether rather more than 170l. Two large specimens fetched 15l. each; others went as low as 25 s .

## An Agricultural Tract for the Times. By J. West,

 Land Agent, \&c., Collingham, Nott I Have lately obtained the above tract, and find it is written by a fellow-labourer with myself in a muchneglected field of improvement. As far as ' am able to judge from my own experience, Mr. Wests and It is not draining and subsoil-ploughing are very to point out the mode of draining any land, but to call the attention of landed proprietors to the absolute necessity of the work being "immediately done." In this I fully agree with him. In my time I have done a great deal of drainipg what I have in whe in the maner which is usually called wedgetiles, but in the manner which is usually called with a stong rushy turf on meadow or pasture land, frow whithe I doutht not, great benefit will be derived. My former experience was in making open drains in plantations, to a geat extent. But, as I am more anxiove to express my cordial soncurrence with Mr. West upon another part of bis pamplict than upon this, I pass onhis chapter on the Appropration and Management English Timber.
Ilis olservations on these heads are excellent, and well deserve that landed propritin's should put them in prac-
tice without delay, if they really whsh to benefit themselves and the public, and to find employment at home for the
tions, and especially those that refer to timber, will have I have, lumble individual though I am, laboured for years and years in vain, and may almost say, spent my strength for nought, in the same cause. For my own part, I cannot see why England cannot produce as good timber as other in quantity sufficient for all domestic purposes, if the owners of timber would but see that it is properly trained in its infancy, and suitably treated afterwards. I fully agree with Mr. West that our native timber, much as it is ther kind that is for instance, as weeled standing, and felled in the autumn or winter, would be greatly improved for building and other purposes, as it is proved to be the case with the Oak, Alder, and Larch. 1 am happy to sa that some friends of mine have agreed to adopt my suggestion, and try some experiments with different kinds o rees, the results of which shall be made known.
But what will be the results of Mr. West's labours with reference to this pamphlet and the others books he ha written? Probably neglect and pecuniary loss. It appears o be impossible to reach the minds of the great majority of the land-owners on the subject of their timber ; and the man who attempts to do so engages in an unprofitable and hopeless task. It will be well, however, for the few wh may meet with Mr. West's pamphlet to follow his advice

Agricultural Chemistry rendered simple for Praolical Purposes. By T. G. Tilley, Ph.D.: Longmans. se should be more inclined to call this book Agricul the following explanation of the nature of ammonia :-

Ammonia is the same substance as hartshorn, and its carbonate is the common smelling salts of the shops. It is composed of carbon and nitrogen. ${ }^{7}$ We cannot wast either our own time or that of our readers by comment on such a book.
CALENDAR OF OPERATIONS for the ensuing weels, years new system of planting lower-gardens within the last 20 ment in May, and instead of improving the appearance of the flower-garden by this change, we have, in nine cases out oiten,
mere blank, comparatively speaking, for five or six weeks from the middle of May. As our great patrons of gardening generally
pass this time in London, the subject has not had that attention paid to it which it deserves. Instcad of pointing ont or suggestthis time as any other part of the scason, I would ruther invite
communications from different parts of the country, detailing the way in which this is already effected, for we feel convisced that
such information would be of essential service to amateurs; and moreover, many amateurs are as likely to supply such informa tion as professed gardeners.
In-door Deparitment.
Pingry.-To keep the bottome heat steady at all times is a good maxim, and more so at this season; too much bottom-heat is
more dangerous than too little; but if the bottom-heat is let down ture many degrees more than is necesary for the plants, a weakly growth will be the consequence; give large portions of air to
all the stock, and shut them up early in the afternoon. or fast ripening ; if they have plenty of sun and air they ought to hang a long time, and come to table or market with a fine bloom.
As soon as every bud on the late Vines has grown a joint or The front ventilators need not be used till the fruit is all set, but give large portions of air all along the the the top part of the house the coolest, and your Vines Peachionar anll Cherres.-L,ight and air with moisture according to the state of the fruit, and a sharp look out after
insects or other enemies will be the romtine here ti.l the fruit is ripe. -Continue, as stated for the last week or two; if the of ripening, have recourse to caprification, they never appear to
drop under this simple process, and they ripen soon when thus treated.
bembons and Cuctimbers.- The weather throughout April has
favourable for carly Melons, and if May proves as favourable, this fru.t will come in, in better condition than we
have had it for many years. Keep up a brisk heat by the linings, and uniess your fruit is full swelled, kecp the plants moist at the
roots, there is a great demand on the plant while the fruit is ridge or cold frame way, the seeds should now be sown, and, as soon as they are up, potted off, harden them by degrees till they
can stand in a cold frame ready to be planted out. The month of May is always a busy time in the kitchen-garden and orchard- Young crops to be thinned out, others to be earthed up; some to be transplanted, watered, and sharled; and succes-
sional crops require to be now oftener sown. Thinning Grapes in the late Vineries is in many places a long and very particutar and worms, are busy at their work of destruction, and must have care and judgment nec
spindling shoots are cutting of at the same time, that they may not binder their betters from coming regularly forward, by en couraging the sap away.
Broccoli.-These shou next winter and spring. The dwarf and tall purple sprouting Broccoli are the most economical and useful of all the Cabbagethe end of the month, they will produce tender sprouts from next without this sort, which is far preferable to Borecor KIDNEY-BEANS.- Plant in boxes, to be protected a while, and Phas, Beans, Stinacit, Turnipg, And Salaids, or any othe sort under the head of "Succession Crops," must now be sown come in faster during hot weather.
Srazals.-Clear away the litter and pots as the stools ge past use; cut over the stools level with the grounl, ha dig ove fully exposed to the sun and air, you must thin them out. brought 45 wasps to me, for which they are regularly paid; the Pear-trees will now be ready to have some of the strongest young shoots stopped. The Apricot, Plum, and Cherry must be
carefully looked over, to get at the mischievous litte caterpillar
which is so unsociable as to shut itself up by twisting the young Which is so unsociable as to shat itself up by twisting the young
foliage round his retreat; this caterpillar is never in great num-
bers, and is ensily destroyed and kept under ; soapsuds is the bers, and is ensily destroyed and kept under; soapsuds is the Peach-trees, and also on the Roses

## GARDEN AND SHRUBBERY

Stove, -Stove plants are now making their growth more freely than at any other period; the usual stmulants of heat, moisture,
and, in some cases, liquid manure, may therefore be more freely administered to them. Young plants that are wished to become fine specimens should be watched, and as soon as their roots Others, apalm, must be cramped at the roots, to inducc them to make short flowering spurs. Many of the climbing plants so
treated may be made to assume the character of shrubs, to suit treated may be made to assume the chara
particular situations and circumstances. opinion that Heaths, Epacrises, and such-like plants, prevalent ruined if touched with a knife; but now it is proved that no plants bear pruning better; and you may see men in the great
nurseries cutting off the young tops of these in handfuls after the plants have done flowering; other free-growing plants have
their tops regularly pinched off at every other joint, in order to get them into round bushy specimens.
Conservatorx.-Some of the Passid
CONSERVATORX.-Some of the Passion-flowers, Ipomoeas, and
other strong-growing climbers, should now be close pruned, if you'wish for a late display in autumn. It is always a good plan to
have duplicate plants purposely for this treatment; this is often done in Vineries, by planting two plants to each rafter, and
cutting them down alternately every year Pits and Frambs - Propagation by cuttings and grafts mist late fowering may now be sown. Very many plants that are
difficult to strike from cuttings may be easily increased by grafting on the roots of some allied species, All tender seedlings
O Out-doon ofnroce npx

Annuals to flower from the end or June should be sown now; those now half-grown should stand thill on the ground. One of the misfortunes of spring-finwering bulbs is, that they must finish there growth. On the first wet day, see to these, and have givine them arefly taken up, and plant them in some quiet place, sticks against them; without this arrangement it is difticult to are out of fower and foliage. Not only the colour and height of every variety of these bulbs, but the very week it usually comes in flower, should be marked in the garden-book, otherwise, how
are you to plant them next autumn i-D. Beaton, Shrubland

## NEWS OF THE WEEK

Her Majesty's Accouchement and the birth of nother Princess must be already known in all parts of the kingdom ; we have, therefore, only to congratulate our readers on the occurrence, and to express our satisfaction that the daily bulletins give the most favourable reports of her Majesty and the infant Princess.-The funeral of the Duke of Sussex is understood to be fixed or Thursday next: it will take place, in accordance with the express desire of his Royal Highness, in the cemetery at Kensal Green. The ceremony of lying in state is at present fixed for Wednesday, but the order of the funeral procession does not appear to be finally settled. The Lord Chamberlain has given orders for the Court to go into mourning for three weeks, and the Earl Marshal has issued the usual notice for a general mourning for ten days, commencing from Sunday last.-In Parliament, the congratulations of both Houses on the birth of a Princess, and addresses of condolence on the death of the Duke of Sussex, have been unanimously voted to her Majesty. The leading Members of both Houses took advantage of the opportunity to bear testimony to the domestic virtues and example of the Queen, and to the memory of the Duke of Sussex, who during a long life had been the patron of science, literature, and the arts, and the warm supporter of every charitable institution. The proceedings in the House of Commons during the week have been chiefly of a routine character. Sir R. Pee nounced on Tuesday, that the long-protracted negoPith Portugal have been "interrupted" by the Ellis to the Court of Brazil for the re-adjustment of commercial relations has hitherto been unsuccessful. On the same night, Mr. Ricardo's motion for an address to the Queen, on the remission of the import duties, was negatived by a majority of 74. On Wecnesday, Lord J. Russell moved the second reading of his Municipal Corporations ${ }^{\prime}$ Bill, which was opposed by Sir J. Graham, and lost on a division, by a minority of 53 . The second reading of the Ecclesiastical Courts Biil was carried last night by

From France, we have the particulars of the marriage of the Princess Clementine to Prince Augustus of Saxe Coburg, and an announcement that the French Court will go into mourning next week for the Duke of Sussex.In Spain, great uncertainty still prevails in regard to the organisation of the Cabinet, and nothing of a decisive character is yet known,--The German papers give long
accounts of an insurrection at Dantzic, which for some succeeded in suppressing the movement, and tranquillity is again restored.-The Servian question is still the absorbing topic in the Levant, and there is no longer any doubt that the Emperor of Russia will insist on a new election. The deposition of the present Sovereign is generally anticipated, and the restoration of Prince Milosch is mentioned as by no means an improbable event.

## 觻ome Netos.

Accouchement of her Majesty.-On Tuesday of a Princess. In the room with her Majesty were his Royal Highness Prince Albert, Dr. Locock, and Mrs. Lilly, the montbly nurse; and in the rooms adjoining
were the other medical attendants, Sir James Clark and Dr. Ferguson ; and the Earl of Liverpool, Iord steward of her Majesty's household. The news was immediately made known to the town by the firing of the Park and Tower guns; and the Privy Council being assembled as giving for the Queen's safe delivery of a Princess be pregiving for the Queen's safe delivery of a Princess be pre-
pared by the Archbishop of Canterbury, to be used in all churches and chapels throughout England and Wales, on Sunday, the 30 th inst., or the Sunday after the respectivers that
ministers shall receive the same. It appears ministers shall receive the same. It appears that on
Sunday morning, her Majesty and Prince Albert attended divine service in the chapel of Buckingham Palace, and after luncheon walked in the garden for more than an
hour, without any appearance of fatigue. There were no hour, without any appearance of fatigue. There were no
guests at the Royal table that day, and the Queen retired at the customary hour. In the course of the forenoon on
Monday, her Majesty gave audience to Sir R. Peel on Monday, her Majesty gave audience to Sir R. Peel on
official affairs, and in the afternoon visits of condolence on the death of the Duke of Sussex were paid by the Duchess of Kent, and other members of the Royal family. About nine o'clock her Majesty rose from table, and on recommended. Sir James decided that Dr. Locock should be sent for; that gentleman arrived at the Palace soon after ten o'clock, and her Majesty retired to bed, enjoying some refreshing sleep until within a few minutes of three o'clock, when the symptoms of uneasiness having returned, Mrs. Lilly summoned Dr. Locock, and after a daughter. Prince Albert, Dr. Locock, and Mrs. Lilly, were the only persons admitted, all the principal The young Princess is reported to be a fine bealthy child, the features somewhat larger, and the frame more fully developed than were those of the Princess Royal, her Majesty's first child. The news of her Majesty's safe delivery was communicated inm wessengers were the Lord the residences of the various members of the Royal Archbishop of Canterbury, \&c. charged with the bul letin announcing the event. Between seven and eight oclock Sir R. Peel arrived at the palace, and was quickiy Lord Stanley, Sir J. Graham, the Chancellor of the Ex chequer, the Duke of Buccleuch, and the Lord Chancelintelligence had spread all over the metropolis before inteligence had spread all over the metropolis before fired royal salutes of 21 guns. The bells of the several churches rung a moerry peal, and the shipping of all nachurches rung a merry peal, and the shipping of all naThe immediate vicinity of the palace was thronged Throughout the day by persons anxious to learn the state of her Majesty's health. From twelve till five o'clock the nobility and gentry were continually arriving to make inquiries, and leave their names at the Lodge. Queen's despatches, announcing the event to the Kings of Hanover and Belgium. The bulletins since issued announce that her Majesty and the infant Princess are going on
perfectly well. It is understood that the customary perfectly well. It is understood that the customary
rejoiciags incident to the accouchement of a Queen will, in this instance, be postponed until after the funeral of his Royal Highness the Duke of Sussex.
Form of Prayer. -The following is the form of prayer
and thanksgiving to Almighty God for the safe delivery of the Queen, and the happy birth of a Princess : 6 B O Merciful Lord and Heavenly Father, by whose gracious gift mankind is increased, we most humbly offer unto Thee our hearty thanks for Thy great goodness vouchsafed to thy people, in delivering Thy servant our Sove-
reign Lady the Queen from the perils of childbirth, and reign Lady the Queen from the perils of childbirth, and
giving her the blessing of a daughter. Continue, we beseech Thee, Thy fatherly care over her ; support and comfort her in the hours of weakness, and day by day renew her strength. Preserve the infant Princess from
whatever is hurtfal either to body or soul, and adorn her as she advances in years with every Christian virtue.
Regard with Thine especial favour our Queen and her Royal consort, that they may long live together in the enjoyment of all earthly happiness, and may finally be made partakers of everlasting glory. Implant in the cies, and give us grace to show forth our thankfulness by dutiful affection to our Sovereign, by brotherly love one towards another, and by constant obedience to thy comfaith and fear, so that passing through this life in Thy into Thy heavenly kingdom, through the merits and mediation of Thy blessed Song Jesus Christ, our Lord. Amen."

The Duke of Sussex.-The necessary arrangement for the funeral of his Royal Highness have been completed by the Lord Chamberlain. The express desire on the part of his Royal Highness that his remains should be part of his Royal Highness that his remains should be have created some difficulty up to the present time; but, through the gracious permission of her Majesty, the only obstacle which might previously have existed to the entir fulclment of the Duke's wish has been completely re Thursday, the 4 th May, in the cemetery at Kensal-green It has been arranged that the coffin should be deposited in the principal catacombs, under the western chapel, until a mausoleum can be erected for its reception. Her Majesty has further expressed her particular desire that no curtailment of the ceremony usually attendant upon royal funerals
should take place in the interment of his Royal Highness, and the whole of the arrangements will, in consequence, b conducted on the usual scale of magnificence. Unlike pointed to take place at an early hour in the day. This arrangement will give the public an opportunity seldom met with, of witnessing the procession throughout the
whole line of road, from Kensington to Kensal-green. The procession, after entering, will not leave the chapel the entrance to the catacombs being immediately beneath Royal Highness, may serve to explain his predilection fo his cemetery. It appears that his Royal Highness has been in the frequent habit of visiting the grounds since their formation in 1832, and more particularly during the last three or four years. He generally came attended by lew of his suite, and spent a considerable time in examin ing the various improvements and works in progress, in which he appeared to take great interest, and on more when it pleased Providence to call him he would certainly be buried there. Some time since, a German friend o the Duke's, named Count on schalenburg, died short after his arrival in the country on a visit to bis Royal Highness. The Duke was much affected by his death and himself selected his grave in the Kensal-green ceme tery, where a neat monument, inclosed in an iron railing, pas been erected. The ceremony of lying-in-state is a The state apartments are now fitting up with the usual appurtenances, and it is expected that they will be competed this week. The public will enter through the court-yard of that portion of the building lately occupied mount the grand staircase, which opens directly upon the tate apartments. This room will be hung with black elvet and lighted with wax tapers. The next, and principal apartment, will contain the coffin, bearing the ducal escutcheons fored with a pall ornamented with the escutcheons of lis Royal Highness. This room will also third apartment similarly decorated, from which visito will pass through another suite of rooms into Kensington gardens. By this arrangement every facility will be afforded to the public, who will be enabled to witness the

General Mourning.-Orders have been issued by the ord Chamberlain for the Court to go into mourning from Sunday last, the 23d inst., for his jate Royal Highness the Duke of Sussex; to change the mourning on Sunday
May 7 th , and to go out of mourning on Sunday May I4th. May 7 th , and to go out of mourning on Sunday May 14 th .
The Duke of Norfolk, as Earl Marshal, has issued an order for a general mourning, stating that it is expected that all persons do put themselves into decent mourning,
for ten days, to commence from Sunday the 23 d inst. The Adjt. -Gen., and the Secretory of the Amiralty have given notice that Her Majesty does not require the Officers of black crape round the left arm, with their uniforms.
The Levée. The Gazette of Tuesday announces that ess Pree intended to have been held by his Royal Highlast, has been postponed to Wednesday, the 17 th of May,

Parliamentary Movements.-The election for East Suffolk has terminated in the return of Lord Rendlesham the numbers were for his Lordship 2,952; for Mr. Adair, representation of Salisbury, by Mr Brodie's accentance o the Children Hundreds, and Mr. E. P. Bouverie has come corward as a candidate on the Liberal interest
Chinese Missions. - The Bishop of London intends issuing a pastoral letter to the clergy of his diocese, directing that collections shall be made in every church and fund for providing religious instruction in conformity with the principles of the Church of England, in China. A similar course is likely to be adopted by the other bishops.

## fforpign.

France.-The Paris papers bring no news of importthe vinegrowers of France, brought under the notice of the Chamber on Saturday by M. Mauguin. The principal tem of the contents of these journals is the rejection of clergyman, the Rev. M. Roussel, arainst a decision of the Court of Versailles, which had declared him disqualified to exercise his functions as pastor at Senneville, because of his having four years previously voluntarily ceased to perform his clerical duties. The Paris press is nearly Cassation. The Minister of Marine has asked for

240,0002 .-five millions of francs-for the expense of establishments at the Marquesas and Tahiti. He estimated the annual expense at 100,000 l. a year. The force to be sent was 1,200 men. The Minister referred to the mis sionaries as follows :--" For a long time English mission aries have been established in the Society Islands, and to their efforts, which preceded those of our own missionaries, owing the more advanced state of civilization in Tahiti The good which they have done, and may yet do, gives This tholl This they shall have in all its plenitude. On the othe hand, we are happy to think that French influence wil find in these foreign missionaries auxiliaries devoted to defend." The journals of Monday contain a letter addressed by Prince Louis Bonaparte to a provincial print, on the rumour reaching him that an amnesty to political offenders was contemplated on the occasion of the marriage of the Princess Clementine of Orleans, or of the King's fête. The contents of the epistle are, we regret to say, anything but calculated to shorten the period of his captivity. It concludes with the following paragraph :" Banished for twenty-five years past, twice betrayed by fortune, 1 am acquainted with all the vicissitudes and sorns of this life, and, having no more the illusions of youth, I find in the native air I breathe, in study, and in shared the of my prison, a charm which I felt not when I drank in the same cup as the con short, if the opportunity offered, I should repeat what I said before the Court of Peers, 'I will have no generosity, for I know what it costs the object of it." "-The marriage of her Royal Highness the Princess Clementine with his Serene Highness the Prince Augustus of Saxe Coburg Gotha took place on Thursday evening, at the Palace of t. Cloud. The royal family and the witnesses having taken their places round a circular table, Baron Pasquier Chancelior of France, read the civil-marriage ceremony Princess Clementine the declaration Aus b the aivi code dechared in the name of thelaw that the Prince and Princess ere united in mion certifionte of a ertir Majestios the Princes and Princeses, and par, hesses havi Preside 1 g President of the Council of Ministers, the Keeper of the and the Grand Referendary. Immediately after the sign ing of the civil act, their- Majesties, the Royal Family, and all the assembly, proceeded to the chapel, where the Bishop of Versailles performed the religious marriage ceremony. Prince Augustus is nephew of the reigning Duke of Saxe Coburg Gotha, of the King of the Belgians, F the Duchess of Kent, and of the Grand Duchess Anna Feodorouna, widow of the Grand Duke Constantine, brother of the Emperor of Russia. He is also brother of the King of Portugal, and the Duchess de Nemours, and cousin-german of Prince Albert. He is in his 24 th year,
having been born on the 13 th June, 1818 , and is about ne jo mern th $J u n e, 1817 . ~ T h e ~ M o n i t e u r ~ a n n o u n c e s ~ t h a t ~ t h e ~ C o u r t ~$ will, on the $2 d$ May, go into mourning for eleven days for his Royal Highness the Duke of Sussex.

They The accounts from Madrid are of the 17th the verification of that the Cortes were still occupied in declared duly elected within the preceding two days, amongst them the celebrated Señor Prim, deputy for Tarragona, recentiy denrived or his commission of colo or his conduct during the late revolt at Barcelona Nothing had been arranged relative to the formation of a new Ministry. A list, however, had been circulated, con taining the names of M. Campuzano, as President and Minister for Foreign Affairs; M. Alonso, Justice; GenePita Irarte, the laterior; General Chacon, War; M Joachim Lopez, President of the Congress. It was be lieved that if Don Joachim Lopez should join the Regent' frienda, a Ministry might be constituted which could carry on the government without difficulty. In the mean pime the existing Ministers were notidle; they were preparing to introduce two important bills to the Chamber of Deputies; one to define the law of libel, the other, or the establishment of banks throughout the country nto which it was intended to introduce a provision to secure the capital subscribed by foreign capitalists, in the same manner as the property of foreigners vested in mining companies is protected. An immense harvest is expected throughout Spain in consequence of the abund ant rains during the spring months. - The Regent re urned the visit of the Infante Don Francisco de Paula n the 9 h . Their meeting appears to have been very cool. The Regent gaid to the Prince, "Our characters fend the throne; and you, an Infante of Spain, now side with the Opposition, arrayed against the Government and the Queen.
Portugal.-We have accounts from Lisbon to the 17th inst., by the Liverpool steamer, which has brought home some of the officers and engineers belonging to the Solway steamer, lost off Corunna on the night of the 7th Who were taken to Lisbon by the French government steamer Erèbe and Eglantine gun-brig. It was known at Lisbon that the British Government had rejected the Portuguese proposals, at a Cabinet Council held on the 8th; and, in fact, the Portuguese Foreign Secretary had authorized the official journal to announce the "interrup tion of tae negotiations. The papers announced that a treaty had been signed at London between Portugal and the Ottoman Porte.

Germany. Letters from Hamburgh announce that serious disturbances broke out in Dantaic on the 12th
and 13 th inst., chiefly owing to the dissatisfaction of the lower classes at the late concessions made to Russia in the transit trade, without any relazation of her prolibitive measures. Groups of several thousands marched through the town, committing various excesses, the police being unable to control them. The troops were called out on the 14th; a regiment of the Hussars was sent against the mob, one man was killed and many people were wounded. able, but trent altogether seems advices.-The King of Prussia has made a proposition to the Diet of Posen, which has given general satisfaction. The proposition is, that the King, out of his private purse, will give the province the considerable sum of roads, on condition that the province raises the same sum, for the same purposes, within fifteen years from this time, the public rads in the province will about 400 English miles for the sum of $1,200,000$ dollars, which will be no burden to the country..-From Vienna Company for Stereport read at the last merting of the present satisfactory results The on the Danube did not present satisfactory results. The expenses have exceeded from that to upon the two lines of Orsova to Gallatz, and from that town to the sea.-A joint-stock company has of a congnised in the Rhenish provinces for the purchase in order to establish a new German colony.
SWITzerland.-A plot for overturning the governgovernment, which seized defeated by the Piedmontese guns and ammunition, sent from Lombardy, and intended oespatched up the lake to be ready for the insur-Gents.-The principal hotel-keepers of Berne, Fribourg, Geneva, the Valais, \&c., had a meeting on the 3d inst., for the establishment of a uniform rate of charges at the hotels in Switzerland. It was admitted by persons the sent, that a system of high charges was prejudicial to their interests, and a moderate tarifif was agreed up dinal Giustiniani, the Cardinal Chamberlain of the Papal States. His Eminence is succeeded by Cardinal Riario Sforza, the late delegate of Pesaro and Urbino.-From Naples we learn that the number of passengers on the daily. For the first two months thistlamare increases amounted to 116,912. His Majesty seems much inclined the first step to a farther coilroad to Gaeta, which would be and finally, to Rome. Although such a fors, to Terracina, hardly be expected to prove a profitable or important so much accommodation and gain of time to travellers that no doubt their number would soon increase to more lately been for present ainount.- A private company has purpose of constructing a railway from Rome to Porto d'Anzo, the ancient Volscian seaport of Antium, which is now undergoing extensive repairs and improvements by into execution, the distance being only about 36 English miles, over remarkably level grounds, it is feared that it Vecchia, and even of Leghorn. Twenty years of Civita $\mathrm{d}^{\prime}$ Anzo consisted only of a few hamlets, inhabited by poor Gishermen, but through the energetic activity of Cardinal now a flourishing town of upwards of 1000 X11., it is and promises fair to become the most important seaport, particularly for trade with Africa, within the Papal domi-Denmark.-The Copenhagen papers state, that on the University waited upon the celebrated sculnudents of waldsen, for the purpose of thanking him for his declared Martion to comonence immediately a colossal statue of already so rich in works of that great artist. The which is are full of dich in works of that great artist. The papers abolishing slavery in the Danish West India islands. Greece.- Letters from Athens of the 10th inst. state, by King Otho, that the Emperor was' deter a loan made incur any further useless sacrifices for the sake of the Aellenic Government. The outcry against the Bavarians througe system of administration was still loud and general Gibraltar, the country. On Palm Sunday the Bishop of England, consecrated the new Protestant Church of Athens, in presence of the Duchess of Oldenburg, the Queen's sister, and a number of English residents and Turkey
Tonrefy. - The Levant mail has brought letters from terest, inasmue of the 7th inst., which possess great inGerman prints as to the critical aspect which the of the question has assumed. The Emperor of Russia's ultimasubstance beinunicated to the Porte on the 30th ulto, its substance being as stern and its language as arrogant as determined in stating that the Austrian Government has Ietter, dated on supporting the pretensions of Russid. A Nuremburg papers, affirming that the Europear in the Were all agreed as to the Servian question, and that the Porte must, coisequently, comply with the demand of

Russia for a new election. The opinion of the restorato Austria and Russia. An insurrection in his favour ha already been organised at Schaback.-The accounts from Syria state that Bishop Alexander has obtained from the authorities of Beyrout permission to go on with the
building of the church he had commenced in the Holy City.
India and China.-An extra Indian mail which left Calcutta on the 5 thi ult. has arrived, but it brings no news of importance. Miajor Frazer, who is one of the passen-
gers, bears magnificent presents to her Majesty, from the King of Labore, said to be in value 12,000 l. There is hittle political intelligence by this arrival, except that Akbar Khan was again beginning to move, and medi-
tated a descent upon the Sikh possessions beyond the Indus, Peshawur being considered in danger of a visit, in which case the British would have to assist their ally. The Barukzyes are now supreme in Affghanistan. The Can-
dahar Sirdars have returned to their capital, Suftur Jung being a prisoner in their hands. The British Govern ment have acknowledged, in Gwalior, Jeeabjee Rao Scin-
diah, the Raene's eldest son. From China there is no news whatever
Unitrd States.-By the New York packet-ship Independence, which arrived at Liverpool on Monday, we
have New York papers to the 7 th inst. They contain some long correspondence-first, between Mr. Webster
and Mr. Everett, the American Minister in London, in which the American American Minister in London, in risit are discussed. Another correspondence also appears upon the seizure of an American citizen by a British officer on the American side of the lately settled boundary ; which, however, a short statement from Mr. Fox would appear to set at rest. The act appears to have been, on the part of the British officer, unsanctioned and officious, but gives Mr. Webster an opportunity of enlarging on the supposed infringement of one of the conditions of the boundary question.-There is no political news from
Canada. Sir C. Bagot was still alive, but with alight hopes of ultimate recovery. Sir C. Metcalfe had entered on the duties of his government
West Indies.-The Medway steamer has arrived Domingo, which, as particulars of the revolution in St. come to a crisis in the flight of President Boyer. The having sought shelter in one of Hh 32 of his adherents, arrived at Kingston on the 19th ultimo, on board the Scyilia. He had been driven to this step by the resistance frered to the means he had adopted to get rid of the National Legislature. At the head of this opposition was the Senator Dumeille, the representative of the province of Aux Cayes, who on five different occasions had beer of the bayonet, and on each occasion had been triumphantly re-elected by his original constituents. It is not Republic.-In regard to be the new President of the which have suffered are stated to earthquake, the islands gua, Nevis, Montserrat, Barbuda, St. Kitt's, St. Bart's, ch. Eustatia, and St. Martin ; the amount of British property destroyed is estimated at $3,000,000 l$. sterling;
French, $, 1,000,000 l_{0} ;$ Public thanksgivings had been observed in all the islands which had escaped the calamity.-The Medway was nearly She was going at the rate of ten knots an hour, and was on the rock before it was discovered. Her engine was immediately stopped so as to reduce her speed and render her manageable, which saved her; otherwise, it is said, sll hands might have perished.

to without a dissentient word.
The Lord CHANOEIL
The Lord Chancerluor stated, in reply to questions by Lord of Insanity, which had also been considered by the the Piea
 table until the opinion of the Judges had been taken. He said
that he had requested the Chief Justice of the Common Pleas to that he had requested lie chie thatice of the Common Pleas to
consilt the other Judes as to the time when it would be con-
venient for them to attend, and had not yet venient for them to attend, and had not yet received a definite
answer. No delay would be had in consulting them on this sub ject, and on the question of the Irish Marriages.
Thurs
Tharsday. - The Duke of Wbllinarow moved an address of and lauded the memory of the illustrious Prince, who had, during and lauded ine , ineen the patron of sicince, litirature, and arts, and
a lone warm supporter of every benevolent institution.-The Mar-
the the warm supporter of every benevolent institution.-The Mar-
quess of LAsspo wns seonded the motion, and in doing so raded his testimony tothe cliaracter of his late Royal Highness. -The Marquess or Society, expressed concarrence in the address, and regret the great oss which her Majesty and the country had sustained.
The address wasthen agreed to unanimously.

Friday.-L Lord Wranclirps laid on the table a copy of the
conventiou between France and this country relative to the Post-
office communication Office communications between the two countries.- Lord CAMP-
BEIL moved the second reading of his bill tout Bey.L moved the second reading of his bill for facilitating the con.
veazanco of real property, by abbreviatiing thele eagal phrase Veyance ofreal property, by abbreviating the legal phraseology and
processes. He proposed that solicitiorss should be paid accordiug to
the evalue of their services, and not accor the value of their services, and not according to lenght of doca-
ments The Lord CHACELIOR, Lord LANGDALE and Corte HAM, opposed the bill, which was rejected without a division.
HOUSE OF COMMONS.
Monday.-The House of Commons reassembled after the Monday,-The House of Commons re-assembled after the
Easter recess. Sir J. GRa MA gave notice that on Monday next
he would state the allerations he intended to propose
 he should propose to go into committee pro format, in, orderefore,
enalued to put the House in possession of the de the proposed alterations.-The CiANCRELOR of the EXChBaukr in-

 on the table of the House-- Lord Sranley, in reply to Lord
John Russell, intimated, that in a day or two he would when he woutd be able t to introdiuce the Caradian Coran bill. Hee promised also to supply the House with information on the sub-
ject of the duties imposed by the Assembly of Jamaica on the
produce of the United Kingdom - a proceeding which he consiOn the motion for going into a committee of supply, Mr.
WILLIAMS made a leg thened statement, with relation Williams made a leogthened statement, with relation to the
financial management of the Chancellor of the Exchequer, and financial management of the Chancellor of the Exchequer, and
in the course of which he argued that onr colonies, especially
those of the West chose of the West Indies, were an enormous expense to this
country. - Mr. BERNAL said that it was a mistake to suppose that
our West India colonies were erpensive to our West Iudia colonies were expensive to this country. They, in
fact, contribled fact, contributed mainly to their own expenditure, in proof of
which he adduced the fact, that his own property in Jamaica was taxed to an-amount five times greater than the returns he reple that colonies shouid be made to contribute ag faras poossibie

 even keep farth with those already sent out. Government with respect to emigration; in reply to whichLord Sra NLEY expressed the uneasiness he felt at the hardships
to which the intended emigrants to Prince Edward's Island had

## hou

 going on, and the fovernment e enngratoun azentep lad been
directed to inquire into the matter, and to give every assistance to the emi grants. It turned out that the yessel was well found;
that she had an abuandunt supply of provisions; and that, in fact, that she had an abudant supply of provisions, and that, in fact,
the requirements of the Passengers' Act had been carefuly complied with. The British American Colonization Association had Prince Edward's Istand; and aschased this land was alleged to have
been purchased from private indiviuals, and not from the
Government, there wos Government, there was no immediate means of ascertaining the
fact. The emis fact. The emigration commissioners had even gone beyond
their powers in this case. They remonstrated with the company;
represented to them the period of the year which rendered the represented to them the period of the year which renderpad the
attempt extremely hazardous; but they were met by assurances
that every that every possible precaution had been taken. The Government,
however, had sent outh information to the Governor of Prince
Edward's Island, with instructions, that if the vessel should arrive, he was to afford every protection to the emigrants, and to
compel the company to perform towards them the obligations compel the company to perform towards them the obligations The on the $13 t h$ December was dris en back to the Cove of Cork.
The emgratin agent $1 n$ that port, on mumry, had ascertamed
 been represented in February that the vessel would sall in March,
and yet at that very time the mortgagee was in possession of the
vessel. vessel. This was a distinct fratud. Application had been made employed; but on the dissolution of the company it was found impracticable to obtain a legal remedy, The company, however,
had been sanctioned by gent, emen of high statom, whose names must have conducets to emabing it to intict the hardsmp and suffering which the sufferers had endured ; and if not legally
liable he trusted that they would at least feel the moral obligation
they were under, to repair the mischief of which they they were under, to
been the instruments.
The House then went into a committee of supnly, proceeding With those estimates which remained over from before the recess and of the West India Islands, raisel some conversatom, and on
the grant for our cunsular establishments, alter some remarks from Mr. WiLiLAMs, Dr. Bowrine called attention to the great
importance of rendering our consular representatives effcient for their duty by previous edincation, especially the necessity of
a consul being able to sperk the language of the country in which he 25 slationcd.- Lord STANIEy actmitted the 1mportyance
of the subject, which was at present under the consideration of
the the Government. $\Lambda$ number of votes passed, witn some general navigation to lindxa, by way of the Red Sea, alter some reniarks
from D. conduct of the Pacha of Kgypt, whormunder culrcunstances cal culated to make ham think that we were oppused to his menterests,
had manifested a very enlightened spirit, in the facilities he had
afforded to afforded to our transit through Egypt, and across the Isthmus. Pacha of Egypt. The remaining votes having been agreed to, other orders were then disposed of greater proportion of which were petitions were presented, the greater proportion or whin were against the educational clauses of the Factories Bill. A private bill, the South Eastern and the
London and Croydon Railways Bill, occupied the House some
time, but after a division the report was receive Sir J. Graham, in reply to Mr. Macaulay, intimated his
intention of introducing, during the present seige
the betren the better regulation of the medical profession. giving some account of our negotiations with Portugal and the
Brazils, fur the purpose of effecting ond Portugal, we had proposed to reduce our diaties on wine, fruit, tion on our cottons, woullens, hardware, lment, elass, porcelain articles, and 25 and 30 per cent., on cothers But the long proment having been made by the Portuguese Government that it
had been broken off. With the Brazils, that Government hat treaty, which, accurd, inetation of the duration of the existing But our proposals for a ree adjustment of commercial relations the agricultural produce of the Brazils-sugar, tobacco, \&ac.,
should be admitted on terms equivalent to tho
own colonial produce. When Mr. Ellis intimated his inability
to comply with this demand, it was then raquired that the maxi-
mum of any differential duty should not exceed by ten per cent. mum of any differential duty should not exceed by ten per cent.
the rates oni our colouial produce. This also could not be con-
ceded, and the negotiation was, therefore, suspended.-A short conversation followed on this sulbject; after which,
Sir R. Pege, with a brief but kindly expression of regard for
he character and virtues of the Duke of Sussex, moved an address of condolence and sympathy with her Majesty on the melancholy event.- Lord J. Russeiz seconded the motion, adding his perThe address was carried unanimously; and
Sir FR . Prel moved an address of congratulation to her Majesty
on the birth of a Princess, adding a few words expressive of ad miration of the domestic character and example of the Queen.-
L ord $J$, RuSskli seconded this; and 1 was carried unanimously. Mr. Ricasno then brought forward his motion, that a humble
address be presented to her Majesty, respectfully expressing the
opininn of this House that it is not expedient that anyy contem--
plated remission of import duties be postponed, with the view of plated remission of import duties be postponed, with the view of making such remission a basis of commercial negotiations with
foreign countries. He quoted the opinions of Sir R. Peel on
introducing the new tariff; painted to the condition of our comintroducing the new tariff; pointed to the condition of our com-
merce, languishing for want of new markets; and cited the late
Mr. Dime and M. Say, as condemnatory of all higgling
about commercial treaties, instead of at once opening our ports about commercial treaties, instead of at once opening our ports
to the productions of other countries, and leaving the imports and exports to balance one another. Trance, Rce, was one proof
accomplish commercial treaties with Franct
of the inefficacy of such a policy, whilst its effect on trade was injurious, ty paralysing the branches respecting which negotia-
tions were pending. The great maxim of political economy,
from Adam Smith downward, was, that we should buy as cheap and sell as dear as we could; that, it was absurd for nations, as for individuals, to make at home what could be purchased cheaper
abroad. -Mr. Gradsrons, at considerable length, argued that
the resolntion, at any time objectionable, was at this moment, the resolution, at any time objectionable, was at this moment,
while many commercial negotiations were pending, more parti-
culariy so. He could not agree that all the investments of capital
and labour in this country were to be overlooked, in order to and labour in this country were to be overlooked, in order to
establisha dogma of political economy.-Lord Fownce desired to
see us reduce our duties without regard to other conntries, and see us reduce our duties without regard to other countries, and
to set the example of unconditional free trade, which he pro-
phesied, would be speedily followed by other countries, so that
in a few years all hostile tariffs would vanish. - Lord SANDoN in a few years all hostile tariffs would vanish,-Lord Sannon
reminded Lord Howick that foreign nations, instead of becoming
more convincible to free trade, were growing less inclined to more convincible to free trade, were growing less inclined to
take any articie of our manufacture which interfered with their
own produce in the smallest degree.-Lord J. Russma, considerat the period of the alteration of the tariff last year, was only
defended by the Government on the ground of resering themas
means of obtaining favourable commercial concessions from means of obtaining favourable commercial concessions from
other countries in negotiations then pending, and considering that these negotiations are now at an end, declared his opinion
that now was the time to apply the general principle of the tariff
to the excepted articles. He thought that we would stand in a better position with foreign nations if we made those reductions Voluntarily, rather than as a subject of bargain and sale; and
therefore supported the motion, -Mr. D'IsAELI and Sir H.
Dovacas opposed the motion, which was supported by Mr.
EWAART and Mr. Vilieres, who said that Mr. D'Israeli had dwelt DNUGLAS opposed the motion, which was supported by Mr.
Ewar and Mr. Vilimes, who said that Mr. D'sreli had dweit
on the danger of drain of the precious metals from this country. Such a drain took place when there was a sudden importation of
forelgn corn, as in 1839 ; but whenever a trade was established,
we paid for our importations with manufactures, as was the case we paid for our importations with manufactures, as was the case
with our more recent importations of corn. Incease our imports,
and our exports would follow; we had only to ince ease the
amount of the luxuries and necessaries for the general enjoyment amount of the luxuries and necessaries for the general enjoyment
of the people, and we would have no occasion to care for the policy of other countries.
Sir R. Perc expressed his satisfaction with the admission of
Mr. Villiers, that, even under a sliding scale, our importations of
corn were paid for by manufactures. Ile woulit int corn were paid for by manufactures. Il woulit not 50 mint
letail on the present occasion, beause it would be inconvenient to clo co until after the Chancellor of the Exchequer had made
his financial statement. But he objected to laying down an
abstract principle, after a few hours debate, affecting most

 recently expressed his desire to see one effected with the United
States. They had resumed those commercial negotiations with
France which had been broken of by the affairs of Syria; were
we now to stop short, and tell the French that we were about to We now to stop short, and tell the French that we were about to
effect reductions on their commodities, without reference to any
reduction on ours? Would a direct intercourse with France or reduction on ours Would a direct intercourse with France or
Portugal not be preferable to an indirect one? -and were we not
more likely to excite a taste for our manafactures by obtaining
facilities for ther direct introduction? But the motion went to facilities for ther direct introduction? But the mon obtaining any
exclude them from waiting even for a month, or obse aquivalent parting with the power of obtaining practical concessions,
agen for the sake of extending what may be considered to be sound principles. Colonel Tor Nens, a well-known free trader, had just issued a postscript to his letter addressed to himself, in
which he said that le had mathematicalty demonstrated the
ruinous consequences which would result from a reduction of duties without corresponding concessions; and these opinions
Colonel Torrens had drawn from Mr. Ricardo's "Chapter on Forelgn Trade." With such divisions amongst the advocates of
free trade, the House should be cautious in adopting an abstract resolution,
Mr. Cobine said that Mr. Ellis had gone out to the Brazils the
representative of a monopolist Government; and a Brazilian representative of a monopolist Government, and a Brazilian
genator had made a speech, in which he exhibited the people of this country as the slaves of a sordid oligarchy, It was a hope-
less errand, also, to send to Portugal-a country too poor to help
us. It was not reduction on luxuries, such as port wine, which we wanted, impairing the revenue, by it. North and South
America, with their corn and sugar, wele the fields for this America, with their corn and sugar, wele the fields for this
country, if the Government were really in earnest, and were not
humbugging the people with pretended negotiations for comhumbugging the people with pretended negotiations for com-
mercial treaties.-Mr. RicarDo replicd, and on a division there
appeared-For the motion, 61 ; againstit, 135. Majority, 74.
Trdue petitions against the education clauses of the Factoris's Bill, a
petition of the Rev. W. Browne, the chaplain of Knutsford gaol,
was ordered to be printed with the votes, and Mr. T. Duncombe was ordered to be printed with the votes, and Mr. T. Duncombs
gave notice that he would call the attention of the House to the
subject on Monday subject on Monday next. The second reading of the Health of
Towns' Bill was postponed to Wednesday, the 10 Mo May.
The order of the day for the committee on the Player of Inter-
ludes' Bill was discharged with the concurrence of Mr. T. Duncombe, min the representation of Sir J. Graham that he had, in
conjunction with Lord Mahon, devoted some attention to the
matter, and that his noble Friend had a measure in preparation matter, and that his noble Friend had a measure in preparation
which would probally meet the views of Mr. Duncombe.
Mr. M. Gissov put some questions relative to the recent
negotiations with the Brazils and Portugal, which led to a declahe possessed on the subject, on Thesday. The negotiation was
broken of on the ground that Mr. Ellis was not antorzed to
treat upon the only basis proposed, nainely, a differential duty of
10 per cent 10 per cent In the course of the desultory conversation that
ensued, the right hon. Baronet, in allusion to the treaties with
Portugal, said ihe proper construction of the word naed hy the
Portuguese Government with reference to the treaty, was that it

given notice on the subject of education until Thursday next, as
the Secretary for the Home Department intended to make
certain the Secretary for the Home Department intended to make
certain amendments of importance in his Factories' Bill, and go
into a committee pro forma for thnt purpose into a committee pro forma for that purpose. As a great part of
lis resolutions referred to that bill, he proposed to allow them to lie over thll the bill was before the House in its amended form,
and till the House had decided on the provisions in a committee. Find did not intend to oppose the bill going into a committee pro forma, nnr when it went really into committee.
Lord J. Russinct then moved the second reading of the Municipal Corporations' Bill, and explained at length the objects
which he proposed to effect by the measure. The bill had reference to those corporations of England and Wales which had been
left untonched by the Municipal Corporation Act, and he trusted that Parliament would adhere to the principle which it had
sanctioned iy a large majority in Tegislating for the other corposanctioned by a large majority in legislating for the other corpo-
rations in 1835 , and would substitute in those also the principle
 same time, gradually put an end to all existing
Mr . W. WilliAms, in supporting the motion, congratulated the
noble Lord for having, by his former bill, annihilated what he called those "nests of corruption and local moismanagement," elective franchise. But he did not understand why the noble Which exceerfed all other corporations in corruption and profligacy.
He cited various instances of its extravagance and abuses, and He cited various instances of its extravagance and abuses, and
concluded by expressing a hope that it would not long be allowed on the ground that the country was taken quite by surprise by this measure. He had reason to know, from information which
he had received that morning, that there were corporate towns he had received that morming, that there were corporate towns
which it was intended to affect by the bill; that he had not the
slightest notion that it was intended to propose a measure of this slightest notion that it was intended to propose a measure of this
description. There were no petitions complaining of any abuses.
 This Iong delay, while the noble Lord held power, showed that he crying evils; and it would appear that the idea of touching those corporations was at length but an idea taken up in haste. The
noble Lord, in bringing forward this bill, relied particularly upon
the abuses and corruption alleged to exist in Queenborough. Now he thought that these alleged aboses were such as demanded
a searching inquiry, and he had to state further, that the law a searching inquiry, and he had to state further, that the law
officers of the Crown were now investigating those charges, for the purpose, ifit should seem to them necessary, that they should against the corporation. With regard to the suggestion that the affairs of the city of London required the mending hand of legis-
lation as much as others, he did not wish to enter upon that question at present; but he must say that there was suph a thing
as straining at a gnat and swallowing a camel, and that whilst the city of London was allowed to retain all its privileges un-
touched and unimpaired, it was not too much to ask that a few touched and unimpaired, it was not too much to ask that a few
small boroughs should be also left unharmed. He concluded by moving, as an amendment, that the bill be read a second time
this day six months.- The LORD MAYOR defended the corporation of the city of London from the attack made upon it by Mr.
Williams ; and after some further slight discussion, Lord $J$, Russell replied. The House then divided-For the onginal
motion, 46 ; for the amendment, $99 ;$ majority, 53 ,
The Attorneys and Solicitors Bill went through committee, and the report was ordered to be received on Wednesday.-On the
motion of Mr. Frrach, a select committee was appointed to inquire into the state of the medical charities in Ireland, and to improving the system under which they are conducted.
Thursday, -After some routine busimess had been transacted, Mr. L. Fox gave notice that on the 11 th May, he would call the
attention of the House to the agitation now foing on in Ireland Government to take steps for its immediate suppression. Mr
Gobson gave notice that, on the same day, he would move for a Mr. Maccin non moved for a select committee to ascertain the
revenue, expenditure, and condition of the harbours and lighthouses on the coast from the Thames to Portsmouth.- Mr. Cur
tris seconded the motion, which was supported by Mr. Rice Capt. Pechele, Sir C. Napter, and Mr. Hume.--Sir R. Preir and
Sire. Knatchbuld opposed the motion, on the ground that a
committee of the House of Commons was the worst tribunal which could be selected for inquiry into such a subject.should be extended to Longwood fort and portsmouth. Ulitim jected by 79 against 34 .
Returns relating to Petty
Sessions in England and Wales were ordered, on the motion of Lord Worsise. bring in a for improving the proceedings in the 20h. - Lord Erior obtained leave to bring in a Bill to amend and
continue the laws relative to the registering of arms, and the continue the laws relative to the registering of arms, and the
importation, manufacture, and sale of arms, gunpowder, and
ammunition in Ireland.- The Exchequer-bills Bill passed through

Friday.-The debate on the second reading of the Ecclesiastica Courts' ${ }^{\prime}$ Hill, adjourned from before the Easter recess, was re-
sumed. The bill was supported by Sir Gronge Grex, the AT opposed by Mr. Escort, Mr. H. Fitzroy, Mr. Newnigate,
Sir G. Sinclair, Mr. Colhert, and Mr. T. Duncumbe.
Sir R. Perl denounced the union of gentlemen of opposite views on ecclesiastical matters, in hostility to thas bill, as umatural most conscientious motives, and in the fairest spirit.-Mr Laboucherr, Mr. Humb, Capt. Gladstonk, Sir W. H. Barron,
and Mr. Roebuck, having declared their intention of voting for
the second reading, the House divided, when there were the second reading, the Housa divided, when there were-for the
second reading, 186 ; against it, 104 ; majority in favour of the
bill, 82 . It was then read a second time.

Money Market, Friday.-Consols left off at $96 \frac{\overline{3}}{3}$ $\frac{1}{2}$ for money, and $96 \frac{1}{2}$ to $\frac{8}{8}$ for account; Three per Cent
Reduced Stock, $95 \frac{1}{2}$ to $\frac{5}{8}$; Three-and-half per Cent Reduced Stock, $95 \frac{1}{2}$ to $\frac{5}{8}$; Three-and-half per Cent
Reduced, $101 \frac{5}{4}$ to $\frac{3}{4} ;$ New Three-and-half per Cent Annuities, $102 \frac{1}{2}$ to $\frac{6}{8} ;$ Bank Stock, 179 to 80 ; India Exchequer Bills, $66 s$ to $68 s$ prem.
fotetropolis and its Vicimitn.
Loss of the Solway.-All the returns relative to the loss of this vessel having been received, the following
statement has been published:- Passengers of all descripship, captain, officers, seamen, engineers, \&c.-lost, I8; that the Company's ships will no longer call at Corunna. The New Library at Lincoln's Inn.-The first stone of the new buildings in Lincoln's Inn was laid on Thurs-
ssisted by Lord Lyndhurst, in the presence of a large assembly. After the ceremony was conciuded, a dinner took place in the court of the Lord Chancellor

The Tower.- For some time past libuurers have been employed removing the mud-soil in the southern or river moat of the Tower, preparatory to the buildiug of two extensive aqueducts for the troops. The moat which surrounded the Tower, and which in consequence of the stagnant water in it was sufficient to create an epidemic in the neighbourhood, is now in progress of being filled up,
with a view of being converted into glounds for healthful

Embankment of lhe Thames.-At the Court of Common Council, on Thursday, the chairman of the Navigation Committee moved the adoption of the report recommend-
ing that the City's Seal should be affixed to certan licenses to embank portions of the river Thames, in conformity with the report unanimously approved of by the Court several months ago. The proposed embankments were all in strict accordance with the plan laid down by Mr Walker and Captain Bullook, assisted by the harbour masters and other officers of the navigation. After some discussion the report was unanimously adopted.
The late Accident at Blackwall.--On Tbursday morning, shortly after two o'clock, as four men were proceeding of the Trinity-House lighters, they observed something floating on the Essex shore which had the appearance of a body. Two of them inmediately put of in a small boat, and on nearing the obje the description of Mr. Basfield. The body was floating with the ebb-tide towards Woolwich, and the men lashed a rope round it, and towed it towards Blackwall, where it An inmediately recognised as the body of Mr. Busfeld returned a verdict of "Accidentally drowned," accompa nied by a censure on the owners of the Blackwall-pier, for Easter Holidays.-The number
smount of receipts taken by the Green passengers and pany, during the Easter holidays, is as follows:-On Grood Friday, 7,069 passengers, 219l.; on Easter Sunday sengers, 765 l. ; on Easter Tuesday, I 6,325 passengers, $495 l$.; and on Wednesday, between 6,000 and 7,000 passengers, or $215 l$. ; making a total of nearly 70,000 passengers, themselves of the return tickets, which were issued at $1 s$ each. In addition to their having to contend with the steam-boat competition, the railway company had to cope passencers from of the omnibus proprietors, who carried each. The traficon the railway during the corresponding period of last year, was, on Good Friday, 8,849 passengerg 255l. ; on Easter Sunday, 8,902 passengers, 249l.; on Easter Monday, 19,875 passengers, 530.; On Easte 6,000 passengers, or 2106 .; making a total of about Special Poor-Law Commission in St. Panoras.-On Friday Mr. Austen, the barrister-appointed, with the sanction of Sectant Poor-Lam Commissioner, for the purpose of inquiring into the case Vestreole pauper, John Jones-held his sitting at the attention of the House of Commons was drawn to the case shortly before the recess, Jones having been taken before the parochial auchorities for an alleged assault, whist labouring under ex then lying in the Fever Hospital, or to see his child buried. The Commissioner having opened the proceedings, the man John Jones was of St. Pancras workhouse. He said that, although he hak committed no crime, he had been locked up in the pers; had his diet reduced to the extent of two ounces of meat per day, three days in a week, and slept in a close bed were there door, fastened with a padlock. On Friday, the 7 th inst. his wife was removed the workhouse lnfirmary to the Fever Hospital, and his child, which bad previously died, was to be buried on that day. He applied to the
Board "for permission to visit his wife in the Fever Hospital, and to see his child buried, but was refused to be turned out of the room, they ordered him fined in the black-hole. The beadle followed him to knife which he used in picking oakum, and threatened to do for the first that came near him, striking it with such violence on the table that it broke. He was subsequently Combe, the magistrate, who was informed by Mr. Sparkes, the overseer, that the Board wanted him punished, but the magistrate discharged him. A nurse in the infirmary, and the superintendent of the oakum ward, were examined, he never had to make a compluint against him. On the day he was taken before a magistrate he appeared much excited at not being permitted to go and see his wife or cated. The witness gave evidence as to the insufficient food supplied to paupers in the oakum room, and as to its general management. The investigation was then adhe ave, and resumed on Saturday, waed Mr. Sparka extremely violent, both before the Board and after he had
left the room, and that it would be impossible to maintain order in an establishment where there were 1200 or 1400 people, if misconduct were not punisled. The beadle confirmed this statement, and deposed that the man was so much excited, that danger was to be apprehended from
his violence. The Commissioner said he should adjourn his violence. The Commissioner said le should adjourn
the inquiry in order to make an inspection of the oakum the inquiry in order to make an inspection of the oakum
room, the black hole, and other portions of the workhouse, room, the black hole, and other portions of the workhouse,
and to examine the director of the poor, and some of the and to examine the director of the poor, and some of the inmates of the establishment. The investigation was then nesses was concluded. The commissioner will report on the evidence in a few days.

Taking the Veil,-On Wednesday, two young ladies, Miss Cuddon and Miss Baxter, the latter the daughter of a gentleman residing at Bungay, "took the veil" at the
convent of the Sisters of Mercy, in Bermondsey. The convent of the Sisters of Mercy, in Bermondsey. The
former took the name of Sister Mary Theresa, and the latter that of Sister Mary. A great number of Catholic clergy and others were present on the occasion.
Labourers' Friend Society. On Wedn
Labourer's' Friend Society.-On Wednesday, this society, establishied to ameliorate the condition of labourers, by encouraging the cultivation of allotments of
land by the spade in their leisure hours, held its twelfth land by the spade in their leisure hours, held its twelfth Peckham, in the chair. The report for the past year was very voluminous, and stated that in Kent and the southern counties the Society's agent had lately visited
3,000 allotments, cultivated by 3,000 families, among 3,000 allotments, cultivated by 3,000 families, among
whom there was not one commitment to prison during the two past years. In the midland counties 700 acres were similarly laid out. In Derbyshire, Leicestershire, Northamptonshire, Nottinghamshire, Warwickshire, and Somertwo acres, were attended with the most beneficial results to the labouring classes. In Hereford, 12 acres were divided into 48 allotments, and the branch society granted
in loans to the cultivators of those patches oll land, $2,550 l$ in loans to the cultivators of those patches of land, $2,550 l$.,
upou which the borrowers paid $93 l$. 16 s . 5 d . interest. the Bishop of Bath and Wells, Lord Grosvenor, Colonel Langton, of Breslington, the Rev. G. Rees, rector of West
Narington, the Rev. B. Whitehead of Chard, and Captain Scobell, the society were greatly indebted for assistance and information. In West Kent there were 200 allotments under cultivation; and in every county where the were mentally, morally, and physically and the people receipts, including subscriptions and donations, amounted to 711l. 11 s .6 d ., and the expenditure left a balance of gentlemen spoke in the highest terms of the allotment system.
Martality of the Metropolis.-The following is the A pril 15 :-West districed in the week ending Saturday, Central districts, 163 ; East districts, 166 ; South disWeekly average for the las (424 males, 392 (emales.) 442 females, ) and for the last five winters, 1,004 .

## 

Bedford.-The inquiry into the case of poisoning at Wrestlingworth, which we noticed in our last, was re-
sumed and concluded on Friday. In the case of the hus band, the surgeons deposed that the body had been ex-
humed and examined, but they had not discovered trace of poison. The jury then returned a verdict thyt "there was no evidence to show whether his death was caused by natural causes or otherwise." The case of the witnesses were examined. It appeared that it was aboul a year old when it died, and was always neglected by the exhumation of the body, and had since analysed it the should consider there must have been from two to three grains of arsenic in the body, judging from the quantity that that would be sufficient to cause the child's death. He ascribed the preservation of the deceased's stomach to the effect of arsenic. The surgeon of the Bedford Infirentirely in this parion the analyzation, and concurred about three quarters of an hour, returned the following the effects of that the deceased, Jonas Mead, died from knowledge, by his mother, Sarah Dazely." The announcetient of the verdict was received with evident satisfac the inquest was held, a very strong and general feeling Bradford,-Mr. John the prisoner.
county by the title of the "Airedale Poet," known in this on Thursday evening week wilh the Poet," left Bradford a relative who resides near Biingley. Having to crisiting river Aire at Dison's nill, near shipley, it is cross the in the act of going over the stepping-stones, hiris foot ing the opposite side, where, on Friday morning in gainand dead. Dr. Steel, of Baildon, examined the body, and gave his opinion that the deceased died of apoplexy, has left a wife and nine chiildren, and was in his 53, Hear.
Bristol. We cxtract an alarming accident whact the following passage, describing happened to from the Bristol Gazettes:-"It is with deep . Brunel, engineer has been flaced in jeopardy this well-known friend. The father and Mr. Branel are the children of a
of-hand, to pass money from the mouth to the ear, and
vice-versâ, when Mr. Brunel, placing a half-sovereign in hise-versa, when Mr. Brunel, placing a half-sovereign in
houth, it unfortunately slipped into the trachea, Where it stuck, and every effort to remove it proving
ineffectual, Sir B. Brodie has been called in, and an operation, by making an incision in the thorax, determined upon, to be performed yesterday: the result had
not to the great regret of his numerous friends in this city, been received when we went to press." We regre ing the that the surgeons have not yet succeeded in extract ing the coin, and that Mr. Brunel is in great danger.
on Tuesday at the Shire-hall, the question of prison hel cipline was entered upon. The chairman stated that he had received from the Secretary of State copies of the inquire into the causes which led to the death of the prisoner Beale, to investigate the charges made by other prisoners as to the treatment they had received, and to inquire other houses the management of the Northeach and were five in number, but as interest is chiefly attached to the opinions and recommendations of the commissioners report which relates to it, After enumerating the measures which the commissioners had adopted in order to regard to Beale, the commissioners censure the surgeon for not allowing him extra diet, and for not putting the governor on his guard against employing him on the tread positi. "It is doubtful," they say, "whether Beale's indisimprisonment, was sufficiently apparent to part of his passing any direct censure on the governor for continuing to subject Beale to the labour of the treadmill for a period of more than two montbs without intermission ; but we put Beale on an improved diet, and in not having paid during the his clothing and the temp,r the wirman said the arman Mr. Bedwell, the surgeon, not only in the case of. Beale, but in other cases brought forward by the governor in his journal, and he would, therefore, move that he be dismissed. On a division, four voted for dismissal, and a very considerable number for retention. Mr. Bedwell was future conduct. The case of the governor was nest taken into consideration, when it wes relved to reprove him and admonish bim for the future. In regard to the visiting magistrales, the report stated:- We are of opi-
nion that the evils which we have described to exist in this prison may be traced to the absence of a salutary and perspicuous code of regulations; to the negligence
of some of its officers; and, we feel bound to of some of its officers; and, we feel bound to add, to the
want of vigilant superintendence on the part of the visit"That the Court were of opinion that the was resolved, journal of the visiting justices apparentlj su earies in the charge as that made against them the the corted such a but that it was a ground of just complaint thatsions, been excluded from that part of the inquiry which embraced their conduct. Had they been present they would have shown that certain inspections lad taken place of substitute the dietary his reneral civcula to the mastrates of Elam in Wales, and some minor reforms recommended by the Commissioners, such as the abolition of the practice of confining persons subjected to solitary confinement to a dark cell every fifth day, were ordered to be carried into effect. In csioexion to coltions expressed by houses of correction, as being smali and ill-adapted for carrying out improved systems of discipline, the chairentail an enormons expense upon the county; be woald therefore, move that a committee be appointed to consider the propriety of adopting the following arrangement:"The appropriation of all the houses or correction in the county to the accommodation prisoners awaiting their trial at quarter sessions and assizes, and who are sentenced ond and the reserving the County Gaol and Penitentiary at Gloucester for tho are seitenced to period of imprisonment of more than three months. This suggestion was adopled, and a report by the visiting magistrates of Northeach was read inererence to the case of Richard Jones, who died the other week, shortly after he coroner's jury attributed to overwork and ill-usage. It contained the evidence of one of his fellow-prisoners and of the officers of the establishment. The substance was that Jones when seized with iliness attributed it to overexpressed himself pleased with the treatment he received It is a curious fact that it was frequently referred to i the course of the discussion, that this Richard Jones was the only person in the inchand that the entry they mad of his case was, "Suffering from a catarrhal affection of a trifling nature."
$\pi$ sfor - At an adjourned Quarter Sessions held las week, berore Mo. the Court proced to the consideration of the discipline of Knutsford gaol, and adopted a course which has created great sensation throughout the county. It will be recoltion the report of the visiting justices of Kuutsford gaol, which recommended the dismissal of the chaplain,
was adjourned to these Sessions. Since then the visiting dietary made another report, embodying evidence on the dietary and discipline of the gaol, and adhering to the recomendation to dismiss the chaplain. A letter had also been received from Sir J. Graham, reffecting in the strongest terms upon the misconduct of the covenor of the gaol, and putting it to the justices whether, after the instances stated in the evidence of the reports, particularly as to the continuance of corporal punisument to a youth when it had been expressiy stopped by the surgeon in attendance, they could with confidence and safety continue him in his situation ; and also conlaining an opinion that if death had ensued in consequence of such conduct, the governor would have been guilty of homicide. The charges against the chaplain made by the visiting justices were the most prominent part of the proceedings. The duct had main one was, that during the inquiry that the inspector, who had been sent down by Government to report on the case after Mr. Duncombe had made his charges against the governor in the House of Commons, xamined the chaplain privately at Knutsford : and that the latter refused, when required, to state to the visiting ustices what he bad communicated to the inspector, because, as he alleged, he considered that communication to be confidential. This was held by the justices to be a ground of accusation against him. He was further charged with having kept a journal, which be declined to produce for the inspection of the justices, although an ever he sawy order that the wong before entering it in his journal, in also charged with haimelis to his spiritual duties, and with nother his he sacrumal dure of the reading the flo At ine reading of the documents, which were of some length, Mr. Townsend moved that the chaplain be dispposed by Mr. Wilbraham, Mr. Daven motion, which was opposed by Mr. Wilbraham, Mr. Davenport, and the Right
Hon. E. J. Stanley. After much discussion the motion was adopted-they. After much discussion, the motion 34 , gainst it 5 . It was then a division, being-for it, lain gainst it, It was then arranged that the chaplain should leave forthwith, and be paid his salary up to the chorges con. the charges contained in Sir J. the gaoler, going through them seriatio. In some of the it magistrates exonerated gooler, though in others it was admitted that he had been in some degree lameable, but not to such an extent as to warrant them withdrawing their confidence from him
Leicester. - We learn from the Mark Lane Express that considerable excitement prevailed in this place on Monday and Tuesday week, caused by the election of deputies for each parish within the borough, to manage the "Freeman's Piece"-a space of ground occupying' about 135 acres, divided among the resident freemen, born in the borough, or serving their apprenticeship therein. An unusual interest was excited in consequence of the candithe being divided into two parties; one body advocating the old system of grazing the land, and thus debarring the poor freeman from any benefit; the other side proposing the division of the land into allotments, and cultivaring it for gardening purposes, by which each person would have he mith 50 and by either let, sell, or curtivate himself, as he pleased; would potata raise about 2,00. ptrikees alone were produced and sold at $1 s .6 d$. per partial, but would also produce not only be limited and 300 . in the same period; each person holding land under the proposed alrotment tional land. The result of the elections purchasing addiFor the Mary's, 2 ; St. Leonard's, 1 ; St. Nicholas, 2 ; All Saints, 2; Total, 11 .-For grazing the land-S.-St. Martin's parish, 2.-Mr. Phillips, a member of the conncil, but not a freeman, warmly supporting the cause of the poor freemen, went to Birmingham on the 12 h , and entered into a contract with a person to supply him with 500 spades, for the purpose of enabling the allotment party to break up the land next week; but application has been made, by the trustees appointed under the will of the testator, for an injunction to restrain the body, should they attempt any such invasion, and the result of the struggle is looked forward to with much anxiety. On Saturday morning, tlse bank of Messrs. Clarke, Mitchell, Phillips, and Smith, of this city, stopped payment. The fact was communicated to the public in the following announce ment:- "Suspension of Payment.-In consequence of a sudden pressure, caused by the malicious rumours which have been so industriously circulated, it has become ne cessary that a lemporary suspension of the business of this bank should take place. The public may rest satis. fied that no individual can sustain any loss, and that arrangencents win be made for rendering the inconvenience resulting from the present step of as short duration as possible.-Saturday, April 22, 1843." It is qenerall bened that the suspension is temporary, and the allu-保解 the members of the firm the wealth and respectability of payment of their notes on Saturday, and the superused Leicester tock place on the same day. Another failure I banking-house, that of Messrs. Inkersole and Goddard, of Market Harborough, has been announced. This a house of comparatively small importance, but from
the inconvenience to the farmers
Lincoln.-A large meeting of the Lincolnshire farmers was held at Bourne, on Saturday, to take into considera tion the alterations about to be recommended by Govern ment for the admission of American and other foreign M.P. for the county, was called to the chair, and was supported by Lord Willoughby D'Eresby, Mr. Heath cote, M.P., Geal farmers and graziers in the neighbourhood. The ential farmers and graziers in the neighbourhood. The several speakers repudiated innovation. A petition to the Legislature was adopted, showing that the petitioners had, by the alteraion of the Corn-laws and he tariti in the last session of Parliament, incurred a loss of 25 per cent. on their capita and annual receipts. That they considered the want of due protection against the introduction into this kingdom, through Canada, of corn grown in the United States of America likely to have a most prejudicial effect on the depress them; and that the proposal to admit flour and wheat from the United States throngh Canada, at nominal duty appeared to the petitioners a direct viola-
tion of the promise implied in the declarations of Ministion of the promise implied in the declarations of Minis he present session, that no further alterations were con the present session, that no further alterations were contions proposed were likely to add greatly to the distres under which the agriculturists suffer, without any coun tervailing advantage to the manufacturing interests, inas much as the commercial regulations of the United States are more stringent than ever in discouraging, by the im position of higher duties, the importation of the manufac tures of this country. On these grounds the petitioners prayed that no law or regulation under the authority of Parliament might be passed to admit corn or flour from the continent of America at lower duties than those at Grantham, Mr. Turner, M.P., in the chair. A stron petition was adopted, which will be presented to the
House of Commons by Mr. Turner, and to the Lords by the Duke of Rutiand.
Oakham.-On Wednesday morning, during a severe storm, Exton church, in this county, was struck by lightderable distance ; and the roof laid completely open to the sky, the windows being mostly shattered to pieces. It will be long before the church can be in a state fit for Southampton.-On the morning of the 22 d inst., as
Service to permed the Exeter mail was proceeding from Exeter to join the mail-train, at this place, it was upset within two miking fright at a cart which had upset, and ran up a steep bank, which caused the coach to fall over; and the spot. The guard and passengers escaped unhurt Wigan.-A man called Robert Taylor, who has ob tained some local notoriety as the claimant of the title of Lord Kennedy, and has been frequently before the magis-
trates on various charges, was brought up last week on a charge of bigamy. After a long examination of no geneal interest, the charge was considered proved, and the Railways.-The following are the returns of the prin ipal railways for the past week:-London and Birming ham, 14,988l.; Great Western, 13, I28l.; South Wester 5,754l. South Eastern, 2,124l. E Eastern Countjes,

and Norwich Railway commenced on Thursday, when and Norwich Railway commenced on Thursday, when of the ground marked out, by throwing down part of a hedge between the marshes and a field, the property of the Earl of Rosebery. It is said that the line was similarly commenced at Reedham, on land belonging to Mr. Cockerill.-A curiosity in railway engineering is now in progress in a meadow, at New Alresford, Dorsetshire, where Mr. Rondney, of the Scotch Fusiliers, is constructing a railway, at his own expense, in the form of a circle, measuring 400 yards. There is a tunnel 70 yards in length, and a locomotive engine and two carriages are building to traverse the line, which is to be used for local

## IRELAND.

Dublin.-The Mercantile Advertiser contains the folwing statement:- The census, which was simulta neonsly taken in every parish in Ireland, on a given day, ts preparation for publication, will soon be printed and laid before Parliament. A variety of curious and interesting details will be supplied for the first time. The and age-the diseases which are most prevalent and fatal - the number of insane persons under restraint, with other statistical details, will, we understand, be given with a surprising degree of accuracy, The following is a return females; Munster, $1,186,190$ males, $1,204,971$ females ; Connaught, 707,884 males, 711,072 females; Ulster, males, $4,155,606$ females. Tomales. Total $4,019.66$ In 1821, the population was $6,801,827$; in 1831, it was 821 and 1831, 965,574 ; increase between 1831 and 1841

407,872. From this it appears that the increase during in the ten vears preceding. This extremely reduced rate of increase is a very remarkable and extraordinary fact. It is evident that, during the last ten years, there bas been very decided check to the progress of population in Ireland. The increase in England, during the ten years from 1831 to 1841 was 2,004794 , which was more than one-seventh upon the population of 1831. The increase was little, during the same ten years, was 407,872 , whic 1831. The incresse in England has been in the ratio of nearly 3 to 1, as compared with Ireland. This is the first Ene that ". Treland has shown a less degree of increase than England. -The long-expected action brought by a milicity, for breach of promise of marriage, under circum stances which excited great attention some months since has been sertled by a compromise. The jury had bee struck, and the lawyers were feed. But the officer has, it is said, accepted compensation in the shape of $550 l$. fo the wounds inflicted upon his heart by the obdurate lady 0 'Connell in this city, last week, the mayor in the chair One city and one county member attended; but thei colleagues declined, as did also Mr. W. Roche, the former representative for this city. The Roman Catholic Bishop the diocese refused the invian, and Che ony membe of the clergy present, Dr. Kennedy, bishop of Killaloe said rat 'he could not prevail on mimself to counteance the Repeal movement, until Mr. Connells recent de-
claration of being ready and willing to accept a Parliament claration of being ready and wiling to accept a Parliament
in Ireland dependent upon England.? Mr. O'Connell in Ireland dependent upon England. ${ }^{3}$ Mr. O'Connell has since left for Kells, from whence he is to proceed

## COTLAND

Edinburgh.-The Gazette of Tuesday announced that the Queen has appointed the Marquis of Bute her Majesty's High Commissioner to the General Assembly of the
church of Scotland. - The Marquis of Breadalbane, having been applied to from various quarters to express his sentiments on the present crisis of the Church, has sent to the ministers of tre parishes with which his estates are connected, a copy of a letter which he had occasion lately
to address to Mr. Alex. Dunlop, Advocate. His Lordship says that, having fully considered the present position of the Church, he cannot but express his great desire that nothing should now be done to precipitate measures, or though not perhaps directly or publicly expressed, ap pears to be entertained by Her Majesty's Government to ment. "I cannot," he says, "allow myself to give up all hope that a consummation so devoutly to be wished blished Church of scotand may be spared to the countiy in its full integrity and purity. What appears most imponscientious scruples of those who tould precinite the secession from the Church. There should be no leaving the establishment by any one minister. If there be a secestime is really a body; but let us take care that the true even incur the imputation of want of firmness (for what of having unnecessarily created rents and divisions, and a secession that must end in the downfall of the establish ment. It is my firm conviction that we have allowed ourselves to be pressed on too frst, and goaded on too far by the taunts of our opponents, and that there is now fully and fairly fought, and when the chances of victory are still on our side. For mosself, I shall be one of the last to leave the field. I shall protest and contend to the end, and 1 dol firmiy to estabisis my principles. I care not for of my opponents. Fin in my owa honest conviction, step faster than the true Presbyterian cause, guided by the principles of sound sense and consistency, tells me I should go. If, after such a trial, we mast go out, I shall be prepared to lend my humble endeavours and assist-
ance to vindicate the truth of my principles, and to take my part in any measures that may be thought necessary to promote the success of the dis-Established Church. event of the Legislature not granting to the Church its just privileges, I have resolved to leave it; but I can do no further act with a view to secession till the Gover jected all means of adjustment. I think I shall best serve the cause of the Presbyterian Church, and best promote the true interests of the State, by using my humble endeavours to remove the obstacles that still appear to obstruct the course of legislation on this important ques-tion."-The local papers state that the late letters of the Duke of Sutherland to the people of Sutherlandshire understood that comparatively few of the people will go out with their ministers, if the latter quit the establishment. The extensive sheep-farmers and tenants are deblishment, and had declared so long before the Duke's sentiments were known

Inverness.-Workmen are at present engaged in repairing the breach in the Caledonian canal. About the men are employed, but months yet must enication, howpassage be is kept up once a week by the Glasgow steamers;
and by the 1 st of May there will be vessels twice a week, performing the voyage between Glasgow and Inverness in two days. There are seven miles of interruption in the passage, but boat is stationed at each end, and coaches will be ready to carry passengers from one to the other so that no delay will take place in consequence of the accident

## 业スtw.

Court of Cgancray.-Mr. Serjeant Wrangham baving obtained a patent of precedence, was called to take his seat within
the bar, Sir Gregory dewin, Mr. Talbot, Mr. Martin, Mr. Roe-
buck, and Mr. Watson, were also called within the bar as of her buck, and Mr. Wat.
Majesty's counsel.
hin the bar as of her the estate of the late Mr. Parker, a hanker and solicitor of Maid-
stone, and two questions were raised on the construction of his

 covered a sum ot $16,040 \mathrm{l}$. 11 Child's, and of do00l in Hobhouse's cellor now gave judgment before the holidays. The Lord Chancellor now gave judgment, and observed that the testator in his
will had marle a very marked divisinn of his property into three parts; mamely, his money and securities for money, his real es-
tates, and his plate, carriages, and jewels; and after disposint of these, and giving several legacies to the extent of many hundred pounds to diferent objects of his bounty, he directed ail the rest
of has reapplied to a particular manner. Now it
was Was most important in deciding on the intentions of the testator, the money actually in the house amonuted the residue, becanse the money actually in the hose amounted to a very small sum,
and the testator, by using the terms the "rest of my ready money," evidently had in contemplation some other and larger fund Looking, therefore, at the language of the will, his Lordship had no doubt that the testator intended everylhing in the slape of
money to pass by this disposition in his will, and the question
then was, what, according to the ordinary halits and deatings of then was, what, according to the ordinary halits and dealings of
mankınd, was to be considered as ready muney. Now every. body, when they had occasion was a customary form of expres-
banker's as ready money. It
sion to denote cash at a banker's. Men usually sdin, I have no sion to denote cash at a banker's. Men usually said, I have no
money in the house, but I have money at my banker's. They
placed their money there for security, but they placed it there ulso to be ready when they wanted it. The hanker received it with the understanding that it was to be ready at all times when
the owner demanded it; and in the ordinary acceptation of the term, and according to the general understanding of mankind, tention on the part of the testator to pass the money at bis ban.
ker's, the terms he made use of were, according to his Lordship's opinion, quite sufficient for that object. The authorities on the subject had been so much sifted in the course of the argument,
that it was quite unnecessary to advert to them at any length. that it was quite unnecessary to advert to them at any length.
in Carr $u$. Carr, the question was whether a baiance at the ban-
ker's of the testator would pass as a debt? Sir W. Grant decided,
and justly decided, that it did pass under that name. In Deveynes ker's of the testator would pass as a debt? Sir W. Grant decided,
and justly decided, that it did pass under that name. In Deveynes
$v$. Noble, five years afterwards, v. Noble, five years afterwards, $\varepsilon$ nd after consideration, he ex
pressed an opinion to the same effect. In Sims $v$. Noble, the Court of King's Bench, acting on this decision of Sir W. Grant,
ruled that a balance ata banker's was not a loan, but a debt, It
I appeared, however, that Sir W. Grant, in the course of the dis-
cussion in the case of Carr $v$. Carr, intimated an opirion that a balance at a hanker's woult not pass as ready naoney. Now, as-
suming that the report of the case and his
Lordship, in justice to the learned gentlemen now at the bar, saw no reason to question its accuracy-still there was nothing to
show that if sir $W$. Grant had been of opinion that it was the intention of the testator to pass his balance at his banher's under
that name, he would not have given effect to such an intention. But the case of Vesey \%. Keynolds, deciled by Sir John Leach, all his securaties for money to his executrix. Sir John Leach
held that the balare at the testator'p banker"s was money in hund; because in all just and reasonable sense, money at a ban-
kex's, which might be had when called for, or when a servant ker's, which might be had when called for, or when a servant
was sent to fetch it, must be so considered; and, surely, no one could say, that there was any real difference between money in
hand and ready money. The present Master of the Rolls had aiso, in a case before him, decidel that money at a banker"B was,
in the ordinary acceptance of the term, ready money, and so considered in all the dealings and transactions of mankind. gument on the sulject, that many difficuities and embarrassments must arise from aliowing money at a banker's to be legally
considered as ready money. His Lordship admitled that thoss deration if there were any circumstances in the case which colled them into action, or any doubt of the intentions of the testator But no such circumstances existed, nor was there reason for any interest, no conditusus were anmexed to the deposit, andil it did not appear that, however large it might be, it was larger than
this very rich individual had been in the habit of leavir 5 with them. Being, therefore, of opmion that the intebtion of the teso
tator was clear, his Lordship had xo difficulty kin affirming the decree of the Vice-Chancellor. With respect to the other point, it appeared that the testator gave legacies to three servants by
aname, and to the others generally under the description of his servants. No condition was, however, annexed to the gift, and,
in his Lordship's opinion, they stood in the same situacion as if they had been named in the will. On that point, slso, the judgment of the Vice Chavcellor must, therefore, be affirmed.
VICk-CHANOELLOR's Court.--(Before Sir J. Wigram).- Salter V. Farey. - The testatrix, Mrs, Mann, by her will, expressed a
desire to be buried in the nearest parish church to the place o her dcath, and she gave a pearl necklace to be sold, and the proceeds distributed amongst the poor of the parish in which her remains were deposited. Before her death she desired to be
buried in the parish of Walcot, near Bath. The parish church of
Bathwick was the nearest to the place of buried at Walcot. The question was, whether the proceeds of the necklace, anounting to $250 l$., should be distributed in Walco
or Bathwick. His Honour held that the proceeds of the necklace were give the whe was Wood V. Wood.-This was another legatees' suit, under the
will of-the late Mr. Wood, of Gloucester; $6,000 l$, had been bequeathed to the "family" of a Mr. Sanuel wood. The only point in dispute was as to the form of the inquiry to be taken th consider the expression to hean the clnkurn of the party numed, sisters, unless some special circu such an interpretation.

## che Gavoners’ chtonide.

"Having read," says a corresponklent, signing himself ' Lexicon," "the remarks of 'Agger,' in a late
Number of the Chronicle, on the pronunciation of the names of flowers, together with the complications of a most extravagant character of the Greek and Latin languages used in naming them, I am tempted to offer my protest against the introduction of these complications into the English language, as is now attempted in the charming gardens of St. James s
Park, where there is an arboretum of almost all specimens of native and foreign trees 'and shrubs that will exist in our climate, but which I regret to see smoky atmospliere they are cloomed to breathe: there Ifind the Birch-tree called a Betulineous tree, the Chesnut a Castanacenus tree, and a Ribes a Grossularious shrub, \&c.; thus endeavouring to engraft a guage. How our lexicographers may deal with them m their future dictionarics I know not, but I am sure they are calculated to puzzle the rising generation,
with the tribes of governesses and nursemaids who with the tribes of governesses
frequent that delightful locality.
Upon this point we entirely cliffer from our correspondent, for the following reasons. It will, we conceive, be admitted that the object which the Commils sioners of Woods and Forests have proposed in attaching names to the specimens of trees in the parks-namely, that of giving information concerning mendation. It will also be conceded that the more information which is thus conveyed, the better. Now the mere name of a plant carries but little interest with it; the idlers in the parks will scarcely stop to
observe whether a tree is called Abies excelsa or Pinus ponderosa; and if they do, they will care but little for the result of their investigation: but if they find other matters connected with it, their curiosity is gratified. For example: they see Robinia pseudacacia on a label; they find that it is also called the Locust-tree, that it is a native of North America-a
fact which they would nothave suspected, considering how common it now is in this county-and, finally, that it is a Leguminous plant. All these things put together form a little history which cannot fail to excite the interest of those who will use their powers of observation. Indeed, we o nhe syiplants we have just described, except so far as the term plants we have just described, But what does Legump nous really mean? The idler in the Park in al probability does not know; inquiry is made of others,
or books are or books are consulted, and then it is ascertained that it is a technical collective term, indicating a particular kind of structure in the flowers and leaves, a certain manner of growth, a seed-vessel like the Pea-pod, and other plants, called the Leguminous order. It further appears, that to that order belongs the Liquoriceplant, the Judas-tree, the Pea, the Clover, the Laburnum, and quantities of other familiar forms, all of which are members of the same large family. This We apprehend is a sort of information very far from useless.

Lexicon," however, probably does not object to the knowledge thus conveyed-it is the word Leguminous that offends him. But how is such
information to be put into a concise form except by information to be put into a concise form except by Dictionary that will answer the purpose, and a new one must be invented. Leguminous may be passable, but what can be urged in favour of Betulineous? We answer, the necessity of the term, the utility of it, and custom. It is an expression having a definite meaning, signifying that the plant so named has
certain peculiarities, and so on, as before explained. be desirable to do so, now that Betulineous has a recognised meaning, which is distinctly stated in books, and that it is in common use, although not among "Lexicon's" friends? We submit that it would We desirable
We think that the Commissioners of Woods and Forests deserve the greatest credit for the attempts they are making to render the Parks a source of opinion that the method of doing so which they have put in execution is well considered and judicious. The hideous stone candlestick, called a fountain, is cover. But while we fully recognise the excellent intentions which have dictated the present mode of marking the trees in the Parks, we cannot conceal the
fact that the utility of the plan is diminished by the fact that the utiaty or the plan is with the execution of it. Information that is false does more harm than no information at all; and it is little creditable to those who were charged with the care of directing the prePopulus a Betulineous tree, instead of Salicaceous, or stating Pyrus Michauxi to be a North American instead of a Persian plant, should have occurred. It
would, however, be unfair to ohject to the system because of such blemishes; and, for our own parts, plan to every place of public resort over which their authority reaches.

In endeavouring to find useful and profitable employment for Agricultural labourers, it should always hem without employ, and consequently without pay, their resources will soon be exhausted; and that, in ther it be by voluntary charity, or a poor-law, or, what is much worse, by depredations on property. The public, and especially the owners and occupiers of disadvantage, that the moral condition of the labourer is deteriorated; that, when labour is abundant, habits of idleness prevent his doing his work with diligence; and dishonesty, the child of indigence,
renders him less trustworthy. All this a very small comparative outlay might have prevented; and the loss which might have been incurred by giving work
which did not fully repay the employer should be cheerfully submitted to, when the great advantage of industry and honesty in the labouring population, as If If a committee of proprietors and occupiers of trict, would meet occasionally to consider how the surplus population could be employed usefully, there is no doubt but the union-houses might become, what
they should only be, refuges for destitute old age, helpless infancy, or bodily infirmity and mental incapacity. The sums now collected for the maintenance of men and women who are still capable of work would be far moxe usefully expended in paying them and ditches of noxious weeds, collecting and mixing materials into composts for manuring the land, and many other useful employments suited to their strength or capacity, which are now seldom thought of By such means as these, the rates of a parish with which we fere connected were, even under the old and imperfectly-administered poor laws, reduced more than onle-half, so that we speak from experience. At is grievous to the farmer to pay a heavy tax trom which he derives no advantage whatever; while at the same time he is surrounded by distress, carsed by want of employment, and his charity is chilled by the thoughts of the heavy contributions he is called upon to pay for the support of the poor.
Fowever useful it may be to the regularlyemployed labourer to have a garden or allotment to cultivate in his spare hours, this is no remedy for total want of employment. We would not introduce the cottar system, with all its privations and waste of time; but we would show the proprietors and occupiers of land how they may find work for many more hands than are usually employed on a farm, without loss to themselves, and, sometimes with considerable profit. There are many operations on a farm which cannot be so perfectly done by the usual implements of cultivation as by manual labour; and although this last is more tedious, it is not more expensive in the end. Without superseding the plough by digging or forking the land, a much better tilth may be given by the spade, fork, and hoe, after the land has been ploughed. In heavy and wet clays, where the treading of the horses does much harm, a man working in the intervals between the stitches usually formed by the plough on such lands can readily pulverise the surface on each side by breaking clods with a hoe or rake, either before the seed is sown or afterwards. We suppose that all the essential im-
provements in levelling, draining, and deepening ditches and watercourses have been completed for these employ many hands, and are sufficiently profitable not to require any strong inducement to undertake them. What we wish to suggest is, additional manual labour in the minute operations of tillage, by which crops may be increased or secured, so as fully to repay the additional expense; while the great object of giving employment to all industrious labourers is thereby fully accomplished. A little reflection will soon lead to innumerable operations, which may be extremely useful, without causing a very great outlay of capital. A few hints is all that

## epretend to give.

rs would not disdain to take a lesson from the gardens and allotments of their labourers, the latter being generally on poor land, often taken out of wastes, and allowed to be inclosed because they were of little use to the cattle turned out, they would see the advantage of the spade, rake, and hoe after the ground has been dug. When the land is laid in regular beds of about a perch or pole in width, slightly sloping from the centre to the intervals, which are deepened by the spade, the crops are invariably better and more certain, even with less manure. The expense of doing this, after the land has been ploughed deep or subsoil-ploughed, is much less than would appear at first sight : there will be 160 perches in length to deepen after the plough has gone twice over it, and less than 160 square perehes to rake and lay in a proper form. Before the labourers are accustomed to the work, they may ask much more per perch than will give them fair wages ; but this is very soon brought to a proper adjustment. Suppose a farmer begins by allowing 1d. per perch for the work, well done, including both operations, this will be only an additional expense of 13 s .4 d . per acre; but we maintain that, if the Iand be not very heavy, a labourer will earn excellent wages at 10 s . per aere, and, where there is competition, perhaps for much less. Those who have experence in task-labour will be better able to fix price at once ; but any man, by giving a good price at will lower the price to a minimum, according to the greater or less abundance of labourers and the usual wages of the neighbourhood. When the farmer walks over his field to look at his growing crop, and finds deep surface-drains at a perch apart all over cesary, we suppose to have been made, he will not regret the $10 s$. or $12 s$. it may have cost him; and if he does, let him examine fields of similar soils which have been laid, as it is usual to find them, after the common operations of ploughing, harrowing, and rolling, and observe the difference. The greatest advantage will be found in cold heavy soils; but even in the lightest it will be evident that the mould dug out of the intervals, and spread evenly over the surface, will prevent too great evapolation and greatly strengthen the growing crop. As it is usual for the ploughman to begin by filling up the interval between two stitches or lands, as they are called, with two furrow-slices laid over one another, and so alternate the crown and furrow, it may appear that the furrow dug out to the depth of fourteen or more inches will leave a hollow in the crown of the stitch now forming. This is avoided by causing the sides of the furrow to be drawn in by means of a heavy hoe before the plough begins its work; that is, if only one ploughing is intended to be given ; but if it is to be ploughed oftener, the new stitch can easily be brought to a proper form by the process called gathering, which every ploughman well knows. Thus a great depth of soil is deposited under the crown of the stitch, and cannot fail to improve the Corn which grows there
At the first opportunity, when the land is cleaned for roots, or whatever is the substitute for the fallow, if the soil can be kept clean without it, and when a cross ploughing is introduced, as it is in all improved husbandry, the stitches are so set out, that what was the crown before shall be shifted a foot or two to either side. The new furrow between the stitches will now be dug out, and some of the lower portion of the soil brought up and spread evenly over the new stitch. After a few such operations, the whole of the field will have its soil deepened several inches, without at once bringing too great a portion of the subsoil to the surface. If a spit of 8 inches below where the plough reached be spread over a perch, there will be only half an inch of the subsoil laid over thesurface; and however tenacious or barren this subsoil may be, it will be mellowed by the effect of the atmosphere, rains, and frost, and entirely amalyamated with the soil. It stands to reason that the subsoil must not contain substances injurious to vegetation, or else it cannot be safely mixed with the soil. This is not a fancy or new scheme invented at the moment, for it has been the practice in Flanders from time immemorial. (See "Outlines of Flemish Hus. bandry," published by the Society for Diffusing Use-
ful Knowledge.") -M.

At the anniversary meeting of the Horticultural Society on Monday last it must have been gratifying to the friends of Horticulture to learn how much real and most essential service this truly great association is quietly rendering to Gardening. Exclusive of their ordinary expenses, the Society has been able within the year to publish a new edition of their invaluable Fruit Catalogue (at a price which places it within the reach of every journeyman gardener), and to lay out $721 l$. upon importing plants and seeds from foreign countries, $340 l$. upon the improvement of hothouses at the Garden, and no less a sum than $833 l$. in medals and other rewards to gardeners for their horticultural other rewards to gardeners for their
skill. These facts require no comment.
It was announced on the same occasion that Mr. Edward Solly's interesting lectures on the Chemistry of Vegetation are about to be resumed this year in a new form, and that, although the Society at large does not subscribe to the funds which defray the cost of the chemical experiments, yet all Fellows of the Society would be admitted to the lectures without charge.

In considering the money part of Mr. Pusey's Drainage Bill, we do not find anything to object to, so far as its provisions go ; but we think it would be desirable to introduce some additional clauses. The their own purposes, and afterwards to charge land with the amount expended in effecting their works; but we do not perceive any clause enabling occupiers or proprietors to borrow money for carrying out their part of the work after the operations of the Commis sioners have terminated. 'The general want of floating capital among landlords and tenants is in itself a great bar to such expensive work as the under-drainage of land, after the noin watercourses are constructed or improved, which, as we understand it, is all this bill contemplates; it will therefore be necessary that money should be borrowed for the purpose. But capitalists will be shy of advancing money, unless the security to be given them is of the best description; and they will scarcely regard tenancy-at-will, or, perhaps, tenancy of any kind, or heavily-mortgaged land, as satisfactory security in the actual state of the aw. It therefore seems desirable that advantage should be tanden of the present opportunity to enable capitalists than they now can.
It should be remembered that where drainage has been effected, the value of property becomes permanently improved; all those persons, therefore, who now hold landed securities will find their position much improved by the operation. It would, therefore, be no hardship upon percons holding landed securities if purpose of draining. Fie would give a direct priority of security to a lender above any existing mortgage, and we would not allow the mortgagee to dispute the propriety of the outlay. That mortgagees will at first resist the measure is probable enough, for they may be alarmed at the idea of any increased burthen on the land; but if they were satisfied that the estate to be drained was improved to more than the extent of the money advanced for the purpose, they would hardly persevere in opposition. It seems to us that a mortgagee would be satisfied upon this point, provided the question of under draining were decided by the Commissioners, and this warrant were necessary in order to enable a borrower to offer the security of his
land. Were this condition required, it could hardly fail to be satisfactory to the mortgagee.

Then, as to tenants: It is possible that landlords may in many cases prefer to throw the expense of under-drainage upon their teriants; in that case there will be no chance of the money being raised, unless the tenant can offer the lender avalable security for the repayment of the money borrowed. We would therefore recommend the insertion of a clause providing that claims for money lent for drainage purposes should, in cases of bankruptcy or insolvency, be satistied out of the property and stock of the tenant, be superior to that of the landlord for rent, and be made recoverable by similar process before all
other creditors. In order to prevent the abuse of other creditors. In order to prevent the abuse of
such a power, it should also be required that the sancsuch a power, it should also be required that the sanc-
tion of the landlord should be given before the borrower could take up money for the purpose of draining; and the amount of amual instalments by which it would have to be repaid might also be made to depend upon the decision of the landlord.
Let these things be provided, and there will be no Fusey's bill. Pusey's bill; on the contrary, land will become, as it find the general a firitc $G^{\text {l }}$. -1 of mvestment; we shall object of interest inprovement of the country the great object of interest to steally capitalsts, such and dancerous speculations, such as foreign lanas and foreign railway schemes, will be left to the artention of those wamblers of which all countries furnish a phentiful crop. points to advert to, such as irrigation and few more
age of towns; but, for the present at least,
leave these matters to other and abler hands.

## FIG-TREES in vineries.

IN compliance with the request of your correspondent "W. C.," I send you a short statement of the mode of as I am not able to say what the kind of $F \lg$ is, $I$ forward to you a box containing a small branch, with several half-ripe Figs on it. I also inclose a branch with a bunch of black Hamburgh Grapes, cut from the Vine which grows opposite to that part of the Fig-tree from which the branch was taken. The bunch of Grapes is the smallest of two
which were on the same shoot, and it was to have been Which were on the same shoot, and it was to have been removed to-day at any rate. I send the Grapes, to show
that I do not sacrifice my Vines for the sake of the Figs that I do not sacrifice my Vines for the sake of the Figs,
and I shall be glad to hear if you think they denote a sufand I shall be glad to hear if you think they denote a sufficiently healthy condition or not.
The Vinery was ereeted in 1826, and in that year the Figs were planted. They received no peculiar treatment for several years; but about five years ago my gardener spade, at the distance of rather less than two feet from the stems, and he then top-dressed with leaf-mould and turf broken down. They now get a very liberal supply of liquid manure from the farm-yard every spring (as do also the Vines), and have daily a quantity of water till the fruit begins to ripen. Some of the small branches are trained back, which has a tendency to make them bear better. Since the plants were root-pruned they have eye a Fig is tormed. Many fall off, but still numbers remain on, as the branch sent will show. The trees are never pruned. I may mention, further, that we have success. The houses are beated with the old flues. I omitted to state that we ripen the second crop also.J. N. V. [Specimens of the Vines and Figs in question possible to find either in more vigorous health.]

TRELLIS FOR CLIMBERS.

IMPROVEMENT IN VINE BORDERS.
Mucr has been written on the shrivelling and shanking of Grapes, and the rust upon them, and many are the have produced these diseases, if I may so term them. But all writers agree that a warm dry border is necessary for the well-being of the Vine ; a knowledge of this fact Vine-borders dry and warm, and when success has attended any method, the health of the Vines and the flavour of their fruit have always been improved, the wood has been well ripened, and the probability of a good crop
every year made certain.

In some situations a simple excavation of a foot or two in depth, filled with a suitable soil, will be sufficient to make the Vine grow luxuriantly, and bear fine fruit. In
other situations, every care in draining the border and in other situations, every care in draining the border and in
raising it above the surrounding level scarcely suffices, as far as it (the border) is concerned, to insure, especially in early forcing, a successful cultivation of the Vine.
The consideration of these circumstances suggested
tat an improvement might be made in Vine-borders, by that an improvement might be made in Vine-borders, by
forming a cavity underneath them of the whole length and breadth of the border, and to make the air of this cavity as warm, or warmer, than the air of the Vinery itself.
Supposing the cavity to be three feet high at the side nexpt the house, and two feet high at the front of the
border, if a small single hot-water pipe were carried round the front and two ends of this cavity, it would, I think, be quite sufficient to keep up a tolerable warmth in such a place. It would be necesssry, perhaps, to raise the border three or four feet higher than the floor of the house, so that the bottom of the cavity might not be much lower than the bottom of the house, and also that one of the pipes in the house, say the lower or return-pipe, might he made to make the tour of three sides of the instead of using one of the principal the boiler; independent independent pipe be brought from the boiler for the sole parpose of heating the cavity ? But ail Vineries are not
heated by hot water; still, I think, the cavity might be heated with a smoke-flue as easily as with a hot-water pipe. The cavity being two or three feet in height, there would be room enough to allow a person to crawl in to examine the pipes or flue. It would be easy to make it deeper if it should be thought best to do so. Supposing
that neither flue ner hot-water pipe were carried round the cavity, yet the air, to a certain extent, might be warmed if any communication could be made between it and the air in the Vinery ; such com munication might probably be made by openings in the front wall of the Vinery. The cavity might be either arched over with bricks, or covered over with large slabs of slate, or stone supported by pillars ; it would be advantageous, perhaps, not to have the covering of the cavity too closely fitted together, as any interstices left between the stones would atlow the heat from the cavity to reach the border above more readily. If slabs of stone were used, they might have holes dritted all over them; if a layer of stones were placed on the roof of the cavity before the soil was put on, it would help to disseminate the heat more regularly through the border. To if allowed to fall on the border I rain or snow would have, Appleby's method of putting a layer of long litter on the border, and over that a tarpaulin (see Gardeners' Chronicle, October 9, 1841.) If the air in the cavity below the border were kept very moist, there would probably be less necessity for watering the border above.
It must be understood that I speak of the early forcing useful during cold wet summers. I slaull be glad to see the opinion of some of your experienced correspondents as to whether what I have suggested would be likely to be an improvement or not.-Observator.

AMATEUR'S GARDEN.-No. XVIII.
The propagation of plants by cuttings is an operation more dependant upon art than any other which horticulturists have to conteud with; for, in addition to the incipient plant being cat off from all communication will its parent, it is also deprived of all support, except the little matcer contains within itself, and which is necessary to the formation of roots, Therefore, it is obvious that it
is not only requisite to surround it by circumstances is not only requisite to surround it by circumstances
favourable to the production of roots, but also to prevent as far as possible, any injury it m, aut asstain by the evaporation of its juices. Hence the indispensability of a humid atmosphere in propagating-pits, and of covering cuttings with hand or bell-glasses, to prevent the escape of moisture, when it is inconvenient to keep the whole atmosphere of a pit in a saturated state.
One of the greatest mistakes we commit in the propagation of hard-wooded greenbouse plants, is placing the cuttings in heat directly they are inserted in the cuttingpot. This ought never to be done, because the increased temperature and humid atmosphere cause the cuttings to grow, and, consequently, to expend that small quantity of matter which ought to go to the formation of woots and hence, though the cuttings may appear fresh and rigorous for a few days, or even weeks, it will generally be found that after that time they will turn black at their bases, and ultimately die off. These remarks are applicable to the propagation of hard-wooded plants ; but softwooded things, such as Petunias, Verbenas, Heliotropes, and Pelargoniums, which are more excitable, will root freely if put at once into strong bottom-heat ; though it must be remarked that such treatment is not to be recommended for cuttings taken from plaths in the open air or a cool greenhouse. The most certain way is to place the cuttings in a close moist atmosphere, the temperature of which corresponds with that in which they had been produced, until they have formed the "callus;" after which if removed to a moderate bottom-heat, they will root with great freedom
preparation of cuttings, great diversity of the rem exists among practical men; some advocating as strenuously exclaim wit anch the leaves, while others certain cireusy exclaim "ouch not a leaf." Under cuttiogs cumstances, both parties are right; because, if is cut of cannot be placed where all loss from evaporation the bet, the more the evaporating surface is decreased remored a since it is better that the leaves should be cutting ance than that they should remain upon the hey sphere can be kept round the cutting, then, if sas "touch phere can be kept round the cutting, then, I say, "touch crowded with foliage, because the make the cutting pot matter out of rliage, because the leaves contain the tories for the precu roots are formed, and are the labora and flowers. for be too short if they possess the parts necessary insisted a plant ; and this fact can hardily be too much insisted upon.
From the above the Amateur will be able to glean that the concomitants of success in the propagation of plants are, a moist atmosphere, a proper preparation of the
cutting, and a moderate degree of bottom-heat after the caltus is formed.
After these remarks it is scarcely necessary to offer any on the propagation of the Rose; but I may observe, that, state of excitation in a plants are kept inere, to which little or no nir is admitted ; and the cuttings, when of the proper length and sufficientiy firm, are taken off and planted immediately in very small pots, and plunged in a congenial bottom-heat, in which they generally root in pots, and in a few weeks are ready for the market. This is the process of Rcse-manufacture in the trade; and by it, it is no uncommon thing to raise from 500 to 1,000 young plants from a singl $\qquad$
HOME CORRESPONDENCE.
Gold Fish.-In your last Number is an interesting Golit Fish. I aiso reside in Sulfolk, and having a simitar pond, but not quate so well filled as your correspondent's, lst. Where did he get a plant of the "Nuph minima?" lst. Where did he get a plant of Sotland and England, till, wearied with my repeated di-appo we quished a hopeless search. men have it. It is not at Kew-it is not now at High Clere, Where it was; and though willing to pay a handsome sum for a plant, I cannot obtain one. 2dly. -Does not the
stugant water that for 4 or 5 years has been in the staguant water that for 4 or
basin get putrid or discoloured? mine is quite brown at the end of the autuma with the fallen leaves, and I rener it every spring. Will the Gold Fish live in this water after it is saturated with vegetable substances
been carried into it? 3dly.-Does the common whit Nymphæa, when put in a pot, get dwarfed in its growth
otherwise, it being plunged only one foot in the wale otherwise, it being plunged only one foot in the strong Would not give room for
and elastic stems. $-J . M$.
Wasps.-I see in your last Paper, Mr. Beaton mentions that his men have brought him 45 female Wasps, the death of which will, of course, prevent 45 nests being made But it strikes me that it is very doubtful whether any autumn diminution in the number or mado wass strong active, and powerful insect. Now, the hive-bee has been traced from 4 to 6 or 7 miles from his home, in quest o food; the London bees are seen at Hampstead and Hendon: if so, to argue from unalogy, the Wasp would take as long or longer daily flight, and I can see no reason why Sirubland Garder shops at Ipswich His Hoy ever, Mr. Beaton has a near neighbour, the Rev. Mr. Kirby, of Barham, who could give hima full and clear Enformation on this head -J. M.
English and Sootch Farmers.-Your Stirling correspondent honours my letter with three objections only, other portions. I find, however, that these objections are not directed to anything that I have said, but to little additions of his own, which he has neally interwoven with my text. He makes a giant and kills him. He saysthe Lothians and the Carse of Gowrie, Wheab is not cullivaled in any part of Scolland." These words in polation of my Stirling friend. He proceeds to say, I patate, when noticing Turnip crops, "That even in Scotland last year there were many failures in consequence of heat and drought." These italics are another interpoobjection is to the following remark, where again it will be found that the words in italics are not in my communication. "Your correspondent says the Scotch ploughs exhibited at Liverpool and Bristol were found wanting required double the amount of horse-power to work them, and that the light English plough was preferred." Thus your Stirling correspondent professes to take the general lone of my arg he may have the pleasure to refute them ; passages, that he masay alone, are what he has refuted. Is it not fair to say his logic is like the subject of our corlespondence, founded on false premises, that lead to erroneous conclusions? In noticing the wheatgrowing districts, I ought certainly to have included the district is it were, but over the hedge from West Lothian. I, howerer, adhere to my original statementthat farmers generally throughout Scotland, save in these favourite districts, have var for doing so is stoded in the following extract from the Dumfries Courier of this week, which gives the particulars of the great agricultural
meeting for the counties of Dumfries and Kircudbright which was held on the previous week, where a farmer addressing his brethren, makes these remarks; and that they may have their weight on those unacquainted with to the Loihian the Carse of Gowrie, and the not-to-be forgotten banks of the Forth, one of the best-tilled and productive counties in Scotlind. This farmer remarks'During a series of years, the crops of Wheat and Barley have been so miserably bad as, in many instances, scarcely se marketable:"-" during some of these seasons, nearly as much Oatmeal was imported into Dumfriesshire as "chue of all the grain exported from the two counties ; circumstances? Why, chiefly from the profits arising
from breeding cattle, grazing, and turnip-feeding. much for the great grain-growing counties of the South. But to my friend's letter. As it regards Turnips, I never said there were many failures of crop. My remarks were, that Turnips were "last summer as much injured by blight as usually they are in the south of England." My observations of the crops of last year extended to Roxburghshire, Dumfries, Lanark, and Galloway, where the farmers anticipated a total waste of their bulbs, which were abundant, from the injury done by hlight, until the rains came in October, when a new foliage sprung from the crowns, and the bulbs were saved. On the subject of ploughs, your correspondent insinuates that my statement may be an untruth. This is not gentlemanly, nor handsome frum one who has interpolated my remarks and censured me on the ground of these additions. But as I wish to stand fair with him I shall subjoin the particulars of the trials at Liverpool and Bristol*, only premising that in those trials, the weight of the Scotch plough was less than that of the English, but in draught required nearly twice the horse-power. The cause of this increased power your correspondent says I attribute to their extra weight, a remark not in my communication. The momen or four horses drawing a plough. I knew they would be found somewhere in the reply, as it is a favourite subject of ridicule with Scotclimen ; yet this English practice is a good practice, and one that Scotchmen might farther grr than in imitating. Your friend should know that in the fens of Cambridge and Lincoln, a great many heavy horses are bred ; these when young are sold to farmers in the midland and southern counties, where instead of eating the brend of illeness as is the onse with their brethren in Scotland they are made to keep themselves by their loh 1 , only put to a plough - might injure these young creatures thy par a pre thed and thus they work until proper ase to be sold into the large towns for the cart and dray; the farmer having his work done whilst hie leam is improving in value, and ultimately sold at wide the team, however, annually depreciate in value, and whether by death or sale, end in a loss to him. This English practice, however, is often abused in a few counkes, where three or four mature horses are used; bat the farmers say their heavy chay soil neens them. In distant
clusion I would remark, that I have not the most ditan wish to detract from the of Scotch farmers. know them to be good ones. hold that station as agricultulists, where their merits place English brethren by reason of extra merits that are not their due. Your correspondent's mis-statements afford an excellent elucidation of how this is usually done.been a good deal puzzled as to which of the properties of this favourite fiower are most important. All writers on the subject require, as the first property, hould orea insistel in so meny words, the tach petal shall presentinits ane share to make up this perfect hall cond the consequence has been that fowers having whis, and middle petals, and (comparativelf) a very diminutive lower petal, have been adjudged worthy of prizes, merely because the general result was a tolerable circle. I contend, with many others, that this is improper, and that, in addern as an absolute rule that the eye should form the centre of the flower, which would prove that the petals were proportionate. Let any of your readers examine flowers having the eye in the centre, against the many top-heavy flowers which have been sent out at ligh infinitely superior in beauty and effect. Passing from forin to colour, another dificulty ahss. All soer to be agreed that the ground-colour of the ins lower petals should be the same, ald the two side petals shoald be uniform. But sapposing the ground-colour or the three tower pelals so be whe or yellow, would a inotch on the eye of the lowest be a disquaw commenced, many of your readers would be glad to have some information on the points I have raised. Will you, therefore, allow me to inquire, 1st. Whether the judges of Seedling Pansies are or are not justified in refusing prizes to all flowers which do not form perrect circles, and in whicli the eye does not form the colour may the fiower, whatever their good quaities as to colour may
we? 2d. Whether a blotch on the lower petal alone, the two side petals having the same ground-col as the lower one, is or is not a disqualification?- $A$ Leawer, Birmingham.
Double Yellow Rose.-I saw a very fine double yelDow Rose at the Forres Flower-show, last summer it was exhibited by Mr. Gregor, Nurseryman. In 1841, a plant first fiowered at Holme, but very fow buds expanded perfectly. A plant of it produced two fine blooms in Novar Gardens, Rosshire, in 1832; and at Invergordon Castle, in 1633, it produced about 60 blooms, of which Castue, $\begin{aligned} & \text { five only were perfict.-JJohn Ross, MIolme Cardens }\end{aligned}$
*I cannot lay my hand on the report of the Livervool meeting, but find the trials at Bristol thus reported:-Howarn's 2 pough
 refured the power of 44 stone to draw it. For your corre-
poudent's information it may be stated, that the light lands of spondent's infore much more easily ploughed than the heavy clay Iands of england. For instance,
plough) in saudy loam, which is the prevailing soil in scotland

A Black Hare.-Mr. Atkinson, of Lancaster, has in his possession a hare completely black. White and spotted hares are occasionally found, but this is the first black one which I have heard of. It has several peculiarities besides its colour: the head and general figure bear some resemblance to those of the feline race, and its ears are like the fur of the cat. It was found lying dead on Lancaster Moor.-- Fucile.
Bees.-I think that "W." is mistaken in alleging that his Bees died by frequenting Dahlia flowers, for such are no favourites or the Honey-bee. Bees may at times enter single blooms, butsela flowers having large petals, afford latter, of all 1 Bees. In autumn they shelter wild little nourishment for with ones, but not enough farm from the flowers of cold,-not "intoxicated bie "Were. This curious Dailias," "as "says misertion of Dr. Barton's, that story brings to mind an assid a isonous syrup, of which some species of plans wh whas been fatal to Bees partake without injury, man. He enumerates sowe ol so phe doubtful ; indeed it must be wrong, for Bees collect much one fort is meant; and hoys know well that large Bummer Bees collect very good honey from Honeysuckle.-J. Wighton.- [The story relates to the poisonous honey of Trebizond; been notorious since the days of Xemophon. Hoe Laurele in question is the Rhododendron, and the Honeysuck the Pontic Azalea.]
Roses.-In your report of the exhibition at the Horti cultural Society's Rooms, Regent-street, on the 18th inst., you mention a Perpetual Aibert Rose as being exhibited by us; and as such name might mislead purchasers of Roses, we trust you will not think it too much trouble to give the Rose you speak so highiy of its proper designaion, i.e. Hybrid China Prince Albert; in colour a phr
Net.-Having frequently observed in your Chronicle advertisements offerng net at so much per square yard, I think your readers may not be aware of the custom of the trade (as stated to me by one of the advertisers) the measuring the nets. They stretch them throng the yards of net, accordme to thell messurement, whil not cover more than 50 square yards of ground. - $K$. E. the Wireworm, which I have adopted for sotae yearsmy ground being full of them, so that I could neither grow Sweet Williams, Picotees, Bulbs, Lettuces, nor indeed any succulent plant, without their boring, running un, and eating the hearts out Near these plants I now place balf a Potato with the eves cut out to prevent its growing, and run a pointed stick through the middle of it nnd per it into the ground, covering it over with about an and peg it into the grouad, co or two I have pulled out by the tails from 15 to 30 of them from one piece of Potato. -Adan.
Ammocharis fulcata.-Your correspondent, "J. W. Rogers," in the Chronicle of last week, states that all his efiorts fo flomers Ammocharis falcata have failed; and as whow it expands its lovely blossoms. The bulb, while dormant, which is during winter, is kept in a cool greenhouse , as dy and airy a place as possible, until it hegins to show it leaves; it is then potted in three parts begin form one part leaf-mould, and a little silver sand, and placed so as it may bave the full benefit of the light, When the leaves have grown to about 18 inches ing lo it is plunged in a strong bottom-heat and llowed to remain till the flower-stem pushes clear of the allowed to remail be in about four or five weeks. It must leaves, wradually hardened off, and returned to the greenthen be grad to expand its hlossoms, which consist of an house, therem 20 to 30 flowers. After flowering, ererr umbel orst be taven of the foliage, by exposing it to the are mur the and piving the Wh in sher When it shows an - Olon Brewster.
Birds.-It may not be generally known that the nests of one of our smallest birds are somatimes occupied as winter habitations by perhaps one of the smallest of Europesn quadrupeds, namely, the shrew-mouse (Sorex araneus): they commonly take up their quarters in holes under banks and among moss; but one during the past winter was determined to be a littie mone in than ordinary, and havig found a wren curious a thornsee the little animal sporting about ite mossy habitation see time to time, and no doubt it would be com fortable enough at night in its feather-bed.- Peter Mackenzie.
Cotton
Cotton Coverings for Frames.-I have found the following a good composition for rendering waterproof the three pints of old pale linseed oil, one ounce of sugar of lead, and four ounces of white resin. The sugar of lead must be ground with a small quantity of the oil, and added to the remainder, incorporated with the resin, by means of gentle heat. The composition is to be laid on by a brush after the calico is nailed to the frames; one coat annually is sufficient. It dries in a sloort time when exposed to the air, and excludes as little light and heat as anything except glass, and does not become mildewed.Devoniensis.
Gas-Lime.-The grass upon which I sowed the gaslime has not recovered, nor is it likely to do so, although
one waggon-load per acre, consisting of one the rate of lime to seven parts of mould; but find it turns them of a sickly colour, and I cannot see that it does them any good. with about best for the bottoms of muck-heaps, mixed over twice before the muck is put on it certainly drives away the wire-worms and kills the seeds contained in the mould. I have now used it for Carrots and Barley, both which look well.-Jack Spratt.
Dried Strawberries.-Last summer, by way of experi to their stalks, and hung were plentiful, I attached thread to dry. I placed them inside a window facing the south, to dry. I placed them inside a window facing the south, time (March 28th). They have just been tasted, and the peculiar to the Strawberry is in full perfection; the flavour of the fruit, without any watery solves in the mouth as slowly as a lozenge, and is infinitely
superior to the Raisin, which so soon brings on a feeling of satiety. The Strawberry thus preserved is a stomachic The experiment may be tried when the fruit is so ripe as
to be scarcely worth gathering, without any further expense or trouble than being luung up. - T. Allen, 190,

Amaryllis Belladonna in Pots.-I recommend any o the following experiment: Keep the plants constantly on a light shelf in the greenhouse, with a pan of wet sand un derneath them, which should never be allowed to become quite dry, not even in summer, when the plant is dormant Good Hope, which, if not A. belladonna, can hardly be distinguished from that species, have flowered regularly fresh potted, in great luxuriance. They should never be of mine have done, and toots_ split the pots, which some must not be adopted till the bulbs have rooted themselves. This management was adopted accidentally as regards the Rev. W. Herbert, for Brured, under the suggestion of tiflora, which were received at the same time, and which years ber reguarly every other year. For some fifteen flower. Th, never succeeded in getting any of them to B . Ner. (ethnary cause of failure in the cultivation of mointure in sum mer much heat in winter, and want of platis lateis lus aralies.-One of the most noble Morerambe lisy and the Estuary of the Duddon, ing of north of Lancashre, which I am murh afraid was put a attention of fiovernment, It is highly deserving of the more than 52, ,hun acres, as the whole land, consisting of years ago it was proposed to carry the great Caledonian this bay, which wougland effected a by the ralkay, and, by raising an embankment for it formation, would have seprated these 52,000 acres of land pronounce the thing impossible of such matters might engineers of the first character, who have examined the locality, report it can easily be accomplished. The soil of this immense tract is found to be of the finest quality with sand and marine shells a favourable mixture of clay lamentably in want of employment, seems a favonrable for adding it to the wealth of the country. The engineer's and the value of the land the embankment was 434,0000 . to be worth $1,196,000$ l. The land beloned was calculate and is under the control of Gelongs to thernment in office, the late Mamstry agreed with the parties frant them the whole of embankment and railway, to grant them the whole of the Bay, reserving to the Crown only one acre in every fifteen; and, moreover, offered to stand between the company and all other claimants. But the pohle flan was set aside, because Sir F. smith and the Pon data since ascertainedsion, forming their opinion the the ratway ought to go through the barren hills of Westmoreland, where not an addational acre of land could be added to the national stoch, while the cost of its formation would exceed by $300,000 \mathrm{l}$. that of the embankment and ralway put tugether. I do trust that some of the induced to investigate this subject, and to press it upon the consideration of Government; for surely it is great and worthy object to reatore to the wealth of the country 52,000 acres of its best land ; and the employment of thousands of starving labourers in effecting such a purpose must still more forcibly recommend it to the consideration of a statesman.-

FOREIGN CORRESPONDENCE Paris, April 27.-We have experienced sad weather by chilling winds, rain, hail, se Fruiy hot, followed kind have suffered considerably, particnlarly Apres of every Pear. Peaches are better off; indeed, they Apricots and will be a good crop of them, particularly on that there that were prumed when the flower was fully expanded. know a garden in an exposed situation where the trees are never covered, yet the crop of Peaches never fail, and the trees are pruned always during the time that they are
in full flower. The $W$ alnut-trees are mean the young shoots, which will be generally frozen-I larly to the small farmers, as the be a great loss, particuhelped to pay their rents. The Vineahefrom the nuts
and in many places the recolte will be but trifling; at the 1811, when the wine was so excellent, they experience exactly the same weather as at presen that the vin in that year, and yet the wine was 8 th and 10 th of April have still hopes. $\qquad$ capita

PROCEEDINGS OF SOCIETIES.

## May 1-At the apniversary this day, his Grace the Duke of

 Son flowers, the very showy Phox subulata and invaiis; the
delicate
of the

 good specimend of philibeertia grandifora, with unusually covering the pot with its pretty pale lilac flowers; chorozeme cordifolium, spinosum, Henchmannii, and varium, the latter in a the four Chorozemas; and it was stated that the Fabiana is any protection--it will therefore be a useful addition to our everPreen shrubs. From Mr. Goode, gr. to Mrs. Lawrence, Ealing zena (Dillwína, glycinifolia, wheh, although difficult to cult tum, shuwy and well managed, the charming Cytisus filipes,
y rodigal of the swect white blowsoms in the sping month frodigal of its swect whate blossoms in the sp, ing months; a fine
variety of Oncidium papilio; and two seedling Azaleas, oule called speciosissima, with immense crimson flowers, richl
spotted in the upper petals, and tolerably well formed the conspicua purpurea, equally large, of a darker tint, less spotted and of a less perfect figure. A Banksian medal was given f
the first of these and Chorozema glycinifolia. Mr. Gaines, great abundance, are seldom favourably grown; these, howeve they were distinguished by a Banksian medal. A specimen of
the rare Houllétia Brocklehurstiana was shown by Messrs. Veitch and Son, of Exeter; it is very singular, and has large chocolate Banksian medal was awarded for this. There was also fromi Messr with the aspect of a Columnea, but apparently a species of Hyypo cyrta; it has curious scarlet flowers, which are not ver yellow Oxalis, which. is an example in which of a doubl are not so showy as the single ones. It was obtained from Ma-
deira, and is to be regarded more as a curiosity than as an orna
 Claway, wheh has a lajge and very deep neh reddish browı
fower. Mr. Davey, gr, to G. Smith, Esq., of Colney Hatch,
exhibited a seedling cinerária (pulcherrima), with most intense purplish arimson blossoms, but chiefly noticeable for the colour Sutherlandia frutescens, which is something like Clianthus pun ceus, and almost equal to it. The Hon. and Very Rev. W. Herbert,
communicated some beautiful seedling Rhododendrons an Azaleas; the first was R. Seymouri, obtained from seed of Rho dora canadensis, impregnated by Azalea pontica; another wa
raised between R. ponticum and R. dauricum atrovirens, and is remarkable for its loveliness. There were also some pleasing
hybrids from $R$. ponticum, which had been fertilised with the
pollen of $A$. pontica latter, they showed how the properties of the male type prevai A. pontica and $A$. sinnensis, the collour of the flowers heing briplt C. Abbott, market gr, Fitmonton, hrought, a pumnet of Mlack plants from the Gardens of the Soclety were the white Indian Forbesii and intermedia, the latter having seven flowers on one of its spikes; the large variety of Oncidiam ampliatam, in an
unnsually splendid state; Epidendrum primulinum; a hairy Variety of Acacia pulchella, which is very distinct and showy;
the dwarf Chorozema varium, so much preterable to the larger
kind showy pink and blue flowers; it is described as hard to prow, but was in excellent condition. Mr. Beck, of Isleworth, sent a centre for the purpose of admitting pots, intended to economize dosacco-water; when this is applicd to plants, for the purpose of
destroying aphides, it is generally wasted, and a great superfluous expenditure is thus incurred: by this contrivance the plants may be syringed or sprinkled, and the whole of the fluid will be caught again, to be strained for further use. It was announced that Mr.
E. Solly, Jnn., will deliver four lectures (on the ilth of May, and the three following Thursdays, ) In the rooms of the Society, on
the Chemistry of Vegetation. Fellows of the Society will be dimitted free; and to others the course will be 10 s . $6 d$. The the formation of organic matter illustrated by reference to inorganic substances; the charges which matter undergocs; and the substances 2d. The componsition and properties of organic matter, the different characters yet similar composition of vege-
table productions, the facility with which they are converted into each other; the 11 proneness to decay, and the nature of ferment-
ation. srd. The food of plants; air, water, and soil; their componition; the substances which they yield to plants; sources of carbonic acid and ammonia; changes which they undergo in the site to vegatation; finfuence of heant, light, and electricity on
plants; deterioration of soil; modes of preventing it; use of
manure; its application and effects; relation of vegelation the animal and vegetable kingdoms. It was also stated that ther will be no meeting of the Society on the 16 th inst., owing to ROYAL AGRICULTURAL SOCIETY OF ENGLAND.
April 20.-T. R. Barker. Esq., in the chair. Twenty-five Members were elected. Mr. Rodwell communicated the follow
ing account of specimens of Bokhara Clover he had ing account of specimens of Bokhara Clover he had presente.
to the Society, and the results of his experience in the garden
cuttivation of this plant. Specimen No. . The growth of 1841 cultivation of this plant. Specimen No. 1. The growth of 1841.
Seed sown, April 21 . The plant the growth of 138 days, First
year's produce. Iength 8 feet 1 I inches. Specimen No. 2.
The growth of 1842 . Second jear's The growth of 1842 . Second year's prodnce from the roots o
the former year. Pressed whend 1 blossum. Growth1 of 125
days. Lenth 11 feet 4 inches. Specinen No. 3. Growth of
1842 Second year's produce from the roots of the former
year. Pressed when in seed. Growth of 189 weeks. Length 12 1841:- Seed sown in drills about 18 , beghes apart, each seed
having a space of 6 inches in the drills. The soil a rich loamy mould, deep and dry. The subsol, leamy craig, about 4 fet
from Jandsprings. Preparation, deep digging and manuring
after a crop of potatoes. Cultivation in May: hoeing al mg in the tisual manner. In June, its rapid throwth (at the rate
of an inch in 24 hours), and its disposition to throw out lateral shoots, requiring great care and attention in giving it support
during some of the genial days in this month. In July, the specimen No. 1 was gathered and dried when in full bloom, the
October, the produce was carefully cut down, and avplied for

 and great hatdiness. The plant now recpured great catc and hem fainug. Early in Jume the blossons, began to make their appea ance, and coitinuce to make fresh bloom during the
monthe of Jnly and August, forming not only an ornamental but
a very framrant earden Wha taken as an average growth. In August and September gathered at the were formed and began to ripent; and the seed siluare rod. The specimen No. 3 was gathered at the same time.
Upm the usefulness of this plant, I am at present unable any very favomable repret, its properthes for feccung cattle
having no great recommensation, as it was found that dred state. It has slown itsclf with my mode of treatment a year; thals, however, may possibly not be its claracter, ptic with resent cuttings in a grcen state; a point whelh I have not at Rodwell's remarks, as to the unwillingness of animals to eat the plant when lucerne couid be had by them. Mr. Gibbs's dea was,
to cut and stack the Ciover in alternate layers with oat straw, with grass in haymahing, when there was the chance of clamage K . I. Clive, M. M., crave nctice that he should propose, at the
next monthy meeting of the Conncil, that the annual country meeting of the Society should be held at Shrewshmy in the year
1845. Mr. Hillyard informed the small Hereford oxcil, ail of one person's breed, and diviled as
cqually as possible, fed for sixteen weeks in his stal and a half each daity with one quart of bonled linseed, and three quarts of barley-meal,
for the purpose of testing the comparative feeding qualitics of
these roots. The Council adjourned to Wedneeday, the 3d of May.

## MISCELLANEOUS.

On Burning Clay. - Several correspondents having has kindly furnished us with the following information on the subject, which was printed in the form of a Mr. Craig, agent to A. Murray, Esq., of Broughton, Galloway, to E. Boyd, Esq., of Merton-hall. Mr. Craig work is, to make an oblong inclosure of the dimensions
of a small house, say 15 feet by $\mathbf{1 0}$, of green turf sods, of a small house, say 15 feet by 10, of green turf sods,
raised to the height of $3 \frac{1}{2}$ or 4 feet. In the inside of this inclosure, air-pipes are drawn diagonally, which commu-
nicate with holes left at each corner of the exterior wall These pires are formed of sods put on edge, and the
space between them so wide only as another sod can easily cover. In each of the four spaces left between the air-pipes and the outer wall, a fire is kindled with wood inclosure or kiln filled with diy turf, which is very soon on fire; and on the top of that, when well kindled, is
thrown the clay, in small quantities at a time, and repeated as often as necessary, which must be regulated only at first, because if the fire burns with tolerable keenness, the sods forming the pipe will soon be reduced to ashes. The pipe on the weather side of the kiln only up, and not opened, except the wind should veer about As the inside of the inclosure or kiln begins to be filled up with clay, the outer wall must be raised in height than the top of the clay, for the purpose of keeping the wind from acting on the fire. When the fire burns larly when the top is overloaded with clay, the breach must be stopped up immediately, which can only be effecdation onposite to it ; and the sods that from the ffounof the first wall are soon reduced to ashes. The wall can clay; and the high as may be convenient to throw on the forming a new wall when the previous one is bin through. I have them so wide, as to afford a space for a broad, it cart to turn upon them; but, when they are so them when feeding with clay, which I would not recom the more rape the more loosely the clay can be laid on, trouble above stated with my kilns; having the all the tage of a quantity of old moss, sticks, and tree-roots, surrounded the fire withed a large parcel of them, and soon as it was well kindled, I built round a strong wall of outer and weat on, adding clay to the fire, and sods to the to contain upwards of wary, till the kilns were so large as secret in burning of 100 loads of ashes. The prineipal quite close and care to clond impervious to the external air, and taking covered with the top always lightly, but completely, come in contact with the fire, if the external air should kiln, or by means of the fure, either on the top of the
fire will be very soon extinguished. In short, the kilns require to be attended nearly as closely as charcoal-pits. Clay is much easier burnt than either moss or loam ; it
does not undergo any alteration in its shape, and, on that does not undergo any alteration in its shape, and, on that account, allows the fire and smoke to get up easily between the lumps; whereas moss and loam, by crumbling down, are very apt to smother the fire, unless carelaty attended to. No rule can be lhaid on on the kiln, as that must depend on the state of the fire ; but I have found every lump completely burnt on opening the kiln, and some of them were thrown in larger than my head. Clay, no doubt, burns more readily if it be dug up and dried for a day or two before it be thrown on the kilns but this operation is not necessary, as it will burn though thrown on quite wet. After a kiln is fairly set a-going, and it or wood, or any sorished by inattention, or the carelessness of the operator, the vicissitudes of the weather having hardly any effect on the fires, if properly attended. kiln is burning with great keenness, a stranger to the operation may be apt to think that the fire is extinguished. If, therefore, any person, either through impatience or too great a curiosity, should insist on looking into the possibly extinuish the fire ; for, as I mentioned before, the chief secret consists in keeping out the external air from the fire." From perusing these remarks, Mr. Ormiston, of Bodyliton, observes, in a letter addressed to Sir W. W. Wynn, Bart., in the same circular, which the insued about tho years afte the date to make a trial of ashes produced from burnt clay and vegetable substances as a manure. Accordingly, about the beginning of April, 1816, I set about the formation of the kilns for that purpose, close to a pit containing a quantity of peat moss, nearly in the centre of a field of fallow 100 acres, then under the oper loads of the pip fallow. Having caused some hundred loads of the peat earth, together with a subsoil of strong adhesive blue clay, a quantity of old wood and roots of trees for the purpose of lindling the fires, and having done so according to the well, I found one man equal to keep four kilas going. The kilns constructed by me were farger dimensions than those described by Mr. Craig, being 30 feet long by 12 wide, inside the walls, and 2 feet high in the first proceeded. Some hundred cart-loads of rot-weeds, and rubbish of various descriptions, collected from the field dently produced superior ashes to those procured from the peat-earth and clay. The operation of buruing no being finished till the end of July prevented my giving the ashes a fair trial that year, as i was, in consequence,
anable to sow the Turnip-seed before the loth of August, and the crop produced was very indifferent, which i impute entirely to the lateness of the season and the expense of burning, as nearly as I can calculate, was about one shilling per cart-loa, mang followare for cartage of weeds and rubish fry otherpise have been necessary o consumed in the usual manner. In the month of March, 1817, the fire in the remaining kilns was little more than extinguished. then had the ashes carted out to an adjoining meadow where they have shown, both on the crop of hay and after-grass, a decided superiority over preparations of earth and lime compost, laid on at the rate of nearly 26 cubic yards to the acre, as an active manure for top-dressing In April I put down a quantity of the ashes in the corne the ground was prepared for sowing, I manured a small portion of the field with them, at the rate of 50 cart-loads to the acre. The Turnips growing upon that part of the field are more iuxuriant, and, seemingly, heavier crop than those sow, with and and even the quere the ashes were put down until they could be carted on the field, is most conspicuous for the luxuriance of the Turnips, although they were taken up as close as possible without renoving par valuable manure as a top-dressing for pasture and meadow ground, particularly as they would not be subject to any loss from evaporation; and in that case all vegetable manure generally used as a top-dressing for meadows might be applied to the raising of green crops, where it would suffer no loss from evaporation, which, in general is very great. In the application of clay-ashes as manure cills and covered, as is practised with farm-yard dung, but that after the ground is prepared for drilling dung, but that they should be spread upon the surface and should the treading of the horses and carts in laying and should the ashesifer might be run through it before the drills were formed; by so doing the young plants would come sooner in contact with the ashes than by putting them into the drills and covering them with the From my practice o the application I am of opinion that it can be done without the aid of kilns, which must be a very considerable saving; besides, it often happens that earths of various kinds might be collected for burning, where it would be very inconvenient to obtain turf, or sods, to form the
kilns; and earths so collected, such as the scrapings of undoubtedly produce superior ashes of any kind, will undoubtedy produce superior ashes to clay, of whatever denomination. In burning clay or soil without the aid of kilns, it is only necessary to kindle a fire, and after it becomes sufficiently strong, lay the clay or earth upon it, and continue that operation directed in kin-burning so long as. a man is able to throw or upon the fire; by this mode, I conceive, a hundred ore may be easily obtained in one heap. I would recommend in this mode of burning, a screen, similar to those used in burning charcoal, which coula be shech from a high wind blowing the fire too much from any side of the heap. Having made the experiment, the result was as follows :- 160 square yards, manured at the rate of 50 cart-loads per acre of clay-ashes, produced $1,834 \mathrm{lbs}$. of Turnips, without tops and tails, 160 dito, dio at the rate of 25 cart-loads per acre of farm-yard dung, produced $1,680 \mathrm{lbs}$. of ditto without ditto, 154 lbs. diference, being equal to 2 tons 1 cwt. 2 qre. 6 10s. per acre in favour of crop sown with clay-ashes; an advantage which may not appear great in this instance, yet it would be very upon this farm.

THE NATURALIST'S CORNER.-NO. XI.
40. Anatomy of Animals. - Galen, when studying human anatomy, was so struck with the perfection with which all the parts of the human arm and hand are adapted to one another, that he composed a hynan to the Deity, expressing his admiration of a piece of so much excellence. The more we extend our researches into the animal kingdom, the more shall we be struck with this extraordinary adaptation of the parts of living bodies to their respective uses; the more shall we be convinced, by our own imperfect knowleage, of the perfection of that Wisdom and Power, whose works are as marvellous as they re unbounded
41. Architecture of Birds. There is nearly as much difference between the comparative beauty of the nests of a wood-pigeon and of a bottle-tit, as between the hut of a North American savage and a Grecian temple. But although the savage, in the course of ages, may attain as much civilization as would lead him to the construction of a new Parthenon, the wood-pigeon will continue only evident from a contemplation to the end of time. It is ties of quadrupeds, birds, insects, and all the inferior ani-
mals, are stationary; those of man only are progressive.
But, within their limited range, the inferior animals per-
form their proper lahours overburdened with money, to have their expenses
paid would be a powerful inducement for them to make still
greater exertions athom. form their proper labours with an unwearied industry and an unerring precision which call forth our wonder and admiration. Elecision which call forth our wonder and tive scale of nature, we may still take example from the dive scale of nature, we may still take example from the dilgence, the perseverance, and the cheerfulness, which 42. Bishon architecture of birds.
42. Bishop Heber mentions, in his Journal, that two curious facts were told him in Kemaoon respecting the forests and their productions. The one was, that fires often took place in the jungles during the dry season, by the mere friction of the cane-stalks against each other in high winds. A scene of this sort, and arising from this cause, is described in "Leyden's Scenes of Infancy." The other was, that the Boa Constrictor is frequently found, particularly in the wood between Bamoury and Dikkalee, under the immediate feet of the hills. These snakes are of though they have, in their opinion, sufficient strength to master a buffalo, they are proportionably unwieldy. Many stories were told there of persons stepping on them by mistake for fallen trees, and being terrified on finding them alive.
43. Sacred Tree of Hiorro.-In "Glass's History of the Canary Islands" we have the description of a peculiar plying the inhabitants, man as well as inferior of supwith water-an island, which, but for this marvimals, adjunct, would be uninhabitable and abandoned. The tree is called Til by the people of the island, and has on the top of a epithet garse, or sacred. latre, which leads from the shore. A clistrict called Tiguwhich scems to rise from the sea, is cloud of vapour, and being condensed by the seliage is impelled towards it, fails into a large tank, from which it is measured out by individuals set apart for that purpose by the authorities of the island.

A Treatise on the Growth of the Peach. By John Smith London: Simpkin, Marshall, and Co. 1843.
THis little work consists of 112 pages, 56 of which ar occupied with some account of the history and introduction of the Peach, and with descriptions of 19 varieties of this fruit, and 13 of Nectarines. This part requires little notice, beyond the observation that it appears to be a compilation chiefly from the "Guide to the Orchard and Kitchen Garden," which work has evidently afforded the basis of most of the descriptions; and in many instances slight changes in the phraseology constitute the only dif. propagation, and kinds of stocks usually employed. On the subject of walls for Peaches, the author states, from his own experience, that atraight walls are better than those built serpentine, or zig-zag; that the full south aspect is the best; and that the east is more suitable than are, so far, very good; bat for many subsoils it would are, so far, very good; but for many subsoils it would The season of planting is stated a bottoming of concrete. The season of planting is stated to be from the " middle of October to the middle of March." Peaches may be planted thus Iate; but to delay beyond February is not to be recommended. The trees are also weakened by end of February until the blossom-buds are nearly ready to burst." When the leaves have fallen, the operation of pruning cannot be too soon performed.
With regard to pruning and training, however, the system is good in principle, but is not so distinctly explained as could be wished. It has to be gathered from amongst details of various other systems, instead of being propounded in regular order, from the time of planting the tree till it is brought to its full and perfect form. The description of other systems occupies too prominent a position in the work, whilst the one recommended is mentioned incidentally. It partakes of those of Mr. Seymour and Mr. Errington, Like the former, it requires that one upright shoot be trained in summer and cut back in winter to furnish side branches; but instead of bearing-shoots being allowed to grow only on the upper side of these lateral branches, as in Seymour's plan, such are encouraged both on the upper and under sides, and consequently a greater distance must be allowed between the principal branches; and as the lower branches are apt to become weak, partly owing to their horizontal position, the ends of these are curved upwards, in order to induce a greater flow

CALENDAR OF OPERATIONS for the ensuing week. THE gardening operations for this week about London will end in a great holiday among the patrons and lovers of the art, and world, at the first exhibition of the season in the Horticultural have never attended these exhibitions, can form no colea of the per-
fection to which the eultivation of plants is broumht round London. It is not an uncomnon occurrence for some of these gardencri to send 'up' part of their very best productions, e'sfitiently rely ing on mare perfect than their plante or fruit, as the case may be. Their confusion and Inud complaints are therefore great, when
they hear that not only no prize 18 awarded them, but that ther
efforts were hardly thought worthy of being mentioned in the cfforts were hardly thought worthy of being mentioned in the
reporta of the day. I have had the good fortune to be present at
these exhibitions such occasions paid my my employers, and I can safely affirm by all my reading and thinkinge exhibitions than I have done hetter way by which gentlemeng put together, and I know of no their plan
of the three exhibitions in each season ${ }^{2}$ and as gatdeners are

## Lorists' Notices to Correspondent

HOWERs. - Now that the season for florists to give our opinion of all novelties that we are ready , not with a view to please the growers, nor for sake of induloino any panity of growers, har for the to satisfy the public. It is alleged that there is but one society in London which can be trust is but subject; that this society only meets trusted upon this then by candle-light, when it is inpossible to judnd correctly of the merits of the flowers thas are to judge We are not of the same opinion; we telieve that better decisions than those of the Floricultural Society will ever be arrived at, and we wish it to be supported, because we know its decisions to be those of honest men, and skilful men. Nevertheless, in order to gratify those who look to some other tribunal, we take this opportunity of announcing that all florists' flowers that are addressed to our Office, 3, Charles-street, postage or carriage paid, will be examined, and their qualities Correspondents." The opinion will be given by a tleman entirely unoonneoted with the trade, thoroughly
acquainted with the subject, but having no interest judgments will be indexed at the end of the buyers of new flowergen at the end of the year, the testing the value of the seedlinge a ready means of are found in our columns, theirs advertised. NEWS OF THE WEEK.

The Overland Mail from India and China, which left Bombay on the Ist of April, arrived at Malta on the 29th alt., and the leading facts of the intelligence it brings have been received by telegraphic despatch. The GovernorGeneral has declared that Scinde is annexed to the English rovin, and thus country has become a be aboli our cocian Empire. slavery is henceforth to is to bence in scinde, and the mavigation of the Indus found in Hyderabad after its capture by the British was the amount of which is said to exceed 1,000,0002 sterling, he news from China comes down to the 23d February and is briefly mentioned as of a favourable nature, althoug contains no important fact.-From France, we have the and Postage Convention recently concluded
 the rates at considerable reduction in on Mondalets. The King's fête was celebrated on Mon, with the usual rejoicings, and without the Hghtest disturbance.-In Spain, M. Cortina has been majority, and the draft of the address drawn up by
committee of the Senate in reply to the Regent's speech at the opraing of the Cortss has been the subject of animated discussion. The Senate, in calm but dignified language, assert the right of Spain to an independent judgment on her own affairs, and censure the assertion of M. Guizot in the French Chambers that the Queen should only marry a Bourbon, as an attempt to assume a tone of superiority to which they cannot submit. From Portugal, we learn that the news of the interruption of the tariff negotiations has produced agreat sensation in the win districts, and that the authorities at Lisbon are at leng beginning to manifest a disposition to bring the quescount a satisfactory settlement.-From Italy, we have account of an attempt to assassinate the Viceroy of to be the act of a lunatic who had imprudently been allowed to be at large.-From Turkey, we learn that the Servian question has been settled by an unconditiona compliance on the part of the Turkish Government with the demands of Russia. The new Sovereign of Servia is to be deposed, his Ministers are to quit the Servian territory, and a new election is to Sovereignty to Prince Milosch.
At home, the funeral of the Duke of Sussex in the cemetery at Kensal-Green-the details of which are given in another column-is the chief topic of public interest. In the House of Lords on Tuesday during a conversation on the Scotch Church, Lord Aberdeen said that Govern ment had offered all that could be conceded, and that ther was no intention of introducing any measure on the subject. In the Commons, on Monday, sir Jame Graham explained the nature of the alterations proposed by Government in the Factories Bill, with the view of On Tuesday, Mr. Hume's motion for a vote of thanks to Lord Ashburton for the treaty of Washington was carried, after an animated debate, by a majority of 238 against 96 and on Wednesday, Mr. Elphinstone's bill for the better regulation of Marriages and Divorce was negatived by a majority of 64. Last night the Government resolution fo the endowment of additional ministers in populous

Court.-Our readers will be gratified to learn th the following most satisfactory bulletin was issued 1843, 9 o'clock, A.M.-The Queen is convalescent. The infant Princess is perfectly well. Her Majesty's recovery is so far advanced, that no more bulletins will be issued. - he daily papers state that her Majesty and Prince Royal and the nemly borm Princess, will probably leave Royal, and the newly-born Princess, will probably leave Buckinghum Palace for Claremont about the and that their stay at Claremont will be prolonged until within a few days of the period of the Ascot races, which will commence on Tuesday, the 13th June. Her Majesty is expected to proceed to Windsor about the l0th of June. No period has yet been fixed for her Majesty's visit to Dublin; but it is not expected that the Queen
will leave England until the latter end of will leave England until the latter end of July, or the Albert has graciously signified his intention of laying the foundation-stone of the Royal Naval School, at Counterhill, near Deptford,
Lord Howe's victory.

The late Duke of Sussex.-The Lying in State. On Wednesday the public were admitted into Kensington Palace, to see the body of his late Royal Highness lie in state. At $100^{\prime}$ clock the doors of the Palace were opened. Passing through the front hall to the inner hall, which was lined by his Royal Highness's footmen in state liveries, with crape hatbands, the company ascended the grand staircase, which was hung with black cloth, reaching his Roval Highness's piper, in his state uniform, and wearing a crape scarf. From the landing, entrance was given to an ante-room, the same in which the Queen held her first council on her accession to the throne. On the ment were completely covered with black cloth. The adjoining apartment, the saloon, contained the body, adorned with escutcheons of his tate Royal Highness's armos. Upon the coffin, on a velvet cushion, rested the coromet of his late Royal Highness, as one of the Princes of the Blood. On either side of the coffin were three gold can dlesticks, with large wax lights. At the head of the cornse sat, as chief mourner, Capt. Sir W. H. Dillon, R.N., one of his Royal Highness's equerries. At the feet of the corpse stood the Richmond and Windsor Heralds, wearing their side, the Hon. F. Byng and Capt. Courtenay Boyle, R.N., gentleman ushers. At eleven of clock the Chester and Noel Harris and Mr. Bainbridge relieved the gentlemen ushers. At 12 o'clock Colonel Wildman, K.H., one o his late Royal Highness's equerries, succeeded Sir W Dillon as chief mourner. The Richmond and Windsor Byng and Captain C. Boyle, as gentlemen ushers. A one o'clock Sir Archibald Mardonati, Bart., one of the room of Colonel Wildman, and the heralds and gentlemen
ushers were changed at the same time. Until the close of the ceremony the gentlemen in attendance relieved bald Macdonald officiating as chief mourners during the remainder of the day. Four o'clock having arrived, and the barriers extending to the gates of the palace being then filled with company, who had not obtained admission he lord chamberlain allowed the ceremony although the outer barriers were closed, two hours wer occupied in passing the visitors already within the barriers t being six o'clock before the doors of the palace wer within the approaches to the palace during the eight hours that the ceremony lasted.
of Sussex.Royal Highness six 0 'clock the different roads leading to Kensington were thronged with persons anxious to obtain a sight of the solemn ceremony. All the shops were closed, and from many of the houses mourning flags and banners were
displayed. From the Palace-gate to the extrenity of the town a line of seats was erected, and house-tops were filled with spectators, the greater portion of whom were of the more respectable class, and atired in of the nobility and friends of the late Duke began to arrive at the Palace. At a few minutes before eight, the procession began to move from the Palace, headed by playing the Dead March in $\mathbb{S}$ aul. Immediately afterward followed 13 mourning.coaches, containing the persona attendants of his Royal Highness, the state-carriage containing the Coronet of his Royal Highness, and the hears mourning-carriage, in which was Sir Augustus d'Este and then followed the private carriages of the nobility After these came a mourming-coach, with six horses, in which was the Duke of Cambridge, as the chief mourner, downed by his two supporters, the Marquerriages of tio Queen, tha Breadalbane, followed by cambridge, th Duchess of Gloucester, the Princess Sophia, the Duchess or Kent, the Princess Sophia Matilda of Gloucester, executors named in the will of his late Royal Highness and private carriages, in which were the imanealate per the solemnity. The procession extended for nearly mile in length, and the last of the carriages had left the Palace a few minutes after nine oclock. The corlege having proceeded through the Church-street sissed along Church-lane ; each side of the the way, being lined with a dense crowd of spectators. All, however, was most quiet and orderly, owing to the excellent arrangements of the police, who, being atation tained the most perfect discipline and order among the people. When the procession had reached the Swan, it turned into the Uxbridge-road. It then proceeded along the Queen's-road for some distance, and passed over the Great Western Railway, by the the mansion occupied by the late Lord Hill. It then entered the Harrow road, about a mile from its commencement at Paddington. At the turning into this road great crowds were assembled, and some not form an experienced in passing, by those who did not form an as eariy as six o'clock, carriages began arid succession, and as soon as the gates leading to the cemeobtained tickets of admission from the directors of the company. From six o'clock to nine, at which time the Shortl ment a Stanhope, arrived, and acted as a guard of honour. The Lord Chamberlain; the Lord Steward; the Master of the Horse; the Bishop of Norwich; Garter King-at-Arma and several officers of the Herald's College were in attend ance, and gave the necessary directions as to the arrange ments. The Cabinet Ministers arrived before $100^{\text {chock }}$ the Cabine of Wellington was the only member Ministers met it jo the in the procession. Officers of State were attired in the Windsor uniform, with a black silk scarf, except Sir H. Hardinge, who wore a military dress. Amongst the first of the nobility who arrived were the Dukes of Bedford, Devonshire, and Sulmerka, and leading to the chapel were covered with black cloth. At half-past nine the chapel-bell began to toll, announcing that the procession had left the palace. His Royal Highness Prince Albert, accompanied by Prince George of Cambridge, the Marquis of Exeter, and other members of his Royal Highness's suite, arrived shortly efore 10 o'clock. They were received at the entrance the chapel by the officers of State and the guar con ducted their Royal Highnesses into a waiting-room, which had been temporarily erected on the rignt fagily and chapel for the accommodation of the Royal ther oom erected for the Cabinet Ministers and all thos plzing part in the ceremony Exactly at half-past 10 the funeral procession entered the gates of the cemetery Upon arrival at the chapel, the cavairy formed procestion moved, in the order arranged by the Lord

Chamberlain, the coffin being preceded by the persona attendants of his Royal Highness, the Heralds, the Bishop of Norwich, \&cc, and followed by Garter King-at-Arms H.R.H. the Duke of Cambridge, as chief mourner, H.R.H. Prince Albert, H.R.IH. Prince George o Cambridge, and the Hereditary Grand Duke of Mecklen burg Strelitz, all dressed in long black cloaks, with the star of the Garter embroidered thereon. Their Royal Highnesses were followed by the Executors named in the will of the late Duke, the personal friends of his late Royal Highness, and the staff of the Artillery Company. On na the coronet and cushion laid upon the coffin. The Duke of Cambridge, as chief mourner, sat at the head of the corpse, the supporters standing on each side. Prince ditary Grand Duke of Mecklenburg Strelitz, sat near the chief mourner. The Lord Chamberlain took his place a land, and Devonshire, and the Earl of Arran, as supporter of the pall, stood on each side of the body. The train bearers stood behind the Princes of the Royal Family an l80 the Executors of his Royal Highness. The Cabine Ministers and other persons composing the processio were arranged on either side of the chapel, the Page having fied off at the entrance. The part of the sesite in the vault, and the Bishop of Norwich having concluded the style of his late Royal Highness. The Bisho of Norwich read the funeral service in a most im the Reverend Mr. Twigger, Chaplain of the cemetery The Royal and distinguished personages present did but at different times, in their own carriages. The Duke o Cambrige teft the cemetery in a pinate and 1 mme diately atter the remains on misher hat signed to the tomb. The Chaper was exceedingly orowed admission. The vault in which the remains of his lat Royal Highness are deposited until a suitable mausoleun can be reet is eitupo a the midale of the cat combs, on the right of thapel containing two wooden tressels, on which the coffin of his Royal Highness has been deposited. Im meciately on the build a strong brick wall in front, closing in the remains of his late Royal Highnes.
Parliamentary Movements.-The Sheffield papers mention that both the Members for that town are about to resign their seats. The failure of the Sheffield Bank, some months ago, is the cause of Mr. Parker's resignafollo, and Mr. Ward, it is said, feels the necessity of following the example of his colleague from considerations Bright, a Member of the Society of Friends, are spoken atation of Salisbury took when Ambrose Hussey was proposed on the Conservative interest, and the Hon. E. P. Bouverie on the Liberal interest. The show of hands was nearly equal, and a poll was demanded, the result of which was as follows:-
Mr. Hussey, 262 ; Mr. Bouverie, 176. Mr. Bouverie resigned before the time fixed for the closing of the poll. Official ippointments.-It is understood that sir John of Clare, has been appointed Governor of Bombay. A a special meeting of the Society for the Propagation of e Gospel on Friday, the 28 th uit. the Rev. Ernest Hawkin Canterbury A. M. Campbell, resigned.

Post-Office. -The following order has recently been s8ued by the Post-Office:-"General Post-Office, April, 1843.-Letters for China, the Australian settlements New Zealand, the Mauritius, or other places beyond the territories of the East India Company, intended to be sent by the prerland mails through India, must be ad dressed to the care of correspondents in that country, as is understood that, under recent regulations, they will
 Office, for their conveyance to their destination. It is not necessary that letters for places within the territories of the East India Company, forwarded by the Indian mails, should be addressed to correspondents in India, provision being made for payment of the Indian postage bove alluded to in those settlements."-A Parliamentary paper, published on Saturday morning, shows, that fo the year ending January 5,1843 , the number of letter received inland was $209,611,508$, and foreign and colonial $8,583,040$. The gross amount of revenue of the United Kingdom, inland, during the same period, was $1,027,074 \mathrm{l} .10 \mathrm{~s}$. $0 \frac{\mathrm{I}}{\mathrm{g}} \mathrm{d}$. ; and the expense of management -after deducting $10,745 l .2 s$. 6 c. for Pariamentary grana ac., charged on the Post-Office revenue. The gross amount of revenue for foreign and colonial, and interna colonial, was $583,406 l$. Os, $4 \frac{1}{2} d$. ; the total expense o management, 696,445l. 19s. $4 \frac{1}{6} d_{0}$; showing a deficiency 0 $113,0392.198$

France, The bill for consolidating the new French colonies in Polynesia was discussed in the committees of the Chamber of Deputies on Saturday. From the prat phich easure $4,000,000 \mathrm{f}$. are for the buildings and stores requisite for
the colonists, and $2,000,000$. for the construction of steam-boats. The troops to be employed in those esta-
blishments are to consist of 1,185 , of which 957 are to be composed of infantry and 228 of maxine artillery. The missioners, only almost nnanimously, for or nine com sitting, a bill was presented by the Minister of Finance, interest due on the povernment to pay the half-year's has guaranteed, in the event of the Greek loan which it not paying it. The sum required is 527,241 francs. The Otho's treasury, the application was received with violent demonstrations of displeasure. One member wished to fulfil its share of the engagernment were prepared to evaded the question. The Moniteur of Monday publishes signed Aage Convention between France and England, of the two countries, from which letters for one another are to be despatched. The French towns are-Paris, St. Malo, in the Channel. The Euglish towns, Granville, don, Dover, Brighton, Southampton, Jersey, and Guernsey. transmission arc-Paris, Marseilles, the office at AlexTheria, Smyrna, the Nardanelles, and Constantinople.
The English are-Alexandria, Gibraltar, and Malta.The principal transmission of letters between the countries takes place between Dover and Culais six days a-week; weather permitting. By the eighth article, the post-boats Wril continue their services without interruption, even in nified its wish that the service should cease. In ports where regular Government steamers do note. In ports vessels and steamers may be employed to carry bags. For this purpose a post-box shall be put up on board the packet for the reception of letters. There is nothing new oay be fa be transmitted three times a month. Letters may be franked or not ; and lettres chargés, or particularly English Post-office is to payt in both countries. The every thirty grammes of letters not franked; and in the same case the French Post-office will pay the English a franked, will pay in France from France to England, Franked, will pay in France by the amount levied on however, will pay but the tariff of Boulogne. Letters single letter, weighing half-ance will pay fivepence per pence postage between Enentioned above, will make tenEpecial charges for letters exchanged with St. Malo, Cherbourg, and Granville. Journals of either country are to be delivered at the port of the country to which thiey addressed exempt from duty. Pampllets may be sent by
post from one country to another, paying in post from one country to another, paying in France as
usual; in England, one penny for two ounces, and so on up to 16 ounces, which is the maximum allowed by the Enylish Post-office.-The King's fête was celebrated Tuileries, Paris, the Presidents of the Clambers of Peers and Deputies, \&c. Not the slightest disturbance tnok place. ult. They state that no modification of the Minoth Would take place until the Cortes was definitively constiof Deputies on the 30th ult, by a majority of the Cliamber reported at Madrid, that the Spanish Consuls at Bayonne ment thpignan had forwarded information to the Govern rection tion. The papers publish the draught of the sensaprepared by the committee of the Senate, in reply to the foreig. It contains the following passage relative to the Barcelona, and to M . Guizot's somewhat hasty assertion
that that the Queen should only marry a Bourbon:-"It is a Governments has not undergone, in the period just elapsed, the ocable change. The motives of disagreement which a friendly Cabinet, must, no doubt, have vanished ; and Your Highness must be assured that the incautious bly, on mat which a statesman has used in a public assemwith no consters concerning us exclusively, will be attended inde endensequence. The Senate hopes that dignity and that esteems itself, precious requisites of every nation relations. Church Missionary Sociely. - The annual meeting or this society was held at Exeter Hall, on Tuesday, the Winchester, Chester, and Norwich, the Dean of Salisbury,
and other dignitaries of the Church; Lord Sardon, M.P*;
and a large number of gentlemen. The 43d annual report stated that the committee entered on their duties at the beginning of the year shackled by a heavy debt. It became their pleasing task to announce that the society had The annual income had exceeded 115,0006 ,-a sum unprecedented in the history of any religious society in this or any other country. The Bishops of Barbadoes and of Guiana had become vice-presidents, and the King of Prussia a member of the society; His Majesty had contributed the sum of 100 l . as a donation, and had herome an annual subscriber of $25 \%$. The missionary institution at Childen, under the superoserously. The students were evidently still more attached than ever to the constitution and formularies of the Church. In New Zealand, the number of converts to Christianity had increased from satisfactory account of the extension of relision in that distant colony. In Eastern and Western Africa, Greece, India, and elsewhere, the missions were increasing. The and in a shors time the society would turn its attention to China towards a mission in which country an individual Cho sum of $6,000 \mathrm{z}$. On the motion of the Bishop of Win chester, the report was adopted,

Wesleyan Missionary Sociely.-One of the largest meetings ever witnessed in Exeter Hall was held there on Monday, on the occasion of the annual meeting of this sociecty. The tidat dontic affiction prevented his attend presidea, bat a dome the amo taren by Plumptre M.P., who was supported by numerous ministers of different denominations. The chai the meeting, the Rer. W. An the society's missions in India, Ceylon, Wirtemberg, France, Gibraltar, Australia, Zealand, Feejee, Wester A Canada, and Hudson's Bay. The effect prodnced by the distribution of the New estament was one of the most interestigg features the the society in New Zealand. At Cloudy Bay, in the middle island, where 400 copies had been dist there were no less than 700 eager competitors, and nothing could surpass the expression of gratitude of the successal applicants to the British and Foreign Bible suciety for its munificent grant. With respect to Hokianga, in the northern island, it was observed in reference to the Camany of the that their people weata the missiouary services ; scarcely a day passed without bringing to the missionary station a company of five or sia Catholic converts, wto went for the express purpose of conversing with the clergyman on religious subjects, and begging books. The committee acknowledged another liberal grant of 13 ritish and Foreigu Bible Society in addition to the 10,000 copies formerly voted (cheers); but even that number would fall far short of meeting the large demand made by the natives within the range of the society's generally in the Friendy slands, the mombing chiefly from that rigid economy which the straitened circumstances of At society's funds compelled the committee to practise. so great; whilst in the West Indies great loss had accrued to the society from recent earthquakes. Cape Haytien was entirely destroyed by an earthquake, May 7, 1842, and to the thousand pounds would not repair the dariage dominica, Montserrat, Nevis, and St. Eustatius. The income of the society duxing the year, containing some princely diture to $100,663 l .13 \mathrm{~s} .9 \mathrm{~d}$, being an increase over the receipts of 2,410\%. 1s. Id. There was, however, a surplus 5237. 13s. Gd. wherewith to commence the missionary labours of 1843. The debt of $30,000 \mathrm{l}$. contracted in $6,653 l$. 2 s. 1d. remaining to bo paid. The Rev. Dr. Hannah moved the adoption of the report, which being seconded Mr Compbell, M.P., and supported by a Chippewa Indian, named Pah-ta-se-gay, who had been converted and christened Peter Jacobs, was carried unanimously. Eight other resolutions, in the course of which Wenty speakers addressed the meeting, were ggreed of the ion was held Friday in the theatre of the college. His Grace the Arche Bishup of Canternay Wher, Lord Radstuck, Lord Howe, Lord Dartmouth, Sir IR. II. Inglis, Bart., ansi ohatrigentlemen. The report stated that the number of and of occasional students 113 , in addition to 497 boys in the chool. The students still maintamet a hiry ford, of two undergradnales admitted into the frrst classical class at this coderge, and two others notre inerl prizes in the secon class. number of Deaths registered in the week ending S 150 ; North districts, 190 Central districts, 168 ; East districts, 210; South dis tricts, 243 . Total, $961-(505$ males, 456 females. Weekly average for the last five years, 903 , for the last
five springs, 854 .

## 3Robincial Netos.

Bristol.- The local papers announce that his Royal Bristol on the launch of the Great Britain, which was intended to have been in the month of May, but owing to some difficulty in the float, has been postponed to June -We copy the following account of Mr. Brunel from the Bristo Gazelle:- The operation, to which we alluded cision by Sir B. Brodie, assisted by three other eminent surgeons. Very little blood was lost by the incision in the windpipe, but coughing and irritation supervened in uch violence, that the forceps could not be used, and the half-sovereign still remains in the trachea. The operation occupied a considerable time, and Mr. Brunel endured bis sufferings with remarkable fortitude. We are glad to learn that the accounts receivet morning are considered very favourable, the exact position of the coin having
been ascertained, and its extraction by the forceps, when necessary alteration has been made in the form of the instrument, is anticipated to be nearly certain.
Bridgend. -This neighbourhood has been for the last few days much agitated by the sudden death of a respect able farmer, a Mr. Howell, or Laleston, as was affirmed, of Asiatic cholera, followed immediately afterwards by the equally sudden death of a poor woman named harvey, cumstances, however, invested the case with very extraordinary appearances, and an investigation was resolved on. The deceased Mr. Howell, it appears, was a bachelor, possessed of property to amount abo a mrs. Lewis. To this match, the sister of the deceased farmer, a Mrs. Thomas, strongiy objected, as it would be the means of alienating from her the property to which, if he died a ber brother had, however, been fruitless, and the period for the marriage was fixed. On Friday. se'nnight, Mr. Howell had occasion to send for some beer to the house and the servant was directed to take a jar and fetch it. On his way he called at the house of the sister, who is oupposed to have taken advantage of the opportunity to
pat arsenic in the jar. Mr. Howell died soon after he had out the body, and the woman who was called in to lay remainder. The bodies have been had partaken of the by Mr. Herapath, the chemist, of Bristol examined detected distinctevidence of arsenic in thistol, who has Mrs Thom and her hister Mrs. Inomas, and her husband, bave both been appre-
hended, and are now in custody until further evidence hended, and are

Carmarthen.-The proceedings of "Rebecca and her Daughters" still continue unchecked, On Friday, at he Neath petty sessions, three workmen in the employ ar the Abbey Iron Company were brought forward to answer to a charge of breaking and carrying away some
gates at Neath Abbey on the luth inst. The evidence in lis case was clear and conclusive, as a police-sergeant caught them in the act of destroying the gates; but as the parties whose property had sustained injury did not appear o prosecute, the magistrates, on account of previous good character, deemed it expedient to dismiss the case.- The new steam-yacht built for Her Majesty's use at Pembroke dockyard was launched on Wednesday the 26 th ult.; the ceremony of naming her was performed by the Countess of Cawdor. The length of the yacht is 225 feet, breadth 33 , tonnage 1,049; and her engines are of 450 horse-power. belonging to the parish of Eisey, with his wife and four children, having been ejected from their cottage, were sheltering, on the night_of the 21 st ult., in a hut they had cotton parish, when about in Golden Ruse-lane, in the above perly extinguished, the place ignited. Litten and his wife escaped unhurt, leaving three of the children, aged five, seven, and ten years, in the flames, without making any mempt to rescue them. Before any assistance arrived the children were burnt to death. On examining the ground where the fire took place, some blood was discovered. Rhis excited suspicion, and on examination of tured. This added to the suspicions nasture of be fraccumstances, and the'father was immediately apprehended. A coroner's inquest was held, and after a protracted deliberation, the jury returned a verdict, "That Isaac Litten wilfully set his tent or camp on fire, thereby causing the death of his three children." . He was immedıately committed to take his trial at the next assizes.

Hertford.- On Saturday last, Mr. Cobden went down to Hertford, for the purpose of addressing the agriculturists of that district on the repeal of the Corn Laws. The Shire Hall was originally fixed for the meeting, but, havPlough Mead, 100 small, the meeting adjourned to the where an assemblage of nearly two thousand persons, almost exclusively farmers, was collected-the outskirts of the crowd being flanked by a number of the principal landBaron 0 oreback-among whom were har, Bart Mr Cowper, Sir Minto FarquWelford the Chan Ruer, and seral othera. Mr. neighbourhood, having been called to the chair Mr deo proceeded to address the meetiog on the usual topies of the Anti Corn-Law League. Mr. Bennett, a Bedfordshire farmer, and a Mr. Maydwell, moved resolutions in support of the Corn Laws, and expressive of a want of confidence in Ministers. Mr. Lattimore, a neighbouring farmer, moved an amendment in favour of total repeal, which, having been seconded, was carried by a large majority. Considerable interest was excited by the meeting, it having been expected that a strong opposition would have been got up by the gentlemen of the county Everything, however, passed of quietly.
the broke out in the extensive warehouses belonging to the Trustees of the Duke of Bridgenter, which has destroyed a grent damaty of cotcon and gran, ande damage to the manense pile fire oris ginated amongst some cotlon in one the upper rooms, and almost immediately burst into a volume of flame, threatenigg destruction to the wroperty, which is estimated at stand close to the Duke Dock, not far from the Custom house, and are buil east ana west. Fortunafely the wind tess bown wet, bor less the fire could not bave been got under. Three of the warehouses are nearly destroyed, and entirely so in the upper stories. The warehouses are seven stories high, and he different cotton, corn, and other goods consigned to them. The complete ruin, the roofs having fallen in soon after to fire began. The three lower rooms contained corn ater the portion of which is either destroyed by fixe or considerably damaged by water. The lower story, principally filled with Burton and other ales, has escaped with compara tively little damage. The goods destroyed are the pro perty of various merchank, but it is believed are nearly all msured, the building being the property of the Trustees of the Duke of Bridgewater, of which Lord Francis Egerton and moment be made of the loss, but it is calculated that about Fin worth of property is destroyed.
considerable amount of property, broke which destroyed ill of Mir. T. Fearnley, situated on the south bank of the Mancuenter ard iorumorm Ras. ay. The fire com menced in the upper larger spinning-room. It is supanp coming in contact with some roving. The flames
the utmost exertions, the roof of the larger side of the building fell in haff an hour after the commencement of the fire; and in about two hours the flames had spread to all the rooms in that part of the building, and floor after floor fell down. The entire building was completely destroyed, and several persons were seriously injured by the
fall of the ruins. The damage is estimated at 10,0002 .

Railways.-The following are the returns of the undermentioned railways for the past week:-London and Birmingham, 15,859l. ; Great Western, 13,723l.; South
Weatern, 6,169l. ; South Eastern, 2,052l. ; Eastern Counties, 2,304l. ; North Midland, 4,133l.; York and ditto 1,596l. ; Greenwich, 773l. ; Croydon, 308l. ; Brighton,
3,435l. ; BlackwaII, 6821. ; Hull and Selby, 1,085l. ; Grand Junction, 6,956l. ; Midland Counties, 2,545b.-Arrange ments are making to accelerate the north railway-mail by Lancaster, and the Irish ones by Chester; the effect of which will be to save nearly two hours on the present expected to take place about the 1st July; but, as the various branch mails require readjustment, it may even attained.-By the report of the Parliamentary committee lately published, it would seem that the bill authorizing the construction of the branch railway to Northampton and Peterborough encountered a severe opposition whe ect were the Duke of Dorset and other landholders, who hat the line, in consequence of the small population of the districts through which it is proposed to pass, could never yield a fair return in proportion to the capital that therefore adequate compensation woul not be afforded to those whose property was sure to be depreciated by the raiway. alchoug
the petitioners to impugn the calculations of Messrs Stephenson and Bidder, the gentlemen port of the apulicants, had considerable weigbt with General Pasley, expressed themselves favourable the undertaking. General Pasley states his opinion against the circuitous route to Blasworth, Eastern Company propose to follow out when their works bave dvanced sufficiently northward; ank. in that case, he will then be confined to the traffic of the valley of Nene ampton and Peterborough is to be, in the first instance, a single ine Pince was adduced, showing that while there would be an effectual guard against accident, public convenience would be amply provided for. It is nevertheles line of rails, should it hereafter be considered necessary Company to lay down such double line if it appear to them作 the income expected to be received is $35,094 l$., while the expenses are stated at $14,600 \%$ per annum. Passenger
traffic is estimated to realise $23,170 l$; goods, $8,750 l$. and parcels, $3,174 l$. The line will be $47 \frac{1}{4}$ miles in length sidering the measure, passed a resolution approving draft of the bill.-On Saturday, a fatal accident occurred on the branch railway at Blackwood, a few miles from engine used on the line of the Tredegar Iron Company, by Which two persons were killed and two others seriously
injured. One of the killed was Mr. Davis, a farmer, of Buttry-Hatch, in Monmouthshire; and the other was Mr. P. Williams, a tradesman living at Blackwood. Great damage was done to several houses in the town. The explosion is reported to have been caused by the enginesteam when leaving the engine. The loss of property, engine included, is estimated at least at 10002 .

## IRELAND.

Dublin.-No slightconsternation was caused on Monday morning by the announcement that Mr. Finn, the City Treasurer, elected by the Reformed Town absconded in the course of Friday, taking with him corporate funds to the amount of 4,0006 . or 5,000 . covery of his absence instant pursuit was made, Sir D. J. Dickenson, accountant of the corporation, having left Dublin on Saturday night, in the hope of catching him, Was expected to sail from Liverpool at 9 oclock on and Mr. Nolan, a rich pawnbroker, are Mr. Finn's sureties to the amount of 2,0001 . each.-The repeal agita-
tion is still in full operation. At the meeting in this city tion is still in full operation. At the meeting in this city would go to Sligo; on the 7th to the Curragh of Kildare; on the 14 th to Mullingar; on the 23d to the Southern
Riding of Tinperary ; on the 25 th to the North Riding He was also invited to a dinner by the corporation of Drogheda; andon the 29 th of June he would go to Dundalk. The Rent for the week, announced at the close of the proceedings, was $683 l .9 s$. $2 \frac{1}{2} d$. This is much the largest weekiy return yet received
Limerich. -The local papers mention as a proof of the Hittle encouragement given to the new mail-coach contractors, and as a circumstance without precedent on the Dublin and Limerick mail-coach line, that the coach
arrived at the office in Limerick on Monday without a passenger, or even a single parcel, on the whole route
from Nublin to Jimerick. The way-bill was a perfect
gainst time in which against any one individual parishtoller. Whole parishes had This was a pase wornder COURT OF QUBBN's BENCH.-(Sittings in Banco.) - The Queen $\begin{gathered}\text {. Feargus } O^{\prime} \text { Connow and others. - A great deal of }\end{gathered}$ excitement had beedi creatcd by the amnouncement that onese
defendants were to be brought up for judgment, and on the mmediately filled. The Attorney-General prayed judgimmediately filed. The Attorney-General prayed judg-
ment against the defendants, who had lecn coinvict of
unlawfully aiding and abetting others in doing certain acts unlawfully aiding and abetting others in doing certain acts
charged as unlawful. Lord Denmax said that the officer of the court hadimformed the not here. That made no dilfercnce with

iass sentence on those that were pesent they would lave a
right, notwhthatanting the alsence of then' fel.ows, to sny any-
 Aitkin, S. Challenger, Samuel Parks, D. Ratlon, William,
Woodruff (all of whom were convicted on the fift count only), and J. Leach, C. Doyle, Jonathan Bairs ow, J. Arthur, T. Cooper, Frederick Augustus Taylor. Lord lenman sald that there had been an acquittal on some counts, and an acquittai of some of
the defendants. He wislied to know whether there was any ntention on the part of any of the defendants to move an arrest
of judgment. Mr. Dundas, who appeared for R. Brooke, said he should move an arrest of judgment on the fourth and fifth counts The fourth charged the prisoners with having created alarm, \&c. by stopping mills, and by these means intending to create great
changes in the laws of this reaim. The fifth count charged them with alarming the Queen's sulbjects, with intent to bring about great changes in the laws. Mr. Dundas then addressed the
court. He began with his objection to the fifth count. There Was no venue stated in it at all, and it was, therefore, bad upon
the face of it. This was so plain, as not to require him to trouble the court with many observations. This want of statement of a
venue was not a defect in this conntalone. It appeared in many

## other couns. It was a feffet wheh was rot curea oy a ver木ict but made the count bad or motion in arrest of juclgment. Ther

## for the want of a proper

appear by the indictment, se., to have had jumat.etion over the
offence.
These words implicd that a good venue had been laid offence." These words implicd that a good venue had been aid,
though not laid perfectly. Here no venue was laid as to the
charge itself. The case of Rex $\geqslant$. J. Minter Hart ( 5 Carxthgion and Payne's Reports) was in point on this objection. The indict-
ment there had beenl found by the London grand jury. The
statent starementor. Me off. I--Bow, but that parish was not stated to be in
parish of St.
1, 1 . wa- mate before the verhict, hut that drl nent affect the oquestion. reguires to be considered. Mr. Dundas then went on to the
second objection. He contended that the statement of the offence was insufficient. It charged an attempt to persuade persons to do whar they might lawfinly do. The charge was to persuade labour, and so to bring abouta change in the laws. No conspi-
racy was cliarged. Lord Denman : This also is an objection worthy of being considered. Mr. Dundas then objected that the part of it, and also that its statement of the offence was defectise, It was stated that there had been unlawiul meetings, bint
it was not slated where those anlawful meetings were held;
yet thatstatement was materal to be tricf. and to be fonnd hy
$\qquad$ jurisdiction, and the absence of it was not cored by the verde.
There could be no necessity to cote anthoritics to slow that
where tiere was a material fact trinale by the jury. it whe necesdint nelly tared the princule m the case of kex $n$. Jtollandi, Term Reports. The charge here was said to have been cum-
mitted "at divers times and places;" but there was no statement of those places. The expression "at the paxish aforesaia
did not compensate for the want of the allegation of place in the shated that the defendant hat anded and abeted certam persons, Nis. Durdas : that would be right ; but for aught that appeared, the
$\qquad$ the offence, the comanithing of which these defendants were
charged with having aided and abetted. The $3 d$ gection of that statute declared that the compeling of fourneymen to leave their employment, or to return work unimished, and the doing of certassly other things, should be unlawful, but the 4 th section expresate
provided that meetings, for the sole purpose of settling the rate of wages to be tahcu, shorthid not be plliegal. On the face of this with arding and abetting did not appear to have been engaged in any other matter, aud conscquently did not appear to havo
been concernedin an indictable offerce. The aiding and net-
thi, of them was not, therefore, indictable; and the count not
$\qquad$ urge siminar objections ouly been convicted on the 5the count., He should not notice that
count now. The 4th count was defective. It might be true that the aiding and abetting might be laid in the way suggested by the Court, so as to bring the parties withiniracy
penalties of the faw; but that could only be where a conspira
whe charged. Herc no con spracy was charged. This was mere
$\qquad$ commission of an ffence charged on the face of the indictment. The offence must be shown to have been a substantive offence, and the aiding and abetting must be shown to have taken plas
within the jurisdiction of the Court. Nothing of that sort was done here. Suppose the allegation had been here, th. .t therly peaceable suljects were residing in Scotiand; that would cicaing
prevent the jurisdiction of the Court. It was clear that the aiding
 Mr.Justice Pattecher Sergeant Murnhy answered, that the venue could not be supplised by imphication. In every indictme was
where there was a charge of aiding and abetting, there wat where there was a charre of aiding and avetting, then and
always an allegation that the parties charged were thet there there present aiding and abetting. That was to show that A peroffence in Scotiand, but he could not be charged with the offence out of the jurisdiction could no
felony-a murder, for instance- the insufficient allegation of that
offence would not be supplied by implication, in order to fex a person charged as an accessary. The want of a proper venue
could only he supplied in an immaturial matter. Here the allegaconld mily he supplied in no immaterial matter. Here the allega-
tinn of the olfence was most material, and the want of a proper
venue un ticc allcpation of it The or,gin of the law of of it could not be supplied by verdict. verue must be properly and fully stated; and the principle which Mr. Borkin, for C. Doyle andlised now to their continuance.pressea nit the Contre that the that the ther on the filthe counts, vemae in th.c carly part of the fouth count was fatal to the
whiole romit. If the rivinal charge was found to be untrue,
ether mact or as to jurisisiction, the charge of being accessory
to that offence would to that offence would wholly fail. Venue was, therefore, most
material, must be correctly laid, and could not te supplied by material, must be correctly laid, and could not ke supplied by
implication. Without a verue correctly laid, bow were
the defendants to sistently with the know what they had to answer? Conmight have happened out of the kingdom. The count cer-
 to have been committed. This intimation ought to have been
givert. Tuc King o. Peck. 9 Ad. and Ellis Reports, and the King Then ogain, the mode of effecting the object charged ancertainsty. prisoners ought to be clearly stated. That was not done here,
 Assumang that to be so, then the want of such a distinct aldega-
tion was a defect that a verdet did not cure. hint formerly more strict with respect to anything than to venue Hefore the statute, the omission of vemue was not curcd by ver
diet. The Khig $H$. Hayncs, 4 Manle and Selwyn, report material, was not one which could be cured bation of it was charge there was that of receiving barley to grind, knowing it to of inducement only, yet, for want of a good venue on that allegaSun, the judgment was reversed. The fact charged hele as the
substantive offence was fully as matrial as the recelving of the
barley thene, and fatal. Tn the King $v$. Matthews, 5 Term Reports, 152, which was a case to the same effect, the indremert yaa for an offince at
commmonlaw, and there the want of certanty in the venue was held fatal. In the King $v$. Holland, whichlh had been already wased, the
question was raised on demurrer. The objection was there held
incurable, incuxable. Then, assuming that. The objection was there held
necessary, the statute required to be considered. Henue was
ithougnt newould be found that the statute did not dispense with the
 inn this indictment, these So far as any alleeration was made
been in in freland the wissemblics might have no allegation of the place, the place wounce; nothd as there was
to charge upon a aidmg anal abcuhug wcie lumati so be at that in all the precedents, Orm was, "then and there aiding and abetting," which certainly
Howed that personal presence was Mecessary in aiding and
befting. Mr. Atherton remarked that that bys ing the present case. Lord Demman-We are ogether want-

 Would br uccessary for the defendants to come upagain in person, The Qucen V . Thitmus Cooper and J. Richurds, -These defendCourt, the Attorney-General (with whom were the SolicitorMr. Alexauder), moved that they should receive the judgment of
the court. Mr. Justice Wuiliams began reading the notes of the
trial, which trial, which being excessively voluminous, he was assisted in
the tedious operation by Lord Denman and Mr. Justice Patte and their lordships were thus occupied from half-past elevenon, till
past five o'clock. They then rose, and the case was adjourned. it
was res Justice Pattesosterday, when, after a very long sitting, Mr. Cooper should be jmprisoned in the gaol of Stafford for the that for the years, and Richards to be imprisoned in the same gaol already undergonc.

The GRANULATED COMPOST contains, in a concentrated plants; it not merely stmulates vegetation when first anplied. but it has been found so rich and nutritious as to sustan the heariest crons till the latest period of growth, and to leave the Manare yet offered to the Farmer. For Winter Wheat it will be found most advantageous to apply
t as a top-dressing early in the spring. For Spring Crops of all inds of grain it slould be sown broadcast and harrowed in For Grass or Hay it should be applied broadcast, early in the spring. The quaztity recommended is from 4 to 6 cwt . per statute acre, according to the crop and the previons condition of the land. mended to Nowat Gurderess as has always produced the very best effects when applied to the Onion and Turnpp crops. It is offered to the Public at 105 . per cwt., or 10l. per ton. For the accommodation of Florists and Amateur Gardeners, the Gracontaining half a cwt each.

MEETINGS FOR THE TWO FOLLOWING WEERS.
 Tuesday, May 28

## aturday, May 27

$\qquad$

A correspondent and subscriber in Essex requests us to follow up the subjeet of wood-paving, which was introduced some months since by Mr. Ainger, with an intimation that he would continue it by describing a good method of laying down such paving. Mr. Ainger's reason for not pursuing the matter was the doubt very generally felt that the slipperiness would be a fatal objection to the use of wood in any shape. Till this question is settled the mode of combining the blocks is certainly a premature consideration; yet this is the and projects to which the interesting paper of Mr. Stead in the Transactions of the Society of Arts appears to have given rise. Although somewhat out nature and probable validity of to remark upon the claimed by wood-paving schemers. Judging only by common sense, we should doubt whether, when a new material was suggested for a given purpose, it is
allowable for parties to rush to the patent office and allowable for parties to rush to the patent office and
secure the exclusive use of well-known methods of secure the exclusive use of well-known methods of modes of dowelling, pegging, grooving, tonguing, rebating, joggling, dovetailing, and a host of other wellknown contrivances, would no doubt be tried in sucmatters, and as they would be upon any uew material which might seem better adapted than Fir or granite to supply those peculiarities which a perfect pasement demands. Mr. Steads paper embraces, we think, all wood-pavement depends. We doubtvery much whether many of the puvement patents are worth a straw: and ue imagine that, so soon as the expediency of woodpaving shall be established, any intelligent workman could devise twenty methods of laying it down effectually. The mode which appears hitherto to have been a favourite seems to us decidedly bad; it does not break joint on the upper surface, and consequently presents continuous lines of weakness, which, as may be seen in all the trying thoroughfares, wear rapidly
into ruts. In order to give a colour to some of the proposed moropolies, the angle to which the wood must be cut is estimated within a fraction of a minute: a question probably of as much importance as the argle at which the sail of the flying ship is to be set. besides the patents for combining the blocks, there these consist principally of large grooves which have been used for the same purpose in other substances time out of mind; and which, in regard to wood, have the further defect of impracticability. Fir is too soft to maintain a useful groove against such wear as deeper the groove the more ruinously do its edges break down.

The great desideratum in wood-paving is some mode of obviating that unctuousness of surface which it acquires when abraded in a half wet state. Pounded Fir-wood seems essentially slippery in certain states of moisture; and we must, perhaps, look to the che mists for some method of altering this. We are not without suspicion that the common kinds of Firs are not quite hard enough to bear the work of Cheapside; and lastly, we entertain the greatest fear as to their becom ing rotten very much sooner than the projectors slippesent or probably anticipate. But, meantime, the slipperiness is the point of attack: there's the rub; and our Essex friend suggests that the Govermment should offer a reward for a successful remedy. We think, however, with all respect and deference, that the prize is already sufficiently large to attract as would science and ingenuity towards the problem as

There is one attenopt to correct the
which deserves notice, and which, the slipperiness had justice done to it, on account of its having been in the first instance connected with a scheme for laying
the blocks, which was an entire failure: we allude to the blocks, which was an entire fainure: we allude to
the invention of Messrs. Esdaile and Margrave for capping the Fir-blocks with Elm. Elm appears to be much tougher and much less greasy than Fir, and if the union between the cap and the block can be secured, this contrivance promises better than anything at present before the public.

There are various means of employing labourersusefully on a farm when work is scarce, and labour consequently cheap, which many farmers neglect from a mistaken economy, but which, when judiciously done, are as useful and profitable as any of the usual opera-
tions of the farm. In every field there are headlands on which the plough turns; and at every ploughing some portion of the soil, which is pushed before the plough, or adheres to it, accumulates there, and in time raises it above the level of the rest of the field. If this were not occasionally removed, the headlands would gradually be raised, so that the water could not run over them into the ditches. In most fields a deep water-furrow is dug, at about a pole distant from the ditch, and parallel to it, and from this there are deep cuts here and there to let the water off. Most good farmers periodically dig up these headlands and mix which is afterwards carted off and spread on the land; sometimes stable or yard dung is brought to the ridge, and the whole well mixed into a compost, A double advantage is thus obtained: the mellow and enriched soil improves the spots on which it is laid; and by the removal of the superfluous soil a slope is produced, over which the water runs readily into the ditches without the necessity of grips or water-furrows. The surface may, perhaps, after the removal of the top soil, require stirring and manuring before the headland is restored to its fertility; but this again gives employment. It is very useful, as well as a sign of neat caltivation, when a flek slopes all round towards the ditches by which it is bounded and when, instead of unsightily balks full of rank weeds along the head of the ditch, where the plough
cannot work, there are gentle slopes made with the spade and shovel, giving a clean rounded appearance to the borders of the field. When helgerows are full of old stumps of trees, or of brushwood, which encroach on the land, these may often be grubbed up by labourers in winter for the value of the wood for fuel, leaving a cleared surface, which may generally be advantageously planted with Potatoes; or if the wood will not repay the labour, the workmen may be allowed
to plant Potatoes for their own use, by which means the improvement will cost nothing to the farmer, and the labourers will have useful and profitable employment. Where Iabourers have no allotments of land it may be advantageous to give them headlands to cultivate for a crop or two, on condition of their
clearing them of bushes and narrowing orlevelling the banks where they are too wide and take up much room. Woodlands, from which all the timber and underwood have been cut, can often be cleared and brought into cultivation at a very small expense, when allotted for a time to labourers, who undertake to grub up all the roots, to level the surface, and to dig or trench the whole, merely for the fuel it affords them
and the produce of one or two crops. It will always and the produce of one or two crops. It will always
be found that men will work harder, and be satisfied with less wages, when the speculation is their own than when they work by the day for a master ; and a very little experience will teach both employer and labourer to make a fair bargain. There is not a farm in England on which some useful work may not be found by which it would be improved. But the farmers complain of a want of capital for this purpose, and doubt the benefit which will result from the proposed improvements : if they would allow the intelligent and industrious labourers to find out jobs for themselves, and let them be remunerated by having a portion of the benefit of the improvements, they would gradually bring their farms into high condition, while they kept
employed.
We will dismiss this subject with the few hints we have given, and leave it to the good sense of proprietors and occupiers of land to devise the means of improving the condition of the agricultural labourers, by stimulating their industry, and by showing that the labourer and the farmer have only one common interest, which is, to make the earth produce as much as possible by careful and assiduous cultivation.- $M$.

We have on several occasions introduced into our columns extracts from some letters addressed to the Farmers of Suffolk, by the Rev. Professor Henslow. It gives us great pleasure now to announce that these letters have been collected, revised, and published, in the form of a two-shilling pamphlet, the profit upon the sale of which is to be applied to charitable purposes. They form the best preparation we know of for the study of Chemistry and Vegetable physio $\operatorname{logy}$ in their relation to Agriculture; so that their
intrinsic merit should secure for them public favour
quite independent of the desire which we all must feel to co-operate in purposes connected with parochial charity. May they have, what they well deserve, a large and rapid circulation.

## PERSIAN MELONS

A COMMUNiCATION which appeared in the Chronicle of the 29th ult., on the culture of the Persian Melon, induces me to offer a few remarks corroborative of the justness of the writer's ideas, from some years' observan
tion of the culture of the Melon in India. My observa tions are confined to the western side of India, and chiefly to that part of the Deccan or Mahratta country between the 16 th and 21 st parallels of latitude.
The time of sowing the seeds commences in the latter part of January, just after the height of the cold season is past, and is continued up to the beginning of March. Ripe Melons begin to appear in the latter part of A pril, and are in the greatest abundance and perfection throughdo May, and even continue well into June, M ine ains away set in early, and destroy or wash comprehends the driest, and part of the hottest, time of the year. In February the days are temperately warm, and the nights generally chill. In March the hot season begins to be sensibly felt, the nights, however, remaining pleasantly cool. Mhroughout April and May there is a progressive accession of temperature, the thermometer ranging from $90^{\circ}$ to $100^{\circ}$ and upwards by day, accompanied with a dry hot wind, and seldom falling below $80^{\circ}$ at night.

The Melons are grown in the beds of rivers from which the water has receded, the stream at this period of the year being connned to a small part of the channel. The surface or level of thaps not more than a foot above the and constant supply of moisture at the roots a ample the beds are composed of nothing but the shingle or loose gravel of the bed of the river, the water percolates freely beneath their whole extent.
The natives, as far as I have observed, take very little pains in the cultivation of the Melon, and grow all sorts promiscuously, apparently without any selection, and in the same beds. Hence, as might be expected from such a course of procedure, you meet with great numbers of very indifferent quality, more like half Melons half Cucumbers than anything else; others of very fair quality, and others again, in the same bed with the worst, of very superior excellence, sufficient to show what might be done with more attention, and that high temperature, dry air, and abundant moisture at the roots, are the conditions most favourable to ensure excellence.
The fault generally observable in frame-produced Melons I think is, that the flesh is of too firm or hard a quality, and perbaps deficient in sweetness and delicacy of
flavour. The best Indian Melons I have met with are, on the other hand, of a rich, melting quality, abounding in saccharine juice, of a very fragrant flavour. I found, however, that these qualities became much altered when grown at another period of the year; having once made some experiments on the cultivation of the Melon in common garden-mould in the monsoon, or rainy season, in a part of the country where the rains are generally light, and that year they were more so than usual. At and there were intervals of three weeks and upwards without any rain; but the general state of the air was moist, and the direct influence of the sua was often intercepted by light clouds, or a hazy state of the upper atmosphere, which, however, did not prevent the transmission thermometer averaged from $76^{\circ}$ to $800^{\circ}$ in the day, and $70^{\circ}$ at night. The seeds had been taken from a very delicious Melon, and the change was therefore the more observable. The plants grew well, but perfected their fruit with some difficulty, some decaying at half-size. Those which ripened possessed much of the original fine flavour of the parent fruit, but the sweetness had nearly all disappeared and the flesh had acquired the firm, hard quality which I have observed so much in our frame-grown Melons.
Besides the Melons grown in the hot season, there is also a variety grown in fields and gardens in the monsoon, or rany season, whats qualities and habits the former somedifferent season. These monsoon Melons are very hardy and of rapid growth, and their general character is akin to what I have stated above as the result of experiment in the fruit being deficient in sweetness, and the flesh being either hard or mealy; but they often possess considerable flavour, which is heightened or brought out by the addition of sugar.

Happening to have some seeds of one of these monsoon Melons when I left India, I inclose a few, in case any of your correspondents should be curious to try them, for and very hardy. The characters are marked on the paper containing them,-J. IT., May, 1843. [The seeds are sent to the garden of the Horticultural Society, to the charge of Mr. Thompson.]

ON the CUUTIVATION of CONIFERR IN POTS. Notring can excel the beauty of some of the kinds of Pinus and Abies lately introduced from Mezico, when peudo-strobus. Deronion, particulariy Pinus filifolia, patula, Montezumæ, Ayacahuite, \&c., and Abies religiosa, \&c. ; therefore a few hints on their management may prove interesting to some of the readers of the Gardeners?
Chroniole. Commencing with the seed, the best time 1
consider for sowing it is the autumn; however, in the case of imported seed the time should be determined, if possible from the period of its ripening in its native country; for
I feel confident that many foreign plants might be more I feel confident that many foreign plants might be more readily acclimatized if attention were only paid to this one thing. How many plants are there that will not endure the rigour of our climate on account of the seeds not being sown in time to cause the young wood to ripen
before the approach of winter. The soil for raising seedlings should consist of two-thirds loam and one of silver sand, placing the pots or pans containing them in a dry and airy part of either house or pit, as near the glass as possible. The front of a curvilinear house would answer admirably for this purpose, observing to withhold water as much as possible until germination is apparent; seeds subjected to this treatment have been found to germinate, whilst others, differently placed, after receiving every attention, have failed. Provided seeds are sown in the spring commences, when an increase of water will arouse the vitality they possess, and a fine crop of plants will soon make their appearance. Potting off should be attended to as soon as their cotyledons or seminal leaves are properly developed, making use of 60 -sized pots. The mould, and silver-sand, in equal proportions, broken fine placing the plants in a close frame for a few days, until they have re-established themselves, when air should be gradually admitted; and it appears to me from experience that the more the plants are stunted in pots of this size the better they are hereafter; but the same thing would be prejudicial provided they were in those of a larger size Any one having plants in the condition just mentioned should immediately remove them into 48 -sized pots, using the same potting material as last described, but not broken the same potling materia as lan don once: ance an the potsherds the bottom in the proce of six weeks, another shift would be required into 24 -sized pots, increasing the quantity of loam a little; and, at the approach of autumis, place them in 8 s, which will enable to pore up a sufficient quantity of matter in their interio to store a a motion. The soil now required will be one-third turfy loam, one do. of peat, the other rotten dung and riversand in equal proportions. In the spring of the ensuing year they should be again removed into 2 s , making use of period of 12 months' growth: wherein, if due pitention period of 12 months growth; wherein, if due attention Tas been paid, the piants will be objects of wonder. included under this head. To enhance their beauty particular care should be taken to give them full exposure during the summer season, and to withhold fire-heat throughout the winter. How many wretched specimens are to be seen at various places from these important things not being attended to! If kept either in pits or houses, the sashes should be removed during sumnaer. What would appear more ornamental in any part of a garden, particularly on a lawn, during that season, than those very plants? But great care should be exercised that the pots are often turned round, to prevent the roots penetrating through the hole in the bottom. Fancy can hardly picture a more beautiful object than Pinus filifolia, with its leaves from 1 ft . to 1 ft .6 inches in length; and also the graceful Abies religiosa. After the largest-sized pots have been made use of, slate tubs, or those of any other material, should be substituted. And at a very trifling expense a building might be erected-covered with slate, tiles, or anything convenient; observing to make the front movable, so as to admit light, air, \&cc-wherein the plants may be placed during winter. No doubt, some of the kinds above mentioned will endure the severity of our winters, if planted in the open air, in many parts of England, but
it is not expected that others will do so-George Bishop.

AMATEUR'S GARDEN.-No. XIX.
IF the reader will examine the Gardeners Chronicle of March 18, p. 173, he will there find some observaaccording to their complementary colours. As the late rains have rendered the ground in a fine state for planting out, and as all danger from frost may now be con at this time, when the plants should be bedded out as fast as possible. To render the grouping of colours as simple as practicable, I subjoin the following arrangement; and, if each colour is considered a bed of flowers, the reader may form a tolerably good idea of the appearance of a garden thus arranged. This arrangement is supposed to be on and their shades, prevail; but had it been on gravel, which is a warm colour, the cold colours, as blue, yellow, and white, which for gardening purposes, take the place of green, would have been placed in the beds containing warm colours, and vice versa. The beds are supposed to decrease in size from the centre one to the sides, and consequently the tallent plants are placed in the beds numbered 1 to 12 , and they gradually decline in height; Atinghe high and thus the whole garden forms a regular - Hasthis qrishgenent ; some of them may not be of the ey are as near as can be got. The
with those in the arrangement. be denied that colours thus arranged imposing appearance than when

scarlet and white, purple and yellow, orange and blue, and so on of their different shades; and while they mutually enhance the brilliancy of each other, the group as a whole is far more imp
an indiscriminate mixture.

In the planting of plants in groups there are three things which deserve particular notice. First, to place all plants with their tops pointing to the north; secondly, to plant all strong growing-plants very shallow, that is, with the ball little more than covered with soil; and thirdly, to plant weak-growing plants deep so as to make them grow luxuriantly

These rules, simple as they are, are of considerable importance; for if plants are not placed with their tops to the north, the points of the shoots, when pegged down, will not assume an erect position; while, if luxuriantgrowing plaats are planted deep, and if delicate-growing loxuriantly, and flower but littie; and if delicate-g up and plants are not plan
After the plants
horough sonking are planted, the beds should receive almost like a puddle; and then, the following clay, be hoed and raked over, so as to leave the surface loose The plants may then be pegged down, and will require W.P.Ayres.

## HOME CORRESPONDENCE

Vines.-I beg to state, in reply to "A Grape-grower's" remarks at p. 286 , as before, that the Vines at this place
were planted in 1839 , and at this time, 1843 , are carrying their fourth crop of fruit-not light, but heavy crops; further, that the Vines when planted were neither old ones nor yet Vines that lad been in bearing, but young two when planted did not exceed one-eighth of an incli in diameter. A leaf produced from one of the young canes the latter part of the season I forwarded to the Gardener's Gazette office, which measured 17 inches across by 30 in. including the footstalk: the Editor's remarks were, "The leaf sent is of the most extraordinary dimensions we ever on essed. Vin In 18 they bore from 6 to 12 lbs , to 1 lb . In 18411 they bore a heavy full crop-the Vines from the growth of two years invariably pruned to 16 or 17 feet. carrying from 50 sused all that saw them, some of now $(1843$, ) they are equally "fine, which I hope will be a sufficient explanation of their carrying their fourth crop of intended to pursue after planting, to effect one object, viz.. to bring them into a bearing state earlier than what was commonly practised (in conjunction with health and strengtb) ; which, I think, from the specimens of five Dr. Lindley's remarks on them, will fully bear me out. They have only one fault (if it can be deemed a fault), varicions over-fruitul, which often tempts an I now come to explain how I get six bunches from one eye; few words will suffice :-by my system of disbudding and spurring (which will be found fully explained in my treatise) at and before winter-pruning, no more buds are left than are absolutely wanted, and from one of those perfect bunches, and man porioned at p. 230 bunches, and many four and five. I mentioned at porfect bunches (bear in mind, grown over Pines). Yesterday I had the curiosity to count the spurs uponsome of the said showed 94 perfect bunches; White Muscadine, 21 spurs,

83 bunches; Black Hamburgh, 19 spurs, 63 bunches and last (not least, but not included in the six before your corren " himself with this explanation, I will be glad to see him at Eshton, to give him ocular demonstration. Tue houses for Pines and Vines at this place are 17 feet clear in width at the base, 11 feet high at the back, and 2
at the front.-James Roberts, Eshton Gardens.
Scotch and English Farmers. -In place of controverting your correspondent's statementa ( p .301 ,) I shall give your readers may judge if I have overstated what he sald. Concerning my first argument on climate, since your correspondeut has not mentioned it at all in either of his communications, nothing need be said. Relative to mysecond, on Wheat, hear his own words:-"Then, as to Wheat, excepting in those favourite districts, the Lothians and
the Carse of Gowrie, have not the Scotch given up its culture? have not the Scotch farmers nearly than a gain ?" Does not this ary not found it a lose rather On my third, respecting ploughs-"Next," says be "let me introduce their ploughs-their far-famed ploughs, of which they boast so much. Were they not tried at the great Agricultaral meeting the year before last at Liverpool, and last year at Bristol, and in both instances found wanting-requiring bearly twice the draught of the poor despised English plough? The word weight, 1 admit, is not here; but otherwise the meaning is the same. Again, of last summ's they were as much injured by blight as usually they are in the south of England ; and, no doubt, were the Scotch farmers annualiy subject to such summers, they would be glad to resort to broadcast tillage to have a crop at all." meaning and mine I asserted, and do still assert, that the crops here, in the centre of Scotland, were good; nay, very good, and gave him proof of it. Now, in his last letter he says, "My observations of the crops of last year extended to Roxburghsaire, Dumiries, Lanark, and the bulbs, which were abundant, from the injury done by blight, until the rains What was only an anticipation in September, 1842 , was not so in March, 1843 , when your correspondent wrote. Besides, he should have kept in mind, that these four counties are but a smave kept is mind, that what he said applied to Scotland penerally These counties, moreover, do not contain the best soil in Scotland, which renders it atill more unfair to cor them south of England With respect to several other remarks in your correspondent's first communication, which I have passed over, and therefore he thinks I have nothing to say upon them; I beg now, to remark that, among these the size of the acre figures ; but I must inform him that this is ow to the landiord as well as the farmer, and paid for by the
latter. To the English farmer the tithe and poor-rate are known, as well as to the londlord, and not paid above the rent by the farmer, any more than fiend (another name for rent by the farmer, any more than tiend (another name farming, is in Scolland. From the great competition in pays full pays ity also it wh. other for any length of time. Your correspondent in his last letter approves of the team of three or four horses; Now our Scoteh farmer finds it more advantageous to work two mature horses, which do as much work, and yet inert consume so much food as three or four young quire nearly twice the draught of the poor despised English plough." It follows then, that it requires from five do seven English horses to do the same work which two Stirling Scotland ; and there is as stiff clay in the Carse of Stirling, as in any part of England. I say again, if this be true, the English farmer labours under a real disadvantage, requiring from five to seven horses to do as much work as the scotch farmer gets from two ; and horse-food is neither rent, tithe, poor-rate, nor tiend, but a real tax upon the farmer. At p. 209 he says, "I might go farther, and show the deficient practice of the scotch farmer in breeding and feeding." Granted ; but for this plain rea-son-he finds that without greater skill in breeding and feeding, "prime Scots" bring in Smithfield Market more money than English beasts, however skifully bred and fed, and therefore he finds it labour in vain to attempt to improve upon the best. When this is needed, he may, pernaps, be able to meet the times, I conclude by saying, that tithe, poor-rate, tiend, large or small acres, \&c., may figure well enough in a theory of rent, but they have no place in the practical question of paying it. Land, both in Scotland and England, like everything else, will bring to the landlord, and demand from the farmer, its true value, and it will do no more for any engthened period, with out injuring all parties. I once intended to say nothing upon draining, subsoil-ploughing, \&e., but as your correspondent asks what great discoveries the Scotch farmer has made, I answer that he has discoyered this fact, that draining, \&cc., in order to be useful, must be put in pracice; and he has done it, while the English farmer according to your correspondent, has known it for one hundred years, has dreamed over the knowledge of it all this time, until now that he is beginning to awake, he finds it more valuable than his dream. No man pretend. to have discovered Christianity, yet every one who bellevem as the discoverer enjoins, enjoys as much benefis fom the Scotch farmer, and it is that which constitutes him a
good farmer, and the English one a bad farmer.-Not a Scoteh Farmer.
The Parks.-I aro much surprised to find by your most valuable Paper of Saturday last, that your corretrees and shrubs in Kensington Gardens and St. James' Park; and I am much gratified to find that you are no of his opinion. I think that the naming of these trees and shrubs is a most laudable effort, on the part of the Commissioners of Woods and Forests, to render these delightful places of recreation as interesting and as hese names will be exceedingly useful; and to ladies who are attached to Botanical pursuits they will be a interest the youtliful mind, so many of which class frequent these delightful breathing places. The Commishurdles which at present prevent the public from going among the named trees and shrubs, without which few of the names will be distinguishable from the walk. am pretty sure that very little injury would be done to the plants by their doing this; for the public, I think, know better now-a-days. This I think is fully borne out by the little injury that has been done to Kew Gardens since they have been open to the public. I trust your correspondent "Lexicon" will clearly see from your interesting and plain explanation that the naming of these trees and shrubs will be of immense advantage to the public, though it may not be so to him; and that the credit, as you say, for having done what they have. I hope the so-calle, be speedily removed, and something of a more artistica
character and in harmony with the scene substituted. Ortolano.

 E. M. W."
## presents

 ts her conEditor of the Gardeners' Chronicle, compliments to the all apiarians who, like her, wish to manage their Bees themselves with the least possible trouble and risk, and to have the power of examining their interesting proceedings at all times, she has procured a sketch of the " $\mathrm{Pa}-$
tent Bar and Frame-Hive," which, she believes, will content Bar and Frame-Hive," which, she believes, will coll"
siderably facilitate the experiments of Amateurs in general; siderably facilitate the experiments of Amateurs in general;
and offer the easiest mode of taking the honey to those who keep.Bees for profit as well as amusement. This hive was invented by Mr. Munn, of Throwley-House,
near Faversham, -a gentleman whose apiarian taste has near Faversham, -a gentleman whose apiarian taste has
led him to spare no trouble nor expense, in order to procure a hive which might include the following advan-tages:- Perfect protection from wet in the open air; an equable temperature within, in winter and summer; a method of feeding the Bees without exposure to cold or
attacks of other insects; protection from vermin and attacks of other insects; protection from vermin and
thieves, (being under lock and key;) cool store-room, and thieves, (being under lock and key;) cool store-room, and ment that ever has been tried, and complete inspection of the entire hive, under every possible circumstance, without disturbing the Bees, or stupefying them with smoke, A hive on this construction may be seen at Mr . ${ }^{\text {Milton's, }}$ Rectory, April , Geat 1843 .

["Patent Bar and Frame-Hive," containing eleven frames; mion-frampe.]
Floricultural Sociely.-The remarks which headed your Notices to Correspondents in last week's Paper will be Florists' flowers, as an the numerous class who cultivate up with renewed vigour the exertions you have hitherto made to gratify their tastes in common with those of your would readers. To those of your correspondents who appointed personal vanity, or because their individual notions or private purposes cannot be carried into effect, I would offer a few remarks on the Floricultural Society. This Society was formed in consequence of the repeated former Metropolitan Society; and having once been estagreat majority of well-known florists, both amateur by the fessional, its objects not being in opposition to any other Society, but principally directed to the examination and encouragement of seedlinga. Many of these parties,
actuated by sincere and proper motives, have continued their support ; but many, on the other hand, from causes which i do not now wish to scrutinize, have retised in dis appointment, and expressed this by abuse. I would not
attribute unworthy motives to all such, for even in the best of us there is a feeling which arises from disappoint ment, and often exercises an influence over our conduct of which we are not conscious-and this is especially the case when the parent-like affection we have for our own productions (particularty if our interest is also at stake) meets Society any check. Hence has arisen the idea that the amongst other circumstances, the Society, however steady in its advance in the estimation of the public and of all hourabie men, has not been supported by some of those ho would eventually be most benefited, with the vigour and cordiality which might have been expected, had their Anosire for a fair and impartial tribunal really been zealous, Another charge against the Society is, that they bave efused to give private opinions, (which of course are forfavourable, and have thereby discouraged appeal from those who did not wish to have their names appear. This may to a certain, but very limited extent, be true; but the not to be sacrificed to a trifling exception, and after all the test by which the Society must be judged is not whether they have pleased every one, for that is impossible, but whether they have acted up to the principles ficklench they started, and whethex, allog for the which they have been called upon to decide, and the falli bility to which all buman judgments are occasionally subject, the result will prove that they have been guided by the lionesty of purpose and the skilfulness for which you holding its meetings by candle-light, the convenience of the great majority of the members is thereby best con the great mant for this armangent too sulted, and, but for this arrifer theo gether unable to attend.-T.C. Wildman.
Scoteh Crops.-Through the medium of your Paper I take the liberty of asking a question of your correspondent of p. 265 , signing himself "Not a Scotch Farmer. hay obtained by Mr. Mowbray, of Cambus, chiefly, as I understand him, by the application of Liquid Manure, 1 do not disbelieve; but as an average produce of 9 quardo not disbelieve; but as an average produce of in some places of that field of 15 quarters to the acre, and a crop of $3 \frac{1}{2}$ tons of hay to an acre, are resuits so far exceeding any I have ever heard of from the best farming on the pertion, and at what periods of the year, was the Wheat portion, and at what periods of Manere with the Liquid what species of cart was employed? - A Subscriber

Budding Roses.-As the plan which I adopt in budding Roses has been eminently successful, (scarcely one havin failed out of a very large number of stocks operated upon last year, perhaps you will allow me again to repeat it, the Bengalensis (or Blush Boursault, as some gardeners call it) in preference to the Wild Briar, which I find more apt to canker and become bast-bound. I commence my labours about the beginning of June, and continue till the middle of August; and I invariably leave a small piece of the wood, as a protection to the eye, using worsted for binding instead or bast. plentiful in the Bengalensis, which keeps the bua cool even proved last form in work early in the year formed good ripe wood before the winter, The propagation of the Bengalensis is exceedingly The propagation of the Bengalensis is exceedmgly easy and allo never falls The disappointment of amateurs in budding condition. The disappolathe andeurs in budding is occasioned too often by ther attempting to deprive the bud of all the wood, whicu, uniess it is very skifuly extracted, irreparably injures the bud. New wood mus of course, glways be chosen in both cases.-W. W
Scarler Pelargonima. Monk remarks on these plants, 1 think he is a lucky man to have so much botlom-heat, othow host $f$ spare time, -which few gardeners can now boast of. I will offer a few simple hints as to how I manage to have plenty of good plants to turn out with little trouble; it may be acceptable to some one who is, lke myself, shorthanded. The readiest way is to raise them from seed. If, however you have any particular sort, you must propagate by turn all the plants $I$ have to spare into the open border about the 21 st of May; I thus get plenty of cuttings and seeds. The cuttings I take off about the middle of July, in an afternoon, and trim them ready for potting the next morning, cutting them close under the fourth joint, laying them lhinly in the greenhouse or shed, to dry till the morning. I then get some wide-mouthed thirty-two-sized pots, and fill them about half full of crocks, with the rest silver-sand and leaf-mould, equal proportions, putting them close round the outside of the pot with a dibble, and pressiug them firmly. I give them just a sprinkle of water, and place them in a two-light box, only filling one light, so that the light that contains the cuttings may be covered with a mat, and the sun be allowed to shine on the other; which will warm the frame. If the surface of the pots is dyy in the morning, I give a gentle watering, giving air for half an hour to get the leares dry if it is cuttings look very flagged. They will be well rooted in
month or five weeks. I then pot them in thumb-pots, setting them in the frame, shading from hot sun, and soon as they have filled the pots full of roets they A hifted into sixty-sized popith more roots, they are hess ind and put into frame are leaf-mould and ess ar a week till eotablished with fre they ar epre fill I lea fre the live vite oft mo air is the give, till J lhe the light quite w. The plo shes, where worms do at get the poring ff the tops, let them stanu ouy as as they are safe from frost, and sho wo spared, giving as much air as consts witb the safety of other plants. Thave thus fine beny slock plants to plant out, which requre no ther I have now and no shifting from the sisty pots, for have now plants raised in that way, son the tor fowers. The seed is easiest saved about the latter end of August, gathering the heads as they ripen, and laying them in the greenhouse or hothouse on paper, thinly, to dry. When dry, they should be well rubbed out, and sifted in a sieve of such a size that the seed. may pass through, leaving the seed-vessels in the sieve. Keep the seeds dry till March, and then sow them in pans, placing them in a cucumber-frame till they germinate. They must not remain there long, or they will damp on; take them to a vinery or hothouse, and place them near the glass til they Lave four leaves, then prick them out in pans or boxes till they are two inches in height, when twey mus be potted in thumb-pots. They should afterwards be potted into sixty-sized pots, and treated exactly as recom mended for the cuttings. If there is plenty of room, and arge plants are desired, they must be stopped and shifted into forty-eight-sized pots. But I find that the smaller the pots, the less likely the plants are to shed their leaves, as the scarlet Pelargoniums do not root so freely as the other kinds. I have now about a thousand seedlings ready to prick off, and find it much easier than striking them by cuttings, besides the chance of getting improved varieties. I never heard before of potting the plants in fresh green turf:-will any of your correspondents say whether they have found it answer, as it seems aomething new ?-Caleb Diplock.
Manures.-The very interesting and instructive experiments of your correspondent at Cookridge, near Leeds, seem to furmish an illustration of the principle in artificia a fertilizer, that little benefit can be expected in employing in a very small proportion, into the composition of the plant it is intended to grow. On referring to the table piven by Dr Tor ini of the Journal of the Royal A ricuitural Society, entitied Table IT-of the Constituents of crops therein pand Pores laime the but a few iontain less autohuris acid The proportion Which the two substomces bear to one another is pretty nearly that of their representative numbers that it may be inferred that in the Potato root they are really present as sulphate of lime or gypsum. Another reason why gypsum alone was all and the Pota requiring but a very small supply and and furnished with deep-striking roots, it pould pro bably mes with sufficiency in any soil not absolutely desty of if this be so, the inutility of sppity destitu in this as a manure is evident. Not gypsum, with the alkalies; for the Potato, in its malural state contains as much zoda as dry Wheat grain and more than one and a balf times the quantity of potash * rai consideration is evidently the key to the fact of the great benefit effected on this root by wood-ashes (rich in potash) and sulphate of soda (glauber salts). I think it would be satisfactory to know with certainty whether or not the soil in the esperiment of your correspondent, does really contain sulphate of lime; and if he think so too, I shall be happy, gratuitously, to solve the question, if he will forward a sample to me, and I will let your readers lroom the result, -W. H. Potter, Chemical Works, Fore

## Slreet, lambeth.

Gentianella.-(Gentiana acaulis).-This is seldom seen o flower well, and Doctors differ much about its treatment. I made a little square bed, in 1840, in which I planted 20 good-sized bunches, with good balls of earth attached to each bunch. They have flowered well every year since, and have been much admired by all who saw them. At the present time there is upwards of 350 blossoms upon them; the situation very low, so that we lose many is half common garden mould, which is very light, and half loam and leaf-mould, such as comes from an old Melon-bed; and every year the bed is top-dressed with loam and leax-moula, in weather, in February or early in March. Neiner spade nork is used among them, dressing is done carefully between the plants.-. Winchester College Gardens.
Frozen Plants. - Notwithstanding the soundness of "C.'s" arguments, I am still doubtful if the method prescribed "F p. 84, has the effect of abstracting frost from plants. that, when the plan is snece" and I have fully experienced little damage. If "C." has determined it by actual experiment, I am bound to submit to his better judgment ; and when occasion requires, I may still continue to practise it, against the evidence of my senses, on the faith of others.
Indeed, one morning last month, when visited with boith

I would strongly recommend the leaves of the Beet (or, peraps, those of Mangold Wurzel would do as well,) as a manure
frost and snow, I tried it on wall-trees, and Gooseberry-
bushes, without any marlsed result. I am perfectly aware that frozen vegetables, of a hardy nature (possibly greenopportunity, ) if immersed in water soon recover; but they must not be exposed again to a freezing atmosphere in their wet state, or the frost would lay greater hold on plants, immediately on watering, in a temperature above soon cease, should the water freeze upon them ; which is more from the state of the atmosphere than from any secret interchange of temperature going on between the
plant and the water, as it is well known water will not freeze, even if thrown upon ice, unless the temperature below freezing (?) The analogy between a cold bar of iron in a warm hand and the present case does not hold good,
since the effect produced by the process of interchange ceases immediately the hand is removed; so the watering prevent its congealing on the plants, or their texture would be more endangered than if they had remained dry. I am sorry 1 expressed myself so vaguely, that "C. should suppose me ignorant of the tencency of heated air to
ascend ; and that, consequently, the nearer the glass, the warmer it is. I thought I wrote near the front glass ; my Pelargoniums stood on the floor of a vinery between the of the house, and on a little higher elevation than where the plants stood; so that there is no inconsistency in the injury being sustained in that position. under my Apricot-trees fhich is not to pans of wate tion ; but from the affinity which frost to create evaporaconjectured that the nitrous particles which will lodge on the dewy blossom would be diverted into the water. J. M. [This last paragraph is above our comprehension.] Birds.-Two or three years ago I witnessed a very bird, exemplified in the case of a Thrush, which bad been taken from the nest about a fortnight and was just able to feed itself, and a couple of Blackbirds about three parts fiedged, and as yet unable to feed without assistance. he latter were iatroduced into the Thrush's cage, and had not been there long before the Thrush, itself only just emerging from babyhood, took compassion upon their helplessness, and began feeding them with all the solicitude of a mother. From this time till they were able to feed themselves it constanty attended to them, and upon no however tempting, until its young companions were satis-fied.-Boughton Kingdon, Teignmouth
liquid or dry state? My Vines show y quantity of blossom every year, and as regularly shank off ; although for some years past I have never applied fire-heat to the house the border is fully exposed to the sun, never having any
crop on it, so that in this instance younwould think that it could not arise from the cold at the roots and heat at the tops. I have tried guano with everything, and found year to swell and ripen an enormous crop, solely, I am sare, by giving its roots a copious dose of guano in the applied in a liquid state, and not too strong; a little and often is a good maxim to observe with it. It is not possible to say what causes your Grapes it the roots are wrone - perhaps in a cold wet subsoil] Bones.-I am rather surprised to find froms Mr that boiled bones are so superior to unboiled. I have purbushel whereas the latter only weigh 28lb. This the great difference; and I cannot comprehend how bones, as a manure, can be improved in value by having all their of fat, grease, and glue, must be worth something. I am not prepared to prove the actual difference two as regards their effects on land.-E. $R$., Halifax.
[It is understood that the experience of farmers, especially in Cheshire, is in favour of boiled bones. Theory would possibly prefer them unboiled; but if facts are against it, theory must give way. Will you kindly report the Turnip-fy.-I have found that lime lightly strewed over Turnips (just up) before the dew is off the ground in the morning, most effectually and invariably preserves to some
Seeds.--The Editor of the Gardeners' Chronicle agree with me, that seeds sown in dry, pulverised soil, shortly egetate than mistened with rain, woad 0 . does not, however, admit my reasoning upon the fact. In goniums, who frequently repots his cuttings, shakes the soil before replanting, assigning as a dips in warm the soi adieres more firmly to them when they are fresh potted I know a lady who never fails of success in transplanting into pots for winter bloom, seedling plants of Mignonette. rom the roots of these she shakes off all the soil, and be wrong in believing that success, in both cases, depends upon coating the roots with fine particles of soil, under circumstances whe , Editor explanation will be thankfully received.-C.-[It may b explaaation wil be thankfully received, of the behaviour of his roots is just ; but it cannot hold good of seeds, because as sooz as the radicle sprouts forth, it leapes that
urface to which particles of earth are said to adhere. The
reason why it is best to sow seeds in what is called dry moistened; they then decompose the water as they get it and are not suddenly gorged with fluid they cannot digest. Draining.-In your Number for April 15 I observe communication signed "W. W.," strongly recommending mode of draining by a movable mould, upon which th when the mould is withdrawn for another operation. It cheapness at $1 \frac{1}{2} d$ per yard, and its duration said to be proved will not justify the practice if it is ineffectual for the purpose intencled. Drainers are very apt to imagine tha ground passage through which the water will flow, and fr bur to be performed, the object of which is to collect and convey away the surface-water along the whole course of the drain, the plan under discussion will be utterly ineffith. It is painfal to bee a piec of lared cons for want of draining; but it is still more provoking to see a similar state of things from drains being badly xecuted, when the whole capital spent in their construc ion is literally buried with their materials
often happens not only from the plan under discussion where the very support of the drain deperds upon it eing made impervious to the water it is intended to carry of, but from the slovenly execution of frequen rains of tiles, stones, or other materials. It is commonis aagined that when the drain is laid the work is done, an hat the most retentive soil may be heaped in and packed down above it; whereas laying the drain is but hal the work, if an access-soil for the water from above is not retained by filling it in for a considerable depth with cravel, broken stones, or porous earth. And thus this mos nvaluable improvement is subjected to distrust, and vast amount or capital is wasted formant of a little reflec fion or attention to practical rules.- $V$. . $M$
Wireworms. - Observing many inquiries in you Paper as to the best mode of destroying the Wireworm I beg to tell you that last year I had been using som chloride of lime-water, and poured it over some grass, whe immediately killed the worms, I was from this succes nduced to try it on some very sickly Carnations infested with Wireworms, and had the satisfaction to find them recover rapidly. The proportion I used was about a table spoonful to a pint of water, but this of course mus depend on the quality of the soil. $-\boldsymbol{F} . B, H$.
Pears.-In reply to "A Subscriber," I beg to inform you that the Pear "Inconnue (Van Mons) was sent me some six or eight years since, by M. Van Mons, of Louvain, as a seedling without name, with several others aso seedlings not named. To distinguish them, they had the above name attached to them, with the number in the atalogue. Thus, the above is "Inconnue Van Mons yet fruited. The above is a most excellent middle-sized melting Pear : shape, oblong ; colour, green ; keening till February. Inconnue Van Mons, 219, will, I think, prove also a fine late Pear. I have reason to believe that Pea alture is yet quite in its infancy. I anticipate that we hall have as many fine varieties ripening in spring and chis codling should be raised from sot of late Pears that keep through the year, such as Bellissime d'Hiver, Easter Bergamot, Bergamotte de Hollande Poire Jalvie, and Rouse Lench. These have been pre erved here in my fruit-cellar till June, and even later: crossed with such sorts as Hacon's Incomparable, Beurr melting very late Pears would probably be the result. I hould recommend Rouse Lench to be fertilised with Winter Nelis, previously removing the stamens of th former; and this should be done before the blossom expands, by inserting sharp-pointed scissors. Easter notte de Hollande with Hacon's Incomparable and so n , according to the fancy of the cultivator. The objec to attain is, to procure very late Pears with the high flavou of some of our earlier varieties.-T. $R$

FOREIGN CORRESPONDENCE.
New Plymouih, Taranaki, New Zealand, Dec. 1.have gxeat pleasure in informe the first body of emigrants landed here 80 lately a March, 1841, we now.muster between 40 and 50 Members, and had it not been for the lateness of the season when umber more, who have should have enrolled a gre ecoming Members next year. Considering the man cares and difficulties attending a new settlement, I think t speaks very favourably for our population, that so many and we shall prosper and I trast sumtain the character of th Taramaki ditrict of the garden of Tealand We here beatiful climate, and I hope me shall torn o advantage, although some time must necessarily elapse as we have everything to do. $-\boldsymbol{R} . gether escaping ordinary observation. After experimentally
explaining the nature of those elements, he adver ted to the great lifficulty of conceiving how the combination of such substance can produce all the varied forrs s recognised among the vegetable
bodies surrounding us. A number of beautiful experiments was
then made to show that an infinite variety of changes takes place by combinations of caseons and fluid matters unde mixed, to form colours: © one kind of colour was changed into another; colourless finids became coloured by merely passing
through the air, solid metal was thrown down from colourless
trangparent fluids. Gases were then act ransparent fluids. Gases were then acted upon and shewn to bining with the oxygen of air. Solits were shown to change int gaseous matter, ron itself being converted into vapour. Gases
were condensed into solid matter by their mutual action. Fluids
were in like manner suddenly condensed into solids. is were dissolved in air. After these preliminary observation which they applied to the composition of Vegetable substances By the analysis of the Spinach and Rhubarb leaves. he demon
strated experimentally the existence in those substances of Carbon, Oxygen, Hydrogen, and Nitrogen-the gaseous element animal matter, in order to show the identity of the product thus obtained from both the anixnal and vegetable kingdoms in plants of Nitrogen, thus confirming the proving the existenc chemists upon that subject, and proving the great importance o this element to vegetation. Sulphate of copper was also intro-
duced successfully as a beautiful and very sensitive test of the presence of ammonia; its white colour, when powdered, chang
ng into deep blue, when acted on by very minute guantities of

ROYAL AGRICULTURAL SOCIETY OF ENGLAND square, on Wednesday, the srd of Moy, the Earl of Hardwicke
President, in the chair. John Hell Crompton, Esq., Mayor Derby, was elected a Governor, and sixty-two gentlemen Member mittee, reported to the Council that agreeably with the order of the Council, the Committee had purchased 1,000l. in the New 3
per cents. in the name of the Trustees of the Society; the tota amount of the Society's Stock in tho funds now amounting to the previous month of cash balance at the bankers, at the end ubscription was in arrear, were ordered to be expunged from the best essay on the drainage of land, was unanimously arljudged toar Swindon, Wiltshire, Councll the report of the proccedings of the General Derby Com arious arrangements for the meeting in Jittee, relative to the eceived and adoyted by the Council, and its recommendation to the public (at the same rate as in former years on the Tuission as well as on the Wednesday preceding the pencral day of the
show, confirmed. The Conncil then proceeded to the consider ation of the question of the place of the Soclety's Ammual Country Meeting of 1844; which, agreeably with the established routin the district formed of the following conntins:- Middlesex, Surrey
Kent, Sussex, and Hampshire, including the Isle of Wight an the Channel lslands of Jersey, Guernsey, \&ec. Deputations from
Maidstone, Sonthampton, and Winchester, had successively an claims of the towns which they respectively represented. Th members of each deputation laid before the Council the replie to the official queries transmitted to them on their or, ginal appli eference to the communication of each place by railways, \&c example of the directors of the Midland Counties Railway a on Friday last, also decided to convey to and from Sorthampton to give every facility for quick conveyance, and not to charge an additional fares for passengers. On the motion of Earl Spencer the President was requested to direct a special council to be
summoned for Thursday, the 11 th of May, and a committee wail with pointed to report to the Council on that occasion. Agreeabl That a preliminary impression of the Prize-Sheet for the nex
year should be prepared, and laid before the Members at the ensuing Anniversary Meeting on the 22d of May, for their revision by the Councl ; on which occasion Mr. Charles Stokes gav
notice that he should propose the first prizes in each class Bulls to be raised from 30l. to $50 l$. Mr. Gibbs brought forwar
his motion on the subject of the date at which subscriptions shal Spensidered to become in arrear, which was seconded by Ear Spencer, and carried urianimolsly, namely:- That all Member
sliall be considered to be in arrear. whose subscriptions, tue in
advance advance for each year on the 1st of January, remain unpaid by
the ist of June ensuing." Dr. Play fair returned thanks to the Council for his appointment as "Consu ting Chemist", to the Clover, and a statement of the progress of the winingdon schools,
the Rev. J. M. King presented a copy of his translation of Virgul
Georyics. Suffilik; Dr. Tilley, the numbers of his Agricultural Chemistry osa informed the of the Farmers Heerala this year of the Italian Scientific Association at Lucca during the two last weeks o May 2, 1843,-The Lord Bishop of Norwich, President, in the

## The Malloo, MISCELLIANEUUS.

abundantly throughe Malloo is a large creeper, growing bottom of narrowhout the district of Gurbwal, at the precipices of rivers and in ravines; it it 40 or 50 yards in a very strong considerable thickness; from the bark of it it for stying up rope may be noade. The natives chiefly use
the fresh bark; it also makes capital matches for guns, and muzzles for oxen and caives. The leaves, wich are in length, are made into apan in breadth and abe to same with twigs, to form baskets for holding turmeric, pepper, and ginger; great quantities of these baskets are sold, being used by the poor instead of dishes seed of the pod is also eaten after being fried. This creeper is generally cut in July and August, but this may be done at all seasons. The outer bark being stripped off, is thrown away, and the inner coatiog, when quired for ropes, is soaked in water and twisted when wet.
Before being used, the fibre is boiled and beaten with mallets, which renders it soft and pliable for being made into ropes. Although these ropes are strong, they are not
very durable, but rot if kept constantly very durable, but rot if kept constantly under water; they will last about eighteen months if occasionally soaked, with tar.-Transactions of the Agri-Horticullural Society of India.

Raising the Currant from Seed.-To grow seedlings, it is important that the largest and best fruit should be
selected. A strong and healthy plant should therefore be chosen, and if too full of fruit to prevent its attaining a good size, it should be thinned out, leaving only sufficient to bring the plant to the utmost perfection. As soon as the fruit is ripe, it should be picked, and the seeds washed out from the pulp; this may be easily done of bruising the seeds in water, passing the whole hrough a situation and afterwards spreading it out in a cool, until the to dime ; after which it may be place season a small piece of ground should be selected, and made fine by deep spading and raking the surface; the seed should that phanted in drills about a foot apart, sowded as to require thinning out to any extent. No other care is requisite than to keep the bed clear of weeds. The plants will prodnce fruit in the second or third vear, when such as are worth preserving should be marked, and the remainder rooted up and thrown away.--Hovey's Magazine of Horticulure To boil Vegetable-Marrow.-Gardeners are apt to withhold their Vegetable-Marrow till it is not worth bringlength. Under that size they may be boiled whole; but if as large, they must be divided once, and all the seeds be removed. Throw a little salt into the water to keep them green, and boil them in the same manner as Asparagus, green, and boil a tost with melted butter.
Poisoning by Snails and Corid́ria myrtifolia.-A family of peasants living in the commune of Clermont, near Toulouse, fell a sacrifice to poisoning by snails. The physsician who attended them communicated what I collected concerning the circumstances which preceded the symptoms which I myself witnessed I had no diffindty i ymptoms which 1 myself witnessed, I had no difficulty in narcotico- acrid thorn-apple, \&c. No doubt remained in my mind as to the cause of this terrible disease, as soon ais I knew that the snails eaten had been collected in the bushes called in (Corisria reut, but in the pátois of the country, roudou Coriaria myots which browse on them, and that the kill them, arl causing giddiness and a kind of epileptic attack; but a fact which is not known, is, that the flesh of these animals may occasion the greatest danger, and even death itself. but it is commo to see among our peasants indisposare cansed by snails, which comes from their eating them as soon as thay are gathered. The example of the ancient Romans should be followed, and these animals should not or a year, feeding them on bran and wild thyme. This is the way also to make them fatter and more savouryGazette Medicale
experiments which M Vy tanis.-Trom the various action of salts on M. Voger, sen., has mads on the owing conclusis:- lats he has arrith at the fols immersed in a solution of sulphate of copper totall absorb the salt, convert it into proto-sulphate, and die quickly. 2d. That acetate of copper produces the same effects, the salt absorbed becoming proto-acetate of copper. potash and iodide of potassium, and die more or les quickly. 4th. That the sulphates of zine and manganese are absorbed by plants without suffering decomposition, and the plants die, 5th. That plants absorb nitrate of cobal and nicke, whice of them nced by emetic tartar. 6th. That the oxalate and tartrate of oxide of chromium and potash are slowly absorbed by plants, and the bichromate of potash much more quick the salt rapidity; they become of a yellow colour and die. 7th. That plants absorb nitrate of silver; but they decompose it, and the oxide of siver is reduced to the meta decomposed. 9th. That corrosive sublimate is absorbed by plants; some of them decompose it into calomel, and others by some plants and not by others. 1Ith. That plants which contain much carbonate of lime, such as the Chara wulgaris and the Stratiotes aloides do not absorb a salt

Cerenper from solution; the same also occurs with the A New Disease of the of a new disease of the Plum is given in "Hovey's MagaMay, 1841, narris, of Cambriage, Massach amongst the Plums in some gardens of this vicinity and it has been observed again during the present season. Soon after the blossom had fallen, the fruit swelled rapidly, and in two or three weeks it had grown to more than ten times the size that it ordinarily attains in the same period. It was soft and compressible, as though it were puffed up with air, being filled with an elastic spongy substance of tige of a bernel remained ; in others, a little, soft, and emper from, and emply more tha the dropped, aud be seen on the trea. the fruit, and abortion of the on almost all the diseased several of It is probable that they begin their attaoks in the blossom, and that they prevent the fertilisation of the ovule or young kernel, by destroying the pollen ; and, by sobsequently puncturing the Plum, produce an irritation, which is followed by a rapid swelling and diseased condition of the fleshy substance of the fruid. Preternatural enlargements and distortions of the parts of fowers and of fruits are known to be occasioned by the attacks of
other species of thrips. This may be seen in the blossom of the black Whortleberry (Vaccinium resinosum), all parts of which, calyz, corolla, stamens, and ovary, are sometimes enormously enlarged, and entirely changed in texture and appearance, in consequence of the puncture of a kind of thrips.
Valley of Kieri,-Notwithstanding the extreme insalubrity of this valley, in which the pitch-springs are situated, it is not entirely uncultivated. The dry parti. are pianted with Olive-trees, which appear to flourish. Along the sides of the morass, pretty extensive plantations of the Currant-Vine have been formed by ditching and draining, -and, as any one who pleases may cultivate the marsh, they are extending. We saw two men employed in reclaiming a piece of the swamp, to plant Vines in; they were labouring hard, with their heads uncovered, ex posed to the mid-day sum, up to their knees in black elid water, throwing up mud and decomposing vegetable This and forming at the same time roductive : but, as might be expected under such circumstances with so littie regard to preoaution, very unwholesome and hazardous; fever being alnoost inevitably the consequence or engaging in it. The enteryrising and careless labourers Kieri. The on the spot, but belong to the village of table matter, is very precocious, rapidly coming to perfection, and as rapidly decaying. It bears fruit, it is said, on the third year from its planting, and perishes in about 12 or 15 a yielding a great profusion of fine fruit.--Davy's Notes yielding a great profus.
on the Ionian Islands.

## GARDEN MEMORANDA

Beiträge zur Anatomie der Cacteen.Von M. J. Schleiden. (Contributions to the Anatomy of Cactacer, by Dr Schleiden.)
This is a paper which appeared in the Transactions of the Imperial Academy of Sciences at St. Petersburgh. In the commencement, the Author remarks that both in
Zoology and Botany nature displays more of the secret of Zoology and Botany nature displays more of the secret of great mass of common phenomena. In this paper he undertakes the examination of the structure of the stem of Cactacex, as an example of singular organisation in the vegetable kingdom. The greater proportion of the observ-
ations were made on the Opuntia monacantha, although ations were made on the Opuntia monacantha, althoug many other species were occasionally examined.
The paper is divided into three parts: the fir
The paper is divided into three parts: the first treats of the structure of the parenchyma, or cellular tissue of the pith and bark ; the second, of the external cortical layers, ascular tissues.
The cellular tissue of Cactacese has generally a loose character, so that, in most cases, it retains its globular form. In the external layers of the bark it is sometimes elliptical or cylindrical. It is only in the medullary rays, and near the bundles of vessels, that it assumes the form of polyedral cells. On account of the looseness of the are easily torn asunder. At the points of contact of the cells are observed round dots, which Meren called great pores, but which the author considers only, thickened portions of the cell. On these spots may be seen small pores, which may be made more evident by boiling the tissue in canstic alkali, adding to it a mineral acid and then iodine; the spots will be coloured blue by the iodine, and the pores will be clean. In many of the cells, cytoblasts are seen adhering to their sides. The contents of the cells colobules of these substances may be frequently found ad lering to the large spots in the cells above mentiond The starch granules are very large in Cereus tetragonns. Besides the ordinary sized cells, larger ones are seen which. are filled with vegetable jelly, which is arranged in forked lines, giving them a very beautiful appearance in forked best seen in Cereus Curtisii and Opuntia imbricata.
Crystals of oxalate of lime (raphides) are very common in the cellular tissue. In a dried specimen of Cereus senilis, they formed as much as 85 per cent. of the bulk of the plant. The crystals assume a variety of forms, and (drüse). Oxalic acid is frequently found free in these plants, and seen to act upon them injuriously, and hence probably the necessity for the existence of carbonate of probabiy the necessity for the existence of carbonate or bonate of lime exist also in the tissue of Cereus triangularis,

The cells are formed from cytoblasts. In some of them a remarkable dissepiment exists, dividing the cell into two parts.
In the bark, the cells under the epidermis are thicker than ordinary. They seem at first filled with jelly, and at last become very hard. This tissue Schleiden proposes to call collenchyma. It exists before the ordinary layers, of the bark (borke) is more highly developed in Cactacea than any other plants, and consists of one or more layers in different plants. In old age it becomes continuous with the parenchyma, and in some species presents pores Crystals are very frequent in this layer of tissue
The cells of the epidermis present mostly a waved character, but in most instances are smooth. The stomates
consist of two cells, placed opposite each other, and the order may be known by its imperfectly developed stomates They are seen on the imperfectiy developed leaves of Opuntia.
The parts of the Cactacer have a remarkable tendency to a spiral development, and not only are the seter, spines, and hairs, developed spirally, but even the cells of the seta of Cereus flagellaris have this character.
The bark (or borke) or cork-layer of these plants is a late development, and appears at different points between the collenchyma and parenchyma of the liber. . The cells are developed from without, inwards, and are truly an endogenous growth. It often bursts through the layers above, and is thrown off in scales. The process of its formation is very like that which takes place in the cicatrization of formations on the soles of the feet of some animals.
The stems of Cactacea present great variety in the arrangement and course of the woody bundles, which include What is sometimes more especially called the vascular Pereskia with variety is seen in passing from the stems of and Opuntia, to the hemispherical forms of Mammillaria and Melocactus. As the Cactaceæ grow all the year round, there are no regular circles of concentric growth, although some causes seem to act upon them that determine occasionally a suspension'of growth. Thus, in a stem, 30 years The woody bundles (Holz-Ko
variety also in their internal form, from the present great gated cell to the development in from the simple elongated tubes of complicated spiral fibres. The spiral vessels always contain air, and in no case has the author been able to detect within them fluid. He considers it highly unphilosophical to conclude, because in one or two instances fluid has been found in these vessels, that consequently these vessels aniversally are destined to convey
fluid. Even in Hoya carnosa, a plant which contains
much fluid, the
nothing but air
othing but air. The spiral tissue presents many forms. In Pereskia and Opuntia the cells have developed in them double spiral bands. Sometimes these bands are in the form of rings, and when the ring is broken, the double character of the
band may be perceived. These bands are sometimes so band may be perceived. These bands are sometimes so
broad as to leave only a small space in the cavity of the broad as to leave only a small space in the cavity of the
cell, so that they appear like disks with a little hole in their cell, so that they appear like disks with a little hole in their
centre. The development of the spiral tissue is the same centre. The development of the spiral tissue is the same as that observed by the author in plants in general, and made known in his celebrated paper on Phytogenesis. The cells that become spiral cease to grow with the rest, their contents arrange themselves in a spiral manner, and they stroyed and absorbed, so that the spiral fibres lie alone in the intercellular passages.
This paper is accompanied by ten beautifully lithoWhich the esthations, and quite sustains the high character end functions of the vegetable kingdom. $-E$. $L$

CALENDAR OF OPERATIONS for the ensuing week. after the middale of this mononsthe seldomm experience liate frosto frost and so much sunny weather, we may safely begin planting oldest and hardiest zorts, if these plants hege been property managed in hardening them off-and we have seldom had a better
season for this work-they ought now to be in turning out, unless perhaps in low, damp, or late situations. Make active preparations, therefore, to commence the work on the first wet or cloudy day, if the beds have been dug over lately,
and your plants have frmm balls of earth about their roots, you
had bet fresh better plant deeper than in . Wyery ilant ought as the pood watering at the time of planting, and if the weather is dry but recollect that "water often and little at a time " is one of the and how much more so if you, apply the prineciple to out-of-ddoor
crops in summer. In nine cases out of ten slightsurface-waterin crops in summer. In nine cases out of ten slight surface-watering
at this season does actual mischief, and plants are safer if teft take their chance than when submaitted to such badd gardening. surface is well stirred up with a hoe as soon as it gets dry, and
your watering will have twice the effect. In the kitchen your watering will have twice the effect. In the kitchen-
garden endeavonr to muich as much of the crops as possible in rows, this being much better than watering. You will observe
how well the Strawbery -beds look that are mulched with short grass; oid tan, rotten dung, or half.spent linings from the hot-
beds, or indeed any sort of itter, will do for this purpose. Nohod thiaks of leaving a newly transplanted favourite tree unmulelied benefited by it as newly-planted trees. In the American ground most of the plants are from naturally shaded places, and they will
loxuriate in the hottest seasons if the beds are thickly covered loxuriate in the hottest seasons if the beds are thickly covered
with grass, fern, moss, or any other sort of mulching: but Ithink have said enough to draw the attention of the young amateur

## - -KITCHEN-GARDEN AND ORCHARD.

Pinkrf.-As the fruiting-plants should have but just water
enongh to keep them alive after the fruit is fully swelled, their suckers orten suffer at this season for want of nourishment. As cotting away the olach botrom Ieaves en oncourage the the and by a good
watering. Shade, water, amd syrine the the ther plent watering. Shade, water, and syringe the other plants as before,
VINER, -The principal work here is now of a more routine regularly tied up, give air early in the morning, and reduce it early in the afternoon after a good syringing, if the fruit has not
changed colour; and as the houses are now getting clear of pot plants, kep all the paths, sills, walls, \&ce, in a clean tidy state. of air, with the fruit exposed as much as possible to the light, is
all you can do now, if the trees are free from insects-which should never cost much trouble in the houses if well looke after in time.
Fresease -As soon as the principal part of the first crop is gathered and probably some of the young shonts will have to be thinne or cut back. Fig-trees shonld be kept thin of wood in all situa Cucumers in Mer large
hand these he whll find the most difficult to manage at first, no being aware of the importance of keeping the shoots well thinned rom the beginning, Let the main shoats reach the sides of the very three of the side shoots may be rubbed off with the finger ois soon as you can see them, and the rest stopped above the first is set on them. The nearer the fruit sets to the main branches the better; and always let a joint or two grow beyond the fruit on the single-rod system.
citchen-garden, may now be planted out in early and favourable situations; but in cold exposed places a week or ten days hence

## Out-door Departme

kitchen-garden, to plant out now be made the best of in the others, and to look diligently after slugs and snails. Every moth and butter ty shoud be as care
tribe from the early seed-beds, may now be planted for autumn use Succrssion Crops, in all their stages, will now show, if your
sowings have been judiciously timed. Endeavour to mark out sowings have been judiciously timed. Endeavour to mark out fying them.
Popatows.-The early ones will now be forward enough to
have the soil well stirred between them, like all other crops in
Pras and bians.-After you have pinched out the tops of with any sort of liquid, manure all the better, but do not yet use hard spring water, if you can help it
Orchard. All the trees on the
Orchard- - All the trees on the walls will now require close young shoots of Pear-trees as you can get in between tive main branches a good one; and if you do not choose to leave them to bear you may begin to reduce them after the end of July. Peach-
trees, like Melon-plants, are very apt to get into confusion about days wall-trees seldom had much athinned. In my younger their breast-wood was nearly full-grown. They were then night as plain as where the mowers left cutting a piece of cuts out a few here and there at a time, and in this way he
soon gets over a good deal of walling, and by the time he is all
round, some of his trees will want 100
lect as to the killing of the caterpillars.

## I.-FLOWER-GARDEN AND SHRUBBERY.

Stoves.-Those who grow Orchidaceze from the highlands of Mexico, and other elevated regions, on the cool system, have
their plants now in that forward state when they may be safely
taken to a hotter place-say to taken to a hotter place-say to a temperature of $80^{\circ}$ or $90^{\circ}$ through the day, and $70^{\circ}$ at night, or rather in the morning, Almost al
stove-plants grow too freely; when well-managed, the point of the shoots should therefore be pinched off from time to time.
Grieenhouse.- With the exception of the common toutine watering and syringing, the next thing of importance to greenhouse plants now in active growth is to form them into handsome specimens-some by training, others by pruning, or rather stopping, and all by being kept in a healthy, vigorous state. One mens is to let them flower too early; if the plant is quite new
there is no resisting this course, but in all other cases avoid it as much as possible.
Psts.- -
succeed the annuals a full supply of autumn flowering plants to somethmg else. If you are fond of a gond old Cabbage Rose and wonld like to have one on Christmasd old Cabbage Rose, tak thalf a
dozen pots from the reserve-ground, and plange them in old them like Heathsthill next Augant, when your may turn tleem out under a north wall; prune in september, and introluce to a must be in the
in this way
Flowrr-Ganden.--Planting the beds leere is the only topic what will be listencd to now; but did you ever hear of any one
whon, bing to preceptor, or by any other mode of reabeds? I never did, nor will I try to conrunce that planting his arranging is better than another; the grand points are, after all, to have suitable soils in the beds; to have a succession of plants for replacing deaths, or those going out of flower; never to have
gaps in the beds till the end of the season, and the whole to
have a healthy, tidy appearance.-D. Beaton, Shrubland Pavtc -

REPORT ON COVENT-GARDEN MARKET There is a great improvement in the hothouse Grapes this The bunches are of a very good size, as well as the Grapes, and Hamburgh kind.
Haty coloured; they are principally of the Black are some tolerably large Nectarines. Cherries and Strawberries are of good quality. Gooseberries are more numerous. Apricots,
being the thinnings of the trees, are plentiful Strawberries in pots, on growing plants, in good order. Asparagus and Tularly frequent and fine. Peas are more common. Carrots have been planted and started into growth; then pulled for the in one of the stalls; but it is now getting greenish. Cucumbers of all sizes, may now be had in profusion. Oranges are becoming dear. There is a great influx of now Cocoa-nuts. Of Cut-Flowers,
there are Tree Pronies, Dodecatheon media, Carnations, Capriolium sempervirens, Fuchsia fulgens, and Kalmia latifolia: puniceus, Boronia pinnata, noticed Fuchsia Chandleri, Clianthus more than six inches high, yet flowering well, Azalea sinensis, Cereus speciosissimus, and Lachnea purpurea, that have not

## NEWS OF THE WEEK.

Tre Budget of the Chancellor of the Exchequer, which was submitted to the House of Commons on Monday night, has been looked for with unusual interest. The leading fact of the financial year is the deficiency of the ordinary revenue by about two millions-and-a-half The total expenditure for the year is $51,160,0001$. the total income is $48,740,0000$., showing an excess of expenditure of $2,420,000 \%$. The Excise, which Sir R. Peel estimated at $13,700,0002$. for the year, has produced only $12,500,0000$. ; the Customs, which he estimated at $21,500,000 l$. have produced only $20,750,0001$. ; the repeal of the timber duties, from which he calculated upon a loss of 600,0002 ., has occasioned a loss of $676,000 \%$. All the calculations have been wrong, except that of the Income-tax, which being estimated at $3,700,0007$., is likely to produce $5,100,000$ l, though as yet the actual receipt has not been more than half that sum. The Postoffice shows, as before, a steady and progressive increase. By the help of the amount expected from the Income-tax Mr. Goulburn estimates the income of the present year at $50,100,0002$, and the expenditure at $49,387,0002$, and he therefore expects to meet Parliament in April next, with a surplus on the year of $720,000 \%$. In the expenditure, he promises a reduction of $900,000 \mathrm{l}$, consisting of a reduction of $645,000 \%$ in the expenses of our establishments, and one of $257,000 \mathrm{l}$. in the permanent charges connected with the public debt. He proposes no new taxes, and has no intention of remitting any tazes now in operation. He relies rather on the produce of the Incometax, and on the prospects of a gradual revival of trade. Next in interest to these statements is the conversation in both Houses on Tuesday respecting the Repeal agitation in Ireland. The Duke of Wellington in the Lords declared that the Goverament were determined to maintain inviolate the integrity of the empire, and Sir R. Peel in the Commons announced that he was authorised by her Majesty to repeat the declaration made by the late King in favour of the Legislative Union, adding on the part of Ministers, that there was "no influence, no power, no authority, which the prerogatives of the Crown and the existing laws give to the Government, which should not be exercised for the purpose of maintaining the Union-the dissolution of which would involve, not merely the repeal of an Act of Parliament, but the dismemberment of the empire." On Tuesday Mr. Villiers brought forward bis motion for the total abolition of the duties on corn. The debate has already lasted for four nights, and was last night again adjourned to Monday.
The news from India and China by the Overland Mail was in some measure anticipated by the telegraphic despatch noticed in our last. The details of the operations in Scinde are of course the leading features of this intelligence ; the news from other parts of India, though comparatively unimportant, will be read with interest. From China we learn that a good understanding subsists between the British Plenipotentiary and the Imperial Commissioner, and that the arrangements for the commercial treaty will be resumed on the arrival of the treaty as ratified by Her Majesty. -The French Chambers have been occupied during the week with discussions on disputed lections, the interest of which is purely local.-In Spain the Regent has accepted the resignation of the Cabinet and a Ministerial crisis has ensued, which promises to lead to a dissolution of the Cortes. The statesmen sent for by, the Regent have failed in the attempt to form new Ministry, and it is generally believed that in the present state of parties in both Chambers, the obstacles

## 3/20me Nrews.

Court.-Her Majesty and the infant Princess continue to make favourable progress. Prince Albert, the Prince Prince on and the Princess Royal are quite well. The and Tuesday visited Windsor Castle, and inspected i alerations and improvements in the Park. His Royal Highness was attended during his visit by Mr. Ingram Her Majesty's Head Gardener.-The Countess of Dunwore has succeeded the Countess of Gainsborough as the lady in waiting on the Queen, and the Hon. Misses Stanley
and Hamilton have succeeded the Hon. Misses Paget and
Liddell as the maids of honour in waiting. Lord Rivers, and Admiral Sir Robert Otway have succeeded the Earl of Morton and Colonel Drummond as the lord and groom in waiting on her Majesty.
Death of Lord Fitzgerald.-We regret to record the death of Lord Fitzgerald, the President of the Board of Control, after an illness of a few days. The daily papera of Thursday announced that no the fears then expressed that his Lordship would not survive the night expresseafortunately realised by the result. The noble lord expired about two o'clock on Thursday morning, retaining his consciousness until a few minutes before his dissohis consciousness until a few minutes
lution. It was evident to those who surrounded his bed, that he was approaching his death, from the exhaustion he experienced and the acute pain he suffered from the nature of his disorder. About five me fell into a morbid drowiness, and shortly afterdeath he fell into a morbid drowsiness, Ma shorliy after-
wards expired in the presence of Mr. Mahon, his Lordship's nephew, who attended him to the last. His Lordship is succeeded by his only brother, the Hon. and
Very Rev. Dr. Henry Vesey Fitzgerald, Dean of Kilmore. New Commission.- The Queen has been pleased to appoint the Duke of Buccleuch; the Eari of Lincoln ;
R. A. Slaney, Esq. ; G. Graham, Esq. ; Sir H. T. De la Beche, Knt.; Dr. Lyon Playfair ; Dr. D. B. Reid ; Professor Owen; Capt. W. T. Denison; J. R. Martin, Esq. ; James Smith, of Deanston, Esq.; R. Stephenson, jun,
Esq. ; and William Cubitt, Esq.; to be Her Majesty's Commissioners for inquiring into the present state of large towne and populous districts in England and Waley, with reference to the causes of disease among the inhabitants. The Queen has also been pleased to appoint fienry Hob-
house Esq., to be Secretary to this Commission. Official Appointments.-It is announced that Mr . Wilder, the chief-clerk in the Colonial-office, has retired after a service in that department for about 40 years. Mr. Smith has succeeded Mr. Wilder as chief-clerk in the
Colonial-office ; and Mr. Barrow, son of Sir John Barrow, secretary of the Admiralty, has succeeded Mr. Smith. The commissioners for the navigation of the Mersey have appointed Capt. George Evans, R.N., Acting Conservator
of the Merser, in the room of Capt. Fitzroy, appointed Governor of New Zealand.
The Levee.-The Lord Chamberlain has given notice that the Levee intended to be beld by Prince Albert, at St. James place on Wednesday next, the 17 thlinst., at $20^{\prime}$ 'clock. Income Tax.-A notice has issued from the office of Stamps and Taxes, that those holders of stock who have proved their exemption from Property.tax for the past year, on account of allowed to receive their dividends for the present year free of any deduction, provided the stook belonging to them remain in every respect the same as when the deduction of the tax was made for the last year. Where any alteration has been made in the amount since the former deduction, the parties entitled thereto will be paid their dividends in full (provided their income has not May they send to the office of Stamps and Taxes a statement of the amount and description of the stocks formerly and now held by them, in a form which may be obtaine from the surveyor of the district in which they reside.
The Mint.-The following is the total amount of gold
bullion and gold coin received at the Mint from the Bank of England and from private individuals, to be coined, from the 24th of June, 1842 , to the 31 st March, $1843:-$ from the 24 th of $204,592 \mathrm{lbs}$. 9 oz . 4 dmts . 14 grs . Total value, $9,559,5971.2 s, 81 d$. The total value returned to the Bank of England up to March 31, 1843, was 8,437,765l. A. Parliamentary return published this week, containing the expenses of the Mint for the year ending March 31, 1843, states 10,4200. 17s. ; the wages and allowances paid weekiy, as materials 12 nd , taxes, $6,529 l .12 s .7 d . \dot{\circ}$ solicitor of the Mint for prosecutions, $14,529 l$. 12s. $7 \mathrm{~d} . ;$ gratuities to the officers for
services on the China silver in $1842,266 l$; paid for services on the China silver in assays of ingots for coinage, $1,014.2 \mathrm{~s}$.; and charges for assays of ingots for coinage
melting, $12,312 l$. $18 s$. 11 .

Constabulary (Ireland).-The following is a statement of the amount and expenses of the Constabulary force employed in Ireland on the 1st January last:- 1 inspectorgeneral, 2 deputy inspectors-genera, 2 provincial inspec-
tors, 1 receiver, 1 surgeon, 1 veterinary-surgeon, 18 paymasters, 35 county inspectors. 216 sub-inspectors, 261 head-constables, 1,419 constables, 7,086 sub-constables, 304 horses, and 58 magistratess. The total expense of the establishment for the year 1842 was 441,605 . 5 s. $11 \frac{1}{2} d$.; of which amount $263,473 l .5 s, 2 d$. was borne by the Consolidated Fund, and $178,132 l$. 0 s. $9 \frac{1}{2} d$. by the counties, cities, and towas of Ireland.

## $\sqrt{F}$ aretgn.

France.-There is no news of any moment in the Paris papers. All of them notice the opinion expressed in the House of Commons oy Sir Robert Peel respecting deen's justification of the course the British Govermment has pursued regarding the late differences between Russia and Turkey. The journals of sunday are aimost wholly
taken up with reports of and comments upon a debate in taken Chap with reports of Deputies on the elections of Carpentras, Langres, and Embrun, which had already taken up two whole Lattings, and had led to the annulinent of the two former. sittings, and had led to the annulment of the two former.
There is nothing else worth noticing in the journala, save
resolution of recommending a reduction of 11,000 me the effective force demanded by the Minister of War.
saving of 14,000 f. would thereby be accomplished. saving of 14,00 . would thereby be accomplished. The opening of the Paris and Rouen railway took place or the 1st inst., with great porp and success. May, 1843, the rapidity with which its works have been executed, have fulfilled their engagements, are topics of general surprise and praise with our Parisian contemporaries, who also advert to the powerful co-operation which British science, capital, and industry, have yienced on thenton letter of the 6 th inst. mentions the
sion departure, on the 4 th, of the Uranie, sixty gun frigate, dred and forty, passengers, including a bishop, and several other ecclesiastics, as missionaries, a non-commissioned officer of the Municipal Guard of Paris, appointed to establish a company of these guards in the islands, and also a crew many artizans, wima large quays previously to the sailing of the Uranie, an impressive ceremony took place on board. An altar was erected on the quarter-deck, upon which the Bishop of A matha, assisted by a numerou admiof clergy, performed an appropriate church service, adelio
nistered the sacrament, and pronounced a benediction upon the ship and all on boara.
SPAIN.-Advices from Madrid, to the 1st instant, announce that in the sitting of that day, the Minister of the majority which had declared against them in the Chamber of Deputies, the Regent had accepted the resignations which the Ministers had already tendered him on the 16 th March. M. Cortina, who had been requested by alloweger to to undertake the task. If the French papers may be relied on, he found the obstacles too serious to be surmounted, and consequently relinquished the mission offered him. M. Olozaga, it is said, was then charged
with the formation of a Cabinet.-In the sitting of the Senate of the 1st, the paragraph of the address respecting the foreign relations of Spain was again discussed, but with ncreasing gentleness. Count Almodovar urged that M. Guizot's speech had heen Mromparish people, and M. Condemned the marked animosity against France which the proposed paragraph imprudently expressed. The debate was the again adjourned. In the Congress, on the same day, M Giraldo prayed that the Cortes of 1843 might prove and pour light and life into the provinces, in the the sun, and pour light and life into the provinces, in the shape of an amnesty to all spa
Barcelona or other occurrences.
Bescerum. - A dreadful accident happened on the 3 d on the railway. When the train which left Liege at balfpast seven in the morning was near to Landen, who were in a waggon carrying light goods, the second in
the train, saw the carriage full of smoke. They removed the parcels in order to discover the cause of the fire, When the flames burst forth, on which they signal to stop. Most of the passengers, hearing the sound of the whistle, looked out of the window, when a the carriages. Two passengers and two guards preserving their presence of mind, held the doors fast, to prevent any person from getting out. In a few seconds the train stopped, the waggon that was on fire was detached, and all the passengers alighted. Fourteen passengers who had leaped out were more or less dangerously wounded. Four passengers and a guard were killed, Some linen was at hand, and the wounds were dressed as we wounded were stances would allow. The most severely were able to proceed on their journey. The cause of the fire is at present unknown, but the inconceivable rapiaity with which the flame spread gives reason to suppose that some that it or jar of highly intiammable spirit the engine. It is remarkable that the sufferers by this disaster were victims seats escaped impulse fear,
Germany.-His Royal Highness the Grand Duke has been pleased to decide that the Princess Maria Amelia Elizabeth Caroline of Baden, Marchioness of Douglas and Clydesdale, shall retain the title and rank of a rrancess omBoser - Wener has just been carried to his last home, preposed Ly Strauss and his band, playing one of the deceased's ceded .We learn also that the Baron de Kubeck, Preside Preside King has entrusted the plans and other arrangements for King has for the projecter the line for the purpose of ascertaining the best mode of constructing it, and the most economical way of working it when constructed. The line, when completed, will be one of the most gigantic works in Europe, not only on account of miles, but also by the many obstacles of nature which afe "History of the Count Valerian Krasinsky, author or che instory of thas Reformation in Poland, long residen "M Majesty been honoured with an autograph elter ficed the Count's the King of Prussia, who has kindiy noticed the Counlen literary occupation, and presented him with the golden medal of merit, which his Majesty has sart best acience a few men distinguished in iteraco, he in sciences. - ITALY,-A curious autograph of Napoleon was disco rered recently at Perugia. It is an order for the army,
and a bilt of exchange for $2,000,000$ p, addressed . to

General Massena. This autograph has been detected in a ive franc piece, which har been given in payment to an Russia.-Letters from St. Petershrgh, announce that Lieut. Ramstett, of the Imperial Navy, has made a most important invention. By means of an electro-galvanic apparatus, from which two platina wire-conductors masses of any weight from the bottom of the sea; and, by means of the same conductors, the spot is at the same time indicated where metal has been sunk. He tried his apparatus recently on the Neva, in presence of the Admiralty, and brought up into his boat, in less than twenty minutes, an anchor and chain cable upwards of one and a half tons weight, in seven fathoms water. The Emperor has granted him a patent for ten years.-The property left by Baron Stieglitz, the banker, who lately died at St. $50,000,000$, is estimated at the enormous amount of $50,000,000$ rubles, (between $5,000,000 \mathrm{l}$. and $6,000,0002$. sterling). He was a native of Hanover, where his elder brother, one of the most celebrated physicians in Germany, died a few years ago.
Turery. - The German papers state, that the day for the election of a Prince of Servia had not yet been fixed; and, as Russia had declared that there existed no objecmerely insist H mery insiced 1839 should he observed, the rganic statutes the yoar of Prince Alexander. The Russian ambassador proposed that Hafiz Pasha, of Nezib, should be appointed Pasha of Belgrade.
India and China. - The Overland Mail has brought accounts from Bombay to the 1st April, and from Chins to the 23 d Feb. As stated in our last on the authority of the telegraphic despatch, the conquered territories of Scinde, except that portion belonging to the Chief of Khyrpore, have been annexed to the British cominions, and General Sir C. Napier appointed Governor. The act for the suppression of the slave-trade have beed declare to be in force in our new possessions ; all kinds of transit duties are ordered to be abolished; ana the navigation the Indus is rendered free to all nations. To commemorate the bravery of the troops by whom the country has beek won, and these satisfactory results ensured, the Cownor General has determined on having the unserviceable guns taken at Hyderabad cast into a triumphal column, on which are to be inscribed in Engish, and two nativ languages, he names of General Napier, and the European nd native officers and men belonging to his force, who gallantry was most conspicuous. On publishing Meeanee, and Major Outram's narrative of his defence of the British residency, Lord Ellenborough published a notification, explanatory of the circumstances which had led to the war, and declaring his intentions with regar most important items of news from the scene of our recent conquest may be briefly summed up. Treasure to the amount of at least a million sterling was discovered shorty of gold bars; and it is said Lord Ellenborough is desirous that it should be made over to the troops as prize money, but that the decision of the matter has been referred to the home authorities. General Napier sas entrenched his troops at the Residency, which is three or four miles from the city, leaving the 12th Native Infantry to garrison the latter. On taking up his quarters in thio new position, he sent to Sukkur for three additional regiments together with a troop of Horse Artillery. The firstnamed regiment left on the $1_{\text {st }}$ March, and reached the camp in safety, but we have no intelligence of the ane 28 th March, by the Semiramis steamer, that they had been attacked near Hyderabad on the 24th March by a bod their rescue, and repulsed their assailants. The authenticity of this report, however, is questionable, the news having been derived by the authorities at Kurrachee froml a native Cossid. Reinforcements have been sent Napier from Bombay. The offcera and men seriouthe wounded in the engagement at Meeanee, arl doing wellSesostris on the 12th March, fand were all doing wives Captain Ennis, of the 218 st , on proceeding cowared by the in company with a Parsee merchaut, was mindered was Beloochees; and another officer, Captain Godrrey, wife. Tacked and robbed, and narrowly escaped wis the like There have been other reports of occurrences or teen nathention these are ho ouly assembled to the cailed Meerpore; and if the rumour just alluded an attack having been made on the force from tion. It was supposed they intended to make an Gy Gevering possession of donbt erabad, but their Among the official despatches conveyed by the mail, is a narrative of a gallant and courageous
made at Vikkur, on the Indus, by a small detachme sepoys, against large numbers of Beloochees, three days and three nights obstinately assaled anparalleled intrepidity. The Governor-General Agra, where he las taken up his residence in one palaces, and in which he held an investiture of the ordeth of the Bath. He has ordered the celebrated somyed in gates to be locked up there, and the officers employ The ing them have been sent back to regimene Indian
army is too scantily officered，has attracted attention，and
has become the subject of general comment．The Bishop of Calcutta and Metropolitan of India arrived in Bombay on the 11 th March，where he beld his primary visitation， A magnificent comet was seen throughout India from the beginning of March，and engaged the attention of all the astronomers，one of whom actually declared it had become a satellite of the earth！Dwarkanauth Tagore has been excluded from his family caste，in consequence of his captain of the Belvidere，which was burned some months ago at Singapore，was tried at Bombay for taking goods The most conflicting accounts were circulated respecting the state of Cabul．Akhbar Khan is no longer popula there，and another was said to have seized the popular ment．Dost Mahommed was going back from Lahore to Cabul，but it was not known how he would be received not seem inclined to give him any assistance．The news was brought to Bombay by an American schoone the test Was brought to Bombay by an American schooner，the Zephyr，which is now plying as an opium trader from The Fay to China，and is remarkable for her swift sailing． mue emperor has ordered an investigation into the Formosa． of the commercial treaty，for the British Plenipotentiary oppeared to be waiting for the treaty as ratified by Her Majesty．The Chinese Commissioner and he were on good terms．Doubts are said to exist of the durability of any arrangement now entered into．The Chinese were their positions in the different places attacked last year． Trade was dull，but expected to revive speedily．At Canton some dissatisfaction still prevailed．An immature evolt at Manilla had been put down，and the rebels endent of the Spanish yok
West Indies．－The Royal mail steamer Avon arrived Taval Her dates of leaving are－from St India Island mails． and Bermuda，April 20 ．Her Majesty＇s ship Warspite had proceeded to New York，for the purpose of taking home Sir Charles Bagot．Mr．Pakenham，late Minister at Mexico，came passenger from Vera Cruz by the Thames steamer，and landed at Bermuda，to await the arrival of India islands are reported to be unhealthy in of the West of the rains，and continued shocks of earthquakequence still felt．At Guadaloupe ten shocks had been experienced on the 3d，and one on the 5th，of April．Geeneral Santa Anna had been indisposed，but had recovered，and gane to the city of Mexico．On the 4 th inst．，near midnight解 with coals and machinery for Cuba．The concussion was 80 severe that the crew of the latter were obliged instantly to abandon their vessel，and get on board the steamer，and the Eliza is supposed to have sunk very shortly afterwards． from Rio with the Mrazilian and Buenos A has arrived having sailed therefrom on the $23 d$ March，mrin mails passengers，and on freight about 20,000 b．in gold，silver， esult of brings also a confirmation of the unsuccessful with a view of effecting a treaty between that of Brazil， Great Britain，his proposals having been rejected and his final audience for formally taking leave being fixed for the Fould embark in the Malabar for England expected he ould embark in the Malabar for England．

April last，contraasting each item with the amounts anticipated
last year by Sir Robert Pech culated to produce $21,500,0001$, only realised $20,50,50,000$ ．，so
that，on this lranch of the revenue there was a deficiency o $750,000 l$ ．Of this deficiency $500,000 l$ ．arose on the a dichelency of uncertain negotiations，which had been caused，he said，by the Powers，and by increased habits of temperance amongst the $13,700,000 \mathrm{l}$ ．（inclusive of 250,0001 ．，the additional duty on Irist
10wer pirits），oniy realised $12,500,000 \mathrm{~L}$ ．；leaving in this branch a defi the fallure of the malt duties，which he attributed to the short－
ness or badmess of the barley crop of 1840 ，and by the additional rish spirit duty，which，istead of realising the anticipnted
250,0001 ，had only brought 56,000 ．into the Exchequer．The Stamps，which had been estimated at $7,190,0001$ ．，had produced
$7,000,000$ ．The Taxes，which had had realised that sum．On the Post－office there was an increase upon the estimate of 110,0006 ．The Crown lands fell short of the
estimate by $30,000 l$ ．The whole of the ordinary revenue，which estimaten estimated last year by Sir Robert Peel to produce
had
$47,640,000 \mathrm{l}$ ，had only actually produced 45 ， 600 ， 0 ， $47,640,000 l$ ．，had only actually produced $45,600,0002$ ，thus leaving
a deficiency on the mntire ordinary revwnue of $2,040,0002$ ． a deficiency on the antire ordinary revinue of $2,040,000 l$ ．In
dummution of this，the 750,000 ．received for the ransom of Canton being applied，the net deficiency on the ordmary revenue
of the year remained at $1,290,000$ ．Under the Property－tax， of the had been estimated to produce $3,200,0007$ ．，the sum of
which he 2，450，000．charges madeen under this tax in Ene 5 th of April ；
but the chard Scot－
land amounted to $5,500,000$ ．，so that，makng allowance for reductions，the yearly revenue derivable from the Property－
tax could not realise less than $5,100,000$ ．However，only 2，450，000．came in aid of the revenue of the past year．The Peel at $51,381,0000$ ．，had been reduced by $222,000 l$ ．，and this left a dericiency of $2,420,00 \mathrm{l}$ ．From this the sumpenf of 202,0002 ．，provided to
year of pay off the holders of Exchequer－bills，being deducted，the net deficiency on the 5 th of April was $2,100,000$ ．To get rid of this
deficiency of $2,100,0002$. ，the right hon．gentleman said he had no plan to propose but to leave it to be wiped away by thic surpluses to announce his anticipations of the present year．He intro－ duced this part of his 1,000 get by stating that he left out of calcu－ compensation，and 800,000 ．due to the East India Company for the expenses of operations in China，as he proposed to raise
money for the liquidation of these sums by a vote of credit money
rescrving the money still to be received from China（which
amounts to $3,150,0002$ ．）for the repayment． year be calculated at $19,000,000$ ．，excluding altogether the
expectation of any duty from corn this year．The Excise，he thought，would produce $13,000,0001$ ．，the Stamps $7,000,0002$ ．， $130,000 t$ ．，the ordinary miscellaneous revennes $250,0002 .$, nioney received from the Chinese Government，and which has been paid into the consolidated fund， 870,0001 ．，the Property－tax，
$5,100,000 l$ ．Thus the total revenue of the year he anticipated would amount to $50,150,0002$ ．The expenditure would be，for the Army， $\mathrm{nance} 1,850,000 \mathrm{l}$. ，for the miscellaneous votes， $3,000,000 \mathrm{l}$ ．Total nance， 1,8 accounts， $27,852,000 \mathrm{l}$ ，being a reduction upon the est1－
on these
mates of last year nf 645,0000 ．Then the charge on the fouded debt would be $28,560,0 n 01$ ．，on Exchequer－bilis 618,0002 ．，on the $31,535,000$ ．，being a reduction on the corresponding charges of last year of 257,0002 ，and makiag，with the reduction before stated，a total reduction on the entire estimates of $902,000 l$ ．The result of these calculations was，that he anticipated the whole
expense of the coming year to be $49,387,000 h$, while the income
he hoped for would amount to $50,150,0000$, ；thus leaving him
763,0006 ．of surplus to apply to the payment of the arrear
$2,100,000 z_{\text {，}}$ with which he 2，100，000l．，with which he commenced the year．The arear of
hon．gentleman concluded by expressing his confidence that the difficulties，and adduced what he considered to be proof trading －In reply to Viscount Howick，the C\＆ANNEELIOR of the EX．
CHEQURR added to his statement that no reduction of taxntin was contemplated．－Mr．Labouchisar asked if there was to be
no alteration in the sugar duties？－The Chancer Exchequxr said he had no such intention．－Mre．Mume come
mented on the statement of the Chancellor of the which had greatly disapponted hima The present Governirent rather increased than diminished，and would do so until our
system was entirely changed．He had been led system was entirely changed．He had been led to expect that
the Chancellor of the Exchequer was about to propose some thing，such as the repeal of the malt－tax，and he was surprised if
not disappointed to hear that nothing was to be done．－Mr． Baring also criticised the financial statement，which showed that the present Government，when in opposition，had proved to
be false critics，as well as bad financiers．The revenue had
produced by upwards of $2,000,000 l$ ．Nens than had been anticipated pockets of the people by the income－tax，they had lost of the quoted from the speech which he made last year，on introducing
his financial statement，and contended that there had been such a reduction in the prices of the great articles of consumption，as would enable any economicai and malaging househeeper to predicted．He had also predicted that a revival of commerce wrshing to speak too sanguinely，he thought that though no
decided symptoms of a revival of manufacturing industry decided symptoms of a revival of manufacturing industry，though
he regretted that some great branches，such as the iron an he regretted that some great branches，such as the iron and
coal trades，were yet in a state of depression．He hoped the
House would not rashly press upon the Ministry House would not rashly press upon the Ministry any reductions Looking to the enormons the nucume－tax had not been imposed Wooking to the enormous accumulated cieficiency of tena millinn
measure could have deat at the commencement of 1842 ，no other effective to mect the difficulty ；had though his anticipations of period of the revival of trade had been postponed，he was satis lim 12 resisting the repeal of the mncome－tap．He had been told reduction of the amount of the assessed taxes．This been nearly what he had estimatuce of the assessed taxes ha state of the revenue，he had come to the conclusion，that for the
present no reductions of duties could be proposed，which other－ wise wo J．Russer remarked that the budget of the late ment was proposed with a view to the benefit of trade and com merce，and would have had that effect if it had been adopted．But the financial measures of the present Government had preserved
the entire amount of the deficiency for which they had to provid the entire amount of the deficiency for which they had to provide
on entering office．He would not support any proposition which would permanently affect the revenue，but if trade and commerce
were improving and we were blessed witis a bountiful harvest next year，it afforded the desired opportunity for further ameliora
tion of our import daties．－After some remarks from Wortugy，Lord Howicr alluded to the＂change of performer＂ of the Treasury，who，with a great flourisil of thampets，an nounced his scheme；this year，it was the Chancellor of the obiged to do，the fa，Iure of that scneme．He commented on the
impolicy of the daty on the importation of coalj and after
cnicising the system of differential duties which kad been adopted by the Government，called on the House boldy to adop restoring the country to a heathy condinon．The present policy of the Government would eutals the mincome－tax，not fur theree，
but for ten years－Mr．Lidneli auded hs testimony to that of Mr．Hurr asked if there was an intention to effect a reduction in
the Three－and－a－flalf per Cents．－The CHAA ChiLor of tue ExChlo Q＇er repled that he must be guded by circumstances．－After
some remarks from Mr．Beil，Mr．Laboucture dwelt on the had only to be boldly acted on to bring general prosperity．which R．FERous on and Mr．M．Girson followed，the latter intimatiag his
fears that With safety to the smaill duty on cotton couid not be maintanned with safety to the prosperity of our manufactures．He hoped
Sir Robert Peel would boldly act on the principles which he avowed，and he was sure the country gentlemen would not for－ sake him if he told them that the condition of the country
required it． required it．－Mr．Williams asked if the frauds at the country
house had been taken into account．－The CHANCBLLOR house had been taken into account．－The Chancellor of the
Excreauk haid no means of ascertaning the amount of the
frauds．The Report of the commission of inquiry had not hrauds．made，and would only refer to frauquiry bad not yet
bovered．
con dis－ covered．－The Chancrllor of the Exchequer in reply to
Mr．Futt，stated that the Bank of England was instructed
not to dedict the income－tax from the dividends of tho not to deduct the income－tay from the dividends of those whose
meome liad been proved under $150 l$ ．Mr．Ewar asked if propositions had been made to other countries，similaz to to give an answer，as it would be inconvenient．The discussion
having been finished，the formal vote was agreed to，snd the Speaker resumed the chair．
Tuesidus， Tuesiay，－Lord Jocklyn，before the House proceeded to the
motions of the day，requested to know from．Sir R．Peel the
intentions of Government with respect to the maintenance of the Irish Union，now threatened by externsive agitation．
Sir R．Prex，in a solema and emphatic manner，declared him self authorized by her Majesty to repeat than Language employed from the throne durmg the adminstration of laat Giey，and Union．The present Government，he said，would exerclse for
this purpose all the powers vested in them law：and though not desirous of disparaping the cone existing appisting for new and extraordinary powers antal those of the not hesitat slould be found practically insufficient，they would appeal to Parliament for such enactments as would effectually attempted was not merely，as some called it，that the object
statute，but the dismemberment of to Parlianent，should it come to be necosure．The applacation bearance of Ministers to make it nutil the necessuty should have law．－In reply to a question by Capt．Bernal，sir R．Pser sad he
did not recollect that Lord did no recollect that Lord Althorp ever declared that，if all the
Irishl Members should be in favour of repeal，lie would consider declaration，Sir R．PEFL．Sadd Lord Athorp not prepared made such a
The SPEAEr motion one the Corn－laws，whech was the signal fored with his
tion of a great number of petitions on the suljenta－
his inability to do justice to the subject, he yet referred to his past exertions, at a period when the public mind was not alive to it, as
the apology for doing so now, in preference to others who might
 said to exhausted, in sere
used on former ocacaion were
great change had now passed this. The Ant Corn-law Leagne, however much underrated mind, and theire exertions would ere long be duly costimated, not not
only by this country, but by the wrld at large. Again, the dis-
ond only by this country, but by the world at large. Again, the dis-
tress of the country had compelled thore to thirk who were usually yerse th the consideration of public questions. Al the
old argunnents by which a Corn-law had hiliertot been supprited
were abandoned last year, when the latw was atereet, and anotier
 labourer. The present condition of the corn-market was the
Yeply the the fallacies; the law was condenned in publico opinion,
and its fual abrogation but waited the sentence of the Legisla-ture.-Mr. V. Stuarr seconded the motion.
Mr. GLADSToNE opposed the motion as implitic
 of events producing a corresponding change in those results Which were then thougt con treact. The Canadian Corn Bill
be a beach of that con
wos not an amend Was not an amendment of the tered inssed The operation of the
of the engegenent then enterne
oresent Corn Biil had not yetobtained a fair trial and the effect
 completely of its specte. The right hon. gentleman concluded
a very long tpech by declaring that the motion was one which it was impossible for the Government to entertain, or to hold out
the hope of ever hereafter entertaining; that the existing law the hope of ever herexpectation held ont when it was proposed,
had quite fulifled the
and that should the Government assent to such a motion, they would convict themselves of the grossest imbecility, and, in the
face of the world, declare themselves unworthy and incompetent face of the world, declare themselves inworthy and incompetent to conduct the affairs of a great nation.-After some remarks by Mr. Trevawne in favour of the motion, Mr. Caristopusp
oposed it, and denied the assertion that the farmers were opposed to a repeal. He said that in agreeing to the changes of
inclined
Iast year, the Members of agricultural counties had accepted the last year, the Members of alaricultural counties had accepted the
proposition of the Government as the minimum of protection, and therefore, considering that so late a reviston had taken place
and constering, alco, that already large importations of foreign grain had been introduced at the reduced duty, he could not
thank of further alterations. - Mr. ROEBUGK, in a long speech debate, on the motion of Mr. Miles, was then adjourned. resumed by Mr. M11Lks, who argued that the repeal of these laws would have the effect of changing arable land into pasture, and
thereby cause great distress to those whose employment depended on agriculture. The indenendent members of the Honse were
prepared to take their stand against farther concession; and th deternination of the Government to maintain the present law
gave him confidence.-Mr. WA mp contended that under the state of things which woild exist with a free trade in corn, the revenue
would be easily raised, because the people would be able to command more comforts, and to consume more of those commodities
from which the Customs and the Exclse collected theur duties. True, other countries were hostile in their tariffs because we
had delayed too long. Had we begun asytem of ree trade in 1815, We might have commanded the trade of Europe. In addi-
tion to general reasonings, the honourable member went int detail on the condition of Sheffield, and called upon the House to
regain the confidence of the popple by wise and timely concesregain the confidence of the people by wise and timely conces-
sion.- Sir C. NAPrke, Sir . STrcrin inn, Mr.
 motion, and Mr. FitzMavilce, and Mr. Bailitir, against it. Which had been described as a panacea for all the evile of the the fundholder, reduce prices, and produce a confusion mora Howrac adhered to his opinion, that the best course was
impose on imported corm a small fived duty; not because hem was an advocate of protection to argicurture, , but because he
thought it would be the best compromise between conflicting opinions. Such a fixed duty would not sensibly affect prices,
while it would materially benefit the revenue. But he was not the less prepared to suppyort the motion; for if it were carried, it
would be competent for any member of the House-and he was prepared, if no one else was - to propnse a moderate fixed dhty
in lieu of the present sliding.scale. The course of Sir $R$. Peel had been marked by phwise concessions, because they were "a
day too late ;", and they might rest ansurect that the next ad harvest would compel anhother course on this question, -Mr. vote for the motion, it would be to go into committee, not to
obtain a moderate fixed duty, but higher protection to agriculture Gladstome's speech that the Government were now repudiating Yree-trade doctrines, and were prepared to support the agricul-
tural interest, the depression of which was now acknowledged He admitted that free-trade doctrines were spreaing amongst the rarmers, and he regretted it, but this was owing to the con--
dnct of the Government, which led them rather to wish to see
the end at once, than to die by inches. TThey were also deeply disappointed by being abandoned by the reyident gentry, who them. The farmers of the country were now beginning to act
them Sor themselves; ald though the Government had silienced sir
Edward Knatehbull and the entry, they would not long be able
to control the yeomanry. to control the yeomanry.-Mr. WALLAOR praised the honesty of
MIT. Blackstone's speech, the like of which he had never heard Mrom the ministerial benches. For himself, he was a streight. forward repealer, and would be no party to any connpromise of a
fixed duty. The Corn-laws were coomed. - Mr. CAMPBRLL affirmed that his constituents were all to a manc coming round to fully ligild opting it out of the reach of the hambler classes.
For limmelf he was not afraid even of a total repeal of the Cornlaws, if a little time were ellowed; the slovenly agriculture of themselves more, in order to pay their rents.-The delaate was again adjonrned.

 Jadge of Judges."-After some remarks from Mr. Hunk Mr.
Sergeant Muphy, and Mr. Haw Boatrwicr, who opposed the motion. Whille aumintung Mr.
 After some observations in favour of the motion from
WaIcargon and Mr, MARSLAND, and against it from Mr,

Palmzr and Mr. Darby, Sir E. Knatchrull defended himself
from the charge of having deserted the cause to which he

 Mr. Brotherton, who spole in favour of the motion. Mr. HUNY
and Mr. W. BLAKELEY also spoke in its favour, and Mr. HA MPDEN,
Cind
 Pgex declared his opinion that the subject was exhausted.
He stood by the principles on which the late changes had been framed; but in doing so, he had no concenled intention of
repealing the Corn law, and ho did not contemplate any im
mediate alteration.
Bevond this decided declaration of no present intention to aiter the law, he would not go,
he would not commit himself to any commercial law, -The adjournment of the debate was then moved, and a very noisy scene ensued, which ended in a division giving a majority
of 385 to 94 against the adjournment of the debate. Mr. W. 0 . STANLBY, however, repeated the motion, which was again nega-
tived by 273 to 80. Mr. EWART then moved the adjouxnment of the debate, being the third motion to effect that object. Lord J. MANNERS moved the adjournment of the House, but after nanther stormy sce
debate to Monday. $\qquad$

British and Foreign Bible Society.-The annual meeting of this Society was held last week at Exeter Hall, Bishops of Winchester and Chester, Lord Morpeth, Lord Teignmouth, Mr. Plumptre, M.P., and a large body of the clergy. The Rev. Andrew Brandram read the report which was of great length, and gave a detailed account o the Society's operations. During the last 23 years no less than $1,600,000$ copies of the Holy Scriptures had been distributed in France through the instrumentality of the Society, and within the last twelve months 135,84 had been circulated there. In Germany a very large dis gress made by the Society in that part of the world was highly satisfactory. In Wurtemberg the number of copies distributed last year was much greater than on any pre vious year. 20,000 copies had been granted for The report went on to state that very determined opposition had been given to the Society's friends in Belgium ; notwithstanding which, 12,546 copies had been distributed in that countr during the last year, being 3,000 copies more than in the The committee had recently received a letter from Chevalier Bunsen inclosing a remittance of 1002., as a donation of his Majesty the King of Prussia, in addition to his annual subscription of 256 . 4000 . had been received
from Van Dieman's Land ; and amongst the subscriptions from Van Dieman's Land; and amongst the subscriptions
was that of the Wesleyan Metbodists' Society for 1,0002 Was that or the 19,935 espies had heen distributed in the In Stockholm, 19,935 copies had been distributed in the been sent to the Swedish Bible Society From St Petersburgh a very large number of copies had been dis tributed in the various local languages; 40,000 families in Finland had received copies of the Bible. In Spain, considerable opposition had been experienced. In Greece, 8,428 copies had been distributed last year. In Mytilene 4,470 copies. 60,000 copies had been forwarded to Cal prospects tions of the urgent demands were made by the natives of New Zealand for the Holy Scriptures. 2802. had been received from Tahiti towards the funds of the Society. Three editions A the scriptures had been printed in Mexico since $1837^{\circ}$ West Indies ; and during the past year 100 new Bible Societies had been established. The total amount received during the year, applicable to the general objects 39,821 , Nociety, in subscriptions and donations, ments, 52,287l. 12s. 3 d . - for drawbacks, 367 l , 3 s . 5 d . Total amount received from all sources, $92,476 \mathrm{l}$ 2s. 8 d . The number of Bibles and Testaments issued from the depository at home bave been 727,830, and from the depots abroad 254,230 ; total, 982,060 . The total number of Bibles and Testaments issued since the
British and Forcign School Society.-The thirty-eighth annual meeting of this Society was held on Monday, at Exeter Hall, Lord John Russell in the chair. The hall was filled to overflowing with a large assemblage of both Fexes. Amongst the company on the platform, were Ear1
Fitzwilliam, Lord Monteagle, the Rev. Baptist Noel, Colonel Fox, M.P., Mr. Hindley, Esq., M.P., \&c. In opening the business of the day, Lord J. Russell called the attention of the meeting to the death of the late Duke of Sussex, whom he warmoly eulogised as a man who had every species of public improvement, and had also contributed much to the success of the Society by the countenance and support which he invariably yielded to
it. He then went on to observe that this was a time when great principles were in jeopardy. There never was a time in which it was so desirable to stand by and support these principles as it was now. Looking back at
times when it was thought dangerous to educate the poor, and when it was thought necessary that the teaching of Scripture should be accompanied with the teaching of the
church catechism and liturgy, he would congratulate the meeting that the present age was one of a more liberal portant points than they were wont to do. For himself,
 Bin of res particular signification This mas a principle which rose superior to every other principle, both in its justice and liberality, and also in its applicand. to the present condition of the of the day England. He earnestly hoped the proceedings of the day those principles bearing upon the important question of generation good subjects while here, and fit them for the reward on god and man was several times warmly greeted durng cis adress, and sat down amidst great applause. The so the finch affairs of the Society, which it appeared were favourable. It stated that the appearance of the schools throughout the country connected with the Society indicated ment, and that the practicability and usefulness of the system on which these schools wero founed were poved cational measure introduced into Parliament by Sir James Graham, the spirit and tendency of which it condemned The Society had watched for the past year, with anxiety, and whatever might ultimately be the nature of those movements, the committee trusted that no amount of aid hich the Government might grant woula ever iadace the Society to compromise in the smantest degree ens great
principles which have regulated it from its institution. Several of the noblemen and gentlemen present then addressed the meeting, and resolutions in favour of the Society were unanimously carried.
London Nociely for promoing Chrstianity aw Jews.- The 34th annual meeting of this institution was very large, every pied. Sir. T. Baring, Bart., presided, and was supported Mr. Plumptre, M.P., the Dean of Salisbury, \&c. The report stated that the number of conversions had been much greater during the past than any preceding year, and seven fresh missionaries had been appointed to foreign countries. The subscriptions and donations amounted to preceding, and leaving an amount, after defraying all expenses, of 9,500l. vested in Exchequer-bills, and 2,4562. in the hands of the treasurer. The Society had issued during the year, 1,830 Hebrew Bibles, 2,056 Hebrew copies of the New Testament, 3,023 copies of the Book
of Common Prayer, with large numbers of the Pentateuch and a variety of tracts. The Society's missions had been most successul in Jerusalem, Beyrout, Berlin, Konigsberg, Frankfort, Brussels, Holland, and Strasburg. Missionaries, however, are still required China, America, and New South Wales. The mission in London and the Hebrew College were likewise in a flourishing condition. The King of Prussia had presented the Society with a donation of 100l., and had become an annual subscriber of 251 . The chairman alluded to Dr. Bowring's attack on the Bishop of Jerusalem, and said pueuce of then a donation of 500 . in conse quence of that apecch. On the motion of Lord Astiey, ance with the priplis of the society were subsequently - Colonial Church Society.-The annual general meeting - Colonial Church Society,-The annual general meeting
of the members of this Society was held last week at Ezeter-hall. The attendance almost filled the room. Captain Sir Edward Parry, upon taking the chair, said
that in opening the proceedings it could not be necessary for him to urge upon an assembly like the present the value and importance of those objects which the Society was formed to promote. It appeared from the report that in Nova Scotia the Rev. Mr. Richards had, during before been sen and held church services. The account ${ }^{8}$ from Prince Edward's Island were of an encouraging nature, Mr. Brooks, the agent, having distributed many tracts, and the churches being attended by large conigy
gations. The Cape of Good Hope had not been forgoten by the S. The Cape of Good Hope had not been forgrebes and chapels, each capable of accommodating 500 persons, were building. The colonists, it was confidently expected, would contribute liberally to their support, as the Noilan,
did not confine its beneficent labours to the Englishmans but gave them to the Dutch, Hottentots, and Malaer After alluding to the satisfactory state of affairs in parts of the colonies, the report stated that Mr. Godrrey, the minister at Chantilly, had been withdrawn in conse quence of the removal of the majority of the English Mr. Harding daily read prayers to the British and German residents at Lyons. In reference to the home proccertips towns of England, Ireland, and Scotlande, and Lad esta blished many auxiliaries. The income during the year amounted to $3,225 l$. 16 s . The Sociely praid particuad. The Rev. C. Yorke moved, and the Rev. il ugh Stowe Reconded, the adoption of the report, which was car of the Royal Academy gave their anniversary dinner at thei pumerous asser members of the Cabinet, the Foreign Ministers, and other
noble and official personages. The exhibition opened on in consequence of the death of the Duke of Sussex. King's College.-On Thursday, the 4th inst., the annual distribution of tiee prizes to the medical students of the institution took place. His Grace the Archbishop Dartmouth, the Bishop of Winchester, Sir R. Inglis, the Professors, \&c. The seats in the theatre were crowded
with the students and visitors. The Dean, Dr. Todd introduced Mr. W. H. Parsey, the successful candidat for the medical scholarship, 40l. a-year, and for a certifi-
cate of honour, Mr. T. Hawksley. The other prizes and certificates were thus awarded :-Medicine, Surgery, and
Midwifery-lst prize, Mr. Parsey ; 2d prize, Mr. Steele. Hartificates of Honour-Mr. A. B. Andrews, Mr. T.
Hawkley, Mr. R. C. Golding, Mr. E. Thomas. Materia Medica and Physiology-lst prize, Mr. B. L. Jemmett;
2d prize, Mr. J. Duncan. Certificate of Honour-Mr. C. Roberts. Anatomy and Chemistry-1st prize, Mr. J
Ody; 2 d prize, Mr. J. Duncan. Certificates of Honour Prize, Mr. J. J. H. Blount. Certificates of HonouranJ. Darean, Mr. F. C. G. Ellerton. Forensic MedicinePrize, Mr. M. Baines, Certificates of Honour-Mr A. B, Andrews, Mr. R, C. Golding, Mr. J. H. Blount, Prize-Mr. B. L. Jemmett, The Principal introduced for the Warneford prizes-First gold medal, 10l. ; books, $5 l_{0}$ Mr. W. J. Hensley. For the Leathes prizes-Is prize, a Bible, Mr. B. L. Jemmett; 2d prize, a Prayer
book, Mr. W. G. Dalgairns. The presentations having erminated, the Earl of Dartmouth moved a vote of by the Bishop of Winchester, and carried unanimously Election of Chamberlain, - On Tuesday a Common oom of Sir James Shaw, who has resigned in conse quence of ill health. As there was no political excitement Willity. The two candidates, Sir John Pirie and Sir Livearance on the hustings. The Recorder stated to the purpose of receiving the resignation by Sir James Shaw of lis office of Chamberlain, and of appointing a successor expressed a confident belief that the constituency would appoint a person in every respect qualified for the high esignation of Sir James Shaw, and Sir Williaw. Heygate hen put Jon Pirie were put in nomination. The Sherift taken the show of hands twice, declared the afer having be in favour of Sir John Pirie. A poll was then Heyctil Tharsday, when the majority in favour of Sir W. rom the contest, and the former gentleman will in due The be declared duly elected.
he Lilerary Fund Dinner-The anniversary dinner has distributed upwards of $29,0007 .$, to men of genins and earning in all part of Europe, took place on Wednesday,
in Freemasons Iall. The Duke of Sutherland the chair, supported by the Russian, Prussian, in States, and Danish Ministers, the Bishops of Lincoln and St. Davids, Lord F. Egerton, the Earl of Arundel and cous literary men. The cause of the Society wime quently pleaded in the course of the evening by the noble Chevalien, by the Bishop of Lincoln, Baron Brunow quer), Mr. Hallam, Mr. Gally Knight, and Mr. Bell. The bscriptions and donations anno from the Emperor of Russia.
The late Special Commission in St. Pancras.-On he assistant official report made by Mr. Alfred Austin, ment to investigate the alleged cruelty of St. Panernowards the Creole pauper, John Jones, was transmitted Was fully nossioners to the Secretary of State. The case Was fully noticed by us at the time. Our readers will
recollect that Jones was taken before Mr. Combe, the masistrate, by the relicsing officer of St. Pancras, for guadians to permit him to see his wife, then lying in the child, Fever Hospital, or to attend the funeral of his going over the evidence, sums up as follows report, after he appear to me, from a consideration of all the facts of acted in as stated by the witnesses, that the committee an the occasion of his application to them, on Friday the behaviour of the beadle or other officer of the workh the owards him on the occasion $r$ appears to workhouse before مrkhouse; for if ther creating a disturbance in the in keeping would have given rise to the greatest difficulty, excitempent. I am inclined to think that a part of the attributed to Jones, whilst in the oakum room, is to be to prect to the intention of the beadle and other persons ime this mistake (if to see his child buried. At the same
arose from circumstances produced by bis own violence, the beadle and other persons present with them in the the beadle an

Mendicity Society.-On Saturday the twenty-fifth anniversary of this Society was held in Red Lion Square,
the Earl of Grosvenor in the chair, supported by the Earl of Eldon Grosvenor in the chair, supported by the Earl Teignmouth, Lovaine, and Skelmersdale, Sir Edward Cust, Sir John Boileau, Mr. G. Knight, M.P., \&c. cases of mendicants have been entertained and relieved a the Society's office during the"year, a number greater than in any previous year, except 1841, when the severity of assistance, 128,914 meals were pressure. Besides other 6,609 persons were employed in breaking stones, grinding corn, or picking oakum, and 4,773 letters were examined and reported on to the subscribers-a slight diminution in the number of begging-letters as compared with the preceding year, when they were 5,171-arising partly 8 believed, fress of the weather, and in some degocis having found it necessary, from the multitude of applica tions made to them by letter, to take means to discourage them. The report was adopted, and the officers for the ensuing year were then elected.
Metropolitan Improvements. The following is the clause of a bill recently introduced into the House Commons by the Earl of Lincoln and Sir J. Graham for better regulating the Buildings of the Metropolitan Districts:"-" And be it enacted, that as from the 18 ay of Jonuary, 1844 , it shall not be lawful to carry on rault, or in the of this act, in any house or building, or from any public way, or than 50 feet from any other hous or building, or ground not in the same possession or occupation therewith any trade or businese such as or ocu soap-boiler, tallow-melter, slaughterer of cattle or horses blood-boiler, bone-boiler, fellmonger, oil-cloth painter manufacturer of gunpowder, detonating powder, lucife matches or varnish, gas-works, chymical-works, fire-works, or any other trade or business which is, or which shall be considered by two of the justices of the peace to be, dan gerous as regards fire, or dangerous or offensive, or bonosious as regards all persons, more especially thos persons living or passing in the vicinity thereof; neveras shall have been already established to be continued to be carried on in their present situations for a exceeding 30 years from the passing of this act, provided the same be not contrary to any existing act of Parliament or otherwise contrary to law, and every person who shall be convicted belore two justices of the peace of carry sum not exceeding $50 l$, as the said justices shall forfeit any sum not exceeding $50 l$., as the said justices shall determine. failure of Messrs. Ackermann and Co.-The firm of Strand, and successors to the late Mr. Rudolph Acker mann, who have produced so many beautiful works of art has stopped paym. extensive, and their English creditors are have been very Their liabilities, it is reported, will not axceed 35 ,000z and there is every expectation of the creditors realising a onsiderable dividend.
Ansi-Corn Law League-A meeting of the merchants, ankers, and citizens of London took place on Monday afternoon, at the Hall of Commerce, Threadneedle-street The spacious hall was crowded to overflowing. Mr. G. Wilson, chairman of the League, presided, and the meet ing was addressed at great length by Mr. Bright and Mr. Cobden. Resolutions in favour of a total repeal were Assam Company. -
Assam Compuny.-The annual meeting of the proprietors of this company, established to extend the cultivation of the tea plant in Assam, was held on Friday last, at the London Tavern, for the purpose of receiving a report relative to the operations for the past year, and to elect irectors, \&c. Larpent. It appeared from the report that the company coutinues to fiourish, and that the produce of tea last season had not only come up to expectation, but had been $10,000 \mathrm{lbs}$. more. The price realised for the teas produced at the plantations of the company had been also larger than was anticipated, and thus the Assam tea had been established as an article of consumption in this country. The expectation of the produce for this season was about $200,000 \mathrm{lbs}$., and the increase must be progressive, so that, in 1847, when the plantations came into full $90,000 \%$. The report was adopted, and a vote afterwards given to the directors.
Custom House.-It is understood that within the last few days, further frauds, to a considerable amount, have been discovered at the Custom House. Several official persons have been suspended in consequence.
Anti-Duelling Association.-An association has been ust formed for the suppression of duelling. It consists of 326 members, including 21 noblemen, is sons of nobleand generals, 44 of Parains, R.N., 23 colonels and lienand genlonels, 16 majors, 26 captains in the army, 20 lieutenants, R.N., and 24 barristers. Theyl denounce duelling as sinful, irrational, and contrary to the laws of God and man. They also pledge themselves to discounHope, R, N., and Mr. W. Dunmore, have become hon. Hope, Raries to the association

Mortality of the Metropolis.-The following is the number of deatis registered in the week ending Saturday, April 29th-West districts, 125 ; North districts, 181 ; Central districts, 160 ; East districts, 211 ; South districts, 221. Total, 898 ( 489 males, 409 females). Weekly average for the last five years, 903 ( 461 males, 442 females),
and for the last five springs, 854 .

## Frobincial Netus.

Aylesbury.--The agricultural gentlemen of Buckingham shire gave a dinner on Monday, in the County Hall of this own, to Earl Stanhope, for the purpose of testifying their respect for his cha bis opposition to the principle of free trade in cory About 130 pentlemen rat down, and amone those present were the High Sheriff of the county and most of th leading agriculturists of the neighbourboot Mr. J Rolfe of Beaconsfield, presided; and on proporis Realth of Lon Stanhope described him as a lind f o the been customary for farmers of Buckinchambire look to the Dule of Bukingham as their champion but be regretted the he support It must howe her whe It mud, the othe agriculturists a voice in the representation of his in the , that he advocated the repeal of the malt-tax, in the belieflat the reduction of the duty on that article would greatiy benefit the British farmer; and on another occasion, after he had consented to take office under Sir R. Peel, when be made alterations in the laws affecting the agricuiturist, and called on the Duke of Buckingham to assist him in carrying them through, that nobleman said he wold never betray the interests of the British farmer. Lordstamope, deeply graterul for the mark of respect with which they had honoured him, but he was not entitled to their thank for any exertions in bebaif of the agricultural interest On the contrary, holaing the opinions he had always done had he acted differentiy, he should have grossly neglected his duty. It was necessary to persevere; for, deplorable and debperate as was the condition of the farmers at present, what must it be if the measure about to be intro duced into the House of Commons should pass, allowing the importation of corn to an andimited extent from the United States into Canada? He had the satisfaction of assuring the farmers present that the measure would be opposed in the House of Ioords, and he would himsel undertake to prove that the arguments of those who sought to establish it were utterly destitute of foundation. The recent meeting in that county, over which he had the honour to preside, had been productive of good fruits-other counties were following the example. The farmers of Berkshire were about to meet during the ensuing week and a requisition calling on the high sheriff to convene a meeting was in course of signature in Kent. The effect of the Canada Bill, if it passed so far as the fruilful proinces of America were concerned, would be equal to the total repeal of the corn-lawn, and thus the little remnant of protection enjoyed by the farmer at present would be destroyed. He firmly believed that the Canadian Cornbill was but the forerunner of a general system of fres rade. He then proceeded to remark on the conrse pursued by the members of the Anti-corn-law League, and stated that he had been informed by a gentleman of undoubted veracity, that a member of the League had declared it to be their intention to force the landholders sell their estates at a very low price, and with a House fommons composed of their own friends re-enact the Corn-laws. Another gentleman had argued in the Bread fax Circular, that the public had a right to sell the landed property throughout the country, and suggested the propriety of paying the present holders a per-centage of ls. r $2 s$. in the pound for managing the estates for the benefit of the country. The agriculturists claimed nothing for themselves, but they asked protection for British industry The noble lord concluded his address by calling on those present to exert every effort to secure a full, free, and proposed the health of Dr. Sleigh, to whose exertions he elieved their recent success was mainly attriburable. Sleigh, in returning thanks, stated that be should arraign her Majesty's ministers on three connts fint that they had followed on unscientrfic and impolitio path thes had been placed in woper : secondly that path since they had been placed in power; secondly, that they had acted charged them with mental imbecility. He then enlarged on each of the above points, and delivered a long address abounding in uttacks on the Ministry, which was received with loud cheers, and other marks of approbation by the company. "Mr. Rolfe and the friends of British industry," and "The high sheriff," and other toasts, pere then given.-On Saturday Mr. Cobden, and other ers of the Anti-Corn-Lem Learue leld and the Town Hall, Lord Nugent in the cbair. About 500 persons were present. Mr. Cobden. spoke at great and Birmingham.-In conseq of the League were carried. Government of the injuence or representations made to the gun-stock the injury which has been occasioned to the gun-stock trade from the employment of foreign wainut-tree wood, the Master-General of the Ordnance has determined that timber of home-growth shall alone be used in her Majesty's service.

Bristol.-The latest accounts state that "Mr. Brunel is daily improving in health, and eats beartily, but little
hope is entertained of a speedy dislodgement of the coin

Kendal.-In reference to several paragraphs which appeared in the local journale, Lord Brougham's solicitors have written to the papers, staring that his Lorasmip is about to bring an action of trespass against Mr. the claimant, and other parties who were engaged in making the distress for rent wethericks, and that Mr. Bird will then have farmers at Wethericks, and that Mr. Bira he has a better an opportunity of showing thather present owner. They title to Brougham Hall than its present owner. They
state, that the best answer to the statement contained in one of the paragraphs, that Brougham Hall "was always cailed 'Bird's-nest,' uatil Lord Brougham came into possession," is the following extract from Bishop Nicolson's manuscript, written about 1670 , and now in the Dean and Chapter's
Roman way brings you to the Roman camp, having on Roman way brings you Browham Hall, the seat of the Browhams; from this you have the prospect of Lowthe Hall, Clifton Hall, likewise of Penrith, Penrin and Chape and Carleton Hall ; hkewi
and of Mr. Bird's house."
nd of Mr. Bird's house.
Leicester.-Tuesday, the 2 d inst., being the usual day for depasturing the Freeman's Piece, alluded to in a former Number, considerable excitement prevailed in the town in consequence of a large majority (eleven to two) of the depaties recently elected having expressed their determination to resist any attempt that might be made by the anti-allotment party to turn catce and horses upon the piece. Early in the morning large bodies of people congregated in front of the neatherd's house, and it was then found that all attempts to turn cattle, \&c. into the piece were rendered abortive, by some persons baving secured the gate with iron bands and spikes; on the othe hand, the anti-allotment party showed an equal deter mination to oppose any atterpt to break up the piece fo gardening purposes; and to support this proceeding, the two deputies, who opposed the allotment of the ground had oblained an injunction from the Lord Chancellor to stay such proceedings, under the powers of an act passed in the 44 Geo. 3, which provides that the right of com mon shall be limited to the "freemen resident within the precincts or liberties of the borough and their widows (during widowhood), to depasture two horses, mares r geldings, and two cows and a calf, from the 12 th of September (if the crop of corn, \&cr, be got in)
until the 13 th of February. It being evident that this act limited the benefit of the common to those parties keeping a horse, cow, \&c, and that the poor reemen received $n 0$ advantage from the common, great piece had hitherto been managed; but the will of the testator being explicit as to the grazing of the common, no other remedy was left than to dispose of the produce to the best advantage; and this was stated to be by selling the produce of the crops and letting the common, thus extending the benefit to all classes of freemen old corporution party, however, resisted every atteapt at innovation, till the late election of deputies, which ended being thrown out. They therefore resolved to concede the point of letting the piece, and divide the proceeds among the freemen generalky. The alloment party be useless to act in face of the injunction, they contented be useless to act in face of the iajuaction, they contented themselves with proposing resolutions expressive of their effect this they announced that they would let the common and sell the crops, after which they would devote them to break up a portion of the piece for gardening purposes, each holder to pay $1 s$. per hundred per annum, which should be loid aside as a form for or decayed fremen. Although upwards of 2,000 people were assembled, the greatest good humour pron place. In the evening a procession went round the town, "cause of the people was triumphant."-A meeting was held here on Wednesday, and was attended by a large number of the creditors of Messrs. Clarke and Phillips, the Duke of Rutland in the chair. The meeting ended in resolutions to form a banking company, to take the business of Messrs. Clarke and Co., and in which concern the Doke announced he would take 100 shares. The old bank will not open again, but the public will not eventually be
losers. Ten shillings in the pound, it is said, will be paid losers. Ten shillings in the pound, it is said, will be paid
in a few days, and the other $10 s_{0}$, with interest, in a short time.

Liverpool.-On Saturday Iast, Wilmot Buckley, convicted at the last assizes of the wilful murder of his wife, at St. Helen's, and Betty Eccles, convicted at the same assizes of the wilful murder of her step-son at Bolton, underwent the extreme sentence of th
place of execution at Kirkdale Gaol.

Nottingham,-An advertisement has been published containing an address by the Vicar of St. Mary's, for the purpose of obtaining subseriptions for the repair and restoration of this churcls, and announcing that in consequence of the denial of a rate for the necessary repairs, it has at length been determined to make this appeal. It appears that all county meetings for charitable and religious objects are held within it, and that there is annexed to it a population of 32,000 souls, that hitherto it has accommodated a congregation of 2,000 persons, and that on these grounds alone it is highly desirable that it sho Plymouth.-In consequence of Lord Ebrington and Mr. Gill, the Members for this borough, having replied to the requisition sent to them by some of the electors,
intimating that they were in favour of a fixed duty, a meeting of a number of the electors took place on the 28th ult., and passed a resolution, pledging themselves to vote only for repeal candidates in future.

Portsmouth.-On Thursday week a serious accident happened to Dr. Quarrier of this town. It appears that he rose at an early hour, and proceeded to his study to examine some papers. Wishing to destroy several, and baving no fre, he called for a taper, and lighted several Dr. Quarris and papers on the bearth. Abstom stooping, and fell on the burning embers, and either from the giddiness, or the fall against the stove, or the effects of the smoke and flame, remained unconscious, so that the whole of his face and mouth were severely burnt. The servant, however, soon discovered Dr. Quarrier's perilous position. On being restored to his chair, be recovered his conas to obscure his vision, which is now, however, beginning to be restored and great hopes are entertained by his medical attendants of his restoration to health.
Truro.-The mansion of Clowance, the seat of the Rev. J. M. St. Aubyn, has again been in a great measure ult., Mr. St. Aubyn was awoke by a smell of smoke, and the crackling of the burning timbers. He alarmed the domestics, who removed the books, pictures, and furniture, to a place of safety. The greatest part of the furni ure wich Wouvermans, by Reynolds, Faill and other masters, are also pre by Reynolds, Kneller, and other masters, ane pre two by Sir Godfrey Kneller, another by Sir Peter Lely with some other valuable paintings, have been consumed All the plate, with the exception of a silver tea-urn, and a few smaller articles, has been preserved; but the most valuable part of the library has been destroyed. About 2000 volumes have been burnt; among which were many works not to be replaced, especially a rare and valuabl collection of theological writings. The fire originated in a lintel let into the chimney of the dining-room.
Wolverhampton.-As the Red Rover coach, which runs from Ironbridge and Madeley to this town, was passengers and a considerable quantity of luggage, when within half a mile of Madeley, the horses became maman ageable at a short and awkward turn of the road, and the vehicle being top-heavy, the coacls was thrown over its right side in the centre of the road, and the whole of the outside passengers precipitated into a ditch. One elderly gentleman, name not known, was killed on the spot; the coachman sustained a severe concussion of the bram, with fracture of the right leg, and dislocation of the ankle joint; Mrs. Hardy, of Madeley Wood, sustained a frac ture of the left leg; and Mrs. Grice, of Madeley, recelved a concussion
slight bruises.
Railways.-The following are the returns of the under mentioned Railways for the past week:-London and Birmingham, 18,459l.; Great Western, 14,631l. ; South Contern, 6028l. ; Nouth Eastern, 2297l. ; North Midland, 4293l.; York and ditto, 1582l.; Greenwich, 806l. ; Croydon, 278l.; Grighow, s1766.; Blackwail, 812l.; Hulk 2774l. -The further opening of the Bristol and Exeter Railway to Beambridge took place on Monday. The serious illness of Mr . Branel, the engineer, prevented any exhibition of rejoicing, except such as the inbabitants of the district, Who very naturally took a lively interest in the event, terminus, the distance in ose open is now 171 miles. It is expected that the line will be opened throughout to Exeter next year.-The Maryport and Carlisle Railway the distance is 117 miles, and the day being remarkably fine the ceremony drew together very great numbers of people from all the towns and villages along the line. - A new railway is proposed to be constructed under the title of the Midclesex and Surrey Grand Junction to commence at the Harrow Station of the London and Birmingham Railway, from thence to proceed southward through various places, over the Paddington Canal to Southall, where it will cross the Great Western. From this point it will pass the Grand-Junction Canal, sweep over the Hounslow-road, and proceed into Isleworth. Thence it will diverge, by a branch line, eastward, taking a circuit towards Twickenham Park, and terminating at Richmond. The main line Twithen continue Park and Ham Kin Fark and Hampton Court, of that Thme ston, and join the station of that name on the SouthEpsom on to Gatton Park, where a tunnel of five-eighths of a mile in length will be required to carry it forward, and form a junction with the Brighton and South-Eastern Railways at Red Hill. Tts communication with the Railway terminus at Paddington.-On Saturday a special general meeting of the London Grand-Junction Company was held for the purpose of dissolving it. The undertaking was started during the railway mania, and was to have run from the Birmingham Railway at Camden-town through Battle-bridge, Pentonville, and Saffron-hill, to the Saracen's-head, by St. Sepulchre's church. The line, like the Greenwich and Blackwall Railways, was to have been built on arches-six of waich, while the works were in abeyance, were for many years standing at the back of
within the time specified by the Act, these arches were pulled down, and so much of the land as had been paid attempt was made to revive this project, when Mr. Rastrick, the engineer of the Brighton Railway, proposed to arry it out by a con Primrose-hill, in the Regent's Park, but the proposition was rejected. No further steps have since been taken, and as the Act expires in July next, the meeting on satur day was held to wind up the company s affairs, and to consider the steps to be taken for the disposal or the $3,000 l$ or $4,000 \mathrm{l}$. in hand. A resolution was passed, authorizing
the directors to dispose of it rateably among the proprietors. IRELAND.
Dublin.-There was an extremely crowded meeting of he Repeal Association at the Corn Exchange on Monday. The stairs and passages, as well as the large room and gallery were thronged. Kildare, entered the room amids lond cheering. The sum of $100 l$, was announced as the result of the meeting at the Curragh on Sunday. The meeting was occupied for some hours with the receipt of money from various parts of the country. 574l. 12s. 5d. tile Advertiser. says-"An official intimation has been eceived respecting the contemplated visit of the Queen and her illustrious consort to this country in the course of the ensuing summer. Orders for certain arrangements connected with the royal visit have been received at the castle. -Mr. Ross Cox, of the Fil-steamer, for Boston armed with all the necessary powers for the arrest of Mr. Finn, the absconded treasurer of the corporation, and the Under the\|Ashburton treaty, increased facilities are given, througl the co-operation of the authorities in the United States, for the capture of criminal fugitives and bankrupts. King's County.-On the night of Thursday week, as John Gatchal, Esq., of Cootegegan, Rev. Mr. Ridgway's. of Clonbullogue, where he had been dining, he was waylaid at Clonad, and murdered. His body was found next morning on the side of the road, with the ribs comHetely beaten in, and his throat cut and mangled in a shocking manner, by a discharge of ball and slugs. No Waterford. The military and police, beaded by the tipendiary magistrates, made another incursion into the barony of Gaultier, county of Waterford, last week. Some of the farmers paid the rate; but many others had their cattle under lock. Upon the latter notices were served
that their places would be broken open if the rate was id within a poek
Fermanagh.-On Tuesday week there was a numerous meeting of the magistrates of this county, convened by the Lieutenant, the Earl of Erne, for the purpose of receiving from the Lord Lieutemant an answer to a former communication on the subject of the recent Repeal disseries of resolutions to the Government, deprecating the repeal agitation, and calling for the support of the
executive in repressing the large masses of people assembled for the purpose of promoting it. The Lord Lieutenant in his answer states, that the question is receiving the most anxious consideration of the Government; which is determined to exercise every legal means at its disposal to maintain inviolate the legislative union between the two countries.
Kildare-A great repeal demonstration took place on the Curragh of Kildare, on Sunday, Mr. Gerald Aylmes in the chair. The persons assembled were composed of farmers and labourers, together with a large number of
the middle classes, who came from Dublin, Blackchurch, Naas, and Newbridge. Several resolutions were passed at the meeting declaring "the Act of Union to have beell carried by fraud, bribery, and the unconstitutional employrequisition by the then wantonly and wickedly called inable purnose of dispersing meetings legally convened to petition Parliament against passing the iniquitous measure of the Union, which their fathers foresaw would be ruinouß to Ireland, and the cruel and unjust operations of which to had adread the seek a separation from Guit and that nine millions of veople could not be dragged at the feet of any other nation." A vote of confidence was then passed by acclamation to cease O'Conuell, expressing the hope that he woun ar domestic Legislature ; after which he addressed the meeting at great length, and concluded by calling upon the men of Kreat length, and concluded by caling upon the mest, and south of Ireland had done, and no Government could refuse togrant them arestoration of their native Parliament.

## SCOTLAND.

Gasgow.-General Sir I. Macdougald Brisbane, President of the Royal Society of Edinburgh, was on Mondag year, in the place of Lord Dunfermline, whose termion office has expired. -The Glaggow Anti-Corn-law petition was sent off on Tuesday, to Mr . Oswald, M.P., with 65,555 signatures. It is believed that this is the larges number of signatures ever attached to
ating from the inhabitants of Glasgow. Dumfries.-At the annual meeting of the Comer after a short rural police should be discontinued from the present dan All pore called in, and com tinued in their appointments for one month only.

## fitiscellaneous.

A New Comet. - M. Mauvais, of the Royal Observatory at Paris, has just discovered a telescopic comet, within the limits of the constellations Cygnus and Pegasus. On Wednesday last, at 15 hours 10 min . 54 sec., mean time of Paris ( 10 min .54 sec . past three o'clock in the morning), its right ascension was 326 deg. $33 \mathrm{~min}, 44 \mathrm{sec}$, and Boreal declination 29 deg. $34 \mathrm{~min}, 30 \mathrm{sec}$. In 24 hours, its right ascension increased 36 minutes of degree, and its declination diminished 1 minute. It had a feeble oval-shaped nebulosity, with a sensible condensation of following note on the subject in the Times, dated from Kensington Observatory, at $3 \mathrm{a} . \mathrm{m}$. on Thursday. "At 17 hrs .31 min ., sidereal time, of May 10 , I got a glimpse of the telescopic comet : its right ascension was about 22 hrs 2 min. and 29 sec , and its north declination about difficulty with my five-feet equatorial, that the observations maust be regarded with suspicion."

## 业ab。

 application loy the Attorney-Giencral to confirm Lord Honley's chart appointing arnul the report. because the Master hard iet in to the trusteeship Sembers of clissentisg congregatums in commexion whth the judgment. His Honour delivered a very long but jucidyWritten judgment, of which it will be sufficient io give an out-
line. His Honour commenced with an eputome of the original persecution, which stated that seventecuth century, Lady Sarah Hewley stood forward as the protector and supporter in Yorkshme of the
Nonconformists -that slie founded the charity in question, several of the trustees of which, in her lifetime, were Noncon-
formists, and that she died in 1710 ; that it was very difficult now to ascertain to what particular class of orthodox dissenters she belonged; znd that the Presbyterians, and Independents, and Baptists, differed only on articles of church government, but
agreed on articles of faith and religious worship among themselves and the Church of England. But it was clear that Gni-
tarians were not objects of her bounty, although they had, in course of time, unture the name if Yreshytegran Dissenters, ontaned possession of the charkit, Thus the information had a
double object, exclusive as regarded the Unitnilans, and in
clusive as regarded the orthodox Dissenters. The decree, however, merely declared who were not fit to partake in the benefits Who were, with the exception of one member of the Church
of England, Atl Unitarians. His Honour had a distinct recol-
lection, forme, that tho declaration was framed in that exclusive Was the leading counsel for the relators, desired it should be the principle of the decree. It excluded those who were not proper objects of the charity, namely, Unitarians and members
of the Church of Engrand, but it Icft the question entirely
open what
 order in the same year, admatting Pxestyterians of northern
congregations in connexion with the Scotch Church and the
United Secession Chureh to attend, with the relators who were Ind penderts, before the Naster, uphint the applintment of thas-
 An Irdependent charity, which was not the meaning of the of Lords, and the second question ther thrushins put to the Aliswers of seven of the Julges. Onc was of opminn that Lnita-
rans were comprebended, two that members of the Cnurch of Eirgland were comprehended, six that it embraced misicuters, included. And the olbservations of dard Cottenham, in moving
judgment, we most mportant- that the intention of Lady Hew,ey was to be joulged of by the hangusae and terms used us be regarded. It remanis, thecriore, to be dee ded by a decree on Were the objects, of this charity. The petitun uf the relaturs Which the Attorney-General had given to Lord Cottenham's sisde for waut of fon. His Honour then stated the hames of Lord Heventrustees, and of the several sub.trustees, appointed by the Court. And his Honour thought that the real question upon those four And heitis Honour thought that the real question upon
namely, whether proper persons were Ho are the persons entitled to participate in the charity. His for this was of opinion that Lord Heuley's report was right, and firmed, he did notsee low the chine question could be decided.
As the caunse sloud at present thic othicr tiustees had no interest trustees were question. It was objected that two of the new
outiers Were; even members of the Secession Church. Suppose they trustees. But upnas the afhdavits his Hothour did not understand
 evidence that such becsons had actually partaken of the chlority. been aisuess with the Articles of the Church of Eurtand. It had out of each ofected that the Master had appointed two the other sees of clamante, and had g.ven the
Shdependents the Mastents but thace trustees. His Honour did not see how
bad vorld otherwise have dividu dine haber seven. He the two others, buty given a preponderance to the larger body over by the reators these words. -The real objection so strongly urged in the benefit ore the ornly persons I Jady Hewley antended to share Court legat it was fit there should be some person before the should be judically decided quention with the relators, which Wh conjecture as to what were Iady Hewley's private opinions.
What she would think, if she were Which she would think, if she were living, upon the questions but, considering her piety and benevolence, it is probable that exertions English Presbyterian she would have approved of the Presbyterian - had recently made in favour of the Jews, and she
would have been delighted to ponder upon the details of the inte-
resting narrative which was lately published by Messs. Bonner and MacCheyne, two of the missionaries from that Church.
His Honour confirmed the Master's report, apoointing trustee His Honour conirmed the Master's report, appointing trustee
and sub trustecs, and directed arl ot thie estate; but the peettoners, vither than the relators and the the
Attorney-General, were to have but one set of costs, as directed
 tho ehound be fally dis
from unee essary costs
Cooure
Courr or Com mon PLEAS.--Chesney y. Day. -This was an
action fora breach of contract under the following circumstances : the plaintiff is a Col, in the Artillery, and in the year 1838 undertook a survey of the river Euphrates, and on his return to this
country he contracted with the defendiants, who are lithographic printers, to furnish him with certain illustrations of a work
which he proposed to write descriptive of his survey. Owing which he proposed to write, descriptive of his survey, Owing
to the iliness of one of the defandint the proposed dilustrations to the illness of one of the defendants, the proposed illustrations
were delayed, and the publication of the work was stopped until were deeaved, and the publication of the work was stopped until
the defendants furnished the illustrations. Ulltimately they were
deliver delivered, but not in time for the publication, until all interest
was lost, in consequence of a parliamentary renort which had was lost, in consequence of a parliamentary report which had
been subsequently published. For the plaintiff several witnesses were necessary to a proftable that the 1 hustricher
 intrinsic interest, it wnuld not have required the fictitious aid of
lithographic illustration to recommend it to public notice.-
Ing Jis Lordship elaborately summed up the evidence, and the
Jury, after half an hour's deliberation, found a verdict for the plaintiff-Damages, 100 l.

## Friday, June 2

IN the Ratisbon "Flora, oder Botanische Zeitung," or 1843, p. 67, there is a short notice of a critique, by Dr. Hugo Mohl, of Tubingen, on Liebig's Theory of the Nutrition of Plants. It appears that this celebrated physiologist, as well as Schleiden, thinks him. self bound to speak out on the sulject, "seeing that liebig's work, by means of his great reputation, and of the boldness with which he gives out his own views
as settled truths, is calculated on the one hand to misas settled truths, is calculated on the one hand to mis-
lead those who are unfamiliar with vegetable phylead those who are unfamiliar with vegeader by the opposition of many of his assertions to well-established facts, and also by the many contradictions observable the work itself."
We have not yet seen Dr. Moll's pamphlet, which is said to consist of about 60 pages; but we extract the following summary of his
p. 57 of the work above referred to.
It is the opinion of Professor Mohl, ] st-That Liebig has not used the means at his disposal as a Chemist to investigate the doubtful points in the theory of the nutrition of plants. 2ndly-That in a manner directly opposed to the true investigation of
nature, he does not draw his conclusions from a deep research into individual cases, but from general and uncertain, and from calculations founded upon the most arbitrary hypotheses. which are therefore for the most part deficient in scientific solidity. 3rdly-That his book, far from presenting a consistent theory considered in all points of view, is full of contradictions and inconsistencies. 4thly-That he does not possess even the most elementary knowledlge of the organtable physiologists consider humus as the chief food of plants is not true. 6 thly - That his proposition that plants live entirely on inorganic matter is not new but a disputed question, long since in discussion amongst physiologists. 7haly - That his asser-
tion that all Botanists have considered it doubtfion that all Bother plants appropriate to themselves carbon by the decomposition of carbonic acid is untrue. nor assimilate organic substances rests entirely on theoretical speculations, and is wholly unsuppotted by proof. 9thly-That the whole account given by during darkness is in flagrant contradiction to facts. lothly-That the assertion that nutritious substances
containing nitrogen, and those without that element, are absorbed in precisely determined proportions, is not confirmed by the chemical analysis of eititer the Rotation plant. 11thly - That the whole theory of inconsequent in itself. 12thly-That the propotition that plants in summer derive their nourishmey
from the atmosphere is entirely incorrect.
On the other hand, Professor Mobl admits that Liebig has, Ist, In considering the nitrogen of plants as derived from the ammonia of the atmosphere, pro-
mulgated an idea which is an advance in science; and 2ndly-as regards the absorption of saline bases, has made it probable that the quantity of them is
regulated by the capacity of saturation of the acids regulated by the
formed in plants.
As soon as we have been able to procure Professor which some of these conclusions are founded.

In another part of our Paper will he found a full Report of the magnificent Exhibition of Flowers aud Fruit which took place last Saturiay in the Garden of
the Horticultural Society at Chiswick. 'io those acquainted with these floral gatherings it may appear has been on curmer occusions; and yet the Chanese Azaleas from the garden of Lady Antrobus, and some of the greenhouse plants, partieularly l'imeleaspectabilis, from Mrs. Lawrence's garden,
anything we have ever seen before.
The day was beautifully fine, the garden crowled ments for refreshments, under the direction of the successors to Mr. Guater, everything that could be
desired. Medals to the amount of 250 were awarded and well were they deserved by the successful exhibitors.
We have in some preceding articles endeavoured to show how the physical condition of our agricultural labourers might be improved by giving them useful and profitable employment. To those who consider the subject in a higher and more philanthropic view, and desire to see the moral condition of the lower orders of society raised in the same proportion as the arts and sciences have raised that of their superiors, it will not be sufficient that the labourer have the means of procuring the common necessaries of life, if he have not likewise that moral and intellectual improvement which greatly enhances the value of existence. This must be effected by education and instruction.
The time is past when the fears and prejudices of narrow-minded men could counteract the desire of imparting useful knowledege to every class in society, from the highest to the lowest; and even if there were really any danger to society from a general riffusion of knowledge, it cannot now be avoided. The mass of the people are thirsting for knowledge, and it is in vain to attempt to lock up its sources, even if were desirable to do 80 .
But it is of great importance to the welfare of society, as well as to the happiness of the lower orders, that the knowledge imparted to them should be suited to their moral and physical condition; that while they learn that which is really useful to them in their station, they should at the same time be taught those moral and religious principles by which they may steer their course through the storms and troubles of life.
There are few words in our language which are oftener misapplied than the word cducation; and when we speak of the education of the lower orders, scarcely two men attach the same idea to the word: hence many of the objections and scruples which We have, no doubt, our own peculiar other perfectly. We have, no doubt, our own peculiar notions respect-
ing the education of the acricultural labourer ing the education of the agricultural labourer, and if our readers will have patience with us while we
endeavour to explain them, they may probably find in the end that they do not differ widely from us, whatever they may do at first sight.
l3y education we mean truining. The French call the breaking-in of a young horse his education ; the pointer is educated to show the sportsman where the game lurks by remaining immovable when his scent
tells him that the game is before bim. When the tells him that the game is before him. When the
horse is obedient, and his paces are formed, and when the dog is staunch and steady, they are said to be well tiained or educated ; their nature and capacity allows of no considerable addition to this education. But with man it is very different: we often find amongst the lowest in the social scale, genius, which requires only to be developed to raise the individual to the highest rank amongst intellectual creatures, but which, for want of opportunity, is buried and lost to the world. It is not, however, to bring forward these are gems that we advocate general cducation it is to fit men of ordinary capacity for the duties which they are called upon to perform-to make the mechanic dexterous in his trade-to teach the labourer to do well whatever he may be called upon to do-to exercise his ingenuity in perfecting the operations he is encaged in, and to perform them with the least fatigue to himself. In those trades which require much skill and practice an apprenticeship is thought indispensable. In agriculture, one would imagine that everything was to be learned by instinct or imita tion, and some well-meaning persons regret that boys, by going to school, are prevented from driving horses at plough, and thus in time learning to turn up the soil; as if the true principles of plugghing might not be learnt at school as well as forming crooked letters on a copy-book; or that a boy, become observant and intelligent by what hed ploughman than the clodhopper. We are almost ashamed to have dwelt so long on so self-evident a subject, but we would not be misunderstood; we do not want labourers to be philosophers nor mathematicians, much less teach them what useful whut will enable them to earn an independent livelihood, and, perhaps, to raise themselves by honest industry, into a higher class in society; while at the same time ae mealcated those sound principles of religion and morality, whin their own minds, or respected by their fellow-men.
On this principle ne would that the schools established in agricultural districts "ere conducted, and that while children are taught to read and write, which, in our days, are essential preliminaries in alt education, they should newsise be taught whatevei may be useful to them, thei hands. That this is not bread by cticable, even in the most retured paits of the cuuntry, but may even be made profitabie to the masters who should voluntarily open such schools, w nin endeavour to prove by actual facts; at all even's
such schools of industry, as well as learning, can be maintained at a much smaller cost than our national schools are at present; and, under proper regulations, be much more effective in training intelligent labourers and mechanics.-M.

SANDAL-WOOD, THE ALMUG OF SCRIPTURE. In a former communication (Mar. 4, p. 132), having given some account of the Sandal-wood and tree, 1 promised on a future occasion to say something respecting its history. This is at all times a subject worthy of inquiry, not only on account of the interest felt respecting substances which we are in the habit of using, and seeing, or hearing talked about; but also because when a substance can be distinctly recognised, we may, by tracing it as an incle coll commerce in ancient inferences respecing che course and also respecting the state of civilisation, both of the exporters and importers of articles of luxury.
Sandal-wood, though a produce of the Malabar coast, became early known in different and distant parts of India, and is therefore mentioned by early Sanscrit authors under the name of Chunduna. The common Indian name is Chundun, which the Arabs converted into Sundal, from which we have Sandal-wood. In the time of the
Arabs the different kinds of Sandal-wood were well known, and distinguished by the names of red, white, and yellow Sandal-wood, all of which are probably the produce of the Peninsula of India; that is, if we suppose the yellow and the white to be produced by the same treeSantalum album, and the red by Pterocarpus santainu. and Adenanthera pavonina.
Many substances, the produce of India, found their way, as is well known, to northern nations, at very early periods. Among these we may mention pepper, ginger, and spikenard. Indis was, in fact, the chief object of north, or its produce found its way by ships to the Persian gulf and the Red Sea. Hence we can account not only for the produce but some of the Indian names of the more remarkable substances reaching the Greeks. Among these Sandal-wood does not appear in ordinary authors. Actuarius mentions it apparently as if it was a well-known substine At a still earlier period however, that is, at the time of the Periplns of Arrian, who is supposed by Dr. Vinent to beve heen morchont of the second century who fisited the cost of Malabar, we find Sandalwood mentioned by the name of Xylon Sagralinon, Sangalinon, easily corrapted as Dr. Vincent says, from Sangarinon, cail eorrupted, Bans, in Gadrosia. Be tween this ad Baruas that in there has almay tween this and Barugaza, twat is Bara, Tundis and Muzixis of the Periplus are supposed by Dr. Vincent to be the present Onoor, Borela, and Mangalore, the very places from which Sandal-wood is exported even in the pre sent day, and from which it must have been carried north to Barooch and Omana. Seeing that it was an article of commerce at this early period, the only way in which we can account for its not being more distincty mentioned is, that it may have been confounded with another Argrant wood, also obtained from India-that is, the Agila, or Aloe-wood. One cannot help thinking, that, growing so near the coast, and being possessed of such remarkable fragrance, it must have atrracted attention us early as any other product of India. If we con ald the deficiency of timber both in Arabia and Eigypt, and this, combined with the active commerce wica seems to have existed at all times in the Red Sea, there must always have been a demand for timer, w.an have been supplied from a varjety of sources; indeed, in the very same list of imports in which Sandal wood is mentioned, we find dokon, or squared day timber is exported from Bombay to the coast of Arabla. Forskal states that Saj, Abnoos, and Shishum were different kinds of timber imported from India in his time into Arabia. These are, Teak, Ebony, and sissoo which is the wood of Daibergia sissoo. Teak, he also states, was taken to Egypt for making the keels of shipa. That timber may have been imported by the Red Sea in former times seems far from improbable; indeed, sway sacred writings, we find that when Solomon held sway as far as the shores of the Red Sea, in conjunction with Hiram and the Phoenicians,"King Solomon made a of ships in Eziongeber, which is beside Elath, on the shore of the Red, Sea, in the land of Edom: and navy also of Hiram, that brought gold from Ophir brought in from Ophir great plenty of Almug-trees and precious stones."-1 Kings, x. 11. In the paralle passaye of 2 Chronicles, 18. 21, "The king's ship went ${ }^{\text {Parshish with the servants of Hiram : ever }}$ three years once came the ships of Tarshish, bringin gold and slver ivory, and apes and peacocks." If wit goid and sllver, ivory, and apes and peacocks." If with these passages we compare 1 Kings, 8 ziio 48 , and
2 Chrun. $x x .35,36$, it 18 evident that the voyage to Ophir was commenced at the head of the Red Sea, and that the ships went to Tarshish, as well as to Ophir, in he it it inust be sought for, as well as "Ophir, on either the Afrean or Astatic shores or islands of the Indran Ocean." temptine to enmmerate the various conjoctures hash hare leen formed reapecting the site of these fictes, in disey were more tian gemeral expres-ions for as a great variety of indubitable lodian products were non, pepper, and others; so it is evident that there must
have been a commerce uith India at very early times; and
stones, ivory, apes, and peacocks, as well as the gold and silver which they brought, as well as for the Almug, or Algum-trees. The parts of India which were reached at the earliest times were Crocala, now Curachee (at the mouth of the Indus), and Barugaza, now Baroach, in the Gulf of Cambay. These ports are very little distant from, and can easily communicate with, those on the coast of Malabar, and even with Ceylon; and thus we may account for precious stones, cinnamon of Ceylon, and pepper, forming such early articles of commerce. But the merchants who visited the Malabar coast for pepper of which Sandal-wood grows, and from which, we have of which Sandal-wood grows, and from which, we have
seen, it must long have been exported as an article of seen, it must long have been exported as an article of
commerce. The Ophir and Tarshish of the above pascommerce. The Ophir and Tarshish of the above passages of Scripture must have been to the southward of
the Red Sea, and one of them, at least, we conceive some the Red Sea, and one of them, at least, we conceive some
part of India. From thence the whole of the above cargo part of India. From thence the whole of the above cargo
might at any time have easily been obtained ; it strikes us, therefore, that any wood or tree which formed a part of the cargo and was thought worthy of record, must have possessed some remarkable properties not common in the a straight trunk, though not large, and being close-grained and possensed of such remarkable and agreeable fragrance, could not fail to attract the attention of any merchants visiting the coasts where it grew. As it was equally well fitted for making pillars or terraces, as for musical instruments, 80 we conceive that there is no other tree better entitled than the Sandal-wood, to be the Almug of Scripture,- "the king made of the Algum-trees terraces (pillarg, 1 Kings, x. 12), to the house of the Lord, and to the king's palace, and harps and psalteries for singers; and there were none such seen before in the its texture and agreeable odour when handled, is well calculated for making musicsl instruments. It is less used for such purposes in the present day, because, being expensive, and not very ornamental, its peculiar property, pensive, and not very ornamental, its peculiar property,
that of fragrance, is of little value, on account of the polish with which fashion requires that all instruments polish with which fashion requires that all instruments
should now be covered. Though this does not amount to proof, yet probability is in favour of the Almug being to proof, yet probability is in favour of the Almug being
Sandal-wood, as it has been supposed to be by Celsius and others. The privcipal difficulty with regard to its being 80 is from the name, Algum, occurring also in 2 Chron. ii. 8, when Solomon asks of Hiram, king of Tyre, to send him "also Cedar-trees, Fir-trees, and
Algum-trees, out of Lebanon." Hence it has been sup-Algum-trees, out of Lebanon." Hence it has been sup-
posed to be a produce of that mountain. But Rosenposed to be a produce of that mountain. But Rosenmüller has justly remarked that in the parallel passage in 1 Kings, $7.6,8,10$, there is no mention of Almug-
trees, but only of Cedars and Firs; and he therefore trees, but only of Cedars and Firs; and he therefore
infers that the addition of Almug-trees in the later infers that the addition of Almug-trees in the later
passage, that is, in the book of Chronicles, appears to passage, that is, in the book of Chronicles,

ON VEGETABLE MANURES.
Lime-Leaves.- 100,000 parts of green air-dried Lime leaves contain of mineral substances:-

phosphoric acid
chlorine
$\qquad$

## 8,491 parts of mineral substances.*

Although when the Lime-leaves are ripe, the greatest part of their potash, soda, and chlorine, have disappeared, or have been carried off by water; still lime, magnesia, and phosphoric acid, remain behind; on which account Lime-leaves are preferable to Oak or Beech-leaves, as litter. 1000 lbs . of green Lime-leaves contain (according
to Boussingault), 32 lbs . of nitrogen, and, consequently, to Boussingault), 32 lbs . of nitrogen, and, consequently,
the ripe leaves mast also contain a great amount of it. the ripe leaves must also contain a great amount of it. Besides these three sorts of leaves, those of Elms,
Birchea, Ashes, Yoke-Elms, Poplars, and Willows, are used as litter. They all are more rich in lime, magnesia, and phosphoric and sulphuric acids, than the straw of the Corn-plants ; and as they probably also contain more nitrogen, it follows that they are preferable for litter. Fir-leaves.-Although most of the Fir and Pine-leaves drop in winter from the trees, they also fall to the ground in other seasons, especially during strong gales or heavy
showers; which is to be taken into account when they are showers; which is to
to be used as litter.

## to be used as litter.

lun,000 parts of green air-dried Fir-leaves contain of mineral substances:-

836 parts of silica
1,290, lime

been made to appear like decimal quantities instead of whole been made to appear like decimal quantities instead of whole
numbers. This requires correction through several previous numbers.
articles.

Ripe Fir-leaves contain a greater proportional quantity of potash and soda than other dry leaves, because their resin protects them against the extracting power of water.
The amount of nitrogen they contain is unknown, but is, probably, trifling.
A comparison of the mineral substances contained in the leaves of Coniferex with those of other forest-trees shows that they are inferior to the latter as a litter ; because if 3000 lbs . of Coniferous leaves are brought (mixed with dung) on one Magdeburg acre of land, it will derive frem them only 39 lbs . of lime, 6 lbs . phosphoric acid, \&c. In some countries as, for instance, in the Tyrol, Styria, Corinthia, Franconia, Switzerland, and the Black Forest, the small twigs of Firs, with their green leaves, are used as litter for horned cattle. The manure thus produced, must possess some advantages over that obtained from dried leaves, as the green ones are richer in potash, soda, ${ }^{2}$ and chlorine, than the ripe ones.
re Pine-leaves.- 100,000 parts of green air-dried Pineaves contain of mineral substances :-

175 parts of silica

3,744 parts of mineral substances.
This small quantity of mineral substances found in Pineleaves renders them a less valuable manure than Fir-leaves, even supposing them not to lose potash and soda in the
course of xipening. Nevertheless, the litter of Pine course of ripening. Nevertheless, the litter of Pine-
leaves is of the greatest agricultural importance in many leaves is of the greatest agricultural importance in many
sandy tracts of Germany. They supply the soil with all the substances required for vegetation ; and by their quantity they make up for their bad quality. In those districts the farmers manure their land every two years with this sort of leaf-dung, and thus the arid soil is supplied with the requisite amount of humus. The quantity of
nitrogen which Pine-leaves contain is not ascertained; Fir probably greater than that of Rye-straw.
Fir, as well as Pine-leaves, decompose with great difficulty, owing to their woody texture and resinous quality. mal marefore necessary to let them lie (mixed with anithey are rotted. in large heaps, where they may heat and be partially decomposed; after which they may be used as litter. If this precaution is not taken, the leaves will remain two or three explains of manure obtained from the leaves of Conifere.
It is asserted that the leaves of the Larch yield better manure than those of Firs or Pines, which I cannot decide as I have never experimented upon them.
used for the absetable remains which are used for the absorption of animal excrements, or as inter, besides the above-named, many others are largely Turves*,'the so-called forest-litter, the Whin and BlackTurves*, the so-called forest-1itter, the Whin and Black berry, Ferns, Mosses, the refuse of Flax and Hemp,
and Bull-rushes, Some of them vield a better, others a worse manure than straw, as will be seen by the followWorse manure tha
ing statements :-
1.-Heath (Erica vulgaris),-In some parts of Germany Heath is the only material used for litter; but a hundred years hence, it will scarcely be employed, now that heathlands are brought more into cultivation. It contains much wax and tannin, and as its texture is very
woody, such manure will lie for years in the ground, if not woody, such manure will lie for years in the ground, if not
properly prepared previous to being ploughed in. It therefore ought to remain for a long time either under the cattle or in the dung-hill.
100,000 parts of young air-dried Heath contain of mineral substances :-

Hence it follows, that, although Heath does not furnish the best, litter, still it is preferable to the straw of Cerealia, as it is richer in lime, magnesia, potash, soda, and
chlorine. chlorine. Rye-straw used as litter acts the first year of
its being used, as its decomposition is very quick ; whilst its being used, as its decomposition is very quick; whist
Heath being woody, and decomposing slowly, affords a Heath being woody, and decomposing slowly, aftoras a
durable and protracted nourishment. The decomposition of Heath is retarded by its wax and resin, of which it contains 6 per cent. To destroy these substances, and to soften the woody texture, it is advisable, previous to being
used as litter, to throw it into large heaps, where it used as litter, to throw it into large heaps, where it
may heat; by which means, the tannin (so very noxious to growing crops), of which Heaths contain perhaps from 4 to 5 per cent., will be destroyed.
Heath is,'preferable to Rye-straw, also, on account of its great quantity of nitrogen, which, although its amount has * Name of a piece of green turf or Heath, cut out with a sharp
iron instrument.
not.yet been ascertained experimentally, will be greater than that of ripe Rye-straw, as the former is always cut green. Heath is especially valuable in sandy districts where fodder is scarce and all straw is used for the food o cattle. Heath supplies the scanty sand with humus, thus maintaining it in a more humid state.
Heath is best sown as litter for sheep, for it will most easily decompose when the manure remains for a long time. But in such cases, straw should be frequently placed upon it, otherwise the wool may be injured.
The four-leaved Heath (Erica tetralix) is said not to be such good manure as the common Heath; this cannot decide upon, not having analysed it. It is known that cattle will not eat it, but this does not prove it to be bad manure, because the Lupine is also rejected by cattie, although one of the best manures.
With Heath are also collected the Crowberry (Empetruma nigrum), the Sweet Gale (Myrica Gale), and the Andromeda polifolia; and it is probable that these three plants form even better manure than Heath itself.

## $\frac{(\text { To }}{\text { be continued. })}$

## AMATEUR'S GARDEN.-No. XX. <br> FEW plants are more generally attractive, or, when

 well cultivated, more deserving of a place in the greenbouse of the Amateur, than the Hydrangea hortensis; and it would be difficult to name a greenhouse-plant which at this season is so admirably adapted for a bed in the flower-garden. In its natural state, with delicate pink flowers, it is very beautiful; and when changed by art to the sort cwrulean blue of a cloudless sky, it is still more lovely. Many of the readers of this Paper have seen and admired the noble specimens of this plant exhibite at the Horticultural Society's and other fetes, and as aghort detail of the treatment they receive may not be uninteresting, I subjoin it.
The cuttings are taken off the plants when about an inch long, which in plants forced into flower at this sea son is generally about the middle of February. They are
taken off close to the old wood, and when trimmed taken ofe close to the old wood, and when trimmed
and inserted in cutting-pots filled with light sandy soii, are immediately plunged in a close moist heat in which they root with great freedom and rapidity.
Being rooted, they are potted singly into small sixty-sized Being rooted, they are potted singly into small sixty-sized pots, in a rather strong turfy loam, using the turfy parts only; and as often as they require it, are re-potted into larger pots, until they reach 32 s or 24 s , in which they are left to flower.
From the time of potting up to the end of July they water kept under glass, but are regularly attended with wall i, (occasionally manure,) and as much exposed to the
 highly-elaborated wart and to get as great a quantity of flower well formed and the wood perfectly ripened before the winter season. After July, they are placed at the foot of a south wall, and exposed fully to the sun, gradually withholding water as the leaves begin to assume the autumnal tint, and keeping the soil only sufficiently moist, to prevent the roots being dried up after the leaves have fallen. By this season, if properly attended to, the terminal bud will be as thick as strong Asparagus; and the only care during the winter, will be to keep the buds free from damp, which may be effected by placing the plants on a dry airy shelf in the greenhouse, or in a dry shed, covering them witt kiln-dried fern, or straw.
This is the process of management the first season; in the second, the first plants should be introduced into the forcing-house in January; the second the middle of March,
and the third be allowed to break naturally: this will give and the third be allowed to break naturally : this will give a succession of fowers from April until November, which
may be used either for the decoration of the greenhouse or flower-garden.
After the first crop has flowered and the wood is pretty firm, say the middle of June, the plants are cut down to within two joints of the root, and the soil shaken from them ; they are then repotted into small pots, and after wards treated as in the first season; only observing to retain three or four branches instead of one, and to give the plants a 16 or 12 -sized pot at the last shift; they may then be forced the third season, and will make? spiendid plan for the flower-garden.
It is singular that the Hydrangea never makes a root into fresh soil during the time it is in bloom, and it is from this reason that many are disappointed in obtaining blue flowers ; because the plants bave not any roots in the new soil, and therefore cannot extract the matter from the soil necessary to the chemical change which the juices undergo. I believe all fresh soil containing oxide of iron will produce blue flowers, providing the plants are grown will produce blue flowers, providing the plants are in have little or no effect on old plants.- W. $P$. Ayres.

## HOME CORRESPONDENCE.

## Erratum.-Artcle on

Drainage.-In your last Paper, I perceive a letter signed "J. S. Fo," whicl speaks of an ineffectual principle of under-drainage, practised on the clay-lands Gloucestershire, and in which he deprecates the drains. any part of the retentive soil for covering in such drains. Having individually practised with unvarying benefit, for several years, the principle of Pearson's under-drainage, both on arable and pasture-land, to the extent of near saifhundred acres; laying the Pearson plough-drains at halfrod distances apart, on the arable land, and varying the separation of the drains on pastures, according to circu and stances, I take leave to recommend to "J. S. F." ", to to all Gloucestershire clay-land owners and occupige, of
purchase a short pamphlet, written by Mr. Hodges

Hemstead, near Cranlrook, in Kent, and published by Messis. Ridgway, Plecadilly, for that experienced cultivator (at the cost, to purcuasers, of one shilling), being
myself convinced that of the Gloucestershire clays are not infested with surface-stone, or materially commixed with infested with surface-stone, or materially commixed with
veins of shrave and sind, that the Pearson drainage might veins of shave mut sand, that the Pearson drainage might
prove of great adantage in that county, as well as in the wealds of West Kent, and of Sussex; in which latter I
have put Mr. Hodge's opinions and recommendations into have put Mr. Hodge's opinions and recommendations into
practice, and found them verified to the letter; and I amo practice, and found them verified to the letter; and I amo
glad now, and not for the first time, to testify nay thanks to that gentleman for the kpains he has taken to benefit clay-land farmers, by making known the principles of
Pearson's effectual, reasonable, and enduring Drainage Pearson's effectual, reasonable, and enduring Drainage
(beyond calculation as to time); and in so saying, I feel it but justice to speak of Mr. Pearson and his invention in the highest terms, not forgetting his disinterestedness in letting the public have knowledge of it, without any tlemen of Kent, and some few of other districts, to subscribe towards making some slight remuneration to the inventor (a tenant of Lord Amherst, and which, in juslandowners, example that should not be lost upon other cessfully. I shall now add the following proofs, which have recently reached me, from an agricultural friend in Sussex, being dated May 12, 1843 :- "We have heen sadly Wednesday, and saw the land-drains run faster than any day during the winter; but I was pleased and surprised to see the theats look so well, where I followed your advice, does Mr. II-n's, at W-k, where it was under-drained." To say more, in fact, of the l'earson llough 1) rainage in this address to you, or to the cultivator of land who may be open to practical information, is quite useless, after
recommending Mr. Hodge's Pamphlet, wherein will be found full and clear instructions, with calrulations of cost, \&c. I differ only in one point with the pamphlet, viz.,
that I have found more man-drains (made with tiles, and outfalls requisite to carry off the water from the plough-drains, to prevent their occasionally breaking up from too great accumulation of water during heavy rains Well to observe, that the drain-tiles should be lail with the open part uppermost, laying a sole, or flat inle thereon, instead of in the common mode. In support of these though declining to make it public. - A Clay-Land Farmer. _- Your correspondent signing himself "J. S. F." seems semoving the water from the surface of che soil. This system, so extensively practised in Gloucestershire, is not through springs," but is used on all stiff pasture-land, where the water, from rain or snow, rests on the top. The
object of draining is not to preserve the soil from moisture so essential to all vegetation, but it is to prevent the fluid becoming stationary, and thus rendermg the land cold where a better system cannot be acted upon, bery well poor substitute for the usual method. Drains, to be of service, are recommended to be made three feet deep, in during the summer months. In performing this prork with tiles, we seldom see a layer of stones placed directly upon
them, for two reasons : first, the great increase of and secondly, it is not considered to be of sufficient ad. rantage to justify the outlay. In five cases out of six, secured with the same substance well pressed all roung them, which has much the same effect as the clay drain, relative to its being impervious to water. In making the
latter, it must be recollected that the trench is in the shape of a wedge, and that there are only about six inches of worked clay over the drain, forming an exceedingly
strong arch; the lower part being smaller than the and the remainder of the excavation being filled in loose. am not surprised that "J. S. F." should be slow to be tures; I was myself rather doubting, (although I was shown land on which the experiment had been made, until I indeed, I should have been too happy to have found one for domestic purposes, and for the benefit of my garden :
yet the surface was always wet and spongy after rain, from the impenctrable nature of the soll ; but since I have become diy and sweet. Draining land is of incalcund advantage to the farmer and gardener", saving manure, and returning almost cent. per cent.; at the same time it may the grand object in draining is not to take up the land, keeping in view the moisture necessary to insure good some of your crops. Howerer strange it may appear to
through the fluid does, in a wet season, filter become per clay-drans in a copious manner, and they doubt therectly dry when the summer is not rainy. No discussion, and 1 trust some of them may be induced to practica opinion, from observation, on the matter: one tion of such im is work a dozen theoretical on a ques-Elm-planks. E In your leader
"Elm-planks-In your leader of May 13, you say the save often seen Elm as well as Fir-planks to state always caused for wheeling upon. The leastrain or frost always caused the Elm to be both greasy and slippery,
while the Fir ones were always preterred by the workmen,
being the best in wet weather for lieeping a secure footing being the hest
upon.-G. $D$.
Manures. - The inquiry in your Paper respecting "sugar-bakers" scum " as a manure has brought to my recollection that many years ago a neighbour of mine
(who is since dead) tried the "scrapings of a sugarbaker's floor" upon some grass-land, the effect of which was visible for several years after. The crop the first year was a very heavy one, but exceedingly coarse and rank, and of a very deep green colour. I should therefore ${ }^{\text {advise " "J. O. U.," if he tries, it, to do so sparingly.- }}$
Stoteh
scriber," arming.-For the information of "A Suband a bushel of Wheat per acre, that the nine quarters acres, was realised in 1826, which was decidedly the best forty years. He in Scotland for a long period-say thirty or equivalent nearly to lamember, also, that our acre is situated upon the north side of the Forth, five miles east excellent Carse-soil, but not from Alloa. The soil is Mr. Mowbray was a distiller, and fed great numbers of cattle, whose urine he collected in a well, made for the purpose. He was also an active and intelligent farmer had was in the front-rank of his class, and would have had good crops though he had not been a distiller, but being this, he turned everything to advantage. The numwas times the field was watered with tife liquid manure time before the middle of May. The same may be said of the field of Hay. It will be recollected that 1826 was a very dry year, so much so as to have obtained the name of the dry year; consequently, the liquid manure told with snowy, followed with hard pinchingy, frost at night very Wheat crop never got a shower. With respect to the proportion, I cannot speak with perfect accuracy, but it it to heguessed at from the nature of the cart : 1 believe which was filled at the well; this barrel emptied itself into a long narrow box at the back end of the cart. The as far ss the I now remember, stretched across the cart holes in its bottom for the emission of the liquor. The died somt at an ordinary working pace. Mr. Mowbray anything I know to the contrary, is as enterprising and successful a cultivator as his father was.-Not a Ncotch Farmer
Bees.-I find that Mr. Wighton has either misread o misrepresented the statement of an experiment which wa in my last communication. He says, "The experiment of putting a headless swarm into a hive to make the Bees create a queen by changing the gender, shows, I think he has taken up." I will not ratalinstand the subjec here-I mop. I will not retaliate, but merely state thing about putting a headless so-that I did not say any dare say that most a headless swarm into a hive; and the Bees were not to be left headless till to mean that he beas, that those be len headess till the queen had laid eggs, the the thegs are destined to be 21 days in queen put around one two, or more of they lose their queen, put an substal years ago, asked Mr. W. to try, which he says he did in August with success. I shall now rectify two or three of Mr. Wighton's mistakes, that may lead inquirers astray.
He says, "Bees' eggs are not hatched by incubation the warmth of the hive alone hring the by incubation; the eggs." The warmth of the hive arve forth from the eggs ; nor yet does the warmth of the Bees hatch egres that are not set upon. I shall give proof that will bear out my assertion, if Mr. W. desires me to do so. In another communication he says that Queen Bees live Queens, generally speaking, live four years, season. more: some prolific ones live but three years and two months. I say prolific ones, for there are good and bad ones, as we call them. No Bee-keeper, ought to keep a hree-year-old queen. Common bees live nine montus stock hives that have bred well in July and August. With a view to the writing a complete practical concise reatise on Bee-management (which I have not time to do t present) for the Gardeners' Chronicle, I wrote to the erson who manages the apiary, in which 1, when a lad, is Bees did in 1842. He says, in answer, "Our Bees did well last year. The best top (first) swarms gathered fifty pounds in the month of August alone. The produce of one swarm perusing these citatioan, sity-my Bees do not produce so is an enormous quantily- Wherein lies the secre" Almost wholly in the ize of the hives! The hives which are used in the apiary alluded to are three-fourths or four-fifths larger than the largest that is within 15 miles or London. Thesitate not to say that Bee-keeping will never be a profitable concern as long as Bees are in those small basin-sized hives. Mr. Wighton says, "Small hives produce early swarms." If we were to inquire what is the reason, he would answer, "Because they are more easily filled;" forgetting that large hives have Bees in proporil ones. Happily he neutralises his own assertion at the same place, by saying that he has " ample proof that Bees will throw swarms, whether their hives be full or not;" which, strange as it
may appear, is also gratuitous. I shall now point out a few advantages that may be derived from a knowledge of find that Mrabity of Bees' eggs. In doing ${ }^{\mathrm{BO}}$, we shall tion in saying thon speaks wita much precipita assured that the knowledge of fit will neither add to nor diminish the produce of his hives." As soon as the owner of the apiary of which 1 have spoken found that Bees could make queens at will when there were egrs in the hive, he invented a system of artificial swarming. which he practised for the space of 30 years with great success, having in one year realised nearly 100 pounds from his apiary-working from 6 in the morning till 6 in the evening elsewhere. The system may be thus stated:-As soon as the hive is pretty full, two-thirds of the Bees and the queen are taken away and put into an empty hive. The Bees that are left in the old hive make queens for themselves. Thus, swarms are prevented from flying away; Bees are prevented from lolling in clusters before swarming, which, when allowed, is an absolute loss; and the cottager can go to his work throughout the week with an easy mind, without hazarding any lass. by the system system ; for after the Bees have lost their queen, they put eggs into two or more royal cells at one time. Those who keep small hives find it to be unprofitable to take more than one swarm in one year. The artificial system has many advantages over the natural system. One more I shall notice. Twenty-one days after the first swarm is taken off there are prood in the old hives but a few drones, drones being 24 days in the cells. The Bees have bred queens; but queens are 10 days ont of the cells before they commence to lay. Well, then all the Bees are taken from those hives that are above 40 pounds weight, and put into empty hives. The honey is taken from the old hives, seat to market at an early season, and sold for a high price. In natural swarming the queens are set some time bef before all the old brood is out.-A. Pettiorew, Wrotham Park.
Hawthorns.-I should be glad if you or any of your correspondents can explain the following circumstance, Which has occurred in a garden about 2 miles from the city of Chester. Several Hawthorn-trees, which have
 and the soil in which they grow is good black soil, upon a bed of sand. $-A . B$.
Parsley,--Parsley-seed, which generally lies long in the ground, is made to grow rapidly by sowing it in the following manner :-Dig a patch of ground, turning the soll over to the depth of twelve inches, break well and
level the top. Strew the seed thinly on the fresh earth and sift about half an inch thick of fich compost on the whole. In this manner Parsley will appear in the course of a fortnight or three weeks at the latest. I find that all seeds when treated in this manner vegetate quickly; and many of those which are supposed to require a hotdrawn, having raised, with the advantage or not being more easily any kind transplanted. It is a great mistake to sow the rising foo thickiy, it is exceedingly injur want of nourishment. Scarcity of food at an early period is too plainly shown in after life by a long unheathy stem, producing yellowish-green leaves and stunted fiowers. The effects of over-crowding is beautifully illustrated in the Mignonette: observe the difference between plants from seed sown in a pot or box and that luxuriating in a border; the former is thin, lank, and emaciated, whilst a single plant will in the latter case cover more than a foot square. - W. W.
On Boiling Vegetable Marrow.-The proof of the pudding is said to be in the eating. You recommended last week that this vegetable should be cut, cooked, and eaten, when not exceeding 3 inches in length. This, 1 submit, using a matter of taste. I have tried it 4 years, and prefer mealy, Let your correspondents who are fond of the vegetable try my plan as well as yours:-Cut it when about the size I mention, peel off the rind, cut it down the centre in four pieces, take out all the seeds, boil it in the same way as Asparagus, and serve it up on toast, with white sauce instead of melted butter. My notion is that, at the above size, it is as superior to your " not exceeding 3 inches" as a good mealy Potato is to an early-forced soapy-ffavoured one.-Chemical Jack

On Preserving Apples.-I tasted some Apples on the foth inst. as fresh as when picked off the tree; and found from my friend, at whose house I was dining, that he had preserved them in sand nof sea-sand) in boxes. They were carefully wiped before put in, a
perfectly dry.-A Tivy-side Subscriber.

Clay-burning,-In the Gardeners' Chronicle, May 6, clay for manure, yet you make no comment of burning extraordinary part of the process, and one which is west worthy the attention of the chemist. I mean the wel vellous appearance of combustion carried.on without fuel The smail quantity of coal or brushwood used at firs kindling of a kiln must of course be completely consumed unabated for months afterwards, yet the fire continues the lumps of pure brick clay , with no addition except top of the kiln. Your informant expressly state the after a kln is airly set a-going. no cual or wood or at kind of combustible is necessary, and it can only be any guished by inattention." Here then is a marvelious paradox-a fire kept up month after month without fuel. How is it possible to account for this? - what can the
combustible matter be? I hope in an early Number to see an answer on this point, which $I$ have no doubt mus have puzzled many others besides myself, and of which have never been able to obtain any explanation, though I have observed the process for yeass,
that the clay itself seldom contains any carbonaceous matter, and that the sods are not thrown on the burning mass, but are exclusively used to form the wails of the kiln, so that the vegetable matters contained in them can in no degree be efficient as fuel.-Phlogiston. [We are unable to solve this problem, if, as our correspondent states, there is really no organic matters present in the
clay; but we suspect there is, although they escape observation. ]
Pronunciation.-My reason for mentioning "Anemone" was, that (as it is universally mispronounced) it affords a warning $t o$ modern nomenclators not to add to vulgar errors. Though the Professor, speaking ex cathedra, could not be charged with pedantry for calling it Anemōne, I yet doubt whether even be would ask a sbopman, to whom he was not known, for a pound of double Aners, öne roots. I was fully aware of the word being classical. Perhaps it is not generas, as my Gradus informs me, using it, at least the expression ruvarßazos-in the very same lline with ave $\mu \omega \nu \alpha$. It may be said that Dog-rose is not the strict latter word occurs in any respectable author, or has been coined for the Anglican market, you can perhaps inform-Salopian.- [The earliest trace that Cordus, a writer who flourished in the beginning of the 16 th century, has a Cynorrhodos, which is said to have been the modern Rosa arvens
The Douglas Fir.-Among your answers to Querists in last Number of the Chronicle, is one to "H.E.B.," on the fruiting of Abies Douglasii; in which you observe it is supposed to have fruited for the first time at Dropmore, about two years ago. I beg to state that there is at seedling plant about 6 in . high, from seed gathered from a plant growing there in 1840 . At that time seed enough was obtained to sow a bed of about 4 square yards, and that solitary plant is all that vegetated. Early this spring Mr. Hislop sowed several seed-pans, with seed gathered last autumn, not one of which has yet appeared, though
the seed looked good. At this moment the tree which was planted in 1835, and has grown vigorously, is full of oung cones, and looks beatififlly.-Quereus.
On Kecping Apples.-I have at present some Apples in my store in a perfectly sound condition, although they are not of a kind reputed to be good keepers. On former occasions I have tried various plans to preserve this valuable fruit, but never succeeded so well as I have done the past season. In order that others may benefit by my experience, I take this opportunity of informing my brofruit before it is the system adopter rubbing it over with a towel, I deposit it on shelves in a large cupboard, with closed doors, constructed so as to excluigh all round, to prevent the Apples tumbling off, are about 6 inches apart, and made to slide in and out for the convenience of sorting. The Apples are placed so as not to touch each month in this way without looking at them, and although during that time one or two may have shown symptoms of decay, the contagion has not spread in the same manner that it does when they are packed in layers with straw in open frames, or exposed to the light without any cover ing. It would would experiment on the foregoing plan, and report the result. Darkness, and protection from frost, appear to be the merits of the wooden press as a conser
vative. $W$. $W$.

Asparayus.-The method of growing Asparagas by inverting a bottle over the head when it first appears from a Cauliflower-was tried by myself with as little success as seemed to attend the experiment elsewhere. Bottom-
heat is, I think, required; perhaps some of your correspondents have tried the plan in a frame over a hotbed and can speak more definitely on this point. The cir cumstance connected with it that I wish to communicate bottle was inverted, and which had grown to such a siz that it was impossible to move it without breaking the bottle. I thought no more of the mirst head from the sum crown is at least three times the size of any other on two large beds. What is the reason of this ately inquired whether salt wonld injure the heads now growing, I beg to add that I have applied 2 stowe of salt to a surtace of 12 ft . by 4 ft . ; especially selecting some I applied it so lately that I see, and expected to see, n improvement in the size and quantity of the heads; bu it assurediy did no injury to tbe growing ones, while full. It is evident that there is little to be feared from an over-application.-Cepophilus.

Verbenas.-Many persons, who have no greenhouse complain of the difficulty of preserving the Scarlet Verbena (Melindres major) through the winter. Let (scarcely missed out of a large patch,) plant it in a pot and train it upright against a twig of Elm, which throws out its lateral shoots so as to present a plain surface.
in the room; and from it (if still kept there) abundance of cuttings may be taken in the ensuing season, and aftally some mould sprinkled over, and a handlight superadded which will strike in many places. I have tried this plan with a small plant this winter, and have about 34 from at this time, besides the parent root.-Cepophilus.

Cucumbers.-The following system of growing early Cucumbers is practised by Mr. Barton, the gardener at Springfield, near Liverpool:-They are grown in a pit of forty-eight feet in length, by ten feet wide, heated by a common flue. A bark-bed of four feet wide is filled to two andm-hal rotten wid fresh tamners bar which is put a layer layer of rop of the spade. This brings the surface of the bed to about the spade. This brings the surface of the blants are fas two feet from the inches from the glass; upon this they are trained in a neat manner. Mr. Barton commences forcing the latte end of January, and very little air is given during the air, it is done early in the fore part of the day. The temperature is made to range from $75^{\alpha}$ to 80 , as near as practicable; and the plants are syringed early in the morning and again in the afternoon. By this method fruit
are cut by the first week in Aprił. Mr. B. prefers the top spit of pasture-land a twelvemonth old, to the most richly-manured compost. The kind of Cucumber grown is the Kenyon. This sort is preferred by most of the gar deners in the vicinity of Liverpool, for early forcing.-J. A
Fios. -Seeing that there are still a good many inquiries throw seing that there, Chronicle about growing the Fig-tree, I send you my mode, which has succeeded quite to my satisfaction. I get small arches turned in the back wall of a Peach-house, so that the roots have liberty to get into the border on the north side. I planted two trees, which were very small, about 4 years ago, and 1 got 200 figs on the same trees, of a good size and colon which I think are likely to do well. I give them the same treatment as I do the Peach-trees.- J. MN., a Gardener Nlate of Garalyg. Adam Smith's tebth Na ical eor advanced I will leave it for others to decide. In book 1st chapter $x i$, he states that Gardening is not a profitable mployment ; he refers, I think, to market-gardening, and says, "The circumstances of gardeners, generally mean and always moderate, may satisfy us that their great inenuity is not commonly over-recompensed. Their deghtful art is practised by so many rich people for amusement, that ittle advantage is to be made by those who practise it for profit ; because the persons who should all their most precious productions." He goes as far back as the days of Democritus, to prove that it was not profit able to inclose a kitchenagarden; he also quates from Columella and Palladius on the same subject. But from the account given of Garden Husbandry in the "Penny Cyclopædia," it would appear that it is not quite so bad e referred to the kale-yards of Kirkcaldy or the gardens f the Metropolis. The author of the "Wealth of Nations," in another place, says, "In a hop-garden, a fruit-garden, 2 kitchen-garden, both the rent of the landlord and the profit of the farmer are generally greater than in a corn or grass field; butt to bring the ground into this condition requires more expense here is ittle difference between the profits of a grass-field and that a kitchen-garden of the same size. In the "Cyclopondia" it is stated that "the profits of a garden near as those of a farm of ten times the extent, cultivated in the best manner, without the belp of purchased maanure." In nother part of the same article, it is said, "And many share of judgment and prudence, raised himself to independence, if not to affluence." From these statements urely we may believe that the condition of gardeners has mproved since the time that the "Wealth of Nations in the cultivation of what the garden produces-or is there a greater demand for the articles cultivated?Peler Mackenzie.
Kitchen Garden Economies, 'No. 2.-By cutting of Lettuces'immediately above the life-knot instead of pulling them up by the roots, when wanted for table, a single or will soon send out a crop of shoots, which are just as good as those first taken; but they require to be used before they becom

## Kitchen Garden Economies, No. 3.-Where room

 scrimp, -that is, where there is room for more, it is not a bad plan to mix Onion and Leek seed together, and sow broad-cast ; then to thin out the Onions by taking up the bed prepared for them as deepBees.-As a remedy against the efluvia arising from the dirt collected in Beehives, W. W." states, in the Chroaricle for April 29, "Let a drawer be attached to the ordinary wooden hives about an inch in depth, which may be removed, when required, for the purpose of cleaning: to prevent the combs being cemented to thed over it, with apertures about an inch square." This may appear a very good plan, but if the entrance is above the "frame-work;" it would be a very unfit tioor for the traffic of
the Bees; if otherwise, the frame would in some measure prevent the egress of the Bees, who seldom or never ceneent their structures to the floor of their dwelling, but leave a small space to afford free access to the divisions of combs. If the drawer was less than the space, say $\frac{1}{2}$ an inch, the frame might be dispensed with; but when we take into consideration the probabilty of the drawer not acting well, and crushing the Bees, I think it would be best let alone. The floors of common hives can be cleaned by lifting them up and sweeping off the dirt. "Mr. Savage noticed this in a previous Paper. It is worthy of remark, that though the effluvia from dead Bees, \&c. is very injurious, still it is not the primary cause of disease, and cleanse their dwellings from these accidental impurities.

## -J. Wighton.

Coniferce.-Observing in the Chronicle of May 13, an article on the cultivation of Coniferz in pots, 1 am inmade by Mr a few remarks on the statementants be raised in the spring, and potted off into 60 -sized pots, and ss son established to be shifted into 48 s ; and in six weeks another shift would be required into 24 s ; and at the approach of autuma to place them in 8 s . The plants to remain in 8 s , and in spring to be again removed into

This (he observes) will complete a twelvemonths growts will be objects of wonder." In the first place, Mr . Bishop recommends the plants to be shifted from Mr. Bishop recommends the piants intermediate size f 32 s , which, I think, all gardeners will acknowledge is of 32s, which, if think, all gardeners will acknowledge a shift for a Pinus, which does not form its roots 80 readily as many other plants.--especially in six weeks Mr. Bishop proceeds,- At the approach of autumu place them in 8 s , thus leaving out the intermediate sizes of 16 s and 12 s . I cannot agree with Mr. Bishop, by shifting into large pots in rapid succession. Supposing the Pinus to be shifted in autumn from a 24-pot into an 8 -sized pot, at the very season of the year when the plan discontinues growing, in order to facilitate the ripening of the wood, -and the roots, of course, have almost done growing,-of what service to the plant can that enormou shift be at that advanced period of the year? It is my humble opinion, that if the plat were to be cop-dressed, and remain in the 24 -pot all the winter, and shifted into a 16-pot eariy in the soring, it would be more advantageous to it, and would enable the grower to shift into larger sized pots in succession as required. Among the Pinus recommended by Mr. Bishop, are Pinus Devoniana and P. Russelliana, which are two of the slowest-growing Pines of all. We will suppose a plant of each potted from the seed-pot into small 60 s in the spring, and as soon as established removed into a 48 -pot, and, if necessary, re. moved into a 32 at the latter part of the summer. What a twelvemonths' prowth ? Why, not more than nine inches. At this period Mr 。B. recommends their being shifted into $2 s$; consequently, we should have a plant nine inches high in a pot as large as a moderate-sized washing-tub; and what is to become of that plant after is shifted into so large a pot? As a matter of course, must there rema, and in the course of two or three years all the goodness of the soil world when, on the contrary, if into a 32 , and so on in succession, shifting about twice a-year, the plant would have the advantage of new soils in its infancy ; and I think, with frequent waterings, the growth of the plant would be promoted, and the treatment be more beneficial to the plants.-S. Snipe. respondent "John Abbott, Jun.," considers the Yeastplant to be Centaurea benedicta, the Blessed Thistle; but on looking into "Llants," under Centaurea, I find that the leaves of some of the species of that genus bear a strong resemblance to those of the Yeastplant; and I should be glad to pened to suppose it was the Blessed Thistle-if he has ever seen it cultivated, and if the same properties were ascribed to it as are in America have raised from the seed in question is of very vigorous growth, and althoughit does not yet show forma tolerably correct idea to what it belongs from the cut I now send you, which is an exact representa, tion of one of its largest leaves natural size at present. The colaler is dark green; the midrib of The colour, and tinged with read sides, whole leaf is downy on both sidea, but more particularly on the forming and towards the base. The young leaves that are formise the at the heart are assuming a broader shape, are deeper and more pointed. The seed was sown in the open ail onight. 2lst of February, and germinated in about a fortnigh Although a coarse-growing plant, the slugs are very daye. - LLady, and Constant Reader.-[We can light on this subject without seeing the plant. Whefore, dence now supplied only shows, what was shown betore that it is of the Composite order.]

Cultivalion of the Gentianella, - Would any of your correspondents oblige me by some hints on the cultivation
of the Gientianella? Will it bear moving about, in order to avoid leaving a vacuum in the fiower-garden, or would it he better to plant something else in the bed after the Gentianella has done lluwerng? What kind of soil does it
like P Are the roots improved or injured by parting? $-0 . S$. ZRecs.-As an $\Lambda$ piarian of some experience, 1 am much surprised at the early swarning of Bees this year. On the 1st of May I hived a fine swarm, the wind blowing cool and Woolwich. Can any of your readers inform me of similar instances in other localitites?--W. R. MI. Deptford. mond finds that the method adopted by him (described in No. 16) a suitable one; but, were it indispensably am afraid that manty amateurs would hesitate, from a fear of failure. To those who have plenty of house or pit roon, and are not particular as to what sort of piants
they may have to cill the beds with, the spring season will they maite as well to increase them as any other; but where good strong plants are required, (and such will always afford the most satisfaction,) the autumn is precerable to the spring for propagating them. leat-mould, brick-dust, and loam, finely sitted, and previously warmed in a hotbed. They will strike very well in pure sand; and, where that cannot conture autumn strike, I prepare compartment under a north wall, by forming a trench, two inches deep, two or two feet and a half wide, (or any other convenient width, and long enough to hold the requisite number of cuttings is then procured from the flower-beds, prepared, (a precise number of eyes is watered with a large pan and rose, to settle the sand about the cuttings. For any farther attention they require at this time, the proragator may make a tour of the Con tinent, or pay a vist to New York, the only orders neces-
sary to be lelt conceraing them during his absence being merely to lot them alone. So that, preparing a hotbed siting and warming of soit, placing them in a close frame shadtrg and turning of lights, applying brown-paperabsorb will make roots enough in a few weeks to require a large sixty or small forty-elyht pot. About this time, some of
the Cucumber and Melon-frames will be found empty When potted, they can be put in these, and the lights shut close over them till their roots have struck into the soil in the pots, when they must be gradually opened, and a free circulation of air admitted, to liarden them for the winter. From the geographical section of Lindley's Introduction to Botany, it appears they belong to Thunberg's kingdom, of Good Hope; but whether within or beyond the limits of the colony, the seacoast, or any of the intermediate terraces between that and the Suowy Mountains, it does not say. At all events, within the limits of Thunis muchl lower than any part of England; consequently, the surlight during winter in this country cannot be too much for them. I have found them do very well through the winter in a house where fire-heat was used to keep out appears to be more in keeping with their nature than shutting them up in frames, under six inches of hay, with mats above and below, and only allowing them a few hours' sun in the course of the day-a treatment that might be recommended were they natives of or bordering upon the Arctic circle, and not from a place under $35^{\circ}$ of they ought to be shifted in March into larger pots, and if convenient, allowed a little more room, as it is still two quantity is likely to he wanted for a late crop, cuttings 2way be taken from the others when shifted, and if placed filled with deal box, an set upon the flue or shelf of a late vinery, they will yery soon root.-John Halliday, Messrs. Lee's Nursery. . The Nuthatch (Sitta Europea) builds its nest in holes of trees, and should the entrance prove its size by filling it up with clay, thus forming a barricade. This fact I had the opportanity of witnessing a year or two since: in the month of May I discovered the Whest of a Nuthatch 1 m a hole of a tree, the entrance to with clay and simall stcies, so neatly that this barricade could searcely be distinguished from the neighbouring former Gzze ; above the nest was lanother hole through Which the rain might enter, but in order to prevent so pletely stopped it up with earth. Wishing to see if the bird would rebuild we mall, I destroyed it, and in twi days afterwards was much gratified to find that it was again erected in the manner as before. The nest was comWeod, \&c., and contained five nearly-fledged young.Burghton Kingdon, Teignmouth.

o hang down naturally, and Oncidum flevuosum, fixed rond low trellis, which prevents it from ramling so much as it woulit curious hittle warty substances on the hap of the tlower, way sent in1 a very verdant state, by Mr. Edmonds, gr. to the Duke of
Devonshire, at Chiswick, Dendrobium densifloruma, bearing two racemes of flowers on one of its splendid stems, and one on G. Barker, Esq., of Birmingham, furnished Peristéria Hnmboldtí, which are much spotted and bloteued with chellowish flowers, Cycnoche spentadactylon, another new plant, having the fowers larger and darker. Both these last are handsome plants, though their forrerg are wanting in any very flecided or showy colour. Doryanthes excelsa was shown $u$ flower by Mr. Hardie, gr. to surmounted by a large bunch of very dark red flowers. Erioswas a splendd specimen of appropriate culture: it was two feet of dwarf greenhouse slirubs. From Mr Frost, gr, to Jady firen ville, there was a spec.men of Oxal.s cernua, which has nodding
flowers, of a very clear pale yellow tint. An excessively beautiful plant of the white Indian Azalea, bbout two fect in helght, was
from Mr. Jones, gr. to Sir Moore Disiny covering a flat trellis three fect high, was richly ladian with
flowers, from Mr. Stanley, gr, to H. Merens, Enq. A ulant of mass of hlossom, and in the healthest ccidution, came from Mr. produced a highly verdant and vigornus plant of Erica sult, eherea, Esq.. exhibited a superior specimen of Erica Hartnell. And
Mr. Hughes, gr, to Mrs. Rogers, of Tooting, brought a plant of
Chorozena Henchmanni, tolerably well bloomed, 4 feet in height, though somewhat ragged. betulæfolius, from Mr. Green, gr: to Sir E. Antrobus, Bart., in the higeesy; Manéttia bicolor, also from Mr. Green, 5 feet high, on a
frerel-shaped trellis chrysnlectron grandifor beautifully in flower. Rhododendron Norbiton, with large heads of brownish yellow flowers, which have numerons spots in the upper petals, and are very handsome.
R. Smithil decorum, from the same individual, with pale and
delicate pinkish blooms, spotted in the upper petals likewise

 Statice macrophylla, a species with peculiariy broad and long Kensington. A species of Bossiza, with narrow, nurseryman, of Kyle, of Leyton, Essex; Begonia coccinew, the showiest species at the ends of all the shoots, from Mr. Goode, gr, to Mrs. Lawrence; Tropæolum azureum, further from Mr. Groode, and saud to veined leaves, and handsome purple flowers, And a Leschenaultia,
probably prandifor probably grandiflora, from Mr. Falconer, gr. to A. Palmer, Esq., of Cheam. The last-named plant was much better than L. biloba, having larger and darker flowers; it may possibly rank among
the finest things that were shown. Was supplied by Mr. Wood, nurseryman, of Norwood. They
comprised some very pretty species, several of which were
alluded to specifcally in our report of the last meeting of the Horticultural Society, at Regent-street. Those which are most
noticeabie, and were not then pointed out, are, Stachys corsica, noticeabie, and were not then pointed out, are, Stachys corsica, plant that is ofter cultivated in flower-borders, and which is quite suitable for growing in pots; Cheiranthus ochroleucus,
another favorite border plant, and equally adapted for pot
culture; Phlox setacea, with showy dark pink fowers; Pulmonária davurica, with bluish blossoms; and Viola palmata, bearing was only one collection, from Mr. Catleugh, of Chelsea, the
best varieties in which were-Buistii, agracefully-growing plart, with very deep blue corollas to its rather small Howers; rosea good foliage, red sepals, and a rich crimson corolla; ; its flowers
are large and showy. Messrs. Lane, of Berkhampstead, plants of their F. Laneii, which has immense biossoms, and
appears to be in all respects a noble sort. Mr. Gaines, of Bat. tersea, brought a basket of well-cultivated Ixias, the varied and The Pelargoniums occupied a larger space than usual and the quantity exceeded that of any former exhibition we have seen The weather has for some time past been so unfavourable for rom h The general display, however, was very imposiog; and the cultivation, training, and management of the plants was highly
creditable to the growers. The new class of Pelargoniums grown in pots of 24 to the cast proved highly interesting, as many seedlings and new varieties were introduced among them;
and had the weather not been so umpropitious, this class would have numbered more competitors, as the size of the pots bring the of growers. The Gold Banksian Medal, offered by the Society in this class, was awarded to Mr. Beck, of Isleworth, a successdition; they were grown and exhibited in slate pots, and the mate of the plants bore conclusive evidence that this anti-porous Some new and fine varieties were shown in this clans also by plants, Mr. Cock's were conspicuously fine; nor can we imagine the cultivation of large specimens to be carried beyond the
skill exercised by him ; the Prince of Waterloo, Dido, Madeleine, Coronation, and Cyrus, excited unanimons delight from their plants were covered. Mr. Bell's collection was very creditable,
and Mr. Catleugh's and Mr. Gaines's large plants were also The supply of seedling Pelargoniums was rather limited; th same ungenial weather had caused the seedlings generally to be
late. Among those sent, two were selected by the Judges, to
which certificates of merit were auarderl they were buth from which certhicates of merit were au arded; they were buth from
ill . Seck, of In (worth : Susamm, a white flower with a crinson spon in the upper petals; the general form of the flc wer 1 ls very
good; and the petals being stiff, it retains its shape to thelast; the good; and the petals being stiff, it retains its shape to thast; the
habit of the flower is good, and its style of trussing very fine.
Zanzummin is a large flower, having delicate pink under petals, Zanzummim is a large flower, having delicate pink under petals,
with a rich crimson spot in the rpper part of the flower, nearly of rose-colour; this is a showy variety, and hoth flowers wo imapine will improve as the weather becomes more favourable for the natural development of the flowers. The habit of the plant
is good, short-jointed, and showingitstrusseswell. Theadvantages of showing the seedlings in pots must have been apparent to every one, as the nature of the foliage, mode of growth and
trussing is seen, and supersedes the necessity of inquiry subject; the regulation is an admirable one, and will prove
advantageous both to purchasers and growers. The seedling Calceolarias were numerous, varying much in quality; but or marking ings in this class possess decided novelty of colou for reward, as the ease with which they are raised brings a tole
rably good collection within the reach of every one possessed o a greenhouse. Two curious varieties from Mr. Standish's col Eclipse, the other Duchess of Gloucester, the former having buff ground, was covered with large maroon spots; the appear-
ance of this variety is very peculiar; the latter had a lemon ance of this variety is very peculiar; the latter had a lemon
ground, covered with brown spots; they are perfectly distinct from those generally seen, and will no doubt be in request. The ticular notice.
PRLAR following is a list of some of the winning Florists' Flowers the cast. (Amateurs). - Silver-gilt medal to Mr. Cock, fo Mabel, Mdo, Marleleme Cormation, Cyriss, Evadne, fuble Large, Coronation, Climax, Joan of Arc, Florence, Erectum, Speculum, Rienzi, Eliza Superb, Jewess : Silver Knightian medal to Clarissa, Acme to Shell, Esq., Pimlico, for Comte de Paris, Annette, Lord Mayor, Bridesmaid, Portia, Magnet. (Nursery Sy lih, Jubslee, Erectum, Coronation, Lady May oress, Jewess, Large sarer metal to Mr. Gaines, for Mayor, Victory, Selma Duke, Sylph, Horence, Erectum, Joan of Arc, Emperor, Cy rus,
Juba, Coronation, Mabel. Pelargoniums, in collections of 12 new and irst-rate varieties, in pots of 24 to the cast, (Amateurs.) the Farics, Black Pinsce, Erectum, Susama Sarpe sive medal to Mr. Bell, Chelsea Honpital, for Camilla, sy, pu, (irand

 of East Barnet, and others. Black Hamburgh Grapes were sent

Mr. Nicholson, gr. to the Earl of Orkney, Mr. Mitchell, of
Brighton, Mr. Davis, of East Barnet, Mr. E. Davis, gr, to
Smath, Esq., Woodhail Pare Smath, Esq., Woodhall Park, Mr. Davis, gr. E. Do Lord Boston, Mr
Dods, gr. to Sır G. Warrenden, Bart., and Mr. Chapman, of Vauxhali: with a few White sweetwater from some of the same Peaches and Nectarines cance from Mr. Tillery, Erq. to the Buke gr. to E. J. Shirley, Esq. Mr. Jennings, gr. to the Earl of Derby
 kinds of Pears, in excellent yreservation, from Mr. Maldwin, of
Turnham-green. Mr. Fish, gr. to R. H. Odde, Esq., and R their biossoms, were fumished by Mr. Moss, gr, to J. Tay I 1 ,
Esq. : and there were several brace of Cucumber, from valuols parties. The prize-list will best explain the merits of all these
articies. The two main points that call for rntice in the getting up of fastened to them ini conspicuous positions; and, secondly, that many of the specimens had the soll in the pots covered with
moss, which had a neat, finished appearance, and would tend materiaiy to prevent the plants being injured by the abstraction
of moisture by any currents of air to whill they might happen
to be exposed. Both practices, however, ought to be mor versally adopted, and if the system of attaching rames to the
fruit were likewise pursued, it would add considerably to the
interest with which they are May 18,-Mr. F. Solly, in his second lecture, brietly adverted
to the importance of bearing in mind the facts, exemplified produced by slight chemical differences of combination; that rise to products of the most diversfied character. He thien promere iorms of carbon, oxygen, hydrogen, and nitrogen. But in
the first place he called attention to the large quantity of water
that is found in all veretables by the following Table of results obtained by himself, showing the relative
in then.

per cent of water, the Cabbae Cucumber contains as much as 953 further illustrated by a comparison between the fresh state of the plant, the former being three feet long, and the latter about one small quantity of organic and appeared that plants consist large quantity of water. The organic products were then examined. Liebig's apparatus for the analysis of plants was introduced, and the organic matter burnt away to be examined, and proved to characters of lignin, were pointed out. By a variety of tests their presence and dis-
tinctions were shown in the specimens of vegetable matter on the and ritrogen. In this part of the lecture some beautiful experiof potassium by chlorine, and the liberation of the iodine, which attacked it, and gave it its usual blue colour. The carbonaceous periments, and the lecture comeluded by agann reformut all the actave piniclules ot plants, all the vegctable acus, ansl 181
short, everything organic in the vegetable structure, to peculiar
combinations combinations of the four great elements, oxygen, hydrogen,
nitrogen, and carbon. Someallusion was at the same time inade introduced at the end of the lecture, and was more insisted on than
that sugar to spirit, spirit to vine frar, that starch changes into sugar,
sug to carbonc acid ROYAL AGRICULTURAL SOCIETY OF ENGLAND. square, on the 10 th of May, the Hon. R. H. Clive, M.P., in the gentemen Members of the socecty. Mr. Davenport commun-

 mps, 4 cwt. of glano and 4 cwt. of gypsum-30 tons produce.
One acre of Turnips, 2 cwt of guano and 2 cwt. of gypsum- 27
tons. The dufference betwe manured with 3 cwt. of guano and the same quantity of gypsuir toft Hall, near Ixwarth Suffir Mr. Hendy Wilson, of sty model of Rouse's Improved Plough. This plourch is the invention of W. Rouse, a wheelwright, restiding at Barton, near Bury
Edmund's, and the principal points of advantage ascribed to share may be deepened or fleetened to or from the land in an
instant without stopping the horses or the ploughman"s tand being
taken off the plough; that it will go with or without a ground,
with or without wheels, with a wood breast for taken of the plough; that it will go with or without a ground,
with or without wherels, with a woo breast for Turmp and sum-
mer land, and with any shaped uron breast that may be required or preferred; that it requires no sledge for its removal from place to place; that the coulter may be moved six ways, by a move-
ment effected in an instant, and so firm that no horse can move
it; that the furrow can be faken any width, and any depth, up hill or down hill, with equal facility; that it
will be less expensive to the farmer and more will be less expensive to the farmer and more easy to the
labourer than any plough yet made, the whole construction
being so simple as to be leyt being so simple as to be kept in repair at less cost than
other ploughs." The communication of Mr. Wilson stated that
the plough had received the approbation of Mr. Allan Ransome the plough had received the approbation of Mr. Allan Ransome, land in Suffolk. Earl Spencer read the Report of the Committee appointed on the 3ric of May, and setaulcd the vanous axvantages
presented by each locality proposed for the next year's meetning,
when Southampton was chosen when Southampton was chopen as the place of the Annual
Country Meeting of 1844. The Journal Committee reported the adjudication of the prize of The sovernal Committee reported the

Corvan. Brocoli, Mr. J. Stoops. Lettuces, Mr. J. Lowrie, Leeles, Birmingham and Midland Floral and Horticultural Socipty, April 27.-The frst exhibition for the season was 1 eld in the
town of Birmingham. The display of Fruit Flowers, and Vege tables was remarkably fine for this period. A good collection admired; as were also the Pansies of Mr. Earl and Mr. Mellon The following prizes were awarded: Auriculas - Premier Mr. Wallace ; 2, Lovely Ann, H. Pope; 3, Clapton Hero, S Bunn. Grey-1, Ne plus Ultra, S. Bann; 2, Conqueror of
Europe, S. Bunn; 3, Fletcher's Mary Ann, C. Fleteher. Whit W, Pillar of Beauty, Mr. Wallace; 2, Lee's. Bright Venus, Mr Weighee; 3, Schol's Mrs. Clarke, H. Pope. Selfs-1, Lord
Lum ; 2, Lady Flora Hastings, Mr. Wallace; 3, Black Prince, Mr. Britten. Alpine-1, King of the Alp. Brue, Mr. Haines ; 3, Lovely Ann, Mr. Haines. Seed
ling ling, 1, S. Bunn; 2, Mr. Downing. Polyanthuses-Premier
prize, George the Fourth. J. Moore. Dark-1, Prince Regent , George the Sydney Smith, Mr. Wallace; 3, Glory of England, J. Moore Scedling-1, J. Pope and Sons. Hyacinthis-1, R. Chinn
2,1
R, Chinn. Pansies-Best collection of 12 blooms, 1, Mr. W Earl ; 2, Mr. J. Cowdry. Pansies-Best collection of 6 blooms,
1, Mr. W. Eari: 2, J. Cowdry. Seedline d $v .-1$, Mr. Melion; 2, E. Phillips. Orchidaceae-1, Cymbidium aloifolium, A. Kenrick, Esq. ; 2, Maxillaria Harrisonii, A. Kenrick, Esq. Green-
house Plants-1, Chorozema varium, J. Pope and Sons; Correa speciosa, J. Gouglh, Fsq. ; 3, Epacris onosmæflora, J. Heuths-1, Willmoreana, A. Kenrick, Esq. 3. 2, Lacteflora, J Pope and Sons. Camellias - 1, Double White, J. Moore; 2, Bellis; 2, Foster's Alicia, Peliargoniums-1, J. Joan of Arc, MM.
Rimum, J. Cowdry. Roses-1, Yellow China, M, Splendidis, White Moss, Mr. Bellis. Hardy Shrubs-1, Rhododendro hybridum, M. Kellett, Esq-; 2, Rhododendron Russellianum, J. Sons 薄, Fumaria nobilis, J. Moore. Apples-1, Scarlet Pearmain, R. L. Chance, Esq.; 2, Silk Apple, R. L. Chance, Esq. Strawberries-1, Keen's Seeding, R. L. Chance, Esq. Beans-
1, R. L. Chance, Esq. Peas-1, Early Frame, R. L. Chance, Gough, Esq. Broccoli-1, R. Chimn; 2, Purple, R, List ; 2. J. Chance, Esq. Cabbage-1, Nonpareil, J. Rodway; 2, Early Dwanf, H,
Chinn. Rhuburb-1, Myatt's Victoria, Mr. Baker; 2, Giant, J, Mist. Lettuce-1, Hardy Green, J. Rodway. Groups of Flowers Dundee Floral and Horticultural Society, May 10.-The first meeting of this Society for the season was held in the Caledonian Hall, Castle-street, when the tables were filed with the best The Auriculas were the principal attraction: but among the greenhoase plants were two or three stands, every plant of which was a perfect specimen. Among the articles sent in for the
decoration of the room, were a very handsome group of green decoration of the room, were a very handsome group of green-
house plants, from T. W. Miln, Esq. Greenhouse plants and Auriculas from the nurseries of Messrs. Urquhart and Sons, and Mr. W. Laird; and some splendid seedling Calceolarias, rased by Mr. Couacher, gr. at Saint Fort, which were much and deservedl admired, as well as three splendid Arnaryllis, from Sir J. Ogilvy, Bart., and and the result of their decision was-1, to C. Clark, Esq. perform, and 3 green-edged Auriculas-Booth's Freedom, Laurie's
for the best Glory of Cheshunt, and Oliver's Lovely Ann; 2, to D. Martin, Lord Lascelles. Best 3 g'ey-edged, 1, to C. Clark, Esq., for Smith' Gen. Boliver, Waterhouse's Conqueror, and Morris's Union; 2
to Mr. J. Tait, for Alpine Shepherdess, Pearson's Lilerty, Taylor's Ploughboy. Best 3 white-edged, 1, to C. Clark, Esq.,
for Campleli's Robert Burns, Taylor's Glory, and Lee's Bright and Lee's Bright Venus. Best miruty of sza, 1, to Mr. James Urıon, Taylor's (ilory, Lce's Bright Venus, and a seciling; : C. Clark, Esq., for Hedges' Britannia, Booth's Freedorn, Jefferey's Best 3 Selfs, 1 , to Mr. J. Jamson, for Findlay's Purple of Tyre, Best 3 Gelfs, Grand Turk, and seedling; 2, to C. Clark, Esq., for Best Alpine, to D. Martin, Esq. Best seeelling Self, 1, to C. Clark, Esq.; 2, to D. Martin, Esq. Best- edged seedling, 1, to Mr. J. Tait
2, to D. Martin, Esq. The premier prize given by Mr. Clark, for the best three Auriculas, was won by Mr. P. Brown, gr. to J.
Sanderson, Esq., with Wood's Delight, Booth's Freedom, and Morris's Union, as well as the Sweepstares, wlison. Best 3 Poly, Smith's Gen. Boliver, Pinnce kerent; 2, to C. Clark, Esq, for Pearson's Alexander, Buck's George the Fourth, and Falkner"s Black Prince, Best seedling Polyanthus, 1, to Mr. J. Tait; 2, to G. Fyfe, Esq. Best
variety of double Primpose, 1, to Mr. P. Brown ; 2, to Mr. J. Tait. Best specimen Bulbs, 1 , to A. Eason, Esq., for Tropæ'01um penta-
plyllum. Best variety of Bulbs (cut flowers), to C. Clark, Esq plyylum. Best rariety of Bulbs (cut fiowers), to C. Clark, Esq
 Mr. (T. Simson, for Princess Royal, Haidée, Prince Abert (Silver-
lock's), Col. Dundas, Lady Flora Hastings, and Jupiter ; 2 , to S

Melomson.s Esq, for Miss Stainsforth, Diamal ermon, Hardie Hope

Mr. J. Dick. Best basket of Vegetables, 1, to Mr. G. Sibbold; 2,
to Mr. W. Taylor.

Cheetham Hitl Cucumber Show, May 5,-This Exhibition was
held at the Bird in Hand, Cheetham Hal botween the dung-grown Fruit and those grown by fire-heat. Sixteen brace were brought for exhibition. The Ipswich Society's respectable Amateurs, Florists, and other gentlemen, sat down

Six Prizes werc also awarded to Dung-heat productions; their 18 do.; Third, 18 and 17 do.; Fourth, 16 and 15 do.; Fifth, 16 and

South Essea Horticultural Society, May 11, The first exhibition or this season took place in Wanstead Park. The fineness of the Park, drew a great many of the Members and the sesident gentry of the neighbourhood. The exhibition was the best that had ever of Plants, Nurserymen, Mr. J. Fraser ; Small do., Mr. Pamplin. Wrouclicr, gr. to J. Alleard, Esq, ; 2, Mr. R. Furster, gro to Rev.

Felton Florists' Society, May 8.-The florists of Felton and its Hyacinths, and Pansies, at Mrs. Hines', the Northumberland Arms inn, when the prizes were awarded to the following gentle-
men:-Auriculdos, 1 , Mr. WW. Harrison, for Dorman's Don Pedro; Booth's Freedom; 4, Mr. W. Scott, for Thompson's Bangrip;
5, Mr. Harrison, for Oiliver's Lovely Ann; 6 , The Rev. J. Orrell, for Grimes's Privateer. Polyant thuses, 1, The Rey. J. Orrell, for
Maud's Beauty of England; 2, Mr. W. Harrison, for Burnard's Formosa, 3, Mr Orrell, for NIcholson's King, 4 , MT. WW. ThompA.exander, and Collier's Princess Royal. Hyacinths, $, 2,3$, 2,
Mr. Rdithc, zr. to Mrs. Mitford for' Groot Vorst, Lord Nelson,

 also much admired, aud is a very fine and distinct variety of the
red ground class. red ground class.
Heartsense Society, May 9.-The second show of this Society
was held at the Thatched-House Inn, Hammersmith, when, con sidering the very heavy rain and hail which had previously tallen,
the tlowers were exceedingly fine; indeed some, which had been great credit on the growers. We are glad to learn that tite
Society is increasing very rapidy ind inded, tudfing from the
Sumerous competions and members, some of whom came from Bristol, Nottingham, and other distant parts of the country, we are inclined to believe that the Society will arrive at as great a
degree of eminence as can naturally be expected, when its objects are con very simple, thourh lovely fower. The following is the
 Ki.rtand, Chipping.
(10s.) Mr. Edmonds,
 to Mr Bridges for his Victory, a flower very much like Thomcomperititin) a seading named Blood Royal, possessing great
novely of colour and a fine form, but slow pinq a turdency to become (at times) rough on the edges of the petals.
Hunslet F:oral Society, May 3.-This society held their annual
show of Auriculas and Polyantauses, at the Punch Bowl Inn, show of Auriculas and Polyanthuses, at the Ponch Bowl Inn ,
Hunslet. The judges distrinuted the following prizes - Avericu-

 Warre's Union, do. Chinu-edged, 1 , Ashworth, Reargurar,

Ipswich Cucumber Society, May 11.-The second show for the not so great as on a former occasion. Suffolk is becoming so celebrated for the cultivation of Cucumbers, that it is with much aificulty that the foreigners (as the growers in other counties are called) are persuaded to come forward. The judges gave
general satisfaction, by awarding the prizes by the Standard of the Society, which embraces all the qualities requisite in a first rate Show Cucamber, viz.-Length, combined with the annexed qualities; straight, slender, and uniform in size; dark green in every respect fit for tabie. It is also worthy of remark that the first. Mr. George Mills, of Gunversbury Park, also made a communication through the Secretary, that he would be happy the first wize in Fehrary next which was immediatcly accepte by Messrs. Latter and Ward. The annexed list will give a full

The West Kent Floral and Hortir first extibition of this Society, which has been recenty got up
under the auspices of Mr. Pawley, of the White Hart Hotel,
 Fine collections of plants were exhibited from the Gardens of Miss Traill, Hayes Place, Hayes, Sir C. Farnaby, West Wickham Croydon, Mr. Pawley, of Bromley, Mr. Hally, of Blackheath, and Mr. Hunt, from Hayes Place, were good specımens of Maxillária Harrisonii, Dendrobium Pierardii, and several other Orchidaceous
plants; Cytisus racemosus, Genista fragrans, Leschenautia
formosa, fine plants from 18 inches to two feet in cliameter, and a very surecior variety, Trope'olum tricolorum, Ixora cocmea in fine bloom, Templetonja retusa, a good but neglected plant Boronia pinnata and serrulata, splendid plants; Erica Hartnellii very large; E. delicata, rubra calyx, and many
For this collection the first prize was awarded.
exhibited a collection of Heathe, containing some fine plants, expectally of Erica sulphurea, mutabilis, elegans, and Will moreana, to which also the first prize was awarded. M
Pawley's collections were the next in interest and Pawlcy's collections were the next in interest, and consisted of and a dozen Fuchsias. Among the plants in the large collection we noticed Euphorbia splendens, Elichrysum secymoides, var speciosum, Chorozema varim, and its variety rotundifolia nana, in spienisia crenu, Arda phylla and rhoriophnæ, Azalea Herbertii, a very decided improvement on A. phoenicea, and several other fine secrling varieties A fine specimen of Leschenaratia formosa, six menes high an of the pots, and good plants of Pimelea rosea, Coldonnea side diana, and Ixora coccinea. To this collection the second prize was awarded. The climbers consisted is
pecimens of Kennedya nypricans and prom; wath fin , tricolorum Zichye pannosa and inophylla, and a spectes of Gompholobinm potting, and several of them that, twelve months back, were in collection of Fuchsias were prown on the same srstem, and contained fine plants of $F$. Moneypennii, Towardii, Venu victrix, a very distinct but paltry variety, a seedling of fine
habit, and good flower, and a fine plant of F. Eppsii. This plant it was perhaps sul emor to any thmg in the exhibtion. In 4 -sized pots, 5 ft , hiph, 4 ft . in diameter, the branches drooning to we ever before saw The fower buds were just becinnins $s$ well, and if they equal the plant, which they promise to clo, this r. to Sir C. Farnahy, contronted snme finc-3inomed plants elargoniums and Auriculas, and John Wells, Esc.., exhibited some good seedling Calceolarias, but not equal to Mr. Wells's
The collection from H. Harman, Esq., contained a few plants, and the Pelargoniums from J. Harman, Esq, of Eltham, were tolerably good Mr. Hally, of biackneash, examion a dooming plants of Rosa Devoniensis, the delicious fragrance of which afforded a great treat th the ladhes.
Of specimen plants there was an excellent wariety of Azalea, with large pure white flowers, and of vigorous habit, from Mr. Malplants of Tropæolun tricolorum, and Clematis azurea srandiflora, from the gardens of F. Baring, Esq., Lee. Vegetables
were not very abundaut. A good collection was exhibited by Mr. Mallion, and a brace of white spine Cucumbers from Mr. Law-
rence, gr. to - Stanton, Esq., Westborough-green, were wellrown fruit -W, P, Aypes.
Limerick Practical frorticultural Society, April 29.,-The Spring
Exhibition was held in the Philosophical Soc ery's competitors entered the prize list.-Mr. MacDonald, gr. to the us stove and greenhouse plants in fine condition, consistnthus punicens, Clenithti cerorlea, Selago Gilliesii, Magnoia, Cmerarias, \&ce. Re, Mr. Heaphy, gr, to Lord Clarina, brace of Cucumbers, best Seakale, best Turnips, 2 d hect Pansies, and best 12 Pears. Mr. Walsi, gig. to Sir A. De Vere, Hart.,

onntry;, particularly noticed by the Newcustle-on-Tyne Botanicul and Horticultural Society, April Music Ifall, and the expectations of the committer and nemiers were most amply fulfilled. To juclge from the immomse quantity and beautiful growth of the plants and flowers, the exlubrince was more like the month of June than April, and the appearance
of the room was quite as gay as at the large summer shows former years. Every portion of the extensive tabics was covered
with specimens, and several were obliged to be placed on the seats which surrounded the room. The fruits were in very fine
condition, and had becn well kept till this late season, many of condition, and had becn well kept till this late season, many We

British Association.-Notice has been given that the thirteenth meeting of this institution will commence in Cork on Thursday, the 17 th of August next, when the the 17 th to Wednesday the meet daily from Thursday the sections will. also meet daily from Thursday the 17 th to Tuesday the $22 d$, inclusive, at 11 A. $\boldsymbol{m}$. and the general evening meetings will be held on Thursday the Agricultural Labday the 23 d , at 8 P.m.
When I had somewhat more Iour a dozen years ago turned my attention much to this subject, at present, I means of procuring the allotment, directly and indirectly, of some thousands of gardens to cottagers. 1 wrote a few in which I mixed up a few hints useful to that elass of persons, with directions for the cultivation of their gardens. On two or three occasions I have been applied to for permission to print this for sale at cost-price for distribution, to which I readily acceded. With the omission of the first paragraph, I believe it is applicable for distribution anywhere. I have only two or three copies left, and send one, which may be made any use of you may see fit. I
have found, practically, that few will adopt the minutime in the disposition of the allotment $I$ have recommended in other respects, the pamphlet has had a very decided in offect in connexion with the gardens. At the time decided written I had very great difficulty in persuading any one to undertake the office of parish constable in the parishes I bad under moy immediate charge, the duty was so onerous in cnssequence of the loose and predatory habits of the popoation. At the Court immediately succeeding the first year's trial of this system, and the delivery of the little book to every cottager in two adjoining parishes, the constable of the preceding year offered no objection to restated at the which expressed some surprise. He he really had had nothing to do in his office during the past year, and I never afterwards experienced any difficulty. I Ient money to buy pigs to those who required a loan: it was punctually repaid, and with one exception the rents have been regularly paid. The rents paid have been a trifle more than the farmer previously paid, to cover the rates, which are paid by the Iandlord. I had in almost universally opposed to the system; but I had the satisfaction of attending a meeting of a farmer's club very recently in this county, at which the subject for discussion Was, the comparative sdvantage or disadvantage of the who spoke garden system. There were some individuals it was carried by a very large majority of the meeting, consisting almost exclusively of rack-renters.-Charles Lawrence.

BRIMPSFIRLD. ON my brother's taking possession of the estates ately purchased by him, forming the principal part of the parishes in which you reside, the entire management of off to admit of his personal superintendence. With far knowledge I had personal superintendence. With the the labouring closses, interest he feels in the welfare of to make early iaquiry into your condition; and had it under consideration, as you know, before the beginning of those disgraceful riots which have taken place about the country. These, for a time, put a stop to my proceedings. Your orderly and peaceable conduct, while these disturbances existed in this county, have increased your claims on our consideration. The other proprietors of land in the parish of Brimpsfield entertain the same feel ing, and 1 bope you are sensible of their kind disnosition towards you. I feel indebted to them for their liberal fond a helninness they have shown on every occasion plans proposed for improving your condition effect any ow set out allotments of lond to cupply all we have gardens. I have been guided as to quantity chiefly by the number of persons in each family; may intention has been to allot to each of you just as much land as I thouglit each family might be able to cultivate properly, without interfering with their regular labour for wages. You must Wages of labour, and that no member of your family who is able to work and can get work should lose wages even for a day. You must remember also that you have onl those parts of the day to deal with that are not engaged in your master's service, and if the land allotted you requires
leave a portion of it forcultivated than lose you had better are seasons at which two or three hours wages. There may be of material consequence to you in the garden then they may not be so essential to your masters : there will be times at which two or three hours' extra service are very important to them, and not so material to you There will be no difficulty in managing this betw you good servant and a considerate master without heen wages, and with much advantage to both parties. ants arefew, but they are certain ; they return ever ap, and the day's wages must be depended upon but them. Your crops may fail with all your pains our firges are sure; therefore they must be alway from your work for the say day night comes you must run in gorn, when watur shall by-and-by tell you what comes of this. Every man who has a garden must keep a pig, and consequently the pig in another place har a god the cottages in Brimpsfield do very large proportion of I cannot help thrmpsfield do not belong to my brother, must get these ready as sot those to styes. Such of you the owners of your cottages to find you materialsslates, and walling-stone; get your masters to haul them for you, and do the rest yourselveg. You must also try keep a shed put up against or near to your cottages, to of your fortur garden as you may want to stow away. You are feel disposed to afford good neighbours, who I am sure will providinged to afford you every reasonable assistance in providing yourseives with these conveniences, and who ment to the induard in giving this or any other encouragein possession of your and deserving. Now that you are greater service than by offering you some advice upon the cuitivation and general management of them. I shall pro bably add a few hints on keeping pigs, and on some othe matcers. The calivation of the grarden is a subject upon which I 8 m very anxious to fix your attention; it is much greater consequence than you suppose;-indeed Whether the same piece of land be managed well or ill will make the difference of one-half, or even more, in the quantity of mourishment that it will produce for you © $M$

Manure.-The first thing you must do is to make stantly manure; for unless this be regularly and con vain. Every crop takes some virtue out of the land, and of this be not returned again, the soil will, sooner or fater be completely exhausted.
"s Always taking ont of the meal-tub, and putting nothing in
F'or this purpose your
Your heap must be formel as to the sty, and a little under the level of it, so that it may basin, about 3 feet deep in the middle, and about 8 feet ver at the top; then puddle this very carefully full 9 nches thick, and ap the level of the ground, with good clay, perfectly clean, and free from sand, grit, or mould, so that it shall be water-tight. If you can put some plank-stones at the bottom, and round the sides, so much the better, as you will not be so likely to disturb the clay, when moving the dung. This is to be kept in this hole antil the heap gets 2 or 3 feet above ground. By these means you keep all the most valuable part of the manure in the heap, instead of leaving it to soak away to waste Everything that the pig will not eat, all the dirt and refuse of the house and privy, and even the old clothes, when quite worn out, must bo carried to the dung-heap. No opportunity should be lost of collecting a barrow-full of dirt from the roads or other places, always taking care to do no harm to any one else, and not to obtain it improperly. Remember that 'every little makes a mickle.' When your dung wants moving from the hole, wheel it to the small portion of waste land left against each of your gardens for this and other such purposes Lay it in a heap not more than 3 feet deep; shake it well to pieces as you lay it, and cover over the top with mould 3 or 4 inches deep; it will require once more turning mould, and put it on again after the is done take off the were to and put it on again after the heap is turned. If 1 not understand it; therefore I need o you, you would very much inch great point to thase who mal thane, which is a "L Laying out the Garden wish to urge particularly on your to manure, the poin tion of crops; by which is meant thatention is the rotayour gardens, and so forecast your crops should lay out stand on different parts of the crops, that they should year. This change does great ground, every succeeding and if it be very regularly followed the land in itsell another great advantage is, that, instead of putting a little the whole to bear on those crops which most can bring every part will get regularly manured in its turn. As the method of laying out and cropping your garden is of should clearly understand my directions anxious that you fore, taken great pains to make the plan simple, and easil understood; and to render it more plain to you, I have laid down a quarter of an acre (which is the gize of most of your gardens) to a scale. See accompanying Plan, Hhere you will find the size of every bed shown in feet you have number of perches each bed contains. When on the plan, and left an alley, about a foot wide, between
each, you will find that you have just disposed of your
quarter of an acre of land, neither more nor less. Plam. an acre of land, neither more nor less. I have Plam of a Garden, containing one quarter of un acre, or 40 poles or

rawn out the plan in the form you see, because that is So form in which most of your gardens are set out. Some of your gardens are in a different form; some :ontain less, and others more than a quarter of an acre; but this plan will be just as good a guide to them, as to the rest, if they will attend to the following dircetion :To those whose gardens contain a quarter of an acre but are in point of form shorter and wider than the plr, 1 need only observe, that all the beds must still be nade the same size as those on the plan; that is to say they must contain just the same number of feet of suface that which is taken from the length of any bed mist be added to the breadth. Those, whose gardens catain more or less than a quarter of an acre, must diminih or increase every bed in the same proportion as their rhole garden exceeds or falls short of a quarter of an acr If a garden contain 30 perches, instead of 40 , every bednust be one-fourth smaller than those on the plan. If amther contain 50 perches, every bed must be one-fourth arger than those on the plan, and 80 in proportion. Takicare that you understand this perfectiy before you lay outyour gardens, otherwise you will get into confusion. I thught that if I gave you only one plan, and described thenode of cropping for 3 years, by reference to that, you nigh get contused, and make some mistake ; therefore, lhave drawn a separate plan for each of the first 3 years At bed. Ihave given the cultivation and the crop forvery fore will have number win be cultivated just the same and different the crop every year, but it will bein a of any part of the garden. If you observe the sitution place iop in the plan for the first year, then mak its thied the plan for the second year ; and then, in the reconear, you will very readily understand the methal go for the Th arden is divided iato five principal compartmhts. tains beds year, the top compartment of the garden onbe moved Nos. 1; 2 , and 3 ; the second year, they ar to crops all to the bottom of the garden, and the oner The second one stage forward to make room for then. tain Nos. 4,5, the top compartment will therefore on bottom for the third year, and all the rest will be maed one stage forwards as before. The third year the to compartment will contain Nos 7,8 , and 9. These nill be moved off to the bottom for the fourth year. lo fourth year, the top compartment will be No. 10, which will be moved to the bottom for the fifth year. The fth year, the top compartment will contain No. 11, wheli will be moved off to the bottom for the sixth year; nd in the sixth year, every crop will occupy exactly the she place that it did in the first. If these compartments wir of equal size, the same crops would not stand on any Fr of the same ground for 5 years, that is, till the year 186. But chis is not exactly the case the plon Patoe more than one-fth is required for the it potatoes, and also for the Barley crop; therefore, a snill
part of the ground on which these two crops stand mst
necessarily be the same as they occupied the year before; that is, to the extent of the difference between the length
of these compartments and those in which the Peas, of these compartments and those in which the Peas,
Beans, and Cabbages are; which will be found to be about 3 yards. I do not think this is of much consequence, as in the case of Potatoes, this extra quantity, though twice cropped, will be twice dunged, according to the directions after given; but, if you find by experience that you can
make a smaller quantity of Barley and late Potatoes serve, you may divide the garden into five equal principal compartments. There is only one more observation which need be made in this place, which is, that the Onion bed are to be manured, as you will see by-and-by, every year; and (see the plan) as they occupy one side of the garden only, when they have gone be changed over to the opposite side. No. 8 must change places with Nos. 7 and 9 , and No. 6 with No.
"Crops. - When you come to this place aguin the last four pages, and examine the plans attentively; and by that time I hope all of you will be perfect in your lesson so far. Having taught you how to divide you how and when to sow and plant the various crops, and where you may raise winter stuff in addition to the regular crops as shown upon the plan. You have hitherto been
too much in the habit of planting any land you could get with Potatoes only, and you will perhaps be surprised at my setting out, only about a third of your garden for this first is, that Potatoes yield much less nourishment for the body than many other crops; secondly, they exhaust the land more than any: yet they are so easily cultivated, so
seldom fail, and are in many respects so useful, that allow them, what I think, a large proportion of your garden. There are means by which men of science can find out the quantity of nourishing matter contained in the various produce of the earth. Several articles of food in common use have been examined by very careful and nice experiments; and you may, therefore, be sure their report is searly correct, however different it may be from the opinions you may happen to have. You must suppose ment you have 100 pounds weight of each of es asite to each will show you the number of pounds of actua nourishment for the human body which each 100 pounds body without assisting in any way to its support
100 lbs , of Lentiles contain

cultivation of Lentiles (a kind Pea), because they have a bitter disagreeable taste; but country, it is said that they saved thousands from perishing

Mode of Cultivation.-Having numbered every bed on the plan, I shall now direct the cultivation of each, in
its order, for the first year-presuming that you have trenched all the ground before winter, as after directed No l.-In the first week in February sow one row of
Prussian Blue Peas, 4 feet from each side of this bed. These will stand 5 feet apart. The first week in April sow a row of Dwarf French Beans, within a foot of the edge on each side this bed, setting the seed 3 inches apart in the row. As soom as the Peas are gathered, dig over the bed, laying the haulm in the bottoms of the trenches as you go on, and plant out Savoys from the seedbed (to be raised as after mentioned), in rows 18 inches apart; set the plants 16 inches from each other in the row. No. 2:-Dig over the last week in April. In the first week in May, plant out Early York Cabbage from the distance from each other in the row. These directions only apply to this first year, as you had not your gardens set out in time to crop this bed earlier. In future, the Cabdire plants, the seed of which is to be sown in Augnst, as bed the middle of October, to stand the winter, and come in midde come in for spring Cabbage. (See directions as to No. 11 ,
Which this bed will always follow.) No. 3 , Dig over, as soon as the Lettuce plants in the seed-bed are 2 or 3 bed, 1 high; plant out a row On the 13th May, or as near that day from the edge. On the 13 th May, or as near 3 feet within each row of Lettuce plants; set the seeds 3 them up, and in the course of two or three days after, stick them up, and in the course of two or three days after, stick
about the mid.-Dige over the first week in April, and for the middle of the month sow Dwarf Imperial Peas the a second crop; one row at 3 feet from each edge of the bed, and one in the centre. The Peas I have recommended will do without sticks; but if you can easily get Dig your crops will be much more abundant. No. 5 .February sow 3 rows of Long Pod Beans, at 2 feet 6 inches part. In the middle of April sow 3 rows more, at the like firstice, to come in for a second crop. AB soon as the ground, and gathered dif in the baulm decp, ever over the No. 2 , feet apart, and 18 inches distant in the row. the end of February, then dig it in about 2 or 3 inches Leeks the mould. First week in March sow a row of

Onion seed, broadcast, over the remainder of the bed. As soon as the Onions are taken up plant out York or Barnes Cabbage, at the same distance as the Savoys.
No. 6*.--The end of February, level 1 yard square of this bed, and work the surface fine. First week in March sow seeds for Early York Cabbage; sow half auother yard with like manner 4 square jards more, and sow seeds of Savoys, Scotch Kale, Milan Kale, and Borecole, 1 yard of each. In June prepare another yard square, and sow seed of anes another yard with Early York Cabbage seed. As soon as the plants in any of these seed-beds are fit to move, get ready a piece of ground on this bed, sufficiently large to take as many plants of the sort as you wil want to plant out to stand, and then prick out the plant more than will fill the bed in which they are to stand for a crop, as some may fail. This transplanting will make the plants much stronger, and produce finer heads, than would Nos. 7 and 9. -Dig over in February ; sow Carrot seed in one bed, and Parsnip seed in the other : these seeds to be sown in drills 1 foot apart, the Parsnip seed rather deeper out to the distance of from 6 to 9 inches in the row, according to the depth and quality of the ground. The ize of these crops will be much increased by loosening the earth to the deph of a or 4 inches between the drills occasionally, indry weather, with a two-pronged hoe.
No. 8. Lay eight barrows full of dung in beaps on this bod in February. The first week in March, throw the ed up in ridges, just two feet apart, leaving your first trench, on each side the bed, 18 inches from the edge. When this is done, you will have 12 trenches. Lay your dung equally along the bottom of each trench. araw about four or five inches of mould down upon the dang, ney,) three or four inches deep, and one foot from each other in the row. You are all apt to plant your Potatoes too near together, under a mistaken notion that, if you plant wide, you are losing ground, but I know, fom Early Potatoes in gain Potates apart, and in deeper soll than yours. As soon as the plants appear above ground, earthe whole over lightly ; when abouraw up the remaining earth to them. It is a bad plaxi to put by small Potatoes for seed; good sized, well-grown fruit should be dug for use by the lst of August, the rest should be got up immediately. The haulm of Potatoes soon rots in the ground, and makes good manure; therefore, when you first row, and lay it on the ground, next the edge of the bed, from which gll the mould will have been drawn in earthing up the plants; and when this row of Potatoes is taken up, throw the mould back upon the haulm ; proceed thus with every row, making the ground good and save digging all over again. Plant out Milan Kale, as fast as the first Potatoes are cleared off, to the extent of one half the bed, as this should be planted as eariy as possible In the beginning of August, plat of this bed. Set the plants in rows two feet apart, and at 18 inches distance from each other in the row. These will be found very serviceable during the winter and spring. If you think $l$ am providing you with more green food than considering how little nournshnent it afor the you that I am thinking of your good friend the pig, as well as of you; and that this ground would be lying idle from July till the middle of April, if it were not thus
No. 10 . Lay on 12 or 14 barrows-full of manure the last week in April; throw up this bed in ridges, in the same manner as directed for No. 8, excepting that these trenches must be three feet apart. The first week in May, plant late Potatoes. Recollect what I have before said in selecting your seed; and treat this crop, throughout, as I have directed for No. 8 ; do not let any one persuade you to form the rows nearer than the sort of seed you use produces bigh and strong haulm, the rows should be four feet apart. You should not use seed grown on the same soil more than two years at any rate; it would be better to change your seed and the sort up, throw this bed up into ridges, three feet apart, in order that the ground may mellow, and work fine for the Barley crop, which will always follow the Potatoes. produce more than enough to fatten the pig thoroughly I shall not pretend to offer you any advice about this crop for I suspect you know much more about it than I do. As and 3, for the next yff, you should lay out beds Nos tubble, where the bed No. 2 will stand the next year, and et it ready for the Early York Cabbage, to be planted ou in the middle of October. The other two beds may b idged up to stand the winter. The farmers will give yo good wheat straw in exchange for your baxhy traw, which heap ond to litter the pic. Having gone over every bed in the garden, the plans will be a sufficient guide to you for the cropping for the second and third years; you will then proceed with the same plan during the forth and fifth years, moving every crop the sixth, they will all come compartment each year, and they are to occupy in the first. round to the same places they are to occupy in the firs

Remarks on the Management of Orchidaceous Plants, Lyons, Ladiston. (Private Circulation.)
This little work has been gratuitously circulated, by J. C Lyons, Esq., of Ladiston, Ireland, in order to remove out of the way of amateurs the difficulties which he himing experienced at it is divided into a general essay on Culture of the Orchidacere ; a Calendar of Monthly Operations necessary in effecting the same, and a descriptive list of those which the Author possesses, with a few superior ones not in his collection. The last section includes a number of excellent hints adapta to the members of each genus separately. In the first, the suggested are carefully based on the principles of science. The Epiphytal kinds, or those which grow on trees or other objects, from which they receive no nourishment, are arranged in four classes, as follows:" lst. Those species found in low dense woods, where
scarcely any sun can penetrate. These, therefore, require shading from the rays of the sun, either from large plants in the house, or from creepers, or by some other means, and must have a hot and moist atnospbere. 2a. N1.ox species found growing on trees, near to open brake in and a free but damp atmosphere. These should have similar atmosphere, but will encure the last. The greatest part of the specing on single trees, in damp but exposed situations. These must also have a damp atmosphere and plenty of heat; but they thrive best if exposed to the sun, except just at mid-day, for although remembered that the plants receive considerable shelte from the branches of the trees, (although standing single) on which they grow. 4th. Those species found growing on single trees, in elevated situations, where they are sul These, therefore, require a lower temperature, less humi dity, and nearly a full exposure to the rays of the sun.
Having spoken of the season of rest, the Author goes observe "s as as the heat of the sun is rather on the decline, during the months of June, July, and August, it will be found of the greatest benefit to give the plants a thorough good syringing, with
water the same temperature nearly as the atmosphere of the house, after which it should be shut up close for the night; the temperature will increase frequently beyond that heat; in fact, as long as the atmosphere is saturated with moisture, the plants will not be injured by heat. When I use the term syringing, I wish it to be understood that I do not mean such a process as is generally performed on other plants, where the destruction and removal formed on other plants, where the destruction and removal
of the green-fly is the object. Epiphytes are not a species of plants much infested with them; I have never observed of ptants much infested with them;
them on my plants, and although they may be frequently seen on the various creepers in the house, notwithstanding the great moisture, still they appear to avoid the Orchi-
dacer. My mode of syringing, therefore, is in imitation daces. My mode of syringing, therefore, is in imitation of a plentiful, gentle shower of rain, let fall on th
Mr. Lyons likewise adopts the plan, of which he claims the origin, of introducing steam into the house, every
evening during summer from the boiler. But the chief evening during summer from the boiler. But the chief
novelty in the work is the design for a stand for the Epiphytal species; it is called by the rather un-English term of the "Oniscamyntic stand," and is thus directed to be made.
"Procure from the potter a pan generally known as a feeder, with a raised centre and a hole in it, into which the forked branch of a tree is to be made fast. In the forked part the plant is to be fastened with zinc or copper wire, and the roots covered with moss. The branches can the bottom. I have them from 12 to 36 inches long. The bottoms of the feeder should be made thick and heavy, which will cause it to stand steady and firm. They may be made of different sizes, and the branches cut to different lengths. Should the plant increase in size and weight so as to become unsteady, a larger bottom can easily be
substituted. I have several plants of Oncidium, Papilio, Stanhopea, Lselia, and Catasetum, \&c., growing in the forked branches, which succeed remarkably well ; the foliage of all the plants so grown is much more laxuriant lumps of peat, and at this moment (November) grown in lumps of peat, and at this moment (November) the branch of the tree is covered with the roots firmly attached to it,
having in many instances penetrated the bark. They were, having in many instances penetrated the bark. They were, to me, fixed in common pots, made steady with yellow clay pressed hard, but those in the stands are much preferable, as they contain a quantity of water in the
feeder, which prevents the attacks of insects and also contributes to the moisture of the atmosphere by evaporation. I aco strongly of opinion they will be found an excellent improvement on pots for almost every Epiphyte, and will not occupy more space, beside they have the advantage of allowing smaller plants to be placed between them."
Of this stand, again, it is remarked that it supplies "A natural material to grow on ; a perfect drainage ; a safeguard in a great measure against insects; it takes up less room in a house, is not more expensive than pots, and is far more pleasing to the eye; besides all which, it enables the of treatment. The plants will be enabled to assume a more natural position of growth, which we know in many instances to be a downward position: this will pretroying them
p-Mr. Lyons informs us that some cultivators have objected to it, because the bottom of the branch placed in it be easily remedied by cutting of the decayed portion, and inserting it afresh: others fear that it will become too heavy at the top and get overbalanced; but Mr. L. says heavy plants on the top of some though be has large and care is taken in syringing. On the whole, the plan seems original, and likely to prove useful to cultivators, by dis pensing, to a great extent, with all kinds of pots for the Epiphytal species. The work is, indeed, altogether cal culated to be of service to inquirers, and the benevolent
design of the Author mast assurediy be appreciated. design of the Author must assurediy be appreciated. CALENDAR OF OPERATIONS for the ensuing week.
I.-KITCHEN-GARDEN AND ORCHARD. Pinkry, -After this time many good gardeners do not put
much stress on the bottom-heat, which must now be fast declin-
ang 1 n tlec spring made beds. It is, however, a good plan to have
 little fresh tan, when the young stock is being examined to frnit, the whole should now have a very moist atmosphere.
Vinkry. -Now is about the right time to determine what kind part of winter. For private families who keep little company at conomical; but for "parties," large bunches and berries should be produce, if only for appearance sake. To leave plenty o
bunches is the way to have them small; and to thin out the
bunches and the berries will cause both to be larger. The eaten of thinning in either case must be left to him who knows the state of the Vines ;

Fery dry till all the fruit is gathered.
Figs. -These gross feeders will now require to have the soi may be in. Mecons.-There have been many very good hybrid varieties of these obtained within the last few years, by crossing varieties
old ones with the laree Persian rarieties The tramhling habit of the $\mathrm{p}^{2} \mathrm{c}$. ans is thus reducen, and the trut partakes of an inter-
mediate quality between both parents; stilit they are toolarge for private use, and might easily be reduced by crossing again with molst atmis spere, with abundarie of aur while the frut in swell
ing. For merely swelling the fruit a close atmosphere is best, but it injures the health of the plants, and a sickly plant never ripen

Rider Cucumbers, Tomatoes, or any other of the half hardy done, and if the weather is windy or very dry, a few boughs or some other screen should be placed round them till they begrn to rnot freely. Capsicums are generally the
planted out, and they will do by and by.
Mroccolit and Callifflower.- From the 20th to the 25th of May, the last sowing of autumn Broccoli and late Cauliflower looked to; see that the plants are not too thick. Prick out some of them, and plant out the strongest.
Turnips And Srinack.-Here are two fastidious crops at this seasdn. A few days of dry weather, and they are up in flower,
unless well watered and well thinned; so that often, and a little at a time, is the best rule for them.
Cardoons And Enble and the first sowing of the otber, may be now got in; almost everybody likes blanched Endive in sallads, yet few people care much about Cardoons; but if the cooks find out you have none, Cmbery.-A few plants, or, if you have plenty of ground, a
good many jliants of the most forward may now be put out; but good many blants of the most forward may now be put out; but
many of then wrll run to seed. SUMMER Crops.-One of the best rules that can be given in a
general way for sowing these, and also for planting out after-
wards, is to do the work often and but little at a time; it is always better to have something to spare, if it goes to waste,
than to run short of anything. Every dull, damp, or wet day, to the end of August, some things will have to be sown or planted, or pricked out and thinned.
than the main crops, I think it is better to keep the soil well stirred in sooner that way
Orchard.-Get soapsuds from the nearest laundry; it is the insects off trees; it is also a good liquid manure. Tobacco-
water is hetter, if you do not mind the price; but then you must make it yourself. Nine-tenths of the tobacconists, judging by make good tobacco-water at the rate of sixpence a gallon by
using the coarsest tobacco, and pouring boiling-water on it. See that all your strawberries have some clean mulching, to prevent have the goong sonke to thin all their wall-fuit as regularly as
Grapes; and as the fruit set so thick this season, others would do well to folliow their example.
II.-FLOWER-GARDEN AND SHRUBBERY.
STove.-If you have propagated enough of these plants, the
general management of an established collection is easy enourh now ; all are in active motion. The eye should have most of
the work to do now; any one may water, shade, and give air, if the work to do now; any one may water, shade, and give air, if see that plants are enjoying their existence-if you will allow the
expression.
Greenhousk. - Get all your best specimens into the more
favourable places, and see, by all means, that they are not too much favourable places, and see, by all means, that they are not too much Azaleas you might force some of them now to finish their growth earlier mext spring. Almost all sorts of plants require large
portions of water now. Never allow the syringe to be used till portions of water now. Never allow the syringe to be used tiil
every pot in the house is watered. Constravatory. -The advantage of two or three dozens of
good stove plants will now be perceived in the conservatory, as these keep so much longer in flower through the summer here than if left in the stove, and are more at home than greenhouse
plants. Let the plants here have a good deal more room now;
it would be it would be quite out of character to see this house crowded in
summer, as if we had no flowers out-of-doors, even if plants were not injured by it. Keep the air as cool and moist as your
means will allow, and do not turn out a fine specimen plant after means will allow, and do not turn ont a fine specimen plant after
passing out of flower if you have not a better place for it elsewhere.
Pits and Framms.-These are applied to so many purposes from this time till next September, that no Calendar can anticipate the different treatment in all cases. Where plants are more an olject than fruit, cold pits are the very best places for Heaths directions will mainly apply.
Out-door Denartment
Planting out the flower-beds engrosses all the time and attengood neal of the success depends on the manner of planting Eimple though it be. If the beds are newly dug, as they ought
sita
to be, you must plant an inch or two deeper than the plants to be, you must plant an inch or two deeper than the plants
stood in the pots, to allow for the settlinu of the groud, and the whole should get a good watering before the surface is
smoothed down. Mignonette, to flower late in the autumn is always sown at the same time as the last spring sowing of talia procumabens, Virginian Stock, Sweet Aliyssom, and a few hence, will flower till overtaken by the frost. Roses require particular attention now. Of all our plants in the open air, the
Rose and the Peach suffer most from want of water when proditcing a good crop of flowers or fruit; b.ths are also very fas-
tidious about soils, and unless both are indulged with moist, friable loam, of a firm texture and on a dry bottom, they will require the greatest attention that can be paid to them about
this time, and for some weeks yet, especially in keeping them free from insects and well supplied with water at the roots.-D. Beaton,
Shrubland Park Gardens, Ipsuich.

State of the Weather neazt London for the Week ending May 18, 1843, as
ciberved at the Horticuitural Garden, Chiswick.

REPORT ON COVENT. GARDEN MARKET
For the Week ending May 19, 1843.
In consequence of the extreme coldness of the weather during the past week, the garden produce has not altered much since our last Report. Grapes, however, are greatly on the advance, and the market
is exceedingly well stocked with them. The major portion of them, too, are very fine and well-coloured. Peaches are scarce and infenor; and there are only a very few Nectarines, which are small and
poor. Forced Strawberries are beginning to decline. There are some extremety good Melons. A large supply of Apples is yet exhi though the last are pretty pumerous. There is now a of culinary and medicinal herbs. We noticed some enormous stalls of Myatt' Giant Rhubarb. Of Cut Flowers, we ohserved Erica hybrida, Hoya carnosa, several kinds of Pinks, Pergularia odora Tree Pæonies, Crinum amabile, Astelma eximium, Smin latifolia, goniums, Carnations, and Heliotropes. There were potted plants of Pelargoniums, Pinks, and varieties of Rhododendron ponticum, that have not been previously named
$==$ $\qquad$ $\%$

Sembling Floristss Flowers.-We beg our correspondents under this head will bear in mind that our opinions are public, for public purposes ; and that We CANNOT GIVE PRIVATE OPINIONS; and also that in
future all varieties must be named, or we cannot in future undertake to notice them. In the words of a correspondent, a favourable opinion from us gives a flower a certain value, and renders it immediately a marketable commodity; but it is possible that such opinions may be used for purposes of imposition. A name is some guard against this; we must therefore request that all flowers, before they come to us, may bear the name it is proposed they should eventually receive. If our judgment is favourable we will give the name at full length. If unfavourable, the initials only will be given. Numbers must in future be discontinued. o Correspondents. - We must again mention that it is not
in our power to sparetime for naming collections of common flowers, ill selected, and worse packed; and we would beg our correspondents not to put themselves to the expense of sending,
or us to the pain of neplecting them. It is unreasomable to expect us to give up valuable time to the examination of little fragments of common plants, whose names the inquirer can obtain of the firstgardeder in his neighoourhood. We are most ready to aford information on such points to a reasonable extent, but there plants are as many as it can generally be necessary to send at a
time. In future, when heaps of plants are sent us, we trust to be excused for notnows and
Hight,-B. A, B.-Your Wheat has suffered from the cold nights, but it will probably soon recover. You may try some
nitrate of soda as an experment; but if there is a pood plant min the ground, it may not be necessary. The nutrate camnot be too finely powdered; if it is dissonved in water its effect will be more certain. It is
land after Potatoes.
Wood-pavement. - An Old Subscriber.-We regard this as a We shat of road-making, and not inapplicable to rural economy. Manures. - happy to insert any communications on the subject, improve every kind of herbage, provided it be put on in rainy hot weather it would probably burn the grass. You may safely put it on that part which had gypsum. This last is very
uncertain in its effect; we have never found much benefit from uncertain in its effect; we have never found much bene may be
it. on yrass land. M.-- Rural Chemistry. - Waste grass mater put with stahle dung, and made part of the manure heap, as may be put into a heap of compost, consisting of the refuse of a yard with wood-ashes and other burnt rubbish; batitis much
better first to reduce it with gas-water, which rots it speedily, and then to add it to compost heans. Ashes may be mixed with andth directly after they are made; but if they are exposed to the weather they are apt to be washed out again. They should be kept dry till wanted. No addition to a compost heap is more
useful than the furids that can be collected in a house, and they useful than the fluids that can be collected in a house, and relating to these subjects. ${ }^{7}$. A. N. - It may be applied to Rose-trees throughout the spring and summer; it is of no consequence
whether the weather is moist or not; only take care you do not-radose the Roses, and make the but will do with gnod management; your difficulty will be with Pears, All precall-
tions for keeping the cob dry are of little practical importance, so far as the trees are concernerd. As to thatching it, your beyond the face of the wall. You will find in previnus Number abmadant information about forming your borders; the best rules are to give fresh soil, not too rich, or your treen win are
run to wood. fiond loamy turf and some stahie-durg the enough. As to blood, and all those forcing suld is excellent;
are fit for nothing but Vines. Good leaf-mould rotten grass, powdered charcoal, wood-ashes, and such matters are not fond of animal manure. $t$ tances. the soil in which an
old gigantic Walnut has grown for a couple of centuries

## NEWS OF THE WEEK

The adjourned debate on the Corn-laws, which occupied the greater part of last week, was brought to a conclusion on Monday night, when Mr. Villiers' motion in favour a total repeal was negatived by a majority of 256 . On Tuesday Mr. Cumming Bruce moved for leave to bring in a bill to amend Lord Asbley's Act of last sassion, for regulating the employment of young persons in mines and The object of the motion was to allow widows and unmarThe object above 18 years of age to return to underround labour in the Scotch collieries. The motion was opposed by Lord Ashley and Sir J. Graham, and negaived on a division by a majority of 113. On Wednesday Mr. Sharman Crawford's motion for a bill, authorizing nnual Parliaments, universal Suffrage, and other changes analogous to what are called "the five points of the Charter," was negatived by a majority of 69 ; and on the same night, Mr. Roebuck's resolution in favour of a to inculcate peculiar religious opinions, was negatived by majority of 96 . Last night Lord Stanley brought orward his resolutions relative to Canadian Corn, pronosing that Canadian protuce may be introduced at a ixed duty of $1 s$, which, with the addition of $3 s$. levied by the Canadian legislature, will enable the grain of the United States to be brought into this country, through Canada, at a fixed duty of 4 s . These resolutions gave rise to a long debate, which was ultimately adjourned to Monday. From France, our news is mostly of domestic interest, he Papers being occupied with an adjourned debate on a bill introduced by Ministers for abolishing the home manufacture of beet-root sugar in favour of the produce of the sugar-cane cultivated in French colonies. Another topic of national interest is a contest which has arisen between the clergy and the Professors of the University on the subject of Education, and which appears to have revived all the bitterness that characterized the religious controversies of the last century,-From Spain, we learn that S. Loper, the new Prime Minister, has submitted his programme to the Cortes. Among its professions and intentions the most important are the announcement of a general amnesty for all political offences, the prohibition of all future declarations of the state of siege, and various financial reforms, which will no doubt lead to strong party struggles.-From Portugal we have account of disastrous condition of the commercial and tradimg interests at Lisbon and Oporto, in consequence of the interruption of the tariff negotiations. The alarm produced by the general spread of distress throughout the attention of Govern ment, and had induced the beher that be renewe with better prospects of success.-By the Levant Mail e lomplication has arrsen in the Servian question, the reigning Prince having announced his resolution neither to resign his throne nor to submit to ejec tion: the grounds on whicb the Prince justines this Russian Cabinet, and the legality of his election in strict accordance with the Servian constitution, and with the sanction of the Porte. -From the United States we have accounts to a recent date, but their interest is chiefly local. The expected retirement of Mr . Webster from the Cabinet, and the changes which his resignation would render
necessary are the principal topics of the papers．Some between the two countries，founded on a mutual diminu－ tion of duties，but the arrangement was considered to be acarcely practicable．The Canada papers mention the installation of Sir C．Metcalfe，at Kingston，with the nsual ceremonies．The addresses of the Legislature and the replies are published；but His Excellency bad given no indication of the line of policy he intended to pursue．

## 䅰踥e Netos．

Count．－The ceremony of Churching the Queen took place yesterday in the Palace Chapel；the Archbishop of Canterbury omiaiated．Arrangements have been made for of Wales and the Princess Royal，to leave Buckingham Palace this afternoon for Claremont．It is expected that the Court will be absent from town about ten days or a fortnight，when her Majesty will return to Buckingham Palace，and remain in the metropolis till within a few by desire of her Majesty on Wednesday，at St．James＇s Palace．The Prince afterwards gave a dinner to the directors of the Ancient Concerts，of which his Royal Highness was the director for the evening．
Ministerial Changes．－The vacancy occasi
Fitzgerald＇s death has been filled un by Loed by Lord moving to the Board of Control，and Mr．Gladstone has become President，instead of Vice－President，of the Board of Trade，with a seat in the Cabinet．

## $\sqrt{5}$ Fereign．

Francr．－－The Paris journals are chiefly occupied with the important sugar question still under discussion in the arisen between the Clergy and the Univerity，hand with the cruelties perpetrated in extending the French rule in Africa．The Journal des Debats devotes its columns to the religious question．The professors of the
University are up in arms against the clerge against the Bishop of Chartres，who has accused them of teaching every crime not even excepting murder．M． Sorbonne against the declamation of the episcopal pulpit of Chartres．And，in return for the bishop＇s denunciation of the pantheism of the University，certain universitarians the instruction of young priests in the duties of the confessional．The Débats gives extract from these books， France．The Débats says，that since 1830 the clergy France．The Débats says，that since 1830 the clergy posed connection with an oppressive Government up to
that year entailed upon them，but the boldness with which they have now attacked the University and the adminis－ tration of Public Instruction have awakened their old evemies，and it is feared that the French are recommenc－
ing the old circuit of the last century．－Judging from the accounts which the papers contain of the state of affairs been long preparing on a formidable scale，has opened under no very favourable auspices．Abd－el－Kader though pursued by several corps，has approached
within a few miles of Oran，and，when the advices left，the French were avenging themselves on some powerful tribes，whose allegiance the presence road between Constantina and Philippeville，hostilities have been renewed with great fury owing to the savage aggressions of the French，who had not only fired the Arab villages，but had armed the troops with axes，for the purpose of cutting down the fruit－trees，the orange and citron－trees，and the olive plantations，which consti－ remarkable debate has taken place in the French Chamber of Peers，on the petition of certain Protestant parishes， on bebalf of religious liberty．The Duc de Broglie stated of view，but the Chamber passed to the order of the day． －Baron Mounier expired at Passy on Thursday week， at the age of 58 ．He was a Member of the Chamber and honoured afterwards with the confidence of the Bourbons，who had made hima Councillor of State and Superintendent of the Crown buildings．Baron Mounier had refused offee since the revolution of 1830 ， and confined himself to his duties in the Chamber of Peers－－From the remarks that have been made under this head on the subject of the salvage of the Telemaque， our readers will not be surprised to learn that the whole concern has broken down．The French Courts of Law have declared the Company bankrupts；Capt．Taylor is
in prison for debt at Pont－Audemar，and the provisional committee have issued an ahnouncement that the Com－ pany is dissolved，and that the shares are rendered value－ less by the declaration of bankruptcy，no means existing by the constitution of the Company of making any call upon the shareholders，or of raising the sum required to
pay off debts，and supersede the bankruptcy．It is some－ what extraordinary，that notwithstanding this failure， there is still an attempt made to revive the project，and propositions for that end are in circulation． decrees of the Gazette of the J0th inst．contains the decrees of the Regent，accepting the resignations of the probity，and the distinguished manner in which they ful－ filled their duties，＂the Regent declares himself highly matisfied．Those decrees are followed by others appointing
the new Administration，as follows：－M．Lopez，Pre
sident of the Council and Minister of Justice ；M，A Minister for Foreign Affairs ；General Serrano，Minister of War；M．Frias，Minister of Marine；M．Ayllon， Minister of Finance；M．Caballero，Minister of the 12 th inst．informs us that Señor Lopez read on the 11th his programme to the Chamber．The following is a sum mary of its professions and intentions：－＂Respect for the constitution，and a rigorous observance of the rights of the Cortes．Development of the national prosperity，
and，as a consequence of such basis，the presentation， and，as a consequence of such basis，the presentation，
shortly，of a law on Ministerial responsibility，and of shortly，of a law on Ministerial responsibility，and of political offences posterior to the conclusion of the civil war．No influence to be exercised over the elections．No more state of siege to be proclaimed．A better organisa－ tion of the national militia to be effected．Order and reformsl propertry to be kept up and increased with foreign countries，whilst apholding the dignity of Spain．
Portugal．－We have advices from Lisbon to the 8th inst．The week＇s delay in the mail was occasioned by having been iberia＇s rudder outside of the bar of Lisbon， appliances of Lisbon consumed full ten days in supplying the deficiency．The utmost dismay pervaded the com－ mercial and trading interests at Lisbon and Oporto，in consequence of the interruption of the tariff negotiations． Robberies were becoming of daily occurrence on the banks ccurred on Six robberies，two of them sacrilegious， The alarm was intense and universal．It was still thought that the Portuguese Government must soon give way，and in the highest quarters the belief prevailed that the nego－ tiation would still be successful．It was held to be advisable in the British Government to fix the precise
amount to which they desired the duties upon woollens to be reduced．A bill for reducing the duties on all foreign goods entering the island of Madeira had beea laid on the fable of the Deputies．This would operate chiefly in favour of Britigh produce，and perhaps allow us to
avail ourselves of the circumstance for a renewal of the negotiations．The Deputies were occupied with a mea－ sure of the Home Minister＇s for introducing a general system of education throughout the kingdom．
Germany，－Letters from Hanover state that if the England en permit，His Majesty will set out for learn that the King of Prossis has presented a heavy gold medal，bearing on one side the King＇s medallion，and on melverse an allegorical figure of music，with other chorus inents，to Meyerbeer，for his composition of the formed on the carsion house of Este，which was per Court of Ferrara in the sixteenth century，of which we formed at Berilin，chiefly consisting，－A society has been the condition of females in India！－A court for the deci－ sion of quarrels between literary men，publishers，\＆cc．has been established at Stuttgard，and has succeeded so well， that the example is about to be followed in Leipsic．－From Chapelle and Cologne，near the village Wix－la beautiful＇Roman to b highest rank，was dug up last week by some labourers making excavations for a new road．The sarcophagus contained some well－preserved gold coins of the reign of Vespasian， 70 years after Christ，and the whole is sur rounded by four marble statues，which from their great beauty，must be considered to be of Grecian workmanship As soon as the whole is cleared it will probably be sent to the city of Hamburgh is about to letters of thanks which the city of Hamburgh is about to present to the Sove－
reigns，who hastened to assist the inhabitants after the conflagration of last year，are to be written，or painted， apon tablets of Oak saved from the ancient city hall， and framed in bronze of the bells of the different churches
that were destroyed．Each individual who contributed to the relief of the unfortunate sufferers is to be presented with a medal of the same material，and those foreigners Who on the spot assisted in checking the progress of the First－rate artists in to be entrusted with the execution of this plan．－Schelling， the celebrated German philosopher，arrived last week on a visit at Munich，his former residence，and was received at the gates of the city by a deputation of upwards of 300 noblemen，citizens，and students，who conducted him to the apartments prepared for him at the Royal Palace．
rtaly，－letters from Rope maritime districts of his dominions．He is accompanied by a large number of high functionaries and engineers． Frosinone On his return he intended to eramin journey to Terracina． the partial draining of which the Government again intend to attempt．His absence would not exceed a fortnight． Russia．－The departure of Prince Paskiewitsch from Warsaw for St．Petersburgh，and the expected arrival of the Emperor in the Polish capital，are regarded as remark－ able coincidences．The conference of the Emperor with the King of Prussia is expected to take place in Berlin，or Whore probably at Erdmansdorf，in the beginning of June． Whether his Majesty will go from Warsaw to inspect the Army of the South is still uncertain，and will depend on What may then be the situation of the principalities of the
be despatched．The progress of the railway is now totally suspended ；but it is confidently expected that the Em－ peror，during his visit to Warsaw，will make arrangements
the continuance of the work，at the cost of the state．
Grexce．－Letters from Athens announce that King Otho has signed a convention with the Austrian Govern－ which hareby che Austrian Lloyd＇s Company＇s steamers， between Trieste and years carried the mairs and passengers shall for the future be permitted to proceed from Patras， ap the Guif of Corinth to Leutraki，a port at the head of the golf，from whence the mails and passengers will be convered across the Isthmus of Corinth（about seven miles），and re－emabarked on board other steamers for Athens and the Levant ports．This new arrangement will not only save time，but does away with the necessity which has heretofore existed of this line of packets making the circuitous and often boisterous passage from Patras，round the whole of the Morea to Atbens．
Turkey．－The accounts by the Levant mail inform us that a new complication is likely to arise from the Servian question．It appears that the reigning Prince，
upon being apprised by the Ottoman Gornmer intention to submit to the demands of Rusoia，its he was resolved neither to resign nor submit to ejection． that his election had been strictly legal in accordance with the constitution，and sanctioned by his lawful sove－ reign the Porte；and adding that as it was evident that the Sultan had been coerced，and was unable to protect his faithful Servian subjects，they were resolved to pert form this sacred duty themselves，and that they would consequently resist all attempts at compulsion．The Bishop of Gibraitar arrived at Constantinople，in the the new ster，on the 2tti，and was to consecrate firmation The rarch，and administer the rite of con－ Abdalah Pahe accounts from Trebizond stated indisposed．The new plenipotentiary of the seriousiy Persia had not yet reached Erzeroum．The difference which had arisen between the Porte and Austria respect ing the navigation of the steamers of the Danubian Com pany had been definitively adjusted．The Divan had given letters for all the Ottoman pashas and fovernors enjoining them to extend to those steamers the assistance and protection granted to Ottoman vessels．
INDIA．－The following letter，giving an account Tivor of the unfortunate 44 th，has been published in the Tmes ：－＂Camp，Deesa，March 2．－A man belonging to No． 4 Company of her Majesty＇s 44th Regiment，whose the is James Edwards，being one of the few who escaped safety hassacre in Afghanistan，has made his way in attached to No． 1 Company，of the 2 d or Queen＇s．He appears a fine intelligent man，and no doubt his acconnt could be rendered interesting．I hear that he travelled along from sumrise to sunset keeping the east on his left and at night often lay down both hungry and thirsty With the exception of three days that catastre the fata camp $f$ believe tenant Simpson，of the ad European he met was Lieu－ hat kindness ，the 2d Cavalry，at Kassa，who did all from the plight that he was then in．He had no ider of the time he has made his way．I understand that 140 days ago he was obliged to leave his comrade，who fell sick，at some Edage．I have at present had no conversation with Edwards，but have seen him at a short distance，and have eard this much from those who gathered it at his mouth；and I mention it，as through the Times his safety may be made known to his friends，who must imagine him dead．Avoiding the large towns，he skirted the sinall villages，sometimes treated with much kindness，and occa－ sonally with great indignity，the villagers sometimes seizing him by the hair，hooting him as a Feringee， sitting in his face；he is much burnt and travel and 8 might be expected，he has abont two years＇pay due to him，and may perhaps by the kindmese of the Gove to ment and others，be enabled to set hime up eon－ in some little way in England，which may his last two Fears of misery．He wos to the 44th，when that regiment went on service ；－－either the 3 d or the 31 st I believe he formerly belonged to．＂ ．The royal mail steamer Britannia arrived at Liverpool on Saturday．She sailed from Boston on the afternoon of the 1 st ，and Halifar on the evening of the 3 dinst．，and has made the passage in 12 days and 12 hours．The new steam－ship Hibernia，which sailed from sail of Boston，which ult．，was met within a few hours sail Boston，which she would reach on the morning of the $2 d$ inst．The papers brought by the Britantia extend Ist inst Their thee weeks，from the 11th ult．to the ot very intercitentare，however，unimportant，and relate interesting．The accounts from Washington Webseacively to the expected retirement of Mr． changes in the office of Secretary of State，and the manges in the Cabinet which that resignation would actually necessary．One account states that he has quit United Suntil the peading negotiations between the to Atates and Great Britain shall have been brought位．There had been some discussion about a reci basis commercial treaty between the two countries，the but of which should be a mutual diminution of duties， the practicability of appeared to be felt in the States of twins were married of Wits Co North Carolina，by Baptist minister，to the two dault Yeates．－The Canada papers contain accounts of the
installation of Sir Charles Metcalfe, at Kingston. The addresses to his Excellency, on assuming the government, and his replies, are published in the papers. He had not predecessor, Sir Charles Baret, had so far recovered as to predecessor, sir Charles Bagot, had so far recovered as to so soon as his health would permit. The Warspite, Lord John Hay, had arrived at New York to convey hire home. ult., communicate the distressing intelligence of the shipwreck of 28 vessels, with serious camage to 5 others, by wreck of 28 vessels, with serious camage to the dritting of the ice from the Guif of the craft were small, and the loss of capital less
Alt extensive in proportion, this great sacrifice of property will, extensive in proportion, this great sacrifice of propertrade of the colonists, especially to those engaged in the fisheries. -From Hayti we learn that the city of St. Domingo surrendered to the forces of the new Government on the
30th March, after a slight affair, in which 10 or 12 persons 30th March, after a slight affair, in which 10 or 12 persons
only were killed. Since the abdication of Boyer the administration of a Provisional Government had prevailed, as there had not been time for choosing a President.-
From the West Indies we have the melancholy intelligence of the death of the Bishop of Jamaica, after a short illness, about the 10th of April.
Cape of Good Hope,-We learn by the Cape papers received on Wednesday, that there is some reason to believe, upon the removal of the troops from Colesberg, that the Boers had again made hostile demonstrations. The news from Port Natal is alike unsatisfactory; for it seems that Major Smith requires a reinforcement of troops to suppress a similar feeling among the Boers in that
neighbourhood. These accounts, however, are very vague ; and, probably, are much exaggerated.
Columbin South Wales and New Zealand. - The making the passage in 105 days. By this arrival we have Sydney papers to the $2 d$ Feb., and New Zealand to the 11th January. There is no political news of importance from either colony. At the former, commercial matters from either colony. At the former, commercial matters
appear to be in a very bad state. The New Zealand appear to be in a very bad state. The $N$ bw Zealand
Wellington Gavette has the following passage: "In our Wellington Gavette has the following passage: "In our
last, under the head of Nelson news, we gave an account of Mr. Cottrell having proceeded upon an exploring expedition. The following extract from a letter of the 12 th of December describes the result, and cannot fail to prove highly satisfactory. We think the fear about the deficiency Mr . Cottrell is just returned from an exploring expedition to the southward, which has turned out satisfactorily.
He reached the mouth of the Wairos, in Cloudy Bay, He reached the mouth of the Wairos, in Cloudy Bay, after about nine days ${ }^{2}$ walking, for the last four days
through an extensive grass valley containing about through an extensive grass valley containing about land : he pronounces a road to be perfectly practicable from this into the plain, the pass through the hills being quite easy. A man who was with him, and a good bushman, ondertakes to reach the valley in three days from the Waimea district ; it appears also that there is an available district to the south-west. We hear nothing more from the flaxdressers; they have only just got their house up, and are beginning to cut the flax. They are still very sanguine of complete success."-At Sydney, the celebrated with great pomp on the 26th Feb.; the weather was remarkably fine, and the whole proceedings of dinners, regattas, and other joyous demonstrations, passed off with the greatest satisfaction

## 排arliament.

HOUSE OF LORDS.
Monday.-LORD Wemencurre iz reply to Lord Beaumont, when stating that no alterations were cont laws - EARE Powis laid upon the table of the House a bill to repeal the union of the sees of Bangor and St. Asaph. The Marguess of Clanricaripe moved the reprinting of the secontended that means hhould be taken to give employment to the
Irish people, which, in addtion to the benefit which it would confer on the collntry, would also have the effect of stopping the
agitation for the Repeal of the Union.- Lord Brougnam strongly agitation for the Repeal of the Union.- Lord Brougnamstrongly Wheh was, that capital would not be nivested in useful minderquess of LONDONDBRRY urged the necessity of strong measures, The Duke of Whincoron declared his determination to do his tions by which he wras held up as an enemy to loseland. Ho He
found himself in very good company, in the attacks made upon found himself in very good
tion bill, and introduced another bill, containing some alteration bill, and introduced another bil, containi
tions. This amended bill was read a first time.
Lord BrovonAm moved the second reading of
Lord Brouanam moved the second reading of the Townshend
peerage bill. After recapitulating the evidence as given al Peerage bill. After recapitulating the evidence as given at their
Loruships' bar, he statell his ntertion to propose, after the Loruships' bar, he stateit his intestan to propose, after the
second reading, that nustear of the bull deciaring the chidren of Lacty Townshend illegitimate, it should merely cieclare them not
Lo be the issue nf the Marquis Townshend. And, moreover, he
proposed to omit the name of one of the sons, because, being propnsed to omit the name of one of the sons, because, being
undrr age, he could not be fegally summoned to appear at heir Lordshil, s, bar. Lord Brougham, on behalt of Lady Townshend,
made a statement that she had beer hoo voluntary party to any
of these proceedings--that she had veliemently protested at the
 made out at the bar was so unnecessary for their Lordships to intertere by an extraselves. The alserations proposed to be made in the bill by agninst their Lordships entertanning the Bill at all. It was a measure without precedent, and one which, if estallished, would be cnly the first of many paintuu cases. Redress by the ordinaty
course of law was open to the parties to this Bill; and, if their hot live to repent it. He therefore moved that it be read that day six months.-Lord Kinyon replied to Lord Cottenham, and
called on some other learned Peers to express therr opinions, lity would suffer. He never more unhesitatingly gave a vote
than he would to the second reading of this Bill. - Lord CampBriL gave his opinion that there was no other remery but this
Bill; and lord LANGDALR said, that sooner than permit a great
public scandal and private injury to go unredressed, the Bill ought to be passed.-Their Lords
Thursday.-The House went into committee on the Townshend
Pcerage Bill.-Lord Brovginam proposed the amendments of which he had given notice, viz, one which would go to make the Bhl
declare simply that the children of Lady Townshend were not the children of the Marquis Townshend, and the other that would leave
one of the sons, Cecil Nina Bolivar, who is under age, out of the Bill
altogether.-Lord Monteacle and the Earl of WICKETOW objected to the amendments and the Bill as unnecessary and mischierous.-
The Marquis of CLANRICARDE suggested the propriety of calling
the Marquis of Townshend to the bar, to answer for his conduct in bargaining for the sale of the rights of the Peerage for a pecuniary
consideration. -The Earl of Devon, notwithstanding the amendments, which he thought improvements, still considered the Bill most
objectionable, - The amendments were finally agreed to, and the Bill In reply to a question from Lord Campbell, the Lord Cuancrilor
stated that the Judges would be in attendance ine the House on Thurs-
day next to give their opinion respecting the law in cases of criminal day next to give their opinion respecting the law in cases of criminal
lunacy. The Lord CFANCELLon stanted that Mr. Austen, the counsel
employed for the Sudbury Disfranchisement Bill, had adunitted bis employed for the sudbury Disfranchisement Bill, had adminted bas
imability to prove a case of feneral corruption nganst the borough,
and had therefore declarei his intention of proceeding no further.The Registration of Voters Bill was rearl a thred time and passed,
Fvday. The order of the day for the second reading of the sudDury Disfranchisement hill was discharged. The Marquis of Nown-
sHink adverted to the language of Dr. Higgins at the Mullingar
meeting, and expressed his hope that the Dule of Wellington would continue the strong tone he had assumed on this question.-Lord
Bravmont, on behalf of the Roman Catholic body, disavowed the sentiments attibuted to $\begin{aligned} & \text { nothing mige diggraceful ever issued from the lips of a prelate. - The } \\ & \text { Earl of }\end{aligned}$ ments attributed to Dr. HIggings, and expressed his concurrrence
with Lord Beaumont's indignation. HOUSE OF COMMONS.
Mondny.-In answer to a question by Mr. Redington, Sir R.
PEEn stated that he was authorized by the Queen to declare her
Majesty's adherence to the declaration made by King William, Majesty's atherence to the declaration made by King William, in reply 1834 , in reference to the repeal of the Union. And that
the yeal reply having contained these words:- "I receive, with
great satisfaction, your assurance that you will co-operate with great satisfaction, your assurance that you will co-operate with
me in my determination to preserve inviolable the legrsative
Union, and I shall feel it my duty to co-operate in the removal of any real grievances under which any portion of my subjects
may be suffering." Her Majesty adhered to the latter as well as to the former part of it. With respect to what measures
besides those before the House the Government proposed, in
accordance with this royal pledge, to introduce in regard to accordance with this royal pledge, to introduce in regard
Ireland, it would be inconvenient to announce them before-
hand.-Lord Cl.EMENTS having asked under what head of ame lioration the Government classed the Arms' Bill, Sir R. PERI replied-" consider that a measure which is intended to pro-
tect the personal safety of residents in Ireland, and to prevent
the commission of such terrible crimes as have been commited in some cases within the last two years, is one which may be expected to ameliorate the condition of that country." The adjourned debate on the Corn-laws was reaumed by Mr . forfiting their pledges, and deciared bis opinion that the fixed
duty of the late Government would have been a farmore effectual security to the agriculturist, than the uncertain and conceding
system of the present Government.-Dr. Bowrina thought that
the friends of free trade had great reason to congratulate the friends of ree trade had
selves on the progress of the deate. Glimmenenings of truth ap-
peared in the twilight ignorance of the supporters of the Carn laws, for half and whole admissions of the principleso of free-trade
dropt from various members, and in one case, that of Mr. Canpibell, the member fox Argyieshirre, there was a hearty assent to
them. The free-traders asked for the unqualifed application of
their principles; they repudiated exemptions in favour of their principles; they repudiated exemptions in favour of any
class whatever.-Mr. Ewart followed, appealing to the Conservarive representatives of commercial towns, and contending that, In the course of the debate, the opponents of free trade
dulged in misstatements and fallacies, such as that low
would follow the repeal of the Corn-laws, and so forth. was required was, such an extension of the commerce of the
country as would increase the ability of the people to consume,
-Mr . CHILDDRE could not, in the present state of the country, -Mr. CErfDERs could not, in the present sar, vote for the imme.
and after the extensive changes of last year
diate and total repeal of the Corn-laws, though he looked forward fearlessly to their ultimate removal, and was satisfied that the
change would disappoint both opponents and supporters. - Cap. change would disappoint both opponents and supporters. - Cap
tain LAvARD comrented on the measures of the Govern
ment, especially the imposition of the Income.tax, and ment, especiany the statement of the Chancellor of the EX.
that the finaucial sher ont
chequer was not only a proof of their failure, hut an addi.
tional argument for the further application of free-trade chequer was not for a proof of their failure, hut, an addi-
tional argument frinciples. He would vote for the motican bectause he con con
prionned the Corn-laws thon demned the Corn-laws, though on this point he feared h
differed from some of his constituents who were interested in
agriculture.-Mr. E. BuLLER discussed the subject of "peculia burdens," and after slowing that last year, by comparison with
the previnus one, was peculiarly favourable for disguising the
mischiefs of a Corn-law, declared that in defont of mischiefs of a Corn-law, declared that in defanlt of opportunity
for supporting a fixed duty, he would give his vote in Iavour of
the motion. The principle of the "sliding scale" could not be maintained, especially after the impetus given to free-trade prin
ciples by the Government, and the feeling of dissatisfaction an insecurity which their measures had comm municated to the agri
cultural interest.-Sir C. Burabli contended that landlord cuitural interest.-Sir C. BURRBLL contended that land the
farmer, and agricultural laboure, were all interested in the
Corn-laws; even now, the recent changes had so affected the Corn-laws; even now, the recent changes had so affected the
capital of the farmer, that if he were to sell off his stok he
would lose one half. He adduced various statements to show the necessity of fair protection to agriculture,-Mr. Poulis?
Scrore looked upom all indirect taxes on articles of consumption as savouring of protection, But as we had a great national
establishment to maintain, we could not push the principles establishment to maintain, we could not push the principles
free-trade to the extent of repealing all these taxes. What
should do, however, was to construct our financlal system a view to revenue, and not for protection, and above all, in tha
which constitutes the main article of subsistence for the people There were only two arguments put forth in favour of the Corn
laws, peculiar burdens and prescriptive right: but the one wa
not proved, while if the other was to be pleaded in defence of error, every additional year added to the prescriptive righ
only pluged us deeper in the mire. In his own opinium
there never was a more fover there never was a more favourable time for the repea
of the corn-laws; prices were already low, and he did no
thunk To the commercial community would be very great.-Mr. Mr.
Thorncry had visited the United States last Autumn, im-
mediately after the passing of its high tarift mediately after the passing of its high tariff. At Washingto forms effected by Sir R. Peel, as a reason for a more liberal
policy, but Mr. Tyler had avowed his opinion-one which wa poncy,
largely shared in by American merchants
Corn-laws presented our systern o
aimost insuperable bar to an extended Corn-laws presented an almost insuperable bar to an extende
trade between the two countries. - Mr. STRUTT, speaking trade betweenili manufacture, denied that it required or sought
behalf of the sile
protection, the demand of those interested in it being for equal
justicr. The advocates of free trade were not disposed to legis-
late hastily or injuriously, or without due and previous inquiry
into the nature of into the nature of the alleped peculiar burdens borne by the agrior thee further extension of the commercial principles which he of the country, to support the motion. - Sir H. Do circumstances as the
free representative of the citizens of Livernool, and no pledged delegate, declared bis determination to oppose the interests of the empire, manafacturing, commercial, and agri-
cultural. England was England's best customer; and to pro-
tect the small farmer was to protect tect the small farmer was to protect the people, and confidence
and steadiness in our leqislation were essential to the employ-
ment of our superabundant canital ment of our superabundant capital.-Mr. MuNTz asked where
the confidence was to come from-from a starving population,
a diminishing trade, or a declining revenue? The Cornlaws caused the people of this country to pay fifty millions
more for food than the range of the continential prices. It
was not all lost to the country, but it was tak dustry and given to ddeness. As a representative of a great,
and enlightened, and a suffering community, he expressed his the people, for which no ministry for the last twenty fiv
jears had succeeded in providng an arequate remeuy.
Mr. Cobven said there was no way of raising prices but by restricting supply. Could they justify themelves, therefore, in
maintaining a law which restricted the amount of the supply of food for the people? He did not impute motives; but the con
dition of the agricultural labourer was the severest condition of some excursions into the agricultural regions; and he found pauperism and crime coincident, and was told that the return
of the petty sessions was no criterion, for they were obliged to
wink at crime, and to leave it unpunished. Even in Dorsetshire it was boasted, as an act of benevolence, that the poor labourer
was permitted to gather up the sticks blown down from the
crows' nests on the trees. Those landowners who wrere the ber crows' nests on the trees. Those landowners who were the best
farmers denied that land wonld be thrown ont of cultivation,
that allegation was only made by those who carne from the worst-farmed districts of the countiy, and who were, therefore,
most rampant for protection. Long leases and good farming were to be found together, as in the Lothians and Northumber-
land; for himself, he would reckon it an insnlt to have farm offered to him on which to spend money without the security of
a lease. In fact, they did not know their own interests. Protection was alleged to have been diminished by the last Corn-law,
but the , landlords, instead of taking of reducing thelr rents,
called on the farmers to bestir themselves instead of sitting at their doors, smoking their pppes and drinking their ale. But the were jealous even of that small section who were trying to get
up a friendship for the farmers on the ruins of the old friend-
ships theylwere suspicious of all who "t Learue, because the question was placer by them on 1ts true warm remarks, excited by Mr. Cobden's allusions to Lincoln-shrre.-He was followed by Mr. Milner Gigson, who repreTrade, making allowance, however, for the difficuities of Sir $R$. Feel, seemg that Liverpool was represented by so violent an
opponent of Free Trade as Sir H. Douglas. - Mr. Vilingrs
replied, and on a division there appeared-For the motion, Against it, 381. Majority, 250.
Tuessay.-The SpEAK*R called attention to the circumstance Tuesday.-The SpRAFWR called attention to the circumstance
of bill (the Scottish Widows' Fund Bill having received the
royal assent, without the amendments of the Lords having been considered
by Lord $J:$ Russeci, moved the appointment of a select com-
mittee to inquire into the circumstances connected with the informality; which was carried.
Mr. Cumining Bruce moved for leave to bring in a bill to
amend Lord Ashley's act of last session, for amend Lord Ashley's act of last session, for regulating the emi
ployment of young persons in mines and colleries. He gave
due credit to the motives by which Lord Ashley had been actu ated, though the purity of his intentions was not a sufficient
protectron from errur in judgment. The Mines and Collieries Act was a hasty and injudiclous piece of legislation, and it had
produced great distress in Scotland, by depriving individuals of employrnent for which they could obtain no substitute; aud,
though he did not wish to interfere with the Act so far as married
females and young persons were iemales and young persons were concerned, he wished to amend years of age, to return to under-ground labour. The hon, men-
ber adduced a variety of documentary evidence in support of his
motion, which he sadd be had brought forward on the express personal solicitations of the colliers themselves. the interference of the House. Why was Scotland to enjoy ${ }^{\text {a }}$ same alleged inconveniences arising out of the operation of the
Act? Already the results bad been most beneficial in the emancipation of women, young girls, and children, from a
slavish and degrading employment for which they were wholly unsuited, and the occupation of their places by men and boys
-a change which was hailed with joy by the people them-
selves. The amelioration of their habits was evince. in striking instances, of which the noble Lord furnished proof
from letters which had been addressed to him by indvidel interested in the successful working of the act, especially by
Lord $F$. Egerton; and amongst these testmonies were letter from Scotland, characterising the movement against the Mines
and Collieries Act as proceeding from the selfish feelings of cer-
tain proprietors, who nad coerced theirwork tain proprietors, who had coerced their work-people into a reluc-
tant assent to the opposition. Of this'latter fact he procuced some evidence, rending to show the compulsory way in which
petitions had been got up against the act. No doubt cases of hardship had arisen out of its operation; but it was the business gies had been exhausted in their service, instead of coming to the
House with a propitition to nullify a measure which had only comse with a prop sition to nullify a measure which had only
cit. By operation last year, and was producing so much bene-
fine motion, the House would affirm that property had its duties as well as its rights
Sir J. Graram, considering the entire success of Lord Ashley'
Act in Eagland, and the great probability of its suecess in Scot land; And considering likewise the limited extent of the evil of
which Mr. C. Bruce complained, concurred with Lord Ashley in resisting the motion.-Mr. Curtils and Lord F. Egerton also
opposed the motion-Adiscussion followed, in which Mr. Roz-
bucr, Lord Dungannon, Mr. P. Strwart, Mr. Forbrs, Mr THROTBERTON, Mr. Locken which the House divided, when the
Trompen, took part; after whe
numbers were-For the motion, 23 ; Againstit, Sir C. Napier moved an address, praying her Majesty to give with an increase of pay, for the purpose of bringang forward
young and active officers. What be recommended was, that a hundied of the oldest post-captains on the hst, belng sixty years
of age, should be allowed to retire with an increase of 100l. a
year.--Sir R. PEEL objected to the motion as interfering with the prerogative of the Crown. He was not prepared to recommened
the amount of this change, ne to say that the plan proposed was

The Sussex Memonial．－It is understood that an influ－ ential meeting of noblemen and gentlemen will shortly be held at the Freemasons avern，to adopt measting，by public subseription，a suitable memorial in remembrance his late Royal Highness the Duke of Sussex．Aearures ere taken to orighate the meeting so early as the lst inst． The Royal Hospitals．－The following is a Report of tainedlin the severai Royal Hospitals of the City for the
year 1842：Christ＇s 1 Hospital－ 185 children put ap－ prentices and discharged from the hospital in the year last past，twelve whereof being instructed in mathematics and navigation were apprenticed to commanders of ships out of the mathematical school，founded by his Majesty Cbarles II．； 12 children buried during the last year；＇； $132 \pm$ children now under the care and charge of the Hos－ pital in London and at Hertford，and 181 to be admitted on presentations granted to this time．St．Bartholomew＇s Hospital：Patients cured and discharged during the last year，4839．In－patients，17，489；out－patients，and and lame persone and many of them，being destitute of all relief，have been supplied with money，clothes，and other ions，amounting together to 39,580 ．St．Thomas＇s Hos－ pital：There have been cured and discharged from this hospital in the last year，of sick，wounded，maimed，and diseased persons， 3,284 in－patients，and 30,711 medical and surgical out－patients，including casualties，some of whom have been relieved with money and necessaries at their dopreys to their several habitations ；total 33 ． 995 heir journoys their sormal 220；remaining under cure－in－patients，397；out－ atients and casualties 917 ；so that there have been， during the last year，of poor objects under the care of the 35，529．Bridewell Hospital：Received into this hospi－ during he last year，under commitments by the Lord Mayor and the Aldermen of the City，as criminal or dis． orderiy persons，who have been kept hatard labour，or Chamberlain for solitary confinement， 42 ；received during the same period suadry poor persons who have been committed for wandering abroad and begging in this city， hospital on the 1842 including those ont on leave， 311 ；admitted in 1842， $344:$ total， 655 ．Dis－ charged in various ways in 1842， 284 ：curables， 205 ；in－ curables， 9 ；criminals， 10 ．Remaining in the hospital， 31st December，1842，including those out on leave， 371 ， ，curables， 198 ；incurables， 88 ；criminals， 85. Scottish Hospital took place on Saturday evening at the Freemasons＇Tavern．About 100 gentiemen sat cown to Corporation，took the chair ；supported by Lord John Russell，the Hon．Lesiie Melville，Mr．Mattheson，M．P．， the Hoo．William Fraser，of Saitoun，treasurer，cc．Meng －The Scottish Corporation，and may prosperity attend

His Grace briefly alluded to the excellent object of and infirm Scottish residents in the metropolis；and to supply them with the means of returning，if required，to report，had been extensively useful．Lord J．Russell，in returning thanks for the House of Commons，said，perbaps some persons may be of opinion that members of Parlia－ and good cheer，in assicting the distresses of their fellow－ and good and in asilug the fellow－countrymen than in sitting up in the House of Commons until four in the morning，discussing the question of whetber debate sball go on or shank cease．I am very grateiul for most highly the benefits of institutions like this．The manest mion Solo fellow－countrymen，who have been overtaken by misfor tune or distress，is， 1 must say，highy honourable to the have the less difficulty in speaking of that character in the manner it deserves．It is said that it is the result of the arid unanimously，all the offices of peace and war．Judging from the facts，certainly， 1 ，think the best education of all is to be found in Scotland；because，whether in the army forward to defend the honour and interests of thei country，and rise to the highest posts．Whether engaged in political achievements or political stations，they ever other duties of civil life，I confess I know no nation in the world which is entitled to take rank before Scotland is becoming to such a people to continue，though unos－ which，for so long a series of years，the poor have such benefits may long prosper，and in every year be more and more successful．The Hon．William Sritherland＂which was responded to with Highland honours．The Duke of Sutherland acknowledged the compliment with deep feeling．The subscriptions an nounced during the evening exceeded $500 \%$ ．
Meeting of West India Planters，－On Tuesday general meetung of the West India body，consisting of Mlanters，merchants，and ahen，wese Mr．Alexander sidering a series of resolutions recommended by the standing committee for the reconstruction of the West India body．The following noblemen and gentiemen were elected members of the committee ：－The Earl of Hare－ wood，Sir J．M•Donald，Lord Holiand，Lord Rivers，sir Simon Clarke，Sir W．Codrington，Colonel D．Pennant， Russell Elt，Messrs．Fuiler，M．P．，Dickinson，Childe， Swaby，Sutton，Cohen，Barclay，Leary，Lesigne，Maize， Mulligan，W．W．Chancey，Garraway，Hiklop，Stewart，

Bosanquet，Natur，Anderson，and Davis．The secretary then read a series of resolutions，to the effect that a standing committee be held to represent the West India planters and merchants，with power to add to their number，The resolutions comprised also various matters of detail connected with the Colonial interests．
Anti－Corn－Law Leayue，－On Tuesday，the various delegates assembled at Herbert＇s Hotel，Palace－yard，for the purpose of discussing the division on Mr．Vulliers ${ }^{3}$ motion in the House of Commons on the previous night，and passing certain resolutions reative to their future proceedings，prior to the dissolution of the Confe－ rence．Mr．P．A．Taylor，baving been called to the Ele Electors of Great Britain upon the vote passed on ，Viliers．Mr．Edwards moved the adop after which resolutions were put and carried that conies of the same should be forwarded to her Majesty＇s Ministers， and to the various members of the House of Lords and Commons．Mr．Harbottle moved That this Confe－ free－trade principles are making in the public mind，as evidenced by the strong manifestation of opinion amongst he electors in different parts of the kingdom，particularly in the Agricultural districts，and which is confirmed by the increased numbers who voted in the minority in the heen carried Mr yiers motion． great length，and was followed by Mr．Hume and Mr．M． Plilips；after which，Mr．Norris proposed the following League forthwith to comence a registration of the elec－ League fort kin on or ared at the ent liest posible period call upon the Queen＇s advisers through the constitutional means of a humble memorial to her Majesty to dissolve the present Parliament，and thus afford to the electors of the kingdom an opportunity Cring their late decision upon the quest． Corn－aw．ni．Craig seconde the mol，wer wo sive of thanks to the Members of the Ifouse of Commons wio voted ja the minority on lis motion， The Temple Church．－The Queen Dowager，attended by her suite，paid a private visit to the Temple Church ont on the terrace by Messrs．Burge，Spence，Whately，and then．Matbot，Benchers．After spending half an hour in the Church，her Majesty and party proceeded to Her Majesty expressed herself lighly gratified，having minutely examined all the curiosities of the building．A she left，a litllourse of persons greeted her Majesty as in their hall，after the departure of the Queen， Wetherall proposed her Majesty＇s healti in an appro－ priate address，which was enthusiasticaly responced to
by the barristers and students present．Her Majesty， previous to ber departure，was pleased to express her had the honour of receiving from a Queen since the days

The British Museum．－On Monday morning，work－ Musegan pulling down the houses on the west sissioners of Woods and Forests the sule of the building materials having tuken place on Friday last．The ground is pur－ chased for the site of the new buildings of the Museum． estival of Thursday the 11th inst，in the usual manner．There were present，besides many other persons of rank and influrnce and a great number of the clergy，his Royal Higlness bury ：the Bushops of Chese，Bungor Rinon，ind Uha bury；the Blshops of Chester，Bangor，Ripon，end Llan－ and many of the Aldermen and civic authorities．The collection last pear and amounted to about 2401 ．Shortly after two o＇clock the service was commenced by the Detingyen Te Deum， followed by other pieces of sacred music．The dinner in TCailors＇Hall，and was attended by most of the dignitaries who were present in the Cathedral，aud by a large body of the clergy．The amount or the contributions was，as at the other part of the entertainment，exceedingly liberal． sale of the Colosseum．－This well－known building was by Mr． tremely numerous assemblage，among which the members The biddings commenced at 10,000 ，a and after consi－ derable time had elapsed in the progress of tue successive of thes，the property was knocked down to a gentleman guineas．It was understood that Mr．Giraud acted in a protessional capacity on the occasion，and that he was the New Church in not the principgl．Rev．J．E．Tyler， Rector of St．Giles＇s－in－the－Fields，intends to raise fund for the erection of a new church in this densely populated parish．The site selected is in the line of the new street which will lead from Bedford－square to Waterloo－bridge．The plan has received the approbation of the bishop of London；and at the last meeting of of 150l．was pranted thr which will be perfectly free． sale took place on Wednesday，at Mesars．Evanais Roome，
in Pall-mall, consisting of a valuable collection of autograph characters of the last century. The chief object potitical tion, however, was an autograph by Shakspeare, affixed to a deed of bargain and sale of a house in Blackfriars, purchased by him from Henry Walker, dated March 10,1612 , with the seals attached. The situation and boundaries of the tenement in question are fully described in the deed, and the interest is greatly enhanced by a detail of places in its immediate vicinity, and a list of persons who rented the or tenement, with the appurtenances, situate and being within the precinct, circuit, and compasse of the late Blackffryers, London, sometymes in the tenure of James Gardyner, Esquior, and since that in the tenure of John
Ffortescue, Gent., and now or late being in the tenure Ffortescue, Gent, and now or late being in the tenure
or occupation of one William Ireland; abutting upon a streete leading down to Puddle Wharffe on the East part right against the King's Maiesties wardrobe; part of
which said tenement is erected over a great gate leading to a Capitul Mesuage, when was sometime in the tenurg of William Blackwell, Esquior, and since then in the occupation of the right honourable Henry, now Esrle of
Northumberland." The indenture is stated at the comNorthumberland." The indenture is stated at the commencement to be "Betweene Henry Walker citizein and
minstrell of London of the one partie, and William minstrell of London of the one partie, and William Warwicke, gentleman, William Johnson, citizien and vintener of London, Joln Jackson and John Hemyng of London, gentlemen, of the other ptie ;" the property being to have pa four; that Shakespeare himsent is decared The document, moreover, contains internal evidence, showing that Shakespeare wus the sole purchaser of the premises, which he afterwards bequeathed in his will to All that messuare or and being in the blackffryers in London, nere the Ward robe"-evidently the same bouse. On the back of the and delivered by the suid William Shatespere William Johnson, and John Jackson in the nnce of Will Atkin son, Ed. Overy, Robert Andrewes, scrivener, and Henry bears, with the initials " $H$, scrivener, whos seals it portant document was sold by Messrs. Evans about two years since, when it was purchased by a Mr. Poynder, of five guineas. After a few preliminary observations from Mr. Evans, the relic was produced, Mr. Sainsbury, the The bidding was carried on with considerable spirit between that gentleman and Mr. R. L. Jones for some minutes, the document being ultimately secured by the latter for one hundred and forty-five guineas. It was
stated immediately after the sale, that Mr. Jones had purchased the relic for the City library at Guildhall. During the life of Shakespeare, the Lord Mayor and aldermen successfully resisted the performance of a single play by Shakespeare within their walls; and now they give $145 \%$. for his siguature d Nevertheless, the Cityinteresting to the topographical antiquary of London,
Custom-House.-A seizure was made a few days since by the Custom-house officers of some foreign manufac. tured goods, supposed to bear the brands of British manufacturers. It appears that 400 bales of goods had arrived from Boston, in the Niagara, now lying in the St. Kathe-rine-dock, addressed to the house of Baring, Brothers and Co. The entry was passed, in the name of that firm, for warehousing the goods at the warehouses of Messrs, Taylor and Beil, at the Legal Quays, and 375 bales prere in the course of removal in lighters belonging to th wharfingers in question. The discovery was made through the circumstance of 1 bale being landed on the quay the dock in error; the officer on the station causing it to be opened, when each piece of goods was found to bear the 400 bales were, in the first instance, detained by the Customs' officers; but they have since been given up on the receipt of an explanation from Mesers. Baring, show ing that the goods are totally different in texture and style on the Engish manufactures, and that the Manchester Of the 400 bales, 200 are branded as being the tapsies the "Lowell" mills (near Boston), 100 baies as those of 100 bales (New Hampshire). This explanation has been considered satisfactory, and the charge of deception alleged against the correspondents of Messis. Baring has of course fallen to the ground.
Destruction of the Stone Pier at Greenwich.-On besday morning, between nine and ten o clock, the inhaalarmed by a loud xeport like the explosion of a piece of artillery, succeeded within a few seconds by the announcement that the pier was faling. At the time several people were on the pier as it gave way, and others were on the
barge which is moored in front. The damage extended to at least three-fifths of the entire length, which is 320 feet; and it is in depth, from the bottom of the piles, 80 feet. At about 11 o'clock on Tuesday night, just as the once attributed to the bursting of the piles in front of the pier. As soon as daylight appeared, boats putout to see the extent of the damage, and the appearance the pier then presented left not the slightest hope of saving bound with iron, and fized at the of poundations in taaseive
plates of iron, had been split and shivered, some falling inwards and others outwards, whilst the parade gave way length, and the plates of iron being shivered like glass It is ing.barges have been affected by the shock, and the floatof the frontage wall and iron bylle shock, and the whole way. The eastern end, near Ship Dock and the Roya Hospital, is opening in fissures, and is likely also to burs a damage, bat the whole must be left to its fate, and be least 10,000 tons of earth, \&c., which Gad been laid in between the wall and the road to form the parade, wil also be washed away. The present appearance of this work, masonry, and timbers are lying about or leanine every direction. The cost of the pier was about 30,0002 and it was only completed about three yearsliago.
The National Society. - On Wednesday the annual the Education of the Poor in the Principles of the Esta blished Church, was held in the Central School-rooms, Westminster. The Archbishop of Canterbury was in the intereste a numerous assembly of clergymen and persons cause of education filled the room, among whom were the Bishops of Winchester, St. David's, Chester, Ripon halisbury, and Bangor; Lords Keno, Cadst by an examination of the children of the Society's school in Scripture knowledge and listory, geography, grammar, richmetic, and music. The Apostios Crea and Magni attending the schools in the colse boys and girls The examination having been concluded, the report was read and adopted, and the meeting was addressed by the Bishops of St. David's, Bangor, and Chester, Lord RadInclosure of Hampstead Heath.- On Monday numerous meeting of copyholders and inlubitants bill now before the House of Lords, entitled "The Wilso Inclosure Bill," the object of which is to empower the lord of the manor, Sir Thomas Maryon Wilson, to let land on building leases, form roads, squares, \&c., and thus entirely for the public of the metropolis, Hampstead Heath Samuel Hoare, the banker, was called to the chair. The vestry-clerk read the copy of the Bill introduced into Parliament, which referred to Sir Thomas Maryon Wilson's and gave Mimdesex, Lssex, Kent, Suffolk, and Sussex, and for the granting powers of inclosure of such lands, squares, roads, sce there the inclosure raving of as well as Hampstead-heath being part and parcel of the Bill. Mr. White said he was one of the trustees of the fund raised to oppose a former attenopt of the lord of holders and the public, by a Bill to inclose on the copythe beautiful prospect of Hampstead-heath. He had fel it his duty to come forward and oppose this Bill on public grounds, and deny the right of the lord of the manor to make roads and build houses for his own benefit, at the sacrifice of the rights and benefits of the public. Mr Cooper observed that the lord of the manor had no righ of the public. Nop his property to the manifest injury was at liberty to build houses for his own advantat no man prejudice of the copyholders on such a manor. Most of the inhabitants of Hampstead were induced to reside there solely on account of its beautiful heath and the extensive also the the therefrom of the surrounding country, as within 40 miles of London. The could not equalled by the proposed measure, wonld be lost. There were umbers of houses at present untenanted; clearly showing that an increase was not needed. Houses beld under stead in the first style, under a belief that their prospect were not to be interfered with. This attemnt prospects o means be, if carried, a public improvement; on the and to the copyholders, who he trusted would unite, in every shape oppose this measure. They and the public ad one common interest in the preservation of Hampwas the duty of every inhabitant of Hampstead, whether it copyholder or not, to oppose this bill, and to whether their rights against that which he could only desiguate as an illegat assumption. On the former occasion, when a
similar attempt was made, Lord. Tenterden not only opposed, but gave a very strong opinion against the claim of the lord of the maxor to bave such powers granted to him. bill of the late Sir Thomas Wilson, the present lord of the manor had no right whatever to inclose the heath, or ruination to the town of bill were, passed it would be would get rid of their propery, and he the copynolder that Lord Mansfield had declared his determination leave Caen Wood, and dispose of his property there. The object of the copyholders in residing at Hampstead was healietude, its retirement, and for the bencfit of their perty would be compere to be deprived of alt these, pro doubt would look after their own rights and interests in come forward boldiy, and resist these encroachments on
the part of the lord of the manor. Mr. Riply concurred in the observations of the last speaker. He had on a former occasion, not only taken the opinion of Lord Tenmen the of tor of the botained the under an act of Parliament, but he had also Abing the opinion of Sir Charles Wetherall, Lord Ahger, when Attorney-General, Mr. Vernon Richards, d wan other eminent lawyers, the whole of whom were anve to such being a right vested in the lord of the ffect "-Mr. Poweil then moved a resolution, to the interests of the copyholders resident in Hampstead and its vicinity, and that it was their bounden duty and they were resolved to oppose it, and endeavour by every means to prevent it being passed into a law." -The Rev. Dr. Burgh seconded the resolution, which was adopted unani-mously.- Mr. Toller said that if the bill were carried, the Whole of the eastern and south-western sides of the heath even as far as Windsor, wous a in the latter instance, prepared a petition against the bill, which he wonld now read. It set forth that the petitioners world would now parable injury if such a perure ore sastal ireparable injury ittempts such a measure were passed: that presimilar measure, which was rejected it therefore prayed a be heard be heard by their counsel or agents against the passing of ach bin. The petition baving been unamimously adopted, committee was appointed to watch the bill, and take all measures becessary for a determined opposition, for which purpose the sum of 200l. had been subscribed.
Hanzell Asylum.-On Wednesday a sale of fancy work, made by the female patients of the institution, was held Fund Hanwell Lunatic Asylum, in aid of the Adelaide their discharge bazaar in the grounds of the asylum, and several marquees were slready erected for the occasion, but from the un-解 galleries on the arrangement, and two of the long evergreens and flowers, in which the stalls were laid out while two of the galleries, similarly decorated, were appropriated for the visitors 10 promenade in. The company are attended through the apartments by several of th Light Drmmittee of justices. The band of the 1.3 th at the basement of the prinsiaw in the afternoon, when, owing to the heavy rain, the com pany began to thin, several of the female patients were permitted to pass through the ornamented wards ; and it was most pleasing to winaess the order and quietness they on recognising the delight and pleasure they expressed magistrates acting on the commitee. attendants, and after the stalls lad been cleared about 100 of patients were regaled with wards, and passed apparently a pleasant hour in singing

## The Royal Yon

Royal Yacht.-The new steam-yacht Victoria and hauled on Monder the especial use of her Majesty, was a aled on Monday ine East India export-dock, and complete her fitings, which will be finished in the most superb stjle. Her engines, which are of 650 horse-power, making to by Messrs. Maudslay, and every exertion is making to ge, her ready in time for her Majesty's inadod to Jreland in the course or the present summer. Accident- We learn from a correspondent that Mr. Cook, of Brooklands, was thrown from his horse on Saturdittle hope of his recovery. He has been to leave very since, and the physicians on Monday announced thet if here were not a change for the better in a few hours all hope of recovery was vain. We are happy, however, to that Mr. Cook is better
Mortality of the Metropolis.- The following is the Mayber of deaths registered in the week ending Saturday, Central districts, 190; East districts, 177. South dis tricts, 193. Total, 879 ( 451 males, 428 females). Weekly and for for the last five years, 903 ( 461 males, 442 females),

## Brobmate! Kabus.

Bridgend, -The adjourned inquiry into the double murder at Laleston 'terminated ou Saturday. After the erapath, the chemist, who deposed to the fact of of Mr. Herapath, the chemist, who deposed to the fact of arsenic
being found in the bodies of the deceased persons, the jury returned a verdict of wilful murder against the siste and her husband. The magistrates, who believe that they their investigation. It is not, therefore, expected adouned Coroner's warrant of committal will issue immediately but that the prisoners will still remain in separate confinement at the county gaol.
Bristob.- Our readers who have taken an interest in the coin was dislodged on Sat will be glad to learn that the Sir B. Brodie, Mr. Aston Key, Mr. Hawkins, and Dr Seth Thompson. On Sunday the patient was visitea ly the above-named gentlemen and Dr. Cliambers, and was

The following statement of the treatment for an drawn up it is understood by Dr. Seth Thompson, has pened on the 3d of April. Papers:-" Sir B. Be accident hapn the 18th, and his opinion vas, that the holf consulted had passed into the windpipe

Brunel strengthened this opinion by a simple experiment. He bent his head and shoulders over a chair, and distinctly a violent fit of coughing came on, which ceased after a few a violent fit of coughing came on, which ceased atter a few
minutes ; he repeated this a second time, with the same result. A consultation was held on the 22d, at which it was decided that conclusive evidence existed of the halfsovereign having passed into the windpipe, that it probably lodged at the bottom of the right bronchus, and that it was movable. It was determined that every effort should be made for its removal, and that for this purpose an apparatus
should be constructed for inverting the body of the patient, in order that thercted for inverting thighasist the natural effort to expel it by coughing. The first experiment was made on the 25 th. The body of the patient being inverted, and the back gently struck with the hand between the shoulders, a viotent cough came on, but or so convulsive and experiment was discontinued. "On this occasion the coin was again moved from its situation, and slipped towards Sir B. Brodie, assisted by Mr. Aston Key, with the intention of extracting the coin by the forceps, if possible; or, in the event of this faining, with fac ef the windpipe would facitate a repetition of the experiment of the 22 d . On this occasion, and subsequently on the 2d of May, the introduction of the forceps was attended with so much irritation that could not be persevered in without danger to life. On the 3 another
consultation was held, when Mr . Lawrence and Mr . Stanley entirely confirmed the views of $\operatorname{Sir} \operatorname{B}$. Brodie and Mr. Key, and it was agreed that the experiment of
inversion should be repeated as soon as Mr. Brunel had inversion should be repeated as soon as Mr. Brunel had
recovered sufficient strength, the incision in the windpipe being kept open. On Saturday, the 13 th, Mr, Brunel the back gently struck. After two or three coughs he felt the coin quit its place on the jight side of the chest, and
in a few seconds it dropped from his mouth, without exciting, in its passage through the glottis, any distress or inconvenience, the opening in the windpipe preventing any spasmodic action of the glottis. In this remarkable case the following circumstances appear to be worthy of
note:-That a piece of gold remained in the air-tube for six weeks, quite movable, and without exciting any inflammatory action, the breathing entirely uadisturbed, and the only symptoms of its presence being occasional uneasiness on the right side of the chest, and frequent fits of coughing. That an accurate diagnosis was formed stethoscope, although the chest was repeatedly and carefully examined, and also that a fair trial having been given -to the forceps, the application of this instrument to the removal of a body or this peculiar ford with reat risk to life; while the cautious and well-considered plan of treatment above detailed

Cambridge.-One or two attempts to annoy the Rev. Professor Whewell have been made during the period of yis office, The other day a more serious trick was played off year. The other day a more serious trick was played off
against him, which must have been attended with great loss to many parties who were made victims in the hoax. Some gentlemen who had just left the UniversityTrinity men, it is supposed-having takentheir B.A. degree, went round, on their arrival in town, to a number of of their respective goods, to be sent, lper waggon or coach, orders were in all cases executed, and the Master's residence was accordingly beset on the day in question. were a grand pianoforte, for the drawing-room; a cottage ditto, for a lower room ; mechanical implements ; complete sets of carpenters' and turners' tools; apparatus of an amateur forge, a child's cot, coral, and rocking-horse,
\&c. "Tailors," adds the Cambridge Independent Press, "chave also arrived to measure the domestics for liveries, and jewellers to remodel the College plate, and one piece of goods has been forwarded under the charge of three men to fit it up in the Lodge,"
Canterbury. - A sitting was held in the bankruptcy of Mion of a dividend under the joint estate, for the has already paid $4 s$. in the pound to the creditors; the debts proved The further dividend declared was $1 s .6 d$. in the pound, the period for the payment of which will be notified to the claimants through the official channel.
Carmarthen. - The Welch papers state that the offences committed by "Rebecca and her daughters" are daily growing more frightif, and not a single depredator near St. Clears, was demolished by a mob of men, disguised as usual in women's clothes, who were, however, broke mail. They placed sentinels on each side of the road, and immediately the mail had passed, they finished their work of destruction. On Monday afternoon, the
plantations of Mr. Powell, of Penycoed, were set on fire, and the wind blowing freshly, before assistance could be obtained to extinguish the fire, four acres of valuable young trees were burnt. It fortunately happened that iu great deal of furze bad been cut from the plantation during the winter, otherwise nothing could have saved the whole 22 acres of plantation from being' destroyed. On Monday night the gate in the town of St. Clears shared the fate of the others. Although a reward of 1.50 . and a the fate of the others. Although a reward of 1506 , and a
free pardon has been offered by Government, not a single
accomplice has been taken, and the conduct of "Rebecca and her daughters" has grown daily more alarming completed at the South Foreland was exhibited for the first time last week, and is said to answer every purpose contemplated. On Friday night the deputy-master and a number of the elder brethren of the Trinity House went off in a yacht to view it from various points in the Chan-
nel, and were much pleased with the briliancy of the light as well as with the improvements generally that have been effected on this important headland.
Eton. The Newcastle scholarship, founded by his Grace the Duke of Newcastle in 1829, of the value of $50 l$. per annum, to be held for three years, open to competition for all boys in the sixth form and upper division have arranged to leave the college before the next examin ation, was on Saturday last gained by Mr. Joynes, K.S., stood second in the examination for his scholarship), was awarded to Mr. Simpson. Mr. Joynes gained the medal last year, and Mr. Simpson, who was then his close comprize, presented annually by his Royal Highness for the promotion of the study of modern languages. Both of Joynes being the son of the rector of Gravesend, in Kent; and Mr. Simpson, the son of the rector of Little Horsted, in Sussex. The number of pupils now at Eton is greater than ever before known; the entries of scholars at the of 700. Since 1836 there has been a gradual and progressive increase in the number of scholars, as follows 522 ; in 1839,560 ; in 1840,593 ; in 1841,636 ; in 842,659 ; and this year, at Easter, upwards of 700 .

Exeter.-On Tuesday the 9th inst. the town-crier o Exeter announced that a public meeting would take place, and that Mrs. Fryer would deliver a lecture on the prin-
ciples of total abstinence from spirituous liquors. The ciples of total abstinence from spirituous liquors. The about 50 years since for the purpose of drying serges, in East-street. At eight o'clock it is supposed there were about four hundred persons assembled to hear the lecture, consisting of men, women, and children; and while a gentleman was delivering an introductory address, a large portion of the flooring gave way, precipitating a great part of the audience to the middle floor, which contained cheral hundred bushels of oats, and fortunately prevented head foremost on the grain; and their additional weight coming so rapidly on this floor, caused it also to give way and many persons were literally buried in oats and rubbish on the ground floor, having fallen from three stories high. The pressure of the falling beams, and the length on the ground Hoor, which formed an egress for those who were able to get out, and admitted many who nately, no lives were lost. That portion of the attic floor appropriated for the station of the lecturer, chairman, \&o did not give way, so that they remained affighted spectators of the catastrophe.

Liverpool.-Another fire broke out on Saturday morning in Formaby-street, in this town. This street, it will be rember, was the ssene of the which day morning the policeman on duty in the neighbourhood discovered the fire on the premises belonging to Messrs. Ashton and Ginn, boat-builders, on the south side of the street, and adjoining the west wall of the fire-proof ware-
houses that were preserved from destruction by the great fire in September. The greatest activity was displayed by the authorities; but, from the start the fire had obtained and from the nature of the premises, being the smithy carpenters shops, \&c., surrounded by piles of dry planks, the fire had assumed an alarming appearance, and had almost completed the destruction of the premises wherein orginated before the engines could be got effectually into play. The windows and doors were burnt out, and the interior apparently gutted, and a quantity of wood destroyed, before a sufficiency of water could be obtained but some hoses were passed through the dock wall, and planted in the dock with great alacrity, and in a few minutes after the engines got into full play its fury was considerably abated; and by 20 clock there was no longer had at first taken possession of, and which wreme nearly demolished,-The Liverpool police-court was crowded by merchants and other respectable inhabitants of that town, on Tuesday last, for the purpose of hearing the investigathon of a case of extensive embezzlement, alleged to have quence of in the Post-office. It appears that, in conse in the establishment, Mr. R. Lord was sent down from the General Post-office in London, to institute inquiries, and that certain surpicions having fallen upon J. Leeming a clerk a cerkattached to the department of the Dead Letter-omine, sarched. He wiven into custody ther prisoner was charged with embezzling several letters containing bills of exchange to the amount of 4,939l. ; also letters containing gold rings, beads, and other articles. The indictment was brought under the lst of Victoria, cap. 26, which enacted that any person who should embezzle a letter going through the Post-office should be guilty of a felony, and render himself liable to be transported; and that if the letter so embezzled contained money or other valuables, he would render himself liable to be transported beyond the seas for life. Witnesses
were then called, whose evidence bore out every part of the charge, and the

Manchester.-About eleven o'clock on Tuesday night an outrage of an alarming character was perpetrated in the immediate neighbourhood of this town by a party of between 300 and 400 persons, chiefly brickmakers, armed with blunderbusses, puns, pistols bludgeons, and almost every description of weapon, who forcibly entered the brick-croft of Messrs. Pauling and Henfrey, with the evident intention of destroying the property, and either murdering or maiming every one who might oppose their violence. After committing several acts of violence they retreated; but information was speedily conveyed to the Salford police-office, and a party of Officers were soon on the spot, by whose exertions some of the rioters wer secured. On Wednesday seven prisoners were brough before the magistrates at the New Bailey, charged with Theng laken part in the attack, but were all remanded. The police are on the look-out for others of the turn-outs, many of whom, it is suspected, were wounded, and will be traced without much difficulty
Portsmouth.-The Eurydice frigate, of 900 tons, built according to the plan of Rear-Andiral the Hon. George Eniot, was launched here on Tuesday. The ceremony of naming her was performed by a daughter of the Admiral A numerous assem
Wiudsor.-An order arrived here last week?from the Commissioners of Woods and Forests, for the five dilapi dated houses, the residences of that number of the Mili tary Kniohts of Windsor, known as the lower foundation situated in the lower ward of the Castle, to be immediately taken down, it having been deemed requisite, in conse quence of their ruinous condition, that no delay should take place in their being razed to the ground, and a new row of houses for the Military Knights of the foundation of Sir Peter Le Maire constructed, with increased conve niences, in their stead. This foundation was endowed in Maire, with an estate of the then value of $230 l$. per annum Maire, with an estate of the then value or 2306 . per annum ciating minister of Christ Church, in the vicinity of Virginia Water, close to Windsor Great Park, was made a few nights ago, between eleven and 12 o'clock. The perpetrators of the outrage remain for the present undiscovered. Mr. Page resides, with his family, at the parson-age-house, which is a detached building situated a shor distance from the church. A few nights ago, just as the Rev. Gentleman and his wife were retiring to rest, and a the moment Mr. Page (whose shadow was thrown upon the window) had approached the dressing-table, at the window of his bedroom, to extinguish the light, a loaded musket was discharged at him from the garden, and evidently at but a short distance from the house. Upon examining the window, a large slug, upwards of an inch in length, was discovered to have been lodged in the woodwork which divided the two sashes of the window, and in the precise direction of the spot where the Rev Gentleman was standing. A portion of the glass was broken, and the shattered fragments scattered upon the dressing-table, but Mr. Page escaped unhurt.
Railways.-The railway receipts for the week have been as follows :-Birmingham and Derby, 1,141l.; Birmingham and Gloucester, 1,699l. ; Edinburgh and Glasgow, 2,406l. ; Eastern Counties, 2,186l. ; Great North of England, 1,451 $l_{\text {. ; Great Western, 14,742l.; Hull and }}$ Selby, 979l. ; London and Birmingham, 18,092l.; Black wall, $715 l$. ; Brighton, $3,081 l$. ; Croydon, 256l.; Greenwich, 680L. : South Western, 5,976.; Manchester and and $4,618 \mathrm{l}$, Midand Counties, 2,033l, Norther and Easter, 1,661.; North Mu N, Eastern and Dover, 2,021. Me returns given in the report of the officers of the raimay department, Board o Trade, show the average speed upon the various lines exclusive of stoppage, as follows :-London and Birming ham, 27 miles per hour ; Great Western, 33; Northern and Eastern, 36 ; North Midiand, 29 , Midland Counties 28 ; Birmingham and Derby, 29 ; Manchester and Bir mingham, 25 ; Newcastle and North Shields, 30 ; and Chester and Birkenhead, 28. The average speed on the Metropolitan lines, exclusive of stoppages, is about 22 miles an hour.-Arrangements have been entered into by the War Office for the conveyance of troops by the South Eastern and Chester and Birkenhead railways. The charge is to be the same as on otiser lines, viz., one penny pe mile for every soldier, with the exception that, upon the Dover line, the officers are only to be allowed 1 cwt . o baggage. -The inhabitants of Stockport and neighbour hood, are, it seems, much dissatisfied at the Manchester and Birmingham Railway Company having raised the fare between the Stockport station and Manchester ; and on Thursday, the llth, a numerous meeting was held to tak the subject into consideration. A number of speaker addressed the meeting, and expressed their disapprobation of the proceedings of the directors; and the meeting resolved, in consequence of their unaccommodating con duct, to establish a company to run coaches on tise road between Stockport and Manchester. Several speaker promised to take shares in the intended company, and others promised to pay their fares to the intended com pany twice or thrice a week to and from Manchester, for appointed to committee was ultion of a appointed to make arrangements vempany.-A meeting of the inhabitants of Brig Town-hal vened by the high constable, was held at the the ren last week, for the purpose of considering the by the alterations in the table of fares and time constable pre directors for the current month. The high ane language of
complaint, the times of starting the trains being conhigher than on any other railway out of the metropolis, and nearly double those of the competing line, the South Tastern or Dover railway. The result was the appointment of a deputation to wait upon the directors, with a view of showing that the interests of the shareholders required a different policy to be adopted with regard to the fares, as well as the interests of Brighton, which the meeting considered to be injuriously affected by the high prices at present charged to passengers.

## IRELAND.

Dublin.-The declarations of Ministers in both Houses of Parliament on Tuesday week have caused no ordinary sensation apoong all parties in Ireland, none of whom seem to have been prepared for the decisive step taken by the Government in relation to the question of repeal. At the meeting of the Repeal Association last week, Mr.
O'Connell adverted to the proceedings in Parliament, and O'Connell adverted to the proceedings in Parliament, and
said that that was a great day for Ireland. He found in said that that was a great day for Ireland to Lord Roden and Jocelyn, and Wellington and Peel, and little "Spring Rice," as he was called in the south of Ireland. He rejoiced to find that their enemies had at length been reduced to the necessity of using Billingsgate in assailing the repealers. They could abuse them, but he defied them
to accuse the repealers of a crime. A short time ago the to accuse the repealers of a crime. A short time ago the
English newspapers either took no notice at all of the repeal agitation, or put it off in a paragraph of five lines; but it was so no longer, and he was gratified to find that the repealers were now known and feared, but that they could not be subdued. He thanked the newspaper Duke of Wellington for that; he thanked the newspaper Lord Roden for it; he thanked the paltry Whig Lord Lansdowne of the newspaper for it, but above all he thanked Henry Brougham. He was not worth their groaning. He was treacherous to his friends and cajoling to his ene-mies-a toadeater of so foul a nature never disgraced the profession of the law. He had, to be sure, high talents; selfish motives as he had degraded wis was no road to power too filthy for him to climb. Oh ! it was delightful to find such a man against them, for they could not have a more contemptible enemy. He of course only spoke of the newspaper Lord. Brougham. Mr. O Connel then proceeded at considerable length, and said, that if Peel best blood of the Irish people." The Queen, he continued, best blood of the Irish people. The Queen, he continued, was coming here; when she came to Ireiand, they would some one would present to her in person, and then the Union was repealed. He hoped that every
town and village through which her Majesty would pass would display its flags, on which should be written, We pray your Majesty to repeal the Union." After his speech by declaring that Ireland should be for the Irish, and the Irish for Ireland. Mr. Steele rose and said "Sir Robert Peel talks of civil war, let him try it if he cheered for several minutes. At the meeting on Monday ast, Mr. O'Connell renewed the subject, and said there would be no civil war in Ireland as long as be lived. The people would keep at the legal side, and if others invaded them that was not a civil war, and he promised them that there was not a Wellingtonian of them all who would shrink less than he from that contest if it was forced upon them. Violating no law, the repealers would keep on if they throw them from that, va victis then, for the contending parties. The room was crowded to suffocation. The rent for the week exceeded 600l.-The Provincial papers are filled with details of meetings in violence of language, even the accredited organs of the Association in the capital. Government has sent a troop of lancers should any necessity arise out of the Repeal movement. The papers announce that Father Mathew is expected to arrive in England in the course of a short time, on a visit places.-The Atmospheric Railway between Dublin and places.-The Atmospheric Raiway between Dub Mullingar.-A great Repeal dinner has been given in this town to Mr. O'Connell, at which the Roman Catholic Bishop of Ardagh, Dr. Higgins, stated that every Catholic Bepealer. "I know," he said, "that virtually you all have reason to believe that the Bishops of Ireland were Repealers ; but I bave now again formally to announce to you, that they have all declared now all. Repealers." Mr.
that from shore to shore we are now O'Connell interrupted the speech and declared that " was the best news he ever heard.'

## 並ab.

Courr or Exchevoer.-The Attorney-General V. Hurel.of her Majesty's Attorney-General, to recover from the defendant, a glove importer, carrying on business at No. 8, Old Jewry,
penalties to the amount of nearly 5,000 ., for illegally defrauding of Froard of Customs of the duties payable upon 921 dozen pair the jury, stated, that this information was founded on the $3 d$ and 4th William XV, c. 52 , an act which rendered any party liable to
a penalty who should receive or conceal goods which had been
ille a penalty who should receive or conceal goods which had been
illegally unshiped, and upon which the proper amount of wuty
had not been through a history of the case, proceeded to say that he thought
the jury would have but little difficulty in arriving at the concluthe jury would have but case, proceeded to say ditle dificulty in arriving at the conclu-
sion as to the guilt of the defendant when they should have heard
the nature of the evidence he should present to their notice.
They would remark, as the case procoeded, that considerable
ingenuity had been exercised in the They would remark, as the case procceded, that considerable to say, that one of the chief instruments in the fraud was no
longer within the jurisdiction of the English law. That person,
whose name was Tye, had, as a partper of a Mr. Sherer, a gentleWhose name was Tye, had, as a partper of a Mr. Sherer, a gentle-
man whose conduct in the affarr it was far from his intention to impugn, because it appeared that he had been altogether ignorant of the acts of his partner-it would seenn acted asel, who carried
on the business of flove-dealers and manufacturers at No. 8 , Old lewry. The partner Vidil, it would appear, resided at Grenoble That gentleman had employed the person Tye as his Custom-house agent, and the jury would hear from Mr. Sherer and the other wit-
nesses a history of the manner in which the Custom-house business for that firm had been transacted. It was butright that
he should state in the outset that one of the witnesses, and a most important witness too, whom he should put into the box, was one of the officers by whose connivance one of the frauds com-
plained of had been effected. That oficer would lay before them a full detail of the manner in which the frad, with regard to
the cases of goods which had reached this country by the Lady tend that the statement of such a witness was altogether calcu lated to induce them to 'place implicit reliance on his credit
All, therefore, that he asked was, that they should regard his tes All, therefore, that he asked was, that they should regard his tes means. Its truth would be borne out by all the surrounding
events which would be detailed by other"witnesses. He simply, therefore, solicited that this man's evidence should be treated b the jury as an explanation of the affair. the wind shere the partner of Tye, would prove that he had landed and ex
amined the contents of the cases, of which he had taken an
account, which had been passed by the witness Burnby, the account, which had been passed by the witness Burnby, the
tainted officer of the Customs, and it would be found that the
variance between the account which he had
variance between the account which he had taken, and
upon which the duty had been paid, was precisely the difference upon which the duty had been paid, was precisely the difference
which was charged against the defendant by the information. The two offences which were charged on the present
occasion had reference to cases landed from the Belfast and from the lady de Saumarez, and if he fully made out the case, then Crown, on whose behalf this information was now filed, not only for whose interests were compromised by transactions of thisnature. 1840 and 18411 carried on business in partnership with a person
of the name of Tye, under the firm of F. and J. Smith and Co. Messrs. Fidil and Hurel were 'Tye's customers. They were glove
importers in the Old Jewry. Vidil lives at Grenoble, and Hurel carried on the business in London. We received instructions from him to pass goods at the Custom-house. The bill of lading
was sent down to us, and if Tye was not there, I attended to the business. We received instructions in January, 1841, to pass
goods brought by the ship Belfast from Boulogne. I obtained thas "sight entry" in consequence. for these cases. Edward Manico wrote the body of this entry.
The goods were at the Custnm-house-quay. Thice mporter has
the option of ordering the gonds sent to him-to any quay he the option of ordering the godds sent to him ho any quay he
choones for the purpose of landig them, and he car previously
ascertain what officer will be on duty there. Burnby was the landuy water on this occasion. I lnew an officer named
Homersham; I believe he is now dead. I made an entry of the contents of the cases marked G S 629 , which contained 152 dozen pairs of men's gloves, 213 dozen or habits, and , case marked E E 3,525 , contained 240 dozen habits, 134 dozen diozen menss, 290 habits, and 10 dozen women's. I made this list
from the inspection of the goods themselves. The course of from the inspection of the goods themselves. The course
business, on obtaining a sight entry, is this: a blue book is sent to the landing-waiter, who should thereine enter the contents of the different cases. The agent of the inporter attends the
examination, and I did so on this occasion. The agent generally
sees the landing-waiter enter the contents in the blue book, but sees the landing-waiter enter the contents in the blue book, but
sometimes the officers make an entry in another book first. After sometimes the ofticers make an entry in anotaer book These gloves
I had examined these goods they were repacke. The
werc packed in the ordinary way. I gave the list of the contents we Tyack my then partner. This is a perfect entry of the goods,
and it is in the handwriting of Tye. The amount of duty is
and entered. After the examination by the then makes a perfect eatry,
are repacked in the case. The agent the duty. William Burnby
with view to the payment of the
examined-In the early part of 1841 was one of the landing examined-In the early part of 1841 I was one of the landing-
waiters of the Customs. This blue book which has been putinto
my hand, was the blue book of the Lady De Saumarez. It was my hand, was the biue book of tha to inspect the cases on board of that vessel. 1 relieved Mr. Mas of this book is done by him. attended the examination, and saw the goods. The whole of them were inspected may my
presence, and Itook an account in the book of the packages,
and we compared them afterwards. I mude a true account, and Sherer's account corresponded with mine. I made out a true
account on some leaves which were formerly in this book, but
those leaves are not here now. There is a leaf here which has those leaves are not here now. There is a leaf here which has
been substituted for those taken away. The substitution took place at the present on the occasion of the alteration being made,
sham was
and it was he, in fact, who had laken out the old leaf. The new leaf is in my writing. That leaf was obtained from a blank book. Blank books are very easily to be had. The seal was melted, and
a counteriett seal was then put on the book. Lord AbigerThen, in fact, you put a new seal on the hook, or ose of. We

the disgraceful manner in which business had for a long time hoped that the commission appointed to examine into the ahuses really guilty was allowed to stalk abroad, while proceedings were were called for the defence.-The Attorney-General, in his reply,
commented 'strongly upon the absence of evidence, which the
defendant if really desirous of provins his inncence readily have produced. He might have produced the involces by him in the Belfast, and Lady de Saumarez; and if, as was
insinuated, he really paid Tye the full amount of the duty, was appear at all desirous of freeing his character fromer, gilit. Ho conduct, and had no desire to sut hamself inght in the eyes of the
world. All he wanted was, to throw $a$ doubt upon his knowledge of the transactions. Then it was said a verdict could not
be given against him. He, however, submitted, that in this, as in all other cases, the question was, what was the fair and rea could doubt that the evidence entirely proved the case against
the present defendant. Some of the persons concerned 12 this transaction had been called "detestable villans." No whe has
no sympathy with men who betrayed the trust reposed in them billam, the Custom. house officer with a small salary, who had
vare
 action, larger, perhaps, than the ofthe officer, and taken advantage ness he had himse.f beenl mstrumenta, in producine Iord Abinger briefly adaverted to the evidence, and ant had recenved the goods in question, knowing they had not paid the full duty.eritered for 4,500 . penalties, which was something less than the Attorney-General $\nabla$. Charles Candy,-The Attorney-General one, arose out of the late Custom-house frauds. The informa-
tion contained a variety of counts, framed under the provision the defendant with treble penalties to the amount of 7 ,6041., fo

 cleariy appeared, from the chine
on the part of the Crown, that the cases $2 m$ question were con-
signed to the defendants, and arrived by the french steamer Phenix from Havre. They were landed, in the first instance, at Galley-quay; and, after being duly examined by one of the
Custom-house officers, were carted to the defendants' premises The defendants employed, as their Custom-houseagent, a person
named Lumaley, who had under bim a clerk named Hunt, who attended to the Custom-house business, and in whose presence the goods in question were landed, welghed, and valued. It seeme of permitting the importers of silk goods, to take them from the
control of the Customs officers before the duty was actually paid. The goods in question were delivered to the defendants in paid by the defendants. The only question therefore was whether the defendants, in paying the estimated duty, had or whelher, by the connuvance and fraud of the Revenue sum than the defendants were really bound to pay. In order to explain to the Jury the precise manner in which it was
supposed the alleged fraud had been effected, several witnesses prove the course of business in that establishment. Their witnesses in the case of "The same effect as that giveo by the appears that the landing-waiter has a blue book entrusted to him, leaf stamped with a Government stamp; and in this book, when consignor and consignee, to take an account of the weight, value, nightiy to the registrr's office. The AttorneyGenevidence, and gaid that at Smyrna, where the occurrence had taken place, it was a concession to British sitblects that the He then read the clause of the treaty by which Malta was May, 1814. Mr. Ballantine would ask the court whether there wa sufficient evidence of the risoner being a British subject as a
Maltese to go to the jury? Mr. Baron Gurney thought there was. Mr. Ballantine said he would then mention tl e objection which he mignt possibly hereaner sake, namely, hathown to be British subjects. Mr. Baron Gurney would wish that Mr. Bal
lantine should not raise an nndecided pont unless absolutely necessary. Mr. Ballantirse did not think the point would be necessary to raise at al, however, he thought it well to mention
it. Mr. Baron Gurney said that if the question should be raised of the Judges. Mr. Baron Grrney then proceeded to sum up th evidence, and having stated the reasons for, and manner of bringing the present charge, he said that there was evicence when lear
He must

## application, and it was not to be allowed that persons should vail themselves of the privileges and advantages of British sub ects, and the

 and said that he certainly dul not see anything in it, supposing manslaughter. The case, however, was in the hands of the jury, and it was entirely for then to deal with it. The jury retired fon the special commisson were pnstponeit to Fryddy, the loth ofJune. The prisoner was then remnved from the bar, and the
Suecial juru was discnarged. The objection will be argued before Peter idamson, who was convicted at the last December session of obtaining the sum of 2007 . from John Heiron, wherer the false pretence that he had received an appointment from Lord Stanley
 portation. The sentence was, that be suobta be mprisoned
and keyt to hard labour in the Iouse of Correction for one yar. have been frequently before the public for some time past, was

 only one course to pursue, tamely, to pass the sentence of tl
law upon him, which was, that he be transported beyond the se

 ohuerie that when a person found valuable property, and an
priated it to his own use, without making proper muquiry ay
the owner, he was in the eye of the law suilty of larceny. property were found in such a place and under such circumstance
as that the owner might be supposed to be possibly found, but
where ft seemed likely that the owner had abandoned it it would where seemed likely that the owner had abandoned it, it would terate person, who did not know that it was his duty to mak inquiry, and applied it to his own use, it would be considered as
done in the absence of that felomous intention which the law declared to be indispensable to the commission of a crime. Mr Bodkin said that he would prove that when the money was dug up, one of the men said to the others that it would he better to
say nothing about it, for fear the lord of the manor should hear say nothing about it, for fear the lord of the manor should hear
of it, and take if from them. The Common Sergeant said that cren if so the Jury would have to decide whether there was an were fonnd in a barley-mow, the hiference might be that tit belonger on the owner of the mow, but if money were found in an unusual place of deposit, it was not a larceny for the finder to appropriate
it to his own use; " and sn he meant to tell the Jury. Evidence Was then given of the finding of the money by the labourers, each of whom had given up his share except the prisoner. Mr. Joseph Frost, of St. John's-square, deposed that he was in business some
years ago, at Islington, as a brass-founder. In consequence of a delnsion of mind under which he then laboured, he had drawn 700l. of his own money from the Bank, and buried it in Tuffinellpark. He had seen the place where the money was found, and buried a portion of his money. Another large sum where he had very honest man, and had not been " very flush of money after the find." Only 1 s . was found in his possession when arrested. The Jury here interfered, and aenuitted the prisoner aged 17, was placed at the bar, charged with feloniously atemich ing to discharge a loaded ptstol at the Rev, John Clark Haden with intent to maim or disfigure him. In other counts of the indictment he was charged with the intent to do him some
grievous bodily harm. The particulars of this case were fully grievous bodily harm. The particulars of this case were fuiy new facts were elicited at the trial except that the lad was a person of weak intellect. Mr. Baron Gurney summed up the
evidence, ohserving at the conclusion, that as it appeared Mr
Haden was nneonacious of being aimed at, there conld not be a Haden was unconscious of being aimed at, there cond not be a
verdict of assault. The jurv. returned averdict of Not Guilly.

> DESCRIPTION OF FUCHSIA ST. CLARE. agnificent Fuchsia was raised by Mr. Meehan,

This magnificent Fuchsia was raised by Mr. Meehan, gardener to Colonel Harcourt, at St. Clare, Isle of Wight, from whom
Messrs. Youell obtained the entire stock. In May last, it was submitted to Dr. Linduce for his opinion, which will be found in the "Gardeners' Chronicle "of the 14th of that month, as folluws: "Your Seedling Fuchsia is by far the finest hy brid we have seen, of a bright carmine colour, and the petals of a rosy purple. If, as you say, it is a strong grower and a free bloomer, it will prove a valuable addition to this beautiful genus.
As a proof of its being a most profuse bloomer, Y. \& Co. had a
plant in flower Sept. 15,1842 , on one branch of which were upwards of 200 blooms, forming a splendid object for the were house, conservatory, or flower-garden. Price 10.8 . $6 d$. per plant, sent free of postage to auy

## SATURIDIV, MLAY 27, I843. <br>  

By an error in the printing-office, we were last week made to say ( p . 333 ) that "medals to the amount of 250 were awarded" ${ }^{\text {at }}$ the great Exhibition in the
Horticultural Society's Garden. What should have been printed was, "medals to the amount of nearly 250\%. were awarded."
W E have received from a very intelligent person, Mr. W. Sherwood, Gardener to Mr. Mills, of Stam-ford-hill, a letter concerning the interests of Gardeners, which well expresses the opinions of all the
best friends of Horticulture upon that very important subject.

After alluding to an appeal said to have been made to British Gardeners on behalf of some obscure and unworthy publication, upon the ground that the Writer advocates their cause in what he calls a "bold"
way, Mr. Sherwood proceeds thus : way, Mr. Sherwood proceeds thus:
will meet with the response anticipated that this appeal some gardeners who entertain strange notions as to the manner in which a deliverance is to be wrought for them from the grievances under which they themselves, prefer others to instead of thinking for themselves, prefer others to think for them, and seem to consider that this power is vested in the "press." None can cloubt but that a properly-conducted Horticultural paper subserves the interests of Gardening and Gardeners to an extent far surpassing any other
channel of knowledge: but I do think, that channel of knowledge: but I do think, that so far their arrangements with their employers, it is in in diametrically opposed to the interests of both. And I believe that I speak the sentiments of the majority of Gardeners when I say that it is the duty of every system so insulting to their employers and so degradsystem so insulting to their employers and so degrad-
ing to themselves. The best advocate of a Gardener's interests is his own full appreciation of them. In nise our duty, we should remember that the progress of Horticulture and the increased demand upon our the intellectual refin upon it has resulted solely from in which Gardeners become sensible of this fact, and is the alive to the duties they are expected to perform mental ime in which they become solicitous for the mental improvement of the whole fraternity of Gardoners. This is strikingly evinced in the sacrifices tion Societies in for the formation of Mutual Instructhe establishmen neighbourhood of London, and While the mass have been listening to scurvilit heaped by one party upon respectable individuals, inder the pretence of advocating the Gardeners tion of and to another expatiating on the dissipaGardeners, these have been acting. They have of appealed to the prejudices and pansions of mave not to his judgment; the tendency of their cfforts has but with to make him dinsatisfied with his situation, who with himsclit. Tue scores of young (iardeners this or that their meelings ase not taught to support interest, but they are taught to think, and thereby led to see, that it is knowledge which confers a claim to deportmenard and pronotion, and that a consistent Nothing is the only me alls of enforcing it."
in which we hene more just than these sentiments, selves that hardenem concur. It is indeed to themshill and kinowledere shoodle look, and to their own like other huen, will find that the surest road to through wages and a better position in the world is They are good conduct and augmented knowledge. sary to society; and if the sure result of that necessity is not by degrees the general improvement of their condition, it will be their own improvement of their the long run, find those their ${ }^{\circ}$ best friends who tell
them of their follies, and those their greatest enemies who teach them to be discontented with their situation, without pointing out any practicable means of improving it. As a body, Gardeners are more respectable and better informed than any class of servants; and the gentlemen of England are generally much more than ever alive to their importance; witness the numerous cases, daily becoming more frequent, where they are entrusted with the managernent of
lands and plantations, with augmented pay. This has arisen out of their intelligence and good conduct. Their first great object should be to employ their natural good sense in holding fast the step thus gained ; and one of the most efficient means of doing so is by encouraging the promotion of societies for instruction, discouraging everything which tends to throw a doubt upon the respectability of their profession, and holding themselves aloof from those low
people who, Mr. Sherwood says, are miscalled Gardeners, and who are not only insensible to the force of arguments such as those he has so judiciously employed, but of any arguments whatsoever, even although they are backed by penury, contempt, and the workhouse.
$W_{\mathrm{E}}$ are obliged to "G. D." for his information concerning the relative slipperiness of Elm and Fir planks, which we have little doubt is correct. We do not, however, perceive that it touches the question at
issue in our previous remarks. The slipperiness of a recently-wetted (and still less of a frozen) plank, worn only by men's shoes, has little resemblance to what we have called the unctuousness produced by violently beating into pulp a certain portion of woody tibre. \&ven in this respect we may possibly be wrong as regards the comparative merits of Elm and Fir,
We cautiously said only that the one appeared to us less greasy than the other; and judging as well as we could from the specimen of Elm-capped paving near St. Giles's Church, we thought, and still think, that this is the case. Meanwhile the subject is very important, and we shall be glad if, many will imitate the example set by "G. D.," of giving us actual facts, which cannot fail to be useful.
improbable that Kyanizing, or Burnettizing us not of the processes which are said to render wood incom bustible, might to a certain extent diminish that greasiness which seems to belong in a remarkable degree to disintegrated resinous timber. On the other hand it may turn out that the greasiness is mainly due to foreign substances lying upon the surface of the wood, and that the superiority of the paving at St. Giles's is owing to the better preserva tion of the grooves by the toughness of the EIm. The question is altogether one of experiments, to which we must appeal, and for the publication of which, when properly authenticated, our columns shall be freely open.
The education we would recommend for the children of agricultural labourers is such as can be afforded with the smallest assistance from the wealthier There the community, if not entirely without it, be schoo-rooms and teach readily converted into a school-room, and there are few parishes where there is not one or more such to spare. Small farms have been united in most place because they did not singly afford a livelihood to the occupiers, and spare buildings remain which may be
readily fitted up as schools; a tithe barn, rendered useless by the commutation ; a tithe barn, rendered an excellent school-house. A retired gardener or headploughman, no longer capable of much labour, may have sufficient learning to teach children to read and write; and the labour of the children in a large garden, with a very small weekly payment, may be ficient remuneration
This plan has been tried in Sussex with full success, master himself who makes show. It is the schoolmaster himself who makes the statement.

MASTER TO INQ
THis school.
Willingdon, near East Bourne, Sussex.
II have twenty scholars, to whom I teach reading writing, and accomnts, the church catechism, collects, and the vicar, without any salury, for one penny per weels from each boy, from nine to twelve o'clock ; and from two till five in the afternoon, cultivating the land. I have not lost one from dissatisfaction, but I am glad to say that they willingly assist me. And the Rev. Julius Nouaille, master to tho a comended me, for which he has obtained the bishop and vicar's consent, and a great farmer has willingly agreed to give up four acres of land for it. I am satisfied that I caa keep two cows on the same quantity of ground, stall-fed, where I could keep but one if allowed to graze. I have no grass land, and ail the first winter my cows had only straw, turnips, and and now my hay is the clover I sowed with the grain crop
last year. I have experienced a great deal of good from the liquid manure from the two tanks, one from the cows, weighing 29 from the pigs. I have just killed a pig weight, which I have used in may family. I have a wife and four children, and a pupil of 13 years of have a wife learn the plan of stall. feeding cows and spade hustand to paid for by Mrs. Parry, of the Cedars, Sunning Hill, Berkshire. It is allowed that my oats are the best sample up the same as wheat, which saves sheaves, and set them ing : this is the general practice in Cornwall and Scotler and, I hear, in some paris of Kent, and is scotiand, useful for barley, to malt. I thrash my corn prer tharly house, as in Cornwall, Switzerland, \&cc., which the cowperfectly dry, being off from the damp ground. entirely supplied with water by the rain which falls on the is five acres, on the side of The quantity of land I rent acre ; this with 10l. for my house, makes 255., which I have paid for the year ending Michaelmas last, thougb might have taken off my crops, and left rent free, but I preferred staying and teaching, though I have no salary, and so 1 think would many others. I have now three cows, a heifer, and calf, standing opposite to each other,
with a road between their mangers for feeding these stallfed a road between their mangers for feeding these stallfed cattle, which have never needed a farrier; and from which In I have made cheese like the Dutch cheese, of that the duty for it paid at Newhaven amounted to $4,000{ }^{2}$. I remain, your obedient servant,
Aprib, 1842.
George Crutrenden."
This statement may appear too favourable to be quite correct, but the fact is no less certain, that this man, paying a high rent, is enabled to raise from five acres of land sufficient produce for his comfortable maintenance, entirely by the labour of twenty boys, working three hours in the afternoon, while he teaches them three hours in the forenoon. The age of the 14 years in stater, but supposing it to be from 8 to 14 years, or an average of 11 , they would easily cultivate five acres of land by trenching, forking, hoeing, When the system of the small Flemish farms. mill Mr. Cruttenden's cheese, made from skim matc, be equal to the Dutch cheese usually imported we will not stop to inquire ; it is sufficient to have shown that a school may be supported without any external assistance. Anditisevident, that, if the children made no progress, or were over-worked, their parents would soon take them away, and the master would lose his labourers, and consequently his means of living. Much of the success of the Willingdon school must be ascribed to the industry and judgment of the master, and also to the superintendence of the lady on whose property it is situated, and who takes a lively interest in its welfare. The children are early impressed with the importance of a minute attention to every operation in which they are engaged. They are the hands, while the master is the head; they see what the land can be made to produce, the profit which can be made on stock economically fed and properly attended to; and the lessons they learn at that early age they are not likely to forget
Compare these children who may have worked two or three years under Cruttenden with an equal number taken from any national school-which are most advanced in those things which are practically useful? If some clever boy has outstepped his contemporaries and can answer questions in arithmetic or geography which would puzzle our industrious scholars, how many will be found who, when placed with a gardener or a farmer, are of immediate use to their master, and can be entrusted with any kind of work? But this is not the question. What has it cost to teach a boy for four years at a national school, or one supported by subscriptions and benefactions? The smallest expense required for the maintenance of a school for 50 children, after a school-room and master's house have been erected, is at least 70l. per annum, or 1 l. 8 s. for each child; whereas if Cruttenden had 50 scholars he would only receive 4s. 4 d. for each in the course of the year, supposing no holidays, and think himself amply paid. He could then cultivate 12 acres instead of 5 , and his profits would be in proportion.
There may be some circumstances which favour this plan at Willingdon; but if Cruttenden pays a rent of $25 l$., there are many situations in the country where a cottage and school-room could be obtained from the proprietors without any rent, or a very small one, and it must be very rich land which would be worth 3 3 l an acre rent; so that if any proprietor of land should be desirous of making the experiment, and find another Cruttenden, he might confer a great benefit on the labourer's children by merely letting ife master have a cottage and a few acres of land, and, if necessary,' recting a plain school-room. II.

## THE ROSE-GARDEN.-No. V.

The remaing group of Bourbon Roses comprises habits of thesies, remarkable for their dwarf and rigid in its these, Augustine Lelieur uncof the oldest, and flowers way, perhaps one of the most beautiful; its flowers are only semidouble, but they are so erect and
so brilliant in colour, more particularly in antumn, that
it always attracts notice. Latifolia is so much like it, as scarcely to be distinguished except by its petals being a
little crimpled; Madame Nerard, Celimene, and Timolittle crimpled; Madame Nerard, Celimene, and Timo-
cles, are also of the same rigid habit, with flowers of the cles, are also of the same rigid habit, with flowers of the
palest silvery blush-a term which will perhaps convey that peculiar glossiness which seems to lay on the surface of the petals; Emile Courtier, Madame Margot, Ida Percot, and Madame Aude, are all beautiful rose-coloured varieties, of different shades ; and last, but not least, the Queen of the Bourbons, which originated in a cross with some fawn-coloured tea-scented Rose, as it is slightly tinged with fawn-a colour quite foreign to this family, and has a slight "Odeur de The," as the French say. All the Roses here named have a uniform growth, and are admirably adapted for a bed, either as dwarfs on their own roots, or on short stems; they are not so well calunless in very rich moist soils.
To some of these Bourbon Roses, which bear seed very Bourbons, blooming but once in the summer ; but their season of blooming is prolonged, owing to their origin in part from Roses that continue to bloom till autumn Most undoubtedly these will form the finest of all stand ards, as their habit is so remarkably robust ; one variety in particular 1 anticipate will, if budded on large stock unique and splendrd Rose was raised by Monsieur Laffay from Celine, and has been named by him, the Great Western-laughably spelt in some of the French cata logues "Grande Wistern," a name the origin of which I have no doubt has puzzled many a French gardener. Thi Rose has leaves and shoots of astonishing luxuriance, and flowers of a deep and peculiar red, rivalling the largest Peonies in size; a standard or a bush of this Rose, highly cultivated, will form one of the wonders of the
Rosery. It should be budded on a very stout stock, Rosery. It should be budded on a very stout in mentioning this, I am reminded that cultivators often do not
pay enough attention to the habits of their Roses when pay enough attention to the habits of their Roses when
selecting stocks for them. Stout old stocks should always have some robust-growing varieties worked on them, for if a tea-scented or some delicate-growing Bourbon Rose is worked on a large stock, the sap is engendered faster than it can be taken away by the bud; many shoots are
consequently repeatedly taken off; the producers of sap, the fibrous roots, then rot and die away; the sap-vessels close, and the plant, after
languishing a season or two, also dies; therefore, on languishing a season or two, also dies; therefore, on
all large stocks the cultivator should bud the most luxu-riant-growing varieties, such as the above and some of the following, which rival the Great Western in vigour of growth, and surpass most Roses in the beauty of their
flowers. The first in beauty is Coupe d'Hébe, colour delicate glossy rose; form, perfection. This Rose has been called by a gentleman, a first-rate judge, "the most
beautiful Rose in the world." Charles Duval is almost equally beautiful; in colour rather deeper. Capitaine Sisolat, Edward Delair, Paul Perras, Franklin, Lady Montgomery, and Henri Barbet, are all calculated to form standards of the largest size: there seems no limit to their growth. The following are of secondary luxuriance, but remarkable for the peculiar and brilliant red in their flowers; of these red Roses, Colonel Combes, Daphne, Ernest Ferray, La Esmeralda, and Dombrowski, are the most distinguished.
Of about the same range as regards habit are Richelieu (Duval), Belle de St. Cyr, Hortense Leroy,"with rosecoloured flowers of the most perfect shape, Sylvain and and Triptoléme are remarkable for blooming in very large clusters, having a fine effect on standards. Lord John Russel, Brillante, and Miss Chauncey, the same for their rigid flower-atalks which keep their brilliant flowers erect, even in the heaviest showers. The above, and indeed all the Hybria Bourbon Roses, form first-rate standards, liarly compact, quite different from that tendency to make long straggling shoots so remarkable in most of the hybrid Chinese Roses. The Great Western will undoubthybrid prove valuable for stocks, as, like its parent Celine, ediy prove valuable for stocks, as, 1ike its parent cine,
it strikes freely from cuttings planted in a shady border in October. The cuttings should be made about nine in October. The cuttings should be made about nine inches long, eight of which should be in the ground, leaving one bud out; the following autumn they should be potted or bedtred out, cutting off ull roots but the tuft of fibres, which will be formed at the bottom of the cutting,
and potting or planting them only from one to two inches and potting or planting them only from one to two inches deep, so that the bud may be inserted in the stem close to the ground. Exactly the same treatment may be applied to the Boursault stock, which wills strike readily under the same treatment ; this is more simple and requires much
less trouble than some other modes recommended. Z .

## ENTOMOLOGY.-No. XLIV

Acarus geniculatus, Linn.; (the Bark Mite)-Fruit-trees are sometimes infested with a minute, red, shining Mite, which is gregarious, and congregates in the spring upon the bark at the base of the twigs, looking fire a gummy exudation. These little animals are frequently form ing prodigious quantiries, and by extracting the sap, they ta doubt render the trees sickly, and in, all probability redrice the size of the fruit. There were pome theurañis them upon a small branch of a Plumtree forwarded to me the beginning of May (6ig. 1); they moved slowlf, that were running over each other, and burrowing their heads under the rugosities of the bark:
they varied in wive, colour, and outline, some being pale sod ; others were of a deeper tint, with three brown spots thwards the'apeef; and the older ones were still darker,
being of a deep chesnut colour, with the abdomen more globose. These mites appear to be separated from the Linnæan genus by Latreille, under the name of Oribata geniculata, and I imagine they have been described by
De Geer as the Acarus corticalis. This distinguished De Geer as the Acarus corticalis. This distinguished
naturalist found them from November to March constantly naturalist found them from November to March constanty beneath the slightly-detached bark of an old Pear-tree,
where they lived in society, remaining very quiet during where they lived in society, remaining very quiet during breed under the lichen which often covers the trunks and branches of fruit-trees.
Acaras geniculatus appears to be horny, but it is tende and easily crushed, being filled with a pale rosy fluid there are a few hairs scattered over the head and thorax and the former is conical, with two strong bristles on the crown, and two incurved, articulated, and hairy palpi on each side of the mouth : the thorax has some transvers sutures, and the hinder portion forms a thickened semi circular margin, which encompasses a great part of the abdomen; this is shagreened, often bearing a transvers brown spot in the centre, towards the apex, and a more circular one on each side. It has eight legs, not long but hairy, and of a dirty, ochreous colour; they are, apparently at least, five-jointed, the second joint being thickened, and the last produces a slender process, wind curved claws, looking like one only in repose (fig. 3, magnified). These mites are about the size of a little grain Acarus telarius (fig. 2, the natural size)

On different parts of the bark I observed minute, globular, white egg-shells, from which no doubt the Acar which were sticking in numbers where the mites hat whick ate and wem some smaller and mor congregated, and worm yellowish white with a dusky spot towards the apez. th yellowing palpi were very visible, they had eight lesa, the vibrating palpi were a the the legs, the anterior pair appearing to be the longest, be second pair apon the other is very uncertain; it might be for the purnose of feeding upon the egas or the young, as soon purpose of feeding upon the eggs or the young, as soon to any other species that I have observed upon plants, to any other species that I have observed upon phants,
which generally bear a greater resemblance to the mites of the Lime (vide Gard. Chron. vol. i., p. 164), it has more the appearance of a tick; its body is globular, it has some in
The following methods of destroying the Red spider have been suggested by various writers upon gardening and they are equally well adapted for the destruction o this Acarus. If the bark of the tree and the branches be well brushed over with a mixture of tobacco-1iquor, sulphur, and a little turpentine, it will speedily kill the bark mites and gas-tar, or ammoniacal liquor woula, in all pro bability, answer the same purpose. The best period is when they leave their winter-quarters, and congregate on also a good remedy; a tea-spoonful of common salt is to be dissolved in a gallon of water, with which the trunk may be washed, and the leaves syringed with safety, but it is recommended to wash the foliage of the tree with pure water a day or two after the application of the salt. It may be inferred from the economy of these mites, that keeping the trees clean must prove the best security against this and most other similar diseases. I have been astonished in the cider counties to see the trees in orchards laden with moss and lichens, which harbour these Acari and multitudes of injurious insects. I believe, also, that they assist in exhausting the trees and more speedily accelerating their destruction, by retaining moisture on the trank and branches, which eventually rots the bark, induces decay, and renders them more likely to suffer from high winds and tempestuous weather. Woodpeckers and other birds are likewise attracted by the insects, and thus, probably, unwelcome agents are required to keep down an enemy which a anple-tree elothed with rich green moss and grey lichens is "\%ost picturesque object, and I always regret to see the trunks whitewashed and rendered hideous to the tasteful eye; the above application, however, after the extraneous clothing has been removed is not subject to this objection. -Ruricola.

AMATEUR'S GARDEN.-No. XXI.
Who is there that does not admire the violet?-and yet how little care is taken of it after it is out of bloom!
Every one complains, when it is impregnating the air with Every one complains, when it is impregnating the air with
its delicious fragrance, that he has not hale enough of it,
and notwithstandin
How dis stock.
保 with those who grow Violets for the supply of Covent Garden Market. They cultivate itkinds kost gare the first, which is a single dark-blu mosi variety, will produce flowers in abundance hroughout the wine N, even when che ground treated produce fow he Neapolitan wh, poplat how the uless the seaso is very mild or it receives some winter, unless the season
The proper way to manage both kinds is as follows:About this time, having prepared a piece of ground-which should be rich and friable-by digging it over, and dividing it into plots one foot square, proceed to take up your ol plants, shake the soil from the yoots, na dive them int the number of plants required, taking care lot a much root as possiblo to each plant, and do of all their runners. They are then ready for planting and may be praced, one strons plank or two wak ones, the corner of each square. They must receive a copiou watering to settle the soil about their roots; and if the weath middle of each day. A rather shaded situation is proper for them through the summer, though a north aspect is not to be recommended.
Through the summer, the principal care will be to keep the ground free from weeds, to divest the plants of all runners as fast as they are produced, and to water them occasionally in dry weather. It is highly important that the runners be regularly removed. Mr. Knight, many years back, in regard to the preparation of Strawberries or forcing, asserted that the production of every runner sable that the same cause will produce the same effect in the management of the Violet. The great secret of preparing all plants for winter forcing and fowering is to get all the organisable matter possible deposited in the plant during the previous season's growth, and this can only be effected by having a bealthy breadth of foliage, properly exposed to the light, and by preventing the plant from expending its energies in the production of useless branches: this is the theory of preparation, but there is another fact worth marking :-In the forcing season the excitation must be gradual and regular, or the matter which under proper management, will be expended in flow and frait would, under warm, moist treatment, produce nothing but leaves and branches. This I bave frequently experienced in the management of the Violet : from the forcing-house would produce nothing but leaves, while another in the comparatively dry air of the greenhouse would be all flowers. Flowers, it must be recollected, are but leaves or branches, in the state of metamorphosis moderate growth is conducive to the production of flowers -luxuriant growth to the formation of leaves and branches. In September such plants of the Neapolitan violet as and potted in 48 or 32 -sized pots, or planted on a very gentle best way to mate the bed is use old spent dry dung and leaves it the beot three feet deep, and be covered with any light soil, such as leaf-mould and sandy loam, in which the plants may be plunged. During the winter the plants must have all the air possible in mild weather, but must be carefully protected the bed when frost, and a gentie lining must be applied After the number of wishe hor the pror in fromes is pre of plants required for pots or thess bian be pared, the remainder, with the Rumsan planted under a south wall or her garden: this treatment is suitailed are the best adapted for winter flowering.一W. P. Ayres.

## HOME CORRESPONDENCE.

Errata - In the article on Draining, by "W. W.", at p, 335 at " not to take up," read" "not to bake up.
Whence do Plants derive their Nitrogen? - It has been a matter of surprise to me that someable and eder prisiog Chemist has not undertaken to solve the following question, in a manner open to no objection on the scorgen accuracy-"Do plants derive the whole of their nitrogeng from the ammonia of the atmosphere and the decomposiag the penous matters present in the soll? or have forma so large a been proposed, and the opinions of acientific men have been expressed on either side; and it is certain that neither vegetable physiologists nor chemists are at the present time agreed on this point. The resolving of this question seems to me of great importance, as it would ond to throw much light on the functions on not imitable by the capability of inducing combiat. The generally received opinion is that of Liebig-that plants cannot appropriate nitrogen unless it has previously assumed ine form of ammonia, and the arguments he adduces fessed convincing. But why should we repose so trustfully on any mere opinion, how probable soever, when it is in our power to obtain positive proof? Is it because, it is much easier to adopt an opinion, sanctioned it may be by a great name, than to enter upon a ness? The human mind-accustomed to repose, and to
receive without effort its ideas, as the unbroken surface of a river the images of the trees and buildings which adorn its banks-is not stirred from this state of quiescence without some sense of uneasiness or pain. No one
canattentively consider the operations of his own mind withcanattentively consider the operations of his own mind with-
out being aware that to think long, convectedly, and out being aware that to think long, connectedly, and
deeply, on any subject, requires considerable exertion and is attended with much trouble. To this natural slothfulness of the intellect in the majority of men is to be
ascribed the multitude of erroneous opinions on all subascribed the multitude of erroneous opinions on all sub-
jects held by them; for it cannot be doubted, if they could be induced to think more, and to make active use of those powers which a bountiful Creator has denied to none but to fools and idiots, truth would take the place of error, and those few thinking men who now lead public opinion would, in order to preserve their proud to observe more closely, and argue more conclusively, Thus all classes would have made an onward step towards that perfection which is "our being's end and aim." Asking pardon for this digression, which I fear will appear irrelevant, [not at all, ] I return to the subject of
this letter. That Liebig's views are not acceptable to the minds of others equally gifted with himself is proved by the fact that such men as Boussingault, Daubeny, Johnstone, Pereira, and others, dispute their correctness. It appears to me that this discordance of opinions amongst persons equally capable of judging arises from the want of appealing to actual experiment, which alone can settle the point at issue. The reason that this has not been done may be
the difficulty of so arranging the conditions of the experiment as to supersede every possible objection. It is acknowledged that the difficulty exists, but it is submitted at the same time that it is not insuperable: and this being the
case, it should, far from discouraging exertion, prove an case, it should, far from discouraging exertion, prove an
effectual stimulus to it. It is indeed certain that nitrogen as it exists in the air, is wonderfully indisposed to combination ; and the most energetic chemical action may take placein contact with it, and is, so to speak, shared by an place in contact with it, and is, so to speak, shared by an
unconcerned spectator. But this is only the general rule, unconcerned spectator. But this is only the general rule, and some exceptions can be pointed out (and they may be
more numerous than we imagine). Why may not the action of plants be one of them? When the atmosphere
is traversed by the lightning's flasb, the track is pervaded by a chemical combination (nitric acid) of the nitrogen and the oxygen of the air

When pearlash, carbon, and
ess for making Prussian blue, iron, as in Thomson's process for making Prussian blue,
are heated together strongly in an open vessel, and often are heated together strongly in an open vessel, and often
stirred, the nitrogen of the air is absorbed by the mixture, and gives rise to the formation of cyanogen, which may be easily resolved into arnoonia. Thus we see how, indiIfctly, ammoniaitself may be formed from the atmosphere. Withdraw and fix the nitrogen of the air, who shall gey that the overruling and superior force of vitality is unable to effect the same? But to the proof: and first let us consider the necessary conditions of the experiment, and then the means of fulfiling them. If we sow a certain Weight of seed, containing a known quantity of nitrogen in an artificial soil known to be destitute of that element; if we irrigate with pure water, and permit the atmosphere slowly to traverse an apparatus properly constructed for the purpose only after having been deprived of all its carbonate of ammonia (ever present in very small quantity),
we shall, I apprehend, have secured all the necessary conditions of a very accurate experiment. After the plant has arrived at the greatest maturity possible under these circumstances, we have only again to recur to analysis, in order to ascertain whether or not the quantity of nitrogen has undergone any change. Should it be less than the seeds originally contained, then the plant must have imparted some nitrogenous compound either to the air or to
the soil. If more, it will prove one of two things-either that the plant possesses the power of forming nitrogen out of some of the materials in contact with it, and thereelement, or it has absorbed it from the air and combine it with its own substance. 1 know of no other way of ascertaining which alternative is the truth, than by forming an artificial atmosphere in which the nitrogen is replaced another gasometer to the exit-tube to receive the air after it has passed through the apparatus, we may, by analysis, making the experiment, two things arrest the atted. In the form and arrangement of the apparatus, and the state of the materials employed. I suppose it will be reckoned heat, light, water vegetating seed must be supplied with renewed. All this, I take it, may be accomplished by Sowing the seed in a shallow glass vessel capable of being tures, into which should be secured, also three aperthree tubes, one from a gasometer, one from metically, vessel, and one fo serve as an exit-tube. The gasometer will contain common air and be slightly weighed in order to drive a current through the apparatus. Between this and the gasometer shall be two absorption-tubes, one conand the solution of sugar of lead to stop the carbonic acid hydroche sulphuretted hydrogen; the other containing properly aric acid to absorb the ammonia, If these are propelly arranged, we may be quite sure that neither car-
bonic acid nor ammonia can vitiate the air of the ment. Care would be taken immediately after sowing the seed to displace the air in the apparatus by that from ciple gasometer. The water-vessel would be on the prinin whe the close filter, used for the liquid caustic alkali, liquid is drawn from thessary to replace the descending deacends. Thus all contact with the general atmosphere
is completely avoided. The exit-tube may dip under the surface of mercury. We have thus provided an
atmosphere destitute of ammonia, which can be renewed atmosphere destitute of ammonia, which can be renewed air, and the means of light and heat. So much for the general description of form of apparatus-the details I leave to others; they will readily suggest themselves, ond may be varied almost ad infinitum. The soil might consist either of pounded rock crystal, or white marble, according to the precise object of the experiment. Much attention should be paid to the purity of the water. I
would recommend that it be twice distilled, rejecting each time the first half that comes over, for it almost always happens that all natural waters, whether spring or rainwater, particularly the latter, contains some ammonia, which, by taking the precaution pointed out, may be got the of. It might be advisable before distilling, to fix chloride of platinum. -W. H. Potter, Chemical Works, Upper Fore -street, London. [We do most earnestly Potter has thus ably drawn attention, will be seriously and experimentally investigated. Profs. Daubeny and Johnston, Dr. Playfair, Mr. Edward Solly, Mr. Fownes, and other working chemists, should at once take it in hand, and their anited experiments would settle the matter in six weeks.]
Draining.-I hope the remarks of your Draining.-- hope the remarks of your correspondent culturists who are disposed to afford their land this most valuable improvement. The greater cheapness of "plugvaluable improvement. The greater cheapness of "plug-
draining" is too often a temptation to its adoption (it is done in this neighbourbood for 4 d . to 5 d . per rod), but if the theory of Mr. Smith, of Deanston, as explained in his lecture at Bristol, that, as the soil becomes dried by the operation of the drains, it shrinks and becomes broken in a degree, to the denth of the drains, be true, it is reasonable to expect it will crumble down into the space left by the plug as a passage for the water, and eventually obstruct and close it. But if the work be properly done, and the clay well rammed down on the plug, it must act as a
"puddling," and prevent any surface-water from arriving at the drain. consolidated by the rammer, moles will be very likely to get at the drains and therefore choke them. I would strongly recommend all who expect permanent improvement from
draining to remember the old saying, "Once well done, draining to remember the old saying, "Once well done,
is twice done."-Lusor. [See the observations of "A is twice done," - Lusor. [See the
Clay-land Farmer," in our last.]
Asparagus.- I fear I am not singular in my disappointment from adopting the method of cultivating Asparagus, described in your Chronicle for 1842, p. $187_{i}$ had heen me it has been a fallure. I took two beas, which had been made three years ago, with every precaution to
ensure fertility. On the 29 th of October, I covered them about four ing. On the 29 ma october, 1 covered them fresh night-soil, with two-thirds of road-dust, swept from a limestone road; on the 23d of February this was forked in, dressed with a pound of salt to each yard, and the beds were covered about seven inches with leaves that had before covered the Seakale beds. My neighbours have been cutting for two or three weeks, but my grass seemed unwilling to make its appearance, till last week I able in forcing through the long, white shoots, much crooked were (as you observed) like "bleached timber," with half-an-inch of eatable Asparagus at the end. I have had the through the surface are looking very weak and small. expect to have lost the crop for this season at any rate. nest will repay you for a temporary disappointment Time is wanted for all these operations, and this year miserable May has rendered time more necessary than Fver.] ${ }^{\text {Fringus on Tan.-I would recommend your corre- }}$ spondent who complains of fungus growing on his barkbed, to try the effect of soot sown moderately thick over its surfac
Hedgehogs.-I consider these inoffensive animals as very useful inmates of a garden. I once had a very young one, and it was amusing, when he was rolled closely up, to throw a snail near him. It seemed as though he detected the proximity of the snail by smell ; for he would soon begin to unfold himself with great caution, till he
saw his prey, when he would suddenly dart upon it, and saw ins prey, when he would suddenly dart upon it, and
comence crushing the shell with great haste; as soon as the shell was removed, it ate the snail with much relish. I think the hedgehog would assist materially in the destruction of snails and insects in a garden.-Lusor.
Guano applied to Mangold Wurtrel. - In answer to the inquiries of "A Correspondent," at p. 216, respecting the application of genuine Guano to the Mangold Wurtzel crop, I beg leave to offer the following particulars of the method 6 inches in depth, and 2 spring :-Drills were drawn 6 inches in depth, and 2 feet apart, into which the Guano was strewed at the rate of 1 lb . to 15 yards, and Mangold Wurtzel seed was afterwards sown. The produce of the seed thus treated was fully one-third more than of that which received a dressing of farm- yard manure; the average weight of the roots being from 8 lbs . to $9 \mathrm{lbs} .-\boldsymbol{E} . S$. Toads and Woodlice.-I am rather surprised to find that Mr. Beaton, at p. 176, doubts the fact of toads destroying woodlice; and yet he says he would not like to see his Cucumber and Melon pits without one. Now, they do not destroy insects, why have them there?
they are not useful, they are certainly not ornamenta I have always considered them to be useful for the above
purpose, and have found that when onejis putinto a pot or frame where woodlice abound, the number of the latter soon decreases. But I never had an opportunity of seeing a toad in the act of devouring his prey until a day or two ago, when, on removing some Dahlia roots, several woodice, disturbed by the operation, commenced running about in different directions. These, a toad, confineda the same frame, immediately approached and attackeil I at first thought that he opened his mouth and sucked the insect in; but, on a closer examination, I found that the toad possessed the property of being able to thrust out to a considerable extent his tongue, with which he seizes and conveys the insect into his mouth with such precision and rapidity, that to an inattentive observer it would appear that he only opens his mouth, when the insect immediately leaps down his throat. In the space woodlice take the above leap. I have had the same toad for upwards of three years, and in the winter months, when his services were not required, a hole was dug in the earth, in the bottom of which a piece of slate was put, and on this he was placed, under an inverted flower-pot, surface.clear from ants, beetles, and woodlice, and they are perfectly harmless. and weodlice, and I always keep a number of them in my houses.-Jemsheed.
Pine-apple Strawberry.-Last year there was a good deal said about the difficulty of managing the "Pineapple Strawberry," and very many persons are hence deasserted that it waing it, yet one of your correspondents perfect success $s$ a perfect success, as any oun. As ais is so delicious a Strawberry, it may not be out of place for me to press a single plant, either young is or old, during, yet have not lost a single plant, either young or old, during the winter, and other kinds. I find, Theweir treatment is the same as the Crane kinds. I find, however, that the maggot of the Crane-fly is a great enemy to them. Would spirits of
tar be as likely to drive them away as it tar be as likely to drive them away as it does the wireorm ?--Discipulus. [The experiment is worth trying.] Birds.-The other day a nest was found at Ashford Lodge, near Halstead, containing three blackbirds and one thrush, fully fledged. The nest was in a secluded place, and does not appear to have been in any way disturbed.-

Keeping Apples.-There are many theories and plans for keeping Apples, but the following instance will show that they sometimes preserve themselves in a very unacApples which we call, in this in the Box-edging of one of the walks, perfectly fresh and sound, although they had been exposed to all the frost, snow, and rain of the winter-the two former unusually severe. What makes it still more extraordinary is, that all the "Harveys" had disappeared from the fruit-room at least a month before the solitary one was found !-

Amaryllis regince.-Surely " J.B.," p. 138, is mistaken When he states that he cultivates Amaryllis reginæ, with A. formosissima and vittata, in the open air. The two last are greenhouse bulbs, and will do out of doors ; but A. reging rience goes, invariably suffering if left in the greenhouse late in autumn, and seldom flowering bat in strong stoveheat; its constitution seems even to affect bybrids with more hardy species, for A. ablica reginæ requires far more heat than A. aulica, so much so that the two will not flonrish under the same treatment. Mr. Herbert doubts if A. reginx came from Mexico, on account of its tenderness Is it not probable that it did come from the neighbourhood of Vera Cruz? We had little communication with Central Mexico and its Tierra templada in 1728, when A. regine first flowered in England.-J. R.

Scotch and English Farmers.-I shall enter no further into controversy with your Stirling correspondent; for what truth can be established, or what right conclusions come to, with one who reiterates that a partial decline, although considerable, and a total giving up, are the same thing. Or that there is no difference between a simple statement of fact given on the aathority of the Reports of the Great Agricultural Meetings at Liverpool and
Bristol, and without the reasons being quoted; and reasons invented for the occasion by your correspondent, whilst the new matter introduced into his last letter, in reference to my first communication, is throughout a perversion of my meaning. I shall, therefore, wait for a
clearer-headed adversary before I again address you on the subject of Scotch and English Farmers'; 'Only now remarking that your correspondents manner of argument confirms the opinion now growing in pubic belief, that, by false statements, the character of Scotch Farmers has been attempted to be placed in a false position.- is Gosforth.- [Here this controversy must cease, so far as the Gavdeners ${ }^{2}$ Chronicle is concerned.]
Bees.-J. A., Devonport, begg to submit, with every of which a sketch was so kindly bar-and-frame Hive, Number of the Gardeners' Chronicle, is not quite intelligible. Will "E. M. W." be so obliging as to describe the several parts, and letter them, in the next publication reme Gardeners' Chronicle. A key of this kind would should hope also) useful Bee-box
Apples.-I think I could show "A Tivy-side Subdescribes. We keep ours in what we call here half-penny (?) pots, or even in boxes. We always place them as they
grow, with the stalk uppermost. We never wipe them.
I sent, a few days since, some hundreds, of a kind not over I sent, a few days since, some hundreds, of a kind not over
good for keeping, to a friend, and have now many hungood for keeping, to a friend, and have now many hunin. This year we do not consider a good year for their keeping.-J. B, $H$
I should b.-As 1 consume a large quantity of Charcoal, I should be obliged if you, or any of your correspondents,
would inform me of the manner of manufacturing it, as Would inform me of the manner of manufacturing it, as
well as the cheapest, most simple, and most economical way, with as little immediate outlay as possible, or in a way which might be considered ultimately, and on a large scale, the best and the most economical by the outlay of capital for any particular construction of works or
machinery.-J. K. [It must be ground into fine powder; that is the main point.]
Nur readers have had to deplore the $I$ dare say many of in dung-frames, by "damping off," caused by the drop from the astragals and side-bars of the lights, in consequence of bad glazing; together with the vapour arising rom the vapour condensing on the under-surface of the lower edges on the plants. To obviate this evil, I had a

frame made and fitted up with astragals and side-bars, as shown in the above section, which requires no further
explanation than that aa are grooves, which catch the rain-water which finds its way inside, and the condensed vapour, carrying it to the bottom of the lights, instead of dropping on the surface of the bed. 66 are grooves to insert the ends of the glass on Mr. Read's excellent plan, which was published some years since in the Horticultural Transactions. I may observe, that vapour condense, but finds its way to the astragals-providing the pieces of glass are neither cut curvilinear, nor the under-sides con vex, but flat, and cut rectangular ; then the groove $a$ wil totally prevent dropping in the frame, and the evil conThe frame above mentioned, was placed side by side on dung-bed with another new one, of the common construction; the former is free from drop, the latter shows the bed ; and as the tank system of heating is likely to become general, as it well meerits, I have no doubt the grooved astragal
Wood-Paving.-In your leading article, May 13, you mention Messrs. Esdaile and Margrave's patent for capping the Fir-blocks with Eim. I would ask what advantage is contemplated from using two binds of cheapest preference to Elm alone? 1s. $2 d$, per foot, and it is known to be very durable when constantly exposed to alternations of moisture and dryness.-Luson

## FOREIGN CORRESPONDENCE.

Paris, May 15, 1843.-The annual exhibition of the Paris Horticultural Society was held in the Orangery of
the Laxembourg Pajace, on the 10 th May and four follow. the Laxembourg Pajace, on the 10th May and four followw ing days. As heretofore, it consisted of a miscellaneous
collection of flowers, fruit, vegetables, grains, paintings, collection of flowers, fruit, vegetables, grains, paincings, pursuits. The weather was favourable each day, and nearly all the fashionables of Paris graced the room with their presence. Among the earliest visitors were
the Duke and Duchess of Nemours. The show (with some few exceptions) was far from brilliant; and this
cannot be wondered at-for what Amateur or Florist would subject a rare or fine specimen to the atmo sphere of such a place for five successive days? But i there was not much to attract the notice of the connois seur, there was enough to please the sight-gazers of Paris, Who were daily seen thronging this temple, and collection was decidedly that of M. Paillet, who obtained the firs prize for Rhododendrons. His plants of Atro-roseum, Conperbum, Comte de Rambuteau, Altaclerense superbum Lowenianum, Rubrum plenum grandiflorum, Morelianum, and album pictum, were grand, and would have done beveral very distinct seedlings, one a dark crimson, and another a rose lilac, very deeply spotted. Unfortuaately describe them. In bis stand was also a fine specimen of Azalea indica coccinea grandiflora, such as is seldom to be seen on this side of the water. The next mostattractive collection was that of M. Margottin. This consisted of Roses in pots, and was awarded a first prize. che varieties were chiefly Bengals, Teas, and Hybrids, cutti6 feet high. Most of the blooms were fine, and the plants 6 feet high. Miost or the an English eye, the naked stems in good healh, but, to an English eye, the naked stems

Among the best specimens were Reine des Iles Bourbon, Clara Sylvain, Bougère, Comte de Paris, Princesse Fulene, Duchesse de la Valliere, Adam, Madame Breon, Fulgovie, Sulphurea (old yellow), Sisley, Emile Courtier, Lady Warrender, Triomphe du Luxembourg, Rose du de Paris du Luxembourg. The bright golden flowers of the old yellow Provence attracted universal admiration. M.M. Cels never fail to send a large collection;-in fact, know not what the Society would do on these acceses At this time they furnished 500 or 600 plants, Palms, Orchidaceæ, Cacti, Ericas, Azaleas, Rhododendrons, Coniferæ, and a multitude of other things, in and out o bloom, from all the four quarters of the globe. Their Cacti are the best in Paris; they pride themselves on their collection, and spare no expense in adding every thing rare, Very many of their specimens are large and fine, particularly Echinocactus electracanthus, acuatus, macrodiscus, aulacogonus, piliferus, cornigerus, Echinopsis Zuccarini, multiplex, and Melocactus, nova species, from Brazil. They also exhibited the beautiful Mammillaria elephantidens, which every collector of Cacti ought to possess. Among their Orchidaceæ were good plants of Brassia Cawanii, with its curiously-formed flowers, Tri chopilia tortilis, Oncidium carthaginense and ampliatum, Cyrtochilum maculatum, and Phaius bicolor: together with a fair specimen of Azalea indica variegata, an Araucaria excelsa and imbricata, 12 feet high, and Cedrus deodara. The gold medal, offered by the Duchess of Orleans, was awarded to M. Tripet Leblanc, for a collection of more than distances, between which was moss or leaves, and the whole covered with light earth, in a raised bed about 50 complete as to give them every appearance of being in their natural state of cultivation. The varieties wer entirely confined to Roses and Bybloemens, for Bizarre beauty would not be tolerated. I must not scrutinize too closely the quality of the fiowers; suffice it to say they were not cut to appear at Hampton ; and therefore passed for his zeal ; for certainly few men beside himself, in France, woul prize. M. Dufoy obtained the first prize for Pelargowere old varieties of little merit, save that of bloomin reely. He also exhibited several very good Verbenas and a dozen Dahtias in bloom. M. Cbatione obtaine the second prize for Pelargoniums; among which wer Priory Queen, Mr. Garth, Flamingo, Onais, Sidonia, and Gauntlet; and a prize for seedling Calceolarias and Cine London. M. Modeste was awarded the first prize fo Pronies ; Josephine Imperatrice, incarnata, Victcria, Hissiana, triumphans, splendidissima, and splendens, were very fine, especially the latter, which has second priz for Rhododendrons : his plants of Formosissimum, Lowei album, Lady Warrender, and Invincible, were every thing that could be wisbed. M. Soulange Bodin exhibited a large collection of hardy and Indian Azaleas, which fully deserved the prize awaraed. Versicolor, purpurea gran trium, hus, arfait, tricolo perfecta, splendens, fulgens, picta, rubicunda superba, in beauty. M. Jacques, the King's gardener at Neuilly exhibited several seedlings of herbaceous Pæonies, which distinct, and will no doubt get into the trade. The amateurs contributed but little, and that hardly worth notice M. Souchet obtained a prize for flowering plants which might have been purchased in any market for 100 francs like Paris. M. Gontier (the Wilmot of Paris) was M in fruit and fower. this stand was always crowded with visitors. The specimens of Pompelmouses, Bigaradier Grand Bourbon, dore, very fine. There were two or three other prizes given, and three or four mentioned as honorables, but the subject contained nothing worthy of particular attention. beside paintings, models, tools, \&c.

## PROCEEDINGS OF SOCIETIES.

May $25 . \mathrm{Mr}$. Edward Solly, in his third lecture again adverted products as gum, sugar, starch, \&cc., one into the other. This was shown to be caused, in plants, by the presence of an azotised
substance, called diastase, which, in germinating seeds, brings about with rapidity the same kind of alterations as the chemist
produces artificially by means of inorganic substances. High heat, or sulphuric acid, or caustic potash will, in the presence of
water, suddenly change insoluble starch into soluble gum ; the germinating plant, although it has neither high heat, nor sul-
phuric acid, nor caustic potash to assist it, has diastase, which prings about the same result as those inorganic agents. Malting
was adduced in illustration of this. Mr. Solly next directed attention to the inorganic matter that forms part of the constiweek, in illustration of the quantity that is fourd to exist in when plants are burnt, and then we are able to determine their
nature: this was illustrated, in the case of ashes from the Beech tree, by the performance of a chernical analysis; wher potash acid by baryta, carbonic acrd by muriatic acid, lime by oxalate All this ammonia, silica by its insolubility, and so on,
ald
air or the soil, which were next proved to be capable of yield-
ing it. In addition to oxygen and nitrogen, which by their maxture form the atmosphere, it was shown that there is
constantly suspended in it, water furnishing hydrogen, carconstantly suspended in it, water furnishing hydrogen, car-
bonic acid, and ammonia, The latter compound is not, however, discoverable, becanse it is dissolved in water as fast as
it is formed, and therefore only occurs in the water precipitated from the atmosphcre. But in ou dition to hese a dhe nis mat ters,

 in the alr: and in fact its presence may be detected for four volatizable in a similar manner. The frot that it is so, was proved by an instance which Mr. Solly had obtained from the
Horticultural Garden. Two piants of a Catasetum were taken, Horticultural Garden. Two plants of a Catasetum were taken,
one growing in earth, the other in air. Their analysis gave the following curious result :-
Pseudo-bulbs
Leaves
Growing in earth
465 parts of solid matter.
Now, it is to be inferred that in such a case the solid matter must is a most curious, and in practice a most important soil. (This With regard to the soil, it must be evident that it is capable of plants. The great difficulty of comprehending how such earthy substances get into plants consists in the supposition that they of flint, or siltca, by the condition of that earth (or acid) in
combination with alkalies s silicate of potasb, for instance, being shown to be perfectly solubse, and the fint in it being separated
instantly when brought into contact with acids. The soiubility of sulphate of lime (the earth called gypsum) was also demon-
strated by a pretty experiment. Carbonate of lime was formed by driving the carbonic acid of the breath through lime-water this rendered the water turbid. A few drops of sulphuric acid expelled the carbonic acid, and seized upon the lime, necessarily forming sulphate of lime, which, however remained dissolved in the water. This
Chiswick Show,-By accidental oversight the collections of
Roses in pots were not noticed in our report of last week. It will be seen by the list of prizes then given that the judges did not award the principal one, it not being thought to be merited. Th account of the first prize not being given, we reserve all remark
on the plants till the June show, when we intend referring to on the plant

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.
wermis Council was held at the Society's House, in Han A wrekly Council was held at the Society's Honse, in Han-
over-square, on the 17 th of May, the Marquis of Downshire in Society. The Marquis of Downshire gave notice that he should call the attention of the Council at their next monthly meetng
to the question of taking into consideration the propriety of the Society's recummending a course or pen the subject of The roughdraining and Subsoil-ploughing, similar to those he had recently from Mr. Kerr on the subject of grated tiles to prevent the preparing tiles for a similar purpose suggested by Mr. Barton, o Threxton, was exhibited to the meeting.-Mr. Clive expressed his intention of exhibiting at the Derby meeting a cheap fire-
engine of simple construction, throwing $2 \overline{5}$ gallons of water each ainute, Mr. Davenportinformed the councll that he had forme effective, and Col. Challoner stated that Mr. Sherborne, of Bed-
font, employed a single-actioned engine with fly-wheel to prepare his manure with water in the summer. - The Marquis of nowl shire presented the yearly Report of the Royal Agricultural
provement Society of Ireland, and Mr. Butsford, of Portlandplace, a specimen of the Guinea-Grass from seed sown las
spring at Hampton Lodge, near Farnham, Surrey, Mr. Butsford stating that this grass in Jamaica grows to the height of five
foet, and is considered as unrivalled for cattle.-Mr. Whitlaw offered some remarks on the distemper among stock.
Ar the general meeting for the exhibition of Tulips and Hearts ease, class-showing and seedlings, there were no Tulips from
Amateurs, and the following is a list of the remainder:--Class showing, Hearkease, AMATEURS : a prize to Mr. Bragg for-Curion, superb, dark. Tulips, NURSERMMEN: Mr. Brown'S Flamed Rose,
1st, Triomphe Royale; OrSon's do., 2d, do. Mr. Brown's Feathered 1st, Triomplie Royale; Orson's do., 2d, do. Mr. 'Brown's Feathered
Byblemen, 1st, Franciscus Primus ; Mr. Orson's do., 2d, do. Mr. Byblcemen, 1 st, Franciscus Primus ; Mr. Orson's do., 2a, do. Mr.
Brown's Flamed Byblomen, 1 st, Salvator Rosa; Mr. Orson's do.,
2dl, Rubens. Mr. Brown's Feathered Bizarre, ist, Ulysses ; Mr
 Aeartsease, Mr. Brown, yeliow, Sulphurea elegrans; edged,
Curion; white, Brown's Mald of the Mill. Mr. Cook, Longwick, dark, Black Bess, Scedling Tulps, Mr. Brown's Ulysses,
Feathered Bizarre, 1 st class. Heartsease, Mr. Cook, Delight, 1843,
1 bloom, Ist class; Mr. Bragg, Elizabeth, 1843,1 bloom, 2 d 1 bloom, Ist class; Mr. Bragg, Elizabeth, 1843, 1 bloom, 2 d
class: these three fiowers were noticed last week. RejectedBOTANICAL SOCIETY OF I,ONDON,
May 19.-J. E. Gray, Esq., F.R.S., \&ce., President, in the chair. plants from Western Australia, from Mr. John Turner: this collection comprises many duplicates. British plants from Mr
Edwin Lees, Mr. A. Henfrey, Mr. Freeman, and M1ss Twinin Various donations to the library were also announced. Mr.
A. Henfrey, A.L.S., exhibited specimens of Leucojum gestivum, collected in Greenwich marshes. He also presented specimens
of Dentaria bulbifera, collected at Harefieid. Middlesex. MT. William Andrews presented specimens of varieties of Saxifragia geum, in one of which the nectaries were thickly surrounding
the ovary. The secimens were collected at the Great Blasquest
Island, coast of Kerry, Ireland. There was read a Island, coast of Kerry, Ireland. There was read a "Notice of the discovery of two species of Fungl, new to the Britwodbine,
by Dr. Phllp B. Ayres;" Peziza corticalis, found on Wood between Stokenchurch, Oxfordshire, and Cadmore End, and Hystericum rubrum, found on Bean-stalks at Aston Rowant, are
Tetsworth, Oxfordshire. Specimens of these new species were presenter to the Society by Dr. Ayres The commencement of
a paper by Mr. Edwin Lees, F.L.S., "on the groups into which
the British Fruticose Hubi are divisible" was also read. The the British Fruticose Hubi are divisible" was also
paper was accompanied by drawings and specmens.
May 24, ROYAL BOTANC SOCIETY OF LONDON. Inner Circle, Regent's Park. The moorning of the day was
extremely thrcatening, and the rains which fell so saturated the extremely thrcatening, mith moisture, that planks were obliged to be laid in some of the show-tents and on the furf for the company to walk remander of the day was all that could be desireal. The exhiexhibitors bringing the same plants. In cac un the paruch us,
such as Orchidacere and Azaleas, it was much below the last Chiswick gathering; but the collections of stove and greenhouse plants, and particulariy the Pelargonums,
Chiswick, we shall not repeat the description of those which wer brougit forward again on this occasion, continiug our observa-
tions to such as were not then shown, or which displayed any
peculiarity not before alluded to. Perhaps the specimen whicl2 altogether most novel, was Acrop,hy 111 mm venosunt, sent by Mr.
Green, to Sir E. Antrobus, Bt. This plant was in admirable
health, and had large terminal feathery spikes of white blossom. Green, gr. to sir E. Antrobus, Bt. This plant was in admosom.
health, and had large terminal feathery spikes of whte blossom.
Another good specimen of the same species was shown by Mr. Redding, gr. to Mrs. Marryatt, Wimblecton: but tue flowers wer
not pronerly expandect. In the collection of Mi. Goode, gr. to
Mrs. Lawrence, there was an immense and elegant plant of Mrs. Lawrence, there was an immense and elegant plant of
Chorozema cordifolum; Gesncra latentia, very handomc, and
finely grown; Erica Cavendishn, a are yellow-flowered kind, in capital hralth; E. ventricosa co ccluca ninnor, a platht xott more cercis littorea, extremely good; Churozema Henchmanm, 4 fec pultacea var., Very tine; and a iscautiful dwarf plant of E. Mun-
dula. The collection of Mr. Green contained some pplendid vated; Pimelea rosea, dwarf and beautiful; Chorozema Dicksoni, laden with flowers; a variety of Cactus, Iike Ackermanni, but
with blue in the blossoms; Erica splendens, handsome; E. estita aba, very good; Leschenaultia biioba, brilliant; with a charming
specimen of Erica suaveolens, and also of E. Beaumontiana.
Mr. Pawley, of Bromley, exbibited Erica propendens in a lovely state; Zichya coccinea, very rich; Chorozema Henchmanni, magnificent, and in a condition which we have never seen
excelled; Exica hybrida, a noble plant; E. ventricosa carnea,
equally fine; Gesnera bulbosa, splendid specimen: another equally fine; Gesnera bulbosa, a splendid specimen: anotyex
plant of Zicliya coccinea, on a trellis 4 fect across, and cere
inch of it covered with bloom; Poivrea coccinea, dwarf, and flowering thiberally ; and Kennedya nigricans, in rich health, but
wanting in showy colours. From Mr. Mill, Nurseryman, stoke Newington, there were large plants of Euthales macrophylla,
and the handsome Hibiscus splendens. Mr. Atlee, gr. to - Beaufoy, Esq., South Lambeth, showed, amongsta generaily Well managed ; Erica mundula, very small and close, blooming difolia, with good plants of Boronia denticulata, Erica elegans,
and Correa speciosa. Mr. Clarke, gro to W. Smith, Esq., Sbirley and Correa speciosa. Mr, Clarke, gr, to W. Smith, Esq., Sbirley speciosissimus, and both flowering together; Muraitia Heisteria Very dense and pretty; Eutaxia myrtifolia, dwarf, and in as
tonishing luxuriance; Erica translucens, and Chorozema Dicksoni, beautiful specimens. By Mr. Clark, gr. to W. Block, Esq very close Azálea lateritia. The followiug plants came from Mr
Hunt, gr. to Miss Traill, Hayes' Place; Dulwynia clavata remarkably well bloomed, Erica odora rosea, an excellent little
plant; E . ventricosa stellata, particularly good; Hovea Celsii
2 feet height, finely grown: Pimelea decussata, Iow and rich; Tro-
preolum trocolirum grandiflorum, superlatively beautuful; and Borcma crenulata, a slowy snecimen. The collection of Mr.
Frazer, nurseryman, Iea Bridre Road, included, among many poor productıons, Zichya glabrata, very elecant: Leschendulti linophylla, 3 fcet hiph, graceful; Erıca nerspicua nana, most and very verdant plant, frem Mr. Joynes, of Tottermec
 nen, from Mr. Frazer, Lea Bridge Road. The Orchiclacea, whe
were of inferior quality generally, comprised a nice plant of Oncidium pumillu, on a block of wood from Mr. Graves, grat t Mrs, Cannon, stratford Green; and a good variety of Nenclitum, from Mr. Reddingo The group of tall Cacti, fron
 which resembles Colvilhi. Both here and at Chiswick, the show
of Fuchsias was by no means what right have been expected from the advertisements of growers. The Venus victrix was the such as it would hat mont the prow reserved until they were in a better condition, or better selected. tubs, from Mr. Beck, of Isleworth. The varieties were, Luna,
Climax, Lady of the Lake, Bleda, King, Standishii, Madonna, Lady Douglas, Maid of Honour, Standish's Beauty, Agnes, an unusually large and riclh state, were sent by Mr. Joynes, of Tot-
teridge. Mr. Gaines's Shrubby Calceolarias were Rising Sun, Dusty Miller, Favourite, Cyrus, and Sunbeam, Mr. Catleengh's
were Commander-in-Chief, delicata, Reform, Commodore, Hero, and Caroline. Mr. Catleugh's Herbaceous sorts were Brides maid, Lady Sale, Van Amburgli, Lread had some Lake,
Isabella, and Favourite. Mr. Gren
and striking seedling Calceolarias, as had Mr. Wakeling gr . to W. Whitmore, Esq. Beckenham. Thnse from
Mr. Standish, in the way of C. Standishii, and all very beautiful,
were 13arshot Beauty Raphael, Surprise, Princess Mary were Bagshot Beauty, Raphael, Surprise, Princess Mary
Reliance, and Duchess if Gloucester. The lost of Mr. Cieen' sedkings wete Kosa magnflora, Georgiana, Imperial, and
Ignea multifora. We insert alist of the Pelargonmmsexhitited
gecor lection from Mr. Cock, Cliswick, not for competition-Wonder
Cyrus, Durn, Mahel, Jubulec, Madeleine, Grand Monarch, Prine

 leuph, Emma, Luma, Lond Chancellor, Matilda, Favorite, Dido

 tal-Simile, Vulcan, Rienzi, Coronation, Erectum, Una; 3, Mr
Slowe, gr, to R. Baker, Esq, Bayfordbury Park (no names)
Nurser Arc, Erectum, Sylph, Frlash, Comte de Paris, Victory, Lillia,

 of Are, Florence; 3, Mr. Cockburn, gr, to the Earl of Mansfield,
Climax, Perfection, Alexandrina, Joan of Arc. Sembing Pexar-
coniums
 Mr. Whomes. There was a brilliant display of Cinerarias, all
some good seedlings, especially from Mr. Ivery, of Peckham.
collection of Echinocacti, \&c., few of which were in flower, came
from Mr. Bunney. A pretty whitish-mowed Clintonia, with Groad pnk edges to its blossoms, was sent by Messrs. Black and
G1en. There uas the charming Tree Holet from Mr. M Arthur,
Edgeware Road. Other objects will have their nerits indicated Edgeware Road. Other objects will have their meerits indicated
by the prize list. But we must notice two groups that seemed to us best to arcord with the objects of the society. These were
wo coilections of Agricultural grasses, from Mr. Joynes, of rotteridge, and Mr. Turner, gr. to Mrs. Holloway, near Reading lection of British Ferns, from, Mr. G. Turner, gr. to the Hon.
and Rev. R. Wilson.

## MISCELLANEOUS

Liendency of Branches to direce themselves towards the example) is reared upon moistened cotton, in aress fo lighted by a single window, or in a box with a single aperare, the roung stem, instead of rising perpendicularl from the soil, as if it were growing either in the open air or in complete darkness, inclines itself towards the light preserving at the same time its straightness throughout he the ceiling. On the contrary, whenever a growing plan which has been raised either in darkness or in the open air, and has taken a vertical direction, is placed in either
of the above conditions, the young stem first becomes bent and then inclines itself towards the light, in two distinct and successive phenomena: in the first, the lower part of the stem still retains its vertical direction, while the upper part is more or less horizontal ; in the second, the upper nclined, the whole of the stem becomes straightened, and finally points in the direction of the light. Although plant thus inclines itself towards the side from whence the light proceeds, it is not necessary, as MM. de Can dolle and Dutrochet appear to think, that the point of curvature should receive any portion of the rays of light This bend does not remain in the young stems after the cause which produced it has been removed: the intensity roun 1 , hower, far fom being the same when the that it may be laid down as a general rule that the tendency of the stems towards the light is much greater in proportion as the light is less intease, or the point from is situated has is low. The medium on the length of time in which the curve is produced; for both in water and in an atmosphere of hydrogen or nitrogen, the curve by acquiring thes, thougn doubtess at diferent periods, tions correspond. If instead of a case with one aperture the young plants were placed in a bag with two openings, equally curious would be observed. These two perture may be formed in the same side of the box, so that the rays of light which pass through them may form an angle be situated on wite sides. In the firstinstance, when the intensity of the two lights is equal, the stem bends in the direction of the resultant-that is to bisector of the angle formed by the two rays. But when he power of the two lights is unequal, either from the them being partially shaded, the stem no longer curves in the direction of the resultant, but towards the strongest light. By the aid of a young plant, therefore, it may be ascertained which of two lights is the most intense-0 which of two glasses is the most transparent; and, under ertain circumstances, a plant may serve as a correct photometer. In the second instance, when the light is intensity of the rays is equal, the plant, equally balanced between both, neither leans to one nor the other If, on the contrary, there is a difference in the power o the two lights, it inclines towards the most intense, unless
mhich case it no longer grows curved, although the light hould be more powerful on one side than on the other In order to induce these phenomena, it is not necessary that all the rays of which light is composed should be present; for in all my experiments, either with the heliostadt or with coloured and analysed glasses, if I pro ceeded by elimination, the resuit was, that the piant, when exposed to the red, orange, yellow, and green rays grew as if it were in complete darkness- that is to say, it never incined to either side; whereas, under the blue and violet rays, it always acquired a curved form. This com plete inaction under certain rays is not owing to the nature of the green or colouring matter. When two lights cross of turpentine-a -that is to say, it grows as if the light were not obscured cerned, the chemical rays of ligomenon of motion is conAs a plant situated between two luminous rays of unequal intensity always bends towards the most powerful, could easily ascertain whether the blue or violet ray exerted the greatest infuence; and it has always been in favou portion to the deficiency of light I could esily, by means of plants placed in different parts of a dark chamber ascertain whether the darkness were complete--J. Payer in the Proceedings of the Academy of Sciences at Paris. aper, we find that a specmen Oat, in the straw, was presented to the Editor of that journal which, from the root to the top of the ear, measured up wards of 7 feet. The soil upon which it was grown was heavy clay, on a retentive subsoil, which was thre years since broken up from grass, and afterwards tho roughly tile-drained. The average height of the ${ }_{x}$ crop from which it was taken is said to have been 6 feet.

In cooking vegetables, the choice of water is very important, owing to the different effects produced in their
texture by hard and soft water. Thus, green veretables and pulse lose both their wolour and consistence if boiled in soft water, whereas, if bolled in hard water, the colour is much better preserved, and the texture less altered. If, however, we wish water to act as a solvent, as, for instance, in making soap, and extracting the vegetable aroma, as well as the animal juices, the purest soft water will be by far the most suitable.-Miss Zornlin's World of Waters.

## GARDEN MEMORANDA.

 Winters, and extends over from six to seeven squad the three wast
 collection for the present seasort ; auct the plants are arranged in Some of them are already beautifuny in fiswer, ars the rot whlt varying in the Rhododendrons from purplish to white, and comprising the orange and flame tints of the Azaleas with the delicate
waxen-blossoms of Kalmia latifolia, the most prominent feature waxen-blossoms of Kaimia latifolia, the most prominent feature limits, of almost all sizes and heights, from a great, spreading
tree, to a low, round-headed shrub. Some tall specimens, with comparatively small heads, would make admirable substitutes
for Orange-tress in the Italian style of gardening; and others, of would be magnificent objects on lawns. We noticed R. hyahybrids between R. ponticum and catawbiense. The way in which the standards are produced is by grafting. The entire collecbe transplanted, if proper care is exercised in taking them up with large balls of earth to the roots. An immense standard specimen, which was brought to the same place two years back,
has been removed there acain this season, has been removed there again this season, pad is blooming mag
nificently, thereby showing that the finest plants are not injured
by shifting. The plants will afford a decided treat to the ad by shisting. The plants will atord Brown's Nursery, Stough.-Had there been no railroads, and
we had been compelled, as in days of yore, to walk 20 miles on foot to visit our neighbour's garden, a sight of the Tulip-bed at Grown nuder fauld more than compensate for all the labour strength of growth and luxuriance of foliage are proportionably great, and the blooms are fuller of colour this year than the
last. The plants are very hcalthy, and do not arpear to bare
suffered suffered, as has generally been the case mother places. Larmas
is excedmgiy good throughont the bed, altuoughin rarious
character; Salvator Rutsais also cxcellent. the colnur of this flower is perhaps not $\mathrm{t}_{\mathrm{t}}$ tate so dark as in some notherson the same
class, but the symmetry of the form. the purity if its ba-e, anc the fine and decided claracter of its breaking, rezder if anc, 12 ses
tionably one of the finest Byblemens in cultivation. Walace,
anotner Bythemen, broken by the late Mr. Cuates large and noble flower, but not oy any meancer, पat to andato Bizarre, and although no doubt raised from Polyphemus, is dif ferent from that flower, or from Albion, to which latter it has
been compared; for, independently of being only and coll stantly feathered, the shape is not exactiy like either of those season as the present, is a manifest disadvantage. Mr. Bruwn has, however, broken many flowers similar to Polyphemus, some Anchor, but it is not perhaps quite so close in shape; another
which for distinction is called Brown's Polyphemus, has

 are all remarkably good; whilst Claudiana, of which we had generally heavy, and not by any means so good as last season. astoniched to find that it had nerer befn prwh by Mr. Browne
However, such will not be the case in futare. Of Tricolors such as they are, tbere were many fine specimens, particnlarly
of Lawrence's Black Duke, and Wilmer's Duke of York. As th blooms are now in full perfection, we should advise those of our
readers who intend to pay this Nursery a visit (and it will well compensate them), to lose no time, inasmach as one hot day
would, in such a season as the present, in all probability cause

THE NATURALIST'S CORNER.-No. NII
44. Geography of Plants.-It is very remarkable that the Flora of Sicily produces scarcely any, if any, peculian Indigenous species, the plants being common, almost without exception, to Italy or Africa, or some of the countries surrounding the Mediterranean, whereas there are several indigenous plants in Corsica and some other Mediterranean islands. Mr. Lyell supposes the plants of Sicily to have migrated from pre-existing lands; and, as the remains of living species of shell-fish and zoophyte are found embedded in the strata at the summits of lofty mountains in the island, he brings us to this curious result, that the families of plants and animals of the Val di Noto, and some other mountainous regions of Sicily, are of higher antiquity than the country itself; that is, was 45. Palestine.-" A land flowing with milk and honey," is a proverbial expression, characterising a land exuberantly productive, not only in the necessaries, but the luxuries of for it includes more than it expresses; yet even as Palestine, the rich pastures of which secure an ample supply of very excellent milk, while for the superior quality of its homey it seems at all times to have enjoyed a high reputation. Milk and honey in various preparations occupy a prominent place in the dietary system of the 46. The Observation of Nature..-When Anaxagorss the peculiar property of whose mind has been called "a certain high wrought and fanciful sublimity," was ask Why he came into the world, he answered, "To behold the sun, the moon, and the marrels of nature."
47. Habits of the Lion.- Pope makes a curious mistake about lions in his note to a passage respecting them in the Easay on Man. "The manner," says he, "of Lions hunting their prey in the deserts of Africe is this: at their first going out in the night-time, they set up a loud
roar, and then listen to the noise made by the beasts in roar, and then listen to the noise made by the beasts in their flight, pursuing them by the ear, and not by the
nostril." On the contrary, the lion hunts but little, is sluggish, and instead of pursuing by the ear, lurks, and springs on his prey by surprise.
48. Uses of the Mesembryanthema.-The common Ice-plant of the gardens, Mesembryanthemum crystallinum, so called because its cuticle is elerated in the form
of multitudes of crystalline points, is burnt in the Canaries for the sake of its ashes, which the Spaniards import in large quantities for their glass-works, under the name of Barilla Moradera. Another species, the M. nodiforum,
is used in Egypt for the same purpose, and also in the manufacture of morocco leather. This and the other species are chiefly found in sandy, desert, arid places,
where they flourish in the absence of other vegetation, where they flourish in the absence of other vegetation, and afford a grateful food to cattle, which browse upon them. M. emarcidum, according to Burnett, is fermented
by the Hottentots, when it becomes narcotic, and is chewed by those people like Tobacco.

## atenip和.

The Transactions of the Gardeners' and Stewards' Pro vident and Mutual Inslruction Society. Dublin. The objects of the Society which issues the above little periodical are the creation of a Benefit Fund, and the diffusion of knowledge in farming and gardening among its members. It formerly published the "Irish Farmers' and Gardeners' Register," which is now discontinned, and the present work substituted for it.
Embracing two desigus, which are both of a praiseworthy character, we cannot but wish it every success, and congratulate the members upon having a printed medium through which the more valuable of their consmunications may be handed about, and rendered more useful. In each of the three numbers for March, April, and May, which have been sent to us, there is an original paper, a few paragraphs containing good practical inform for the succeeding month. They appear to be sent out monthly

## I. contains an agricultural article on sowing grain-

 crops; and the writer concludes with the following advice about selecting the seed of all kinds of grain :1st-Never retain the same kind of seed too long upon the land; at the end of three years it will generally always produces a change for the better in the crops, loams and peat soils will sooner require the change.
" 2 d -In selecting seed it should be ascertained, if possible, where and on what kind of soil it grew ; and be sown. Never select seed from a rich soil to sow it on be sown. Nut prefer that from a poor soil to sow it on a rich
"3d-Always select seed well cleaned and pure, being strictly of the same kind; seed of different kinds will vegestrictly of the same kind; seed of different kinds will vege-
tate at different times, and ripen at different seasons, which occasions serious loss, and further deterioration of which oc

In No. II., for April, there is an excellent communication on the treatment of Mangold Wurzel. An article on the culture of the Potato occupies the principal part of No. III. We give an extract respecting the diseases to which the plant is subject:-
The disorders to which the Potato is liable are, Dry Rot, Curl, and Scab. The first of these, which is the most dangerous, makes its ravages among our old mellow
varieties, corroding them as a canker, commencing where some bruise, scab, or wound has effected an opening on the rind or skin of the tubers, and by admitting atmospheric air to mix with the saccharine and other juices of
the Potato, causes gangrene to set in, and in a few months infect the whole tuber, and it becomes a brown putrid mass of dry rot. Old varieties of the Potato are not so liable to it, when grown on bog moor or mountain land. The Potato abounds in a starchy substance, and when cut or bruised there issues a portion of the liquid, and forms an incrustation on the wounded part, impenetrable to the atmosphere; but on the contrary, strong lands which retain ammoniacal salts, and that are remarkable for producing gluten, grow Potatoes destitute of the necessary quantity bruises remain porous and open to the influence of air, and to the baneful consequences of dry-rot.

The Curl is a disease that a few harvest kinds are subject to, such are Bangor, Red Nose Kidney, and most of the kidney varieties. It is caused by allowing them to growing state, before the stalks wither, and exposed to the influence of the sun until they turn green in the colour, the propensity to curl will be remedied.
fertility, that are worn all Potatoes grown on lands void of tion of the plough, and I would not advise a Potato crop in such soile. The farmer should endeavour to have his Potatoes for seed from moor or mountain soils, and if such cannot be procured, from mellow fresh ones; always such cannot be procured, from mell
avoiding seed from worn-out land."

CALENDAR OF OPERATIONS for the ensuing week. a fow of the later flower-garden-plands, and tise season hitherto being the most favourable we have had for many years, we shall
have more leisure for the next three months to turn our attention
to the higlier branches of gardening; and this is so far fortunate,
becuuse, whatever kinds of plants one cultivates, unless the greatest attertion is paid to them while they are making thenr
growth, so as to bring them into fine proportionate specimens growth, so as to bring them into fine proportionate specimens,
they will not be worth looking at, be they ever so rare. The window.gardening round London, now-a-days, can boast of
better specimens of skill and attention than the general run of our best conservatories could do as late as fourteen years back, species was considered the fortunate king of spades. While this so much, that their naked stems looked more like fiddle-sticks than anything else. The vexy opposite of this sy stem now pre-
vails; no matter how rare a plant is, unless it yields so far to valls; no matter how rare a plant is, unless it yicelds so far to once discarded for ever; and in this consists the grand secret of
keeping up a selection of plants. At no former period were the ad vantages of growing plants into fine specimens more apparent every plant was a perfect specimen of its kind. The manner,
aiso, in which the exhbitors placed their plants on the table was a lesson of itself worth going a hundred miles to see, and to
learn. Instead of crowding them after the manner of the old school, every plant had a free scope all round, so that you conld
see the different modes of pruning, training, and staking, which the growers found most applicakle to each kind; and let your experience be what it might, you could learn many useful hints
from this arrangement. Any one, after witnessing this arrangement, who will allow his plants to be huddled up together at home has prid too dear for his admission-ticket. I.-KITCHEN-GARDEN AND ORCHARD.
Pinary,-About the beginning of June the succession and younger plants will want potting, and of room in the new pots, as, after Midsummer, when they are established in the new soil, they will grow faster than at any other period of the season.
Vinery.-These houses are now out of all sort of danger that I cantring - These houses are now out of all sort of danger that and if you have any doubts on the subject, let the Vines have the benefit of them. See also that the bunches of the succession-crops
are well thinned, and keep up a good growing atmosphere till the fruit begins to ripen. guard the crop. The trees must put up with a little ill-treatment Fios. - These must never suffer for want of water. Pinch off the tops of the yonng shoots always at the third or fourth joint, unless you want wood to fill up your space.
Melons and Cucumbers.-I saw the other day an original and very simple method of smoking these plants; or indeed, any kind of plants in frames. It is this:-Dissolve a table-spoonful
of saltpetre in a pint of water; take pieces of the coarsest brown paper, about six inches wide, and ten or twelve inches long; steep them in the liquid till they are all wet; dry them, and they
are fit for use want to smoke a frame, roll one or two of the pieces like a cigar,
leaving a hollow in the middle from half-an-inch to an inch in diameter, and fill this up with tobacco; then twist one end, and 8 tick it in the soil, and light the other end, and the thing will
smoke away slowly for an hour or more, and kill all the flies. An inneeper rear this place hit upon the plan this season, and he ends of cigars, and what is left in the pipes, \&c
The last three weeks have been the finest weather for gardening that we ever experienced in May. Insects have been as yet less
general than usual, and all the crops of vegetables and fruits are general than usual, and ail the crops of vegeta berry bushes infected with the caterpillar, and a little dose of the A Pirages. This is the very best time in the whole year apply salts and saline manures to this crop. The drainage
common sewers, of stables and cow-houses, laundries, or ev pond-water made thick with soot, will all be now appropriated
by these plants Broccor, for autumn may yet be sown. Grange's Early White is the best; but if you are fond of novelties, you cant get enough for aught I know,
Cavilimpower.-I should not like to sow this later than the beginning of this week for late arick out next month, so that the crop must stand on the seed-bed till fit to plantout permanently. the bist time to sow this very wholesome sallad for autumn use; and as you ought to sow some every three weeks till the middle them also very thin. Crops.-All summer crops, of whatever
Sowing SUMMER nature or kind, should be sown very thin indeed if any of the
plants are to be afterwards transplanted. To be sure, you can thin out if they happen to be too thick; but if the weather is dry
at the time, you may do a good deal of harm, and, on the whole, you had better sow thin in the first instance; - and I have allowed you a new heading in the Calendar to remind you more particu-
larly on this point. Lettuces, and the other succession crops you will, of course, not forget to sow, if you have only a penny
almanac to say when
now- $a$-days. the thinning-out and regulating the summer-growth of the Gooseberry, Currant, and Raspberry bushes. Though the
kitchen-garden were fuil of weeds, the summer-pruning of these plants was never omitted in my younger days, and always about that time. In early situations, Peaches and Apricot may
patriall thined, where a heavy crop is set. Cherries and Plums on the walls will also want thinning by-and-by. All the late
Pears, either on walls or standards, are much improved by early thinning. It is hardly necessary to rernind any one to keep down insects of all sorts on fruit-trees.
I1.-FLOWER-GARDEN AND SHRUBBERY.
Srove, -Very many of the free-growing plants will now want another shift into larger pots, and as they must occupy morc greentiouse, or some other place. Now and in the middle of winter are the advantages of an intermediate house between a
stove and greenhouse most apparent; this is the most useful house that can be about an establishment. Recoliect that no plant is worth looking at until it is brought to a good specimen.
GreENGouss.-If you can by any possibility have access to spare frames or pits, all the Heatlis, and most of the other hardier and more delicate greenhouse plants, will grow in them far
better than in the best-constructed greenhouse; and in that case better than in the best-constructed greenhouse; and in your greenhouse into an intermediate stove, or into
summer. Pits And Framps.- When the finer plants are brought into these you may keep them a little closer, and probably many of the Alants will want a little shading in the middle of the day at first good sprinkling with the syringe; not, however, if it has been a
dull cloudy day. dull cloudy day.
FLOWER-GARDEN, - This has been such a fine time for turning for mowing and rolling, and for the growth of weeds, that people are so much engaged in all this as to leave them little time to
read Calendars.-D. Beaton, Shrublund Park Gardens.

REPORT ON COVENT-GARDEN MARKET,
For the Week ending May 26, 1843.
The market this week is weil stocked with garden produce of a better quality. Carrots and Turnips, of the present year, are quantity of Cauliflowers, offered at $6 d_{*}$ each. Grapes, Pines, Melons, and Cherries, are exceedingly good, particularly selling as low as $2 s$. a pound; but they are evidently very stale. Ordinary ones produce $4 s$. a pound. Gooseberries are much larger, and there are some Currants in a few of
the stalls. Foreign Grapes and Oranges are many of them now rotting. Peaches are of a moderate size, though poorly coloured. The flowering plants in pots, that were fresh to us, were Epacris heteronema, Erica mundula, E. vestita alba, E. cerinthoides, a few wretched Baisams, Lupinus polyphyllus (both the blue and Mignonette, the red-blossomed Hawthorn, Boronia denticulata, Eutaxia myrtifolia, and the Honeysuckle. Of cut specimens the principal were, kinds of herbaceous Pronies.

Notices to Correspondents.
SALT.-Dianthus.- It was a sad error to listen to such foolish advice as that of salting your fower-beds. inee things may to wash out the whl proval the attempt, and may not succeed; 2 . To remove all the soil; salt and form nitrate of sodi. We fear, however, the latter will be too costly a remedy. The best way will be to try a bushel of the soil first, and see what happens. The acid may
be diluted largely with water, and the mass left for a fortujght,
when it should be examined, to see if the soil is hetter. This may be ascertained by potting in it some spare Carnations, of no value.
Manures.-Guano. - Use it at the rate of $\frac{1}{\frac{1}{l}} \mathrm{lb}$, to a gallon of
water; it varies in strength. If you do not get effect enough repeat the dose in strength. If you do not get errect enough weeds and peat, and you will find it speedily fit them for manure. --Graft.-If you will take the trouble to refer back to our meet with all yon desire on the subject. clearing the water in his pond. It may possibly prove effectual; We cannot advise him as to any other plan.
GArDRN-Frame.- Will the correspondent at Dewsbury, who, at page 211 , described a garden-frame, favour us with so
further information as to the manner of its construction? Buttom-Heat.-J. MA, H.-You will get the information you want in a short time, in a leading article, probably next week. In the meanwhile we see no objection to your boiler; fut why return pipes, do as well? don's patcht pyailes. The former are manufactured at stourbrisge ; the latter at lirmingham. Of this any dealce those in your neighbourhood do not choose either to supply them themselves, nor to give themselyes the trouble of obtaining information respecting them from their L.ondon correspong the London nurserymen. li RUiT-TREES.-J. B. H.-We hear of no complaints in this Providence. Winl Mr, Hamilton, who last year made some Pink-Applrs,-Will Mr, Hamilton, who last year made sod as
statements about, his success in growing Pines, be so good

NEWS
OF THE
WFEK

The long-expected secession from the Church of Scotand took place on Thursday, the 18 th inst. The event, though remarkable in many of its details, presented few
of the usual characters of a popular movement, and the expression of feeling on the occasion appears for the most part to have been confined to the galleries of the House of Assembly. The secession took place immediately after the General Assembly had been constituted, and before ven the roll of members had been called over. The Moderator read the protest of the Non-Intrusion party, and walked out of the House, followed by 120 Ministers and 73 Elders; among whom were Dr. Chalmers, Dr, Candlish, and other well-known names. The seceding party then constituted a new assembly, by the name of the "Assembly of the Free Presbyterian Church of Scotland," of which Dre Chalmers was elected Moderator. These events have of course excited general attention, and it will be seen by our Parliamentary Report that the Government are prepared to act by their recorded declarations, and will be guided by the proceedings of the General Aع sembly, as the recognised authority of the Scottish church, in any remedial measures they may propose for the relief of its present difficulties. The adjourned debate on the Canada Corn-bill in the House of Commons was concluded on Munday, when the motion for goivg into Committee was carried by a majority of 188. Mr. Christie's motion for leave to bring in a bill to abolish the oaths and subscriptions now required in the Universities of Oxford and Cambridge, and for admitting Dissenters to those Universities, was negatived on Thursday by a majority of $\%$. In the Lords on Tuesday, Lord Powis brought forward his bill to repeal so much of the Ecclesiastical Benefices Act as provides for the union of the sees of St . Asaph and Bangor. After an animated debate, in which several prelates took part, the bill was withdrawn for the present session.
Fiom France we learn that the law adopting the amend-
ment for equalising the duty on colonial and beet-root majority.-From Spain we have the important intelligence of the resignation of the new Ministry. They asked not only for the dismissal of all the military friends of the Regent, but the immediate removal of the garrison of Madrid, to be replaced by such troops as Señor Lopez should select. The Regent refused to sign the dismissal of the Generals, and an immediate dissolution of the Cabinet was the result. Señor Becerra, President of the Senate, has been cormissioned to form a new Ministry and it is openly asserted that the demands of Señor Lopez were the precursors of a new Christino movement, which must have led to the overthrow of the Regent.-From the Levant we Iearn that the Servian Government has at length made its unconditional submission to the Pofte This unexpected change has been produced by the cer tainty that they would receive no support from France England, or Austria; the Prince has therefore consented to resign, and a new election will take place without delay

France--The principal news in the Paris papers is that the law adopting M. Passy's amendment, equalising the sugar duties in five years, passed by 286 votes against Ministerial bill by recognising the altered completely the sugar manufacture, and by subjecting colonial and home grow n sugar to the same duty"; is considered by the papers as a victory over Ministers; but the fact that the question involved no political principle is successfully opposed by fore alluded to the order of the Minister of Public We bedepriving the Protestants of the use of certain churches of Alsace, in which Catholic worship is also performed of which the curate of Bitschuelin committed some violent acts. Since then however the Minister has recalled the Strasburg, in a circular to his clergy, has enjoined them to pursue the ways of conciliation and peace. Much notice is taken by all the papers of the Repeal agitation in Ireland, and most of them view with satisfaction the prospect of the peace of the United Kingdom being dis
turbed. The Gasette de France, the organ of that porm
tion of the Legitimists and of the clergy who have placed their hopes on a popular or republican movement, is loud in its praises of the Irish Bishop of Ardagh, and is equally burg. The Globe announces on the authority of account from Goree, the arrest by a French cruizer belonging to the station on the western coast of Africa of an English essel carrying slaves to the West Indies. This capture Was made by the Vigie brig of war. The letcers state that the vessel was English but was running for the Havannah Grenelle has thrown up small black fighes which have no apparent eyes. This phenomenon was observed last year at the same period. The Academy of Sciences had prdered a report to be made on this extraordinary fact Paris on Monday, communicating the important intel ligence that the Regent having refused to sign the dis missal of Generals Linage and Zurbano, the Lope Ministry tendered their resignation, which was accepted Senor Gomez Becerra, President of the Senate, imme diately charged himself with the formation of a new
Cabinet, in which the Ministry of Finance would be conCabinet, in which the Ministry of Finance would be con-
fided to M. Mendizabal. The Congress voted on the 19th anded M. Mendizabal. The Congress voted on the Amnesty as well as thanks to the retiring Ministry. The Congress declared on the same day unanimously, with the exception of three voices, that the Ministers who had fidence. Previous to this event, the Cabinet had taken
for various measures showing its hostility to the policy of the previous Ministry. At Barcelona, party feeling had run so high that the municipality on the 15 th inst. published an adress to the inhabitants, in which, after congratulating them on the part they had in the overthrow of the Rodil Administration and on the accession of their independent representative, Don Joaquin Maria Lopez, to the Presidency of the Council, they invited them to attend at grand Te Deum which was to be chanted the next day servicathedral in commenooration of the event. This arrio was accoraingly performed on the 10tu. The outbreak ensued.-The barque Majestic, arrived at Liverpool from Africa, reports that on the 21st. March the panish brig-of-war Nerrion formally took possession of colours were hoisted and alue Queen The British took no part in the proceedings, but some of the natives showed a disposition to look upon the affair in a hostile light, although no disturbance took place.
Portugal.-We have Lisbon news to the 15 th inst. The Deputies had passed the bill for establishing a system general education throughout the kingdom. It was ery doubtful whetber the Road-hill would pass into a aw this session ; and a strong opposition was expected to he reduction of the tariff as respects the island of Madeira. Prayers had been ordered to be offered up for the sate delivery of Queen Donna Maria, who has passed the sixth month of pregnancy. If the tariff negotistions were rsumed by England, there was considerable probability able compromise of the disputed woollen duties. There was little likelihood of the Portuguese Government resuming these negotiations of their own motion. Great agitation prevailed at Oporto and throughout the wine districts, ith reference to this subjec
Germany.-The Diet of the Prussian Rhenish proLetters was opened at Düsseldorf on the 14th inst. mined to jo are described as being in a state far from prosperous and as petitioning the Government for more protection, while Prussia, perceiving that the union is for the sole advantage of Saxony, is beginning to grow weary of it. The Leipsic food is said to be as dear in Saxony as in England. The Frankfort papers state that the house of Rothschild has given 100,000 f. for the foundation of a hogpital at Jerusalem, and is building, at ite owne expense, a synagogue at Englishman, named Yardley, reaiding at Manheim. consists of a typo-electro-magnetic telegraph: a machine by which news may be transmitted with the greatest rapidity from one place to another, and which at the arme time fixes the impression on paper in the same manner as by a printing press and types.
Italy.-The German papers publish a letter from movee of the 6th inst., mentioning that an insurrectionary delegate and authorities had been obliged to seek refuge in the citadel. Nothing is known of the motives of the movement, or the measures adopted by the Papal Government to repress it.
Greece.-Letters from Athens state that King Otho has determined to apply the sliding-scale system, not ouly as regards a duty on corn grown out of Greece, but also o the reduction of public salaries. The King has accordamount to nearly 50 per cent. on foreign wheat, on which the inhabitants of the Archipelago almost entirely depend for support. A commission is now engaged in drawing apstem, tarin of duties. system, especially as respects English artieles. A letter written by a Jew of Tricala, the chief town of the Sandjac in Thessaly, gives an account of an inundation by whici this statement many of the largest trees were broken down by the weight of the people who climbed up to their tops to escape from the flood. This account however requires confirmation.

Russia. - The news of the Sultan haviog acceded to the Emperor's demands reached St. Petersburgh on the 5th and gave much satisfaction M. de Boutenien has been intrusted by the Eluperor with an extrarn to Rome, for the purpose of settling the long-pending and Catholic Bishops in the Rysion the pointment of Roma Couto tol bla Kjachta, the principal town on the Chinese frontiers, is to pe put into operation immediately.
Turkey.-Intelligence has been received from Belgrade shat the Servian Government has at length submitted to the Pora He Price consents to resign, and anothe The Ministers in all probability take place at Belgrade. The Minstas immediately to Constantinople. This unexpected sub-
mission has been caused by the certainty which the Sermission has been caused by the certainty which the Ser vian Government had obtained that they had no coun
tenance or support to look for from France or Encland Meerza Taka the Persian pienipotentiary artived Erzeroum on the 18th April, escorted by upwards of 100 armed Persians with a few field-pieces. Two Turkish regiments marched out of the town to meet the envoy ninistered of this month the Bishop of Gibraltar ad - 21 the rite of confirmation in the Turkish capita Sunday the Bishons of both sexes; and on the previous Embasay. A Smyrna letter mentions the breaking out of a fire in the centre of the Bazaar at Magnesia on the 20th ult., which could not be extinguished until 2,000 shops had been destroyed. Fortunately the greatest part of the merchandize they contained was saved, but the loss estimated at an enormous sum.
West Indies.-The Dee steamer has brought a full supply of the West India journals, but although containing details of news from the several localities there is leading point in these papers is the statent of the ciency of the Royal mal packet line and the trongly made for placing the old packet on the station Respecting the condition of the crops little is reported. In Barbadoes, Demerara, Trinidad, and Jamaica, the manufacture of sugar had commenced, and was progress ing according to these accounts favourably. Agriculural operations had not of late been successful from the eneral want of rain, but as within the three days prior to wishes of the mails the weather had alered to the themselves. Fip harp, they whedrad the one in the for the ate ilands were still damage is hot stated: Several of the
 the lake had been fit al nigua, Guadaloupe, ac. A te crup plas calculated that about one-third of in inhabitant of Guadaloupe, dated March 7, giving an ccount of a phenomenon which appe connected with the catastrophe of Feb . 8, has been pubMarie Galante and Guadaloupe, and in the mid-channel, a column of water, black in colour and of mid-channel, a arose from the sea with great force. All around it to considerable distance a quantity of vapour covered the sea. This appearance lasted about half an hour. M. Coloron add that being well acquainted with waterwas too vertical and did not touch the clonds. No doubt Was entertained by him of its being the effect of a submarine volcano.

He also supported the bill before the House.-The Bill, which was supported by Earl Fitzwilisham, Lord LyTtles Mon, and the Bishop of Norw ich- - On the suggestion of the
Bishop of Exrrer, Earl Powns withdrew his bill for the present
session. - The Duke of Werinaton then informed Lord Powis that in case he brought forward this bill again, it would be
necessary for him to have the Royal assent to its introduction,
as the a Frict authorizing the union of these sees. Bradalbame, The Earl of Aberdbpn, in reply to the Marquis of hoped to be able to introduce of the
 trates hat Mr. O'Connell, Lord Frrench, and other Irish magis The Duke been suspended for taking part in a Repeal agitation? Monday, - HOUSE OF CUMMONS,

Sir R. Peec, said the immediate question before the House was
not the merits of the Government measure, which might be fully
discussed hereafter, but whether or not the House should adopt the unpedecerdented, course of addressing the Couse should adopt to refuse the
Royal assent to an act of a colonial legislature. The Canadian Le riclature, ascmblecd undirnnulame pecrinircucumstanct s, hind act; and he hoped that the House of Commons would not adopt
the nnusual course of asking for the interposition of a veto.
Mr. Baring lad said that Ministers had not contemplated this measure when they altered the Corn-law. But at that time the
Government had given the subject an attentive considerationin proof of which he read extracts from Lord Stanley's speeches
doring last session. The Canadians liad no right, in passing
their act, to anticipate that a formidable opposition Cheir act, to anticipate that a formidable opposition would be
raiser by the members of the late Government against it. He
did not deny the unfettered power of the House of Commons to refuse assent to the proposed resolutions, and thus to defeat the Whole plan. But he asked them to consider such a step care-
fully. The speeches which had been made in the course of the
debate had clearly shown that Ministers were not abandoning the principle of a sliding-scale, nor trifling with the agricultural
interest; the measule was no; dimmution of the protection now
cujoved. No doubt. American corn brought cujoyed. No doubt, American corn brought throagh Canada
wonnd be subject to a fixed duty; but there was no alternative,
for there was no system of averages in Canada by which to levy it in a different manner. It could not be denied that this
measure would be a boon to Canada; the faith and honour of
the executive Government were pledged to do what they could restorry it. peace to the province, could not be estimitedi at less
than $3,500,0002$; the hazardous experiment of uniting the provinces had been tried; and under the irritating circumstances
of our then intercourse with the United States it was of the
utmost importance to conciliate the Canadians, without whose gond- 1.1 and affect on the culony would brise the werakeit
point in cur whole empise, These ccnsideratous had movcu
the Government in proposing this measure, which was ardently the Government in proposing this measure, which was ardently
desired by the Canadians, and was not calculated to affect home
apriculture, either directly by large importations, or by smuggling, which, under the circumstances, could not reasonally be
supposed to be carried on to any extent whatever. Let them supposed to be carried on to any extent whatever. Let them,
then, recollect the interests involved; if the House consideles Assembly, why permit them to legislate? The spirit which the extinction of the Jamaica Legislature; he could not deny
their power to reject the measure, but let them beware of the consequences.
Lord J. Ruserin rebuked Sir R. Peel for calling. Canada
the weakest point of the empire, and for asserting that the adoption of the ame Crown. It might be a moxtification to the Minister at it was a perfectly constitutional resolution to adopt, sense would prefer a fixed duty to a sliding scale," and asked
why was not New Brunswick included ? and why Canada was the resolutions to be to extend monopoly and restriction through the resolutions to be to extend monopoly and restriction through from the Government but deceptive statements upont the question another that he could not wonder at the want of cmfience in introdreing his grand financial scheme, that his measure
would be the means of bringing in a considerable quantity of foreign cattle, and by these means of reducing the price of meat tion of foreign cattle-that on that ground there was no cause
for apprehension-that no one need think about it. Such were the contradictions made in the course of a single speech upon a
singie measure. In the debate on the budgct-in talking about
the Income-tax, the Vice. President of the Board of Trade sald We have so lowered the price of living, that with moderate prudence any man may easily pay his Income-tax out, of that
reduction, such has been the effect of our measure! " That answered for the day. Presently there was a debate on the Corn
Laws, and in recommending the Honse to vote against the repeal of those laws, he then told a very different story. Then
it was that-"the reduction in the price of the varjous commodities had been caused by the clistress of the manufacturers, who had ceased to produce, and who therefore had ceasca to con-
sume." When we heard such shifting what wonder was it tiat
men's apprehensions should be excited. Could anythung, he men's apprehensions should be excited. Could andere completely show that these Ministers-that these Conservative Ministers-were acting in the spirit of notre inno-
vation - that they were changing for changing's
alterations without the sightest prospect of benefit to the people of England, to the people of Canada, or to any mortal soul? 'We
are the men for change,' they cried, 'and we care not what its consequences may be, - The House then divided, when there
were ;-For going into committee, 344 ; for the amendment, 156 ;
 he found made by Lord Stanley in the Canada
By the mintroduction of the words " produce of," the operation of the proposed law was confined to corn grown in Canada. He
had voted for the resolutions under the impression that corn imported into Canada under the transit duty would be entitled to
the privileges of colonial corn.- Lord STANL.EY expressed his regret at having taken the benefit of the hon. Member' vote ins
consequence of a misunderstanding. He had stated distinctiy that he intended to make no change with respect to American
wheat.-In reply to Mr. Labouchere, Mr. Gladstone said he intended to move for the revival of the committee of 1831, on Fund. - Mr. Hawes called the attention of the House to its
former proceedings in reference to the Danish claims. He recapitulated the particulars of the case, and concluded with prosideration technical obstacle to the reception of the motion
posed a tuch a proposed address, involveng a grant of public money mately, after a conversation on the subject of precedent, the
motion was withdrawn, with notice for a future day of one more in conformity with the forms of the House.
Mr. T. Duncombe then submitted the case of the Rev. William Browne, latc chapiain to the Knutsford House of Correction, who atter giving evidence against the governor of the prison before
the inspector of prisons, in the mpuiry instituted under the
authority of the Secretary of State for the Home Department authority of the Secretary of State for the Home Jepartment.
Whist the chaplain had been dismissed, the governor, whose with a declaration that he had not furfeited the confidence of the magistrates; and as the ailegations against the governor
mrolver not only himself, but the discipline and mamagement of Kuatsford House of Correction, and also the conduct of the who had manifulyy done his duty, he moved for a select committee Ecerton, as one of the Cheshire magtstrates implicated, denied that the governor of the prison possessed his confoence, and expren admitting that they had erred in judgment, misled by
evelings of attachment to an old and faithful servant, still a body of 34 gentlemen residing in and well acquainted with the locality,
must be better judges of all the circumstances than the House.
The chaplain had attributed his dismissal to political motives,
which was a libel who concured in it were liberal in their political principles, and he had been treated- leniently, considering his conduct He
opposed the motion.-Sir G. STRICRLAND and Mr. Curters sup-
ported the motion.-Sir J. GRAHAM, though objecting on principle to consituting the House a tribunal for judging the conduc mittee of inquiry, if he thought it would be the means of bringing
out any concealed facts. He xegretted that the magistrates had not attended to his reccmmendations, but was bound to admit
that the dismissal of the chaplain had been determined on b, a

## open to question within the House. As to the motion, he hoped it would be withdrawn.- Sir T. Wilde considered that a mos

 it would be withdrawn,- Sir made out for inquary but after whatoverwhelming case had been
had fallen from Sir J. Graban, he would join in the recommendation to withdraw the motion,--some comments were made
by other members, and Mr. T. Duncombe withdrew his motion. Wednesday, - After the presentation of a great number of
petitions against the education clauses of the Factories Bill, Mr. ment to subn it a chpplemet the cot,minte to fanliament to pro-
 expense on the public. Should circumstances, however, require

 of procuring the reimbursement of what trau been paud, and o
preventung the possibility of the same liability being incurred in preture by the guaranteeing Powers. To an application since
made to this country to contract or guarantee a fresh loan, a refusal had been giveli. Dr. Nichont, in reply to Mr. R. Yorne, stated that there was sion.-Sir G. Grex moved the second realding of the Charitable
Trusts' Bill. - The ATtorney-GENERAL said that it was the wish of the Government to meet all the evils that belonged to the
present system, and, if possible, correct them. It was mos desirable that some scheme should be adopted by which charities
might be visited and improved. He haw hupd that tac (x,1)crin-
 would not 1 res- the presint measure. - Sir J. Grabam saic. thic
subyect was One of grint magnitude and importance, ana llad cheazed the sch ch14 alter thi in of the Government. He could not the present session. He hoped the measure would be sufticiently
matured to be laid upon the table during the present session, but e could by no means pledge himself that the Government would o have it distinctly understood, that under no circumstances
could he consent to the second reading of this bill,-After some further conversation, the motion for the second reading was
wrthdrawn.-The Roman Catholic Oaths' Bill, atter a short disand Rescue Bill. Russell, that on Thursday, the 8th June, he would move that the House resolveitself into a committee of the whole fouse, for the foreign grain.- Sir R, PEEL gave notice to move the adjournment
of the House for the Whitsun holidays, from its rising on Friday uext till the following Thursday.
In reply to questinns put by Sir R. Inglia, Sir R. Pser stated that of all connexion between the officers of the East India Company and the ceremonies of the Heathen and Mahommedan worships; With the management of the pagodas and mosque lands. These instructions had been, as far as practicable, acted upon, The
attention of the Governor-General was also directed to the dis-
continuance of the annual pension of 60,000 rupees to the Temple of Juggernaut.
Lord STANLEy answered several questions respecting the
Canada Corn Bill. He maintained that Carada could grow a surplus supply of grain, and affirmed that the decision of the nimous, in proof of which he said he would lay on the table of
the House extracts from tlise journals of th. H1, of A
 Asaph and Bangor, declared his intention of upholding the deciearly consideration to the means of increasing the efficiency of the establishment in North Wales.
Mr. Craristic moved for leave to bring in a Bill to abolish cer-
tain oaths and subscriptions now required in the Universities of

 proposal when asked as a boon, he was doubly determined to
resist now that it was put forward as a claim. Relngion now formed the basis of education in Cambridge, as it always had done
m Oxford. The dissenters, instead of exhibating a spirit of conciliation towards the Church, opposed it in every shape with the
utmost animosity and virulence; and this therefore was a very unfortnnate time for them to ask for concessions from the by the establishment of the University of London,-Sir H. W.
BArron supported, and Mr. Shaw epponed the motion.-

## 

 Dissenters were admitted for the mere purpose of education.He opposed the Bull because the introduction of it would renew animosities and jealousies, and because it would
degrees in oxford and Cambridge, the practice should be abolished; and that as there was a different rule at Oxford, at

Cambridge, and at the Dublin University, and as all could not be
riglit, they should be made to conform. He cordially supported riglit, they should be made to conform. He cordially supported
the motion.-Mr. Wrse, Mr. WynN, Mr. Redinaton, Mr. Rom-
Buck, Lord Sandor, and Mr R Yoris, BUCE, Lord SaNDON, and Mr. R. YORE, took part in the dis105; against it, 175 ; majority against the motion, 70 .
Sir $V$. Brake moved for leave to bring in ra B Binl to apportion
and regulate the overwhelmung labour and business of Parliament in a mammer calculated to allay discontent, and to preserve
 a seconder, fell to the ground.-Mr. G. W. Woon obtained lave
to bring in a bill to exempt scientific and literary institutions
from the payment of parochial sud nunuicipal rates and taxes from the payment of parochial and nunicipal rates and taxes
upon such parts of their buildings as are used exclusivcly for
scientific and literary purposes. On the motion of Sir R. PeEn,
the Chaplain of the Huse was ordered to preach before the
 F. Kely was duly elected; that there had been bribery, but that
it was int known to him or his agents.- The House went into
committee on the subject of the resolutions on the importation o Canadian wheat and flour. On the first resolation, embodying
the fact of the passing of the Canadian Act, Lerd J. Russmbumped to omit the words which made the legislation of this country de-
jendcnt rulle treislation of tie Camadian Assembly. After some
discush1 m1 the amencment was rejected on a division by 203 to at. Lord Worscev then propesed another amendment decla-
ratory of the inexpediency of any change in the duties on corn.
On a divisinn, there appeared, For Lord Worsley's amendment, On a divisinn, there appeared, For Lord Worsley's amendment,
I02, against it, 203. Miajority, 101 . Another division was taken
on the resnlutions, which were carried by 218 to 137 .-Sir James Grabam, in reply to Mr. M. J. O'ConNELL, said he had received
an offical communication from the Lord Chancellor of Ireland,
int mating that Mr. O'Connell and Lord Ffrench had been remoted int mating that Mr. O Connell and cord accourt of taking part in
from the commission of the peace on accer
meetings for the Repeal of the Union; and that the proceeding meetings for the Repeal of the Union, and that the proceeding
had the approbation of the superior Government.

City Improvernents.-At the last meeting of the Com mon Council, the Improvement Committee submitted a Special Committee having examined carefully the plans Which have been suggested to the Commissioners of in the neighbourhood of Leicester-square, through Lin-coln's-Inn-Fields, into the City, crossing Farringdonstreet by a viaduct, next considered the practicability of
forming a street which would connect the end of Cheapside with such a thoroughfure at Lincoln ${ }^{2} s-I n n$, and with a branch diverging into Holborn, which would effectunlly relieve the great pressure of the public traffic in the a viaduct at Holborn-bridge unnecessary. They were of opinion that the formation of a street combining these desirable objects was decidedly practicable-the street to commence at the east end and continue along Paternosto the soutn-west corner of Farringdon-market, in a straight line, the main line to continue across the middle of Fetter-lane to the City boundary, and a branch to diverge from the corner of the market to the end of Fet-ter-lane, at the summit of the hill in the wide part of
Holborn. The Special Committee having had the levels in this proposed new line accurately taken, find that the greatest inclination of any part of it would not be more than about three feet in 100, and that only for the distance of 370 feet. It occurred to them, in pursuing the improved by the removal of the whole of the houses between the north side of St. Paul's-churchyard aud Pater-noster-row, from the end of Cheapside as far as Ave
Maria-lane, which could be done for the additional sum of 150,000l. Should this be effected, that magnificent structure would terminate a vista of upwards of one-third of a
mile, and the whole would, in addition to the increased faciluty and convenience which would be afforded to the growing commerce and traffic of the City, form one of the grandest improvements of an architectural character yet achieved in the metropolis. They also propose a new street from the north end of Dowgate-hill to the east end of St. Paul's-churchgard, thence to Earl-street, Black-
friars, through Tower-royal, Little and Great Distafffriars, through Tower-royal, Little and Great Distaff-
lane, crossing the Old 'Cbange into St. Paul's-church. yard, about 1360 feet in length; and from the Old 'Change, through Knight Rider-court, Carter-lane, Godiman-street, Bell-yard, Addle-hill, to the east end
of Earl-street, about 1,200 feet in length. Various other lines and removals of portions of streets to widen the thoroughfares are also recommended. The report improvements, the Special Committee turned their attention to that part of the reference whereby we were directed ing these objects, and having had under consideration the varions improvements which have been carried out during approaches to London-bridge, ascertained thenues and penditure in this respect has averaged about 150,000l. per annum, a sum which they apprehended, if the same could be provided for a few years, would enable all the proposed
improvements to be carried into effect; and feeling that the Corporation have not the nceans at their disposal of may appear to be, the Special Committee are of opinion as may appear to be, the Special Committee are of opinion, as special commission for the purnose of considering of ther Metropolitan improvements, which commission is now sitting, that a favourable opportunity exists for drawing the attention of the Government and the com-
mission, as to the best means to be adopted for raising the requisite funds for those purposes, and recommending this desirable object ; and we areeing with the special this artee in the honourable Court" "Theport, was ordered to be printed honourable Court." The report was ordered to be printed, Court.-On Tuesday a deputation from the Metropolitan Improvement Society, consisting of Lord Robert Gros venor, Mr. Hickson, Mr. Fowler, Mr. Godwin, and Mr, Austin, had an interview with the commissioners for improving the communications of the metropolis. The running along an embankment on the north side of the Thames, to connecr the great Essex-road with the west end of London. A plan showing the projected line was Court of Aldermen.
Court of Aldermen. -The committee appointed to in-
vestigate the charges against Alderman Thomas Wood ith respect to his transactions with the Talacre Coal Company, held a meeting on Saturday. The committee having stated that they had completed their investigations, Alderman T. Wood addressed them in a long speech, in Which he explained various matters, and concluded with a
solemn declaration that he had never been guilty of an unworthy action committee was even-handed justice. Sir M. Wood then said he had a resolation to propose, but before he did this, strangers were ordered to withdraw. It is understood hat it was ultimately agreed to have the speech of Alderman T. Wood printed, and that the committee will give their decision on Saturday, June 17
Brilish and Foreign Temperance Sociely.-The annual meeting of this Society was held on Tuesday evening at absence of the Bishop of Norwich, in the chair. The with stated that, in 1832, the number of persons charged th drunkenness was 32,636 ; in 1842, it was 12,338 ; howing a decrease of 20,298. The decrease in the number pared with the in England and Wales, in 1840, as comcompared with 1839. The total quantity of malt converted nto liquor in all the distilleries of the kingdom in the 3,796,000 quarters : 3 , quarters. The consumption of spirits in 1830 was not so much by $5,000,000$ of gallons as in 1820 ; and in 1840 , the decrease as compared with 1830 was $2,087,000$ gallons. licit distillation had increased in Ireland; 143 person January, 1842; and 1,040 persons were similarly charged in the corresponding quarter of the present year. Sir Robert Sale, writing from Jellalabad upon the hardships to which the soldiers under his command were subjected, troops having been without spirits, because I believe that troops having been without spirits, because I believe that
to be a circumstance tending to keep them in tiee highest health, and in the most admirable state of discipline ; crime has been almost unknown, and a murmur is neve heard, though they are deprived of their usual quantity of animal food." The principles of the Society were pro-
gressing in Gibraltar, Malta, Madras, Calcutta, China, Sweden, Denmark, Prussia, the Hanse Towns, Hanover, Russia, Switzerland, and elsewhere. The receipts during
the past year amounted to only $473 l$. 18s. $6 \frac{g}{4} d$. , and the expenditure to 451 l .3 s . $2 d$. The Society was involved to the amount of $212 l .8 s .3 \frac{1}{2} d$. This report having been adopted, it was resolved that the grateful thanks of the with which she had been pleased to honour the Society. Sweden were likewise included in the resolution.
Aborigines Protection Society.-On Tuesday the annual Aldam, Esq., M.P., in the chair. From the report, it appeared that the funds of the Sociely were inadequate to the farge teld of its operations for protecting the Aborigines o on thar colonies. Statements of successful intervention authorities were mentioned in the case of the Indians of British North America, the Hudson Bay Settlement, in the United States, Texas, South Africa, Australia, New Zealand, \&c. The income of the past year was $259 l$. 1 s . 2 d ., debt of $100 \%$. owing by the Society, The meeting was addressed by the Rev. John Burnett, Dr. Yates, Dr. Hodgkin, and other gentlemen, and a subscription was present, among whom were two natives of Dongola, and purpose of disposing of some giraffes to the proprietor of the Surrey Gardens ; a Hottentot boy, and others.
Parts.-On for the Propagation of the Gospel in Foreign Society, incorporated by King William III., was held in St. Paul's Cathedral. There were present in the prebendal stalls, the Archbishops of Canterbury and Armagh, Lincoln, Bangor, Ripon, Salisbury, Winchester, Chester, Archdeacon Wilberforce, Archdeacon Hall, Dr. Russell, Dr. Hawker, Dr. Cuthbert, the Lord Mayor and sheriffs, and a large body of the metropolitan clergy. The Bishop of Norwich preached the anniversary sermon. The report, after alluding to the missionary efforts of the Society in Gritish North America, the East and West Indies, British places, places, from the Queen's ther sources, $33,776 l$. Unless $30,000 l$, more were raised to defray the annual expenses, several promising missions
would have to be abandoned. The number of missionaries at present in connection with the Society in various places was upwards of 400 . In the evening the Lord Mayor entertained the Bishops and clergy at dinner

Library of the Duke of Sussex.-The Duk library is forthwith to be disposed of. It is stipulated in British Museum ; and that, in the event of the to the declining to purchase that, in the event of the trustees decining to purchase, it shall be sold in such manner as the executors may direct. Messrs. Evans have been called in to value it. The library, it appears, consists of upwards independently of MSS., consisting of early copies of different portions of the Holy Scriptures.
St. Saviour's, Southoark.-On Friday a numerous meeting of the rate-payers of this parish was held in the Ladye Cbapel, for the purpose of nominating the candidates to the living of joint chaplain to the parish, vacant by the death of the Rev. W. Mann. After the
nomination was concluded, the days when the several candidates are to preach their probationary sermons were fixed as follow :-Morning : May 28, the Rev. G. W Cockerell; June 4, the Rev. Thomas Gibson; June 11, the Rev. J. T. Leet; June 18, the Rev. S. Rowe; June 25, the Rev. E. Thompson. Afternoon: May 28, the 1. J. ... Barber ; June 4, the Rev. S. Benson; June A resolution. J. Williams; June 18, the Rev. P. Waller. only who intended to go to the poll would preach their probationary sermons. The living is worth 700l. a year Artists' Benevolent Fund.-The anniversary dinner of this Society took mace on Saturday at the Freemasons Tavern. Lord J. Russell took the chair ; supported by Mr. G. Knight, M.P.; Mr. Ewart, M.P.; Sir J. Guest, h. . ; sc. Lord John Russell advocated the claims of he society in an eloquent speech, in which he pointed out such honourable independence as was due to the professors of the learned arts, those who, but for such means, might not have been enabled to provide against the casualties of

The appeal was liberally responded to ; and a long st of donations was read, including an annual benefaction of 100 l . from her Majesty, and another of $10 l$. from the Queen Dowager. Mr. Gally Knight, in returning thanks for the Royal Commission of the Fine Arts, said that rince Albert, who was at the head of the commission had shared in the to judge of the merits of artists, as The demeanour of that Prince was such as to win ali bearts, and be knew he the the interest in the prometion of the arts in this country. The inquiries prom mission, as far as they luad here was a fund of talent in the country which would render it unnecessary to call in the aid of foreign artista. Eton Festival. - The customary anniversary festival o he noblemen and gentlemen educated at Eton Coliege house Tarated sarurday evening, at the Thatcher supported by about 70 noblemen and gentlemen.
Accidents and Inquests.-An inquest was held at Hampstead on Monday on the body of the Hon. Lady Colville, relict of General the Hon. Sir Charles Colvile, the der from he effects of injuries received from ber dress taking fire It appears that on Friday morning her Ladyship, having for the purpose of sealing it. The taper was directly for the purpose of sealing it. The taper was cirectly foot-stool. By some means ber dress soon ignited, and when discovered by her attendants she was completely enveloped in flames. After some difficulty the servants succeeded in extingnishing the flames, but not before she was so dreadfully burned about the body and head, she died on Saturday morning. The jury, after hearing the usual evidence, returned a verdict of Accidental Death. - On Tuesday an inquest was held on the body of Miss Sarah Jane Colling, who threw herself out of one of the windows of Hanwell Lunatic Asylum, where she was a visit to her brother-in-law, Dr. Conolly, the phys.ola of that establisisment. It appeared from tie evidence tha the mind of the unfortunate lady had latterly been wander ing on religious subjects, and at an early hour on Sunday morning she entered Dr. Conolly's room, saying that she thought it necessary that she should burn herself; and that she had been thinking of jumping out of the window. In order to quiet her, and to give him time to aress, Dr Conolly asked her if she slept well; to which she replied that she had had a speet sleep. He made a motion to get out of bed, on seeing which, the roonudoor being open, ceased ran away and went up stairs again. He slipped on bis dressing-gown, and followed her to her kom, hed, door of which he found shut. He called and found the windoce operi, and deceased in the act of springing rom it. He rushed towards her, and as she was falling, part of her dress caught some of the stonerork, and he succeeded in catching her by her left wrist with his left hand. He contiaued to hold her by the wrist, although she struggled most violently for him to let her go, for upwards of 20 namutes, he wice for assist once, but which was not afforded him, no one having heard bis which Was not afforded han, the violence of deceased's strugales, he was ultimately compelled to let go her wrist, the area bow, with a loud crash. He rushed down stairs, and found her lying on her side, ompletely doubled up, and quite cead. Had she destroyed herself on Palm Sunday her soul would be saved. Had
she been a patient in the asylum she would have been confined. He had no doubt of ber insanity. The coroner remarked on the melancholy nature of the case, and the
jury returned a verdict of "Temporary insanity."An inquest has been held on the body of Mr . F. Tyrrell, the eminent surgeon and oculist, who died suddenly on Tuesday at the auction-mart. The sale of the freehold of Mr. Tyrrell's country residence at Acton, of Which he held the lease, was advertised to take place by purchaser. About half-past two he entered the sale-room, and gave instructions to a gentleman, whom he had deputed to bid for the property. While he was conversing with his friend in a cheerful manner, he was suddenly attacked with illness, and left the room. He had scarcely reached the door when he was observed to stagger, and in attempting to lay hold of the bannisters, he fell. Several persons raised him from the ground, but long before any He gasped twice after he fell, and died in less than two minutes. He was oaly 46 years of age, and had been for many years connected with St. Thomas' Hospital and the Ophthalmic Institution, and his practice was very extensive. The event created a great sensation in the quence, postponed.

Mortality of the Metropolis.-.The following is the May 13 :- Deaths registered in the week ending Saturday, Central districts, 182 ; East districts, 178 , Worth districts, 161 ; Central districts, 182 ; East districts, 178 ; South dis-

Aylesbury,-On Saturday, a special meeting of the Buckinghamshire Royal Agricultural Association was held in this town, the Duke of Buckingham in the chair. of the New Canada Wheat and order to discuss the bearings of the New Canada Wheat and Flour Bill upon the interests
of the farmers, and was very numerously attended. several gentlemen had addressed the meeting, a vote of thanks was given to Mr. G. G. Mansell for a donation of
then 200 guineas to the Association. It was then resolved, Corn and Flour Bill introduced by Lord Stanley in Par Corn and Flour Bill introduced by Lord Stanley in Parlianoent on the 19th inst, is detrimental to the best inbills being persisted in, oure-that in the event of such a be requested to oppose it by every means in their power -and that this Association views with the deepest apprehension and alarm the unremitting exertions that are Made by the Anti-Coru Law League to force upon the
country the adoption of the principles of free trade." Afountry the adoption of the principles of free trade." most of the farmers in town dined together, the Duke Whackingham, as before, in the chair. The assemblage Aplesbury to consider an agricultural question, upwards of 200 gentlemen being present. After the usual loyal sperity to the Association." He said it was their duty to tell Sir Robert Peel plainly what their feelings were, and did not think that they should be told by him in reply that if they did not submit to the measures which he lurch towards. They did not, however, wish to rouse opposition always bad been and always would be in favour of cers order and good-will; and it there was a misunderstanding and the then and the Government, and between them and their members, as had unfortunately lately occurred, benceforth they would not occur again; be hoped that Pould combine to form an association steadily looking after their own interests, and not interfering with the interests and Mr. Clayr. Dupre, Mr. Murray, Sir S. Chetwode, of the countton, returned thanks for the representatives
the beroughs. Mr. Dupre then proposed the healthoty and boroughs. Mr. Dupre then proposed returning thanks, Duke of Buckingham. His Grace, in interest in thanks, said he bad, as they knew, taken a deep
When questions affecting the Corn-laws, and them for comportant measures of last year came before respect to cosideration, he had formed an opiaion with
change, buth, which he had never yet seen occasion to Change, but which, on the contrary, the events of every
day convinced him was the proper and correct view. He had opposed a fixed duty on corn upon the ground that he considered that it would be impossible to maintain it corn in of scarcity, whereas the sliding-scale admitted consumer, and If, therefore, he had thought it proper on his own part to support the sliding-scale, how could he, maintaining that opinion, support a species of duty in the colonies which
he did not think congenial to the interests of the country? Considering, therefore, that imposing a fixed duty on corn with respect to Canada would be giving rise smuggling of a large quantity of grain from the United States into this country, he could not give his vote in the sidered to be so fraught with evil consequences. He was amare of the difficulties which surrounded the agriculadhering to the law as it now stood with respect to protecdion, they would survive and triumph over their temporary property of farmers was also was sure of, that if the month, and year after year, to be agitated and unsettled, the country would never be able to endure its burdens, and one common ruin awaited them all. They wanted peace; they wanted their in terests to be led to the manage but if they were to be told on the one hand that free trade was their were to be toll on the one hand that free trade was their only saivation; if they were to be harassed upon
the other by the supporters of a fixed duty; if they were told that the Canadian Corn Bill would not prove injurious to their interests, all this was keeping up an agitation with respect to the property of the farmer as injurious to him-
self as unsafe to the country. It was, therefore, upon these grounds that he told them that it was his intention, When the Canada Corn Bill came under the consideration of the House of Lords, to oppose it, he hoped as honestly as he had opposed the Government measures of last session. He would steadily adhere to that cause which he honourable name which he feared he did not sufficiently deserve-the Farmers' Friend-addressing them in that capacity, he could assure them that they never would be discarded by him-that they should never be addressed by one who forgot his duty to the Crown, to the people, and the county of Buckingham.
Bath.-In consequence of the inability of the Bishop of Bath and Wells, from his extreme age and increasing infirmities, to perform his episcopal duties, the Bishop of Salisbury has undertaken the triennial visitation of the diocese. His Lordship will consecrate several new tions in the month of August
Cambridge. - At the early hour of five o'clock on TuesCollege took place in the chapel of the College. The electors consisted of the ten fellows. At eight o'clock the Mr. Phelps, tutor of the College.
Carmarthen.- The Welch papers give the following account of the price of provisions in the Principality :salmon trout are now selling at 7 for $2 a$., or 42 for $1 s$.; pound; potatoes, 61 lbs , for $1 d$.; a quarter of veal costs only of the native manufacture cost next to nothing
Knutsford.-On Monday the general intermediate sessions for the county of Cheshire were held at the Courthouse of this town, before Mr. Trafford Trafford, and upwards of 20 other Magistrates. After the Chairman trates retired his charge to the Grand Jue Charman read a letter he had received from the Home Secretary, in reference to the affairs of Knutsford Gaol. In this letter, me that the Magistrates of the county have determined to retain in the office of keeper of the gaol one who has been proved to have so misconducted himself. The Magistrates are of opinion, upon the case to which I more especially keeper persisted in inflicting corporal punislment on a prisoner after the interposition of the Assistant-Surgeon and his desisting to forbear), that the reprimand of the Visiting Justices was sufficient punishment. It appears to me that such misconduct, as soon as made known to the Justices in quarter-sessions, should have been punished "The responsibility of these concludes by saying that-quarter-sessions is upon those Magistrates who recommended and adopted such a decision; but I 4 l it to be duty to declare my opinion that it is a decision foel to be a to lead to evil consequences, detrimental to the mainte nance of good order in prisons, and calcolated to lessen one confidence which Parliament and calculated to lessen impart to Magistrates in the superintendence and regulation of gaols." It was then suggested that no notice should be taken of the letter, but no motion was made on the subject, and the matter terminated
Leicester.-A meeting of the creditors of the Leicester Bank was held on Thursday, at which it was stated that the liabilities are 600,0006 ., and the assets $800,000 l$. The concern is to be wound up under the direction of a commade to a meeting of creditors, fixed for the 31 st inst. Lincoln.-On Friday the 19th a meeting of the Lin Lincoln.-Oers way he 19 meeting of the Lin colnshire farm C . Corn-law League. About 3,000 persons were present. Corn-law League. About a, and persons were present.
Mr. Bright and Mr. Cobden addressed the meeting at
considerable length, and a resolution, embodying a vote of thanks to those gentlemen, and condemnatory of the Corn-laws, was proposed to the meeting, followed by an amendment in their favour. After several speeches in support of the first resolution and the amendment, the original motion carried by a large majority,
Liverpool.-Another fire broke out in this town on Thursday last. It occurred in Jackson's lane, in a warehouse containing cotton and saltpetre, the latter of which caused a series of continued explosions. The wareliouses on the opposite side of the lane caught fire, and four of them were almost entirely destroyed. Fortunately, no loss of is estimated at 45,1000 .
Manchester.-We learn by the local papers that 23 bricklayers have been arrested at Manchester on suspicion Pauling and Hencrined in the late outrage investigation which lasted nearly four days, eight of them were committed on Monday, to take their trials at the next assizes, Six others have been remanded to afford time for further evidence to be obtained against them. The anthorities are apprehensive lest another attack should be made upon the croft, but measures have been taken by them to secure the public pace in case of a similar outhreak. It appears that most of the persons arrested on this occasion belonged to the Brickmakers' Union, which held its meetings at Manchester every Saturday night.-On Tuesday evening this town became the scene of another outrage of a more alarming character than even that in which the brickinakers were engaged last week. The cotton-spinners have again turned out for an advance of wages, and during the past week have been parading before the mills and intimidating the workmen who are satished to work at the present prices from carrying on their lawful occupations. On Monday evening an outrage of an alarming character was perpetrated by the military, assisted by the mob. A wanton assault was made on two police-stations, the windows of which were completely destroyed, and several of the policemen were seriously, if not dangerously wounded. The police, however, succeeded in capturing some of the riotous soldiers, who were fined by the magistrates, and discharged from custody. It was hoped that this affray would have ended liere, but it was only to be followed by still more lamentable outrages. The streets remained thronged during Tuesday morning, and in the afternoon Captain Willis received information that another attempt to demolish the station-houses in various parts of the town was contemplated. Arrangements were immediately entered into to defend the police against the aggressions of the military, but these arraugements were not completed in time to avert the danger. About five or 60 of the disorderly soldiers, surrounded the Oldhamroad station, and commenced an attack upon the building. There were but five police-officers in it at the time, and they were therefore obliged to fasten the gates in order to keep out the mob, who, after having smoashed a few of the mindows, and fearing that there might be a strong force inside, retired, and in about half an hour after returned once rent 2 the att an demolished every window and several of the doors. The magistrates, however, and a strong detachment of police, followed by General Sir T. Arbuthnot, with two or three companies mob and the disorderly soldiers saw this force coming ap, they turned and cheered, and were about to face them. At this moment the policemen rushed out of the station-
house, attacked the mob in the rear, and by their united force they succeeded in apprehending several prisoners. The mob then dispersed, and re-assembled in other parts
of the town, and beat the police whenever they could meet with them. The town, as may be imanined, is in a very disturbed state, and the troops are confined to barracks. oxford.-Great sensation was created here last week which the reverend professor avowed his faith in consubstantiation and the doctrine of the mass. This surprise has been increased by the announcement that a copy of authorities, with a view to examination and probable censure. It is stated that Dr. Pusey has, however, requested two days for consideration before complying with the request, and it is conjectured that he intends to plead the circumstance of the sermon having been preached in his Hebrewedral at Christchurch, of whior exemption from the cognisance of the academical authorities.

Portsmouth.-An inquest was held a few days since at Little Green, near Gosport, on the body of Dr. Quarrier, aho died on Wednesday night, from the severe burns he acoind sustained thirteen days previously, and noticed in this Paper at the time. His death was caused by the glottis, occasioned by the burns.
Reading.-A meeting, convened by the High Sheriff, upon the requisition of upwards of of the farmers, freeholders, and agricularis of Berkshire, was held on Saturant pressed present depressed state of the agricutural interest, and to discuss the propriety of seeking for more ample protection or that interest from the Legislature. At eleven o clock, the town-hall, the place appointed for the meeting, was
nearly filled. Sir R. G. Throgmorton, Bart., high-sheriff, presided, and opened the business of the day with a short speech: Mr. Hippesley then moved the following resoluand alarm the present depressed condition of ull classes
of the ac, icultural communily, caused, or greatly agcra-
vated, by the operation of the hew corn and tariff laws, Which afford ithaler, tate protectun to the extrcise of pressure of general taxation, and the local charges to which the land is exclusively liable, the home produce has a constitutional right to expect and demand from the competition of untaxed foreign capital and foreign labour." Mr. Job Lousley, a farmer, seconded the motion in a long and animated address, during which he was loudly cheered. it was necessary to adjourn to the Forbury, where hustings had been erected in anticipation of the event. The Earl of Radnor then spoke at great length in opposition to the previous motion, and concluded by moving as an amendment the following resolutions:-"1. That the petitioners have lating and restraining the importation of com from abroad, are necessary for the protection of the British farmer;
but that experience and more mature reflection have conbut that experience and more mature reflection have con-
vinced them that such laws really afford him no protection, but that the best encouragement that can be given to those concerned in agriculture is that which is derived
from the flourishing state of the industrious classes of the community. 2. That your petitioners believe that the time is fast approaching when all legislative protection
will be abandoned. They have observed that all the measures lately adopted by the Legislature are in that direction, and that the principles advocated by the most
eminent men of all parties lead to that result. 3. That your petitioners being for the most part connected with, and dependent for their support on agriculture, are now with respect to their trade and future prospects. They conceive that any measures which do not bear the character of a final arrangement can only increase that uncertainty, and prolong its duration ; and that it is for the interest of all parties that the question should be settled as speedily and as completely as possible. 4. That your petitioners, therefore, pray you to take steps for the total Norris of Sutton Courtney seconded the
Mr. Walter, of Bearwood, then proposed as second amendment, the following resolutions: "That this meeting is deeply sensible of the very depressed condition to which British agriculture is now reduced. it cannot but observe that every measure which has been introduced for many years past, for regulating the importation of foreign corn, has totally failed, as is proved by the frequent changes of the law on this subject. That this meeting, therefore, is of opinion that some fixed and stable of corn might be considerably lessened, the landlord and tenant might know what they had to expect, and foreign corn be subjected to a permanent duty of such an amount as might be most productive to the revenue, tion." The Rev. Mr. Sloper seconded the motion. Mr. Allnutt, Mr. Blackstone, Mr. Palmer, Mr. Pusey, and Lord Barrington, followed in defence of the agricultural interest,
and in support of Mr. Hippesley's motion. Several other and in support of Mr. Hippesley's motion. Several other
gentlemen addressed the meeting, and the show of hands was then taken. The original prosition was carried by a considerabie majority, only four or tive hands being held
up in favour of Mr. Walter's amendment. Petitions up in favour of Mr. Walter's amendment. Petitions the Lords to be presented by Earl Stanhope, that to the Commons by one of the county members.
Uxbridqe. - On Thursday
Uxbridge. - On Thursday, the 19th, a meeting was held in this town, for the purpose of discussing the subject lated, announcing that Mr. Cobden, M.P., Mr. H. Pownall, and other gentlemen, would be present to argue the question. Mr. F. Sherborne, of Bedfont, presided,
The meeting was addressed by Mr. Cobden, Col. Wood, The meeting was addressed by Mr. Cobden, Col. Wood,
Mr. Hume, Mr. Byng, Mr. Pownall, and other gentlemen. A resolution was proposed by Mr. Wilkinson, and seconded by Mr. Hall, in favour of repeal of the Corn-
laws, which was carried by a large majority, there being laws, which was carried by a large majority, there being only about 40 hands held up against it. A petition to
Parliament, in accordance with the resolution, was then submitted to the chairman to sign on behalf of the meeting; but he declined doing so, stating that he had not taken the chair with any such understanding, and that, After some commotion, a vote of thanks to Mr. Sherborne was moved by Colonel Wood, and agreed to $;$ and Mr. Hall was then called upon to succeed him, which he did, and signed the pettion
for the past week:-Birmingham and Derby, $108 \%$ Birmingham and Gloucester, 1,627l. : Edinburgh and Glasgow, 2,314l. E Eastern Counties, 2,127l. Great Writrn, 13,8792 ; Hull and Selby, 1,079l.; Birmingham, 2861. South Western 6,491 . Midland Counties, 2,473l, South Eastern, 2,030l. - The half-yearly general meeting the London Tavern last week. Ther Conpany took place at traffic on the line since the last opening from Head com to Ashford exhibited a gradual and steady increase. The railway would further be opened to Folkestose shoruly after midsummer, and to the ultimate terminus at Dover nication betweent Paris and the South Eastern Railway, prepared by Mr. Stephenson, had been approved of by the
of Deputies for their sanction in the present session. The
appleano to Parliament, concurrently witl the Loudon and Croydon Company, to extend the Railway by branch line to the Bricklayers' Arms, had proved suc Cessful, notwithstanding the opposition of the Greenwich cipal carriers in Kent and Sussex for daily conveyance over the line, and a single line of branch railway
to Maidstone, $10 \frac{1}{\frac{1}{3}}$ miles long, at a cost of $112,000 l_{\text {, had }}$ to Maidstone, $10 \frac{1}{2}$ miles long, at a cost of $112,000 \%$, had tractors within 9 months after obtaining possession of the land. Branch lines to Canterbury and Hastings were
likewise in contemplation. No accident had occurred pon the line to any individual. The balance, on the construction account, was 245,0002 , , and that on the
traffic account, $6,451 \%$. Mr. Cubitt's report gave a detail of the progress of the works, and stated, amongst severa Cliff, land, that by the recent explosion at Roundown Cliff, land to the extent of 15 acres bad been covered with directors was ultimately adopted by a large majority. Friday a special general meeting of the London and Croydon Company was held, at which the bill now before the Corbett's-lane, where the Croydon and Greenwich railways join, to a point in Swan-street, near the Bricklayers' Arms, in the Old Kent Road, was unanimously approved of.pany was held on Wednesday week at Bristol, to take into consideration the financial condition and late management of the company's affairs. The report of the committee of inquiry stated, that, from the investigations which had been made, the directors appeared to have been more mindful of their own interests than of those of the shareholders, and that the latter had been sacrificed to the former. They had further ascertained that some of the compors hau contracted for the supply of articles to the line at less than the ordinary rates-and had sold bad coke to the company at an increased rate. By this misliability of $93,885 l$., in addition to the capital required for the completion of the railway-a total liability of 754,0002 The meeting was finally adjourned.

## IRELAND.

Dublin.-Notwithstanding the absence of $\mathrm{Mr} . \mathrm{O}^{\prime} \mathrm{Con}-$ nell, the Corn Exchange, at the usual weekly meeting on much excitement as at any previous meeting. The aly as of rent was the largest weekly return yet announced, having been 7097. 18s. 6d. This included several English returns. The meeting did not terminate until nearly six has election for the office of treasurer to the corporation has taken place, and Mr. Costigin has been elected by a
majority of five. The numbers were-for Mr. Costigin, 25 . ing to 15 columns, of the proceedings in that city on the recent visit of Mr. O'Connell congregated at the incredible figure 500,000 ; but, even reason to believe that the demonstration was in any way inferior in point of physical force to the great gathering tovelty in the ditle quelty in the speeches at the Sunday meeting and banwill, therefore, be sufficient to say, that Mr. O'Connell, Mr. Roche, M.P., Mr. Steele, and Mr. Callaghan, one of the city members, were the principal speakers. On the
Monday another meeting took place in the Butter-weighhouse, at which, of course, Mr. O'Connell referred to the recent denuaciations of repeal by Lords Beaumont and Brougham in terms of unusual violence.-The Virginia packet-ship, from Liverpool to Boston, was totally lost off Kinsale, on Tuesday the 16 th inst., but the crew and passengers were sa
their assistance.

Charleville.-Another great repeal meeting has taken place in this town. If the concurrent accounts of the to be relied on, the Lathering Rasporter, and Nation are able, in point of numbers, of all the assemblages which had yet congregated together at the bidding of Mr .
$\mathrm{O}^{\prime} \mathrm{Connell}$. The two former papers state wo fornoer papsion whe the declares that 350,000 was under the mark. Some idea may be formed of the demonstration when it is stated, that, from $0^{\prime} \mathrm{Co}$, which is a distance of ten miles, to Charleville, Mr. pace, so great was the cavalcade which accompanied it large platform was erected in the centre of the street opposite the market-house, in which were stationed a party After considerable difficulty, the carriage arrived opposite the platiorm, but it was so crowded, and the streets so blocked up, that Mr. O'Connell found it was impossible to multitus way, and accordingly determined to address th one, but be lively and merry at the prospects which were opening upon their country. He wanted liberty for old have the entire island with larongh the land, and would ver. Who would tell him, after that many months were would refuse thein he would not aet pul of the who would tell him knew that England was weak as legislative union? France discontented-America knew it-Russia, learned, and all

Europe was aware of it; and Heaven forbid she should be
secure while Ireland was in chains.
Aeeting and dinner in this town been invited to a public in the shape of a declaration, signed by Dr. Higgins, Roman Catholic Bishop of Ardagh, Dr. Cantwell, Roman Catholic Bishop of Meath, Sir M. D. Bellew, Bart., and many others residing in the adjacent counties. In the declaration they say, "We are
fully impressed with the conviction that nothin. short of a repeal of the Union can be of any beneficial service to Ireland. This conviction is more firmly established by the threats said to be made use of by Wellington and Reel, and particularly by the declaration of the latter, who seems to entertain so thorough a contempt for the Irish people, vice of her mot consent tolister to the unanimous coercion we despise, and, as a proof of the little weight they have with us, beg 10 invite you, the father of repeal, to come amongst us, that we may show you, by the reception we shall give you, the measureless contempt we entertain both for him and his abettors."

## SCOTLAND.

Edinlurgh. - The long-repeated threat of secession from the Church of Scotiand has at length been carried into effect by the Non-intrusion party coming voluntarily e church. This event took place on Thursday, the 18 th, immediately after the meeting of the Assembly, and before even the roll of members was called over. Dr. Welsh, the late Moderator, on taking the chair, read a document containing a catalogue of alleged grievances-cases of interference on the part of the civil couxts with matters spiritual. To this document 193 names were adhibited, comprising 120 ministers and 73 elders, who, immediately on the document being read, followed Dr. Welsh, and proceeded through the streets of Edinburgh in a body to a place of meeting prepared for their reception. It appears Palace harsday morning, and bue lat Lord High Commissioner his Bute, as her Majesty Andrew's church to open the General Assembly. After the usual sermon by the Moderator, Dr. Welsh, the Marquess of Bute ascended the throne, on which Dr. Welsh, having constituted the Assembly by a prayer, proceeded read the protest of the non-intrusionist majority, which declared that "the Legislature has now, by its late proceedings, unequivocally, and for the first time, fixed the conditions of the church establishment in Scotland to be such as the civil courts have lately pronounced themsubversive, that is to say, of Church independence, as held by the seceders, and as believed by them to have been patible with lue the land, and mors especially moom puture with the freedom of the Assembly itself; that any is therefore no free or lawful Assembly; and, fiually, that while firmly asserting the right and duty of the civil magistrate to maintain and support an establishment of religion in accordance with God's word, and reserving to
themselves and their successors to strive by all lawful means, as opportunity shall in God's good providence be offered, to secure the performance of this selves at liberty to retain the benefit of the Establishment while they cannot comply with the conditions now to be deemed thereto attached, they protest their right to separate in an orderly way from an establishment which they loved and prized, and to organise themselves as shall seem expedient. On reading the protest, which was listened to with the utmost attention, the Moderator delivered it into the hands of Dr. Lee, the principal cierk, and immediately left the chair, and walked out of the
House. He was followed by Dr Chalmers Dr. M'Farlan, and the whole of the Nens, all the benches usually occupied by them being emptied. The secession was hailed with loud acclamations in the gailery, but these soon subsided, and the party left the When wita the utmost silence from those that remaned When they got outside the church, they were received wid Having formed intses by the mass of people assembreast to Tanfeld, Stock bridge; but along the line of procession, minch was deasely crowded, there were no expresild the meeting was constituted by the name of the "Assembly of the Free Presbyterian Church of Scotland." Dr. and after saying that he felt as. eyes of erery individual in that Assenbly-the eyes on dom-were directed to one individual, whom to nathe was to pronounce his panegyric"- Dr. Chalmers, he procceued to relinquisk to him the chair of Moderator. Dr. otbers propose mean the new, and for proposed measures for organising Six committees were appointed to provide interim supplies of ordinancesmeans of education for their ministers-a church polity; to prepare an address to the adhering people, and letters dred to corresponding churches at home and abroad. The meeting was then adjourned till the next dayd When a dentation from the Presbyterian Church of Irean came forward to the bar, with an address expressive of the sympathy and concurrence of that Church with the proceed ngs of those who now Church of scotlana. Severaly the course tion addressed the Assembly, their principles. Dr. Chalthey had taken in the the Presby terian Church of Ireland for their friendly sympathy and
the deputation. After the Non-intrusi by the sentiments House deputation. After the Non-intrusion party left the cipal M'Farlan Moderator, and her Majesty's Letter was read, appointing the Marquis of Bute Compasester was the next meeting of the Assembly, the usual address to the Queen was agreed on, and forwarded to her Majesty by the Lord High Commissioner. On Sunday the churches those of the Non-intrusion party. The opening of the first of the new buildings for the Free Presbyterian Church Which took place on that day, excited a good deal of the church was completely filled during the forenoon and the church was completely filled during the forenoon and
afternoon services. The building, which is in the Lothianroad, is services. The building, which is in the Lothian-
reat and substantial structure, capable of accommodating about 1,200 persons, and has been erected Doctor congregation by the Rev. Dr. Candlish. The Dr. M'Farlan, of Greenock, preached in the afternoon. Dr. M'Farlan, of Greenock, preached in the afternoon. Assembly, there was a prayer is the Hall of the General which the Lord High Commissioner and his suite attended. The church was excessively crowded, and great numbers Ware unable to obtain admission. In the Great Hall at Chanmills a sermon was preached by Dr. Candlish in could ubtain autmission, and it was arranged that Mr. Chalmers, of Dailly, and Mr. C. J. Brown, of Edinburgh, should preach to the people in two separate parts of the park in the open air, which they accordingly did, great and Lady H. Thorpe, accompanied by Mr. Campell of Monzie, M.P., attended the meeting of the Free PresbySubsen Assembly on Saturday, and were loudly cheared. Assembly the the above proceedings, the Free intrusion protest. It was announced by ance to the Nonof Monzie, that the Dowager Marchioness of Breadalbane had subscribed 1,000l. towards the Free Presbyterian Faid. The number of adherents to the protest is now said to be 428 ministers; but what portion of these is money, Dr. Chalmers announced that the gross receipts in aid of the new scheme were $223,028 \mathrm{l} .6 \mathrm{~s}$. 11 d ., of which General Assembly have also been engaged in business of a routine character. The most important decision at which mainisters of Strathbogie as ministers of the charch, and in all respects as to their status and privileges, as if the pronounced. This resolution was carried by a majority of ${ }^{1} 15$. The deposed men of Strathbogie were, therefore manner, as Ministers of the Established Church, and their commissions were accordingly received.

## fintíscellaneous

The Comets.-At the Paris Academy of Sciences on the discovery, M. Arago made a communication respecting the $2 d$ inst ance was by no means distinct when first discovered; but observation, and the 3 d he was able to take a better within the sphere of the constellations exactly. It was Pegasus. In two subsequent observations swan and those lained its orbit, which he declares to be unlike any of comet laid down in the astronomical calculations. This at this moment approaching towards the earth. M. Arago celebrated of all munication some remarks on the moat last appearance in 1835 , that fof Halley, which made its are 74,75 , and 76 years. Our readers are revolution Several astronomers have examined the Chinese records ad bee purpose of ascertaining whether any observation researches, said M. Arago, had been without result, the
M. Blil M. Blot, a distinguished Orientalist, undertook the task that Hallep's has shown, in the most positive manner, Sept., 1378 . The following is his translation of the moon, day Kecord:-"Period Hougwou, 11th year, 9 th north, east K. asu. An extraordinary star was seen to the hairy appendage extending over about 10 degrees. It entered the group Rei-Kiai (T, i of the Great Jear), and swept over the five north polar stars (the Polar star and planisphemall stars marked round the Pole on the Chinese wall (north), passed over the Choocsai of the eastern market (the sphere of the and entering the Celestial Serpent), remained there uncil the 10 th moon, day Was no mov.), when the weather became cloudy, and it Omet, ande by the astronomers of Europe on Halley's ntervations made in Chins coincide so perfectly with the that cailes no doubt that the comet observed in China the pards thall Halley's comet. It was not until a century after American correct observation of this comet took place. the Ren has been Reviev. Sydney Smith:-"The humble petition of the ington, Iney Smith, to the House of Congress at of the some measuresition your Honourable House to institute
for the repayment of debts incurred and repudiated by
several of the States. Your petitioner Ient to the State of Pennsylvania a sum of money, for the purpose of some public inaprovement. The amount, though small, is to with difficulty and privation. If their a life-income, made hich a very large number of English families are (from ig ) had been the result of war produced by the unjust aggression of powerful enemies-if it had arisen from civil discord-if it had proceeded from an improvident application of means in the first years of self-govern-ment-lf it were the act of a poor State struggling against the balrenness of nature-every friend of America would have been contented to wait for better times; but the fraud is committed in the profound peace of Pennsylvania by the richest State in the Union, after the wise invest ment of the borrowed money in roads and canals, of which the repudiators are every day reaping the advantage. It is an act of bad faith which (all its circumstances considered), bas no parallel and no excuse. Nor is it only the loss of property which your petitioner laments; he laments still more that immense power which the bad for of America has given to aristocratical opinions, and to the enemies of free institutions in the Old World. It is in vain any longer to appeal to history, and to point few. The Ags which the many have received from the the institutions of the old world have at limproved crimes. foot all earthly tyranny, has been puilty of a frander enormous as ever disgraced the worst King of the most your petitioner of Nurope. It is most painful to wherever they to see that American citizens excite, wherever they go, the recollection that they belong having tricked and pillaged Europe; and this mark is fixed, by their faithless legislators, on some of the best and most honourable men in the world, whom every It is a suhjas been eager to see and proud to receive. that a subject of serions concern to your petitioner that you are losing all that power which the friends of the ark rejoiced that you possessed, looking upon you as the ark of human bappiness, and the most splendid picLittle justice and of wisdom that the world had yet seen. Littie did the friends of America expect it, and sad is the spectacle, to see you rejected by every state in Europe, catuse none will be kept; unstable in the very foundation of social life, deficient in the elements of good faith; men who prefer any load of infamy, however great, to any pressure of taxation, however light.-Nor is it only this gigantic bankruptcy for so many degrees of longitude and atitude which your petitioner deplores, but he is alarmed asso by that total want of shame with which these thing hava been done-the callous immorality with which $E$ rope has been plundered-that deadness of the moral sense which seems to preclude all return to honesty to perpetuate this new infamy, and to threaten its extension to every state of the Union, To any man of real philan thropy, who seceives pleasure from the improvements of the world, the repudiation of the public debts of America and the shameless manner in which it has been talked of and done, is the most melancholy event which has hapYour during the existence of the present generation men petitioner sincerely prays that the great and good States the deep disgrace they have incurred in the whole world, restore them to moral health, to that high position they have lost, and which, for the happiness of mankind, it is important they should ever maintain; for the United States are now working out the greatest of all political problems, and upon that confederacy the eyes of thinking men are intensely fized, to see how far the mass of manaffairs and the establishment of their own happiness.'

## SATURDAY, JUNE 3, 1843.

$W_{\text {e }}$ are happy to announce to the Fellows of the Horticultural Society, that the Council have directed the Garden at Chiswick to be kept open till $80^{\circ}$ clock in the evenng during the months of June and July, which it is hoped will be agreeable to those whose business keeps them in London during the afternoon. We would also direct the attention of visitors to some highly interesting experiments on manures which are now in progress in this establishment. Wheat, Potatoes, Turnips, and Peas, are the subject of examination in the Stove and Hothouse Department, under the direction pof Mr. Edward Solly; and the influences of phosphate of ammonia, sulphate of ammonia, nitrate of soda, chloride of sodium, and other saline substances, are already becoming manifest in a highly instructive manner.

We would advise all who love flowers to visit the Wxhibition of American plants now on view at Messrs. Waterers, in the Kings-roarl; they will find them selves amply rewarded for their trouble. Under a large canvas roof is formed a temporary garden, with gravel walks, turf, and some thousands of American plants, as fresk as if they were still growing in the walks are bordered by the most marniticunt Rhododendrons one can imagine, intermixed with Azaleas of many colours, and the broad-leaved Kalmia. Of cumference, about 9 ft high, and loaded with about 600 clusters of beautiful pale violet blossoms. Others have stems from $4 \mathrm{ft}$. to 5 ft . high, and heads bending Kalmia, 7 ft . high, and 6 ft . in. A broad-leaved few days be a sheet of waxy blossoms.
Although these are perhaps the largest and finest approach the collection, there are many others that colour, white, blush, and lilac. We will not protend found here, with valicties of Rhodoilandron to be Found here, with the single exception of what is caller Everestianum, a charming kind, whose corolla is very crumpled at he edges, but at once refer our readers to the collection itself, which, we may add, is now in all
its beauty.
The following letter appeared in the Church and of our clerical to which we would draw the attention
education of thi agricultural poor.
To the Edilor of the Churoh and Slate Gazette. country, parishes of the greatest difficulties contend with in the education of
their difficultr ( parishioners, is the want of funds; and this any of the hitherto proposed schemes. There is no douby but that the improvement in the standard of education do much supplied by our Diocesan Training Schools, will the count but it will not do all that is necessary to relieve more efficientergy of this difficulty; better desient master or mistress, and thereby excite a the educaire than now cxists on the part of the poor for mistres adequate to the maintcuance of such master space in yoner vainuble persuasion I senture to beg a short the attention of the tand widely-citeulated paper, to call Which successfully tried in this neighbourhood, and experiericedises to supficulty I sply the almost universallycultural sch prietor has established what are termed "agrinational and achols," upon a principle of uniting our present raking the agricultural instruction; and by so doing, of tuition in the labour of the litule scholars, while uniler pensate the master, in thesbandry in the afternoon, to comhational recive from him, in the usual couse of ourbeen establishention, in the morming. Schaols have already Dean and Willinupon this plans at the villages of East happiest resullts. The undual they are atended with the mastarpose does not exial quanmy of land required for $r$ pays a rent, certainly equal to, and in most cases
beyond that of the adjoining land occupied by farmers. In the case of the Willingdon school, there is an appropriate house for which the master pays an additional rent. The only payment in money to the master is the usual penny a week from each scholar.
"Professor Daubeny lately visited these schools, and has approvingly noticed them in his article upon the Public Institutions for the Advancement of Agricultural Agricultural Society of England: saying, among other Agricultural Society of England: saying, among other
things, 'So far as the scholars are concerned, it would appear that a sufficient number of hours is allotted to impart to them an adequate knowledge of reading, writing,
and arithmetic.' Dr. Mackenzie, of Kinellen, Ding wall, has also evamined them, and noticed, them in a little tract,
called 'Britain's Danger and Safety.' called 'Britain's Danger and Safety.'
"Now surely, Sir, the clergy of small agricultural parishes would do well to consider whether they may not educating the children of their poorer parishioners, at Thesent apparently insuperable, may not be overcome. They have, for the most part, glebes at their disposal, and which if let on this understanding would produce to
them quite as much rent as they could otherwise obtain, and then quite as much rent as they could otherwise obtain, and
provide at the same time their noorer nejphbours with the means of a suitable education for their ch. extensive tithe-barns, now rendered unnecessary ; y the Tithe Commutation Act, would give them every facility, with but trifing alterations, for the establishment of a
scliool-house. Nor can any reasonable objection be made to this plan on the ground of so employing the boys in the afternoon. The girls in our national schools are
taught, and for the same number of hours, to work with taught, and for the same number of hours, to work with
the needle, the use of which, however, is not more important to them than is that of the spade and the hoe to the boys.

But I have already occupied more space than I purposed in your columns, and therefore I will not at this time do more than add my earnest desire that the country clergy, whose parishes are otherwise without the means of supporting schoois, will give my kind neighbour's sugge tions a fair and sufficient trial.

## Deo. 26, 1842. <br> 20, 1842. "Clerious."

be obtained, by particulars respecting these schools may cultural School, Willingdon, East Bourne."
Where schools are already established, and fund raised to maintain them, it would still be an improve ment if the children were taught to work as well as to read and write. $\Lambda$ national school was established at Winkfield, near Windsor, in 1835, patronised by the Royal family and the wealthy inhabitants of the Forest. Ample funds were raised to build a neat house for a
master and mistress, and two school-rooms, master and mistress, and two school rooms, one for
boys and another for girls, with a workshop and sheds for tools. The garden was only two acres in extent until lately, when two acres more adjoining were purchased. The produce sold from two acres in 1842 amounted to upwards of 20 l ., besides the vegetables used in the master's family, whose wife teaches the girls. The children learn to read, write, and cypher, four hours in the day, and work four hours (two hours in the morning and two in the afternoon). In we weather the boys are employed making mats and The girls sow and knit stockings. The the garden. twopence each per week, half of which, together with half the produce of the garden, is given in rewards once a year, chiefly in articles of clothing, in proportion to their attention and progress. The vicar of the parish, the Rev. W. L. Rham, directs the operations in the garden, and has the general superintendence. The plan has been found completely successful, and there are, or were lately, 45 boys and $8 ?$ girls taught in the school. The girls' work produces but little; but there is no doubt, that, with proper management, the 45 boys, paying $2 d$. a week and working on 5 or 6 acres of land, would indemnify a master who knew how to employ them to the best advantage.
Many improvements might be introduced in the mode of teaching the boys to work. The more advanced might be made to direct the work of the younger, and each having a responsibility, the work would be more systematically and profitably done There are other schools where hours of working have been introduced; but in none besides that at Willingdon and another at East Dean has the system of entire self-support been tried, as far as we know. If this example could be followed successfully in various parts of the country, there would no longer be any obstacle to the education of every individual amongst the labouring population ; uniting as much of letters as is useful to men in their station with those habits of industry which are so essential to their happiness of industry which are so essential to their happiness
and prosperity in life.-M.

Public opinion as to the manner of heating horticultural buildings has within the last 20 or 30 years undergone a remarkable change, which has by no means reached its end. When the application of hot water to this purpose was first proposed by the late Mr. Bacon, the flue-system was in almost exclusive use. The innovation of that gentleman was either looked upon coldly, or altogether opposed; it was pronounced costly, inefficient, and inapplicable ; and
the owners of flues clung to them with tenacity, preferring the evils they were accustomed to, to advantages they knew nothing of. However, in this, as in other things, intelligence and common sense have at last triumphed over ignorance and prejudice ; and we do not imagine there is a Gardener in the country who would think of heating any place with smoke flues if he could possibly get hot-water pipes.

Then came contrivances for moistening the atmosphere, and these too were opposed; syringing and watering being asserted to be all that a Gardener could want. However, some who were wiser than their neighbours adopted evaporating-pans: their crops were visibly improved, and evaporating-pans are rapidly coming into use.
Just now attention is directed to the possibility of expelling tan and fermenting stable-litter from a garden, and obtaining bottom-heat also by hot water. Mr. Rendle, of Plymouth, seems to have been the first to direct attention very strongly to the advantage of a method of doing this wihout the assistance of hotwater pipes; and in a pamphlet lately published by him* he has fully explained his manner of proceeding. While, however, we state this, we must add that the idea of causing water to circulate in troughs is by no means new ; on the contrary, it is almost as old as the application of it to horticultural buildings, and even within this last few years has been much employed by Messrs. Corbett, Beaton, Davidson of Stackpole, we think Green, and others. What is most original in Mr. Rendle's plan is the establishment of a double current of water in the same tank, which also forms the foundation of the bed to be heated; but even this is not so new as we at one time supposed, as the following section and plans of a house at Oakley Park, the seat of the Hon. R. Clive, will abundantly prove:

## Inside the house

 End vieBoilex
Triex
inches, 14 deep
inche
Flue
$\qquad$
8 Path inside the house
Thi lower chamber 2 fors was erected about 12 years ago; it is front long, 9 feet high at the back, 3 feet high at the ree, wide. The lower chamber is 5 feet cep, and is covered by a flagging 3 feet square. It heated by slack coals at $8 s$. per ton: one ton of coals is sufficient for 12 days in the severest frost, and keeps the thermometer at from 70 to 75 deg. In mild weather, about half the quantity of coals is sufficient to keep the thermometer to that degree. Making an average calculation, $6 d$ in the 24 hours would be the outside expense for coals.
We do not see that Mr. Rendle's plan differs from this in any essential particular, the trough (fig. 5) being in fact exactly the same as his tank, except that the flag-stones do not rest upon it.
We find, however, that, as usual, all sorts of objections are taken to this substitution of a steady, simple, manageable source of bottom-heat for the variable, troublesome, and often very expensive materials now in use. For the present, however, we shall merely efer to the success which has attended it for 12 year at Oakley, at Mr Lee's of Hamm ersmith, and at other places. On a future occasion, we shall endea-
*Treatise on the Tank System of Communicating Heat
vour to answer such objections as we have heard of, to show in what way it seems likely to be most usefully applied, and to point out what the circumstances are which have occasionally led to its failure.

## THE ANTIQUITIES OF GARDENING.

No. I.- Extracts from a M.S. onn Gardening, in the possession of
Sir Henry Bunbury, Bart., written by his Ancestor Sir Thoma, Hanmer, 1660-16\%0.
Maracocs.-"The Maracoc is called in Latine Granadilla and Clematis trifolia, and Flos Passionis, the Passion-flower, because there are some parts of the flower which resemble a spear and three nayles, the instruments of the Passion. The flower consists of ten whitish leaves which stand round, and are covered with many crooked threads, of a kind of pale Peach colour, with a ring or circle of deeper Peach colour; out of the middle of the flower comes a pale whitish green head, spotted with red, with five crooked spotted horns, Nith broadish heads, from the midst of which rises another head, which bears three things like nailes, big above and smaluder to the ren. [Rapin, in his Poem rise to the name of Passion-flower, as follows:-
"In summer months will Granadilla show
And graced the shore sent hither from $P$
Ou lofty stems indented leaves adorn
The blossoms, which, with prickles, as the Thor
Our Saviour's Passion in their form dleclare
Show all the barb rous nails and bloody spear
For from the midst a three-forked chive ehe rears,
And each bent grain like a crooked nail appears.
maranthe.-"When Gerard wrote his Herbal, he knew only of two Purple Amaranthes, and one Scarlet, and that with the painted leaves; but of late years the English florists have raised above half a score of new valietyes out of seed that came first from Surat, in Persia; many of which are very fine, and are of different scarlets, and other reds, or of lovely yellow; all the colours very
orient and faire."
Roses. "The Damaske Rose is very common with ub,
Roses.- "The Damaske Rose is very common with us, and the sweetest of all. The Variegated Damaske, or well with white; a fine rose when it marks rightly, sweet as the Damaske. Of Yellow Roses wee have only one double, which is as big as a reasonable Provins, when it
blowes well, which it seldom does, either in England or blowes well, which it seldom does, either in England or other countryes, being eaten up commonly with wormes
in the bud. In Italy, they hold it likes best in a coole place. Wee know by experience that it loves to run up being of a rich yellow colour. It blows very well in an open pure aire, near Hogmagog hills, not far from Cambridge, and a light soyle. In Italy, there hath been above these twenty years a fine Rose, the seed whereof came from the East Indyes; it is called in Latin commonly Rosa sinensis, by the Indians [Chinese] Fuyo. It grows to a high tree for a Rose, hath a leaf like a Fig [this is
doubtless the Hibiscus Rosa sinensis]. Ferrarius was the first raiser of it from seed in these parts of the world.' Christ's Thorn.- "In Latin Paliurus ; it is a shrubby bush, with small roundish leaves and many sharp thorns. It grows plentifully in Palestine, and is called Christ's Thorn, because ,

## The Cedar, usually called of Libanus.-" No tree con.

 tinues longer free from corruption than this. Wee have of late had some fine plants raised from seed which are set very small, so that it
## ON VEGETABLE MANURES.

2. Turces.-In many parts of the north of Germany and Holland, heath-mould is cut into turvee, called in German "plaggen." They are either used in stables, for litter, or placed alternately with strawy dung, in heaps 4 to 5 ft high (called Plaggenmist), and after they have
become rotten, are used for manuring sandy soils. When long enough subjected to the action of dung (sheep or long enough subjected to the action of the ammonia deve-horse-dung is best, on account of the
loped, $)$ the crops will turn out very fine.
No doubt these turves, if properly mixed with dung, will form an efficient manure for dry, hot, sandy land, which they will supply with humus; and although the Which they will supply with humus; and although the nature, yet the action of ammonia and the heating to nature, yet the action of ammonia, and the heating to
which it is subjected will dissolve it, as it were, and convert it into vegetable nourishment. The coal of humus will then yield to the crops not only humic acid, but also lime, magnesia, sulphuric and phosphoric acid, alumina, \&c. It is clea nat the manuring action of turves will be considerab!y increased, if the heaps are also wetted
with the drainage of dunghills, urine, \&c., because in this with the drainage of dunghills, urine, \&c., because in this case more ammonia will be generatted to decompose the
coal of humus. It is also advisable to add some lime, coal of humus. It is also advisable to add some lume,
marl, \&c., by which means goopd compost will be produced. This sort of litter is best adapted for sheep, under whose influence the decomposition of the coal of humus and heaths will be roost perfect; and the ammonia formed
by the excrements of the sheep will be entirely absorbed by the excrements of the sheep will be entirely absorbed
by the humus of the turves; indeed the ammonia which by the humus of the turves; indeed the ammonia which
is perspired by the sheep will not be lost, as may be ascertained by a simple experiment. If a vessel with humus is placed in a sheep or horse-stable, it will be
found that humate of ammonia will be quickly formed. found that humate of ammonia will be quickly formed.
To prevent the wool of the sheep being injured by the To prevent the wool of the sheep being injured by the
turves, which are to be turned root upwards, a slight layer of straw is to be placed on the top.
This sort of manure will be much improved and made sooner available, if, like the leaves of trees, before being placed under the cattle, or mixed with straw, it is thrown
in high heaps and left to rot; by the heating thus produced, not only will the coal of humus (which is always
alloyed with wax and resin), but also the lieath and its alloyed with wax and resin), but also the
roots, be subjected to a partial decomposition
When, subjected to a partial decomposition.
When turves are littered in stables, or placed there in some regular order, no sinks for fluid excrements will be required, because the earth of the turves will absorb them. They are to be left, if possible, four to six weeks under
the cattle; then conveycu outside, and placed in lieaps three to four feet high, for the purpose of heating, and if too dry, they are to be moistened with water. Under such circumstances, the ammonia cannot be lost, because it will be chemically absorbed by the earth of the turves as fast as it is formed.
It is said that turf manure will improve by remaining four or five days in small heaps in the field before it is spread, and it is stated that the air will extract the acid acid. If it is contains. 1 , however, comaroved by lying in small heaps, it can only be by forming more humic acid with the oxygen of the atmosphere, which acid cannot be generated in large heaps 80 extensively as in small ones, because the air has not free access; and if turves be ploughed in

Although it is well ascertained that making turf manure requires much manual labour and carriage, and that large tracts of land may be rendered still more barren by cutting the heath and its roots; on the other hand, we are to remember that fields of dry sandy soil are much improved by this manure, and it may be asserted that without it the soil would not even return the labour bestowed on it.
Instead of heath, common turf is also used as litter, the roots and the earth surrounding it being cut to a certain depth. This is a much better manure than peat turf, as it contains not only less carboniferous bumus (saturated चith resin), but the roots of grass are easier decomposed, and possess more manuring material than heath. If such turf is used as litter, the manure may be carried away and ploughed in in three or four weeks; whilst than eight be weeds. it is seldom, however, that much use can be made of such turf, because this operation spoils whole tracts of land for a long time. It is only turf from roadsides, lanes, \&c. that can be used.

## AMATEUR'S GARDEN.-No. XXII

Of all the various tribes of plants which we cultivate, there is not one so admirably adapted for blooming through the winter as the Cineraria; and what renders it still
more valuable is the fact that any one having a common more valuable is the fact that any one having a common frame may grow the varieties in a8 great perfection as tribe upon which the Amateur must mainly depend for flowers to supply his drawing-room table through the winter. Those readers who possess the Chronicle for 1841 will there find $m y$ system of cultivating $t$; bat as many do not, I shall here give a short abstract of my
practice, which is simple, and has always been attended with very satisfactory resuits.
About this time the plants that have bloomed through the season must be cut down, turned out of their pots, and have at least half the old soil removed from their roots. This being done, a piece of ground in a she friable must be made so by adding leaf-mould or rotten dung and sand to it-must be prepared, and the plants planted out in rowe 15 inches apart, and one foot apart in the row.
In planting, the old ball must be kept at least one inch below the level of the surrounding soil, the object being to get the young shoots, as they spring through the soil, firmly rooted before they are removed from the old plant. supplied with water, in dry weather, and be kept free from weeds, either by hand-nicking or hoeing; but if the hoe is used care must be taken that the young plants are not injured, as they frequently protrude their offsets at some distance from the centre of the old plant
By the middle of August the plants will be getting pretty strong ; they must then be taken up and parted, retaining as much root as possible to each plant, and not rejecting any in consequence of their being small, as it is upon the displa-sized plants that we must depend for a sur in display of flowers ; since the large plants will bloom in following spring. At this removal the largest plants must be potted in pots proportionate to their size, and be placed in a cool close frame until they are established; after whicls they may be exposed until the approach of frost renders it necessary to protect them. The small plants, after the ground has been dug over, must be again planted at about one foot apart ; they will require a planny weather, and will make beautiful plants for potting in October:
The soil which I have found most suitable for Cinerarias is two parts of turfy loam, with one part each of
leaf-mould and sandy-peat, mixed together and used as roughi as possible ; but they will grow in almost any light soil. Some of the old kinds, as Hendersonii, purpurea,
elegans, Waterhousiana, and King, are the best adapted elegans, Waterhousiana, and King, are the best adapted
for early flowering, and a shrubby kind called Greenii, is also very splendid; but those who do not possess any plants at all may depend upon a tolerable good show of flowers from plants raised from seed, A friend of mine shop in Holborn, 12 months back: from this he raised upwards of sixty plants, a number of them very distinct, and one a blue flower, superior to anything I have ever met with round London ; so that the reader will see it is
not an expensive affair to procure a collection of Cinera-rias.-W. P. Ayres.

## HOME CORRESPONDENCE.

Errata.-In Mri Potter's article on Nitrogen, p. 357, line 39 from the top, fror "and ift, so to speak, stand by," sc. In the
spectator," read same page, line 15 from the bottom, for "slightly weighed," read "slightly weighted." Also, in the article on Apples, page 357, at
the bottom of the third column, for "half-penny" read "lialfpiece," which our correspondent tells ns in a mug used in Wales about 28 quarts
Garder-pots.-I have just made a good improvement n the common flower-pots, which deserves to be universally adopted. The shape, size, and expense are not altered. I have done away with the hole at the bottom altogether ; and, instead of the flat bottom, the maker pushes in the centre of it, like the bottom of a common black bottle, only not with so sharp a turn inside, and the drainage-holes are round the sides at the bottom. From 2 to 6 holes, according to the size of the pot, will do all the business of drainage. The roots cannot get through he bottom, neith and not hang under the pot in winter, which, for Heaths, is the best part of the change.-D. Beaton
Bees.-Having read in the Gardeners' Chronicle of May 20 some observations by Mr. J. Wighton on the plan suggested by "W. W." in the Chronicle for April 29, as a remedy against the effuvia arising from the dirt collected in Beehives, I beg to coincide in his opinion, but recommend one of the American foor-boards made by Mr. J. Milton, of No. 10, त्रreat Marylebone-street, which, by its construction, will at once obviate the necessity of lifting up the hive to sweep off the dirt, or dead Bees, \&c. As an inclined plane is made to extend the whole length of the centre of the American floor-board, it must of necessity be always clean, as notling can remain upon it. The slight ascent forms no impediment to the Bees when returning home from their labours of collecting honey or pollen.-W. $A . X$.
Roses.-I have taken some pains to inquire, amongst private growers and nurserymen, what their opinion was as to the exhibition of Roses by Mr. Milne and my gar dener at Chiswick on May 13, and without an excep tion I find them of the same opinion as myself-that they were highly creditable. I am gladmy situation as second enables me to speak disinterestedly; and whilst I hold hat we ought always to submit to the judgment of the judges, and give them the credit 1 do for honesty and im partiality, yet I think a little discussion may prevent the repetition of an error if one be committed, or satisfy the disappointed that the judgment was correct. In No. 5 o his year's Chronicle will be found a letter signed "Rose bud," in which I state my opinion as to the possibility of fine exhibition in time to come, but that the production of 25 varieties in bloom would, from the shortness of the otice and the novelty of the thing bltogether be attended ith difficulty to the first exhibitors. Who will doub heir being exhibited better in June? -that is the Rose season. Why the merit of the exhibition, in my view was their appearing out of season. Now I ask any one of the judges, in the very best spirit-that of inquiry-did they ever produce such a collection as Mr. Milne's with such notice and at that time? If it be easy, how ashamed ought the nurserymen to be-the Rose-growing nursery ought the own) who lat but 36 planta to cot his 25 out 0 and wn) who had but [We shall be happy to insert any short letter upon this subject, if rose-growers wish to take it up.]
plants for a rububan abo facut plants, that wom St Pallowing, which may possibly be of more general use :-

Fumigaton,-I observe in last Neek's Clromi, le an article on "Smoking Melons and Cucumbers," which you
suppose to be original ; but if you will refer to Harrison's "Floricultural Cabinet" for 1840, p. 264, you will find the following : "Not having a house, I am obitiged to winter my plants in a cold pit, which 1 lave found a difficulty in fumigating, until I thonght of the following plan : Tuke a piece of touch-paper, and lay it ori a thin one end and place it in foll it up and tie loosely
I think half-an-ounce used in this way is equal to an ounce with the bellows; and it is not a tithe of the trouble, as it does not require any altention when lighted," referred to by Mr. Beaton, is sufficiently difterent to entitle him to regard the latter as original.] - In the Chronicle of last week, Mr. Beaton gives a receipt for a brown paper in a solution of saltpetre, (one table-spoonful to one pint of water;) and then rolling up the paper like a cigar, but hollow, and filled with tobacco. Now, as I I thought I would try it, and accordingly steeped the paper in the solution as directed; I then rolled it up, all thengthwise and the shorter way, and also spirally; burn more than a few minutes. I finally soaked the tobacco in saltpetre and water considerably stronger than the former, and when dry it burnt freely by itself, but
When rolled in paper it died out like the former. The ashes in each instance appeared to prevent its combustion Monger. As I may not have applied it properly, perlay
Mr. B. will be kind enough to give some additional par ticulars, through the medium of your Paper,-Junius.

Testa di Quaglia.-A reader at Dorchester will be indigenous to the Island of Malta, and called by the natives Testa di Quaglia, from the strong resemblance of the seed-vessels to a duck or quail's head. What is the true name of this plan
should it be cultivated

Bees.-In answer to the inquiry of "W. R. M., Deptford," in the Choonicle of Saturday last, I beg to state
that on the 1st of May one of my stocks of Bees in common straw-hive swarmed, the wind being in the east;
and on the 20 th, this stock cast. It and the two young hives the 20th, this stock cast. It and the two young May another stock, also in a common straw-hive, at my Grounds in the Lea Bridge-road, swarmed; on the 14 th, it cast, and again on the 20th. All of these, as well as
those at Walthamstow, are strong, and whenever the weather is fair work well.-J. Pamplin.
Visiting Gavdens.-Having had the privilege of making what is excursion into the country near me, to look into What is going on in the gardening world, I beg to lay before and in doing so, I would iupress upon my brother-gardeners the great advantage arising from one gardener visiting another for their mutual benefit. Nothing tends so much to develop the mind as to witness in one's neighbour's While the observer has been perplexing himself for years to bring about the same end. Many instances of this tions, both as regards the growth of fruit and vegetables and plants. On calling at Studley Royal, the seat of Mrs, Lawrence, the garden of which is under the able orderying is done upon an extensive scale, in the first order. The Pines are abundant and very lusuriant, and are also fine, and every bond full of fruit and bloom exhibiting great luxuriance. The kitchen-garden is filled with crops necessary for so large a family, all of which situated, gardens in the country so far as regards the soil Which is a cold, wet, stiff, barren clay, wholly brought to posts. Many laborious plans have to be adopted, sueh obliged to raise all the beds above the natural level crop. adding various light and drying composts to every Even for Stum can be grown are generally considere eligible for such situations, it is found necessary to 18 incheds, which are in form of a half-cylinder, about filed with high in the centre and 4 feet across; they are methone, the plants being placedin the interstices, by which and being so succeed to admilation; the fruit is always fine colour, as well much exposed, is of the bighest fluvour and The may be useful to others who may be similarly situated the highental part of the gavden and grounds is all in plants for such a splendid place does not keep pace with hext call was at Hope Nursery where I was tation. M prised to fas at Hope Nursery, where I was much surLane, one oflace. Hope Nursery is situated in Leeming froprile district. This is comparatively a new place, the and business from Pickhill, which is about two milos Pits, \&e, for has in that time erected numerous houses, appears to be feet of glass, beneath which everything collections of all the fashonable plants in present cul Australian and as Calceolarias, Pelargoniums, Fuchsias,
sent cultivation ; such as the new Achimeues, Gesnelias, Gloxinias, (amellias, Indian Azaleas, and indeed I may say ( $n$ ith the exception of Orchidacex) by hundreds. What struck me as very beautiful was a plant of Rhododendron Smithil var. timrinum; a good specimen, about 5 feet high was a bright pinkish crimson, very much spotted with large black dots. This, I think, ought to be in every collection, particularly as it is said to be quite hardy. The hardy herbaceous collection appears to be very exten nience of being removed at any season, besides a large quantity in the open ground. The florist's department is large quantities, and of very select varieties. What gave me a good deal of pleasure was to find an arboretum duous flow duous flowering shrubs, which are all legibly labelled, to
the number of about 300 species and varieties;-the next is composed of hardy ornamental and forest trees, including most of the new hardy Pinus, \&cc.; this division contains about 200 species and varieties, and to which I understand there is to be added a separate division of the hardy evergreens. When this is completed it will form a very
valuable and useful appendage, both to purchasers and the nursery. The out-ground is occupied as a general nursery and is upwards of 20 acres, as I learn from Mr. May; and in a very high state of keeping, as I scarcely saw a
seed-weed on the ground. Mr. M. says he acts upon Mr. Loudon's principle-the "economic;" that is, by allowing no weeds to seed if possible to prevent it.-
Asparagus.-"Este" begs to say that his Asparagusbeds were treated with salt at the beginaing of March, at
the rate of 14 lbs. to all the beds but one, which had 10 lbs. The beds are 14 yards long by 1 broad. The produce has been greater this year than ever, and finer. The beds were manured as usual in November. He will feel next year at the same time, or deferred till this time next year, as it is stated in last week's Chronicle that thi is the best season for salting the beds. It has been a time in the season for all seeds; they have lain a long [When the Asparagus is beginning to grow is the sast season for applying salt. If used earlier much of it will be washed away from the roots by rains.]
tho lineabs. - hals at last ascertaned boyond I had often watched them carefully leaf of the Bean. reposing amongst the young unfolded leaves; but they hide so quicksighted and timid, that they run away and to see what they are doing. I have had presumptive some time their cutting the edges of the Bean-leaf for female) so busily at work, that I was able with caution to take the point of the leaf in my hand, and watch her operations for several minutes. Her position was on the commenced eating on the edge, by cutting a small scollop. she then drew back the head, and began at the edge again, as nearly to touch the abdomen, and so continued till she had cut out a scollop of more than a tently of an inch across. I used a powerful pair of spectacles, and am very
Bees.-Though it appears that my name as an apiarian has obtained a pretty extensive circulation, yet, with the several years, I the prepuration of the $2 d$ edition of "The Honey Bee," the press. Amone the many apiarian to any portion of the Gurdeners' Chronicle, some of them, if they persevere in their apiarian researches, will see cause to modify certain premature opinions. There is no one whose general Wighton. In your Chronicle of April 22, Mr. Wighton obser Bees a la may be, I have no hesitation in saying it is founded in Mr. Wighton of his error, upon a matter in which, I am
certain, none would feel more interested than himself, provided he could have conclusive evidence of this sin gular trait of his favourite insects, I will refer him to page 379 of "The Honyy Bee," where he will find a simple
detail of facts relative to the detail of facts relative to the point upon which he is
heterodox. In order to furnish Mr. W. with some internal evidence upon the matter at issue, I will add, that Hust, it is not to be expected that I escaped imbibing some of his opinions - perhaps I might have said preju dices. Formost among these was my ridicule of the faithless but believing," the instance, as piven in "The Honey Bee, occurred in my own apiary. Among my other apiarian whims was one to have a Polish hive. In one of the entrances of this, about 2 ? inches in length, was the fortification placed. Not being a convenientlyshaped hive to feed the Bees in, the family died, and why this is mentioned, is to give another singular fact, viz., that during the next spring, other Bees, when cleaning out the hive as a preparation for taking possession when redecesso Mo Wive Mr When of atoning等
will suggest that he come on pilgrimage-he may "boi ur to render is penance as ight as is consistent with the heinous Mess of his
Scarlet Pelavgoniums.-In noticing Mr. Diplock's article on this subject in No. 19, I would not recommend him or any other person to adopt any new method, howver right it may appear, without first proving it small scale; but if he will, without prejudice, take six plants, and treat them precisely in the manner there laid in si, and twice that number raised in autumn, and kept in sixty-sized pots until turned out, I have not the least flower fower in greater profusion. It, perhaps, would be acceptale to some to know how to raise good plants from cut ings without bothomeat and with little trouble. In north and north, and taree nches of leas-mould are placed in the botcom and watered well, on that is put three inches of sand, or sand and leaf-mould; this is then rendered firm and level; the cuttings are then planted in rows, and clightly watered sethe twe soil about hem, leaving of the lights shading, water, shading, water, nor attention, farther than taking off any dead leaves that may happen to appear; and they will be firmly rooted in time to admit of being potted and rooted in the new soil, and hardened of before frost sets in. As Mr. Diplock never heard before of fresh green turf being used in the pot-culture of plants, I may state that I have pead that the late Mr. Knight grew his large Cockscombs in a mixture of green turf and fresh dung; and Mr. Diplock would do well to turn back to a late Number of the Gardeners' Chronicle, and he will find an article on the effects of patrid vegetables on the growth of plants. Its beneficial influence is there plainly shown; and, along $m$ experiments, this has thoroughly convinced me that decomposing vegetables are more beneficial for By gewth of plants than those which are decomposed. plapesing my article again, he will also find that the a suffien placed in very poor soll, and kept there until nutriment number of spongioles is formed to absorb the belief that it is length of time, that I never use such when I can get it in a fresh state. Not only do Scarlet Pelargoniums grow luxuriantly in it, but any other plants with succulent roots will do the same. I have at present a Cineraria Waterbousiana thus treated, that in March was in a sixty-sized pot, now one foot and a half high and two feet in diameter, branching out in every direction, and not yet in flower. It does not require a single stake to support it. Various other plants in a like state of luxuriance are growing in green turf and dung, and that, too, on The effe-shitt system. - Rovert P. Drummona. ing Scarlet Pelargoniums prescribed by Mr. Drummond having elicited from others an account of their practice, daye which for economy can equal that of Mr. Hall first awn whewise induced to send you my plan, which Hurdwicke, and have practised for nearly 20 years with success, without seeing any reason to change. I put the cuttings into small jots at once, which obviates an check they would receive when removing them, either from cutting-pots or the open ground. I do not miacl like the cuttings taken from the open border; they are generally too spongy, and as I am not in want of a graat number ine beds of mixed varieties, chiefly the old Vicolens, Fair Helen, Lady Essex, Emily, and Moore notso mady A dozen all I raire the pots whicls reserve supply with my Pain and cutting them down, arranging the prunings, as I cut them off, as nearly as I can aluhabetically fur the convenience of finding the sorts. When cut, I remove them into a shed; on the following morning I commence making them 48 cots ands. The scarlet ones 1 put into 60 or small of Vian place on a fue, which runs along the fron 18 inches, whe shading except what re struck when Ifords, and very little water, unci they on can give them plenty of air, and keep them there till the beginning of November, when I stow them away in a Vinery, which 1 intend to force about the beginning of ebruary. At that time, or earlier if the weather wil them admit of out-door work, 1 repot them, aud place them in another Vinery to be forced. By furbing-out tione, they are nice plants. The cuttiogs mu orts put in smaller pots and plunge in sa a gentle Water made the coves, cover about the cutting. They recpuire very little after, as their greatest enemy is damp. frequently they require scace shading, unless the sun is very hot. After they ar struck, they receive the same treatment as the scarle ones, unless I sometimes give them a larger pot in the
end of September or beginning of October.-J. Murdoch. Ahioul one several occasions been higuly gratiien by your observations on the subject feeberpioy and would glady lend my feeble aid to any effort that may be made in such a right ane call. I rear, nowever, that the tenant-farmer, and especially the man who holds a strong clay farm, will not eable to carry out such plans of improvement as youexcept the prospect before him should greatly improvehave often suggested; although it is quite certain that The real fact $i$, that such a prerson as I am here speaking
of is incapable of carrying on any extensive scheme of improvement, or, indeed, any improvement at all if is involve an immediate outlay. Clay farms, which mos need improvement, are so dependent upon seasons, tha those who occupy them can never raise themselves above
the cripoling effect ut low prices, even if those prices should cuntinue but for one season; and hence the first consequence of low prices upon all unimproved or but partially improved heavy soils, is, that the
labourer is thrown out of work. The next effect and which inevitably follows, is diminished produce which is never compensated for to farmers of this class generally just before harvest, when they are without a grain of corn of any kind for sale. It will be at once seen how this state of things is aggravated by the continuance of low prices if the unhappy tenant be left to his own he has no spirit or means for anything better-must tell upon him so fearfully that he quickly becomes a pensioner tunate friends. And as to the landlord, although be may, by means of the preference which the law allows him, have obtained the whole of his rent, i can have no difficulty in showing that under such circumstances as I bave -J. West, Newark.
Hibiscus cannabinus.-This plant is well known and very common in India, and is correctly described in of the flower is stated to be yellow, or, as I would rather call it, yellowish buff. Some few years ago, while in India, I had some seeds given to me, which were said to have oeen brought from the Himala in range by a gentleamong them there were the seeds of a plant, in which, on growing up, I was unable to discover any decided difference from the Hibiscus cannabinus, until it flowered When, instead of the buff of the common country plant, it turned out of a rich deep crimson or lake colour. In all other respects it resembled the Habiscus cannabinus, as
nearly as it well could, in every stage of its growth : and of nearly as it well could, in every stage of its growth : and of the various species of Hibiscus described in Loudon s
work, there is none with which it coincides except the cannabinus. I can scarcely think it is altogether unknown in British collections of exotics; yet it has appeared strange to me, in that case, that so important a feature as the colour of the flower (differing by such marked characters from that of the species described) should not have been noted, if they are both of one species; or if a
different species, that it should not have been more disdifferent species, that it should not have been more dis
tinctly described in a work like Loudon's Encyclopædia. Should it turn out a variety of the Hibiscus cannabinus not hitherto introduced or recognised, it may be a useful acquisition. I beg also to offer it to notice as a handsome showy flower, of a hardy character, appearing to me capable of being easily acclimated to endure the open air
of the southern parts of Britain. I have some young plants growing in pots, the seeds of which were sown in the middle of last month. Till they germinated they were kept in a room at a temperature of from $60^{\circ}$ to $65^{\circ}$; but since then they have been placed in another, the general the height of a bright day, with the sun shining into the room, when it rises to about $60^{\circ}$; notwithstanding the plants continue in a vigorous state. The plant grows well in common garden mould, and is of rapid growth, taking not more than from 5 to 6 months from the sowing to the ripening of the seeds. Hence I conceive it might be acclimated in a few years to the ordinary outprogressively approximating to this condition, each sacceeding generation becoming more hardy than its predecessor. The Hibiscus cannabinus is indicated in Loudon's "Encyclopædia" as a biennial.
more strictiy accordino win the whole process in India, from the sowing to the ripen(the rainy) season, from June to November ; and though the plants, if left in the ground, continue to vegetate a month or two longer, they die gradually off with the manth or of the hot season. $-J, H . H$.

Gentianella. - "O. P." will run little risk in parting his Goil of his garden is not too light The provided the they are transplanted must be fresh turned and broken smail; the plants should be put into the ground inomediately, well watered, and shaded with a mat for a few days, till they are established. I divided my Gentianella last year as above described, without any apparent injury; the only mistake I made was in separating the masses too the bloom has disappeared ; if left in the borders without moving, they increase so rapidly as to disfigure the parterres by their straggling leaves.-W.W. [We have seen this plant thriving in clay, rendered almost plastic by bearias up with water, and consequently quite hard during summer, and we are also aware that it thriven
admirably in peat, among Rhododendrons. It seems, admirably in peat, among Rhododendrons. It seems,
therefore, indifferent to soil, and it is probable that the therufore, indisterent to soil, and it is probable that the Tith planting it when in flower, or when first growing, and not when the seeds haveripened and the plant is at rest. 1 in a low damp situation in peat soil, and then let it grow maldo damp situation in peat soil, and then let it grow tbrow/out runners like the Strawherry, and bloom freely; and will soon fill the bed. $-V, P$.
Tulipss, I was present at the last grand Chiswick Flomer-Show, and was delighted with the exhibition, with
one single exception; viz, the absence of any Tulips, Which, in my opinion, detracted in no slight degree from
the beauty of the exhibition. A lint to the above effect the beauty of the exhibition. A hint to the above effect
in your valuable Journal, I thinks, would have its due weight in the proper quarter, and I may probably be the
cause of the introduction of the above valuable and beaucause of the introtuction of the above varuabe and beaution would be proportionally great, no doubt, for such a immediate neighbourliood of London.- A Subscriber. philus," I beg to inform him that I have this season tried to grow Asparagus in bottles over bottom-heat, but were six remarkably strong ones. I have also tried the bottle systen upon Asparagus in the open ground, with be brought to the perfection to which it is said to be brought by simply inverting a glass bottle over it, the used, which I believe are either wine or soda-water bottles. pint, as the Asparagus will fill them in a much shorter time, and will be mucls more tender. I cannot account season; I do not believe it was because of any benefit likely from the dressing of salt "C." had given it, it being a well-known fact that salt
for Asparagus-beds. $E$.
Netting for Wall-trees.-EEarly in the spring I placed a quantity of nets against some wall Fruit-trees, thinking been disappointed in this reaspect; for now I find that the trees which were sa protected are perfectly free from blight, while others, and even those immediately adjoining, for which 1 had no netting, are much injured by blight. The net was of twine, and used for preserving the blight. The net was of twine, and used for preserving the
fruit from birds when ripe-Coryoius. [By blight is, we presume, meant cold at night.]

Flomer-sho in Clay. the Flower-shows in the Chronicle of May 6, I find it stated that F. imbricata is hardy. This I can confirm, were put out in the open ground at the commencement were put out in the open ground at the commencement
of last winter, and have endured the inclemencies of the weather without the least injury, are quite healthy, and will soon flower. The Fabrenheit thermometer at its lowest was 17 deg, averaging upwards with the changes
of the weather. This place is between seven and eight miles east from Perth, in Scotland, and is 200 ft . above the level of the sea,--Peter Long, Gardener:

lecture. ROYAL AGRICULTURAL SOCIETY OF ENGLAND.
ThE anniversary meeting was held on the 22d of May, Earl Spencer in the chair, The following elections were made unani-
nously :-Presinent, Earl Speucer. Trustres : Sir T. Acland,
 of Richmond, Duke of Rutland, Earl Spencer, Duke of Suther-
Iand. VICc-PRESIDENTY: Duke of Buckinghan, Earl of Chiches-
ter, Earl of Duocie, Marquess of Exeter, Earl Titzwilliam, Sir T. Teoch, Bart., Sir C. Morgant, Bart., Duke of Northumberland,
Gord Portman, Earl Talbot, Duke of Wellington, Lord Worsley.

 Wood. II. Members re.elected from luast year's Counctll: Col
Austen, Hon. W. B. Baring, J. Benett, T. W. Bramsten, E. Buller Col. Challoner, J. W. Childers, H. Gibbs, Sir J. V. B. Johnstone

Pusey, F, Pym, Rev. W. Pusey, F, Pym, Rev. W. LL. Rham, J. V. Shelley, T. H. S.
Sotheron, W. R. Stansfield, H. Wilson. MI. New Members of

 in the accomplishment of the objects for which it was originally founded. The number of its Members now amounts to upwards
of 7,000 , no less than 1,436 having been elected during the past
 Mo the interest with which ifs objects arem, reararddd by the frientd of
ofricultural improvement, and the increased amount of subscripagricultural mprovement, and the increased amoun of susccip.
tion Thas added consideraily to the annual income of the society.
The Finance Committe have laid before the Council a highly The Finance Committce have laid before the Council a hhighly
satisfactory statement of the funds of the Society, and the result of their inquiry connected with the general receipt of subscription,
Not only has every claim against the Society been dischaxged, Not only has every claim against the society been orks.hactget,
and bills amounting to upwards of t, ooot, for the work exected by estimate and contract in preparing the present house for the
reception of the Society and the transaction of business, been
duly paid, but a further investment of capital has also been duly paid, but a further investment of capital has also been
effected by the purchase of 1,0002 . Stock in the New 3 d per Cents.; the total amount of the Society's funded property now amounting $1,200$. The Council steadily maintain their firm conviction that
the permanency and usefulness of the Society are dependent, in the permanency and usefulness of the Society are dependent, in
a great measure, upon the possession of such a fixed amount of reserved capital as will carry on, at all times, and under every they therefore not only receive with great satisfaction the result
of the Finance Committee's care and attention int thus husbanding the resorrces of the Soclety, and increasing annually its permanent investments, but they are also strongiy convinced of the absolute
necessity of abstainmg from embarking the Soc.ets's funds in any
iondithit speculations, and of strictly confinmg them to immediate objects cflegitimate and undoubted mpyortance. With respec confirmed the recommendation of the Finance Committee, tha
while would undertake the trouble, should be requested to favour the
Society with their inspection of the list of such subscriptions as Society with their inspection of the list of such subscriptions as
might be outstanding and unpaid in their respective neighbourmight be outstanding and unpaid in their respective neighoour-
hoods, and communicate at their discretion with the parties
whose names had been transmitted to them, the remittance of
subscriptions by means of Post-office orders should be generally
recommended by the Society to its Members, as the most direct, recommended by the Society to its Members, as the most direct,
practicuble, and secure; this system of payment having beeri
 enabled by its means to remit to the secretary, as it has become due, and from every part of the couniry, however remote, the
subscription of the year, and to botain by immediate return of
post an official notification subscriptiniof the year, and to obtain by immediate return of
post an officil notifcation of the recept:in and registration of
his money, lt has been chiefly by this means that no less a sum his money. It has been chitfly by this means that no less a sum
than 1,097l. has been received since last Christmas on account of arrears alone. The Council have decided that in future all subshiptions due in advance on the lst of January in each year,
siall be considered as in arrear on the Ist of June eusuing. The
Council, on mature deliberation, have rosolved to strike out from
the list of the society the names of those the list of the society the Dames of those Members who, pre-
viously to the date of the Charter, attended the early country
mectings, and paid the subscription of the then current year, mecthe temporary purpose solely of enjoying the privileges of
membership on those occasions, bit without any intention of becoming called upon for the subscriptions of sabsequent years. The
be cancling of these ciaims woudd greaty diminish the amount of
what has hitherto been viewedin what has hitherto been viewed in the light of arrears, while at the In the officiai department of the Socedent, the rapid increase in the amount of correspondence with so large a number of members,
and tile reception and accumulation of documents of every kind
in the various branches of the in the various branches of the currert business of the Society,
along with the multiplicity of accourats and numerous details
men requiring daily attention and great exactness, have rendered
further aid indispensable to enable the Secretary to meet and futher aid indispensable to enade the secretary to meet and
discreasing duties and responsibilities of his the members, the
ince; and in consequence of the linance Committee sine Cou ail have made a permanent addition of two clerks to be piaced under his ci he
trol suitable arrangements having also been effected in the
convenicnt adaptation of tine offices to the purposes of the daily convenicnt adaptation of the offices to the purposes of the daily
transaction of business. The Council have obtained, on reasonable conditions, a lease of the Society present house, for a term has been duly executed, and the common seal of the Society
afixed, in the presence of the Council, agreeably with the powers of the Charter. The Bristol Balance, Sheet has been laid before the Council, and the sum of $573 l$. ordered to be pard out of the
funds of the Society to meet the deficiency to that amount funse by the exceess of the expenditule over the recents at that
simeetirg. The Geheral Derby Committec have nearly completed
me mectre. The General Derby Committec have nearly completed July \&irectors of the Mitland Conaties' Rantway, to mulertake the supply of any number of spiccial tranus that may be rcauired on
the occasion, liberally proposing to receive only half-fares for the conveyance of cattle and farming implements, and no advance
on the usual faxes for passengers. The Counct have decided or Southampton as the place of the Annual Country Meeting of 1844; and have every reason to believe, that the selection they of the Society at large ond to the Agricultural population resid-
ond ing within the district, in the amount of accommodation to visl-
tors, which the town itself and its immediate neighbourhood are capabie of affording, and in the facility of communication with
every part of the kingdom. In order to diminish the expense attending the distribution of the Journal, the Coumcil have conpublication shall in future take place in half-yearly parts, the first of each year ; the whole volume for the year containing the same amount of matter as herctofore: and the first half-volume for
the present year will accordingly be issued in a few days, agree the present year will accordingly be issued in a few days, ngree-
ably with this new regulation. Dr. Playfair having resolved to
devote his att. devote his att.ntion exclusively to the study and practice of
Agricultural Chemi-try, and tol estabhish at the Royal Institution
at Manchester a Jahoratory for the pursuit and investration of this sulject, the Council have gladly avalled themselves of the
opportunity of appointing. him the consulting chemist to the Society, anhonorary designation, in virtue of which the Soclety will at all times be favoured with Dr. Playfair's gratuitous opinion,
on any question in that science submitted to him by the Council, while memstances, may, at any time, by applying to the Secretary, obtain the scale of Dr. Playfair's charges. The Journal Committee have reported the following adjudications of Prizes for Essays:-To sovereigns, for the best essay on the rotations of crops suited for Heavy lands. So Thomas Arkeld, of Pen Hill Farm, near Cofor
Harbour, byindo, Withsire, the prize of 50 sovereigns for of the ncat mode of under diainng lamt, yegard being
anad to variety had to variety of soil, subsoil, and other local circumstances. To JAmes Cowir, of the Maing of Haulkerton, Laulencekirk,
Scotland, the prize of 10 sovercigns for the best Essay on the
comparative advantages in the employment comparative advantages in the employment of horses and oxel
in farming work. To W. F. Karierk, of Truro, Cornwall, the prize of 20 sovereigns for the best explanation of the causes
which appear to determine the production of fat and muscle respectively, according to the present state of our knowledge of on the Management of Farm-yard Manure, and artificial Manures or Hand Tillages, are stil under the consideration of the Judgees and subjects of the Essays, for 1844 , the conditions of which will be given in the ensuing half-volume of the Journal. I. For the por milch cows, 20 sovereigns. 2. For the best Essay on the
for influence of climate upon cultivation within the limits of Grea Britain and Ireland, 30 sovereigns. 3. For the best Essay on the indications which are practical guides
or karrenness of the soil, 50 sovereign of the present state of the agriculture of the countr of Norfolk 50 sovereigns. 5 . For the best report of the prescils
agriculture of the county of chester, bo sovercigns. best report of the present state of the agriculture of the county of Essex, 50 sovereigns. 7 . For the best report of the pres. 8 .
state of the agricuture of the county of Wilts, 50 sovereigns. For the best account of improvements made by artificial at culti-
of soil from the sea or tule rivers, and the subsciuext vation of the land, 20 sovereigns. 9 . For the best account of the cheapest way of keeping farn horses in good conders, Essay onl
winter and summer, 20 sovereigns, 10 . For the best Esial
any agricultural subject, 20 sovereigns. Mr. R. Barker laid any agricultural subject, 20 sovereigns, My. R. Barker, and
before the Meeting the following Census of Members, abstract of Accounts:-Life Governors, 101; Annual Governorary
200; Life Members, 399 ; Annual Members, 6551 ; Honorar HALY-YEAELX Abstract

NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL
RHoDodendron Roxlissonir．Garden variety，（Half－hardy
Shrub．）－In many respects this very striking plant so resembles Rhododendron nobile，the Ceylon variety of $R$ ．arbo－ which they are arranged，that we supposed it must be it． 13 ut upon comparing it with wild specimens from Ceylon we find that
the Rhododendron of that island has leaves silvery underneath， while in the plant before us they are rusty．It is therefore clear origin was we do not know．It is among the la，
crowd omest of the crowd of varieties，called hybrids，which tempt the buyer at Mars by Mr．Lee，of Hammersmith，but its flowers are much
more compact．There is a common belief that the Indian Rho dodendron ought to be hardy，because it is found in Nepal．But
Dr．Royle tells us（Illustrations，p． 258 ）that it is only found at Himalaya．It is true that it snstains considerable cold in winter and better enable a plant to resist the climate．If the niost mild，how much more so must those be to the southward，and that Mr．Walker assures us that the shoots of the Rhododendron Hence of continued cold mornings，which blight everything situation than the old $R$ ．arboreum．The plants，after flowering，
sthould be kept in a warm pit，and rather close，to encourare the should be kept in a warm pit，and rather close，to encourage the dressing of fresh cow－dumg and plenty of water．It is increase E＇CuIUM PLETRAMM，The Rnck Bugloss．（Greenhouse Ho，Hit
ceous Plant．）Boraginacee．Pentandria Monognia．This is
beautiful herbaceons plant，

 Garden Welden，and flowered beaatifully in a cool greenhouse in May．At that time it was the gayest little pluat possible，with
its neat clcan leaves，stiff stems，about nine inches high，and pale bluc flowers，which are pink before they operi．It is a pretty is rather poor， 1 l must be kept in a dry，airy situation，in a cold
pit，where there is plenty of light at all times，but particularly and May，but is dificult to preserve throught the winter，as it is
very subject to damp off，even when the plants are old．It is
increased by seed freely，or by cuttings of the young wood Botanical Register．

## MISCELLANEOUS

Treatment of Amaryllis Belladonna in Pots．－This is a plant of the easiest growth，generally blooming in Sep－ tember and October，and adding much at that season to the
beauty of the greenhouse or parlour．The soil best suited beauty of the greenhouse or parlour．The soil best suited
to the bulb is composed of $\frac{x}{2}$ sandy loam，I leaf－mould，and $\frac{1}{4}$ old hotbed manure，with sand in the proportion of nearly 8 of the whole．The bulbs should be potted in August or sike of potsherds，coarse at the bote good drainge，with broken the pots with the compost；place in the bulb，setting it duwn so as to leave about one－third of the top above the surface；finish with a good watering through a fine rose， creenhouse where a place the pots in a rame or in the produce their flowers．But it is after this that the bulbs require the most attention，to make them bloom well another year；for upon the growth of the leaves，and the entirely its future excellence．As soon as the flowers have faded，the stem may be cut off just above the bulb； will begin to months they will have acquired their full size，and waterw ing should then be gradually diminished until the foliage is completely dried up．During their growth the plants should be placed in a sunny situation，and as near the glass as convenient．When the bulbs have completed their growth，which will probably be in the month of shelf，turning the pots upon their sides，but not shaking out the bulbs．Here they may remain until August or September，when the operation of repotting should com－ september，when the operaing of Magazine of Horticulture．

American Willows．－＂In some few places a few miles up（Black and Polyer Rivers，Mosquito territory，）the land is low and swompy and arvered territory，the The importance of the Willow－tree has been acknowledged from time immemorial．Ropes and baskets made from Eurow－twigs are of ancient date．In many parts of Europe，especially France，the leaves，in the green or dried very good food．The bors and horses，sud are considered be used in tanning；and the leaves are also applied medi－ cinally．＂－Young＇s Mosquito Sher
Culture of the Vine in Bengal．－Mr．W．Storm，in his garden at Chamdanee，near Ghirettee，has for some time past paid much attention to the growth of the Vine， and we bad the gratification，a few days since，of seeing well－formed berries，and promising an abundant crop of fruit，which，from ts early formation，will ripen long be－ fore the gales，the severe hot weather，or the rains can set in．Other Vines，too，at the same place are covered with lastly ，others again just putting forth leaves；and， plete a course of succession fruit．Mr．Storm has secured his early fruiting by adopting a system of extensive his Vines the ；so treated；add then each successive week it until the whole have passed under the ko as to continue on the successful result of this experiment as opening a new era，as it were，in the fruit－garden；and we may with conndence recommend the system to those who may wish to cultivate the Grape．A few years ago it was a general fruit in Bengal，but，as a rarity ；it is now shown that we may shortly expect our tables to groan beneath a plen－ tiful supply，－Planter＇s Journal．
arrival from the Ber－ Colonel Reid，which for excellencen by the governor， anything known in Europe．This should encourage the West India Planters to turn their attention to the cultir ation of Potatoes rather than Yams，which are not nearly

## 埌的化的：

Flora odorala；or a characteristic Arrangement of sueet－ scented Flowers and Shrubs，ge．，（Orr and Co．），is an useful particulars relating to the more framrant of our cul－ tivated plants．The idea was a happy one，and we dare the meanwhile the worked out in greater detail．In acceptable to many．It is，wor plants，and as the vegetation of not thern countries is not so remarkable for fragrance as that of warmer latitudes，the list is not very extensive．

Milton＇s Practical Beekeeper（Parker）is another of those useful and entertaining contributions to the litera－
ture of Bees which the late few years have produced. Its most peculiar feature is a description, with figures, of a great many different sorts of hives, and a practical account of their respective merits. In this respect we regard Mr. Milton's book as peculiarly useful. It also contains many good instructions for the management of Bees, and a collection of passages from numerous writers on Beecraft. We understand that Mr. Milton deals in the hives he describes, so that those who are ambitious of trying the various ways of management which Bee-authors have described, have an opportunity of doing so, in the most advantageous manner, by his assistance and that of his boots.
A Calendar for Young Farmers. By Cuthbert Johnson, Esq. Ridgway.
A simple, plain, and practical work for the guidance of young farmer is much wanted, and might be most extensively useful. When we received a copy of this work, we opened it with a high expectation of its merits, coming from the well-known prolific pen of the author. We must confess that, as is often the case where there are high expectations, we have been disappointed. The
work before us consists of short questions and answers as to the operations on a farm for each month, intended no doubt to point out the most important objects of attention for that period. In this it resembles the headings of the months in most common almanacs. The most important part of the information is given in the notes, and con-
sists of copious quotations from the "Farmer's Encyclopredia," by the same author, and of other works. Many things well suited for an Encyclopredia may not be so as a foundation for a practical system of farming, ncticate follow without danger of failure. Many of the recomfollow without danger of failure. Many of the recom-
mendations in the notes are founded on facts and experiments, by no means certain and universally admitted; and some are directly contrary to the erperience of many practical farmers. We will only give a very few instances Salt is invariably recommended to be mized with composts, or used directly on the land. We were startled at pare 6, by a direction to add a bushel of salt to every cubic foot of earth, or pond maud, intended to be carried
on the land : but we found afterwards that this was an error of the press, and that a cubic yard was meant, as in page 16. As a general rule, we cannot admit even this page 1.. As a general ruie, on gravel it would be soon ashed out and lost : on clay it might do harm if the weather was very dry and its nse is doubtful weather was warley (we presume Spring Barlen in Winter Ber. Band ( Winter Barley is sow a own in devary, plant as Spring Barley, which a cold, wet February, such plant as Spring Barley, which a cols,
Fellowz are to be broken up in March. We believe that this practice has been abandoned very nearly a century end that all good farmers in heavy lands now break up their fallows before winter, and if they have an opportunity to do so early, give them a second ploughing or ridgin up before Christmas: no notice is taken of this in Octo A curious mistake, copied from the "Farmer's Alma nac," is made as to the value of different fodder, (note p. 14). As we could not understand this, we looked at the article in the "Journal of the Royal Agricultural
Society of Eugland," and found out the mistake. Instead $f$ latter math bay being eand to the mistake. Instead when good hay is $100,102 \mathrm{lbs}$. of latter math hay are only equal to 100 lbs good hay, and 90 lbs . of clover hay are of the same value, and so on-which is unintelligible: the richer the fodder, the less is required. A very young farmer might be puzzled by this table.
There is, no doubt, a great deal of good matter in the notes, which, if systematically arranged and put into the form of positive instructions, under the correcting hand of an experienced practical farmer, might be very useful. be derived from it to the young and inexperienced. The most important directions with respect to ploughing, sowing, and reaping the crops are entirely omitted, or only incidentally alluded to.
It is with reluctance that we criticise the production of a meritorious author, Who, with the assistance of those lent manual for young farmers. The work has been too hastily compiled.- $M$.
CALENDAR OF OPERATIUNS for the ensuing week A.r the china, Teac-scented, and Bourbon Roses, that have
bect forced since last Christmas will now be on the decine, and
should he well pruned back and all the weaker shoots cut , at should be well pruned back, and all the weaker shrots cut out
entirely. There are many of them so fertile for blooming as to
continue in flower ment to let them do so, as there will be no want of hoses for the

 that have als, been forced throughout the winter should now be
entirely cut down to the surface of the pots, and viaced in a
shaded place. It will not anfer shaded place. It will not answer to prune Briars, that have been
forced, like other Roses. They et shard in the wood by being
constantly deprived of their foliaee, that nothing short of cutting down will bring them about anain, but by this system the same
dlants will do for years, and answer better than young ones. The

 clieap ones indeed, their ch
reason for pointing them out.

CHEN-GARDEN AND ORCHARD.
Pinsey, -I once knew a good gardener who had three-fourths of his fruiting Pines frully swelled about this time of the year, and
to all appearance likely to ripen at one time. He turned out half of them into a close, cold pit, and anter three weoks he began managed to make a lone succession of them. After the sucens sion and younger plants are potted, shade them a little in the midclle of the day, and keep them close and in a moist atmosphere till they take freely to the new soil.
VINERY. -Keep thinning the berze
as they advance; which, besides syringing and giving air, is the principal work now in Vineries.
for some weeks yet, till theres.- These nust take their chance ventilated and dry all night, and the glass as much down as pos-
Melons.-As your earliest plants ripen off their fruit, be ready with a stock of healthy, stout plants, to ffll up the frames again;
first taking the precaution to whitewash the sides of the pots. first taking the precaution to whirewash the sides or the pots.
The rafters and woodwork should aiso be painted now, if they require it. A ilttle of the surface-soll may be thrown away, and
the rest stirred up, adding a portion of freshil soil. This is ten
times better and easie times betier and easier than struggling away io get a second
crop from the same llants. Kecp your uther plants thin at all tumes, aud sce that the fruit does not get hurt by lying too long
in the same position. By no means let the bottom-heat decline, tholigh the weather be ever so warm.
KIDNEY-BEANS,-If
come up tbick, now is a good time to thin then,, and plant the thinnings in pots for forcing, if you have not already succession
enough on hand to supply you till they are ready in the open ground.
Never did the crops of fruit and vecctables look better at this Pears are in general so thresent season. Peaches, Cherries, and
that unless they are well thinned they will not be good for much besides exhausting the trees.
Did you save a goond licap of dung for tlie Celery trenclies. if nat, you must get some prepared. Have you netting enough to and the shins free from weeds? If not, it may be worth whinle to
say tlat one good weeling is better than three hocings and say that one good weeding is better than threc horings alind
rakinge. IIded, except for covering seeds and gathering off
stones, the rake should not be much used in Asparagus will be much improved if the beds do not get dry this is the proper time to cultivate Asparagus, although half of the Le Lis Bys are a very useful vegetabie in winter, and this is about the best time to plant them out from the sed. beds.
ONrows are often injured by being left too thick in the rows. Thin, sow, and plant your succession crops as their different
Obciard. - The wall-trees have hitherto been almost fre hem, nd must be prepared for their deestruction. You canno
pay too much atent pay too much attention to thinning, stopping, and training the
summer growths. See that none of the trees have more than a air crop. The late rains were so favourable to the lawns that
there is no want of short grass this season for the Strawberry beds. The green Gooseberries are swelling fast now, and will
soon be fit to gather. soon be fit to gather. II.-FLOWER-GARDEN AND SHRUBBERY,
STove.-Of all plants stove ones are the most easy to manage
and to propagate; that is, in a general way, But they must have abundance of room for their roots, and not be too crowded in the heads. Large quantities ond heat, with the atmosphiere kept sweet by free ventiation, is the life of these plants. In the great
nurseries, they shade their stoves regularty in hot weather. It saves watering, and young plants grow with more freedom und is the worst possible plan to shade them. Graminiousc. - There is nothing more general or more difficnit none same house. But the thmg cannot by any possibility be
done anything like perfection. House- plants, in our climate, must have large portions of water thrown over or among them, to keep up a moist atmosphere while they are growing, und fower
will not stand this with impunity.
CONSERYATORY,-Plants in flower here must be constantl shaded while the sun is strong on the glass. I have often heard ladies say, while viewing the large Pelargoniums at the Chiswick plants trained in the same way. Nothing is easier, if you have
plenty of plants of each sort to be so trained. When the plants are just coming into flower, put four or five of them into one large ittle training, you can at of the plants atwards and, with size ; and if the soil is good, the plants will flower much longer in
this way. I regularly adopt this plan, and find it very useful with many other plants, as well as with pelargoniums. The

Flower-gardening for the next four months is the most pleasan plants, to fill up vacancies as they occur. This is a subject that fower-beds need show no want of flowers till the end of Sepafter insects, no one forgets.-D. Beaton, shrubland Payd Gooking

## State of the Weather near London for the Week ending June 1,1843 , ation observed At the Horticultural Garden, Chiswick.

and

## REPORT ON COVENT-GARDEN MARKE For the Week ending June 3, 1843 .

The continued wetness of the season, and the greater warmth that has been lately experienced, have rendered all those articles
which flourish in the open air far superior this week partcularly the caso with Currants and Gooseberries, Peas, toes ares, Cawbage, Turnips, \&ce, and the Carrots and New Pota-
tine fine. Artichokes are also now supulied, with good French Beans, fine autumn-sown Onions, inimense Turmil Radishes, and very superior Cauliflowers. Pine-apples are
unusually and Nectarines are much improved. Graves, likewise, are better and most abundant; and Strawberries are exceedingly plentiful
The latter are principally Keen's Seedlings but thert besides, some handsome Myatt's British Queen Phere ard mondib, Genista triquetra, Polygala cordifolia, different kinds o Verbena, $\& c_{\text {., are a among the piants in pots; and Iris germanica }}$ Lilium bulbircrum, Jasminum revointum, the Yellow Barksian Rhse, the Double-10werech Senecio elegans, My Mosotis palustris,
the Double Rocket, and the Doubie Red Hawthorn, are the chief

blargonyms.-C. Tr. Thurtell, R.N.-Phosphorus is a flowe of great beanty of colour; the delicate tinge of blue in the
centre imparts great lrilliancy to the rich and fine rose-colour of the lower petais; the rosy crimson ground-colour of the upper petals is also very fine, although it is in a degree robbed

## NEWN OF THE WEEK

The Christening of the infant Priucess, by the names Royal of Du-a members of the Royal alace, in the presence of various State. The Royal Fainily, and of the great Officers of the week have relatim both Houses of Parlimment during Ireland, which at present occuptes so large a share of public attention. In the Lords, on Tuesday, the Duke cellor of Ireland ind the proceedings of the Lord ('lan. cellor of Hetand in dismissing Lord Ffrenel and other magistrates who had presidid at Rape:l meetmge, a.d Gord chancellor, in the opinion of the avernwent, had only performed his duty in endeavouring sappress agitation. Lord Aberdeen on Tharsday brought in a bill relative to the admission of ministers to second reading and explain its provisions shill move it s assembles after the Whitsun recess. . ${ }^{2}$ In the the House the second reading of the Irish Arms Bill, after a debate The Re nights, has been carried by a majrity of 103 Canadian whe the resolutions on the iup rtation of When Mr. M. Gilson moved as an anendment that the and flow and flour into the United Kingdom should not be made ag the impusition or maintenance of a the importation of fore'gn corn into Canad mendment was opposed by Ministers, and uceatived on a aion by 193 to 83 . Leave was then giren to bing froin Lord J. Russell against the Imperiul a protest bing restratued from altering or reptaln,g it. when uther riews prevaled on the subject of the Corn Lins. The
 the whea. Lord Worsley mored as an anendurent that ong deade a second a divise that day six months. reading was carried by a major.ty of 109. The s the meetings to maintain a formilalie are increasing in frequency, and are everywhe of Jreland by large and excited masses of the people. Troops have this week been despatched to Ireland in considerable numbers, and all the garrisons in the Irish provinces have been strongthened by fresi reinforcements.
A telegraphic despratch from Paris reached town yesetday, announcug the anival of the Inda man, with accounts from India to the 2d of May, and from C.i.i.a to the Isth of March. The affuirs of sc.tide were tranquil, though some troubles had taken place at Sirhind, and a scrivus cngagement had beea fought at h. hytul. The death of Commissioner Elepou was the only ncws at On M, Lut frein athans to Canton with the ratification of the yemty but weyond this brief summary is at ?present knonn.-Frums Spaiu our intelligence continues to be biglly inter esting. The Cortes were dissolved on the 26 th ult., and another general election will take place forthwith. The be in a state of great excitement, and the immediate sus pension of the Regency is said to be the first object of the disaffected. The National Guard of Madrid, however have openly declared their allegiance to the Regent, and be surmounted without an appeal to military interference.

## Thame Niems

Court.-The Queen and Prince Albert, accompanied by the Princess Ruyal, arrived in town on Tuesday afterby the Princess Ruyal, arrived Prom Claremont. The Prince of Wales and the infant Princess, accompanied by the Dowager Lady Lyttelton, followed in another carriage. On Wednesday and Thursday her Majesty and Prince Albert took a drive in an open carriage and four. A grand dinner was given on Wednesday evening at Buckingham Palace, to the Queen Dowager, the Royal Family, and the directors of the Concerts of Ancient Music, of which Prince Albert had undertaken the direction, for the Earl of Westmore-
land. After the dinner her Majesty and the Royal party land. After the dinner her Majesty and Concert; and on attended the performance of the Concert; and the Italian Opera with their presence. On the same
day Prince Albert laid the foundation stone of the Royal day Prince Albert laid the foundation stone of the Royal
Naval School at Counter-bill, near Deptford. Her Naval School at Counter-hill, near Deptford.
Majesty will leave town this day for Claremont, remain there during the Whitsun holidays.-It is rumoured that, previous to the nuptials of the Princess
Augusta of Cambridge with the Grand Duke of MecklenAugusta of Cambridge with the Grand Duke of Mecklen-
burgh, an application will be made to Parlament, by Ministers, to settle an annuity on that princess of 3,000 . per annum. The ceremony is now understood to be fixed Hanover arrived in town yesterday, having finally determined to pay his long-expected visit to England, on the occasion of the Christening of the infant princess.- Their Royal Highnesses the Duke and Duchess of Cambridge, Prince George and the Princess Augusta, and the Hereditary Grand Duke of Mecklenburgh Strelitz, honoured the Duke of Devonshire with their company on Tuesday, at the public breakfast given by his Grace, at his residence, Hon. Charles Grey in the duties of Equerry in Waiting on her Majesty, and Major-General Sir E. Bowater has relieved Colonel Wylde as Equerry in Waiting on Prince Albert.
Christening of the Infant Princess.-The second daughter of her Majesty and Prince Albert was yesterday Cabinet Ministers, and others, who had been invited to the solemnity, assembled in the Old Dining-room at Buckingham Palace, at twelve o'clock, and upon their arrival were conducted the Archbishops of Canterbury and York, the Bishops of London and Norwich, the Dean of Carlisle, the Hon. and Rev. C. L. Courtenay, Archdeacon Wilberforce, and Lord Wriothestey Russel, Canon or wad not arrived at quarter past 2 oclock, consequently his Majesty, who was to have stood sponsor for the Royal infant, was represented by proxy. The Duchess of Kent appeared as proxy for the Princess of Hohenlohe Langenberg, and the Grand Hereditary Prince of Saxe Coburg and Gotha; who, with the Princess Sophia Matilda, were the sponsors. Her Majesty the Queen, Prince Albert, the Queen Dowager, and other Royal personages, took their seats in the Chapel Royal shortly after 12 oclock, attended by the $_{\text {Great Officers of the Household, and the attendauts }}$ forming the suites of the members of the Royal Family and visitors, who arranged themselves on either side of the chapel. The service commenced with the performance of
sacred music. When the music had ceased the Lord Chamsacred music. When the music had ceased the Lord Cham-
berlain, accompanied by the Groom of the Stole to his Royal Highness Prince Albert, conducted the infant Princess into the chapel; her Royal Highness was carried
by the head nurse, attended by the Dowager Lady Lyttelton. Upon the conclusion of the Baptismal Service, her Royal Highness was reconducted from the chapel in the same way. As soon as the ceremony was concluded,
her Majesty and Prince Albert, her Majesty the Queen her Majesty and Prince Albert, her Majesty the Queen Dowager, the Archbishops, the sponsors, and the other Royal personages, returned to the Queen's apartments in the same order as they entered the chapel. The visitors proceeded to the Long Gallery, to partake of a collation
with her Majesty and the Royal Family. The Baptismal with her Majesty and the Royal Family. The Baptismal ceremony was performed by the Archbishop of Canter-
bury, and the Royal infant received the names of Alice Maud Mary.
Judges' Cirouits.-The Judges sat on Thursday in the Exchequer Chamber, and selected their circuits during the approaching summer Assizes. The following is the arrangement:-Norfolk Circuit, Lorabenwan and baron Baron Parke; Midland Circuit, Lord Abinger and Justice Pattison; North Wales, Baron Gurney; South Wales, Baron Rolfe; Oxford Circuit, Justice Williams and Justice Erskine; Northern Circuit, Justice Wightman and Justice Cresswell. Justice Coltman remains in to wn. -: Pesi Office. The Post-office convention with. France came into operation on Thursday. In the new regulations the former principle that the English charge a single rate
for letters under balf an ounce, while the French limit themselves to a single rate only when the letter is under one quarter of an ounce, is still preserved, but the English one quarter of an ounce, is still preserved, but the English
rate to France is reduced from $10 d$. to $5 d$., the French rate being reduced to $5 d$. also ; and the payment of these rate being reduced to $5 d$. also; and the payment of these
two rates will be all that is required for the convevance a letter to any part of France or Algeria. These letters must be left unpaid, or else they must be paid the whole rate to their destination Jikewise reduced to $5 d$., a rate on to other countries is ikewise reduced to $5 d$, a rate on letters under a quarter of an ounce; the other foreign rates varying according to the limit to which the letter
is paid. To Turkey, the Levant, the Archipelago, Greece,
the Ionian Islands, Austria, Venetian Lombardy, Switzerland, Belgium, Germany, and Holland, letters may be sent by paying only the British rate of postage, if they are specially addressed via France; but to Spain and Portugal, paid. To Alexandria, Constantinople, the Dardanelles, paid. To Alexandria, Constantinople, the Dardaneiles, Smyrna, and Tuscany, the letters, when not sent by French packets vià Marseilles, may be unpaid or paid to destination. English newspapers sent to France by packet will go free of postage, or by private ship on payment of a penny, while French newspapers sent here will pay a
hallpenny. To and from other countries viù France, the rates on newspapers will be a halfpenny from Spain, Id from Greece (by the French packets), ad. the East Indies
any other place in the Mediterranean and the (by the monthly mail), and $2 d$. from other countries. It must be distinctly recollected, that on all letters a foreign
rate is added to the lowest postage for every quarter of an ounce, while an English rate is only added for the half ounce. The departure of the mail to Yndia vid Marseilles
is postponed to Tuesday next, the 6 th inst. postponed to Tuesday next, the 6th in

Prance.-There is little news this week in the Paris papers. The Constitutionel states that the Government the Emperor French free access to his dominions upon the same footing as the English, and that in consequence of this intelligence a naval division is about to be sent into the Chinese Seas, under the command of a Rear-Admiral, and con sequently it will be composed of several frigates and other Ghps-of-war. - The committee appointed by the Chamber in France, have terminated their labours. According to their report, the number of refugees amounts to ajout 790 Italians, and 333 Germans. The following telegraphic despatch from Gen. De Bar was received in Paris on Sunday:- "Algiers, May 23.-The Duc d'Aumale writes to me on the 20 th May, from his camp at Cha-bounia:- The 8mala of Abdel-Kader is caped, and his regular infantry killed or dispersed. Four flags, a cannon, two ordnance carriages, immense booty, large tribes and flocks have fallen into our hands.' The Prince must have arrived on the 22 d a Boghar. His column will conduct the prizes into the Metidjah. The mother and sister of Abdel-Kader The night interrupted the despatch at this pportant point, and the sicr disappointment was experienced at the Tuileries when the
result was known. The darkness having interrupted the communication, and sister of Abdel-Kader have--" hopes were indulge till sunrise that the remainder of the despatch would announce the capture of the two Princesses. The up, but it was as follows :-" The mother and sister of Abclel-Kader have escaped." The Journal des Débats states that smala is the name given by the Arabs to the
tents, family, domestics, and riches of a chieftain, and hat this coup de main has probably been executed in the direction of Gougilat, an oasis of the minor desert, which other despatches, though representing affairs as every where prosperous, detail but unimportant movements and
skirmishes, amidst which we find Abdel-Kader still skirmishes, amidst which we find Abdel-Kader still harassing his foes and escaping their grasp, and the rench perpetrating raszias on such thbes as favou which has yielded near two thousand captives of both sexes, three or four hundred horses, and twelve thousand head of cattle.
Spann.-A telegraphic despatch aunounces that the new Cortes were summoned to August. All was tranquil in the capital, but travellers rom saragossa and Barcelona state that a movement had National Guard, and troops had agreed to demand the restoration of the Lopez ministry. In Arragon and Catalonia it is said to be the intention to proclaim, with the aid of the Deputies who have quitted Madrid, the immediate suspension of the Regency, and the declaration o the Queen's majority. All the chief towns are agreed declaration of its intention. The Barcelona municipality is disposed to follow the movement, but will not commence. The sittings of the Cortes previous to the diswere very stormy. No sooner was it know that Señ. Lopez had finally resigned, than a message was sen to the Regent by the Chamber, praying hino, indeed, to his acting constitutionally. The Regent replied that his acceptance of Lopez's resignation was constitutional, and hat he would act in the manner he deemed the mos adve hall the new President of the Council, Gomez Becerra, and his colleague of the War Department, Gen. Hoyos, were insulted. A stone was thrown at the former, which dual was arrested who had attempted to stab him. The wo ministers succeeded in entering a carriage, and with the ministers and Anglo Ayacuchos !" "Down la libertad!" The glass of M. Mendizabel's carriage Was smashed on the same day, and it was believed
that he would have incurred some personal danger had he
not prudently avoided attending the sitting of the Deputies. That of the Senate was far more pacific ; the deputation entrusted with the presentation of the Address in reply to the speech from the throne succeeded in moving safely to and from the Regent's palace, though it included General Linage among its members. The troops were till kept in their barracks, and a part of the garrison The coalition journals published a number of most violen and olmost revolutionary articles; one them, in which the peope were thatl were deceived heple 1 M. Lopez himself. They failed, however, in creating the slightest agitation, and a bull-fight which took place on the next day passed off quietly. On the 21 st, the nine regiments of the National Guards, to show how little they pproved of the movement, ordered their bands to unite nd give a serenade to the Regent.: Most of the Guards thenselves attended, as well as a multitude of people Atter some music, the crow shouted, Long live the Regent," to which the latter replied by appearing on the
balcony. He thus addressed those present-" Nationals ! Nove have more than you comprehended my wishes, Whichare as her you wishes, war, derence constitution, of the throne of your innocent and young Queen, and the maintenance of national independence Such are my aims. As Regent, as soldier, and as citizen, will with you defend the constitution, national independ ence, and liberty." The Regent added, "Long live the Queen, the Constitution, the brave Nationals, and thei vivas for the Regent. Serenades were given by the same bands to the Ministers, Becerra and Mendizabal.-The official Gazette contains two important documents. By one of them, the Minister of Finance, Senor Mendizaba orders that the extraordinary contribution of $3,000,000$ reals, raised at Barcelona in consequence of the lat insurrection, shall be restored to that city. The other document is a circular letter of the Minister of the Inte ror, containing the promise of a general amnesty, by hich all Spaniards sentenced for political crimes commit ed since sept. 1, 1840, are set free, whether in prison all the emigrants who have not undergone trial
Portugal --We have accounts from Lisbon to the $22 d$ ult. The arrival of the Princes of the Cobourg amiy, and The Cortss some weeks longer. The budget and other financial mea sures were coming under discussion. The ministerial Bill, reducing duties on foreign goods imported into Madeira to one-half, had passed the Deputies. Coal is admitted free, and the privilege was ordered to be extended to the Azores. The question of extending the whole Bill to those islands had been referred to a committee. At Lisbon business was generally complained of; but the export of wine from Oporto, and the amount of Custom driesed during at the principal Culow-house, had in having ceased, though some uncertainty still prevailed on having cease
Germany.-The first debate in the Diet of the Prus sian Rhenish provinces, opened at Dusseldorf on the 14 th ult, was on the subject of giving complete and verbal
publicity to the transactions of the Diet. The result was a petition to his Majesty, for the purpose of appointing an hose notes shoula be published.-Th Emperor of Austria opened the Hungarian Diet at Ropal propositions were afterwards submitted to the Assembly. One of them referred to the respective positions of the different religious worships, to the right of individuals not belonging to the nobility to purchase landed properiy, the means of promoting trade, \&c. The papers announ of Prince Metternich, at Vienna, on the l4th ult, the day of the 70th anniversary of Prince Metternich's birth.We learn from Munich, that a site has been selected for the house which the King of Bavaria has ordered to b built after the model of the ancient Romans, and for that purpose an architect and a painter have been sent th Naples to examine and to study all the particulars of th best preserved private buildings at Pompeii and Hercula neum. The extensive collection of ancient utensils and furniture which his Majesty at various times received as presents from the King of Naples will be sufficient to urnish the House
Iraty.-The Pope's joumey through the southern provinces of his dominions is described as a perfec trixumph. The populations of the most distant villages meet him on his road, to offer him presents, and to receive his benediction. In one small town the corporation presented him with an equestrian statue of their patron sall cast of solid silver, and would almost with main forcs have placed this mark of their affectiffily, envinced them that it would be better for the saint to remain where he had been for so many centuries.
DENMARK. - It was announced in the French papers few days bagen that journalist of that city, charged with libel, had, the absolete law, been thrown into a durgeon, and sept on bread and water. By another letter brought to trinl and acquitted, and the crown has beed condemned to the costs of the suit

Russia. - On the 8th ult., the Emperor of Russia Russia, -- On the Minister of Finance, ordering that a loan should be made for the sum of $8,000,000$ of
silver roubles, for the year 1844, This loan is intended
to defray the expenses of constructing the railroad from to defray the expenses of constructing the railroad from
St. Petersburg to Moscows St. Petersburg to Moscow
Turkey.-Constantiuople letters of the 3 d ult. meation that Sarim Effendi, Minister of Foreign Affairs, has
been dismissed, and replaced by Rifaat Bey, Envoy at been dismissed, and replaced by Rifat Bey, Envoy at
Vienna, Khosrew Pacha's accession to power was said Vienna. Khosrew Pacha's accession to power was said
to have been prevented by Sir Stratford Canning and M. Bourqueney, on the ground that he was too Russinn. The funcral of one of the young Sultanas, daughter of his
Highness, who died on the 30 th April, took place with much pomp on the lst ult., in presence of all the Minister and principal functionaries of the empire. The Turks of Bosnia have broken out in insurrection, and made an repulsed, but they besieged it and other fortresses, demanding that the Pacha and the Arnauts be sent away, states that they have seen a letter from the Dublin papers tradicts the report of the murder of Capts. Connolly and Ecco. stodhart, oy the barbarians in Bokhara. The is generally centaidered to require confirmation.
EGXPT, -Letters from Alexandria announce that Mehetinued in a precarious state of health at Cairo, which gave might ensue should he die before his father us Said which the second son, was considered incompetent to pown such a country as Egypt. The Augsburg Gaxette publishes 2lst ult, station that two ships laden with alem Cairo been captured by British cruizers in the Red Seaves, had latitude of Sanaken, and that the captains of the ships had been hanged at the mainmast. The two slave ships were escorted (the bodies of the two captains still hanging from at liberty. This example is said to have intimidated the

## United Sta

rrised aral mail-steamer Hibernia the afternoon of the 16 th ult., and Halifax on the evening of the 19 th, and has made the passage in the remarkably shor between Boston and Liverpool. The Caledonia, from Liverpool, for Boston and Halifax, was spoken about half pool, arrived sage of 12 days and 13 hours. Mr. Webster has resigned declined the mission to China, Mr. Cushing, the gentleman Who was recently rejected by the senate as Secretary of the A cry for repudiation of the debt of Maryland had been raised ; but the more honourable part of the community of that state was too strong for the democrats, and the docIn the letter of a Philadelphia correspondent of the New York papers, dated May 15, is the following paragraph :"The keeper of the lighthouse at Thatcher's Island, Cape The last Kingston papers mention that Sir C. Bagot had gon papealth and that Mr. Cholmondeley formerly on the staff, is on his way to New York, for the spite to Quebec, an New York for Sir C. Bagot, in his present condition, to emabark from. A vessel arrived at New York on the 15th one of the three islands called Caymans, Cuba and Jamaica, was sunk by an earthquake ; but more recent advices, received by H.M.S. Warspite, state that been received that the report of the intended canal across the 1sthmus of Darien being nearly completed, is iscorrect; and that the two years allowed the contractor to prepare attempt whatever being made toward its fulfilment.

Brazils.-The Malabar has arrived from Rio, which Hon. Henry Ellis, the British Envoy to the Brazilian Government, the failure of whose negotiations for the some time. On the 18 th ult., while in full sail, the island of Terceira being in sight, though at some distance, the She was immediately brought to, but no bottom wos found with 189 fathoms of line; and it might have been the effects of a submarine explosion, though this fact will be ascerlained on her bottom being examined.
Livendwich Islands.- Accoun have been received at Liverpool, announcirg that the Sandwich Tslands were Fere taken possession of by Lord George Paulet, of Her Majesty's Ship Carysfort, next day.-The New York papers mention the arrival of a smal vessel at that port
froma Oahu, which had for part of her cargo 6,100 bags of sugar. "To import sugars, it adas, from the most distant Pacific Istands into the Unted states is a remarkable feature in trade. The industry of the people of
these islands is now very succesfilly employed in raising the cane, and they will shortly compete with the West Indies in supplying a part of the world, at least, with that great staple, sugar.

## HOUSE OF COMMONS

Monday, - Sir G. Crark, OF COMMONS. the Peninsula, the Meditcor ranean, and the West Indies, should
in future be despatched from Sonthampton in and that this arrangement would come into operation as soon as the Postmaster-General could make the necessary alterations for
so doing.-Amongst the other preifininary business, there was a as to the use of her Majesty's namen, and other Irish members of the union and the dismissal of Lord Frfench and other Trish
magistrates.-Sir J. GulAHAI said that the Cord Charicelior o magkstrates.- Sir J. GuAhAn said that the Lord Charicelior of
Ireland had recived general directions to use all his official of her Majesty's namercout liad been done under the direction of both sides or the House, moved the usual amnual vote of thanks to their chaplain, for the sermon which he bad that day preached
to the House, in commemoration of the restoration of Charles II., and which was ordered to be printed. He said the laughter
arose, he presumed, from the fact that only six or eight members were present in St . Margaret's, with the Speaker and the mace.
The report on the resolutions on the importation of Canadian
 of Canada whent and flour into the binted Kingtidm, it is 110t
 RTNG.-Lord STANLAY declined re-opening the question, which
had been so recently discussed, and affirmed by a majority of two to one. He, however, briefiy replied to the speeches of the mover
and seconder of the amendment. - Mr. THokNELX adverted to Lord Ashburton's declaration, that the tariff of the United States had been passed for revenue purposes only. His own experience,
derive from a visit toA America last autumn, enabled him to affrm
that the current opinion of the Americans themelves was, that that the current opinion of the Americans themselves was, that
it was passed for protection, in order to foster American manu.
for
 cipple in the Canadian measure, which was, in fact, tre creation
of a Corn-law in canada, and therefore an expedient to raise the price of food. We ought rather to present inducements to
emingrants to settle in the colony, instead of adding to the tempt.
ation ation presented to them. of proceeding to the United States.- On
a division, the amendment was rejected by 195 to 83 . On the question, that leave be given to bring in a bill founded on the
 sounder views prevailed. Leave was then given to bring in
the bill-Sir J. the bill. - Sir J. GRARAMI then moved the consideration of the
Lords' amendments on the Registration of Voters Bill, which were agreed to. Lord Elion, who briefly adverted to the past legislation on the subject of the importation of arms into IJeland amd their regis-

testimony, he coited various cases of violence and forcible entries
into houses of tecent occurrence, as well as the fumber

 pikes and daygers, some slight moditication is to be made in the
existin existing law, which leaves at present no alternative but trans
portation. In this matter a discretion is now to be piven to the

sen precedents; but as he had never been a party to the precedents
he moved the postponement of the second reading to that day
six monthis.-Lord Crsamsrs seconded the motion, only regret-
ting that it was not a direction to the Sergeant-at-Arms to kick
the bill out of the House. He admitted that Lord Eliot, in drag the bill out of the House. He admitted that Lord Eliot, in drag-
ging the "monster" before them, had stated the case fairly
but it was melancholy to see the Governmen such a measura, instead of amending the laws relating to tolle It was absurd to say worse outrages were committed in Ireland
than in England: were not people shot at in the streets of
London and Manchester? Nay, what was the charecter of the outrages on her Majesty? You call them mad, said the noble lord, and the theory seemed to be, that murders were com-
nitted by madmen in England, and by Roman Catholics in
 ain coetc ye meanitres: and adduced a mans of documentary
evidence relative to the past legislation of cocrcion, ino orcer to
prove the uselessness of the present measure, the provisions of
which the magistracy of Ireland, as a body, would not enforce, which the magistracy of Ireland, as a body, would not enforce,
though individuals might look to it as a means of oppression an revelnge. If they were to legislate for Piccadilly as they did for
Ireland, they would find the mhabitants of that quarter as dis-
contented as the people of Treland approving of coercion, supportee this bul, because it would
prevent m much mischief. The measure was only a prellminary confident that the Government would undertake to cure the
evils of freand.-Mr. SHEIL said if he were satisfied that auch
an Arms 1311 world be cfictual for th esul prosion of crince in lrcland, te would give it a reluctant but strcmunoms anj mint. requiring other methods of care. One was a great defect in the
administration of justice-the mode of employng witneskes for
the Crown, by which informers were bribed, and honest witnesses left wholly unprotccted, Crown prosecutions were got
ap with injurious plic.pitancy; and the power of challeaging
jurors was also exercised to the obstruction orjected to the Arms Bill, because obstruction of justice. He
the means of defence, without taking from the ruffian the man of of aggression; and, above all, because it established a distinc "Repeal the Union-restore the Heptarchy!" But they wer teaching Irelaud tiat with different legislation there ought to
be different legislators. The bill wais sall not to he new bont it

 of Wellington, whose fame filled the world. Sastle, and the Duke himself joined in a similar denunciation, and had asked if such a cipation had not produced its desired resuits. Bath lad it been agneeded earlier-had it been granted in 1825, when they hadagreed that the Catholic clergy should receive a salary from the
State, and thus be connected by a venture to say what would have been the result, but it would have
been very different from the results of that measure been very differentifrom the results of that measure, which wasspusc of commons with a preparcd and sternly niconcinatory he had mixed up the name of our beloved Sovereign. What had
been the course in 1837, on the accession of the Queen ? occasion Lord Johm Russell, in officially confirming the Lord-
Lieutenant in his office, had been commanded by her Majesty to express her satisfaction at the tranquillity of Ireland, and her
wishes for its welfare. The young Queen had read of his country; she had fell that for great wrong there was great commanded her then Home Secretary to give utterance to those sentiments of gentleness and mercy by which she was animated.
What was the condition of Ireland now? -what the difference between the Government of a Whig and Tory Administration? had been governed as Ireland was still; but they now gave it a
liberal governor, who did not even belong to their party, and they had called to the functions of office men who had been hunted to
the death. Pursue a sinilar course in Ireland; carry out the Ehe death. Pursue a simular course in Ireland; carry out the
Emancipation Bill; conciliate the clergy ; strip the agitators of
their three-fold panoply; and the whole past history of the world their three-fold panoply; and the whole past history of the world
informed them what would be the result.
The ATTORAM-Givinal. for 1 reland reforred to the fact, that

## 

 denounced as a violation of the consticution. He entered into statistical and other details, vindicatory of the necessity of the pre-sent measure, butadmitted that the question of an Arms Biil for
Ireland was Treland was one of some doubtfulness, aud to be fitly considered
by the House; and replied in detail to some of the argumnents of
Lord Clements and Mr they considered involved in "juntice to lreland."
Lord J. Russem admiticd that it wan tuninestionably true that
the
$\qquad$ the people-a policy whoce results requircd net a $1 n g l e$ act of
the Leglslature, but the continuedoper tion of a wise poliey. In
this he, as Home Secretary, and Loras Normanby and Morpeth had been well seconded by the late sir Michael O'Loghlen,
whose memory was now justiy revered. They also had filed
offices with men in whom their countrymen had confdence, and
the sympathies of the people of Ireland had been sought. But the sympathies of the people of Ireland had been sought. But
this course had not now been pursued they had filled the benct
the of justice whth individuals whose attachments were no with the
maj rity, hat the minority; and their treatment of the irish maj rity, hat the minority; and their treatment of the frish

 it had been actuated: would, for instance, such a man as Sir
Michael O. Loghlen have been promoted ly the reresent Goven-
ment? He could not vote against the second reading of the Arms

 and wonld apain promote tranquility in ireland he was hot
afraid of a civil wart but he felt the importance of a conciliatory
policy. -The debate was adiouned and after some routine

 contradcting a stateinent of Sir $R$ R. Peel, who had said that the
Greek Loan had been guaranteed by the late Government; whereas it was the Governmer.
Minister was a leading member
The adounrned debate was then resumed by Mr. Ross, who said The adjourned debate was then resumed by Mr. Ross, who said
he was the last in the world to depreceiate the act of emaciipa-
tion, butit had been obtained ata areat acrice for it had pros-
treat trated the forty-shilling freeholders, and had practically put
stop to further amelorating measures for Ireand
strish
sto

 he intended to propose amendments in order to mitigate its
strintency, and hoped that when passed it would not hereafter
be used for purposes of oppression and industice.-Mr. Reatno be used for purposes of oppression and injustice-Mor Redino-
Ton crticised the provisions of bie bill, which, though stated to
be only a renewal and consolidation of the existing law, contained new and stringent enactraents, as absurd as they were
severe. There was nuthing in the condition of freland requiring
treatment different from that of England. The recent riots in the neighbourrond of Manchester were caused by men with
arms in their hands, and the account of the outbreak not only accomuts of the French exploitt in Algeria. Yet no proposal
was made to disarm these rioters, or to prevent them repeating their conduct. He cited returns to show that there was a
 people by exageerated statements both of evis endured, and o
 Jrelnnd at heart considered necessary. - Mr. Smiti O'Brien pro-
tested against the bill, for which no case had been made
out. The best mude of repressing the outrages was by improving the condition of the country, and protecting the people
from oppresive treatment on the part of the landlords. He
warned the Government that the hill in its present shape would encouster a division on every clause.-Captain Larard bore
testimony to the goad qualities of the Ir,als poople amd appealed
to both English and Scotel members not to vote for a neasure which was an ontrage to their feelings and liberties.-Mr,
Warsont though an Englishman, yet, as an Irishil representative,
felt it his duty ito protest againgt a bill which placed eight millions of our fellow-citizens beyond the pale of the constitu-
tion. Ireland required peace, but instend of peace, they gave
her an Arms Bill. Was Irelaud to be the victim of coercion,

 Shen's brilliant speech of the previous evening, arguments for
the necessity of the Arms Bull. He vicwed it not as a coercive
ricazure, Uut as a protection to the innocent and well disposed. - Mir. C. Bur Ler did not consider the bill itself a matter of much
importance, seeing it was, on the whole, but a continuation of
an old law which had beenl supported by both pari ies. But it
was of impopotance when viewed in comnection with the spirit of
 meastre

1. ishan to give an opinion on the repeal of the Union, which
injut to be deprected more ly the penple of treand than by th i country. But for the last two centuries the misgovernment
if lrelar d was the scandal of Christendom , while all Europe had

committed in rreland, far exceeding those commited in England in proportion to the population of the two countriec, as profs of the mecessity of continuing this or some simiar
quoted the admission made by Mr. Sheil, that in the pp
zent state of society in Ireland there was no chance ti sent state of class of petty jurors would perform thiei
the orinary
daties, from very fear, and that it required a higher class of men and better protected against outrage than at prescrit, to perform the duties-as the strongest argument it in Ireland was not
of this biti. The existing state of society in Ir
new, but an old and jongcontinued one, and the enliactment proposed were not new, but old enactments, He then eiltered
into a history of the nunierous Arms Bill and the Coercion Binl
int and showed that, so far as Liberal precedents would go, he hatd
plinty of them in support of the proposed measure. He claimed credit for the Government for having endeavoured to conciliate
all parties in Ireland, and declared that it would be worse than madness in the present state and circumstances of Ireland. - Thie
the bill
Earl quently spowe against ihe seond reading: and arter some
remarks by Mr. Romsuck, Sir R. PREr concluded this long debate by charging those who now clamourect a, aninst the bil as a vio-
lation of the b.11 of Rights and of the common law, and as an
insult to Ireland, with having abandoned their Parlianientary dinties when they supported a similar one in 1841, out of com
plaisance to the Goverrment of the day. He repeated the asser any refercine to the prresent state of things in Ireland, but in then, to decide was, whether any bill was or was not necessary
for the regulation of the possession of nrms in Ireland. ${ }^{\text {The }}$ necessity was fully proved by the admissions of Mr. Sheil, ada the
hon Members on his side of the House.-The Hoane having
divided, there were -for the second reading, 270; Against it 103air, Mr. W.S. O'Brien moved as an amendment, for by the peesent state of Ireland, but withdrew it without goivg
foll Thzursday. -The Speaker took the chair at the usual hour, but
torter Members present at 4 o'clock, the Foure and, On the motion that the House at its rising adjourn
To Thursday, a conversation took place on the state of Irelant Lord J. Russinit explained that the late Government had offercd
not the Chief Baronship, but the Mastership of the Rolls to Mr.
not now taking place in Ireapand, acconapanied with ditsmisasais of
magistrates, were creating great alarm, piving an undue impetus to the Repal agitation, and producing general
embarrassment. - Sic RoskrT Pekr, in revil deprecated ail
 division,-On the motion for the second reading of the Canad
Wheat and Flour Bill, Lord WonsLEx moved that it be read that bers took part, and on a division the second reading was carried
by 209 to 109 .

STetropolis amo its Wiciníty.
Despatch of Troops for Ireland.--Her Majesty's steamfrigate Cyclops was lying totally dismantled on Saturday
last at Woolwich, and the engineers of the dock-yard had
disconnected part of her machinery for the purpose of repairing her. On Sunday morning at $40^{\circ}$ 'clock, she was commissioned by Captain Austin, and the following day by 4 P.M., she was completely rigged, had got her large Arsenal board, with ammunition and stores lom tord including 300 tons of coals, and was in every respect read for sea within the short space of 36 hours. Lieut., Colonel Burton, of the Royal Marines embarked at a late hour
 ni large detachment of Marines from Chatham. The crem large uetachment than 175 men, me crew for the preat number of troops 145 only will be taken from the gund hip at Sheerness for the purpose of man rong her The teame lientenant Jeayes, has ano sailad fort phe it is expected she ill be ordered to asni in convering a part of the Marives intended to proceed to Ireland. We learn from Porls mouth that the Bhe mbarked Maior Castienu, three Lieutenants sixty suners four 6-pounders, and two howitzers, and sailed immediately for Dublin. The entire number of Marines, including officers and privates, embarked from that division, will be grat 280. Rear-Admiral Bowles, it is shid, will hoist his flag in the Malabar, and be stationed on the Irish coas
Testimonial to Lord Morpeth.-The committee for completing the Morpeth Testimonial having determined to present the address to his Lordship without delay, the ceremony was performed on Tuesday at stafford-1ouse the residence of his Grace the Duke of Sutherland. The presentation took place in the great hall of stafford-house, gallery. Lord Morpeth acknowledged the compliment in a speech of great feeling, and declared that whatever may be the impressions produced by his recent travels in the western worid, he has returned more than ever attached to the institutions of his own country
Royal Nacalsolor ong tie anniver sary of Lord Howe's victory, the ceremony of laying the Rodatsone of the ins ther was permed by his Royal Highness Prince Albert. The Bishop of Rocheste oin prayers, after which the -reasurers presented some the stone ; the stone was lowered, and the Prince, with his mallet and trowel, completed the ceremony. Anothe salute was fired, and the band of the Royal Marines played "Rule Britannia," amidst the shouts and applause of apwaras of 1,50 persons, who had obtained and one of the boys from the school delivered a brief address to his Royal Highness, thanking him for his kindness in endeavouring to promote the prosperity of the schaol. The mallet which was used by Prince Albert was made from one of the timbers of Lord Nelson's ship, the Victory. New Zealand Company.-The half-yearly meeting of the directors and shareholders of this company was heid that the directors bames in at Wellington in July last of numerous settlers from Sydney, with capital, and large importations of live stock had taken place. During the half-year ending Nidsummer, from England, Sydney, and other places, was 126 registering $1684^{2}$ tons; and the customs duties durin the same period amounted to $8,000 \mathrm{l}$. The population of the colony of Nelson already numbered 3,500 souls, and the number of ships arriving at that port in the half-year ending Midsummer, 1842, was 58 ; the customs revenue being 2,000\%. Coal had been found on the river Mokaw and limestone at Moturoa. Some differences had unfortunately arisen between the natives and settlers in the anstrict of New Plymouth; but they had been entirel Emigntion had been carried on during the last season to Emig a considerable excal, settlements in ships chartered by the cyed the se tellington, 4,431. Nelson, 3 335, New Plyp 1,030 ; 0 r00 Duris the last year Phymoud, l, ship arisen of German so 1 . arisen wh respect the Zealand the Hop The report then proceeded to give a financial statement of the compan's por from she the total and the lialle tompany aso showing a surplus in favour of the company of 130171 s s. 11d , which, with $150,000 \mathrm{l}$, the estimated value of additional lands receivabie from the Government in virtue of expenditure to the 5 th 280 April of the present year, gave ad by resurplus fidere perch upon the half-year Mr. Lyall, M.R., moved the adoption of the report, that a divicend of two-and-a-half per cent. be dechared for that hali-year ending the bta or prilan, and that Courtenay, M.P., and Mr. E. Gibbon Wakefiela, ve eled directors in the place of Captain John He , and W. Moles worth, who reired. unanimously, On the motion of Mr. Russell Ellice the thanks of the proprietors were given to the governor, dipuy of the and directors, for their general good manag company's affairs.
Ani-Com-Law League.-On Monday another large meeting of the Anti-Cor11-aw League was held in the the
of Commerce, Threadneedle-street, Mr. G. Wilson in the
chair. The Chairman, in opening the proceedings, said he had great pleasure in again conferring with them on a subject of no secondary importance either to thens or the the country at large. They were not met to discuss the
merits of the two sliding-scales of 1828 and 1842 ; it was mo part of their task to reconcile the different opinions of these in favour of a 10 s , and those in favour of a 5 s , fixed duty; nor did they care whether the old or the new Canadian Corn Bill was the more favourable for smug ging. They were here on the part of a numerous body when and where they thought proper. All the interests of the community were represented on that platformthe agricultural by Lord Ducie, the professions by Mr Moore, and Parliament by Mr. Cobden, M.P. He begged in progress for enrolling members in the City of London. Three out of their four members had voted agaiust the principles of free trade on a recent occasion, but such a tircumstance would never happen again if a majority of the electors were enroled as memor the Anti-CornLavt League. The meeting was then addressed at gacie, Mr. Moore, and Mr. Cobden. Anii-Slavery Convention.-The committee of th British and Foreign Anti-Slavery society have completed all the necessary arrangements previous to the holding of the Anti-Slavery Convention. The sittings will com mence at ten o'clock on Tuesday morning, the 13 th inst.
at Freemasons' Hall; and Mr. Thomas Clarkson has con sented to preside
Anniversary Meeling of Charity Children at Si. Paul's. _On Thursday the imposing assemblage of upwards of 6000 children educated at the parochial schools of the custom, in St. Paul's Cathedral, and was, as usual attended by a great number of the nobility and gentry, and by the Duke of Cambridge. The Sermon was preached by the Bishop of Salisbury. A very large subscription was made at the doors, which
Excise Seizures.-At the Excise Court on Thursday James Walton, wholesale and retail tea-dealer, of 129, Bishopsgate-street-without, was charged with having in cated as tea, and adulterated with carbonate of copper and gum-arabic. The penalties were laid at 1000l. under the Act 4 George MI., c. 14 , sec. 12 , which imposed a penalty Excise stated that, on the 26 th April, be went to the shop of the defendant, 129 , Bishopsgate-street-without, and requested to examine his stock of tea. After a minute search, he discovered two bags, weighing 2 abs., which, leaves that had been used and re-dried. Mr. G. Phillips, the chemist, stated that he had tested parcels of the tea, and that he found them adulterated with carbonate ing matter. He found leaves which he believed to be ing inatter. The found leaves which he believed to be yellow and Dutch pinks. By the aid of acids and precipitates he had succeeded in reducing the copper to a metallic form. The leaves, on being immersed in water for some time, changed from green to their original for some time, changed from green to their original
colour, black. By damping the leaves and placing them colour, black. By damping the leaves and placing them
upon paper, the colouring that had been used was clearly upon paper, the colouring that had been used was clearly
perceptible. A solicitor for the defendant said it would be fruitless to struggle against the charge, and he should confine himself to the question of mitigation. His client had never been charged before, although he had been in
business for twenty years, and had a large family to supiness for twenty years, and had a The Court said that this was most gross case, Which had been fully proved, and their judgment was, that the defendant be fined in the penalty of $260 l_{\text {. - }}$ Charles White Cressy, tea-dealer, of 86 , Kent-street, Charles White Cressy, tea-dealer, of 86 , Kent-street, 176 lbs of dried and coloured leaves, adulterated to represent tea. An officer proved finding four large bags con-
cealed in defendant's shop, who said he purchased it as cealed in defendant's shop, who said he purchased it as
sea-damaged tea from a person named Johnson, of Sea-damaged tea from a person named Bethnal-green, for 1 s .9 d . per lb ., but had no bill of parcels or receipts, as he always paid ready money. It Was adulterated with gum or some other glutinous matter.
$\mathrm{Mr}_{\mathrm{r}}$. Phillins said he had tested it, and found the adulteraMr. Phillips said he had tested it, and found the adulteration with gum varying from 25 to 18 per cent. The
Court fined the defendant in the mitigated penalty of $250 \%$.

The Temple Church.-On Sunday, their Royal Highnesses the Duke and Duchess and Prince George of bers of the Royal Family, with the Duke and Duchess of Sutherland, the Greek Minister, Lords Brougham and Morpeth, attended divine service at the Temple Church. After service, their Royal Ilighuesses proceeded to the Hall of the Middle Temple, where they honoured the benchers of the Middle and Ioner Temple by partaking of a dejeunce. The Duke of Cambridge, in reply to a short address of Lord Brougham, observed how happy bencher of the Hon. Society; to which Mr. Thesiger replied. With the exception of the Queen Dowager, who Visited the Church and Hall a few days since, these places lave not been honoured by any member of the Royal beautiful screen wrought from some of the material that formed a part of the Spanish Armada, together with several spears, helmets, and frelocks, that now grace the gallery of the Hall, were presented.

Elpctron of an Alderman.- The inhabitants of ColeHunter, Alderman of that Ward, in the place of Sir W

Heygate, who had vacated his gown on being elected City Chamberlain

Wall.-At the meeting of the Institute of Architects on Monday night, Mr. G. Godwin, at the request of several members of the Society of Antiquaries, drew the attention of the institute to the threatened demolition of the remaining portion of old London wall, at the back of the houses in Trinity-square, Tower-hill, with the view of inducing their aid in favour of its preservation. He stated that this interesting remnant of antiquity bounds the western side of a plot of vacant ground in Georgestreet, dn which it is proposed to build a church and seight from 20 to 25 feet. It is faced with masonry in regular courses, and shows occasional layers of Roman bricks, especially in the lower part on the east side, recently exposed to view by the removal of some vaults and sheds, where they are seen to occur at regular inter-
vals. At a period less eminent for the preservation of ancient monuments than the present day, the wall was strengthened at the northern angle and coped with brickwork, and is consequently in a tolerable state of repair. Lord Northampton, who was in the chair, suggested that the council should communicate with the society of Antiquaries on the stobject, and present a joiat memorial, which he hoped might bave the effect of saving the wall.

Thames Tunneb.-During the tro months since the tunnel has been opened there have passed through, and paid toll, 675,640 persons
Spitalfields' School of Design.-The second annual meeting of this School was held last week, at Crosbyhall, for the purpose of receiving the Committee's report of the proceedings of the School during the past year, and for the distribution of prizes to those pupils whose merit in the art of drawing and debigning entitled them to the distinction. Lord R. Grosvenor presided, supported by Lord Colborne, Messrs. Cockerell, Dillon, Etty, James, Hanbury, \&c. His Lordship congratulated the friends and supporters of the School on the progress which the School of Design was making in the public estimation. IIe directed attention to the distinction which France had attained in this respect; and observed that England, which had long been her rival in war, was now preparing to become her "rival"-though in a friendly way-in the more glorious arts of peace. He complimented the pupils on their progress, and having encouraged them to sufficient in England to compete, if cultivated, with any other country in the world. From the report it appeared that there are now 180 pupils in the School, including the children of weavers, wood-carvers, cabinet-makers, ac., income, from the establishment of the School up to the 25 th Marcts, amounted to 257 l . 16 s . 5 d ., and the expenditure to $252 l$. $16 s$. The report further stated that the net proceeds of the ball at the Upera-house, under the patroninvested in Exchequer bills as a "f building" fund. The prizes were then distributed, and the

The Nelson Column.-The committee, consisting the Duke of Northumberland, the Marquess of NorthCockburn, John Barrow, H, Inglis, and P. Laurie, and Messrs. C. Wood, Wilson Croker, and Sydney Herbert, met on Friday to consider whether the Corinthian capital should be gilt or bronzed. The committee agreed that it should be bronzed, as gilding would be inconsistent tained that 600 l . more would be required of the public to enable the committee to complete the capital and statue. St. Paul's Churoh, Knightsbridge.-The Bishop of London consecrated this church on Monday morning. large number of the nobility and gentry of the neighbour. of were present at the ceremony. The church is capable a cost of 11,000l. The Rev. W.J. Bennett, M.A., of Christ Church, Oxford, has been presented to the incumbency. Miss Milford's Subscription.-We Wre happy to find Miss Mitford has been so far successful, that in a letter to the Rev. W. Kinsey she writes:-"You will, I know, be glad to hear that things are going on well, so far as the subscription is concerned. The debts are all paid, and friends wished in their kindness ; for my own part, I was ever more set upon the payment of the debts, but now both parties are gratified
The Parker Society.-On Tuesday the onnual meeting of this Society, instituted for the publication of the works of the fathers and early writers of the English Church, The report announced that the receipts for the past year showed a considerable increase over the preceding, and that the number of subscribers was between 6000 and
7000 . Amongst the works which had recently been printed were the writings of Archdeacon Philpot, the
remains of Archbishop Grindal, the Zurich Letters, and other interesting works. The subscriptions for the present year required an issue of 7,500 copies, and amongst the writings of Bishop intended to be issued were the early Archbishop Cranmer. These would be followed by reprints of the works of Jewell, Ridley, Coverdale, Latimer, Governesses Benevolent Institution.-A meeting was held last week, at the Hanover-square Rooms, for the purpose of passing a resolution and adopting measures governesses while suffering from sickness, or when too
advanced in age to continue the exertions necessary for of Cambridge objects in view: :" 1 . To afford assistance, privately aud delicately (as in the Literary Fund) to English governesses delicately (as in the Literary Fund) to English governesses
in temporary distress. 2. When a sufficient sum shall have been accumulated, to grant annuities to governesses in their old age. 3. When a sufficient number of names shall have beea furnished, to open a provident fund, by which governesses may, by their own subscriptions, secure annuities for thenselves." The proceedings were of the most satisfactory character, and the sum subscribed in the room amounted to nearly 500 l .
Fancy Fair at Greenwich.-The town of Greenwich on Thursday presented a lively and attractive appearance, in Fancy Fair of the crown of vise Fancy far held the paiated chamber or Greenwich Hospitar in aid of the funds of the stipwrecked Fishermen and Mariners Benevolent Socicty. The articles exnibited cor salo consisted of ald society who officiated at the stalls were the Countess of Ifaddington, Lady Saraln Ingestre, Lady Caroline Legge, Lady Georgiana Bathurst, Lady Byron, Lady Aylmer, Lady Bloomfield, Lady Charlotfe Berkeley, Lady Stafford, the Hon. Lady Stopford, Lady Seymour, and Lady
Dymoke. The fair was again resumed yesterday, and Dymoke. The fair was again resumed yesterday, and Accidents.-On Thursday afternoon, an accident of a Leslie street, frolvile. He had just armved in Gracechurchin the acm is country seat at Roehampton, and. Whilst me act of descending the steps of the vehicle, another oribus came rapidly up, and before Mr. Melvile could reach the pavement he was knocked cown, and the wheels passed over hinl. He was taken up quite insensible, and Deacyed to the banking-house of Messrs. Williams, Deacon, and Co., Birchin-lane, of which firm he is a Hospital. On left leg had been fractured in two places, his right leg much injured, an extensive lacerated wound across the forehead, besides several contusions on varions parts of his body. The fractured limb was immediately set, and the hon. gentienan is going on as favourabiy as can be expected. Mr. Melville is between 50 and 60 years of age, learn by the Brighton papers that his Grace the Duke of Richmond met with an accident a few days ago. He was thrown from his pony, which started suddenly, and a bullet, which his Grace's medical attendants have never been able to extract, being slightly displaced, caused great pain and induced fainting. Assistance being soon and is now doing well

Mortality of the Metropolis.-The following is the number of Deaths registered in the week ending Saturday, May $20:-$ West districts, 139 ; North districts, $164 ;$ Central districts, 181; East districts, 192; South disWeekly average for the last five years, 903-(461 males, 442 females, ) and for the last five springs, 854.

Aylesbury.-After the lapse of two centuries since the death of John Hampden, a monument is about to be raised to his memory on Chagrove-neld, where he lost gested some time ago by Lord Nugent, and is now to be carried into effect by the efforts of his Lordship, assisted by the Duke of Bedford, the Marquess of Bredalbane, the Farl of Buckinghamshire, Lords Brougham, Denman, Lovelace, Leigh, Fortescue, and other gentlemen. The fenment consists of a large block of Porland stone, on a feet high, surmounted by a Ceppo Cap, and resting on a the leading on one side to the village of Chalgrore, and on the other to Warpsgrove farm-house. It was here that repulsed the main body of the Parliament troops under Gunter and Cross was encountered by Hampden, who led a party of horse to the attack from the direction of Warpsgrove, and received his death-wounds shot by some of the prince, nho limed the hedge which still incloses the south side of the lape. On the side of the monument facing Warpsgrove is his medallion portrait, in bold ,relief, by Scoular; on the opposite scribe by and on the cribers by whom the monumen from the pen of Lord fourth is the following this field of Chalgrove, John Hampden, after an able and strenuous but unsuccessful resistance in Parliament, and before the judges of the and, to the measures of an aroitrary court, frst took arms, assembling the oxford in 1642 . "And here, within a Buck paces of this spot, he received the wound of which he died while fighting in defence of the free monarchy and ancient liberties of England, June 18, 7643 . In the two ancient rear from that day this stone was raised in reverence to his memory." A dinner will be given on in the chair, in commemoration of the 200th anniversary

Kendal.-The inmates of Brougham Ih, i. it e: 'f Lord Brougham, were on Tuesday week stupuat in the appearance of Mr. Bird and his family, "Bind's Nest" to
the father of Lord Brougham, subsequently named
Brougham fall, who took possession of the premises. Brougham Hall,) who took possession of the premises. A few weeks ago some part of the family entered upon
the estates contiguous, in the occupation of some of the the estates contiguous, in the occupation of some of the
tenants, but after three or four days' occupation withdrew tenants, but after three or four days' occupation withdrew,
and returned home. For this trespass it appears Lord and returned home. For this trespass it appears Lord Brougham thought proper, through his solicitor, to serve
each of the parties witl a writ ; to this the family of Bird put in an appearance, when it is stated Lord Brougham declined following up the matter, thinking the writ would effect an intimidation. The Birds have at length taken possession a second time, and entered upon the Hall, and now require to see by what autbority the property is withleld, since they state they are satisfied the entail was never broken, and that their relative ( $\mathrm{Mr}_{\text {r }}$. Bird) had no time will give a proper title. They remained on the premises until Friday last, when they were forcibly ejected, and are waiting at Penrith for further
Liverpool.-It is only three weeks since we had to record the particulars of an alarming fire that occurred in houses, situate between the Duke's and King's Docks. We have now again to describe another conflagration, which broke out on Saturday evening last, in the western wing of the same pile, and has proved little less extensive, of property. In the brief interval there have been two other destructive fires in this town, one in Formby-street, Friday week. The fire of Saturday evening was discovered shortly after the men had quitted work, when third warehouses from the western end of the range. I spite of all the endeavours that were made, the fire story of the second and third warehouses, where its further progress mas arrested, the whole of the four stories below proing saved. In consequence of the fire having broken out under very suspicious circumstances, the magistrates of the borough instituted a lengthened investigation into its origin on Monday. The inquiry was private, and was It was adjourned for the purpose of affording time for It was adjourned for the purpose of affording time for several witnesses were examined, and that their evidence several witnesses were examined, and that their evidence
left no doubt upon the minds of the maristrates upon the left no doubt upon the minds of the magistrates upon the
main object of the inquiry, namely, that the fire was the main object of the inquiry, namely, that the fire was the
work of an incendiary, at present unknown. The total amount of property destroyed is not less than from 10,0006 . o $15,000 \%$., independently of the damage to the buildings. into the conduct of the parties implicated in the late disturbances belween the military and police was bronght to were ordered to find two sureties in 25l. each, for their appearance to answer the charge of riot and assaule at the sureties in $15 l$. eacb, to keep the pence fur three months,
and all the rest were discharged. Ou Monday a Military and all the rest were discharged. Ou Monday a Military
inquiry into the disturbance was commenced in the Regent-road Barracks, in consequence of an order issued
from the Horse Guards. Lord Charles Wellesley, Colonel of the regiment, came down from London to attend the investigation, by direction of the Duke of Wellington. the reginent was called out into the barrack-yard, and formed into a solid square by Lord C. Wellesley. His Lord ship then addressed the officers and men, saying, that "i the General commanding this district a very favourable account of the behavinur, divcipline, order, and condition pleasing intelligence should be followed by reports of painful a nature. He had come to Manchester to inves tigate the accuracy of these reports; and it was his determination that such investigation should be conducted with the strictest impartiality and severity, and to punish al proved offenders to the utmost rigour of civil and military law. If any officer of the regiment shonld be proved to have participated in the outrage, he should not escape with impunity." The inquiry coonmenced at twelve o'clock before General Sir William Warre, who presided; Mr. Kershaw, Mayor of Manclester, assisted by the Townof witnd the officers of the garriso was adjourned
Notiingham.-Earl Manvers, as patron of the living of St. Mary's, in this town, has withheld his countenance to the subscription in progress for repairing the edifice, until the parish shall have conceded the principle of a cluurchcomplete the pews, sittings, \&cc. of the.church, which was readered useless by a threatened fall of its massive towers last December

## Oxford.-The

alled for.-The Margaret Professor of Divinity having called for a copy of the sermon preached by Dr. Pusey, on Sunday the 14th inst., the same has been transmitted to the lec-Cancelior, by whom the following were appointed
it board to examine and seport upon its contents : The it woe-Chanccamine and Jeport upon its contents:-The Divinity ; Dr. Oqilvic, Regius Professor of Pastoral Theo Divimity; Wr. Orilvie, Regius Professor of Pastoral Theo
logy; Dr. Hawkins, Provost of Oriel ; Dr. Symons, Wary; Wr. H Wradham, and Dr. Jelf, Canon of Christ Clatrcls. It is understood that the investigation terminated in the condemnat.on of the sermon, and
that Dr. Pusey has been suspended from the office of preaching within the University for two years.
The Rev. R G. Macmullen, Fellow of Corpus, has

Professor an action of damages against the Regius At the perf Pivinity for refusing to act as Moderator. Bachelor of Divinity in the Divinity School it has been customary for the Professor to assigni the subjects for these Esercises, which be did; but Mr. Macmullen refused to adopt them, and tendered instead two theses of his own selection; and in consequence the Professor declined to act as Moderator. The two which Dr. Hampien appointed can it be proved from Scripture, that any change takes place in the elements in consecration at the Lord's Supper. views of Divine Revelation, to spealk of Scriptures and Catholic tradition as joint authorities in matters of Cbristian doctrine. The cause commenced last week in the
Vice-(.hancellor's Court, before Dr. Kenyon, and was adjourned to Friday
Plymouth.-We learn from the Plymouth Times that a preliminary meeting of the Town Council was held on came to tlie resolution of inviting Prince Albert to accept the office of Lord High Stewarl of the borough, vacant by the death of che Duke of Sussex, the result of which
will be communicated to the council at their next meeting, on the 6th of June.
Railways.-The following are the returns for the past week:- Greenwich, 6871. ; Sheffield and Manchester, 4,018\%. ; Croydon, 267l. ; Blackwall, 8756.; Eastern Counties, 2,278l.; Grest North of England, 1,3532. Birmingham and Gloucester, 1,6671 .; Birmingham and Derby, 1,2002 . ; Birmingham, $16,112 \ell$.; Great Western, 14,471l.; Suath-Western, 6,172l. ; North-Midland, 3,922l.; Grand Junction, 7,137l.; Midland Counties, 2,414.—The report of the Committee appointed to investigate
affairs of the Blackwall Railway has at last made its affairs of the Blackwall Railway has at last made its
appearance; and though anxiously expected, its contents to be satisfactory to the shareholders. From the multiplicity of figures it is with some difficulty
a correct view of the fact can be ascertained, though the result seems to be that, supposing all contingencies settled, $1,055,000 l$ w will be the expense the proprietary are to bear for the completion of the undertaling. In this account there are many startling items. The act of incorporation,
inclusive of all preliminary expenses, subsequent acts of Farliament, and attendant charges, figures at the large sum of 53,5492 , while solicitors' costs for professional 42,9867., of which 5,6432 . remains unpaid. The engineering expenses have been more reasonable, , h, 337. hav. there is another item which should be included in law charges-that of vendors' costs in conveyances, which
is stated at $26, \% 91 \%$. There twill he, according to the statement of the probable ultimate charges and receipts of the proprietary, wisen the whole of the amount to be company pear to have made the small profit $256 \% .111 .3 d$., the gain on the issue of new shares having
 assets and liabilities of the concern, the committee prowhich state that there is now no claim against it on having done this, express themselves favourable to cheapness of conveyance, in accordance with which view the present rate of fares stand between London and BlackMay, in 1842 , was 382,929 , and the money received $7,3522.11 \mathrm{~s} .8 \mathrm{~d}$. ; while the number of passengers carried in the same period in 1843 was 398,687 , and the money received $6,408 \% .3 s$. 7 d . On the future prospects of the they have cautiously avoided indulging in any speculations which might have a tendency to mislead; still in concluding their report they feel bound to express an earnest desire that the proprietors will co-operate in carrying out the measures which have been suggested for extending the team-boat traffic in immediate connexion with the railmust mainly depend its fatere prosperity - In ase for compensation on the Norwich and Yarmouth Railway, on which occusion Sir W. Follett was retained for the company, and Mr. Fitzroy Kelly for the defendant, jury returned a verdict for $1,500 \mathrm{~m}$, M , Guich the anker, stated, on his cross-examination by the Solicitor General, "that he had never travelled by rail ; that he nus an enemy to it; had opposed the Norwich Railmay had left a sum of money in his will to oppose th

## IRELAND.

Dublin.-We noticed in our Parliamentary intelligence who had week that Mr. O Connell, and other magistrates who had taken part in the Repeal movement, had been struck out of the commission of the peace by Lord Chan cellor Sugden. The following is a list of those who have ${ }^{\circ}$. $O^{\circ}$ Connell, M. P., Mr. Maurice $\mathrm{O}^{\prime}$ Connell, M. D ., Mr. R. A. Fitzgerald, Mr. Nicholas Boylan, Mr. James Roe Mr. J. P. Somers, M.P., Colonel Butler, Sir M. Dillon Bellew, Bart., of Galway; Mr. Alexander Sherlock, of Waterford; Mr. Pierse Somerset Butler, of Kilkenny Mr. Daniel Clanchy, of Charleville ; Mr. John Barter, of
Cork; Mr. Caleb Powell, M.P., of Limerick ; Mr.

John O'Hea, of Coik; Mr. Josepls Myles M‘Donnell, of Doo Castle; Mr. Phillips, of Mayo ; and Mr Fitzgerald, of Muckridge, county of Cork. Mr. James Sinclair, of Donegal, and Mr. R. D. Browne, M.P. have addressed letters to the Lord Chancellor, resigning the commission, in order to enjoy the right of public discussion.-At the meeting of the Repeal Association on Monday, Sir Coleman O'Loghlen, Bart., (son of the late Master of the Rolls, and ten other members of the Irish bar, seyeral of them genteren of extensive practice, all of whom had heretofore kept aloof from the movement gave in their adhesion to the Association. Mr. O'Con firnanded in the shm of $1,2246.7 \mathrm{~s}$. 4 . from the county from various parts of the country sere read, inclosing money to a large amount. At the close, Mr. O'Connell larger sum than had been received in any week during the agitation which led to Catholic emancipation. In conprevails in various Government departments in sending off troops, arms, ammunition, aud stores to Ireland; 25,000 stant of arms have been despatched from the Tower and Woolwich during the last five days, and barbeen sent away for the same destination.
ashet.-On Tuesday week the inhabitants of the South Mr. O'Connell. numbered it is said 300000 persuns The metina and mand Laffon in the chair. The mount contributed to the Repeal rent was 732l. 10s. A dinner look place in the evening, at which Mr. James Roe, of Roesborough, late member for Cashel, presided.
exclusively stration of physical force which last at $\mathbb{N}$ enagh, the capital town of the North Riding of Tipperary, at which 450,000 persons are stated to have been present, including many thousands who came a distance of 15 and 20 iniles. The people of the King's and Queen's counties, of Limerick, Clare, and Galway, people, crowded the Shannon from the two last-mentioned counties. The platform was capable of containing 500 persons, and was crowded by at least that number. Mr mid the acclamations favour of Repeal were unanimously carried. The dinner took place in the evening in the Temperance hall. Nearly 250 persons sat down to cinner, and a gatlery at thronged throughout the proceedings. Mr. O'Brien Dinon presided, supported by Mr. O Connell, Mr. Caleb Powell, M.P. Mr. Steele, Mr. Hackett, mayor of Templemore, \&c. Mr. O'Connell reviewed his labours for some weeks past, the brilliant success that followed his movements, from the meetings of Rathkeale and on the physical force displayed at Nenagh, and remarkew effectual it would be in the hands of another Napoleon, who had marched from Boulogne to the centre of Hungary nha much smaller eflective force than surrounded him yelouay the rock of Casbel, and victory marked his progress, although he could not calculate on such an army freely on the subject of Repeal, gnd afterwards spoke of the facility of getting it-contended that it we in the power of the Queen to grant it without the consent of blament, and then laid down his pian for the assem of Ireland. The Right Rev. Dr. Kennedy in his speech said-" We have been ruled by England for forty-three years, and during that period her condict to this country a country callion of the foulest crimes that ever disgraced greatest statesman perhaps of Enaland or Ireland prophesied should be one day made-it is now made ond, as I said before, we should urgently, but legally, constiobjectly, and peactld by anith be effected we ab lating civil more unwise threat than that-never did a more ill-judged one proceed from the lips of ny statesman, and never was there such blind ignorance as that evinced by the anti-lyish truculent and dishonest legislators, who called forth that misplaced threat. Fellow countrymen, it is impossible that those who threw out the threat had any knowledge of the present condition or feeling of the people of Ireland. You know that a greatmajoniy of ou unhappy people at this monent are suffering tions, hat no war has any terrors for tiem. I say feal war against their unnatural-their inveterate, and stilt unrelenting oppressors. I believe further, that except, perhaps, the restoration of a native Parliament, nothing would be more welcome in their present temper thal sher toast, whatever should be its issue. We in of Repeal were delivered before the meeting broke up.
Longford.-A meatinore the mordinary magnitude took place here on Sunday, for the purpose of petitioning the Legislature for a repeal of the union. The requistion published on the occasion was of the county of Longford, meeting was the dinner,
the course of a long speech, said he had been accused of saying that there was no hope for Ireland but in repeal, that he how reiterated that assertion. He also reiterated that he had the most unbounded contempt and hate-not, as he had been reported to have said, for the aristocracy - but for their vices. By the immoral press of England he had been called something like a rebel. He was reported to have roused the priests of his diocese, and to have maddened the people to such a pitch that there
was no safety either for life or property while such frebrands existed. He disclaimed such views, but he would at the same time let the people of England know, that if
it was attempted to carry into execution the threats which had been held out lately against the people of this country, he would make every chapel in his diocese a repealing place, and would go into every sanctuary to proclaim repeal. With all the respect which every man of common sense and judgment must entertain for the aristocracy, when they are entitled to respect on account of still stood to the sentiments he had uttered in Mullingar, and, embodying the sentiments of his clergy and people he defied them all to the death. He then proceeded to give the usual toasts. Mr. O'Connell's health was proposed, of course ; and he responded at great length, but Well, Roman Catholic Bishop of Meath, in returning thanks for his health, stated that he concurred in all the sentiments put forward by Dr. Higgins that night. His of the people of his diocese; and that opinion was, that the union was a robbery, and that they could be respected ration of their they did
Galway.-A repeal meeting was held at Caltra in this County on Sunday week, at which Lord Ffrench presided. by Roman Catholic priests and laymen, the latter class comprehending some of the leading gentry of the immeMartin Ffrench, Mr. Dillon, of Caherhouse, \&c. The resolutions embodied the following catalogue of the benefits to be derived from Repeal :-"1. Self-government wishes of cur of our own laws, suited to the wants and tration of our own laws-the filling of all offices in the State with Irishmen.-2. The freedom of religion, and the extinction of a heary and unjust impost by the total payments by the tithe-rent charge, and all compulsory payments by one body of Christians to the teachers of the sidered plan of fixity of tenure, which, while it would secure to the landlord a moderate and adequate rent for his land, would at the same time ensure to the tenant the
benefit of all his own labour and expenditure in permaoppressive grand jury cess and the present iniquitous lated charitable institutions." substitution of well-regu. last, adondall:-The borough commissioners, on Tuesday last, udopted a petition for repeal without a dissentient
voice. At a meeting of the Repeal Association on Sunday night, several new members were enrolled, amongst as a mers, Captai

## COTLAND.

Edindurgh.-At the meeting of the General Assembly on Wednesday it was resolved in reference to the protest thair names to the protest have, by their own act have become vacant, and that they are disqualified from receiving any presentation or appointment to a parochial Blished, till reproved by the ecclesiastical judicatoriesand that the subscribing elders are no longer elders in any of the parislues or sessions connected with the EstablishPrest. The General Assembly have therefore instructed Presbyteries to intimate, without delay, the vacancies thus or to nomin to patrons, or to those entitled to present they may be supplied. They lave also declared that the chapels and churches of the ministers who have since The number of clergymen who have seceded from tide Church of Scotland is now 450 ; and there is little cuesnearlyat the number will soon be close on 500 . This is under 1,200 half of the entire clergy, the number being than 10 week About 240,0006 . bave been raised in less for the support of the seceding clergy ; and there can be exceed that in a few weeks the amount will cousiderably Marchioness of Breadalbane, $1,000 \%$; a Colonel in the Mrmy, $6,000 \mathrm{l}$., in three yearly instalments of $2,000 \%$. cach; bookseller, a private gentleman, $2,000 l$. i Mr. Nisbet, each are various other subscribers of 2,000l. and 3,000 albane, who has signified his adhesion to the " BreadSecession," has signified his adhesion to the "New 10,0002 . to its funds. The Duke of Argyll has given in Campelltes for such new churches as they may require a church at his own expense; Mr. A. Campleell, mender bitants have reshire, is to do the same. In Elgin the inhawill also liberally contribute for its support. So that
in many instances churches will be built and ministers
provided for, solely by private munificence and local exerprovided for, solely by private munificence and local ex
tion, without requiring any aid from the general fund.

## 蝗atu.

Court op Exchequbr.-(Sittings in Banco.)-Custom-House
 at the last Nisi Prius sittings, Mr. Erre now moved to set aside
the verdict entered for tie Crown, and to the defendant, apon a legal point reserved at the trial. The
information was laid at the instance of the Crown against the defendant, , was extensive importer of rreech gloves and other
foreign goods, under $3 d$ and 4 th William IV., can. 52 and 53 , for foreign gools, under sd and 4t William IV,. cap. 52 and 53 , for
having unlawfully ushhipped goods upon which the duty liad not been culy paid, or for having such goods in his possession, the
duty not having been paid upon them. The learned counsel sobmitted that in this case the goods in question har been regularly
landed, urder what was called a "sight entry," an entry founded landed, under what was called a "sight entry," an entry founded
on the declaration that the importer was not acquainted with the natire and value of the goods. Subsequentily, and after the goods made, and arter paynent of the duty calculated on the perfect entry, the goods were delivered to the importer. In the present
case the alleged fraud was in substituting a fabricated account of he quantity and value of the goods for the genuine account
originally taken, by which means the goods were delivered upon payment of a much smaller amount of duty than the Crown was entitied to receive. All the hroceedings were correct, fair, and
regular, pu to the period when the goods were examined, and reguar, quat tha ascertained. There was no pretence, therefore, for
the
saying that the goods had been illegally unshinped saying that the goods had been illegally unshipped, and yet
every count in the information was founded on an illegal unship.
ment. The learned counsel $s$ sad he hat
 General, on belaif of the Crown, suggested, by way of $\mathrm{rc}_{1}$ IT.
that as the "perfect entry" on whicl the eoods were delivered

 s. Ae, 4), slight entry, it wast the same ane if no entry had been
under
nade; but here the goods were properly landed under the " sight entry," and there was no reason to suppose that any franid was
contemplated untuly after the perfect entry wa made. The Court
was unauimously of opinion that the point raised by the e earnert connes at the trial had been answered by the counse. for to
Crown
Onder the circumstances, ot was as if the goors in fore illegally unshipped. The Court, therefore, thought there
was no ground for disturling the verdict.- Rule refused. The Attorney. -General $\mathrm{\nabla}$. Cundy. - In this case, which was tried
before Baron Rolfe, and reporled in this Paper when the trial
took place Sir took place, sir Thomas Wilde now moved to set aside the veruict
Fiven for the Crown, and to obtain a newo trial, on the ground
that the verdict was gainst the evidence. The case against the defendant, who was an extensive importer of sillk goods from

 evidence of Burnby. In lis examination, Burnby stated that hic
wras on habits of scial intercourse with the elefendant ; that tie

must therefore be discharged. Court or Quernts Bevr i.
 friends, calling upon the Crown to show cause why the judgment
agaunsi Mr. O'Connor and others should not be arrested on the afens Mr. Connor and others should not be arrested on the
4th and 5th counts. It was right he should state that, with
respect to the rentark that the 4 th cornt did not charge conspirespect to the renark that the 4th cornt did not charge conspi-
racy, the defants were tequattect of the conspiracy, and they
were entitiled to the benefic of that aconuittal

$\qquad$
$\qquad$
$\qquad$ to the facts stated in the that count it was impossible for limm to 0 ne (nj, ction wiss, that to the material avernent there was no
 times, between that day and the stst day of October in the e ear
aforessid , in the parish aforessid in the county sidid Feargus o' ${ }^{\circ}$ onnor, sce., together with divers other expl- dis posed persons to the jurors aforessict as yet unknown, did untawstaled with a perfect venue- "and in that cuunty aforesaid, aid,
 volence, and in the said impecfing and stopying of the labour
employed in the sadd trades, mauufact ures, and bisines intent thereby to cause terror and alarm in the minds of the peaceable subjects of this realm, and by the means of sucis terror great changes to be made in the constitution of this realm, as by
law established, against the peace of our said Lady the Quen, her Crown and dignity." One of his friends had intimated,
that it was mot stated who the divers other persons were who had so assembled.-Lord Denman understood the onjection to be
that, the facts stated without a venue were facts which might nal in lhiss country; and another objection was, that it was
neither stated that the defendants were present when the offence charged was committed, nor that they knew any such offence
was in point of fact committer, ouly that they were adding rfience charged. Mr. Erle observed, that it was sad that divers and it wh essential that the e should be three or more assembled, the Bumber assembled. Mr. Serjeant Murphy considered they saknt that the count charged, "that cilvers persons at divers places ;" that would ussume that there must have been two

## 

stitution. It was sard that it w, wnit stated who those persons
were; that was primportant,in aiding persons in doing an uniawful act. Was at an offenceping the labour of the whole country, with intent to hring aloonta change in the corsatutution ? If that was an offence, it was an
offence to assist in doing it. Mr. Justice Patreson said that suchintention was not laid in the eally part of the count. The Attor-
ney-General said that no doult, with respect to several of the
meetings, manymeetings, many of the parties attending them liad no view of
changing the cunstrtution, but olhers came in and carred thepart of the count that which was stated in the tatter part. The
Attorney General said tiad, by the geuer statement, the
asscrably might have hapuened auywhere but the ofcastcr. Charging the defendants wath assisting in Lancashare
innported that they had done so in that county. Mr. Justice Pat-
The Attorney. Gencral.-It the assistance was given in Lancashirein Lancashire. The allegation was that the deferdants had aided
the partics with the intent to change the constitution. The mintentWas that of the aiders and abettors. Mr. Justice Patteson-
What, although the original parties had no such intent, andthut it was done out of the realm. But if there was an insurrec-

Within the reaim. The absence of venue was cured by the
statute. There need ho no allegation of venue at all. If the
explyession iu the statutelad becus that an improper venue should be cured, then the would understand the argument that there proper venue where there was none, as when it was improperly stated; and therefore the statute would cure it, because it stated
that in such case no objection should be taken. If the want of time was cured, so would the the want had place. It must be supHunt of 1 enue wailed not be an obscction. The first part of tae about disturbing peaceable subjects of the realm, ard that they,
by violence, threats, and intimidations, forced those who were peaceably disposed to leave their occupations and employments, in the minds of the peaceable subjen parish and county aforesaid, together the defendants did, in the conifort, support, and encourage the said evil-disposed persons first mentoued in the count, to continue and persist in the said in the said inopeding and stopping of the labour employed in the said trades, manulactures, and businesses, with intent thereby to
case terror and alarm in the minds of the peaceable subjects of
the realm, and by means of such terror and alarm violently and made in the constitution of this realm as by law established." The Learued Counsel proceeded to argue the point at great the offence with which the defendants were chargen was thisposed persons to coritinue and persist in the acts stated, and that they did so with a certain interit. The charge was not that the
defendants were uresent, or taking part in the acts stated to have been done in the previous part of the indictment, but that they
encoutaged the parties who committed thase acts to persist in the tame conduct. There was a venae, therefore, laid in that part of
the count which cortained the charge aganst the defentants: and the question, therefore, now was, whether the allegation was also necessary in the previous part of the indictment. It certannly
was not necessary at commun law to introduce such an averment, sect. of the statute of George IV., c.64, if it appeared of the face of the count that the court hod jurisdiction, the want of such that independent of the statute it was quite unnecesary, it was
quite impossible for their Lordships to assume that the act
clarged took place out of the realm. Suppose the offence of tumnltuously atsemb'ing and impeding labour had taken pla in the cunty of Chester. The defendants were charged with
aiding them in the county of Lancastcr. If the evidence had proved the defendants have been found guilty on this indictment ? and thereforc it was innmecessary to introduce the averment. The the offence might lo made up of acts done in varions placé, and Eome acts might be done out of the realm, and 8ome in it. Therr
Lordships wonld obserre also, that the count contained the word land. It also alleged that must mean against the law of Engo land It also aileged that threats where made of this ream. Why stonld the Conrt assume that the minst he aswomed primd facie, that the grand jury were speaking would be a most violent presumption, after verdict, to say What took place must have taken place out of the realm of
 Court, and Lord Denman sal

SATURDAY, JUNE 10, 1843.

That ealt is extremely beneficial to Asparagus is undoubted; that this plant will take a great deal of it, and be much the better for it, is equally certain. The are abundantly fed with salt at all seasons. How much the largest quantity may be that they will endure is uncertain, but we have seen a pound of nitrate of soda given to one Seakale-plant without the slightest injury, and it would no doubt have found no inconvenience from as much common salt ; neverutility of salt as a manure for Asparagus. The reason of this is well pointed out by Mr. Beaton in a memorandum now before us.

It is," he says, "a general rule to cut off all weak shoots while the Asparagus beds are in bearing, or at least up to the beginning of June. Under such treatment the plants cannot be much benefited by whatever dressings the beds received through the last winter or spring, till after this time, because all plants-the Asparagus and store away the product for the next growth, while they are in a growing state; and in all herbaceous plants like the Asparagus this store is laid up in the Yoots. Now, whatever may have tended to improve
Asparagus this season must have been stored before the end of last autumn; and salt given to beds last March must go through a wonderful process, along With other agents, in the course of this summer before it can be stored in the roots when the growing season is over, or tell upon the crop next May. These are simple facts, well known to the gardeners of the present day, but of which many of the last race of gardeners entertained strange notions-judging from their mode of loading their Asparagus-beds in winter with dungs and composts, a practice which is not yet got rid of, fut which, compared with the improved system of growth, is a mere waste of time and materials; - not that winter-dressing is lost on the plants altogether, amough the best part of it is, but that if the same the plants could at once appropriate it, the benefit Would be out of comparison in favour of summer manuring, not only to Asparagus, but also to Seakale and Rhubarb."
This is sound doctrine, and should never be neglected. We have a good deal to say upon the subject burselves, but for the present we can do no more than laid our Gardening friends to act upon the principles dressinn by Mr. Beaton, and not expect that somesing of manure applied in winter is to produce some instantaneous magical effect; the processes of advantage, plow, are like animals-they do no but the fat the moment they swallow a good meal the effect must have a great many good meals before While of their nutritious diet tells visibly upon them. Asparage we are speaking of the effect of salt upun ation directions by Mr. leaton for the general cultiv "By this delicious vegetable
"By far the best way of growing Asparagus is in but if rows, 3 ft apart, and 9 in . plant from plant if room is sround is not deeper than ift. or 330 in , or for the asunder. I have grown Asparagus this way winter, last 15 years, and give them no dung in October, and clearing off the stalks and weeds in deep with a fork, and poing over the surface about 2 in . Early in March, when the surface is ouite dry it is raked down, and about 2 in. of soil drawn over the crowns from each side of the rows, which gives the earthed up for the first time; when the gathering is
nearly over, the ground is stirred again to loosen the tramping made in gathering the crop. The hollow between the little ridges is then filled up with a powerful compost, consisting of equal portions of sandy soil, leaf-mould, and pigeons'dung; the whole is then drenched with liquid manure from the stables, cowhouses, or laundry, and the foreman of the kitchengarden gets carte blanche to water the Asparagus any day through the growing season when he can best spare his men, or, at all events, every fortnight, and always with liquid manure, if possible; as to the quantity of water, the only instruction he gets is tha he cannot drown them. This is cultivating the Asparagus in summer. The plan is not at all a new one. I have seen it when a boy, 30 years ago, and I have very dry seasons, like the last, it is of great advantage to mulch in between the rows with short grass, or any litter. Some have an idea that the frost should be kept from Asparagus, and go to some trouble to do so, but it is in reality as hardy as the Oak, or any other of our native plants."

We have already expressed our decided opinion that the subdivision of farms into small occupations, although it may for a time give employment and maintenance to a greater number of families, tends in the end to impoverish a nation; and we would ting of emall portions of tond greather with a cottage and necessary outbuildings for the purpose of being cultivated entirely by manual labour, like the small farms in Flanders. No doubt it may be the means, in many instances, of raising poor, industrious men to a comparative state of comfort and independence; and if every circumstance were not taken into considera-
tion, this would offer a very simple means of diminishing poverty and diffusing comfort through the class of Agricultural labourers, many of whom are distressed for want of employment. Nothing would be easier than to build cottages, with small barns and cow-stalls, to be let to industrious labourers, with four or five acres of land; and there is no doubt but the rent would pay a good interest for the outlay. The plan has been tried by the same lady who established interesting account has been published of a man, once a pauper, who, with a small advance of money to purchase a cow, and a few acres of land let to him at a full rent, has raised himself to a comparative independence. Such an example must have a most beneficial effect on all those who have the opportunity of following it, and, by stimulating industry, must
reduce the number of those who are now dependent on private or public charity.
There is a great difference between a general subdivision of large farms and the introduction of a few of all intermediate sizes. We are inclined to think that the most natural and beneficial division of land is that which includes farms of all dimensions, from 50 to 1,000 acres. Less than 50 acres of arable land cannot well be profitably cultivated, according to the most improved system of husbandry, including the rearing and fatting of stock, and the raising of food for man. Great improvements cannot well be introduced where the capital is not large, and experiments cannot be made except where they form but a small proportion of the whole of the operations on a farm; but small farms produce many articles of consumption, such as poultry and dairy produce, which are below the attention of the large farmer. In them are brought up honest and industrious bailifis and connrous in our days, and which should be encouraged by every means in our power. In a small farm more attention is paid to details and economy, and a farmer who has successfully cultivated a farm of moderate dimensions and increased his capital may safely be promoted, as it were, to a larger. Be this as it may, may have its advantages, provided such occupations be let with caution and judgment, and the tenants be selected from the steadiest and most industrious labourers, as a reward for good conduct, and a solace in old age. The sight of a family consisting of a patriarchal father, who can no longer do much with his while in return they gratefully work for his support is truly edifying; and we would such pictures were as common in Britain as they are in some other countries less rich and powerful. but not less happy

It was once proposed in Parliament (by the late Mr Whitbread, we believe) to provide cottages and gardens, as a reward in old age, for those who had never
applied for parochial assistance, and who had brought up their families in industrious habits. As a public measure the thing was evidently impracticabie, but the principle was good, and might be acted on by individuals in their own small circle. A few small occupations of four or five acres in extent, on which a family might live comfortably, let to men of known character, with a small advance of money, if required,
to be repaid by instalments, to purchase a cow, pigs,
or a few sheep, would not only be a provision for a family, but have a salutary moral effect on the whole population. We will endeavour to develop this idea in a future article. $M$.

Anong the questions that naturally arise in the minds of the friends of the poor is, whether articles now rejected or neglected as food may not be sufficiently nutritious and palatable, to be suited for ordinary consumption. We all know how largely prejudice is mixed up with our feelings on the subject of food, and that even the Potato was at one ume proscribed by the Puritans; a Middlesex peasan would not dream of cooking Nettles, and yet in York shire and Lancashire, they are, when young, a common, and as we can testify, a good ingredient of broths we also find that the French cottager will succeed in preparing good and wholesome food from substance which in this country are not thought of. Now, although we do not anticipate an English cottager's taking to frogs and snails, and "such small deer" fo the supply of his table, yet we see no reason why h should not imitate the people of the Continent in the consumption of certain kinds of vegetable food unem ployed among us.

Of these it is the Kidney Bean which promises best. We use it only in the young and tender state The French employ the ripe seed, and when properly dressed, an excellent ard agreeable food it proves to be If instead of cutting the young pods, and thus wasting the produce of such plants, they were allowed to ripen their Beans, a saving of some importance would be effected in the economy of a cottager. We are led to hese remarks by a letter from our correspondent $\mathbf{M r}$ Billington, who mentions the following case :-

A very poor famly in Shropshire being hardly pressed for food, the husband being unable to ge employment, the wife bethought herself of som Kidney Beans she had by her, and put some in an earthen vessel containing a sufficient quantity of water a few lumps of bacon, with a little seasoning of pepper and salt, and placed them in an oven to stew, two o three hours, till they became as tender as the bes boiling Peas."

The peasants were agreeably surprised to find that the Beans, which they had fancied unfit even for the food of pigs, would thus furnish them with a nice mess; for they did not know that such seeds are served up at the tables of the wealthy in this country under the name of haricots, and are generally favourite vegetable with continental nations. Hitherto it has been the universal custom in this country to throw away the dried. W not wanted for seed. We trus it berch be remembered that excellent food may be had from one of those plants which now is made to scramble over the hedges and walls of a cottage garden, chiefly for the sake of ornament

It must, however, be borne in mind that, although the Beans of the Scarlet Runner are good, the roots which are fleshy and perennial and look tempting enough to be eaten, are really poisonous, as was unfortunately proved last winter at Chelsea
While we are upon this subject we may as well add that, according to Mr. Daniell, the preparer of the manure of that name, horses, cows, sheep, and pigs may be advantageously kept iu part upon pulverised wood. In a pamphlet published a few months since* there is the following passage:-" About three years since I had occasion to send my cart-horses frequently through a piece of coppice-wood, and whenever happened that they stopped within reach of the rods, they would greedily devour every bough they could come at. This I noticed many times. At last I was led to examine the rods on which I had seen them feeding, and found them completely stripped of their branches, some of which were of a very considerabl thickness. This first led me to suppose that there must be some good qualities in the wood, and this consideration induced me to get some pulverized, and given to my,cart-horses, which experim repeated at several different times, until I was full satisfied that it had no injurious effect on them. Afte this I was led to give it to my gig-horses with thei corn, and having ascertained that it did them no injury, I had machinery prepared for reducing the wood, for the purpose of food, and began to feed botin cart and gig-horses, as also my cows and pigs, mixin a portion with the food which was given them. Thi practice I have continued for the last ten months. Previously to feeding my horses in this way, they had each three-quarters of a peck of Oats and Beans given them per day, for waich is now substituted taree pints of Barley per day. They are ime equally fine condition as when fed in the usual away, and more playful and free in their work. Soon after the wood was mixed with the fodder given to the cows, thei milk, as well as their condition, was much improved.
For several weeks past I have been feedinig sheep with

* Address to the Agriculturists of the United Kiogadora. Bath
the pulverized iwood," together with crushed Swedish Turnips, and they also appear to improve by it. have likewise fatted four pigs successively, mixing this food with Barley-meal, and the results have proved most satisfactory.
This statement, however strange it may sound, is not so startling when we remember that the woody matter of trees is, in its chemical nature, nearly allied to starch, and that it always contains some nitrogen so that in reality it furnishes the ordinary materials of food in another form. We presume, however, that white-wooded trees, not resinous, are those which furnish Mr. Daniell's cattle with the sawdust they thrive so well upon.
A FEWW weeks since we published a report of a lecture delivered before the Society of Arts by Mr. Fardon, in which the following passage occurs :- ${ }^{6} \mathrm{He}$ then detailed the result of 27 years' cultivation of two acres of land, alternately with Wheat and Potatoes. The
cost of cultivation was $23 l$, whilst the produce had cost of cultivation was 23l., whilst the produce had
been worth $93 l$, thus leaving 70l. profit, subject to a been worth $93 l .$, thus leaving 70l. profit, subject to
drawback of $17 l$. for rates, rent, and parochial charges." One of our correspondents justly remarks, that these sums appear too large for average years, and that the statement requires explanation
Upon writing to Mr. Fardon on the subject, he was so obliging as to furnish us with the following statement, from which it will be seen that although the quantity of land referred to as producing annually $70 l$. profit, less $17 l$. for rates, rent, \&c., or $53 l$. net, was
four acres, not two, yet that the result is still most four acres, not two, yet that ihe result is still n
interesting to the advocates of Spade-Husbandry.
"Samuel Bridge, of Stock Green, near Feckenham, i Worcestershire, has about four acres of stiff clay-land, o the blue lias formation. The land is naturally of inferior quality : he has occupied part of it for 27, and part for
15 years. He grows Wheat and quantity of Beans. Leaving these out of the account, we may consider that he grows two acres of Wheat and two acres of Potatoes every year, the crop being shifted As soon as his Wheat crop is off he br
stubble ground, raking up and saving the stubble for he then digs it over with a fork about 10 inches deep, and plants his Potatoes in the following spring; this crop is kept clean while growing, and the getting up of the
Potatoes is made a complete cultivation for the planting Potatoes is ma
"At first his neighbours plougbed his land for him gratis, but after about three years he took to digging it, and now
prefers going to that expense rather than have it ploughed prefers going to that expense rather than have it ploughed
for mothing; and upon stiff land of that kind I do not for nothing; and upon stiff land of that
doubt that his choice is a judicious one.
"He sells most of his produce, consuming a few of the Potatoes and the Beans in feeding a small quantity of
bacon; the pigs are littered with his Potato-haulm and stubble. The manure from these, and from his house with occasionally a little burnt clay out of his ditches,
is ail that is applied to the land. is ail that is applied to the land.
own work, is as follows:-

Wages, at per acre per anhum
Leaving out of view the small quantity of Beans raised and of bacon fed, and supposing that he grew Wheat ant Potatoes only, estimating the Wheat-crop at 40 busbels of grain and one ton of straw per acre; ; and the Potato
crop at 12 tons per acre, which are what he obtains, crop at 12 tons per acre, which are what he obtains,
valuing his Wheat at $7 s$. per bushel, his Potatoes and straw, at the price he obtains for them "on the land, we shall have the following account :-

## Sold annually :-

## 24 tons of Potatoes,

80 bushels of Wheat, 50 s.
2 tons of Wheat-stra.w, at 50 s.

Deduct:-
Manual wages, at 4l. $68.1 \frac{1}{d} d$. per acre Seed Potatoes for to wo acres, 25 bags, of 1801 lbs ., at $4 s^{\text {s }}$. per bag Four bushels Seed. Wheat, at $7 s_{6} 6$ d.
 $£ 230$ Nour bushels seed. Wheat, at 7s. $6 \mathrm{~d} . \quad 110 \quad 0$

Subject to ren $t$ and parochial payment

1 may mention that the man has bought his land, and erected a cottage and out-buildings upon it.

This is not the first instance that has occurred of large profits being made by the growth of Potatoes. I do not believe that these results could have been obtained on stiff and inferior land, under oxdinary methods of culture: it is to fork-culture they are due.
Potatoes on the land be much better to consume all the even more profitable results might thus be attained. The principle of selling so much produce is not admissible in farming, unless manure is bought. I published the particulars of this case in the Mark Lane Express some months since, and it occasioned a lengthened correspondence in that and in the Worcester Journal. I may observe that the cost of digging is much less when land has been dry for a long period when it
culture."

We are continually hearing of sports, as they are called, when a branch of a red Thorn produces white flowers, or of a white Camellia red ones, or of a Peach
tree Nectarines, or of a red Plum white ones, and tree Nectarines, or of a red Plum white ones, and so that all artificial to return to their original condition, and on the other to deviate from it still further, the tendency to change having once been gained. Although it must be confessed that such explanations explain nothing, yet we are compelled, in the present state of our knowledge,
to rest satisfied with them. We have now another to rest satisfied with them. We have now another
case to record still more strange than those just adverted to.
Mr. Williams, of Pitmaston, a well-known, very skilful, and philosophical horticulturist, about 35 year ago planted a standard Mulberry tree; it did not
begin to bear fruit till about 10 years afterwards, and for the following 10 years it produced no male blossoms, and the fruit had no seeds. But Mr. Williams being desirous of raising some seedling plants, and observing in a garden about a quarter of a mile distant a tree with some male blossoms on it, procured some, and applied the pollen to about half-a-dozen female flowers on his tree; these all set, and the seed produced plants. Two or three years after he had applied the pollen to a bough of the old tree, he observed on this particular branch, which was on the southwest side of the tree, many male blossoms; these have gradually bears any but male flowers, and this year nearly all the buds have proved males. The appearance of the tree was so remarkable, from the number of large blossom-buds, that two practical gardeners, who had asked leave to see his garden, could not at first view make out what tree itt'was
Now to what are we to ascribe this? A tree that for many years produces nothing but females, as it becomes older changes its nature, and ends in produc ing nothing but males. We examined some branches sent to London by Mr. Williams, and their appear ance was certainly very extraordinary. The old Gar dening books say "that Mulberry-trees sometimes become barren;" and as those books were always written by men of great experience, it is probable that
the fact is as they state-but why? Mr. Williams the fact is as they state-but why? Mr. William says that many other Muiberry-trees in his neighbour hood are also barren this year; and in the neighbour hood of London we have remarked several rather
young Mulberry-trees covered with a profusion of male flowers only. But again we say-why? The occurrence is not common, and some branches of an exhausted old tree, as well as they, bear female flowers abundantly. Is it that males are a sign of vigour, and that the fine warm season of last year brought the Mulberry into a state of unnatural healthiness ? Mr. Knight says, that the effect of an excessively high temperature is to cause, in unisexual plants, the
production of male flowers only, while a very low temproduction of male flowers only, while a very low tem-
perature produces an opposite result. Cucumbers and Melons invariably produce male flowers only when the plants are young and very vigorous. Seedling Peaches and Apricots, as Mr. Williams remarks to us, in like manner form no pistils at first, that is to say when the plants are in great vigour. These given to the Mulberry in our hot and dry and bright summer of 1842 that produced the effect; but it is all uncertain, and we wish that our friends would consider whether anything within their knowledge goes to prove or disprove this conjecture.

## ON THE APPlication of guano.

 kills the embryo in germination. For this reason I am kills the embryo in germination. For this reason I amdoubtful whether it might aid or hurt the first stage of growth, if the seed were previously steeped in a watery solution of guano. We know that carbonic acid and vinegar are given off by seeds in germination. These acids seem to attract ammonia so powerfully as to kill the
germ. This effect will be most decided when the soil is very dry, but it is worth while to try with solutions of dif-
ferent strengths, whether ferent strengths, whether water will take up azotized
matter in a form capable of injuring tender seeds ; wish
to try it on Red Clover and Turnip seeds. The Peruvians irrigate immediately after the guano and crops are sown the sandy character of their soil and their want of rain make this necessary. For the same reason they are said to give the manure in divided doses at different stages of growth; neither our soils nor situation admit of general irrigation, nor do many of our crops admit of repeated manuring on the large scale, but we have in mixtures a substitute more suited to our soils and climate than irrigation would be
$b$. As the lumps are too strong the guano should be put through a fine sieve, and the lumps thus separated should be broken and put through the same mixing ; but before proceeding to it I may mention a fact which farmers would do well to attend to. Guano rapidly absorbs moisture from the air, and this absorption increases absorbs moisture from the air, and this absorption increases
both with the moisture of the air and the value of the manure. By drying two specimens of different values for an hour at $150^{\circ}$, I found the worst lost 15 per cent. between water and ammonia, and the best lost $22 \frac{1}{4}$ per cent. ; and water and ammonia, and the best lost $22 \frac{1}{4}$ per cent. ; and
by again exposing these specimens to the open night air or an hour at $35^{\circ}$, the worst recovered nearly 6 per cent., and the best rather more than $8 \frac{1}{2}$ per cent. moistureInference 1.-Guano is constantly gaining weight. This would add much to the profit of retailers if it were not for the fact that part of this moisture (in mild weather) goes to aid the decomposition of the organic matter and its value ; and this loss ise, 2. Guano is constantly losing the article when imported, and to the warmth and humidity of the air in which it is kept. 3. Hence, the farmer will find his profit in purchasing that which has been recently imported (if valuable), and in mixing it as soon as possible: for, if too damp, it will not pass through a sieve; much will be lost; and if he attempt to dry it by heat, he will lose much more. If any has already become too damp for economical use, it may be mixed with at well dried and ground in the mill This will absorb much of its moisture, reduce it to a workable powdery state, and increase its value as a manure, without expelling its ammonia. 4. In comparative experiments, and indeed in fair trading, each bag ought to be weighed, and have its weight marked on it when imported; and this weight is all that the farmer ought to pay for, or regard in his experiments.

The objects of mixing guano are, 1. To partly disinfect it by absorbing its volatile products and diminishing its smell. 2. To separate its active particles, and thereby diminish their action on each other. 3 . To present it to warm soils in a form in which its action will be less violent at first, but more protracted and steady than when
given in an unmixed state. Of course, the colder the soil given in an unmixed state. Of course, the colder the soil
and the earlier the season when sown, the less quantity of and the earlier the season when sown, the less quantity of
mixture is needed, and conversely. But as a general mixture is needed, and conversely. But as a general rule: It should be mixed as equally as possible with fou
times its bulk of finely-sifted, moderately-dry black or brown-coloured earth, or peaty matter, sawdust, slightlyburnt clay shar , or peaty mater, sawdust, shichever of these substances can be most conveniently had. Perhaps newly-burnt charcoal, used as soon as cold, is the best matter that can be had for mixing; but as it carl seldom be at the farmer's command, any of the above matters will answer in its stead. Where a considerabie quantity of useless wood can be had, it might be piled up, urf, the charcoal, clay and chared tury matter, if well broken with a spade, mixed, and put through a sieve, will make an excellent mixture for guano, especially for light, warm soils. Some have mixed guano with sand, and when for a cold clayey soil, this mixture seems rent suitable; only sand need not be given in more than double its bulk, and should be put in the soil soon with adyantive, stand beat up under more, according to the weather characer of and and ccores proportion to quatio acre. The ae the and weather, we more sightly the manure ought berience in and conversely. No rules can supersede experience of his. When either dung or bones are given as part of disponure, and when the soil is modera be put near disposed to clay or peat, the guauo should be put limed, the seed. Again, where the ground has just guantity of the guano ought both to be given in a large quand not mixture and covered rather deeper than in ground limed for a year or more. On light soils, lime should, is possible, be wixed some weeks before guano is given. An ime rapidly expels the ammonia from gua, it the renders the manure inert. No farmer who unds ither matter will mix either guano or drog or bon slaked lime or fully-burnt wood ashes, or burnt couth unless the couch be well mixed with eart, and he some time in the heap after it is cold. Any of these sub stances, if in contact with guano, drive of its am, Although guano slightly mixed may be sown above they yet bones and guano ought not to be mixed berore the are sown, as they act on each other, if good, before it readiest yart of the manure is thus dissipata guano can seldom do any hurt, and for Turnips or Clover on light soils it may often be advantageous. When our Turnip soils are very dry 踥 sowing, it might be a great advantage if the of the drills could be watered with a weak solution of gugno. This might be done at no great expense, by a watering-pan having a very small rose, perforateid with only three or four small holes so as to spread thith this
paa, followed by another with a supply of liquid, a large barrel or tub standing at the upper end of the drills. this be found beneficial, a machine might be made to carry tharger supply, and water two drills at once. It is likely that this watering would both disgust the turnip-fly, and quickly put the plants beyond its power.
From 60 to 70 per cent. of good guano are either dissolved or readily suspended in water. The solution may be tried of different strengths from $\frac{1}{2} \mathrm{cwt}$. to 1 cwt . per acre of the powder. This would require about 160 gallons of water, or 1 gallon per perch, or $40 \frac{1}{3}$ yards length of a 27 -inch drill. It may be difficult to make less liquid go over this length, and a larger quantity may be found incon venient in practice. The undissolved parts of the guano may be mixed in sand or mould and used as a dressing over du

Quantity of Guano per Acre.-This is not so easily determined as some gentlemen seem to think. The character and state of the soil, the locality where it is used, the tended, the previous manure and system of cropping, the natural action and durability of guano as a fertilizer, the quality of the article used, and the amount of expectamay wary the quantity from 2 cwt. to 8 or 9 cwto per Scotch acre when given alone, and half the above quantities when a due proportion of dung, bones, or rape dust is given at the same time. When the soil is naturally warm and has been brought to a high state of fertility, only four or five years, he will most economically promote it by giving merely enough of guano to start the plants with vigour, and, after a year or two, a light dress-
ing of some suitable saline manure. If allowed, he may Very cheaply "take his own out of the soll" in this way mane it as poor as he could wish. In our climate, all manures, except dung and partly-fermanted vegetable matter, tend ultimately to exhaust the soil. Bones and
guano, though in a much longer period, will in the end as guano, though in a much longer period, will
effectually exhaust our soils as lime will.

We have heard much of the solar light enabling the leaf to decompose carbonic acia, and of plants receivins their carbon from the atmosphere. In hot and tropical climates, where sunshine is more abundant and steady and where his rays are more direct and powerful, there is reason to believe that this is true to a considerable extent ours : the large size of leaves and blossoms, compared with matter the comparative general deficiency of vegetable matter there; and every other analogical fact, confirm this supposition)-but in our climate, where the heat is much less, and where the sun's rays are both more mosplat and clouded during much of the season, ittle at green pheric carbon can be appropriated, except by ou afforded by the soil. Whatever, then, causes the evolution of more carbonic acid from the soil than it brines to the soil, gradually exhausts it, not only of carbonic acid, but also of the bases dissolved and carried from the soil by this acid. In the soil, any alkaline matter, as amnoosalts (from guano, dung, or bones), lime, and most of the mence a general fermentation, which extends to the dead vegetable matter in the soil and gradually reduces its quantity. Where the vegetable matter is in a very inert slate and the soil is coarse, as in clayey land recently (and when either lime must be given in a previous fallow, manure must be good farm dung, not over fermented, or the guano must be given in a heavy dose (say 5 to 8 cwt some wer acre, put in, and covered moderately deep, for in theese or moils, it requires much to berin fermentation So effectually soils, it requires much to begin fermentation a fertile state as to act on the inert soil, and bring it into Soilis with state. A good Turnip crop may be raised on such Will whow the guano, but then the following white crop of the soil was the manure was wasted before the inerticu by judicious culture, is already disposed to fermentation, repeated made to yield crops for several years, by using reous stimulants or salts, with occasionally a little dung till the soil is reduced to ruinous burrenness. In wagm, light soils, it will require considerable management to give injurin of good guano to carry through a rotation, without cwt. per acre crop at first by its violence. Two or three better give half may be proper, if given alone; but much Soils. Cold, high, clayey soils, even though under previ-
Ous acre, accordinagement, will take 4 to $5 \mathrm{cwt}$. . per scotch the cascording to their exposure; and if (as is too often they may require more.-P $P$. Garden, Glene, Dumfries. 1843.) fracted from the Dumfries Herald, 30th March,

No. T. THE ANTIQUITIES OF GARDENING. Gardening.
Wett from Sir
'
Continued.)
manuscript by bir favoured with an inspection of this It was by Sir Henry Edward Bunbury, Bart. Flintshire, and has evid about 1660, at Bettisfield in and from, mach practical observation. It shows the attention much practical observation. It shows the island cearly two been paid to Horticulture in our prosecuted with a zent scarcely surpassed by its numerous Flintstire Sir Thomas Hanmer was Member of Parliament for
patrons among the nobility and gentry at the present day. The various kinds of flowers then in general cultivation are described, and instructions are given for their cultivation. Bulbous flowers were, it is stated, at that time in highest esteem, and accordingly the author gives full details respecting them. Of Tulips, in particular, he had an extensive collection of the finest varieties. Ornamental trees and Shrubs are treated of, and also forest trees. Many varieties of Fruit-trees were introduced by Sir Thomas from France to Bettisfield, and cuttings from these were distributed to various persons in the neighbourhood.

The flowers in highest esteeme now amongst us are such as have those rontes wee call Bulbous, of which there are different kinds, both for the figure and greatness, but all of them resemble an Onyon more or lesse, and are made up of white fleshy tunicles which enfold one Tulipe, Narcissus, Iris, Crocus, Colchicum, Lilly, Crowne Imperiall, Martagon, Gladiolus, Orchis, Ornithogalum Dens caninus, Bulbous Violet, Moly, and Fritillary. O uberous flovers the most curious are those : Anemones Trises, Cyclamens, Hyacinths, tuberous Irises, Satyriums,
the Hollow roote, and Dragons. Of fibrous Perennials the Hollow roote, and Dragons. Of fibrous Perennials
we have the Gilliflower, Stocke Gilliflower, Wallflower, Beare's eare, Hepatica, Lychnis, Trachelium of America Lilly convally, Spiderwort, Valerian, Indian Candy Tufts, Maracox, or the Passion Flower, Everlasting Lupine,
Melanthium, Moth, Mullein, Cortusa, Belfflower, Soape Melanthium, Moth, Mullein, Cortusa, Bellflower, Soapewort, Hesperis, Fibrous Ranunculus, Hollyhocke, Cytisus,
Aloes, Double Pellitory, Cowslips and Primeroses. Double Featherfer, Pellitory, Cowslips and Primeroses, Double or Venew, Manica or sneezewor, ling of Canada, Everlasting Pease, Limonium Rawolfi, Sedum arborescens or Tree Houseleek, Heleborine, the Italian or blew Marigold, Gnaphalium Americanum or Life Everlasting of America, Lagopus or Hartsfoot, Mnapdragon, Nightshade Daisies, Double Lady Smocks, African Marigold. Of annuals the best are : Adonis, the Beane, Bastard Sopran, Convolvulus or Bindweed, CorneFlower, French Honeysuckle, Goates beard, Hawkesweed Larkespur, Cresses, Mullein, Molucca odorata, Nigella, Pulsatilla, Scabious, Sonchus lanatus, Venus lookingglass, some sorts of Foxgloves, Coventry Bells, Sweet Sultan's flower, the Wonder of Peru. These above of in England, worthy to bee received into our gardens, and more than were enjoyed by our ancestors, for many brought hither out of foraine past way y beene brought hither out of fraine parts, especially our plantnever seen here before some whereof have required a manner of cultivating and ordering quite different from that of the old English flowers.

Of Choosing Seed, and of Sowing and Ordering it, -The best seed is most weighty, and is had from the lustiest and most vigorous stemms. Wee use to crop of flowers of such kinds as are many on a stalke, to make
the other seed the better and have the more vertue, and such wee find usually in the lower seed-vessels of the stalkes. Bee not curious to keep the finest markt Tulipe
or other rare flower for seed, unless the kind be strong, for better flowers are raised from a lusty flower of one colour, than from a curious stripped one of several colours that is but weak.
"Such seed as rises up with down, as Anemones and other sorts doe, must be watched and taken as soon as sunshine will make it doe, and if it be not gathered presently the least breath of aire will carry it away. Such as that are naturally more contumatious and stubborne must be steept in warm water or new milk before they bee to help their germination-but hurt not the little spot o point of the seed, for then it dies "

Earwigs hurt most Gilliflowers, and are taken best when these are newly podded (for they feed upon the young pods most) with sheepe's hooves and hollow Cane in the morning to hide themselves all day the then you shall be sure of them every morning. Mice are easily taken with little traps baited with Nut kernels, pieces of Apples, and such things.
earths in our gardens, that is naturol and twis. natural are only the good rich blacke mold, which is the most generally good for all kinds, but best for the fibrous. The sandy fittest for bulbs; and loame, a kind of fat sand much used about London, good for most rootes. Clay
and gravel, as well as marle, wee almost totally reject."

## AMATEUR'S GARDEN.-No. XXIII.

One of the most troublesome diseases which Pelargonium growers have ever had to contend with is that which within the last cro years has attacked the leaves of some having had the small-poz or measles. Many of the grea growers in the vicinity of London have suffered to a very great extent, and 1 am informed that as early as February of his finest Chiswick, was obliged to destroy a number ing through his whole collection. As several letters suliciting information relative to the cause and prevention of the disease have been put into ray hands, I may state (though I cannot speak positively, as the plants under my charge have hitherto escaped its ravages, ) that
of some insect similar to the Tephritis Oropordinis, or Celery-fly, and I suspect it may be removed by the same peans, viz, crushing the grub in the leaf, and by dressing he plant with something like spirits of tar, which, by imparting a noxious effluvium, will prevent the insects from depositing any more eggs on the plants.
Of course this remedy cannot be applied during the time the plants are blooming : at that time nothing more can be done than to divest the plants of the worst of their leaves, and give them a little extra heat to force them to make a few leaves to improve their appearance during the time they are in bloom. When the plants have done fowering, and are ready to cut down, every leaf should be removed from both the cuttings and old plant, and burned. The plants may then be dressed with tobacco-water, soft soap, and soot, made to the thickness of paint, and applied over the whole plant with a brush, which will destroy any eggs on the plants, and probably prevent the insects from depositing any more upon them.
As a further precautionary measure, the pots used should be well washed in warm water, the house properly cleaned and painted ; and it would be well during the time the plants are in the open air to sprinkle the ground around them occasionally with a little spirits of tar. This is the system of management I should adopt if my plants were infected; but I have no hopes of clearing the plants this season, though every means should be employed by destroying the leaves to prevent the insect increasing in another one.
In several nurseries which I have lately visited, I find the disease making its appearance on the Fuchsia; collectors would therefore do well to keep a watchful eye pon new additions of soft-wooded plants to their collections ; indeed, for my own part, I intend to make any additions to my stock perform a kind of quarantine in a house away from the other plants until I am satisfied they are clean. The above Itrust will be a satisfactory
answer to the Hon. and Rev. F. Curzon, and several answer to the
In a season when the blooming of American plants has been more than usually fine and abundant, I would direct particular attention to the importance of removing the fower-stems and seed-pods directly the bloom has fallen rom the plants. In a garden containing several thousand Rhododendrons, part of them had the seen-pods removed about this time last year, and the difference both in quantity and quality of flower has been this season at least 50 per cent. in favour of the plants thus operated

## HOME CORRESPONDENCE.

Testacella Maugei.-In a potfull of slugs, which my gardener was on the point of destroying a faw weeks ago,
I happened to observe a species of TesI happened to observe a species of Tes-
tacella, differing much in appearance from that which I had seen in the OXford Garden ; and on showing it to my friend, Mr, J. G. Jeffreys, he at once ascertained it to be the T. Maugei of Ferrusac. This species, though a native completely naturalised in the nurseries at Durdham Down, near Bristol; and from thence has spread to become common in the gardens of this neighbourparts of the country, although from its
habit of burrowing and rare appearance on the surface, it may often escape mitted by the Jarve of the Crane-fly, I lave long hoped that some natural and knowing that all the species of Testacelle are carnivorous, I thought it as they are lereabouts called mighs, found to answer the purpose. In this, however, I have been disappointed; for some experiments lead me to suspect that they would rather starve than douch the "leather jackets;" but as they live on earthwornis and cormmon slugs, they are still our benefactors,
and ought not to share the fate, as they commonly do, of the phytivorous slugs. Great numbers of them have been destroyed by my gardeners, from a supposition that they rise to the surface in the night to eat the lettuces; but 1 an abundantly satisfied by a series of experiments and egetables. The Testacella may be at once known from other slugs, by a small flattish and rather ear-shaped shell at the posterior extremity; and I bave sent you a drawing copied from Ferrusacs, that you may the better draw the attention of gardeners to the utility of these anim $\%, s$. 1. Maugei appears to be at least equally hardy, and has Zoology as T. haliotidea.-L. W. D., Sketly Hall. Accentuation.-I think that classical students, above al thers in the world, should be the last to find fauit with he pronunc.ation of scientinc terms by gardeners: if win the road for the weak and the weary, they would have conferred a benefit on mankind; but instead of driving smoothly, as over wooden pavement, they have sthl letr
the road as rough as a newly-metalled Macadamised bighway. With a total ignorance of the nature of the be placed Greek accent, one party asserts that it should as stoutly affirms that it should be pleced on the tercoination. Others sey that the Greek accent should be some What like the Latin, when another party says that it
should differ; and so in the Latin antanaclāsis we have the accent on the penultimate, and in the Greek avravak $\lambda a \sigma t s$ we have the accent on the antepenultimate
syllable. And what better again are our English Lexicoraphers, when treating of classical words? Take, as an example, the word "capillary;" and we find that Johnson, Kenrick, Nares, and Fenniag, place the accent on the first syllable of the word; while Sheridan, Ash, Perry, Buchanan, Bailey, and Entick, place it on the second, Now, what can you expect from poor gardeners, when doctors differ so far? And when a bevy of students meet that have been taught at different umiversities, and attempt o read or speak in Greek or Latin, there will perhaps be found as great a difference in the pronunciation of some words as there will be among gardeners at ;horticultural exhibitions; and the person who has the misfortune to be in their company will have his mind somewhat dumb foundered, and be like the boy who was sent to different teachers to learn English versification ; he had committed to memory the following lines:-

An.Orpheus-an Orpheus-he works on the crowd
He sways them with harmony merry and loud.
He fills with his power all their hearts to the brim
Was aught ever heard like his fidde
Was aught ever heard like his fiddle and him?" He was told by one of his teachers that it was iambic verse, and the accent must be placed on the second foot; mother told him that it was troobaic verse, and the accent must be placed on the first foot; no, bays a third, it is anapestic verse, and the accent must be on the third syllable; while a fourth as gravely informed him that it
a mixture of all the other three.-Peter Mackenzie. mixture of all the other three.-Peter Mackenzie. destroying the young shoots of Spruce Firs; perhaps i may be guilty of doing so, but I believe it is of use sometimes in Spruce plantations. There is, I think, an aphis which is more destructive to these trees than the squirrel : their abodes have some resemblance to small cones; on an average they may contain a dozen cells, and in each cell there is commonly more than twenty of these insects. I have watched the squirrel devouring them very greedily. Now, suppose the squirrel took three meals a-day, and four of these cone-like substances to each meal, it will be found that more than 15,000 of these insects will be destroyed in one week by one squirrel; and perhaps it shot were expended upon these lively animals; for it is no uncommon thing to see the leading shoots of Larch, Spruce, and Scotch Fir, destroyed by those who delight in killing birds that
Salvia patens.-Mr. Proctor, at p. 117, has stated that this plant damped off in winter under favourable treatment, proving thereby that it is not hardy. I do not, however, approve of cutting even the hardiest plants off close to the surface of the ground early in autumn, as was leaf-mould as a dry covering, because, although it may protect the plant from frost, it will not preserve it from amp. I prefer col-ashes, sawaust, very old lime-rubthe trees are thick, and they make a very dry covering Mr. J. Henchman, of Edmonton, dug up during the winter of 1839 after severe frosts a plant which aftersomds produced plenty of cuttings. Most likely there is something to be observed with regard to the state of the Holme, near Inverness.
Tulips.-Having noticed a paragraph in your Chronicle of June 3rd, on the absence of Tulips from the exhibition at the Chiswick show, I would remind your correspondent that a collection was exhibited last year, of which very little notice was taken by the Judges. Conld it therefore sacrifice again? I noticed, this year, a beautiful box Carnations and Picotees exhibited, and for which no amard was made. Can it then be a matter of wonder that florists are so backward in showing their productions at Rendle's System of Tank.-. . J. T.
leading article of June 3rd, that it is your intention lend your assistance to the furtherance of the application and other exotic fruits. There is no doubt Pine-apple now, as you say, persons are to be found who object to the plan as brought forward by myself, but those who make these objections mult be persons who have never seen the plan in operation, or at any rate could not have seen it efficiently in practice. Out of the many Horti culturists who have seen my new propagating house, have not heard one say anything against it. The atmo sphere is most genial and the plants flourish admirably plan used for twelve years at. Oakley Park, which you consider similar to mine. Here I must, but respectfully, differ from you, as it appears by the plans and diagrams of the house at Oakley Park that the bottom-heat is flowing in open gutters and partly by a fire flue, whereas my plan is merely a tank underneath the whole bed (as shewn in the accompanying sketch) ; and what I claim and consider of the greatest consequence in my plan, is, water contained in the tank or cistern when once heated remains so for a considerable time, by which the saving of fuel is immense." It is stated that a ton of coals wil Oakley Park, which at $8 s$. per ton is very reasonable But then it must be borne in mind that coals cannot be procured in the neighbourhood of London, and at places distant from the collieries, at so cheap a rate; for 20 s , $25 s$ s, and even $30 s$, per ton are no uncommon prices in
many parts of the country; whereas with my plan a ton
of coals will be sufficient to keep the water heated in my

tank for more than twelve weehs for a house of similar dimensions to that shewn in the plate alluded to. From this it must be fairly inferred that the plan recommended not by way of prejudice, my only object being to point not by way of prejudice, my only object being to point
out to Horticulturists the best plan for obtaining bottomheat, and whether hot-air chambers, by either flues, pipes or gutters, or my "s tank-system," are the best mode, I
leave for the public to judge. William E. Rendle, F.H.S. leave for the public to judge.-William E. Rendle, F.H.S.
Clay-draining.-At Clay-draining.-At p. 245 this is said to cost in Gloucestershire $1 \frac{1}{2} d$. per yard. I beg to say that the highest price I ever knew to have been paid for such work was $4 d$. per lug of six yards in length, but $3 d$. per lug is the common price. I have seen many acres clay-drained and rendered dry at a small cost, but the work requires to be very well executed, otherwise it will soon tell tales; indeed there is no description of draining that requires a more vigilant superintendence over the workmen than claydraining does. Some workmen, if left to themselves, will take advantage of their employers. I once found, when length the turf had only been taken off and replaced, with a few crumbs of earth added to give an appearance, no excaat page 385 , says that "there are only about six inches of worked clay over the drain, and that the remainder is filled in loose." I beg to say that this is not the method practised in Gloucestershire. In this county the practice號 to well ram the whole of the earth, beginning with the well ramming up to the surface, turf and all, is the principal criterion of good workmanship. A good clay. will appear when his work is finished. When the land is in grass, the soil sufficiently adhesive, and the work properly executed, clay-draining will be found to be both draining is the spring; it may however be done in winte jurious to the permanency of the work, no portion of the earth should ever be left out at night if there is the slightest prospect of frost. The mouths of the drains are
formed of tiles; the branch drains should join the main at nearly right, the branch drains should join the main This sort of draining is not now much practised on arable land, and even on grass land it is falling into disuse tile-draining being now more approved of, as being more permanent, but even this kind of draining is found in very stiff clay to be inefficient without some porous material being put over the tiles, which adds greatly to can be fense, as in many places neither stones nor grave telligent member of the Gloucester Farmer's Club lately suggested the use of burnt clay for this purpose, thereby effectually drained, there can be no occasion for Ieaving the ridges so high as they are now in many places, suffiridges for the purpose of burning.- Culto

Bees.-It "Pettigrew" will look over his former com unica, he will find I have neither misread nor mis represented his words, viz,,-" putting a headless swarm I fear an empty hive, to make the Bees produce a Queen." I fear that it is "P." himself that misrepresents things he says in relation to Bees, for his knowledge of them is beyond my "ken." On a second thought, I shall make a few observations on his remarks in the Chronicle of
May 20th. "P." states, "I shall now rectify two or three of Mr. Wighton's mistakes, that might lead inquirers astray; " and observes I am wrong in saying Bees' eggs are not hatched by incubation, as the warmath of the hive do not hatch their eggs by incubation, I cannot see how could express the thing in better words; however, I shall give "P.'s" version of it :--"The warm th of the hive alone does not hatch eggs ; nor does the warmth of the ay compeggs that are not set upon. This is be it herefore I must " wait a wee, " and notice proof of at ioned that queen Bees lived 4 or more years, and common Bees one season. To this "P." replies, "Queens, generally speaking, live four or more years, but never more. Some unprolific ones live but three years and two months." The last part of this sentence sppears to me as if "P." Ready Reckoner. Authora, however, differ respecting the age of the head Bee, and " $P$." of course does not believe
the old notion that the queen Bee "never dies." May not this exemplify the old saying that "our King never dies?" I may observe that the age of a colony of Bees is a different thing to the life of the head Bee, though colony I have heard to have been confoundea. The oldest college, Oxford," (Corpus Christi is meant); it continued college, Oxford,' (Corpus Christi is meant); it continued
above 100 years. But I think it is doubtful if it were not aften replenished by fresh swarms during that period; for Bees readily take possession of tenantless hives or cavities, though the combs they contain be very old. This fact is, of course, against the opinion that Bees' cells soon get coated with wax, or rather a film, from the brood, and become too small to rear strong Bees. For the sake of the reader who may be ignorant of this subject, I ought to state that there is a fresh or young queen left in possession of the hive every time a swarm leaves it, except the first one, which is led off by the old queen a few days, before one is hatched, and in general she perishes in" What is commonly called a "virgin swarm." I never heard of the quantity of honey obtained from the Cottage Bees just noticed; but I question if it was equal to that got from a hive on Pettigrew's artificial swarming plan, namely, " 110 lbs of run-honey." If this be not a misto解. The size of hives being an important thing, I Dr give an extract from a letter on the subject, from Dr. Clarkson, of Selkirk, who has kept Bees with success more than 20 years. "My hives are made of straw generally; but I have boxes also which I use occasionally The straw ones are of the following dimensions: in height 10 inches, and flat at top; in diameter $11 \frac{1}{2}$ inches." How very near this comes to the size of the hive re and 12 in diameter." Both bury, via., 9 inches deep storifying plan, with straw hives, which is the simplest way after all. I question what either would say to to their size, and are to their as soon filled as small ones. To me than $m$ also, that also, that 1 hame ample proof that bees,will sometime points this out an in bo the who understand Bees will not see it as such. I have now only to 1 artifial ways of making swarme. It is sufficient to say, that he professes to tak the Queen and part of the Bees from an old stock, and put them into an empty hive; the headless Bees will perously natusl, and the so taan if left to swarm in thei natural way. This may appear very well to those who are ignorant of the subject; but those who are otherwise must see that the thing is hardly practicable with safety to the Bees; but even it it were so, there is hittle necessity for such schemes, for Bees are prone to swarm ; indeed this propensity acts against keeping them, especially on the depriving plan; for, how galling it is to have the number of Bees reduced, instead of having a box or bell glass of honey. This will happen in spite of ventilation pians. I must now leave it to the candid reader to der most likely "to statements or "Pettigrew's" are the
Roses.-One would have thought that, after the passing over of the Roses in your first notice of the last exhibition, it would have quite satisfied the exhibitors that the plants were, as a very good judge said, mere "make-shifts." This was apparent to any one of cool udgment; surely half-standurds or quarter-standards, some with large, some with worked, and some with smal stems, did not deserve or obtain much admiration. I, for one, thought that your omitting to notice them was intentional and admired your tact accordingly. I hope another ime they will put in a better appearance and merit some praise. Allow me, now, to ask any one really a judge, if there scented Roses in large pots, from two to three feet high, covered with their large and fragrant flowers. Some approach to this I boped to see at the last exhibition nstead of which, in one place were Roses on stems, the latter clumsy and ugly; in another, some plants, not by ny means large, our blooms and buds on own roots, with rome specimen approaching even to perfection. I am a Rose grower, and yet not ashamed, as Mr. Beck says I ought to be; or, in common with many other growers, I generally pot standards and half-standards for forcing. Now, the give abundance of fowers and cuttings, but I should have been really asbamed if I had.sent them for exhibition. am inclined to think, however, that it will not be goog. policy in the large Rose-growers to exhibit plants in pontly For this purpose plants must have age, and consequentld they must be established sorts. Nurserymen shom to bow ther custmmers the new sorts, and leave th not exhibit fine plants of the old ones. By reason o have being able to show the new Roses so readily as the Society bitherto, I for one shall much regret when the soly cap new Roses be exhibited.-J. L. Y., a Rose Grower. We must observe again, that the omissio
Garden Frames.-I see you request me (in your Notices to Correspondents) to give you some further in formation respecting my communication inserted in you Paper at p. 211, on the subject of Garden Frames ; and an Paper at p. 211, on the subject of Garder all the inform ation which lays in my power, I send you as good descripion $I$ can. In first place, the soil is removed ta suffien the the being on a level with the garden. The outside walls are them
built; afterwards the flues are built with bricks on edge, running about six inches from the front wall, and returning about the same distance from the back wall. After the flues are covered, the whole is chambered over with rough flags, resting on rough stones, a few iaches above the flues, with the same inclination as the lights. The
soil is then laid on the flars. The fireplace is built rather soil is then laid on the flars. The fireplace is built rather lower than the bottom of the flues; and the front may either be madestraight with the front wall, or be put at
the end, and covered very thick with stones and clay, to prevent the heat from escaping; or a light may be put over it, with a partition between it and the rest of the
frame, as it will be too hot unless a loose brick be kept frame, as it will be too hot unless a loose brick be kept cause a current of cold air to pass through the chamber. The fireplace is fitted up with a front, having an ordinary iron-dwor at the top and another beneath, with a ventilator for the ash-pit; and will only need attending to are nicely and a dead plate three or four inches broad be placed between the grate and frame. A frame constructed on the above plan costs a mere trifle in fuel with us, as we can get the best coals delivered at $3 \frac{1}{2} d$. per cwt.; or we not make so much smoke. I have a common brown ware bottle, which holds from two to three gallons, walled in by the side of my fire, with a tap to come to the outside with wall; so that I have constantly hot water to mix ther information will be willingly given by--A Coltager's Friend.
Bees.-Will you allow me through the medium of the Gardeners Chronicle to inform one of your correspondents, Mr. Devonport, that a pamphlet will be shortly published by Mr. R. Tyas, of No. 8, Paternoster Row,
descriptive of the "bar and frame hive," invented by myself, a slight sketch of which appeared in the Chronicle flast May. You will thus relieve your correspondent E. M. W." from the necessity of sending a lettered description of the "bar and frame hive," and much oblige W. Augustus Munn.

Bees.-Having seen a query in the Gardeners' Chronicle for May 20 respecting the early swarming of Bees this year, I beg to say that I bought a swarm on the 2 d May, the weather being cool at the time. Would the Writer of the article signed "A. Pettigrew, Wrotham Park," be kind enough to give the dimensions of the hives away two-thirds of the Bees with the queen, leaving the away two-thirds of the Bees with the queen, leaving the plan is to be pursued in one of Nutt's Bee-boxes, in which the Bees have been at work nearly three years, and the comb in the middle box is become very dark and thick. Is it recommended ever to remove it, or to change the queen, as hinted in the above-mentioned article? I find in our immediate neighbourhood, that one swarm was taken Westbury, Wilts. and another on the 1st May.-A Lady, of Bees , Witts had a very strong healthy swarm Very well, and I consider them an unusually strong swarm. I was also staying at a friend's in Nottinghamshire on the 3 d May, and saw a hive preparing to swarm, and also heard a report of a swarm at Tirley, about eight miles Ledbury.
Guano.-The great object in the use of Guano seems to be to apply water to it shortly after it is employed. having a mixed with a small proportion of some salt, from the tendency to deliquesce, or to attract moisture haps, as Nitrate of Soda. Possibly u small quantity of common salt, or a portion of well-rotted dung, say 10 lbs . to 1 ewt. of Guano; or possibly a similar proportion of
cow-dung would answer the purpose.-J. Florus. Thanging Plants.-At p. 318, "J. M"
soundness of my argument, but seems to doubt my prac it quite All I can say is, that I have adopted it, and found that I equal to my expectations ; and I would also state, Nature' deeply impressed with the utility of looking at Nature's laws for instruction, and would direct "J, M." my better judgment" which will be the more sensible course to pursue, because he will find his faith strengthened and his judgment improved. Suppose $I$ were to beat is that sand had an affinity for the sun's rays-that and rendered conicated by it to matter in contact with itCeus, "J. M." would not believe it, because he did not Fith Nerything going on, though it is perfectly consistent stands Nature's general laws. Surely "J. M." undertemperature water thrown upon ice will expand if at a expect plant is regulated by the heat at command. To Thect more than this would be to expect impossibilities. ${ }^{0} 4$ my dulness of apprehension will in some degree himself But my misunderstanding his remarks on Apricot-trees. is a to follow up my previous statement, it is said, that it under trees on walls some gardeners to put pans of water they think, to retard the blossom, but how far it has decide? -Cul is another question-perhaps "J.M." can Drone B
"ssared that dro" A Shropshire Subscriber" may be 8 warm, though in smaller appar previous to the first swarms leave the smaller numbers than before the afterappearing, much depends on the the time of their first the seargon, for the depends on the condition of the hive and season, for the old queen that leads off the first swarm
is very cautious, and will not quit in stormy weather. This season the drones appeared in one of my hives 8 days advisable to kill the drones, at least before the Bees acrisable to kill the drones, at least before the Bees
begin to slaughter them; and even then it is of little consequence, for they will do it effectually-even the egggrubs in the drone-cells do not escape their fury. Drones have appeared very early this season. The reason is obvious: the hives are in good condition, by the previous applicable to "W. R M S". I think this Bis Bees swarmed on the lst of May- the first I have heard of this season. Since then the weather has been unfavourable. The first swarms, however, will be stronger, and perhaps the after ones weaker, for during the delay more Bees were hatched to increase fresh colonies.-J. Wighton.
Hawthorns.-There is a Thorn-tree here full of dark pink (excepting one small tuft of pure white) blossom, on below the white tuft, and no budding or grafting has been practised. Can any reason or cause be assigned for so unusual a circumstance? The land is cold and strong loam, with a clay bottom; the tree is growing about 100 yards from the Mersey.-T. $J$
Fumigation.-I have tried various experiments for using Tobacco in frames, \&c., and the particulars of dent "Junius." now adopt may assist your correspondent "Junius." For a 3-light frame used for Cucum4 inches in length, in the mould in front of the bed, and put in length, in the mould in front of the bed, and put 3 small flower-pots round the candle, laying on the pots over the candle some wire-work, (the remains of an old garden-sieve, ) about a foot square; I then lay damp damp, and in about 15 minutes the frame will be well charged with smoke, and the candle may then be removed. fond the above method to answer well, and to be safer than using burning embers amongst plants ; it also requires far less trouble for small frames or pits.-Jas. Dreweth. lately given in the Chronicle, and have alorar plan to that I have rolled the chronicle, and have always succeeded pended it by a string about 3 feet from the ground, and it has never failed to burn out well, and with good effect. -J. L.B.J.
Wrens.-It is a common belief in different parts of the country that a pair of Wrens in one season builds two reasons given by schoolbovs and others for the Wrious acting in such a manmer. Some assert that one of the nests is for the male Wren to sleep in; others that the one nest used for rearing the young is placed in a more exposed situation, to turn the attention from the habitation of the young ones; and persons who attend to birds' nest and the marks how to distinguish between the true that in the rast one before the eggs are laid. They say there are always feathers in the bottom of it; the other nest is without them. Perhaps some of the readers of the Chronicle may be able to give some information on the subject, and oblige those who take pleasure in knowing The Khat Plant.-A correspondent has favoured with the following extract froma a letter, dated Yaush, in the dominion of Shoa, 29th Nov., 1842. "I have the satis faction to forward you a few dried sprigs of the
Abyssinian plant Khât, pronounced like our English word cart without the $r$ being heard. It comes from Epabsie, and was of the town of Māstola Wáriano, in Epabsie, and was obtained during my late visit to that i wished when at Mat seen the tree to which they belong. where it grows, but I was told that at Mota, whither I was then proceeding, it was found in yet greater plenty, the inhabitants building their bouses of the brancles, it being in fact the only wood for that purpose. When I obliged to return at once, unless I wished to lose the where it is party of merchants across the mountains, postnone my personal in single traveller. It therefor whither I am going as soon as I have despatched the messenger who carries this; and I did so with less reluctance, as I was told the Kbat was not yet in blossom and therefore I should not learn much more of it than 1 1 mentioned as being Tea,-I cannot speak positively as to the correctness of the identification, but my impression in favour of it, from my general recollection of the Tea Camellia sasanqua. Of the Kiatt, I learn leaves to the varieties, red and white, distinguis I learn there are two the wood and young leaves; and, though I ane not quite sure of this, the flower also. It appears to be a shrubby tree. Its size for building purposes need not be very large, as the houses are little more than wattles covered with mud. In Damort I shall make a point of becoming better acquainted with it. The Dejezmach told me that it grew in great quantities at Bútela about a day's journey from Gridera, his capital, and that there also the houses except by the Mahommedan merchants, who chew the leaves, and say that they prevent sleep. P.S.-I have just been putting a few of the loose leaves in my mouth, and if they are not Tea there never was anything more like it. Dec. 6th.-I have heard to-day just as I was ported the Khat the Mahommedan merchants ane that Yedjou Grows in great quantities in the country of the
Still it is not used as an article
trade." [This plant is not Tea, but the Catha edulis of
Forskähl, now called Celastrus Forskähl, now called Celastrus edulis. According to
that author it is the Kat or Gat of the Arabs, by whom it is cultivated in Yemen along with Coffee. They eat the green leaves with greediness, believing them to have the power of causing extreme watchfulness, so that a man may stand sentry all night long without drowsines. They also regard it as an antidote to the plague, and assert that a person wearing a twig of it in his bosom, may go among the infected with impunity; they even believe that the plague cannot appear in places where the tree is cultivated. "Nevertheless," says Forskähl, "the taste of the leaves does not seem to indicate such virtues." Bové found it in the Pasha's garden, cultivated under the Bave of Kaff. The accompanying woodcut is taken namo of his specimens. "But," says a learned friend, "Bové probably misread the Arabic name of the plant, and bence,
 leaves gathered when the plant is 3 years old, are sold as Kat moubarreh, or inferior Kat. The following year the young shoots are gathered, and fetch a bigher price. They very ike a fresh filbert. The Kât, when quite fresh, is very intoxicating, (Botta, Voyage dans l'Yemen, p. 99); mots ordinary effect is to exhilarate the spirita, to pro the quality of the infasion in hot water, but are unable to say anything in its favour.]

Bees.--A curious case concerning Bees has come under my observation. On the 9th of March, 1842, an old Abele was blown down from the western side of a hill. it had long been thought that Bees hived in its hollow stock of proved. The top of the tree, containing a large rubbish) was carefully removed to a neighbouring kiteb engarden, where they worked merrily all the summer, and in July threw off a swarm, which has thriven well. Refore winter, the hollow of the tree, above the comb, was well cleaned out and plastered up, and the place of exit and entry which the Bees had made for themselves, through a nolewhere oncehad grown a branch, was reduced vith mor tar and lead plates, and the tree placed in a sheltered place. Till March, the Bees were observed occasionally working about their home, and they seemed pretty strong. Then they were missed suddenly, and on splitting open the tree, There ones, and hardly a dozen dead bodies were found. lolbs was a great deal of comb-some very ancient, and 10lbs. of honey. Intermixed with this was gll tuamer These eggs were brought into the neighbouring house and were not of unpleasant odour at first, but ing shouse, time were extremely offensive, and on being opened, a young owlet was found, that once must have been quite ready to peck the shell. A few days after the Bees left their tree, there was observed in the house (in which Bees are known to be in the roof) a very large number of Bees, dead and dying. Now, would ask the following questions:ny When were the with dead Bees in the neighbouring house ? rather sat
the comb stopping out outward air ?- Tizy.
Daphne cneorum.-I beg to inform your correspondent that the most successful way of cultivating the above dry sithardy Daphne is to plant it in an exposed airy naturally lon, in peat and road-sand. \&c. must be put into the hole, an lon the top of them
pieces of turf be placed, the grass side downwards. Then put on the compost, chopped nine, but not sifted. Under this treatment eve
bloom freely. $-J$. Rogers.
Rapidity of Vegetation in India.-When Lient. Eyre, the author of the interesting account of the Cabul insurrection, left Meerut for Affghanistan, two years ago, he had
commenced a Botanical Garden at the Horse Artillery commenced a Botanical Garden at the Horse Artillery
mess-house, and had planted a number of choice trees. mess-house, and had planted a numbers of chate trees astonished to find the trees grown so high, that he could sit under their shade at noonday, many of them being 20 ft . high. Agricultural E'ducation.-" Tizy" begs to euggest on the subject on which "M." writes to the Editor
Gardeners' Chronicle, that the schools which have been some time established and are now in full force in the neighbourhood of Eastbourne and East Dean, Sussex, are believed to carry out the combin
Wagtails.- It is pleasant enough at times to notice the situations where birds will take up their abode for a time, to rear their young. The Wagtail will sometimes descend into a crevice in the side of a coal-pit, where persong and descending daily, and machines working above them. A pair this season built theirs in a heap of coals, but the coals had to be removed, and the rilest was shifted from place the reared their young. Some years ago, some of my children brought home a Wagtail s nest, with young ones in it; like the old birds followed them home, and a shelf was fitted up in a pigsty, which was inhabited by a pig at the time. The nest was placed upon the sheif, and the young ones were brought up by their parents until they were able to fly and shift for themserves the young birds from destruction.-Peter Mackenzie.

FOREIGN CORRESPONDENCE. Eboe, Aug. 28, 1841. -The town of Eboe is situated on the left bank of the Niger, and is approached by a narrow
stream about a mile in length; it is one of the great marts of African commerce. In the stream we met with many canoes, of all sizes, belonging to tribes from different these canoes upon the water, so that the entrance of the town assumes a very lively appearance. Some of the larger canoes are adorned wirds, and implements of warfare, worked upon them. During our sojourn at Eboe, several of us paid a visit to the palace of the main creek proceeding to which we had to hundred yards long. After walking through mud and water up to our knees for a quarter of a mile, we arrived at the seat onstisted of a quantity of mud-huts hudled together, without the least appearance of order. We were ushered into a square yard, with an open shed on the was the building which contained the sable beauties belonging to the mighty monarch of Eboe. Some of the most accomplished coquette of more civilised countries, by peeping from the entrance of their hut with all the curiosity inherent to the female portion of society, ing their beautiful white teeth; darting away, however, the instant that they saw our eyes were fixed upon them. Others joined us, bringing little curiosities of their own
manufacture in exchange for cotton, needles, rings, \&c., which we took with us to barter. The greater part of their garments are of Manchester manufacture, obtained
from merchants who trade to the cosst ; one of the principal ornaments of both sexes consists of large ivory rings, worn round the arms and legs. Some of the men have
obtained small bells, which they fasten round the legs, and seem to be highly pleased with the tinkling which they preduce in walking. During our stay at the palace, some most of which produced a most horrible noise. After ladies of the court, we took a survey of the town, which covers a large extent of land; the huts from each other, and are generally surrounded by a plot of ground, in which Cocoa-nuts, Bananas, Plantains, \&cc., are grown. The town is intersected by small streams,
which at this time were full of water ; so that to get from Which att to the other, you are obliged to wade up to the midale in mud and wor was informed, 1 as we during hot weather these creeks are dried of the inhaparaded through the town, a great number of the inhasaw the effects of our fire-arms upon the small birds.
They seemed to fancy that we were possessed with superThey seemed to fancy that we were possessed with supernatural powers, and afterwards paid us us, so that we might tion; even carrying a seat about after us, so tain we showery,
rest ourselves at our leisure; and the day being soll they even held mats over us during the rain. Their objects of worship are numerous, nearly each dwelling having its ge-ge, or charm; some of these were the rude figure of a man cut out of wood, others are some utensil
of common use among the people, or the skulls and bones of birds and beasts; all of which are protected by a small shed erected over them. Aroong the articles manufac-
tured by the neople are the wooden figures of different tured by the people are the wooden figures of different
beasts; but whether they represent any beass found about that part, or are formed from the imagination, I could not ascertain. I think the estimates of the population of thiss city, as furmed by recent travellers, are far too high; as the huts lie detached, it is a difficult undertaking, during a visit of a few hours only, to give an estimate near the truth. Certainly, a great number of individuals

Nown canoes upon the stream, which rung from the various parts of the country, go that they cannot well be considered to belong to the population. Polygamy is allowed, and a man is considered rich in proportion to the number of wives which he possesses; thouga saves the laborious work-such as cultivating Yams, taking them to market, \&c. Upon asking one of the traders to take us to the vessel lying in the river, he evinced as
much sagacity in striking a bargain as could be expected from a merchant of Europe; and, as a preface, informed us that he had traded with the white people at Bonny, a place frequented by the Palm-oil merchants. King Obie came on board the Wilberforce twice during the time we 60 years of age, though from the early decay of the Afri60 years of age, though from the early decay of the Ari-
can constitution it is probable that he might not be so old. He seemed very proud of forming an acquaintance wilh the white men. His eldest son is a tall young man, of prepossessing appearance, and apparently about old ; he was persuaded to dine on board uring one of
his visits, in which he did not deviate from the custom so universal among all the Africans, i.e., of refusing to partake of wine before the person presenting it had previously tasted it. Upon the second visit of Obie to the vessels he brought with him two of his wives, who, by order of This scene was very interesting, as after being clothed they were each provided with a looking-glass; their panturned about in every direction-first looking in the glass and then upon the dress: Obie hiwself seemed no less pleased than they did. The highest degree of heat observed at this place was $85^{\circ}$; the greatest difference
between the wet and dry bulb of the hygrometer was $78^{\circ}$ and $83^{\circ}$; the lowest temperature was ?

Rayal Deron and Cormanall Botanical and Horticultural Society splendiri assembly-room of the Royal Hotel. The rich display o
Hlants plants and flowers was set off to great advantage, and a very
numerous company-more numerous than has been experienced for nany years past-appeared highly delighted with the improve
ment which the change had effected. A finer or more bountifu ftow never graced a spring meeting. The collection of PelarReniums was truly beatiful-showing a forest nf rich blooms
The dixplay of Orohidaceous plants and Heaths was also excelleot. The Tulip, the Heartsease, and the Rose, in many of its
chaste varieties, were tastefully grouned in different parts of the romm. The rooms were crowced for hours, and the entire fxhibition showed to what perfection horticulture had been
brought by industry, enterprise, and scientific knowledge. The following is the award of the ind des:-FruIT-The best-flavoure

Gtneral Iorsetshire Horticultural Society, May 17.-The first Forticnltural extibibition took place at the Assembly-rooms, in of horticultural sxill are exhibited than this, artl probably none where gardeners and nurserymen have so intle inducemeut to White and Co., of Poole, exhibited a stand of the finest varieties of Pelargonium; and the specimens, for young plants, were exceedingly well grown. The sorts were Lyne's Duke of CornVeitch's Fair Maid of Devon, and some of the hest old kiods. The prizes were awarded to Mr. Nohie, pT, to J. J. Farquharson,

 China Roses, best Collection of do, sccond Heurtstrise, first Culor first Greenhouse Plunts, and second miscellaneous coilection To Mrs. Michell, for first Shrrabby Calcenlurius, and first Cucum-
bers. To Mr. Knight, gr. to E. Doughty, Esq., for first Strawberries and first Lettuce. To Mr. Arnold, gr. to C. Park, Esq.
 Essq., for first Caulifolowers
Grantham Floral and Horticultural Society, May 25.-The exhibition of this Society was held at the Guilahall, but the uniavour did not present such an array of fashion as on many former occasious; and owing to the season there was a deficieucy in both the quantity and quality of Tulips, but the collection of Greenhouse
plants was perhaps never surpassed in this Society. Amongst the specimens most worthy of rotice, was a cut stem of the Crinum amabile, with a quantity of fine blsoms upon it, grown
by Mr , Buckwell, gr. to the Duke of Rutland. Several geedling Cinerarias, quite new in colour. raised by Mr. Sharman, gr. to Sir
J. Thorold, Bart., and a collection of Ericas, and other tender plants, from the greenhouse of Mr. Bryan, nurseryman, \& \&c., were not set out for competition. The prizes were awarded as follows. Tuxips:-Feathered Bizarres, 1, Mr. Asilwell, for Magnum bonum ; 2, Mr. Yeomans, Joan d'Arc; 3, Mr. Yeomans,
Trafalgar ; 4, Mr. Yeomans, Goud Mont; 5 , Mr. Yeomans, Grand Duke; 6, Mr. Banton, Sovereign. Flamed Bizn?res, 1, Mr. magnifique; Mr. Ashwell, Capt. White, 4 , Mr. Banton, Poly-
phemus; 5, Mr. Sharman, Commandant, $6, \mathrm{Mr}$. Wood, Garicola. Feathered Byblemens, 1, Mr. Yeomans, Lilliard; 2, Mr. Yeomans, Washington; 3, Mr. Wood, Pranciscus Primus; 4, Mr, Yeo rable; 6, Mr. Buckwell, Mastre Partout. Flumed Byblemens,,
Mr. Wood, Acapulca; 2, Mr. Yeomans, Pearson's Lord Hill; 3, Mr. Ashwell, Princess Char. Yote; 4, Mr. Wood, Maria Louisa; 5 , Feathered Roses, 1, Mr. Banton, Allette; 2, Mr. Yeomans, Hero of the Nite; 3, Mr. Ashwell, Lady Middleton; 4, Mr. Banton,
Lady Crewe; 5, Mr. Wood, Triomphe Royale; 6, Mr. Burbidge, Doolittle. Flamed Roses, $1, \mathrm{Mr}$. Wood, Triomphe Royale; $2, \mathrm{Mr}$. Wood, Unknown; 5, Mr. Yeomans, Lady Midileton; 6, Mr. for a seedling Cineraria, Polygala cordata, Amaryiljs Johnsoni, pelargonium Lady Denbigh, Pimelea sylvestris, and Siphocam Sericea nova; 2, Mr. Bryan. Best 6 Calceolurius, Mr. Sharman, 3 Seedlings, Polyphema, Sir John Thorohd, and Harisonia.

NOTICES OF NEW PLANTS WHICH ARE EITHER LSEFUL OR ORNAMENTAL

## Begoniace

##  organ Mountans of Brazil, fowards the cluse of last season, tor the first tume, and has agam flowered early in the present year. Plants still continue in flower, and will probably blossom throughout the grearer part of the year. In height, branching ifberal.y, and producing a great quantity of prominient capsules, benng of a bright deep red colour, while the space between the projecting angies of the latter is shaded off almost to wh species known <br> $\qquad$ the species, common cuttings are employed, and are treated in ing off. The plant, like mos <br> $\qquad$ <br> $\qquad$ that the drainage be so good as to admit of this fluid passing off (Half hardy Prinus; var, grandiflota. Large-flowered Erinus.  make the ly ds of the flower-garden, the smaller wases or baskits lesser parterres of the conservatory as summer ornaments, the

rated pots or vases employed to eniiven the greenhouse,--so gay
during the warmer months of the year. For all these purpoces.-
for filling boxes to place in balconies, for vases to stand at the top of steps or along balustrades, for elevated stone parterres in ornamental the elevated shelves of greenhouses, and even for putting ont in edging by the sides of walks in conservatories- there is hardly
pettier or more interesting object in the whole range of easily
cultivated fowers of a cutivated fowers of a warl character. But the variety at
present recommended is a yet more enchanting litte plant, in
consequence of its fowers being much larger, ancil thereforemore
specious, than those of the original species : and on this account specious, than those of the original species ; and on this accous
it has a far more brilliant appearance when in blossom. We me
with it last autumn in the sursery of Messrs. Henderson, Pine Apple-place, where it was making a very admirable display in
the greenhouse. These gentlemen, we understand, obtained it
from Mr. Frazer, nurseryman have raised it from seed. Whether, however, it is an accidental
varlation, prodiced castally or by good culture, or whether the scil ermas, we have mot ascertamed, The plant is certainly a such, deserves, from the popularity of the species, to be unıver-
sally cultivated. From its low, half-trailing character, it is
peculiarly fitted for planting in very small beds, or particularly peculiarly fitted for planting in very small beds, or particularly
broad and shallow pots or vases, or for placing round the etge
near the margins of larger plots and borders, especially where or near the margins of larger plots and borders, especially where
they are a litte raised, so that it can hang down over their sides
hi w whid, aya mo. more specifically suggest its being used as an edgmg to conservatory borders that are not too much shaded
The necessity for something of a lively description in such
positions must be strongly apparent to the observantly tasteful, positions must be strongly apparent to the observantly tasteful,
and nothing would be more agreeable or showy than the presen
plant. Not knowing its origin, we are not aware whetber it be reproduced by seeds. It may be increased either by cuttmop shoots with earth in, the former season. It is not quite hardy,
and must have the protection of a frame in winter, where it ca and must have the protection of a frame in winter, where it can
be kept either as large plants for spring propagation, or as young
autumn-raised stock.-Paxton's Magezzine of Botany,

Oh, great and glorious ! Oh, herbaceous meat T would tempt the dying anchoret to eat;
$\qquad$

## Horticultural Society.-Advices have been receive

 from Mr. Hartweg, dated Bogota, 31st March. He was at that time on the point of starting for the town of rooded country, and thence he was to proceed to Cartha gena on his return to England. His collections from Popayan and elsewhere filled 14 chests, in which were species of Orchidaceæ, several fine plants of Thiebaudia 12 J kinds of seed, and about 4000 dried specimens.The Weather.-We have miserably wet weather, no atwee 20 therwise if the baroweter keeps Huctuating 3010 , or 3020 deg. it would more than double the ower of the atmosphere to dispose of aqueous vapour and keep the stratum of air free from clouds from the
height of 1300 feet to 3000 . The temperature of our summer months depends mostly on the height of the barometer. The whole country is now a morass, and the exhaling foliage of crops, woods, \&c. \&c. enormous. We
had yesterday a thunder-storm about noon, preceded by o dark a sky that the clergyman could scarcely see to read the church service.-John Williams, Pilmaslon, une 5, 1843.
India.-The dates from Calcutta, are 21st April. A meeting had been held at Agra, at which it was resolved to establish an Agricultural and Horticultural Society fox tendant of the Government Botanic Gardens sape le Bengal in the Tenasserim, on medical certificate.Irdian News.
To Destroy Cook Roaches.-We understand that the Mesoning method has been successfully practised by arsenic is mixed with four ounces of tallow, and the two are melted together in an eartlien pipkin. When smaall pieces of wood are dipped in the tallow, which forms over them a coating. They are stuck about in the pots, when the cock-roaches greedily attack them and
perish.
Wheat, 30 Quarters an Acre--Possibility is one thing, present practicability another, and while the the latter. Mr. Pusey raises the average British pro
 printed so loug ago as 1774 , by C. Varlo, Esq., are recorded (vol, i. p. 292, and seq.) a set of experments for determining the space Wheat requires to flourish on; and at p. 299 he concludes- "I say one foot square a foot square contains 144 square inches, this allows nearly 5 square inches to an ear ; room enough to admit air and sun for ripening it ; and $30+9=270$ ears per square yard. Now, a fine ear of Wheat (we are talking of possibilities) will yield 80 grains weight of corn ;
and $80+270=21,600$ grains, or $31 b s, 1 \frac{1}{4}$ oz, per square
yard. And an acre being 4,840 square yards, will

But this decides only the space required; the next ques
 30 roots will not flourish su a square foot; auch wo hnow leaf, or even kill the seed. But have we learned enough, even yet, of the respective functions of individual manures, and of their mutual reartions when mixed, to know hor largely they may be applied, in due proportions, to regu-
late each other ?
humus meat enjoys and cerces
f animal manure will run it to leaf and straw, whils
xepes of salt and lime will kill the seed. They seem to applied in due proportions to supply all that the plant rocnires, and to regulate each other's operation in ex-
$\qquad$ when the ground is thus made as rich as the seed will bear, we can continue to feed and stimulate the growing plant, fies meated top-dressings, of whicis the kinds and quantiof the season: ammonacal manures if the plant is thin and so forth Met ic:l wntht, viz, that in Belgium, where every article in: num i carefully preserved, to restore to the soil all above computation nor, indeed, do not approach the Wry, e. But the question is not one of mere quantity of manure, but of its most effective application; and the Belgian farmer, with all the practical perseverance, ha different kinds than we have, nor of their mutual correc
Encyop proportions. We have reports in the from ground-dressing only; a long step in advance from our present position; and more recently 23 qrs.-" Brit.
Husb." vol. i. 381. An instance may be quoted in which practice has overtaken a computation analogous to the bove. Last year a farmer of our neighbourhood (Mr oots, and Beer) weighed some select Man bel calculation, gave 80 tons an acre, and he said he would not be satistied till he had realised that product. I exgencies; but we now see, in the advertisements of Potter's Artificial Guano, a report of 86 toms Mangel-wurzel per 6 tons Spredes he more it gains in depth as well as in surface, and it is an interesting question how deep our different root-crops may advantageously penetrate ; and how much deeper where the air is drawn down and circulated in the soil by under draining, as by this depth the possible amount of root-crops must be limited. The best proportions of practice" may be dided formad by The quantities and best proportions of the materials equired for feeding the plant may be indicated by comparative analysis of good and bad crops, and those of the exciters by the study of their re-actions, with the observation of their effects; "practice with science" may adreat roops can be obtained upon choice land only. But whit in inferior land? Mechanically or chemically? The first points out its own remedies; and those of the latter
may be indicated by analysis; the difficulty is that they costly. But what would be too costly to bring "poor land" into condition to produce 30 or even 15 qrs. of Wheat an acre; or 86 tons of Mangel-wurzel ; or 50 tons of Swede Turnips; or other crops in propore manures? The concentrated and saline manures offer us a new and daily-extending resource; and as they increase the produce, so more stock will be fed and more yard down, and enrich the manures may be goy extent an the amonaca matters also, which have most of the effects of yard-dung ase with concentrated manures answer other pur mors or has turned to account; the liquid part over the adjoining meadows--the solid collected in cess-poos, an If judiciously employed, each to the best advantage, ne shall probably have manures enough, not only to increa in better and better heart, and our farmer's and husbandmen too. In what degree these speculations may be reat fane must show. Liming our appears probable and praclicable, why should has been may be again. What one foot has produced another may But what is to be done for the farmer while tais At progress? While the grass grows the horse stalture will not pay prices, and with present produce, to the landlords, whelher, instead of abating their rents, it will not be better to return an equivalent proportion in the concen rated manures, with plain directions for their use, and would probably beneft the farmer in his next crop to two or three times the amount, and much more prospectively
by showing him how to increase his produce from year"to proceeding, the veturn to Agricultural prosperity genetry by the it would proportionately benefit the counpractically refure the taunting argument that "the land from the Plyme population."
from the Plymouth Herald.)
clusion of Mr. Lawrence's. - [The following is the con "General Directions.-I must now give you a few general directions. Be very particular in keeping your
garden free from weeds; do not put off hoeing till weeds eche ar when the you cannot get rid of them. When the weather is dry, hoe as often
as any weeds appear above ground; you can go over the whole of your garden in a very shori time in this way, and you will find, by following this upin April and May, your ground will be clean all the summer, and with much less
labour than is required when weeds are once let get ahead. You should have a tool to use between your crops, like the common hoe, but with two prongs instead of the cutting edge; the prongs should be a little larger than those of a dung-fork, six inches long, and about four inches
apart. You will find it very beneficial to your crops to loosen the earth with this occasionally, between the rows of plants. In November and December, throw up every bed intended for Barley: this gets the mougested in the working order, and renders it much more fruitful. I wish also to press on your attention, with respect to all crops, namely, that much is lost by planting too closely, let the ground be ever so good. This is a mistake you are all which is called the physiology or principles of vegetation. A free exposure to air is absolutely necessary to the support both of animal and vegetable life. The blood of animals, after being forced from one part of the heart, through the vessels called arteries, all over the body, returns by
another set of vessels called veins, to a different part of the heart, in a very impure state; from thence it passes into the lungs, or lights as you would call them, where it is it, and renders it, with some additions, acrain this purifies lation. It then returns to the heart again, and is again sentround the body as before: and thus it circulates, regularly undergoing purification in the lungs every turn. Nature performs a like process in some respects in vegetation. Plants derive their nourishment partly from air, the earth derives all its fertility from the air. The leaves are the lungs of vegetables; their juices also circulate where they absorb the main prizciple of their eupport, and return by another set of vessels, and deposit the materials which cause the growth of plants. Your vegetables would not grow without air and light in the richest soil that ever was made. It follows, therefore, that the earth sphere or air, that it may absorb the necessary moisture for the nourishment of the roots ; and that the leaves should all be freely exposed, in order that the fluids circulating through them may also absorb from the air the mate-
rials necessary for the support of the plant. I hope you rials necessary for the support of the plant. I hope you
now nuderstand that, what you call making the most of your ground, by planting close, is, in truth, making the least of it ; that is to say, when the plants are so near to each other as to prevent the exposure of the roots and
leaves of all to a free circulation of air. You have all planted rows of Potatoes so near together that the haulms of the rows, when high and strong, met; and you have probably observed, in this case, nearly all the under leaves yellow and decayed. Nature intended every one of these intentions, which I hope you will avoid in future. You must make a hole on the waste, near each of your gardens, \&c., for these will rot in time, and make good manure.
Pigs.-I have a word or two to say about your pigs, as I expect every one of you to keep one. In the first place must therefore always be attentive to the roof of the sty, and see that it does not let wet. The open part of the and where the pig feeds and exercisen and be pranked, Wet to drain away to the dungheap. The sty must be and clean; it should be cleansed every day. Dry leaves Straw for the bed, when straw is scarce. I would recommend you not to buy in your pig before May, as you him earlier wome difficulty in finding sufticient food for not leass than six or seven months old. As there is very to grommon or waste on which your pigs could be turned leaves, pods of Peas, and Beans, \&c. to supply them with sufficient food in the sty during the summer. One hog sho you must have, and as soon as you can afford it you should get another, that one may be filling while the other the wash whilied; moreover, it is an advantage not to give better on it when is fresh, for pigs are found to thrive intended for the pigs be boiled, and then mashed up with the wash. As soon as the Acorns and BeechDery are ripe, set the children to collect them, as they are you must phing food for pigs. In the beginning of October and more Potatoes and Carrots, which you will then have in abundance. A pig will require about two bushels of

Potatoes, and one of Carrots or Parsnips boiled, and as the appetites of piga will vary, you must watch them when feeding, and give a little more or less at a meal taking care not to give at one feed more than they eat up I chould say four times during November and December, while fatting. During the last week of October, mix Wnile fatting. During the last week of October, mix
about half a peck of Barley-meal with the allowweeks in November, one peck ; each of the two last weeks, a peck and a half; the two first weeks in December, two peeks each; the third week, three pecks; and the fourth week, four pecks. It is necessary to be careful in
increasing the Barley-meal; this must be done gradually in order to prevent surfeit, which will throw the pig and produce more than you want them ripen well, and put them by for fatting the pigs to managed the pig well, he will be fat; if he be not, yo must give him a little more time, for he ought: to be thoroughly fat before he is killed. I cannot dispose of the the Author of "Cottage Economy." He proceeds follows: "The inwards are next taken out, and if the wire be not a slattern, here, in the mere offal, in the mere family for a week, and hog's puddings for the children, \&c." "The butcher the next day cuts the hog up, and then the house is filled with meat-souse, griskins, blade cheek, thigh-bones, spare-ribs, chines, belly pieces last of the latter not before the end of about four or five weeks " All the other sides that remain, and that are called flitches, cured for bacon. They are first rubbed with salt on their insides or fiesh sides, then placed one on the other, th flesh sides uppermost, in a salting-trough, which has
gutter round its edges to drain away the brine; for to have gutter round its edges to drain away the brine; for to have fine bacon the flitches must not lie sopping in brine, which gives it a bad taste. Every one knows how different is the taste of fresh dry salt from that of salt in a dissolved state; the one is savoury the other nauseous let it melt, and sink in, but not lie too long; change the flitches; put that at bottom which was first put on the for making the flitches sufficiently salt, it depends on cir cumstances-the thickness of the flitch, the state of the weather, the place where the salting is going on. It takes a longer time for a thick than a thin flitch; it takes longer in dry than in damp weather; it takes longer in a dry score, in weather not very dry nor very damp, about six weeks may do; and as yours is to be fat, which receives are injury from over salting, give time enough, for yo for salting should be cool, and where there is a free circulation of air. Confined air, though cool, will taint meat The Author then directs that the bacon should be smoked, and not dried, that the flitches should be hung up in a chimney where no rain could fall upon them, and not so near the fire as to melt ; that the smoke should proceed by day, a month would be long enough for the flitches to remain in the chimney; but if not, rather noore time mus be given, taking care not to leave them long enough to get
rusty; that the flitches should be dried to the hardness of a board, but yet not quite dry; that before the bacon loung up in the chimney it should be laid on the floor powdered over pretty thickly with bran, that this should lard must be taken care of and put away in bladders, mixing a little salt with it will make it keep good for a for you the thowledge I could dent the pig, for $h$ will furnish you with a great nurober of good, hearty, and nourishing meals after your day's toil, throughout the year ; and I hope you will not only attend to all I have written, but pick up ail the information you can as to the little additional trouble, for "there are no gains withou pains." "Cleanliness, Neatness, Regularity, and Orden. Strict attention to these qualities is of the utmost importance to your welfare. Make them the habits of you and a great advantage to them through life. Cleanliness is said to be next to godliness: on the latter it is unneces sary for me to say anything more than to urge your regula attendance at your church on a Sunday, where you will be taught the vast importance of this virtue to your condition, here and hereafter, by your good minister, who, $l$ know, Cleanliness contributes greatly to your health, as well as comfort and appearance. Neatness carries with it its own where it is least expected, in the dwellings of the poor It shows a disposition, in the dwelliags of the little advantages you may have; it is an encouragement to those who have done something to serve you to do more. Order and regularity in all things are well worth your attention they will save you both time and money; have a place for everything, and everything in its place. The wife should have a regular time, every day, allotted for the performarrange them as to devote as much time as possible, of the most favourable part of the day, to the garden; but she
must never lose a day's work when she can get paid fo one, unless prevented by illness, or the necessary care of yever childe. As every day briags ins on do doy There is some trath in the old proverb, "One to-dgy is worth two to-morrows." Regularity in your payments is a most important consideration; without the strictest: attention to this, neither your own labour, nor any advantages that may be offered to you, will long mend your condition, or save you pay ready money you can go to the best market, buy the dent dent, and you have no chance of paying off old scores, for your wants and your mear one another. For fear of offending those in whose power you have thus placed yourself, you must continue dealing with them; you must be content to take those articles, of inferior quality, which others who go with money in their hands, have refused ; and you must pay the best price, nevertheless, to cover the risk the shopkeeper runs in trusting you. You become dependent, your spirit becomes broken by difficulties, you become careless and negligent, and are lost men. If you are thrown bebind hand by any chance accident, borrow of your masters, who will always help a good servant in these cases ; but do not run in debt at the shop; do not even resort to this if you can possibly avoid it, for "the that goes a borrowing goes a sorrowing." Cleanliness, neatness, regularity, and order must be enforced on your children, both by your advice and example. They will all have to get their livelihood in one kind of service or other; most of them will look for places nearly all the the possession of these qualities make less servant I have seen many cases in wich reall industrious servants, who were never idle but who were always in a muddle, and had neverdone their work merels for want of math rho 1 athers themselves, with time to spare for their own purposes, and with satisfaction to their employers."

Service.-The few last observations have suggested to my mind some reflections on the subject of service in general, which I think may be useful to you, and with which I shall close my observations. I have always heard very general complaints by servants, both agricultural and domestic, of the treatment and conduct of their masters and mistresses ; sometimes, no doubt, with good reason, for we are all erring mortals. But the number of the satisfed bear a very small proportion to the number nf
the dissatisfied ; and truth compels me to say, that I have generally found those who were contented with their situ ations happened to be the best of servants. Again 1 have known some servants give a man the worst of characters as a master, and others give the very same man a character just the reverse. How come these things to
pass? I will tell you. Careful, industrious, and faithful servants generally make good masters; and there arc very few exceptions to this. Good men make gond
masters to such servants from a natural feeling and sense of justice. Bad men, in other respects, often make good masters for their own interest only. Every man, be his character what it may, feels that good servants are necessary to his own peace and comfort; and to keep them, will leave him I know this to be the feeling of they master and mistress I have ever talked with on this subject. I never find any one who is not sensible of the value of a really good servant, in any situation; or, who is not ready and willing to make any reasonable sacrifice complain of neglect or ill-treatment-though such com plaints are, I am aware, too often well founded-I am sure that in nine cases out of ten it arises for inattention or misconduct, in some way or other; and a the same causes will lead to the same consequences, wherever they go, as soon as they feel from their master conduct towards them, that they are losing his esteem and consideration, let me advise them, at once, instead of leavigg a master and abusing him, to look carefully back upon, and examine their own conduct, and see if they have been, upon all occasions, faithful, just, and obedient to him. If they do this sincerely and honestly, I suspect their master's conduct towards them. If, upon reflection they find that they have failed in their duty, they must exert themselves to xepair the mischief, and regain lost ground. If they feel they have done their duty, they should respectfully inquire whether their employer has any complaint to make, and tell him, at the same time, a cause of their inquiry. Jhis woulderstandine in future You are always too ready to change your masters, on very slight grounds, without recollecting that you must meet with difficulties and something you may not like in every situation; and that in changing, you, are probubly flying from one evil merely to run into another, perhaps fying from one evil merely to run into another, perbap service, appear to me to be aware bow material it is to your interest to continue as long as possible in the same place. After long service, a servant becomes ac quainted with all his master's views, wants, and habits,
and knows how to serve and please him better than any one else. This gives an old servant a great advantage tha he cannot have in a new place. As the period of service increases, so does the attachment of the master ; and from this naturally spring acts of consideration and kindness it leads to momerous little privileges and advantages, which a servant, continualiy on the move, can never know Should death, or any other circumstance reuder it neces-
sary for a servant to look out for another place, long service with the late master is the best recommendation he can take. Such a person is sure to have a choice of the most desirable situations; and, in old age or sickness, whom he may have served long and faithfully. Poor Richard says:-

## Nor yet an oft--removed family,

lh is true settled b are these children, in consequence of the complaints I hear in almost every famaily of the habits and conduct of servants now, as compared to what they used to be. Whatever
may be said of the situation of agricultural servants, (and I am fully aware that they have not had those comforts they are fairly entitled to,) this is very far from being the
case with domestic servants. Within the last few years, their wages have been greatly increased: their only neces sary expense, namely, clothing, has been very greatl diminished; they have become extremely particular, both as to the quantity and kind of work they would perform; and equally so as to the quality of their fare. I want to have strict justice done on all sides. I wish most anziously to see the labourer and his children engaged in treated with kindness and consideration. But I must tell you and them, that all these advantages are due only to those who strive to perform their various duties to the obliging, ready to do the work justly required of them, industrious and careful in the execution of it. fasthful guardians of the property entrusted to their care, and ever watchful of their master's interest. I will give you one caution at parting, though I hope and believe it is of supplying labourers with gardens, and to their keeping pigs, \&c. ; because they think that having a garden to return early from it-and to steal away from it when his master's absence may afford him an opportunity. The same persons think that having a pig will be a temptation to a poor man to pilfer all he can for its support;
corn, grain, straw, \&c. I do not believe a word of this; for, making due allowances for the different advantages of different stations amongst mankind, I believe the
poor to be full as honest as the ricl ; but I mention these poor to be full as honest as the rich; ; but I mention these
objections to you in order that you may be particularly careful to avoid every act that might give any persons the least ground for supposing they were sufferers by any
advantage given to you. Take nothing that does not belong to you ; neither goods nor time. For, if you rob your master of time which he pays you for, it is the same thing, in substance, as robbing him of his money. When you lay down jour heads to rest at night, employ, flecting upon your conduct through the day. Judge yourselves, as you may rest assured you will hereafter be judged by Him "to whom all hearts are open, and and desires known, and from whom no secrets are hid;' and a sure and safe guide for thourselves to sleep, will be I shall add nothing more at present, but that I hope, ere long, to see you baking your own bread, and brewing your own beer. This must be deferred till you can save will have your hands pretty full now, and will want every farthing you can save for some time to come, to supply yourselves with garden-tools, the hog-tubs, \&c. go so far. I shall watch your proceedings with great interest, and shall hope to find you have attended to all my directions, or be able to give me a good reason for not
having done so. The deserving may be sure of encouragement. If they are at any time in want of further information or advice, or of any assistance in my power to afford them, it shall be always at their service. With every wish
for your increased comforts and happiness, which after all for your increased comforts and happiness, which after all
will mainly depend on your own industry and general good conduet, I remain, your faithful servant, Charizs

## GARDEN MEMORANDA

 Highcherere, the enrhi Caernarvon's.-There was lately blooming,most splendidly at this place, which has al ways been celebrated for

Wenerally surcharged with colour, excepting in those instances
where they had run back and bee ren
stanct stancy is more to be depended on. Among the Roses Goldham's and his Ellen, which has the its singularly bold and fine flame,
 Maria is this season in great purity of ground, with the feather and flame most delicately pencilled. The Gem is also in its true
claaracter with its high and rich colour, but wanting sun to blead the ground colour. Triomphe Royale, Aglain, and Fleur des
Dames were in fine character. The Duchess of Sutherland amonrg the Byblemens clamed particular attention, not alone for the
beauty of the fiower, but for its constancy also; every bloom was beauty of the fower, bat for its constancy also; every bioom was
true to its character, pure in the white, and rich and decided in the markings. Pandora, a rocy purple, was not so fine asid it was
Inst season, the nutter perals had evidently been cramped by the uritowari, thate of the weather. Musitrona was in great perfec.
tion The Louls were on the decine, but enough remained to
show Jown Kemble weere fine. Naperion, $z$ flower with $a$. bold darlk
flame, forms a valuabie addition to a bed, dedme, forms a valuable addition to a bed, from it being so deci-
dedy different from others. Lord Nelson, Holmes' favourite), and Franklin's. Superb were also fine. In Bizarres Polyphemus was heavy and bad, excepting in two or three in
stances before alluded to. Milton not pood
 Bedford, a feathered bizarre, a fine middle-row flower, and Davy's
Comet, good. Apelies and Strong's King were both fine. last season comes fine, and is peculiar for the deepness of the yellow and the intense black of the flame and feather; the rew
we have noticed were either old varieties in very fine condition or flowers not generally found in collections. It was evident upo expand the hlooms more kindly. A few have broken into colo to this scason; we noticed a bizarre which promises to be a great ac quisition; in its present state jt bids fair to surpass Strong's King,
the yellow and scarlet are fine and clear, the cup short and wellfornied, petals firm and waxy, the colourr is distributed in a dee rich feather, alike in all the petals; it is to be named Goldham clear. Anounher bizarre a seed wing from Polyphemus, having a
fection delicately $y$-pencilled feather, to be called Per fection, with a rose just opening, and promising well, were the
elite of the newly-broken flowers. - Mray 22 .

Manual of British Botany; containing the Flowering Plants and Ferrs, arranged accordiny to the Natural Orders. By C. C. Babington, M.A. Small 8 vo

Mr. Babington has long been known as a most diligent and critical investigator of our wild plants, and we are glad to find that he has made public the result of his he makes in the preface explains what it was that led him to consider this kind of investigation worth the

From the attention which has long been paid to the excellent botanists who have, since the time of the justly celebrated Ray (not to go further back) employed genous products of these kingdoms, the Auther, common it is believed with most English botanists, not suppose that much remained to be done in British botany ; for he could not expect that after the labours of such mea as Smith, Hooker, Lindjey, and others, and the publication of so invaluable and unrivalled a collection of figures as is contained in the English Botany, ther could still be many questions concerning the nomenclature determinatiderabie number of unascertained species, the not however advanced far in the critical examination our native plants before he found that a careful comparison of indigenous specimens with the works of eminen cintinental authors, and with plants obtained from othe parts of Europe, must necessarily be made, for it appeared England was different from that used in employed in that often plants considered as varieties here were held to be distinct species abroad, that several of our species were only looked upon as varieties by them, and also that the mode of grouping into genera was frequently essentially
"The discovery of these facts produced considerable the author was led to consider what could have The following appears to be the most probable explana century Sir J. E. Smith became the close of the last of the Herbarium of Linnæus, and was thus enabled to ascertain, with very considerable accuracy, the British species which were known to that distinguished man, and to publish, in the most improved form that he had given to his system, a remarkably complete and excellent Flora of thim. Then followed the long-continued separation European nations, by which we were almost complete prevented from observing the progress which botanical science was making in other countries, and at the same time our own Flora was continually receiving accessions of new plants which it was nearly impossible to identify German species detected and published in France and so wedded to the system of Linnæus, and it may even perhaps be allowable to add, so well satisfied with our own proficiency, that, with the honourable exception of Britain who took any interest or mid the latanist to the classification by Natural Orders whil adopted in France, and to the more minute and accurate examination of plants which was caused by the employment of that philosophical arrangement

The publiration of so complete and valuable Linnæan work as the English Flora greatly contributed to the permanency of this feeling, and accordingly we hind that at very recent period working English continental floras, and indeed even now many of those
cultivators of British by
the Brish botan
mpon looking through Mr. Babington's pages we find will bear thes. But whether or not all his new species time a matter of of examination will probably be for some he deserves credit for calling attention to circumstance which have been very generally overlooked. For our selves we are far more inclined to reduce than to increas the number of species in books; and to regard the distinctions which many Botanists suppose to be per manent, merely as triffing deviations from ordinar structure, analogous to those which occur in so much more marked a manner in the animal kingdom, withou however leading zoologists into the error of confounding them with species. When we see the extroordinary creations which are now springing up in gardens; whe we know that plants with glmost all the characters of Azalea pontica, for instance, have been bred out capsules of the common Rhododendron ; and when we consider the very unexpected discoveries lately mad experimentally by the Dean of Manchester among specifis and but pans before we recognise as Babington separates $G$. intermedium from $G$, urbanum Dryas depressa from D. octopetala, or Thesium humile from T. linophyllura
However this may be, there is no doubt that Mr Babington's is a very valuable contribution to our know leage of British plants, full of original information and the adoal remark. , has also an excellent feature, in those points in the specific characters of difficult genera, to which attention is most particularly demanded.

Theorie der Gärtnerei, von John Lindley (Lindley's
Theory of Horticulure).-8vo. Vienna. 1842.
Turs is a translation into German of the well-known English work, with some valuable notes and observations by the translator. As it may interest our readers to know the opinion of well-educated foreigners upon the importauce of correct theory to Gardeners, we select a few passages explanatory of the translator's views
In the preface, after some complimentary matter, whic need not be extracted, the taxt proceeds thus : The ar of gardening has hitherto consisted of a mere medley of isolated or ill-arranged rules, and the individuals engaged in it usually received nothing more than a tradesman-
like and superficial education, principally dependent on the capaitio of their degree of instruction masters or employers. Suct a satisfactory, but it is a question whether this is so at the when we listen to the complaints eituer of garden proprietors or of gardeners, who often find themselves foiled in the culture of most important plants for want of som sound principies of action. Much fame, indeed, has already been earned by gardening, but it will be more considered principles and scientific views.

The most profitable and useful appropriation of the soil forms the most solid prosperity of all countries. It is therefore the chief problera of our art, for the great teacher, Nature. If our questions are well put, we are sure to receive in all cases the same answer, because nature remains invariably the same, and is never subjected to either inconsistency or contradiction. If we perceive the for of this thol he timu pron should only be sti prome
"If once a theory is constructed on a sound basis, like that of our Author, it is impossible that those who apply themselves to horticulture should be easily led astray in their endeavour after improvement. To the young gardener it is invaluable, because it contains a long serien principles, the soundness of which has been proved
experiment, and which therefore deserve the entire confiexperiment, and which
dence of the beginner
Among the notes which the translator has added to the Author's text, the following will be found among the more interesting. We have prefixed to these the num ber of pagaphs in the Engish eadion pages-for the convenience of those who may possess Par. 30.-"Every leaf-bud, either on the branches or the stem, has a connexion with the root by means of very simple organs. It is the contimued life of these organs plant or a bud, after its separation from the orig the form, which, in our opinion, is the main
Par. 30.-"The young roots of some genera live for a very considerable time without the cotyledons exercisony which are sown in January will seeds ormed roots in Sepuember, but the cotyledons will not be visible for four or five months later, viz, in January or February of the next year. $\qquad$ As summer advances leaves are nearly all formed, and they then perform the function of nourishing a plant; because, if the root remains ever so long withous moisture the plant will not cease to live so atmospheric parts can absorb the moisture of the air, atzoospheric parts,
the dews, and rain. roots, the simile of a wick of a candle is certainly one of the most appropriate. The wick (as wel ality continually oles of the root by ity conducts remed by their constant formation on wards, are permanent

Par. 35.- "In many cases the rejection of certain sub stances by the roots of plants may be caused by a want shows chical affinity. Liebig says: Nays fires a the first period of development. Becquerel has proved that the seeds of Graminaceer, Leguminose, Conifere, Chicoraceæ, Umbelliferæ. Conifere, and Cucurbitaceæ excrete acetic acid during germination. A plant sproutcontain a portion of ashes, which are in general as much saturated with alkaline salts as at any other period of yegetation (Saussure). Becquerel's experiments tell u plants. The acetic acid, when formed, spreads in the plants. The acetic acid, when formed, spreads in the nd magnesia and is aran wiken back by the fibes roots in the torm is again tak
Par. 37.-" The curious phenomenon that poisons fata to animals are also destructive of plants must be cons dered as a wise provision of the Creator, because if sucl
poisons did not kill plants the latter could not be the chief nourishment of men and animals, whose existence Would then be the most difficult thing imaginable.
Par. 38.-"The analysis of Liebig has proved that rain-water contains nitrogen in the form of ammonia, and sonion struve, that most mineral matter contains carbinc acid. Before this, no one could explain whence the Thimt of ntrogen contained in the phants was derived. this riddle is now solved, and the culture of plants has been thereby advanced to an incalculable degree, although some may still not sufficiently appreciate the discovery. the nourishing of the young stem, so also the leaf which is beneath a bud is there for nourishing the latter. But the leaf in the axil of which is no bud has another function.
Par. 49.-" In all perennial plants, in shrubs, fruit and forest trees, a new and particular vegetative process folannuals from this period the stems becoree lignified, and the leaves change their colour into yellow; on the other until the beginning of winter. The remain in activity woody reginning of winter. The formation of the and from ss proceeds, wood ecomes more solid and hard all carbonic acid which they receive and assimilate is used in the preparing of nutritious substances for the next year the for or ligneous fibre, starch is formed, and spread (Hartwio in August juice through all parts of the plan (Hartwig in Liebiy's Organic Chemistry.)
Par. 67.-" The common belief that it is only the direct rays of the sua which can operate the decomposition (the common lind leaves, and that the reflected rays grest fll stances alacy, because in many plants just the same subthe sua or grow in the slade ; they require light, and the light of the sun ; but it is indifferent to them whether the receive the solar rays directly or indirectly; their functions will merely go on with more energy and rapidity if growing in the sun than in the diffused light of day, or in the shade ; and there cannot be any other difference in this case than what is exercised by light on chemical compounds, and this difference will consist merely in a more or less accelerated process. Thus chlorine and liydrosen unite into chloric acid, but this combination only takes of day, while in the sun's mays it is sudden, and accong nied by an explosion, and in the dark not the least chang will be observed..-Most physiologists have connected the exhalation of carbonic acid during night with the absorption of oxyen from the atmosphere, and consider the function of oxygen from the atmosptere, and conider this know) produces in animals a decarbonization of the blood. There is scarcely an opinion which rests on such a feeble acid, The water received by roots contains carbonic but remich is not decomposed on the absence of light, of a plains dissolved in the sap wich pervades all parts por atant; and every moment, along whin the water evaporating through the leaves is a proportionate amount of carbonic acid expelled. Soil in which plants vegetate lux uriantly contains a certain quantity of moisture (an indisdensable condition of their life), and such a soll is never deficient in carbonic acid, either derived from the atmosphere or from the patrefaction of vegetable matter. No acid ; and at no period of the life of a plant carbonic capability of its roots to absorb moisture, and conse quently air and carbonic acid, altogether cease. Can it therefore surprise us that carbonic acid, conjointly with atinosphere, when the cause of the fixation of carbon, viz light, is deficient? That exhalation of carbonic acid is as unconnected with the process of assimilation and with the life of a plant as the absorption of oxygen. They do purely the least relation to each otber process. of cotton shut up in a lamp which contains a fluid impregnated with carbonic acid will be in just the same position as a living plant in darkness, Water and carbonic acid are absorbed by the power of capillary attraction, and both evaporate again on the surface of the wick.-Liebig's Organic Chemistry, 1840 .

CALENDAR OF OPERATIONS for the ensuing week. see, plain apologise for ploughing with arrother man's heifer; I
claim to onoulh, hat the "'Floricultural Cabinet "has a better my friend riginality for smoking frames with touch-paper than
words publican; and we must cover our retreat in the words of the adage, which says, "a good tale is not the worse for
being twice told." I can only account for "Junius's", failure by
supposing his Tobacco to be too moist. One of
two man men tried plan of putting a thin layer of Tobacco on the paper, and then centre. Thave just heartre that Mr. Frenderson, of Pine-Appie-
piace, has proved the Polygrala Clampoluxus to be a good plant
for

 on through the whole winter, supplying the place of the
Frchisis: and this puts me in mind of the Mexicau Fuchsid
 water than will just keep it alive, then give it a good shift and
force it aloug with the Roses, and you wwill have it in flower by the end of February. I treated my piants thus iast year, aind
they were much admired in the conservatory last spring. I have also, the year before last, crossed this Fuchsia witt the prillen of
fulgens and corymbillora; and I like the seedings better than I. - Kitchen-garden and orchard.

Pinsry,-If the young stock of plants have anl been looked wanter for some time, except the comnon routine of watering
and sy finging, giving air, and perhaps shadiug if the plants do Viswix:- The houses where fruit is ripe, or about ripening, crop is redtuced to a fortnight's consumption, you had better cut
all the buactes and hani them in a coot, giry room. This would be a great relief to the Vines, as you can syringe them freely,
and yet give them as much air as the bouse will allow. Those moisture, both at the greenhouses, will want abundance of them to swell a fine crop of fruit.
Grapes, as they do not keep well any length of time after the trees, Xou must therefore than when just gathered off the this house dry till after the fruit is gathered for use, when yon will. of course, give the tress and all parts of the house a
tharough good washing down with the engine or a powerful syringe. The Cherry-trees may also be treated in the same Mrlons and Cucumpras.-In nine cases out of ten, Melons,
in the hands of a young begizner, either come in when they are
 mee such a case is to. gather some of the fruit a short time Melon they are quite ripe, or as soonl as the flavour of the firs
Men
mpproach to maturity, to place these on a week or ten days; and if you serve them as you would winter kitcich, or under glass in the sun, they will eat as mellow and
with as good flavour as if they had tipenced on the plant. Indeed, improved in this way. See that the ridye Cucumbers do not ge

The weather still lieeps dripping. How different from this garden but the watering-pot, and no short grass or hardly any are now weckly improving in strength and appearance. In two or three more wreks we shall have the turn of the seasin; the
mighls $W .11$ then begin to lenthen and the dews will become
his gus should not be cit after this time in private gardens.
BRooccols AND CABBA AES.- Plant out a few young Cabbageplants and autumu broccoli once a fortnight, to keep up a suppl of young heads no the autumn; and see that the seed-beds on
these do not get too nuch crowded, as they will soon do this
moist season.
Cautimbowrrs. - A few young plants of these from the spring sown beds had better also be transplanted, at short interval use are likely to be more abuudant than is required for the daily consumption, some of them should be checked, to keep them
their roots.
CrLerry. -A short row of this may be put out and well watered to carry on the early succession; and the young plauts for the
main crops will require a regular supply of water, if the rain maes not get to their roots.
 -Yna will go on with these accorcing to the state of the last sowings; and see that the hoe is atways in motion among crops
in rows, whether there are weeds or not. There is one kind of work which is hardily ever thought of in summer; I mean
trenching vacant pieces of ground as they fall in ; but I know of tremethod of improving heayy soils equal to trenching it when

## NEWS OF THE WEEK

Trim despatches by the Overland Mail of the 1st May bring detailed particulars of Sir C. Napier's decisive victory on the 24 th March. This hard-fought batt.e, which
is scarcely less important in its consequences than those which took place during the late events in Afighanistan, Was fought on the river Fullalie, about four miles from Hyderabad. The Beloochees, commanded by the Ameers, numbered 20,000 men, while the British force was only 5,000 . Notwithstanding this disparity of numbers, the enemy were defeated and dispersed after a hand-to-liand fight of three hours, in whicti a large standards were captured; $; 1,000$ men killed ; 4,000 wounded, and all their leaders, with one exception, made prisoners. The towns of Meerpore and Oomercote were who fiately taken ; and thus the power of the Amertile districts along the Indus, has been utterly overthrown. These achievements were not accomplished without a considerable loss on our part, in killed and wounded;
and the despatches are filled with accounts of personal galiantry which may be classed among the most remarkable exploits of our army. Scinde, as before announced, has been annexed to the British territory, and Sir C. Napier is actively engaged in arranging measures for the government of the conquered districts.
From China our news comes down to the 12th March. It states that in consequence of the sudden death of the Imperial Commissioner, a considerable delay in the settlement of the treaty and commercial tariff was anticipated. Many of the difficulties which had arisen were supposed to be occasioned by the intrigues of the Hong merchants at Canton, who are jealous of the opening of the other ports.-From France we learn that the Committee on the Budget for the ensuing year have proposed ceveral able reductions on the Ministerial estimates, several grants have been altogether rejected, and others
are expected to become the subject of party struggles, which may seriously embarrass the Cabinet and possibly endanger its existence.-The news from Spain announces a succession of insurrectionary movements which have taken place in different towns of Catalonia; but the prompt measures of the military authorities, by prea great measure, of their importance. Attempts have been made to excite similar movements in the northern provinces, but hitherto without success; and it is hoped hat the decided steps adopted by the Government will Uffectually prevent any general Curles Buat one the United States we learn that Sir Charles Bagot, notwithstanding the apparent improvement in the last reports, exired on the 19 th ult., after a lon fact that the changes he introduced into the constitution of the colony will hereafter be regarded as the most important events in its political history: and even those unite in mast opposed to the of respect to his memory and to the excellence of his personal character.
At home, in the absence of the usual excitement of Parliament, there is little to record. The proceedings in the Court of Queen's Bench in the case of Mr. Feargus O'Connor have terminated in the admission of the alleged defect in the indictment, the Judges having unanimously decided that the omission of the venue in $\mathrm{O}^{\prime} \mathrm{Connh}$ count renders* it absolutely void. As Mr . 8'Connor was only found guilty on that count, the decision of the Judges amounts of course to an acquittal, and
Mr. O'Connor is consequently at large. The Repeal agitation continues in full force, and money to the amount of many hundreds of pounds is still contributed to the Weekly rent. Fresh dismissals of magistrates have led to the resignation of the commission by other gentlemen Who disapprove of the proceedings of the Irish Chancellor, and in the meantime the Government are making
extensive military and naval preparations to suppress any outbreak of rebellion.

## 3home Nems.

Court.-Her Majesty, Prince Albert, the Prince of Wales, and the Princesses, left town on Saturday for Claremont, and returned to Buckingham Palace on Thursday in excellent health. On Monday her Majesty and the Prince drove from Claremont to Windsor. The Queen did not visit the Castle, but remained at Adelaide Lodge while his Royal Highness walked to the Castle through
the Park. His Royal Highness was met on the north errace by the Clerk of the Works, who reported the progress made in the various alterations sud improvements going forward at the Castle since his Royal Highuess's last visit. The Prince did not go over the Castle, but retarned to the Lodge through the new walks, attended by Mr. Ingram, her Majesty's head gardener. Whe Earl of
Warwick has succeeded the Earl of Hardwicke as the Lord-in-Waiting on the Queen.-The King of Hanover arrived, as we announced in our last, on Friday evening, Majesty immediately visited the Queen, the Queen Moager, ha hions the event was celebrated with the usual honours at Kew, and the principal members of the nobility in town paid visits ${ }_{2}$ of congratulation to his Majesty. In the evening the Queen Dowager gave a state dinner to his Majesty and other
members of the Royal family, in commemoration of the day. On Monday the King honoured Sir R. Peel with a visit, and on Tuesday dined with the Duchess of Glouces

On Thursday the King honoured Mr. and Mrs. Laurence with a visit at Ealing Park, and dined in the
evening with the Marquis and Marchioness of Londonevening with the Marquis and Marchioness of London-
derry.-Her Majesty the Queen Dowager, attended by the Prince of Saxe Weimar and her suite, left town Wednesday by the London and Birmingham Railway, to pay a visit to Croome Court, the seat of the Coventry approve of the situation, will, in all probability, be take as her winter residence. After inspecting the Hall and going over a portion of the grounds, her Majesty departed
by Upton to Malvern to dine and pass the night previous to her return to town.

Gazette Announcements.-The Queen has been pleased to nominate his Royal Highness Prince Albert to be the First and Principal Knight Grand Cross of the Oraer of the Bath, and to appoint his Royal
Grand Master of the Order, in the room of his late Royal Highness the Duke of Sussex. The Queen has been pleased to direct letters patent to be passed under the Cambridge the offfices of, Chief Ranger and Keeper of Hyde Park and St. James's Park, in
Royal Highness the Duke of Sussex.
The Army.-The Ministerial papers announce that Government last week entered into a contract with Messrs. Learmouth, the principal army accoutrement forthwith the army is about to be considerably increased.

Parliamentary Movements. The Nottingham Election Committee have reported that Mr. Gisborne was duly elected member for that Borough. The Lord Advocate elected member for that Borough. The Lord Advorate in the room of Mr. Campbell, of Monzie, who has retired. It is not expected that there will be any opposition.
Royal Commission of Fine Arts. Her Majesty's commissioners have given notice:-1. That whereas various statues in bronze and in marble, of British Sovereigns and illustrious personages, will be required
for the decoration of the New Palace at Westminster, for the decoration of the New Palace at Westminster,
artists are invited to send models to be exhibited, for the artists are invited to send models to be exhibited, for the
purpose of assisting the commissioners in the selection of parposeors to be empioyed. 2. The moodels are to be sent in the course of the first week in June, 1844, to a place of exhibition hereafter to be appointed. 3. The specimen, or specimens not exceeding two in number, to be sent by each artist, may be either prepared for the occasion, or selected from works already executed by him within five years prior to the date of this notice. 4. The works may be ideal or portrait statues, or groups, but not rilievi. The subjects are left to the choice of the artists. The materials are to be such as are commonly used scale of an erect human figure, not less than three nor more than six feet. 5. The invitation to send works for the proposed
exhibition is confined to British artists, including foreigners who may have resided ten years or upwards in the United Kingdom. 6. Artists who propose to exhibit are required to signify their intention to the Secretary, on or before the 15 th of March, 1844.
Post-Office.-A pamphlet has just been published by Mr. Rowland Hill on the subject of Post-office reform, in which he points out several defects in the existing system, and suggests various remedies for the purpose of affording additional convenience to the pubic. On the derect which still exist Mr. Hill obsevves that-. Of the Wales, about 400, containing a million and a half of inhabitants have no post-offices whatever. The average extent of these 400 districts is nearly 20 square miles each, the average population about 4,000 . The average population of the chief place of the district about 1,400 , and the average distance of such chief place from the nearest postoffice between four and five miles. In one instance (in
Lincolnshire) the chief place of the district, containing nearly 1,000 inhabitants, is as much as 16 miles from the
nearest post-office, and in some parts of Wales the distances are even greater than this. But striking as these facts are, they by no means indicate the frill extent of the cunt An in England the Post-ace that even in England, where the ramificalions of the Post-office distribution are more minute than in any other part of the kingdom, there are districts con-
