## NEWS OF THE WEEK.

The Overland Mail has arrived this week with news from Bombay to the 19th June, and from China to the 6th A pril. The details are not of much importance, with the exception of those which relate to Scinde. Sir C. Napier as made terms with most of the chiefs of that fertile coutry, and there is little doubt that its complete pacif ation will shortly be effected. Dost Mahommed has rached Cabul and has resumed the government, but the aghan chiefs are far from being united in their allegiace to him. Lord Ellenborough left Agra on the 30th May for Calcutta, to join his council. In China, Sir H. Pottinger was waiting the arrival of the new Imperial Commissioner Ke-Ying, who was expected at Canton about the beginning of June. Smuggling was openly carried on, in spite of the efforts made to arrest its progress; and opium and British goods were selling at high prices.From Spain, we learn that the insurgent Gemerals entered Madrid on the 24 th, and that the Lopez Cabinet was reconstituted on that day. The Ministers immediately proceeded to the Palace, and were received most graciously by the young Queen. The Regent, on the other hand, has effected a junction with Gen. Van Halen, and commenced the bombardment of Seville; one of the suburbs of that fine city is already reduced to ashes, and the last accounts state that the firing is still continued. The new Madrid Government has despatched a division against the Regent, who is said to be in a conSeville is severelytual resistance. The bombardment of seville is severely censured by the French papers, but it is all of Mat bave been aware of the , Madrid when he commenced operations.--In France, the afiairs of Spain still occupy attertion, and rumours determination to Northern Powers have intimated their Isabella and the son of Louis Philippe. Sotween Queen
Some alarm pre-
vails in Paris respecting the Turkish expedition against Tunis, and a squadron has been despatched from Toulon to watch the movements of the Ottoman fleet. From the Levant, we learn that this fleet left the Dardanelles on the 16 th, under the command of the Capitan Pacha, and Tunis The Sultan is also concentrating a large military force at Adrianople, and in the neighbourhood of the capital ; and tates some act of aggression on the Turkish frontier.
In the House of Commons, on Monday, the motion for the second reading of the Church of Scotland Benefices Bill, sent down from the House of Lords, gave rise to a long and animated discussion on the affairs of the Scotch Church, and the second reading was only carried by a forward a motion for repealing the laws of Mortmain, as imposing restrictions on private charity, suggesting at the same time the re-establishment of religious houses and of Which was ultimately withdrawn without a division. Mr. settlement of the revenues of the Irish Church, by distributing them among the members of the Establishment, the Roman Catholics, and the Presbyterians, according to the numbers of each denomination. Lord Eliot opposed
the motion, and after a long sitting the debate was adjourned to Wednesday, when the House was counted out, and the motion consquently fell to the ground.

## 3 ${ }^{2}$ ome Nems.

Court.-Her Majesty and Prince Albert, with the Prince of Wales and the Princesses, accompanied by the Duke Ferdinand and the Prince and Princess of Saxe
Coburg Gotha, left town on Thursday for Windsor Castle, where they will remain till Tuesday. During the week the Royal visitors have inspected Hampton Court Palace, the exhibition of Cartoons, Westminster Abbey, Green-
wich Hospital, the East India House, the West India Docks, the Athenæum Club, and Guildhall. Her Majesty and Prince Albert accompanied them to the new Houses of Parliament on Saturday, to the Exhibition of the Royal Academy on Monday, and to Stafford-louse, the residence of the Duke of Sutherland, on Tuesday. The Queen had a state ballon Monday, and a dinner party on Wednesday,
Prince Albert presided at a meeting of the Fine Arts Commaission on Friday, and transacted business at the office of the Duchy of Cornwall on Tuesday, The
Duchess of Norfolk has succeeded Iady Portman as the Lady in Waiting on the Queen; Lord Rivers and Colonel Drummond have succeeded Lord Byron and Sir
F. Stovin as the Lord and Groora in Waiting on Her Majesty. Colonel Arbuthnot has relieved Major-Gen. Wylde has relieved Colonel Bouverie as Equerry in Waiting on Prince Albert.- The King of Hanover left town on Saturday for Kew, and gave a dinner on Sunday and a numerous party. The King came to town on Monday, and was present at Her Majesty's Ball. On TuesWednesday with the Earl of Shaftesbury, attending the Duke of Wellington's concert in the evening. On Thursday His Majesty dined with the Duke ofer days for Witley Court, Worcestershire, which Her Majesty has taken on lease for three years.-The Crown Prince of Wurtemberg has arrived in town from a tour of several weeks
land, the north of England, and part of Ireland.

Royal Commission of Fine Arts.-The Commissioners have issued an invitation to artists to send in specimens of fresco painting, for the decoration of the new houses of
Parliament. They have also issued similar invitations for arabesque paintings and heraldic decorations for the enrichment of panels, friezes \&c. in colour and gold,
as well as for designs for ornamental metal work for screens, railings, gates, \&cc., and for ornamental pavement.
The National Society.- The National Society for proEstablished Church has just circulated a paper on the subject of additional schools in the mining and manufac-
turing districts. The object of the circular is to effect turing districts. The object of the circular is to effect the purpose aimed at by the Educational ciauses of the
Factories Bill, by means of private subscriptions, and in connection with the Established Church. Amongst the subscribers are the Queen, $1,000 \mathrm{l}$. ; Prince Albert, 5002 . the Queen Dowager, 500l.; the Duke of Northumberland, 1,0002. ; the Duke of Porland, 1,002 . the 500 . ; the Archbishop of York, $500 l_{\text {a }}$; the Bishop of London, $500 \%_{\text {; }}$; the Earl of Harrowby, 500l.; the Dean and Chapter of DurEgerton, 5001 . the Hon. Sidney Herbert, 500 . ; Mr Abel Smith, M.P., 500 .; Mr. Holford, 5001 ., \&c.' The total amount at present subscribed is nearly $33,000 \mathrm{l}$.

## $\sqrt{F}$ oretan.

France.-Considerable alarm prevails in Paris respecting the reported Tarkish expedition against Tunis, and that destination on the 26th. The Marseilles papers of the 28 th announce, that in the evening of the 25 th the maritime prefect was instructed by telegraphic despatch to send out immediately all the vessels of war which had their provisions on board, and early in the morning of the

2fth two ships of the line and a steamer put to sea, for
Tunis. It was supposed that the Government Tunis. It was supposed that the Government had re-Tunis, and that its last despatches from Coustantinople had apprised it of the intention of the Ottoman Government to make another attempt against that Regency. Some even stated that the Turkish fleet was already before Tunis. A steamer, returning from Bona on the 19th, descried a fleet of nine sail off Cape Gattes, apparently steering towards Gibraltar. This naval force, at first mistaken for an English fleet, is now believed to be the Ottoman squadron, which was to have put to bea on the 5th for the Archinelago.-The anniversary of the revolution was not celebrated by fetes this year in Paris. The King and the Royal Family returned on Saturday evening to Neuilly from the Chateau of Bizy. The Duke and Duchess de Nemours are makisy been enthusiasmically received. The Toulon papers mention report that Admiral Parseval Deschenes has been called from Smyrna to take the command of he to heaihis flag in the Inflexible, as Commander of the Levant station. - The National of Tuesday publishes is Ireland.
list of subscriptions in favour of agitation in It amounts to 230 france, making the total amount suibscribed 2,836 francs.-Duriug the entire week there lave been innumerable conferences at the Hotel de Courcelles (the Paris residence of the ex-Queen Regent of Spain), at which assisted the whole of Her Majestysister, the
the Austrian Ambassador, the Prussian Minist Chargé d'Affaires of Russia, and M. Guizot, who came in from Auteuil express for the purpose. The result has not transpired, but it is reported that the narther Courts, at least, are determined to oppose a marriag The Moniteur publishes a Royal ordinance, promoting the Prince de Joinville to the rank of Rear-Admiral. This ordinance is followed by the Marriage Act of the Prince with the Princess of Brazils, which was ence th Royal family, Marshal Soult, M. Guizot, the Minister o Brazils, Baron Pasquier (Chancellor of France), and the Duke de Cazes (Grand Referendary of the Chamber of Peers), acting as the civil officers. The Sough to her husband for her dower :-lst, $1,000,000 \mathrm{f}$, in specie ; 2 d , revenue of 180,000 \%. arising from Brazilian 6 per Cen Stock; 3d, 25 leagues of territory in the province of Santa Catharina, at the choice of the Prince ; 4th, the Princess possesses in her own right, a yearly an amount of 200,000 f. $; 5$ th, the Emperor of Brazils made a present to his sister of 300,000 . for her outfit. Besides these, the right of succession to the throne of Brazils is ex pressly reserved the the Princess the exclusion even of her eldest sister, the Queen of Portugal, if the Emperor Don Pedro 11. and the Princesi Jonuaria, This clause has been inserted in the Marriage Act of the Princess.
Spain.-We learn from Madrid that on the 23d the barricades were removed from the streets of the capital, as well as the cannon, which had been stationed in various quarters, and the National Guard dispersed and returned to their homes. In the afternoon Gen. Aspiroz made his entry, his vanguard consisting of the engineers and artilery, who had recently joined them. Aspiroz was ese, who uttered mingled Vivas! and Mueras! Gen. Narvaez entered on the 24 th. On that day also Col. Prim entered a Catalan battalios forming his vanguard. On the 25 th the people had resumed their good humour and gaiety, and the National Guard were disarmed without Deputation were also dissolved. M. Gomez Becerra, the head of the fallen cabinet, was said to be seriously ill. M. Mendizabal was believed to have sought refuge at the English Legation, which was granted, and General Seoane ha retired to France. Madame Mina and M. Arguelles ha tendered their resignations, and the MM. Ayllon and Caballero arrived at Madrid on the 24th, and thus completed the Lopez cabinet, which was reconstituted on that day. The Ministers immediately proceeded with General Narvaez to the Palace, where the Queen received the more gracious, and gave Geno Narrez a reception the mer ger, Queen Christina. In the evening the young Queen drove ont, and was everywhere enthusiastically cheered. It is said that, previous to his departure from Madrid, Gen. told by him that he would endeavour to join the Regent, recommended him to advise the latter to abdicate. We learn, however, by telegraphic despatch that the Regent and Gen. Van Halen have effected a junction, and that, at the moment when all his hopes of success were over, the Regent commenced the bombardment of sevile, reduced one of its suburbs to ashes.
was continued to the $22 d$ ult., and the Paris papers state that on the morning of the 23d, the people having sent out a deputation to request the Regent to cease firing, a negotiation was entered into, but without eft, an papers dwell with great severity on this attack, which they pronounce an act of cruel revenge, or a means of extorting a large sum from the wealthy capital of Andalusia. there is a four days' march from sevile to cadiz, the
remain but two days before the former leave it on the 24 th, in order to be at Cadiz on the 27 th, Zurbano bas ulready arrived thither, when Cadiz may very possibly have soined in the general movement, and shut its gates on him. Desperate, however, as his position appears the there is reason to believ that he has still the means of protracting the strugglo. His jue is with an halen and as was recently supposed. The new precipitately fying, as was recenly toper a ivision Madrid Governmer hue haris his patisa Ger against him, and another against hes pan, Gen. Ricafort, in Estramauara; whis his caan in Galicia, since a brigade has also been sent to that quar-

La Siécle affirms, on what it onsiders excellen authority, that the united forces of Espartero, Van Halen, and Ricafort, amount to $12,000 \mathrm{men}$, and that the soldier are begioning to repent their defection. The Municipality of Saragossa, upon the news of the entrance A Natas the puaria, sent a depila to him that the city mether, the purpose of announcing to him from Perpign recognised 26 th ult Government. Montjuich had written to the foreign consuls to inform them that he had demanded 25,000 francs from the authorities of Barcelona, to provide for the wants of the parrison of the fort, and that if his request was not attended to, he would fire upon the city. The consuls had protested against that determination and had suc ceeded in prevailing on the Governor not to fire upon the of Madrid.
Portugar - We have advices from Lisbon to the 28th lt., announcing that on Friday, the 21st instant, the Queen was safely delivered of a Princess. This event having taken place rather unexpectedly, the usual prepa ration and anchore and were 11 and three nights throu partial matters, which appear to have withdrawn, in a great measure, the attention which might otherwise have been bestowed upon the Soverag. derms as the greatest regiments had been kept 1 anxiety continues to prevail is the first doughter her Spain. The infant Princess is tility Majesty has yet had, and the probabinty that, if she she may become the future Queen of the French, is alread talked of-the Count of Paris, heir apparent to the Prene throne, is now three years old, andle. It is considered to in point of age, who more probable by the fact that the heir to the Fe made more probable by the fact Catholic Princess of

India.--The overland mail has arrived with dates from Calcutta to June 7; Bombay, June 19; Alexandria, July 20. The dates from China are of the 16 th of April. The news is not of much interest this month, except that relative to the state of the newly-acquired province of
Scinde. That fertile district, which under a good government and properly cultivated will become a garden, is now nearly pacified by the measures adopted by Sir C. Neven Meer Shere Mahomed is stated to have offered to make his submission provided he could have his private property secured to him. There is no doubt that within a short time the complete pacification of the country will at Hyderabad. Several officers died. Sir C. Napier had an attack of fever, but had recovered. The ex-Ameers had been removed from Bombay to Sassoor, near Poonah. The most dangerous of them was a prisoner in the Castle of Surat, where he was well guarded. The news from Lahore is that the alarm caused by the rumoured sick-
ness of Shere Singh had ceased. That monarch was employed in traversing the north-east part of his dominions and in examining his fortresses. The sons and brother of Shah Soojah were dependents on the bounty of the Sikh
Monarch. Dost Mahommed, who was in very bad health, Monarch. Dost Mahommed, who was in very bad health,
had reached Cabul, where he is said to have resumed the government, but the Affghan Chiefs to bave very far from being united in their allegiance to him In the interior of India tranquillity prevails. There were some disturbances at the capital of the late Scin-
diah's dominions, where the Minister appointed to govern during the minority of the child chosen to succeed him, was attacked and dispossessed of his power. The British had not interfered, but it was generally supposed that they rould soon be obliged to send troops to protect the young Sovereign himself. Lord Ellenborough left Agra on the 30th May for Cawnpore and Allahabad, en route for Calcutta. Rumour asserts that strict orders had arrived from home ordering him to join his council. Prior to his departure from Agra he named Mr. Clark Governor of the North-western Provinces. This gentleman was latterly Envoy at the Court of Lahore, which omice has been India. The mercury fell very much and expended its fury in the Bay of A gale came on ships were lost on the Coromandel coast. A dreadful lurricane was felt at the Mauritius towards the end of April, and caused severe losses. In Bombay, the burning ship, the Thomas Gureville was consume, when a fine ship, the Thomas Grenville, was consumed. The insur-ance-offices have declined granting heavy policies on
native ships with Lascar crews. The heat in Bombay was felt very much in the commencement of June, but the monsoon had broken on the night of the 18th, and had cooled the atmosphere. The wing of the 78th Highwas attributed to their caps, and exposure to the sun, as well as to their careless mode of living in the tropics. China.-The news from China is extremely scanty.
Reports had been circulated of Sir H. Pottinger's sickness, but they were regarded as exaggerations. He was said, according to the latest news of the beginning of May, to be waiting for the arrival of the new Imperial Commisbeginning of June. The death of Captain Farmer, of Her Majesty's ship Driver, was mentioned. A letter from Hong Kong, dated March 7, states that business was most active to the north. 'There were seven ships in the Yang-xze Kiang, seling openly, at Woosung, opium and
Britisl goods. They had been warned off by the puthorin ties, but having persisted, they were allowed to continue their sales. The Americans are busy in smuggling. H. Pottinger sourht to stop that trade, but in vain. were subsequently released. Opium and British goods are selling at high prices at Shanghai, and British goods are said to be scarce in China; not a piece to be found to Nizon, in Cochin China, to demand satisfaction for the persecution of the French missionaries.
New Zealand.-The New Zealand Company has deits lands in New Zealand, to be called New Edinburgh the site of which will be selected by the Company, subject to the approval of the Governor of the colony. It is in tended that the site chosen shall be the best that may be available at the time of the selection being made, and the Company will select in this settlement such a quantity of greatest value in the neighbourhood with respect to fertility and accessibility. The land will be divided into 550 acres for the town, 20,000 for suburban lots, and 100,000 for rural lots. The town-land will be divided into 2,200 lots of a quarter of an acre each; the suburban land into 2,000 lots of 10 acres each ; and the rural land into 2,000 lots of 50 acres each. There will be reserved, free of charge, as a property for the future municipal corpora-
tion of the town 200 town-lots. 1 town lot i suburban tion of the town, 200 town-lots. 1 town lot, I suburban
lot, and 1 rural lot will constitute a single property, there will be reserved for the company 200 properties. The remaining 1,800 properties are to be offered for sale at per cente of 120l. for each property. A deposit of 10 application on each property to be paid previous to any the residue of the purchase-money on a day of which public notice will be given. The priority of choice in selecting
the lands comprised in each property will be determined
by lot, for the Company's and Corporation's reserves, as
well as for the properties belonging to purchasers. The party purchasing two or more properties may, with respect to rural lots only, take them in a contiguous block received, viz., $216,000 l$. will be disposed of as follows :54,000 l. to the Company as the price of the land at 10 s . per acre; 30,0006 . for surveys and other expenses of founding the settlement ; 81,000l. for emigration ; 26,000l or roads, bridges, and other improvements; 5,0001 . as a ministers; 10,000 l. as a school-fund for building and masters. The Company undertakes to apply the pur-chase-mqnies, or so much thereof as shall be received in cable to these several objects. The whole of the emigra-
chertion tion-fund, with the exception of $11,000 l_{\text {.; will be expended }}$ Edinburgh, labouring persons eligible according to the regulations established by the Government. The $11,000 \mathrm{l}$. will be reserved as a special fund, out of which, and to owards the cost of cabin-pise bade to puicuasers, families, and servants, to the settlement. The amount of the allowance will, in no case, exceed 25l. per cent. of the purchase-money paid by the colonists; and the fund iven to the applicants for the allowance, ince will be their respective applications for the same.

The Earl of Lincols withdrew for this session the Metro-
politan Buildings Bill. -On the order of the day for going in politan Baildings Bill.-On the order of the day for going into
committee on the Episcopal Functions Bill, Mr. S. O.B.ans

## amendm committ Tuesd

ommitted pro formáa.
Tuesday. - The House had a morning sitting, the chief busi Bill.-At the afternoon sitting, Colonel Rusnbrooke moved the sToNe moved, as an amendment, that leave be eiven to bring in a bill to make an effectial intuiry into the bribery and conrupt
practices alleged to exist in the borough of sudbury. Considerable discussion ensued, but ultimately the House divided, when
the amendment was carried by 138 to 25 . Leave was then given obring in the bill to make further inquiry. nexpedient in the present condstion of the country, "To continu the evinting restictions on the exercise of private charity an
munificence." His motion was drected to the propriety an expediency of repealing the laws of Mortmain, the origin and
history of which he briefly sketched. Restrictions in Mortmain originated, not in any politico-ceconomical notion, but in jearestrictions were useless; on the contrary, he thought if the
monastic establishments had been placed under more stringent monastic establishments had been placed the subversion of the Reformats had passed over society, arid we had six millions of our popula that narrowed and stinted charity, still existing amongst our for the repeal of the Mortmain laws, he asked no exclusive berne-
fit for the Church of England; he was prepared to extend it nint fessors of which we had now placed on a political equality wit impoverished peasantry, furnished an additional argument fo but we could do so fcr a museum or a menagerie of wild beasts hem away. more, we required the establishment of religious hooses, and monastic institutions. In proof of the disadvantages to whic an old lady, who has begueathed $25,000 \mathrm{l}$. for the erection churches int the north of England, and the lawyers are of opi corring winter. He hoped they would sweep away those cob weos and mes.
Sir J. Grafam could not consent, at $s o$ late a period of the
ansion, and in so thin a House, to disturb one of the great arrangements of the law of real property. Nor could he gagree or munastic institutions. In such a matter, too, it would have been more fitting that the noble Lord shonld have proposed a
bill than a mere abstract resolntion. Therefore, with all respect for the motives and intentions of the mover, he must resist this
proposition.-Mr. C. Bunkr suppoxted tile motion. He saw no eason to fear that too prnfise a picty woud in these days ingual any great amount of private bounty than to make that church
endow a chure by
unpopular by a public rate.-Sir R. Ingis could not join in the iews of the mover, least of all is his wish to revive monastic alty was unrestricted; and this kind of property had grown in main Acts.-Mr. Bernall recommended it to Lord J. Malners vourable to the motion, and Joord EBrtmentioned might effect her object by giving the money to a chureh buiding society. and the motion was thereupon withdrawn. Mr. Warn then brought on his motion for an address to the
Queen, afirming the Church of Ireland to be among the most
prominent grievances of her people, and pledging the House to prominent grievances of her people, and pledging the House to Governments had sunk under the atlempt to arrange this question, was one which must be arranged. He hat said, some weeks ago,
that the whole substance of the Ministerial policy as to Ireland wha summed up in the Arms Bill; and he was now convinced without having taken any one stey toward the relief of Ireland. temporality or appropriation measure. Appropriation might have story of the Sybiline books-you would give more, get less,
grhaps endanger all. His own principle was simply this- that all which had been done in Ireland for 300 years on the subjec he rouldion had been in debate as he spoke in private, would say that the existence of the Protestant Church in reland was
scquence, the type, and the badpe of his degradation. In all
ther countries the estaiblished religion was that of tie majority other countries the estailished religion was that ere the majority
but in freland this rule was reversed, bacause the mencement, had been handed over to the very scurm and refuse
of the English clergy. He quoted Spenser's testimony against those clergymen, and in favour of the Roman Catholics of that raine to the cily of London, containing a condition that the said that the ensociety was traceable to the Statute-book. The
but tin state of
settlement of every great question in Ireland had been impetted that church done for Ireland? Was it the author of that great perance? No: that was the work of a hamble Roman Catholic nicsnt of the establistment; while the Regium donum to the Presbyterians made provision only at the rate of about $1 s$, a head;
and for the Roman Catholics there was not a farthing. Mr. that thie churchi in those days was used, not as a means of religion, years afterwards. Then What was the pure apostolical period of
he Irish Clumch? Was it the time of the union? He cited the Irish Church ? Was it the time of the union? He cited
instances to show that at that time also the clurch was con-
verted to grossly secuin purposes. He admited that at the ornaments to it; but the chutch had still very great abuses; for nntance, some of the unions, containing a number of parishe
thrown together, sich provision for sorne farded by the Irish not only as an injury,
such a church wegard men, they must be governed and they
but as an insuit. leing mater such a churcsit. being men, they must be governed, and they
but as an insuit.
could not be governed thus. You could not thus govern $8,000,000$ of people, living in the midst of you, and knit together by the in Prussia, the true principle was well understood; this country
lone was ignorant of it. He would propose altogether to break
 Rnman Catholics. That might have been done at the Union; bay, as late as 1825, the Priesłs were willng to accept remmene-
ation from tile State; but this willingness had ceased. Some thought a provision should be made for the Catholic clergy from
the consolidated fund; but the objection to that was simply that $t$ would be impossible; the English and Scotch people would place them, subject to existing interests, in the hands of com-
missioners, and distribute them among the Members of the Estabishment, the Presbyterians and the Roman Catholics, according which might be made to his plan. It would be said, we must that no party or majority had a right to pronounce upon such a
question. If this were justifiable anywhere, it was justifiable cverywhere, and Lord Ellenborough in India ought to parade the
39 articles instead of the gates of Somnauth. Then the Catholic religion was said to be dangerons. Why, it was the only form
in which Christianity had flourished for many centuries; it was the elder type of our own religion. The spirit in which the
House should proceed would have a great effect upon the gues House should, proceed would have a great effect upon the gueshe motion. The do-nothing system could not be maintained much longer in Ireland, nor could the Protestant Church. He system on which it was planted there.- Lord Ehoot eaid that certainly this was no vague propossl, it was defnite enough! But the question now was not what would have been, a priori,
the fittest church estahlishment for Ireland : the existing esta. without that Unon, so purchased, Catlolic emancipation would never have been peaceably carried. Mr. Ward had admitted that herefore for gentlemen to consider whether they were prepared
o Fote for the total destruction of the Protestant Church question of Protestant Fablishment was and the quegrion Protestant Sovereign, certainly until the throne should be
opened to the Catholics, they had not the complete equalit demanded on their behalf, In answer to the imputation on the political purposes, he would remind Mr. Ward that in those times polical parposes, he would reming was true of every Church in Europe. The total revenue of the Irish Church, which Mr. Ward had put at upwards
of 552,0002 ., was in fact $432,123 l$; and this sum, when distributed of $552,000 l$., was in fact $432,123 l$.; and this sum, when distributed
among 1,396 beneficed clergymen and 744 curates, gave an average income of little more than 201l. to each. Mr. Ward had high authorilies ; but had omitted to cite their opinions in favour of the inviolability of the Protestant Establishment. Gentlemen
talked of the Roman Catholics as if they were the whole people Ired of the Roman Cathonics as if they were the whole peopl as no part of that people. Mr. Ward had said that the English the maintenance of the Roman Cathoic clergy. Did he suppose Protestant Church ? The language now employed was strangely at variance with the assurances given when the emancipation
was carried. Mr. O'Connell now held opinions on the subject was carried. Mr. O'Connell now held opmions on the subject
different from what he and other leaders expressed when eman cipation was granted, and wout a distinet compact, not al have sufficed to carry that measure.-On the conclusion of Lord Elict's speech the deoate was adjourned.
Wednesday. - The adjonrned debate on Treland was resumed by Mr. Trelawney, who advised the House to take into its deliberat Church in Ireland, or submit to the alternative of civil war.-Sir R. INGLIS maintained the title of the Church to its endow ments accused of having deceived the House; he had taken away from
Lord J. Russell and his partisans all excuse for voting in favour in Ireland all the revenue it possessed except 70,0001 . - that is, to take away 7 -8ths, or $17 s, 66$. in the pound; and yet had gravely putting a halter round her neek, had handed the other end of the rope to her bitterest enemies. The manner of the hon. Member had, indeed, been courteous; but the bowstring was not the less respects the Church of Ireland had failed of her duty ; in par vage of the people. But he denied the validity of the ar deduced from former abuses of that Church, and showed the im provements of its ministry in recent times. Mr, War, however o establish the creed of Bramah or of Fo, if it were the creed suaded that it was just as much our public as our private duty to teach and advance what we believed to be the true religion. The
question, moreover, was not what religion we should establish guestion, moreover, was not what religion we should establish lready established; and that, too, by more than any ordmary
law, by a compact of two independent Legislatures. The multi tudes, therefore, who were collected to destroy that establishment
were not entitled to plead that they were seeking only the repeal of a statute. When emancipation was conceded, it was upon the assurances, given by the leading Catholics themselves, that it fortify, the Protestant Church. He would maintain that Church because he belicved its doctrine to be the truth, because it was valued it for its works of charity, and because he regarded it as he great bond of connexion between England and Ireland. - The
Earl of Listowss, and Mr. V. STUART spoke in favour of the motion, and Lord Bernard and Mr. 13. Cocurane ophosed it-
Mr. Hardy was proceeding to speak against jt, when it was moved that the House be counted: 38 members only having been
found present, the motion fell to the ground, and the House Thupsday. - Mr. Ward adverted to the "counting out" of the House on the previous evening. He laid the chief blame on the him fairly, and therefore he could not expect to renew his motion dming the present session. - Mr. Escotr, who had made the motion for "counting out" the House, explained why he did so;
which was, because he considered that no interest was taken in the question by the Opposition, or the House generally. - After timn of Mr. Ward, that the Liturgy had never been prinited in
Irish. The very first hook cver printed in Dublin was a Prayerbook in Irish. - Sir J. Grafam postponed the committee on the the Scotcll Church to express their opinion of the bill. The thir reading of the Irish Axms Bill was fixed for Monday. -The House went into committee on the Limitations of Actions (Ireland)
Biil, and counsel having been heard at the bar, the clauses were all agreed to.-The Honse went into committec on the Poor Relief (Ireland) Bill, and agreed to the first 15 clauses, after
whicla progrena was reported. -The Mandamus Appeals Blll and the 13sheys Relaef (Ireland) Bill passed througla committee, -
The Chancercor of the Exchraver obtained leave to bring in a Bill to Declare and Amend the Law for Auditing and Enrolling Friday, - Mr. T. Duncombe's motion for a select conmittee to inquire into the facts connected with a recent meeting at Hull
was negatived by 83 to 29 . The House then went into committee
of supply, and Sir G. Clesk moved that the sum of $1,281,2111$.
be granted as compensation to the owners of the opium troyed in Canton, in March, 1839, beng the amount due to them under the treaty of peace with China. - Mr. Mangles, Mr.
Lindsay, Sir T. Wilde Mr. Abel Smith, Lord Palmerston, Mr $^{\text {Hal }}$.

Visit of the Queen to the New IIouses of Parliament. - Onid Saturday atternoon houses of Parlind Prince Albert now in a state of rapid progression. The royal part were joined at the gates of the works by the Prince and Princess Angusta of Saxe Coburg Gotha, and his Serene Highness Prince Leopold, who had but just left the exhi bition of cartoons. Her Majesty was received in the
Speaker's court by Mr. Barry, the architect, and Mr. Grissel, the contractor. The Royal party were first and thence to the sculpture and model rooms, where are many objects that occupied her Majesty's attention A model of the new House of Lords was shown to he Majesty, with which she was so much pleased that dupli cates of the ornamental parts were directed to be taken in plaster and forwarded to the palace. The Queen also inspected the various descrintions of stone of which the new houses are built. The royal party proceeded from the sculpture and wings, where the statues of the Saxon Kings and Queens, time. From the south wing the Queen and aite conducted to the Victoria Tower, and thence through the cloisters and crypt of St. Stephen's to the present House of Commons, and the plain appearance of the interio cansed her Majesty to remark that it was wholly unbe coming the high purposes to which it was appropriated, Reid's Experimental Room. Dr. Reid was in attendance, and minutely explained to the Queen the process pro posed to be adopted in the ventilation and warming of the new Houses of Parnament. Her Majest, leaving the works, expressed her approbation of the present appearance of the new buildings. This was the Queen's first visit to the house, and it occupied about an hour and a balf.-In reference to her Majesty's visit to its return last week, it is sta "Syren," a Woolwich steamer. The boat was very near the barge, when a naval officer, who was outside the house, between her Majesty and the watermen, stood up on the of Royalty, sung hand, and, unmin his voice "Hallo halloo, where are you coming to?" The rudder of the barge was put hard over, and fortunately, the collision alarmed. Prince Albert looked soyal party were greatly Clementine appeared frightened, but the Queen laughcd, and did not extibit the least symptoms of fear.
Death of the Duke of Dorset - We have to announce denceath of this been for some therefore, not unexpected. He succeeded to the family honours in 1815, on the death of his cousin, Charles Duke of Dorset, was was killed by a fall from his horse in Dublin, whilst on a visit at the vice-regal court, during the lord-lieutenancy of his father-in-law Earl Whitworth The late duke was Yiscount Sackville previous to his accession to the dukedom, and as he Mies without issue, the
Dukedom of Dorset, Earldom of Middlesex, Barony of Buckh sonal favourite of King George IV. and King William IV to both of which monarchs he was Master of the Horse.
By his Grace's death, a vacant ribbon of the Garter is the dispoac's death,

Excise Seizures.-It having come to the knowledge of the Commissioners of Excise, that large quantities of grain, purporting to be high-dried malt, but which was, in fact, but scorched barley, having never been sub mark the maiting process, were to be found upon the discoveran investigation was instituted, when the ofichad in their grain, which was accordingly seized, and deposited in Her Majesty's warehouses, and now amounta in quantity to between 400 and 500 quarters. A considerable porion of it was brought from the neighbourhood of Croydom, time. The effect of the sale of thisposed wus to produce beer from it having the high colour and appearance Crown of a large revenue from legally malted grain.
Cuvtom house Frourds - It will be in the recollection of ourn sham and Blake, were deeply implicated in the late Custom-house frauds, and their names have been repeatedly mentioned in the legal proceedings against Messrs. Candy and Deane and other parties. Homersham and former died shortly after his delinquencies had become
known. Blake, who possesses an estate near Dublin,
retired to Jreland after his dismissal, and continued to retired to Ireland after his dismissal, and continued to over to the metropolis. In the meantime the Commissioners of Customs, with the law advisers of the Crown, had determined upon proceeding against Blake for the extent to which it had become known he had defrauded the Crown. For this purpose a warrant was issued at
the suit of the Attorney-General, for upwards of 20,000 , , in the City. Mr. Blake wras nucreringly sum in the City. Mr. Blake was accordingly apprehended, and is now in the Queen's Prison. A second detainer had
been lodged against him at the instance of the Crown, and it is said that the claims against him altogether amount to 80,000 .
Public Meetings,-On Saturday evening a meeting was held at the Crown and Anchor, to celebrate the return of
Mr . Bright for Durbanc. The Hon. Mr. Villiers presided, and was supported by Messrs. Cobden, Bright, Crawford, took a part in the proceedinge. Mr. Bright thanked the meeting for the honour conferred upon Durham, and pledged himself to be the unflinching enemy of every Fpecies of monopoly to the latest moment of his existence. example of the men of Durham and Essex by returning Members opposed to corruption and monopoly. In conclusion, he assured the meeting that the $50,000 l$, collected by the League liad not been uselessly lavished, but had of the Corn-laws, and in paying Anti-Corn-law missionaries. A resolution of thanks to the 488 electors of Durham who returned Mr. Bright was carried ; and, in consequence of the crowded state of the great room at the tavern, another meeting was

## Temperance Meelings.-On Monday a vast concourse

 of people assembled in the Commercial-road to hear and see the apostle of temperance, the Rev. Theobald Matbew,who had announced his intention of administering the total abstinence pledge from all intoxicating drinks in the ground lately consecrated by the Roman Catholic Bishop. before a Metropolitan auditory for the first appearance was received with loud cheers, particularly by his countrymen, who assembled in great numbers. He is about 50 years of age, of mild aportment, and the simplicity of his style when addressing his hearers, appeared to make a great impression. Father Mathew opened the pro-
ceedings by a slort but expressive prayer, and then delivered an address, which was listened to with great allention, on the advantages of total abstinence from ance. The first persons who presented themselves was a Roman Catholic fraternity called the Holy Guild, The brothers and sisters of the ground bearing crosses. The brothers and sisters of the fraternity knelt down, and repeated the woras of the pledge after Father Mathem, in them his blessing, and after touching them all on the forelead, dismissed them. The same ceremony was repeated about 12 or 14 times during the day. At 12
o'clock, Earl Stanhope arrived, and was loudly cheered by the people. At this time there were not less than 30,000 persons assembled, and the Commercial-road was nearly impassable. Earl Stanhope and Father Mathew thook hands, and the noble Lord addressed the multitude many years, and invited his hearers to follow his example. He declared bis intention of publicly taking the pledge from Father Mathew, and warmly eulogised the Rev. Gentleman for his useful and patriotic exertions in Ire land, and expressed a fervent hope that his mission in Eogland would be attended with simoilar results. Father Mathew then called upon those who were anxious to take the pledge with Earl Stanhope to come forward and do Bo. A semicircle was formed, and 300 men and women laboured under considerable agitation, was direcily afterwards embraced by Father Mathew, who, in the enthu siasm of the moment, kissed his cheek. The noble Earsmiled, and grasped Father Mathew's hands, exclaiming, "God bless you, Sir." The delivery of speeches and the administering of the pledge proceeded until dusk, when Father Mathew left the ground, having previously ansame purpose every day this week. He was treated with great respect by all persons, and appeared nearly exhausted pledge during the day, one half of whom were Irish.--On Tuege during the day, one half of whom were Irish.--On meeting in praise of Father Mathew's exertions. I acknowledging the compliment Father Mathew said that priest ha sectarian objects in view. Though a Catholic priest, he had been received in the most cordial manner by Ceergymen and lay members of the Established Church, by Wesleyans, Dissenters, Quakers, and even Jews, and he administered the pledge to millions of all sects. He wished and elevate mankind, and to promote the interests of religion, and the good of the community, by that greatest of all blessings, sobriety. The people of Yorkshire, where he had admishistered the pledge to upwards of 100,000 persons, wished to pay him for his services, and presents were
offered to him from persons of wealth and high standing in society, but he refused to accept a farthing. He bad expended $300 l$. of his own money since he had been in posed to but he did not regret it ; and if he had been disposed to favour himself fand family, he should not have
his own countrymen from drunkenness to sobriety. brother he dearly loved was the proprietor of a large dis-
tillery in Ireland, the bare walls of which cost 30,0001 . tillery in Ireland, the bare walls of which cost $30,000 l$,
and he was compelled to close it, and was almost ruined by the temperance movement in that country. The husband of his only sister, whom he also dearly loved, was a distiller, and became a bankrupt from the same cause. He was sorry to speak of those things, but when he was accused of being instigated to do what he had done to
enrich himself, he felt compelled to deny the charge." enrich himself, he felt compelled to deny the charge."
The proportion of English who took the pledge The proportion of English who took the pledge on Tues-
day was greater than on Monday. Upwards of 50,000 day was greater than on Monday. Upwards of 50,000 steamers to Wapping, and by the Blackwall Railway, to witness the proceedings, which appeared to excite great interest, and have continued daily during the week

The Church Service.-On Wednesday, a vestry meeting the parish church, for the purpose of considering the changes which have been recently introduced during the performance of divine service, and to adopt such measures thereupon as might appear expedient. Mr. Howell, the senior churchwarden, was called to the chair, and read the requisition addressed to him by a large number of the resident parishioners, requesting that a meeting might be preaching in the surplice instead of the academical gown, and on the restoration of the weekly offertory, a series of resolutions was proposed representing to the vicar, the Rev, S. J. Knight, that the recent alterations were regarded desirous of returning vestry, and that the inhabitants were divine service. These resolations were seconded, and carried with only one dissentient.
Wood Pavement.-A number of labourers have been engaged for some days in removing the macadamised stonel on that portion of the Great Western road extending from the entrance to Kensington Palace to the western end of Kensington High-street, a distance of nearly a quarter of a mile, preparatory to the whole being laid
with wood pavement, by order of the Commissioners of wih wood pavement,
the metropolis roads.

Murder on the High Seas.-Intelligence has been received of the blowing up of the Diana, South-Sea whaler, while on her homeward voyage, and the death of her
commander, under very suspicious circumstances. The commander, under very suspicious circumstances. The Sea fishery. She left London about three years ago, her crew consisting of Captain May (the commander, ) chief
and second mates, steward, and about 18 seamen and and second mates, steward, and about 18 seamen and Helena, when the chief mate and crew on deck were alarmed by the report of fire-arms from the cabin, where the captain was found shot, the pistol lying in one corner of the cabin, about six or seven feet from the body. The the cabin. On her arrival at St. Helena, a day was fixed for her departure for England, and a few hours previous blew up, cusing thed ald Most of the crew at the motal aestructe standing on the after part of the deck, and the steward, who was seated on a chair near the companion-ladder, was killed on the spot. The inquiry instituted by the authorities occupied hat days, and excited great interest. It was clearly shown the powder inspection by the officers attached to her Majesty's ship Grecian, it was found that a train had been laid from the magazine to the forcastle, from the latter of which it had been set fire. It was stated that there were several bundred-weight of powder, most of which was packed in barrels lined with copper, clearly showing that the preparahad all exploxplosion must have taken some co "Wilful murder against some person or persons unknown."
Temple Church.-This unique edifice is again to be closed after to-morrow for two months, during which time it will be thoroughly cleansed from a great quantity dust which hangs about the grooves of the arches in the ceiling. The marble pillars are to be polished, and the entire wood-work is to be stained dark and polished. The pulpit will also be finished, as well as the new seats for the choristers, and a building attached to the church or the choir. Above 20,000 persons must have visited this building by Benchers' orders since it opened in November last, including the greater part of the Royal Family and Nobility, and for some months hundreds were refused admittance daily, not having orders. The whole been paid out of the funds of the societies.
Female Orphan Asylum.-On Thursday, a ballot took place for the election of Chaplain to this charity, When the numbers at the close were-for the Rev. Mr. Cattley, 418; for the Rev. Mr. Curling, $229:-$ majority for Mr.
Cattley, 119. The Duke of Cambridge, President of the Institution, recorded his votes, forty in number, in favour of the successful candidate. A great deal of angry feeling prevailed in consequence of the Committee baving recommended Mr. Cattley to the notice of the Guardians ; and a resolution expressing censure and want of confidence in the Committee, was carried by a large majority.
Suicide.-On Thursday evening, Mr. Frederick Ancona, manager of the Patent Elastic Pavement Company, and by throwing himself over Waterloo Bridge. It appears that he had been spending the afternoon with two friends, Mr. Green, jun., son of the aeronaut, and another gentleman, and was returning with them over Waterloo Bridge towards the Middlesex shore, about $90^{\prime}$ clock, when, on
nearing the third arch from the Surrey side, the deceased suddenly exclaimed that he would throw himself over the parapet, and, darting from his friends, ran towards the ascertain the reality of his intention, Mr. Ancona had mounted the raily of his intention, Mr. Ancona had bimself into the river seat the recess, and precipitated close to deceased when he entered the recess, and, had his manner indicated anything approaching to an intention to commit suicide, nothing would have been easier than to have arrested the attempt. As it was, the occurrence was the work of an instant, and as the tide was running down fast, all attempts to recover the body were fruitless, although several boats put off immediately from the stairs on both sides of the bridge. The agony of his friends When the fate of his death became no longer doubtful was extreme, and it was with the greatest difficulty that Mr reen could be prevented from throwing himself over the parapet. The body has not yet been found,
Figh Tide.-On Monday afternoon the tide was more than usually high. The wharfs along Milbank and the opposite side of the river were flooded. A great portion Lammas Land at Chelsea. In the latter village, Cheynewalk was for a time impassable. At the Waterside, Wandsworth, the Thames flowed into the bouses. The Wandle overflowed its banks, and so high was the tide at Putney, that the Thunder steamboat, in attempting to pass through the centre axch of the bridge, had the top of her paddle-boxes carried away by coming in contact with cross beam at the very top of the arch
Wouthroark.-At the vestry meeting on Monday for the parised a rate of 9 d . in the pound, to meet the expenses of
mover the year. An amendment was moved, that the parishioners should not be trifled with by being called upon to pay such an amount of rate during the present depressed state when there were some discussion a division took place, 23 ; giving a majority of one-half the rate-payers present Mortit the smaller rate.
Mortality of the Metropolis.-The following is the July 22 :- West districts, 113 . North districts Central districts, 153 ; East districts, 180 ; South dis ${ }^{\text {tricts, }} 17$. Total, 790-( 398 males, 392 females, 442 females, ) and for the last five summers, 846

## 3 Zrobincial Nerns.

BBirmingham.-The state of the iron district continues give rise to great apprehension, and the crisis anticiand the masters memorial, which we lately noticed, appears to be fast approaching. The furnaces are daily clown out, the horses drawn out of the pits, the works closed, and the masters going into the Gazette, while the mouse on their wives and children are going to the workand, with collecting in groups along the roads and fielas, against all around them. Distress is now reaching all classes., At a place called Lye, 70 rate-payers were summoned for non-payment of poor-rates a few days aro, when they produced their rent-books to show that they could not get a shilling from their tenante, that their property was now useless, and that they themselves were on the verge of pauperism. In Dudley it was found, on the 20 th ult., that 200 persons, occupiers of 101 . houses, had become disqualified for voting from non-payment of their rates. At Dudley, the bank of Dixon and Dalton is atill open, notwithstanding rumours at a distance to the con$300,000 \%$ to iron and coal masters, who are unable to meet their engagements. Mr. Maule, solicitor of the Treasury, with Mr. Raven, Mr. Maule, solicitor of the Treasury, with Mr. Raven,
have arrived at Swansea, and Mr. Vaughan and the have arrived at Swansea, and Mr. Vaughan and the
other parties who destroyed the Bolgoed gate have other parties who destroyed the Bolgoed gate have
been committed for trial. In the course of the inquiry been committed for trial. In the course of the inquiry
it appeared that a chest of fire-arms had been found in the steam-packet office, addressed to Mr. Vaughan; suspicion being excited as to its contents, it was broken open by the authorities, and twelve new muskets, two new pistols, a quantity of patent ball cartridges, gate some powder, were discovered. Ahe Abergwilly. gate, upon the road at the entrance to Abergwilly village, The at about a mile from Swasea, The bar was situated upon the high road leading from Abergwilly to Cwmgwilly and Castelpeggin. The number or Rebeccaites who ath their conduct firm and determined. They showed by their proceeding on this occasion that they had no antipathy to the turn-pire-gates upon althang the bar which was destroyed immediately adjoined a main gate and its toll-house, they were not injured-the party contenting themselves with the total demolition of the bar. The Rebeccaites, as if in utter defiance of the authorities, have also attacked and destroyed the Sandy-gate, close to the town of been Rebecca and her of any attack, but shortly afterwards speedily destroyed. Penygarn gate, on the-Llandilo road, has also been again destroyed. Not a night passes withont a gate being destroyed, although a detachment of the nightly is patroling the roads round Carmarthen that she and her followers invariably escape being caught

Chelmsford,-On Thursday week Mr. Cobden paid a
second visit to this town, for the purpose of propounding unon the was erected in a field at the back of the Bell Inn, where the proceedings took place. There were upwards of 1,000 persons present, the great majority of whom were the mechanics and working classes of the town and neighwere also present. Mr.J. Copeland was called to the chair. Mr. Cobden addressed the meeting at great length in favour of total repeal, and Mr. Holt White spoke on the other side. A resolution in
then carried by a large majorit
Chester.-On Friday last,
the employ of Mr. G. Wilbraham, of Daburer in in passing down a lonely lane at Crowton, called Red-hill, ing from the back part of his head. She immediately gave an alarm, when the body was recognised as that of
Matthias Bailey, the gamekeeper of Mr. Wilbraham. He was quite dead, and was bleeding from a gan-shot wound in the top of the neck. It was evident that he had been shot from behind, and fell suddenly forward aithout the
slightest struggle. Five men were taken into custody on suspicion of being concerved in the murder, but there Was no evidence against them, and the jury have returned a verdict of Wilful Murder against some persons unknown.
Dusham. -There are only two instances of Quakers having been returned to Parliament, and it is remarkable that one was for the county, and the other for the city, of
Durham. Mr. Joseph Pease, of Darlington, represented the southern division of the county after the passing of now been returned for the city.
Eton.-The annual celebration of "election" commenced on Saturday, and attracted, as upon all former oversions, a large assemblage of the nobility and gentry gn'she 1 dsmanies
day, the cloister speech was delivered by Joynes, M.A., 1..S., and Capitain of the school for the succeeding year. for Old Surley, and on their return there was a display of fireworks. On Monday the public delivery of the speeches ceeded to the long chamber, which was tastefully ornamented with boughs and evergreens. The "election"
festival took place in the College-hall, to which upwards of seventy guests were invited. There are more pupils on period; a gradual increase having taken place every
since 1836 , when the number on the books was 444 . since 1836, when the number on the books was 444. The
number now is 713 -viz., 661 in the Upper and 52 in the Lower School. In 1745 the aggregate number in the two schools was only 248 . Since the foundation, in
$1 \not 111,2,257$ have succeeded to King's. It has been determined that the examination this year for Prince Alberc's prize of $50 l$, is to be in the French and German Languages, and that the prize is to be thus divided:- the to be given to the successful candidate on leaving school; the second prize to consist of books of the value of $5 l$.
Hereford.-Mr. Cobden visited this city last week for the purpose of discussing the question of the Corn-laws with the tenant-farmers of this district. It had been large enough to contain the expected assemblage, and a platform was erected in the open square at the east end of the building. The meeting, in a short time, reached in number from two to three thonsand. The audience was composed of agriculturists and inhabitants of the city ; among the former were many farmers from the neighbour Kington, and Hay. Sir S. R. Meyrick was unanimously called to the chair. Mr. Cobden, Mr. Baily, M.P. for the county, and Colonel Thompson, addressed the meeting at considerable length, and a resolution in favour of the total repeal of the Corn laws and all other monopolies was afterwards proposed to the meeting by Mr. Southall, of Leominster, and seconded by Mr. Morgan, the banker of Leominster, and seconded by Mr. Morgan, the banker
at Ross, and when put by the chairman it was carried at Ross, and when put by the chairman it was carried almost unanimous
Hull.-Since our last report, arrangements have been made for weighing the hull of the Pegasus steamer, and numerous persons have arrived at Bamburgh and Holy Island to make inquiries for the bodies of their lost relatives. A considerable portion of the wreck, and various
itema of property, have been brought to shore. On Tuesitemas of property, have been brought to shore. On Tuesday the quarter-deck of the vessel, having risen to the
surface, was towed on shore by the fishing-boats. The surface, was towed on shore by the fishing-boats. The also the cabin floor. Below the deck was a writing desk marked "William Banks, 1836." No bodies have as yet come ashore in addition to those mentioned in our last. The following is a statement of the number of passengers and crew of the Pegasus, according to the latest estimate in the local papers:-Cabin passengers, 18 ; steerage, 23 ; crew, including firemen, 14. Total, 55 ; of whom there were saved 6. Drowned, 49.
Hythe.-It appears that the English vessel mentioned in our last as having been run down by a French Government steamer, did not founder as was supposed, but was discovered on the following morning by a brigg belonging mate, also, who was reported as killed, was found on board the wreck, unhurt.

Rushton ohn Anderson was again brought before
sums of money in his possession, knowing the same to have Mr. Blakemore Mr. Marquis, at the Preston Guila, and police, produced the gentleman whose pocket had been picked of 1999l. at the Preston Guild, which bad become necessary in consequence of the evidence given last day
by Mr. Jennings, clerk in the Branch Bank, that he had by Mr. Jennings, clerk in the Branch Bank, that he had
changed the stolen notes for the prisoner at the bank, substituting for them others of a similar amount. Mr. Marquis accordingly deposed that he lived at Accrington, and when at the Preston Gnild in September, 1842, lost 19997. in notes. They consisted of two 500l. and nine 100. notes, which he received from Cunlifie and Co.,
Blackburn. Since the robbery he had ascertained that Blackburn. Since the robbery he had ascertained that
the numbers were known to the clerk at the bank, from the numbers were known to the clerk at the bank, from
whom le had received them. All the notes were of the Manchester branch of the Bank of England. A woman had been apprebended in London and convicted of steal-
ing the money from him. There was a 100l. note produced at her trial, found at Birkenhead the day after the robbery. Mr. Rushton said it would be necessary to have the banker's clerk who paid the notes to Mr. Marquis, and knew the numbers, examined. Two inquiries ha since takes place, and the prisoner is still remanded.
Maidstone.-Some narticulars connected with the dis Maidstone.-Some particulars connected with the discovery of the body of a young female in the Medway, at appeared in the daily papers On Friday he inquest took place before the coroner for the borough, and from the siderable circnlated in the town the inquiry created conproved that, while he was waiting upon the river bank, about half-past ten on Wednesday night, he heard a screaming up the water for about two minutes, which to get into his punt to see what was the matter, when to heard footsteps, and a woman's voice say, "Oh dear, oh dear, what sball we do ?" He plainly saw two men and a right,"' and they all then walked along very fast. He went up to them, and gave them into cnstody, and afterwards got drags and discovered the body, but life was quite extinct. The surgeons who examined the body after about the out of the water found no marks of violence examined, but nothing was elicited further than that they heard a noise as of a person drowning, and that the woman in their party was greatly frightened. Some other "Found drowned." The prisoners in custody were afterwards examined before the mayor, but there being no evidence to implicate them in the transaction, they were discharged from custody. The borough police
are still pursuing their inquiries into the affair.
Manchester.-On Tuesday last, while workmen were employed in strengthening the curbs to exclude the water the whole gave way, and the water rushed into the pits with such violence that the entire colliery was destroyed. The loss to Mr. Fitzgerald is stated to be least $50,000 l$., and several hundreds of workpeople are thereby thrown out of employment. The pits supplied nearly 1,000 tons of coals daily to the Manchester market.
Rochester.-Last week the bodies of a man called Hendery, and of a young woman called Hapnalh Saneto, in the Medway, clasped in each other's arms, which were tied together by a piece of tape. It appeared at the inquest that the parties were to have been maarried, but some days had been in a desponding way. Subsequently the young woman went to meet him, but never returned home again. On Thursday last the bodies were found. After the jury had retired some time to consider their verdict of "Fpolo the "and the remainder for that "Temporary insanity." The coroner told them be could not assist them, as he could not take a verdict unless agreed upon by twelve of them. The jury were again locked up, each party continuing to uphold their opinion. After some hours they all, with the exception of the foreman, agreed to a verdict of Felo-de-se, and the bodies
were buried at night by the Coroner's warrant. Shields.-The local papers state that upwards of 200 unemployed workmen of South Shields have thrown themselves on the parish, and are now employed breaking
stones and covering the churchyard with gravel, at $1 s$. ser day, whilst others have gone into the workhouse, where they receive the food of the house, and lodgings. Stafford.-Another dreadful accident has just happened in the Potteries, and within a short distance of the scene where only a few weeks ago nine persons were killed by an explosion of fire damp. It occurred on Wednesday morning, as four colliers were descending the shaft of one of a pair of pits belonging to the Broadfield Company, at Fenton, and was caused by the breaking of a spur-wheel connected with the engine used for drawing the coals. When these four men were going down one pit, a corfe of coals was ascending the other, and as soon as the spurtop, and the men within 15 yards of the bottom, caused, by its great weight, the men to be thrown out of the pit with great velocity over the pulley-wheel. The bodies of nearly were thrown a considerable height in the air, and greatly mutilated, and death must have been instantaneous. Ware.-A correspondence has taken place between the parishioners of Ware and the Bishop of London on the parish. The Churchwardens transmitted a memorial to
the bishop, signed by the whole congregation, with the exception of about five or six individuals, calling upon his lordship to recommend the vicar to return to the former mode or celebrating the Service, and abandon certain to know the particutar points to which objection is the churchwardens in reply, state that the parishioners object- " 3 st, to the preaching in the surplice instead of the academical gown. 2. To the entire omission of the prayer before the sermon in the morning, and to the use a the long prayer prescribed by the 55 th canon, instead of sermon in the, cluded the afternoon. offertory, instead of dismissing the congregation with the Uessing immediarely after the sermon

Wells.-The Dean and Chapter of Wells have just pair of their catbedral at an expense of about $70,000 \mathrm{l}$. Windsor.-In consequence of the crowded state of the mall portion of consecrated ground attached to the Royal Chapel of St. George, which is appropriated for the in-
terment of the dead, the dean and canons have removed three houses opposite the west entrance to the chapel for the purpose of having extensive vaults excavated extending to win a few feet of the west door leading in the catacombs are neary completed, and will contain between 200 and 300 coffins.
Railways.- The following are the returns for the past Westernan South Eastern, 3,550l. 10s. 8d. Eastern Counties 3,311l. 6 s .8 d . ; North Midland, 4,654l. 11 s . 7 d. ; York and N. Manchester and Birmingham, 3,280l. ; Manchester and Leeds, 5,000 l.-The half-yeariy seneral meeting of the Liverpool and Manchester Company took place last week The report stated that the receipts for the half-year had amounted to $108,960 l$., and the disbursement to $51,897 \mathrm{l}$. leaving a net profit of $57,062 l$., out of which a dividend at the rate of five per cent. for the half-year was declared While the receipts in the merchandise department had re-
mained steady, there had been a falling off in the coaching department to the extent of $5,000 \mathrm{l}$., which was partly attributable to the completion of the Boltonand Preston Railway. It appears by the report that during the last six months great progress has been made in the constraction of the Leeds Junction line, and of the Company's new station at Hutt's-bank. -The Manchester and Bolton Company have declared a dividend of 16 . $8.6 d$. per share laving
surplas of $1,935 \%$. 1 s . $2 d$. The net profit for the halfyear s working is stated to lave be 9,000l. public dinner was given last week celebrate the passing of the Act recently obtained for the way, which is intended to join the London and Birmingham line at Blisworth. Mr. Barwell, the mayor, presided, supported by a large number of the principal inha bitans. from the remarks of Mr. Bidder, who, jointly with Mr. R. Stephenson, will act as engineer of the line, it appeared that its length is nearly 48 miles, and tha the estimated amount of traffic from passengers, In its route it will form the principal medium of communication between the eastern and western districts, conuecting the manufacturing districts of Birmingham and the north on the one side, with the agricultural counties of Lincoln and Norfolk on the other. The line will be worked by the electric telegraph, with one set of rails, and will pass through Thrapston, Oundle, Boston, and Kettering. It was amounced that, under the direction of the Birming ham Company, the line would be commenced imme diately. -The half-yearly meeting of the Greenwich Com pany was beld on Tuesday. The report announced that the traffic account, as compared with the corresponding period of last year, showed a falling off of 119,000 passengers, and of $2,327 l$. in receipts, and which was attri butable, in the opinion of the directors, to the onnefore recommended that the fares of the directors therefored from $6 d$ ed $8 d$ the rom $6 d$. and $8 d$. to $4 d$, and $6 d$. The net profit for the half-year amounted to $1,103 \%$. of whicu 1,00. wouldting appropriated towaras the expense incured in aspla late the line. The directors regretted the issue of the la to Parliamentary contest with the Croydon Company to prevent the construction of the Bricklayers Arms bmend The adoption of the report having been moved, an ainted mentwas movedand seconded, hat acomanitee beapp they oinvestigate the affairs of the company, and that an apply themselves more particularly towards effecting at amicable arrangement with the neighbouring lines affic London-bridge, report on the great falling off in the trates returns, and suggest the best means for its speedy rous toration. The proposition elicited a long and clamor last discussion, but was ultimately carried.-On Tuesday lone a regular communication between London and Bo being was established by way of Folkestone; two traino despatched twice a day on the Dover Railway, Bolosne tion with steam-vessels between Folkestone and Boulognt working each way, every tide. The even way by by a public entertainment given at Folkestone by and Mayor and inhabitants of that town to the Mayor an

Were present, and the band of the national guard of Boulogne played some of the national airs of France and
England during the entertainment.-The directors of the England during the entertainment.- The directors of the Brighton Company have issued their new list, reducing the fares and altering the time table. Six trains will carry third-class passengers to and fro every day; the fare
is reduced to 58, , and on Sundays every train will coavey third-class passengers.-The up and down morning mail trains on the London and Birmingham Railway have been accelerated this week, the whole distance being accomplished in four hours and a balf. For this increased speed, and for the superior accommodation which these trains, composed wholly of first-rate carriages offer, an trains, composed wholly of first-rate carria
additional $2 s .6 d$. per passenger is charged.

## IRELAND.

Dublin.- The Commissioners of the Great Seal, in the absence of Sir E. Sugden, have superseded Mr. Geoffrey Martin, from the commission of the peace for Mayo, for having attended a Repeal meeting at Ballinrobe on the
24th ult. The Lords of the Treasury liave given notice 24th ult. The Lords of the Treasury lave given notice
that all revenue officers who may attend Repeal meetings that all revenue officers who may attend Repeal meetings
will be dismissed from her Majesty's Service. The meeting of the Repeal Association took place on Monday, when Mr. O'Connell announced that he had received
a letter from M. Ledru-Rollin, for which he felt a letter from M. Ledruu-Rollin, for which he felt
exceedingly grateful. It was exactly suited to the temper of the times; but the letter was written in French,
and he had not had time to have it translated. He and he had not had time to have it translated. He
would therefore nol read it then, but would move that would therefore not read it then, but would move that
the society adjourn to Friday, for the purpose of reading M. Rollin's letter, and paying it that respectful attention to which it was entitled. This gentleman, he said, had
tender claims upon Ireland, as he had married an Irishwoman, who had shown her taste in making so good a choice. He nest spoke of the miserable condition of the people amongst whom he had recently travelled. Nothing, he said, could be more dreadful than the increasing fatness of the beasts of the fields, and the increasing leanness of
the population. They lived in habitations the population. They lived in habitations not fit for swine. The clothing they were ragged-not robed-in,
was disgusting. The brute beast was there everythingWas disgusting. The the soil was abundantly calculater, under a better system, to support four times its present population. The rent for the week was announced to be
$2,004 l$. 10 s. $8^{\frac{1}{2}} d$. It was ordered that the Association bands should play none but Irish tunes, with the exception of "God save the Queen." Great preparations, it was also stated, were making for an extraordinary and purely Irish meeting on the celebrated hill of Tara, and new Irish harns were making for the occasion.
Mayo took place at Castlebar, on Monday. Mr. Mark Blake, M.P., in the chair. The local papers estimate the numbers present from 250,000 to 300,000 souls. The Ovening, at which Mr. D. Browne, M.P., presided, Mr. spoke at great length on the affairs of Ireland. Dr. spoke at great length on the affairs of Ireland. Dr.
M'Hale cailed upon the enemies of Ireland seriously to apply themselves to redress her wrongs, to heal her evils, to restore her to equality by the management of her own
concerns, and by the enactment, with the consent of the concerns, and by the enactment, with the consent of the
British Sovereign, of her own laws. Then, and never until then, would they see the end of this, or of a similar agitation. It was well for the Government, for England, and for the empire, that the discontent of the people
flowed through such legitimate and innocuous channels, Iowed through such legitimate and innocuous channels,
and grateful ought they to be to their illustrious guest and the Catholic hierarchy for their lessons of wise Jorbearance, compassionate sympathy, and active co-
operation, in forwarding the only measure which could operation, in forwarding the only measure which could
bring relief to the people on a large national scale. He said that in reply to a petition for an increased grant to Maynooth, the Secretary for Ireland had demanded what quid pro quo would the trustees of the college give the Government in return? But he would venture to say that the Catholics of Ireland were not yet prepared, and never Would be, to hand over, for an additional grant to Maynooth, to the Secretary of the Castle, any further control over the education of their priesthood. The quid pro quo
was at the bottom of everything. This it was which Whigs and Tories fottom of everything. This it was which higs their grants for education, and in all their insidious overtures for pensioning the Catholic clergy ; and he was convinced that if the Government did get the control demanded, it would soon happen that their books of prelate whom theology would be intrusted to some Saxon their creed happened to place on one of the archiepiscopal thrones of Ireland, recommended by the bigotry of his past life as the fittest instrument silently to work their perversion." The Rev. Prelate then proceeded to conconcluding would be the result of the present movement, repeal of the legislative union. Tipperary.-Another murd
in the north division murder has just been perpetrated farmer, north division of this county. A respectable Tomer, named Rody. Donohoe, who lived at Nicane, near into a mara, was wiylaid by four nuen, who beat his head bludgeons. The resident magistrate, from Nenagh, was trated scene of the outrage at midnight, when he concenthe surrounding from the adjacent stations, and scoured Buspicious characters were arrested, but were released after examination. The murderers, who were four in strangers, were seen by several persons. They were concealed in a pit, and rushed out of it upon their victim.

This murder, like all others in the same county, with
one or two exceptions, is attributed to the taking of land one or two exceptions, is attributed to the taking of land,
and Rody Donohoe was murdered in and Rody Donohoe was murdered in mistake for his
brother John, who had lately taken some land in the brother John, who had lately taken some land in the neighbourhood of Toom, from which the Shelleys, relaof one his by marriage, had been ejected. Conermation of the four men being strangers in the locality
Ahascragh. -The presiding magistrates, after a patient investigation into the cases of the different prisoners, have determined upon a summary conviction of twenty from 10 s . fine (or imprisonment) to $2 l$. 10 s ., which was the highest penalty inficted. Ten of the prisoners have gone to Galway ganl, the other ten paid the fines. Warof the rioters.
Cork.-In pursuance of orders received by Admiral Bowles from the Admiralty, the entire fleet at present stationed at Cove, is said to have received orders to be in readiness to sail in a day or two. In pursuance of those arrangements for the meeting of the British Association are nearly completed. The sectional meetings are to be held in the Court Houses and Grand Jury Rooms, the
Chamber of Commerce, and Commercial Building Rooms, \&c., and it is said that besides the two promenades and soirees given by the associution, a ball on an extensive
scale, under the direction of the local committee, will scale, under the direction of the local committee, will boarded over for the occasion, and a gallery raised so as accommodate 1,200 persons. Prince de Canino, nephew of Napoleon, is expected to visit this city during near this city, exploded on Saturday, and two persons were killed.
Monaghan.-As Dr. Coote, of Carn Cottage, was rehis car to the ferry at Foxshore, Lough Erne, he wns fired at when going down a hill by an assassin whom he did not see. After having travelled some distance on the road he got out of the car, and discovered that the ball had per-
forated the step. The only cause thal can be assigned for this outrage is, that Dr. Coote had attended an AntiRepeal Meeting in his neighbourhood a few days before. SCOTLAND
Glasgow.-The local papers announce the death of Mr. name is Mackintosh, of Dunchattan and Campsie, Bhose rubber cloth. At an early period of life he distinguished spondent of many of the most celebrated men of correHis successfil practical application of scienific principles to the manufacture of various ingredients used in the prowhole mercautile world; ; and the large works whichls he carried on for these purnoses at Hurlet, Campsic, and
Dunchattan, have long been objects of interest strangers visiting Glasgow. The discovery of a cloth ances, for some of which patents were taken, extended his celebrity, and secured his election as a fellow of the Royal Society

## THEATRICALS.

Haymarket-A new comedy, in five acts, called Moonshine, from the pen of Lady Emmeline Stuart Wortley, was produced at this theatre on Thursday night. The authoress has laid her scene in Rome, among a party
of English fashionables who are staying in that city. An intriguing mother with a brace of marriageable daughters, and a wealthy unmarried nobleman and his younger brother, a titled bo perims specimen of a member of Parliament, were the chief characters of the piece. There was a good deal of applause at the outset, evidently prompted by something of a
feeling of gallantry; but as the play went on it became feeling of gallantry; but as the play went on it became
less frequent and more feeble in its expression. As early as the close of the first act there were some sounds of dis approbation, which were occasionally repeated as the succeeding acts proceeded. At length coughing and
sneezing succeeded hissing, and had increased so much sneezing succeeded hissing, and had increased so much forward and entreated the audience to bear the play to the close. This appeal had the effect of restoring silence during the remainder of the performance ; but at its conclusion, when Mr. Farren came forward to announce the piece for repetition, he was greeted with such a volley of cries of "off, ofr," amidst some very pertinacious applause, were strongly cast, and Mr. Farren, Mrs. Glover, Madame Vestris, \&c.., did their best to ensure success.-On
Wednesday night, Mr. Webster, the manager, devoted the entire receipts of a crowded house towards the fund now raising for the relief of the orphans of the late Mr. Elton. The Patent Theatres.-It is stated that M. Benedict has been engaged by Mr. Bunn as conductor of the music in the forthcoming season at Drury-lane Theatre, which will open on the 1st oct. witimake oftraction. Mr. H. Wallack, on the other hand,
dities of attracter is making engagements for Covent-Garden Theatre, which lead to the conclusion that he will follow in Mr. Macready's footsteps to uphold the national drama. The
theatre will open under his management in September.

## ftifscellancous.

New Tank at Windsor Castle.-In consequence of the difficulties which presented themselves in the attempts to
obtain a supply of water on the premises of the New
Royal Gardens at Royal Gardens at Frogmore, (which extend over an area of upwards of twenty acres, the Commissioners of Woods and Forests determined upon the erection of an enormous tank in the private gardens at Windsor Castle, to communicate by means of iron pipes with Frogmore-house and gardens ; the private gardens at Windsor Castle being upwards of 40 feet above the level of Frogmore. This tark which is 100 feet long, 10 feet wide, and 7 feet in depth, has just been completed by Mr. Stacey, bricklayer to Her Majesty. It is composed of brickwork, of a most It will contain 7000 cubic feet of water, or upwards of 42,000 gallons, and will be kept constantly suprlied by the Queen's engine from the Thames, in Datchet-lane ; the Water pumped up by the Royal engine first supplying a
large tank on the top of the George IV. Tower, which supplies tise fountain and reservoir in the private gardens, and thence it proceeds to the newly-erected bricked tank. Home-park from the Castle to Frogmore, with 25 branch Home-park from the Casted to Frogmore, with 25 branch sive kitchen-gardens, for the convenient supply of water at every part of them. Branch pipes also from the main will communicate with Frogmore-house, for supplying the Whole of the establishment of the Dachess of Kent. Frog more-house is now but scantily supplied with water from some wells in its immediate vicinity, at considerable un-
certainty and inconvenience. The tank in Her Majesty's private gardens will be covered with ca-t-iron girders and (stone) landings, and will be completely hidden from view. It may be observed, that in attempting to obtain a sufficient supply of water for the new gardens at Frogmore, upon the premises, several borings took place, and some to the depth of upwards of 200 feet; but although plenty of water was obtained, it would not rige in any one in-
stance within 15 or 20 feet of the surface. Under thess circumstances it was deemed necessary either to bave a steam-engine erected over one of thpse wells to pump up
the water, or to adopt the plan which has now been perfected. The latter will prove in the end by far the least expensive, as not one farthing further outlay of money will be required for a period of many years, and purposes for which it will be required. The whole of the works, which are most substantial and complete, will have been accomplished within a period of five weeks from their

Egyptian Attiquities.-A letter from Dr. Lepsius, a member of ese scientibc expeution sent by the
Prussia to Egypt, has just announced that the ruins of the Prussia to Lgypt, has just announced that the ruins of the discovered. The account states that former descriptions particularly of Messrs. Jomard and Coutelle, by no means
agree with the real localities, and that the drawing of Mr. Perring Colonel Wyse's clever architect, gives but a poor idea of the existing rains. There are some handreds of chambers standing, with walls of from fifteen to twenty feet high, and the name of Moeris has been frequently found amongst the inscriptions. Dr. Lepsius says that the supposition of Manethan that this monarch belonged
to the twelfth dynasty is confirmed. The supposition to the twelfth dynasty is confirmed. The supposition
that the ancient Lake of Moeris was at Brke-el. Kernn is found to be incorrect. Tbe immense embankments, 160 feet wide, of the real lake have been diseovered by M. Linant, a French architect in the service of the Pacha. Its use was as a resevoir for the waters of the Nile in order to pour them out in times of drought over the
plains of Memplis and the provinces bordering on the Delta.-Times.

appeared in support of the motion, saifl that not the sinht appeared in support of the motion, saifd that not the slıghtest
idea of a compromise had ever been entertained. His twinour
made the order. The decree must therefore be executed as if the
order for suspending it hed not made the order. The decree must therefore be executed as if the
order for suspending it had not been made. The defendant
must pay the costs np to the mpor must pay the costs ap to the present time.

Commission of Lunacy.- On Monday a commission de buna
tico inquirendo was opened before Mr. Barlow, and a special
Jury, to inquite into the state of mind of Mr. David Ochterlony
Dyce Sombre, formerly of Sirhind, in the Upper Provinces of Jury, to inquire into thie state of mind of Mr. David Ochterlony
Dyce Sombre, formerly of Sirhind, in the Upper Provines of
Bengal, and now of Hannver Lorge, Regent's.park. The alleged Benga, and now inlannver Lotre, Regent's.park. The alleged
lunatic was formery elected member for the borough of Sudbury,
lut was unseated by petition. Mr. CaIvert, of the Chancery bar, appeared in support of the commission, which was unopposed.
The learned Counsel stated to the Jury that the unfortunate
gentleman was a native of Hindostan, and the son of Gencral gentleman was a native of Hindostan, and the son of Gencral
Sombreand the Begum or Princess Sirhind. At an early age he
came over to England, where he remained until the course of education laid down for him was finished, when, at the age of 19 ,
he returned to India, and remained at the residence of the Prin-
cess, his mother, until her death, which took place in 1836 . Some cess, his mother, until her death, which took place in 1836. Some
tine before her dcath she n, ade a whl, bequeathing to Mr, Uyce
Sormbre the whole of ber landed and personal property, and this
will she soon after will she sonn after confirmed by another document. Upon the
will of the Princess becoming known, the East India Company
claimed the lands left to Mr. Dyce Sombre, but allowed him to retain the personal property, which was enormous. He came to
England in 1888 a ad in 1840 he became acquainted with Misg
Jervis, the dauchter of Earl St. Vincert, to whom he paid his adduresses, and to whom he was married in Septemither in the same
year. It was shortly after his marriage that the first symptoms year. It was shortiy after his marriage that the first symptoms
of mental aberration manifested themselves, and they gradually
increased unth an inquury was rendered imperatively necessary. The consent of his friends having been obtained, the present com-
mi $)$ was instituted. Sir J. Clark, Lord Marcus IIn, and several witnesser, were examined at great length in the presence
of Mr. Dyce Sombre, when the Jury expressed themselves satis. fied, and declared him to have been of "unsound mind from the titgation by distinguished personages.
Assize InTerliaence. - Mrpland Circurt, LexcrgTrr, $\rightarrow$
Fruncis Raitey was charged with having, on the 3d April last,
felonnously stolen in the house of the Earl of Wilton, at Melton Mowbray, a gold wathe and purse, bank notes to the value of
3206, and ot er articles, the property of his Lordshp. Thomas 320., and ot er articies, the property of his Lorrishp. Thomus
Smith was charged with being an accessory after the fact. It
appeared, from the evidence, that about four o'clock on the
niorning of the 3d April, the gardener at Egerton House (Lord Wilton's seat at Meltin Mowbray) found the back-gate open,
when an alarm was given, and shortly after it was discovered
that his Lardshin's ainove described, and that the thief must have been secreted in
the house, and had let bimseff out. Information wasimmediately
scnt to the different ,olice stations in the nciath , $r$ wasd offered for the dincovery of the offender, together with a
deseripthen of such portions of the property as could be identified. descriptiom of such portions of the property as could be identified.
On the loth of April the prisoner Bailey was talken into custody
at Kegworth, a littie town near Lougliborough, at which latter place the other prisoner was arrested. Several of the notes were at Lougthborough and in Leicester, exhibiting a arge amount of time before been in the employ of Lord Wilton as cook, and the
certanty of the robbery having been committed by some one well acquainted with the premises, together with certain sus-
picious cunduct, led to his apprehension, when all the articles
which cuuld be identified were found upon his person, together with 180l. in notes. Lord Wilton stated that he had legether the
whole of the missing property in his dressing.room, which was whole of the missing property in his dressing-room, which was
partiaily detached from the house, when he retired to rest about
twelve o'clock on the night previous to the robbery. His Lordtwelve oclock on thie night previous to the robbery. His Lord-
ship also identified the articles which were found upon the
prisoner. Several witnesses were examined to prove the facts prisoner. Several witnesses were examined to prove the facts Smith for $1+$ years,
Normork Crrcutr, CAmbridor, -Considerable sensation was created in Cambridge on Friday by a rumour, which turned out nyon his wife, with intent to murder her, and sentenced to transportation for fifteen years, hat put an end to his existence. The
prisoner, it appeass, was lucked np in his cell a little before seven o'clock on Thursfay evening, the turnkey, as is usual under the
circumstances, removing his outer clothing. Eycrythng was removed from lis possession which was likely to afford him an
opportunity of dong violence to himself, and he was heard, it
is said, by a lad who was in an adjoining cell, moving about so ate as two o'clock in the morning. After that hour nothing was
 Immediate recourse was had to medical aiil, but without any fatal act had been consummated for some hours before the visit of the tarnkcy, while the means by which it was accomplished ing tied tise stockings together, and made one end fast to the bar

 and the whol history or he mans ine, a vercict or temporary timony of his relations and friends, who deposed to many acts closely indicative of a mind disordered at intervals.
Hone Crcurt, LEwes. - Mucintosh v . The Wardens and Fellows of New College, Oxford. - This was an issue arising under
the Tithe Commutation Act, Which has been already twice
disposed of, and which was now brought forward for disposed of, and which was now brought forward for the third
time. plaintiff is the holder of a large quantity of land in the
neighbourhood of Romford, known as Haverint pit neighbourhood of Romford, known as Havering Park, and which
was formerly a Royal demesne; and it was contended that, in lieu of ththe in kind, this land was only subject to the rendering of a
fat buck and doe, in the proper season, to the vicar of Hornquestion was in the hands of the Crown in the reign of Henry In. and that Monarch leased or granted the right of tithes to the
monks of St. Bernard and Montjoie, in Savoy, by whom they were helrcuntil, in the reign of Richard II, the pruperty was trans-
ferrad a lienme of the Crown to William of Wiekham, the foutuder of New College, Oxford, and 1t has ever since been in
the hands of that corporation, and they liave received the tithes charch of limemenurch. The case on the part of the plaintiff was,
 expressly stated that it was destiricly exempted all trom the question, tithe was a lat buck and do, in the proper season, to the parson
of Hornchurch. In the course of his adtress to the Jnry, the
Solicitur-General complained of the litigation that had been occasioned by the New College authorities, and he said that,
after the solemideesion of two Juries, affirming the right of the
plantiff to the exemption from payment of tithe, they hart, plantiff to the exemption from payment of tithe, they hart, upon
a mere technicality, occas.oned the necessity of a third trial, and
he added, that he was convinced he should be able to satisfy the

Jury that the College had no legal ground for claiming tithes, and he trusted the Jury would defeat their unjust attempt to purchased this land from the Crown as tithe free, and paid for it were compelled to pay an impost to which he had no idea that he
was liable. The various deeds and document that were prowas liable. The various deeds and documents that were pro-
duced on the former trials were then again put in evidence, and witnesses were also examined, who proved that within the time
of living mernory, no tithe in kind had cver been paid for the
park, and that a modus of a buck and doe had always been given in lieu of tithe. Sir Tr. Wilde made a very long address to the Jury on belialf of the authorities of the college, who he he said, being pelaced in the situation of trustece for the benefit
of others, were bound to assert those rights to which they considered themselves legally entitled. He then proceeded to comment upon the evidence that had been adduced on behalf of the the fact of the existence of the modus that was set up. Mr.
Baron Parke having summed up, the Jury, after a short deliberation, returned a verdict for the plaintiff, thus establush-
ing the right of the land to be held tithe free. The cause ing the right of the land to be held tithe free. The cause
occupied the Court nearly eleven hours, and it is anticipated that
this verdict will set the question for ever at rest.

## HORTICULTURAL SOCIETY OF LONDON.-

## Cye Catnemes Cobronite.

## SATURDAY, AUGUST 12, 1843.

Shoulid Strawberry leaves be mowed off at this season?-We say, no; some of our correspondents say, yes, They appeal to their own practice,-we to
general principles, which cannot be neglected with general principles, which cannot be neglected with
impunity. The opinions of the one are enpiricalof the other theoretical. To which is the public to give assent? Let us consider.
The reasons in justification of this practice assigned by the mowers, are the following, viz: 1 . That they get good crops; 2. That the beds are again covered protected at that season ; 3. That a very neat appearprotected at that season; 3. That a very neat appear-
ance is secured; ance is secured; and 4. That the buds for the
That good crops may be obtained by mowing is What we will not dispute, for on good Strawberry land We know that the beds will bear ill treatment to a great extent; but in such cases it may be that the crops are obtained in spite of the mowing and not in consequence of it. A man who is lame may walk faster than another who is whole, but no one would of his lameness, and the slowness of the other because of his wholeness. The question is not whether good crops can be obtained with mowing, but whether better could not have been had without
As to the beds being again well covered with
eaves before winter, this is perfectly true ; but what leaves before winter, this is perfectly true; but what
then? Rightly considered, this is one of the worst consequences of the mowing; for if we inquire into the history of the formation of these new leaves, we shall find that they are produced at the expense of organizable matter, previously lodged in the roots of by the leaves, which the mower destroyed, and was intended by nature for the food of the leaves and fruit of the succeeding year. Being expended in the production of autumn leaves, the store of food for the Doubtless such autumn leaves form a good protection in winter, but it is a protection bought at a been furnished by the old leaves had the mower allowed them to remain.
We are far from denying the neat appearance obtained by the mowers, and if Strawberry beds are made for ornament we should approve of this practice. But the Strawberry is grown, we believe, to
gratify the palate and not the eye. This is not a question about the manner of making a green edging, but of obtaining a crop of fruit. Nevertheless, we mowe, that the who in inconsiderate anxiety make their Strawberry beds look pretty
Fiually, we fully admit the fact that when Strawberry beds are mowed at this season, the buds do become very plump and fine looking: and so much the worse ; for what is this plumpness, except the indication of an attempt on the part of the plants to
throw up their flower-buds in the autumu, instead of reserving their strength till the spring? Surely it cannot be advisable to encourage such an attempt, which can only have the effect of rendering the buds Ought to be perfectly dorming
Let any one look at the present state of Strawberry beds. He will find them covered with dark green healthy vigorous leaves, not exhibiting a trace of
decay, if the beds are in good health. Those leaves are now collecting the organisable matter which is Wanted for the crop of next year, and that matter they are slowly depositing in the roots. Up to the present first they have not done much in this way; for at and then were called upon to feed the fruit. It was only after the fruit was gathered that they began to collect and send down into the roots, in any considerable quantity, the organisable matter, or true sap, Wanted for another season. By mowing them off the garclener stops this essential operation; and it is physically impossible for him to do so without detriment to the future crop. The utmost that he can expect is to repair the mischief he has committed: but is that good gardening which commits mischief for the sake of repairing it?
The way in which the evil may be partially remedied is this. When new Strawberry leaves appear, they feed, as we have before said, upon the sap already in-the roots, and thus consume a large
part of that which was intended by nature for the
maintenance of the fruit of next yar. At first
their action is entirely one of robbing. But if they grow fast enough, and the season is long enough, they may become organised in sufficient time to restore to the roots a part of that which they have stolen ; and in that case the mischief produced by mowing is, perhaps, repaired. This is the utmost that can be said-not in favour, but in palliation-of the bad system we have been considering.
If it were right that the life of a Strawberry leaf should be put an end to at Midsummer, we may rely upon it that Providence would have ordained that should perish without the assistance of a scythe.

The most obvious mode of increasing the produce of the land if, no doubt, that of bringing waste lands which are of inferior quality; but there is another, which is of more general application-we mean the more perfect cultivation of every kind of soil, from the richest to the poorest. There was a time when an opinion was universally adopted by agriculturists, that in every soil, according to its natural quality, there was a maximum of production which could never be exceeded;-that if by excessive manuring you attempted to force a crop, you were sure to suffer : the produce of straw would be increased at the expense of the grain, or the weight of the ear would be too
great for the straw, and the corn would be laid before great for
At one time, five quarters per acre of Wheat were thought a maximum for the best lands, and other grain in proportion : yet we have known eight, and even ten, quarters per acre in the gardens of cottagers; and we observe daily that the crops on the allotments heavier to larers, and well managed by them, are much the land is in general cropped harder in the allotments than in the farmers' fields. No farmer would think of having Potatoes and Wheat alternately for several after a few alternations;--nor would we recommend such a practice on the richest alluvial loams. How comes it, then, that the labourer does so, and his crops for it-this is, tillage. He stirs his land oftener and deeper; he incorporates the manure intimately with the soil. If you observe his crops growing they appear less luxuriant in spring; the plants are not so thick on the ground as they are in a field which was
richly dunged in autumn-but pull one up carefully, and you will find that the fibres have struck deeper, and the roots are more numerous: the strength of the plant is gone downwards, a broader foundation is laid, and when the stems rise they are more numerous and much stronger. The deep roots are not much affected by the vicissitudes in the weather; if there is a wet season; there is a greater depth of mellow earth to absorb it ; should it be very dry, and the superficial roots lack moisture, the deeper-laid fibres will pump it up. We see how vegetables in a garden which are drooping for want of rain are invigorated and refreshed by merely digging or forking the ground around their roots; the fibres find a readier passage to the moisture of the earth below, and very soon transmit it to the stems and leaves by capillary attraction. In a deeplypulverised soil, however light in its nature, plants are eldora burnt by the effects of drought ; clays, no doubt, retain moisture in their solid clods, but the oots cannot penetrate them until they are pulverised. If plants are kept alive in very stiff clays they make no progress, unless they find a well-pulverised soil

Tull, who was a keen observer of nature, saw so many proofs of this in his clay soil, that he began to think that dividing and pulverising the soil was all that the land required for producing great crops; and as he could not deny that manure did some good, he thought it must be by dividing the clay and preventing its uniting in masses-and he was not entirely wrong. undecomposed fibres of the straw interpose between the clods and prevent their being cemented together by the rains; as they decay they leave a residue of a and which forms excellent channels for the fibres to spread in, while the moisture which this humus retains strongly, independently of its own nourishing quality, greatly promotes the growth of the roots. Tull produced good crops of Wheat for many sion by sowing the seed in rows with wide intervals, keeping the plough continually working between the rows; thus he had a fallow and a crop at the same time: and if he had known of the chemical constitution of the grain which he carried off hel elements to the soil, he might perhaps have realised his vision of a perpetual fertility. If, while he ploughed the intervals, he had manured them judiciously,-we will not say that one species of plant might have been brought to perfection for ever in the same ground, but the symptoms of deficiency in the crop from what farmers call
the land being tired of it, would probably not have appeared so soon. In fact, the cause of this defect is not yet well ascertained. Perhaps one great cause is the increase of those minute insects which are found to infest and live upon particular plants, and which increase so rapidly as at last to cheek the growth of the plant altogether : another plant, especially of a different natural family, does not afford them the nourishment and protection they require; hence this plant thrives, the insects gradually die off. and the original plant thrives again. We know that the greater the variety of produce raised in succession on the same spot, the more healthy is the growth of each; but if we could find out the real cause of the degeneracy of plants repeatedly raised in the same soil, and also a remedy for it, there seems no reason to doubt but the same crop might succeed on the same spot for ever In the present state of our knowledge, experience has taught us, that, by pulverising the soll and exposing it
 crops, restorivg, in the shape of manure, those element. which they had extracted from the earth and assimithe to themselves, we cank keep up the fertility of and manuring to the by ghe are inferior, we gradually improve them till they become equally productive with the best. The soil of very old gardens is nearly of the same quality, whatever may have been the original soil. Stiff clays are converted into a black friable mould, and so are light sands; so that, without a very minute analysis, it would be difficult to distinguish them, and as to their fertility, they are quite on a par. The object of the farmer should be, so to crop and manure his land, and so to till and prepare it, that every year it may improve in texture and productive power, until his porous sands become c insulidated and retentive of moisture, and his heavy clays mellow and crumbling under the fingers. Then he may hope for increased crops, and reap from the same extent of land as much corn as he would have
done had he added to it an equal tract of waste, and brought it into cultivation at a great expense. $-M$.
CONCLUDING REMARKS ON THE WATERING
As the remarks I made a fortnight since on the watering attention of practical men to the subject, and embody a few leading facts in plysics bearing on the prucess, 1 would here, with your permission, the combined influences of evaporation and radiation is considerable, may be tested by direct experiment ; it is also obvious from many famuliar examples. That given in the experience of the natives of
ladia is quite apropos. Placed in a climate which does not maturally produce ice, advantage has been taken of the refrigerating powers of evaporation and radiation in order to procure it. Shallow trenches are dug on the higher lands, where the temperature is lowest ; the bottoms of these are covered over with straw, which is moisteued: on this straw are placed shallow earthenware vessels witio about half an inch of water, and by the agency referred to, the whole or a portion of this water is converted into ice during the night. The object of the shallow trench in this instance is to guard against a frequent renewal of the air as it is cooled down, and of the straw and porous Wrels to increase as muca as possiole the evaporation. When the vessels used are of a dark colour, and the straw or other porous material of hike complexion, the effect is greater. Another example of a similar nature here occurs me, which may be worth while noticing. In many parts of the country, particularly in Scolland, there are many natural basins where marshes erewbile existed; hese, by the successive accumulation of vegetable deoris, have got filled up with peat-earth, and by drainage and is, however found ticular) suffer much from boar-frost during the early and latter parts of the season ; that the Potato in particular is often cut down by frost, while those growing on the neighbouring acclivities and places more exposed remain unscathed. The reason of this is obvious. The dark porous nature of the soil favourg free radiation and temperature is depressed : and the shelter of the surrounding hills and woods, it may be, prevents a free circulation of air which that depression may be compensated; the cold in consequence gets so great, that the plants growing there are frequently frozen to death, while others growing there are in the vicinity escape.

There being no question whatever about the fact of cold thus produced, let us inquire briefly into attendant circumstances. The amount of cold is greatest when the air is very dry; that is, when the dew-poin is fren prectically when the wet and dry bulbs of the thermometer indicate the greatest difference of heat; $2 d$, When the sky is clear and cloudiess ; 3d, When the atmosphere is stili ; and 4th, When the surrounding soil is dry and parched. On the two first circumstances it is unnecessary to insist ; on the third I may remark that tender plants are generally put out in a sheltered situation, being so protected either by shrubbery or hedges, and that so placed they are thus the more listle to has and the on the world observe, that the parched state, tend to imbibe moisture given off from any
attainable source, and in so dning render the atmosphere a place to the dry, and the evaporation and cold consequently increased: to render this more familiar, take a small cup of water, place it in a tray of vitriol or dry muriate of lime, and invert a bell-glass over the whole; you will soon find that the fluid in the cup sinks in temperature sensibly, of its vapour by the vitriol or muriate of by the absorption substances having a preat avidity for mof buth of these ing the air about them constantly dry. The cup of water here is like the wet pot or patch of soil, and the vitriol or lime like the dry objects around in their thirst for moisture. The next subject of inquiry is,-are there no exceptions to the rule attempted to be laid down in preferring the morning to the evening supply of moisture to plants exposed? undoubtedly there are: in the case of Ferns, Alpine plants, and such othersas you wish to keep
cool during the night, by all means water at night; or, if the sky is cloudy and promises to continue so, then little or no barm can accrue from the evening practice, as
no radiation can then take place with its cooling infuence no radiation can then take place with its cooling infuence; or, in fine, if the hygrometric state of the atmosphere is
great, the wet and dry bulbs of the thermometer differing great, the wet and dry bulbs of the thermometer differing
little from each other, then there will also be comparatively less diminution of heat, although evening moisture be given. In other cases when the air is very dry, the neighbouring soll parched, and the sky cloudless, and where you wish your plants protected against excessive night-chill, then be cautious with your evening irrigations. It is clear that the early part of the season, when tender plants are first turned out of doors, is the time when night-cold is apt to be most prejudicial, for it is then that we are apt to have the coldest nights, and then also the susceptibility of the plants to the influence of the cold is greatest. It was from observations made on plants at this season and under these circumstances, that led me to adopted, and to arrive at the conclusions whie practice offered to your readers in the remarks made. I am, therefort-you will excuse me in observing-no mere theorist, but would rather wish to wed theory and practice, or reason and experience, into indissoluble bonds. willingly, therefure, leave my bints to the candour and intelligence of practical men.-J. L., Newburgh.

AMATEUR'S GARDEN.-No. XXXII.
Ont of the first things to be attended to now is sowing Mignonette for blooming in pots through the winter and spring. It is a plant rather difficult to manage in low and damp situations, especially if not sown sufficiently early to allow the plants to become strong before the dull weather of winter sets in. To insure success, the pots must be clean, and well drained ; the compost used should consist of three parts good mellow sandy loam, to which one part of decomposed leaf-mould may be added. Fill the pots quite full of soil, and make it rather solid, 80 as not to allow much room for subsiding; for as the young plants are rather impatient of too much moisture, it is as well to have them so placed as not to be susceptible of injury, while very small, from careless watering. The pots ; for it is better to thin them several different times leaving about six plants to bloom in a 48 -sized pot, than to take too many out at one time. Through the winter the proper treatment is to secure them against frostkeep the soil moderately moist, but not wet-and to give them all the air possible at all favourable times, but always to guard them against cold cutting winds or rain A few small plants, potted now from the open borders, will bloom in November; those sown now will succeed end of the mory, and a few more pots sow is wanted in pots in the spring.
The plants to which attention is first required in the Way of propagation for another season are those of a dethrough the winter. Among theve may be noticed the different kinds of Nierenabergia, as N. intermédia, calycina, grácilis, and filicaulıs. The first is the most clelicate, less in flower-gardens; but it makes an excellent bed and less in flower-garuens; but it makes an excellent bed, and it. N. calycina is also scarce, but it to propacate from manage as the manage as the preceding. Boutindia triphylta and same, -are planis which make beautiful beds in ordinary seasons, thuagh in the present one they have, by no means, done well. B. angıstifólia is the best both in constitution and colour of flower, but both witl now strike
freely in sand in a little heat, and, if gradually dried off before the winter, will make nice plants for turning out next seasun. Another favourite plant is Lantana Sellowi, which also requires to be propagated early, so as to Let the plants well establisheitin small pots before winter. LotusJacubreus, with its yellow variety, and the lovely litile L. micropbyllus, with its pale orange flowers, are plants ment in the evinter. rably adapted for droming an old pant whin of luasket vase, or even for making an excellent bed late in the season, may be mentioned Myoporum débile; it blooms freely in the autumn, and is not readily mjared by cold weather. These are all good plants, which hitherto hav not been 50 cultivated his their merits entille them to
 beds are, Smatn's Erperor, The Shruband, Frogmore, Brarlet, Hero, Gube Scarlet, and a prostrate-growing scarlet, which in some places is called the Huntsman, but

Ingram's and Coopers ${ }^{3}$ s Scarlets neighbourhood of London ngram's and Coopers's Scarlets are two dwarf kinds, of good pabit, the latter with a slight tinge of black in the upper pime, but there are several seedlings which will probably displace some of them next year. There are, moreover many pencilled varieties which make good beds, and to which I shall next week allude.-W.P.Ayres, Brooklands
DESCRIPTION OF THE BOILERS USED AT THE EXETER NURSERY
THE ach described bonagating-house horizontal, wrought-iron boiler, and was manufactured and erected by Messrs. Garton and Jarvis, of Exeter We find it equal, if not superior, in power and economy to any boiler that has terior and exterior being presented to the action of the fre. $a$ shows the perspective, $b$ the end section, and $c$ shape, and of a very novel description, $d e f$, called the double-drum boiler, also of their invention, which we think equally good, but better adapted for smaller houses ; $d$ represents the door and frames, $e$ the perspective, and $f$ Veitch and Son, Exeler.

THE EXHIBITIONS IN THE GARDEN OF THE HORTICULTURAL SOCIETY
LET no one who reads the following return comnlain again of the uncertainty of an English summer, and of its unftness for out-door meetings. Here we find that out of only four days, fixed four or five munths beforehand, two were fine in the afternoon. and of those five all but did not deter 2,471 persons, chiefly of the higher classes, from travelling several miles to inspect a Horticultural exhibition. In other respects also this document is remarkable, and deserves to be preserved.

## HOME CORRESPONDENCE.

## Prizes for Seedling Pelargniums.-In reply to your

 correspondent "F. H. S.," who, at p. 542, finds fault with the decision of the Judges at the last show of the Horlo remal Nociety, I would, in the first instance, beg leave old and new produr objects for which prizes are offered for they are really for the encouragement of individuals, and comparatively little wrong is done, even should the specimens exhibited be not sufficiently good to deserve the award; but in the case of a seedliug, the individual should never be considered, and no higher award made than can be justified by the intrinsic value of the production itself ; for if to gratify the individual a prize be given disproportionate to that value, the public are misled in their estimation of its merits. I need not add that such is not the case with an old and well-known variety. As regards the prizes offered by the Society for different objects, the judges have nothing to do therewith; althouph with regard to seedlings they are often placed in some dilemma. Faults may exist which may or may not be permanent and notwithstanding the desire which may be felt to make some allowances for an uncultivated variety, the opinion of the judges may be compromised by not confining themseives strictly to the facts before them. It is therefore not only the opinion of most judges, but of amateurs and growers generally, that in common with many other flowers, some alteration should be made in the plan of exhibiting seedling Pelargoniums, - that the Large 'Silver Knightian and Silver Banksian Medals' should only be given to seedlings 2 years old ; the Prizes offered for those of the current years being only considered probationary and confined to certificates, for it is a wel-known fact that flowers which have been very promising in their seedling state, have proved quite worthless the second year. Besides, the plan I have suggested would afford the twofold advantage of ascertaining the true habit of the plant, as well as the permanent properties of the bloon ; the judge should also know whether a flower had been submitted to cultivation. Upon the fiower mentioned by "F.H. S." a difference of opinion esisted amongst the judges, and upon the very point to which I have alluded, viz, whether the faults apparent in it would be permanent or not; and a centifica'e of merit rood proquenty granted, in order that on account of its a medal propertes it might not be disqualified from receiving should the defects prove to have been transient merits, have annesed my notes on the flower for the information of "F.H.S." and of your other readers who take an is $P_{\text {syt }}$ I would wish to encourage in these matters. narrow feathering, scarcely any ; rose; bases of the petals white, colour, unon which veins are irmeularls marked ; petals rather thin and uneven on the edge." In concl!n" sion, I would take leave to remark, that when a fower oi Mr. Forster at the preceding. show, Pheon, was exhibited by opportunity of conferring the bighest the judges took the they had the nower to bestow, and with the same feeling they withheld it when it could not be consistently awarded. -One of the Judges.Prizes for Fruit.-I beg to state, in answer to kill requird good seedling Pelargoning good Cherries as in raising a good seedring Pelargoaium. Be that as it may, as one of he judges of Prut at the Horticuluaral Society's Exhibiment has bein juded in everything .a lhat department has been juaged with the strictest impartiality and that the opinion of one of the most experienced growers of seedling Pelargoniums ought to be taken in preference to that of the three judges in that department, or that there was a which, well knowing them, can I subscribe to.-F. $H . S$., of more than 25 year's standing, and rqually anxwus Efect of Muriate of Ammonia should be mitinained. Effect of Muriate of Ammonia upon Cacumbers. phials filled with water, and hung them near the glass of a small house, where they form roots, sometimes in six or cight days, when 1 pot them of without flagging. A few in one solution into of water, and filted a surall phial with thich in a hittle time faded and seemed dead; showing that the solution was too strong ius that state. I took the cuttings from the phial and placed them in another phial of warm rain-water, in which they recovered and rooted; they are now potted and growing well. I had two Cucumber plants in pots sent me by a friend, as an ex worth planting; however, as they were a present, I hestowed some pains on them. One plant grew in a rame; the other, in a separate frame, remained stationary for many days, and appeared to be going off. I mixed one part of the above solution with two parts of water, and atered all round the bed ; this I continued to do, when, and is now by far the finest and most healthy of the two, with leaves of a beautiful green.- WV.S.D.

Wasps.-My method of destroying Wasps is as follows : Having found a nest, I procure a large glass bottle, and a small portion of turpentine which I put therein, and I then fix the nest, nishing the piace over it a lange once or twice, the fumes penetrate into the pest and completely destroy them.

This method I have practised for several years, and never found it fail.-B. C. $K$. [This is a slight variation from the method recoommended by Professor Henslow, at p. 637
of lust year's Chronicle, which is certainly an excelleut way to destroy them.]
On Watering Out-door Plan/s.-On perusing an arti, cle at p. 478 , on watering out door plants by " J. L.,"
I was struck with the novelty of the subject which he therein strenucusly advocates. The following week you directed attention to the subject, since which time I have waited the appearance of your last Chronicle, to see what pructical experience would say on a point or such geat their part to say anything on the subject. I do not object to common practice, but because I conceive it to be unnatural, and in many points retarding instead of accelerating the very processes which-heat and moisture ; but he, not content with plants receiving the heat which nature intends for them through the day, wishes also to preserve as large an amount as possible during the night, which is certainly necessary for out-door plants, night-watering-and not morning-would be the best means of preserving it, for ing with it by radiation at night. Heat is preserved in any body so long as the surrounding atmosphere is a ing its temperature than the body inaelf ing its amount of heat in an equal ratio with the surrounsubstance till the atmosphere that surrounds that substance is reduced to a temperature lower than the subject under a clear sky than a cloudy one ; in a damp atmosphere slower than in a dry one. If the sky be cloudy quently damp, the earth, water, \&ce, will appear to be warmer than if the sky were clear and the air dry, which were it radiate the heat acquired during the day, and quickly correspond in temperature with the surrounding medium.
If we water plants in the morning, however damp the atmosphere may be at the moment, it is constantly becoming urier, and before night every vestige of the moisture communicated to the plants is evaporated, radiation the soil dry, and affording every facility for Whereas, if water were given to plants in the evening evaporation would go on but slowly, a damp atmosphere and not accelerated, as "J. L." conceives would be the case. Night watering, also, is not subjected to so rapid an the air after sunrise is becoming every moment drier, and, consequently, the moisture intended for the benefit of the plants has scarcely saturated the soil ere it is evaporated, tion is to be carried ous. Thas, I think, will prove that to preserve by night the heat acquired by the soil during plants instead of a dry one. Another objection to morn ing watering is, that the dew renders the surface of the soil damp; we cannot discriminate between those requiring water and those that do not, rendering the per otherwise would bave been avoided. But laying asid theory altogether, and appealing to nature for an answer,are warm nights beneficial to the health of vegetable life Which are to supuort them under the influence of hent light, \&c. during the day, and nature has so ordered it that, a certain period is assigned for each. Now all animals require a period of rest to recruit their bodies, and why vegetable life, it follows that if, by artificial means, we give to vegetables more than a natural quantity, we shall overWork their organs, and consequently weaken them. By an unnatural stimulant plants may certainly for a time bypear to be enjoying good health; but as their organs would thereby become unable to perform their offices, the plates would be ontealthy onless thel afices, the taken, death would probably be the result; at all events total derangement of their whole system would take place Tyro.
Improve
Improved Garden Pols.-TThe Improved Garden Pots recommended by Mr. Rendle, at p. 519 , have been made
by Mr. Croucher, of Clapham, for the last two or three ears, and answer remarkably well.--A Subscriber
Fuchsias.-It may, perhaps, be interesting to some per
ons to know that some varieties of the Fuchsia are mor hardy than is generally believed. There is in the FlowerFarden of Colonel M'Douall at Logan, Wiytonshire, forming about 10 feet bigh and 40 feet in circumference, of July, \&ce. richily covered with its elegant flowers, and ripening its seeds in the autumn, from which there are have nearly raised seedlings without number. Some of these have nearly attained the size of the parent plant, and grow reely in any soil or situation in which they may chance to shrubs will grow, and on exposed situations without any protection, blooming freely, to the great ornament of the grounds, from July until November. The above parent gant has been suid by several individuals, who have visited they have seen. But your widely-circulated Paper may
possibly be read at some gardens which neither of these
persons have happened to visit, and where there may be
Fuchsias as well acclimatised and larger specimens. I so, a statement to that effect would, l presume, be grati fying to many of your readers, as, by bringing them into more general notice as lardy shrubs, they may become more universally cultivated, as they undoubtedly deserve to be. I may also state that there is a considerable variety among the seedlings, as regards the size of the flower, habit of the plant, bardiness, \&c.-G. Williamson, Gardener, Logan. [It is a pity our correspoudent do
say what species of Furhsia it is that he describes.]
Support for Orchidaceous Plants. - I herewith send
 ing suspended Or whereby they may be introduced into the drawing-room
with the same ease as those under potof the most curious and desirable of the tribe produce pen. dhlousfower-stems, thoroughly be dis thoroughly be diselevated and sub elevated and sub some similar mode adonirers know that jo place their subposition, mostadvantage, displays as muth art culture; and in no
class of flowers can this be more apparent than in Orchi daceæ; for when so situated, their singular habits, their curious form, and gaudy colours, cannot fail to atract the beauties ; and those who are lean have no rivals as draw ing.room flowers, on account of their delightful fragrance and their long duration of bloom in such situations, the following means of making them portable may prove acceptahle to those who wish to see them oftener than by pot according to the size of the suspender required, and get a piece of strong wire, (say a quarter of an inch in and turn it sharn over the rim ; then proceed to shape it in the form of the annexed representation. Turn the top down so as to form a loop, bring it close at the shoulder, and form the other side to correspond ; this will compose half the frame. Make two more aldes of the same shape, with a turn at top to meet cluse to its neck; make this fust with a piece of wire, then with a brad-awl periorate two holes below piece of wire (copper is best) tbrough to the inside, and twist the ends with plyers tightly over the uprights, which will complete the suspender. The pot may be filted with sand to give greater stability to its basis, and as well as
the suspender, may be painted green. It may then be placed either in a flower-stand or upon the drawing-room table-J.W.

Artificial Glazing-As a covering for flowers, \&c., nothing can be better than the varnish or solution of caoutchouc, spread with a clean brush upon fine hollandnot calico. When the linen is properly strained upon rames, it is as tight as a drum-head, and is no contemptible ubsatute for glass;-indeed, its chastened light render
Shade and Shelter for Plants.-The following is an acconnt of a contrivance for shading or otherwise protecting various outdoor plunts, which answers the purpose so simply half a common garden-pot (the pot being bisected before being submitted to the kiIn), twelve inches in dia meter, and fourteen inches high (but the dimensions, of course, alay vary according to convenience), of the same ways, either erect or longitudinally, so as to afford a ways, eteler erect or longing newly planted, from scorching sun, driving winds, or beating rains. In some cases, where required, it will be found advantageous to place the plant. Their application is universal, their usefulness endes, and I may mention a simple, but, I believe, effectual, method of protecting tender Roses in masses, as practised at Ash Grove, near Halifax, the residence of E. Rawson, Esq. which came under my notice during my visits there in the winter months. It was done by merely pricking branche of common Whin between the plants, deep enough to prestand very little higher than the Roses, and not so numerously as to crowd them. In this way at that season of the year, the groups presented an improved appearance rather than otherwa. Jhis simple method or protection may be appt the roots hyve been covered with decayed leaves, or tanner's bark. Where the Whin is not very plentiful, common Eleath or Major, Knosthos wil Forcing Pears.-I have tried to bring Pears to bea
forcing, but cannot succeed. The red spider took pos session so strongly of the leaves, that for the preservation of the Vines from their ruvages, the Pear-plants were taken Mulberries.-I -W.S.D.
Mulber ries.-I beg to state, in answer to "A nonymous," at p .545 , that I was reading some years ago of an old
man who was planting a Mulberry-tree being ridiculed by three young men, who asked him-tree being ridiculed by should ever taste the fruit; his rely wes, that his tre would live when they were rotten: and they all three died in the same year. Upon turning the subject over in my own mind, I fancied that Mulberries could be reared and brought to perfection much earlier than by the usual way therefore obtained a branch Irom a tree, about the end of December, and laid it on a grass plat, where it was left until early in March following, when I cut from the brazch 30 small pieces from 6 to 9 inches in length, and planted them in the garden 8 inches apart. In dry weather 1 gave a ittle water, and watched tbe progress of growth, which was slow. At the following Michaelmas I lifted them pruned the roots, and planted them again, giving them more space to grow in. At the end of two years I had upwards of 20 small but healthy plants; I selected four of the best, and again pruned the roots, so as to ret them into a small pot, and placed them in a Viners, where they continued to do well all the summer, but did not increase in size. I puat them in the open air all winter, and early the next season I returned them again to thesVinery where they soon showed blossom, and produced a few fruit, which ripened well. The following year the plant ritw, wad on one of them 103 very fine ruit which ripened by the ond of Jume. I was led into this experi nent as well from the story of the old man and bis isitors, as from hine some sears aro mafted a small seedling Applan some jears ago gralla a small seedins A pory very sua por grafting ripened two Apples, which were excellent.-W. W. $D$.
Ginger.-After the first crop is gathered, which will be in the space of ten or twelve weeks from the time of planting, replace the old sets, and they will produce a rop for seed the following year. I have some now that Bolanical Destruction. - I was in herevale.
Bolanical Destruction.-I was in hopes that the absurd outcry about "radical Botany" had died a natural death ; but I observe, at p. 501 , that such is not the case. Notwithstanding your correspondent's formidable signature, his letter is devoid of sting, and is in want of those facts which should support his conclusions; indeed it would not require notice, but that well-meaning people who do not investigate for themselves might be misled by it,I believe that the only authentic case of "extermination" is that of Menzıésia cserulea (said to have been the work of an Edinburgh nurseryman); as to the Orchidaceæ, although roots of Orchis fusca are hawked about London in the spring, I found it abundantly near Cobham this sear. O. hircina, perhaps, is gone ; ldo not know of its having been found since the time mentioned by Mr. Peete, in a late Number of the " Phytulogist. Naw, 1 , for one would rather that so rare a plant, as it has aiways been should be preserved in the Herbaria of the celebrated Botanist, whom Mr. Peete names as having found it, than chat it should be left to the mercy of promiscuous passersby, who, ignorant of the interest atracbed to it, would nevertheless be attracted by the singularity of its appearance. Althæa hirsuta, about the luss of which 80 much ament was made last year, is this year as plentiful as eve in the old locality; this is the case also with Salvia pratensis. "Nettle" does not appear to understand any distinclion between rare and local plants. I consider hat, if I have a local plant growing abundanty within for reach, I owe it to my brother botanists to collec who can make a pilgrimage to the locality. The imputa tion of greediness must certainly rest with those who think othervise. "Nettle" says that he has been told that a member of the Botanical Society of London has transmitted plants to head-quarters by the hundred. I must frighten him still more-I know that several have one so. I have even heard of a member of the Edinburgh Suciety botanizing with a cart. Possibly your correspondent may be a follower of the Botanist(?) who travelled all over Europe with a sandwich-box and a pair of scissors, by means of which he obtained a splendid collection of specimens, each five inches long. For my part, until we can altogether dispense with roots in our cific descriutions, I shall stick to the trowel.-Dockiber The Cuckoo.-I see, at p. 519, that "A Subscriber" Suffolk I have con the last day of Jume. In this part of Suffolk I have con stantly heard him up to the 12 th day of July, but neve a friend of his has a young one, which he hopes to keep a friend of his has a young one, whope he will, as many hrough the winter, wide myself would like to be acquainted with a method of doing this. Many of my iriends, as well as myself, have tried several times to do so, but h
Birds.-Many gardeners adopt the motto, and act up to it to the very letter, of killing every bird that enterg heir gardens. Now, leaving humanity out of the question such a practice cannot be too highly censured; and could intlicting one moment reflect on the injury they were inticting on themselves, they would instantly abandon the practice. To induce such a reflection is the only object of this essay ; and should it be the means of producing it in but one individual-should it be the means of saving tife of but one innocent bird- 1 shall be wore than amply recompensed. To say that gardeners do not receive extensive injuries from birds, wokld be to speak
falsely; and we are so apt to be led away by prejudice,
that by witnessing the depredations of one or two, we iastantly believe them all to be thieves and enemies, and persecute them accordingly, when, if we bad but examined their habits, and been less basty in our decision, we ourselves greatly. We should certainly find, if we would take the matter into consideration, that by balancing the accounts of the injuries they inflict against the benefits we conceive it to be. The injuries we receive are directly, the benefits indirectly, which certainly leaves us more chance of deciding against the poor birds. Thus, if we we are immediately sensible of the injury; but when tens of thousands of the larve of destructive insects are exter it, and consequently therefore carefully investigate the habits of the gardenfrequenting birds, before we deal death and destruction among them. There are some we are justified in killing which he is but the superior one, should not recklessly destroy. He has an undoubted right to remove those that are noxious to him, but he should act discriminately creatures, will have more to answer for than he imagines. A protdential power is extended to the ant as well as to the most mighty of mankind, and through every grade o animal life; and that man who acts the tyrant over inferio animals-he who, without just reasons for his conduct can wantonly and cruelly destroy the most trifling animal-
is unworthy the name, and is destitute of the beat feeling of our nature, 一the love of Nature's subjects-

PROCEEDINGS OF SOCIETIES.

 of the accrunts, from which it appeared that indenendently op of the sums deposited at Alessrs. Cromp
on the 3 sist Julv in the hauds of Messrs. Drummond, a current Cash balance of 2,0522 , to meet the amount of prizes awarded at
the Derby Meetiny. The names of three Governors and twenty Prears ot subscription. Mr. Neale, contractor for the Couniclil
Diniver in Derby County Hall, attended to produce his tickets as Ouchers for his claim of payment, and to explain the onissions
zomplained of as having occurrect at that dinner; although the
and Couilau resolved that he liad insurficiently execented his contract,

 representatives in communicating their wishes to the Stewards
duriog the meeting, and that all the implement makers present duriog the meeting, and that all the implement-makers present
were fully prepared for the full trial of the merits of their re-
spective implements, and were greatly disappointed at the result spective implements, and were greatly disappointed at the result
in the arrargenents for effecting that trial, for, with the excep-
tion of the satisfactory trial of thrashing- machines and chaftion of the satisfactory trial of thrashing-machines and chaff
cutters, there was not suficient time, even had there been pro-
per land, to insticute a due trial of the numerous implements for per land, to institute a due trial ore With regard exibition and trial of inplements, there had existed no distinct
collection, the in structions referring to them being mised ap with those affecting the general objects of the show. He ha regulations applying exclusively to implements, and embodying all that they conceived to be most suitable in previous regula-
tions. Mr. T. J. Marshall having sent the model of a stackcovering prevously to the Derby injured by the carriage to be exhibited among the models on that occasion, he called attention at the present object in thew. The contrivance consists of a framed roof
ing alsove the stachs, and the arranging upon this from th
eaven to the ridme, in the mnde pursued in the slatmp stance of hat felting, alterwards coated with coal-tar, \&ce Mr. Marshall remarked, "For large farmers who grow a great
quantity of corn and hay, I strongiy recommend the erection of sheds near every homestead; indeed they will soon save them
selves with a person who may grow only for his own consump tion. With this imprescion, I beg to send you a plawn and estimate
for one I am abour to erect; which, upon blocks and felt ro fing Will cost about 113 , one twice the size would be less in proportion,
say $1 \times l$ : either of these properly made at the first will last from
15 t.
, wirs. When once hay or corn is ready to lead, ant safely under such a shed, neither stack-cloths or other protection
are regnired. Against this outlay, place the expense of thatching
in th. ber of 3 ears, and no more need be said in its favour. The woond
work If find lighter, and the inclination of the roof not so stee y une liat as. slate or tiles require, and the whole cost conse-
ne"my less, The frost and snuw of last winter, and the late
eavy tums, have not made any impression, nor is there any appearance of either damp or wet within. This stack-covering donations to the Library were reported. The Council then ad WEST LONDON FLORICULTURAL EXHIBITION Chat Annual Fiower Show, for the benefit of the Butchers 9th inst., and, conibmed with other sources of amusement,
attracted a large asse mblage of spectators. The display of fluwer
far exceeded our expectations, bonth in extent and quality. The tents were well bilied, and appeared to afford general gratification

Bouquets. Sixnarieties of German Stocks, J. Gough, A Seedling its colours were, corolla deep vivid purnle and calyx very deep blond colour; form of flower that of Globosa. J. Welsh, Esq.,
exhibited a P much admired fir distinctness of character ard clearness of
colours. G. M. Walthew. Eso., also exhibited a fine specimen of Fuchsia Enchantress, in good bloom, the first so exhishited in relarid; and as usual Mrs. Desmond exhibited her inimitable thé beautiful and curious Maxillária tetragona, attracted general admiration. daceons plants were sent in by Mr. Boyle, gr to the Chief Baron;

Reigate Cottage Gurdeners' Society, Juty 29.-On Saturday evening, the second anniversary of this Suciety was held at the
Town Hall, for the distribulion of premiums for the best culti-
vated Cottage Gardens, within the parishr, when the mempers with their wives and friends atterded, and exlibited a very
respectable display of Vegetables, Frunts, and Flowers, the pro-
ducts of their cardens; and a numerousassemblage of ladies and gentlemen, resident in the parish and neighbourhood, honourred
the meeting with their presence. W. Price, Esq., laving taken the chair, the Treasurer stated, that by the Report of the
Inspectors of Gardens, the cultivation and Feeping of the Cottage in proof of which the superiority of the productions of Gardens then on the table would show; and at the monthly meetings,
the Members were frequently bringing proofs of improved cultivcient, not orly for the premiums awarded to the ordinary
Members; but the Committee felt themselves justified from the surplus balance, to distribute young fruit-trees, chiefly Apple-
trees, t the choice of the Members, as additional rewards. The Meoks relating stricty to rard Committee had recommended the adoption of other buoks on subjects likely to interest, agreeably, the minds of the Members
and their families ; and as affording a variety ofreading, they liad "The Cottager's Monthly Visitor", and "The Visitor:" to which they will add, as they proceed, other bonks of ant instructive and entertaming nature. A kind friend of the Society, P. Foskett,
Esq., being well aware that Members, in the conrse of their had presented them with several copies of a cheap edition of packets of flower-seeds to the Members' wives. Tht Treasurer also stated the case of a farm Jubourer, who, from a fortunate enabled, in addition to a skilful knowledge of. all farming operaand to havdle the tools or valious traces to exceicnt parpose; this man possessed, all might cmulate his activity, ingenuity, melted fat, with a little wax, of home profuce, was recom-
mended, as costing nothing; the man collecting ine rushes and the wife peeling and preparing them so as to furnish a very good
light for all domestic purposes, of which there is a very pleasing
description in "White's Selborne " Letler 2ith, addressed to Mr. description From the increasing population of the country, and
Pennatt. Frome it a profitable investment for their money to build up tenements, ground, and in some instances home at all, which from uns
great demand for human habitations are impiedrately occupied, the allotment system so strongly recommended by the occupation or the labouring mand during his spare time, asse best
by his wife and childen, if fuund to be attended with the
aivantages. The Revoit of a Se.ect Conimittee of the House of system was adverted to, the favourable neture of the rindence
poinied out, and the conclusion quoted: , in Cr mintice of the Honse, and of every landowuer, this method of ha.filing
the duty which they have to pertorm towards a clase $l$ liss fortunately situated than thernselves, whose whole property it by duties, and various other causes producme distress and misery,
against which the most pradent cannot guard, but wheh the
 property where allotments could he conveniently provide d, to
give every facility for the purpose." Froni a considerale ondness towards his regular workmen. Mr. Pym, a farmer of thd
parish, has ailways allowed them the use ol sn, all odds and ends
of his fields, and waste latids, to plant with Potatoes chiefly.
 present were strongly urged to bring up their chaldren imbing,
courses; to get the best education they could for them, combing as much as possible, scholastic instruction and industrial occu pation. The Rev. G. A. Webb, in expressing himsell warmiy
favour of the objects of the Society, adverted to the circumstance d by the poor; well in the course of his ministrations among them,
assured that the crowded state of the dwellings tended only
to make the inhabitants uncomfortable in their homes, but flyo to make the inhabitants uncomfortable in heir horted all present to a strict observance of relighous, moral, and social ant ondects
religious education of the chidren, and to perseverc in the opprehation of the objects of the Society, and expressed his cordial good happy to do everything in his power to promote those ends, and

## MISCELLANEOUS

On the Nutritive Power of Bread and Flour of difBeccaria of Bologna, in Italy, that Flour consisted of two parts, differing essentially in their nature; the starchy part affording principles similar to those of all vegetables, lar to those derived from an animal origin. According to the present views of chemists, those substances which contain azote are alone capable of forming blood, or, in common language, of nourishing the body. It is obvious, therefore, that the determination of the amount of this element present in Flour affords us at once an index of
the nutritive power of Flour or Bread ; on this principle the nutritive power of Flour or Bread; on this principle
the following important Table has been constructed by Dr. Robert D. Thomson, of Glasgow. The Naumburg Bread-a town in the south of Prussia, situated in a fine corn country,-the Dresden and Berlin Bread, were obtained in these cities in August, 1842. The Flour was probably, therefore, grown in 1841. The other specimens
were procured in the early part of the present year, and were procured in the early part of the present year, and
are probably of the growth of 1842 . The last column are probably of the growth of 1842 . The last column
gives the relative value; 100 of Naumburg being equivzgives the relative value; 100 of N
lent to $115 \frac{1}{3}$ of Dresden Bread:-

The low position of the American Flour, as indicated by the first experiment in the Table, was so startling, that it was repeated by means of the mechanical process.

It is from this analysis that the second result is given in the Table, and it affords a striking confirmation of the
ature of $212^{\circ}$ before being subjected to experiment
The Rhododendron a good Thermone'er.-The follow ing singular statement appears in the American Agriculturist. "There are few persons who would see, on first scrutiny, in the Rhododendron maximum a complete thervery large specimens of this the last five years several room windows, and, by protracted observations by various members of the family, they have been so infallible in showing the temperature of the atmosphere, that the thermometer, which hung without the door, became in some measure useless, unless we wished to ascertain to a degree the state of the air. When the weather is cold, and the thermometer about zero, the leaves are rolled so tightly together that it seems almost impossible for them to again become unrolled, at the same time they are turned nearly black; and the expansion, as the weather moderates is so gradual, that, by the degrees of their colour and shape, a person is enabled to form a pretty accurate
opinion of the weather ; and when mild, the leaves assume a light and very rich green
Bolanical Prize-men.--The following gentlemen ob University College, rocent examination in Botany, in gold medal, Mr. C. Prentice, of Kingston-on-Thames Chd certificate and silver medal, Mr. W. H. Colborne, of Chippenham; 3d certificate, Mr. J. R. Pretty, of London, de Champ Ball, of Plymouth ; 5th, Mr. Alex. Henry, of Kingsbridge, Devon; 6th, Mr. H. F. Goodridge, of Bath; 7th, Mr. W. R. Randall, of Southampton; 8th, Mr. C.
R. Mathew, of Paddington; 9th, Mr. J. H. Elliott, of London.

Cormack's Prince Albert Pea.-This Pea, which has been cultivated in the garden of the Horticultural Society during the present season, produced Peas fit for table time. It is a seedling from Cormack's Early Kent, but is earlier and more hardy; and it may be recommended as the best early Pea.

## THE NATURALIST'S CORNER.-No. XV

55. Agarics. -There is this most remarkable fact connected with the qualities of the Agarics; or Mushrooms; a fuct which seems to show that their properties depend rather than upon specific peculiarities. Those kinds which are wholesome in one country are not so in another thus, in Great Britain, the common Mushroom (Agaricus campestris), the Fairy Ring Agaric (A. pratensis), and eat; while the Fly Agaric (A. muscarius), and A. virosus Europe it is different. In France, in Italy, and especially in Russia, a usual aliment is afforded by a great variety of would be which, aithough hand, even the dangerous A. muscarius is a species of food in Kamtschatka.
56. Aromatios.-The impression made on the organs over the digestive powers, by those agents obtained from the vegetable kingdom are very peculiar. Scarcely any some are affected by them to an extraordinary degree. The approach to Ceylon can be determined by the fragrance of the air at the distance of many miles ; the Mag nised at the distance of three miles among the swampy districts in which it grows. This powerfully affects many persons while travelling or hunting; and the Magnolia tripetala causes sickness, headach, and an aggravation of fevers or rheumatism, among those near it who are Jonquils and other fragrant plants raised in Holland, is so great when brought into a close apartment, as to be quite overpowering. In such countries or places as have readily diffused as well as most potent; of this we may readisfy ourselves by calling to mind the greater fragrance of flowers early in the morning, in the evening, or after a shower. This accounts for the violent action of the plants in the countries just mentioned; but even many peculiar and excessive sensibility to an extreme degree The sweet-scented Violet has such an effect on certain persons as to occasion headach, convulsions, and apoplexy ductions Nelumbium speciosum.-Of all the vegetable pro duction of have the great Water-liy. Its leaves are nearly 2 ft . in diameter, and foat upon the surface of the water; the stalk which bears them rises perpendicularly between six and eight feet from the bed of the water, and from between the leaves issue flower of delicious fragrance in splendid rose-coloured veneration by the Hindoos and natives of Thibet, from a belief that their divinities reappear after death in the shape of these richly-scented flowers. The nuts, or capsules, of the plant are also in great request among them; and the flowers are distilled at Astrakhan into a water which has the taste of amber, and, used as a cosmetic, gives sotness to the skin.
57. The dried leaves of the Sawifraga crassifolia are used in Siberia and other parts of Upper Asia as a substitute for tea. They are chiefly gathered in the valley of the Tsharysh, on a mountain, which, on that account is tain. The leathery spongy leaves of this plant fall off in
the fourth year, when those only are gathered which are quite black. They require no other preparation to be used. The infusion is reddish, and of an astringent wanting.

GARDEN MENOMANDA.

ま frbers:
Dr. Justus Liebig, in his Relation to Vegetable Physiology. By Dr. Hugo Mohl. (Dr. Justus Liebig's
Verbältniss zur Pflanzen-Physiologic.) Tubingen.
(Continued from page 544.)
of Dr. Monl's obxervations relates to the chapters of Professor Liebig's book, inscribed "The Assimilation of Carbon." The question at issue is, whether the plants owe their carbon to the absorption of organic inorganic substances, Pruf. L. having given his sanction to the latter opinion. The reasous which seem to have
weighed most with him are, Ist, Humic acid loses its soluble character by exsication as well as by freezing d, Even conceding that a the bases found in the ashes the form of humates bet conveyed the their substance in thera or onveyed to prants is sumeleat to expiain the amount or carbon they contain; wen all the rdin the large quantity of carbon they contain : bat the chief rgument agins toe piats deriving carbon from hu mus is, 4th, That manured and barrenground will yield nearly the same amount of carbon in the plants growing
thereon. It is, in fine, to be observed, that, 5 th, and the carbon of plants must have the same origin, as it is impossible that there could have existed any primitive humus, for plants must bave existed before humus. Plants receive, therefore, fheir carbon from the atmosphere, where it exists in sufficient quanity to supply all plants with carbon. Dr. Mohl says, then, that l. has arrived, in these remarks, at one or two results correct in the main; but he aiso shows that most of it (or at least as much as is above las known to sausure 40 years ago As the tanical physiology, Dr. Mohl proceeds to exanoine the doctrine of Liebig in detail. The argument stated under No. 1 proves, he says, nothing-because the combination of humic acid with alkalies, stated under No. 2, is in direct contradistion to it. These parts of the question have been, bowever, already sifted by Schleiden; and the utmost which can be conceded is, that plants do not Liebig concludes one of his remarks relating to humus in the following words:-"As plants grown on an acre of monured meadow ore grown on manured and qua vated fields,-as, moreover, the former soil will not become by the process of vegetation, poorer in hamus, but, on the contrary, richer; there must be a source different from humus or manure, whence plants receive their carbon, and this is the atmosphere" This mistaken argument Liebig, (says Dr. Mobl, arises out of his confounding the origin of carbon in the whole of vegetation with that Cn a par whithat when is dethe.en. has ommu- if fint ment, and sti, prepare and yield, by the decay of ils tolddre
or herbage, the same quantity, or even more than The next argument of Liebig discussed by Dr. Mohl (relating always to the origin of carbon in plants) is, that in antediluvian times, plants must have existed before Purmelias proming an the perpendicular cliffs of aranitic Parmelias growing on the perpendicular cliffs of granitic the egg or the ben existed first and question, whether the egg or the ben existed first; and being aware of the being derived from mere algebraic calculations, he says that all sorts of results may be ex-calculated (herausrechnen) in that way

To settle the question about the existence of primeval humus, Dr. Mohl makes the following remark on antediluvian vegetation. "What do we know of the incipient vegetation of the primeval world-and why, before the appearance of the highest developed plants, such for instance as Ferns, sliould not others which can live with out humars, such as Mosses and Lichens, have prepared the humus necessary for the higher plants ?" "This, of course, is the eternal progress
and in every place of the globe.

## be continued.

British Phanngamous Botany; or, Figures and Descriptions of the German and British Flowering Plants. B W. Baxter, F.H.S. 6 Vols., 8 vo. Oxford, Parker.
T is not every year that brings a work like this to its It is not every year that brings a work like this to its
conclusion ;-begun long since, and continued steadily and uniaterruptedly to the end, with perfect good faith towards its subscribers, and so absolutely the same in execution at the beginning and at last, that one would have thought that the whole must have appeared simul taneously. Mr, Baxter deserves great credit for having thus completed his design, with the production of one o the most nseful, if not the most useful, help the young stu dent possesses to a knowledge of British Flowering plants We must all of us have felt in the beginning that the great difficulty which is offered to gaining an acquaintance with plants consists in appreciating correctly the minut characters by which the genera of plants are distinguished It is very puzzling to an unassisted student to ascertain whether his plant is a Polygonum or a Chenopodium, for instance ; but it is less difficult, and we will add less impor tant, to determine what species of Polygonum or Chenopodium he has before him. The former difficulty Mr a figure of each genus of British plats is given, with such representations of the parts of the flower as it is really differences by which it is known from those to which it is most like.
For those whose means will not permit them to purchase the more expensive books of Natural History, this is particularly well suited, and we can hardly name a more that the inevitable cost of a work containing only regret 500 copper plates should necessarily place it beyond the reach of the multitude

Chemistry made Easy, for the Use of the Agriculturists of Great Bridain and Ireland. By the Rev. J.'TopNTO 44 tiny pages, containing about five of our columns of ordinary type, is here compressed all that Mr. Topham considers " necessary for the clear comprehension of the terms (viz, the things they represent) which chemistry formed , the multifarious objects over which its influence extends; and the method by which it explains the qualities and exposes the constituents of the respective objects on We a farmer's attention and capitalare usuall exercised. We wish that experience would justify our admitting that these important objects are to be accomplished by such neans. Nevertheless the little work is worth reading, as an introduction to a serious inquiry into chemical phe nomena.
CALENDAR OF OPERATIONS for the ensuing week. that atand our ordinary winters, and that flower from the middle of April to the middle or end of June, may be sown in very light Where there is such a convenience-or indeed in any open places in
the shrubberies. This is about a month earlier than is generally chosen or recommended for this work; but I am of opinion, and time, especially in this cold season, as the earth has not been warmed
to the usual degree; and if we ahould have a cold autumn, a month to the usual degree; and if we ahould have a cold autumn, a month and the plants are found to be too forward by the beginning of
October, they could then be easily tranplanted, and the cheek
would be so far in their favour in enaling them to atand the winter. Would be so far in their favour in enahling them to stand the winter.
When the flower-beds are dug over in February, these annuals could be transplanted in groupg, aceording to theiry colours, or the
fancy of the owner, for I would never impose rules against people's fancies in such matters. At the same time the seeds of other
annuals could be sown, so as to have no blanks in the beds ; even those beds filled with spring bulbs, such as the dwarf early Tulips,
Hyaccths, Narcissi, \&c., should be planted or sown with these annuals between the rows of bulbs, and by the time the latter would begin to fade, the annuals would be getting gay, and continue so till and the beds plantted: immediately with atrong healthy plants of the half hardy sorts, now used ${ }^{\text {Nor summer and autumn display. As hy }}$,
this aystem there would be to want of flowers during Moy and $J u n e$, there need be no harry in "getting out" the latter class of plants
(as at present), till they aro sufficionty hardened in turf pits and
temporary shelterg to stand the cliange with impunity, and be ready to prow away at once, instead of hemge with impunity, and be ready and seen the haggard appcarah.ce of nme tenths of our best flower-
gardelens nt that season, wil dispute that something of this kind is
mucts wated. Silme pendula and compacta, with Nemophila mingus al. I atomaria, are among the first to flower in npring; and
here you have at once pinks, , carlet, with true blue and white; s.
compacta, at that early season, being a deep reddish pink, and per
dula being also deeper in colour at that season, rising not highe 1015 inches. Moreover, Silene péndula, when sown in April, will
flooer from June till overtaken by the frost, and yet you can hardly see it anywhere, it forms the best pink edging, as it bears clipping Wens, all excellent plants for edgings. Indeed, with the exccption of the Leptosiphon densiflorus, when you catech it in its prime, there is from the 1 st of June to the end of November. For yellow colours there are Callichroa platyplossa. Bartonia adrea, and Oxyura chrysan-
themoides, all three differing litte in height (1d foot); they also come into flower by the end of April, and although their follage is rather weedy, it is well hidden with the protusion of their rich
coloured flowers, which last six weels. Then for a taller bed o yellow, there is Erysimum Peroffskianum, which contrasts beautinot yet tried if Sphenogyne speciosa will stand the winter; I wish
some one who has would let me know. Whilst it lasts in hloom it is the finest thing we have, to say nothing of the Clárlkins, Collinsias,
Godetias, \&c., which make sucla a rich appearance in the latter end of April, through May and the greater part of June, or in
words during the dreary season of the English flower-gardens.
-KITCHEN-GARDEN AND ORCHARD.

Pinery.-If you are satisficd that the nculy-potted plants are in
no danger from bottom-heat, the rest is mere routine. as son as they hegin to show signs of tresh growth let in more air to them, bu
they require hitcle water till they get good hold in the fresh soil. he black ones will now begin to change colour, and then you ma carry them on slowly, with plenty of air, no monsture, and, except on very utet days, without fires throughout the autumn. Some people
never think of pushing on late Vines till they see thena at a slandderanging the economy of nature and leaving traces of commences,
dill ment for years to come. this time our Peach-houses ought to be so take little interest in keeping down red spider in such a place, of ane heading in the Calendar for the next three months; and I $I$ shali
contrive to find something to say about flowers, to fill up the space. MELONS AND Cl cumbers.- After the present crop - which is
neariy ready to cut, is orer-few people care much about late
Melons, except in great families, where Meions are in request late in autumn; and as, in these places, first-rate gardeneqs are always kept, I may perhaps be excused if I pass over this head
occasionaliy through the autumn to make room for something else.

## ,

 have not seen any of it this season, and from a good circle of corre spondents I hear no complaints about it. Pcas of all sorts haveborne remarkably well this season, and the individual crops kept longer in succession than I ever remember to have seen before. mad a singular instance of the force of vegetation the other day, in about the middle of May, for pickling, being nearly large enough,
the foreman and myself walked step by step all over them, and laid therr tops down quite flat. He is a heavier man than myself, and theught he had crushed his bed, bulbs and all. Soon after this a heavy thunderstorm passed over the garden, and next day all our but the third time settled them
CABBAGES.-After we plant out from the first-sown beds, which the same from the Lettuce-bells, with other two sowings of Lettuces in the Calbage way for a long time to come, hithe the exception of
Cthe perennia succession crop, or weekly sowings of small salading,
comas o-This and the Cardoons will want to be earthed up as
as they are fit; but I think the latter had better remain till soon as they are fit; but I think the latter had better remain till
they are full-grown, and then be earthed up at once ; either way will do well enough.
ORCBARD. - All that I can think of under this head to-day is, that
the early summer Apples and Pears ought to be gathered a few dass
before they are fully ripe, and if they do not ripen fast enought in the
fruitor in the sun, to bring them up to their right flavour. As to pruning $\pm \mathfrak{y w}=\mathrm{maz}$

Stove. - Have you added the Passiflora fragrans or Middletonia yet to the climbers in this house-or do you prefer an intermediate
stove for it? Although its general aspect differs little from the old
cervilea, it deserves a place in every collectior, on account of its cerutea, it deserves a place in every collection, on account of ita
fragrance, and if you were to graft it on cærulca it would flower in warm conservatory. Passificra racemosa and Loudoni so grafted as those in the stove; but I have not yet succeeded in entahlishing P. Kermesina in the conservatory. Almost all woody stove-plants
require to be lept drier in the autumn, after finishing their summer growth, and to have large portions of air given them. Greeniouse, - If those thunder-storms which have passed over this month have really setted the weather at last, we may expect a
fine autumn, and then greenhouse plants out-of-doors will grow
more than will be useful for them next winter. It is the misfortune of greenhouse plants out-of-doors that they too often are in vigorous growth at the time they are housed for winter and ant in their prowth can there be regulated according to their own habits or the wishes of the grower. All that can be donc in autuma for those tions-to allow them more room, less water, and to be well secured with stakes.
now nice sizeable - The early spring cuttings of Pelargoniums are last successions. If the house is large, four or flve of these bushy
plants may be put into a large pot, and great huyhes thus formed at once, to fill up receases or vacant corners. The leaves and flowers will soon turn to the light, and by turning the pots round twice which, although very necessary to show off plants at exhibitions, are
most intolerable in a weil-regulated conservatory advances, the conservatory is again kept more or less close, and much less water is given the plants; those from the pasth now they should be removed back to the stoves. greenhouse plants out-of-doors deceive you here. Every encouragement should now be given to rame plants to grow to their utmost ; the the evenng, beng taken off altoger tice, to let the mi have the night-
dews, whol are always heavy in the autumn, and make plants look so kreen and healthy at this time. We can always stop the growth When we think fit, by keeping the plants and frames drier, hy having present system. Is it not curinus that plants should grow better heated with the sun absorb too much of the moisture from the platits at right.
FLower-GARDin.- Since the last Calendar 1 have received a
letter from one of my late pupils, in which the foliowing observation letter from one of my late pupils, in which the foliowing observations
occur:- "Onr flower garden looks renarkalsy gay just now
univalled about this quarterwobut the ncessant rains injure ts uncivalled about lhis quarter-but the incessant rains injure 1 ts
beauty very much. We have some excellently-furnished beds of
cariet, variegated, and miscellarieous Peiargoniums, such as, for Joan of Arc, ece. The italies are mine, to show how much I relish have many more of such letters from different parts of the country, naming all the bedding plants that are not commonly used, for the use of this Calendar.-D. Heaton, Shrublund Parfo Gurdens.

## REPORT ON COVENT-GARDEN MARKET,

Tre late hot weather has caused an abundant supply of
Orchard Fruit to be brought into the market. The quantity of Vegetables is also amply sufficient to meet the demand. Pines White plianes of comprise several varieties. 130 wh ble price Forelgn Melons continue to be well supplied, but these of home growth are becoming less numerous. The supply of Peaches and Nectarines will be rather limited until those are ripe upon
the open walls. Apricots, Greengages, and several kinds of Plum are now generally offered : the hest of the former fetching be met with; very tolerable Surawberries may also he obtained at a somewhat advanced price, Gooseberries and Currants conrenden being added to the dessert ones. Jargonelle Pears are becoming general, from 4s. to 85. per half.sieve; inferior sorts are offered in great abundance. Filberts bave made their appear-
ance, from $1 s$. to $1 s$. $6 d$. per 1 b . Althongh the supply of Peas is somewhat limited, yet it is seldom that they are supplied in such Artichokes are very inferior. $\Lambda$ few Tomatoes have been offered during the week. Field Mushrooms are selling at 6 s. per bushel. Flowers in pots consis Balsams, Fuchisias, Pulargoniums, reum, Sollva heterophylla, Apanantius umbeliatus, Jasmine, beautiful Heaths, Pinks, Picotees, Roses, \&cc.

Nox are both flnwers of pood substa, ce: the latter the best in not being well marked at the top. They are none of them beyond second-class fowers. -J. R. P.- Miranda (though
unquestionably too small in its present state unquestionably too small in its present state for showngi) is
one of the most perfect Pansies we have seen: form and sub. stance good, fine eye, good ground-culour, and the side petals cision-we should like to see it again when larger. Ne preather Colbert nor Portia are sufficiently good to send out, the former and deficiency in the ese, and the latter foom the colvurs being
weak, and having a washed out appearance it wants substance aiso.--A Lover of Punsies. - The general fantore in your flowers is in the want of substance, and very frequestly the smalness of the side petals also, which seldom meet above the decide upon the general form. No. 1 , good general torm, with
fine eye ; the beltug is imperfect but untorm, and the yellow deeper in the bottom than in the side petals, a bright and at-
tractive flower; 2 , colour poor: 3 , colour weak, edges rough; s, yelow not uniorm; 5 , very fine eye, but deficient in suh-
stance, markiug also irregular; 6 , yellow, marking imperfect,
petals too thin; 7, run colour; 8 , dark rich self, not equal to in form and substance; 10 , eye fine, yeliow delicate and good, markiog imperfect and wants substance; 11 , fine eye, very bad; 13 , colour too imperfect; 14 , good substance, general
form not good; 15 , too thin ; 16. thin, and eye poor; 17 , wants form ; 67 , imperfact in the poor; 18 , too thin, and not good in in the bottom one; the best of these flowers are but second rate, and are surpassed ly others in the same way, already out." pretty, and wery curiously marked; there are, however, two or

## NEWS OF THE WEEK

A telegraphic despatch reached town on Monday, announcing that the Spanish Regent had been driven to seek protection on board a British ship of war. The siege of Seville was raised on the 27 th ult. The Regent had heard two days before of the surrender of Madrid, and of the march of General Concha to the relief of the besieged. He perceived, therefore, that his last hope was gone, and imnodiately retired in the direction of Cadiz. The insurgent forces, however, so closely pursued him, that it was impossible to reach Cadiz ; and he was compelled, almost at the point of the sword, to embark at a small port on the shores of the bay, and seek protection on board the Malabar. Thus, the power which at one time seemed to bid fair to consolidate the interests of Spain has been overthrown in less than three years after the abdication of Queen Christina, and only 69 days after the commencement of the insurrection. In the meantime, the new Ministers have announced various measures, more in accordance with the character of a military commission than of a Constitutional Government. They have issued a Decree convoking the Cortes for the 15 th October, and have broken up the Supreme Court of Law, because the Judges would not recognise their authority as established by the enactments of the Constitution. Great disunion and jealousy are said to exist among the Generals themselves, and some apprehensions are enterfained that a reaction will take place before the assembly of the Cortes. - In France, these changes in the affairs of Spain are received with general satisfaction, and the Spanish party no longer conceal their ansiety to effect a marriane between Queen Isabella and the Duc d'Aumale. The Repeal subscription has ceased to be reported, and it is rumoured that the French Government have given orders for its suppression.- From Portugal, we learn that the tariff negotiations are on the point of being renewed, the Duke of Palmella having arrived in London, with full powers to bring the convention to a satisfactory conclu-sion.-From the United States we have accounts to a recent date, but they contain few topics of interest. The Repeal agitation in the States appears to be entirely at an end, and some of the New York journals describe it at a political farce, got up for electioneering parposes.
At home, in both Houses of Parliament, a great amount of routine business has been despatched during the week. The House of Commons has sat on some days for 13 or 14 hours, and many supplemental votes and matters of detail have been disposed of. On Monday Mr. Ewart's motion in favour of free trade was negatived by 52 to 25 , and on Wednesday, after a long debate, the Irish Arma Bill was read a third time and passed by a majority of 70 . On Thursday the second reading of the Exportation of Machinery Bill was carried by a majority of 78, and an amendment rejecting the Church of Scotland Benefices Bill was negatived by a majority of 31 . Both these Bills were passed last night. In the House of Lords on Monday, the Coroners Bill was thrown out in the second reading, by a majority of 24, and Lord Campbell's Bill relative to the expulsion of the Scotch Professors who have joined the Free Church, was thrown out without division. On Tuesday a conversation took place on the Repeal agitation in Ireland, in which the Duke of Welling ton expressed his conviction that from the measures adopted the Government will be able to resist every attempt against the public peace, and that it would be better to employ no other precautions until they become absolutely necessary.

## 

Courr--Her Majesty, Prince Albert, the Prince of
Wales, and the Princesses, are at Windsor Castle, and in
excellent health. On Saturday, her Majesty and Prince Albert, with their distinguished visitors, walked through the Home Park, and inspected the new Royal Gardens at Frogmore. On Sunday her Majesty and the Prince, accompanied by the Duke Ferdinand of Saxe Coburg otha,

France.-The Paris season is now completely at an end. The King and all the Royal Family, except the pensien, Duchess de Nemours, and the Da Mo Hi Majesty, it isir departure for the end of September. The Duke and Duchess de Ne mours left St. Lo on Wednesday week, on their return to Caen. Preparations for departure were likewise observabe the hotels of the Ministers of War and Foreign Alfairs. Marshal Soult will shortly set out for his Gen. Bugeaud the Commander of has been made a Marshal of France. The National has ceased publishing its daily list of subscriptions in favou bat a report was current that orders had been given by the law officers of the Crown to seize such part of the tional. "It is migh be found at the ofice of the N reat carelessness on the part of the French Government and great tolerance on the part of that of England, of aiding and encouraging revolt and civil war in a friendly country ; unless the two Governments, indeed, as is pro bable, have allowed ridicule to do all that is necessary piece of buffoonery which some persons, after too goo says :-"A Frenchman lately visited the HOtHl de Bragance, to compliment the Royal occupant on the happ. evens which have laken place in spain. Maria Chris nfinite satisfaction, ss she believed that those events would ead at length to the pacification of Spain, particularly if as she most anxiously desired, the Duc d'Aumale shoul marry her daughter Isabella. We are able to guarante this to have been the sense of the words pronounced the journals that M. Salvandy is making preparations return immediately to Madrid, as Ambassador at th Court of Queen Isabella 11
v, announcing de, anouncing that the Regent has been driven, at the bik of the sword, to seek protection on board a British ship of war. According to the terms of the despatch, he norning a cadiz on he Jolu 72 guns. General Concha had pursued him with 500 horse up to Sta. Maria, where he took a boat. The Spanish frigate the Constitucion and several small vessels, which had gone over to the insurgents, blockaded Cadiz at the time. It appears that the siege of Seville laste having been raised on the night of the 27 th, and not on that of the 25 th, as hitherto supposed. The hombardment continued ten days in all, during which time 1,600 projectiles were thrown into the town. The Politica Chief, in his report to the Provisional Government Madrid, writes thus :- "We have great losses to deplore The streets are filled with ruins, and more than one edifice which had stood the wear of nges, is now levelled to the ground. But, in the end, we have conquered, and the candard of liberty floats proudly from the top of our in the telegraphic despatch arose, most probably, from
the fact that the Regent took his departure from Sevill on the morning of the 26 th, with 300 or 400 cavalry. He heard, on the 25 th, of the surrender of Madrid, and learning, at the same time, that the main hody of Gen. Concha's forces were near at hand (part of them having got into the fown on the preceding day), he saw that his last hope was one, and that no other altermative was left him than to retir He, therefore, determined on proceeding to Cadiz; and the siege to be continued until the evening of the 27 th Gen. Conche immediately pursued him, and after a vain attempt to reach Cadiz, he hurried round the bay towards Sta. Maria to intercep, the Regent in that quarter. Mh and a charge was immediately made by Espartero's troops which remained deroted to the last The accounts are no very communicative as to the details of this engagement. It appears, however, that ultimately Gen. Concha's troops number of prisoners, amongst whom were Gen. Juan Van falen, brother of the Commander-in-Cbief, General Alvarez, Osset, Osorio, and others of some rank in the serice, though not of such great notoriety. Whilst the nd ere thus engaged the kegent made for the sea-sia, Halen and Nogueras (his minisler of war), M. Gomez de a Serra (his minister of the interior), and some other officers, amongst whom is said to be his friend Linage. The accounts state that he took him the Military chest. entrusted their safety put ont to sea ceeded straight to the Malabar. Here he was at first refused one receiven, the officer in command declaring that he sulted the English Consul at Cadiz. The order for his reception soon arrived, and the Regent had no further cause for alarm. Once on board he showed some hesitason as to his future course. His companions were of opinion that he ought to proceed to Cadiz, which stil to the suggestion ; but in the midst of their deliberation, lond discharge of cannon and ringing of bells were heard in the town and it was soon after ascertained that this rejoicing was in celebration of the victory of the other party, and of the installation of the Junta of the pronunciamento. The account states that the Regent then vented doing so by illness. At Madrid in the meantime the Provisional Government have adopted the course of a true military despotism. They have October next, and directing that the Senate be integrally renewed, contrary to the express letter of the Constitution. A nother decree, equally unconstitutional, has been published, dissoiving the provincial deputation of Madrid and appointed other Deputies to replace those whose ser vices were dispensed with. By other decrees the tolls levied at the gates of 31 cities and harbours, and suppressed by 1 . been isur Tustia the has breakn up the supreme risming the President, Don Jose Calatrava, and nine other judges and fiscals, because they would not pronounce in favour of the new Government. The judges in councl were caluahother, it appears, to reply to an authoritative comer of Grace and Justice. Ther refused to recognise the Lopez Ministry, on the ground that it was not regularly excres ing the supreme power, and had not been estabished sancting to the enactments of the constle. The judges, whilst making this protest, expressed their readiness to their functions as usual, if required. To tho Senor Lopez replied by dismissing the ten judges who council, majority out of fourteen. Who assitisans who will not be likely to manifest the same scruples. The councils of the Ministry are also described as showing strong symptoms of disunion among the Generals. They have, however, published a manifesto, addressed to the nation, and signed by all the members of the cabinet The manifesto contains nothing worthy of notice, excep prom pll spod Spaniards will assure the confience and strengthen the bonds which hapily unite use" They have also re-號 es tion by the late Ministry. The Spanish buaget for of the precinitate dissolution of the Cortes by the Regent, and the taxes bad therefore ceased to be legally demandable. Portugal.-Letters from Lishon to the 3lst ung announce that the Qureen and intrine lo England by the steamer, for the purpose, it is sald, be renewing the tariff negotiations. The Duke
invested with full nowers, and it is confidently believed in Lisbon, that the convention will be fortıwith concluded. Germanx.-Great preparations are maniversary of the the August 6 ens Germany east of the Rhine was separated and declared independent from, other Carlovingian dominions. The Israelies of the R order to express their gratis manifested by the membersish provinces for the wate the Jems of Prussia, have present to be vested public securities, the interest to be applied, in equal prostportions, to the relief of the indigent Catholics, Proten
ants, and Israelites of the province. Accounts from Vienna state that the Austrian Government has concluded
treaties with three of the small North Italian States, and treaties with three of the small North Italian States, and
in which the Sardinian Government has joined, for the purpose of abolishing the many different duties to be paid on merchandise going up or down the Po; and this, it is believed, will be the first step towards the introduc-
tion of a uniform tariff all over Italy. The papers contain a letter from Goritz announcing that the health of the Duke d'Angoulême was seriously impaired, by a longstanding intestinal irritation, and that he is now reduced to a state of complete emaciation, Maria schooner, which left Saint Thomas, Guatemala, on intelligence of the death of Mr. Simons, the director of the expedition, whicl took place at sea on the 15 th May. Onists, who had arrived in the Theodore 17 days before nists, who had arrived in the Theodore 17 days before,
and were living for the present in huts erected at the end of the bay by Caribs, in the service of the directors of the colony. At the time of the departure of the Louisa Maria, the colonists were preparing to quit that low and
marshy spot, to settle on the more elevated ground. The Ville de Bruxelles arrived at $S t$. Thomas on the 8 th June. Gresce.-Letters from Athens of the 20th ult.
noounce that the Government had transmitted 500,000 announce that the Government had transmitted 500,000 on the loan. The people were much dissatisfied at so much money leaving the country, particularly as it was
not sufficient for the purpose for which it was intended. M. Rizos, Minister for Foreign Affairs, had resigned, but the King had not accepted his resignation
Turkex.-The Augsburg Gazette publishes a letter from Belgrade of the 22d ult., stating that Baron Lieven has demanded formally from the Senate the expulsion of Wucsitsch and Petroniewich, and has also protested
against the election of Prince Alexander. The Leipsig papers state from Smyrna, that the Sultan has it in contemplation to confiscate all property belonging to the mosques and other re
the public Treasury.
the public Treasury. voyagea for a sailing sbip ever known, having been only fifteen days from New York. An immense gang of coiners had been arrested at New York, the chief connterfeiter
being a blacksmith of Boston, worth 60,000 dollars. The village of Warrenton, Mississippi, had been destroyed by fire. Mrs. Gillmour, of Scotland, claimed by the British Government, had not succeeded in her insanity plea, as feigned She coid shissioners believed her insanity to be the unfortunate Gillmour, and denied baving murdered him. The Commissioner deferred giving his decision, and btated at the termination of the inquiry that he should accede to the application for the surrender of the prisoner. The Repeal agitation in the United States appears to be entirely at an end. The New York Journal of Commerce speaks of the whole movement as a political farce, got up
for the purpose of securing a few Irish votes in various districts. The memorial of the Rev. Sydney Smith to Congress, against the repudiation doctrine, was still creating a great sensation in the States. Emigration to
the Oregon territory continued to increase. Two expedithe Oregon territory continued to increase. Two expedi-
tions bad recently started. the last with 990 persons (male and female) with 121 waggons, 698 oxen, 296 horses, and 973 loose catlle. Sir W. Drummond Stewart's party bad
been spoken to on the prairiee, near the. Big Sandy River, all well. Sir William and his friends had protected a party of Pawnee Indians from their bitter foes, the
Kanzas. The troop ship Alert was totally lost on her pasaage from Halifax to England, having on board part of the 64th Regiment, all of whom, together with the crew, were saved. The Alert has since become a total wreck, H.M.'s ship Rose has been sent to their assistance, and a subscription has been commenced at Halifax to relie
their sufferings. The loss is said to exceed $20,000 \%$. India-and Caina.-Among the miscellaneous items in the papers received last week, we learn that the Agricultural and Horticultural Society of Calcutta are endeavouring to call the attention of Parliament to the question of kets on a principle of equality with bome produce. resolution was agreed to at the May meeting of the society, bilities a committee be appointed to inquire into the capaexport of wheat from this country; and to report upon Indian expeniency of our expressing our graticu, as an pressing on the bome government the important measure of the admission of Indian wheat into British ports, and at the same time expressing our earnest support to the measure, as one calculated to benefit and advance the anxiety caused by the vague announcement of the Indian papers, that Lord Saltoun had met with a dangerous accident, had been considerably relieved by the last accounts, stating that Lord Saltoun was considered out of place in the lasty to do well. The accident, which took He was riding week of March, occurred at Hong Kong. horse took fright the vicinity of his residence, when his length succeeded in kicking his lordship off, who fell with so much violence as to of his ribs. cellor of lyeland, on accuatt of a dispute with Mr. ${ }^{\circ}$ Malley,
which ended in fracus at the Casticbar petty sessions. The Friday, On a motion of Lort CAMPBell respecting a Bill re-
gulating the succession to proverty ins Scotland, Lord Broveasm
attacked with great severity the late proceeding in regard to the Scotch Church, particularly censuring Lord Aberdepu, Sir J.Graliam, and the Lord Advocate, Lord Brovarian
then withdrew his Bill for changing the Verue in Ireeand The
Duke of WriuThaton inulguantly condemned the allusion of
 of the rent, or for Repeal contributions, is one thing, and to possible to the comonission of crme, and so do all the maschref
possible to be done to the country, without exposins his own person, is another thing-but to corrupt the army is quite a
different thing, which, 1 hope and trust, I may promise your

## Saturday. - The House sat for about six hours, the main sub-

 laws, relating to different articles. Clause 10, which sff, c" ed . lie
British Watch-trade, was given up by the Government, and struck of the State Bill. On the 25th clause, which permits the produce stifl a British Colony, Mr, BANEEs objected to the admission of
American agricultural produce, through the State of Maine, into this country, on equal terms with the produce of Canadar He agraculture."-Mr. Gladstonk defended the clause, because it
has couformable to M. Websters proposition to Lord Ash-
burton ; because the permission it gave was a matter of no consequence one
having been a portion of the British territory, was parsed hilue a foreign power, with all its British privileges unimpaired, and
becanse the State of Maine did not grow enourh -Sir R. PEEL opposed the amendment because, as the Ashother produce, no distinction ought to be made. He thought it
extremely reasonable that, when we passed the State of Maine over to America, we secured to the produce of Maine the same privileges as if it had continued to be British produce. He also
thouglit no other country would have the effrontery to ask to bo equally favoured with Maine. - Mr. BANEES withdrew his amendother clauses were agreed to
morning, being House sat from noon till half-past one Tuesday Irish Poor-law Amendment Bull in committee, and advanced supply, Mr. Ewart raised a briof debate on free trade, by moving
that it was expedient that it was expedient that the principles advanced in the cele-
brated Import Duties Conmittee of 1840 should now be recoobrated Import Duties Committee of 1840 should now be recog-
nised in legislation, and at once applied as a remedy for the depression of commerce and the distress of the people, -Mr

 ness was a motion by Mr. Bormwick, respecting the detention pecting it.-Mr. Cochirank secorided it, and informed the House
that he was personally assured by Don Carlos himself that he was only allowed $\mathscr{E} 1,200$ per annum for his establishment, and he
was kept in close restraint. - Sir $R$. PEEL considered that the treatment of Don Carlos ought to be as lenient as was consiss
teat with the object in view. The British Government had
communicated with the French Govennment, and was assured roctraint
with the affairs of Spain as possible.- Lord $J$ MTANNERS defied Sir R. Peel or the French Government to justiry the detention of interpretation of the quadruple treaty. The cause for which the
Prince suffered was the cause of religion, of gi od order, and legitimacy. This was proved by the result; Dos Carlos had been
defeated, and anarehy and infidelity now triumphed orer the both the French and Britsh Governments had agred as to the thexpeciency of permite was on the point of being captured, he was saved
trom his Spallsh antagonists by British agenis. He was then
fin permitted to take up his residence ihat he wos not to the indle the flames of insurrection in spain In alterwards returning to that country, be was guilty of a breach
of faitl. He was not surprised at the motion, as it arose no doubt from the feeling that in the present distracted condition of Spain
Don Carlos should have a fair start in the general scramble. The documents asked for having been considered both by Sir $R$.
Peel ard Lord Palmerston as not produceable, the motion was Ihe House then went into

 of the Chna war, with several others, one of which was s, 0000 .
for the Cald donian Canal, which rased considerable discussion ardd led tw a dvision, in which the Government were supported
by 137 to $13-T$ The next vote was 1,5000 , to defray the cost
munuments to the memory of the late Sir Sieney Smith, Lor Exmouth, and dimirral De Saumarez. - Dr. Bownive suguested
that in ali cases of public statues, models should be sent int, and the work assigned to the ablest modelist.- Sir R. PEEL thought
there was great difficnlty as far as regarded public competition in such cases. It by no means followed that the person whe
made the best model could execute the best statue, Mr. HA WEs expressed a hope that the Government would avail themselves
of the Royal Commission of Fine Arts for the purpose of ascertaining the best mode of erecting memorias oo sen why the
gulahed in literature and science. He did not see why
military and naval profession should engross all the mational munuments. - Sir R. PRBL thought it very desirable that in the be erected to their memory, He saw no reason why the
country should pay that tribute only to distinguished naval and military men; on the contrary, it would be a great
incertive to exertion in science if monuments were erected to
the most eminent of her sons. He mad piven a good deal of ocnsideration to this suhject since it had been mentioned last year
by the hon. memener for Lambeth. The first fificulyty which struek hinh was, as to the place where such monuments should
be ereeted. Thore was very grat obection to placing then in
ecclesiastical edifices, for unless the publichad no great pulyic oliject would be attained. If they did not erect
them in any edifice-if hey erected them out of doors, it was almost necessary that they should be of bronze, then the expense
would be enormons, and a statue in bronze was not always a very great ornament. He always hoped that there might be some
portion of that great tuilding which was now erectig for the
porise of houses of Parliament tat might be appropiated torne stater not merely of men of political character, but of
of eminent men
persons distiuguished in literature and science ; Bnd if he were assured that there could be any part of that edince so appro
priated, he slould not have the slightest diffculty in referring
the matter to the commission which had been alluded to and which had discharged its duty with the greatest credit to itself.
But it was a commission appointed to consider the properest method of decorating the houses of Parliament, and if its dutiee
were extended beyond the sphere assigned to it, the commission might be made a general roving commiss. on for the encourage
ment of the fiue arts in this country. This was a matter requiring consideration, and he was not prepared at once to say that he
was disposed to recummend that the commission should underfor it. Therefore, unless he saw reason to believe that there would be some portion of the new edifice erecting for the houses
of Parliament in which statues to men of sciencecould be placed, he should wish to reserve to himself the right of judging whether
the commssion was the body which could be properly consulted
on the matter. Under these circumstances, he was afraid he could nut say anything definite, excepting that he was not adverse
to the priuciple of the proposition which had been suggested to the principle of the proposition which had been suggested.
The site for the statues was the chief dificulty. The hall at
Geenwich was aupropriated to naval men atd nothing could be more proper than such an appropriation, for it was suitable to
the genius loci. He did not wish that the subject should be pressed further at present. The Government would be prepared nent as Newton and Davy, but they would wish to be perfecti)
gatisfird as to the place where the stature could be put,
Mr. V. Smith felt that there was a great deal of weigh in the observations which had frallen from the right hoin
baronet, but there was one point which he had omitted to reter to the commissinn to ascertain if there could not be some
portion of the building for the new houses of Parliament which might be epprcpriated for the eception of such statues wh
 tion of the estatues? Without extenddng the esphere of the duties
of the cr mmissin, might not that body be also referred to to as-
cer an whet ther

 gri.und that the house was c.lled upon to vote one sum, when
giro her sum wasintendee 10 obe expended.-Sir R. PkEL explained
thot he that the Guvr rnment only haked tor the particular sum they
wanted tor the currei, e ear. With reterence to the sugenestion
 missi.n. - Mr. Husis trusted that the right hon. baronet would they were now locked up. He alluded to Westminster Abb.y
and St. Paul's, where they could not be seen unless the parties
desirous of beholding them first paid money for admission. He
thought the country would be prepared to have a proper place fitted up for the reception of all statues for which it voted money,
If, instead of throwing $200,000 l$. into the caledcnian Canal the If, instead of throwing $200,000 l$. into the Cale dcnian Canal, they have fitted upan appropriate bullding for the reception of these
statues. For the want of a suitable building, the statue of one of our greatest poets, executed by one of the greatest of modern sculptors, fiad been lying in the Custom. house for the last tell
years.-Mr. M. MinNBs thought it was extremely crenitable to years.- M. M. . Mor Montrose that, with all his economical prom
the hon. Member
pensities, he had always shown limself extremely gerierous with respect to matters of art. He, however, differed from the hon.
Member on one point, viz., as to the uriwilhngness on the part of Member on one point, viz., as to the urrwillingness on the part of
those who were the guardians of the great public depositories to meet the views entertained by the country: He belleved there
were great difficulties in the way, and from conversation he had had with those persins, he could state, that they were as anxious to open all to the public, and in every respect to accomplish the
wishes which, from time to time, had been expressed. He con-
curred in thinking that there was a class of monuments much curred in thinking that there was a class of monuments much
belter calculated for other buildings tuan a Christan church, and
he should be glad if the suggestion of Mr. Barry, as to the adinishe should be gian Westingestion of Mr. Barry, as to the admis-tion.- Captain Pechell expressed him- elf perfectly satistied with
he selection of the naval officers made last year to whom statue were to be erected, but if the list was not closed, he urged, as
deserving such an honour, the names of Sir R. Strachan Sir A. Cochrane, and Sir J. Duckworth. - Mr. Hume, in allusion to what had fation romi Mr, Mised against opening the monuments to the
objections could he raised
public, especially after the Government had declared its opinion Tuesday.-The House met at noon, and on the bringing up of the report of the committee of supply, Mr. Humz raised a short
discuission respecting the Custom-house frauds. He noved for copy of the evidence taken before the commissioners of inquiry ground of present inconvenience, promising that the evidence
would, however, be forthcoming as early as possible. The House was connted out at half. past four in the afternoon,
Wednesday. -The Coalwhippers Bill, after much opposition and Wednesday.-The Coalwhippers Bill, after much opposition and
six divisions, passed through committe.- Mr. T. Duncombs complained of the manner in which the nomination of High
Sheriff of Buckinghamshire for the ensuing year had been made by the Piivy Council.- Sir J. Grabam explained the facts
of the case, and stated that the nomination was strictly second reading of the Landlord and Tenant (Ireland) Bill-Sir R. PERE opposed the principle of this ball, at the same time
promised, on the part of Government, to give a fair consideration to the subject. He had already ordered a careful inquiry to be
made into the laws of England and Ireland, so far as they referred to the relation between landlord and tenant. - After
remarks by M. O'FERRAL, Sir A. BRorr, Mr. M. J. O'CoNNELLL, and Sir D. Norrexs, the mation Mas wh, and $11,000,000 l$ poses of savings banks were voted. Lord CiEments moved, as an amendment, that it be read a third amendment-Mr. M. Milings supported the bill, but on the latge measures of policy towards Ireland. - Mr. B. Wall opposed to and Mr. D'ISRARLi, Mr. SMYTH8, and Mr. C. Boller, censured
both the bill and the Irish policy of Government.-Mr. Sheil
quoted a sentiment of Sir R. Peel'g, when he said thet his quce to the Reform Bill might be unavailing, but would not be
fruitless. So would it be with the Arms Bill. He drew a parallel between the condition of Ireland under the Whigs and its present
aspect, affirming that the country was now more combined organize, varishing point, the Irish Executive had the confidence of the how, to a man, supporting the national movement of the Repeal seemed incapable of understanding, judging from the style in
which they had been spoken of in the House of Lords on the proceeding from thence to the subject of the grant to Maynooth, those who doled it out. He warned the House against the delu
sion of supposing that the Repeal agitation was an ignis fatuus rising out of the morasses of Derrynane; and detined a parlia
mentary line, by which the legislation even of an Imperial Par Irish domestic be made acceptable to the Irish people, on a jority of Irish members be duly considered; on the plan he must be given up, but with it legislation for Ireland was im-
possible. He concluded with a warm appeal to Sir $R$. Peel, to give effect to those "noble aspirations which make ambition bold and decided policy for Ireland, that the Arms Bill had been framed last year, before the present agitation had arisen; and
proceeded to show that the peculiar state of Jreland was th proceeded to show that the peculiar state of ireland was
justification of this and all preceding. Arms Bills. Mr. Sheil'
own proposals (made in his specch delivered jn a former stage the bill) for diminishing the evils of Ireland, Btrikingly evmed order to secure convictions at the ordinary assizes, he would ordinary juries, and would provide an asylum in a foreign
country for witnesses. After criticising the speeches of Mr. Smythe and Mr. D'Israeli, he passed to a general defence of the
whole policy of the Government. Mr. Sheil talked of the "dis ciplined yhalanx "o ecclesiastics combined for the Refeal of the
Union. Did be foresee that in 1829 ? Or would the prospect of what is now taking place in 1843 have then conciliated English Government did not endow the Roman Catholic priesthood, and
yet Mr. M. O'Ferrall distinctly told them that no concordat with the Pope would be accepted by the Roman Catholics, by which
thley would be subjected to the control of the Cown. Roman since that great measure had been passed, they liad recelved
other substantial additions to their claims for civil equality, as in admission to muncipal corporations. The Government, there-
fore, were justified in expecting that the prescrit agitation would subbide; aud they were determined to adopt every alternative
but an appeal to arms, and leave nothing undone wluch would tend to preserve the integrity of the empire. - Mr. M. J. O'CoN-
NELI remarked that Sir R. Peel was much given to "hope," but his expectations of returning traxiguillity to Ireland would prove third readung was carried by a majority of 125 to 55.
Thursduy. - The Hassing the met at noon, and after pase Designs Copyright Bill, entered into consider ation of the Muni-
cipal Corporations Bul in Committee. It underwent a protracted discussion, but was ultimately carried through this stage.
To a question from Mr. Hume, Lord STANLEX Eaid he had lately received proposals resjucting the importation of free
labourers from China to the West Indies, but he was no $t y$ et Pekro replie, that the Queen of Tahiti, having signed papers which she did to rrance ; but he declined to say further on the matter.
regard the

To a question from Mr. SHEll, Sir R. PRel answered, that the expressed his expectation that some negotiation would soon be
 moved as an amendment that a select committee be appointed Mpose the bill, but Mr. LABOUCHERE warmly supported it.Dr. Bowring all expressed their satisfaction with the measure ; while Mr. Ross, who had been called upon by his constituents in
the flax urade to oppose it, namitted that the arguments of Mr. and Sir R. Pbisl, took part in the debate, and the second reading
was carried by 96 to 18.-On the result of the division, Mr. Hiniliry declared his determination to unite with Mr. Cobden
and Mr. Bright, in seeking for a total rupeal of the Corn-laws. Scotland Benefices Binl, Mr, M. P. Strwart moved its committal that day three months.-After a discussic n, in which Mir. Humie,
Dr, Boyd, Mr. Pring le, Mr. Bannerain, Sir J. Gramant, and Mr. Coli,kTT, took part, the fouse divided, when the amendment
was rejected by a majority of 31 . Sir H. Hardinge moved the second reading of the Chelsea
Hospital Out-Yensioners Bill. The bill proposed that when these pensioners were called out to help the civil power, they
should be placed under the command of the half-pay officer by equipped with fire-arms. They were only to be called out in tary.-Mr. T. Duncompe moved the second reading that day
tirree months.- The House divided, when the second reading was carried by a majority of 49 .
Friday. The Irish Poor Law was read a third time and passed. The House then went into committee, and the Export
of Machinery Bill, the Fisheries' Bill, and the Bills for the Apprehension If Offenders in America, and France passed through Cliurch of Scotland Benefices Bill was read a third time and he Bill introduced by Lord Brougham in the House of Lords, otherwise they should have introduced it themselves.

## Pitropolts amo its Yícimíty

Loss of II.M.'s Sleam-ship Lisard.-Accounts have been received of the total loss of her Majesty's steam-ship
Lizard, which was run down by the French man-of-war steamer, Veloce. It appears that before day-break on Monday, the 24th July, when about 20 miles from Carthagena, a light was reported on the larboard bow of the positive orders of the Admiralty when steamers meet each other, immediately put bis helm a-port, but owing to the other vessel putting her laelm a-starboard, the Lizard was struck by her on the larboard paddie-box, the shock of which the Lizard over on her officers and men below immediately rushed on deck, the officers and men below immediately rushed on deck, the to pump out, when the rush of water was the Lizard was apparently sinking so rapidly, that the nien were ordered to save themselves by climbing up the bowsprit rigging of the other vessel. At the instant the colision took piace the Jizards boats were ordered to be lowered, but the passage aft was obstructed by the bowon the quarter deck were the quartermaster's man at the wheel, and one or two officers, who had come up from their cabins, and who, seeing that to all appearance all others had left, followed their example. Determined, chance of saving her, the boats of the vessel (which proved to be the French man-of-war steamer Veloce, of 1,200 tons and 220 horse power) were lowered, in which some of the officers and men of the Lizard returned, and saved a sick boy and passenger, with some two or three others who had been left behmd in the first confusion. It was then discovered that the water had aiready made so much head as to put out the fires and to float the lower-deck hatches, and continued pouring in with such violence as had scarcely left the Lizard when she sunk head foremost. The night placed on her paddle-boxes, could not be seen patil sire was close on board the Lizard, which carried her lights as usual at the mast head. Friday, the frrst public meeting of the members and supporters of this institution was held at the British Lord R. Grosvenor, Sir R. H. Inglis, Admiral Oliver, Sir F. Austin, Sir Edward Parry, the Hon. W. Cowper, several civilians. The chuirman opened the proceedings in a brief address, explanatory of the objecta for which the society had been established, and characterising the His Lor or uelling as barbarous, unchristian meeting to a memorial, which oras read by Capt. Hope, embodying the sentiments of the committee on the subject, for the purpose of being presented to ler Majesty, respectfuly practice $b y$ the royal displeasure. Resolutions in furtherance of this object were proposed and seconded fy Lord R, Grosvenor, Sir R. H. Inglis, Sir Pas a and a deputation was Sir E. Parry, and oth the memorial to Sir J. Graham.
. Roberts, in proposing a vote of thanks to the char, manilar to that established in the reign of Louis XIV."

THE GARDENERS CHRONICLE.
would be formed in connexion with the society, by which personal disputes and points of honour would be settled, without an appeal to arms, a measure which he was sure would greatly tend to diminish duelling.
Anti-Puseyite Meeting, - On Tuesday evening a crowded public meeting was held in Marylebone, for the purpose of considering se best means of opposing hud church. The secretary read letters from the Earl of Glengall, Mr. Plumptre, M.P., the Rev. C. Day, the Rev. A. Rose, the Rev. E. Dalton, and other clergymen and gentlemen, apologising for their absence, and expressive of their cordial concarrence with the object of the meeting. condemnatory of the Puseyite doctrines were passed.
Temperanoe Meetings.-On Sunday, after morning service, Father Mathew administered the pledge to a large number of persons who had been prevented attending
during the preceding week. Throughout the day there curing the preceding week. Throughout the day there and from 5000 to 6000 received the pledge. On Monday, Tuesday, and Wednesday, Father Mathew administered the pledge on Kennington-common. On Monday he was accompanied by a large number of Temperance Societies, who marched in procession to the Common. On their
way some of the people at the end of the line attacked Mr.C. Way some of the people at the end of the line attacked Mr. C. them in his gig, and severely beat him. They pulled him out of his gig, and tore his clothes from his back. One
of the principal assailants was apprehended and fined $10 s$. for the assault. Father Mathew and his friends were at the head of the procession, and were not aware of what had taken place. In the course of the proceedings on
Tuesday, the platform was attended by Mr. Milnes, M. P., Mr. P. H. Howard, M.P., and a large number of ladies and gentlemen, several of whom accepted the pledge.
Mr. Milnes and Mr. Howard shook hands with Father Mathew, and expressed themselves highly gratified with his extraordinary exertions. An address
was presented by a numerous deputation of the Society of Friends, to Father Mathew from the Protestant Temperance Associations of the south of London, expressive of their gratitude and delight at the sucproceeded to Fulham to administer the pledge in the ground, and the police refused to interfere, but the business of the day proceeded after Father Mathew had Mujesty's Government in holding these meetings. He applauding his exertions, and until now, even throughout Uster, where the most conflicting political and religious ophe magistrates and police to prevent the proceedings from being interrupted. From 1000 to 1200 persons took the pledge during the day; they were chiefly composed of neighbourhood, to whom a vote of thanks was awarded for having given the men a holiday on the occasion. Yesterday Father Mathew admimistered the pledge in the Riding
School, Albany-street, Regent's Park: he will also attend at the same place this day, and at Cumberland Market the pledge in London is computed to be upwards of 32,000 persons-viz., about 22,000 at the East End; 5000 on Monday, 3000 on Tuesday, and 1000 on Wednesday, Th Kednington Common, and 1200 at Fulham.-On Association was held for the purpose of opposing Father Mathew's proceedings, on the ground that their object
Was the spread of Popery. Great uproar took place, and the speakers could hardly obtain a hearing; the police Were at length called in, and the meeting broke up in great confusion.
The New Steam-ship Bentinok.-This fine vessel now moored off Blackwall. The Bentinck was built at Liverpool, and launched in January last. She is 2000 for 110 burthen, and 520 horse power, has accommodation double cabins, 12 family and general cabins. Twelve of the cabins are unusually spacious, being from 12 to 15 feet by 9 feet, and in the cabins throughout every possible confort of the occupants. Light and ventilation have been particularly attended to, the lower cabins are fitted with throughout are imp and cold, and shower baths on board, and a bath-room on the main deck. The Bentinck is the property of the Penin Eular and Oriental Company. She is sister vessel to the between Suez and Calcutta, affording a direct communication with Madras and Bengal to passengers by the overland route. The Bentinck starts from the river this day, and from Southampton for Calcutta on the 24 th August,
alta on her first trip to Suez on the 15 th December. Her average speed on the voyage round to Lecember. Her average speed on the voyage round to
Ondon has been little under 13 miles per hour, and she ccasionally ran 14 miles per hou
period of 24 hours Sthand Sunday last, within the short period of 24 hours, the metropolis was the scene of four
destructive fires-three of them occurring almost simultaneously, and each resulting in a great sacrifice of pro-
perty. The first occurred on the reraises of Mr. Mosely perty. The first occurred on the premises of Mr. Mosely,
machine-ruler and tool-maker, iu New-street, Coventgarden. It broke out on Saturday mosning, and ended in tity of valuable property, and serious injury to several of
house were destroyed, and a great sacrifice of property took place. It occurred at 11 on Saturday night, and was folfire on the premises occupied by Mr. Bird, an extensive contractor to the various Dork Companies, near the bottom of Old Gravel-lane, Shadwell. Mr. Bird's premises finest in the kingdom; besides this, on the same plot of ground, he carried on the business of a scum-boiler on very extensive scale, employing nearly 80 workpeople. these premises, covering nearly one acre, were levelled with the ground; the whole of which were uninsured, the stock was considered so dangerous that no office would undertake the risk. While this fire was raging, the re fection of another in the western part of London ren dered it necessary to despatch those engines that could be fourth outbreak had taken place on the premises occupied by Mr. Villiers, surgeon, in Great George-street, exactly before 3 o'clock, and burnt with undiminished violence antil nearly 6 , wholly destroying two houses and seriously juring several of those adjoining. Fortunately, no los of life resulted in any case. The total loss has been va-
riously estimated, and it would be impossible to give the ved not to exceed $30,000 l_{.1}$ a result attributable in a great measure to the efficiency of the Fire-brigade.
Inquests.-An inquest was held on Thursday on the
body of Mr . F. S. Ancona, whose death by drowning, Waterloo-bridge, on the 3 dinst., was noticed in our last The body was found under the second arch of the bridge on Tuesday evening. It appeared from the evidence of Mr. Green and Mr. Rogerson, who were walking with the deceased at the time of the occurrence, that he was partially intoxicated, and jumped on the parapet of the bridge as a feat of daring and agility, and not with any verdict of Accidental Death.
Thames Tunnel.-The traffic through the Tunnel visitors who poss through from motives of curiosity. The number of passengers last week was 45,528 .
Chiswick. -On Tuesday evening a report was circuresiding in William-street, Chiswick New-town, had been killed by his own father, who in a violent fit of passion had nearly severed his head from his body with a grassthe son guarding his head with his left arm, received the weapon just under the elbow-joint, and it inflicted a wound ing to the bone, and dividing all the principal arteries. The father wa committed to Newgate on the capital charge. Another Wednesday, by a female, named Isabella Murray, upon her own offspring, an infant only nine weeks old, by poisoning with laudanum, but the measures taken to counteract the poison were effectual, and the child is likely to do well. Vicar of this parish has placed at the disposal of a Commiltee of the inhabitant householders seven acres of portion of the village, to be divided by the Committee into plots averaging about 20 square poles each, to be let to such of the industrious labouring classes of the district as may desire to use it as garden ground only

Mortality of the Metropolis.-The following is the number of Deaths registered in the week ending Saturday, July 29 :-West districts, 98 ; North districts, 129 ;
Central districts, 138 ; East districts, 182 ; South districts, 202. Total, $749-(378$ males, 371 females $)$ Weekly average for the last five years, 903 - ( 461 males, 442 females, ) and for the last five summers, 846 .

## Throbmeral Nopos.

The Harvest.-The local papers are filled with reports of the approaching harvest. From the West of England we learn that the harvest has commenced in the neighbournood of Exeter, where a considerable breadth of in good condition near Bath. In Herefordshire, a large breadth of wheat and barley presents a most luxuriant appearance, and although the harvest will be late, still fine Weather will insure a full average crop of excellent quality. Hampshire, harvest commenced on the south side of Portsdown Hill last week. In Buckinghamshire, a sack of new barley, from the farm of the Rev. J. B. Reade, of Stone, was exposed for sale in Aylesbury market, on Satuiday. was to be seen in shock on Wednesday week, about Caldecote and Biggleswade ; oats were mown at Girtford, and at Bromham a very large field was in process of reaping. In the neighbourhood of Birmingham the crops look poor and withered, while in the Vale of Worcester the wheat crop is much better, and in many places abundant of the crops on the ground, even with fine weather, the harvest will not commence before September, and will not be more than an average one. In Lancashire, Westmoreland, and Cumberland, the of a fall of snow in the month of July: Such, however, is the fact, for, on the 17 th ult, the called the "Old Mans the highest point in Coniston
cur, was partially covered with snow, which, in the anless the weather hours, disappeared. It is feared, that have materially injured the hay crops already cut, and that the hay and grain harvests will be very late. Scarcely one half of the hay is secured in the northein counties, but the wheat in Lancashire looks well, and promises an abundant crop if the weather continues fine In Norfolk and Suffolk, the whest with scarcely an excep tion is uncut, and the barley is generally green. The crops are laid to an unusual extent, and in many districts the winds have twisted the stems in every conceivable direction, not merely laying the corn flat, but breaking the straw. The consequence must be, that a great proportion of the grain will not ripen, or if it does, the grain will be small and shrivelled. Nom considerably within the month, and, until the advanced consured will fuctuate with the weather The chat is secure, are that price are at their bithest, and they will decline rather than otherwise, unless the harvest is more disastrous than there is at present any reason to anticipate. In the neighbourhood of the metropolis the operations of harvest have commenced. In Surrey several fields or rye and oats, at Peckiam and Battersea have been cut. In the parishes of Tottenham and Enmonto, fields of rye and oats have been cleared the produce appearing in good condition. Should the present warm weather continue the wheat will, in a few days, be ready for the sickle.
Thunder-storms.-On Wednesday, one of the most destructive storms which has occurred for some years wa apenced different parts of the country, extending, Com hent to the Midland Wintes, and from the East coast to Somersetshire aud Wits. At Rochester and Chatham the damage done by The hail is said to be incaiculable. The skylights in the Dockyard and public buildings bave been demolished, and the loss in every direction to individuals must be very great. Mr. G. Masters, nurseryman, estimates his Cor atween 400l. and 500l. The skglights over the Corn-market at the City Repository are entirely destroyed f fones broken, and scarcely a house in the nei which fell measured an inch and a half in length, and in the marshes, near the Cattle-market, pieces as large as a hen's egg were picked up. At Cheltenham the rain fell in such torrents that the High Street was nearly impassble. At Hungerford aecorrespondent states that the bail-stones were $1 \frac{1}{8}$ inch in diameter; they demolished the glass in four houses 40 feet long, and swept the fruit from the trees. At Stamford many houses the damared and at Cambridge the hailstones are said have been as large as pullets' eggs; the University buildings and churches lost a great deal of glass in their windows, and the inhabitants were obliged to pump the water out of their houses. At Worcester, the ligbtning truck several buildings, and many animals were killed, but no loss of human life occurred.
Bedford.-Sarah Dazeley, who was tried at the last ssizes for the murder of her two husbands and daughter badministering arsenic to them, and sentenced to death ity went the last sentence of the law on Saturday in this city, in the presence of an immense
tors from various parts of the county
Bury St. Edmunds. -In pursuance of an invitation from the inabitants of this town, and several agricultu rists in the vicinity, Mr, Cobden and Mr. Mnore attended meeting on Monday, for the purpose of addressing the armers of Suffolk upon free trade and the Corn-laws On the motion of Lord C. Fitzroy, Colonel Addison was called to the chair. Mr. Cobden in a long speech laid before the farmers the asual arguments against the Corn laws. The Rev. Mr. Maberley then came forward to expose what he called the well-intentioned delusions of Mr. Cobden. He wished all classes to live, and was of opinion that the man who tilled the soil was, both upon principles of reason and scripture, entitled before any one else to a subsistence from it. He was proceeding at some leagth, when the people refused to histen to him. Mr. Hales, a farmer, then came forward, and moved a resolution in favour of free trade. He had had the honour of addressing them about three years ago, at a time when the people were in great distress; that distress now consome radical remedy. After some remarks from Mr . Moore, the resolution was carried with only two dissentients. Hull. It is stated in the local papers that Government is about to institute an inquiry as to the loss of the Pegasus. As the boats belonging to her are saved, proof can be obtained whether they were capable of takiog all were unusually large, and with the assistance of the lifebuoy, on the quarter-deck, all might have reached the shore had not these been lowered and swamped by the passengers in the first alarm.-Another of the unfortunate sufferers was picker castle to Leth on the 4 th inst, and put on shore at Holy Island. He was in the fatiguedress of the 96th Rely , Mr. Aird, a passencer of. Aird, a passenger, has also been found, with a piece the surface; and it is expected that many other bodies will soon be found, the diver's impression being that a number are kept down by the mattresses, \&c., which are strewed about the cabin.
loucester.-After several years' litigation, the will and codicils of Mr. James Wood, the late wealthy banker and
draper of this city, have been proved in Doctors' Com.
 00ml, and to the family of the latter gentleman $6,000 \mathrm{l}$. ; and the residue of his property, estimated at about 500,0002 , to his and the probate bears a stamp of 12,000 l. The executor named are Alderman Wood, John Chadburn, Esq., (who commatted suicide some time back under very extraordinary circumstances), Jacob Osborn, Esq., and John Surnam, Esq. The charges of three proctors engaged in the snit relative to the will amount to $17,536 l .3 \mathrm{~s}, 2 \frac{1}{6}$. the senior King's scholar at Eton last week, who lost his Fellowship at Kirg's, because there was no vacany event had never before occurred since the foundation of the culurs, in l thl. It appears, however, that this inthe Rev. Wh.tley Heald lost his Fellowship at King's unde milar circramstances. This gentlenan died is 1780 , holding the livings of Northrepps and Buston St. Law ence, Norfolk. An Eton boy, however, when he leave ton for King's, is first a Scl.olar and the
Liverpool.-A meeting of the propietors of the 5 St George Steam-packet Company was ast week, for the purpose of considering the propriety of effecting an enthre during the eight years of the company's existence as much is 500,000 . have been lost, and that the proprietors on hearing this, unammousle resolve on animmediate disso of the Company's steam-packets which had not lately been 10 sea, while the Cork proprietors agreed to tak hose packets which have for some time past been plying across the Irish Channel. Thus it seems that two com panies are to arise from the dissolution of the one. $A$ ishing a final report, will be shootly held.- Johs Ander son, whose case has been so often mentioned, and who is charged with having received portions of the money stolen London, was brought up on Saturday for final examinaion, when some additional evidence was adduced, with the view of corroborating several parts of hat given upon the previous days, and with respect to the diferent hand At the close the several witnesses were bound over to prosecute, and the prisoner, who refused for make any state proaching assizes.
Manchester.- It appears that the damage occasioned to Mr. Fitzgerald's colliery, by the irruption of the water, not so extensive as at first anticipated; and that the colliery, so far from berug destroyed, is no further injured than be pumped out, atter which the raising of the coal will be resumed. - Another turn-out of mill hands has taken place at Ashton-under-Lyne, commencing with the spinners in Ryecroft Lower mill, but subsequently it since been carried into effect in every mill in the neighbourhood. It was caused by a notice for the reduction of wages, and appears to have been free from all politichl characier. Sided $20,000 l$. f.er annum, to the Hon. C. Spencer Cowper, the third son of Lady Palmerston, by the late Earl. He is no relation to the testator, and is now Secretary of Lega-

Oxford.-The long-pending case of Macmullen $v$. the Regius Professor of Divinity was brought forward in the Vice Chancellor's Court last week, when Dr. Kenyon, the assessor, gave judgment in favour of the admissibility of the plainuff's libel in its amended form. The two principal exceptions to the libel, taken by Dr. Twiss, counsel for Dr. Hampden, viz., that the libel did not allege that the damages affirmed to be sustained by the plaintiff were consequential, or that the defendant had acted from reserved the question of costs till a further stage of the proceedings, considering that the question befora the an action for damages. Should no appeal be entered by that the proof of the plaintiff"'s allegations will be proceeded with early in the ensuing University term. The theological questions involved, and the effect of the ultimate crecision of the
Salisbury.-On Wednesday a meeting was held in this city inr the purpose of hearing Mrs Cobden and Mr Bught on the real of the Corn-laws, About 4,000 After several speeches lad been delivered it was unani mon-ly resolved "That in the opinion of this meeting, the primiples of free trade sre founded fore con the revealed designs of the Creator and there ore every act of legislation which interferes with the freedum of industry, under the pretence of protecting mann'ac'ures, agric,
for huith abolished.'
(Glumorgan), The toll-houses and bars in this count (Glumorgan), as well as in Carmarthen, continue to fall
by the hands of the Welsh Guerillas, who, from their local knowledge, the precaution of their spies, and the sympathy of the great body of the people, are still enabled to laugh at the mustering of the mintary. On Thursday worning the Rebeccaites assembled at Iy Coch, within half a mile of Swansea, and in less than a quarter of an hour demolished My coch and two adjoining toll-gates The Furnace toll-house and gate, together side bars near Llanelly, were also destroyed on the sam night, and the wood-work burned. Mr. Maule, of the Treasury, and Mr. Raven, who are present to conduct said wo be pinced of the necessity of some measures than those previously adopted to put down this career. On Friday, the men employed in the grea copper works near his town strack work, in consequence the man from 1400 to 1500 , and proceeded to perambulate the streets, marching four abreast. They were met by the with the works. The Mayor nnformed them that he had instructions from government to prevent large assemblages of persons from marching or congregating in the
streets; and he trusted that their good sense would induce them to obey his instructions. Mr. Vivian then addressed then, exhorting them to listen to direct them for their benefit, assuring them that emplogers to make the reduction in their wages; and that when any improvement in the trade and price of conper took place their mares would be adranced sain in pro portion. Several of the men attempted to show that by the reduction they would not be able to support themselves and families: but upon being cuestioned as to the amount of their earnings, they were compelled to admit that at the reduced price it would average above a pound per week, more or less, according to the several branches of their employment. Since this meeting took place several have returned to their work. Mr. Hall, the Comturbances, has concluded his inquiry at Carmarthen, after hearing privately the communications of every person who went before him relative to the state of the
country. Mr. Ellis the barrister also formed part of the commission, and directed his attention solely to the ac counts and management of the turnpike trusts. It is said that he has expressed a strong opinion against the
numerous side bars, and that he has drawn a bill, now before Parliament, having for its object the consolidation of the trusts, and the gracual paying of of the tallies. appears that these outrages, by reducing the incomea suffering in rendering the trustees unable to pay the holders being old people, who have invested the little avings of a life in these securitics

The Grand Junction conhmues to pay a dividend at the rate at the expense of the guarantee fund, no pro ision being made to increase it out of the half-year' eturs, and also by adding the surplus of the preceding balf-year. The traffic has declined, but with rigid economy the expenditure has been proportionately redich
sum divided among the shareholders is $110,781 \mathrm{c}_{\text {., }}$ but th net profits appear to be barely 105,000 .-The Leeds an Selby Company bave declared a dividend of $2 l$. 10s. pe ne is leased to the York and North Midland Company The North Union Company pays a dividend of 2 . . Ss departments, and the interest reduced from 5 to 4 per cent. - The Chester and Birken head Company's accounts for the last half-year show , and declare a dividend of 78.3 d . on the original 506 hares, and of $3 s .7 \frac{1}{2} d$. on the haves, or Navirstion an Railway Company declare a dividend of $17.7 \mathrm{~s}, 6 \mathrm{~d}$, reerving a large surplus to equalize future dividends, sufficient to pay a dividend of $1 l .12 s$., but the sliareholders acquiescing in the views of the directors concained in their report, consented to forego a division of the ne eturns.-The York and North Midiand Company at the ecent meeting reported that there had been a faling of 1842 of dise, however, exceeded the corresponding half-year of 843 by $2682 l_{\text {, and as the working expenses had also }}$ een reduced to the extent of upwards of $1000 l$. on the half-year, the dividend of ten per cent. would be main from the early completion of the Newcastle and Darling
ton Railway, were represented as extremely encoaraging. Resolutions declaring the expediency of undertaking the formation of a railway to Scarborough, thus uniting the York and North Midland with Filey, Bridlington, Whitby Pickering, \&c., were unanimously agreed to, it being stated that the whole of the pronosed line would be completed for $260,000 \mathrm{l}$, or about 6000 l . or 7000 l , per mile. -At the meeting of the Newcastle and Darlington Company last week, the direclors reported that all the land for the line is, with a triffing exception, purchased, and that the works for the whole line are under contract and that the railway will be completed for opening on the lst July. With regard to the completion of the railway chain to scotland, there was no movement on the part of the moters of the West coast (Lancaster and Carlisle) live prefert, and the government commissioners had giver a preference to the Eastern (Rugby, Leeds, and Berwick) he, ir the Midand railways were continued to Newcastie, Which communication the Newcastle and Darlington would effect. Resolutions, authorizing the direetors to open negotiations with the Durham Junction, and to ascertain whether it would hime, were then agreed to.-At the meeting of the Brighton Company on Tuesday, the report of the eirectors announced that by a recent valuation of the locomotive to residue of unsold property was estimated at 28,177 l. A further sum of 11,611 . would be required for the purpose of re-ballasting the line and the total cost of the railway had been ascertained to siand at $2,707,872 \%$. The revenue account showed the expenses for the past half-vear to have amounted to 3,304l. The the receipts to 74,394l., leaving a defici o meet the current demands upon the company. Wharfs were now erecting at Shoreham Harbour for the reception of steam-vessels, and arrangements had been made with the General Steam Navigation Company for enabling nassengers to book through from ondon to Rouen, an ad vantage which would soon be extended to Paris. A long discuseion ensued aiho tor, when Mr. Joseph Thompson was elected in the Com Wr. Whan Company mer Wednesday, wen the din meeting in reforming the management, and in reducing tho expenture, bus the receipts as compared with the corresponding half-year, were nearly stationary, though there had been a diminution in the working expenses of
$11,500 \%$. An estimate had been made of the liabilities of the company, their claims, and disposable property, whic led the directors to conclude that a surplus woth remain after discharging all debts, and paying off the loan notes The amount received for the conveyance of passengers during the past half-year was $56,511 l$. The total receipt being $98,554 \%$, and the expenses $57,960 \%$., leaving a disthate vaiance of 44,054l. A dividend of 16. 10s. per carried for extending the line to Bradford, and for award ing 6006. to the members of the investigation committe as an acknowledgment of their services

## RELAND

Dublin.-.The Lords Commissioners of the Great Seal have ordered that Christopher Blake, Esq., of the county Meath, be superseded in the commission of the peace The papers publisha correspondence between Mr. Lucas Mr. John Bodkin, M.P., and Mr. Sugden, containing the usual questions and answers relative to the attendance ir. Bodkin at the Tuam repeal meeting. The replies being demed unsatisfactory by the Lord-Lie Benant an the Commissioners of the Great Seal, Mr. Bodkin bfice been informed that he is dismassed from the Mre J. H. Talbot has also had a correspondence with Mr. Lucas, who intimates to the ex-member for New Ross that having attended a repeal banquet at Enniscorthy, he is no onger a Deputy-Lieutenant of the county of Wexford.Mr. Ross Cox, who was despatched some weeks ago in
$\qquad$ . ecognise British jurisdiction.- After one or two post ponements, owing, it is said, to the inclemency of the weather, Mr. Gypson, the aeronaut, made an ascent in able for a petende excursion, Mr. Gypson descenderl in a field clove to the fy. Here the balloon was taken possession of by a part of quay porters, who demanded remuneration inclined to conoply with their demands, and, moreover, making some remarks derogatory to rishmen, the coal por vented their indignation by closing the vent of aceed on its and having cut the cords, suffered it to procumbered, solitary voyage. The balloon being left thus brisk with little prospect of its ever more being heard of.-A adjourned meeting of the Repeal Association was held a Saturday, for the purpose of reading the transhamber of letter from M. Ledru Rollin, member of the Chast week. Deputies in Paris, received Mr. O'Connell said that the hon. After reading thomunication met every view he had at gentleman with him disclaimed any wish to disturb im attachment to the Queen, which he would say it was im-
possible to disturb, as the Repealers were in reality the true friends of the Sovereign; therefore, the object
attributed to M. Ledru Rollin was false-that be wished to draw the people of Ireland from their allegiarse. He was not surprised that they should speak of the alliance between the Irish troops and French warriors in bygone times, because the violation of the treaty of Limerick alone (independent of any similar case) sent no less than 50,000 men into the Fiench service; and on the record in Paris it was to be seen that of that number on the field of battle. A letter of acknown ledginent was then adopted, from which the following is Your extract:-" We we understand each other perfectly. men who are struggling wilhin the limits of local law and constitutional principle for the rights and liberties of means than land-or men who desire to use no other no other efficacy than that which arises from their moral force and power. Your, indeed, allude to another contingency, in which you may be disposed to be more active cline to discuss, because we now deem which we de that it should arise, the British Government having retracted every menace of illegal force and unjust -if it shall continue to resist those to our claims the ordinary channels of legalised administration." Baltinulase-The Wicklow Repeal 1 emo 1 . 4 . place it this town on Sunday. Nearly 150,000 persons are said to have been present, collected from the five or Mr. O'Conging counties. At the banquet which followed, we will have the Preservative Society sitting in Dubliu, nad drawing up bills which they will call on the British Parliament to pass: if they will l'efuse, then respectfully call on ber Majesty to convene a Parliament in Ireland apostles of my sect-to promulgate my ductrines far and nour-to talk amongst yourselves and to convey amongst your neighbours the plan I propose, which will have the
effect of patting an end to abseniceism - to the clearance bystem-to the extermination of tenantsm-to the over-franchises- to the giving to our corporate towns the full dominion of their local affairs, and to Ireland generally Rev. Mr. Lalor, (parish priest of Baltinglass), acknowledging the tonst of the Clergy, "that rumours the Crown; but he would tell England, that wealthy though Ite was, she was too poor to bribe the Catholic clergy o in his eyes than that which was said to be in contemplation, for the history of all countries abounded in evidence to mow that the interests of true religion had invariably been

## Rulls' Court. - Hope v. Hupe. - This suit related to a cabine

 Esg., wind are estimated to be of the value of $100,000 l_{\text {. That }}$ That of the resiuuary legatees of has uncle, instituted one of the three suits now belore the Court, for the administration of his uncle'
estate and effects. In consequence of thas, Alemander J. B Estate and effects. In consequence of thas, Aleaxander J. B to declare that he was entitled to the cabinet in question, by
virtue of the deeds giving them to him, the one dated the 1gti of May, 1832, and the other cated the 10 th of Ap,ril, 14,38 'Inss
suit was followed by a third, institutca by flenry Thonas Hope claiming the jewels in question wed alled alleg to hav neither were the contitents of the deed, or the property intended
to pass, proved. From the case, as stated, it appeared that the to pass, proved. From the case, as stated, it appeared that the
late Henry Phip, Hope had for many years been collecting the cabinet in question, which now corisists of many rare speci-
mens; and in 182k it was alleged that he executed a deed, by which, after his decease, he gave sisteen of the nurst cainable,
if not all, the jewels in question, If not all, the jewels in question, together with his gallery of
puctures in Duchess-street, to Hery Thomas Hope; no trace however, of this deed can be found, other than a paper writmg
alleged to be a copy, but containing nothing from which it
could be ascertained that any deed had been executed. In could be ascertained that any deed had been executed. In H. P. Hope, the guardian of his son, Alexander James Beresford
Hope, who was then about eleven years uf age On the ondiamonds and precions stones, jewels, gems, and minerals, 2 lnches wide, and 12 incles high, with silver connices and
circular silver p.ate, engraved with the arinorial bealings of the said th. P. Hope, to John Raphael, since deceased, upun
trust for him for life, and after his iecease upon trust for his
nephew, Alexauder James Berestord Hcpe. Thas deed contanged nephew, Alexauder James berestord Hepe. Thas deed contaned
a power to sell or exclange the jewels; so that those disposcd
of were replaced by others of equal value. It albo contained a covenant for further assurance, and a clanse indeminfyng the
tiustees in case of any lose. This deed was duly execited and
delivered. it subsequenty, however, cane into the fossession i Henry $P$. Hobse, Bet ween the date of turs deed and 1838 , the calmet was changed for a arger one, nito which thejewers were
frymerred, partly because the cabmet was too small, amf partly because olu cabitict was allowed a space in the lunber-roum c,
time the
the owner, but ulimately it was sold to a gentleman io Sussex, o whose possession it now is. In 1838 HEnry Pli,ip Hole, for gift of the same jewels to his nequew, Alexazder James Beresford Hope, aud accordingly he sent the deed of 1832 back to Johus
Raphael, who preparid another deed, to which he, as trustee of juwes, by the description to the former deed, to A. J. B. Hope absolntely; this deed was ruly exccuted and delivered, and was
afterwartisdeiivered to H. P. Hope. In July, 1838, as H. P. Hope was golng to Hohand, whina Viscountess Beresford, the mort h hin three nephews, at the same time sayitg,-" Dear Mamma, , upon you, after my death, to deliver these sealed parcels of the pe packets was addressed to herself, one to $\mathrm{H}_{\mathrm{t}} \mathrm{T}$. Hope,
and the other to Alexander J. B. Hope. H. P. Hope subsequently left England for Holland, but returned in the auturna, and at hib
request the parkets were returned to him unopened, lowing year he again wert to Holland, and he then in like manLady Beresford; he again returned to Eug and in th.e autumn Lady Beresford; he again returned to Eug and in the autumn,

important to ladies.
K EARSLEY'S ORIGINAL WIDOW WELCH'S pecuiar virtues, are strongly recommended to the notice of ever lady, having obtained the sanction and approbation of most gen-
tlemen of the Medical Profession, as a safe and valuable Medicine in effectually removing obstructions, and releving all othe inconveniences to which the female frame is liable, especially those which, at an early period of life, frequently arise from want
of exercise and general debility of the system: they create an appetire, correct indlgestion, remove giddiness and nervous headstomach, shortness of breath, and palpitation of the heart; being perfectly innocent, may be salely used in all seasons and climates.
$*_{*} *$ It is necessary, owing to the numerous imitations, to inform the Fublic that KEARSLEY'S is the only ORIGINAL and GEAUNE MEDICINE of this description ever made, and has been particnlarly requested to remark, that qsars a testimony of authenticlly, each Bill of Drections contains an affidavit, and bears the
signature of "C. KEARSLEY," in writing, and each box is signature of "C. KEARSIUEY," in
wrapped in white paper. Price $2 \delta$. $g d$.

## FASTOLFFRASPBERRY.

EARL OF HARRINGTON, THE LORD BISIHO OE LON-
DON, LORD VISCOUNT LOR'TON, LORD SONDES, \&e.;
as weil as by the HORTICULTURAL SOCIETY OF LONDON.
VOUELL \& Co. have much pleasure in announcing
Canes of the whove inabled to supply, at the latter end of Oct. next, fine -unequalled for the extraordinary size of its fruit and riclness of fla-
vour. Those to whom Y. \& Cn, sentitiast season have expressed their vour. Those to whom Y. \& Cn, sentitiast season have expressed their
highl admiration of its superiority over all other varicties, nd it has
hecn awarded several prizes at various Horticultural exhbitions during the eseason- As a proor that they have not exaggerated its excel-
lent gualities, Fruit was submitted to Dr. LiNDLEX (sce Gardenergs) lent (julities, Fruit was sutbitted to Dr. LiNDLEX (sse it is as fol-
Chronicle of ine 22d July, page 502), whose opinion of
lows:-" FASTOLFT RAsPBERYY.-We have received from Messrs. Yows :-"FASTOLYF RASPBERBY,- We have received fromeressrs.
Yousl, of Great Yarmouth, fruit of the Fastolf Rasporry, nd
we find that it merits all that has been stated in favour of its excelWe find that it merits all that has been stated in favour of its excel-
lence. The fruit received is very large, obtusely conical, and of rich
flavour, far exceeding in this respect some other new and large flavour, far exceeding in this respect some other new and large,
varietics. The plants bear abundantly and in long succession."
They also exhibited it, on the 1st of Augutst, hefore the London Hor-
ticultural Society, 2 , Regent-street, and aprize was awarded to them.
 it more fully, or with areater confidence, to the notice of the public, merely observing that it continues in high perfection throughout the
autuninal months, and has maintained its superiority in the most
unfevorabie soils and situations, and requires no other than the
ordinary treatment of the old varictics. Fine Canes will be ordinary treatment of the old varictics. Fine Canes will be
ready by the latter end of October, and can be sent with safety to
nay part of the United Kinglom con the receipt of a Post-ofice
ordery upon the following terms:noy part of the United kingdom (on the
order; upon the following terms:-
Packages containing 100 Canes
50

less than 200 arc ordered.

season, by $\mathbf{Y}$. R Co. not being able to meet the demand, they therefeason, ispectfully solicit early application.
Great Yarmouth Nursery, August 17, 1843.
THE NEW YELLOW AUTUMNAL ROSE, "CLOTH OF
T RIVERS, Jun, has the pleasure of offering to his the West of France from Noisette Lannarque. This fine Rose was pur-
chased ly T, 1 , jun,, in the spring of 1842 , on condition that he might
 submit the following description as correct in every rest ect. Colnur,
brilliant yellow, of the same shade as Rosa Harrisonit; form, lar, like Noisette Lamarque, flowers of the same size; petals theck
and leathry, not hathe to file in the sun; habit extremer.y rulust, a4 much, or more bo than Noisette Jaune Desprez. Owing to the here, but is in bud, and will bloox shorl], T. R. offers it now,
that purchascrs may have the oppoxtunity of budding a few plants.
'rice $21 s$. each, package included, carriage paid to London ; as the stock is limited, no allowance can be made to the trade.
NOISETTE SOLFATERNE, from the same parents , and of the
same robust habit-colour, pale lemon yellow, $7 s$. $6 d$, each. same rolust habit-colour, pale lemon yellow, 7s. 6d. each.
Sawbridgeworth, Herts, August 17, 1843.
 YOUELL \& Co., possessing the most extensive stock
in the country of the above Splendicd Hardy Ornamental line robust, 3 year-old plants, 8 to 9 inches high, $10 l$. per 100, or
308 per dozen.-Great Yarmouth $N$ nrsery, August 17 , 1843 .

MAGNTFICENT NEW FUCISIA
C UCOMBE, PINCE, \& Co., beg leave to call the Lastention of the Puble to a very superb New Fuchsia, which
has ben rancel nu the Exeter Nursery, and which is decidedly
the finest variety ever produced. Flowers of it were submitted to Dr. findley, who, in the Gardeners' Chronicle of the 8th ult,
"Lucombe, Pince, and Co.-The blooms sent of Fuchsia Exoni-
ensis prove it to be a very splendid variety; it is a flower of great substance throughout, seed-vessels dark, tube and sepals of a rich crimson carmine; the sepals are long, they expand
freely, and disclose the rich crimson. purple corolla, which is very large, and of a peculiar denseness of texture. ${ }^{33}$.
The Plant was also exhibited at the last great meeting of the s.ondou Horticultural Society on the 12th ult, and obtained the Strong Plants will be ready for delivery on the 10th inst., at the post, carefully packed in stout tin cases. The usual dis-
bount to the trade if six plants are ordered. For a full description, N.B.-This Seedling Fuchsia has been fully proved, and will give satisfaction to those who purchase it.

FIRST.RATE SEFDLING PANSY, "UNIQUE."
OHN SCHOFIELD begs respectfully to inform OHN SCHOFIELD begs respectfully to inform
the Public and his Friends that he has Plants in good condition, nlow weadraw attention to the following opinion of the Editor of the Gard Chron. and others, on the above; see p. 409 , No. 25, Gard.
Chron., $1842:$ " 1 . Schofield..-No. 10 is a first-rate Pansy ; inside white and sman, in consequencwer the band of deep, rich, hluish
purple, which surrounds the lower petals broad; the cye purple, wand rich, the upper petals are mulberry-purple, the flower is large, of fine form, grood substance, withont crumple," Also, sec

## 

## SATURDAY, AUGUST. 19, 1843. <br> meftings for the two following weers.

$\mathrm{W}_{\text {Hen }}$ the late Sir Alexander Burnes returned from his adventurous visit to Bokhara, he mentioned, as one of the more remarkable products of that country, its magnificent Melons,--large, juicy, and rich, beyond anything he had seen in the East. This those who visited Cabul; and seeds have been sent home in abundance by officers employed in the Affghan expedition. These seeds are now bearing fruit, and delicious they prove: not hard-fleshed, with a thick rind, like Oak bark, forming their larger part, and almost as indigestible as that substance, -but noble
fruits, thin skinned, delicate, and almost wholly eatable. Such a one was produced at a late meeting of the Horticultural Society by Mr. Fleming, the Duke of Sutherland's gardener at Trentham; and we have since seen a specimen of the famous Sirdar kind grown in the Isle of Wight, which weighed nearly nine pounds, and would not have been inaptly named (as some actually are, in the poetical language of the East) "a mountain of sugar.
Few things more plainly
that has been silently made show the great progress skill with which this delicate fruit has been thus readily brought to perfection in a most unfavourable summer: When Sir Joseph Banks first introduced these Persian Melons into notice, scarcely any one could find that they were better than Gourds; and
for a long time the late lamented President of the Horticultural Society stood almost alone in his success in obtaining them of their native excellence. Now, Knover, - - hanauks to the admirable precepts of Mr. of a knowledge of the principles, as well as practice, of gardening,--nobody seems to find any difficulty in the matter ; and nothing would more surely mark a gardener as a bad one, than his clinging to his favourite
old Rock Melons, in preference to the delicate varieties of Cabul and Candlahar, because the can canolicate vrouv therietatter In our opinion, a Melon is an infinitely better fruit than a Pine-apple, provided it is like the Ispahan, the Hoosainee, or, above all, the Sirdar ; it has the great merit of being much more easily grown, and we strongly recommend everybody who values his dessert not only in future to procure seeds of the Melons of the East, or of those which have been raised from hem, such as the Beectwood, but in future to expel
the whole race of Cantaloupes and Rocks as entirely unworthy of a modern garden.

The reason why the soil of old gardens is so fertile is, that there has been an accumulation of animal and vegetable matter, beyond what was necessary to raise
the plants cultivated. The only inconvenience arising from this is, that the soil has too little cohesion for those plants which, like Wheat, require a firm bottom and bence the produce of these is not in proportion to the richness of the garden mould: besides this, so matter which is undergoing spontaneous decomposition, that many good gardeners, where there is a considerable extent of old garden ground, fallow a portion of it, alding lime or lime-rubbish, and raise green crops, such as Tares, or I.ucern, whicl always grow
luxuriantly in such soils. After a year or two, during which all the superfluous animal and vegetable matter is convertell into humus, and becomes a constituent part of the soil, it is trenched deep and mixed with is it were, the too great richness of the black mould. The vegetables which grow in this renewed soil, if frey are not so large, are much more healthy, and have a fresher taste; and if Corn were sown, it would produce
a much greater crop, and one less liable to be lodged, than in the richer mould. In a field there is never he langer of there being too much organic matter in incorporate it may not be reguarly of and just under the surface, as the plough has turned it in.
 roots, finding plene shoots spring up vigorously. The for food at hand, do not spread
ret downwards, but horizontally. Suppose that there be a dry spring, so as to dry up the soil as far as the manure lies, -this becomes inactive, and, instead of
hourisling the roots, dries them up. The whole plant
suffers, and its growth is stopped; and when the ear comes at last out of its sheath and begins to swell, the straw is too weak to bear it, the root has no hold of the ground, and the least wind lays the whole plant prostrate. If the same manure had been well mixed with the soil, and this stirred to a good depth, the fibres of the young roots would have struck downwards and taken a good hold of the ground. No frost could then raise the whole plant out of the ground, nor any length of dry weather parch all the roots. When the seed is forming, and the greatest quantity of nourishment is required, it will be gathered by a much greater extent of root, and nothing will check the formation and swelling of the seed, as is often the case in very dry weather, and where the roots have no depth of s sil.

There is another circumstance which materially affects the weight of the crop : this is the distance between the plants. What would some farmers say, we proposed to hoe out the Wheat plants to ten inches or more apart, as we do Turnips? and yet whoever has examined a crop of Wheat of seven or eight quarters per acre, will have seen that it consisted of tufts of ten or fifteen stems, each proceeding from eoronal root, and that such plants required nearly a square foot of ground to grow in. If they are
crowded, the side stems are weak, and bear but small ears; but if they have sufficient room, all the stems are of equal height, and all the ears equally large : this, besides a heavy crop, produces an equal sample, which is more valuable in the market. The practice of dib-
bling the Wheat, which is found so useful in Norfolk and Suffolk, leaves proper intervals between the plants which can be hoed; and depositing the seed at a proper depth insures the formation of roots beyond fe influence of a hot and dry sun. The great faul dibble hole: if the seed is good, three or four grains, at most, are sufficient; of these, one or two only wil take the lead and form the tuft, the others will be overpowered by the more vigorous. When land is well prepared, half a bushel of seed is an ample allowance for an acre, the rows being at nine inches from each other, and the dibble-holes at the same distance in the rows. This allows of perfect stirring and hoeing of the intervals, and the complete destrucion of weeds. Whenever a simple and effective machine shall have been invented to make hole and deposit the seed with certainty and expedition or a perfect drop drill, which will answer the same purpose, and the land shall have been carefully prepared to receive the seed, we may expect to see he average produce of Corn in Great Britain and reland so increased, as to supply a cuntinually in creasing population; while the mechanic will hav his bread at a cheap rate, the farmers and the land ords will be prosperous from the more abundan return of their land. Let all wet lands be well drained all loose soils clayed or marled, if possible; the firs rendered light by repeated stirring and long fresh dung, the latter consolidated by pressure and enriched with well-decomposed animal and vegetable manure Let the crops be varied as much as possible, alternating the culmiferous and leguminous plants, and always having abundant green crops and roots to feed cattle and sheep in winter, increasing and economising every kind of manure, and blending it intimately with the sol by deep stirring. Whatever may have been the original soil, it will, in time, become fertile; the only difference being, that the rich alluvial soils require much less tillage and manuring to keep up their fertility; but if they are overcropped and neglected they will soon be deteriorated and produce less than much inferior soils, which are properly managed. With great care and industry good crops may be raised on very indifferent soils, but the additiona labour and expense should be fully compensated by the difference of the price or rent. Few men ar aware of the value of rich land, which is cultivated at little expense, compared to that of the poorer raised in usually made in valuations of rents. It may some times be advantageous to buy poor land, but it is eldom so to rent it; and our advice to all young farmers is, to seek for farms in the richest districts, and to exercise their skill and industry in keeping up fertility, rather than in producing it where it did no exist before, although the last is by far the more patriotic plan. Let this be done by rich proprietors, or by those who have accumulated a capital by the cultivation of the soil and have ample experience.- $M$.

Vulgar errors are, of all things, the most difficult to deal with, not because of any want of argument o evidence to refute them, but because the persons who entertain the errors are incapable of understanding rgument or weighing evidence. Accordingly, we find people still maintaining that the Berberry blights their Corn, and that one kind of plant changes into another We are reminded of this by a correspondent, who
writes thus:-" You will, perlaps, be astonished when I tell you that the majority of agriculturists in the eastern division of Kent assert, and most confidently too, that the plant they call Droke, ( to botanists known as Lolium arvense,) is produced-they do not,--perhaps entre nous, they cannot, tell how and why-from Wheat; that is, to use their own expression, Whea runs out into Droke. I conclude this would be better expressed by the word "degenerates" into Droke. I was told by a gentleman and his bailiff last week-and they are no mean judges in agricultural affairs-that wenty years ${ }^{3}$ experience had convinced them of the ruth of this matter, and that Droke and Wheat had been found both growing on the same root. I could not persuade them that they had sown the Droke with the Wheat, which seems to me self-evident, as this plant rarely appears in any other than a Wheat field. could not refrain from remarking to the batiff, that some morning I should hear of his honey Bees being changed into Wasps. Facts are stubborn things, but often think vulgar prejudice (I do not use the term ffensively) equally stubborn. My scanty knowledge of botany and fondness for natural history in general ells me that the All-wise Creator allows of no deviaion in his harmonious laws of nature, and that however frequently we may find what is termed lusus naturce, (or a sport of nature, we do not find, either in the animal or vegetable worlds, that one body or plant, from any cause or effect, can be transformed into another. I therefore assert, Wheat can never turn into Droke, or Droke into Wheat. In the latter pinion my opponents agree."

This strange fancy is as "old as the hills." The ncients, says Linnæus, fancied that Corn depencrated by degrees in bad land; that Wheat changed into Rye Rye into Barley, Barley into Rye-grass, Rye-grass into Brome grass, Brome-grass into Oats, and so on ; and they even believed that Brome-grass and Barley might on the other hand, improve into Rye. It was not so very unnatural that these fancies should be entertained when people believed that Bees sprung spontaneously wut pe forms of creation are all the result of chance and accident; but it is astounding that any others than atheists should hold such doctrines now-a-days. They might as wel believe that a man degenerates into a monkey, a monkey into a squirrel, a squirrel into a rabbit, a rabbit nto a rat a bat into a sparrow, and so Such absurdities hardly deserve refutation
We would here ask these persons to watch the growth of an Acorn; to see how its shell is burst-how the young root grows downwards-how the seed-leaves (cotyledons) hold together-how the little branch comes up, and cothes itself with leaves, not of an Almond or a Fir-tree, but of the Oak; and to try whether, by starving or feeding it, he can persuade it to become anything else. And then, when he is satisfied about that, to consider whether, if he cannot change the nature of the Oak, he can alter that of Wheat or Droke. Should he still remain in doubt, we would refer him to Linnæus's ingenious essay on the Transmutation of Corn (Transmutatio frumen torum), written to put an end (as it did) to this sort of folly in Sweden. If he is still proof to all such arguments, we can only conclude him to be one of those "quifungum habent pro cerebro."

SCUTELLARIA SPLENDENS; ITS INTEREST AND NEGLECT.
THis showy species appears to be receizing far less attention at the hands of cultivators than its real merit deserve. Though less gorgeous than the Naivia, and much ess capricious in its flowering than the Leonts (Lion' tail), it is, nevertheless, equally beautifu, and much more subservient to the limited convenieace of sman collection

With the exception of the instance of its caltivation in the establishment from whence its published figure is derived, I have not met with any other where its intrinsic value appears to have been equaily appreciated. This apparent neglect may probably be traced to its labit of growth, wherein it so much resembles many of our com mon half-hardy herbaceous plants, and offers one more instance wherein exists a strixing disparity between the general habits and the splendid floral developments of mature growth in many of our fine autumana plants From this has arisen a partia, and in some instances a total, neglect of the means requisite for renovating their constitutional vigour; thus leaving their latent beauties to "blush unseen," excent to the few who have discovered their apmopriate treatment. The natural result of this has been, in many instances, an exposure of the plan to a temperature unequal to their required growth in some cases consigned to the ungenial position of a nort aspect and in others wholly exposed to the open ground where, in both instances their stonted and collapsed appearance bore ample testimony to the chilling influences around them.

Scutellaria splendens is a half-shrubby plant, requiring, during its season of growth, a warm greenhouse, or on from from June to November, but wel adapted, by being excited at different times, to bloom eare to a discretion of the grower, when subjected to s ither itable
temperature. To attain a maturity of growth it should
be regarded as an herbaceous perennial plant, requiring an annual accumulated excitement, consequently should be kept throughout the winter months in a partial state of rest, until March or April, when, after being again excited by a partial development of its buds, its previous season' growth should be partly cut back, to test its amount of vitality, and when this is proved by a vigorous flow of sap t may then be disrooted and reshifted back to a pot commensurate in size to the vigour of the plant or to the ability of the cultivator in this department of his profes sion. When thus established in its first pot or shift the whole of its remaining stems of last season's growth should be removed. Its ultimate vigour and fertility will be proportionate to the accumulated development of its growth shem root or base of the stem. Paxton, in the Magazine of Botany," speaks of its bloom being inthus treating it as a semi-shrubby plant, either by retaining a portion of its previously-matured growth, or by causing axillary or side-shoots, would result eventually in the production of inferior flower-stems, as the only legitimate substitute for the amplitude and splendour of perfected growth. The principle upon which the practice of obtaining the greatest number of axillary or side-shoots is founded, as the only legitimate mode of obtaining the reatest amount of bloom, is more strictly applicable to plants of a shrubby and branching habit than to those which incline to be perennial and herbaceous, or of luxuriant and spare development; the latter requiring, generally, an accumulated vigour at the root, to insure an ultimate bloom.
The present species, being rigid in its growth, and latent in the foliation of its buds, excepting under the nost favourabie circumstaices, requires atolerabie botom drainage, and the dried siftings of heath-mould, diveste of its strong, fibrous portion, may be advantageously used as a substratum, or intermediate drainage, upon th potsherds. The most suitable compost is equal portion of yellow loam and dried leaf-mould, adding a sixth part of white sand. The application of heath-mould as a com ponent part of the compost, should, in this, as in most others for plants of soft-wooded growth, be entirely regulated by its open and well-pulverised quality ; without such a preparation, heath-mould is generaily too retentive of moisture for those plants requiring a rapid circulation. By the foregoing management, S. splendens will amply repay the attention bestowed upon it by its terminal spikes of brilliant scarlet flowers, from nine to twelve inches in length, which, whether regarded for their long continuance in bloom or gracefulness of habit, will not fail to recommend it as one of the most elegant and interesting of our autumnal flowering house-plants.--surrejanus.

## AMATEUR'S GARDEN.-No. XXXIII.

Since I wrote my last week's article, I have seen two other scarlet Pelargoniums, which are very deserving of notice, viz., Pullen's Scarlet and Smith's Superb. The first is rather a shy flowerer, but is very large and o it is an improvement upon the same person's Emperor, and therefore perhaps the finest variety in cultivation The prevailing opinion that these scarlets are too stron for beds is an error, for if they are occasionally pegred lomn, the height of the plant will not exceed the lengtt of the flower-stem, which is the case with many plant of the tower-stem, which is the case with many plants here, and which produce flowers us large as smal Hydrangeas. For my own part, could procure a sufficient stock of the large, I would never grow anothe plant of the dwarf kinds; and, at any rate, a gre Or the tien or Pelar the season. Or the fy the milies of Pelargonium (a ma awarde o them, by the way, more by courtesy than any superio merit), some very good ones for bedding out were noticed of M. Beaton last week; and the truth is, that so many of these kinds flower freely when planted out, that it would be more difficult to name those that are not adapted for hedding out, than those that are. of the old dwar kinds, there is a beautiful little variety called Moore's Victory, which makes an elegant bed; and there is
also another of the same habit, with a light flower, also another of the same habit, with a light flower, but which I have not geen for a long time, and which we used to call Fair Ellen; and there are also many more old varieties in this way which I should much like to see again in cultivation for the flower-garden. From France we have some singular and free-flowering kinds-of these Sidonia is perhaps the finest, being of a rich velvety texture, and very delicately pencilled. Diadematum, and Diadematum rube scens, are also good kinds, as is, likewise, a very dark variety called Mulatto. Jehu is curious, and blooms profusely, and the Jew and Jewess make beautiful beds. Oliver 'I'wist is an orange scarlet, of profuse habit, and Wildfire, Fire Fly, Orange Boven, Rival Queen, and Queen Superb, may be classed with it. Gauntlet is a dis. tinct colour, whicla is only surpassed by Rising Sun and Sun-rise : these with Priory Queen, would make a lovely groxp. Lady Carlisle, Emily, Firebrand, Florence, Sylph, Vulcan, Chef d'œuvre, Lady Murfay, Lady Denbigh Alexandrina, Erectum, Matilda, and Fosteri Roseum, ar all distinct kinds, which make most excellent beds. The great advantage of bedding these kinds out is the prolongation of the Pelargonium season, as they are just beginning to bloom when the house plants are over. The treatment which these varisties require for turning out, is to store them, four or five plants, in a 48 -sized pot February or the beginning of March, and take gro 60 s in to keep them welt, staipperl पhe to the midale of A pril, to make them dwarf and bưshy, and likewise to prevent the blooming untit Uliey are well established after being
planted out. As a general rule, the ground should be rather poor than otherwise for Pelargoniums, and if it is of rather a gravelly nature, it will be all the better
I am obliged to "Omega" for his lint relative to the pairing of Roses; hut I was aware that strong-growio kinds would starve the weaker ones, if budded on the sam branch, and it was for that reason that 1 recommentied the weak-growing varieties to be placed in the most clevated positions on the branch, as the difference of elevation places the weak and strong-growing varieties almos on an equilibrium ; at least, so I have found it. I am gratified to find that "Omega' is, from experiment, so convinced of the excellency of my plan, that he is about to bud a wall of the Sempervirens, 214 feet long, with Bourbon and Noisette Roses," and I hope next year to hear of his complete success.- WF. P. Ayres, Brooklands.

## RENDLE'S SYSTEM OF TANK-HEATING.

1 Find in reference to the Chronicle, that the new system of heating lately brought into notice by myself is attracting the attention of Horticulturists, and it is my
firm opinion that as soon as it gets properly understood, firm opinion that as soon as it gets properly understood, it will be universally adopted wherever bottom-heat is required. At p. 501, Mr. Sherwond lias written a lons letter on the subject, and endeavours to throw cold wate on my plan, by stating that "it can never be made available for Horticuitural purposes to the extent that 1 anticipate, nor anything like it;" and his reason for so doing, is because he does not see how the atmosshere is to be heated, irrespective of the bottom-heat. This will be readily explained by the annesed drawing :-

The water enters the tank at $A$, and by means of plugs or valves (at the apertures B) can be made to circulate round the tank and pipes, or be made to pass throngh the tank or pipes separately. This is easily explained, and trust, therefore, that Mr. S. will not he prejudiced agains my plan, but will forthwith adopt the "tank system. He may be assured that he will be more than pleased with still more pleased in the saved, and expense that would be effected. The accompanying drawing repres a section and perspective view of the interior of a propa gating-house, heated on the tank system :-

A. $-\quad$ -

At p. 460 there is a letter from the Rev. J. Huyshe on the "Tank-system," which I should have answered before, but have been too busily engaged. Mr. H. seems, from the tenor of his letter, to claim for himself an im proveraent on my plan, and, to use his own words, stat Rendle is most material por the ons on Rendle is the depth of depth." On referring to my ireatise ( p .32 ), he will find depth." On referring to my treatise (p. 32), he will find the following advice :-"I would recommend the tank to be at least 12 ins. in depth, so as to contain a very large body of water, for the larger the body of water the larger the continuance of heat. What Mr. H. alludes to a p. 15 is the depth of the tank $I$ erected for the purpose of experiment, and not advice to others. This, "the material point," is explained ; the other differences, as to the thickness of the slate, or the exact position in which the boards ought to be placed, do not seem to callor observation, further than to state that I recommend the best articles to be used in the best possible manner. If a superior slate cannot be procured, an inferior quality must be used ; but still it must be acknowledged that the firmer the quality of the slate the more capableit is of enduring the heat of the water.-W. E. Rendle, F.H.S., Plymoulh.

From these facls, it results that if even 5000 lbs of saw. dust (mixed with excrements) be applied to a Magdeburg acre, the soll will not derive from it more, on an angl to than 20ibs. of mineral matter, which is not enost can produce any great effect. Manuring with sawdust the only be beneficial by supplying lumic acid; but as the decomposilion of sawdust is very slow, art must be brought in aid of that process. It should therefore be left (nixed with excrements) till it is thoroughly roten, or be, previous to being used as litter, thrown into accelheaps, till it is eutirely decoraposed; this will be anure erated by its being occasionally wetted with liquid manure and stirred up.
It is probable that the हawdust of Oak, Beech, Ash, and Elm, will contain somewhat more nitrogen than hat of Pines and Firs, on which account the former is able; but in either case its amount is insigninican, awnot equal even to that of IRye-straw. Yet, bad as Flax dust may be litter, it is preferable to the refuse oineral dust man and contain less matter, but are altogether destitute of nitrogen.
matter, but are altogether (To de conlininuctl.)
HOME CORRESPONDENCE.
7) ccayin larches.-At p. $542, \mathrm{l}$ observed some remarks Don the rot incident to laarches, in the red or heach wood of the cree, and which you atcribute to too while moisture in the boil upon which the Laren is grown, wrary the experience of a correspondent leads to
opinion, viz., that Larches are most liable to this disease When grown upon a sandy soil. I belicve that I am the first person who observed the decay of the red wood in
the Larch-tree, now more than thirty years ago; having planted many thousand Larches on the estate of Closeburn, in the county of Dumfries, unon a sandy soil, with a subsoil of gravel or red sandstone, and also upon a
slaty rock. I have found a great proportion of the Larchslaty rock. I have found a great proportion of the Larch-
trees unon the sandy soil begin to decay at the root in trees upon the sandy soil begin to decay at the root in
the course of ten or twelve years; and at the age of thirty or forty years the decay is found to extend three or four feet up the stem of the tree. The Larch-tree, planted upon the sides of hills composed of Greywacke, or slaty rock, so common in the south of Scotland, 1 have always found to succeed best, and not at all liable to the disease Which affects it when grown upon a sandy soil, which 1 opinion I entertained, that a sandy soil was not congenial to the Larch, was completely confirmed by observations Which I made in a tour through Switzerland (the country Britain) about twenty-five years since. In the valleys of Switzerland not a Larch-tree is to be seen; the Spruce Fir is the prevaling tree upon the limestone or sandstone, country ; and it was not until I came to the Slaty mountains that I observed the Larch-tree growing upon the sides of the hills. The Larch is not found to thrive well tion, neawn upon limestone orksire, upon a magnesian subsoil, I found the Larch-tree liable to a similar disease in the heart wood of the tree: in this soil the Oak also Inflers from premature decay. From my own expen sandy soils, should be cut down by the time they have arrived at forty years of age; and though the Larch is found no arrive to a great age in a healthy thriving state, yet I con sider it a profitable tree to plant in a sandy sonl, as
becomes useful when 12 or 14 years old for many agricultural purposes, such as the division of fields by a temporary paling, and hurdles for feeding sleep upon turnips; and lf alled to stand tul fa foars ola, houses, for boat-building, \&c. It is known to be a very durable wood for all puryoses in which it may be employed, containing much more heart wood than any other Fir
grown in this country. I have found the Scotcl Fir, at a considerable age, in a much mote thriving state in sandy soil than the Larch-tree, but mucis worse upon a
slaty subsoil ; it is much less compact and hard when slaty subsoil ; it is much less compact and haru whe
grown upon a slaty than upon a sandy soil. The wood of the Scotch Fir is made much more durable by soaking it in lime-water, when cut up for boards or the roofing of for more than forty years, and I. find the wood of roofs erected with Scotch Fir treated in this way at that period, to be perfectly sound; whereas roofs which had not been
subjected to this process, require to be renewed in little subjected to thirty process, The effect producert by submitting Scotch Fir to a soaking in lime-water, is to destroy the eggs of the worms which destroy the white or sap
wood of Scotch Fir by feeding upon the saccharime matter contuined in it. This the lime-water is found to ventra lize or absorb, and it thas renders our home-grown Fir
valuable substitute for the more expensive Baltic timber C. G. Stuart Montealh.
on the Larch, --Seeing in your Paper some remarks belief that a wet subsoil was the cause of this tree rotting in the heart, I beg to state what I know of the tree in
this guarter. Ist. When planted on very dry and very sandy land, it begins to rot after fifteen or twenty years, and to the extent of one half or more of the number.
2nd. When on the sides of steep liils, although wet at some seasons, we rarely find any of them rotten-say one the sides of rivulets, a rotten one is rave indeed. But if there be any stagnant water it kills them in the course of a very few years. 4th. If we wish the trees to become give to any hard-wood tree ; we allow the branches to
luxuriate on every side, just as they please. 5th. If they are wanted for taking out any but those that are killed by their neighbours overtopping them.-Doolly, Stonehaven.
Diseases of Tares.-The crops of Tares in this neighbourhood have suffered much from the united attacks of an Insect and a fungus, the latter probably the consequence formeak and depraved state of the plamens which accompany this note, that the development of the shoots has mass of abonly arrested, their extremities presenting a oles of the leaves fowers ander part of the mass are thickened and incurved, and in their axilla you will find a few White grubs, probably belonging to some Curculio. Of most cases, it an at competent these masses wither, and are invested with Botrytis vulgaris; sometimes, however, one or more shoots are developed, which flower, and are again produce be attacked, and even if this be not the case, the crop of is not only injured by the dese the others ureced towards maturity, the pods in the upper part of the plant are immature Which is at least an inconvenience. This is not, hovever, the whole of the injury, for the portions of the plant the pow parts attacked by the grub, not excepting even evidently, are invery injurious. I have not at present found speci-
eve
mens of the parasile in a perfect state, so as to enable me to ascertain the species. It is, I believe, a form either o Ascochyta Viciac or Pisi, of Madam Libert, the latter of
which-pointed out to me, many years ago, by CaptainCar-Which-pointed out to me, many years ago, by Captain Car-michael-in damp seasons destroys many a crop of Peas
but without the inspection of the reproductive bodies, it is impossible to ascertain this. The parenchyma beneath the red spots, is gorged with a gumay substance, of a beautiful red or Iilac, in which all trace of chlorophyll is lost. The hairs with the colourerl bases afford sometimes pretty object under the microscope. The main strength of vegetation is evidently diverted in great measure from
the seeds towards the coloured spots, and I have little doubt that the produce will be very much diminished in consequence, and probably few of the grains will be wel developed. 'It is not unfrequent for parasitic fungi to be
imperfectly developed. The red fungus, which is often so conspicuous on the leaves of the Sloe, is abundant in America, but, I believe, never perfect; and this is by no means a solitary instance, and is analogons to the fact that in certain countries many species of Mosses and Lichens never fructify. I do not find any special mention the diseases of plants.-M. J. Berkley.
Discase in Pansies.-Our Pansies here are dying with almost incalculable rapidity. The disease is by n means uncommon, but having never met with any perso the could satisfactority assign a reason, I purpose the cray assist me in finding out the cause. If a reason fo their decay cannot be assigned, perhaps some one may be dole to name a preventive, -as a remedy is out of the question, because the first symptom of disarrangenent is from want of nivisture. Some of them have completely failed in wet weather, wherr wo daily experienced falls o is evident it does not procecd from drought. The firs appearance of it chis scason was observable during the Mry tract of weather, which preceded the wet montas of be the first to suffer, but now weak and strong are alike subject to these ravages. The plants, when examined after death, generally present a mass of dead roots, partly acomposed; but on examination, we find that to
of the stem below sround are the first attacked limes (but seldom) the infection attacks the stem imme liately that a fiesh supply of young shoots fills up the vacancy we have only to regret the rare occurrence of the latter Cambstance. Our plants have been proco them propagated hundreds of miles from these places, but all are alike susceptible of the disense. The whole of our plant are already balf dead, and only those plants which hav disesse is wholly confined to those plants which have been kept in all planted out in kept in oll our investivations we can observe no in sect, unless in one solitary instance, which turned out to be a small maggot-but was this the cause or effect? It may fur bats of the pround, growing in different soils, but the disease is alike in both places; when there are two of a sort, if one dies, the other immediately
follows. Thus, two plants of Countess of Orkney both died together; of three plants of Major's Bridegroom, two Fiora Superb, growing at least four yards apart, died during the last fortnight. - $R$. $L$. Troperlum canariense.-In the new long garden-walk in Kensington Gardens the zeal and ingenuity of Mr,
George Davidson, one of the gardeners, have prompted him to train five plants of Tropeolum canariense or peregrinum upon dead skeleton trees, abliy disposed and dis the fort in a graceful shape, by twine attached from the estremities of the boughs, the whole being just now literally th a profusion of beantifuly ing from the refreshing pale green of the foliage, doubl agreeable in tho dal an bla trees assume so dark a hue, as by contrast to display the vage, reminding the beliolder of the Laburnums with which wheluctance in spring, and for which we have now presented to us a very cheap and efficient sub-stitute-six pennyworth of seed being enough to procure 100 artificial trees, covered with flowers of incessan renewal throughout the entire months of July, August, and Septemiver. Profuse mass of bloom, and the stems at ensure a most protur trained belind the tree, will diminisla the artificial sppearance of the treatment of the plant. As the seed ripens freely in the open air, this plan, once commenced, may be annually continued by the poorest cottager free of all expense. The seed also makes an excellent pickle, and I have met one gardener who daily improves his bread and butter at tea-time by the young leaves, which havea agreeable flavour. peeper of the Kensington Gore Gate, Hyde Park.James Mangles.

Prizes for Seedling Pelargoniums.-I feel obliged to One of the Judges" for his courteous reply to the observations I made at page 542 of the Chronicle, and for his explanation of the principles upou which the certicate

Die Krankheiten der fllanzen. Von Dr, A. I. Wiegman.
Braunschweig. 1839.
Pfanzen-Pathologie, von F. I. F. Meyen, Berlin, 1841.

That Seedling Pelargoniums excite much interest, is proved by the crowded state of the tent in which they are Soited at Chiswick, and is for the Horthall b gratife to determine whetber the pubic them. But i they are to be ranked below the common out-door fruits of the season, or if it be necessary to exmil the same seedling two successive years before a medal can be awarded to it, few gentlemen will, I think, take the trouble of sending their seedliugs for competition. To your correspondent E.H.S. or more than 25 years standing," I will now offer two or three observations. In the first place, I did not impugn the decision of the judges in the fruit department: they could not be responsible for the awards to flowers. In the next place, nyy remarks mounted to thi good Seedling Pelargonium as in producing a dish of good Horticultural Society should rearerd them with different rizes? With regul to the degree of skill required to produce rood Cherries, I will observe his admission, that bere "is as much skill required" in the production of one as the other, is quite sufficient for my argument.
Should, however, his life be spared to the Society another year, and should he cast his eye into the fruiterers ${ }^{7}$ shops hae month or uly, be will see such ae correctness of the opinion which the experience of an T.H.S. of more than aurter of a century has led him to aclopt, that the skill necessary for the production of that excellent ruit is such as to require the Horticultural Society to Banksin medts give siver and two . made its statement, we may be allowed to Charies, and that such as have been awarited have been conferred by the judges, by virtue of that authority which enables them ary to do so." 2d. That silver Kuimhtian and Banksian medals are specifically offered for secding florists' flowers and, therefore, if the judges do not award them, it is by virtue of that other authority, Whicis enabies tuem think it F.H.S." that the Society has done all that he desin and that blame, if there is any, lies with the judges. At that the society can do is to offer prizes; it is impossible for them to control the judges in their decisions. It has been alleged, indeed, that they have done so; but that statement was destitute of the smallest foundation.]
Vines.-In a leading article, at p. 443, you have advanced a doctrine which seems to startle many Grapegrowers, and to many it will be impracticable on account of having. Pines growing beneath the Vines. For my part, 2 , we find, "Every branch in me that beareth not fruit, he taketh away; and every branch that beareth fruit, he purgeth it, which may bring forth more fruit. This is my syster, good 1 have acted upon for many years, away all barren shoots, and $I$ purge all fruitful branches; that is, $I$ remove all laterals, and stop the shoot at the eye nest the fruit, or one above it. Now if the Saviour cultivates his church apon this principle, I don't think we can folow a better phers may say to the contrary. - A Subscriber.
Vives.- I have planted my Vinery fout years, and have since had three full crops of Grapes. The first year, the plants were turned out of 48 -sized pots, in February, and made rods of strong, good wood, 20 feet long. The second third year there was a greater crop. This year there is a still larger quantity, and excellent wood for the next year. I am persuaded this success may always be expected with proper management and a proper situation.-
Verax.
Will you state your management, for the benefit of those who are less successful ?]
Pines.-I have jast taken up a quantity of Pines from hark pit and planted them in a bed of virgin soil, with a bottom-heat obtained from a flue (not water). They were in a wretched state when in the bark, but they are now looking well and growing fast. They are planted in the soil, and I expect to have full-grown Pines with much less expense and trouble than by the old method, than which I can conceive nothing worse or more unscientific.
MFulbervies.-I am no great gardener, but I will tell you something about a Mulberry plant. I got a top shoo from a Muberry-tree carried through we bottom leaving the shoot a few inches above the surface. This was cut off wat it was in the was cut off when it had struck in the pot. What was put in it aftererds I don't know. Mr. Knicht, of Downton, once told me that by striking cuttings or taking plon, once told me tha by striking cuttings or taking plants Mulb Mulbery, period which is a very good one. 1 .
The Shaddock.-In the vicinity of Ingleton, Yorkshire, a beautiful specimen of the Citrus decumana, or Shaddock, has this year borne flowers. It is only three years since it was raised from seed; it does not usually bloom, even in the genial climate of Italy, before the seventh or eighth year. The above-named plant was raised in a sit-
Treatment of Strawberry Plants for Forcing.-Mr. Murdock's paper, at p. 542, on preparing Strawberries for forcing, is good, and many excellent crops I have seen
grown on the system recommended by him,-but I cor--
sider the following to be an improvement on that methud. I proceed as follows:-any convenient on that me from the I proceed as follows:-any convenient time from the the better, ) I take 60 -sized pots, and having filled them the better, I take 60 -sized pots, and having filled them wiace them along the rows of Strawberries, and lay one of place them along the rows of Strawberries, and lay one of
the finest runners in each pot (taking care not to break the wire). I let them remain in that situation for six weeks, and should the weather prove dry, they are care-
fully watered. I then remove them to a shady situation, fully watered. I then remove them to a shady situation, 32 s , singly ; as'I find one plant, thus treated, to produce more and much finer fruit than three, with a certainty that none of them will go blind: and such plants will
be found stronger and in a better bearing condition than those of two or three years' standing. The advantages of this system are, in the first place, that the plants make the best roots, and being supported by their parents until they can shift for themselves, or rather until they are recommend to be gentle in forcing until the fruit is fairly wet. Nothing, in my opinion, repays the gardener better for his trouble, or affords greater satisfaction to his employer, than a good dish of Strawberries, from the Ist February until the 1st of September,-C. W.
Apples.-In the last Saturday in July, at Preston market, Apples were sold by Mr. H. Homby, of Catforth-within-Woodplumpton, some of the past and some of the present year's growth. The Apples of 1842 were re Facile.
New Peas.-A neighbour of mine has grown Cormack's Prince Albert Pea, (sold last spring at हैs. per quart) side by side with the Early May, and he believes them to be a single variety. At any rate, the reputed new sort is no respect. I have myself proved that the Farly May in any into use nearly a week soomer than Farnes's First Early which also was advertised as a new sort, or at all events with a new name. $-\boldsymbol{J}, \boldsymbol{B}$. Whiting

Large Mushrooms.-Two prodigious Mushrooms were gathered on the lst of August last; one in a field near rort Green Cottage, Garstang, the residence of Mr. Saul which 6 inches㫙em 6 inches long and 2 inches in diameter, the height of the whole being 9 inches. This immense Mushroom mus have grown within 24 hours, as I had looked over the ground the previous evening, when there was no such well formed in all its parts. The other was gathered in Witinton Hall Park, near Kirby Lonsdale, the residence of T. Green, Esq., and measured $23 \frac{3}{2}$ inches in circum-gathered.-Facile,

Extraordinary Discovery of preserving Vegetables for an unlimited Period.-Our energies and exertions of late years have been directed to the improvement in? the growth of fruits and vegetables; but we have never yet of the year; but, thanks to the talent and research of a French gentleman, we are enabled, by a singular process, to enjoy not only fruits and vegetables, but poultry, game,
meat, and even milk, at all times, and all seasons. Wwould strongly mik, at all times, and all seasons. W pay a visit to the manufactory, 137, Houndsditch, where we have seen the whole process, and where we were Ward's Cases.-I am truly glad to see the Horticul. tural Society of London have taken Ward's Cases under their fosteriag protection, as I am convinced they will come more and more into general use, the better their capabilities are developed. The best guide to find out what may be done by them is to know what has already been done, and I am, therefore, induced to send you some to some future; reserving a more parint in bud and in blossom, Cattleya Forbesii, C. Loddigesii, GIoxinia maxima alba, G. speciosa two plants, Achimenes coccinea, A. Iongiflora, Thumbergia alata, and the white and pink double Oleanders (growing freely, but from improper season or pedium insigne, Dendrobium cucullatum, Crispa, CypriBrassia Lanceana, Oncidium flexuosum, O panilio, Maz, illaria stapelioides, Stanhopea frandifiora, Coloprne fax briata, Oncidium viperinum, Dendrobium speciosum, cupreum, D. fimbriatum, D. pulchellum, Maxill D. Harrisoniæ, Crinum longifolium, Gloxinia rubra, Gesneria elongata, Leelia anceps, Stephanotis floribundus, Hoya cangasa, and Gossypium herbaceum (alive, but making no progreas), Cypripedium venustum, A\&ceoclades maculata and a (supposed) Galeandra; the latter has never senial since its from Rio, last aumn. So conwhich does the atmosphere appear to be, that Brassia, pseudo bulb, with one arrested shoot uponit, has now not only pushed two other shoots, but vegetation is proceeding in the heart of the arrested shoot, a most unusual occurrence I believe Dendrobium speciosum consisted only of two very shrivelled bulbs, without root, and appearing quite rotten about the rhizoma; it has pushed a very healthy shoot, and is rooting freely. Cattleya Loddigesii, C. crispa, Oncidium papilio, and O. viperinum, though small plants, have each two growing shoots; and Leptotes bicolor, Which arrived with the Galeandra, and "consisted of five bulbs, has pushed in no fewer than nine points, and is rooting in proportion. Hymenophyllum Tunbridgense (I think, for it is too small as yet for me to be quite certain) has come up spontaneously in some of the Devonshire
peat, in which C. Loddigesii was potted. Gloxinia leaves
take root in three weeks, and form tubers as large as a full-
sized Pea in six. Portulaca Thellusonii, and Petunia magna rosea rooted in a fortnight. You will see by the above list that my box is none of the little elegant drawing-room like crows in a mist ; it stands six feet high, is four fe broad, and two feet wide, has a door at one end, two shelves inside, and as many hooks at top as possible for suspending logs of wood. During the coldest njghtlast winter, when the thermometer was at $6^{\circ} \mathrm{F}$. in the fields, the thermomete in the box fell to $38^{\circ} \mathrm{F}$.; during the summer it has neve been below $65^{\circ}$, and two hours ${ }^{3}$ sunshine raises it to $90^{\circ}$ sion, I would recommend boxes to be made two feet and a half wide, with a door at each end, large enough to admit the whole person freely ; and if it is wished to grow Dendrobia well it should be not less than eight or nine eight deorees here is in mine a differer at the top and that at the bottom of the box; but the lower situation answers quite well for Cattleyas, Lælias, \&cc. Allosorus crispus is Cuckoo.-I see in your last Paper that a correanonden appears to think it very difficult to keep a Cuckoo through winter. I should think warmth was very important a winter -doing. The only bird I ever heard of surviving and I believe that Cuckoo lived spring, when the family went to London, the bird went too.-Rural Chemistry.
and discharden on the one laughter hand by a malt-house, and the other by these destructive rermin; the consequence is that garden is completely honeycombed, and looking as much worse I fintwarren as garden, and to make matter worse, 1 find today taat the continual excavations have at last stopped the drain, so that the water now runs about the beds of the garcen instead of following its pests $\frac{1}{}$ Poison hat aried, bith ion of numbers, as a fresh diately the former one is destroyed.-Devoniensis. [We must refer this case to some clever correspondent; for we cannot suggest a remedy,-unless chlorine gas or
Fecundity of Bees.-A hive of Bees belonging to
I. Dobson, of Great Plumpton, near Preston, swarmed on the 12th and on the 26 th of June, and again on the forth a large swarm on the 4th of July. -F acile
Refuse of Paper-making.-A paper-maker wishes to be informed of the best manner of disposing of the refuse of the materials used in bleaching hin rags. These are ion suphuric acid, and manganese. After the distilla supposed that the residue consists of sulphate of sode and oxyde or sulphate of manganese,-in what proportions may this saline matter be used, diluted with water, for pasture land, or for arable or growing crops? and would fix the ammonia in dung, and be more serviceable in hat way as a manure for arable land? or, in other words ould it be best to use it as a direct stimulant to vegeta f or as a chemical agent to assist in the decomposition Paper-materials before it is brought into use? The ractice of mast of his brethen into the stream, and he has a strong misgiving that they throw away a very useful manure. Strewed on pavement and paths, the above-mentioned refuse kills the weeds fo the entire summer.

PROCEEDINGS OF SOCIETIES.
Aug. 15, -R. H. Solly, Esq., in the chair. Sir H. Willoughby,
Bart., the Hon. G. F. Hamilton, Gen. Caulfield, Jas. Ackers, Esq. M.P., John Broadhurst, Esq., P. Rolt, Esq., and R.J. T. Tompson,
Esq, were elected Fellows. It was announced that the seed lately brought over by Mr. Hartweg might be obtained by Fellows,
upon application being made to the Secretay. Mr. Dean, gr to J. Bateman, Esqe, exhibited a collection of handsome Oxchida
ceous flowers, comprising a superb variety of Oncidium Lancea num; the richly-colowred Vanda Roxurghii; a fine spike of its having been produced by the selfsame pseudo-bulb which las green flowers, while those of the former are small, and of a dark preeplish brown; the same plant this year produced only blooms cies of a Camarotis, were also exhibited byMr. Dean, who received Banksian Medal for Oncidium Lanceanum and Vanda Rox
burghio, From Mr. Errington, gT to Sir $P$. G. Egerton, were
most beautiful cut specimens of Cattleya crispa and intermedia, for which, particularly the former, a Certificate was awarded from the same person were icaves of Rhododendron ferrugineum,
the undersides of which were covered with galls similar to the produced by the puncture of some insect Mr. J. species, and to Mrs, Lawrence, brought exceedlugly well-grown plants of
Erica Hendersonii; the curious Brassia irachiata; Peristéria Bárkeri, with a long drooping scape of rich yellow flowers; and Oaxaca three months since, at which time the scape of the Pcrisfor a time in the shade it arrived at perfection: a Banksian Medal cally Groom, highly beautiful Lílium lancifolium punctatum. Mr. Standish, of Bagshot, exhibited four seedling Fuchsias, which he stated to
have been obtained in the following manner : Having raised in 8iflora, $F$, formosa elegans, fertilized with the pollen of $F$. corymassistance, and gave ribe to the present plants, which showed that this tribe, inste nd of degenerating like Calceolarias, and many
florists' flowers, if not crossed, improved considerably: the sedfings were named Attractor and Colossus, which resemble each other in colour, but differ in size and character, having smooth
wazy crimson carmine tubes and sepals, with long, lange, and
stout corollas, of a purple crimson colour, President, with rose-
coloured tube and sepals, has a, large and stout
coroll corolla, with but little blue in it, and Candidate has a carmine mine; the flowers are large, the two latter long, and large also and the habit of all promises to be good. From Messrs,
Lacombe and Pince were blooms of their beautiful Fuchsia Exoniensis. From Mr. Epps, of Tunbridge Wells, was a plant of
his seedling. FuChsia called Monarch, bearing the areater resemblance in form and habit to the old globosa major.
Mr. R. Cooper, of Croydon, exhibited a white variety of Mesem-
bryythemum tricolor, the lolooms of which would not expand
in the shacle of the room in the shade of the room. Mr. Cuthill, of Camberwell, brought
four very fine plants of Lisianthus Russelianus, grown in hard
earthenware pots ; and a specimen of the Beech From Mr. Mountoy, and a Epecimen of the Beechwood Melon.
tiful vermilion and yellowe cut flowers of a new beauland apparently raised between G. cardinalis, crossed with psittacinus; Gloxinia carnea, and a sample of "Improved" Traylor's
Windsor Beans: a certificate was awarded for the Gladiolus.
Six well-swelled Queen Pine
 were sent by Mr. M. Henderson, gr to Sir G. Beaumont; they From Mr. Eyre, gr to R. W. Barchard, Esq., were two Moscow
Queen Pine-Apples, weighing 31bs. 3 oz. ant 31 lb .5 oz.; one was
particularly well swelled. a certificate swarded particularly well swelled, a certificate awarded. From Mr. C.
Barker, gr to the Rev. T. Thurlow, two Candalar Melons, for of Barker's White Spine Cucumber, from plants arown gro pots.
From Mr. Wortey, gr to Manbert, Fisq., an exceedingly fine-
looking scarlet netted Cantaloupe Melon. Mr. Col. Sowerby, sent half-a-dozen very fine Peaches, from standard
trees, grown in the centre of a honse upon the rafters of which Vines are trained; one of the specimens had been produced upon the end of a shoot devoid of a terminal bud. a Banksian medal prepared and arranged. From the garden of the society were brown species from Guatemala; Angelónia Gardneriana, a
pretty stnve plant from pretty stove plant from Brazil; Achimenes multiflora and coc-
cinca, Sálvia hians, and Zephyranthes grandiflora; with cut
fiowers of Gladiolus psittacinus, Acanthus mollis, and a variety

BOTANICAL SOCIETY OF LONDON.
June 2.-J. Reynolds, Esq., Treasurer, in the chair. Mrs. M Stovin presented specimens of Anemone ranunculoides, found
uild in Library, Herbarinm, and Museum were announced. The concluRubi are divisible," by Groups into which the British Fruticose that the barren stems offer the best, if not the only plan, of diserect or arched mode of growth, and continuance of vitality, be resolve themselves almation. And in this view the differences the glaucosity, or greater or less degree of hairiness, and the
glandulosity of the barren stems. Commencing then with $R$. cesius, and ending with $R$. idrus, it will appear that seven groups
are casily scparable from each other, passing from one into the other in a very natural manner. These, at all events, may be can be classed without confounding really different things. unequal prickles, trailing, rooting. R. cresius and its various de-
rivatives. 2. Glandulosse. -l larren stem angular, hairy and prickly, setose, very glandular, arched or trailing, rooting. R.
radula of Weilhe and Nees, Koehleri, fusco ater, \&c. ${ }^{3}$. Vili-caule.- Barren stem angular, very hairy, but without glands,
prickly, arched, or decumbent, rooting, R. villicaulis, W. and N., R. leucostachys, Smith, \&cc, 4. Fruticosi,--Barren stem angula, prickles, rooting rarely. R . affinis, nitidus, rhamnifolius, \&ct. not rooting.- Barren stem angular, very smooth, nearly erect, W. and N., and R. fissuns, Lindley, 7. Idai.- Barren stem round,
downy, covered with innumerable small dilated prickles erect R. idyeus and varieties. The Paper was accompanied by numerous specimens, which are deposited in the Society's Herbarium. Wat son and Mr. R. Kilvington, of Philadelphia, presented a very large cates; and the President presented some plants from Singapore.
"Observations on Dicranum Dillenii," (M.SS. Taylor) by Dr. Thomas Taylor, were read.
HIGHLAND AGRICULTURAL SOCIETY Thr Annual Show of this important Association has lately taker, from which we glean a few paragraphs. "There is something
extremely intremely curious in the rapid growth of this Association, and
in the enthusiasm whech has taken possession of many of its noble Members. It was no wonder that farmers, and those in the daily exercise of Agricultural pursuits, should have from of
first seen the advantages to be derived from this condensation
experience and discoveries, into a systematic and appreciale form, made patent to every, one connccted with land intercsts; farmer. Many of the first names among our nobility appear in have sent stock , hundreds of miles from their farms and estates,
to compete for the prizes of the Highland Society. The whole country for hundreds of miles round seems to have poured out the plainitural treasures-the mountains of Aberdeenshian and the wild shores of Loch Rannach. And it was a gratifying thing
to see noble and peasant, duke, earl, lord, gentleman, and simple farmer, all uniting in one great patriotic object-the improvement of the land and the produce thereo. Nothing was neglected on the part of the Local Committee for the accommodation The
Members, and for the exhibition of implements and stock. The great place of interest was, of course, the Show Yard.
fine grass-field in the form of an oblong-paralellogram, perfectly sufficient as regards size, and situated in the immediate vicinity of the town. The stalls for containing the different animals ran in parallel lines, with sufficient room in front and ranged the different kinds of stock, each kind forming a sepahere, both of high and low another: and many degree-their pedigrees being as keenly serutinized as those of the human race. The rough whrHighland bull, from the hills of Breadalbane, and the siee. The
shire and Teeswater from every fat pasture in the country. The short-horned breed was the finest part of the exhibition, and in he opinion of the Judges, the best that hasd stallions were also rood, and there were in particular some very fine mares. It may show the interest taken in the exhibition, when we mention, that the famous breeder, Jonas Webb, sent sheep from Babraciety's prizes. The crowd round the show Yard was enormous, conrather rough treatment in the way of jostling and squeezing tor admittance. Great as the crowd was, however, every one had an opportunity of seeing the fatisfaction of those qualified to judge.
of to the full
she contrics of cattle, \&cc., stood as follows:- Cattle, 326 ; horses, $74 ;$ sheep, 334 ; pigs, 30 in in all, 764 . This was the largest ex
hibition of cattie ever held by the Society, except that at Glasgow
 burgh last year, but that was the most extensive ever held in
Europe. There were 29 exhilitors of dairy produce, and a new
feature in the Show was some fine poultry, 17 lots in all. space prevents our fiving a list of the prizes for Cattle, \&c.,
which were extremely numerous. which were extremely numerous.
For Implements, which are more generally interesting to those
not present on these occasions, we must, find a littie room, although they are described as having been less numerous than in former years. toenthe following: "Thrashing Mill aml Stcan Engine attacher

tion tings, put in sand and placed on a gentle heat in the usual way
 native of New IIolland, whacce it was sent to Messrs. Londiges,
from Mr. Wm. MacLeay. Of the locality for it in that country we are uninformed. It very much resembles a heap of little c'ucum-
bers, whence the name has been dexived. Those bodics are apparently leaves, terminating the short articulated stems ; but
they rear they require further examination, for they may be of the nature
of pseudo-bulbs. The thowers appear from the hase of the Cu-
cumbers in sepals and petals striped with pink, and a three-loled lyp, whose
middle division is crisped very much, with five wavy elevated ridges along its micklle - Botrazal Register.
phyte, Orchiuxatuare. Dislucated Mormodes. (Stove Eipi-
modes has so entirely the habit of Monandria. - The genus Mormeans of distinguishing those two gencracexcept when in tlower a nature that, iormodes presents some peculiarsties of so strange species, we should be tempted to re regard them in several distungict
In particular, the columan, ingtead of being straight and etaudiug
erect in the centre of the flower, is bent over to one side, just as
if it had been subjected to violence. There is also a great irregularity of direction and proportion in the parts that surround
the column. Nowhere are these singularities so strongly marked the column. Nowhere are these singularities so strongly marked
as in the plant now before us, whose sepals and petals, instead of standing in an obviously alternate position with respect to places that they com hardly be recognised, and the whole floral sepals, the back one is placed almost opposite one of the petals; the first; and the lip, instead of being stationed exactly between
the two petals and two lateral sepals, turns its back to the lefthand sepal, and its face to the right-hand petal. And then the
column is bent to the left as well as the lip, but not in the same are, opposite each othere two organs are not, as they usually singnlar plant we some time since spoke of it thus:- "When hood of Valladolid, in Mexico, there was brought to him some safely in England, and one of them has at last flowered, proving stately habit, with a very delicious fragrance, although powerful,
but wit Its fiowers are three inches in diameter, pale lemon-colour, tion of all the parts, that it would be difficult to ascertain their real nature, if it were not for the token given by the labellum.
The latter has a deep brown streak drawn down its middle, and
covers over the columu like a hood. about three feetlong, narrow, deep green, with a very fine glaucous bloom upon their underside. It is worthy to be associated with these plants." It is a stove-plant, which should be potted in a
compost of turfy heath-mould, mixed with a portion potsherds. Water should be liberally given in fine weather, day, and $70^{\circ}$ by night.

## MISCELLANEOUS

O THE ROSE DE L'ISLE DE BOURBON
Hatri sorrow paled thy bloom, fair emblem of the mind Of her whose mourning wreath the Cypress sad hath twine
Wheres fled the brighter glow that sparkled in thy smile, Before thou bad'st adien to Bourbon's sunny isle? Ae know the rich red tints did mantle o'er thy brow,
As ky the Woodbine's armis enclrcled thou did'st grow,
Beneath the clime that gain'd a fragrance from thy birth, Beneath the clime that gain'd a fragrance from thy birth
And double value drew from beauty and from worth; Then whence this fainter shade, consumption's cheek might wear,
Increasing love by dreams of mingled hope and fear ? Dost fade with vair regret, and for thy birth-place mourn Or dost thou share the grief the widow'd bosom feels?
Is symp is sympathy the pang that from thy lustre steals?
Affection then will cleave with fonder zeal to the Affection then will cleave with Inder zeal witchery.
Imagination paints the husband's look of love,
As thee he first beheld in Bourbon's spicy grove;
Distinctiy as the voice, it tells the thoughts of home, That clust'ring to his heart, in crowding nyriads come. Imbibing half its charm from innocence' sweet breath! I'll covet none beside, fit offering wilt thou prove,
To her who, next to God, ranks husband, home, and love,
Thus, thus, his glance did speak, as thee he homeward bore, When hasting back to love, from India's fatal shore. The visions hope had raised, death's'er beheld, hand dispell'd; His fever'd veins but drank a mumuntary life,
From baimy airs that seem'd with healthful vigour rife.
He died-but friendly hands this tribute of the heart In safety bore to her', to dull grief's venom'd dart She placed thee where thou stand'st, fit soil for gem like thce Upon the grave of him whose heart was virtue's throne, As though thou fam would'st point to where the world should read, Nore.- The introduction of this Rose into lirance is ascribed
by some writers to the wish of a lady, that her husband, on his return from a long sojoum in the east, shonld bring her the most
beautiful Rose that the journey homeward presented to his observbeautiful Rose that the journey homeward presented to his observ-
ation. Touching at the Isle of Bourbon, he selected this from among the "gintering throng," but lived not to enjoy the pre-
sentation. Dying soon after his departure from the Isle, a friend who took charge of them, landed both the Rose and the corpse of
his friend in France, when the widow plated the flower upon Pine Apples from the West Indies.-Many thousands of this fruit imported from the West Indies, and as it is said from Nassau in New Providence, have beex sold by auction this week, and now crowd the fruterers' stalls, and mostly ill-grown, many not weighing more than half a pound, and none that we have seen exceeding two pounds. Some are in good condition, but many are rotten, and must have heated on the passage. To what variety they belong it is impossible to say, as they are quite unthey belong it is impossible to say, as they are quite unlike the specimens not improbable that they are small Providences. ever, not improbable that they are small Providences. flavour. It is understood that much larger numbers may be flavour. It is understood that much larger numbers may be alarmed at present, for unless future importations improve in quality, those accustomed to English Pine Apples would not place them on their tables. They will, however, be
acceptable to those who cannot afford the price of homegrown fruit.

## GARDEN MEMORANDA.

whor this garden is seen in the greatest beauty is in the latter months oto spryand the Arboretum is chlivened with Rhodedendrons, the numerous species of Crategus, Phitadelphus, \&c., and
the magnicicent Cilycme sinensis. Although far from being so gay at the present time, there $1 s$, nevertheless, much to interest becn effected withn the last twelvemonths, and many more are
contcmplated. The tank sy stem of heating has been apphed to a range of pits fronting the curvinnear stove, which was formerly taken the walls of the pit about three bricks in height, and by building a small furnace-house at the west cnd, separatci from
the curvilucar stove, and partly concealed by a mass of rockwork, which has greatly mproved the appeare about seven inche wide and the same in depth, rounded ht the bottom, and carned round the pit within a few inches of the exterior walls; the space
in the centre being filled with brick-rubbish, upon which a layer

## 

 case, and another upon a smaller scale has gir ence celal satisfactionin heating a range of Melon pits. In the latter, however, the
 smaliment
perineries,
Vine
inneries, and briffly alluded to at page 101, are particularly
interesting. The subjects of the principal experiments are Wheat
Potatoes, Potatoes, Peas, Turnips, and Beet, and the substances with
which they are treated consist of phosphate of ammonia, phos phate of lime, the sulphates of soda, lime, ammonia, maj nesia, and potash; muriates of ammonia and potash; salt and cerving no artificlal aid of any kind. Those rows of Putatues urnm
whinch the three compounds of ammnnia and mitrate of have bee
vigour an
differenc
difference was even more apparent; but whether their produco
will be equally remarkable, remains yet to be proved. Wheat treated with phosphate of ammonia and muriate of potash, appear to be much stronger than the rest; that to which nitrate of soda
has been applied is scarcely superior to that which has received nothing. but the most striking differcnce ss onservalie in that across the northern ends of all the beds of Wheat was dressed to grow more vigorously, and to produce finer ears. Turnips
have succeeded best upon land dressed with the phosphates of ammonia and lime, nitrate of soda, and the sulphates of ammonia
and lime; the former and the latter exhibiting a striking superonity. Scarcely any difference is manitest upolithe feas and
Beet, but a better jullgment may be forned of the lattr when
taken up. But perhans none of the capraments lave produced a mure curious result than a few which hase been
caried on with the White Paris Cove Cos Lettuce. Each experiment when the ground was dry, two barrowfuls of rotten dung, of superphosphate of lime. The Lettuces uppou the former centre; upon the second they are of a dark green, very open,
and promise to be of little value. whiie thuse dicesed wath superphosphate are exceltent, ageular, and well turned me. Ths
substance has also proved of serijee to Asparagus; eight wornand applied at once, is weak and yellow, showing that the dose Was too great; 2, the same quantity of nitrate of soda is rather
stronger; this substance pulverises the soil, and renders it lighter;' $3,20 \mathrm{lbs}$, of sulphate of magnesia, is scarcely' different at the rate of a hatufful of cachis to every four gallons of water, is
excedmgly strong - showing that weak dowes, applied often,
produce a much betfer cfiect thin when a

 which charcoal-dust and wood-ashes were sown, do not exhibit any marked difference from the rest, farther than an inclination
to grow stronger and later. Some expernments are also going applied a fortnight, their effect is not yet discernible. Superwell, three Chy sauthesmums treated winh it prowing vigorousily,
ant lecumng of a dark grecu under its application; and a searlet Pelar gomumin which had recelvo it cximmting a great superiority
over wine to whin phosphate of hme had been appled. In the service, the Roses beling perfectiy frec trom them, and P,um-
trees, whose growth had been quite stopped by their 3umbers for several preceding years, having this season made abundance
of wood, by leing occasiomally syringed with it, diluted in about mended at Girass lawns into manure, 1 heaps should be small and that they should be frequently turned; otherwise the exte-
rior of the heap only will decay. The plants in flower in the conservatory consist or the magninicent hiniscus splendens; the bilcha, planter out in the border; with a variety of Fuchsias, Hydrangeas, \&c. The Tea-Roses planted in the centre have
made vigorous growth, and are now blooming delightfully. The Araucirias have advanced rapidly, A. excelsa and cumninghami having reached within five or six feet of the top of the house glaced, instead of being a dead-wall, as at present. . he Orehidaceous plants are therefore removed to the greenhouse until pleted, the cririous Aristodichay gigas, the various slecies of nia Gardneriana, are blooming here in full perfection. The ciosum and Caládium esculenturn. In the Orchidaceous house, the singular Nepenthes distus sobrália macrantha is making rapid growth; and Stanhópa Wardii, var., Gongora maculata, HántPeristéria eata-the Dove or Holy Ghost Plant (so namect from
the strining resemblance to a dove contained jin the interior of arbrretum, have thrown up fiower-stems of great height; those
of Y. recurva and crtulatata bemb 10 feet high. It may, per-
haps, be interesting to know that Fuchsia discolor, which appears to be either identical with, or differs but very, slightly
from F. Riccartonia-is perfectly hardy; a cutting of it, which
 highly beautaful flowers, the colours of wheh far surpass Vmes have fruited in the curvilnear Vinery, and anongst them is a particularly fine white Grape, called the Rasen de
Calabre; the buncles are long, not unluhe thrme of the White water. The Ortliebscher is a smail, white Grape, bearing com-
pact bunches, only fit for wine, Rother gulabe has large bunches, bearing conisiderable resemblance to thine of the Black Morncco,
The Aramon proves to be the White Iroutiguan, the Z, Bibho of Sleily-the White
Black Hambargh,

be hoped that these will come to perfection, in order
handsome species may bo increased from native seced.

## 3ipebitus.

Dr. Justus Liebig, in his Relation to Vegetable Physiology. By Dr. Hugo Mobl. (Dr. Justus Liebig's
Verhältniss zur
Pflanzen-Physiologie.) Tubingen. Veriältniss zur Pfianzen-Physiologie.) Tubingen
Frues. 1843 . It is, therefore, contear (continues Dr. M.) that L. has completely failed to prove that plants do not use humus for their food. Besides, the question whether plants feed on organic or inorganic substances, was mooted long be-
fore the publication of L.'s work. Although it is certain that the chief portion of plants is formed by the assimila tion of inorganic substances, yet, the collateral questions whether they receive organic as well as inorganic matter; whether all or only some plants require organic substances
for their existence, -these nuestions are far from an ultifor their existence, -these questions are far from an ulti-
mate and scientifically-corroborated solution. Conclusions, moreover, merely based on uncertain observations, or made merely at random, cannot be of value, and ought to have been replaced by minute and well-devised experiments. Iu this manner, L. might have become eminently useful to science. He professes (it is true, ) to to his Work contains the reprint of some made by Hartig, which he adduced in corroboration of his doctrine. But it is unworthy of a great chemist (concludes Dr. M.) to those of a gentleman like Hartig, who, we are sure, does not aim at the distinction to be considered a chemist, - a science foreign to his pursuits.
The experiments which have been hitherto made relating to the question of the organic or inorganic nourishment of plants, may be divided into three classes. 1st, distilled water or such as contained carbonic acid. Under both these circumstances they do not prosper; still, this are not prove the necessity of organic foon, because they which they are in contact with, under common circumstances. 2d, Or, plants have been reared in powdered terial the most luxuriant growth, Hower, and bear froit but he merely quotes in evidence the experiments of Lucas, reprinted in his Appendix. But the reasoning of L., under this head, is illusory. Lucas speaks of vigorous powder and decayed leaves; of such as are grown in charcoal powder alone, he merely says that they speedily become rooted. Of their further vegetation he says nothing ; and it has been proved by the experiments of Zuccarini that plants will not grow at all, or very bady, in this substratum. who relates, that Peas reared in charcoal did not grow who relates, that Peas reared in charcoal did not grow
much better than those planted in mere sand. The third class of experiments relates to the question, whether plants will absorb organic substances dissolved in water, and especially humates; and whether they will prosper under
these circumstances. The experiments of Saussure, Davy, and Sprengel are affirmative; but L. has reprinted (as stated before) those of Hartig, which are negative. The
whole question, therefore, is, to sdy the most of it, one yet undecided. At any rate, it cannot be solved by experiments upon a single species of plants; and it is begging the question to state (p. 122) that, "All plants are the same in the chemical nature of their nutritive process."
Dr. Mohl $^{\text {. }}$ then proceeds, at some length, to refute this unqualified assertion of Liebig. There is a considerable number, he says, of true parasites, which require for their food the juices of living plants. It cannot be doubted that such plants require substances of a pecuiliar chemical combination and quality for their food. Many such purasites are not green, and therefore cannot decompose car-
bonic acid, so that their food must necessarily consist of substances already assimilated by other plants, and stand in the same relation to the mother plant as the flower and ruit of other vegetables to their respective branches. Now this sort of nutrition from substances derived from living plants is also proper to a very large number of parasites (Loranthacæ) which are quite green, and therefore provided with organs for decomposing carbonic acid. Such plants are eutirely similar in structure to those which grow in soil ; but they must, of necessity, possess the capacity of feeding on substances already assimilated by other plants. To these true parasites are to be added the spurious parasites, which feed on decaying organic matter, amongst which some kave green leaves, and others are destitute of that colour. The latter can have no capacity for decomposing carbonic acid, forming organic matter from it and water. The same is also the case with many other plants of a green colour, which, although they decompose carbonic acid, still are proved by their place of abode to be dependent for their food on organic matter in a state of decomposition. From this series of plants there is but a step toward those growing in peat and heath - soil, \&c. I do not mean, concludes Dr. Mohl, to prove by these statements that all plants feed on organic substances; my object is rather to explain that the introduction of organic masserts, necessarily detrimental to the economy of plants ; and to show that it is by far preferable to have recourse to positive and precise experiments, than to indulge in groundless and general remarks and theories.

> To be continued.)

The Injury and Waste of Corn, from the present PracBy Hewitt Davis, Farmer and Land-agent. London. Waller
Triss little Tract treats of a very important point in Agri-
culture, which has been long a subject of discussion among practical farmers, each appealing to experience in support of his own opinion. It is well known that the late Lord Leicester, a very high authority, strongly recommended sowing plenty of seed, and maintained that Wheat should not be allowed to tiller, but that a single strong stem from each seed would produce a more abundant crop and a much more regular sample.
Hewitt Distanding this, we are inclined to side with Mr. good davis. With some exceptions, which may be very the land clean, and the soil where the tilage is perfect Mr. Davis recommends will produce a plentiful crop; but that the hoeing is essential, proty pirorous. With respent spring crops, there may still be some doubt, but careful experiments on various soils would soon settle that point ng thirists are much indebted to Mr. Davis for draw. Tract to thention to this subject ; and we recommend his municate to the public any further information he may obtain, especially the result of experiments made on soils.-M.
Ernatum, -In our review of Baxter's British Phenogamous
Botany; at p . 560 , the continuation of the title should have been-rior Figures and Descriptions of the Genera of British
Flowering Plants," and not "of the German and Britislı
Flowering Plants;"

CALENDAR OF OPERATIONS for the ensuing week.
 than the middle of Augusto It it tive we manage to flower them as
enrly as Christmaz, after potting them as late as the end of Septemenrly as Christmaz, after potting them as late as the end of Scptem-
ber and beginning of October; but this is too much for the buibs-
the to
 sensons' good nursing to bring them round again, so that they will
malke thio appearance mong the early spring bulbs in the heds and
borders of the the lower-garden. They manage difierently in Holland, where they lrow the nature of the plant so much better than we
do, especialy as exemplifed in our practice. There, from thime out
of mind, the first crop of forcing Hyacinths is potted about the
 something of the kind. H aloout six weeks the pots are full or
roots ; they arc then taken to cold frames and kept ciose to the glass

 business. If one party can procure these bullss thus carly, there is no
reason why the whole trade should not ye as early in the market
 regular planting season in the open ground is over. It would be
better, however, for all parties if they could be issued gix weeks in
 for other plinsts, were now planted where they are to mawer next
April and May; and as they do not push up till after the present
crons are over an lithe hy form
 better able to supply the equusisite nowishbent at the proper time
than if left out of the ground till october. Narcissii hat are Ieft in
the ground from year to yenn are the ground from year to year are now making fresh roots activety,
though no signs of vegetation are apparent in the hulbs rhis
in this tells su plainly enough that we should not put off planting
the time of planting Tulips.

## NEWS OF THE WEEK

Both Houses of Parliament have been actively engaged this week in working up those details of business which are always crowded into the last days of the Session; and from the preparations in progress, it is supposed that the Queen will prorogue Parliament in person in the course of another week. In the Lords, on Monday, Lord Mont eagle brought forward his resolutions on the finances of the country, which led to an animated discussion on the tate and prospects of the Revenue ; the resolutions were opposed by Government, and negatived without a divi ion. On Tuesday, the second reading of the Trish Arms Bill gave rise to a discussion on the nature of the Roman Catholic Oath, Lord Camoys and the Earl of Shrews bury contending that the orth was not binding on Catholic Peers in their legislative capacity; while Lords Beaumont, Brongham, and others insisted that it was to be taken in its literal sense, as prohibiting a vote contrary to the interests of the Established Church. After some discussion on this point, the second reading was carried On Thurgday the Bill went through Committee, and was last night read a third time and passed, without alteration. In the Commons, the principal topics of discussion have been the Bill for organising the Chelsea Pensioners as a military force at the disposal of the civil authorities, and Lord Campbeli's Bill for altering the law of libel. Considerable opposition was shown to the Chelsen Pensioners Bill, and numerous divisions took place on its several stages, but it ultimately passed through committee after a $a_{\text {o }}$ vain attempt to limit its duration to nve years. For the particulars of the debate on the Defamation and Libel Bill, and for the routine business transacted, we must refer to our Parliamentary Report. From France, we learn that Mr . O'Connell's reply to the offer of assistance from the Republicans of Paris has given no satisfaction to that party. The Conservative press treats the whole affair with ridicule, and the Radical papers declare that Mr. O'Connell does not go far enough, and that French democracy has pitched its tent far beyond the line he has laid down.--In Spain, the new Ministry bave adopted the decided course Queen Isabella the national wish that she should be declared of age after the meeting of the Cortes. The address embodying this resolution was presented in the presence of the nobility, ambassadors and anthorities of and and Queen, in reply, signified her assent to the proposal. The adoption of this measure is attributed o the anxiety of the new Government to divest Espartero f all official character, to prevent the Infante Don Francisco from intriguing for the Regency, and, finally, o enable Queen Christina to return to Spain, which can only be effected by declaring the majority of her daughter.

In the meantime, Espartero has published a manifesto declaring that he has not infringed the fundamental law, and showing that he is not disposed to resign his office as chief magistrate. His arrival at Lisbon, of which our Portuguese news has brought advices, was at first supposed to have reference to some ulterior views for the reestablishment of his power ; but it is now known that the Portuguese Government have not permitted him to land, and that he is on his way to England.From the Levant we learn that the two deposed Ministers have at length determined to leave Servia, and take up their residence within the Turkish frontier. This result, it is supposed, will satisfy the demands of Russia, and lead to a final settlement of the Servian question.-From the United States we have accounts of a revival of the Oregon movement by Gen. Cass, late Minister in France,
who is avowedly hostile to England. The opinion now expressed is in favour of the seizure of the disputed territory by the United States, without assenting to any negotiation, treaty, or reference.

## 79, Neme Nems

Court. - Her Majesty, Prince Albert, the Prince of Wales, and the Princesses, are quite well, and continue at Windsor Castle. On Saturday, the Queen and Prince took horse exercise in the Great Park. On Sunday, they attended divine service in the Chapel Royal of Cumberte terrace, which was crowded with visitors. On Monday and Tuesday her Majesty and Prince Albert took their early morning walk, and in the afternoon rode out in the Park on horseback. The Prince of Wales, the Princess Royal, and the Princess Alice, were also taken for an airing in the shrubberies and private iplantations in the Home Park, attended by the Dowager Lady Lyttelton. Wednesday being the birthday of the Duchess of Kent, her Majesty and Prince Abert dined with her Royal
Highness at Frogmore. The Earl of Haddington, First Highness at Frogmore. The Earl of Haddington, First Commander of the Royal yacht, have visited Windsor this Week for the purpose of making all the necessary arrangeweek for the purpose of making all the necessary arrange-
ments connected with the marine excursion of the Queen during the sojourn of the Court in Sussex. Her Majesty is expected to proceed from Windsor to Brighton, on Monday the 28 th inst. There is now very little doubt that her Majesty will honour Plymouth, and probably Pembroke, with a visit during the trip. It is likewise expected
that the Queen will honour the Earl and Countess Cawdor that the Queen will honour the Earl and Countess Cawdor
with a short visit at Stackpoole Court, Pembrokeshire. The Earl of Morton has succeeded Lord Rivers as Lord in Waiting, and Admiral Sir Robert Otway has succeeded Colonel Drummond, as Groom in Waiting on her Majesty. The Duchess of Norfolk has resigned her appointment as Lady of the Bedchamber, and has been succeeded by the Marchioness of Douro.-The Queen Dowager, left Witley Hall on Monday morning on a visit to Worcester, returning the same day. Her Majesty was received with every
demonstration of respect, but in consequence of the demonstration of respect, but in consequence of the stormy weather the illuminations were postponed to Tuesday.-The King of Hanover came to town from Kew on Saturday, and dined with the Duke of Wellington, returning to Kew in the evening. His Majesty had a dinner-party at Kew on Sunday, on Monday dined with the Marquess of Londonderry at Rose-bank, Fulham, and on Tuesday, came to town and attended Viscountess Dungannon's evening party. His Majesty dined with the Earl of Lonsdale on Wednesday, and with the Duchess
of Gloucester on Thursday. -The Duke and Duchess of of Gloucester on Thursday. - The Duke and
Post-Office.-The negotiations between the Postmaster
General and the Post-office authorities of Belgium, Hol land, Austria, Saxony, Prussia, Sweden and Norway, and Russia, are, it is stated, finally concluded for the transmission of letters and newspapers to and from the above countries, similar to those between England and France by pre-paying the postage or not, at the option of the reduced the postage on letters to a uniform price through out their territories on the English system. The French Government is making arrangements with the Post-office nia to and from this country, viá France, will be placed under the same regulations as the Post-office Convention entered into with this country in June last.
Gazette Announcements.-The Queen has been pleased to grant unto John Townshend, Esq., of Lower Grosvenoratreet, and of Chatteris, in the Isle of Ely, formerly known as the Earl of Leicester, and one of the members for Bod may discontinue the surname of Townshend, and hence marth use the surnames and arms of Dunn Gardner. forth use the surnames and arms of Dunn Gardner. The Queen has also been pleased to grant unto sir Thomas folk, her Royal license and authority, that he and hi fors, her coyal license and authority, that he and his issue, in comprode, Esq, may wise the aurname of Roke Gode, in addition to and before that of Gage, and bear the arms of Rokewode quarterly with those of Gage.
The Cathedrals.- From the Parliamentary
The Cathedrals,-From the Pariamentary returns of the fees charged for admitting individuals to see monu-
ments at Westminster Abbey, it appears that for several ments at Westminster Abbey, it appears that for several years up to Midsummer, 1841, a fee of threepence was paid by each individual for admission to Poet s-corner and the nave, and one shilling more for admission to the ransepts and the chapein; but from Midaummer, 1841,

Poet's-corner, and but sixpence for admission to the remainder of the abbey. From Midsummer, 1841, to the end of the year, upwards of 30,470 persons paid this admission. In the year $1842,51,444$ paid the admission, and from January to Midsummer in the present year about 23,500 paid it. During the year 1842, about 1,290l. was 542l., the whole of which, ds stated in the return has 542l., the whole of which, as stated in the return, has
been appropriated to the "Ornamental fund," and for cleaning the monuments and tombs. The payment by each person for admission to St. Paul's is twopence, the fees arising from which are received by the four vergers,
and which during the year 1842 amounted to $425 l$; but and which during the year 1842, amounted to $425 l$. ; but
in consequence of the death of two of these vergers the in consequence of the death of two of
accurate amount cannot be ascertained.
accurate amount cannot be ascertained,
Foreign Wines and Spirils.
Foreign Wines and Spirits. - By a Parliamentary ported into the United Kingdom during and spirits imappears that the total quantity of wine imported from the Cape, Portugal, France, Spain, Madeira, Germany, and other places, was $7,216,113$ gallons ; the quantity of rum $4,619,804$ gallons ; the quantity of brandy $1,674,436$, with several thousand gallons of spirits, sweetened and not
sweetened, mixed, in bond, imported from the beforementioned countries, America, and other parts.
Window Duty.-The returns of window duty for the $t$ welve towns in England paying ithe largest amount, and
just published by order of the House of Commons, gives the several amounts as follows :-For Bath $21,898 l$.; Birmingham 11,093l.; Brighton 15,216l.; Bristol 15,056l. Cheltenham 6,755l.; Clifton 7,850l.; Laeds 7,514l.; Liverpool 30,7901.; Manchester 19,1576.; Newcastle 5,7101. Norwich 7,141l.; Plymouth 11,391 .

## dForeígn

France.-The domestic news from Paris is of secondary importance: The papers in general refer to Mr Connelis mention or Ledru-kolia's comunicathe Repealers. The Débats sneers at the whole proceeding, and declares that if M. Ledru-Rollin and the Radical journals are satisfied with Mr. O'Connell's letter, they are easily pleased. "It is impossible," it says, "to find more cutting satire upon the letter of the deputy of the like a polite man who has received a mark of politeness like a polite man who has received a mark of poniteness
which he did not seek or expect, and which he knows not what to do with. M. Ledru-Rollin says-' 'Sir, you have perfectly understood our intentions, and Mr. O' Connen how do they understand each other? If the Tory Government, says M. Ledru-Rollin, should profane the sanctuar of the law, France will give you active assistance. Mr
O'Connell reduces to its just value this offer of reinforce Connell reduces to its just value toss to discuss this contingency, because it can never happen; and he adds, ihis speech, that if France, or America, or any other power should attempt to shake the devoted attachment of the Irish to their Sovereign, such attempts would be repelled
with contempt. See, therefore, what the understanding is $0^{\prime}$ 'Connell is decidedly incurable ! He will never be relieved from that malady with which the National the other day reproached him in such burlesque terms-the Maladie Monarchique $l^{\prime \prime}$ The National also alludes to he subject, and declares that Mr. O Connel not time," it saye, "to decide whether his mode of proceeding is best. We receive it as a fact merely, and have beyond the French demown."-The tour of the Duk and Duchess de Nemours through the western departments had been attended with nostriking incident until their arrival at Mans, the chief town of the department of the Sarthe. city by M. Trouves C was there met at the gates of the addressing the usual felicitations to him, recapitulated the grievances of the department against the central Government, spoke of the attachment of the people to the dogma July national sovereignty proclaimed by the revolution of the Orleans dynasty accepting with sincerity the repre sentative institutions, and upholding abroad the dignity of France ; and concluded by reminding the Prince of the cruel trials his family had already undergone, of the vicissitudes of royalty, and of the gratitude of nations for the great citizens who have given glowing proofs of their devotedness to the glory and prosperity of France. Th dignity; but, although M. Basse, the Deputy of the slite of the who wated upon his an head or the uncourteous popuation, mada the Mayor, he did no think proper to prolong his stay in the town beyond three hours ; and the Mayor, the adjoints, and the librarian, have since been dismissed by a royal ordinance The tribunal of the first chamber of the Royal Court of Paris pronounced its judgment in the case of the executor
 donation of 30,000 f. French rentes, made by the late Marquis to an old servant, was neither out of proportion with his immense fortune, nor unlikely, when the liberal habits of the master were considered. . The Court consequently adjudged that the inscriptions should be handed The to Nicholas suisse, the executors to pay the costs.The raising of the timbers of the Telemaque, at Quilleboeuf, is still going on. The new company has savea
42 pieces, besides the caboose stove, and three casks of rancid tallow. Every piece of timber, as it is brought up,
is carefully sounded, in order to ascertain whether it may not have been hollowed out, and made a place of concealment for the diamonds and gold, whiah some persons persist in saying were embarked in the Télemaque. In a few hull will be take of the cargo will be landed, and then the ult. announce that, early in the morning of the 25th, Abd-el-Kader attacked in person the camp on the OuedAman, at the head of 800 cavalry and 200 infantry. This cump, which was intended to protect the works of he bridge in progress of construction on the Mascara. road, was only garrisoned by 250 infantry. The assailants were nevertheless repulsed with the loss on killed
 and several others wounded.
(he have accounts from Madrid to the inst. Their contents relate principally to the proceedings at the Palace on the prevous day, when the mistry be should be declared of age. This ceremony took place in the presence of the Infante Don Francisco and his ramily, the whole of the foreign ambassad ors, the grandees of Spain, the general officers, and all the authorities of rather long. After alluding to the termination of the Regency by the flight of Espartero, it proceeds as folMajesty ine will and want of the nation are, that you hear the national will expressed in the Cortes wishes to解 y the meet, and to take before them the oath required by the Constitution, which none but the Cortes can rehie rom a Constitutional Monarch. 10 this address eplied : "I signatures of all the Ministers, the Queen oyal - se. have heard with the greatest satiafaction the the nation has just expressed to me; and from the day I shall make oath, before the Cortes, to the Constitution of the State, I shall endeavour to secure the happiness of Spaniards. On the conclusion of the ceremony the troops assembled before the Palace retired, uttering loud vis in honour of Queen Isabelia. It appears that the Ministry was induced to adopt this important measure by everal considerations. It had been stated by Espartexo riends that he did not renounce all hope of recovering his authority, that he had positively declared that he would measures with his partisans in Estramadura and Gallicia to revive the struggle. Although little importance was attached to these menaces, the Ministry deemed it expe dient to divest Espartero of all official character. On the ther hand, the friends of the ex-queen chrsan an anxious to enable her to return immediately to spain, the majority of her daughter. General Narvaez, on being asked by a distinguished foreigner if the ex-Queen intended to visit Madrid shortly, replied, "Certainly; is but foir that her misfortunes shoald end with the minority of her daughter" Don Francisco de Paula, or mano rather Dor alth the Reger thera Regey had alread been for the purpose, under the meetigs lad was watching their proceedings, and to defeat their plans Gaisolvel at once to proclaim the Queen of Gazette publishes several decrees, pronouncing the dilions lution of the corps of operation, the stafl, and batal an of volunteers, organised during the insurrection, address from General Nandez to the amy, exho to union, aiscipline, andobedience to the laws. ap manifesto the who the 1 charge of Regent of the kingdom to give security to the constitution and to the throne of the Queen, af people, freed it from despotism. As chief magistrate 1 swore to maintain the fundamental law-neither to sawe owe thei infringe it. To this blind respect do its enemies ow time triumph. But I am not perjured. There was a and I when I witnessed the re-establishment of the lawned by then hoped that, at the expiration of the term eliver up the constitution, I should have been enabled inter and to the Queen a monarchy tranquil in it without the slighiorly respected. A military insurre commenced by a mghtest pretext, concluded the work iso often had more few; and abandoned by those whom I 1 a foreign land victory, 1 km compelled to seek reloved country. The fervently desiring the felicity of my belo to join her husband new Ministers. The Junta of Barcelona perseveresed opposing the provisional. Government, a of convoking a Supreme Nation Junta, in imitation of that assemble at Cadiz, in 1812. But the decree Barciona the Junta the Cortes having arrived at Barered useless perceived that their demand was rendered the inst., H.M.S. Mortugal.-On Sumbon with the ex-Regent of Spain, and 30 persons, including Gen. Van Halen and some lis his late Ministers, who have faithfully adhered to fallen fortunes, and voluntee to becon on of his exile. A. Council of Ministers wa the following morning, to consider the compand the occasioned by the presence of the iate Regen and, and probability that he would seek permission tosumtion of make Lisbon tate position in the neighbouring kingdom. The

Council sat for three hours, and resolved to refuse perPrometheus, on his way to London, and touched at Bayonne for the purpose of taking with him the Duchess, if she were still there; but she had already quitted that city for Paris. The Regent did not disembark from the Prometheus, but set sail for England on the 16th. The supposed renewal of the tariff negotiations by the Duke our last, has excited much interest in Lisbon announced in ally among the fruit-growers. The correspondent of a ally among the fruit-growers. The correspondent of a convention will undoubtedly serve, by reaucing to merely nominal rate the dity on Portuguese fruits, \& market. The Peninsular Company's packets Covent-garden ampton from this on the fifth day; and thus the enicure will be be leaving what Camoens calls "snowy England," climate ande to participate in the advantages of this sunny climate, and luxuriate in the choicest fruits and vegetables, long before they could be ripened by his own sluggish, sun, and for a fifth of the price of hothouse productions."
BELGIUM.-It Belgium.-It appears from the last official returns that the finances of Belgium are not in a flourishing condition ; the deficiency between the actual receipts and the budget of expenditure amounting to $4,714,911$ francs its pedestal in the Place Verte at length been placed on itself is 14 feet high, and weighs $20,000 \mathrm{lbs}$. The figure monument rises to 30 feet. The inauguration was cele sul in when enthusiasm. Mannoy, Belpian Consul in the Philippine Islands, has purchased at Manilla, for the Royal Library, a collection of very curious boor whin contains, among other works, a general History, the Philippine Islands, in 14 volumes; a Flora of those a Tagalog and Spanish Dictionarys, a Pampago grammar, Germany, -The celebrionary, \&c.
Jubilee, in commemoration of the settl Thousand Years ${ }^{3}$ German Empire was divided between the thre which the gons of Philip the Devout, was generally celebrated on the 6 th inst., more particularly in the Prussian States. The 6 th is said to have been the day of the settlement 1,000 years ago, and as it this year occurred on Sunday, the Queen, and all the Royal family, attended the the King, where a sermon suitable to the athed Cathedral, Dr. Strauss. The hymn of celebration was executed under variety of instrumdlesohn, and was accompanied by a great esting, and the impress. The singing was extremely interby the firing of cannons at intervals of panseas in lheightened Several of the Prussian intervals of pauses in the singing. intends to pay a visit next papers state that the King The Duke de Bordeaux arrived at Vienna on the 2d init. and intends, it is said, to pay a visit to England to study navait tactics.
Russia,- Accounts from St. Petersburg state that the Emperor has been afely del eldest dughter of the baptized by the name of Nicholas ; and that the Duke of Nassau is betrothed to her Imperial Highness Princess Maria Michaelowna, eldest daughter of the Grand Duke Michael. The Swabian Mercury contradicts the statement that Prince Peter Dolgorucki has been exiled to Siberia by the Emperor of Russia, in consequence of his Emperor suggested the propriety of journal adds that the for a time at a distance from the of his keeping himself for a time at a distance from the nobility, lest he should
involve himself in serious disputes, and that the Drince involve himself in serious disputes, and that the Prince Turkey.-Letters from Belgrade in the Austrian papers state that Wutzitch and Petroniewitch Austrian ength determined on quitting Servia, and that an assembly of three hundred of the principal persons and elders of the country had been convoked at belgrade for the 8th inst To that assembly will be submitted, in the presence of Hafiz-Pacha, M. de Lieven, and M. Wanchenko, the
reasons which have rendered the departure reasons which have rendered the departure of those two
Primates necessary. On the same day, Wutzitch Petroniewitch will proceed to Widdin, where the Porte has desired them to fix their residence.-Accounts from
Tunis state that the Turkish fleet has not Tunis state that the Turkish fleet has not yet made its appearance off the coast, the ships which were seen on the is conducting the new Empress of Brazil to Rio Egypt.-Letters from Alexandria, of the 26 th ult., state that Captain Harris, lately employed on a mission to the Sovereign of Abyssinia, has succeeded in establishing the preliminaries of a commercial treaty, which may eventually lead to a useful commerce with that country, in which there are so many natural resources bitherto totally neglected. Captain Harris has left for England, with presents to the Queen, consisting of a mule of the royal stud, with magnificent accoutrements, and 25 chests of curiosities and objects of natural history. The lock at Atfeh is now finished, and being open to boats of all sizes, affords a direct communication with Cairo, obviating the necessity of changing boats at Atfeh, with the taz upon merchandise and the attendant expenses. The first boats pany with the Indian were those of the Transit Comrise early thindian passengers. The Nile has begun to country is now year, and velerybly wall stocked with cattle, there is every reason to look forward to increased agricultural prosperity.
nia, which States. -The Royal Mail steam-ship Caledothe evening sailed from Boston on the 1st, and Halifax on night, after a passace inst., arrived at Liverpool on Sunday other subjects of excitement, the sections of the Protest
ontroversy respecting the the United States are in hot this subject the newspapers have been filled for some time past, and some of the editors declare that their tables are weighed down by correspondence on the topic. They appear generally to agree that there is no resting-place for and they but the bosom of the Roman Catholic church, body by his influence and example. The Oregon question is once more before the public, having been and avowedly hostile in his sentiments towards England. He describes England as "boldly aiming at uniwill not lonr be avoided unles his belief that divisions nong be avoided, unless prevented by intestine tained by the leaders in the Oregen The opinion enterterritory shall be taken possession of by the United territory shall be taken possession of by the United
States, and that no negotiation, treaty, or reference shall be deemed necessary. These opinions of General Cass aspire to the Presidency in opposition to Mr. Clay and Tr. Webster, both of whom are mentioned as candidates tion of the lial has been abandoned. A considerable pormaterials ignt machinery has been saved; but the heary materials, including the engines, it was found impossible
to save. The Acadia, which sailed from Livernool on the Gillmour, charged with murder Caledonia left. Mrs. pronounced sane by the court in New York, but her case Washington to confer with the and her counsel is gone to very doubtful whether withe Attorney-General. It is chapters of "Martin Chuzzlewit," by Boz, have given great offence, and even Mr. N. P. Willis, the admirer and advocate of Mr. Dickens, has found it necessary to denounce English commander, Sir T. Thompson anform that the Queen under his protection, that the French commander is exasperated, and that the respective vessels are prepared statement. Another disturbance took place at Kingston, in Canada, on the anniversary of the battle of the Boyne, in which one person was killed. A collision has taken place in Newfoundland between H.M.S. Electra and the French fishermen, who had began to take bait on British ground in spite of repeated warnings. One man was arrived to demand explanation.

## 非arlíament.

mity of the reenactment of a tax upon property in t time of

Honday.-The Admiralty Lands Bill was read a third time and inancial condition of the country. The late Minstry lad been
 had undertaken the task, backed by a Parliamentary confidence
almost unboundel and unparalleled.. From the mpooition of the roperty and Income-tax, it was estimated that there would be of $2,421,000$, . whinh made an error in the estimate of no hess than $2,940,000 \mathrm{l}, \mathrm{an}$ and this without reckoning the Chuese money
nd the 1,300, nool. from the corn duties, which was not calcuited on, and which, if added, would present a deficiency in the revenue, as compared with the expenditure, which was perfectly
irigntiful The Government were entitled to take credit for the
unpaid portion of the Property-tax, amounting to uuwarda of unpaid portion of the Property-tax, amounting to uywarda of
129,000 , , but still the deficiency was to be counted by millions, ans by far the greatest that had ever been know to toctur -on coats, Irish sipitits, \&cc.; and on timber, an unwise sacrifice
had been made of $680,0000 .$, besides inflicting an injury on sweden, which was entitled to the advantages of the most favoured nation, and had a right to claim beng placed in the
same position as the United States. In one instance had the expectations of the Goverument been realised, which was
Ge the nearest approach to free-trade principles. The loss on coffee and been estimated at 170,000., andt it amounted only to 48, 4801. , depression of the period. The anticipated income of the piresent
year was 50,150, ,ool, and a surplus was anticipated of Foo,oovi. But though the Government had made considerable elluctions, ha that of the preceding year. Under the circumstances of the country, he had ittle hope of the repeal of the Income-tax, which the Goverument had pledged tiemselves would be taken it had more than done, for tt was estimated that it would only yield $3,300,0002$, while its actual produce was $5,100,0002$. A substitute might be discovered for it without much difficulty, which Would be found in economy and free trade. It must te admitter Government. They were now removing the restrictions on the exportation of machinery; and they had but to extend the applii-
cation of the principle involved, in order immensely to benefit the country. After advocating the doctrines of free trade, he concluded by proposing his resolutions,- The Dake of WEL-
LNNCTON regretted the absence of the Earl of Ripon, whose LINaran regretted the absence or the Eari of Rpon, whose
illness threw upo him, who was but imperfectly accuainted with

O'Malley from the magistracy, After a conference wid M. Commons, the emendments made by their Lorddiwips in the Earl the motuon to go into committee on the Lrish Arms Bill, priate a part of the iecclesiasticall revenues of Ireland to thpro-
elevation of the Roman Catholic priest, elevation of the Roman Catholic priests, sce. - After a short
defence by Lord Broug ind on of the late Marguess Wcllester
 clauses up to 23 (nclusive, were agreed to, and progress re.
ported.- The Holyrood-park Bill and the Designs Copyright Bull
were read enird time and passed. Friday,- The Coal whippers B1ll and the Sudbury Commission ron moved the comminttal of the Irish Poor Law Amendment Bull,
 drawn, and the Bill passed through commoittee. The Irish Armas
bill was read a third time and pasper.

## house of commons

Sathrday. -The House met at noon, and went into committee Attornies and Solicitors Bill, the Grand Jury Presentments Bill, and the Coal Whippers Bill, were read a thirr time tmend pasill,
Reports on several Bills were then brought up, and various
meosures were adranced aster
Monday. -The House mtage
amount of routine business,-On the motion for going a into come

Criments made a very long speech, complaining of the inequa-
lity of the legislation for the two countries, and objecting in pity of the legislation for the two countries, and objecting in
particular to the operation of these Loan Find societies in Tre-
lanti. No discrssionn followed, and the bill went through com-
nittee, with the exception of two clauses, which were reserved for further consideration.- Lord J. MANNERs presented a petition
from members of the United Church of England and Irelard,
praying for the establishment of an efficient system of ecclesias praying for the establishment of an efficient system of ecclesias-
tical goyernment, to which he called the attention of the Hose.
-To a question from Sir C. NA PIEt, Sir R. PEEL replied, that as the expense of the Chinese war had not yet been fully ascer
tained, he could not as yet say what the army and navy engaged in that war were entitled to as prize-money.-Mr. COBDFN asked
if the report was correct that the Duke of Palmela had arrived
in this country, in order to renew the negotiations for a commercial treaty with Portugal?-Sir R. PeE. intimated that he
was not oofficilly awnere of the fict, and, so far as this
wountry was concerned the negotiations were clesed, but h country was concerned, the negotiations were cinsed s but
had some reason to believe the report to be correctly founded.
On the motion to go into commitee on the Chelsea Out pensioners Bill, Mr. T. Doncombe moved as an amendment that it be
commited that day three months, and with freat vchenenc
denounced the liill as an attempt on the part of Government establish a milatary despotism over the people.-Mr. Whidirams
seconded the motion.-Sir H. HARnNow vindicated the army, and as obedient to the cuvil power in time of peace, as they were open to a cense of humanity, as they were ready to perform their
duty. The chelsea pensioners had been repeatediy called out, as in 1830, when a distribntion of arms took place, of which a
large proportion were sent down to Stockport. But he objected
to this mode of arming these men, without the intervention of an Act of Parliament. The metropolitan police force could be the authorities. The Chelsea pensioners were under the control
of the executive, ant were liablo to be deprived of their pensions
for disobediencc of orders. By the piesent measure, a portion of them would be organized in a way agreeable to the feelings of mere valuable to the civil authorities in any case of disturbance
mor younger and rawer troops, who, when excited, were apt to
than at
at with ferocity; and as the power of the Crown was undoubted,
the ohject of the Bill was at once constitutional and safe.-Mr.
 ston, Mir. Niswdigate, and Colonel Sibriorr supported the
original motion.-Mr Brotrenton would not make up his mind there were-For going into committee, 92; against it, 16:
majorty, 76 .-On the question, that the Speaker leave the chair, Mr. Husie moved that he should leave the chair that day six the Speaker leaving the chair, 92 ; against it, 13 : majority, 79.
A course of obstruction, similar to what was pursued in the
case of the Irish Arms Bill, followed, the result of which was, that after seven hours' debate, the House went into comm wittee, aid reported progsess, but without agreeing to the first clanse.
Twesday, -The House met at noon, and disposed of some routine business, but on the motion for going into committee on
the Chelsea Out-pensioners Bill, the Opposition was again renewed. After two divisions on questions of anjournment, and tour hours' debate, the question that the Speaker leave the
clair was left undecided, and consequently no progress was chade. The Fisheries Bill, and the Sessions of the Peace (Dublin)
Bill, Were read a third time and passed. Lord J. MANNBRS
called attention to the fact that some boys had been fned by called attertion to the fact that some boys had been fined by magistrates in lucks for playing cricket on a Sunday aiter divine
service, and asked the Attorney-General if the laws of England servented people from practising cricket or any other manly
pexercise on the Sunday after divine service.-The ATTORNBY-
GENERAI. Yeplied that if the boys were within their own parish Genkrai. replied that if the boys were within their own paristh
they wee not violating the law; if they were not he believed
that they were acting contrary to an Act of Palliament.-Mr. C. BuLLer brought forward his views on colonisation, and, in a
long specelh, urged the necessity of encouraging a simaltaneous
emicration of capital and labour to our colonies, especially to Canada. He called on the Government to co-operate during
 sation aroze principaly from the want of power to carry out an
eficient scheme. He assured Mr. Buller that the Government
ware disposed to treat his plan with the fullest consideration. Mr. B. Cocmrans brought the affairs of Grece before the
House, and moved for papers relating to our diplomatic inter-
course with the kingdom of Greece amone others, for conies of course with the king om of Greece ; among others, for copies of
tinse protocols which are supposed to have been signed since
1833. when the last was communicated to Parliament; also, copies of instructions transmitted to our Minister at Athens, in corisequence of those meetings of the representative of the three
Powers, at which, from any particular cause, no protocol was
signed; also, copies of those communications from. Sir Edmund Lysins which convey any information relating to the financial
state of Greece. - Lord PALserscon hoped something had lieen
done to impress the Greek Government with the necessity of fulfiling the obligations contracted with the European Governmin progress. With referene op King Otho's conduct personally,
the three Powers had offered, very earnestly and pressingly, their advice anon points of great importance, which friendly counsel,
he trusted, night be productive of beneficial effects for the people,

- Mr. Coc braNE said, in reply, that if these representations were not at tonded to by the King, it would be the duty of the three Lord PA Lasenston moved for copies or extracts of commun
cuin, Titween the Government and the ambassadors at Vienna
Paris, St. Petersburg, and Constantinople, and the Consil the late changes in the Government of Servia, He contended compleded the Sultan to accede to unreasonable demands, detriment of the balance of power in Europe, - S' F. Pek it
explaitied the transactions that have taken place in Scria, at
gnome length. The Russian Goverament had demanded nothing constiluter in Scevia should be made. That new election laving
been had, Rusia would, foubtless, abice by the decision. These
transactions bei transactions being sillilincounplesele, abir Rir Ry Peel decid not feel him-
self justified in granting the papers asked for.-Mr. MisRavil upon an ignorauce of which there was no precedent. The Fouse and
it had confined itscif to domestic questions, and yct now, when
it was about to separate, no man pretended that the country was
left in any other than a most perilous state at home. He wonld therefore vole for Lord Palmerston's motion.--Mr. Min NEs,
though he did not altogether approve the course taker by Ministers, was inclined to eive them some credit. He was understood
to w we the motion - Dr. Bowning lamented the inadecinate
used any contumelious expressions,- Lord SANDON referred to
the phrases "gross ignorance" and "disgraceful conduct," as the phrases gross ignorance" and Misgracerul conduct, as
havine been used by Mr. Disraeli.-Mr. Huma, after defending
Mr. Disraeli, inveighed atainst the ignorance and incor petency Mr. Disraeli, inveighed atainst the ignorance and incor petency
of our foreigin Consuls. IIc, lowever, was favourable io S.r R , Peel's policy of non-interference.-Mr. Suy Yris complained of and was not sorry to see a split in the Tory party,-LOrd PA IMER sTon replied. He justified the policy of making timely and strong
remonstrances in foreign affairs. It was true that war was areat remonstrances in foreign affairs. It was true that war was a great
evil to England, butother powers were just as much afraid of war as she could be; and if a nation forbore to interpose in time, she was
drawn into hostilities at last with greater disadvantage. As Sir R. Pcel had stated that the papers could not be produced without
projudice to the public interest, he would not press his motion. Wednesday. - The Episcopal Functions Bill passed through
committce. On the motion for going into committee on the Chelsca IIospatal Out-Pensinmers Bul much ppyosition was
shown to its permanent character. After fuur clivisons and seven hours' discussion, principally on the attempt to limit it
dur ath,n to five years, ir five yeurs ant a balf, the bll passo his oph committec, with a protest from Mr. Muse, who e erlared give no further opposition.
was not the intention of was not the intention of the Government to ask for any addi-
tional vote for increasing the existing means of curcating the people, as there was already a sum of 40,000 . placed at their dis Education bill had failed, it was yet the intention of the Govern ment to direct attention to the subject of education, and Counc found in force when they had succeeded to power. It was als Council, not in the letter, but in the spirit. agreeing to the Lords' amendments on the Theatres Regulation Bill, - Sir J. GraHam remarked that the Lords had struck out peare to the patent theatres.-Mr. Home thought that the Lheatres as well as everyching else.
The Defamation and tibel
The Defamation and Libel Bill stood next for consideration in committee. On the question being put, Mr. Cniristie gave a its nature, and given it their approbation. The bill extended the remedy by civil action from written to spolken defamatory words, truth to be pleaded in justification, under certain restrictions, as the public advantage that the alleged libel shouid be published; and it amended the present state of the law witizespect orovision which were calculated to give protection to the honest and
respectable portion of the press, while it reached the worthless individuals who used the press as a means of extorting money.of slander to the stringency of the law of libel he was rather disposed to bring down the law of libel to the level of that of slander. In the course of his own long professional experience,
he had never advised the bringing of an action for abuse; and he was disposed to condder the law as inoperative. It was unoffice of overseer, and so forth, was placed in the same class as serious crimes, as misprision of treason, procedure by indictinent
being equally applicable to both. But the bill before them contained objectionable clauses: he was averse to going back to severitios of punishment, which have fallen into disuse since
public opinion had ameliorated the practical operation of the law; he was unwilling to take cognizance of mere oral slander;
and he thought that truth should be alone pleaded in justification, ving the validity of the plea to the discretion of jury. But he cordially approved of all the provisions of the bill
which really amended the law, as permitting the plea of truth in cases of criminal information-After a few observations from
Mr. Macaulay and Mr. Bernal, who expressed their satisfacMr. MACAOLAY that Atorney-General had adopted the main principle of the bill, the Honse went into committee. In its progress, Mr. Bollar took the opportunity of speaking generally on the
measure, urging its adoption, not on the groundof its perfection, but because it was a decided improvement of the law-was calculated to protect private character from the professional
libeller, and drew a broad line between the honest public writer
and the mere trading slanderer.and the mere trading slanderer.-- The question of leaving to a
jary a discretionary power of judging of the validity of the plea
of truth, by reference to considerations of public adventage and private motives, raised a discussion, the Arrornex-GIsNeral
thinking it unnecessary to make any change in the law at present in this respect. The clause containing the disputed provision
was lost ox a division, by 38 to 30 . The bult, having been further The China Government Bill and the Coroners Duties Bill passed through committee. The Charitable Loans Societies
(Ireland) Bill was recommitted and all the clauses agreed to, Honse, saying that there was no use in his attempting to do anything; anci he would therefore go home to Ircland and say quer (Ireland) Officers Bill, and the Coroners Duties Bill were
read a third time and passed. The Law of Evidence Bill was In reply to Mr. Lanninaman, Sir J. Grailam said that he hat With respect to the memorial, as to the inability of sir David Church; and ano steps had been taken by the Government with Sir J. Graham having stated that he had no confidence in any
law for regulating the price of bread, Captain Pokifili gave notice, fie best mode of regurlating the price of bread in the nascero-
polis.- Sir R. PREL, on this notice, remarked that though legislation could not remedy the impositions of the bakers, yet he
thought that, if Gentlemen were not ashamed of exerting themwho charged a fair price, a check might be puat to bakers onl tant demands, That was the legitimate mode of putting down
the evil; and if his hon. Friend and other genstemen would exert themselves in encouraging those tradesmen only who asked a fair price, whe public would not be subjected to the injustice.
Mr. Wre postponed his motion on the sulject of legal educa.
tion in Ireland till next session. Fion in Ireland till next session.
Bill, and the Trish Pen Pensioners Bill, the Episcopal Functions Defamation and Lishel Bill were read a third time and passed. On Suppression Bill, Mr. Duncombe, Mr. Fors'rbr, Lord SANDon,
Mr. Briout, and Sir J. Mibomay, strongly condemned it, and
severeiy censured Loxd Brougham with whom it originated R. Peel, Sir T. Wilde, and Lord Palmirston, supported it. -
The House went into comrittee, and after a long discussion it Was agreed that the bill should pass through committce, with the
nnderstanding that the discussion upon the amendments to be understanding that the discussion upp
proposed should take place on Monday

## FAtetropolis and its W̌íintity.

Destructive Fire.-A fire of a most destructive cliaracter broke out this morning, at a few minutes before 2 A.M., in Cotton's Wharf, close to London-bridge. The flames were discovered by a policeman, but so rapid was their progress, that the entire building in which the fire originated was destroyed before any engines could be got to work. The wharf and wavehouses on the east,
filled with combustible articles, followed the destruction of Cotton's-wharf, in their turn extending the fire This wharf closely adjoins the chut Topping's-wharf. This wharf closely adjoins the chmelk of st. Olaves, a prey to the flames, was directly followed by the roof and body of the church, not any portion or which side at present extends only to the premises of Mr. Goodchild, these next adjoining being Fenning's Wharf, Three schooners lying off Cotton's Wbarf are partially burnt, although both of the floating engines were brought to the spot. A large quantity of gonpowder in one of the wharfs exploded shortly before three o'clock. The shock was sensibly felt on the bridge, and at other distant points. directing the labours of the firemen. The deeds of St. Olave's parish were got out shortly before the body of the church took fire. It is impossible to estimate the damage done, but no fire of the like extent has happened in loondon for many years.
Will of the Duke of Sussex. -The will of his Royal Highness has just passed the seal of the Prerogative Court of Canterbury. The executors named in the will are Jord Dinarben, C.K.; K. Tynte, Esq.; and Mr.Walker (Comptroller of the Duke's household). His Royal Iligliness directs that a bond held by his daughter for 10,000 l. be discharged; and that the whole of his property go to his wife, the Duclsess of Inverness. He also directs the sale of his plate, jewels, and other articles, which have since realised the sum of $37,713 \mathrm{l} .9 \mathrm{~s}, 11 \mathrm{~d}$, , and provides that if Government does not purchase his library within a year, it is also to be sold by auction. The will is very short, and written on a small sheet of paper. The property has been sworn under $60,000 l$.

Custom-House Frauds...The result of the late trials connected with the Custom-house frauds has caused the heads of the various departments to issue circulars to those their securities capacity, with the view of ascertaining are alive and solvent. It is understood that in future similar returns will be made annually by all employed in the Customs department.

Taking the Veil.-mOn Thursday, four young ladies, named Beauchamp, Pallett, Dawson, and Savage, took preparutory to their becoming "Sisters of Our Lady of Mercy " in the convent of that order attache the Chapel. The ceremony was performed by Dr. Griffiths.

Temperance Meetings.- On Saturday Father Mathew administered the pledge in Hall's Riding School, Albany street, Regent Park. About 15,000 persons visited the 1,200 g during the day, but out or that number only from he 1,200 to 1,400 in eped the pleage. which presen which presented the appearance of a fair throughout the afternoon at an early bour, a number of persons decorated with green scarfs and bearing wands with orthe back of the platform. It of wery large dimensions, composed of town Roman are in the centre were follmength portraits of St. Patrick and Father Mathew, the latter attired in the robes of a Roman Catholic priest, and under them were jnscribed the words "The two Apostles of Ireland." On the obverse was beeding Aather Mathew then addressed the people and said, that in carm rying out this work of pherance on a Sunday after attending divine service, he believed he was performing a holy work. These temperance meetings were purely cration of the Sabbath-day. They had assembled to promute the obscrvance of that great cardinal virtue cmprend political had among them all shatfes wilh the religion of any man. A gentleman, who was apparently a clergyman, here interrupted him, and pointing Father Mathew to state why protessing as he slould insult fere with the religious feelings of any man, ic banner placed Porestants having that kow dinied that it was his flag, and requested that it might be thken down; some confusion ensued, which ended in the removal of the bammer. At the close of had taken the pledge. On Monday Britann Is ington, whither he was escorted by a Homia Fields, Frocession of perceived that the majority of the procession carried wands with crosses, and wore sashes on which were other Catholic emblems, when he ut once desired that they should be dispensed with, in order that Hould not ap no reltpious or political object in view, He said the the present, and all future occasions, no such distinctions should be made. The emblems
having been vemoved, the procession proceeded to the
place of meeting, where about 2,360 persons received the pledge: On Tuesday he attended at the same place, but the number who took the pledre was not so great as on the previous day. On Wednesday, after breakfasting at the IIon. Arr. Jerningham's, to meet Lord Brougham and pledge at Padington to Fabout 2,000 persons. Onistered the day he visited Enfidd, where about 350 persons took the Hedge; and yesterday he commenced his labours in St Giles's, which he will continue to-day and to-morrow. On Monday next he will administer the pledge at BlackFreath, on Wednesday and Tharsday at Millbank, and on Friday and Saturday at Bermondsey.
Balloon
Green, jun., made an ascent in his new balloon. Charles Albion, on an experimental trip to the Continent from the grounds of the commercial gas-works at Stepney, accompanied by Mr. Alfred Bradley. The balloon remained apparently stationary for some minutes. It then crossed the Thames and took a direction towards the Slowly coast, and the wind blowing gently, it was wafted noon the wind suddenly shifted In the course of the afterdescend at Cuckfield, Sussex, which they were obliged to at half-past 3 P.M. of the same day, after a voyare of four hours and a half. Of On Thursday morning Mr. Green resumed his attempt, and ascended from Brighton, accompanied by Mr. Bradley, as before. It was his intention to make for the French coast; and, in order to avoid the tanger arising from the dilation of hydrogen gas when exposed to the sun at a great altitude, measures had been the water, by means of a rope pendent from distance from having attached to it, at regular intervals, about a dozen inflated bladders to create a resistance on the surface of the water, The balloon having been filled at Hove, by half-past 8 the voyagers took their seats in the car, and the balloon, at a height of about 30 feet, was conbladders were made fast. The wea-beach, where the bladders were made fast. The wind at this time was the balloon, when detached, glided out to sea at a speed ( 120 feet long) answering their purnose effectively, and ( 120 feeping long) answering their purpose effectively, and scarcely, however, had the start been made, when the took a direction which must havebreast, and the balloon Wight. A few minutes more, and a further change made it doubtful whether the balloon would not change made before reaching Worthing. The wind still continued quence of which, the balloon having traversed the in conse-horge-shoe course, hovered over the Hove Coast Guard station, half a mile from the spot from which it bad
started. Here the voyagers alighted, and the ballon started. Here the voyagers alighted, and the balloovi
having been re.conveyed to the gas-works, a fresh supply of gas was taken, and the wind an hour afterwards being nearly south, the balloon again started in the direction of London. Both ascents were viewed by thousands of
spectators, who thronged the line of cliff from one spectators, who thronged the line of cliff from one extre
mity of the town to the other. The balloon was infle with 27,000 cubic feet of carburetted hydrogen gas, which had been diminished in density nearly one-half by being decarbonised, or deprived of its illuminating properties. Wrelsh Church,-It is announced that the committee appointed some time since under the presidency of the Welsh residents in London, have opening a church for rangements; and that the chanel in Ely-place their ar hill, has been engaged by them, and will be openedndivine service in the Welsh language at the end of next month.
Mortality of the Melropolis.-The following is the number of Deaths registered in the preek ending Saturday

## Fistrobncial Wefos.

The Late Storm.- The provincial papers are filled Wednesday week. It appears to have been partorm of severe in Kent; the damage done to property in Roclies6,000 l Medway is torn up for some distance, and acres of corn are damaged, the ears being cut off by the ice as clean as imunedate neighbourlood have seriousig suffered, the plants being totally destroyed. At Chatham Barrecks the "ater ponred down the parade ground from the terrace becity, that upwards of 100 cartloads of sand were washed down in front of the men's barracks. In the Dock yard no
less than 14,000 panes of glass were destroyed. The mail cart, on its way to Rochester from Maidstorie with the letcers, was overturncd, and the driver and horscs were
severely cut by the ice that fell ; the driver's hands bo Thig the reins, were cut in stripes and covered with, blood. lhe accounts from almost every village in the vale of Berks detail the damage inflicted citleer by the violent
hail or by the electric fluid. In many places the grain crops are described as having been completely beaten down, and the grain thrashed from the ears as cleanly as
if under the ordinary process in the barn. The trees in fury, are said to have been stripped of their leaves, the windows were broken, and the ground in a few moments covered with pieces of ice, measuring, in some instances, shire, and six inches in circumference. In Gloucestershire, and particularly in the neighbourhood of the city,
the storm raged with destructive fury for two hours and a-half. A correspondent of the Gloucesler Chronicle says, "The storm visited the neighbourhood of Stow-on-theWold, and the adjacent villages, with great violence; the lightning was aderrific; the thunder continual, like one constant peal of artillery. The ice fell in large lumps, and constant peal of artillery. The ice fell in large lumps, and
proved destructive alike to the crops and the glass windows: proved destructive alike to the crops and the glass windows:
pieces of ice were picked up weighing from two to three pieces of, ice were picked up weighing from two to three
pounds, pointed and jagged. It commenced about twelve o'clock on Wednesday morning for about an hour, and recommenced with increased fury for three hours in the evening of the same day." On the estate of Upper Upham, in the parish of Aldbourn, Wilts, the property of Mr.
Round, M.P. for Maldon, the crops were damased by the hailstones to the Malton, the crops were damaged by wheat, 54 acres of barley, 35 acres of oats, and 20 acres of peas and vetches, were literally thrashed ; such a scene of devastation has heen rarely witnessed. In Bedfordshire and Cambridgeshire the most serious losses have been sustained in the fertile part of the coustry, comprised within the Bedford level, and particularly within the neighbourhoods of Wisbeach and Peterborough. In the fens alone upwards of 2,000 acres of hay, valued at $10,000 \%$., have been totally destroyed, and the pasturage for 1,000 head of cattle entirely inundated. In consequence of this upwards of 1,000 persons have been thrown out of employmost A letter from Norwich describes the storm as the say extraordinary ever known in that city. The glaziers the that all the glass in the city will not suffice to mend been smashed broken; hothouses and greenhouses have at 9 on Wednesday night, and lasted till 3 in the mornind All the cellars and passages were immediately flooded and it is not yet possible to calculate the damage. Mr. Bell, everycondale, the horticulturist, is a great sufferer; almost amouning in bis establishment was destroyed, to the amount of at least $3,000 \mathrm{l}$. Walls were washed down and in the county generally.-In addition equally extensive learn that the midland counties have been visited during been few days by storms, which, in severity, have not mingham, on Tuesday night, Wednesday week. At Birand the rain descended for some hours ing was most vivid, the Derby line of railway the rivers In most places th where it was fit for the side whe and a succession of storms is said to have been
cedented. On Wednesday to have been, almost uupre tropolis was covered with a dense a threatening thander and rain, which continuosphere, 10 'clock, when a light shower fell, after shone out. At Richmond, Clapham, Wandsworth, Kensington, and Brompton, at $80^{\circ}$ clock, the rain came down in torrents, flooding the commons and lowlinds, and accompanied with violent peals of thunder and flashes of lightning, passing over to the Surrey hills; whilst in town there was scarcely a breath of air ; and at Greenwich an down the
fine breezc
Alnwick.-Sufficient funds have been obtained to erect a monument to Grace Darling, the late heroine of the Fern Islands, in the church or churchyard of Bamburgh, Where she was buried. The bodies of the unfortunate passengers in the Pegasus steamer are found daily, float of Berwick, Bamburgh, \&c. Those of the Rev. Mr. M'Kenzie, -Mr. Brown, painter, Master Flowers, Miss Hopetown, Mr. W. Milne, of Edinburgh, and of several steerage passengers, have been found. It is reported along the coast that the crews of some French fishing-boat in the offing had picked up some bodies, and after stripping daily in operation, and have recovered a great deal of property and luggage.
Dirmingham.-On Wednesday, in pursuance of a reso lution adopted by the Chamber of Commerce on the 2nd inst., in consequence of the declaration of Ministers that inst., in consequence of the declaraction of Ministers that
the distressed state of the manufacturing districts arises from over-production, and that there are no measures within their power to relieve the present alarming embar-
rassments, a meeting of the bankers, merchants, manufacturers, and traders of this town and neighbourhood was held, to take into consideration the long-continued difficulties of trade, and to adopt such measures as the present crisis may require. Mr. R. Spooner presided. After a long discussion, it was resolved that a general meeting of the inhabitan
Canterbury.-On Saturday Mr. Cobden and Mr. Bright isited this city for the puipso adarssing the farmers on the subject of the Corn Laws. About an hour before the meeting, the East Kent Agricultural Association assembled in order to determine what course should be pursued by the farmers at the Anti-Corn Law Meeting. Sir Brooke Brydges presided. It was then proposed by Mr. Boys, of Waldershaw, and seconded by Mr. James, the Novelist, "that the farmers of East Kent do not conCorn Laws at a meeting called by, or at the request of any person unconnected with the county." The resolution was carried by a large majority. Shortly afterwards, the meeting in favour of a repeal of the Corn Laws took
place, Sir John Tylden in the chair. Mr. Bright and Mavour of free trade at great lengtb, and resolutions in Carmarthen, - Conte unanimously carried. chief-constable of the Andrew scort has been appointed chief-constable of the new Rural-Police in this county, appoint Coloni $L$ that her Majesty has been pleased to appoin Colone Love on the staff of the army, and to place enur wommand the districts of Monmire and South Wales. Mr. Hall, the chief-magistrate of Wowsen and morning from office to submit the erierwards proceeded to the Homeoffice $o$ submit the evaence and the result of his inquifies to Sir J. Graham. At Swansea, on Friday, the copper-
minerg had another interview with Mr. Visian miners that anotier noctvew with Mr. Virian. The men stated has was abolutely impossible for them to subsist on the renuced mages, in consequence of the physical
cxertion required in thic work being prefudicial cxertion required in thair work being prejudicial to hoally
from excessive perspiration, and their inlasling so sulphur generated in the furnaces. in which, they required more and better food than persons empluyed in other manufactures; aud that their eypences were consequently much greater than those of other workmen. Mr. Vivinn stated that the mines were worked at a loss, and that the reduction was caused by necessity not by choice, and that unless the men made up their minds to submit, the masters would come to a determination of putting out their furnaces altogether
Chester.-Through the activity of Mr. Baker, special high-constable of the Tarporley district, a clue has been obtained to the murderers of Matthias Bailey, gamekeeper to Mr. Wilbraham, who was found dead from a gun-shot wound, on the morning of the 28th ult., in a by-lane near Delamere house. The parties accused are John und Samuel Maddocks, both of them notorious poachers. They Fatmon been committed for trial at the next assizes belonging to $\operatorname{St}$. Ives local papers state that several boats coast, shot for pilchards last week, and took fre prish to 15,000 per bost, which sold from 1 . of six score. They were taken abom $18.0 \%$ per hundred from laud. The coasting vessels and boats from the Irish cosst report that there is abundance of pilchards on the north coast of Cornwall
Isle of Wight. - A short time since a meeting of the inhabitants of Ventnor was called to consider the propriety of ading a some means to ascertain the prachcabity or place. In or that a considerable 4 , a considerable sum lias been raised by public subscription, and a larse body of workmen are at this time actively employed, when the tide allows, in clearing away the rocks riom the entrance and site of the proposed harbour,
and piling them carefully so as to form a breakwater on the south and western sides
Manchester.-The turn-out at Ashton-under-Line still continues, and every mill is deserted, the men refusing to resume work at the reduced prices. No disturbance has taken place, and neither the police nor military have been called upon to interfere. On Monday and Wednesday meetings were held on Thacker's ground, the usual rendezvous of the turn-outs. Upwards of 10,000 were
present, and several persons addressed the meeting in iavour of the strike

Stafford. - The Birmingham papers mention that the iron-trade of south Stafirordsbire has Enown symptoms of improvement during the past week. They state that Mr Foster, of Stourbridge, has put four puddling furnaces in blast, which had been previously closed, and that an extensive ord
Oak Works.
Stockport.-Some of the power-loom weavers of this town have turned out for an advance of wages; and the conseguence of a threatened reduction of warn out in masters allege that this branch of the trade are paid higher rates than any other, as they have suffered noid duction for the last twenty years. The London Relief Committee have refused to send any more money to the aid of the Stockport unemploved manufacturing hands, on the ground that business has improvell, and employment is to be had. The local committee have in consequence discharged all the labourers whom they had employed in mproving the town for some time past.
Sheffield.-Two cases of great importance to Sheffield manulacturers, and to the cutilery trade throughout the kingdom, came before the magistrates last week for adjudication. It seemas that for some time past a practice has prevailed in the trade of puttigg the marks of superior articles on things of inferior quality. In the cases before the court, the knives, which were made of cast iron, were marked "cast stee." and sheer sfeel," in direct violation of putting a stop to facturers who mate their actices, and to protect manuthe metal. The charge was fully proved. The maise of fournd that the penalty upon Samuel Naylor was 417 Fl . 10 s ., and upon William Sanderson $1,395 l$. ; and requested the Haster Cutier to take the first opportunity of destroying had heen the manufacturers
Windsor.- The early trains from Paddington on Sunday being freighted with immense number of risitors, one train It is computed that upwards of 4,000 persons from 800 . and the neighbourhood visited Windsor durit from town Her Majesty and Prince Albert attended
in the morning at the Royal Chapel in the
and long before their arrival the edifice with strangers, who had reached Windso
trains, that the resident families who regularly attend the
chanel were unable to find room at the usual hour of service. chapel were unable to find room at the usual hour of service. Railways. - The following are the receipts for the past week :-Croydon, $561 l_{\text {; }}$; Greenwich, 792l. ; Blackwall, 1,205l.; Great North of England, 1,6697. ; Northern and
Eastern, $1,817 l$. ; Birmingham and Gloucester, 2,132l.; Eastern, $1,817 l$.; Birmingham and Gloucester, 2,132l. ;
Eastern Counties, 3,0381 , ; South-Eastern and Dover. Eastern Counties, 3,0381, ; South. Eastern and Dover.
$4,022 l$; Manchester and Leeds, $5,074 l$. North Midland, $5,307 \mathrm{l}$. ; Brighton, $5,717 \mathrm{l}$. ; South-Western, $8,124 \mathrm{l}$. Grand Junction, 9,785l. ; Great Western, 16,670l.; Birmingham, 20,193l. -The London and Birmingham Company met last week at Birmingham. The report announced the receipts for the half-year as $389,658 l$. expenses, $165,734 l$., leaving a net profit of 223,9246 . ing half-year of 1842 , was less by 13,1131 ., while the goods and cattle traffic was more by 10,0192, , making a
decrease in traffic of $3,094 l$., which, with other items, make a total decrease of $3,537 \%$. The reduction in expenses, on the other hand, was $8,767 l$, the total decrease the amount for the corresponding half-year, by 16,982 ; the net profit, with former balances, to be divided being 211,8552 . The receipts from passengers had been parcels, $23,125 l$. The number of passengers during the parcels, 23,125l. The number of passengers during the miles, the number of passengers per day amounting to
nearly 2000 . The works of the Warwick ton line are in active progress, and arrangements had been made for the execution of the proposed Northampton and Peterborough line. For the purpose of constructwould be raised, in addition to the existing capital of would be raised, in addition to the existing capital of
$5,500,000 \mathrm{l}$ rate of 10 per cent. was declared.-At the meeting of the Midland Counties Company last week, the directors re-
ported that the receipts for the balf-year had amounted to ported that the receipts for the half-year had amounted to
$62,324 l$; ; the disbursements to $44,987 \%$, leaving a balance of $17,366 \mathrm{l}$. which would have enabled the directors to declare a dividend of $1 l .6 s$. for the half-year, but that they
had to deduct a balance due to the North Midland Company, amounting to 1,5006 , which would leave an available surplus of $15,0 \% 0$. applicable to a dividend at the rate of $1 l .4 \mathrm{~s}$.
per share. The competition between the Midland Counties and the Birmingham and Derby Companies still continued unabated. The loss upon passenger-receipts to the
former company had been $1,472 l$., and to the latter, former company had been $1,472 l$, and to the latter, mate the Midland Counties, North Midland, and Birmingham and Derby Companies, which it was contended would increase the joint profits to upwards of 35,0001 . per annum, reduce the present scale of expenses, and tend to the convenience of the public. Although met by a
strenuous opposition on the part of the directors, a resolution was passed for the appointment of a conmittee to confer with the several companies on the subject, and report the result to a special meeting.- By the proceedings of the York and North Midland meeting, it appears the total receipts for the half-year were 40,0202 , and the expenditure
$17,562 l$., the balance of which, with a slight addition from the reserve fund, enabled the directors to declare a dividend of $2 l .10 s$. per share on the old shares, and of $1 l$. per share on the half-shares, An extension-line to Eastern Company on its half-year's profits pay a dividend of $12 s .6 d$. per share, and the returns present a consider-
able increase in passenger and goods traffic. A correspondence between the directors of the Eastern Counties and the Northern and Eastern Companies was read at mer meeting relative to an offer on the part of the
former for leasing the Northern and Eastern line at former for leasing the Northern and Eastern line at
a rate based on the present receipts and expenditure, to a rate based on the present receipts and expenditure, to considering the traffic as yet far from developed, or yield-
ing the reasonable return that might shortly be expected from the sources of revenue with which the line is said to abound. The balance for the dividend was $6,199 \mathrm{l}$. I1s. 10d . Counties Railway to Norwich, Harwich, and Bury St. Counties Railway to Norwich, Harwich, and Bury St.
Edmunds, by means of a line to be called the Eastern Edmunds, by means of a line to be called the Eastern
Union Extension. Plans and sections have been prepared, by which it would appear that the line and branches are well adapted to give Ipswich and Harwich, and the
surrounding districts, the benefit of railway communicasurrounding districts, the benefit of railway communica-
tion with the metropolis, as well as with the inland districts. The expected traffic is large, and the earthworks easy; and in furtherance of the object a meeting was held last week at Ipswich, when the High Sheriff,
the Mayors of Norwich, Harwich, Bury, Ipswich, and Eye, with influential landowners, were appointed a committee for carrying the project into effect.-An adjourned
meeting of the London and Greenwich Company place on Tuesday, when the committee of investigation made their report on the points referred to for considera-
tion. They recommended that there be three classes of carriages, that the fares be eightpence for the first class, sixpence for the second, and fourpence for the third, and that annual tickets for the first class be 12 guineas, and
for the second 10 guineas. After some discussion the report was received, and the committee requested to continue their services with a view to some arrangement of the Great North of England Company, at Darlington, the report showed a total receipt for the half-year of sable balance of $13,622 l$., out of which a dividend, at the rate of $1 l .5 \mathrm{~s}$. for the half-year, was declared. The number of passengers during the half-year was 64,173.-At
pany, the accounts showed a falling off in the receipts of
9002, , which was met by a d 900 l , which was met by a decrease to the same extent in
the cost of the working charges. The local passengers the cost of the working charges. The local passengers,
during the half-year, had amounted to 137,124 , and the during the half-year, had amounted to 137,124 , and the
general passengers to 48,110 . A dividend at the rate of 5 per cent. was declared. - The half-yearly meeting of the Great Western Company took place on Thursday at
Bristol. The report states that the half-year's income has Bristol. The report states that the half-year's income has been 330,847 l. $19 s_{s}$, of which the separate earnings on the Great Western Railway are $275,306 \% .1 s$. 7 d . Compared
with the first six months of 1842 there is an increase on the goods of 5,9162 . 11s. $5 d$. ., but the passenger receipts been extended twenty miles Bridge) since June, 1842. The expenses of working the (omitting Government duty, and rates and taxes) by 5,359. 2s. 9 d., notwithstandirg the greater length of line than that of last year, arising from peculiar circumstances which are thus explained. The balance left undivided in January, 1842, was 18,437l. $5 s$. 1 d ., and in January 1843, 2,670l. 5s. 11d., making more than the difference The interest paid within the last six months exceeds that and Exeter railway is nearly balanced by the saving o expenditure. The total sum now availabje is 82,8866 . 6s. 9d., which gives a dividend of two.and-a-balf per cent a balance of $1,071 \mathrm{l}$. 6 s . 9 d . A portion of the permanent way between London and Maidenhead has been recon17,783l.7s. 11 d. The timber and rails taken up have been made available for the Cheltenham and Oxford lines. The irectors conclude by calling the attention of the proprie Plymouth projected plan for the continuation of the line to Plymouth, or some other western port. The business of
the general meeting having been disposed of, a special meeting was held for the purpose of empowering the Great Western Union, the Oxford Junction Line, and to negotiate with the Bristol and Exeter, and the promoter negotiate with the Bristol and Exeter, and the promoters the purpose of extending the line to that place. The directors were duly empowered to take the necessary
steps in these matters. steps in these matters.

## IRELAND.

Dublin.-The Great Seal of Ireland (in the absence of the Rolls to Mr. Justice Burton. The Master of the Rolls is about to visit Germany during the vacation. The Commission have dismissed Mr. C. Nangle from the
commission of the peace for Meath, Mr. Pettit from the commission of Wexford county, Mr. V. O'Connor Walmsley, of the county Dublin, for having attended repeal meetings. The weekly meeting of the Repeal Association took place on Monday, when Mr. Reilly,
town-councillor, moved that the Irish हculptor, Mr. Hogan, be employed to execute a statue of $\mathrm{Mr}^{2} \mathrm{O}^{\prime} \mathrm{Con}$ nell In the course of his speech he said, "Though O'Connell rules our hearts, and is the king of our affectons, and never did any sovereign sit on so glorious a throne. I hope be may live long, and see this statue in Speaker." The motion was carried by acclamation. The rent for the week was $913 l$. 10 s . $7 d$.
Cork.-The business of the meeting of the British eception was appointed to attend at the Committee o buildings in sets, at different hours, in order to be prepared to receive strangers as they arrive. The number of visitors
is said to be very great, and a satisfactory meeting is anticipated.
King's County.-The Irish papers state that the Adjutant of the 5th Fusiliers, Lieut. Robertson Mackay,
stationed at Birr, King's County, was shot upon parade on the evening of the 11 th inst. by one of his men. He fired when about five yards from the unfortunate officer and the shot passed through his body. He died instantly hat the gave himself up, and there is no reasoledge of any ther person. A coroner's inquest sat on the hody on Saturday, when the jury, after some deliberation, brought in a verdict of "Wilful Murder" against the prisoner, accompanied with the observation, "that discipline had in the 5th Regiment of Fusiliers." The evidence and finding were by order immediately forwarded to the Tara.- The long-expected Repeal demonstration on the hill of Tara took place on Tuesday. About 500,000 persons are said to have been present, and so general was
the holiday in Dublin that on Monday, at the commission in Green-street, the counsel for the prosecutions in three cases made application for the postponement of the trials which were fixed for juesday, on the ground that public of penalty to prevent the witnesses from attending the meeting. Every description of public conveyance was accommodate his customers, took the roofs off four hearses, and converted them into a sort of omnibus. Mr. $\mathrm{O}^{2}$ Connell addressed the meeting on the usual topics, declaring his confident belief that before another year expires he will address an Irish Parliament in Collegegreen. A series of resolutions condemnatory of the
Union, and adopting a petition to both Houses of Parliament for its repeal, was then carried, and the immense
multitude quietly dispersed. At the dinner in the evening, Mr. Grattan said that, the Prime Minister speculated upon four contingencies-firstly, upon an outbreak of the Irish people, in which he would be disappointed secondly, on the demise of Mr. O'Connell; thirdly, on the intention to buy the Catholic clergy; and fourtbly, on the attempt to sell the Protestant clergy. Upon this, Dr. Cantwell, titular bishop of Meath, said, "They may, perbaps, sell your clergy, but they never will purchase mine. As to the project of making a state provision for aever submit; and he would take upon him to declare, on the part of all the bishops in Ireland, that they would receive such a proposition with horror and indignation."
Clogher.-The Beifast papers state that a singular has caused great sensation, and done injury to the market as the people are really afraid that the town will also sink解 ine feet of water and dirt in it, caused by springs and gravel from the sides of the pit. As yet no cause can be assigned for the chasm

## SCOTLAND

Edinburgh.-The Commission of the Church of Scotand met last week in the aisle of the High Church be brought undected thideration, there was a very full attendance of members. On the motion of Dr Lee Principal Macfarlan, Moderator of last Assembly, took the chair. Dr. Cook in a speech of great length moved a resolution, expressing hostility to various clauses of the Bill, "as conferring on Presbyteries an extent of powe which no judicatory, bound to decide judicially upon what is brought before it, ought to possess, and as at variance with the professed object of the Bill, and calculated to defeat that ubject, but nevertheless approving of the gene amendment, that uThe Principal Hala mis as considered Loul A berde Coll same, and confidently hope that it will fulfil the patriotic intentions of the Government, by securing the peace and prosperity of the Church." A long discussion ensued which ended in a division, when there appeared-for Dr Colk's motion, 33; for Principal Haldane's amendment 1. The amendment was then adopted.

## 业abl.

Count of Quern's Bench, -In the course of last term the
Duke of Branswick preferred a series of indictments agamst Mr B. Gregory for libellous articles published in the Satirist. On when the defendant pleaded guilty, and judgment was deferred were preferred at the instance onuettly to this other indictments solicitor to his serene Highness, which the defendant unsuccess void the exed to remove by certinrari. In order, thenefore, to avoid the execation of the warrants issued upon these hilact-
ments, he defendant has been for some time keeping himself out
of the way of the way. In consenuence of this, a reward of $10 t$. was offcred
tor his apprehension. On Saturctay last information was received by the police that he was living under a feigned name at South end, where he was captured on the next day. He was taken
before the magistrates, and remanded until he procures the
necessary bail
Northern Cincurt, Aprleby.-Brougham-Hall Estates.-
Robinson v. Bird and Others.-In this case Mr. Knowles applied Robinson v. Bird nnd others. - In this case Mr, Knowles applied
to have the case postponed, but it was ulumately decided to pro-
ceed with it ceed with it. Sir T. Wilde, with whom were the Hon. Mr. Stuart
Wortley and Mr. Roebuck, stated that the present action was Wortley and Mr. Koebuck, stated that the present action was
brought to recover compensation for a trespass by the defendants, brought to recover compensation for a trespass by the defendants,
and an illcgal selzure of the goords or the pluintif. The panalifif was a tenant to Lord Broutl am, of the farm of Weatheringgs in this
ci unty, and the sezure was made under an alleged claim for arrears of rent due to the delendants. The defendants had pieade
that they were not guity of the trespass: and secondly, that the that they were not guilty of the trespass; and secondly, that the
horse in question was seized for arrears of rent due to the defend ants. To support the latter plea, it would be necessary for the
defenclants to establish their title to the property, but this they did not even attempt to do, and, independently of the failure o their proof, he would show conclusively that they had no title
whatever, and that they could have none, inasmuch as the property in question had been in the possession of the ancestors of possiblity be any legal title in period thit there could not by indeed, go buck as faras the reign of Henry II, and show tuat it from which the family of Bergham. Burgham, or Brougham, from that early period; but it would be necessary to show that the Birds, at least, had no title to this property, all the interes veyed to the Brougham famity so long ago as 1726 . But even if
there there was any tithe sth. existing in the descendants of James
Brol, the deffendants in the prenent actinn we evoly unale to hum any rclationship to establish a ftice betwey tor the assump-
him. There was no reasonable ground what the James Burd in tion that they were the representatives of the James Burd in question; but, at all events, it would be shown that is question,
Bird, who, in 1726 , was possessed of the property during a brief alienation from the family of Brougham, sith their uncle, sold the
"eath two taughters, who, togcther whit
ancestor for, $5,000 l$.
 until the present ctefendants, without any anthonty, without any
proof whatever of a title in thin $m$, urgell proof whatever of a title icked persons, had ventured to molest
advice of.jyorant or of wicupiers. When the distress
and annoy the rightful owner and oction was made, the regular and amoy the righttul ownest action was made, the regular
complained of in the present and the defendant, Adam Bird,
c.firer lad refuscd to auct, aneer named lrving, had himeplf macompanied by an auction trespass an action was brought, but not being so promptly followed in a body to Brougham-hall, anticipated, they weat, it appeared, it, evidentyisinterpreting the delay and thok possession of in punishing them for their conduct. The son of the plantiff was Weatherriggs, on the 21st Niarch last. Adam But the and Irving the auctioneer, were the acting parties. cient. Before leaving they made a schedule of the property the mare left it in evied within five days, they would return and sell. The schedule was put in, setting forth that a mare had been distrained for 100 arrears of rent due to Thomas Bird, and to Juhn liird or his agents. A number of deeds were then put in
question. The first of these was a conveyance by indentures
lcasc and rclease, dated the 9 th and 10 ofh of November, 1722 ,
whereby Thomas Carlcton and Isabella his wife, a daugher
James Brougham, inconsuderation of $3,150 l$, and Atkincon Carle tinn, ant Dorotl.y his wife, and Margaret Burd, granddaughters of to John Brougham, of scalcby, the mansion of lirougham-hall, the property of James Jurd, to the use of the sart Johng Brougham, for title and to levy a fine. There was also put in in evidence
the rthengraph of a fine levied in pursuance of the forner ded 2 d Gerorge $\mathrm{I}, 1$, 1 2\%. The next deed was date the former deed, 28 November,
$1-03$, ang nas a conveyance curolled in the Common Pleas, from Ilenry Brouphant, the elder, son of James Brongham, and Henry make a tenant to the $p$ rocipe, for the purpose of suffering a comdeclared to be to lenry Brougham, the elder, for life; remainder of his body, with remainder to the thght heirs of Henry hrougham,
the elfer. These was also an exemplification of a recovery suf-

 suance of this deed Trinity term, $23 d$ George III. A number of
witnesses were then examined to show the undisturbed possession
of of Lord Brougham and his predecessors under these deeds, ex. tice Wightman, in summing up, said that the present action had
been brought to recover damages for a trespass and illegal distraint. No defence had been set up by the defendants. The
plea, so fir as it was materal, was that the property belonged to
the wef the ceft ndants, but ius evidence had been grven to suppert that
plea, And of couse it foll to the ground. It was not, under these
crrcun, focunsfanecs, incumbent on the plamtiff to prove more tlian the
forchle entry and distress; but he had further gone into his own
title,
 claims some parties of the name of Bird might have had, they had
parted with them in 1726,117 years ago. It was for the Jury to say
whether provel, whe trespass was proved to theires they woull a ward. The action, did not
appear to have been brought for the sake of damages, but merely to get rid of the danger of annoyance for the luture. A very
modererate sum would, therefore, probably be sufficient to satisfy the requirements of the case. Verdiet for plaintiffici-Damages 40 s.
Thomas Bird, Isaue Bird, Peter Bird, Thomas Bird (nephew Thomas Bird, Isaae Bird, Peter Bird, Thomas Bird (nephew
of $\mathrm{T}_{\mathrm{s}}$ Bird, the elder), and Adum Bird, stood charged in
the Crown Court with having, along with John Bird, on Tuesday, May 33 , unlawfully entered the mansion-house o
Lord Brouglam, called Brougham-hall, in the parsh
Brougham, Brougham, and from the peaceable possession of the same, with
force and arms, unlawfully expelled and put him out. The several defendants, who had been admitted to ball, surrendered to take their trial. They lad the air of respectable mechanics,
and with the cacention of Thomas Bird (the neplew) describeri
in the calendar as able to read and write but imerfectly They
 appeared for them, stated that, on an exammation of the case,
he was satisfied that they hain monticient defence to this mollict-
ment, aud that hy his adioce the defendants would plead guilty.
 ants, armong out of the same clam, whincla surgested the course
of conduct on their part which liad glen rise to the present
indictment; and there had then been lawt before the jury a senes
 claimed. It wond, however, be open to them ever now to sup-
port, by legal means, any claim which they might fancy tley
possessed; but it was necessary they should be made possessed; but it was necessary they should be made aware, that
it was not to be permitted that parties should take the law into
therr own hands, and take possession by force and violence of property in the peaceable possession of ofthers, to which they might supphe they had some clainu of right. As the defendants,
however, sermed to be sensible that thelr conduct was nonjustifi-
able, he fire lus approntion, that nentence should not be passect, hat that the
jnulgment slomla be phastponed, and carried into effect only in
case of their being guilty of any further violation of the law. from Mr. Justice Cresswell, discharged on their own recogniz ances to appear to receive judgment when called own.
 M.P. for Macclesficld, for the recovery of a sum of 3800 . upon pleaded pay ment and the statute of limitations. The facts of the
case werc few and simple. It appeared that the late Miss Dun-
calf was the and was the survivor of three shaters, and a member of a wealthy
lation of hery, and that the defendant was a distant re Wards becanie. He the law armerty been an artucled clerk, and aftington property, on which
Miss Duncalf rested ands Duncalf resided, He was appointed collector of her rents,
and while acting in this capecty, commenced raising money
from her for years after, until at length it amounted to the considerable Sum claimed. Verdict for plaintiff.
Cota Mines, Bagillt-Hanmer V . Eyton and Others.-This case
excited considerable interest throughout the country, in coited considexable interest throughout the country, in
consequence of the property at stake, the damage being laid at
200,0000 . The Solicitor.General stated that the plaintiff, Mr. W. Hanmer, was the trustee of Sir J. Janmer, under the will
of the late Sir Thomas Hanmer, who was possessed of mine in the estates in the county of Flint including the
and which and whicl it was complained had been destroyed by the negligent miniug proprietors in the same county. The property borders the dip was from the uylands lown towards the river; the ceins were under the river. In 1826 it was leased to parties named Howells,
for twenty-five years, reserving a royalty of one-seventh. It
was sin to this colliery was one worked by the defendants, leased from Worked Sir J. Hanmer's mines, and several also of thie arifacent
mines, He worked through two faults, aud opened into Which, He let in anked through two faults, and opened into one, body of water, supposed to be tapped
from the river Dee, which filled a large space underground formed a sort of subterranean lake, knowa as the Boot-water, from the Joort Colliery, and which waskept out of the rest of the
collieries by a fault. This body of water was well known to all
then tarbeldiers, and it was also known, that if the fave disalt was dislieries. The defendants began to work their mine at Bagillt Was so satuatcol that water Howed from it futo the thets, whose pit towards the fault which was the barruer agamst the Boot-
water, Notice was given to their agent that they were proceeding in driving levels whivh would destroy all the collieries proceeding which
notice was repeated. He should prove by their own workmen
that this notice was given, and that they continued to work the $2 d$ July last, and it was providential that it happened on that day, as 100 lives might have been lost; the Boot-water burst in,
and first destroyed defendants' pits, and then plaintiff's pits. In and first destroyed defendants' $\mathrm{itss}$, and then plaintiff's pits. In
the first instance defendants oftered to pay the expense of drain: the first instance defendants offered to pay the expense of cain
ing the plaintiff's pits; but the learned comnsel said he was in-
structed that that could no bedone the structed that that could not be done, but that the colliery was
totally destroyed. With respect to the question of damage, he totally destroyed. With respect to the question of damage, he for some years the royalty had averaged amually about 1,547\%.;
and that there were about 91 acres of the three and five yard veins, which gave a gross tonnage of $2,344,427$, but, deducting
the uswal per-centage, the net tonnage would be about $1,687,998$ the usual per-centage, the net tonnage would be about $1,687,998$
tons. It would take 90 years to exhaust these beds. He entered into two calculations fonnded upon different scales ; one came he stated that he should sustain his statements by evidence; and
as Sir J. Hanmer had lost his property by the default of the as Sir J. Hanmer had lost his property by the default of the
defendants, he was entitled to full compensation at their hands. by the learned counsel, and, at the to prove the cnse as stated remained two witnesses to examine on behalf of the plaintiff.The trial was resumed on Tuesday, when the additional witnesses were examined, and the case for the plaintiff closed. Mr. Jervis
then addressed the jury in favour of the defendants. He said that the enormous damages claimed by the plantiff would amount to really was that the defendant had not attended to the idle and gossiping conversation with the people of the neiglhbourhood that he had recklessly destroyed not only his own property, but contended that it was caused by the ordinary working of the by, sincerely regretted it. No witnesses having been called for the defence, Baron Gurney charged the jury, who returned a
verdict for the plaintiff, damages $6,227 l$, with power to move for a reduction of damages to 1,600l.
Wbsteran Circuit, Bristol.-Isane, Thomus, and Robert WutWisTERN CIRCuIT, BRISTOL.-Isane, Thomas, and Rabert Wut-
Kins, were indicted for burgiariousy breaking and entering the
dwelling-house of Mary Hunt, and stealing divers articles, and for assaulting her with intent to murder her. The prosecutrix was a poor old woman living alone in a house at Brislington,
near Bristol, and the circumstances of the outrage attracted considerable attention at the time. Her house was broken into, and the bed was thrown upon her, with a heavy box upon it to pre.
vent her giving an alarm. Two of the prisoners attempted to
prove an prove an allibi, but the Jury found them all Guilty of the burglary Coleridge ordered judgment of death to be recorded, but told Would be upon that of their being transiorted for life
WesternCircut, Bridobwatrr.- Richurd Alvin
for the murder of an illegitimate child, pame and sex unknown, by tyeing a hayband round its neck, and producing suffocation. person of considerable property, residing, at the time prisoner is a Was said to have been committed, upon his owu estate, at
Crewkerne, where his father lived, and acquired considerable property as a banker. The particulars of the case having been
noticed at the time, it is sufficient to state that the child was the offspring of a servant girl, who swore that her master took the
chich from the bay-loft in which she was confined, that she never made up a hayband, but she did not see him do anything with it. Other witnesses deposed that
the body of a child was found in the prisoner's garden on prisoner, pointed out various inconsistencies in the evidence, see their way clear to find that the prisoner had killed the child by suffocation. There being no evidence whatever that could satisfy them
In oxpord Circuit, Stappord.-The Queen v. Arthur $O^{\prime}$ Nerb-uttered certain sedratious words to a large public meoting of
workmen, at Rowley Regis, on the 26 th Aurust, 1842 , intending to bring the laws and constitution, and the House of Commons int contempt, to obstruct the collection of the revenue, to
induce the subjects of this realm to refuse and resist the payment of taxes, and to persuade large bodies of workmen in the
coal and iron mines unlawfully to conspure and combine for the purpose of obtaining an increase of their wages, by abstaining from work, and to cause them to hold unlawful assemblies, to create disturbances, break the public peace, and resist the execu-
tion of the laws. The Jury found him Guilty. The defendant upon being asked what he had to urge against judgment, said "you value many and weighty reasons to urge. "If," he said ples should spread, there is no more certain means of so doing ence all the institutions. Moreover, 1 am not desirous flea sbire-the schools I have formed and taught, the congregations have preached to, the sick I have visited. Nor do I wish to leave hitherto been eble to a stainordshixem. But for conself have not the slightest objection to imprisonment. I shall in gaol hav ing from its pages studying the scriptures despetism and evil have ever struggled aganstr.', Mr. Justice Williams, addressing the defena sedltions speech; and when the situation of the
uttering a
country at the time that speech was uttered, and the conduct of the parties to whom it whs addressed, suffering, as I fear they
were, under great andl veal distress, are fakeninto consideratton it seems to me that the Jury could have come to no other con-
clusion. Having no connexion with the trade of those whom you addressed, though you state you were connected with them or some of them as their minister, you chose to select that particular time of excitement and distress for your visit and addres other topic than patience and submission to the law had been dwelt on by you, your address would, at least, have been cautious off allegiance to the Government, and to refuse the payment of at such length expressed, is best known to yourself. How far to anticipate as the result of modern enlightenment, and th without oceans of blond, of whiphecy, you so strongly express your abloorrence, it is for you to say. No reasonable man can thin about without $a$ fearful burst of the volcano, to which you yester.
day referred with so much apparent pleasure. Be that as it may, bear in mind that you are not prosecuted or convicted for you deliversd. Taking into consideration all the circumstauces o the case, the sentence of the Court is, that you be imprisoned for Fotey v. Botfield.-The questions which gave rise to the premany points of law originating from the construction put upon the clauses of a certain lease made as long ago as the year 1801 . That lease operated as a demise for sixty years of an estate of Cipton, supposed at the time and eventually proving to contaio valuable mines of coal and iron, which was then held by different individuais in four undivided shares. The proprietors of these
land, covenanting at the same time that he should keep the surleave as much as possible unbroken, but that he chould have free
leave the mimes bencath, to erect such engines, whim-
sies, blast and air furnaces, cupolas, gins, and smeltinu work
as to him siovl as to him should secmaces, cupolas, gins, and smelting works,
such buildings and term, be left ou the land in good condition and repair. Si,me lease of the same estate, demismed, Mr. Botfield made an underto Mr. Turton, who afterwards accepted Messrs. Dixon and Co, as his under tenants. The mines were worked to 1837, then on
the expuration of the under-lease, Mr. Botikeld left the mines unworked till 1812. The original lease being determinable on one
ycar's notice being given by ctther party, the lesse gave that notice, and thus the lease granted in 1801 expured in consequence
on Lady-clay, 1842 . The main object for which the pienent
action was brought by Mr foley action was brought by Mr. Foley was, to recover his propor-
tomate share of the dilapidations alleged to have been caused by
the deffndants. the deffendants. The corenants of the lease being of a pectliar
construction, rendered the determination of this pint a natier
 the case, that a satisfactory determisation of the numernus
1ssues between the parties can be attained by the prenent tral.
The sittug of the Court on Monday, it was agan resumest, and concluded at two oclock, when Mr . Richarids addressect the jury on
behalf of deferddnt, and ar four o'clock the judge summed up the lengthy evidence with mucu minutencss. Tue jury rerianincd some:-We find that the mines were not finsibert, that they were
dot left in workmg condison; and we awail accordingly no damages for the broken surfac., regaring the whole as still a
mining property. Bat for removing the engines, \&e, we give ing buldings, 250l.; for dulaputations of the furnaces, $36+1$; for
basons, bridge-, \&c., 212l, total, $2,526 \%$. One-fourth ot which will be the share of the plaintiff.
Homb Circuit, Crosuon
Homb Circuit, Crow ion.-
Angell.--The crrcumstances unt
are, in many respects,
to the Jury, said, that, peculiar. Sergeant Shee, in his addintifi was an aged man a gardener, and defendant was a gentleman named John Benedict assumed the name of Angell, under circumstances that would after wards be detailed. The action was brought to recover about
20 acres of land, in the parish of Stockwell, and the title of plaintiff was founded upon the will of a, Mr. John Angell, who
died at Stockwell, in 1784 . By that will the testator gave to the male heirs of Winliam Angell, the frst purchaser of Crowhirst, all his lands and estates real and personal in Surrey, Kent, aud
Sussex; thll in detanit of such malc hens being in existence,
then the estates to go to the male heirs of Whlliam Augell, of Angells, and their heirs for ever, and in default of that branch, to William Brown, who was an Augell. The will also directed
that the party makitug out hin descent ot his name almoud lapperu

\section*{SATURDAY, AUGUST 26, 1843.}
mebtinas for the two following werrs.

\section*{}
\(\mathrm{I}_{\mathrm{N}}\) consequence of a statement which we made a few weeks since, directing the attention of our correspondents to the difficulty experienced in the cultivahave been Myatt's most excellent Pine Strawberry, we upon the subjured with numerous communications proceed to subject, the substance of which we now proceed to place before our readers.
Upon this, as
Upon this, as upon most other questions of a similar nature, the statements are very conflicting, some persons asserting that the variety is only indifferent, or not superior to the Old Pine,--others contending that stating that it is a most uncertain, some writers a most prolific bearer. On one point most of our delights in a Mr, R din a highly manured soil. In a letter from statement uperson, of Ravenswood, is the following "Let the upon this point:-
feet, and the ground be trenched to the depth of two feet, and throw in an abundance of dung during the too much, from the fact Strawberry can hardly have like many other sorts. The plants should be arranged in rows 18 inches apart, in beds four feet wide, A ounce in weight. They bear to them upwards of an or thirty on the bunch, and although we cultivatenty Elton, British Queen, and although we cultivate the kinds, they are not to be compared to which are good one great advantage of which is that it continues
bearing till Septem bearing till September."
Another correspondent, signing himself "Hiberan open space of ground, which I effect. "I choose of eighteen inches or two feet, \(I\) trench to the depth the bottom of the trench to the throwing dung into inches, and afterwards spreatine thickness of three four or five inches thick, and digging it in surface spadess depth. Beds four feet wide are it in about a with alleys between them two feet in width formed, take out from the latter the stiff soil to the depth of eight inches, which J throw upon the beds on each Iide. The manure which I use is rotten dung. If bed. About the middle of November, a liftle manure is forked in about the plants, which stand eighteen inches apart between the rows and one foot from plant to plant."
Another writer, under the signature of "J.W.C.Y." cultivation of opinion that "the chief requisite in the ing kinds, is free ground trench all other large rootso that the roots cand, trenched and well manured, depth before the approach of winter." The latter point we deem well worthy of attention; for if a scarcely forms roots suffici out late in autumn, it to prevent its being sufficient, before frost occurs, leceives so great a check that it either dies or it is The employmene the plant recovers its energy. Reader," regarded as a bog. earth is, by a "Constant Myatt's Pine is grow a cause of success. He says that bearing abundance of fruith him magnificently, and that his kitchen-garden is on a piece of reclaimed bog, and the great luxuriance of every vegetable med in question is quite astonishing. The Strawberries bore very fine fruit rows, edging the walks; they Year, and seem likely to do the same this yeart to Myatt's fact wine ; forth attention, without reference Theclaimed by judicious means. There is one more point means.
should which is, that Myatt's Pineveral writers borne the ser be kept upon the ground after it hatry our correspondents of With this statement some of coincide. Wendents of last year (pp. 491 and 525 ) this subject, as give the remarks of "Hibernicus" upon "In consequence of the the purpose.
magnificenly a moderate crop, and those of August magnificent one, while those made in 1840 had but a
small one (though last year they bore most abundantly), I am disposed to think that plants of Myatt's Pine will only bear two crops of fine fruit, and that adopting this kind of biennial treatment, I have cultivated this kind very successfully. My crops last year, as well as those of the present, have been most
abundant, and the fruit very large. It will not abundant, and the fruit very
succeed in a low, damp situation."

Mr. Reid, the intelligent garden recommends that a fresh bed should bo season, and the old ones destroyed. After mentioning that he always obtains excellent crops by the method recommended at p. 491 of last year's Chronicle, viz., of rotten manure slightly covered with soil, and making a new bed every season, he continues-"Whoever adopted this plan last autumn will not be able to see the result before next summer, as the runners are only
now growing for next year's now growing for next year's crop. I am still of than the soil, because if the soil in this the treatment them, why should I not have a crop from them, under the same management as other sorts? This I have never been able to obtain. Being convinced that Myatt's
Pine will not produce a crop under the ordinary method of transplanting, I adopted the following plan for moving them: I filled a number of pots (large 60 s ) with good rich soil, without putting anything over the hole at the bottom, and these I placed round the small stong a runner or two on each pot, with a rooted in the soil. Ihem to keep them down till they less than three weeks they were fit for removal, which was done carefuliy by keeping the balls entire. I thus 12 feet sumcient plant six rows across a border feet between the pows. They grew very strong beor
fore the winter, and many of them threw ont fresh runners These rows are now producing as heavy a crop as can be desired, and finer fruit than \(I\) ever saw before. The runners have nearly covered the four-feet space betwixt each row, and will make complete four-feet beds for next summer's crop. As there is still plenty of time to try this method, I hope many of your
readers will do so, as I have no doubt of their success I ought to mention, that, as soon as the rows have done bearing, or at least some time before winter, I cut them clean out; the space where they grew will serve for alleys for the young beds. The soil in this garden is a very stiff heavy loan, cracking in all
directions in dry weather, with strong clay at the
bottom" direction.
bottom.
"Discipulus," another correspondent, states that under ordinary treatment. The soil is naturally strong, and he covers down with manure in spring for the double purpose of keeping the soil moist and rich, and the fruit clean. Last year he parted the old roots, because he could not procure rumbers in consequence of the ravages of the Crane-fly; and these plants have borne fruit this season as well as the rest. He states, in conclusion, that "as far as his experience goes, he finds Myatt's Pine easy enough to cultivate, and by far the easiest to separate, as there are always an abundance of young roots at the upper part of the old plants, and the offsets thus taken off make very vigorous plants. A rich border, dry in winter, is certainly preferable for it."
It may be as well to observe that the dryness of the beds in winter appears to be of essential consequence ; and this may probably be the reason why Myatt's Pine succeeds so well with some persons when grown on a gentle slope. This is particularly observable at Mrs. Marryatt's, of Wimbledon, where it is cultivated in loam, and dressed over in spring with point, writes thus :-"I, last year, had occasion to make a new bed of this kind, and I selected for the purpose a south-east border, 6 feet wide with a wall \(2 \frac{1}{2}\) feet high at the back. As my soil is light, I first tender loam, and upon that I laid pigeon's dung, four inches thick. I trenched the border two feet deep, carefully mixing in the lung, and I also took care to have the border elevated towards the back at an angle of seven degrees. On the 26 th of October, I planted the border with second runners, a foot apart, and the same distance from row to row. I believe it is rarely following season; but any fruit to perfection the matured some very good fruit, and at this time, the plants are growing freely." We would therefore suggest that in retentive soils the bottom of the trenches, when the ground is being prepared, should be covered several inches thick with brick rubbish, and that the surface of the beds should slope gently towards the south-east; this would keep the subsoil dry in winter, and partially secure the surface from the parching rays of the mid-day sun in summer.

It may be as well, in conclusion, to mention a remark made by Mr. R. Saunderson, that " in gather-
ing this sort great care is required: if turned red on one side, the fruit is ripe, and if left longer-like its faveure, the Fine-apple-it loses that tart and musky

From the first appearance of the manure called Potter's Guano, we have expressed an opinion that it Would necessarily prove one of the most aseful of fertilizing agents; and experience proves us to have been right. In addition to the published accounts of last year we are now able to state that on Asparagus and other Kitchen Garden produce its action has been most beneficial during this summer. Little worn-out suburban gardens, where, for obvious reasons, manure cannot be applied, have been restored to fertility by two or three dressings; and have been crowded with flowers where plants could scarcely grow at all betore. It has, also, like the superphosphate of lime, the great merit of not doing mischief substances as the best materials that have yet been provided as substitutes for manure; and we are therefore glad to find that Potter's Guano has experienced such a reduction in price as will induce both farmers and gardeners to avail themselves of it.

When we have got a piece of good loamy land lying on a dry subsoil, or well drained, it is our own rault ir we have not good crops, or if the vicissitudes last years have been trying yreat extent. The two last years have been trying years for bad farmers; and we may look upon it as a warning to keep owa difference between the produce of two fields, both of nearly the same quality, but the one drained and subsoil-ploughed, and the other merely ploughed up in high and narrow stetches, must be fully convinced that the capital laid out in thorough-draining often pays a better interest, without risk, than the most usurious discounter of short bills could have the conscience to desire. This year it has been 100 per cent. and more, in some heavy wet soils, now laid dry. Draining, in the best manner, seldom costs more than 6l. per acre, and it can be done effectually for half that sum. Without being drained the cold wet lands which abound in England will not average 16 bushels of Wheat por acre, taking into the account the great many fields which failed entirely. The same soil wrill ay and manure, will average 30 bushels, with double the guantity of be saved. Here, then is a difference of seed may be saved. Here, then, is a difference of 15 bushels per acre, which, at six shillings, amounts to \(4 l .10\) s., andrained land, worth of straw more than on the of the draining, or cent. upon cent., on the capital We have ourselves realised this difference; and we have 10 acres of Wheat in a drained field, and eight acres in another of equal quality, but not drained, of which the first will average by estimate 36 bushels per acre, while we do not expect more than 20 or 22 from the other. The poorer crop has been the most expensive, owing to the constant hoeing and weeding required to keep it clean. After this, caln any proprietor or tenant hesitate to have his heavy and wet money to spare, let them borrow it, if they can, at five or six or more per cent. They will soon be enabled to pay off the debt; but every prudent landlord should urge his tenants to drain, and offer to find tiles on receiving 5 per cent. additional rent for the cost of them. He should erect a tile-kiln on his estate, if it is of any extent. Where the land requires draining, there is always brick-earth at hand, or clay, which can be readily tempered. Machines are invented every day by the use of which the expense of tiles is gradually reduced, so that half the sum formerly required to lay a field dry may be saved. For the last Number or half-volume of the "Journal of the Royal Agricultural Society of England," Mr. Pusey has collected a variety of useful information on thorough-draining,not new plans or theories, but the practice of genera. tions gone by, reaching to 150 years back,-so true is it that in Agriculture there is nothing new,eacept those things which rest on late discoveries in the arts and sciences; and in these there is not yet that certainty which would produce universal adoption: time alone have brought the subject of draining more those who have brought the subject of draining more generally before the farmers, we must not suppose that it is a new discovery. Can any traveller observe the pains taken in warm climates to distribute water over every part of a field, or see the works erected in northern countries to keep the water from the land, without having the advantage of draining suggested to him? It is true, that the first attempts to lay the land dry were by means of ditches and sluices, and by lowering the general level of the waters in a flat country: but ditches take up much ground, and hollow drains will carry off the water equally well. Once arrived at this point, it is only a step to the increase of hollow drain
to any extent. But as the drains increase, they may be made less and less, until a space two inches wide and four inches deep is sufficient to collect the superfluous moisture. Such drains may be made in a retentive subsoil at a trifling expense, and spread over the land-like the veins and arteries of the animal body, increasing in dimensions as they collect more stall streams, and ending in a capacious tile-drain, which pours out the water of many acres into the open ditches. We will explain our meaning in the next Paper, and we shall not be surprised if many of our readers have already anticipated our plan.-M.

ON CONSERVATORY CLIMBERS, \&c.
At this period, when people are busily engaged in planning out new modes of heating, and re-arranging houses, pits, \&ce, or in contemplating new ones, let me
suggest a simple, cheap, and efficient mode of rendering suggest a simple, cheap, and efficient mode of rendering
the conservatory superior and more interesting than anythe conservatory superior and more interesting than any-
thing that has hitherto been done, with the exception of a few instances, which proved highly successful. It is to a few instances, which proved highly successful. It is to
clothe the rafters with the best stove and half-stove climbers, for seven or eight months in the year, and thus climbers, for seven or eight months in the year, and thus to impart to it all the character and importance of an
exotic stove, with the cool, refreshing atmosphere suitable exotic stove, with the cool, refreshing atmosphere suitable
for conservatory plants, where those who cannot endure for conservatory plants, where those who cannot endure the broiling heat of the
Something of this kind seems now to be wanted, seeing that the better and more delicate greenhouse climbers are That the better and more delicate greenhouse climbers are
being encouraged as dwarf plants on trellis-work-a plan being encouraged as dwarf plants on trellis-work-a plan
very suitable to tender and small flowering-plants, but very suitable to tender and small flowering-plants, but, unrestrained freedom of a fine climber-and also that the stronger greenhouse climbers are now turned out against conservatory walls, so that we are left in the dilemma of having the same kinds of climbers in the conservatory as
against the hot walls in the open air, or we must contrive against the hot walls in the open air, or we must contrive
to grow others in-doors more suitable to our tastes and to grow others in-doors more suitable to our tastes and
ideas ; or, at all events, more in accordance with the higher branches of gardening.
The plan which I propose for effecting this change is exceedingly simple, and not at all expensive, having lad a less economical mode for the same purpose in operation
for some years, and I can speak confidently as to the result. for some years, and I can speak confidently as to the result. This plan is, simply, to build a narrow pit along the back of the conservatory, or along one end of it, if that is not
in sight of the main walks ; to keep up a constant stovein sight of the main walks; to keep up a constant stove-
heat in this pit; to plant out stove-climbers in it, and when they are of sufficient length, to introduce them through holes pierced in the back wall of the conservatory: or, more in detail, to build a pit, six feet wide and four
feet high, the whole length or breadth of the conservatory, feet high, the whole length or breadth of the conservatory, as the case may be, with glass sashes, in the usual way, at an angle sufficient to leave you head-room along a path next the back wall of the conservatory. This path may be two feet wide, leaving room for a bed four feet wide, excepting the four-inch wall along the path to keep a Vine-border, well drained, with a layer of rough bones over the drainage, and a good portion of them mixed with fresh turfy loam and a little peat and leaf-mould, to the depth of three feet. If you wish to try the effect of bottom-heat, nothing is easier than to run a trough under the drainage, with a two-inch pipe, to heat the water will not answer this purpose A common flue may bethe mode of heatiog, if you want to go the cheapest way to work, and the heat may be from \(75^{\circ}\) to \(85^{\circ}\) in summer, and from \(50^{\circ}\) to \(55^{\circ}\) in winter.
About the end of November prune all the side-shoots from the climbers to one eye, leaving the leading shoots, the first year, their full length, and draw them back to the pit, to be wintered there. For the first few weeks let the pit, to be wintered there. For the first few weeks let the
temperature of the pit be about what that in the top of the temperature of the pit be about what that in the top of the
conservatory was for the last month, say \(45^{\circ}\); this is to induce the plants to rest, because if the temperature here were kept higher at this time it might cause the plants to make a fresh growth at that dull season, after being so probably defeat your expectations for two or three years, it may appear strange to some that the tops of plants It may appear strange to some that the tops of plants will thus grow in a much lower temperature than that
necessary for their roote, but such is the case, and my attention was first drawn to it on seeing it so well explained by the Honourable and Very Rev. the Dean of Manchester, in his work on the Amaryllidaceex, p. 402; but we have a case far more curious bearing on the point, recorded in vol. i. of the Chronicle, p. 150, by Mr. Fox, of Bridport, who states that a shoot of a tender Passionflower escaped into the open air in summer, "through a small hole in the glass, "and remained outside all the hard winter of \(1840-41\), "without being much injured." Could anyone have believed such a thing possible, unless well authenticated? I am almost satisfied, although I have not yet proved it, that the tops of many of the stoveclimbers mentioned below would live well enough in the conservatory all winter, and be the meat
others that are shy flowerers bloom freely.
others that are shy flowerers bloom freely.
Where a stove joins a conservatory, this experiment might be tried at servatory, an intermediate house would suit better for some of the plants chosen for this purpose. If the conservatory stands in an open part of the flower-garden,
this is impracticable, without planting screens to hide the pit; and if the conservatory is built with glass all round, like the great Chatsworth conservatory, or the
come by painting the outside of the glass the length and as useful as any the best place for many kinds of propagation, for storing away bulbs, \&c., for smoking the conservatory plants in and for cleaning their leaves in wet days; it would also be a good place for many Orchidaceex: in short, there is no for furnishing to whicls it might be applied, as well the stove climbers.-D. Beaton.

\section*{(To be continued.)}

\section*{ENTOMOLOGY.-No. XLVII.}

The Smajl White-Scale, or Oleander Shield-bearerAspidiotus Nerii. (Bouché.)-This insect belongs to the 2d section of Cocci, in which the scale is not fastened to is animal, but is left sticking to the leaf when the scale be removed from it This group Bouché has distinguishe as a genus, under the appellotion as arenus, under the appellation of Aspidiotus, or shield.
bearers the males differ also from Coccus in having two little processes issuing from the mesothorax, analogous to the balancers in the Diptera.
The small White-scale is a most abundant species upon various hothouse and greenhouse plants, and I have seen vatories.in the undersides of the They are generaly scattered all over the midrib. The targer leaves, but first attach themselves to the midrib. The larger ones (Fig. 1) are females, the scales being dirty-whitish or buff-colour, very thin, slightly convex, more or less orbicular, and are very much like Oystersurface (Fis 2 ine, even the surface (Fig. 2, greatly magnified) ; on removing the scale, a fleshy yellowish animal is disclosed (Fig. 3), which is proceeds from a nipple in the breast, about one-third from proceeds from a nipple in the breast, about one-third from horns, but there is often a little cottony substance beneath horns, but there is often a little cottony substance beneath the scale, especially at the tail of the female, where the eggs and the recently-disclosed young are often grouped together (Fig. 4); the former are oval, and yellow or brownish, and the latter are pale green, oval, with two
short antennæ, and siz small legs. The lesser scales (Fig. 5), of which there is always an abundance, scales fectly white and generally oval ; on lifting these up, a little brown pupa is found beneath, which produces the mal insect ; this sex differs so astonishingly in all the Coccidæ that have come under my observation from the female, that nothing but a perfect knowledge of the economy of this family could satisfy any one that they were even related to each other; for whilst the females are either horny scales, or fleshy masses concealed beneath a scale, which are constantly drinking deep of the sap, and never move from the spot where they are once located; the males, on the contrary, are little flies, which appear never to require any sustenance, and whose only object is to fulfil the great nitely smare. The male of the small White-scale is inithe little head has two distinct black eyes, the antennæ are hairy and said to be 8 -jointed-they appeared to be only 6-jointed in my specimen, which was dead and injured, the abdomen is furnished with two longish setæ, or bristles at the apex ; the six legs are moderately long and hairy at the extremity ; the tarsi apparently consist of one joint only, which is terminated by a single claw : the two wings are dirty-white and irridescent, and are more than twice back in repose (Fig. 6, magnified). With the small Whitescales are sometimes found clusters of ellintical white powdery cases (Fig. 7), not adhering very closely to the leaf; they contain a long cylindric greenish pupa, with two black eyes, and a stout process at the tail; these I suppose are the pupæ of the males : but since I have found doubtful regarding them and thin ther must belong to doubtful regarding them, and think they must belong to another species, possibly to the Aspidiotus Bromelice, has two elevated lines forming a cross, the sides of the abdominal margin ridge down the back (Fig. 8, magnified) small outlines denote the natural sizes of the different objects, as they are shown upon the leaf.

The small White-scale is, I believe, more difficult to eradicate than any of the others. It is supposed to have been introduced from America, and does not require the heat that most of the exotic species do; it is therefore Oleander \(\mathrm{ra}_{\mathrm{s}}\) as Acacias, Arbutuses, Aloes, Palms, and
similar plants. The Olive, as we have observed, is infested by it : but this is a very different species to the Coccus Slea, which inhabits the Olives in their native soils in the South of France, Italy, \&c., where those valuable trees suffer considerably from the immense quantities of the having bects which are produced, as many as 2,000 eggs Olives is always in circulationale, and as the sap offered to their increase, and consequently they are breeding the whole summer, if not in the winter, sometimes spreading to the Myrtles and Phillyreas also. If find that the peasants call them lice, and believe that they are produced by the ants, from those insects traversing the Olive-trees in search of the scales the Cocci,

\section*{Sprengel on vegetable manures.}
12. Peat-earth. - Peat is a substance composed of
vegetable remains, which are more or less decomposed and deposited in boggy or wet soil. When used as litter it is necessary to throw it in large heaps, that it may lose its superfluous humidity. At times, the vegetable remains of which peat is complosed are of a very filmy texture, in which case the heaps must be well cut through several times, else, when placed under cattle, it will not properly mix with the animal excrements. Where, however, peat case it is sufficient to shovel up the earth from the surface of the fields, which, by burning, ploughing, and larrowing, have already become soft and dry, and this earih may

\section*{at once for litter}

It has been proved by long experience, that peat-earth yields a superior manure, especially if it contain mineral substances, required for the growth of plants. As, however, the different sorts of peat-earth contain different quantities of mineral substances, their manuring value can The upper strained by the chemical analysis of their ashes. The upper stratum of peaty moor generally consists of hald possess little value as litter, heing deen already stated, posseas lat importas to vegetation. Hence, it follows that moss-pent canat be very cood litter, as indeed is proved by perimets fibrest by experiments on a arge scale. He rown fibrous-peat its ashes contain much gypsum, phosphate of lime, magnesia, and common salt; but even this sort of peat does not yield a very superior manure, being (in almost all cases) deficient in potash, and generally in nitrogen also. If, therefore, manure obtained from littering with peat-earth is to supply the crops with all necessary substances, the cattle must be fed with substances containing much potash and nitrogen, so that what is deficient in the litter may be supplied by the animals.
Peat-earth liter will be most advantageous in localities which are very dry and sandy, for the soil will then be supplied with plenty of humus, which (on account of its hygrometrical quality) will keep the soil sufficiently moisth. One of the chief advantages of littering with peat. earth, however, is, that not the smallest particle of nitrogen from the animals will be lost, because all the ammonia that given off from the urine or otherwise, or which the cathe may perspire, will be at once chemically combined with the humic acid of the peat-earth; at the same time
part of the superabundant humic acid which would injure vegetation will be neutralised.
In order that peat may be uniformly mixed with animal matter, and that it may be perfectly rotted, it is better to throw the peat-manure into large heaps, and to leave toing some time (say two or three montis), previaus to carted on the land. It is true that in doing so somet carbon will be lost in the sbape of carbonic acia, bily reneed not be taken into account, for it will bo peatplaced by the layer of peat. The rotting of tupst be manure in large heaps is the more necessary, and mosed carried on the longer, in proportion to the undecomsition vegetable remains it contaims; for that decomil if the soil be place in the ground very slowiy, espedvantage for soitter sandy and dry. Peat may be used to a with horses and sheep, as in this case it will fix that great amount on ammonia which these amimals furnish. In siep prevent straw may be strewed over the earth, in ordar the wool from being soiled.
In order to show that some sorts of peat-earth are, really very valuable on account of their mineral. ces.
I shall insert here the result of one or min:-

 to a manure, I beg to ubnlity of the paper-makingrefuse give advice fied my attention. I have been requested to adice for the establishing a chloride of lime (bleach.
consider what manaftory; and have been brought to the chlorine refuse. This refuse is of the same nature as that from the bleaching of rags, and produced, like it, from salt, manganese oxide, and sulphuric acid (oil of
vitriol). The chemical nature of this refuse will depend upon the proportions of the articles used. There is almost always a large excess of manganese, but this is, or should be, separated by washing \&c., to be used over again. acid, it being the cheaper material. Such being the case, and the oxide of manganese almost constantly containing carbonate of lime and oxide of iron, the residuum must consist of the stlphates of manganese, of soda, of lime
(Gypsum) and of iron, and a portion of all these substances (although in proportion infinitely varied) enter into the composition of almost every plant, there is good reason, à priori, to suppose that the judibe beneficial, if your reiterated and excellent hardiy fail to observed, - " little and often." I do not know, that, with respect to the sulphate of manganese, any exact experiments have been recorded; and it may happen that forming a principal part of the refuse, it might exert a poisonous ingredients a chance of acting. Nothing, however, can be quantity, and, above all, carefully to experiments as to There is no doubt about this refuse being most results. for fixing ammoniacal matters, if the ammonia be in the the chronbonate of hydro-sulphate, (vide my letter in should the oil of vitriol have ben sed. or even if free, modus operandi will undoubtedly be partly as a stimulant and partly as a conveyer of nutriment, and the probability its best effect will be to the class of Saline Manures, dissolved in water. I hope that your Correspondent will have nerve enough to make the experiments I have mentioned, and philanthropy enough to communicate his esults when obtained. Most of the sulphate of manga ese might be separated from the other salts by a managed printer Peas In Perro's
nst. is a unst., is a receipt for preserving Green-Peas, \&c., which ripe) pe) when fit for the table, lay them to dry in the pods bave a continual warmth. When perfectly dry, put them away in a dry drawer till wanted ; and whether put them mas in a dry drawer till wanted; and whether at Christ-
mas, or 36 hours before boiling, they will be found nearly equal in every respect to leas fresh gathered." Now, barring the boiling, the Editor might have added within his edi-
torial brackets,-fine substitute these would make for smal shot for the gamekeepers to kill young rabbits with in the garden. This would be better young rabbits with in the from the Gardeners' Chronicle, editoral pirating paragraphs \(-D . B\). [We really are surprised that so respectable a itself to the charge of being a receptarle should thus expose Becs. "A once discovered a and their comb contained broes in Hawthorn-hedge, and thear come contained brood. To some this may pens. This season I found a weak sperm of Bes haphedge, having a small comb containing egrs Bees in a pollen, but no honey. The cold, and shortness of the time they had been in their airy abode, may account for the latter. Such occurrences do not bespeak much for the notion that Bees will not mork, I mean construct their cells, except in the dark.-J. W.
Fruit without Leaves.-Should there remain any doubt as to the maturation of fruit without leaves, I beg to state that last showed a single leaf sixteen inches long, which never showed a single leaf, but bloomed and set its middle of the shoot as allowed to remain as near the my young men, determined to t, together with two of Peach ripened and coloured beautifully, and was as fine those exhibited before the Horticultural Society. The shoot gradually died back to the fruit, which it reached when the lalter was about half swelled; but the disease went no further until the fruit was plucked, when it went on to the main branch, which, I think, fully testifies that the Peach had the power of drawing the matter necessary for its support.-M. Heuderson, Coleorton Gardens.
Melons.-I agree with you generally in your remarks, at p. 571 , upon the Melon, but not with respect to an anceremonious dismicsal of the "whole race of CantaMy object in writing to you is, to mention that I have this year succeeded in growing one of the most magnificent Melons I ever saw; the seed was sent to me from Syi hut I only succeeded in rearing one plant. The fruit was most exquisite, and meited in the mouth like the most delicious Peach; there was not much pulp in it, and the hard, --however, not near so rind, but this was rathe Melons. The shape was a fine oblong, and it was benuti fully covered with net-work, and when ripe was guit golden. It requires a smart bottom-leeat, and is inclined to be woody; this season-which, by-the-by, is no critegbout seven pounds. I am also growing the Candahar sent to me by a friend, but from the lateriess of the anar when I recevved the seed, I am afraid I shall not bring the fruit to perfection; for they evidently, like the Syrian, require plenty of sun. The fruit upon the

Candahar is now about the size of a goose's egg. I have of which camefrom the treen Mesh, a small fruit, the seed and is called the "Melon of the lurem" Intiropre, growing about nine varieties of Melorem. I am nuw has no difficulty with any of them. I also keepa a good eye on the new ones. \(-\boldsymbol{F} . \boldsymbol{P}\).
Disease in Pansies.-Seeing, at F. 573 , an article on
a Disease in Pansies," I beg to inform you year I lost nearly all my best varieties you that last manner. This year I tried the follora a similar been perfectly plant this season. About the begining of Ja single barrowful of soil, Abour the beginning of June I had a soil, river sand, and one shovelful of lime of loam, rich mixed toneth, about the heart of each plant, and the result has been as stated.- \(W\).

Asparagus.-The extent of scientific information which Chronion in the Gardeners cultivation of considerable Asparagus. It is, however, a matter of equal in size to equat in The suave a stateme er gooaness of the sol may be inferred Darmat grew last year at Durther adds, mo lise, hastrian gardeners generally lay move the shicks over the Asparagus when it appears above sher shem the inclemency of the weatmer, and cause it to shoot up apace. Besides, by this contrivance it is kept soft, for it is apt to become hard when exposed to cold winds. I should be glad to know, througl the medium of the Chronicle, whether the Austria gardeners continue to produce such monstrosities as to me it appears altogether incredible that one head of Asparagus should weigh hall a pound. I have experienced the good result derivable from spring protection, and there fore tostimony to its efficacy. In a garden of which once had the management we were annull more or less, deprived of an early crop till the adoption of auch a procedure. By some it may be argued that Aspa ragus is as hardy as any other marine plant, which inhabits our sea-coast. To this I readily assent; but when subjected to artificial cultivation, its primitive character schanged, by the appication or manure, which elare the vegerable tissue, sid it is consequently less able effects of cold to H. G. G. Sudlow, Esq., Heywood House, Westbury, Wilts.

Strawbervies. - The Strawberry deservedly occupies attention in the Chronicle, and it is to be hoped that your just remarks at p. 555 will speedily explode that almost worn out system of anaually mowing off the leaves, which cannot be too strongly condemned as unnatural and mischievous. My present purpose is to draw the attention of your correspondent "D. Z." to my method of management, differing as it does from the practice of other gardener's lately recorded in the Chronicle. To ripe fruit as early as possible out of doors I plant Seedling 18 inche port, in a row close to the boen's a south wall at a point where the pernendicular of wall forms an angle with the horizontal line of the garden soil, thereby giving the plants the be the exposure to the sun during the day. For the gent of crop, I trench, clean, and well manure the or the general the whole subsides, I draw the soil with a hoe ind ; when six inches high and two feet apart , early in into ridges when the first runners are in fit eary are planted out on these rina inches soil and the vigour of the rarieties Pines reyviring tre space than Scarlets. By December, I take the more nity of frosty weather to wheel on a quantity of half decayed leaves-scrapings from the wood yard, long dung Ma, to fill the space between the xidges; and early in May, the prunings of fruit-trees and other small loppings runners a few inches above the soil ; by this fruit and ruit is arge, well favoured, preserned pethed the and the ground is not impoverished by the growth of useless plants on the runners; the wood-sumports pevent this. Early in autumn, I remove all useless growth, fork up the soil between the rows, and repeat the mulching in tations may be kept in the highest state, Strawbery planfations may be kept in the highest state of productiveness pots, filled with rich mould, are placed in the 48 -sized pots, filled with rich mould, are placed in the bramules, of rooting, place two apart in each runners show signa them, them, place a few pebbles on the surface, which will also pots are filled with roots, the plants are shifted into the usual size for fruiting. In this way I bave never failed highly stored with organisable matter, Mands for forcirg, every respect to answer the purpose.-H. Bouters, Lce's Vursery, Hammersmith.
the Chonicle, as to the since I mooted the qucstion manure, founded on various propriety of using SaIt as Writings, where it is noted as allusions in the Sacred desolation. A corresped as an emblem of sterility and desolation. A correspondent (Mr. Brewer), ansinered ploying it. l requested own successful experience in emcolumns, to state the natum, through the medium of your of the application, the quature of his sonl, and the thequency bar, to waich he has never, to my knowledge, replied matter which I regret. The notice at \(p .427\), on disease
in Potatoes, brought the subject again to my mind. I have observed on various occasions, when the seed Potatoes are of a dry and floury texture, or what is commonly
known by the designation of "mealy Potatoes," they are very apt to produce, what, in the west country, seem to similar results and much absolute failure when the seed Potatoes had been exhausted of their natural moisture, by improper modes of keeping, by fermentation in the strength by premature growths, \&cc. Whether any of these causes operate to the production of "Bobbin Joans" in Cornwall, I cannot say; but Io meg to an old Potato-grower, who lived a series of years in the west coast of Argyleshire, respecting the application-not, indeed, of salt-but of saline matter.
My friend's statement was this :-That the west Highlanders set apart whatever portion of their Potato-ground was intended to produce the following year's seed, and
dressed that with Fucus, or sea-wrack; the effect was that the Potatoes, which grew upon that portion were so "squashy" (watery), that they were qqite unfit for the never been located near enough the sea to put the above practice to the test; but if some of the Cornish men near practice to the tesst ; would try it, they might possibly get relieved of the undesirable company of "Bobbin Joans. -Quercus. Watering Out-door Plants.- l , like your correspond-
ent "Moorland Willie" (p. 542 , am heartily tired of water-tubs and watering-pots, and have frequently experienced something like bis disappointment in the use of
them. I hope he will tell us of what his "Macintosh" them. I hope he will tell us of what his "Macintosh"
is composed, that others may profit by its application as is composed, that ot
Extraordinary Tenacity of Life in the Potato.-In March last I planted a piece of land with the Regent Potato, but having occasion to raise the ground, I had a level it in the autumn. Two or three days ago I sent a man to clean the ground, and was astonished at seeing the Potatoes, which had been buried fully 25 feet; and what was very surprising, considering the weakness of the stems, I found that tubers had been formed near the surface.-

Climbing Roses.-I have a strong climbing Rose, growing 16 or 18 feet high, in front of my house, which fiowers are only semi-double, with flimsy petals," that I intention of rooting it up. I shall, however, immediately bud some China and other roses upon it, and hope to too late for the operation. I beg to observe, en passant, that last year I put in a bud a red Rose rame uncommon white garden Rose-stock, five feet high, leaving common white garden Rose-stock, five feet high, leaving all the three sorts in hloom at the same time. This may not be new to practical men, but was quite so to me, who not be new to practical man an amateur. \(-E\).

The Mulberry.-The observations in a late Number respecting the propagation of the Mulberry, induce me to
mention a fact which passed under my own immediate mention a fact which passed under my own immediate
observation, and which appeared to me extraordinary. A observation, and which appeared to me extraordinary. A
large branch was torn from a Mulberry tree, in the garden belonging to the Widows 'Hospital, at Bromley, in Kent. The Rev. - Scott, chaplain to the institution, planted it
without any particular attention, and two years afterwards without any particular attention, and two years afterwards \(-M\). R.
Ginger.-Mr. Brown, of Merevale, at p. 557, says,
After the first 'crop of Ginger is gathered renlay "After the first "crop of Ginger is gathered replace the old sets, and they will produce a crop for seed the following year." Now, it appears that he excites his Ginger to a second growth. May I ask, When he first plants his
Ginger-when he gathers his "first" croo-and how he matures his replaced "seed" for the following season? Ginger being a great favourite of mine as a preserve, I am very anxious to obtain all information regarding it. I
have been accustomed to opposite culture these last six years with the greatest success, but still stoop to " live Potting Plants.-At p. 479, "E.C.," when speaking of the treatment he pursued towards some seeding Pelararticle "on Potting, \&sc." by me, and I would therefore beg to say a few words by way of explanation. If he takes the passage in question, which runs thusbury an inch or two of the stem of a plant is very injurious," in an isolated point of view, I grant him
some ground for his remark; but, if taken in connection some ground for his remark; but, if taken in connection
with some passages preceding it, I confess I cannot see the slightest foundation for his objection. I said, " \(a t\) its first remove from the cutting or seed-pot "" by which II mean, when a plant requires to be removed from the minute pot it was placed in-when taken from the cutting or seody texture-when it has has acquired a somewhat Woody texture- when it has adapted itself to the external it to darkness and moisture is anything but natural, any-
thing but wise. We know it is very often desirable, thing but wise. We know it is very often desirable, when
seeds by some ill-treatment become "drawn" in potting seeds by some ill-treatment become "drawn," in potting them off to bury the weak and fibrous stem to \(a\) consider-
able depth, to enable it to support itself; but this has able depth, to enable it to support itself; but this has
nothing to do with the potting of the plant, when its nothing to do with the potting of the plant, when its
stem and branches assume a more solid and woody texture stem and branches assume a mores sold and true character of the substance peculiar to the nature of its several parts.
When a seedling it conld scarcely be termed a plant, being
in fact nothing but an embryo, and had nothing, or partook very slightly, of the character of a true plant. The several
organs by which it was to absorb the nourishment from the soil, and adapt it to the constitution of the plant were certainly formed, but had not as yet become of such a
nature as to be affected by treatment, which, if the plant were subjected to it in a later stage of growth, would prove fatal, or at least materially affect it.-Tyro.
Wrens.-On the summit of an arch covered with the Laura de Voorst Rose, and within six feet of my door, is a Wren's nest, termed the "cock's nest." I could but notice with what astonishing rapidity,those little creatures constructed this nest, as it was only from three to four days from their commencing before the work was comoutside is roughly built of old thatch from a building hard by, and the inside is lined with coarse moss from the shed, The cock is the only one that appears to visit this nest, although the pair assisted each other in building it. There of the cock during the greater part of the day. Visitors have often been shown the peculiar situation of this singular nest, and not altogether without its advantages, as thas ofttimes been the means of selling plants of the abe lovely Rose.-S. Dillistone, Nursery,
Pelargoniums.-."C." blooms a few hundred Pelargo niums annually, from cuttings struck the year before in the open air, on the plan detailed by Catleugh. These are kept in small pots in a small Greenhouse throughout the winter with as little artificial heat and water as possible. In phe they are re-potted and removed into frames. As house, affording, from their irregular period of blooming, a continued succession of unbroken gaiety for three months. The appearance of the leaves is singularly healthy, but the flowers are inferior in intensity of colour and substance of petal to others so treated as to bear only a few and yellowish leaves. "C." states this fact in relation to Pelargoniums oniy. "C." must not omit to mention that
he does not use either bone-dust or liquid manure in the management of his Pelargoniums. The soil employed consists of fresh loamy turf, leaf-mould, peat from a moor August 13, 1843. part of very old stable manure. Bees.-In reply to Mr. Golding, in the Chronicle of July 1, I mentioned two things concerning Bees, which find he has noticed in the Chronicle of July 11, viz. :He supposed instinct in Bees to close their door-ways gainst their enemies, founded on what is related by pollen mentioned manner in his Work on the "Honey Bee." Mr. Golding is silent respecting the principal or leading point, - fortification à la Huber. For the manner in which "Quarterly Review" ( Honey Bee' may be considered as a standard work on our domestic Bee," and observes, "he would not be easily ed away by a 'mealy Bee story." I did not say he errors creep into standard works, for they are more likely to mislead than otherwise; for example-the writer in the Quarterly Review " seems to have been led away by a meall and reevel in a flower, like a donkey in a dusty road." One thing brings on another. I find that the same autho ity mentions some things at variance with Bee knowledge for instance, "Bees store away more pollen than they can ase, which, in its decomposition, becomes to them a sor trouble and annoyance." At one time I thought so too but now I think otherwise, and consider that a store o polien is as needful to the prosperity of a colony as that reared. The desire of Bees in storing up pollen is only in accordance with that of storing up honey, for it can only be collected at certain times, and becomes to them no nom or annoyance, when the real use of it is generany re should pollen was as valtabie as hoey, 1 question of it than they really want for honey mixed with pollen makes it into brood bread. Bees are good chemists, and of course know how to preserve it from decomposition. At p. 18, the writer in that intruded into Revew which the Bees sealed down, only round the edge of his shell. This, of course, appears very funny; but, after all, it only agrees well in instinct of Bees sealing anything giving straw hives three good coats of paint inside, a thing Which no good Apiarian would countenance, for the Bees know best what to do in this respect. Of that powerful nemy the Wasp, with which the Honey-bee has to conend, the writer remarks, "these brazen-mailed invader they very soon make themselves at home, waiking in and out in the most cool, amusing manner possible. As a natance of the extent to which these intrusions may be carried the was sent to Tintomolol Societ is July last a
 been put to flight by the burglars." A slight reflection may show that the last sentence is not correct, for only one Queen Wasp begins a nest, and of course cannot attack a hive however weak-nay, a hornet dare not attemp t. The trath is, Wasps never form their nests in Bee hives unless they are tenantless. Again the "Quarterly" observes, "Bees, like men, have their different dispositions, no that even their loyalty will sometimes fail them." He bays so, because he knew of "a hive, which having early exhausted ita store, was found, on being examined one
morning, to be utterly deserted; the comb was empty,
and the only symptom of life was the poor queen herself, unfriended, melancholy, slow, crawing over the
honeyless cells, a sad spectacle of the fall of Bee greatness." Loyalty sounds well, though it has nothing to do with this event; death put an end to the Bees because of their weakness, which also led to numbness and barrenness the queen; her being the longer-lived accounts for her Dr . Bevan "cuts the life of same writer mentions that that is, to six months, and he says, "if his account were correct, the sacrifice of their lives by stifling would not be ogreat a loss as it would at first appear." And he furher observes, their use in the second year is not so mucl for gathering honey, as for tending and nursing the young." Supposing Dr. Bevan to be correct, (and I that would not affect the plea of riving system, for their places are fill Respecting old or nurse Bees, though they may be seen with tarnished wings, yet I never could discover any that ere not able to quit the hive in search of food. In fact, Bees have too much enmity to their aged or cick to allow hem room in the hive. The writer in the "Quarterly," ike most of our Apiarians, follows Huber's belief, that the impregnation of the Queen Bee takes place in the air this most hidden thing in the economy of Bees, however wise will hardly believe Huber's statement to Bonnet iz, that "he constructed the entrance of a hive so as to prevent the Queen making her exit, but allowed free passage to the workers." If that could be accomplished why not adopt the plan to prevent the Queen eatering sid aperseding all attempts at ventilation. But the fact is ther is hardly a pin to choose betw. Bhole that would et out a worker and keep in a Queen Bee. The "Quarterly" also observes, that we are indebted to Huber for the knowledge that wax is produced from honey. This, I believe, is doubtful, and I consider that Bees collect wa from plants ; bowever, if 1 am wrong, it is excusabie, beyond the "ken of either a Farady or Liebig to discover" Speaking of or erare "I that the on recommended by Mr. Payne is too flat at top;" the com mon shaped hive, in my opinion, is more suitable for Bea question is constructed to hold another, or at least will think of the observations in the "Quarterly" respecting Mr. Bagster's "Ladies' Safety Hive," where he says "yet for aught we see, it is just as reasonable for a lady Wighton.
ruffes.-You noticed some time since the occurrence fufur Truffle (Tuber ferrugineuma, or rather, \(\mathbf{I}\) th fun in wsex. This has been sent me lately from teral new underground Corsham, from whence I have sum o Sowerby accurs in that neighbourhood in abnndance, and is wed Bath in preference to the common Truffle, under the Ba of Trufle, though it h8s 80 long been lost to botanists. It has, however, little in com mon with the Truffle in appearance or qualities. The surface is quite smooth, and the scent very like that decaying pears. The flesh is black, with fine whitish yellowish veins, and instead of being dry and brittle, n some states very juicy. The reproductive bodies no the tips of cer the lips of certain cells. It does norbeng it Me Tuber at all, but to Melanogaster. lanogaster Broomeianue, after C. E. Broome, , successful investigator of the namderground Fung successful investigator of the nnderground rung which has been adopted by Messrs. Tulasue (tor of the had communicated specimens) in the last Nome of your Annales des Sciences Naturelles. I wish some large, maca or Hampsire readers could meeh have in vall sought whe many or, and which, like the Mask botanists; an if so, that they would bave the kindness to comm. King's Cliff, Wansford, Northamptonshire.

showy blossoms throughout the whole sum roduced in comparatively large spikes, at the end of the or lnteral branches, and besides being of a handsome the principal
prettly spotted in the throat. They are somewhat like those of a prettly spotted in the throat. They are somewhat like those of
delightful little plant which is so common on our hedirc-lanks, and
therefore searcely noticed much longer tube, and are arranged with greater effect. As it
nanie asscrts, it is a Japan plant, and has bect in the nursery Messss. Rollisson, Tonting, for three or four years. ravels in Japniz. From its native country the probabilit during will be found hardy enough to cudure our winters. At Messrs. Rol Insson's it has been treated as a frame plant, and grown in a pot
amongst Alpines and such-likco specyes, being exposed through the summer months, and merely placed in a cold pit during winter. It an excellent plant for mixing with a potted collection of Alpines,
being of small dimensions, great beauty, a most liberal hloomer, lasting in flower a great Iength of time, and having lue blossoms,
which are not very common in that class. It may also be cultuvated w.the extreme ease, not being at all delicate, and simply requirmng
the commonest soil. As a border plant, however, it will attain then a higher perfection than in a pot, and may possibly prove useful for
phanting in beds or patches. These it would cover with bloons planting in beds or patches. These it would cover with bloom
througlout the summer. It can be increased by cuttings or by tially trailing shoots, so as almost or wholly to cover then e parbottom, these will most likely root in the manner of Verbenas, and may atteruards be tant or
HigNóvia picta. Streahy-blossomed Trumpet-
honse (limber.) Bignomacear. Didynama Angiospermia...This handsome species has, we find, been in British collections since tlie year 1823; but, like many of its allies, it is so shy in developing perfected some blossoms last year in a stove; and the same suecimens have flowered agnin in the present scason. The plant is by no
means of a rambing habit, for, although its branches extend to a consideralle length, it is so well clothed with evergrecn foliage as to come out in pairs, towards the upper ends. of the shoots, and are
indluzdually of a large size, beng almost three inches in breadth. indundually of a large size, belng almost three inches \(2 n\) breadth.
They are of a deep lilac or purplish colour, with a whitish throat, moproperly manazed, it is next to impossible to get \(B\), when hloom : yet if rightly grown, and suffered to reach maturity before greenhouse or a cool stove will suit it. Still, it is. perhaps the best tory. In such a situation, it only neers to be placed in soll that is not shaded, or linale to be saturated with moisture, or too far from the glass, or very dcep, or imperfectly dramed, and at will specdily
arrive at a flowering condition. 13ut, when it bas grown sufficiently large to be capable of bearing flowers, the great point with it, as with others of the genus, \(x 8\) to refrain from prunng it, and let the
branches take their natural course, unless they become too straggling. Under such management it will not fail to flower; and it matters

\section*{MISCELLANEOUS}

A/ ushrooms,-We have lately received the Gth Number of "The Transactions of the Gardeners" and Stemards"
Provident and Mutual Instruction Society of Iuther Provident and Mutual Instruction Snciety of Ireland: Mr. E. Owens, upon the cultivation of the Mustirn by Mr. E. Owens, upon the cultivation of the Nushrnom. flowing way. Hushoo in the ofen grownd, in the deep and twenty-four wide, and filled them with inches otten dung, previously prepared by frecuent turning, I an for inches deep, and six anches broad, placing the spawn about the size of a wainut, tweive inches by six inches apart in the dung in covering all with meiden over the dung on their sides, epth. I had maiden mould, about four inches in the season they naturally appear ins of hasture-fieldsand even for this period the plan is well worth a trial These beds may be made in March and August, and, if dry weather, they should have occasional waterings. In hem witheather I placed boops over the beds, and covered will be Mushriter or mats. If the spawn grows, here blanting. From the uncertainty of obtaining good crops Mashrooms in the open air, I give the preference to tivating most certain:-stable dung being one of the most necessary agents, should be prepared for that purthe steam frequent turning, so as to let off what ae term what is termed, a burning never be allowed to get turnings prevent and conn heat; in fact the frequent is the most proper counteract this. An open shed Mushroom-house long, constructed with slide 14 feet wide and 30 feet and a boarded ach end length of the house 4 feet high running along the whole length of the house. The space from the boarded passage with three divisions in the prepared ding for the heds, so that when in the boards, three at each sidectly formed, there win be six beds, beds are to feet deep at the walls of the house. The best seasons for forming the beds are spring and autumn, and then in commence with month-not all at the same period. We has subsided he irst bed, and atter the volent beating the surface, place the Mushroom spawn in it, just under asuuder and 6 inches apart ; after which the tod struck down by the back of a spade, and covered with inches of fresh maiden mould. Dry hay is then placed at which time the spawn will have sufficiently run throus the surface of the bed. We then strip off the hay, and In a copious watering from the fine rose of a water-pot. dan few days after, the Mushrooms will appear in abunthey are liable to be infected by insects. The beds left, have been describing will continue to bear from one month from the time the Mushrooms first appear; at which time or second bed will be coming into bearing; and 80 on on the surface should be removed, by which operation the thread-like substances that bore the crop will be cut down the crowns of the spawn in the dung. When the bed are dry, a layer of the same sort of material that they wer originally formed of, should be laid on them four inches eep, and over this maiden mould must be placed a is placed in the passsge, so as to cance the piorse-dung and the beds again to bear. By this mode of house ure, and from beds so constructed, a constant supply of Mushrooms may be had during the year.
More Orchidacea for Sale.-A further sale of Guate mala epiphytes is announced, and we are able to state that it will include some extraordinarily fine specimens of he rarer Guatemala species. In addition to Barheria pectabilis, there are large masses of Lælia superbiens Odontoglossums, Epidendrums, a Cattleya-like plant, and
Oncidium sphacelatum ; all in perfectly good order.

\section*{3Rebúnows.}

Dr. Justus Liebig, in his Relation to I'egetalle Physiology. By Dr. Hugo Moht. (Dr. Justus Liebig's Frues. 1843. \(\qquad\) Tubingen. In the second chapter Origin and \(N\) atain IIumus.) Liebig states, that vegetable matter is successively changed forms carbonic acid with the oxymen of the constantly air; all which forms a constant source of no tronspheric plants, which decompose both the carboni ashem for e roots, and that obtained hy the leares from the however, most certainly, was known long ago. N゙ew, L. intends to prove ( 1 . 56) that humus is unnecessary, mosphere. In derive their food exclusively from the atanteduluvian and corroboration thereof, he addaces the that its ermich repetation, and says of the former, dispense Palms, Graminex (sic .), and Ferns, could development of their foliage, as they are also distinguished L. says further, that in hot climates the succulent plants
require but a slight connexion with the soil, and develop themselves without its co-operation, in proof of which he adduces the slender roots of Sedum, Cactus, and Sempervivum. L. believes, in fine, that in lactescent plants the humidity absorbed from the air, and indispensable to their growth, is protected from evaporation by the
very nature of their sap, as humidity is surrounded very nature of their sap, as humidity is surrounded
by caoutchouc and is protected by a sort of impermeable integument! Risum leneatis, amici-exclaims Mohl, in allusion to these opinions. The assertion that antediluvian plants lived on a soil devoid of humus is so extraordinary, that M. refutes it at some length. We know, he says, that monocotyledonous and cryptogamic plants possess no tap-roots, but merely fibres, which, although they are slender, still are very numerous. The assertion, therefore, that plants with thick, branchy roots (like our trees) obtain their food from the soil, and those plants which possess fibrous ones are nourished by the air-is untenable. L. himself "considers the absorption of jnor ganic substances to be necessary for the nourishment plants; those, however, can only be absorbed by the roots." "The reader"-concludes M.-" will, I trust, not expect vegetation, which are really beneath criticism. If the lusuriant vegetation of the tropics, with their virgin forests, Palms, and arborescent Grasses, is to be typified by a ew Sedums, Cacti, or Semperviyums, and if lactescent plants are to be looked upon as surrounded by a coat of Indian-rubber ; then, certainly, anything may be proved -and, not least, the ignorance of the propounder.
Professor Liebig's third chapter, inscribed "The Assimilation of Hydrogen," proves pretty well that all which Chemistry has made out about chemical processes in the interior of plants amounts to almost nothing. L. states, and the component parts of water, or of carbon plus a and the component parts of water, or of carbon plus a certain quantity of hydrogen. Here, therefore, the very first proposition in the progress of assimilation contains of water is the more likely to take place, because water is of water is the more likely to take place, because water is the easier of decomposition; and this is plausible enough.
But what shall we thiak of the consistency of Liebig, if in all other parts of his work the decomposition of carbonic acid is considered as a self-evident fact (p.121); and leaves are said to possess powers of decomposition stronger than that of the most poweriul chemical agencies, because
they can decompose carbonic acid, which resists the they can decompose carbonic acid, which resists the
strongest galvanic battery! L. states further, that the frongest galvanic battery ! L. states of acids, of ethereal oils, (having no oxygen, and of caoutchouc, may be considered as combinations of carbonic acid with water; all, or the greater part, of the oxygen having been eliminated. This may be true in a chemical point of view, but it remains to be proved that these combinations are really formed by water and car-
bonic acid, and are not the result of other organic combonic acid, and are not the result of other organic combinations. But if the latter be the case,-if ethereal oils are formed by the mutual combination of organic sub-stances,-if they exhibit certain determined stages of vegetable metamorphosis, then the decomponic acid cannot be taken into account, because these do not exist as such in organic combinations; "and then" (concludes Dr. M.) "the process to which the above substances owe their origin is a far different one, and the ing their origin"" but is quite as erroneous as the assertion would be that sugar consists of carbonic acid and spirits of wine.
In the fourth chapter, "On the Origin and the Assimilation of Nitrogen," L. starts from the correct assertion, that even in a soil richest in humus, no vegetation can take place without the co-operation of some nitrogenous substances ; and that (as it has been proved by Boussingault) their nitrogen is derived from the atmospbere. But L. subsequently rejects the opinion (p. 65 ) that plants assimilate the nitrogen of the ail in a direct manner, and derive their nitrogen from the ammonia
contained in the rain-water (a discovery made by himself), contained in the rain-water (a discovery made by himself), in the form of ammonia, the analysis of the sap of Acorns, Birches, \&c., in which ammoniacal salts have been found. This idea is certainly the most valuable in the whole of Ls's work. But here, as elsewhere, he has been great importance in vegetable physiology. Considering great importance in vegetable physiology. Considering amount of nitrogen contained in plants, he bas entirely neglected the nitric salts, and asserts (without adducing any proof) that Borage, the Chenopodia, and the Jerusalem Artichoke, owe their nitric salts merely to ammoniaof John.

CALENDAR OF OPERATIONS for the ensuing week. niums, have attracted more attention than I anticipated. I have
reccived several letters reccived several letters lately on this subject, of which I shall
make use by-a nd-by; meantime, let us not forget the other families required for the flower-beds. There are many bad VerAmong Verbenas, take the bequire valiety of the creeping Scarlets,
or Melindres breed; then the best of the more upright sorts of the same colour, and these two will give you the cream of the
scarlet Verbenas. Then come the purples; there is scarcely a creeping one among them; but you may take the best coloured
dwarf, and the tallest among them this is sufficient for the purple colour. After that, take the pink ones in the same manner, and then the Whites- 1 wish I could say the same of blue ones.
The so called blue Verbena is like the scarlet Laburnum. Now,
 colour. Instead of niving the names, I shall wait to hear the must be dealt with after the same manner. But I must hasten to
explain one point in the culture of those dwarf Pelar goniums
which I named at the end of the last Calendar, and which are not well understood. These plants are mere weeds in the eyes of the florist, but like many old sorts, they make far better beds than the
large new ones. They are the Hybrid Pernetuals smone the Iarge new ones. They are the Hybrid Perpetalas among the
Pelargoniums; some of them are among the best for winter and early spring forcing; others have their foliage so sweet, that they are regularly forced with Sweet Briar, the Lemon-plant (Aloysia), and others of that stamp, to furnish bouquets. Hundreds of markets; this ore is also the hardiest of the family. It will stand 10 idegrees of frost in dry light soil. They are, moreover, an
anomalous race, dififering widely trom their fellows ; heir habit
is is more woody, and whle they are in butiom yon canmor that
shoot out of 500 that will do for a cutting, or that whll strike
rot il you choose to try it , all their shoots are analogous
the flowering portion on the top of the other sorts. This race i capable of hybridization only to a very limited extent, but an occasional one, with some mprovement, comes then. seen, and as they promise to drive the larger ones out of the
flower-garden in a few years, just as the hybrid Perpetual Roses are doing now with the older sorts, fishall be excused for gated to so long ox on the subject. Now, as they cannot be propa Irom April to November, and prodnce no woold for cuttings until Carly in spring, they must be taken at that time, or, what
better, a few plarts must be put into forcing early in January, from which a very large stock may be got bofore the flowern) smaliest plants should be reserved, along with as many Helio-
trapes, kpat through the and only allowed water enough to keep them alive. Abont the and put into cold frames, or some warm corner; and by a little down those out-of-doors. As many of the large Pelargoniums lately mentioned are scarce in remote parts of the country it
may be as well to mention that in sring these plants are easily multiplicd by cuttings of the roots two or three inches long, with the tops a quarter of an inch out of the soil.
kept rather dry in \(a\) close hotbed or stove.
- KITCHEN-GARDEN AND ORCHARD.

Pinery.-Shut them up in a moist heat of \(90^{\circ}\) in the afternoon, and as long as you keep them above \(60^{\circ}\) in the morning, all is
right; but as the autumn is the beest growing season, let the heat be np to \(60^{\circ}\) as a minimum, until frost and snow, with short
days, will lower it down to \(50^{\circ}\), which may be stated as the minimum temperature through the winter. never fail to show the practical gardener how matters have been managed in this house for the last year or two. I meau in those houses that are forced in March. The black Grapes are now of a
jet-like colour, with a fine bluish bloom; the white ones of a fine soft amber tint. Then the young wood is darkish brown, and She leaves perfectly green, but firmer and drier than formerly,
and the laterals \(i n\) a vigorous frowth. These signs show that the ronts are all right, that the vine has not been over cropped,
and that there 18 a fair and that there 1 al fair prospect for the next crop. Red ones, the woud is pale green, passing into white streaks; the foliage is
blotched with all colours, and dry cnough to be made into powder, and the laterals are only thread hine shoots. There are
many Vineries in the country showin both signs. I once sucand the means I used I shall state ere long
The late-sown Peas and Kidney-Beans have little time to spread their roots, and their foliage often throw off the passing
shower, so that they stand in need of occasional watering. Rows of Alpine strawberries are similarly situated, and ought ti be well watered, they should not be allowed to form rumbers at any time, their growth being difierent lom other strawberries. by dividing the plants; a few of the old plants will furnish a for this work, planting out the offsets in Nursery beds till next Taking up ONINS, and harvesting them, earthng up Cri,Rry, the Cardoons, with the watering of newly-planted out things, form the principal work wh the Ritchen-garden about this time,
or acdition to tie usual rontine of clearing the ground of weeds and exhausted crops. It is a never-failng rule to keep the ground well-stirred between rows of young crops. Spinach, Yeas, Dwar
Eeans, and late-planted Caulifowers are the only young crops now to be looked to in this way.
Asparang - This is now swelling off a heavy crop of seeds, Asparaovs. - This is now sweling off a heavy crop of seds, were made tolear be done by breaking and bruising the young shoots and teaves. The next hest plan therefore appears to be hefore their growth is over. much in need of water as Asparagas; but pondl-water is strong to reach; pour a dozen or so of large water-pots's full all round accorting to the size of the tress, and then put over them a bum
 free access to the next year's canes. From this time to the middte of Septrnaber is the best to prune trees of all sorts that are
anyways unhealthy, or of a tender constitution; ; it is also a good growths are avoided, and then no unripe wood remains to be injured by frost; the budx on the remaining branches will be more prominent by the force of the ascending sap being thus checked over before winter. For these reasons, and others that might be adduced, September
time to cut hedges

> R-GARDEN AND SHRUBBERY.

STove. " What have you to say about the bulbous section of the dent. They.disilike much water at the roots, and should not have much shade, seeing that they grow on trees grox reason is that
peopie keep them too much shaded. Another good notwithstanding the number included in this section, few of them are realy fine plants. This reminds me that this is a good time o pot such Orchidacea as require eit. Odontogiossum yrand
will be in flower with me three weks earlier than last year; it was kept last winter along with others from the highlands o Mexico, in a temperature not exceeding \(45^{\circ}\). Any woody stove-
plant now in growth should be checked a little, unless it be ConsErvatory. - The different species of Begonia are wel suited for flowering in this house, and in rooms through th
summer: they are enabled to resist the dry atmosphere in sucl places, compared with that of the stove, by the suce culencey of their stems and foliage. The Stephanotas I mentioned some time since, is now nearly done flowering, and is growing away as
freely as a Passion-flower; it was only planted out in the end of last May, but I was preparing it since this time last year, by
keeping it in the same house with the Pelargoniums. Sudden hanges
Prrs.- Early Chrysanthemums and Sávia splendens, with
some of the Heliotropes and forcing Relargoniums, should now
be put under cover in pits, to bring them on slowly. Many of
the dwarf China, Bourbon, and Tea Roses, treated in this way, would bloom through November till Christmas, when forced
Cabbage and Moss Roses will be coming in; there in sothing as a week in spring
Fho wrir-Ganden- - After so much about Pelargoniums, the
next step will be to make a selection of the best, and most distinctly coloured of the antumn fiowering Cane Heaths, for nishing the flower-garden in the lattcr part of the season. Thave been collecting materials for this scheme for the last 12 months,
and shall put them into form in due time of bedding Pelary into form in due time. Meanwhile accounts the cointry. A correspondent from st. Andrews says he has planted out his hest planted out this class for years in England, but we find some run too much to leaf; others flower by fis and starts, or flower three weexs, then grow away as long ana slight shower, or fades away under a strong sun. Selections, therefore, and not collections, under sated. Beds. of Lapections, Hartweifit and nanus, with Salvia
are want
patens, Mignonette, Alonsoa patens, Mignonette, Alonsoa, and similar plants, will now require constant attention, to cut oft the flower-spikes as they begin to
geed at the botom; with care they may bept in flower to the
end of the season. \(-D\). Beanton, Shrublund Park Gurdens, Ipswich.

should say his management of Heaths is radically bad and the fact of his being guided in his management by Mr. Macnab's treatise confirms me in this optnion, for however excellent the Ireatment recommended in that work may be for the locality
in which it was written or other places similarly situated, it is in which it was written or other places similarly situated, it is
well known to practical men that for a guide-book in the management of ifeaths it is calculated to do more harm than good. I have not time to state the why and wherefore of this assertion at present, but at some more leisure opportunity
I may state my reasons in full. Now the preventive for these diseases may be stated in one sentence, viz., keep your plants diseases may be states in one sentence, viz, keep your plants
clean, water regularly and ventilate freely, for diseases in
Heaths are more frequently induced by neglecting to do these Heaths are more frequently induced by neglecting to do these things properly than by any other cause; as if they are not
freely ventilated, they are sure to become mildewed, and if you allow them to be covered with dead flowers, heavy dew and dust, you place them under the most favourable circumstances
possible for the generation and propagation of all the insects that plants are subject to. The Scale whinch H. T.S. Speaks of
is no doubt some species of seale insect, which has been very troublesome in many coltections thus season, probably ow ing conerquent upon it, and the snbstance which looks like adthesive fsand is, is suspect, the young brood of insects before they
lave formed their coverine scale. If the plants are not mucli infested, they may be cleaned by washing them repeatedly away, as the probablity is you will kill the pants hero you clear then of the scale. Mildew is engendered by a damp
atmosphere and bad ventilation, and may be radicatecl by spriukling the plants and dusting them with suphur once a week as long as there is a speck of mildew upon them. You rust, however, persevere or you whll not conguer. Tlie drooping of

\section*{NEWS OF THE WEEK.}

The Prorogation of Parliament, after a long and busy ession, took place on Thursday with the usual ceremonies. The Queen's speech, delivered by Her Majesty in person, makes but a brief allusion to the subjects which have occupied attention during the recent session. It merely refers to the Bill for making a portion of the church revenues available for the endowment of additional Ministers in populous parishes, and mentions with satisfaction the passing of the Act regulating the jurisdiction of the Church of Scotland. It also contains the usual para graph, announcing that all Foreign Powers continue to give assurances of their friendly disposition, and of their earnest desire for the maintenance of peace. The speech then alludes to the disturbances in Wales, to the adoption of measures calculated to repress outrage, and to the inquiry instituted into the circumstances which have Ied to insu bordination and violence in a part of the country usually distinguished for good order and willing obedience to the law. It then proceeds to the main topic-the Repeal Agitation in Ireland The speech declares that it has been and ver will be, Her Majesty's earnest desire to administer he government of that country in a spirit of strict justice and impartiality, and that from a sincere conviction that the legislative union is essential to the strength and stability of the Empire, it is her firm determination to maintain inviolate that great bond of connexion between the two countries. In conclusion, it states that a demand for additional powers has not been mude, from an unwillingness to distrust the efficacy of the ordinary law, and from a belief that those who have influence and authority in Ireland will discourage to the utmost of their power a system of pernicious agitation, which disturbs the industry and retards the improvement of that country. - The business transacted during the week in both Houses of Parliament, prior to the proro gation, was mostiy or a routine character. The Chelse Pensioners Bill, the Customs Bill, the Slave Trade Suppression Bill, and the Bills for the Apprehension of Offenders in France and the United States, have become law, together with many others noticed in our Parliamentary Report. In the Lords, on Tuesday, a petition from Sir Augustus D'Este, claiming the titles of the late Duke of Sussex, was presented to the House by her Majesty's command, and referred to the committee for privileges; o that in the next session the Sussex Dukedom will no doubt become the subject of discussion. In the Commons, on Monday, Sir R. Peel said that the Government of this country regarded Espartero as de jure Regent of Spain, and that he would be received with the respect and sympathy due to his high character and nomerited misforunes. The Regent has since arrived, having landed at Woolwich on Thursday, with his wife and several of his Ministers. The Duke of Wellington, Sir R. Peel, and other Members of the Cubinet, were among his earliest vi itors. A Court of Common Council has been summoned by the Lord Mayor, for the purpose of welcoming the Regent to this country.

In France, the Opposition papers have availed them-
elves of some exaggerated accounts of aggressions committed by British ships of war at Newfoundland and Tahiti, to renew their expressions of hostility to Eugland. -In Spain, the proceedings of the new Government have caused a reaction at Barcelona, Valencia, and Cadiz, and the establishment of a Central Junta is loudly demanded by the republicans of Barcelona. The Regent has issued a protest against all the acts of the new Government, and
expressing regret that he was compelled to leave the expressing regret that he was compelled to leave the derived the powers of his Regency.

\section*{私的me Nems.}

Court.-Her Majesty and Prince Albert, attended by their suite, arrived in town on Wednesday from Windsor of the same duet which her Majesty's speech an closing the sessions of Parliament was arranged and agreed upon. After the Council, her Majesty held a Court, and gave audience to several ministers and official personages. On Thursday the Queen prorogued Parliament in person with a speech from the throne, which will be found under our Parliamentary news. The Queen and Prince Albert re Royal Highnesses the Prince de Joinville and the Duc d'Aumale arrived at Windsor Castle from France, on a visit to her Majesty, and accompanied the Queen an Prince Albert on an excursion in the Park. On Tuesday morning her Majesty and Prince Albert took their usual walking exercise, and in the evening visited St. George's Chape, accompanied by the rench Princes. Their evening, and left the Castle at an early hour on Wednesday morning, on their return to France. MonMajesty to leave the Castle, upon the long contemplated marine excursion in the Victoria and Albert yacht. not expected that her Majesty and the Prince, with the infant Prince and Princesses, will be absent from Windsor for a longer period than ten days or a fortnight. This, however, will depend, in a great measure, upon the state
of the weather during her Majesty's visit to the casst. It of the weather during her Majesty's visit to the coast. It
is understood that her Majesty will embark at Southampton, and that the Royal infants will remain at Brighton until her Majesty's return. It is also rumoured that the Queen, in this preliminary excursion, will cross over to
Ea, near Dieppe, so as either to visit King Lonis Philippe Eu, near Dieppe, 8 as either to visit King Lonis Philippe King of Hanover left towa on Saturday for Kew, where his Majesty had a dinner party on Sunday, at which the Duchess of Gloucester, Prince George, \&c., were present. His Majesty came to town on Tuesday, and was visited by the King dined with Viscount Lowther, and on Thursdas returned to Kew.
Church Preforment, -The Queen has made the following appointments to benefices in the Church of Scotland the parish of Cargill, Perth, in the Rev. W. C. Rose to Stirling; the Rev. W. Elder to the raom of the Rev. M. Forfar, in the room of the Rev. D. B. Mellis ; the Rev. J. Mann to the parish of Kiltearn, Ross, in the room of the Rev. D. Campbell ; the Rev. P. M'Kenzie to the parish of Tongue, Sutherland, in the room of the Rev. H. M. Forfar, in the room of the Rev. J. Millar ; the Rev. T. Davide, son to the parish of Abbey St. Bathans, Berwick, in the parish of Cromarty, in the room of the Rev. Hall to the parish of Cromarty, in the room of the Rev. A. Stewart; in the room of the Rev. J. Alexander.-The Queen has also boen pleased to nominate the Rev, George Pocock to the perpetual caracy of St. Paul's Chapel, Marylebone, oid by the resignation of the Rev. J. H. Caunter.
The Army. Her Majesty
The Army.-Her Majesty having been pleased to appoint H.R.H. Prince George of Cambridge to the staff
in the Ionian Islands, Major-General Brotherton has in the Ionian Islands, Major-General Brotherton has issued a district order at York, expressing the sense he entertains of the services of His Royal Highness during
the time he has been in the north-eastern district. The Major-General states that His Royal Highness was in command of the troops at the breaking out of the disturbances last year, and performed this difficult duty with General has always found His Royal Highness most zealous and attentive, and he considers it a particular advantage to the service that an officer of the exalted
station of His Royal Highness should have laudable an example. The Major-General regrets that His Royal Highness is leaving the district under his command, but states that" wherever his services may be required he will be followed by the good wishes of all who have had the honour to serve with him.

\section*{\(\sqrt{F}\) orefígr.}

France.-The Paris paper, with few exceptions, bave England in the affair of Newfoundlang the aggressions of brieny in our last, and in another alleged dispute botween the English and French ships at Tahiti. The Opposition papers comment"in severe terms on the collision with the was killed by the fire of an English vessel tutionnel observes, that even were it triel. The Constiermen were within English limits, and that warnings had meen given and disregarded, the English corvette had other meana to enforce respect for her rights than by having
recourse to the Fargument of fire-arms. He could hav
seized on the delinquents, and have had them seized on the delinquents, and have had them trie
instead of firing upon them. According to the first stor from Tahiti, the English Captain had enticed Queen Pomare on board, seduced her from French alliance made her hoist her national flag, saluted it, and when the
French threatened to bombard, the English threatened to cannonade the French. A different version has since appeared, which states that "Queen Pomare having when the French Clag, the British Commander saluted is placing his vessel between the island and the British frigate, signitied to Queen Pomare that she must hoist the
 on the English frigate st the same time, if he was not listened to. But Queen Pomare obeyed the French des Débat inunctions, and hoisted the flag. The Journa brother journalists infuse into these events. "The mis sion of the press," it says, " is to enlighten the public mind to correct prejudices, and calm old enmities; on the conWe coit does mosty but revive, foster, and envenom both world, and how having no sincere and keep them whe our first care is to treat them as enemies, to construe al their acts into insults, and to view every accidental misfortune as a premeditated insult? Let it be well under stood; nothing injures us so much in the regard of Europe and of the world as that quarrelsome, discontented, and jealous tone which we seem to assume on ever occasion and to seek every opportunity of exhibiting rice of the country, there would henceforth beno po the treaties, alliances, peace, or security",-" no possible Correction and 12 th inst. with the trial of M. Petiaux, the architect of the town, for neglect of duty in not having taken proper measures to prop up the bell-tower, so as to prevent its falling down on the 7 th of April, by which accident seven persons were killed. The principal witnesses were four the mects, who had been specially appointed to examine opinion that M. Petiaux ought to have foreseen the fall of the monument, and the Court condemned him to 100 f fine and costs. M. Petiaux immediately lodged an appeal. Spain.-From Madrid we Iearn that Espartero, the 30th ult., on board the Betis, a protest, signed by him and those who accompanied him, against all that had been done and might be done contrary to the constitution, and expressing regret that he could not obtain By permission of the cortes to leave the kingdom Baldomerre of the 16th, the Government declared Don test, deprived of their titles, ranks, employments, and decorations. The elections are now the great source of interest. The convocations are already made, and a
numerous body will very soon assemble. The Government has sent orders into the provinces that the National Guard should be everywhere and forthwith organised. A grand electoral meeting has been held, at which various political personages inculcated reconciliation and union A directing committee was appointed, and the representa Tives of several provinces, such as Alicante, Murcia assembled for the same purnose be thadrid, had also had likewise been siven in pose. Several public dinners tero. The banquet on the 11th, at the Pardo, concluded with a dance, in which General Serrano danced with th young Queen, and General Narvaez with the Infanta, her sister. On the 15 th, high mass was celebrated of the triumph of the "in the Royal Chapel, in honour sat on the throne which had not been occupied since the days of Isabella the Catholic, no Princess having reigned over Spain since that period. At this solemnity an the high dignitaries of the state, a number of General and the elite of the society of Madrid, were present. The still in a very agitated state. Although the Junta had resigned its powers as a supreme Junta, it was stil striving to retain much more authority than the Govern ment of Madrid was willing to leave it. It had not, howThe emigration in above 200 National Guards derable. General Arbuthnot, the new Captain-General had refused to recognise the Junta, and had shut himsel up in the citadel, waiting till the column marching from Uni ero, ha democratic paper, founded to overthrow Espar new Chief, Narvaez On the evening of the 13th, says, the Liberals mustered on the Rambla, and paraded \({ }^{2}\) a banner, to the cry of "Long live the Central Junta, najority" Thoderados, and down with the Queen's gallantly held for Espartero, by Brigadier Echaleca, and length submitted to the new Government, finding hopeless to hold out further, but it does not appear that Covernment troops have Junta of Saragossa, following the example of that of Bar ment for the purpose of demanding the re-union of a Central Junta. Some of the Regent's friends have made a demonstration at Cadiz, which has been declared in a state of

Portugal.-The only news from Lisbon relates to the Portuguese Governmont to allow him to land. No
new facts are stated, except that the Spanish Minister at Lisbon, Señor Agailar, who owed his elevation to EsparCabinet The against his reception by the Portuguese Condemned at conduct of the Government is generally 10th, the Regent dined on board the Formidable with Commander sir C. Sulivan. His departure from the one ship, and arrival at the other, were attended with the ships; but the \(F\) Bishop of Gibraltar had arrived at Lisbon, on a visit to hi diocese, and consecrated the British Chapel of St. George, and the adjoining burial-ground. The queen is now perfectly restored in health, and drives out daily. The Her baptisme young Princess is proceeding favourably the Emperor and Place on Thursaay; the sponsors bein sented by the resident Austrian Minister, the latter by the Infanta Donna Isabel Maria. The name of the Infant Princess is Maria Anna.
GERMANX.-Considerable importance is attached b the German papers to the journey of the agent of Do Carlos at Vienna, to Ischel, for the purpose of conferrin with Prince Metternich. M. de Flaber, who, it is said, his most confidential councillor, has at the same time
left Frankfort for Baden Baden, where the Grand Duke left Frankort for Baden Baden, where the Grand Duk Michael of Russia resides at present. A letter from the talian frontiers asserts also that Don Carlos had sen is abiration should be married to either of his sons. Sir R. Gordon the British ambassador at the court of Vienna, had also proceeded to Ischel, to confer with Prince Metternich on mposed on Britin, anauf the unfavourable condilion published. - From Berlin we learn the tariff about to be Prussia returned Berlin we learn that Prince Albert of remarkable journer his wife left Berlin for Italy on the next day. The Minister from the city of Hamburgh had arrived for the prirpose of presenting to his Majesty the address of and has been unanimously voted by the Nenate that ancient city for the timely and generous assistanc which the King yielded on occasion of the late conflagra ton. The address, written, or rather painted on parchazure, and red, is set in a ters highly colourethic goble, or winged frame, made of the scorched ak timber of the destroyed Town-hall, and ornamented with castings out of the bells of the different churches, which fell a sacrifice to the fire. The Opera-house at Berlin was destroyed by fire, on the 18th, after having stood exactly 100 years.- The commission appointed by the King of HanHanover joining the Customs Union has unanimously declared against such a step, and at the same time the declared against such a step, and at the same time the
Bavarian Diet has passed a resolution to petition the King to use his efforts for the purpose of persuading the King of Hanover and the Hanse towns to join the Union. ITALY:-The Inquisition of Ancona and the neighbouring districts along the shores of the Adriatic, have issued an Edict against the Jews in that portion of the Papal State The terms of this decree are so severe that they have atracted great attention on the Continent. The prescribed in the enjoned under the pitan of Rome:"1 Ene Edicts of the Supreme Inquisition date of this day (24th June), all Gipsy and Christian domestics, male and female, whether employed by day or (Jewries) , must be dismissed from service in the Guet are eas), and Jews resiang within our jurisaictin nurse, or availing tian in any domestic occupation whatever, under pain being immediately punished according to the pont decrees and constitutions. 2, That all Jews who may possess property, either in town or country, permauelvin share in or rents or interest, or any rigat inty, mus within the anded property or leased landed prop dispose of it by a positive and real, and not by any pretended factitious, contract Should this not be done withia by time specified, the Holy Office is to sell the same public auction, on proof of the annual harvest bet n. 3. That no Hebrew nurses, and still less any he their amily, shall inhabit the city, or reside in, or rem Ghetto property into any town or district where there is (piace of residence for Jews); and that such return to their respective Ghetto within the peremptory period of six month according to the tenor the especialy in any city where there is a Ghetto, no Hebrew must presublicto associate at table with Christians, either in in in houses or ordinaries, out of the Ghetto. 5 . Sut of the city which has a Ghetto no Hebrew shail sleep out milia Israelite quarter, nor make free to enter into Hebrem conversation in a Christian house. 6. That no 1ever, to shall take the liberty, under any pretest wbaterstians induce male Christians, and stin the Ghetto. 7. That no Hebrew whin he bodadations even only by the day, Hebrew shall hire Chist Chetto. 8. That no Hebrew ither male or female, shall frequent the houses on Christians, or maintain friendly relations men and women. 9. That the lawsed by the Hebrew respecting the decorum to be obe their Ghetto, to trave who may absent themselas all Hebrews are . or books of any kind, and from purchasing, reading, or
keeping possession of prohibited books of any sort, under the penalty of 100 scudi and seven years imprisonment and they who have such articles in their possession mus and in case of failing to do so, they will be subject to the above-mentioned penalty. 11. That the Hebrews, in conveying their dead to the place of burial, shall not observe any pomp or ceremony, and must especially abstain from singing psalms, or carrying torches or lighted Ghers through the streets without the boundaries of the and suffering other punishments, to which the nearest reatives or the deceased will be condemned." It is stated from Rome, that the Pope is determined to put an end to the "nefarious transactions" of his Jewish subjects, and that the Ancona ordinance is only a precursor or
more severe measures. There are some fears of political disturbance in South and Central Italy. Neapolitan officers have been recalled to their duties, and the Prince of Palermo has gone on a mission to Paris. Every precaution has been taken at Bologna and along the Po. These, with other lcircumstances, indicate rather a con spiracy which has failed, than one likely to break forth.

Turkey and Persia.- Constantinople letters of the 2d inst. state that the conduct of Wuscitsch and Petroniewitsch had caused considerable embarrassment to the Government, as they pretended that their departure would be the signal for disturbances, and that the people would oppose their departure. Baron Lieven proposed to proceed to Kragojewatz, where preparations were making to convoke an assembly of the people on the 8th inst.-A long statement has appeared in the daily papers containing a narrative of Saaleh Mahomed, one of a family at Herat which has been employed on various services by the British political agents. Saaleh Mahomed states that Major Todd directed him to join Capt. Conolly, and that he accordingly accompanied that officer and Col. Stoddart to Bokhara. After recounting the seizure and confinement of the whole party about December, 1841, he states that he and other servants were led ont to execution, that his own life was spared, but that the others were murdered on the 10 th June last year. "The next morning," he says, "a secret message came from Capt. Conolly, saying he had heard that I and anlahdad Khan had been killed, and that he was full of me to remain in Bokhara, that an English cantlemen (Mr, Thomson) had yone to Khiva, and that he (Capt Conolly) had contrived to send Hoossein Leng the Heratee, to Khiva. When I afterwards went to Khiva, Heratee, to Hoossein had actually gone to Khiva, but found that after the departure of Mr . Thomson. On Suaday or Monday the Ameer sent to Colonel Stoddart and Capt. Conolly certain letters from Cabul, which had got into the Ameer's possession seven or nine months before, the con-
tents of which the Ameer desired to know. This \(I\) heard from Syed Hich the Ameer desirec to know. This heard had Shed Hoossein, the brother of the Topchi Bashi, who had charge of the two offcers. The Ameer sent at the same time a message that he would rree them in a few days, and told them to be of good heart. On Tuesday, at night, their quarters were entered by several men, who stripped them, and carried them off to prison; but I do other. In stripping Colonel Stoddart a lead pencil was found in the lining of his coat, and some papers in his waist. These were taken to the Ameer, who gave orders that Colonel Stoddart shonld be beaten with heavy sticks until he disclosed who brought the papers, and to whom he wrote. He was most violently beaten, but he revealed othing ; he was beaten repeatedly for two or three days. On Friday, the 8th or 9 th (the 7 th) of Jemmadee-oolEovel (17th of June) the Ameer gave orders that Colonel Stoddart should be killed in the presence of Capt. Conolly, who was to be offered life if he would become a Mahomedan. In the afternoon they were taken outside the prison into the street, which is a kind of small square. Their hands were tied across in front. Many people assembled to behold the spectacle. Their graves were dug before their eyes. Col. Stoddart exclaimed aloud at the cruelty and tyranny of the Ameer. His head was then cut off with a knife. The chief executioner then turned to Capt. Conolly and said- 'The Ameer spares your life if you will become a Mussulman.' Capt. Conolly answered, ©Col Stoddart has been a Mussulman for three years, and you have killed hina. You kilied Yoosoof, to o die.' Saying which he stretched forth his neck. His head was theng graves which had been dure and I myself have seen the spot and the small hillocks which mark the place. One the executioners gave me the foregoing relation, and, that I nighe offered to bring me the heads, if I chose, He i might take them with me, but I refused this offer. To this concludes with an account of his own escape. Teheran, has added Col. She following testimony under his own signature, dated Teheran, Nov 23, 1842. "Besides the internal evided Teheran, Nov. 23, 1842. "Besides the narrative, I wish to add that the appearance and manners of the Ais wish to add that the appearance and manders possessing young man, contribute highly in strengthening impression in favour of his veracity
United States.-The packet-ship Europe arrived at Liverpool on Tuesday, bringing news from New York one day later than the Caledonia; and the Independence arrived on Wednesday with news 6 days later than the Europe. The ammercial accounts are in substance the same as the last rioval, and the papers contain little which was not premiusly known. The case of Mrs. Gilmour, charged with Mrucering her husband in Scotland, is still undecided. Mr. Fox, the British Minister, has formally demanded
her from the United States Government. Her counse repaired to Washington immediately, for the purpose of
meeting the demand by objections in the highest quarters and the result thus far is, that the whole case is referred to the Attorney-General of the United States. No order, therefore, for a delivery of the prisoner to the British gives his opinion in favour of such a course. In Canada, a Mr. Thomas Kinnear, a Scotch gentleman of good family in housekeeper was also murdered. The murderer fed but was captured near the Falls.
was also murde

\section*{Glarlíament.}

Saturcay.-The Chesease Pensioners Bill and the Trish Charita-

 next session,-LLord Brougisan, in making a formal motan and the Judicial Committee of the Privy Council, took occasion to praise law, pointed out the necessity for a complete digest of an index to the criminal law, and expressed his satisfaction with the mea-
sures for impovine the law which had been passed during the present session. -The Lord Chancrlior joined in the eulogium on the Criminal Law Commissioners, and added a compliment to Lord Brougham for his Jabours on the Judicial Committee of the Privy Council.-Lord Campbell. joined his testimony with ments on Lord Brougham's "satisfaction" with the amount of the law reforms of the session.-Lord Brougham retorted, vindicated himself from the charge of ignorance brought agaiust him
for his Slave Suppression Bill, the authorship of which he assigned to his Slave Suppression Bill, the authorship of which he assigned Courts bill, the County Courts Bill, and the Factories Bill, mainly BBiL reminded the House that the opposition to the Irish Arms Bill had been the cause of its being very materially amended and
improved.-Lord Monteagle also remarked that the Factories Bill would have failed if the Arms Bill had never been heard of,
The educational clauses fell before the opposition of the masses out of doors. - Lord Brougham said it was the opposition not of
masses, but of sects; to which Lord Montrache replied, that here were at least two Lord Wharncliffe, in laying a pile of papers on the table, opinion that the Lord Chancelior of Ireland had acted perfectly
right in dismissing the noble Earl fron the commission of the peace.-The Lord CFANCALLOR concurred in thisopinion, which he said he had derived from a perusal of the documents.-The had been impelled by some other force than a perusal of papers
into this tardy vindication of his colleague, the Irish Lord Chan-intlor.-The Earl of LUCAN complained of the conduct of the Government towards him, and charged Lord Wharnclife wers,
trickery or evasion in delaying the production of the papers,
with the view of defeating the chance of a fair discussion of his case before the session closed. - Lord WHArNGLirfe indignantly Broustan strongly censured the conduct of Lord Chancellor
Brouen which was definded by the Duke of Wighivaton, and Sugden, which was defended by the Duke of Wibilivaton, and
after some general conversation the subject dropped. The rest of the evenine was spent in disponing of the business betore the House, various bills being carried through certain
stages, or passed. The Customs Bill, which stood for third reading, raised some discussion, - Rarl STANHopr animadverted Parliament at a late period of the session, and censured those approve of. He opposed the grounds on which the unrestricted
exportatlon of machinery was defended, and showed the results exportation of machinery was defended, and showed the results
that would flow from this free-trade measure, as well as from the admission of the corn of Maine into this country as colonial produce. The noble Earl moved that the Bill be read a third time
that day three months, -Lord Monteagle supported the exportation of machinery as a measure which gave an additional argument for demanding a free trade in corn. He pointed out the
difficulty there will be in refusing to Sweden and other countries, with which we have reciprocity treaties, the same commercial advantages which this Bill gives to the United Srates through MONT, the amendment of Lord Stanhope was negatived withnut a division, and the Bill was read a third time and passed.- The Irish Poor Law Bill, the Irish Exchequer and
Hons Bills, were read a third time and passed
Tu'sday.- The Rnyal Assent was given by commission to the Custums Duties Bill, the Cathedral Churches (Wales) Bill, West
Iudia Iglands Relief Bill, Episcopal Functions Bill, Mintia Pay Bill, Apprehension of Offenders (France) Bill, the Apprehension of Offenders (Amcrica, Bind, China Government Bill, Atorneys and Solicitors 13il, Writs of Frror Bill, Warrant of Attorneys Bull, Hackney and Stage Carriage Bull,
Copyright of Designs Bill, Coroners' Duties Bull, Theatres ReguCopyright of Turnplke Acts Bill, Coalwhippers Bill, Affidfavits, \&c. (Scotland Rnd Ireland) Bill, Arms (Treland) Bull, Grand Jury Preentments (Ircland) (Ireland) Bill, and several private Bills. The Bull, the Muncipal Corporations Bull, hand the British Iton Company Bill, were read a third time and passed. -A petition was
read from Sir Augustus d'Este to her Majesty, "claiming to be Duke of Sussex, carl of Inverness, and Baron of Arklow, and prayit of summons to pass the Great Seal, to summon the petitioner to sit in Parliament, and there to cnjoy the rank and privileges
to the sard titles, dignities, and honours belonging." This petition was presented to their Lordships by her Majesty's command, together with the report of the Attorney-General thereon. It was
read and refe
and report."
Lord CAMP
Lord Camprrll, in moving that their Lordships agree to the mill, while regretting some of those amendments, expressed his Bil, what the Bill would still have the effect of putting a stop to
hope that certain disreputable newspapers which now only existed by publishing, or threatening the the truth the greater the libel," was now maxim of, "the greater truth would now be admitted, and the Jury put an have to say whether it was for the public gond that the
would have imputation was cast on the plaintiff. If it were proved to wantur and maincious, the pryblic bencfit, then they would say it were proved that defendant was not guilty...The Lomp Cm. supported the Bill, and the Commons' amendments were agreed passcd, after an ineffectual attempt by the "Marquess of ClanRICARDE to omit the 47 th clause. The Commons amendments to moved for returns relating to the operations of the Poor Laws,
and stated his object to be, to suggest whether the Government might not, among themselves, agree to exert their influence in
procuring some extension of out-door relief; and next to suggest the propriety of Govermment calling on the House to grant, next
session, a select committee to inquire generally into its opera-tion-E Earl STANTrope supported the mition, which was agreed.
to, and their Lordships adjourned until Thursday. to, and their Lordships adjourned until Thursday.
Thursday. - About 2 o'clock this day her Majesty
Thursday.-About 2 o clock this day her Majesty arrived at the
House in State to prorogue Parliament. The House was crowded Ho every part; nearly all the foreign ministers, were present.
The sound of trumpets indicated her Majesty's arrival, and, preceded hy heralds, and sirrounded by her court, her Majesty
entered the House, led by Prume Abert, and was conducted by him to the throne. The Duke of bucclengh carrete, and Lord Wharncliffe carried the cap of maintenance. The Duchess of Bucclengh and Lady Dunmore aticuded
Majesty's entrance, every person rose, and after she had taken her seap voice, bade the lords and gentlemen be seated. Her
in a low
Majesty looked well. Prince Albert, who was dressed as a fieldmarshal, also appeared in good health.
The chair of the Prince of Wales was placed on the right of that of her Majesty, and at an equal distance on the left, and on the
same platform as the Prince of Wales's chair, but lower than the throne, was the chair of Prince Albert. few minutes the Speaker, accompanied by a consideralle number of members, came to the bar. The right honourable
gentleman immediately addressed her Majesty on the usual gopics of detail and finance. The royal assent was then given in Bills for the service of 1843 , and for grantir,g relief to the West Indesamaion and Libel Law Amendment Bill, the Foreign Juris. diction Bill, the Bill for more effectually Suppressing the Slave the Bill for Appointing Commisisioners to inquare uto Bribury at
Sudbury, the Public Notaries Bill, the Chelsea Pensioners Bill Sudbury, the Public Notaries Bill, the Chelsea Pensioners Bill,
the Poor Relief (Ireland) Bill, the Charitable Loan Societies (Ireland) Bill, the Municipal Corporation (Ireland) Bill, the
Liverpool Fire Bill, the British Iron Company's Bill, and Westen's Her Majesty then read, in a clear firm voice, the following
speech, laying a very marked emphasis on the passages relating to Ireland -
"The state of pablic business enables me to close this protracted mentary duties.
"I thank you for the measures you have adopted for enabling me Foreign Powers.
"I have given my cordial assent to the bill which you presented to me for increasing the means of spiritual instruction in populous parishes, entownment of additional minucters. I confidentlo trust that by the zeal and liberality of my subjects - and that belter prowision
will thus be made for pulhic worship, and tor pastoral supernntend-\(-2=\) doubts respectule thefecturisdiction of the churcle of Scotiand in the
admission of ministers, and for securing to the peop admission of ministers, and for securing to the poople and to the
courts of the Church the full exercise of their respective ri, thts. It is my carnest hope that thas measure will tend tei restore religious
peace in Scothand, and to avert the dangers which have theatened a
sacercl institution of the utmost sacred institution of the utmost imp,
welfarc of that part of my duminons.
fricudentinue thy receive from all Forign Powers assurnnces of their perce. "Gentlemen of the House of Commmen ,
"I thank you for the readiness and liberality with which you have olject to comhine a strict repard to comomy with the consideration
which is due to the exicencies of the public service. My Lords and Gentlemen, the public peace has heen inter rupted by lawless combinations and disturbances, unconnected with
polhtical causes. I have adopted tice measures which I deemed Lest calculated tor the repression of outrage, and for the detection and
punivliment of the offenders. I have at the same tmee drecterl an

 subyects in Ircland, and to excite them to demand a Rep eal of the o admmaster the Guvernment of that country in in sprit of strict ing such amendments met the existing laws as mary tend to mprove
the social condition and to develop the naturnl resiurces of Ircland, esential to the attainment of these objects than to the strength and tabilty of the empage. it is my firm determination, with your suphave forborne from requiring any additional powers for the counteras well from my unvillungness to d.strust the ctficacy of the ordi-
nary law, as fron ny relinuce on the good sense and patriotism of nyy people, and on the solemn declarathns of Parlament in support
of the I.egislative Thnon. I feel assured that those of my faithiful subjects who have influence and authornty in Ireland wil discourage,
to the ntmust of thicy power, asystem of pernicrous agithtion, which and exas the mindustry anmand distrust and anmosity between difCrent classes of my people."
At the conchusion of the Speech, the Lord Ciancellor, by her
Tajestr's command, then declared the Parriament prorogued to Thurstlay, October 1uth, to which time it accordingly stands pro-
rogned. The speaker and the Commons retired, nnd the ladies and
gentlemen who had crovded the House soon separated; and thus gentlemen who had crowded
concluded the session of 1843.

\section*{HOUSE OF COMMONS.} Monday, - \(A\) new writ was of Mr. A. Camphrilt, uho has accepted
for Argyllishire, in the rom ond
the Chistern Hundreds; and some additional discussion took place on the Slave Trade Suppression Pill. Mr. HiNnafy w, thdrew his
notice for paners relative to the ofenpatinn of taht, by the French,
on an assurance riven by Sir R. Pecl that a commumeation was in progress wheh could not be produced.
In answer to a quistinn pult by Mr. BonTn
reception the Goternment would give to Fspartern, Sir Re Pe the reception the Goternment would give to Espartern, Sir R. PEEL
stated that he regarded Espartero as dr tur, Thegrite he had ceased to esercise the functions of that ottice de fucth, and
that he should be recewved in this country with the respect due to his tune. He would take that opportumpy of stating that no disposition this country to depart frum that hangh tone which the Sflanish
Government ought to adopt in its intercourse with other nations.
There There had been no one single act done by Fspartero in conduch, ing the
diplomatse clators of Spain mith this conntry at ranance with, hat
paramount duty whinch he owed to nix own. He did not beleve the paramount duty which he owed to nis oun. He dod not beleve the
reins of power had ever been placed in the hands of one who entertained a more sincere demre for the independence of his country.
The accusations against this country of having interfered with the
 Government was inclined to recognise it as a Government d
jure.- Sir R . PERL said, that, in declining to answer tlie question
he would

 prejudiced.-In reply to Mr. Hawzs, in reference to the pro-
priet of. decoraty the new Houses of Parliament with stu-
tues of distinguinished persons, Sir Robert Psize, said the house would probably recollect that there had been some thiscussion
on the subject a few nights ago, and the hon. (eentleman had propesed that commissioners, apponited to the partuctleman duty o inquiring into the best mode of encouraging the arts in connec-
tion with the bilding of the new Houses of Parliament, should be empowered to consider whether it woud be a advisable that statues, or other recorvis of puble gratitude to persons who ha
disturguished themselves in literature, science, and the arts, shoul be placed in them. He (Sir R. Peel) rather objected to giving a
general power to the commissioners, but said at the time that hic gencral power to the commissioners, but said at the time that hc
had no objection to authorize them to ascertain whether there was any part of the edifice now being constructed for the two
houses of Parliament which could with propriety be appropriated to the reception of such statues or memorials, and if they
were of opinion that any part conlld be bo appropriated, that they should have funl powers port consilder be 80 appropriated that the of attaining the double object of raising a lasting record of pullic
gratitride to distinguished persons, and, at the same time, encou
 mace, hy giving to the commissioners full power to consider
the question. In reply to Mrs EWART, as to any probability
of the cathedrals being thrown open to public inspection, Sir R. Prers said he had no ruthority in the matter, and could only express his nwn strong opinion in reference to it. He could only
state that, for the purpose of protecting property from any injury
which which might arise from the admission of the public, the governtheir power, to obviate the objections that hari been marde to the
suggestions on the subject; and he should have thought, after the example of throwing open the cartoons without charge, from which not the slightest injury had arisens, it would be considered
that free access might be allowed without the appehension any mischievous corsisequences, and that where the admission was
unrestricted, the public would themselves act as a police, as was exemplifed in the cases of the British Museum and the Cartoo The usher of the black rod then appeared at the table and dellVered the Queen's command for the immediate attendance of the
House in the House of Peers. The Speaker, attended by the House in the House of Peirs. The Speaker, attended by the
members present, forthwith proceeded to the House of Lords, and on their return the right hon. gentleman read at the table, the

\section*{Flletropolis and its Fícimity.}

Prorogation of Parliament.--On Thursday, \(\overline{\text { St. James's }}\) Park and all the avenues along which the royal procession passed for the prorogation of Parliament, was crowded suite left the Palace at a \(\frac{1}{4}\) before 2 . The corsty and sisted of five royal carriages and six, which preceded the The Queen sat with Prince Albert on her left, having the Duchess of Buccleugh and the Master of the Horse oppo site. The escort consisted of Life Guards, under the command of Colonel Reid. Upon the state carriage issuing from the marble arch, the band of the Blues struck up the tune of "God save the Queen," which was responded to by the cheers of the populace. As the renewed along the whole line to the House of Lords Her Majesty on her return was also loudly cheered. Seizure of a French SMerchant Vessel by an English
War Steamer.-On Thursday afternoon intelligence received at Sheerness that the Cyclops war steam-resee had captured at Cork a French merchantman having a quantity of fire-arms on board, and proceeding to the coast of Ireland.
The late Destructive Fires.-In addition to the deswithin the space of a few hours, in the rery metropolis. One of them was attended with the loss of ive lives, and altogether there has not been such a series Tooley-street, briefly mentioned \(\begin{gathered}\text { years. The fire in }\end{gathered}\) extensive. It broke out in the premises of Messrs. Ward
, Was the oilmen, near the entrance to Topping's Wharf. Before the engines could be got into play it had extended to the buildings of the wharf, and to the tower now used as Watson's telegraph. The latter took fire about 3 o'clock, and about the same time the roof of the church of St. Olave's, Southwark, which joined the east end of 'Topping's nar, look fire, ar. which time the excitement in the aeighbourhood was beyond description, all persons
being most anxious that the church should, if possible, be preserved. The hose of the County engine which the flames had penetro the body of the church, which the flames had penetrated near the organ. Other branches of the brigade engines were also taken into the building, bat, notwithstanding the exertions of the firemea and the parochial officers, they failed in attaining that object, and in a very short time the fire reached the belfry and flame burst forth. By \(60^{\circ}\) clock no portion of the building but the bare walls was left standing, and the attention of
the firemen was mainly directed the firemen was mainly directed to prevent the flames
extending to the adjacent extending to the adjacent wharfs and warehouses, several ultimately successful, the danger; but their destructive element being confined within the limits already described. When the fire broke out there were several coasting-vessels lying alongside, some loaded and ready to sail at daybreak ; sensible of th some difficulty that the crews could placed. Many of them which they and thei tossel were craft in to the centre of the river, beyond the reach of the are ; but four were aground, and, it being low water, were
consequently immorable. These were the Fleece, schooner, of Exeter; the schooner Cornwall, of Truro The The crews mounted the rigging, and for a length of time but the flames rapidly increasing soon forced them to quit their situations, the hapreasing soon forced them to quit lives were in jeopardy. towed away, but one, which was iying alongside the wharf, was burnt to the water's edge. By this time the concourse of persons attracted by the extraordinary light in police had to was immense, and the auty the was ardua in perform in keeping the pressure back was arduous in the extreme. From all the bridges, which the fire could be distinctly traced. The numerous towers and steeples in the metronolis and the houses and wharfs which lined the river side were perceised and whar distinctness than in the noonday sun; St. Paul's and the Monument had a most beautiful appearance, their summits seemed as if sheathed with the brightest copper. The fames at intervals rose to an immense height, and there was not a portion of the metropolis which was not brightly far as the eye could whole scene along the Thames, as the illumination, an appearance brilliant beyond description. The extent of the damage is as follows :-The destroyed, with the contents, in Tooley-street, totally turpentine, and other inflammable articles. Insured in the Sun Fire Office. Loss said to amount to 10,0001 Messrs. Scovell's premises, Topping's Wharf, totally bisted of numerous warehouses, filled from the base conto the roof with valuable property of various descriptions from all parts of the country, no portion of which has been saved. Amongst other property destroyed were 200 and of paper belonging to a west country manufacturer ; Sir R. Dundas, of the Lowestoff ammonia belonging to is burned. Messrs. Scovell estimate their loss at 20 , 0001 a great portion of which is covered by policies in the portions. St. Olave's C'hurch Offices, in nearly equal prono portion of the edifice remaining but the walls and the pews in the body of the Church, which are all greatly The interior of the tower has been entirelyg of the roof. the remains of the bells church underneath in broken lying in the porch of the insured to the extent of 6,000 l. in the Phoenix Fire Office. All the sacramental plate, and other parochial muniments and records, have been preserved. In addition to the above, the Telegraph Tower, and several other buildings of done to the ce are destroyed, which, with the damage dane to the shipping, will swell the total amount of the fire to still burning, on Saturday morning, the rite of matrimony was solemnised by the Rev. Mr. Kennev, the vicar nuder old The bridegroom, in the first instance, was a standing. about sixty years of age, and the bride whout airty of age, and the bride about thirty, while After the fire, Mr. Braidwood stated that he thought he might have saved the church, but, at that trying moment, being a pubicc servant, it was a matter of pounds, shillings, is whol whim. If he had attempted to have brough Fenning's-wharf must the church, the warehouses and abandoned the church, which is insured for \(6,000 \mathrm{l}\)., fo the purpose of saving premises worth at least between
\(300,000 \mathrm{l}\). and \(400,000 \mathrm{l}\). There were, hower, engines playing on it up to the very last moment, and ander all circumstances, he and his men did all they could to save it from destruction. The property destroyed and damaged is insured, and the amount of insurances are ,0001. be as follows :-Sun Fire-office, 9,000l; ; Union, henix, 6,000 ., Aura mori. Yotal, 25,000 . was raging at Topping's Wharf, at its greatest height, an other fire, altended with a melancholy loss of life, took place on the premises of Mr. Newberry, Fetter-lane opeaive chemist and firework-manufacturer The first alarm given to the neighbourhood was the report of a lond explo son, and on the police running up the lane they found the sop front and all its contents completely thrown into the street, and flames bursting forth with extreme fury. After the lapse of a few moments they discovered Mr. Newber'y getting out of the second-floor window, who cried out to rder to sidered the most availableely, however, had the core he suddenly precipitated himself into the street and fell on his precipita up the unfortunate road. The police instantly picked had received such \(\mathrm{m}_{\text {, }}\) when his dying moments re to Bertholomes Hospital. buts. He was conveyed to Barthoto exist Within a few min hes arr Mr. Newberry lad jumped from the windom, at the window, several this time a lare number of persons had assembled, who state that the cries of the females for help were painful in the extreme; but explosions of estructive character constantly taking place, conte with fire works shooting from the burning building in all directions, and other combustibles blazing forth kept the police from rendering any assistance at the risk of losing their own lives
appeared, and were not alterwards seen, the whole of them perishing in the flames. A short time before the engines could be got to the spot a large quantity of gunpowder xpluse in Burtlett's passage occasioniug great destruction f property, and throwing the inhabitants into a state o the greatest confusion. The house Fe Feter-lane was Mr. Newberry, Mr. and Mrs. Rose, Miss M'Crindell, and Miss Eliza M'Crindell. This party were to have embarked or Ramsgate in the morning, and had made preparations accordingly. Mr. Rose was for many years a clerk in the Law institution, Chancery-lane; Me has a accident suffered amputation. Miss E. M'Crindell left her lodgings in Gough-square, on the previous evening, and slept in Fetter-lane, in order to be in time to see her sister off to Ramsgate, and thus fell a victim to the but only two of the bodies could be identified. After a long inquiry the jury returned a verdict of "Accidental death," at the same time expressing a hope that the fire ladders in future would be placed in such a situation that they could be more readily brought into operation, it being clearly proved that the fire-escapes could not From the evidence at the inquest, there appears to be no doubt that the explosion was caused by the fal of some bottles of fulminating mercury, which are supposed to have been thrown down by the cats in the premises ; and it will be recollected, that a atal accia a explosion of thime since at Apothecaries the fire was raging in Tooley-street, and the blazing embers were liter Ally falling in showers upon the High-street, a consider able piece of ignited timber fell into the chimney of the The engines were speedily on the spot, but the flames were not extinguished before considerable damage had been done.-The first fire on Friday night broke out in the rear warehouse of ment. The damage done was very great, but the flames were prevented from extending to the adjoining houses.-On Saturday night, while an experiment was making with Robinson's night signals for ship. ping, from a skiff on the river off St. Katharine's-dock8, some of the combustible materials of which the signal lights are made, accidentally ignited, and instantly set the skiff in a blaze. The persons in it, to save themselves were with great difficulty saved from drowning, with the exception of one young lad who was carried away by the day night a fire broke out at No 14, Cambridge On Sunnew and unoccupied house filled with planks and flooring The flames communicated to the adjoining house at the corner of Norfolk-crescent, but were ultimately subdued. of accident, and a reward of 100 l . is offered for the apprehension of the incendiary. - On Tuesday morning a destructive fire broke out in the oil and varnish manufactory belonging to Messrs. Wentworth, floor-cloth manufacturers, at Old Ford West, within a short distance of flames made rapid progress, and in the space of the minutes after the discovery, every part of the building, which was composed principally of wood, and about fifty feet long by thirty wide, was one burning mass. The On Thursday morning a destructive fire broke out in the extensive warehouses of Mr. Mandeville, hemp and cane merchant, Kent-street, Borough. The warehouses are 130 yards in length, and from the combustible nature of the same morning a fire broke out in the premises of Mr . Bourne, a cooper, in the Cornwall-road, Lambeth. It Bourne, a cooper, in the
spread so rapidly that Mr. Bowrne and his wife threw themselves out of the window, and were severely injured. The premises were consumed. the Pluton French war-steamer arrived at Wad morning the Prince Jo Joinville, and his brother, the Doolwich with attended by the rchimede and Napoleon wic d'Aumale, in the French service. Their Royal Highnesses, on leaving the Chateau d'Eu, near Dieppe, proceeded in the Pluton to Boulogne on Friday, and the next day sailed for Calais, to review the troops and National Guard. On leaving Calais, they sailed for Dunkirk, and arrived there on Sunday, making but a brief visit. On the departure of their Royal Highnesses from that port, they sailed direct for this country. The Pluton was detained nearly two hours in the Downs before a pilot came on board, and it was determined that the steamers should anchor for the night off Chatham. Their Royal Highnesses consequently remained on board at Chatham until Monday morning, and arrived at Woolwich about 9 o'clock, under a royal salute from the Artillery. The Princes landed shortly the Dock-yard authorities and the officers of the garrison. They left Woolwich immediately for Windsor Castle on a visit to her Majesty, escorted by Lord Hawarden and Capt. Seymour. On Wednesday morning their Royal Highnesses left Windsor Castle and arrived at the terminus of
the Great Western Railmay, at Paddington, at ten minutes before eight, with their suite. They entered two of the Queen's carriages, which were in readiness at the
station, and proceeded to the French Embassy, in Manstation, and proceeded to the Frencli Embassy, in ManPaul's Cathedral, and afterwards paid a visit to the Duchess of Gloucester, and Prince George of Cambridge. The Princes thes proceeded to Buckingham Palace,
where they took leave of Her Majesty and Prince Albert returning to the residence of the French Embassy, Highnesses dined with the French Chargé d'Affuires. On Thursday at an early hour they left town in one of the Watermen Company's steamers for Woolwich, and breakfasted on board the Pluton. They then landed under a royal salute, and minutely inspected the dockyard and arsenal. They partook of a luncheon at the soon after which the steamers took their departure for Havre under the customary salutes.

Arrival of the Regent of Spain.-On Wednesday, H.M.'s steamer Prometheus arrived at Woolwich, having on board Gen. Espartero and his suite. Sir F. Collier, Superintendent of the Dock-yard, immediately went on board, and on the part of the Government assured the Regent that every accommodation, both to himself and his suite, would be most gladly rendered. Sir F. Collier also informed his Excellency that carriages for the conHis Excellency, however, declined the offer, having preHiously arranged to embark in a small steamer for Hungerford Wharf, where the carriages of the Embassy would be in attendance to receive him. He added, that he wished his visit to as private as possible. His Excellency conversed in the French language for some time with Sir F. Collier, and took occasion to express in the most unmeasured terms his gratitude for the extreme kindness he had experienced from the British authorities from the moment heplaced his foot on board the Malabar ship-of-war
The Duchess of Victory and Donna Eledia Espartero, The Duchess of Victory and Donna Eledia Espartero, the Regent's niece, also expressed their acknowledg ment. Despatches were'm meedal Woolwich. Lord Bloomfield Coment of the Royal Arsenal, arrived at the dockyard shortly after twelve o clock, and went off to pay his respects to his Excellency. Shortly before two, a steamer belonging to the Watermen's alongside the Prometheus, for the purpose of receiving his Excellency and suite, and baving taken the whole of them on board, proceeded to Hungerford Wharf, where car riages were in waiting to convey the noble exiles to Mivart's hotel. The Prometheus left Jisbon on the 12 th for Bayonne, and finding on arrival there that the Duchess had previousiy let for Havre, the Regent pro under airect to Falmouth, wher strea guard-ship in th port. He merely landed for a short time near the Qua rantine station at the East-end of the harbour, and expressed his desire of proceeding at once to Havre for the Duchess. Captain Ellice, however, could not grant permission for the Prometheus to go to a port in. France, but ordered the Commander to sall for Portsmouth to confer with the Admiral, who at once acceded to the Regent's at Havre, and returned direct to Woolwich. Among the Regent's suite are General Van Halen; General Augustin Nogueras, Minister of War; Señor Gomez de la Lacarte several Aides-de-Camps, and Secretaries. Immediately after the arrival of the Regent at Mivart's, on had a long interview with his Excellency, and subsequently with the members of the staff who accompanied the Regen to this country. Throughout Thursday the hotel was literally besieged with visitors of all ranks. The Duke of Wellington was among the early calls, and subscribed his name as follows in the visitors' book:-"Field Marshal the Duke of Wellington et Capitan-General Duque de Ciudad Roderigo." The Earl of Aberdeen and Sir R. Peel also visited the Regent. In the course of the day a to the Lord Mayor requesting him to "convene an early court, to welcome the arrival of General Espartero in this country, on his being driven into exile by the and whose sernics he energies, and the Prime Minister of England) 'that he will be received by all classes in this country with that respect which is due to his his merito deserve'"' The Lord Mayor fortunes which his mext for entertaining the subject.
Temperance Meetings.-On Monday Father Mathew administered the pledre to the inhabitants of Greenwich, at Whitfield's Mount, Blackheath. Some delay in the commencement of the proceedings took place in consequence of his having attended a breakfast given by Colonel Dawson Damer, at which he was to have met the Duke of Wellington, Sir R. Peel, and a large number of nobility and gentry. Neither His Grace nor Sir Robert was present, but the latter sent a letter of apology, expressing regret that the commands of her Majesty detained him at Windsor. There were, however, upwards of seventy of the nobility present to meet Father Mathew, and among them Lord and Lady Palmerston, the Marquess and Marchioness of Clanricarde, Lords Camoys, Clifford, Lovat, \&c. Father Mathew, on reaching the Broadway at Deptford, was met by a teetotal procession, headed by horsemen, and accompanied by a temperance band. Father Mathew rode in a carriage and four, and was followed by tweive other carriages, each crowded with temperance advocates. His carriage was preceded by about a hundred and fifty young women and children, carrying a banner, on which was inscribed, "Wel within
Father Mathew, to Greenwich." On his arrival the barrier, the scene which ensued almost exceeds description. There were at this moment at least from immediately opposite the hustings a publican had erected
a capacious booth, and provided himself with an entire dray, containing not less than ten barrels of ale and porter. Soon after Father Mathew commenced speaking a large body of persons, who had evidently got intoxicated at the beer booth opposite, aided by a number of Marines, made a desperate rush in the direction of the hustings, knocking down the barrier, and sweeping the people before them with such violence that even the hustings were in danger. The police appeared paralyzed, but subsequently some of the ringleaders were taken into custody. Many of them wore papers in their hats, on which was written, "Member of the Malt and Hops nocietss as a badge of distinction. Father Mathew said it was impossible for him to proceed, and therefore he would at once relinquish the task, and proceed with administering the pledge to all who liked to take it. The Hon. Capt. Jerningham was the first who took the pledge on the platform, and was followed by small far as, including several Greenwich pensioners. As far as the administration of the pledge went the affair was a failure; not more than 500 having received it during to be not less than from 50,000 to 60,000 persons. On Monday Father Mathew breakfasted at the Hon. Mrs. Howard's, where upwards of 50 persons of distinction Dinaben, Effintim, and Montegale, the Earl of Arunde and Sumey, Lord ad Maners, Lady Step Lady Murray, \&ec He then proceeded to administer the Lade a plo Blo tions at Blackhe place to keep in check not only the members of the "s Mal and Hope soch. but any ore int do for doy lik ford dock look the pledg. Suitly with excention of a brief contest between the opposing parties during a heavy shower which had compelled them both to take shelter under the arese of the railmay. On Wed nesday Father Mathew adnuinistered the pledge at Westminster, in the neighbourhood of the Fentendary, about 1200 persons. On Thursday he alcnded at the same place, and soon after his anill 0 nide tion was created a mongst the teatotallers by the ihe of the Duke of Wellington, on horseback, facing the hustings, leading to Vaushall-bridge. The Duke, who was attended by his groom, pulled up for a meedint, evidenty for the purpose platform. Father Mathew ecogsard, and took off his hat to him, and for his Grace, the call was responded to in a most enthusiestic manner, which the duke acknowledged by taking off his hat ana bowing down the road towards the House of Lords, amidst the arwed cheers of the peopie.
Miessrs. Hammersley's Bankruplcy.-It appears that dividend of \(2 s\). 11 d. on the estate of Messrs. Hammersley is now in course of payment at the offce of the Account-ant-General in Chancery. The announcement is oaid to be a relief to the creditors after the long suspense under which they have laboured, but the amount is to most of them a source of disappointment. Notling is known as Balloon Ascent.-In our account of Mr. Green's attempt to cross the Channel last week, it was mentioned Continent, Mr. Green and his companion, Mr. Bradley, frermined on taking an excursion imand, and started appears that they effected their descent in a fieli at Patcham, a village a short distance from Brighton, on the line of the railway. A number of men, busily employer same nom the train from London, which reaches Brighton at half-past 12 , passed the balloon. The guard, on his arrival at Brighton, reported the circumstance to the superintendent of the line, who despatched an express engine to the assistance of the aeronauts. The gas being emptied from the balloon, it was packed with the apparatus in the car, and with Mr. Green and his companion con* veyed to Brighton, where they intend awaiting a change of wind, in the hope of being able to cross the Channel. From an account since published by Mr. Bradey, to appears that in lifulty has been occasioned by the loss of gas when the balloon has risen to a considerable altitude. Owing to the atmo much less dense than at the arface of the earth, the gas expands and rushes from the neck of the balloon, thereby occasioning not only a loss of the sustaining power, but in some cases personal danger to the aeronauts, instances being known where suffocation has nearly resulted in this manner. Mr. Green feet which he shortens to any recuisite degree, and the end, trailing on the ground, creates a friction, which the levity of the balloon cannot entirely overcome. The balloon is thus kept in the air at a height (within the length of the guide-line), at the pleasure of the voyager, tion and strength at varying heights, as is penerally the cose, is enabled to select th t current whioh best suits his object. For effecting the same end when over the sea, about a dozen blarders, partly filled with water, and then guide-line; and the sscent at Brighton was for the purpose of trying whether the plan would succeed on the

Water equally well as it had proved to do on land. The | leading members of the Political Union of 1829. Ward
process of decarbonising the gas also appears to have been
successful. By the means adopted at Brighton, the levity of the coal gas approximated to that of pure hydrogen, and some idea may be formed of the great ascending power which the balloon (a small one), containing 24,000 cubic feet, possessed when they left the shore, by stating that the disposable ballast amounted at least to 6 cwt .
New Zealand Company. - A special Court of Directors and members of the New Zealand Company was held on Monday. The Governor, Joseph Soames, Esq., in the chair. After a few words from the Governor, to the fraising a loan of \(50,000 \mathrm{l}\). to carry out the establishment of two new colonies; the one to be called New Edinburgh, the other the Church of England Colony, the secretary company report. From this instead of calling upon the shareholders to pay the remaining moiety of their liabilities. The three distinct settlements already established are going on sacissactorily, and settlements have been placed in this position upon a capital of 200,0002 ,., through which the company have acquired a property of about a million of acres of fertile
land in favourable portions of a colony in which the minimum price of Waste land is fixed by the Legislature "has been only \(200,000 l\),, our actual outlay for colonizing purposes has been nearly half a million; the difference, your directors must "repeat, was supplied by the confi"
dence of the public." The report conclades by stating dence of the public." The report conclades by stating
that the directors are on the best terms with Government, and that the settlement of New Edinburgh is a favourite

twelve months, and have been distinguished for their good twelve months, and have been distinguished for their good conduct, and availed themselves of the moral and religious instruction of the warden.-The local papers state that, period, is again likely to be the scene of a great policical agitation. The present movement originated with the Chamber of Commerce, which has adopted Mr. Attwood's
views on the currency and that gentleman has been Tiews on the currency; and that gentleman has been requested to place himself at its head. The whole manage-
ment of the agitation, it appears, will be transferred to the
meetings alre held almost every night, at which the burgesses congtatulate themselves upon the return of Mr. Attwood to public life, and pledge themselves to use every exertion in their power to support him in any measures he may propose. No public announcement of expected in the course of a short time.
near Ponthen.-A meeting of the parishioners of Llanedy bear Pontardulais, in this county, was held last week, to operate prejudicially upon the interests of the country generally; and more especially upon the agricultural establishment of the police force, when several farmers addressed the meeting, contending that there was no necessity for a rural police, and the sense of the meeting being taken, every hand was held up against it. On the subject of tithes, they were equally unanimous, and it was elata of the meeling, ing ford sign a letter to the titheowner of the parish, applythe free-traction in tithe. The meeting then discussed of catle urade question, and the effect of the importation they had ber farmers stated that was a proen deluded by the notion that the Corn-law whatever, while and that the Corn-laws did them no good free-trade, their Corn could not be lowered much in price as it was all consumed by themselves, and sold to the neighbouring towns. If they thould not have free-trade would fail wurks and copper-works in the neighbourhood The chairman then fook the wounse lose their customers. question of free-trade in Corn and all other articles of rood, when all hands were held up in its favour. The new Poor-law was then discussed. It was stated that the amount of Poor-rate for the parish was nearly double what lieved was less. There are abont number of poor reUnion, and several farmers complained of the unfairness of compelling their small parish to pay towards the support of the poor of the populous parish of Llanelly, which, they contended, was the effect of the new Poor-law. They also poor-rate to officials under of money paid out of the operated very heavily on their parishes, and deprived the pas of what would otherwise be expended for them. It meeting, was the best law which, in the opinion of the poor- the new Poor-law or the old, when the poor of each parin was relieved by the overseers. All old we hel discussion then ensued in favour of the old law
complained of the great number of gates bars, when all that a man could scarcely paying toll. They were willing to pay reasonable tolls, miles was intolerable. They also maintained that landords and magistrates ought to see the reasonableness of he proposition that lime and all kinds of manure should was also discussed, but they were more objected to from principle, than because of the amount, which they said was very trifling in their parish. After discussing these subjects they agreed to an address to the titheowners and of Lianon was held on the 9th inst., which was crowded to excess. After several persons had spoken, a series of reso-
lutions were agreed to-copies of which were to be for warded to the titheowner and landlords of the parish, and which embodied the topics of the Llanedy meeting. They also expressed the regret of the parishioners at the late out-
rages, but at the same time stated their firm conviction that unless the landlords and titheir firm conviction reduction in proportion to that in the agricultural market, the depredations will not terminate. The resolutions stipendiary to the pory orseer to receive and pay all moneys relating dispensed with, "as that would tend materially to restore the country to peace and quietness once more

Windsor.-On Thursday week Prince Albert visited the Ordnance Survey Office in this town, for the purpose of inspecting the plans which, by command of her Majesty, have been taken of the Home Park, the Castle, and ToW The indsor, including Frogmore and the Royal Garden The survey is drawn on a scale or ive feet to a mile by party of Sappers and Miners, under the command of Capt. Tucker. The plan preparing for the ofice Woods and Forests, for the improvement of the drainage is on a large sheet of eleven feet square. In looking ove this plan, his Royal Highness suggested various improve meats, among wich may be ment. an ornamental canal in the Lower Park, commencing by the Maestricht Gardens, and terminating at the extremity of the Park, about half-a-mile below Datchet-bridge, the fall of which being six feet, will insure a constant rumning stream. His Royal Highness gave directions for a re dor the purpose of being placed in the library of the

Castle, and then inspected the Ordnance plans, which are drawn an a simila, scale for the omico or wod and Forests. The whole of the work is executed with great minuteness, and when finished will show the contour
levels which have been struck out at every four vertical levels which have been struck out at every four vertical
feet above, and two vertical feet below the flood-line of feet above, and two vertical feet below the flood-une of
1841. Several sectional lines have also been executed by the party of Sappers and Miners appointed to assist Sir H. de La Beche in the contemplated drainage of the sidered of an infectious character. His Royal Highness expressed his approbation of the progress of the works.
Railways.- The following are the returns for the past week:-London and Brmingham, \(19,041 l\).; Great Western,
\(16,687 l\). South-Western \(, 8,423 l\). ; South-Eastern, \(4,515 l\); Eastern Counties, \(3,0855 . ;\) North Midland, \(5,225 l\).; York and North Midland, \(1.980 l_{\text {. }}\); Greenwich, 9656 ; Croydon, 483l.; Brighton; 5,251l. ; Blackwall, 1,408\%. ; Hull and Selby, 1,2106.; Midland Counties, 2,865 6 .; Grand Junction, 9,4201 . - At the annual general meeting of the Canterbury and Whitstable Company the accounts showed a total receipt for the year of \(7,785 l\), and the expenditure
of \(4,935 l\), leaving a balance of \(2,849 \%\). The report stated that great improvements had been effected at the Canterbury station, and that, in addition to the saving that would accrue to the company, the distance between Canterbury and Whitstable might benceforth be performed in the space of thirty minutes. The railway does not yet but the report gives hope of such amnouncement at the next meeting. -The profits of the Great North of England Company for the last half-year have amounted to \(13,622 l\), from which the Directors have declared a dividend of 11. 5s. per share, carrying to a reserve fund the balance equalize dividends in future. The interest on a greater part of the bonded debt of the con pany las been reduced Company continues to pay five per cent, the amount declared at the meeting of last week on the profit of \(3,578 l\).-The half-yearly meeting of the London and Blackwall Company was held on Tuesday, and was number of passengers carried in the ing June, 1842 , was \(1,063,015\), and the amount 20,4092 . were 999,683 , and the corresponding period of 1843 showing a decrease of 63,332 in the number of passengers, and 3,057 . \(19 s_{0} .6 \mathrm{~d}\). in amount. In the receipts for double that of the last half-year. The total revenue for the half-year was \(23,937 l .12 s .1 d\)., and left a balance of \(3,0162 ., 19 \mathrm{~s}\). \(5 d\)., which would be reduced by \(1,433 l .9 \mathrm{~s}, 9 \mathrm{~d}\),,
for repairs of engines. The total capital up to the 30 th for repairs of engines. The total capital up to the 30 th
June was \(1,289,080 l\). The committee of investigation had concurred in the recommendation of the directors for extending the steam-boat traffic, as the only means of
insuring a dividend. It was stated that if a good Woolinsuring a dividend. It was stated that if a good wool-
wich traffic could be supported, the present prospects of the railway warranted the conclusion that with industry and perseverance a dividend at the rate of \(\frac{1}{4}\) per cent. upon the present prices of the shares might shortly be expected. The whole of the Directors having resigned
their seats, five of them who had expressed their willingness to serve again if required, were re-elected, with five other large sharebolders, who were members of the
late committee, and for their services they are to receive collectively 10002. per annum.-At a meeting lately held at Redruth, subscriptions to the extent of proposed Cornwall Railway, including 5000l. from Lady Bassett, and \(5000 l\), from Mr. Pendarves, M.P. It was also announced that Lord Wodehouse and others had taken the value of their land in shares. The half-yearly
meeting of the Pontop and South Shields Company toole place on Monday. The report showed that, notwithstanding the depression in the coal trade, on which the income of the railway mainly depended, the total receipts for the half-year amounted to \(33,264 l\)., the expenditure being directors recommended a dividend of 30 s. per share, being at the rate of five per cent, on the paid-up capital. The total amount of tonnage for the half-year was 324,826 , being an increase of 9,000 tons.-A new line is now in contemplation to join the Brighton Railway at Croydon. It is proposed to issue from the Greenwich line, near Deptford, Fith from thence to pass through Lewisham, Southend, Eltham, Adiscombe, and Bromy, umately frolling into the Brighton line at its junct.

\section*{IRELAND}

Dublin.-The Lord Lieutenant and the Countess de Grey left Corrig-na-Greena, Killiney, where they have Tueen enjoying the sea-breeze during the summer, on Tuesday, for the Vice-regal Lodge, and they were expected occurred which have enabled the authorities to place the myaterious murder of Lord Norbury in a train of judicial mysestigation. It is now about five years since his Lordinvestigation. It is now about five yea in a plantation on his
ship was assassinated, in open day, in ship was assassinated, in open day, in a plantation on his could be ascertained at or subsequent to the inquest was, that the murder was committed by a single individual, Who was seen to cross the country after the deed had been perpetrated. An immense reward was offered, but no clue could be discovered to reach the murderer. It
appears that a man named Peter Dolan is now in custody, charged, upon sworn informations, as the actual murderer. He was apprehended in England, and is committed to
take his trial at the next assizes for King's County.-The weekly meeting of the Repeal Association took place on
Monday, when Mr. J. O'Connell, \({ }^{\text {in }}\) in consequence of the absence of his father, moved its adjournment to the next day. The rent for the week was announced to be , 38. 18 . \({ }^{2}\). At this adjourned meeting, Mr. Ot Conthe Irish Parliament." This document is arranged in nine clauses. 1. The first declares that the people of Ireland recognise, acknowledge, and will maintain the rights of Queen Victoria and her heirs for ever. 2. In his they also acknowledge the privileges of the Peers of House 0 . They insist on the restoration or the Irish House of Commons, consisting of solemnly declare that they will resist the Union by all legal, peaceful, and constitutional means. 4. The plan legal, peaceful, and constitutional means. 4. The county members to be increased to 173 ; and 127 members to be returned from cities and towns. The
county of Carlow, being the only county in Ireland with less than 100,000 inhabitants to member; every other county having above 100,000 inhabitants, io have an increase of two members; those above 150,000 , an increase of three members; those above 250,000 inhabitants, an increase of four members Tipperary, having more than 400,000 inhabitants, bu less than 500,000 , an increase of eight members; and Cork, having more than 700,000 inhabitants, an increase Dublin, having more than 200,000 inhabitants, to hav eight members. The University of Dublin, two. Cork Re, having more than 100,000 inhabitants. Limerick and Belfast, four, having more than 500,000 inhabitants. Gal 200, Waterford, and Kikenay, three, having mout 700 inhabitants, to have two members, and 49 other towns, nex highest in the ratio of population, one member each. schedule of the different places to return members to the Irish Parliament is here added, to show their relative ber of members assigned to each. The report then procalled 'household suffrage,' requiring six months' residence in the counties ; with the addition in the cowss holders or not The mode of voting for members of Parliament to be by ballot. 8. The monarch de facto o England, at all times hereafter, whoever he may be, to be regency, the Regent de facto in England to be Regent de jure in Ireland. 9. The connection between Great Britain and Ireland by means of the power, authority, and of change, or any severance or separation. The foregoing plan to be carried into effect according to recognised law and strict constitutional principle." Mr. O'Connell then Catholic
 of Lords, he concluded by moving that the Repeal Association prepare a petition for the abolition of all oaths affecting Roman Catholics, with the exception of the one Oth of Alt of the treaty of Limerick. Mr. O'Neill Daunt seconded the motion, which passed unanimously
Dalkey.-A preliminary experiment of the principle upon which the atmospheric railway is to thas made on Saturday, and answered in every respect the expecta tions of the patentees, as well as of all those concerned The experiment was one made solely for the satisfaction of the engineers, the works being as yet in a very crude and imperfect state. Some carriages being placed on the line with the engine, and all the necessary arrangements being made, the train started from Glasthule, a littie below Kingstown, and proceeded at a very rapid rate, travelling over a mile and a quarter in three minutes and apar. upon any regular railway by atmospheric pressult of the experiment was considered to establish satisfactorily the success of the atmospheric system. A few data of the ing. When finished there will be in length 9200 feet of open pipe. The close pipe forming the connection with the air-pipe is upwards of 400 yards. The engine is 100 principle. The air-pump is double stroke, its diameter 67 inches; the diameter of the tube or oven pipe 15 inches. The station at Dalkey is 76 feet higher than that at Kingstown. The elevation varies-one in 57 being the greatest, one in 240 being the least, and the main ascent descend from Dalkey by its own gravity, at the rate of from 30 to 35 miles an hour. The sharpest curve is only 547 feet radius. Another trial took place on Tuesday still more success than the first experiment. Two carrigges stil more success than the first experiment. No carriages ascended returned down the inclined phour, in three minutes, mentum, in five minutes, so that a rate of 50 miles an hour may be easily obtained with perfect safety.
Cork.-The business of the British Association is the chief topic in the Cork papers, and the proceedings are reported at too great length for us to enter into the details. The Earl of Rosse was chosen president of the meeting. The report of che council stated cray the expenses of the publication of the reduction of the catalogue of stars in pubicaistoire Celeste, and of the catalogue of stars in the

Southern Hemisphere made by Lalande, which had been effected at the expense of the Association. The report of accounts shows that the receipts for last year were \(3,271 l\). 4 s . \(4 d\). , and that the expenditure consisted of payments for various grants for scientific purposes, 1567. 5 s. \(11 \frac{1}{2} d\). ; printing reports, \&c., 4462 .; salaries, 435l.; and expenditure at Manchester, 328 l. 8 s. 10d. ; leaving a balance in hand of 496\%, 4s. 1d. The property of the Association consisted of funded property, 5,500l. which, with other assets, made a total of \(6,705 l\). - At the meeting on Monday the general committee resolved that the next meeting should be held at York, under the pre sidency of Dr. Peacock, the Dean of Ely, in this town
Roscommon. The Repeal demonstration in took place on Tuesday, and was attended by as great a number of persons as any previous meeting in the prospoke at great lengtb, and said he "would place the teetotallers in the fust rank of the Repealers. Napoleon boasted of his Body-guard-his Imperial Guard-but he boasted of a more than Imperial Guard-he hoasted of guard of Christin teatiers. He adduced the fact as a fuan ar five millions ledged tel 1 moral miracle had or It was it that res mow such masses-how could he have brough a million and a hal of people together if he were not backed by the teeto allers? They we the first preservers of the liberty o Ireland, and it was for that Father Mathew was sent. Belore the expiration of the week he would pabish his plan for the restoration of the Irish Parliument. They of course acknowledged Victoria as their Queen, God bless her. And they would maintain all her prerogative. The rish House of Lords would be acknowledged with all it privileges, and they would insist upon the lrish House of Commons having the number of three hundred members. He would submit to the public the number of counties and the towns which should have representatives in the Irish Parliament. The machinery of his plan for proceed ing for the repeal would be laid before the people, and he had no doubt they would seriously read it. Their succes was at hand. He read in the signs of the times and in the actions of men, that the hour was come when Ireland should have ber own Parliament, and when her virtuous, faithful, and religious people, would be free, prosperous, and happy. At the dinner in the eveniug, Mr. O'Con nell adverted to the late discussion in the House of Lord on the Catholic oath. He said he had " intended to propose to them a resolution that day, agreeing to petition for the abrogation of the thing called a Catholic oath. If the meeting had heen a smalier one, he would have done so, but he promised them that he would let no other meeting For it was without pring a petition to abolish that oaththat scoundrels and hypocrites should insult them, and that they should be taunted and insulted every other day consented to any arrangements. He never would have did not conceive that they would have put the same construction upon it as they did upon the coronation oath. Nothing but the most prejudiced malignity could have dared to attach the imputation of perjury to a body of Christians who were not emancipated for years hecause they would not consent to perjure themselves. Than be subject to such insults they ought rather not to take the any more, and fling the emancipation in their teeth for that which be had wrung from them before, he could get from them a second time.

PAXTO In in POC sinall ver price BOTANICAL In what may be called an age of Cycloppdias, when the com. presion of a great variety of information into orie volume, in
order to bring it whthin the means of persons of all ranks, is so
oniversally sought, it is evidently dessrable that the Gardener, universally sought, it is evidently desirable that the Gardener, and those connected with his profession, should be as well ac-
commodated as other classes in this particular. No such work existing, however, prior to the issue of the present publication, its ralue will be at once apparent, since it combines the more
easential features of a Botanical Catalogue, a Horticultural Guide, and a Technical Glossary.
Besides being of this comprehensive description, it is especially
 rying it in his pocket, examine all the plants that are at any time
submitted to his inspection, and immediately derive every intel. ligence respecting the pecoliarities or affinities of particular vantage that can only be sufficlentity estimated hy those who
have feit the want of such an assistant; and to all such indivlduals, 88 well as to every agent or rriend of Horticulture, the Pocket Botanical Dictionary is decidedly indispensable.

From 'the first establishment of this Journal we have thought it a duty to give our support to those who advocate the claims of New Zealand as an agricultural colony, because we have always considered that the evidence in the possession of Botanists as to its climate and products was such as to leave no reasonable doubt as to its fertility and salubrity. We
stated long since, that, so far as it was possible to judge from the information that had been received in Europe, New Zealand is the colony where of all others there is most to hope and least to fear; and that, in fact, with the single drawback of the possi-
bility of collisions with the natives, everything gave bility of collisions with the natives, everything gave promise of its being the most advantageous settlement to do this partly from a desire to point out to agricultural emigrants the place where of all others their energies could be best directed, and partly for the sake of contradicting the false reports, which,-
invented by the disappointed in New Zealand, and the interested in Australis and Van Diemen's Land, were largely propagated in this country by the daily press. According to those stories, the country is either uncultivable from its ruggedness, or absolutely sterile, or storm-bound, or flooded, or so overrun with bush and fern, as to cost more for clearing than it is worth, or, finally, exposed to the constant inroads of ferocious
savages, who refuse to recognise the validity of the savages, who refuse to recognise the validity of the
sales which they have made, and perpetually threaten to resume by force the land of which they have been deprived by fraud.
Public opinion has now taken a direction so decidedly favourable to New Zealand, and the vast importance of it is at last so fully recognised by the fluous to combat any longer the misrepresentations tha: have been made upon the subject. But its colinization is still only in the bud,--thousands are
stil wavering as to the place where their little capital stil wavering as to the place where their little capital
wil be best invested, and it is of such vital importance to hem to know exactly what they have to expect as emgrants, that we think we cannot do better than diect our readers' attention to a rich supply of facts which have been furnished by the settlers themselves, int collection of their letters which has lately been pulished.* For here we have no suspicious testiagnts and speculators, but plain and simple statemots from men actually in the islands to their friends athome.
In the first place, it is highly gratifying to see that or fears of quarrels with the natives were groundless, vderstood, or that the judicious regulations of the lew Zealand Company have effectually removed all tuse for serious complaints. Disputes, indeed, have !curred here and there, but so far as we are
:quainted with them, they have arisen from causes :quainted arranged, and with the worst of the natives, hose acts their own countrymen openly discounteance. We may add, too, that where they have led to npleasant consequences, this has been mainly caused y the cowardice or wrongheadedness of the settlers hemselves.

The New Zealanders are a fine race of people, 1 settler at Nelson ( \(p .78\) ), "stout and well made. Says nilder, kinder people, I believe, does not exist. Our ladies of the Fifeshire, that almost dreaded the idea of seeing an ugly tattooed New Zealander, would no more
be afraid of one of them, or I believe not so much, as be afraid of one of them, or I believe not so much, as
they would of one of their country of the lower ordersat least they are perfectly harmless, and I believe that nothing would induce them to meddle with, or injure a
white man believe in no case have they been known or proved to do so; I a little suspected it, but I now believe no such thing; the lost things I have found, and I have
trusted them anywhere, and lost notling by them., -"Some dress in English clothes," says Mr. Gillingham, a yeoman, (p. 154), "the others wear blankets, which is a poople. I tike them much, and am not afraid to race of miles inland to live amongst them; they seem to be very harmless and strictly honest ; they come into the tents, sit * "Letters from Settlers and Labouring Emierants in the New
Zealand Company's Settlements," 12 mo , Smith and Eider, 1843 .
down, laugh, and are very entertaining with their gibberish." "The natives," says another witness (p.158), "are a good-humoured, good-for-nothing set of vagabonds ; extremely well- disposed to Europeans; and when inclined
to work, which is but seldorn, they are of great assistance to work, which is but seldorn, they are of great assistance
in constructing houses ; at first they took tobacco for in constructing houses; at first they took tobacco for every trifing service they rendered; but now nothing will
do but clothing or money. There is not much fear of their quarrelling with us; they are too much alive to their interests for that. As long as they continue as well treated as they are at present, there is no chance of any
interruption in the amicable intercourse between the two races."
So that, ingtead of the fierce and bloodthirsty ogres which they have been represented to be, they are really above the average of European peasants. Indeed, it is quite evident that they are amicable and kind-
hearted. The greater part of the population in Cook's Straits originally came from Taranaki. This name alone has a magical effect upon them. Whenever Mr. Cook mentiuned Taranaki to them, they began to cry like children, and made a thousand inquiries about old friends, old pahs, gardens, rivers, \&cc. \&cc. (p. 156.) And when a destructive fire broke out at Wellington, destroying fifty-nine of the best houses in the town,
the natives actually collected five pounds among the natives actually collected five
themselves for the sufferers (p. 57).
The calumnies relating to the natives being thus disposed of, let us see what the settlers say of the land, which we have been told is all cut upinto gullies and precipices, utterly unfit for agricultural purposes, and incapable of improvement by the plough :-
"Here," says Mr. W. Bayly, a yeoman of Devonslire, "are thousands and tens of thousands of acres as level as cleared, all that I have seen, that the plough shall go over nineteen acres out of twenty. The soil is very deep in
high land as well as low. I believe for climate and soil not better to be found in the known world. I know a man that has tilled the third crop of Potatoes in the same piece of ground, and I am expecting a crop within twelve piece of
months.
culture ; it is a beautiful soil and a beautiful climate ; all kinds of Corn will grow well. You may grow Pease all the year. That small portion of Wheat which I brought
with me vielded after the rate of seven quarters to the acre. I saved the whole of the seed, and made myself a hat with the straw, which I believe to be the first that has been made of straw grown in the colony. I have sown beautifully. I have got half an acre of land in cultivation. We sow the Wheat in July, and reap in January. I am sorry to say, there are but few who support cuitivation, fierce as it is represented." - Extract of a Letter fron a good, very good ; and much superior to any land at bome We con produce two good crops in one year, which can't be done in Eugland: Wheat, averaging sixty bushels an acre, and Potatoes sixteen tons ditto." \(A\) A small Devonthe independent colonist, have assumed a healthy and vigorous bearing, full of well-grounded hopes, and determination to do their utmost by a soil Which barel Esq., p. 67.-" The soil is a black vegetable mould, about four feet or from four to six feet deep; generally speakieg, the subsoil is a yellow clay. -Mr. Charles
Palner, p. 17..." New Zealand looks more like an English nobleman's domain;-rich valleys with gentle slopes, and woody knolls, dark groves of Pine, apparently sush filled with songsters, - nay, everything that can cush filed with songsters, - ayy, every captivate the senses." - From a Settler. p. 113 .-" ' 1 can truly say, ' Here one can live in ease, without care or trouble, in one of the most genial and healthy climates in the world, and where it only requires the hand of man to make a plenty of clear land suitable for grazing in the immediate neighbourhood, within two bours' sail of the heads. There is a large valley extending for forty miles inland, clear of trees, and covered widn cese in
capable of maintaining large herds of cattle, if once it was opened up. The country is only becoming known; n sooner is one valley explored and surveged than another is
discovered contiguous to it. They seem mostly to turn up discovered contiguous to it. They seem mostly to turn up bare hills from the winds which blow with such violence on the coast, which three-fourths of those who come out here only see, and have no idea of the lusuriant evergreen -Alexander Perry, Esq., p. 20.- "The valey of the Hut is mich more extended, he finest districts for agri cultural purposes in all New Zealand. In fact, there is capital of at least one hundred thousand Englishmen. A Taranaki, where new Plymouth is situated, there is an opening for at least a million of people ; and the country there is open, so that you may have a clear view upon almost any of the rising grounds for at least thirty miles, andin Wallace, p. 12." "This is the finest Wheat and Barley country that ever was seen, and that you would If from this we turn to the accounts of the produce obtained, the evidence is not only satisfactory, but even beyond all expectation:-
"I don't believe any country in the world will beat this for breeding; sheep, I have little doubt, will breed twice in the year. Some of my goats have kidded three times in less than fifteen months. I landed four females and one male, and in less time considerably than two years, counted 25 in number. Our bush or rich land is too strong for Wheat. I put some into my garden, and had to cut it down twice before I could get it to stand up, so luxuriantly did it grow. I have some Oats growing in my garden, on rich soil, seven feet high; and some of the stems measure one incl in circumference; and a large sort of English Pea growing so high, that I could not reach some of the upper pods. You will think I am romancing, but I give you my honour that I am not. Some Cabbages (the Flat Pole) growing on a piece of only been on our farm, measure five feet across, and hav 15,000 of the Flat Pole, Jersey Cow, and 100 Headed Cabbage for our milch cows. Cabbage plants are 2s 6d per hundred, but I grew all we required, and more. A this present mament my garden is groaning under a Aro fusion of most excellent land, near an acre in but not all cleared athor fenced in Some Mal feet and eight feet high. in fact Imp quite at a seven say what the land will at produce when under a proper system of cultivation and produce when under a prope from the climate as the (attel from the - " Wheat is caled which is abont the en calculated to pay 25l. an acre wuch a ", much lower."-A Private Letter, p. 29.-"This is a most splendid country for farming, when the land is cleared. You know I brought some Wheat out with me it was two quarts. I had a small spot of land, and sowed it, and I have reaped and thrashed ten gallons from it ; mine was the first harvest in the country., Ihad ten men and boys to cut it for me one evening." - William
Henwood, p. 149 . Henwood, p. 149.
Captain Smith has a large garden, with Cabbages 12 feet round, Onions 20 inches round, Roses, Pelargoniums, Sweetbriars, fruit-trees, and all kinds of vegetables.-H. S. Tiffin, to his father, p. 11. And another person, ( p .117 , ) speaks of his Turnip Radishes 16 inches in circumference.
"Mr. Molesworth raised last year at the rate of eighteen tons of Potatoes (Kidneys) to the acre, and ninety bushels of Wheat to the acre.* This is in the Valley of the Hutt, on land nemly reclaimed from the forest, and
or three times in the year." \(A\) Setler, p. 33 .

It should here be remarked that this flooding is one of the evils which people have been told render New Zealand unfit for cultivation. But Mr. Stokes shows most distinctly that the floods of New Zealand are-as those of the Nile-a source of fruitfulness, and not of injury.
"In my last visit to the Hutt, I ascertained a very interesting fact relative to this point. I should state that this winthe Hutt has several times overflowed its banks ones, and Wheat that had been four times covered with water, and yet was in beautiful order. But the point to which I wished to direct your attention was in the instance o Mr.-_'s Burley; that which bas been flooded is, flooded has been attacked by the grub. Now, a flood in New Zealand seems to produce an opposite effect to what it does in England, or a colder climate to ours; it pro duces a fertilizng effect in the deposit which it leaves, and, as it would appear, a salutary effect in destroying in England, and the frosts which usually succeed floods This is this is important to be known, because in the district of the Manewatu, more to the north, and stin warmer than 100 . 00 holson, on ell er side 100,000 acres of good Jand, easily drained, and still more easily brought under cultration, but which must be occasionally subject to overiows hom the fiver. Now, is Hutt) are beneficial, they must remove any apprebension or
The only well-founded complaint concerning the soil applies to what is called fern land, extensive districts of which have fallen to the lot of some settlers. This is represented to be a strip of land along the coast, about 200 yards wide; behind which is a belt of bush land, as it is called, composed of the most beautiful shrubs from five to twenty feet high, filled up with fern of the same height, which is about three miles wide
It is said by one person (p. 204) that this sort of soil " will not grow a heavy crop the first year, the land having been run out by the fern; fund there is such an immense quantity of fibrous root left, that, after rain, it puffs up, and you walk over it like walking dries too quickly, and you lets in the air, the ground day to make things grow" Aire rain every third declares that it is all humbug what has been said about fern land being so good (p. 156). But as Mr. Jollie observes (p. 126) the very fact of the fern being so rank shows that the land has in it the power of vigorous production. And such is evidently the fact, for a writer at p. 204, says, that a great
* This must be considered an exceptional case; the average i6 tone for Potatoes.
improvement takes place in its quality after the first year, and that he does not desire to see finer Potatoes than he has on that land. The great question for the settler is how to deal economically with this sort of land. The fern grows 6 and 7 to 15 and 20 feet high, and to clear it is a serious undertaking. No doubt the wiser course is to leave it in the first instance, and to scatter the ashes on the land; by this means the saline matter which the fern has been robbing the land of is all restored, and will immediately give the peaty soil a tendency to decompose and consolidate. That the fern will again spring up is certain; but once down it is easy enough to keep it down. The continual destruction of its young leaves will speedily put an end to the roots; and we are told, what is quite to be expected, that any smothering crop will answer the purpose. The Rev. C. Saxton ( p . 105) found that a crop of Vetches killed the fern which grew up among them. And then, when the fern is gone, the settler has the richest land in the colony: There are in stances, says Mr. Jollie (p. 126), of prolific crops of nearly everything on land of this description; and in general one may observe over the place, as a pretty certain rule, that the finer the crop the higher had been the fern which previously grew. This must necessarily be the case, and if we were to settle we should be much inclined to try our luck with the unpopular fern land. Let us add, that, to remove the fern, and not to burn it where it grows, will infallibly deteriorate the land excessively.
Can any sensible person, after such evidence as this, say that the reports unfavourable to the land of New Zealand are other than mere calumnies? If we next look to the condition of the agricultural settlers every thing bears the face of prosperity.

At present there is not a single good workman lef on the hands of the Company: all but the stupid, lazy, or feeble folk, having been hired by settlers going upon their land, or they are working for themselves. Of abso-
lutely idle people we have none, and the settlement has every appearance of a thriving and industrious community. It will be a beautiful villagy sort of a country,
wherein the population will be principally farmers and well-doing peasants, with a sprinkling of large landowners, professional men, and shopkeepers."-Letters received by Thomas Woollcome, Esq., p. 188.
No country seems to offer such advantages to the industrious labourer,
"The agriculturist (farm servant), earning 8s. or 8s. \(6 d\). per week at home, out here would save more than be could earn at home. I am persuaded that all classes of Thomas Shaw, p. 135 .-" "We can save ourselves about 6 l. in a month; our trade is a very good one, I assure ou ; single men are getting from \(2 l\). to 3 l. a week, and they can live and lodge on
-George Beavan, p. 28.
Let it not, however, be imagined that New Zealand is a country for the lazy or the apathetic; or that independence is to be gained there by walking about with the hands in one's pockets. Idlers enough have tried the experiment,-of course they have failed ; and, attributing their ill-success to anything rather than their own misconduct, have raised the outcry which has found an echo in Europe. Let us see what the settlers say on this head :-
- All the complaints that I have heard, arise only from the drunken, the idle, and worthless portion of the com-munity-fellows who would do good nowhere."-John
George Cook, Esq., p. 166.-"It is really lamentable to witness the want of courage and industry in a large number of young men who come here. They arrive with the idea that they are to have no difficulties or discomforts to contend with, yet most of them have fled from home in despair at the dismal prospect they were abandoning. are well to do. I should not mind landing in this place without a shilling, confident that I could make myself a pursuit in three months."-A Resident, p. 23.-"Very many of the young gentlemen which come out, walk the beach and smoke their cigars, and spend their money in
the grog-shops, which are very plentiful."-William Dew, p. 37.-" I would not go back to England again if I could have a free passaye back again, for I know I could not do so well in England as I can here, nor no labouring
man besides; but I can tell you a drunken man is not much good here; a good steady man is sure to do we here."-John and Ann French, working Emigrants.

But the idle and dissipated are not the only discontented persons. There is anothey class, who, with good intentions and some means, are equally unsuccessful: these are the gentlemen who, knowing nothing of cultivation at home, undertake the management of land abroad, and, incapable of farming in England, think that the antipodes will teach them. New Zealand is not the country for them. The men who should adventure thither are good farmers with a capital of 1000l., good labourers with no capital, and country gentlemen with abundant wealth. All these may render the country a blessing to themselves, or become themselves a blessing to the country. It is, however, to the first class, more than to any other, that the colony must look; and we trust that the New Zealand Company will take measures to encourage their
emigration beyond all others. A system of cheap cabin passages will be a powerful attraction; and that, we have reason to believe, is already promised.
But we must conclude. Our space is exhausted But we must conclude. Our space is exhausted without even an allusion to the important scheme of
establishing a Scotch colony on Banks' Peninsula. That may form the subject of further observations hereafter.

A Correspondent asks us whether we recommend an open tank as a source of bottom-heat, for he says that many persons are using such a contrivance. We hear this with regret, because the plan is sure to
fail. Where an open tank is used three things happen: the steam condenses among the soil and renders it mere mud; the tanks become foul with soil that drains into them; and by degrees the boilers themselves are choked up. All such contrivances as placing hurdles, faggots, or other open materials over tanks have everywhere failed, or will do so. The tanks must be closed with some kind of solid, though porous, material. We prefer soft pan-tiles ; but slate answers the purpose vexy well.

There are various systems of draining, according to the circumstances in which the water lies in the ground. However beneficial draining may be in to remove the moisture under the soil. In grass land - provided the water does not stagnate in hollows which have no outlet, or remains to soak the ground too near the roots of the grass, so as to rot those of the a reservoir for dry weather, when it rises by capillary attraction and refreshes the roots. We read of floating islands in great lakes and rivers, naturally formed by trees and branches, and covered with vegetable earth, which rest entirely on the water, and are covered with the finest verdure
The first question to be asked, therefore, is, whether the land is too wet? and whether the crops are injured in wet seasons by the water rising and remaining too near the surface? -to what extent the drains should carry off the superfluous water?-whether it is regularly distributed through the soil, or lies directly over an impervious subsoil?-whether the water is merely accumulated by the rains exceeding the evaporation,
rises from springs, or runs down from higher grounds rises from springs, or runs down from higher grounds?
Each of these circumstances may require a different Each of these circumstances may require a different
mode of draining; and whoever should think of applying the same remedies to all cases, must be considered as one of those quacks who, having a nostrum to sell, insists, on its curing all disorders, whether dropsy, consumption, or any other.
The following directions on draining are intended for one kind of land only; that is, where a thin stratum of earth, mellowed more or less by the
influence of the contact of the atmosphere, and enriched by cultivation and occasional manuring, lies over a stratum, more or less deep, of a compact loam or clay, through which the water cannot percolate ; so that, in wet weather, the lower portion of the soil becomes like mud, pr , at least, quite saturated with water, and the roots and delicate fibres of plants are
injured, if not destroyed, by excessive moisture, unless they be coarse aquatic plants, suited to such a soil. If the surface is nearly level, the whole of the soil, at a certain depth, will be found equally soaked with water but if it be irregular, with risings and hollows, the water will slowly run over the subsoil, and render the hollows still wetter, so that it may there xise up over the surface, producing temporary pools. The effect of water standing long on one spot is to kill vegetation,
and also so to dilute and wash out the soluble portions of the soil as to render it much less capable of bearing a crop, even when the water has been carried off. scientific drainer before he lays down his plan. The straight line, being the shortest, is always to be preferred for carrying off water speedily ; but a straight may have to go round the foot of a hillock, to collect what filters down between the soil and subsoil; and you may have to go round a hollow, to prevent the water from running into it, and so save the trouble of very deep drains to draw it from the bottom when it is once lodged there.

A section of the land, which canalways be obtained by digging holes and boring, is essential to lay down the best plan for the drains. The drains must be sufficient to carry off all the superfluous water; but it is a useless expense to have them larger or deeper than is
necessary. They should consist of three distinct sizes at the least: very small, where they merely collect the dripping of the upper soil; somewhat larger, where many smaller drains pour in their contents ; and the main drains, which carry all the water of many acres be proportioned to the quantity of water. The depth must also be regulated by the size of the drain-the larger it is the deeper it should lie, and better pro-
tected from accidents which might choke it. In a
soil where the upper soil is nine or ten inches deepthat is, where the plough has gone to that depth-and
the hard impervious subsoil is found a few inches lower, a drain should be dug first so deep as to reach the solid clay, which comes out in spits without any crumbling, as if cut out of soap or cheese; and in this solid mass the main drains and the secondary drains should be cut to the exact width of the tiles to be used, if this be the mode of draining: if they are to be filled up with broken stones, such as are used for macadamising roads-an excellent material-the must be made wider and deeper. On an average, the main drains should be three feet below the surface, if they are five or six inches wide at bottom. They should be filled up with solid clay or loam, rammed down over them; for it must be recollected tha they are mere subterraneous channels, and do not at all dry the land around them,--they merely carry off the water collected by the secondary drains. The main drains should cross the greatest declivity of the field at the bottom, and have a sufficient fall into a river or deep ditch. In mos cases one main drain may suffice; but in fields of great extent several main drains will be found necessary, that they may never be so full as to burst upwards, which would be a continual source of trouble and expense. The secondary drains may run down the declivity of the land; if this be not too steep they may in general be laid in the direction in which the land has been usually ploughed. Two feet six inches will in general be sufficient depth, and this will bring the tiles directly over those in the main drain,-much the most advantageous mode of union Immediately over the tiles or stones in the secondary drains it may be useful to press down some stron heath, if it can be readily procured, or any porous material which will not rot soon ; and the earth thrown over the heath may be a mixture of the soil and subsoil, trod in well, but not quite impervious to water. Thus these secondary drains will act as collectors of water, as well as conductors, and keep the soil dry from 10 to 15 feet on each side. We are well aware that we have hitherto only described the common mode of thorough draining, such as has been so ably advocated by Mr. Smith, of Deanston, and applied with much success by many proprietors and practical farmers. This is the mode we adopted ourselves. The secondary drains, as we now call them, according to the present mode of draining, require to be at no greater distance from each other than 12, or at most 15 , feet; the tiles being four or five inches in diameter outside, and two or three inside, with a flat tile to rest on. This is expensive; and by the suggestion of a friend we are about to try which, if it appears likely to succeed, may perhaps be
also tried by some of our Agricultural readers. It is to also tried by some of our Agricultural readers. It is to
have the secondary drains. in parallel lines down the declivity, as before, but 50 or 60 feet apart, and convert them into conductors; and to form smaller and shallower drains to collect the water from every spot in the field and pour it into the conductors. We shall explain the plan by a diagram.

The collectors are small drains, about 20 inches deep, made in the solid clay, as is the practice in Suffolk and Essex with a shoulder, as described in the last Number of the "Journal of the Royal Agricultural Society of England," and a sod of grass, or a peat, or any porous substance pressed into it to support the earth thrown over it. These drains are very cheaply xecuted by men who have the practice. They are only two inches wide at bottom, and a horse happening to step over them, will not have room for his foot to make any serious impression. The subsoil-plough may work to the depth of 14 or 16 inches without fear of injuring them. If one should be choked, it will cause no stoppage in the others, and can readily be repaired; or, which is safer, another may be dug by the side of it. Thus the expensive and regular tile-draining is united with the shoulder-draining, and at a great saving of expense. The collectors may be 25 feet long,-the portion of the drain which carrie the water four inches deep and two wide, and the adhesive subsoil will not allow this to fill up. The distance between the collectors must depend on the nature of the climate, and the average quantity of evaporation, but in very wet soils 12 feet will be quite near enough. The conductors can be made and finished by a practised workman for \(2 d\). per pole of \(16 \frac{1}{2}\) feet. The expense is easily calculated. The main drains will cost altogether \(8 d_{0}\) a pole, the
secondaries \(6 d\). We will hereafter give more exact
results when we have drained some fields in this way.-M.
The fearful storm which devastated some of our midland counties the other day has fallen with sad violence upon a most respectable market-gardener at Norwich. The large forcing establishment of Mr.
Bell, of Bracondale, has been almost annihilated, his Bell, of Bracondale, has been almost annihilated, his
loss being estimated at \(3000 l_{\text {., against which it was }}\) impossible to insure; at least, the Hailstone Insurance Office, which is now beginning to make itself known, had not become so established in public opinion as to call upon individuals to avail themselves of the security it professes to offer. A calamity of this sort is overwhelming. Mr. Bell, a substantial yeoman, one
of that class which forms the main-stay of the country, of that class which forms the main-stay of the country,
is ruined-by no errors of his own, but notwithstanding his honest well-directed industry, by a
terrible visitation of the elements, unless those who terrible visitation of the elements, unless those who
can feel for such disasters will assist him. His friends and neighbours who know him best, have, as the Norwich papers -tell us, subscribed already \(750 l\). towards the restoration of his establishment. His London friends have also set on foot a subscription, as
our advertisements explain; and we hope that the our advertisements explain; and we hope that the
liberality of Norwich will not be greater than that of the country generally.

\section*{ON CONSERVATORY CLIMBERS, \&c.}

The first plant that I would turn out into the bed in this pit would be Bignónia venusta, the best of all the old stheve climbers. this opinion is altogether untemable, and a mere delusion. out in a front border, and trained up within three inches of the glass. Through a temporary defect in the heating apparatus we could not keep the house warmer than from
\(40^{\circ}\) to \(450^{\circ}\) for several weeks, and the inside of the class was often encrusted with ice in the morning. The Bignonia did not seem to be much affecter by this treatment; it grew away freely next "summer, and by the following
Fobruary every joint of the last year's wood was covered Fobruary every joint of the last year's wood was covered
with bloom, and the plant continued to flower annually with bloom, and the plant continued to flower annually
early in the spring, with no better treatment than being warmer in winter.
The next climber would be Echites suberecta, from Jsmaica. This lovely climber flowers profusely in the
stove on the ourreat year's growth. Like the Vine, it requires a great deal of room, and to be spur-pruned in geat desideratum, a brilliant yellow Convolvulus, or Ipo-xoea,- What a beautiful contrast it would make with the
boomosa Learii on the rafters of the conservatory! Then le Allamanda cathartica, more hardy than the last, also Dwers on the current year's wood frome June to October,
ad requires therefore to be very closely pruned, and kept ad requires therefore
omewhat dry in winter. After that, Stephanotus floriundus, the easiest of all the recent introductions to janage, as sweet as the Cape Jasmine, and, like it, pure
hhite. The delicious fragrance of the old Pergularia odohite. The delicious fragrance of the old Rergularia odoatíssima claims for it a place in this selection. It does
not require much room; its flowers are of no beauty, and 6 should be trained on the same rafter as the Stephanotus. After these comes the Combretum purpáreum, which lowers from April to November, if the shoots are occa-
sonally stopped through the growing season; and as it kooms on the current years growth, it requires to be osely prused in winter. The Honorable and very Revein for some time, leaves the head of the Combretum in e conservatory all the winter. By this system only can e beered. Mr. Brewster, gardener to Mrs. Wray, Chel nham, is the most successful cultivator of this fine ant, flowering it on the side spurs and on the young ood also. Attempts are now being made in some
the Metropolitan establishments to flower the Beauontia in the stoves, but this will not be. For ten ears I tried all conceivable means to bring it to flower in ears stove without effect; but by the above system owers as freely and regularly as a Pelargonium.
Next come the stove and half-stove Passion-fiowers, ribe, of all others, the easiest to manage. One or two of bese will be enough to plant permanenily in the pit, as ay, Passiffora quadrangularis, a magnificent, free bloomtay, Passifora quadrangularis, a magnincent, free bloomng plant, on which kermesina, Loudon, and race-
nosa, might be worked. P. alata also might be tried ; in nosa, might be worked. P. alata also much like the quadrangularis in general appearance, but with larger and deeper coloured flowers. These two species are often confounded
with each other. I have grown them both for the last 15 With each other. I have grown them both for the last 15
gears, and the only clue I can give for their identity when not in flower, is the glands on the foot-stalks of the leaves quadrangularis having invariably four greenish uniform glands, while alata has only two of a yellowish tint: this
will be a sure guide to purchasers. Anyone fond of rich mill be a sure guide to purchasers. Anyone fond of rich
foliage may plant P. ligularis, but its flowers are no better foliage may plant P. ligularis, but its flowers are no better
than those of the common one. P. holosericea is rather pretty, and there are others more curious than ornamental, such as vespertilio, with its bat-wing-like leaves; foetida,
with its curious fringe-work inclosing the flower, \&c. The with its curious fringe-work inclosing the flower, \&c. The same section as the common blue Passion-flower, which it much resembles ; but it is a half-stove plant, and the

\section*{verywhere.}

There are many others which might be mentioned, but I have run to too great a length already. I may, however Bignónia Cherere har or two about greenhouse chabers a true greenhouse plant, and, like all the Bignónias, does not bear much pruning, unless indeed you prune them like G Gooseberry bush, without spurring, so that what you is trained at full length. Tacsónia pinnatistípula does not bear the heat of a light greenhouse in summer: the only lass do good with it is to take it out through the fron mas , then it \(\mathfrak{j t}\) outside, where it may remain till Christ mas; then it may be closely pruned and wintered inside.
This is the way I propose, and have practised with the rest of the conservatory climbers, after introducing the stove ones as above: the principle is the same in both cases It is true \(\bar{I}\) have not yet flowered all the plants which recommend for this system, but am so well acquainted
with their habits that I have no fears as to the result.D. Beaton.

\section*{AGRICULTURAL PESTS-Dodder, Broomrape.} I SEND you some specimens in flower of Cuscuta epilinum, which appears to have thoroughly established of it (by Babington) in the "Journal of the Royal Agriof it (by Babington) in the "Journal of the Royal Agri-
cultural Society," Vol. ii., p. 63 . I have lately seen it referred to in some journals, as our old Cuscuta Europæa; but this is a mistake. I have wrapped up these specimens in the stems of another species of Cuscuta, to which I beg to direct the attention of agriculturists. It is now two or
three years since I first received a dried bundle of this Cuscut, which had then flowered; it was sent to me from the neighbourhood of Bury St. Edmund's, and described as a pest hitherto unknown to agriculturists, and which
was doing considerable injury to the Clover. I observed that it closely resembled our Cuscuta epithymum ; but not thesely resembled our Cuscuta epithymum ; but whether itg seen it in its fresh state, 1 fert uncertain species his lately-published "Floda" as a possible variety of C. epithymuma, which he has called B. trifolii, at the same time expressing a doubt of its identity with this species. About a fortnight or three weeks ago, one of my neighbours invited my attention to what he considered to be a noveity in this parish. Upon accompanying bim to a about two yards in diameter, covered with the stems of this very Cuscuta. The appearance was as if a quantily of fine, closely-tangled wet patgut, had been carelessly it were either dead or much injured, and it was evidently spreading itself rapidly in all-directions. I see no appearance of flowers on it as yet; but I have transplanted some to my own lawn, where it has taken possession, and rhope soon to be able to give \& better account of what species it may really be. 1 find (as might, à priori, have been expected) that it attacka Lucerne also. My object in directing the attention of your agricultural readers to this parasite is, to advise them of the propriety of eradicating it as speedily as possible wherever it may happen to make its appearance. It has certainly been introduced into this country with foreign seed ; and unless some care thoroughly established amons, we shall soon have it as neglected pest, the Orobanche minor, has already become A simple means of checking this Cuscuta is, to mow the spots where it has attached itself to the Clover, and carry the mown plants entirely away. I see that the farmer in whose field it has here shown itself, has been content with merely raking it off; he has consequently left a con-
siderable number of fragments behind, which are still siderabe number of fragments behind, which are still
attached to the Clover, and are again spreading in all attached
directions.
Having alluded to the Orobanche minor, I may mention that this plant has also been slightly noticed in the "Journal of the Royal Agricultural Society," Vol. i., \(p\). 173. Upon finding it in our fields when Ifirst canoe to reside here, I asked the farmers whether they attempted to keep it under. I found that some of them had never noticed it, whilst others who had observed it were not aware of what it was. As 1 knew that its seeds are extremely minute and abundant, and that on some parts of the Continent it prevails so much that Clover cannot be growa there, 1 recommended them as requiring very pulled whilst in flower, such a process that the neigh-
little time or trouble. I was glad to find that bour who took me to see the Cuscuta had ever since adopted this practice, and no longer allows the Orobanche to perfect its seed in his fields. May I venture low extend my recommendation to all farmers those who are unacquainted with the singular habits of this description of parasite, to dig up a plant or two which may happen to be attacked They will be able, with a little care, to find the the Orobanche atcer and if they will allow a Botanist to explain, they will understand that, as the Orobanche has no healthy leaves of its own capable of supplying it with nourishment, it borrows, or rather steals, the proper juice which has been prepared in the leaves and has descended into the roots of the Clover. It is thus that is enabe to perfect its strange and lurid-looking fiowers, to ripen its own seed at the expense or the his cattle, in order that the farmer may afterwards be able to fill his own pockets.

The Cuscuta has a like bad habit, only with this difference that it altacks the stems and not the roots of the Clover As both plants are readily propagated by seed, they should be watched and never allowed to perfect their seed. it is very possible that their seed may lie dormant in the land for a long period, until a fitting opportunity shall arise for its germinating; and at all events it may be widely distwo ate withe sea the Clover iselrwn, Hitcham Suffolk, 25 th August, 1843.

THE KILLOGIE;
Sid beds, and for pipes, fluke, \&c. in hothouses. Some time ago I sent Mr. Loudon a plan for a hotbed adapted to the very poorest class of country cottagers built without an iron nail or a brick, and calculated to generate "bottom-heat" and "top heat," moist or dry, without pipes, flues, hot-water, or steam-and in the absence, too, of all fermenting materian, by the agency of fire only, and that in its simplest and cheapest form; on the open hearth, a grate or "ingle" in the centre of a chamber, or killogie-or, in other words, by radiant heat, as it hath from time immemorial been used in the parching of corn, \({ }^{2}\) c. The readers of the "Gardeners' Magazine " in general gave Mr. Loudon little praise for this communication, and in the Gardeners' Chronicle, Dr. Lindley passed it over by saying " in our simplicity we took it for a hoax." I will now beg leave to trespass on your valuable columns a littie, whilst I attempt to show that this system of heating, so far from being a hoax, will be found the simplest, cheapest, and the most efficient, and moreover the oldest; for thousands of reasonable men have borne testimony to its merits for ages past as well as a the present day; and if I were to ask the miller or maltman how it happened that whilst he eagerly adopted every improvement in the machinery connected with the grindin and dressing of the corn, \&c., he still continued to dry the grain in the old way on the kiln over an open fire; or, in his own words, over the "ingle" in the "killogie," notwithstanding all the heating apparatus, new and old, approved improved, and re-proved in hot water and steam, I think the miller or maltman could easily show that the perfect manner in which the ingle and killogie maintain an intense heat at a small expense, leaves little room for I provement in the parching of corn or malt; and where, required a temperature so high as would be sufficient to parch corn in a few hours? Here, then, is a simple fire grate in the centre of a cubic room, set up for a fem shillings and managed by the man that feeds the miller's swine, or some equally unscientific hand, doing the worl of heating the kiln-room or hothouse, and the corn or hotbed to an extent that a hot-water apparatus wort 100 guineas would not be equal to; and I question whether the powers of hot water could in any reasonable space of time prepare grist for the millopper, and if could, the intricacy of many hot-water apparatu, and kiln of the maltman or miller
Therefore, instead of condemning the miller for not heating his kiln or hothouse by hot water or steam, a gardeners do, let us see whether he bas not a better system than they, and if this can be proved we are come to the point, namely, to consider the propriety of borrowing it for gardening now-a-days embraces such a host of men, so differently situated as regards their means and their wants, and in such various localities, that whilst many will be found glad enough to try a cheap and ready way of obtaining heat for the culture of exotics, others more highly favoured will no doubt say, and that traly, that there is nothing like plenty of strong cast-iron pipes and hot-water for heating all sorts of hothouses; but I could name many very respectable men, who, though they know the better way right well, havo a strong reason for not trying it, namely, the want of funds for that purpose, and where this is not the case, short leases prevent many from building permanent structures, in the same way as they pitch a tent where they would not rear a castle. To sich the ingle and killogie are well adapted, and for such I write. I am quite surprised that fire for bottom-heat, as well as for top-heat, is not more generally in ase wherever heat is wanted. I should first try fire, as the most likely agent to raise it effectually, and whoever has experienced the cleanliness and constancy of that mode of obtaining it for horticultural purposes will not be easily persuaded to return to the litter, with the labour and uncertainty of raising it from fermenting materials-not to speak of the cost, which in most cases is double that of fuel ; yet, strange as it is there seems a general notion that linings of litter and large beds of dung are cheaper and better for hotbeds than flue and fuel; these ideas, however, are fast wearing out, and I hope the day is not far distant when it will be as rare see a man injuring good manure by making hotbeds and linings of it, as it is now-a-days to see a man winnowing corn between the opposite open doors of the barn, as ons fathers did ; and though this wind was free of cost in the first instance, yet the process became expensive in labou capricious lime, whilst the supply of wind was alway in obtaining heat from fermentation ; it is equally uncosetrollable, and uncertain as the wind.
But mark the change in a few years' experience: artificia wind from the fanner, impelled by machinery, can now be regulated in its duration and force to the greatest nicety; and, moreover, is at command by day or night, withii doors; at a moment's notice it begins, and the director of the work can suspend its services by a word. The same may be said of heat, when supplied by fire; kindle
the fire over-night, and your hotbed is warm and sweet in the morning, ready for culture of any kind, and its duration and intensity will be as much under control as the pinions of the fanner; and in our variable climate, where a few hours will raise or depress the thermometer thirty degrees, a perfect control over the supplies of heat is Treatise on the Cucumber" (pages 11 and 12), -which, by-the-by, may be taken as a fair, indeed a refined, sample of the system of dung hotbed making; he turns dung eight weeks to sweeten it, zud after he allows its body to rest in the bed he shakes the face of it for another fortinstrument is tuned to play its part, during which time in istrument is tuned to play its part, during which time in body has heard, Mr. Niver would, from all accounts, have reared Cucumbers from seed and ripened their seeds to sow again, in less time than Mr. Mills takes to tune his strings. But, mark well, Mr. Mills owns that steam from
dung thus prepared is not superior, after all, to the steam obtained from heated bricks for growing Cucunabers; and his improved pit is neither more nor less than a hothouse flued and buried in a dung-heap, the heat being dry a that obtained from hot iron. surely such statements need so comment to show that heat obtained from sweetened filth comes slowly, and costs foul handling, and heavy unreasonable labour to come at all; witness Mills, shutting his lights to keep the heat in, at three o'clock in he morning of 13th Nove, 1840 (see page 29)
But I should not complain of the filth and labour of fermenting materials so much, if, after all, we could control to the but, unfortunately, it is always in the inverse ratio matter of course, we want heat most, that is just the as and in windy weather, when linings are the coldest. See, then, the necessity of trying some simple fire apparatus to generate heat for horticulture just when it is wanted; and here it may be as well to remark, for the sake of those Who wish for hot moist air in motion in their hothouses, that it is just as easy for ignited gunpowder to stand still and as for moisture, I should rather prefer system heated; and then I could easily add moisture as I might see occasion, for the continual damp or vapour arising from occawater in an open tank or gutter must seriously injure the pollen of flowers, and the colour and flavour of fruits while ripening off. I prefer, therefore, a close apparatus, containing a column of water three or four inches in diameter, with the simple saddle boiler of malleable iron; containing little water and without bricks, forming both sides of the fireplace, such as Fowler, of Temple-bar, and sides of the fireplace, such as Fowler, of Temple-bar, and
others, have been so successful with, combining strength and simplicity, and such a control over the heat as enables the cultivator to increase or dimanish it with the greatest nicety, and make it moist or dry by merely turning a up the "killogie," in preference to these inimitable and truly practical systems of heating, which leave nothing to be desired, except that they were cheaper for horticulture. I only wish to throw in my mite towards substituting something in place of the decaying masses of filth for hotbeds in British gardens, and to enable the moorland cotter and the American backwoodsman to nurse, force, and cultivate exotic luxuries with three-light Melon-frames and the use of his own good axe and spade: where he can find fuel, however coarse, there he can always have a good hotbed without dung or any other fermenting material. The walls of the fire-room, or killogie, must be isolated, as it were, from the outer walls of the house, by a cavity, such as is common in Cucumber pits, built after Mills's the firearom \&c. \&c. are growing in the hothouse, and as there never can be any difficulty in finding space for a fire-room in any Grape or Pine house, since the killogie will occupy the tan-bed generally lies, for it is well the house where first four feet immediately under the glass roof is the only atmosphere in which fine fruits can be produced, and the empty space beyond that is highly injurious and wasteful, as it has to be heated to no purpose, and there being no surface near the glass for the reaction of the rays of the sun, the amount of vapour that sun heat would raise is The filling up of this empty space in Vineries, therefore, cannot fail to be beneficial; and in the case of Pines, the killogie will be invaluable as supplying bottom-heat killogie will be invaluable as supplying bottom-heat I am acquainted with. The roof of the killogie may be made with iron sleepers and flue tiles; or, instead of tiles, iron castings, the same as for a kiln, only not with holes, as
kiln coverers are made. I need not say how many other kiln coverers are made. I need not say how many other forms it may take, and of what various materials it may
be made, as bricks and mortar in the form of arches, stone or brick walls roofed with flag-stones, either flat like a kiln, or in shelving tiers like an amphitheatre-the force of the ingle or fire being always directed towards the sunny front, to make amends for the sloping rise in the glass, as the higher level will ever be the hottest. The
depth of the killogie should be 9 feet. the grate shaped depth of the killogie should be 9 feet; the grate shaped
like a punchbowl, with a circular plate of like a punchbowl, with a circular plate of iron, rather larger than the surface of the grate, hung right over the fire, at a distance of 3 feet from the surface of the grate,
thus making 3 feet from the ground to the top of the grate, and again 3 feet to the reflector, which will hang 3 feet from the roof. A fire-room 16 feet long, 9 feet wide, and 9 high, will heat a Pine stove or Vinery of the ordinary size, say 25 feet long and 12 wide-A. Forsyth, Alion Towers, August 8, 1843.

THE GARDENER'S LAMENT,
FOR THE MXDDLE OF AUGDST, 1843 .
Thie chilly west begins to blow again,
His rotten hreath mfects my garden round, A howsand millews follow m Lrs.s train, The clouds " tuck up their petticonts" * \(*\) in haste,
And wade and welter through the murky air, Shower upon shower come pelting thick and fast,
And desolation rules the broad parterre. And desolation rules the broad parterre. My tender Poppies off in whirlwinds flyHeadless my noblest Dahlias prostrate hie, gone o setting sun pale ©notherra cheers, No merry morn the bright Convolvulus calls The muchy morned Pansy htdes her face in tears,
Oppressed with moisture, too, the Lily falls. My dwindling Balsams, pranked with many a dye Begrim'd and prostrate in disorder lie;
Ah! naught remains to soothe my melancholy. My orchard, too, no better tale relates; The trees themselves a withering fate awaits, No savoury juice my well-dressed Peaches own Necturines, once huscious, all insipid seem;
And are, paught, and hard as nether stone,
And Grapes but nil, or nothing worth the name y bursten Gages drop from of the trees, The same sad fate awaits my ripe Morells
Mildew'd are all my ralh-ripe Cocagees,
And hletted all my best tright
Whip me the fools who prate of western breezes, Of balmy zephyrs and eternal spirings;
Oive me the subtle east, tho' oft it freezes, In summer months it warmeth and surnmer brings But still the west and north-west winds prevailing,
Atlantic vapours, rushing to and fro, Atlantic vapours, rushing to and fro,

AMATEUR'S GARDEN.-No. XXXV IN my desire to bring the various kinds of Scarlet and other Pelargoniums adapted for bedding out prominently onder notice, I find I have forgotten to mention two variegated and Ivy-Ieaved varieties of the variegated. Captain Mangles' variety, or what in some parts of the country is called "Pullen's variegated,"-is perhaps the best, as the markings are very distinct and the white particularly good. The flower however is very small, of groupink colour, and not profusely produced, so that in colours of the foliage than the flowers. Amorg the common and golden variegated, there are several kinds with rich scarlet flowers, but as they have no established names the amateur must examine the gardens in his neighbourhood, and choose for himself. There is in the Shrubland, or Smith's Emperor, but unfortunately it is an exceedingly shy grower, and therefore, being in few hands, is more likely to be lost altogether than extensively trailing habit are plants indispensable for furnishing vases and baskets, or running over Rockwork or Rootwork. Among these, one which has been named in compliment to Captain Mangles, and which has peculiarly wrinkled leaves, is the best, as the white is clear,-indeed, has a silvery appearance. Sometimes whole tbranches in this variegation produced with leaves entirely white, bu impossible being a diseased state of the leaf, it is found impossible to perpetuate these white varieties. There are golden and plain white markings, all of which, as they produce white or pale-pink flowers in large corymos root freely now in any sandy soil under hese clases wil are placed a dozen or eighteen plants in a 32 -sized pot they may be stored in it until they require to be potted off next March.
Another very interesting tribe of plants which now My spring increased for another season are the Petunias. now that they are in bloomerable array of names, but varieties, and among them the following are all \(I\) consider worth preserving. Gem, or, as it is called in some places, Triumphans, is the largest flower that I have seen, but it is a shabby grower, and is of a pale rosy purple colour. preceding, and of a purplish rose colour, with a dingy white centre. Lady Peel is the darkest variety in cultivation, is colour ; it blooms freely in rather rich velvety maroon Standishii is synonymous with this variety. Next in colour may be mentioned a variety which originated in the Clapton Nursery, called Duncan's Seedling; the colour is rich crimsonish purple, with a dark centre, and elegans is a smaller flower of the same colour, with a White centre. Medora is a very rich rosy purple, and well worth cultivation. Of the pale-flowered kind Beauty is very properly the most beautiful; the colour is White, with dark centre, and the petals shaded with rosy is French-whith like Dodd's Mary Dahlia. Erubescens grower and profuse flowerer is well, and being a dwarf white flowers we have not a really aood variety ; the old Nyctaginiflora is dirty, and Climax and Bristol Boy are readily by cuttings at the present time may be propagated post in a cutings at the present time, in light sandy commentioned, may be slord a dozen or a score in a pot through the winter
The next fortnight is the best time in the whole year
A familuar expression for the festooning which sometimes show
itself in the cumulus-cloud about to dissolve in nimbus.
for propagating Chinese, Noisette, and Bourbon Roses by cuttings. With a sandy soil, gentle heat, and a close frame, they will strike as freely as Couch-grass, Have earnest inquiry of all Rose-fanciers at the present time and many and loud are the forebodings that it will not and many and loud are the forebodings that it will not
come up to the description. Be that as it may, it is a very come up to the description. Be that as it may, it is a very
nice-looking plant, and a good grower.-W. \(P\). Ayres, nice-looking
Brooklands.

WEIGHT of FINE HORTICULTURAL PRO-

\section*{DUCTIONS.}

Pine-Appie, Queen.-Weight, \(5 \mathrm{Ibs}, 14 \mathrm{oz}\) 。 ; length, \(10 \frac{1}{2}\) in. ; breadth, \(6 \frac{1}{2}\) in. ; number of pips in height, 9 . by Mr. Spencer, gr. to the Marquess of Lansdowne Pine-apple, Queen. Weight, 5 lbs. 3 oz.; length, 10 in.; breadth, \(5 \frac{1}{2}\) in.; number of pips in height 10 ; crown small. A well-formed fruit, grown by Mr. Spen cer, gr. to the Marquess of Lansdowne.
Met.on, Beechwood.-Weight, \(5 \frac{1}{2}\) lbs.; grown on a bed fermented dung and leaves made up in the usual man ner, by Mir. Carmichael, gr. to Mrs. Hawkins, Bignor

\section*{HOME CORRESPONDENCE.}

Testa di Quaglia.-No answer having been given to an inquiry made some time ago by a "Constant Reader" Malta the Testa di Quaglis a curious plant called in plant has been known in England evorm you that the 1738 , under the name of Martynia Proboscidea, that it is mentioned by Miller in his "Gardeners' Dictionary" as cultivated under that name in England in 1759, and belongs to the class Didynamia Angiospermia. It requires shelter in the winter, but can be raised as other half-hardy plants. Miller recommends sowing the seed in tan bark; but, as he says they frequently failed to vegetate, may not a more hardy treatment suit them better? It was imported to England from the banks of the Ohio, where it Girger - Yur 590 , is anxious to gain all the information he can with respect to growing Ginger. My method is as follows:About the end of March or beginning of April, two goodized tubers are placed in a \(24-\) eized pot, and planged into a bark-bed at the hottest end of a Pine-pit, using very rich compost, consisting of half loam and half manure, previously incorporated at least twelve montas ; the bottom-heat should be \(80^{\circ}\), or \(85^{\circ}\). As soon as the roots will hold the soil together, they are re-potted into a No. 12 -sized pot, and plunged again ; they now require a powerful heat, and proper attention to watering. By the end of June or the beginning of July the crop is
gathered. If the old tubers be replaced in July, tley will have plenty of time to mature a secoud crop before Christmas. They will, however, do best planted out in rich soil, with a good bottom-keat, and gathered as they grow, up to a certain time, similar to plundering an Asparagus-bed. Thope your correspondent will make known his practice for my benefit, as well as for that of dhers. I must add, that this is my first attenspt of posseng the tubers twice in one year. Ours have yeth we get from the West India Islands - W. Brown Merevale.
Standard Roses.m-Whoever is desirous of forming lines fhese, well-organised under the shortest notice, should bud eariy in June; cut all away, to force the inserisd frequently produce a head of flowers. Most sorts (perhaps all of them) will yield to this practice.-W. Brown
Maggot in Onions.-The ravages of this pest to the Onion tribe have become very serious. Last year I totally lost a crop by them, and this year 1 have seen many crops seriously injured, and in some instances quite destroyed; and as I have tried an experiment or two, and have lucceeded in obtaining a promising crop, I beg leave, through our pares to detail the meang I have ped ground intended for Onions was well manured with rotten table-dung, and thrown up in ridges to be mellowed by the winter frosts. At the proper season for sowing the seed I had the ridges levelled, and the plot divided into hree parts: one part was covered with wood-asbes, nother with soot, and the third was lea ars or seed was then sown in drills; it came up very well, and for a time they all appeared to thrive alike: that part som with soot, however, soon took the lead; the wood-ashes were next; but the part that was dunged only begun to show symptoms of maggots, and is now a failure. There mew maggots amongst the wood-askes, but not one bougst the soot. Now as soot can be more easily anged than wood-ashes, and as I have proved its efficacy, I trust that many of your readers who may have auflered Appleby.
Myatt's Pine Strawberry.-After your notice of this Pine Strawberry, the culture appears so clear that I am reluctant to again throw over this variety any mystery as to its cultivation. Deep trenching and manure (with early planting) will go very far to ensure success with any Strawberry, if the plants are not crowded; but as many persons may not have the dry situation recommended for their preservation in winter, I can inform them that the very finest unfailing crops, in my experience, are growa oining or floods and and I have seen them produce their finest crop after lying
under water for days or weeks, during a very wet winter. This occurs in Mr. Sheppard's market-grounds at Deptford, where they grow in the wildest luxuriance, and produce most prolific crops; the plants are renewed annually, and judging from these results I have hitherto deemed a moist bottom to be essential for this variety of my favourite moist botto
fruit.
ruit.-M.
Hydraulic Cement.-T have a water-work that costs mé yearly a large sum. The course is made of ridge tile and rick,--the sides are worked with Roman cement; the Roman cement will not stand the frost; -What I wish is
that some of your correspondents would inform me if I could use any other cement for the purpose ;-whether could use any other cement for the
the asphalte would answer?-J. \(B . H\).
Rust on Grapes.-Having the thinning of Grapes in a late Vinery, and having frequently sees it mentioned in the Chronicle that allowing the hair of the head to come in contact with the berries, and unskilful handling in thinning, would cause rust, I beg to say I purposely caused several bunches to come in contact with my hair, and likewise carelessly handled them during the operation of thinning, on all of which there is not a single berry showing symptoms of rust; while on the surrounding bunches, some of the berries are almost totally covered
with it; sad \(I\) should mention that they are now about to with it; and \(I\) should mention
Rendle's Tank System.-I am sorry that my letter on this subject should have been considered by Mr. Rendle as nothing more than an attempt to throw cold water on his plan of heating; if such were the tendency of my Temarks, I most earnestly wish those of your readers who have not read Mr. R.s the instruction in that treatise, and not on what the author now offers, which is entirely supplementary to it. The suggestion, however, at p. 572 of the Chronicle, \(I\) consider excellent. And if flow-pipe into other pipes the circulation in the tank is not arrested, I am convinced that a great deal is done towards rendering the plan useful in Pine culture. But there is one thing which should not be overlooked, namely, it does not admit of the pipes being fised one inch ligher in the house than the tank, be that where it may. Whether that is a disadvantage as compared with other tank systems which do, leave other persons to
determine. Respecting the saving of expense that would be effected by the adoption of this plan, I am willing to defer to Mr. R.'s opinion, but I cannot see so clearly as he seems to do, that the saving of fire is attributable to the use of a large body of water ; because whether the quantity of Water is great or small, it merely transmits the heat given
oft in the combustion of the fuel to the air in the house As this air is constantly being cooled, a continual demand of hea; is made on the radiating surface to maintain the desied degree of temperature. Now, through whatever meaum this heat may be imparted to the house, the
quatity of fuel necessary to produce it will always be prety much the same. If a large body of water yields twie as much heat as a smaller quantity, it is because hasfirst received twice as much as the other. My opinion is, hat the most economical qualities of a heating apparats consist in its having as much surface of boiler priented to the fire as possible, and the most effectual pryention of loss of heat through flues, \&c. ; and in its byeans of a quick circulation of water, whether through pies, gutters, or tanks: these advantages once secured, th cuestion as to quantity of water I regard as one of con veince rather than one of expense. Mr. Rendle tells us thatit is his "opinion that as soon as it (his plan of heatg) gets properily understood, it will be universally adoed, Which implies that it is not properly under oo step farther by giving my opinion, that no would pla of heating is properly understood, and the reason in welvritten letters which have recently appeared in the Cdeners' Chronicle on out-door watering, tell us in lamage not to be misunderstood that we are very far fro knowing in what state the elements are most con. gell to the growth of plants in our own climate, and it cliste from which we bring plants was more accurate. N, , although the subtilty of the working of nature may folver elude the sagacity of human research, yet it is my huble opinion that the only unerring rule by which we caxdapt places to plants, is to be deduced from a greater
kndledge than we already possess of the laws which adapt pits to places. When we can duly appreciate the necessitof sabjecting a plant, at certain periods of its exister, to a series of changes in the surrounding elements, sillar to what the Almighty Creator had determined its ciatal vicissitudes to effect, in order to its perfect deve-
lonent; \(I\) say, when we can do this, it will be with more ce than we have ever yet evinced that we shall make clice of a heating apparatus. And, considering the faciliss which practical men now enjoy for making known to eth other their ideas, and receiving every species of sontific information relative to Horticulture, I regard no loger the idea as Utopian that the opinions of gardeners, ory be heard, buit that they will become the inventors of evrything necessary for carrying on their own operations, Takk System of Heating.-I have put up a small boler (Rogers') with a wooden tank, under a Melon pit, san xperiment. The result is so entirely satisfactory "intend to apply it to all the houses. I never saw
say that I added an open gutter, fixed along the
the pit, which I think an improvement. \(-T . P\).
". Aromatios.- Under this word, in the' Gardeners' Chro nicle of 12th Aug., 1843, p. 559, middle column, is this passage :-" The approach to Ceylon can be determined If this has been given by one who has actually perceived
by the fragrance of Ceylon at the distance of many miles, the Writer of this note has nothing farther to say. But if it must lake the liberty of doubting the statement. I have several times approached Ceylon, and anchored pear the island; and having read and heard similar statements, was on the alert to sniff the said fragrance, -but none could be perceived: Many of my shipmates had also heard the like; but neither then nor on carlier occasions, found any
confirmation of the rumour; therefore I cannot help setting the notion down a that the Miltonic authority of "Sabean odours" being
wafted from the spicy shores of Araby the Blest," is mere poetry-

Cheered with the grateful smell, old O Oceain smiles-
the same. "And again, as to the "spicy shores of Araby the Blest," or unblest, it may be set down to the like perfumes of Arabia" is a common household phrase, and as erroveous as common. Scores of quotations, poetica and prosaic, might be given in addition to Pope's
"And all Arabia breathes from yonder box." But his may suffice.-O Oriental.

\section*{PROCEEDINGS OF SOCIETIES.}

markable thus gemmipara, concerning whose supposed identity with S
Romanzoviana we hope now to have some means of deciding
On the Infuence of Light on the Grouth of Plants, by Mr. R.
Hunt. - The peculiar infinence exerted upon the germination of seeds and the geers or se subject of the anthor's investigations The reas some yhow the surprising powers exerted by the mare
Tumious rays in preventing germination, and in destroyine the lamious rays in preventing germination, and in destroying the
healthflul vigour of the young plant. Plants, when made to grow under the influence of the red rays, bend from the light as some cious in quickening the growth of plants. Since the publication of the last Report, the author has tried plants of a great variety
of kinds, and the same effects have been produced. It has, however, been foun,
tion, and pives a lian, and gives a heathrul vigour to the young plant, its stimu-
litreng inf uethee are too great to ensure a perfect growth The
sthe plant appears to he expended in the production of strength of the plant appears to he expended in the production of
a beautiful deep green follage; and it is only by checkme this tendency, by the substitution of a yellow for a blue light, that the etiolating nuthence of the qreen rays was observed upon, as well
as the power which plants possessed of sending out shoots of as the yower which plants possessed of sending out shoots of a
great length in search of that light which is essential to their
Virour. :
Mushstrous Violets.- A paper from Mr. R. Milliken, on a sup.
posed anomaly in the Fructification of the Violet. Mr. Babineton said that the anthor of the paper had described the a ppearamines correech ioula some flowers were later than others in appearing,
t.at in tion
and the the and thac the later ones were generaily imperfect, not having any
corolla. The later flowers appearimg without petals had misicd Mr. Milliken to the supposition that these produced their fruit as
the result of the flowering of the first fowers.--Prof. E. Forbes the resut of the flowering of the frrst flowers, - Prof. E. Forbes
stated that the absence of petals was a permanent state of some of the species of the Violet.
Cant ina escomposition of Carbonic Acid Gas, and the Allkaline
arbonates, by the light of the Sun. By Prof. Draper, New York. -The decomposition of carbonic acid gas, by the leaves of plants remarkable facts in chemistry. Dr. Daubeny, in a very able paper in the Transactions of the Royal Society for 1836, came to the
conclusion that the decomposition in question was due to the rays of Lront, a resultobtained by the agency of coloured glasses, who have attributed it to the chemical rays. There is but one conducting the experiment in the prismatic spectrum itself.
When we consider the feebleness of effect which takes place, by eason of the dispersion of the incident beam through the action or the prism, and the great loss of light through refiection from
its surface it would appear a dificinlto oeration to effect the
deternination in this way. Encouraged, however, by the purity of the skies in America, I made the trinl, and met with complete
success. The plan followed was that already described for detersuccess. The pian followed was that already described for deter-
maning the active ray. in the case of conlorme and hy drogen. A
\(\qquad\)
 heat, the tube occupy ing the red. sparace, or evch the one zin the
extra-spectara red space, whuld, at the close of the experiment contain most gas. If it were the ' chemical rays, ", in the common
acceptation of the term, we might look for the effect in the blue, viopetation or indige the term, we might look for the effect in the blue,
vot it it were the LTG HT , the gas should make its appearance in the yellow, with some in the green, and
some the the range. I made the trial several times, and found it much more easy to accomplishe than 1 had expected. The results
were briefly as follows, -In the tube that wwa in the red space a minute bubble was sometimes found, but sometimes none at all. That in the orange contained a more considerable quantity; in the green a ruuch smaller quantity; in the bive, the indigo, the violet, and the extra-spectral space at that end, not a solitary
bubble. From these facts, in connexion wurth some results oltained by the wese of behromnte of potanh, as an absorptive decomposition, and that the rays of heat and the tithonic rays

 decompositron of these salts y leares in the sunnigh, and found
that it took place with faclily. Nor is the effect limited to the cmoval and decmposition of the second atom of the acid. It posing and yielding oxygen gas. In like manner the sesqui.caronate of ammonia may be made to yicld a very pure oxygern
cas.-- Prof. A Jochu marie a few remarks on this communicatsin hich announced results so different from our received ideas on were the most active in producing the decomposition of the
carbonic acid absorbed by the plant,-MI. Hunt said, that he had
listened with great surprise to Dr. Draper's paper, as, from his
own experiments with coloured glasses and transparent carefully analyzed so as to determme what rays were absorbed

 to which ine experiments.
the resalt of exita
Saxifrages. - Mr. Mackay exhibited specimens of the Irish Saxixrages. He calleed attention to the species resembling the
London Pride (Saxifrage umbrosa), and with the specimens of
 fraga was dificiouit genus to stady. There were many specimens
on the table, which, if they came from different countries, would
be natorally describod es species put which be naturally described as species, but which, as they were all
gathered in Ireland, he had no besitation inc calling varieties. It
was no pronf that a plant was a species because it remained the was no pronf that a plant was a species because it remained the
same in cultivation for a great length of time, for many varieties
 S. umbrosa elegans, geum, and hirsuta, were species. The
variety S. u. of Mr. Mackay, was not the London Pride of the
English Gardens, which was identical with the London Pride of
the Pyrenees. Prof. Forbe the Pyrenees. Prof. Forbes said, that the difference between
betanists whth regard to species and varieties, culd
bonly be
reconciled by ascertain reconciled by ascertaining from each writer an estimate of the
value he attached to particular characters. For the want of this
ver there was much confusion even in Botany, but the evil was much
greater in Zoology. The vague mander in which the characters of animals were crawn up by British zoologists, was a constan
canse of complaint amıng continental naturalists
 very rare plant had been discovered by Mr. J. Drummond in a
salt mansh near Castelon Beerraven, in the county of Cork, in
1810 From an imperfect specimen, Sir J. S. Smith had de-
scriben scribed and figureditt, and it had not been seen again till 1841, when
It was re-fourd by Dr. Sharkey. Only one specimen was again
 specimens, which were eng ow on the table, The orrineal plant was
not a Neottia, as had been supposed by Smith, but was now referred to Splranthes. Mr. Babington stated, that he had care-
fully exan ined the plant on the toble, and believed that it was a
 rom whence these specimens were brought, Mr. Hincks stated
that amorigsome Califoritian plants recerver in 1 .ondon had been
found what appeared to be a spirantues meminara Linaria ytulica, -Dr, Aliman exhibited specimens of a Linaria Which he had gathered in Ireland. He believed it be a new
species, and had described it at a meeting of the Ryal
Aritit Academy. It had been supposed to be the Linaria Italica of
Tieviranus, which had also been tound in Emgland but this plant
dififered in many respects from L. Italica, Mr. Babington thought thered in many respects from Lre. Italica. Mr. Babington thought
the plant of D. Allman differed from the English L. Italcca.
hould this Linal. Should this Linaria be a new species, it whill probabily be new to
the European Flora. Dr Allman stated, that Botaists in Lendon
hed with this opinion. the very rare Trichomanes speciosum, and also of one discovered
by Mr, Andrews of Dublin, which differed from it in many points, and which might probably turn out a new species. The principal reatures of difference that this Fern presented were, the posses-
sion of bipinnate fronds, long bristles, and the trianguiar form of its fronds: in all these points it differed from T. speciosum. Mr.
Mackay had cultivated the plant in ouestion since Mr. Andrews Mackay had cultivated the plant in question since ar. ADrevs
discovered it, and it was his conviction that it was a new species.

 Corth Horticultural Society, July 26 . The exhibition of Flowers,
Fruits, and Vegetables, took place at the Corn Exehange. The varied contribntions from the Flower Garden were not so
numerou3 as on former occasions. The Fruite were fine and in
nem
 and Vegetabes. From Mrs B. Fritzarald, a collection of Fruits
comprising Grapes and Melons, and well-grown Greenhouse an Sture Plants, amongst the latter we notiticed the beantulfal Ron
deletitiappeciosa, and Ixora grandiflora, covered with flower: the
Aesa
 amongst which we noticed a brace of immense Cucumbers
From A. Newman, Esq, a collection of Rnses, Fuchsis, and Dahliag, and a variety of Vegetubles. From the Rev. J. Stopford
a collection of Roses, Pansies, and Herbicuruus Plunts. From J

 From Sir G. Goold there was also a collection of Fruits and
Veyetables. From Mrs. Morrogh there was a beautiful collection of Greenhouse and Eerbbaceous Plants, compaprising some Seedling

Fuchsias of rare beauty. From Capt. Hill there was a splendid
collection of Pelargoniums, amongst which were some fine Seedlings, also a variety of Fuchsias, Roses, Pinkts, and Dahiass. From
W . G. Bradford, Esq., there was a beautiful illection of Cape

 M. H. Conway, Rsq., a collection of Carnations and Picotees,
and a large assortment of treenhouse Plants, comprising some
fine Pelargoniums and Fuchsias. T. H. Hewitt, Eqq, sent a sple did specimen of Fuchsia corymbiffora. From W. Beamish,
E-q., a collection of Carnations and Pieotees, and a variety of Fruits and Vegetubles. From W. M. Reeves, Esq., there was a
 collection of Punsis. The botanical prize was awarded to D Sullivan, of Blackrock, for the best "Hortus siccus" of tifty
named Native Plants. From Messrs. Haycroft, of the Victoria Numedry, there was, as usual, a brilliant display of Greenhouse
Plants, amongst which we noticed many novelties in Pelargo-

Cork Horticultural Show, Aug. 22.-The Horticultural Society had a numerous and fashionabie attendance in the room of the
Corn Exchange. The principal oontributor was the Earl of Kingston, in whose collection we noticed Cycas revoluta (the
Sago Paim), a large plant of Brometia, a beautiful assortment of
Greenhouse and stove.plants, amongst which was Clerodendron Greenhouse and Stove.plants, amongst which was Cierodendroi
speciosissimum ; there were also Fruits, Pines, Grapes, Melons, Guavas, \&cc, in great perfection. From Viscount Doneraile's garCypripedium insigne; also a collection of Dahlias and Green-
house plants; the Fruits were Grapes, Peaches, and Melons From Sir W. Chatterton were Fruits, Vegetables, Holly hocks, a collection of, Fuchisias and other Greenhouse plants, a taste.
fally-anranged basket of Flowers, and a collection of Vegetables. From W. Beamish, Esq., was a collection of Greenhouse plates,
Fruits, and Vegetables. Colonel Hodder contributed a collection Mrs. Blakeney Fitzgerald was a collection of Fruits, amongst which we noticecd some excellent Grapes, also a fine Melon and
 Dahlias, and other flowers. From Col. Piper was a nicely arranged large Bouquet, , some weil-grown Grapes, and 2 colof Greenhouse ulants; amongst which was silene laciniata, a ford, Esq., were well-grown Grapes, Peaches, Melons, and Plums. From A. Newman, Esq, was a collection of Roses, Dahlias,
Greenhouse plants.
Miss Lyons contributed some good Plotees and Carnations, a variety of Hollyhocks, German Asters, and
Hardy Annual Flowers. From S. Lane, Esq., was a collection of Fruits and Vegetables. From J. Lindsay, Esq., War a Bou-
quet and a large assortment of Fruits and Vegetables. From J. M. Travers, Esq., was a collection of Fruits and Vegetables; amongst
the former we noticed some fine Pcaches, Melons, Grapes, and Gooseberries. Conser Datura and Fuchsia corymbifiora; also a fine specimen of Vallota purpurea. From W. M. Reeves, Esq.,
were Dahlias and Vegetabies. From R. S. Coppinger, Esq., wers Vegetables, and a large Melon, From J. Bennett, Esq, was
collection of Dahlias, Roses, Pansies, Vegetables. From Rev, J. Stopford, was a collection of Herbaceous plants and Vegetables,
C. Terry, Esq., sent a large specimen of the Oak-leaved Hy yrangea. From M. Conway, Esq.,s was a collection of Picotes,
Fuchsias, Pelargoniums, and other Greenhouse plants. From tees, and a variety of Annual Flowers, Dr. Bual contributed
some very large Triooli Onions, weighing on an average aboat Solb. each. J. Halloran, Esq, exhibited a miscellaneous collee-
lion of cat Flowers. From W. G. Bradrord, Esq., were some finely-grown Calceolarias, and Cape Heaths ; also a collection of
Roses, Dahlias, and Pansies. There was a large collection of Native plants contributed by D. Murray and D. Sullivan. The
colivection from Messrs. Hay croft comprised upwards of oue collection from Mesars. HRyy crots comprised upward of ope
hundred specimens of Greenhouse and stove-plants in Flower;
sto amonst some fine plants of different varieties of Gesneria, Achimenes, statice, Pimelia, Thumbergia, Chironia, and Ciape isian and lots of the beautiful Brachy come iberidifilia, Dahlias in great variety,
wilh cut specimeno of Herbaceous plants and Roses. M. Cutter contributed a collection of Green
varieties of Cacti--Cork Advertiser.
Devon and Exeter Botanical and Horticultural Society, July 28, RThe 44th Extibition took place at Congdon's Royal subscription
Rooms in this city, and was aurpassingly fne. Foremost among
Ren the contributors was Mrs. Welis, who had a quantity of well-grown
specimen Plants. The OOchidacee were very grand, particularly Cattleya crispa, , having 19 fiowers open on it; C. Harrisonix, with 14 flowers, on it, Stanhopea insignis, with 9 pendululous flower-
8pikes: S. Wardii, 8 c. The Stove or Hothouse Plants were very
 an immense mass of blue flowers; Clerodendron squaratum,
Golphemia splendens, Gensera splendens, zc. The Greenhouse
Piants consisted of Bor Ane specimen of Elichrysum prolfferum, Leschenáaltia for
mosa, Siphocámpylus betuleefolius, \&c. The Ericas or Heath werc crceediulyly file. The Fuchsias contained many new and
choice *orts well grown. There was also a fine specimen of
Lilium lancifolium punctatum. were very good. On the fruit-table weo observed a fine Queen
Pine, some good Grapes, and a choice collection of fruit, also exhibited by Mrs. Wells. From J. W. Buller, Esq., Sir T. Acland, Lousada, Esqrs., and F. Cross, Est., were collections of plants, Mr, J. Clark, exlibited a beautiful collection of Alowers. Mx. R.
Webber, a stand of superior Carnations and Picotees; amongst Which we noticed in Carnutions, Parker's Sophia, Earl Grey, Prince Heath's Superb, Mary Anr, Gidden' Diana, Webber's Devonia,
Duchess of Kent, and Crask's Duke of Wellington. The contributions of the Nurserymen and Florists were as liberal as
magnificent; Messrs. Jucombe, Pince, and Co., having beauteous specimens of Achimenes grandifora, multiflora, pedunculata,
rosea and longiflora, Brugmánsia floribunda, Ixora grandifora, \&c. ; also that beautiful Stove-plant Cyrtoceras reflexa. violacea, with its large rich violet-coloured flowers; Boronia great attention- but we must particularly notice their new collection of cape Heaths, and a chrice display of named Devoniensis, Calceolaria Standishil, \&cc. Messrs. Veitch \& Son had most valuable and rare Orchidaceous and Stove-plants, Ericas, \&c Messris. C. Sclater and Son exhibited a fine collection of Stove
and Greenhouse Plants, Carnations, Picotees, Fuchsias, \&ce, among which the following were very fine :-Angelonia grandi-
flora, Glooxinia rubra, Sinningia guttata and violacea, ILophospermum Hendersónii, Stcphanntus foribundus, Achimencs ingiAriel; a quantity of remarkably fine Balsams and Cockscombs. among other fine kinds, the following were particularly 10 ticed: Rogersonia, Cormackii, speciosa, Lanei, Towardi, Venus
victrix, globosa rosea elegans, Gem, Iveryana, Grenvill, Brockmannii, formoss elegans, pulcherrima, and a kind with variegated
foliage, namely globosa variegata. The collection of Petunias were beautiful, many of them quite new, and of brilliant colours. There were also a fine box of Verbenas; a Seedling Pentstemon Carnations and Picotees, in pots; Carnations,-Rainbow, Gem Prince Abbert, Achilles, Coronation, Fire-i, Lady Morgan, Victoria (yellow), Mary Anne, Plenipotentiary, Erin-go-bragh, ling of Messrs. Trude's Sictore present and of the most unique and beautiful kinds ever seen, cotted with almost
black on a light ground, of beautiful form and symmetry: fine collection of Roses, containing Duc de Trevise, Emerance, La Fontaine, Madame Laffarge, Micalea, Edward Jesse, Triumphant Adonis, Charles Duval, Achile, Kean, Felicité Parmentier, Aspasie, La Grandeur, also came from the same. Prizes were H. Porter, Esq.; 2, Sir J. Kennaway, Bart.; best Pine-apple, , M Mrs.

nium velutinum, Glaciol us byzantinus, Peeonia Potsii, Dictamnus frax xinella alba; \({ }^{2}\). Mr. J. Adidisin. For the best bunch of Ham.
unrgh Grapes, Mr. J. Goodall: 2 , Mr. W. Cuthbertson. For the burgh Grapes, Mr. J. Goodall; 2, Mr. W. Cuthbertson. For the
best hunch of Grapps of any sort-Muscat of Alexandria-Mr. W. Cuthbertson; 2 , Mr. J. Godall. For the best Cauliffower, Mr. J.
 Mr. J. Dooglas. The followink were sent for exhibition:- - From
Mr. W. Cuthbertson, several first-rate trusses of Nertum splen. dens. From Messrs. Handasyde, a collection of 24 mixed Roses of great ceauty, \& coltection of 30 ine Pansies, and a fine plant
of siphocampy collection of 24 superior Pelargoniums. From Messrs. Lawson
and Son, a box of 24 distinct varieties of Pansies, 一The plants and Son, a box of 24 distinct varieties of Pansies, -The plants
and flowers sent for exhibition were superb, and were of course greatly admired, both by professionals and amateurs,
Norwich Horticultural Society, August 3.-The August show was held at the Corn Exchange, and attracted a great many visitors, the spacious hall being, athous,
was scarcely room to move. Although not presting so meny
 Bracondale, this exibition, nevertheless, offiered several points
of attraction in the excellence of the fruits, plants, flowers, and vegetabies. There were some excelinent speciment. The fruits were fine, particulary the Grapes, Currants, Gooseberries and Strawberries. Lord Stafford, H. Cooke, H. N. .N.
Burroaghes, R. Foster, and C. . B. Tompsom, Equs., exhibited some esplendid. Grapes. Nothing could be finer than the Currants,
the several dishes of which were most seductive objects. Fine the several dishes of which were most seductive objecti. Fine
Strawberries were exhibited by J. T. Mott, Esq., the Rev. O. MMathas, and Mrse. F. Noverre, a dish of Eiton Pine, sent by the
Matter were very large, and of exquisite flavour. The Bigarreau latter, were very arge, harries, and the Gooseberries were also unusually fine. The vegetables were of f superior description.
The Rev. \(J\). Burroughes had \(a\) number of excellent specimen of
 were heautiful specimens of this charming flower, with its delicate white petals, and their rich dark erging. The Carnations shewn
by Mr. Burronghes were also extremely choice ones. There wes by Mr. Burroughes were asso extremey chice ones. a considerable variety of Fuchsias from his greenhouse; one of a considerable variety
these was the celebrated St. Slare, the flowers of which are
elegantly formed, and the colour a bright crimson. A large colelection of Roses were exhibited by Mr. Bircham, from the Hedenham Rosery, but riot or a prize. The Picotees and Carma-
tions of the Hon. and Rev. R. Wilson; those of Messrs. Norman, Nurserymen, of Woolwich, (not exhibited for a prize); and of
Mr. G. Dover, were much admired. J. N. Wiste, Esq. C. Middleton, Esf.; Mr. J. Barkway; and J. Stracey, Esq., ex hibited some excellent specimens of the Fuchasi. A table in the centre of the
room excited much attention: It was covered with magnifcent qpecimens of Erica and Greenhouse plants from the Bracontale Nestryalingia, infund bubulformis, Irbyana, cubica ninizor, eximia, first five being large specimens, the other six smaller ones. Achimenes longiflora, two very large plants of Achimenes coccinea, Gloxinta, caulescens and violicea, Cleome pur-
purea, a very curions stove plant; 12 Fuchsiag, amonnst
which wis a very fine variety, named Epssil, Another teble Which was a very fine variety, named ep, of nature. It was possessed equal intereet to the admirers or nizure.
covered with a fine collection of Foreinn and Britis Ferrs. Every
shew exhibits an improvement in the cottagers' About 50 of this usefulc clage exhibited, and the oniions, Cabbages, Parsneps, Bean,
ceeded by any in the room. There were 1500 visitors during the
 Lection of so, the Rev. J. Burroughes, Modesta, Quiz, Joan of
Arc, Wood's Agrippla, Lady of the Lake, Sir W. Wideteon,
Cind Mrs. Bevan, Lacly Douro, Miss Oshorn, Madonna, Proserpine, Gidaten'S Diana, Deborat, Hero, Zenobia, Julia, Sy,

THE GARDENERS' CHRONICLE.
[SEPT. 2,

\section*{MISCELLANEOUS.}

Wine from the common Bramble.-Tive measures of the ripe fruit with one of honey and six of water, boiled and strained, and left to ferment-then boiled agaia and put in casks to ferment, are said to produce an excellent
Wine. The colour of Wine is often rendered darker by a Wine. The colour of Wine is often rendered darker
mixture of Blackberries with the Grapes. Loudon's Gardeners' Magasine.
To make Raisin Wine.-Half Smyraas and half Malagas are best, seven pounds to the gallon-wine measure. Boil the water and let it stand to get cold; pick out thel argest stalks, and wash out the barrel witi a little brandy; put the fruit in whole, and let it stand six or seven months, according to the quantity made. If the to give it room to swell, and should not be stopped down until it has done working, but stir it every two or three days. If it be madeal the night before bottling, mix some burnt sugar in it, and put a little into every bottle,-a cwt. will require a barrel
Dock-Mud.-This is probably a most valuable fertiliser It contains the whole wash of the city; and after a rainstorm \({ }_{3}^{7}\) the most valuable portion of the street dirt settles in the docks. Soap-suds, soap-lees, pot-liquor, \&sc., are the greater portion of the docks, when in the dock-mud, or the tide is low, is a pungent proof of its fertilising foul, or the tide is low, is a pungent proor of in some conpower. This material should be collected in some con-
venient spot where it can be landed, put into heaps under venient spot where it can be landed, put into heaps ander open sheds, mixed with lime, plaster, or charccal, and let
lie until a thorough decomposition takes place, and then lie until a thorough decomposition takes place, and then applied to the land. There can be no doubt that one cartload from sach a compost-heap would be more valuable to the farmer than three loads of the best street-dirt. It
has been objected by some that dock-mud contains salt. has been objected by some that dock-mud contains salt. This, instead of being an objection, will be found to be one of its most valuable properties. The celebrated guanomanure contains more than 30 per cent. of sea-salt, a larger portion probably than would be found in dock-mud. I should consider that a compost made from dock-mud would be very little, if any, inferior to the guano-manure. -American Agriculturist. [We trust the Editor is more correct in his other statements than in this concerning the per centage of sea-salt
little more than a trace of it.]

Mushroons.-Some people assert that the Mushroom, or that part which springs from, or appears above the earth, is the stem, or principal part of the plant, and those parts under the earth, its roots. Frowth are totally departed from ; for, as a stem, or principal part, with its appendages, advance from the earth, its roots spread in the earth in proportion and at the same time; but to aver that the roots will extend of themselves in the earth, without the roots wil extend or its buds expanding, or advancing in growth with them, or nothing less than nonsense; and in this case the Mushroom, being the last part produced, after the plant in Mushroom, being the all directions, and goes through the the earth extends in all directions, and goes the stand of growth, is evidently the fruit and combined; and as the plant is subterraneous, it pushes its fructifying part into the air to perfect its seminal organs, and resembles in this respect aquatic plants at the time of flowering, as they send their flowers above water for the same purpose--E. Owens, in the Transactions of the
Gardeners' Society of Ireland. "This is very'true, and Gardeners' Society of Ireland. " [This is 'very'true, and the observation does credit to the acuteness of Mr. Owens, who does not seem to be aware of the views of modern
Botanists on the subject.] GARDEN MEMORANDA.
Mrs. Sherbourne, Hurs House, near Prescot, Lancashire.-On centering a glazed passage leading to the principal range of stoves,
 Thstroemia indica, hearng myrias plant grown to perfection can
Thase who have never seen this
have but a very faint idea of its beauty, and as Mr, Durden (the
worthy gardener at Hurst House) succeeds so eminently in its
cultivation, I will briefly describe his system of culture, although it may not differ materially from that by which many gardeners are accustomed to grow it. In the autumn, after the plant has
done flowering, it is removed first to the greenhouse to harden done flowering, it is removed first to the greenhouse to harden
it a little, then, if there be no fear of frost, it is set out of doors it a little, then, if there be no fear occommodated in a back-shed,
for a time. During winter it is ac,
where it cannot be injured by frost, nor be excited into growth where it cannot be injured by frost, nor be excited int gris beason. Some tume in February a great part of the soll is slaken from
the roots, and the plant is repotted in light. rich, sandy loam and the roots, and the plant is repotted ing back to two or threc inches
leaf-mould. The strong shoots are cut whole vigour of the plant may be concentrated in the few huds
which are left at the base of the last year's shoots; the pot is which are left at the base of the last year's shoots; the pot is
then plunged in a smart bottom-heat in the stove. The plant check, and remains in a partially dormant state for a few weeks. It is at this time that persons unacquainted with the nature of
the plant turn it out into the greerhouse or open air, supposing that there is no chance of its flowering for that year; but if the
plant be stnll kept in the stove it sonn commences a second
growth, ald ultimately flowersin profusion. A white Mauranoya, growth, ald ultimately flowers in profusion. A whte vauranal looked
called alba, falling gracefuily over an ornamental vase,
very pretty, and opposite, in a similar vase, a fine variety of Pnlox calcy pretty, and opposite, in a similar vase, a fine variety of Pcinea,
verummondi was blooming beautifuly ; Kalosánthes cocinea,
with its bright starry corymbs, showed how beantful it can be when it receves a little good treatment; a fine old plant of
Plumbágo capensis, profuseiy, producing its beauthinl blue flowers; and a noble plant of Cléthra arborea are equally worthy
of notice. The Orangery, a noble structure, standing in the centre of a long range of stoves, contains the principal collection
of the Citrus tribe. The centre of the house is divided into long narrow pits, about two feet m width ; between each pit is a path
about three feet in witth. The Oranges, \&c, are planted in the about three feet in wicth. The Oranges, sc. are pres present, as it wore, trees in frint are kept so thu that they do not intercept
too much of the light from those behind, thus the greatest possible quantity of fruit is obtained from the space allowed, and the
house has at the same time a very neat appearance. The trees house has at the same time a very neat appearance. The trees
are loaded with fruit in every stage of maturation; tioc large Shaddocks, \&cc. having a beautifni appearance when contrasted
with the fine dark-green luxuriant foliage. Several plants of Passiflora quadrangularis are trained along wires near the glass, and are producing numerous fine fruit. The beantiful Mandevila
suaveolens, planted in a border, and running the whole length suaveotens, planted in a border, and s well as if it were in its widd
of a rafter, Is growing and fowering as
native woons, and the no less beautiful Petrea volubihs is flourish. ing beautifully, in a similar situation; Jasminum azoricum and simplicifohum, Beaumontia grandiflora, Thumbergia grandifora,
and several other climbing plants, all contribute to beautify the and several other climbing plants, all contribue (i) is just putting
house. A strong plant of Bignonia prandilora forth a fine spike of flowers. Thunbergia Hawtayneana is in in Ardisia crenulata, about two feet in height, and almost as much ardisia crenuiara, a a beautiful object, beng loaded with myriads of its little red berries a handsome plant of the Cimnamon-tree (Cinnamormum verum bearing bundreds a quantity of ripe fruit; a pretty Ipom ceacalied ficifolia, trained over a barrel-shaped trellis louse, and reaching from the foor to the glass, eighteen feet in height, is a very singuiar-looking plant, slender stem \(1 s\) crowned by a bunch of lanceolate leaves, about
two feet in length, which give it a very paim-like appearance.

\section*{IRebielos.}

In. Justus Liebig, in his Relation to Vegetable Physi ology. By Dr. Hugo Mohl. (Dr. Justus Liebig's Verhältniss zur Planzen-Pnysiologie.) Tubingen. Frues. 1843.
(Continued from page \({ }^{376 .)}\) and Assimila
In a chapter like that "On the Origin and Assimila tion of Nitrogen," it was to be presumed that Liebig conveyed to the plants. As almost all plants grow in black mould, the re humus was to be examined topic interesting not only in a theoretical but practica point of view. But L. treats the matter very slightly merely stating (p. 83) that humus stands in the same relation to ammonia as powdered charcoal, viz., condensing the ammonia. But we have seen although the latter substance absorbs ammonia even more forcibly than humus, yet plants will not prosper in it. This, therefore, does not corroborate L.'s assertion. The province of a true chemist, in this case, instead of being satisfied with the trivial fact that rotten wood absorbs ammonia, would have been rather to inquire whether these two substances will combine, and what combinaty asserted that humus and Sprengel and Mulder hatur ammonia will form combinations somb, in all sorts of humus, a soluble nitrosure also found, in all sorts of hains the conveyance of genous extract, by which he explains experiments, and without even taking notice of those of such men as the above, Liebig despatches the whole question with the assertion that the humic substances contained in black mould (Danana Ere) are entirely insoluble in water
The explanation of the action of gypsum on plants is connected by L. With the existence of carbonat gypsum is decomposed by the carbonate of ammonia of the air; and he considers it, therefore, a means of fixing ammonia, and conveying it to plants, of grasses, and by the increased luxuriance and fertility of meadows manured with gypsum." This explanation (replies Dr. Mohl) is only true in a chemical, but not in a physiological point of view; because if its action consisted in fixing ammonia, there is no reason why it should not act beneficially on all plants, especially on Corn. And although L. asserts the latter to be the fact, (Am. d. Chem. u. Pharm. xli. p. 369), yet the farmers, who are pretty good judges in these matters, will not agree with the Professor. If L. explains in a farther part of his work the manan influence which, (he says) could not have been previously un.
derstood, it is certainly not to him that the discovery is owing, but to Sprengel, who in his "Doctrine of Manures" has also explained the influ
their attraction of ammonia.
Of the fifth chapter, headed "The Inorganic Constituents of Plants," Dr. Mohl says, that Liebig justly rejects the prevailing opinion, that the salts absorbed by plants act merely as stimulants, and is right in considering the bases absorbed from the soil as necessany consticuent of vegetation. Liebig says, that all plants contai vege table acids, which become combined with inorgan bases or organic, formed by the plants themselves) into neura r acid salts;-that, considering the constant presence of these acids, we have to inter that they serve some wital purpose, and that their formation constitutes some neces sary part of the vital process. Hence, Liebig arrives at the conclusion, that several earthy or alkaline bases can be substituted for each other in the vital process, and that the quantity of the saline bases absorbed by plants depends on the saturating capacity of the acids they contain. This, (says Dr. M.,) is the second new and important principle perfectly evident for it is only supported by the analysis f two plants. Whether the enigma which still shrouds the absorption of inorganic substances has been thus solved Dr. M. thinks doubtful. This theory, he says, is, in this respect, one-sialit, and neglects the considerproportion of earth andors, which appertains to such ation of the specific proporion substances in a that the replaciog of one to a certain extent ; that, moreover, the same quan for the certain base, which may bor prosperity of one plunt, may aot as a poily is conspicuous as. In this respect, hme more Alps, compared with that of as the flora of the calcareous Alps, In this respect some primitive rocks, clearly proves. plants are very fastidious, and will only bear sort of soll, whilst others grow in soth, the substitution which may be called fastidious of soil, the sabstition of one base for another cannot be supposed to take place. what Liebig has stated or retracted in his late work, "Organic Chemistry in its Relation to the Doctrines of Dr. Grubes and Sprengel." Dr. M. considers the explanations of \(L\). in that place only as additional proofs of his inconsistency, and another sample of the uncertain style of his writings, "which leaves the reader, on almost style orect uncertainty what it really is that Liebir means." In only one instance, concludes is the the ping, in alluding to Dr. M., the that is taken up by plants, and is that, moreover, whence the formation of wood takes its origin: acting, therefore, like one of those particles of a solution on which the first rystals are formed, and that in Equisetum and the Bamboo silica assumes the form and functions of the wood. This theory Dr. M. calls a physiological blunder, (as it certaing is,) proving Prof. Liebigsiology of plants.
onnected with the pheint, says Prof. Mohl, (p.37,) Another important por, is that the saline bases absorbed by plantd are not only absorbed in the shape of carbonates, (which are easily decomposed by the mere vegetable acids, ) but often also in the shape of phosphates, sulphates, \&c. According to all experieace, these salts are not less essential to vegetation than in ingredient bined with organic acids. Silica, also, is an ingredents. equally essential to the growth of most, if not all, plams. Which part these substances take in the vital process, sume that the sulphates yield plants the sulphur required for some of their organs. Of the phosphates we knowg still less; we are ignorant why they chiefly occur in young plants, and in their seed; and we are perfectly ignorant the quantity required for vegetable growth-for analysir shows that the amount of phosphates varies considerabls, as is best seen in the different sorts of grain.
\(-1\)
knaphytosis ; or, the Rejuvenescence of Plants: being a Key to explaining their Growth, Flowering, and Culture tificution, with Practical Application to the Culture of Plants. By Dr. C. H. Schultz. Berlin, 1843. Hirschwald. 8vo, pp. 214. [Die Anaphytose oder Verjuingung der Pflanzen.]
THis is the title of a book of Professor Schultz, of Berlin, who, having previously published a work on the Berlin, who, having previousiy publisas applied himself to the regeneration of all nature. It is difficult to bring the ideas of the author into a compass adequate to our spa chawe will,
Dr. S. begins by stating, that "It is often not enough
Dres Dr. S. begins by stating, that but a full result of such efutation will be only achieved when, in lieu of ersed." and mistakes, something better and true is propowing Che main object of the author appears from the however, passage - "The recent progress of science, part of prompts us stronglance with the laws of nature finorus, must be acknowledged that, since the time of a nechait has not much progressed bers the whole of our mor nical terminology, which stil form is a newsystem phological knowledge. This work, is in its leading feaof Vegetable Physiology, or at leaunt pages of the preface, proceeds to censure that aversion of theoretical Botanists, and to complain that the aversion of theoretical

Botanists for practical application has caused a de facto separation of theory and practice, theoretical Botany, however, having often "sat upon addled eggs" (11). look to horticultural, agricultural, and forest operations; investigate the processes of vegetation in all sorts of plants on a large and comprehensive aissertation on the morphological meaning of the different organs of plants, into which theoretical disquisition we are not inclined to follow. Dr.
The new term, Anaphytosis, is thus explained to be that which lies at the bottom of all vegetation, as well as the foundation of all vegetable metamorphosis; namely, a continual repetition 3 n the development of organs, whica,
although they are similar to each other, appear always although they are similar to each other, appear always novel, sprouting constantly out of the substance of the
individual plant, and repeating in different forms the old type of vegetation. Thence, it follows, that those parts cannot only be divided and dissevered by art (without
losing their vitality), but will divide spontaneously, and by the mere impulse of nature, which explains the prodigious increase of plants, especially in the tropics. This may take place by root-spawn, as in the Gramineous, Liliaceous, and Orchidaceous plants, or by branch-spawn,
as is the case in the exotic Figs and Mangroves, whose lateral branches again form roots and twigs, by whose continuation, almost ad infinitum, a forest of plants is formed out of one plant, which, although yet connected together, still lead each its individual life. This infinite regeneration may take place, moreover, by leaf-spawn, as
is the case with Ferns, many Sedums, and Liliaceæ, and more especially with Algæ; or by trunk-spawn, as in Everywhere we find the same repetition of the same exterior organs of plants, similar to each other, and to the repetition (Wiederhalung), which governs all vegetation. In order to give a precise name to these phenomena, the tosis ;" by which name is meant the living reproduction of the same organs during the growth of plants, as well as their constant regeneration. It is this Anaphytosis which enables a plaft to continue itself (sic! ), to extend itseif,
to branch off, and multiply, ad infinitum, every part being always equal to that whence it is derived. This, however, takes place with relation to certain partitions, or separations, by which longitudinal growth is divided into separations,
articulations, where Anaphytosis continually begins anew. The parts produced from this process of articulation, are The parts produced from this process of articulation, are
called Anaphyta, or vegetative articulations. We have considered it right to attempt an explanation of that idea of the author, which he regards as important enough to be placed on the title of his book; but we must refer again to the work itself for his views concerning what he calls Metanaphytosis, Enanaphytosis, Exanaphytosis, \&c
In a subsequent page Dr. S. "dilates on the conditions of flowering. In stating the difference between a mere general growth and the art of flowering, he says:-" On this head a common mistake requires to be rectified, viz, that
plants can be forced into flowering and fruiting by being deprived of nourishment, and especially by any such checks to their growth as pruning, transplanting," \&c. It was
Linnæus who, in his doctrine of Metamorphosis, first inLinnæus who, in his doctrine of Metamorphosis, first in-
troduced this error. A really stunted growth, however, troduced this error. A really stunted growth, however,
(brought on in any way whatever), can never lead to vigorous fructification or flowering.' We know that it is the flowering and fructifying of crops which most exbaust the soil, whilst mere herbage may be grown on worn out ground. Hence it follows, that it is flowering and fructi-
fying which demands the strongest nourishment, and the known results of pruning trees or exposing bulbs rest on other grounds than those generally received. Even where mere flowering without fructification is desired, land must be well manured, for we find everywhere that the floral organs require quite as much support as the mere individual plants
The chanter "On the Relation of Chemistry to Botanimena connected with "the transformation of chemical substances into organic forms, lead to some general remarks on the relation of Chemistry to Botanical Phy
siology, which tle author thinks has been litherto entirel siology, which the author thinks ias been bitherto entirely
mistaken. The recent improvements in (so called) organic Chemistry, relating to the transformation of substance into the organisation of plants (and animals) has threat-
ened the entire absorntion of Vegetable Physiolory in chemistry, and seems likely to bring us back to the worst itself of the alchymists, when it was thought that even life itself could be analysed by their coarse methods. Plysiology, under these circumstances, has done little more than
The physiology of plants has a great practical bearing on medicine, rural econoray, and all the practical opera-
tions of social life; and this importance is in consequence of the formation of useful substances in the interior of tions of vegetative processes, yet, after all, the grand operations of orgànic life in plants overrule all chemical and the gardener palthough the physician, the agriculturist, "part of Botany, they must always fall back on Physiology, payment the vital principle is the bank where all chemical of chemistry to phaysiology is founded on the contrast The life organised form and formless chemical elements. organic form ; and mere chemical substances can never
become the exponents of life, without having first acquired organic forms. Vegetable life, in as far as substances enter into its forms, is the vanquishing of the chemical propies of these very substances, and they obtain their cess of assimilation. This process has never yet been properiy understood, and this is the reason of all the assimilating process of nutrition to consist in a mere chemical change of substances; but, on the contrary, we qualities of substances, in their utter transformation into organis forms. If the process of assimilation were one merely chemicaf, chemistry would have to displace physibut a subordinate chapter of the science of chemistry. But we see, on the contrary, that it is botanical chemistry that has intruded on the province of physiology, and has carried there, like death, its ravages amongst the living,
sweeping away with its fatal scythe all traces of sablime organic life.
Dr. Schultz himself answers the question as to assimilation. The very name (he says) is so closely connected
with the inmost nature of the process, that we cannot but admire the greatness of the human mind that, by mere instinct, has expressed, in one word, the pure and entire truth. The Latin word (and still more the version of it into German-verähnlichung) tells us that we have here to
do with the rendering dissimilar substances similar-with the conversion of shapeless nutritive substances into definite forms. It is this changing of chemical matter
(chemismus) into organic life, which is the culminating point of all assimilation. These considerations, however still lead us to the fact, that the substances to be assimilated by plants (their food) are of a chemical nature, and \(\mathrm{O}_{\mathrm{n}}\) the other hand, the organism of plants is qualities death, again resolved into chemical substances, and it is another of the provinces of chemistry to analyse and But we have stated enough of the speculative part of space to matters and must devote the remainder of our ter. In the chapter inscribed-" Formation of Substances in Different Parts of the Plant," the author saysThe difference in the formation of different substances in difference in their vital processes." \({ }^{\text {" }}\) On this account the parts of a plant above and below ground are often in as different a position as animals living in different
climates. Nourishment and water, although they are absorbed by all parts of the plant, still arrive at the interior under different modifications of soil and air; and by an equally different reaction on the part of the organs,
different substances are generated. It is, moreover, light to which the above-ground parts owe their peculiar and little oxydised substances, whilst the root and other sabsweet ingredients. All the modifications of vegetation are not brought on by a quantitative but by a qualitative difference of the vegetative process, which, again, depends on condion of the vital sap and the vital vessels; by which, in fine, the condition of the sap formed in the determined which aves, sters, tubers, and the roots, is the formation of flowers. The sonced and consuuranisation of the substances employed in forming the vital sap go always hand in hand. The sap of the woody fibre usually contains only 2 to 3 parts in a thousand (rarely 2 to 4 per cent.) of solid substances. The vital sap, flowering, 15,20 , nay 40 per cent. of solid substance The saline contents in the vital sap of a Mimosa pudica will instantly crystallise into the finest dendritic forms. This great amount of saline matter in the vital sap is connected with the fact, that the bark (the focus of the vitalsap vessels in most plants) contains a greater amount of neck show that the amount of ashes in the bark of the Willow is 3,1 per cent., whilst the wood yields only 2,79 per cent., in Pinus silvestris the proportions between of saline matter in the sap is, however, only apparent towards the period of flowering, and again decreases during and after that period, when those peculiar substances which are developed at that period are again absorbed. Mollerat has observed, that the herbage of Potatoes dried
shortly before blossoming, yielded 9.20 per cent. of its weight of ashes, but a month later only \(5 \cdot 12\) per cent. The general supply of food is the same for all plants, and will suffice for their mere growth; but flowering and of salts, different in each individual case. Thus we find that the toughness and hardness of timber depend on the mineral constituents of the soil. It is well known, that Oak grown in the most fertile humus of American grown on the calcareous soil of Germany is of a superior
" The chief effect, however, which salts would exercise on he flowering of plants, consists in stimulating (Reitzung) and contracting the vessels and cellular tissue, so as to inrease evaporation and concentrate the sap which unites hem. But it is essential that the saline stimuli should be kept in a due proportion to the amount of general food; that the braad in wheat and other grain is generally caused by such a disproportion between general food and saline stimuli.' "The author's remarks upon that sabject
occupy considerable space ; we can only afford room for the foilowing extracts. Besides the general stimulating and exciting properties of salts, the phosphates and sulphates appear to contribute towards the formation of peculiar substances, 一such as albumen and gluten, as is apparent in fruits and seeds; whilst ammoniacal salts cause the development of pollen, which is nitrogenous. Phosphoric and sulphuric acid, and ammonia, may therefore be considered both nourishing and stimulating substances, and equally beneficial in flowering and fruiting As to other salts, the acid of which they consist seems to exercise less influence than their base, for vegetable acids are apt to be much changed and transformed by the vegetative process. We know that many composite plants, such as Wormwood, Calendula, and Carduus benedictus, contain considerable quantities of saltpetre; whence I suspected that the Jerusalem Artichoke, which only flowers about Berlin late, and badly, might be brought to flower early by manuring it with a solution of saltpetre in water. By watering it during several summer months with a weak solution, my Artichoke flowered in Augus and bore fruit. Further experiments made with beech ashes gave the same result, and convinced me that it was merely the alkali which acted in this case, the vegetative process of the plant supplying the rest. I believe, therefore, that plants are able to prepare nitric acid from the ammonia of dung and rain, if assisted by the calcareous contents of soil.
Common salt and chioride of lime (continues Dr. S.), seem to bevery advantageous in the flowering of most plants, which, however, can only endure a small quantity of them. Salts of lime seem to have so much the same effect as those of potash and soda, that it is only necessary to place lime in their way, provided there is no deficiency of manure in the shape of general food. Lime will, in the main, promote the flowering and fruiting of most plants to an astonishing degree, because calcareous salts promote evaporation and the concentration of the sap. Silica, however, seems to act differently on plants, as inthe family of Grasses, which absorb the greatest amount of it, in the form of a soluble silicate, especially that of potash. From will absorb no silics sand without potash, even Grasses and it is only from decomposed feldspar that they will absorb the sili fro f feldspar io whence the berefial fet produced by manuring Corn whe th the by aning Corm wranite Bet go bor the silica of c is from or potash, and form therefrom silca, as appears from the crystals of sinica . The phosphates, sulphates, nitrates, and ammoniacal salte do not act merely as saline stimuli, but their constituent parts enter into the organic composition of flower and fruit in the shape of food; for the plant assimilates the phosphorus, sulphur, and ammonia of these salts, and uses it in the formation of albumen, gluten, and pollen.
The following observation completes the series of Dr Schultz's arguments:-"The influence of the above and other salts, as well as of manures in general on vegetation, has been hitherto considered too generally; whilst there a differeace in their influence on growth, and on flowering and fruiting. Hence a great many erroneous notions have originated, for mere growth requires so different a nourishment from flowering, that one sort of food will advance growth but not flowering, and vice verst; whilst many circumstances must combine to produce growth, flowering, and fruiting in the most perfect state.
Although we have occupied so much space with a notice of a book whose title cannot fail to excite curiosity, we must confess that we find much less novelty in the matten than in the manner of \(i t\).

CALENDAR OF OPERATIONS for the ensuing week. That the autumn is the best time to bud Rose no one who haz.
tried it will fispute. A correspondent writes -I Is hall begin to bud
miy Rose the my Roses this week (second week in August), and continue to do so
occasionaly to the end of September, as I find dormant buds are more safe to stand the wuter." From some experments 1 have
been engaged in for the latest two years, I ara led to infer that the autumn, ne many cases, is a hetter time to graft and bud many kinds
of treos
 having at bud at its axil is to prepare proper nourishment for the
full develosment or organisation of that bud , that the leaves of some trees possess the property of furnishing the buds in a few days,
that otbers talce some weeks to effect this, while a third will require a month or two to furnish the buds, as independent membera of the
system. Now, if \(I\) bud from a shoot in May whose buds system. Now, it
fully organised before June, the shoied or rind of the be bud may unite
 repented failures 1 set down the tree as "difficill to propagate" by
budding, whereas my own innorance of its ceonomy was the true.
budser cause. If, on the nine Rimat, after the maturation of the buds, and find
or September, or any
 autumn is the safest time to bud those trees and shrubs that are sup-
posed difficult to increase in this way, and that such trecs may be graited in the autumn, and unite in less time, and with greater
safety, than it any other season, ts a very lmportant point to attend to. During this ingurry I have met with some singular and thteterest-
ing facts, one of which will be welcome news to many, and with it shat conclude my remarks this week. The Rhododendron in the
nutumn will bud as freely as the Rose, and graft in the open ain as autumn will bud as freely as the Rose, and graft in the open air as.
easily as the Apple or Pear. The only precaution that is necessary
in this operation is to take prominent buds from the first growth of in this aperation is to take prominent budc from the first grow th of
this season, as many of the family have made a second growth this this season, as many of the family have made a second growth this
month. Variegated Holles may now be grafted and budded witm
the month.
the greatest freedom. The Rhay now be grafted and budded with
best by sude-arafting, and buds of it alson heng better be inserted does the manner of side-grafting, with a portion of the solt wood retaned
behind the hud; all autumn buds nay thus be inserted. I seareely experimental buds and grafts, so that with this usefu! precaution there will be no fear of success. The following observations may be
useful to those little versed in these matters:- Insert autumn-graft ys you would; buds, leave about an inch of the graft out, at the top
stock. If the bark of the stock be very thin, or if it do not part
freely from the wood, you had hetter put in the grafts and buds as reely from the wood, you had hetter put in the grafts and buds as
in side-grafting, cuting out a thin siice, and preparing the pratis so
as to fit the place, and tie rather gently, as the stock is soft, for fear as to fit the place, and tie rather gently, as the stock is soft, for fear stock, it will be an additional security from the heat of the sun. The
best grafting clay is made hy putting a lump of soft clay in the
bottom of a small pot, with a little water over it; then stir it with a atick until it is rather thicker than paint, and with \& small brush made with stripes of matting tee. tiv a hittle stick, paint over the
tying, and whale the pant is wet, , rust a hitte dry cand or mould
over it, and when at becomes dry no rain will wash at off, and the sand will keep it from cracking.
I.-KITCHEN-GARDEN AND ORCHARD. Punks. - After they are firmly rooted, about this time, some good
growers whom I know, make up a heap of fresh horse-dung at the grotside of the succession-pits, to supply moist top-heat through two
or three holes in the end wwall, Others leave a space of one light or three holes in the end waun insils, there to steam away more
cmpty, and introduce the dung ind
slowly, and cover it over with a wooden shatter. Any other plantwe slowly, and cover it over with a wooden shutter. Any other plant we
cultivate except the Pine would soon be destroyed by the rank ammo-
niacal vapour thus createrl. but Pines delieht in it for three months in the autumn, or at any time when they are growing freely; and this which is more or lens irregular. This is, moreover, the simplest way to clean Pines from scale, bugs, \&cu. be fully coloured by this time, and Muscats hegrnning to assume them dry until the frost o very cold nights set in. These Grapes, in a good house, may be such a had Grape as it is often represented; but it should never be
touched till six weeks after it is fit for table; ; its flavour will much touched till six weeks after it is fit for table; , ts favorr will mach
improve during this time in a dry atmosphere, thd there is
in this country that can produce such fine clusters with equal ease; at thinning time any bunch that is not likely to weigh three pounds should be cut out.
FRrNCR BeNs. The thinnings from those sown at the end of
July covered from early frost, and would succeed the lagt ones from the open air, others should now be sown in boxes twice or three times
during this month, according to the wants of the family, and afterduring this month, according to the wants of the family,
wards transplanted into pots or beds covered with glass.

About the beginning of May we planted out a few hundreds of the
forced Keen's Seedling Strawherries and by the time the Eltons were over these were coming in for a second crop, which lasted to the
end of August. But a good gardener tells me he gets three full crops of the same plants within thelve months. Thus, those forced last spring and planted out in May, beng now done bearing, he
will take up and pot in next October, and cut away the man portion
of the old roots, as by that time there will be plenty of strong young of the old roots, as by that time there will be plenty of strong young
ones produced immediately under the surface of the ground; thess he puts into a cold Vinery, for forcing by the end of January, and a
third crop will be gathered by the end of the twelvemonth. Cutting third crop will he gathered by the end of the twelvemonth. Cutting
off the leaves of Strawberries at this time is not a worse practice than digging the heds in winter, as you cut off all those fine roots
formed late in the autumn near the surface of the ground. The old plan of covering the beds with a rich compost, leaving only the tops Artichooes.-If any of your rows or beds are seven years old,
lose no time in cutting them down, and trench the ground as deep as you find it good, while it is yet dry; not but what the plants might go on for another seven years, and still bearwell enough, but it is had
management to let pround lie out of rotatinn so long. Goosebery, Currant, and Raspberry bushes are often leit on the pround nebtil the
plants cease producrg through sheer exhaustion of the soil. Thyme, Sage, Mint, and Tarragon that were cut over last month are now getting quite bushy again, and in fine condition to be
taken up for potting, or to be put in boxes for forcing gently in
Ointer. informed; but here we have abundance on our light soils, Haw-
thornden and other Codlinga for the kitchen should be gathered thornden and other cod
before they are fully

\section*{II,-FLOWER-GARDEN AND SHRUBBERY}

Stove.-There will be little variation in the treatment of gtove plants for a long time to come; the great point is to get them well currents of air, and by giving less water. Another mosp essential part of their management is to have them perfectly cleaned from insects in the dead of wint Ggyenaoovs.-The best kinds of greenhouse plants are very Wanted about the roof of this house,
when they are comparatively crowded.
Consezvatory.-No plants look more gay here in the autumn or Black-eyed Susan, as we call it. I have seen Mr. Fryer's seedling, with the light eye, and a very pretty contrast it makes with the rest, large specimens of Galphimia glauca, a half-stove plant from
Mexico, make a gay appcarance also at this time, and is one of the easiest to manage. The old Lagerstromia indica comes in beautifuliy at this time, when properly managed.
PITs AND Frames.-At this stage of the Calendar I received a printed at the bottoma:-" Hyacinths, when intended to flower early, ahould be planted the last week in september ; and for flowering at a later period, the third week in October." Hyacinths planted the last
week in september will flower at therr usual time in the spring, if in just is wreks too late. These directiong of the old cataloguea deceive thousands, and nothing but the force of custom can be pleaded in excuse.
Flower-fíardev.-The heds
tion through the autumn ; the fingers and knife must be constantly at work-thinning, pruning, stoppang, and regulating plants and
the outlines of the beds. Fivery flower should be cut away which offers to seed as soon it hegins to fade. Dahlias and Hollyhocks,
with other tall growera, require to he kept well trimmed, and ticd up regularly to stakes. The hibrid Phloxes are particularly gay at this
season. Fuchsia cory mbiflora in rows or single standards will have
a fine effect from this time until frost comes. Will "Delia." allow a fine effect from this time until frost comes. Will "Delia"' allow
me to publish her criticism?-D. Beatonsi Shrubland Park Gardens,
Ingurioh.

\section*{NEWS OF THE WEEK.}

The event of the week is the promised, visit of her The aresty to the King of the French at the Chateau d'Eu. excited a great sensation on the Continent ; and of has British Monat sensation on the Continent ; and as no meeting of Henry VIII, and Francis I., on the Field o the Cloth of Gold, the event is doubtless one of peculiar interest. The French papers are almost exclusively journals hail theussions on the subject. The Ministerial pliment to France, and the Queen as a significant complionent to Framee, and as a symbol of that pacific civilizaour timich tends every day more and more to the glory of our time and the welfare of mations. The Opposition
papers, with few exceptions, admit the compliment, but regard it as an unforeseen and mysterious episode of British policy, the result of which will probably be a treaty of commerce, or some other consummation intended to undermine einterests of the French manufacturers. The people, how ever, are represented by all parties as delighted at the prospect of the Queen's visit, and there is no doubt that
Her Majesty will meet with a cordial reception from all classes in France. The Queen's speech at the prorogation of Parliament, and the simultaneous manifesto of Mr . O'Connell, are noticed with dissatisfaction by the French papers, which have found a fresh cause of grievance in the hospitable reception given to the Regent of Spain by the British Government.-In Spain, notwithstanding numerous party meetings, the new Government appears to have lready been position; and it is ramoured that it has celona and other provincial cities continue in an excited state, and a Central Junta is still demanded as the only means of pacifying the \({ }_{d}\) country.-The reception of the Regent by the Portuguese Government is the chief item of our news from Lisbon, where the conduct of the Executive is generally condemned as unworthy and in-hospitable.-From Italy we have particulars of the recent troubles in the Papal States. It appears Stat a general insurrection had been organised in the States of Central and Southern Italy; but that a premature outbreak in the Bolognese disclosed the nature of the conspiracy, and led to the apprehension or flight of the principal insurgents.-Accounts from the Levant demands of the Emperor of Russia, and have withdraw to the Bulgarian territory.-From the United States we learn that the law authorities at Washington have decided on the surrender of Mrs. Gilmour to the British Governont, under the 10th article of the Ashburton Treaty and that she is now on her way to England, to take her
trial. This decision recognises the loth article of the treaty as a subsisting law of the land, and consequently as binding on the judicial authorities of the United States. so that in all future occurreaces of the same kind this countries.

\section*{殒ome Newos.}

Court.-Her Majesty and Prince Albert left Windsor embarked on their the details of which will be found in another part of our Paper. On the same day, the Prince of Wales and the the Dowes left the Castle for Brighton, under the care of panied by Viscou Lyttelton. Her Majesty was accom Hon. Miss Liddell (Maidning (Lady in Waiting), the lesley, Colonel Wylde, and Mr. G., E. Anson. The Marquis of Ormonde, Earl Hardwicke, the Hon. C. A Murray, and Colonel Arbuthnot, are in attendance on the Saturday, being and the Princesses, at; Brighton. On Majesty gave a fête at Virginia Water in honour of the day. The Royal party dined in the Fishing Temple, at while frigate the Belvidere, and the pleasure-grounds from the the lake. The frigate and Royal barges were illuminated with variegated lamps, and the military bands of the Life and Foot Guards were in attendance. The event was also afternoon of the same day his Highness ans. In the la Victoria Recent of Spay his Highness the Duke de Aberdeen and Colonel Gurrea, arrived at the Castle, and, after an audience of her Majesty, returned to town. On Sunday morning her Majesty and Prince Albert took their survice in the chapel of the aterwars attended divine service in the chapel of the Castle. The Queen Dowager continues in the enjoyment of improved health, at Witley King of Hanover has resided at Kew ghbourhood. The King of Hanover has resided at Kew during the greater part of the week, where the Duchess of Gloucester has
been on a visit to his Majesty. The Duchess of Kent left Frogmore Lodge on Monday, for the Watford station of the Birmingham railway, and proceeded thence to Witley Court on a visit to the Queen Dowager. Prince George of Cambridge took his departure on Sunday for Antwerp on his way to assume the command of the troops in the Ionian Islands. Prince Alexander of the Netherlands is still visiting the Duke and Duchess of Leeds at Mar Lodre, Braemar. His Royal Highness has had excellent sport and is much pleased with his visit to Scotland.
Parliamentary Business.-A parliamentary return has been published, from which it appears that from the 2d February to the 17th August the House sat I19 days, and three Saturdays; the hours of sittings were \(986 \frac{1}{2}\), and it sat \(105 \frac{1}{2}\) after midnight, making the average time of sitting on each occasion 8 hours and 17 minutes. It also appears that the number of petitions for private nated in the Lords, and 164 in the Commons Upon these petitions 181 bills were introduced, of which number thirteen were only read a first time, seven a second, six a third, 150 received the Royal assent, and five were with drawn at various stages during their progress. Of the fifteen were for the formation and improvement of roads
- 13 for harbours- 35 for railwass- 13 for inclosures13 for improvements in towns and cities-3 for ces-teries-16 for the regulation and improvemenme estates, and the remainder consist or bills for peerages divorces, police, canals, docks, piers, gas and other companies, \&c. Upon a comparison with former years, the private business in both houses is shown to be much le
Church Preferment.-The Queen has been pleased to Church foid wing appointments to benefices in the Scotch to the parish of Marrem, Forfar in the Rei Rev. A. Ferguson; Rev. J. M'Master to the parish of Barr, Ayr, in the room of the Rev. E. B. Wallace; Rev. A. M. Ferguson to the parish of Muckhart, Perth, in th parish of Longforgen, Momson; Rev. W. Ritchie to the J. Walker; and the Rev. G. Arklay to the of the Rev. R keilor, Forfar, in the room of the Rev. J. Laird of Inver The Army.-It is understood that the Reverd
Principal Chaplain of the Forces, is the Rev. Dr. Dakins, period of more than 33 Forces, is about to retire, after pucceeded by the Rev. G. R. Gleig, the present chaplain succeeded by the \(R\)
to Chelsea College.

Consular Appointments.-The Queen has been pleased to appoint John Rice Crowe, Exq., late Consul at Kam merfest, to be Consul-General in Norway ; William Miller Esq., to be Consul-General in the Sandwich, Friendly, Society, and other islands in the Pacific Ocean; William Esq., late Consul at Risa to New Orleans; James Baker George B. C. Wynyard, Esq., to be Consul at Riga.
Post-Office.-It is stated
in rural districts, that the Post-Mastence to Post-offices concurrence of the Treasury, has issued a regulation whe which any place whatever within the United Kinedom may have a Post-office, with a free delivery of therefrom, provided that one hundred letters weekly may be expected to reach the Post-office; and that when one or more places shall be contiguous, or in the route which a postman would take in his course of delivering letters, these places taken together shall be reckoned as one, if they can amongst them show that one hundred letters weekly may fairly be expected to arrive for the inhabitants of them conjointly. The Postmaster-General having concluded the arrangements that have been pending for Companies, for the transmission of the morning Railsay the early trains the followine notice, which mais by operation yester, the following notice, which came into public, being the official list of the different intesting to the which letters and newspapers the different post-towns to which letters and newspapers can be forwarded by the Appleby, Banbury, Bangor, Bath, Basingstoke, Beauma Stortford, Berwick, Berkhampstead, Birmingham, Bishop's Brampton, Brouburn, Bradford (Yorkshire), Brackley, Brampton, Brough, Bristol, Brighton, Buckingham, Burnley, Burton, Cambridge, Canterbury, Carlisle, Carnarvon, Chatham, Chepstow, Chelmsford, Cheltenham, Chester, chester, Conway, Coventry, Cowes, Cuckfield, Dartford, Daventry, Dover, Fareham, Fairford, Farringdon, Fenny Gtratiord, Feversham, Folkstone, Gateshead, Godalming, Haydon Bridge, Hemel Hampstead, Hertford, Hexham, Haydon Bridge, Hemel Hampstead, Hertford, Hexham, figlaworth, Hoddesden, Holyhead, Holywell, HuddersLechlade, Leighton Buzzard, Lewes, Liverpool, Maiden head, Maidstone, Manchester, Margate, Maryport, Miln horp, Mold, Monmouth, Newcastle-upon-Xyne, Newport (sle of Wight), Newport Paguel, Northampton, North shields, Oxford, Penkridge, Penrith, Portsmouth, Pres ton, Preston Brook, Ramsgate, Reading, Rickmansworth, Rochdale, Rocbester, Rogby, Ryde, Saffron Walden Sittingbourne, Shoreham, Slough, South Shields, Salis bury, Southampton, St. Asaph, St. Albans, Stockbridge Stafford, Stockport, Stone, Stroud, Stoney Stratford, Stratford-on-Avon, Sunderland, Swindon, Towcester Tring, Ulverstone, Uxbridge, Wallingford, Walsall, Ware, Warrington, Warwick, Watford, Weedon, Whitehaven, Wigan, Wigton, Winchester, Windsor, Wolverhampton Workington, Worthing, Yarmouth. All Ireland and Scotland.'

Houses in the Uniled Kingdom.-By a parliamentary Engr just issued, the number of inhabited houses in migland is stated to be \(2,753,295\); the number uninWaled, 162,725 ; and the number building, 25,882 . In 10,133 ; number inhabited is 188,196 ; uninhabited inhabited houses is put down at 503,451 . number of 24,295 ; building, 2,763; making a to, uninhabited \(3,454,101\) inluabited; 198,049 uninhabited; and 30,634 houses building throughout the United Kingdom, Ireland Fine Arts Commission. ThesComi
in their second report to her Majestioners have sent competition of artists at the Cartoon exhibition the satisfied them respecting the Cartoon exbibition has artists in the practice of cartan their capacity to attain excellence in those qualities which are essential in historical painting ; and that they now propose, in pursuance of the plan before fresco-painting of a artists to exhibit specimens in them to proceed to thederate size, which may enable rations proceed to the selection of artists for the deco. They in fresco of certain portions of the Palace. They report their announcement relative to sculpture submit gpecimens; and farite thas the order in which the
several branches of art and decoration applicable to the embellishment of thr Palace have been considered has been, and must cortinue to be, determined by the time requisite for the preparation of the works, the study required by the ectists in modes of esecution which are new to them, axd by the progress of particular portions of the building. They conclude by stating, with reference to the architett's report, that they are not yet prepared to lay any specific recommendation before her Majesty, both in consequence of the building not being sufficiently adranced, and because the result of the inquiries and experimeats made and making by and under them coming to any final conclusion in this respect. And with reference to that part of the architect's report which reference to lucal improvements in the neighbourbood of the Palace, the commissioners consider that, however deserving of attention the improvements in question may be, they do not
Religious Worship.-A Parliamentary return has just been printed, entitled "A return of the amount applied by Parliament during each year since 1800 , in aid of the religious worship of the Church of England, of the Church of
Scotland, of the Church of Rome, and of the Protestant DisScotland, of the Church of Rome, and of the Protestant Dissenters in England, Scotland, and Ireland respectively,
whether by way of augmentation of the income of the ministers of each religious persuasion, or for the erection and endowment of churches and chapels, or for any other purposes connected with the religious instruction of each such section of the population of the United Kingdom, with a summary of the whole amount applied during the above period in aid of the religious worship of each of the above classes." The abstract of sums paid to the Established Church shows that the total was \(5,207,546 l\)., which is divided in the following manner :-Church of England reland, \(1,749,818\) l. The total sum paid to the Church of Rome is set forth at \(365,607 l\). 1 s. \(2 d\)., comprised in the ollowing two items :of chapels, 2,113l.13s. 1 d . The total sum paid to Pro testant Dissenters is \(1,019,647 \mathrm{l} .13 \mathrm{~s}\). 11 d . in England and Ireland. The recapitulation shows the following three sums:-Established Church, 5,207,546l. ; Church The sums were advanced from 1800 to 1842.

\section*{fforetgn.}

France.-The promised visit of Queen Victoria to the French Court, at Eu, excites the attention of the whol French press, and is the theme of many a grave leading article. The ministerial Journal des Debats confine spectacle may be given to Europe," and affirms that the immense majority of the French nation would associate itself on this occasion with the feelings of the King, an would be happy and proud to receive the Sovereign o
Great Britain in the territory of France. The Press declares its satisfaction at the event as a compliment \(t\) the monarchy, but does not intend to forget the many grierances which the English Navy has inflicted upon
France. The Constitutionnel adopts the same tone, but accepts the visit as a proof of the good understanding between the two Governments. Another Opposition print Le Siecle, expresses great distrust about the intervie result, because the English Cabinet can authorise such step only for some interested purpose. The republican
\(\mathbf{V}\) Vational declares that when Henry VIII. shook hands with Erancis I. on the Field of the Cloth of Gold, he was already meditating that perfidious aggression which so greatly injured France, and that though Queen Victoria is not of the blood of Henry, and Louis Philippe resembles Francis little enough, it is not a declaration of war that the National apprebends; what it dreads most is the possibility that the Queen has a treaty of commerce in her pocket, by which all the cotton-spinners, and are to be sacrificed. The French people, hower are delighted at the prospect of the Queen's visit, and even the Paris Bourse has partaken of the general feeling on the occasion. The impreasion is so strong that her Majesty will also visit Paris, and that the British Embassy is preparing in great haste for her reception, that a number of boxes have been hired at the Grand Opera for several days to come, in hopes of the Queen honouring that
theatre with her presence. It is also said that M. Paul Delaroche has been directed to proceed to Eu, to make a drawing of the interview, for the Royal Palace at Versailles.-After this exciting topic the speech of
her Majesty on closing the Session of Parliament, and the simultaneous manifesto of \(\mathrm{Mr} . \mathrm{O}^{4}\) Connell, are the principal matters referred to in the Paris journals. Each paper finds great fault with the party which it pecu-
liarly favours. Thus the Débats finds Sir R. Peel wanting in decision, whilst the loyalty expressed by Mr \(0^{\prime}\) Connell for the Queen is an abomination to the National. The Débats would have the Government adopt measures forthwith against the Irish agitation, and the National would have Mr. O'Connell fing of all reception given to the Regent of Spain, and particularly the visit of the Duke of Wellington, who, in addition to offence in the eyes of our Paris contemporaries of leaving a card on which one of his Spanish titles was inscribed, has produced a tirade against the English Government,
which they suppose to have no other motize in the kind reception of Espartero than a determination to oppose the new government Sebastiani to England is also commented upon with much gravity. All the Opposition journals concur in stating that this visit is of a pitica chacter, and of a nature to compromise the dignity of France, but they are not at all agreed as to the precise object of the mission. According to some, he is gone to apologise for Otaheite ; others say that he is charged to fish out the designe of England as to Spin. and some suppose that hi mission has for its object to prevent Sir R. Peel from taking offence at the violent language of French journal respecting the affair at Newfoundland; so that in the have gain to sustain the imputation of sacrificing the dignity and honour of France to the pleasure of this Royal family on Monday. His Majesty, the Queen, the Queen of the Belgians, the Comte de Paris, and other members of the Royal family, left Eu in a char-a bane, drawn by six horses, on an excursion to Treport by the
new road of Mers. On arriving at the bridge of the Lock of Assas, at the head of the canal, which goes from thence to the sea, four of the horses, when entering on the bridge, took fright, either at the noise of the cannon, which were firing at the fort of Tréport, or from that of the water rushing into the lock: One of the leaders threw himself on the slender chains which were placed to protect footpassengers, which instantly broke, and he fell into the canal, dragging with him in his descent two of the who was riding one of the wheelers, with great presence of mind and strength of arm, turned his horses' heads, so as to bring the pole of the carriage against one of the posts at The King and Queen, and Queen of the Belgians alighted, and their Majesties, having satisfied themselves that no one was hurt, went on foot to Tréport, amidst cries of the whole party in such fearful circumstances was very great. The Queen was much affected, and wept bitterly great presence of mind ; he held the young Count of Paris in his arms, and refused to leave the carriage till every member of his family was safe
Spain.-The Madrid papers have at length published the protest of Espartero, noticed in our last, in which he solemnly protests against all that has been done ore constitution of the monarchy; and also the decree issued not in ame, depriving the Regent of the title of Duke of Victory and of all grades and emoluments. The journals of the 21 st, ult. state, that a numerous meeting Spanish Institute on the previous day. The President, the former deputy, M. Rodriguez Leal, opened the discussion by reading the programme adopted by the committee, which hefairs, which the 'Coalition denounced as most insolent The basis of the programme was,-I. The faithful execu tion of the Constitution of \(1837 ;\) 2. 10 . Nathe . Nationa independence. A letter has been published by the Pay master-General of the army, completely disproving the Puerto de Santa Maria the military chest of the army The Members of the Juntas who have arrived at Government, and it is probable that the submission to the present rulers of the nation will soon be genera The Queen and her sister arrived at Segovia in the morn ing of the 18th, and were to visit on the next day the citadel, the Mint, and the Alcazar, an old historical edifice having been reported that the excursion of her Majesty tary party to keep her in their 0 wn hands, and that the would eventually carry ber to Pampeluna, the Ministry had been obliged to contradict the report in the Gazette of the 19th, declaring it calumnious and unfounded that city, and indeed the whole of the province, as in state of complete anarchy. It would appear that Col, Prim, bad, to a certain extent, acquiesced in the wishes of the Supreme Junta, with regard to the formation of of Catalonia, held by General Arbuthnot, in the name of the Madrid Government. The latter had no means of enforcing respect for his authority, and still continued in the citadel with a few battalions, on whose devotedness he could not rely. Brigadier Echalecu had been conirmed appointed Gen. Pajol governor of the citadel, and Col, Milans, who had been the first to raise the standard a Reuss with Brigadier Prim, governor of the Attarazanas, which was still occupied by the volunteers. The Captain General of Seville bad issued a decree, appointing Courts martial at Cadiz, and condemning to death all who Espartero.
al.-The Lisbon papers are filled with discus sions on the late conduct of the Portuguese Government the river, the Duke of Terceira sent on board one of his Adjutants to offer his services to the Regent. This act of mos was expected that the Duchess of Victory would pass the
rontier in order to arrive at Lisbon, an escort of honow was proposed, but refused, when it is well known that this ady experienced every possible attention and respect from the conquerors of her busband. An extraordinary courier was despatched to Madrid with every particular relative to the impediments placed in the way of the Regent's land ing, This express was accompanied with the most posiherld follow precisely the conduct adopted by Mr. Aston The recognition therefore of the Provisional Government tas not yat mace in Lisbon
Germany.-The Berlin papers give long details of the alarming fire which took place on the 19th ult., which reduced the Opera-house to a heap of ashes. Who one of the most magnificent theatrs in the woris, and one of the greatest ornaments of the srussilingen one Frederick the Great. The two buildings on one aide, the invaluable Royal library, and the palace of the Hereditary Prince of Prussia, were alarmingly threatened - so much so that the most valuable manuscripts and works in the library had already been packed up for removal, but through the exertions of the fire brigade, both buildings escaped with only slight injury. The Hereditary Prince has addressed an autograph letter to the magistrates of the city, requesting them to express his gratitude to ail the citizens who had assisted in preserving his palace from the threatened conflagration. The investigation in to the origin of another fre, which a few months ago reduced to ashes one of the largest and most frequented places of amusement-the Colosseum-has assumed a very seriou appearance. The owner of the establishment, who wa known as a very enterprising and wealthy man, has bee arrested in consequence of these investigations. - Th Duke of Cambridge arrived at Cologne on the 18 th ult and after land to Coblentz. The papers announce that the Duke of Bordeaus is the point of resuming his project of tre velling abroad, which he had been obliged to postpone in coin aro The Prince will travel under the name of Come de Chambord, and will first visit England and the north of Germany -Professor Rante, of Berlin, one of the most celebrated historians of the age, has arrived in London for the purpose of extending his learned researches to the State-Paper Office, and various important archives, for which every facility has been granted him.-According to a circular just published, the new sect of the Jews formed at Frankfort has agreed to the following points:-"We recognise in Mosaism the possibility of an unbounded progressive improvement. The collection called the 'Talmud,' and all Rabbinical writings and assumptions ounded on it, have no binding power for us, either dogmatically or practically. A Messiah, who shall conduct the Israelites back to this land, Palestine, is neither expected nor wished for by us; we recognise as our native land that alone to which we belong by birth and civil relations." The members of the reform association are to sign the declaration which expresses energetically against these Grozette of Judaism declareme at Baden, among the inhabitants as well as visitors, because the pharao-bank has suffered immense losses, and has actually been broke twice within two days. When it took place the second time a universal "bravo" sounded through the saloon, and the musicians were called from their beds to celebrate the misfortune of the professional gamblers.
Italy,-We have accounts from the Roman States of the agitation and troubles which have arisen there. It seems that an insurrection was prepared for the month o August, in Sicily and Naples, as well as the legations The King of Naples had, however, taken every precaution. He had sent a number of troops to Sicily, and taken steps to fortify Messina and Syracuse. It was on the rumour of some troubles in Naples that the Liberals of Ravenna thought the time was come to make a demonstration Accordingly an engagement took place on the 15 th, at Savigno, between a detachment of carabineers and the insurgents of Bologna, who had made an irruption into the rural districts. The latter were in number between 40 and 50 , the carabineers and the volunteers were from 25 to 30 . The captain of the carabineers and four of his soldiers were killed; the remainder, having no ammunt tion, made their escape. The insurgents then entered Savigno and caused the Secretary of the Commune, and two volunteers who were carrying despatches, to be shot. The Cardinal Legate of Bologna adopted precautionary measures, recalled the troops from Ferrara and Romagns, and despatched against the insurgents several detachments who were familiar with the country about the mountan Most of those suspected were seized, but many escaped the coat. It is said that the Austrian garrison or Minis ter, Rise has not bus thought it necessary to fly and hide himself, as implicated
\(\qquad\) Russia.-The Paris papers announce that the young Grand Duchess Alexandra, the eldest daughter of the Duke of Letichtenberg, died a few days since on the 1 13th August, between five and six in the afternoon, Mos cow was visited by a violent storm, with a showe panes o which did considerable damage. Above 0,00 pofs of sixty glass were destroyed, the iron plates on those on sixty houses were torn off, and also many of carden trees, others. Much damage was done to the Anothe many of which were torn up by the the anth June, is storm, with hail, which took place on the 20th June, it remarkable on account of the extent of country wents of

St. Petersburgh, Moscow, Poltawa, Kiew, \&c., that is from the Euxine to the Baltic
Greecen-Accounts from Athens of the 10 th ult. state that their Majesties bave just removed to the new palace, the furnishing of which is now almost entirely completed. This structure is of immense magnitude, built of marble from Pentelicus, after designs by a Bavarian architect, but in the estimation of most people, it is devoid of external grandeur and internal comfort, although the total cost amounts to such an immense sum, that the King has contrived to prevent any exact estimate thereof being made
public. The Government had suspended twenty-five Propublic. The Government had suspended twenty-five Pro-
fessors of the University, in compliance, it is said, with fessors of the University, in comoliance, it is said, with
the desire of the protecting Powers, who insisted on the strictest system of economy being introdnced into the finances. The crops had suffered severely in most of the provinces, and the greatest misery pervaded the whole
Turkey.-The Vienna papers announce officially the result of the assembly of the notables and people of Servia at Kraguzevatz, which is, that the two leaders, Wutsitsch and Petronowitsch had consented to subnait to the demands assembly had not made the slightest demonstration against this measure. Later accounts state that they had arrived at Belgrade on the 14 th , and were to embark on the day following for Widdin. Accounts from Constantitinued to hover about the Dardanelles, followed by a French man-of-war steamer. Large bodies of Turkish troops were concentrated at Adrianople, which, at a
period when the Divan professed theoselves anzious for retrenchment, cuused some surprise. Nothing satisfactory retrenchment, cuused some surprise. Nothing satisfactory
had been concluded by the commissioners appointed to arrange the difficulties between Persia and the Porte.

United States.-The Royal mail steam-ship Acadi arrived at Liverpool from Boston and Halifax on Tuesday. arrived at Liverpool from Boston and Halifax on thesday.
She left Boston on the 16 th , and Halifax on the 18 th , and has consequently made the passage in twelve days.
The dates from the United States are from the 8th to the The dates from the United States are from the 8th to the 16th ult, inclusive. The authorities at Washington have decided to deliver Mrs. Christina Gilmour to the officer who went in pursuit of her from this country, and a
warrant to that effect has accordingly been issued. The counsel of the prisoner had made another attempt to save her, by an application to Judge Betts for a writ of habeas corpus, but without success. The Judge, in reply, gave the following as his opinion on the law of the case:on application for the allowance of a writ of habeas corpus :- I am of opinion that the loth article of the Treaty of Washington, concluded August 9 th, 1842 , is, stitution of the United States, in force as a subsisting law of the land, and is accordingly to be observed and of opinion that a commissioner appointed by a Circuit Court of the United States, pursuant to the acts of Congress in that behalf, is, by force of the act of Congress of August 23, 1842, empowered to perform the functions pointed out by the 10 th article of the said treaty. I am of opinion that it is not competent for a Judge of the
United States, in vacation, to revise, on habeas cor the adjudication of such commissioner as to the efficiency of the proof of criminality of a party charged before him. rightfully allowed for the purpose of inquiring innot be legality of a warrant emanating from the executive branch of the Government, intended to surrender a person duly committed to a marshal of the United States, to the authoarticle of the said treaty, before the party shall be thereby article of the said treaty, before the party shall be thereby
actually transferred to and detained in such British cusactually transferred to and detained in Such British custody within the United States. I accordingly refuse to cision will form a precedent for the guidance of both countries in all similar cases, and is therefore of consider-
able importance.-Mr. Wickliffe, the Postmaster-Generai of the United States, had been stabbed, but not mortally, on board a steamer between Portsmouth and Baltimore, by a Mr. Gardiner, who it is stated took this mode of revenging himself on Mr. Wickliffe, because that gentleman refused to interfere to secure him an office. The Philadel. phia papers contain accounts of a fearful hurricane which 12thed over that city and the surrounding country on the 12th ult. Many parts of the city, and some of the adjacent lands were deluged. Several bridges, houses, trees, fences, and hay-stacks were swept away, and 27 lives were lost. A Boston paper states that an American sloop of War brings intelligence respecting the discovery of a beaudown in the in the Pacific, extending 40 miles, not laid weat latitude, 165.05 . It was called Eadie's Island, after the man who first discovered it. Mr. Cushing, the Amaerican Ambassador to China, had sailed in a war. 8teamer for Alexandria, thence to proceed to India by the overland route. On the 19 th, off the coast of Newfound land, the Acadia steamer ran down the barque Merchant, head and and and sustained by the collision the loss of her were all saved, and brought by the steamer to England. The commissioners upon the demarcation of the boundary makine progressing rapidly in their business, and are the Rive up for their delay in the spring. The survey of Pealls to the mouth is nearly completed from the Grand Falls to the mouth of the St. Francis. A party of survey-
ors is at work near Lake Pohenaguook, and another party has ascended; to the head waters of the St. John menture at work upon the line between the monument and the St. John, amounting in all to about 100
men. Two parties are at the north end of the line, two parties are at the sonth end, and the other two near Fort
Fairfield. The distance is about 78 miles, and all the parties together advance about one mile each day. They clear out a passage 15 feet upon each side of the line, cut-
ting down the trees smooth with the ground. The linetrees are cut upon the spot, and the stumps left standing. It is said that this line is a very crooked one. In one place there is a square offset of about 40 rods. The whole inclination to the westward.
Thariti.-A copy of the following curious letter, in the English Government gyainst France, protection of ceived in the City:-"Tahiti, Jan. 23, 1843.-My dear -Health and Peace to you, and Queen of Great Britain, Jehovah, the foundation of our power as Queens of by respective countries. We dwell in peace from the arrangements made by our predecessors. This is my speech to in my helplessness, and in the difficulties in which my nation is involved with France. The existing Protec torate Government of France in my dominions I do not acknowledge. I knew nothing of what my Chiefs and Captain Jones, I being absent at Raiate. On the arrival of the French Admiral, A Du Petit Thouars, the same chiefs who formerly signed the document requesting and Parsita, the person who was left in three governors (Paraitaita, the person who was left in charge at Papecte (Paraita is the root of this great evil), the French Admidesign in signing the document, sent it over to the at Moorea, through the medium of my messengers, Tairapa and Mr. Simpson, for my signature. Tairapa said to me, do not write your name, you must pay a fine of 10,000 dollars; 5000 to-morrow, and 5000 the following day and should the first payment be delayed beyond \(20^{\prime}\) clock the first day, hostilities will be commenced, and your signed cause I was afraid, for the British and American and be residing on my land (in case of hostilities) would have been indiscriminately massacred ; no regard would have been paid to parties. This is the way my Government Governmen from me and constituted into a French enemies, Paraita, Hitate, Tati, and others connected with with ; it was they who combined and entered into agreemen not be Sovereign of Tahiti that they me that I should and also their children. And now, my friend, think of me, have compassion on me, and assist me; let it be pow in my Government; let it be prompted by the feeling which caused the Messiah to come into our world to save trouble, in my affiction, and great helplessness. Do not cast me away, assist me quickly, my friend. I run to you same as afforded covered under your great shadow, the now dead, and whose kingdoms have descenders, who a weaker vessels. I renew that agreement ; let it be lasting and for ever. Let its continuance extend not only to ourselves and children, but to our children's children. My friend, do not by any means separate our friendship. This is my true wish. I now deliver up to you, my friend, my last effort my only hope of being restored is am like a captive pursued by a warrior and nearly taken, am like a captive pursued by a warrior and nearly taken, I fear I shall lose my Government and my land. My Ifrend, send quickly a large ship of war to assist me. A Frencb ship of war is daily expected here-speedily send a ship of war to protect me, and I shall be saved. It is my wish that the Admiral may speedily come to Tahiti. may come just at this present time. Continually send here your ships of war; let not one month pass awa without one, until all my present difficulties are over. I have also at this time written a letter to your Admiral on and peace to you, may you be blessed, my sister friend, Queen of Great Britain, \&c.-Pomare, Queen of Tabiti.'

General Espartero.-The Earl of Aberdeen, as Secretary for Foreign Affairs, wrote to the Regent on Friday evening, to signify her Majesty's pleasure that his High-
ness should have an audience with the Queen on Saturday afternoon at Windsor Castle. In consequence of this command, the Regent proceeded by a special train to Windsor on Saturday, accompanied by Col. Gurrea, his private secretary. The Regent wore the full uniform of a General in the Npanish Army, his left breast being ornamented with various decorations of Knighthood, the Star of the Order of the Bath placed concpicuously in the
centre. Colonel Wylde condacted his Highoess to the Royal presence, when he was introduced to her Majesty
and Prince Albert by the Earl of Aberdeen. The interview of his Highness with the Queen lasted about half-an-
hour. On leaving Windsor the Regent came direct to town. The Duchess of Victory and Donna Eladia went out in an open carriage in the afternoon of the same day and took airings in the Parks. The Duchess and her niece walked in Kensington-gardens abont an hour. On Monday the Earl of Minto, Lord Monteagle, and numerous other visitors, called upon the Regent. Viscount Pal merston also waited upon his Highness, and was engaged some time in conversation with him. The Regent visited the Duke of Wellington and the Farl of Aberdersited also called upon Sir R. Peel, but had of Aberdeen, and the right hon. Baronet not having then arrived in wh from Windsor Castle. The Regent subsequed in town Lord Stanley and the Earl of Clarendon part of the afternoon the Regent and Duchess, and Donna Eladia took airings in Hyde-park and Kensingtongardens. On Tuesday the Regent went with the Duchess and Donna Eladia to visit some of the public buildings in Hyde-park. Hapd afterwards took a carrage-drive in Hyde-park. His Highness saw several friends at his Duchess of and among the calls were the Duke and Duchess of Somerset, Lieut_-Gen. Sir John Macdonald, and several Members of Parliament. In the evening the Regent dined with Lord Palmerston, to meet the Earl of Clarendon, Lords Ponsonby, Monteagle, Glenelg, Seaford, \&c. On Wednesday his Highness removed from Mivart's to a villa in the Regent's Park, which he has taken as his residence, Yesterday, according to previous notice, the Lord Mayor, Aldermen, and Common Council, assembled at Guildhall, for the purpose of considering the propriety of weicoming General Espartero's arrival in this country as an exile from Spain. The court was exceedingly crowded, not only with members, but with strangers. After a long and desultory discussion, resolutions were adopted expreseing sympathy with his misfortunes and hopes for his speedy recal. The Lord Mayor then announced that he would invite bis Hishers都 House, where the resolutions sbould be presented.
Temperance Meetings.-On Sunday Father Mathew administered the pledge in the village of Stratford, Essex. In commeneing his address the rev. gentleman said he had often spoken on the subject of holding a temperance meeting on the Sabbath-day. He believed that a meetforwarding the reformation of heaven for the purpose of to Almishty Gedormation of mankina, was as pleasing of a cathedral. If an ox or an ass fell into a pit on the Sabbeth aral. If an ox or an ass fell into a pit on the out. Was it not, then, incumbent on them to attempt orescue from the vortex of dissipation, on the same holy day, that being who had a soul to be saved ? Why professors and ministers of the church should oppose them e could not understand. If they could not concur in the vews of the teetotallers, surely they might leave them lone. The fact of his being a Roman Catholic priest did could have no effect on the goodness of the canse. He could have no effect on the goodness of the cause. He adhered strictly to the tenets of the Roman Catholic Church, and would lay down his life for any one of them still he allowed the same liberty of opinion to others which he claimed for himself." Several other persons addressed the meeting, and in the course of the day about 600 peradminiok the pledge. On Monday Father Mathew at Rag Fair the pledge at Hackney, and on Tuesday o welcome Where about 8000 persons were assembled self, wame him. Father Mathew, on presenting himcalumnis loudly cheered. He expressed regret at the denied which were sought to be heaped upou him, and total the allegation that his mission to London was a considering all the circumstances of opposiLond contended that the total abstinence movement in of thon had made more progress than in any other part upwar United Kingdom. He had given the pledge to he hards of 50,000 persons, and he believed that before prove done as many more would take it. In order to come he was not mistaken, he called on the people to St. Giles's. This invitation was fully responded to, and before the close of the proceedings, nearly 2,000 person had taken the pledge. In one of his speeches, Father Mathew alluded to the encouragement given him by Bishop of Norwich in a recent letter from which the lowing is an extract:-" I regret that I cannot attend at Cambride on the occasion of the Rev. T Mend at visit If on the comes to Norwich, I shall think's my duty to sanction a meeting, and pay every respect to an individual to whose zealous exertions in recovering so large a portion of the community from the degrading and ruinous effects of intemperance, men of all religious persuasions and parties owe a debt of gratitude." Father Mathew admanistered the pledge at Somers Town to number on Thursday, in the Bunhill-fields burial- stome in the City. Yesterday he paid a visit to burial-ground, said that upwards of 60,000 persons in London alone had already taken the pledge at his hands. When circumtances shourd a hoped he should pledge double the number. It had been his intention to stop a fortnight longer, but having an engagement in Dublin on the 17th, be should be obliged
 however, before be left. England, have the honour of visiting the Bishop of Norwich, and thence he should go to Birmingham and Liverpool, and on to Dublin.

Metropolitan Improvements.-Mr. Barry has completed the internal decorations of the Travellers' Club, the arabesques of which are executed by Herr Sang, a German,
and possess considerable merit. The erection of the new attic gives a very picturesque effect to the exterior, and to the group of clubs in which the Travellers' seemed, until this alteration, to be sunk. The new Conservative Club in St. James's-street is also progressing, and is likely to be a magnificent feature in that neighbourhood. Pater-noster-row is to be invaded by architectural magnificence, the Religious Tract Society having authorized the construction of a new establishment, which is now far advanced, and shows a great array of stone columns and pilasters. mittee appointed to inquire into the means and expediency of preventing the nuisance arising from the smoke of fur naces and fires in the metropolis and elsewhere presented their report to the House of Commons. The committee consisting of Lord F. Egerton, Viscount Sandon, the Lord Mayor, Sir W. Clay, Capt. Plumridge, Mr. Mackinnom, Mr. Ewart, Mr. Brotherton, Mr. Borthwick, Mr. Hindley, most eminent men in chemistry, from practical engineers of high reputation, from leading masters, manufacturers, and proprietors of steam-engines, and from persons who have smoke, which is the result of imperfect combustion, may in all cases be much diminished, if not entirely prevented by mears of a proper admission of arecantions, so as to insure perfect combustion. It therears them that the expense of putting up the various pparatuses and patents which had been laid before them, and which answered the two-fold purpose, not only o preventing smoke, but of lessening the quantity of fue equired, was not only very trifing, but hat the outla might be repaid within the year by the dinat the preven tion of smoke might be accomplished in all steam-vessel by a similar process, and by the use of anthracite and private dwelling-houses might be entirely prevented by the same means, or by the use of stoves or grates formed for the more perfect combustion of coal. The committee looking at the measure as one of a sanatory nature: aud as essential to the comfort and well-being of the populashould be brought into Parliament at an early period in the next session to prohibit the production of smoke from furnaces and steam-engines,
College of Surgeons.-The regulations of the College have just been altered in the following points :- 1 . Students were formerly required to bring proot of having stadsed demonstrations, and by dissections, during three anatomica seasons or sessions, extending from October to April inclusive." The latter part of the rule now runs thus :"during three winter sessions, of nactice of surgery chemistry, materia medica, and madwifery, was formerly of the obligatory length of 70 lectures ; this is now lef teachers, expressing the opinion of the Council that it highly inexpedient that the pursuits of stadents should be period of the winter, period of the winter, and strongly recommending

Strike of the Type-founder's.-On Tuesday, a meeting of journeymen type-founders was held, to resist the reduction of wages proposed by the London firms of Messrs.
Figgins, Thorogood, and Caslon. From the statements of the speakers it appeared that in July they reduced the wages 10 to 25 per cent., which they further reduced to 75 per cent., without making any proportionate
reduction to priaters. It was also stated that Messrs. Sharwood and Wood were resolved to make no reduction, that Mr. Wilson would not reduce the wages beyond the diminution that took place last July, and that Mr. Miller of Glasgow not only continued the old prices, but also allowed his men certain privileges. All the speakers expressed their willingness to submit to the reduction that took place in July, but declared that they would not submit to any further reduction. Resolutions were adopted to that effect. The secretary stated that the funds dependent upon it.
British Museum.-.On Tuesday, the west end of the centre building of the old Museum was disposed of, for he purpose of being taken down, in consent of the old building called the Gallery of Antiquities. The site to be cleared will be built upon to form the new frontage. The new west wing, which is several hundred feet beyond the old wing, is in course of erection, and exhibits a soid ing, it is expected, will not be completed for some years.
 Richmond, 5,669 ; Teddington, \(3,1 \& 7\); passengers ; iudeRichmond, 5,669 ; Teddington, Wandsworth, Hammersmith, and Brentford. Fires.-On Thursday night a large unfinished mansion on Westbourne-terrace, On entering it the police found that a large pile of flooring-boards stacked together in the place were in flames, but by prompt assistance, the fire was confined to that part of the premises in which it commenced. The
proprietor, Mr . Ponsford, believes that it was the work of some incendiary, as no light had been on the premises during the day. About a week since, a brother of the same gentleman offered a large reward for the apprehension of the party who fired another unfinished mansion in Cambridge-square, but as yet the incendiary has
one \(0^{\prime}\) clock, a fire, which was not extinguished until property to the amount of some thousand pounds was consumed, broke out in the spacious premises well known as the Stingo Brewery, in the New-road. The flames were subdued for some hours, and at one time it was Hospital would be consumed. They were, however Hospital would be consumed. They were, however,
arrested on the south side of the brewery, beyond whicli arrested on the sout

Stephen's, Walbrook.-A vestry meeting was held in this parish last week for the purpose of taking into consideration the necessity of cleansing the Cbr parish church, one of the inest designs of Sir Christopher
Wren. A long discussion ensued ; many parishioners objecting to a rate on the ground that the church was endowed with considerable funds of which they knew nothing, as Alderman Gibbs, the perpetual churchwarden, had long refused to submit any accounts to their notice. The Alderman at length intimated, "that, if not estry ote the required sum for repairs, and the meeting was adjourned sine die
Shoreditch.-The churchwardens of this parish have ad an interview with the Bishop of London, on the ubject of the Puseyite innovations in the mode of per orming divine service. The opposition to chese formerl one of the most numerously attended at the east end of the metropolis, has been for some time almost wholly deserted. The circumstances in which the parish is placed are of a singular character. The vicar has been biocesan, on a plea of mental aberration. The ministerial duties, therefore, devolve on two curates, appointed by the vicar, and who are charged with making those innovations against which the parishioners protest. The Bishop, after reading the memorial, put several questions to the duties of the church were performed. Upon points of discipline represented to have been either evaded or discipline represented to have been either evaded oro mised that a strict investigation as to these matters should take place. But with regard to the morial, his Lord upon the grounds set forth by the memorialists. The allegation was much too vague, general, and indefinite, to justify a summary course of procedure. Besides which
the curates were removable only by the vicar, who had originally appointed them. So long as the vicar was the incumbent of the parish, he could not be divested of the right to nominate his assistants. The bishop then adion in the district of Shoreditch, and said it was more than ever essential to keep up a cordial union between ministers and their flock more especially those who were charged with official dutie uppertaining to charity and education. These were matters that should engage the attention of all men, and in which

Richmond.-On Saturday the first stone of a new building for the Mechanics' Institution at Richmond was laid by Mr. Selwyn, Q.C., amidst a numerous assem blage of the gentry of the town and neighbourhood.

\section*{3Probincial Nabis.}

Her Majesty's Marine Excursion. - On Monday morning her Majesty left Windsor Castle on her long left the Castle about half-past seven, and joined the South Western Railway at the Farnborough station, where carriage specially fitted up for the occasion had been provided by the directors. The various stations on the line between Farnborough and and outhampton were decoadjacent country and villages were assembled in grea numbers to show their loyalty and gratify their curiosity All of them expressed their gratification by loud cheers,
and her Majesty and Prince Albert bowed repeatedly as the train passed a very rapid rate. Shortly befor 11, A.M.., the train reached the terminus at Southampton, Where every preparation had been made to do honour to
the Royal visitors. Unfortunately the morning was not propitious for the occasion. The rain was descending in drizzling showers of sleet, and the wind was blowing cold and comfortless; nevertheless, thousands of people were assembled, both sides of the railroad were crowded, and he platform at the tenhas was covered. Wellington, the alighting was received by the Duke of Wellington, the
Earls of Aberdeen and Liverpool, the chairman, and several directors of the railroad, \&c. Her Majesty was loudly cheered as she entered the Royal carriage, which was drawn up close to the platform. She band struck up Royal salut Queen, and the cannoms and eteeples o the churches the bells rang out peal after peal of welproce. The Duke of Welliag tonilst the Royal cortíg took its course through Marsh-lane, St. Mary-street, into Northam-road, then to Marland-place, down the Fighstreet to the Royal pier: There was hardly a house tha laurel and flowers were erected across several parts of the road ; all the shops were shut, but the windows every visitors incessantly. On reaching the pier the rain had fillen so bil the mermer spread fallen so heavily that the mayor aua aldench sprad werk do her to the Victoria and Albert yacht; Where her Majesty
was received by Lord Haddington, and other Lords of the Admiralty, Admiral Sir C. Rowley, Lord Adolphus Fitz Abence, sir H. Pakenham, and other offcers. Lord accompanied her Majesty on the excursion. The Duke of Wellington was on the pier, but did not go on board the yacht: his Grace left for London at l o'clock by a special train. Immediutely on her Majesty ascending a deck of the Immed Majesty did ling in to shortly after 12 oflock the jor proceeded down Southemp the yacht got under weigh, and proceed assembled to witness her departure. The steam-squadron manned their yards as she got under weigh, and followed in her wake. A number of the Royal Yacht Squadron who were lying off also made sail. The Queen's yacht vent only at half speed for some time after she left the ier by which they were able to keep up with her, but as soon as she put a little more steam on they all dropped astern, with the exception of a new iron steamer, the south Western, which, with some difficulty, contrived to kep in her wake. All the others, including even the men-or-was teamers, could not keep up with the yach, and were left
 Arter passing Calshot Castle the yacht directed her course Cowes. The Warspite, 50, the Modeste, 18, and the Grecian, 18 , were lying in Cowes roads, and as sonn as
the Royal Standard was descried they each fired a Royal salute and manned their yards. The battery at Cowes Castle, and the Royal Yacht Squadron Ciub-housealso fired. From Cowes the Royal yacht steered towards the Motherbank and Ryde, and again went at less than half speed, in order to enable the steamers astern to come up with ber, and to give the immense fleet of sailing yachts, which were now trying to keep her company, the opportunity of doing so. This was a beautiful sight, and would have been even more splendid had the weather been fine. The Royal yacht forme time but at length dropped astern. After passing Ryde the yacht proceeded towards Spithead, and passed round the St Vincent, 120 , which fired a Royal salute and manned her yards. Her Majesty, after leaving." Spithead, returned to Ryde, where the Royal yacht was brought to an anchor, and Her Majesty and Prince Albert landed in the admiral's barge at the Ryde pier, and walked to the town, the parties on Majesty Her Majesty and the Prince proceeded Majerty pass. Her Majery and the proced the late Lady Vernon and now the property of Col. Vernon Harcourt After staying there a short time, the Royal party returned on board the yacht, which immearely squadron to Cowes roads and aned and slept on board the yacht, and early on Tuesday morning, accompanied by the Prince, went on board the Earl of Yarborough's yacht Prince afterwards landed at West Cowes, where the carriage of Earl Delawarr was in waiting to convey them to Norris Castle, where her Majesty formerly resided when Princess Victoria. Upori landing a salute was fired from Cowes Castle, and another from the Royal Yacht Squadron Clubhouse, and the yards of the Modeste were nianned. As soon as her Majesty returned on board the yacht from Norris Castle, the vessel immediately got under weigh, and went to the eastward round St . Helens, and to the back of the island. She was accompansed by the Cyclops, modorthe, Lightning, and other steamers, yachts. The royal yacht went at a quarter speed, to enable the sailing vessels to keep up with her, which, however, they could not do; and when off St. Helens they fred a royal salute, and the Victoria and Albert procee After having visited Ventnor, Shanklin Chine, Bladkgang Chine Freshorer and other places at the back of the Isle of Wight her Majesty proceeded to the westward along the coast, and about siv in the evening, wa he anchored in Portland Roas about 3 miles from Wey month. The mayor and corporation of that town went mfi in boat to lo know if it was her plessure to land. The hopes which kad been entertained that the Queen and Prince would go on shore were disappointed, for the intelligence brought by the mayor , that her Majesty did not intend yacht and the other steamers got under weigh, and proceeded down the Chaunel. It was a beautifully fine morning, and notwithstanding the early hout at whicl the Queen proceeded on her course, numbers of boats had put off from the shore, filled with persons hoping to obtain a glimpse of her Majesty and Prince Albert the they took their departure. About five oclock in wis evening, a signal announcing ber Majesty's approachortly made from the breakwater at Plymouth, and sound afterwards, the Caledonia flag-ship anchored in the sowing and the several men-of-war in the harbont, fritate the Inconstant, Formidable, and a Neapolitan ord and fired a Royal salute. The yards were then mane, rhe Rosaips decorated with Hags of all descrind rapidiy Royal yacht entered at the eastern channel, ane she was passed through the Sound to Barnpool, the men-of-war moored. Royal salutes were fired from the mobe, as her Majesty sprount Wise, and Morous workmen of the breaky approache. as her Majesty passed that great national undertaking A landing-place bad been constructed at Mount-Edge
cumbe in anticipation of her Majesty's landing there, and another was erected under the Hoe, under the directions of the Town-Council, in the event of the Queen's landing
at Plymouth. Shortly after the arrival of the Royal yacht, at Plymouth. Shortly after the arrival of the Royal yacht, of the Lords of the Admiralty also arrived. The day was throughout exceedingly fine, and there was scarcely a breath of wind blowing when her Majesty reached the port. On Thursday morning her Majesty landed at Mount Edgecumbe, and walked through its beautiful grounds, while
Prince Albert visited the Dockpard, attended by the Lords of the Admiralty. The Prince returned to the yacht about 12.: It was expected that her Majesty would then visit the Caledonia, and hold a levée in the course of the afternoon, and after going over the dockyard with the Prince, port, and Stonebouse. Her Majesty is not expected to
King of the Erench, before Sunday morning.

\section*{g of the French, before Sunday morning \\ Brighton.-On Tuesday morning as early as \(100^{\prime}\) clock} a great number of persons assembled at several hours awaited with patience the arrival of the Prince of Wales and the Princesses. Shortly after three o'clock, a salute from the battery announced the approach of the Royal
visitors, and a carriage and four, containing the Prince and Princesses, and the Dowager Lady Lyttelton, entered the Palace-giounds, amidst the cheers of the assembled multitude. She Greadier Guarsi wed without any and saluted the Royal visitors, who arrived wi other carriages, containing the Marquess of Ormonde, Lord Hardwicke and other members of the Royal household.

Bristol.-On Sunday morning the extensive Logwood Mills of Messrs. Lediard and Mortimer, at Chewton Keynsham, about six miles from this city, were destroyed by fire. As the mills are situated at a short distance from the Avon, a plentiful supply of water was obtained, and the engines were enabled to play, after their arrival, with out interruption ; but they were only enabled to prevent the fire from reaching the house connected with establishment. The mills were completely destroyed.
Carmarthen.-The proceedings of Rebecca and her thguters assumed to Gelly wernen, near Llanon, the house of Mr. Edwards agent to Mr. R. G. Thomas, the lay impropriator of the thes of the parish. Mr. Edwards was ill in bed at the time, but the Rebeccaites fired into his windows, broke 52 panes of glass, and destroyed the extensive greenhouses hud gardens adjoining. Miss Edwards appealed to their ill, and confined them that her father was exceeding on any future day. After letting off a few additional charge they left the house, but attacked and plundered the cot tage of the gamekceper in their retreat. On Thursday trates , information having been received by the magis gast that the Rebeccaites intended besetting Prender detachment of cavalry, and another to Pembele for company of marines, both of which arrived at Haverfordwest at eleven oclock. The magistrates determined that of need the cavalry and marines should come in case assistance, Very soon after their arrival, Rebecca horse and foot, made their appearance, when the special men attacked Rebecea, who was mounted upon a was and carried a double barrelled percussion - a charger and carced double-barrelled percussion-gun, loaded with off and lodged the contents in the loins of the horse, and the constable succeeded in securing the gun. The second barrel was loaded with ball. Rebecca finding herself disarmed, gallopped off, the horse, however, fell dead at the distance of a hundred yare between the constables and the rioters, when two of the Iatter were captured. Their faces were blackened, and they were otherwise disguised. Finding themselves Vigorously attacked by the constabulary, the rioters fled in all directions. On Friday the prisoners captured the pre vious night were brought before the magistrates. They amined, and the prisoners were fully committed for trial A large meeting Friday on Mynydd-Selen to consider their grievances. From 3,000 to 4,000 persons were present. A petition to her Majesty was adopled, submitting the grievances of the turnike-gates, the new Poor-law, the tithe-commu tation, the increased amount of county-rates, the magisdissolve the present and to convoke anew Parliamesty "t directions to consider the various grievances of the country and to ameliorate the same; and aiso rally, whe the commercial prosperity or the country gene supply-a course which would conduce to the prosperity of the whole country, and the petitioners amongst the number

Chatham.-On Tuesday afternoon a fine display o siege operations took place at Chatham, under the direc Engineer department. They included the varions manoeuvres incidental to the siege and capture of a fortress the blowing up of bridges, \&c., concluding with a general assault, which carried the enemy's position by storm.
Derby
the magistrates this week, a youth named Growcock, the
son of a confectioner at leicester, who lately removed to
Nottingham, having surrendered himself to the police as a murderer. It appears that he had endeavoured to destroying a young child into a cave for the purpose of child, when he made off, and went to Beeston. He there met with another child, whom he induced to accompany him to Derby, and attempted to murder ber on the way commit murder, and it is supposed that he is insane.
Farington.- A meeting of farmers and others connected with agriculture took place at Farington last week, for the purpose of considering the propriety of adopting by their labourers on their farms. It was represented to the meeting that a short time ago a hay-rick, at Lodg negligence in this parish, was entirely consumed, owing to the heaving laid himself down under the hay-rick to take bis dinner, and afterwards smoked a pipe of tobaceo ; severa that the tobacco, which was not extinguished in the pipe, bad set fire to the man's coat which communicated it to the rick, and thus the rick was destroyed. Resolution for the suppression of smoking on the premises were then put, and carried unanimously
Gravesend.-On Tuesday morning, the vicinity of the was thrown Darnley, at Cobham Park, near this town, the perpetration a most painful state of exciteme havin perished by the hand of his son. The body was found in the park about 30 yards from the road, covered with
blood At first it was surmised that it was a case of suicide, Ar it was surmised that the corpse, and that part of Cobham-park where it lay, circumstances tunate man had been murdered. There wie seversevere gashes in the throat, and a large knife 8 inches long covered with blood, was found lying on the grass, removed to the inn at Cobbam, where it was identified as that of Mr. 2. . Dodd, who had taken tea with his son a the house on the previous evening, and after hiring two returned. An inquest was held, and the jury returned a verdict of "Wilful Murder against some person doubt that it has since been achained beyond was no other than his third son, Richard Dodd, 24 years of age, and that he committed the act whilst labouring under the aberration of intellect. He was an artist, and has gained several prizes at the Royal Academy. A year or two ago he accompanied Sir Thomas Phillips, the late Mayor of Newport, on a tour through Italy, Switzerland, his art. Owing to his arduous studies and exposure to the sun, his brain became affected to such an artent as produce insanity. He returned to England three months since, and he was visited by several physicians, and only as late as Saturday Dr. Sutherland was called in and recommoended the strictest caution in watching his mo ments, af seene heing considered necesary Mr change of scene his son into Kent, and reached the Ship Tavern at Cobham, on Monday evening. There they had tea, and Mr. Dodd requested that beds should be provided for them both. The son was noticed to behave in a very sullen manner, and took a pint porter in preference to cea, and at about hall-pat a
 received as to the flight of the son. The police have trace of him could be discovered. It is generally supposed that he has destroyed himself.
Leicester:-A young man named James Garner, the on of a small farmer residing at Rearsley, was found murdered last week on the farm of Mr. Messenger, Gaddesby Lodge, whose service he had entered about 17 weeks previousiy. It appears that deceased had excited the jealousy of his master, by the partiality shown to him by the housekeeper, and that Messenger had often missing for some days, when some Irishmen agreed to reap a field of wheat about 500 yards from the residence of Messenger, and the latter went to show them, but as oon as be got to the corner of the field he turned round by the hedge and went away. The Irishmen then went amongst the wheat, and had not proceeded far befor from it, and in a state of decomposition. On the left side from it, was long. The body was identified, and the axe was palf los. proved to berg Murder against some person or persons unknown, but Messenger was immedialely apprehended on a magistrate's warrant and conveyed to Leicester, on the charge of murder Marlborough.-The school for the sons of clergymen and others, recently Thabished at of Salisbury officiated,
assisted by the Marquess of Aylesbury, the Mayor and Corporation of Marlborough, and large number of the Oarford
Oafford. -The Poor-law Commissioners have sent down their rules for the governance of the Oxford union workcommissiner guardians (who are elected under a local act), have appointed a committee to consider the same, and lave expressed their intention of opposing the commissioners by every method in their power.
Stafford.-The execution of Charles Higginson, who bas been lying uuder sentence of death in the county prison, for the murder of his child by burying him alive, days after his condemnation, in a very hardened and ncorrigible state of mind; but the chaplain succeeded at length in making some impression upon him. He acknowledged the justice of his sentence, and was sensible of

\section*{Railways.-The traffic for the week has been as follows} -London and Birmingham, 38,648.; Northern and Western 7 ,9201. Noth Midund 4,38\%: Grand Juth o 9,1011 . Midlond Counties 28681 ; Grand JuncLeeds, 5,2092 . - York and North Midand, 1,794l. ; Birmingham and Gloucester, 2,0507.; Birmingham and Derby, 1,368l.; Great North of England, 1,510l. ; Hull and Selby, 1,1512.; Liverpool and Manchester, 5,136l.; heffield and Mancbester, 528l.; Eastern Counties, 2,907l. ; London and Brighton, \(5,044 l\). ; Croydon, 447l.;
Black wall, 1,2767 . Greenwich, 757l. At the meeting of the Eastern Counties Company last week, a dividend of 5s. per share on the new shares, and a dividend of from the latter in respect of the \(2 l\) per shere uncalled, was declared payable, less the income-tax; and the report presented by the directors on the occasion made it appear that the traftre on the line is steadily increasing. The cost of the line throughout is stated to be \(2,800,0002\)., and betweon that date and the 16tמ. Angust, there has been an additional expenditure of \(30,9706.13 \mathrm{~s} .8 \mathrm{~d}\)., but against hese anounts, 48,830 . was received from sales of surplus property. The traffic had much increased since the entire opening of the line, and when the extensions of the are made, a the and eastward into Sulioik and Norrolk, traffic account it was stated that after reserving \(1,003 l\). for the depreciation of stock, there remained a balance of net profit amounting to 22,9982 , out of which the directors made the above dividend, leaving the sum of 8816 . to be carried to the next account. The application for the branch hne, from Stratford to the Thames, was to be renewed in to lease any extension lines at rentals that would pay moderate interest. The gross receipts for the half-year moderate interest. The gross receipts for the half-year
were \(43,182 l\). A long discussion ensued in respect to the litigation with Lord Petre, and the necessity of tomin to a coming to an arrangement so as to avoid expense, when it within a objina quarter a mib of Inver by the Cumb lavestigation, appointed by compan at the doum the adjourned meeting last week, that the proprietor should adopt a proportionate miluge ton, instean of the now existing toll of \(4 \frac{1}{2} d\). ; but that, should it fall short of 11,500\%. per annum, the other Companies should make up the deficiency to the Greenwich proprietary. A desultory discussion of nearly four hours' duration ensued upon this proposition, Resolutions and counter reso-
lutions were proposed and withdrawn, till at length the lutions were proposed and withdrawn, till at length the
recompender recommendation of the committee was
modified form, the amount of the mileage toll being fixed at \(13,500 \%\). instead of \(11,500 \%\). A resolution was the passed, authorizing the committeo Brighton, and Dover Companies, joint, bale of tha portion of the Greenwich Railway used by them, for the sum of 240,0006 , or a lease to them or the same at a per manezt net centa or a,po. The so day reported to another adjoumed Companies had declined this ofier, unhess the Greenwich Company would give up a cetain portion of their land this condition was at once rejected, and the comaitle resigned. The old tollage of \(4 \frac{1}{2}\) d. per passenger wil therefore continue until the other Companies shall engage to bring, at moderate fares, passengers to London-bridge, when the directors of the Greenwich Company will be prepared to mar passengers, and for short distances.-At the Bristol and Exeter and Bristol and Gloucester meetings, the extension of railway communication with Devon and Cornwall was discussed, and so well is the project supported by these companies and the Great Western, that there is apparently every probability of the work being forthwith commenced. The understanding is, 80 far arrangements are concluded, that the Bristol and Exeter Company shall subscribe 200,000 ., the Great Western Company \(150,000 \%\)., and the Bristol and Gloucester Company 50,000\%. The dividend declared at the Bristol and Exeter meeting was at the rate of 118 s . per shat free of income-tar, payable on the 30th of Octobe The balance of receipts and expenditure up to the 30th June was \(360,004 l .6 s\) s. 2d.-The report of the Birmingham and Gloucester Company for the last half-year shows that the receipts have been 42.6181 .17 s . 6 d , and the expen diture \(25,935 \%\). 11 s., the difference between which sums, deducting \(12,41 \% \mathrm{~L}, 8 \mathrm{~s}, 11 \mathrm{~d}\), paid for interest, \&c. left a divisible balance of about \(5,500 \%\), sufficient to declare dividend of \(12 s\), per shaxe, deductingiacome-tax. Thetraffic
both of passengers and goods has slightly increased. After considerable discussion with reference to negotiations with neighbouring lines, upon which a quantity of correspondence was read, a resolution was passed empowering the directors to raise the sum of \(41,000 l\)., and three new direc tors, some of whom had taken a leading part on the recen committee of inquiry, were elected to fill vacancies.-The Pontop and South Shields Company declare a dividend of 30 s. per share, or at the rate of 5 per cent. on their paid-up capital. The total receipts for the half-year were \(33,264 l_{\text {. }} 3 s\). \(4 d\)., while the expenditure was \(23,047 l\). \(13 \mathrm{~s} .4 d\)., leaving a net balance of \(10,216 l .10 \mathrm{~s}\). The traffic accounts show a considerable decline in the quantity of coal shipped for foreign destination, owing to the high duty on the export but a proportionate increase in the delivery for home con Darlington Junction is announced to be steadily progress ing to a completion; and the debt of the late Stanhope Edinburgh and Glasgow Railway meeting was occupied, in Edinburgh and with the digcussion of the question Sunday travelling, but Sir A. Agnew was defeated by an enormous majority. The dividend declared was at the rate of \(1 l .2 s .6 d\). per share on the original shares, and fund of \(25,474 \mathrm{l} .19 \mathrm{~s} .5 \mathrm{~d}\)., from which this amount will be paid, there will remain \(1,699 l .19 s .5 d\). to be carried to the reserve fund, now amounting to 7,6996. 19s. \(5 d\). Reso lutions were passed to enable the directors to extend the
line to North-bridge, Edinburgh, and to take powers to line to North-bridge, Edinburgh, and to take powers raise additional sum of 150,000 . In comsequence of the facilities afforded by the London and Dover Railway to Folkstone, in three hours from London-bridge, and by the steamers twice a day to Boulogne, in three hours from Folkstone, and vice versâ, the directors of the Paris diligences are having new light coaches constructed that will run from Paris to Boulogee in 16 hours, inatead of 22, as heretofore; so that the whole distance will be performed within 22 hours from Paris to London, which will be nearly as rapid as the Post-office estafelte.-At the meeting of the South Western Company on Wednesday, the report 1,893 l. 2 s . 11 d . The branches of expenditure under the directors' control had been considerably reduced; but the increase of parochial rates, and the maintenance of the Gosport line, in a great measure counteracted the beneficial influence of this saving. The directors were, however, enabled to recommend a dividend of 30 s , subject to leaving 573l. 18s. Id. as a balance in hand. The repor stated that the docks", at Southampton were now open; that Government contemplated removing the mail-packets from Falmouth to the former port; and that the co their place of meeting in July next. The report concluded by tating that a new pier had been which por the Gospond and periods of the tide. The report having been unanimously adopted, the chairman addressed the meeting in a speech of sqme length, incidentally alluding to the patronage which had recently been bestowed upon the railway by her Majesty, Prince Albert, and the Duke of Wellington, who had expressed their satisfaction the company's mode of conveyance. A discussion ensued with reference to the establishment of a more ith the railway between Southampton, Havre, and the Channel Islands, and a resolution was passed recommending that application be made to the proprietors for subseriptions in promotion of the measure:-By a Parliamentary return just issued some information is afforded respecting the number of railway bills brought into the louse of Commons, with the number of acts which have been passed since the close of the year \(1839:-\operatorname{In} 1840\), the number of bills was 27 ; in 1841,24 ; in 1842, 23 ; in 1843,31 : total, 105. It appears from the return, that of the bills introduced in 1840, 23 became acts of Parliament; in 1841, 19 ; in 1842, 21 ; and in the present sessions, 25. The return further shows that the number of plans deposited for the three last sessions of Parliament at the Private Bill office was 62

\section*{1kELAND}

Dublin.-Lieut.-Gen. Sir E. Blakeney has been sworn in one of the Lords Justices." The Lord Lieutenant sailed for England on Saturday. The Lords Commisof Cong, Galway, and Mr. P. Lynch, of Mayo, for having attended a Repeal meeting at Cong-bridge ; and Mr. W. Lalor of Queen's county, for having attended a Repeal meeting at Mars of Parliament have published an address beral member to the people They state that they have in vain appealed to the Legis lature tribunal of public opinion. They demand the higher tribunal of public opinion. and equalty in regard to ecclesiastical ious communities into which the population of Ireland is divided; a more ample representation in the Legislature; franchises adequate to give full expression to public opinion; the assimilation of municipal rights in in the benefite of the public expenditure; that the pro fescion of the Roman Catholic Faith shall no longer be made a ground of virtual, as it has ceased to be one o legal, exclusion from official station; that in the general administration of the affairs of the empire, Irishmen shal be called to take part, in a proportion commensurate with the eatent to which Ireland contributes to its greatness
that the management of local affairs shall be confided as much as possible to those who are identified and acquainted with the interests of the country; andar control, shall be self-government, subject to popular canization of local applied, wherever practicable, in the organization of locas
institutions. "Should this remonstrance be successful," they say, "we cannot, indeed, promise the restoraion of those feelings of attachment which a few years since had begun to expel from the national breast
sentiments engendered by centuries of oppression. We can ouly expross our conviction that those who confide in the influence of justice will not have misplaced their trust. It may still be in the power of a goverament which shall merit the confidence of the Irish you that every day's delay increases the difficulty of the
task, and gives additional strength to those who maintain task, and gives additional strength to those who maintain that there is no hope of 'good government for Ireland The meeting of the Repeal Association took place on Monday. Mr. Steele said, that as it had been determined by a vote of this association to give an order to Mr.解 of his country should be represented presiding at Tara, or as he appeared at Mallow, when uttering a fiery defiance the people of Ireland. The Irish preople despised the threats of that puppy Peel, and that old Indian SeapoyWellington. Mr. Hogan preferred to execute the statue in the latter attitude, and therefore he would move that this association give its approval to the suggestion. On the base of the statue should be the memorable words trample upon me, but it shall not be on my living body, but on my corpse.' he motion, having been seconded by Mr. Scott, of Edinburgh, passed with acclamation. An allusion having been made to the Queen's speech, Mr.
J. O'Connell said that they distinctly recognised the . Oct that the Queen was in a position of coercion- that the speech in question was her Ministers' and not her own. She was under the constitutional coercion of her ministry, supported by a majority of the present houses
of Parliament, and was obliged to make that speech. It of Parliament, and was obliged to make that speech. It induce her to use any stronger phrase than the milk-and water one of "deep concern." Mr. O'Connell then gav some further details of his plan for the restoration of the Irish Parliament, and concluded by moving that distric repeal wardens should be appointed for the two firs towns on bis list which are to return members This poin Parliament, namely, Arklow and Ardee.
being disposed of, he informed the meeting that he would postpone his speech in reply to the Queen to Tuesday All he would say at present was, that the speech attri-
buted to her Majesty was no more hers than it was his. The sentiments were those of her Ministers, and it was daring profligacy on their part to endeavour to make the
Irish people believe that the Queen did not possess ever claim to their love and affection. The rent for the week was \(1,380 \mathrm{l} .7 \mathrm{~s} .4 \mathrm{~d}\).-At the adjourned meeting on Tuesday Mr. O'Connell moved, that it be referred to the committee to prepare an address, directed to theirfellow-subjects resident in every part of the universe obedient to the British throne, stating the grievances under which the people o Ireland are suffering. He then proceeded to the Queen' his teeth-they might taunt him from high placesbey ther corm of a nation He had Corent in trish members 30 of Govern. a to whom, and more than twonlirds of hem not kepealers, had signed chat documend ay whe British found the bill of indictment against the bitish Gove ment. There was not, he saia, a single bonet man Ireland who would not find a verdict of Guilty agains the British Government on this indictment. Looking to the enormous grievances described in that declaration which he had himself a thousand times exhibited, he hel it was a sacred duty to be discontented with British mi rule, and he would continue discontented so long as his country suffered under such a weight of evin. These 50 rish gentlemen had published this code of charges againa he British Government, unequalled by anything the Christian Greeks could have brought against the Grand Seignor. At the commencement of the late session of Pariament this was the condition of frelad. worse than nothing; for all the existing evils had been aggravated. The grievances of the Poor-law had been rendered more intolerable, and they gave Ireland should close the session with a speech insulting to Ireland. He agreed with the Morning Chronicle that the speech was a compound of impudence and stupidity; but, mark, e was not speaking of the Queen. Kings, indeed, condescended to scold him, and Queens also would say something harsh concerning him. Of William the Fourth's seeck he had said the it was insolence and stupidity combined. The Tories hold her Majesty in chains. They have the Parliament at their back, and she cannot escape from them. But, oh! he wished she had poken that speech by commission, and that she had not delivered it in person. He regretted that they made her do this thing herself. This is their worst crime. He entertained for her Majesty a sort of parental feeling. She had the hearts of the Irish people at her command.
They would have died for her. Was it not treasonable in
her Ministers to deprive her of such sympathy?-to tak that grace from her which is the very surest prop of the throne? But was there anything in this to retard them in their career? No; but something to stimulate them As to the Tories, he would not think the Queen's life safe in their hands but for her children. Thep were a security them against the worst evil that could happen. He next went through the several clauses in her Majesty's speech seriatim, and commented at great length and with much vivacity on each. He declared his conviction that the union were not reperled in his lifetime the result ould be a sanuinary struagle and a perpetual separation While be lived he would keep away the danger of despair he would endeavour to protect the connection, by placing it upon the only just footing on which it could exist. Ministers boasted of not having sought for ordin be the wase crime to prosecute Mr. O'Connell concluded a speech of more than two hours duration by moving that it be referred to the committee to prepare an address to be placed before he Majesty and all her subjects, setting The motion passed uuanimously

Cork.-The meeting of the British Association termi nated on Saturday, when grants of money to the amount of 1,887l. were awarded for different scientific purposes. The Mayor of Cork presided at a meeting on Wednesday hen a committee was appointed, who nominated Prof M'Neill to prepare the necessary plans and report the best line of railway from the terminus of Cashel to Cork, so as to form a general line of communication from that city to Dublin; and he is required to express his opinion in his eport on the application of the atmospheric principle, as ell as the locomotive power

Mayo. The address to her Majesty from the high eriff, grand jurors, magistrates, \&c., of this county, ondemning the Repeal agitation, has been forwarded for presentatior. It has beeu signed by.sixty of the gentlemen who form the grand panel of the county, by seventyine magistrates, twenty of them being deputy lieutenants, nd by twenty of the last grand jury. But four or five of names to the address.

\section*{ames to the addres}
finding of murder of Adjutant Mackay, and as earchin in into the star conom its management in the field, and every other ircumstance that could in any way throw light on the cause of the recent complaints. He has expressed himself most favouraby state that in his opinon the regiment is in the highest state of discipline, and not overdrilled by the Colonel.

SCOTLAND.
Edinlurgh.--The local papers state that the labours of the committee appointed by the public meeting of the inhabitants of Edinburgh, to manage and apply the funds or the relief of the unemployed tradesmen and labourers, have been brought to a close. The last works thoug taken by the committee were the walks formed through
the Links, which are considered of the most essential service to the inhabitants of Edinburgh; and taken in connection with the Meadow-walks, the public now enjoy a promenade not surpassed by any city in the kingdom. Priace Albert, during the visit of the Court to Scotland last year, having expressed a desire to try the experiment kingding the Black Cock in the southern parts of the kingdom, several cocks and hens were sent to Windsor hast week, as a present to the Prince from the Duke of great difficulty, were secured on the estate of the Duke in the Isle of Arran, where they are bred in the highest state of perfection, and are prized for their extraordinary size, many of them weighing from 12 to 14 lbs.

Aberdeen.-The Bishop of Aberdeen, Dr. Skinner, has published a pastoral letter, announcing that the Rev. Sir William Dunbar, Bart., late minister of St. Paul's Chape in that town has renounced his canonical obedience, and withdrawn himself from the jurisdiction of the Scottish Episcopal Church, contrary to his ordination vows. The Bishop, therefore, acting under the provisions of Canon XLI., declares that the sain Sir W. Dunbar has ceased to be a Presbyter of the Church, and that all wis misterial acts ale with people to avoid all communion with the said sin oray and sacraments, or in any way countenance to him in his presert course
Dalmarnock.-The Glasgow papers state that George Wilson, the steeple-climber, who had acquired some celebrity by his repairs of Carrickfergus steeple in Ireland met his death on Thursday week, in the inside of a pipe at the Springfield dyrsay appears, which is 18 inches in diameter, had been recently laid down between the works and the river, but previous ringing it into use, it was necessary to clear Wilso applied to clean it, but his offer was declined, because h was much intoxicated at the time. The unforturate man however, entered the pipe when those in charge wer temporarily away from its mouth, and for the course of ffort hour and a befor he could be extricated. He used to make his ascents on chimneys and steeples without scaffolding, by merely fixing amongst the bricks little sharp pieces of wood for the hands ond fer the made a pathway to the summit by which a cat would scarcely venture to ascend.

Inverness. - The number of strangers at present in the
Highlands is greater than has been witnessed for many Highlands is greater than has been witnessed for many
years. Steam-boats, coaches, carriages, and inns are crowded, and every scene and object of interest is daily visited by large parties. Prince Alexander of the Netherlands, the Dukes of Marlborough and Leeds, and
numerous visitors, have arrived for the sporting season. numerous visitors, have arrived for the sporting season.
The reports from the Moors show that the gronse are plentiful though not equal to last season for numbers or quality. Mr. A. Camphell, M.P., of Monzie, bagged to his own gun on the 12 th, \(184 \frac{1}{2}\) brace of full-grown grouse,
6 mountaia hares, and 5 snipes.

\section*{THEATRICALS.}

Haymarket.-At this theatre last week Mr. Planché presented the public with a picturesque and agreeable Quensberry Fette. The period is fixed in the year 1728
Quen and the scene of the first act is in the grounds of the Duchess of Queensberry, where a fête champêtre is held under the patronage of royalty. Throughout the piece, royalty, nobility, and gentry agree for once to throw off
their fine titles and court dresses, and play the parts of shepherds and shepherdesses, millers and milkmaids, under the assumed names of Chloe, Daphnis, Amaryllis, Lubin, affect to live in the golden age of the poets, but in the region of Dresden china, recorded to us by the chimneypieces of our grandmothers, when every shepherd wore flute, and wore a waistcoat spotted with gold fowers white every shepherdess had a hat with a gilt edge and fondled a lamb with gilt feet. The main feature of the plot is the appearance of a real countryman among this artificial creation, in one Giles Fairland (Mr. C. Mathews) Who comes raw from Somersetshire in search of some obtaining a situation. The opportunity for playing off a practical joke upon his fellow masqueraders is too good miller; and he at once determines upon introducing Giles to the festivities, representing him to be a Russian Baron, with an unpronounceable name, who has created an gives to sensation in Paris. The only instructions he
gre to dance and make free with every her. These instructions he obeys with an alacrity truly He kisses the Countess, he kisses Laady Bab Blazon (Mrs. Glover), he kisses, he kisses Lady Bab Blazon self; in fact, he kisses all the ladies, young aud old, running after them like a wild colt, and knocking down anyGiles's path is not smooth to the end. The Queen is ignorant of the crimes he has been conmitting whis imagines he has only been carrying on coural titing, and While he has been embracing Countesses, and pushing (Madame Vestris) stands his friend, partly becanse Rosidale Saved her dog from drowning in artly because he has because, bearing his real name by chance, she find partly he is lier foster-brother. She therefore concealis him that a while in a summer-house, where he puts on a court
dress (not the pastoral dress) belonging to a Visconnt bepherd, and then escapes from the place with the Countess. Of course, there is a good deal of jealousy on the part of Sir Felix, the recognised suitor of the Countess, and loud complaints from the Viscount at the loss of his velvet suit, which occasion somee amusing scenes, in the course of which the latter are ingeniously returned, and the former appeased; and then all ends meerrily as a marriage bell. The part of Giles was excellently sustained
by Mr. C. Mathews. He gave the country by Mr . C. Mathews. He gave the country dialect with great effect, and by his heartiness and bluntness really made and was announced for repetition every evening by Mr . Mathews, amid loud applause. The two scenes in which the action takes place are remarksble specimens of good taste, fully reviving the best days of the Olympic.

\section*{ffitcrellaneous.}

Contagion of Plague,-Letters from Cairo, of the 28th June, state that some very important results have been the Russian Government to Egypt, in order sent by experiments as to the contagion of plague, and the means tory conclusion propagation of the virus. One satisfacmore be done, that conclusion must lead to the early modification and final overthrow of the whole quarantine 8ystem as at present constituted; for the Commission sort, after to the unanimous opinion that articles of any 50 deg. to 60 deg, of Reajected to a temperature of from plague. The Commissioners collected a large quantity of garments, of sundry tissues, and of susceptible raw supposed, wirus of were thoroughly impregnated with the chamber hirus of the plague. These were placed in a 50 deg. to 60 deg. (Reaumur), some portions loose, some portions tied lightly, others closely pressed together, some others in tied lightly, others closely pressed together, and to the action of the heally closed. They were subjected persons, of all ages heat for forty-eight hours. Sixty-six ments and, Syrians, and Negroes, were clad in the garWhich had been thus treates. exerciseus medical authorities at Cgiro of Healh, and exercise the necessary control and surveillance over these
very important experiments. The result has been, tha not one single person of the sixty-six has been attacked the Cominissioners to which he has been subjected. The not been in any way deteriorated by the action of the heat; that the colours of the various manufactured articles have been attended with scarcely ; that the experiments securities may thus be obtained against the communication of plague at an exceedingly small expense.
largest ever cast in Enew days since an immense bell, the 11 cwt 2 q qrs, and 121 lbs ., was shipped on board the Lad Seaton, lying in the London Dock. This bell, which is intended for the new Catholic cathedral at Montreal, was cast at the foundry of Messrs. Mears and Sons, White of persons. Some idea may be formed of its immense size from the fact that it required 10 tons of fused metal to form the cast, and the casting itself weighs upwards of three inches, that its clapper weighs at the edge is 7 feet the wood work, which is composed of old English oak, the bell , the iron work more than half a ton, and that the bell itself is heavier than the Great Tom of Lincoln a fund subscribed by the merchants been paid for from fund subscribed by the merchants, artificers, agricultarists, and inhabitants of Montreal
Statistics of Paris.-The Courrier Frangais states that the number of indigent poor in Paris has varied considerdry since the commencement of the present century. In in 1808, 116,703; in \(1809,118,202\); in 1807, 187,914 in 1811, 116,670; in 1812, 93,836 ; in \(1813,102,806\) and at present the number receiving relief amo 102,806 62,539. The National observes, that it is no wits interest to consider the sums expended within the last 24 years in the improvement and embelishment of Paris, which have rendered it one of the finest cities in the world. Expended on works relative to the distribution of in flag, aqueducts, reservoirs, fountains, \(30,986,347\) f. enlarging the public avenues, \(39,047,708 f\).; the construction of commercial edifices as well as in objects of art and decoration, 62,984,919f.; in the purchase of ground Human Infusorfa. Anses, \(17,802,729 \mathrm{f}\); total, \(168,465,764 \mathrm{f}\).
of Sciences, a very curious paper was read from M. Mandl, entitied, "Microscopic Inve ing If we are to believe M. Mand1's the Tongue and Teeth.
mouth is a perfect cemetery, where millions of infusoriz fhat their catacombs. Leuwenhouk had already told us and that the muicous secretionsed with infusory animals, their ocean ; but it remained for M. Mandl to discover that the tartar which covers the teeth is formed of the mountains of the dead of these inhabitants of this ocean. M. Mandl knews not to what cause to antribe this ocean. of these microscopic animals, but he has ascertained, he says, that they are most numerous in persons who live on spare diet, and are instantly killed by ardent spirits.
workmen were digring a workmen we agging a new sewer for the hotel erecting opposite Cadogan-pier, Chelsea, at about 18 feet from the surface, they discovered a great variety of fossil bones, forming the skeletons of various animals, some of which are of enormous magnitude, consisting of the mas-
todon, the elephant, the ox, the elk, the hyens, the wolf, \&c., all of which are in good preservation. Many of the specimens have been selected, and are now in th possession of the Rev. Mr. Kingsley, rector of the parish The Comet. -The Canton papers of April lst. state that the comet which caused so much sensation in Europe had been visible from Manilla and Singapore since the beginning of March, but during almost all that time the weather at Canton had been so unsettled, and the sky so continu ally overcast, that it was only seen there for the first time on the night of the 28th. The comet itself was barely visible to the naked eye, but its tail was of great extent, adds, "it sets at about half-past ten in the south-west, ind when first seen disappeared soon after nightfall; it is probable, therefore, that it will remain visible a long while. We believe this to be a comet hitherto unknown. As may be supposed, the Chinese arein great consternation about it, believing that it forebodes evil."
The Singing Mouse,-This heading, strange as it appears, is not a fiction, as the incredulous may ascertain to their complete satisfaction by a visit. We give the fol-
lowing account, furnished us by an intelligent corre-spondent:-I have much pleasure in endeavouring to give you some account of a musical phenomenon which I have just beheld and heard. I will do so in as lucid a manner as I am able. This wonder is in the shape of a "singing mouse!" Let it not raise the smile of in-
credulity, for sing it does in verity. The little creature is credulity, for sing it does in verity. The little creature is
the common house-mouse, of the mabculine gender. When I heard him be was in full song-having all the notes of a full-grown canary. The imitation in the sostenuto passages and cadences of that bird was perfect. I feel a powerful glass, which I purposely borrowed, I could observe the tremulousness of the throat; and I asked the proprietor to retire from the room for a moment, which he did, in order that I might convince myself that I was not being made the dupe of ventriloquism. I then placed \(m y\) ear close to him, and the effect was still the same.
human being could make his piano passages. One circumstance places this beyond doubt; for sometimes parties have to wait a considerable time before he will pipe. An where he was taken for happened recentiy at the Palace, Princesses to hear him. But I was informed that he fully made up for this sul I was informed that ing more lustily than he ever did before. He requires o be attentively observed, and by so doing you catcl his ariety. When quite still bis notes are surpassingly digrinct, and have all that peculiarity of the notes of the canary when lie is singing himself to sleep. When he was in motion I tried the effect of sound upon him, by vibrating a tuning-fork upon the table. This, although repeatea several times, neither deterred him from singing nor in the slightest degree alarmed him. If I may hazard conjecture, his pitch is more than an octave above that of the bird be imitates. It is very difficult to guess hom this faculty got into him ; for, supposing that he listened to the canary from his hiding place, the larynx is not formed for sucha purpose. However, I must leave the matter to physiologists and modern Daines Barrineter simply contenting myself with silent wonder, naw then exclaiming prodigious!" Its history is somem interesting. The wife of the man to whom it belong (they were poor people, but are now on the high road to competence) occupied the second flat of a mean bouse in Redcross-square, Cripplegate, and, "save the mark" at a tailor's. One night, not being able to sleep for what she conceived the gentle singing of her bird, she removed the cage ; but the singing remained, and not coming from the quarter in which the poor innocent Dick was placed, it both puzzled her and excited her curiosity for the rest lef's nost, sometimoise was of a fitting kind, like Hamerer felt convincimes here, sometimes there. She, howshe mas A that and she was the syren was egg to this knight of the goose--Globe.
of the British Associationgland.-At the recent meeting of the British Association at Cork, Professor Owen read bis report on the Fossil Mammalia of England. This Was commenced at the request of the Association, and at Manchester he gave an account of those extinct quadrupeds the extremities of which were terminated by hoofs. He gave instances of the fossil remains of a species of monkey, a bat, several species of bears, lyyena, badger, wease, wolr, and a gigantic species of tiger now unknown, with a gigantic beaver three times the size of the present beavers of North America. He first described the fossil rmains of the elephant. Many naturalists (and amongst malia were natives of the country to prove that these mamfound, were reminded of the elephants brought to by Pyrrhus, yet, when they crossed the German Ocean, and found similar fossil remains in Britain, where there is no account of any being brought, with the exception of ne by Julius Cæsar, they had ample grounds for supposing that they were formerly natives ; and in support of this argument many of them were discovered in Ireland, where Cæsar never put his foot. The remains which had been pecies ered much from both the Asiatic and the African fossil ivory there were formation of the teeth. In the or cement, so that they always retained their chaformation in African elephant this character in the they are in parallel lines in the form of a lozenge, but the teeth pre parallel lines in the Asiatic elephant, where teeth found hach broader. The most common fossil Asiatio much narrower in the former broade. whe in the the are much covered by Cuvier in 1796. There were about 3,000 extinct species of mammalia discovered, not one of which could bpecies of ham hisored, not one of which could be mistaken for the African elephant, besides which which hossil Siber been foun the dug foun dug up in all parts of tangland, upwards of 2,000 specimens ing winn the lu of coast ou Yarborough. He next alluded to two species male muie, and might have belonged to a species of Zebra, and the other about 13 hands high. There was in this class the gigantic elk, commonly called the Irish elk, but elk, but to the deer species. The horns were different from those of the elk, being broad at the base and narrow as they approach the top, the species approaching closer to the rein-deer than to any other. There was anothen species of deer which could not be distinguished from the red deer, but that it was much larger, and the remains of which were found in great abundance in Essex, Norfolks

 out of the mude of his carrsing on the business of a vitincl
manufccurcrat Jathersea. The indictment was very long, and
contaucut a grat i, umber of counts, but they were all to the same ffect, charging the annoyance of the passengers upom the highway
near his manufactory, and to that of the inhabitants of the
neighbourhood. Mr. Thesiger addressed the Jury at some neighbournood. Mr. Thesiger addressed the which the indictment was instituted against the defendant. It appeared that he is the proprietor of a vitriol manufactory at Battersea, near the
Red House, and it was alleged that the works carried on were the means of occasioning noxious ctfluvia, which was not onls
destructive to the crops growing in the neightiourhood, but also
 distance from the spot, and even across the river. It was also
alleged that persons travelling in steam-boats up and down the rive were materially inconvenienced by the noxious eftiuvia
that issued from the defendant's premises. A number of witthat issued from examined in support of the prosectation, among,
nesses were
whom were Messrs. Brande, Phillips, and Cooper, the chemists, all of whom deposed to the noxious character of the effluvis that issued from the manufactory of the defendant. Mr. James,
however, in cross examination of Mr. Brande, elicited, that if the effluvia were sufficient to cause inconvenience on the oppo-
site side of the river, it must of necessity be destructive to the vegetation of the immediate neighbourhoor, deal of evidence
distincty proved was not the case. After a great deal in dispute might be more satisfactor \(\mu\) ly settled by arhitration; and, atter some consultation between Counsel, it was at levgth
arranged that scientifio persons should be appointed to view the arranged that scientific persons should be appointed to vew carry-
premises, and that such arrangements slould be made for mg on the business as to prevent inconvenience to the pury were discharged without returning any ver Western Circuit, Bridgewater.- John Skinner and seven
other persons, who were acquitted on a former day during the assizes of the felony of destroying a house erected for collecting tolls, were now indicted for a mistemeanour in puth at the former
toll-house. The evidence was given at great length to although, to the surprise of the Judge and bar, the Jury acquitted all the Jurymen were challenged who had sat upon the previons trial. The same evidence precisely was then gone through. The lars by other persons. Mr. Justice Coleridge, in summing up, told the Jury that they had notaing to do with he former veract supposed to exist; the only question for them was, whether any or either of the prisoners took part in the proceedings of that Guilty. The learned Judge then addressed the prisoners in the rolowing terms : - Prisoners at the bar, fit to find you not guilty shey are the judges of the fact, and are responsible to God and their own consciences for the verdict they have pronounced. It been justified in their own minds in coming to that conclusion. I protess to se decent and respectable men. I see nothing at all-I conducted yourselves properly during the trials. I do hope that 30 far as in you hes, you why time of that which is unlawful and notous If you took part in these proceedings, it was, as yo must all have known, a breach of the law; and we have had, and have at this moment, too fresia and tocsaw. People who begm, and people who wink at, such breaches, and suffir such breaches may he. I do hope ald anvise you not the the fing of the second time or the first, as it may be. Youl may all be chsciarged; and 1 advise you to go home
peaceably, ald don't consider this as a trumpl. Surrey Sessions, Croydon,-Derby Clubs.-The Town Hal
Croyden, was on saturday crowded by persons anxious to hear the decision of the bench upon an information land agannst the house. It will be remembered that some months ago an informa tion was laid against the same house, \(\begin{aligned} & \text { technical objection. The same informer has since laid a second }\end{aligned}\) information, which now came on for hearing, and on account of the circumstances connccter with ilt, and ine of cubs of this description, and then deal of anxiety. It will be unnecessary to state caused a good that the information was laid under an old Act of Parliament, viz., that of the 12th Geo. .1., and charged the defendantawful and mischievous game, called the King's Arma Derby Club, and that a number of persons subscribed small sums
money, to be divided amongst the winners at such unle game, and that they also fssued tickens they had forferted the
mischievous and illeyal game, for which the
um of 2onl. Mr Thomas, harrister, appeared in support of the sum of 20ni, which purported to be laid by Whllam Kerrod, sniria
intormation,
water manufacturer, of Chelsea, and said that the defendants were charged with having set up a certain manalul scheme or wame, to induce pivided into prizes, the first berigg \(70 l\). The person who had gained the second prize had brought an actad tecided that these lotieries were illegal. He then proceected to say that this information would never have seen that a scheme was prize hat not been whey was advanced, and that prizes were dispributed, and if he did this he had very little doubt that the bench would feel it to the them. After some evidence bad been given in support of the information, Mr. Adams said herted upon the Ac of Parlianient on which it had been framed. The preamble of that Act, and the different sectinns in it, sliowed that it was in

meetings for the two following weers.

\section*{}

Professor Henslow last week called attention to the silent but dangerous progress that is making by a new Agricultural pest, the Clover Dodder, which threatens to destroy the Clover crop atogether in
some places. We have been favoured with a communication, which will be found in another column, from Sir James M'Adam upon the same subject; and we understand that the evil is beginning to cause serious alarm among Agriculturists.
There can be no effectual means of opposing the inroads of this new enemy, without knowing what we have to oppose. It may therefore be as well at once
to explain its habits, and to offer suggestions for its eradication.

The Dorders are a singular race of true parasites, inhabiting all the temperate and warmer parts of the globe, distinguished by Botanists into numerous species, butall having the same manner of growth and multiplication. They are leafless annual plants, alied they lay hold of. Their flowers, which are small, appear in balls on the stems, speedily form fruit, and end in producing each four seeds, about the size of a grain of Mustard, within which is coiled up an embryo
plant, looking like a miniature snake. As the number plant, looking like a miniature snake. As the number
of flowers in each ball is, in our common species, on an average, about fifteen, it follows that every ball will furnish about sixty young plants-whence the rapid spread of such pests may be easily understood.
he ground, and usually seems to lie dormant till the succeeding year ; sometimes, however, it is said to germinate immediately. When the spring returns, the embryo sends one end down into the earth to form a root, and with the other it rises upwards, like a small white thread or worm. At this time it is not a parasite, but seems to derive its food from the soil, like ordinary plants. It cannot, however, do so long, but
withers and perishes, unless it touches some livitg branch and if it succeed in doing so, it imme diately seizes the live stem by means of a sucker, which is protruded from the point of contact, and then, twining from left to risht, anslf ornits mot and ceases to have any further connexion with the soil. From that time forward it is a true parasite feeding on the juices of the plant it has seized upow,
After making a few turns round the branclu, and securing itself firmly in its new position, it agai lengthens, and catches hold of some other brancie when more suckers are protruded; and thus it goes on-branching, and twining, and sucking, and branclaHenslow well describes as reseinbling "fine, closel tangled, wet catgut." Now the Dodder has a new and indenendent seat of life wherever it has twined round a branch; and as it is incessantly twining and separating, and twining again, a single plant is speedily on the condition of a polype-so that if it be cut into a thousand pieces, each piece will immediately go on growing, as if nothing had happened to it. Tearing the Dodder to pieces, then, so far from extrirpating it, ris short statement show it is a formidable enemy that has been thus unfortunately introduced to our fields. and as these things are not very nice in their food, it may next take a fancy to our Wheat fields, unless we can speedily put an end to its presence. It is of little use to cut it in pieces, - it is of no use whatever to do so, if the fragments are left where they can catch hold of anything else.

As it is only an annual, it would be killed if we could prevent its flowering; but that is difficult, because of its hiding itself among the lower branches of plants, where it cannot well be seen: and a few
heads of flowers will soon renew it in a succeeding year. The right plan would be to dig up the Clover where the Dodder appears, so as to form a circle considerably beyond the patch apparently formed by it, and then to burn it in heaps; or, in cases where the entire field is infected by it, to sacrifice the whole crop, and burn it. This may appear a violent remedy, but it is the only one likely to be effectual; and even this will fail, if (which is not yet the case, but soon
will be) the Dodder is allowed to form its seed: for, they will fall on the ground, lie hid in the crevices, and reappear with the next crop,-when all the labour will have to be done over again.
\(W_{\text {HeN }}\) the ground to be drained is of small extent -as a garden or small paddock-the spade is the best instrument to begin the work with. The main drain having been dug in the lowest part of the ground, with a proper fall into some river or ditch, the conductors as parallel as the ground will allow, and the tiles, with or without soles, laid in firmly and evenly, and covered as we explained before, the collectors are now to be dug: these will be from 24 to 30 inches deep, with a small declivity towards the conductors. The water must run very slowly, and almost continually, in these; for if they get very dry, the moles are apt to work in them, and choke them: this, however, is
not likely to happen if the drains are cut in the tough solid clay

The first thing is to dig a trench, about 18 inches deep, in the direction in which the collectors have been laid out, the bottom of which slopes very gently towards the conductore ; this bottom must be carefully cleared out with the shovel, leaving a width of 9 or 10 inches of solid subsoil. Should the top soil be deeper, the trench must be deepened in proportion. This will require the conductors and the main drain to be
deeper also, which should have been calculated before they were made

In this solid clay bottom a very narrow channel, 10 inches deep, is dug, with a spade only 3 inches wide at the insertion of the handle, and \(1 \frac{1}{2}\) or 2 inches the end, the length of the blade being 13 inches, n each side. The anmere
on each side. The anmexed cut
will give a clearer idea of it.
The slit which forms the channel
for the water is 10 inches deep, and is cleared out by a hollow scoop, 2 inches wide, made of strong sheet-iron, steeled at the point, and attached to a long
handle at an acute angle, as in sides of the channel quite smooth. When this collecting-drain is finished, it must be covered, first, with tough peat, if this can be got, or sods, with the grass downwards, or with heath pressed in by the feet, so as to fill a third of it, and a few inches of the trench, as is marked by the dotted line. If no heath is to be dotted line. If no heath is to be had, a rope of straw may be twisted and forced in: this will last a long time, and if it decays, the earth over it will have formed sn arch, which will keep the drain open when the straw is rotten. We have seen drains thus made, which ran well after they had been made twenty-ive years. The peat, sod, heath, or straw, must be well pressed in with the feet, so as to form a complete plug, leaving 6 inches clear below, for the water to run; over this, some mellow earth from the surface, or small gravel, should me thrown in, till the trench is filled up to the bottom of the top soil. This should be well rammed in, in a dry state, and over it, to fill up to the surface, the common soil may be used. If the surface is in grass, the sods may be laid back from the place out of which they were dug, allowing something for the sinking of the earth.

In a kitchen garden all the drains must lie deeper, to allow for the usual trenching. There the collectors may be 3 feet deep, and the conductors and main drain 3 feet 6 inches and 4 feet respectively. This method, although it is somewhat expensive, will soon be found profitable, by the improvement of the soil and the increase of the produce.

But if the land to be drained is extensive-say fields of from ten to twelve acres-and the soil at top is poor and shallow, the expense must be reduced as much as possible. In this case the plough must do the greater part of the work, to be only finished by manual labuur. Expensive draining-ploughs have been invented, but they can only answer on large been or where draining is contracted for ; a common estates, or whath a sharp coulter and broad fin to the point, plough with a sharp cour of pornt, will do a great part of the work, if properly managed. Suppose the dechivity of a sufficient fall in that of \(c d\) to carry off the water; then \(c d\) will be the direction of the main drain which may be straight or winding, as the lie of the land indicates-a \(a\) will be the direction of

\section*{the conductors}

Let a plough make parallel furrows across \(a b\), so as to have a very slight deviation from the level, say one inch in 10 feet, more or less. The distance of
these furrows may be from 10 to 15 feet, according as the soil is more or less retentive of moisture. The do very wher 9 inches, with a depth of another furrow, leaving a small balk between it and another first. The section of the furrow will then be as
 under, where \(a\) a is the slice turned
over \(b b\), the two furrows. The
plough next splits the balk \(d\), taking five or six inches more of the soil and raising it up obliquely, against the sides of the first slices, right and left. Thus a trench is made 10 or 11 inches deep, and 18 wide. The section of the trench will now be somewhat as under, if the mould-boart is of a proper concave shape, and the
subsoil will pro-
bably have been
reached. In this
trench the drain-
ing spade is to be
used, digging out
a trench 9 inches
deep and 9 in-
ches wide. The
bottom will now
be 19 inches below the surface, and the narrow spade and scoop finish the narrow, drain, the bottom of which will be 27 or 28 inches-quite deep enough for ploughed land to allow of subsoil-ploughing without danger of interfering with the drains. For more minute particulars we must refer to the "Journal of the Royal Agricultural Society of England, vol. iv., p. 28. It must be noted that the plough crosses the conductors and that only a portion of the trench made by the plough is required for the collectors: but it would be more trouble to have ploughed out short trenches of 20 or 25 feet in length than to go on from one side of the field to the other at once. The ploughman may raise the plough and ease his horses when he goes over the portion which he knows will not be dug out ; but at first, before he is quite aware of the plan, it will be best to let him plough to the same depth throughout. The stirring of the soil will do rood, even where no drainis wanted, and the whole trench will be filled up by reversing the operation.

If the subsoil is not of a uniform clay, some variation will be required in the operations, which we will next touch upon. The principle, however, will be the same. \(-M\).
In our observations last week on New Zealand, is a typographical error which destroys the meaning of the paragraph in which it occurs. Speaking of the morle of clearing fern land we are made to say, "No doubt the wiser course is to leave it (the fern) in the first instance." What should have been printed was - "No doubt" the wiser course is to burn it in the first instance" as indeed is obvious from the context. Since we are obliged to correct this error it will be as well to explain why we recommended the fern to be burnt since it involves a question of general busbandry in or countries as well as New Coaland Wh Wherever whealinar har by a rank vegetation, of wa her sarily rich in what is called homs matter which results from the decay, year alter year, of fragments of leaves and branches that fall on the ground --in other words, it is rich in carbon. To such land it is useless to add more carbon. If the vegetation that overruns it is gathered together and forced to deay so as to become ordinary manure and in teay, so is restored to the pand that would bat cond bon that tainí be to ada casbo taining it in excess; so that applying such manure is total loss.

But, on the other hand, it is equally mischievous to carry the wild vegetation off the land, for that would be to incur a large expense, and at the same time to impoverish the land for this reasou: all vegetation, of whaterer kind anther matter taken fors in and absoluty the soil in the prolth of plants. Such malutely necessary to the readed, for soil rarely contains should never of them. Ferns yield as much as \(3 \frac{1}{2}\) per cent. of such matter, obtained from a great depth beneath the surface. The question is, how to preserve the alkaline and other matters that are important, and to be rid of the carbonaceous subinporeat, \(h\) superfluous; the answer is by fire stances whe all the latter, and leaves all by fre, and behind in ther
But it is not merely the preservation here of substances valuable, and the destruction of matter useless to plants as food that is accomplished by fire: Another most important purpose is thus served. The black mould of such places as the New Zealand fern land, is like our peat mosses, in great part very slowly convertible into vegetable food, because of its insolubility.

Plants growing in it are not unlike aninals placed the chill off; it would be perfectly ridiculous to have hotthat they cannot bite it matter as is obtained by burning is immediately to render soluble that which was insoluble, and so to convert the vegetable food actually stored in the ground into a form on which plants can freely feed. The true plan of clearing and preparing such land is to fire all the vegetation, standing if possible, in order to save labour, but at all events to fire it and spongy peat, which forms over the surface of the being followed by ploughing and such other operations as will suggest themselves to every farmer.
It is known to many farmers, though not to everybody, that skilfully reclaimed peat is among the
richest of all soils. Peat, indeed, and wood-ashes, richest of all soils. Peat, indeed, and wood-ashes, properly mixed, form a manure equal to that from cows. An interesting instance of this effect is men-
tioned by Dr. Dana, with which these remarks may be concluded:-
\({ }^{4}\) Mr. George Robbins, of Watertown, is an extensive manufacturer of soap and candles and of starch, and still enriching and gladdenng his land. For four years, and it is believed bis crops will compare with four years, and , ultivators around him ; le has not used a spoonful of manure made by any animal, walking cither on two legs uses not a shovelful of their manure, buts, 100 hogs; he uses peat and swamp muck, mixed with his spent barilia ashes. The proportions are, one part of spent ashes to After shovelling two or three tall, mixed in the spring. plourhed in. The effect is immediates, and, so far, lasting. excellent, it makes the whole quite ' on sandy loam are excellent, it makes the whole quite 'salys '

\section*{THE KILLOGIE;}

\section*{SUBSTITUTE FOR FERMENTING MA \\ beds, AND FOR PIPES, FLUES, \&c- iNRIALS IN HOT-}

But, connected (concluded fom page 608.)
Vineries, I must say something of the applied to heating Grape-house and border, for eariy forcingstruction of the for the finer sample of Grapes at all seasons any gardening book, and under the head "Grapes" I will guarantee you to find the following prime order :- "Be sure to have the bottom under the Vine-border well unconnected with the killogie, and consequently quite to the subjert in hand, I can only entreat such to have patience a while, and they slall see that this is the principal part, for I mean the killogie to strike at the root of the Vinery and under it, I must get at, if possible git in the Vine-border-taking, therefore, the absove text, "IBe very well in its way, and has done very well this is all but as I have proved it to be a mach better way to day; the top of the Vine-border, I should dispense to drain drainage under, and, on the contrary, puta foot thick any clay, grout, or puddle, to keep the moisture in the Vineborder from entering the vaulted chambers under it: by this you nill see that I mean the Vine-border to be high, and rigularly cellared under, for the following a Vineiy to an angle of about \(30^{\circ}\) to the glass roof of the sun at nearly right angles, and after securing excellent under-drainage, and some crack compost, you will no doing well. Strange enough, he could clearly see the necessity of the steep roof, yet ever and anon had a mote in his eye in looking at the Vine-border, not to see the the rays of the sity of holding its face equally well up to ment about this, for whoever intends to grow Ge any argumust place the Vine roots in a warm medium, at least perfectly free from chilling and excessive rains, frost, and and what more simple method could be devised than raising the Vine-border high and dry to meet the summer sun? and by thatching its steep surface during winter you change the climate entirely; for as far as that compartmont is concerned, there is " no winter in the year; the roots of exotics during their period of rest, are effectually werded off, and when the air under the border in grates or ingles, such as plumbers by means of firematering, there is such a thorough control over the materiel for Grape-growing, as renders it almost entirely upon skill, and not upon seasons nealy altogether dependent no easy task not upon seasons; and though it may be no easy task to get prejudiced persons out of the old sive observation and experience, that it is impossible to get Crapes, or, indeed, any other fruit, to its proper
flavour, if tile snil in which they grow is saturated with fidvour, if the soil in which they grow is saturated with
whit is colouring. Again, let any one try and I warrant late will learn to his cost that the Vineboider should be dry, for the roots will keep sucking the cold rall, becones affected by it. And in sfe system, fruit nothing can be done whils the roots remain in cold wet earth-the roof only can dry it, and nothing else, and the
fire, if necessary, which it seldiom, if ever, will be, will take

Water pipes under a Vine-border where heat of such coarse quality would do, and where the supply is only Enormous as the fuilding a short time.
Enormous as the building and labour in erecting such a vine-house as the above section may appear, I must tell the readers of Gardeners' Chronicle that there are cross sections as much bricklayer's work as this, and nearly as steep Vine borders, and the crops of Grapes you But leisure know as well as I were first-rate.
But leisure fails me. In conclusion, therefore, I beg leave to say that it will be found an excellent way to
warm a bed of earth, to kindle a fire under it in vaults 7 feet high; and to prevent water lodging in the Vine-border, I would give it no quarter there at all, from the time people take up their Potatoes lill they begin to plant them again in March, by having wooden shutters fectly waterproof. No more complaints of cold wet subsoil or bad drainage,-no more talk of your Vines losing root In the winter-the earth, as well as the other elements of fire and water, for Grape-growing, are, or may be, now at rich or poor, wet or dry, the media in which they are placed, as regards both branch and root, being now of

Linnæus has remarked that most Aloine plants, when cultivated in the lowlands, are rendered quite sterile. In most of these cases, we see that sterility is compatible with long life and health. Is it, then, too bold a theory to suppose that all double flowers are first rendered by some change in their natural condition, to a certain degree, sterile; and that their vessels being charged with organizable matter in excess, (which would be greatly the organs orhich are nearest in their morphologichetsand position to those whose functions are checked? there any shadow of truth in this theory, or is it an abor tive one, as are the buds of the Gentians ? \(C\) D avor [We can only say that this is at least as reasonable an hypothesis as any that we have seen; but the greater frequency felds doble flowers in gardens where soil is rich, than in Mr. Divere it is poor, offers some difficulty in the way of Cabbage-leaf, grown into the form of a perfect fund the fold of paper into which grocers put sugar funnel, like borne on a long footstalk from the centre of an. It was from which a Cabbage had been cut this summer, I remember that De Candolle describes pitchers at the end chose of the same kind? [Yes.] Yes.]

\section*{ROSES IN POTS.-No. II.}

Ir is an excellent plan to remove all the Tea-scented, Chinese, and tender varieties of Noisette Roses, to a cold is not only to afford them protection from frot in. This is not only to afford them protection from frost, but many teader varieties, especially those grown on their own
roots, are liable to suffer materially from the rains in rots, are liable to suffer materially from the rains in atumu. Through the winter, the lights or covering should be removed in fine weather, that the plants may have as much air as possible; and being in a state of
comparative rest, they will require but little water Where a cold pit is unattainable, such varieties may be removed to the north side of a wall or fence, and a temporary frame erected; upors this a light covering of Fern prhich will throw off be laid in the mavy rains, and form a thatch, which will throw off the heavy rains, and form no small protection against frost, at comparatively little trouble. The front of this erection may be left open, that air may circulate freely amongst the plants to prevent damp, and the pots should be covered over with Fern or stable-litter. In selecting plants from the ground to grow in pots, I prefer such as have grown moderately through the summer ; they will be more compact, and the wood solid and better ripened than that of those which have grown very vigorously; and it is of great importance to have them polted early in the season. As before mentioned, most of the sorts will bear removing by the middle of September,-certainly the varieties of Teascented, Chinese, and Bourbon.
The operation of pruning may be performed at two seasons; in November for early fowering, and in March, or even A pril, to procure a later bloom. The first season after removal the plants will require to be pruned closer than at subseruent periods; and it is worthy of remembrance, that the flowers should be produced as near home as possible, or, in other words, that the plants may become close and bushy. The Moss, Provins, Gallica, and most of the autumnal Roses, may be pruned in close, within three or four eyes of the base. With the exceppruning a very robust growers, there is little fear of the hybrids of Chinese it is far otherwise . Buth with disposed to form wood, and should be well thinned out, and the remaiuing shoots left longe

In pruning all Roses, where the shoots are crowded or cross each other, it is beneficial to cut some entirely out, that those left for flowering may stand a good distance upart; for if too many be allowed to remain, they will become drawn, and produce weak flowers. It is, in fact much in favour of a good bloom, to have the shoots thinned during the previous summer, which assists in ripening the wood. And, as a general rule in pruning, weak growers should be cut a cloge, growers le long, und those of intermedia The hardy varieties (pruned and not pruned) may now (November) be removed to an airy situation in the garden, and plunged in the ground up to the rims of the pots from one to two feet apart, according to the size or pots from one to two feet apart, according to the size or
habit of the plant. It is well with regard to Roses grown in pots that they be ulways kept plunged.
plant in the disadvantages following the plunging of the ground, and the foclity aforded for the ground, and the facility afforded for worms to work into the pots, I have the soil taken out of a sufficient
depth, and a geed-pan with the bole enlarged placed at the bottom in an inverted position, upon which the pot is placed. It answers perfectly, and further secures an placed. It answ
After the plant
After the plants are plunged, the pots should be covered over with stable-dung, to protect the roots at the top from frost in winter, and to keep the surface of the soil moist through the summer. Atout March, the texider varieties may be brought from their winter residence, and treated bere when late prong, be pruned. Where the buds push out very numerously, the strongest and those which have a tendency to grow outwards should be selected to remain for flower, and
the weak ones rubbed off. The plants should be frequently looked over for the purpose of destroying the grab, which will otherwise eat into the buds, and spoil the bloom; frose worked plants all suckers or wild
shoots should be cut out shoots should be cut out as soon as they appear, and in
some instances the backward or side flower-buds be nipped
out. As soon as the warm weather appears, it will be well to look after that tiresome pest, the A phis, or Greenfly. In looking round, you will see one or two tiny ones Walking about your plants; you may think they are of no your enemy, for they are then meditating where to provide for millions of their race. Wash the ends of the shoots, or syringe them, with Tobacco-water. I have also found equal parts of Scotch snuff and sulphur vivum very effectual into a shallow pan and the ends of the shoots dipped in. One thing is important-never allow them to collect their

Great attention should be paid to watering ; and, though plunged, the plants will require through the summer
months a liberal supply. When they are coming into bloom, such varieties as are of a drocping habit wil require the adjustment of a neat stick; we should render
however, be too lavish with threse supports, or they rend the plants stiff and unsightly. A light shading should now be formed, to protect them from the sun's rays during the
middle of the das; this should be constructed to draw up, middle of the day; this shoud be constructed may have the advantage of the dews, so beneficial to Roses at this season of the year. Here they may remain till the middle of September, when they should soil shaken turned fresh supplied. and such as require it shifted into larger pots.-TV. Paul, Nurseries, Cheshunt, Herts.

\section*{AMATEUR'S GARDEN.-No. XXXVI.}

AONG all the various tribes of plants that decorate our flower-gardens, there is not one so beautiful, or which the Verbena. A very few years back our collection of these plants was limited indeed; but now, thanks to the spirit in collecting and cross-breeding, the varieties are almost
innumble; and though it is to be expected that among so many there sliould be some indifferent varielies, yet, taking them altogether, there is scarcely a variety that is not worth cultivating in gardens where there is sufficient vailing fashion for cultivating selections rather than collections, I will endeavour to enumerate those varieties Which may be consid

First, then, among the throng of beauties may be men. tioned Chandler's atrosanguinea, and when I say that the brightest of the Scarlets, as ignea and Melindres latifolin
are pale compared with it, the reader may form some idea of the brilliancy of its colou and a very free and robust grower. V.ignea is the next in colour, bnt it is rather difficult to keep through the winter and Croucher's maxima is nearly as dark, with a betce
habit of growth. V. Hislopii is a bright scartet, with something of the breed of Teucrioides in it, and V. melincires, \(m\). superba, m. latifolia, are kinds known and esteemed by
every one. All the varieties of Tweediana are good; but V.T. superba is the best. Of the tose-coloured or pink kinds Barnsii is the best, as the old incisa is a very straggling grower, and fades very much under a strong sun.
Anong the purple kinds, V. Stewartii is the best, but V. Charlwoodiana, Hendersonii, and Triumphans are so much like it, that it is difficult to distinguish the flower When of the plants. The two first are probably the best, though all four are worth cultivation. The orange-scarlet speciosa and Croft's formosa elegans are most worthy of notice. The first has large flowers, with a white centre and formosa elegans is very appropriately named, for it scarlet is elegrabilis is in the same way, but not quit so bright. Of the white varieties V. Teucrioides must be laid aside, as it is very much surpassed by Youell's
Princess Royal and the Queen. Princess Royal is a very pure white, more so than the Queen, and a plant of excellent habit. The varieties of V . Teucrioides are rosea is a purplish rose colour, and Girling's eximia is a flower of the same character, but two or three shades forkers Burleyana might be caled a deep rose or raby colour and change to pale rose, so that there are several colours upon a plant at the same time. V. lngramii is a fine variety, with deep
rose-coloured flowers tinged with salmon. V. Taglioni, very fine, with immense corymbs of flowers of a Superb, are of nearly the same colour, and all three very good. V. Iveryana is a rosy purple, very good;
and V. Bishopii is a parplish rose-coloured kind, which makes a good bed. Of the lavender-coloured varieties V. variety raised at this place, which I have named Brooklandsia, which corresponds admirably with Niellii, and Howers very profusely. V. Hycleuna is a pale bluish same colour; V. Laconii, the biue one that was to be, is a deep bluish lilac, but a very good variety. Alh the pre-
ceding linds are good and distinct, and worthy of a pluce in the smallest collections.
While I am writing I have received specimens from Mr. Girling, of Stownarket, of his nine seedlings, and I
must do him the justice of saying they are fine varie ties, with large flowers and desirable colours. Boule centre. Bridesmaid is a pale lovely bluish colour ; Fortune Teller and Minstrel Boy are very beautiful Beunty, Renown, and longiflora, are desirable colours;
White Perfection is curious, and Amethystina is a gem, Brooklands.

\section*{HOME CORRESPONDENCE}

Clover Dodder.-A desire to be useful will, perhaps, be the best apology I can offer for the liberty I have taken to give an account of a most pernicious an destructive plant in a field of Clover, called Seven Acres, on this Farn, which has attracted great attention, and caused much alarm. Its name, if I am correctly informed, is Cuscuta (Dodder) or Indian Grass. It commences in small patches all oper the field, and gradually extends itself in circles of from 5 to 7 feet in diameter, destroying in its progress all vegetation, Clover, Weeds, and every thing; it then appears to die off, leaving the whole area fourth part of the crop of Clover is already destroyed and the evil still continues. This Weed has the appearance of a large mass of yellow horse-hair, which shoots up through the Clover upon an average of 9 inches deep, and twines itself around every stalk of it. A portion of it throws out a small white flower at the joints. It is must liave been mixed with the seed of the Clover when sown, which was purchased from a general Corn and Seed-denler in this neighbourhood. I am anxious through turists upon their guard against so fearful an enemy, and I will highly esteem the favour of any information that may be elicited on the subject.-James M'Adam, Tindon End, near Thaxted, Essex. [This is the plant mentioned last week by Prof. Henslow as the Cuscuta Trifolii, and the subject of some observations in a leading article of to-day We have also received specimens from Mr. Stock from the neighbourhood of Bungay.]

Asparagus.- "Este," respecting Asparagus, begs to say that his beds are 14 yards long and yard wide. He trealed all with sal the produce was finer and more abundant than ever, in spite of the cold wet season. The salt was applied the first week in March. All the small weeds were killed at first, but they grew afterwards so rapidly that much weeding was nece
7 he salt was strewed, and suffered to melt by itself.

Wasps.-Last year, it will be remembered by all persons, that this insect was unusually abundant, and most annoy ing both in doors and out ; all kinds of fruit were attacked and the poor Bees were engaged in continual warfare. In the spring of the present year, 1843, the Queen Wasps, as they are called, were observed by many persons in Kent, as being exceedingly numerous. I never remember in any spring laving seen so many; strange to say, \(I\) hav seen but one Working Wasp this autumn. What has become of them? I observe, in Dr. Bevan's most usefu book on the "Honey Bee," that a simisar 1806. On the summer of 1611, Dr. Bevan quotes an author, by name Butler, who noticed a similar circumstance, 8. e., anextraor dinary number of Wasps in 1611, but none in 1612. The same occurrence is noticed in 1620 , but no wasps in Dr. Bevan, " of the Entomologist, that betwixt the years of scarcity here recorded, there was a lapse of exactly 1833 ; in the latter case, instead of being preceded, the were succeeded by an abundance." I shall feel obliged o any of your correspondents who baper, pro bon this subject to forward them to your Paper, proben Wasps' nests were destroyed on my farm, of about 200 gcres. Peaches, Nectarines, and other fruits were muc injured by them; for the garden swarmed with these intrusive vermin. This year I have seen but one wasp indeed, several "Queen Wasps," as we call them, were seen. We have a notion that every queen then destroyed prevents a nest. Three or four Hornets have been seen Hornets' nests have been seen by any of the haymakers Hornets not When premises, near Woodbridge, Suffolk. No Wasps have, believe, been seen in that neighbourhood this year, while lust year they were sad pests. How have yo

Peat-earth.-Until "Moorland Willie" diacloses his weather, will derive much benefit by being top-dressed with well-pulverised dry peat-mould: it obstructs eva poration, and being a non-conductor of heat, prevents the ronts from being scorched during the day, and clailed at night by radiation. As a proof of the non-conducting properties of dry peat, I may state that, by its application and that of other non-conducting (non-fermenting) materials, we had a daily supply of Seakale last spring, from in flavour to Seakale forced under pots with fermenting horse-dung.-Thomas Cowan, Churchill Garden.

Bees.-As friendly collision presents the best, as well as the pleasantest mode of eliciting truth, 1 have been towards my esteemed friend, Mr. Golding; a tone which towat too well calculated to deprive our apiaxian brethren of farther communications from the same intelligent source. Mr. Golding's letter of June last was writter in a spirit of friendly disquisition, accompanied by that warm spicit of hospitality which he is ever prompt to evince; lenge would have led, not only to a courteous reply, but
to a cordial shake of the hand ; and have laid the foundation of a friendly intercourse betwixt two gentlemen, who ought to combine those powers which both so eminently possess in the furtherance of science and the eradication of error. Mr. Golding's object in addressing Mr. Wighton was, to induce him to put failh in an averment of Huber's respecting which Mr. Wighton was sceptical ; and as Mr. G. had had ocular demonstration of certain proceedings on the part of his own Bees, which appeared to afford evidence of their throwing out intrenchments of some sort, and which might reasonably be supposed to lave been constructed as defences against an apprehended intrusion; he very fairly inferred that in the case mentioned by Huber, the Bees might have done the same, and therefore that the statement of that prince of Apiarians rested unon probable grounds. The fortifications alluded to by Mr. Golding, if Mr. Wighton will allow me to call them by that name, fell under my own observation when 1 was on a visit to my friend's house, and the representation which I have given of them in the "Honey Bee" is very correct. As respects "Mr. G. s referring Mr. W. . M . the \(\begin{aligned} & \text { Review, for the manner in whicl? Bees collect pollen, I }\end{aligned}\) think there must be a misconception, though, as I have not the letters before me, being at this time on a visit at Tenby, I cannot speak with certainty. If my memory do not fail me, Mr. G. merely opposed the opinion of the Reviewer upon the whole of the "Honey Bee" to Mr. W.'s criticism upon a single point. Neither Mr, G. nor myself would hesitate for a moment to acknowledge any errors which may have crept into the "Honey Bee ;" indeed, to obtain the benefit of their correction, Mr. W. may see, in the first edition, (which I find he possesses, as well as in the last, that I call for ingenuons criticism to elicit such criticism from Mr. W., in the most eflicient manser, I shall be happy to present him with a copy of the second edition, hoping thereby, should a third be called for, that it may reap the benefit of Mr. corrections and suggestions.-Edward Bevan

Conservatory Climbers.-Allow me to recommend to he readers of the Gardener's' Chronicle, a beautiful plant of the above-named class, which Mr. Beaton has slightly alluded to in his very interesting paper on mean Bignonia cherere, which is decided one of the finest in my conservatory. It was planted in one of the borders, about eight years since, and though it did no bloom for the first hree years, has eve since nowered regularly, and been generally admired. It grows very rapidly, and would, if not restrained, cover thole building, which is between 30 and 40 feet long. Its manner of blooming is, I think, pecula fy vatable, as it does not produce its flowers simultaneously to develope them from the commencement of June to the end of October, their large size and rich colour rendering them very conspicuous. The plant is decidedly not a Stove-climber, as in the same house the exquisite Big nonia jasminoides thrives and flowers as freely; while in the spring, the Kennedyas and Zichyas are equally prodiga of blossoms. Mr. Beaton has assuredy rendered an essential service to Florists, by publishing his valuable remarks on a method of rendering ones conservatories far more attractive than they have hitherto been; but I must dissent from his opinion that he has run to too great a length, as the opinions of a practical gardener like him self are the very things that, among others, tend to make the Gardeners Chronicte so useful. He would confer boon on me and many others if he would now give us little information respecting plants that are strictly Con servatory climbers. With Bignonia venusta, planted in the same house, I did not succeed, nor does Ipomœea Learii, though growing luxuriantly, flower well. Mandevilla suaveolens is equally fine, but without blossoms. Canavalia Bonariensis, though possessing handsome foliage and a tolerably free flowerer is, I think, an uninteresting thing ; and Duranta Ellisii refuses to gratify me with blossom, though healthy and vigorous. Jasminum heterophyllum I must discard, in spite of its beautiful leaves, as it has never flowered but once in England. Siphocampglus bicolor must give way to something else, though it is an ever-blooming plant, from its being almost hardy in our climate. Bignonia jasminoides I bought from the strong recommendation of a nurseryman, and that too kindly ner produced a single blossom. Will Mr. Beatom kindly aid me in my desire to cover the pilars of my conbeing possibly enabled to carry out his plan, by erecting a building at the back of my Conservatory for the growth of Stove Climbers, may I also venture to ask, if, by increasing its size beyond the limits he suggests, it might be mate avaiable for the growth of a selection sta plants, and for forcing flowers for the Coive the sun's its about wil west, but the ende that the same heating appor When will Mr Geaton favour ns with his list of Cape Heaths, which I think prow feature to our flower-gardens-does he purpose sinking the pots, or turning the parts out, into beds of Heath-mould? had once a bed of Erica cruenta which was very beautiful;-the plants aurvived one winter, with a slipht protection, and the second summer were a mass of bloom; but the next winter proving more then usually rigorous, they all perished. - A Devonian.

Cellar for Roots.-One of my neighbours stores his Potatoes every year in a cellar or pit of the following de-scription:-The subsoil is a loose, stony rubble on the upper oolite, and has been excavated to the depth of 5 feet and width of about 8 feet; round the interior is a dry stone wall, which is carried 2 or 3 feet above the level of the surrounding ground. A roof, with about 18 inches in
thickness of thatch "stubble "covers the whole. Outside the wall and up to the eaves earth is laid firm, in a sloping manner ; the entrance is by a door at one end. When the Potatoes are stored some loose straw is shaken over them. I have frequently seen the Potatoes taken out in the spring in excellent condition, and I never heard that
any were injured by frost. I have also seen similar pits any were injured by frost. 1 have also seen similar pits
in places where the soil is a stiff clay, but in such cases a sloping bank has been chosen for the purpose of easy drainage. I am induced to send you this short descrip-
tion, from seeing in a late Number of the Chronicle, pace tion, from seeing in a late Number of the Chronicle, page
285 , a communication from "Lusor," who says that many 285, a communication from "Lusor," who says that many
years ago, he stored his Potatoes in a limestone quarry, years ago, he stored his Potatoes in a limestone quarry, many feet in thickness, and covered the whole with stubble, several yards in thickness, yet his Potatops were
spoiled, and even the wind was not excluded. I cannot help spoiled, and even the wind was not excluded. I cannot help aperture where the enemy entered, he would have found the covering something less than several yards in thickness. I have never heard of fruit having been kept in such places, but I beg to inform "Totty" (see page 245) that a gentleman lately showed me several sorts of desert
Apples which were as hard, and sound, and juicy, as when Apples which were as hard, and sound, and juicy, as when
gathered from the trees. He had kept them in narrowgathered from the trees. He had kept them in narrow-
mouthed large earthenware jars, sealed upuntil wanted.Cultor
Roman Cement.-I fear your correspondent "J. B. H." has not had his work properly done, or he would not have occasion to say that "Roman Cement will not stand frost." Supposing his brick-work to be properly executed, with a the cemt ottom to prevent settiement or cracking, and find that Roman Cement will stand frost The brickwork should be well wetted prior to the application of the cement, which should be from a first-rate factory, such as Francis and Sons, and what is technically called No. 2, river-sand (which is better), and should be finished in one coat; a second, or setting coat, as it is called by plasterers, should not be put on, as it almost always scales off after thoroughly dry, and then have two or three coats of boiled oil and tarpentine. When this is completely dried the Water may be admitted, and if properly done no frost will work has failed either from improper construction of the brick-work, or the cement being dead before it was used, or from being mixed with other material than sharp sand, liable to we split by the render it porous, and therefore [H. Heylyn, of No. 5, Acre Lane, West Brizton, offers to give information to "J. B. H." on this subject.]
Farnes' first early Peas, beg to say that I have some May and Warwick this season, and the results were decidedly in favour of Farnes', as the latter were fit for use from ten to fourteen days before the others. I merely notice this to show that persons must not be too
hasty in drawing conclusions from one, communication alone, as we see from Mr. Whiting's account the results are widely different. \(-C\). Noble.
Ginger.-I beg to thank Mr.
Ginger.-I beg to thank Mr. Brown for his ready commore tedious than my own, is doubtless very good. That Which I call mine is, however, Mr. Markham, \({ }^{\text {He }}\), of Hewell, and was published by him in 1831, in the sevesth
Vol. of the "Gardener's Magazine"" page 577, gigned "Zol. of the "Gardener's Magazine," page 577 , signed "March I pot my Ginger in small 32 or 36 pots, according to the size of the tuber-loam, rotten dung, and leaf mould, in equal parts, by all appearance being their spade, or the hand. After filling the pots with this compost I proceed to place the Ginger upon it, but barely it in a hotbed, frame, or some such situation, to placing If it will push without more water so much the better or time. The pit in which this practice has so complet answered is abunt 7 feet wide, with linings ore each side; it is prepared a few weeks previously to the planting of 2 feet of halt decayed tan is placed in the bottom, upon a good drainage of rough pieces of wood and branches, and upon the tan to the depth roughness of the soil placed deep. it is precisely the same as that in which I first plauted my 'sets.' Planted in this compost, at about growth. Giving them a hittle water when planted will suffice for some time, as I keep the pit almost close, even over them to preserve them from the burning sun sufficient till they begin their growth, when too much heat and water cans scarcely be given them. The pit should be their mowth is almost incredible. By the middle of September the crop will be ready for gathering. I always preserve the oldest part of the tubers for future planting, placing them, after a little drying, in a pan of dry sand, setting them in a cool dry situation, free from frost or "seed. ' With the following season." It appears Mr. Brown gets two crops in one season; about three lights of the above-mentioned pit produce me from 40 to 50 lbs . of very fine Ginger with scarcely any trouble at all ; and this I find an abundance for the consumption of a large family J. M. Dytch.

Tobacco.-I observe in your "Answers to Correspond-
ents" that "Tobacco may be grown in England by any one for his own use." This I believe to be true, but only to a certain extent. Many years ago (I presume before the
union of Ireland with this country) Tobacco was cultivated in the neighbourhood of Kelso, in Scotland ; indeed, so in the neighbourhood of Kelso, in Scotland \(;\) indeed, so
successfully, that I believe an act of Parliament was passed prohibiting the growth of it by any person beyond a limited number of plants, I think not exceeding one thousand. Some years after the union with Ireland, it was discovered by some agriculturists that the act was
limited to Great Britain; they, therefore, went very largely into the cultivation of this plant, and with no less success than in Scotland. This of course led to the extension of the act to Ireland, and I suppose with the
same limitation as to the number of plants. The above I believe to be a correct statement of the case. \(-F . H . S\). Morphology. - As 1 perceive you are interested in
Morphology, I take the liberty of forwarding you a branch of Spruce Fir, in a state of monstrosity, as a
specimen from a quantity of plants in the growing here in the vicinity of old coalpits, upon the banks sormed of the refuse
small coal. It appears the dry weather of last plants growing upon this porons material only about three feet high) to form incipient cones in great
abundance; and the excessively wet spring
of this year has forced them to elongate in their more natural state as branches. I do not know that this cumstance, but Inever
 saw it so abundantly exemplified as in the plantations named, and it appears to me an excellent example, as showing the relationship between fruit and branch, clearly proving them originally one and the same thing, only in
different organic state.-Joseph Paxton, Chatsworth.
different organic state.-Joseph Paxton, Chatsworth.
Larch. I have examined the Larch in various situ tions in this part of the country, and find that it thrives well in soil that may be considered light and moist. Some years ago a considerable quantity of Larch was cut that
grew on part of the Earl of Dunmore's property. The grew on part of the Earl of Dunmore's property. The the trees were affected with the dry-rot. Neither does it appear to thrive well on soils that have a moist tenacious
subsoil. Draining would be an improvement to such soil. Again, in soils that are moist and sandy, with mixture of peat, the Larch grows well, and produces woo that is healthy and hard. Upwards of twenty years ago
I visited the Larch-trees at Monzie, (and it is commonly I visited the Larch-trees at Monzie, (and it is commonly reported that they are next in size to those at Dunkeld, Which are the largest in Scotland) ; those at Monzie grow tendency to keen the soil moist.--Peter Maokenzie
The Chinese Primrose.-In my experiments from time to time in acclimatising plants, it was no small satisfaction to find the purple and white Chinese Primrose able to endure the rigour of our winters, flowering in early beauty with the Crocus, Polyanthus, and its other fair sisters of the spring. This I have effected (even in Middlesex) at more than one place, and in successive seasons, by planting out early in September, strong old plants in front o soil was a poor light loam on a sandy subsoil. In drained under the roots of the shrubs border not well brickbats or a flower-pot reversed under each plant; in this situation I had plants which did surprisingly well, without any other protection than the sbade of neighbouring Evergreens, from under whose fostering wings many there were sereral inches of snow on the ground; ; indeed they did not appear to suffer so much from frost or snow, as from the cold March winds-when, as Stillingfleet beautifully expresses it,-

Winter still lingers on the verge of Spring,
Retires reluctant, and from time to time
Looks back, while at his keen and chilling breath
Fair Flora sickens,"
Plants in other aspects of the garden planted similarly did not answer; those on the north perished first,
east next, and those on the south, though surviving the winter, vanished in March and April by the soint effects of frost and sunshine. In passing, I will observe, if plants of the Chinese Primroses, not excited by fire-heat or allowed to flower during the previous winter and spring, are planted out about the end of May in the flowergarden, on elevated beds in a mixture of loam and leafmould, and shaded a few hours from the mid-day sun, they will become very ornamental during the summer, but in this situation they are early destroyed by frost. I have found in various localities early planting to be cases Au lavourable for accimatising exotics. all things, luxuriance of growth must be guarded against, as every practical gardener knows that succulent vegetaand a low temperature acts injuriously on plants in pro
portion to their watery contents; therefore attempts should be unceasingly made, by thinking gardeners, to place exotics in the most favourable situations, so as to render the numbers, inure them to our climate, and possible flower-garden at all seasons as attractive as interest for means by which these can be introduced in the flowergarden is in the selection and diversity of its flowers and shrubs.-H. Bowers, Hammersmith Nurser
What your correspondent " E one" Stock. - In addition to this subject, in your valuable paper of August 26 pecting I may mention that a gentleman, a very near relative mine, had a common Rose-stock, on which he budded all the Moss Roses that could be obtained in the county in which he resided. The buds took, and in the following year the tree was quite a picture of beauty, every shoot ing of this subject it may probably kind. While speak if I mention that my relative had also a Pear-tree trained against a wall, on which he had grafted fourteen different kinds of Pears. He selected those Pears which be considered the very best (he being a good pomologist), and he was gratifed to find the ger after year ensh he duced fruit true to its kind. Unfortunately, however, for these trees, my friend determined on making great alterations in his garden, and, consequently, the trees were obliged to be removed. This removal, however, had no effect on the Rose, which continued to thrive with great Iuxuriance; but the Pear-tree did not survive this transmission, it being about the middle of June when it was

\section*{PROCEEDINGS OF SOCIETIES.}

Sept. 5.-R. W. Barchald, Est. in in the chair. R. Osborne,
Esq., and W. Ellis, Esq., were elected Pellows of the Society, Fss., and
From Messrs. Veitch and
Sin, cimens of Echites splendens, mnd a species of Allarnanda, said to
be grandifora, but appearin! to le only cathartica; also a beaube egrandifora, but appearint to be only cathartica; also a beau-
tiful little plant of a verticorria, for which a certificate was
and suntted Aowers; also a new speries of Achimeney, which sprung up spontaneously among the roots of a mass of Orchidaceex, which
was purchased from Mr. Skinner last year, and havine in its was purchased from Mr. Skinner last year, and having, in its
habit of growth and appearance of foliage a marked resemblance to A. pedonculata, but distinctly different in the flower, which
is of a violet-rose colour, with a dingy yellow throat, closely
dote dotted with mal-roue brown spots, ; he flingers yllow are rather larger and
handsome as some of the others, yet it evidentily possesses
 plants of Catasetum Russellianum, Oncidium microchiium, Max-
 the latter about six feet in, height, and bearing 15 fully expranded
bloo blooms. This plant was stated by Mr. Robertson to have been
presented to Mrs. Lawrence some time ago by Baron Hugel, and is perhaps the only plantof the kind in the country: a silver rubrum. Mr, H. Groom, of Clavham Rise, also exhbited a col-
lection of Lilium lancifolium album, and lancifolium roseum,
particularly wellparticularly well-grown specimens, varying from 3 feet to \(5 \frac{5}{2}\) feet literally covered with heantiful white and pink frow each pot, They
had been grown in a span-roofed house, about 21 fect long by 18 feet in breadth, on a horizontal stage: a Knightinn Meclal of a most beautiful new variety of Miltonia candida, and a cut Banker of Govenia sp., very curious, and rather handsome: a
Bedal was awarded for the Miltonia candida. Mr Trenfield, of Lee, sent some seedling Verbenas and a hybrid
Glowinia, with light pink flowers. Mr. Pawley exhibited cut Beaufoy, Esq., were some very fine Pe From Mr. Allee, gr to H hAtive, Noblesse, Milett's Mignonne, Red Magdalen, Kensingten,
and Padley's Mignonne, finely swelled and beautifully coloured: a certificate was awarded for the Violette hative and Noblesse. ton Nectarines, with some good bunches of unnamed Grapes Mr. M. Henderson, gr to Sir G. Beaumont, sent five fine bunches
of the Muscat of Alexandria Grape, weighing respectively 2 lbs . Elridge, 210 s . 2 oz ., 2 lbs . 12 oz ., 1 lb . 13 oz ., arid 1 lb .13 oz . Mr. Grapes, imported from Paris in the year 1839, resembling in appearance, a good deal, the Black Morocco. From Mr. Trinder,
of Forest Hill, was a new variety of Pine-apple, weighing \(2 \frac{1}{b}\) bs., not so well grown as might have been wished, butwell- flavonred, and reported to be very handsome, under favourable circumstances. Mr. Frazer, gr. to Sir C. Sullivan, sent two nice looking
hybrid Persian Melons, two Citrons, and some well-swelled and beau their great beauty, were interesting from the circumstance wa
their having been produced by a tree 16 years of age, which was removed 2 years ago from a south to a west aspect, and never produced previous to its removal such fine fruit as those exhibited.
Mr. Frazer is of opinion that all Peach-trees of any size are improved by being occasionally removed and properly transplanted. A Certificate was awarded for the Peaches, From Mr. Jones, gr.
to Sir M. Disney, were excellent Noblesse and Grosse Mignonne Peaches. A Certificate was awarded for the former. Frori
the Gardens of the Society were plants of Peristeria Barkeri. with its fine pendulous scape of yellow flowers, Bolbophyllum
Cand Careyanum, Achimencs coccinea and longiflora, Babingtolia camphorosmæ, an exceedmgly pretty plant, bearmer on its fine
droping lranches a multitude of its small white flowers. This sanguinea, Statice mucronata, and cht flowers of Jupinus semperflorens, sent by Mr. Hartweg, particularly rematkable on acecomt
of its forming a large hush, densely covered with flowers, cluting the whole year, in its native country, Peru. Prom the Garciens
of the Society were also sent, the Nectarine Plum, Imperatrice Nectarine, and George the Fourth Peach, an American variety, Which is found most worthy of cultivation of any from the United

NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL.

Thiches above the soil, compact, and during the blooming pexiod
very showy with its fine yellowish flowers. Jt was raised from New Holland seeds several years ago, and is a plant that comnearly all thesomumger. This is one of those ine rinooted plants nhich are easily injured, wate frequentattentition in their culture,
and require to be managed well, or they are never worth growing. and require to be managed well, or they are never worth growing very fbrou and open heath-mould and loam, with the base of

LYCASTE PLANA. Even.flowered Lycaste. (Stove Eniphytyte.) by Messrs. Loddiges, with whom it fowered in October last. is conspicuous for the large size of its leaves, and is in fact ve near 1 .. macrophylla, from which it differs in the petals being
quite even, not undualeted, nud in the lateral sepais being much
more exaciy bluntness on the tubercle of the tin. The beauty of the flowers of L , plana is far greater than in L . Thacrophylla, which wents the rich red. wine colour of the plant before us. Like other
species of Lycaste, this requires to be grown in turfy peat; the
pot pot to be half filled with potsherds, and the soll considerably ppeato-bubs imberded in the soil, or they will damp off
summer, after the thant has commencer drowing plenty of summer, after the plant has commenced growing, plenty of water
should be given to its roots, and a slight syringitit over head once shivice a day as the weather permits. The hany days, and the temperature kept about \(80^{\circ}\) by
day, and \(50^{\circ}\) by night. In winter, for a few weeks, very litt
 kept moist it will be quite sufficicat, and the templerature may
be alowed to fall as low aus \(58^{\circ}\) by day, and \(50^{\circ}\) by night.-
Botanicul Register.
 in Covent Garden, for the Horticutural Society, and in the Chis-
wick Garden it flowered in the autumn of 1842 . It is a charming
tend tender annual, about a ioot high, which flowers most abundantly
from July to September, if treated in the following mamner. The sed should by sown about the middee of March man in pots. Thited
with woith a mixture of sandy loan, oid lime-rubbish, and well-decomon a hot-bed, and when large enough should be potted off ringly
into small sixty-pots, flled with the same kind of compost as that
in in which the seeds were sown. The young phants w
should be again returned to the bict-hed, and whirn
she blished, helir pors bemg woll filled withr rovots, shourth be re rotted into upright this
this the pots should be placed on the fromt shelf of and. After Where they are freely exposed to the sun, but guarded from wind
and rain, the first of which destroys the flowers, and the latter the plants. Care must also be taken in watering, the plants; for
on this much depends of the success in their
 senson, if it is plansed ins a hot situation, where it can be protected
from heavy rain and wind, but it will not, under such circum from heayy rain and wind, but it will not, under such circum-
stances, display all its beautiful effects.-Botanical Register.

\section*{MISCELLANEOUS.}

Chalk in Brazil.-It is a generai opinion among geologists that no chalk occurs in South America; this was Humboldt's conjecture, and all succeeding geologists have adopted his view. Mr. Gardner has, however, in a paper
read before the Philosophical Society of Glasgow, proved that in Brazil there is a very extensive chaik formation probably extending over the whole of the immense shoulder which forms the most eastern point of the Amedistrict is very level, and large tracts of it all the way up consist of what are called Vargems by the Brazilians. These are large open spaces destitute of trees or shrubs for the most part, and only covered with herbaceoue vegetation, and that sparingly, during the season of the rains. The place where Mr . Gardner found his evidence of chalk is situated in about \(80^{\circ}\) of sonth latitude, and \(40^{\circ}\) of west eastitude, or about 300 miles in a straight line from the last coast. The locality forms part of an elevated tablepard, which stretches continuouslyfrom the sea-coast southprovinces of Cearáa and Piauhýy. It is generally elevated from 500 to 1000 feet above the level of the country to the east of it, but not so much above that to the west; and at

2000 feet above the level of the sea. To this range the name of Serra Vermelha is given by the Portuguese, and Ibiapaba by the Indians. Between the 10 th and 13 th degrees of latitule it takes a westerly direction, and in erminating at the mouth of the Amazon, under the valley, including the provinces of Piauhŷ̀ and Maranhas Italian Rye-grass.-The following communication from Dr. Blundell respecting the early and abundant produce of Italian Rye-grass, we extract from the Mark Lane Express:-It is how more than three weeks since I drew your attention to the fact of my having cut a specimen of
Italian Rye-grass on the 12th of June, the seed of which was only sown on the 27 th of the previous April, which measured the astonishing length of 18 inches, cut clear
from the surface soil! This, from the sowing to the cutting, is little more than six weeks ! I make little doubt that many of your readers considered, as I did at the ime, this rapidity of growth as surpassing that of any other known kind of grass; but what will they say when I in-
form them that on the same spat of ground, and from the selfsame plants, I have obtained a second growth of grass, cut on the lst of July, the average specimen of which
measured from 15 to 16 inches ! This is only a growth o ighteen days, or very neariy equal to one inch per day Again, another sample of this Italian grass, sown on a was also cut on the lst of this July, measured 5 feet 4 nches, and was only just then full in seed. Surely these facts are of themselves sufficient to establisia the high
claims of this grass to the notice of the agricultural public. since my former letter appeared a gentleman has written to ask me the question, "Whether Italian Rye-grass will succeed sown after harvest, upon a Barley stubble which is sown with Clover, for sheep feed;" and as this way be a question which may arise in the minds of others, in a manner, too, that will surprise and exceed their most sanguine expectations. Again, I may further remark that such is the avidity with which stock of all kinds will eat this grass, that having once tasted it, they will forsake every other part of the field for that on whind Great Produce.- We find in a late Number of the American Agriculturist the following statement:-"In the large crops, for which premiums were awarded at a meeting of the New York State Agricultural Society. a plentiful use of barnyard manure, and some ashes and plaster. The corn was planted in hills two feet apart each way, kept clear of all weeds, and a product of 122 bushels sown to the acre, on well-manured land, and 102 bushels btained. In the same field, side by side, without maobtained ; thus demonstrating, even on naturally rich land, the benefit of adding fertilising substances to it. The ame care was used in the cultivation of all other grain and also of the
commonly large.

\section*{Liebuetus.}

Dr. Justus Liebig, in his Relation to Vegetable Physiology. By Dr. Hugo Mohl. (Dr. Justus Liebigs
Verhätniss zur Pflanzen-PAysiologie.) Tubingen.

In that chapter which is devoted to the Cultare of Plants, Professor Liebig puts forth a regular theory of vegetable nutrition-as tar, namely, (observes Dr. Mohl, tematic arrangement. He again starts from the assump tion, that humus cannot be absorbed and used as food by plants for two reasons-one chemical, and the other
physiological. He, in the first instance, denies that humus of vegetable mould possesses the properties ascribed to it by chemists, it being absolutely msoluhle in water, and not combining with earth into soluble salts whose stalactites, instead of consisting of humate of lime, do not contain a trace of vegetable Dr. M. say has no does not intend to settle these opinions, for he time. He merely throws out the following remarks:'It cannot be positively asserted that the humates conwater will vegetable mourd are insoluble in water, because water will dissolve out or the soil a certain amount of an organic, brownish substance-an experment which can be
made tith any garden soil; still coal of humus seenos to possess the property of subtracting these substances from a solution passing or filtering through soil, otherwise (as has stated) all our springs would contain brown water It appears, moreover, that besides coal of humus, the (although in astancer degree) the property of with possess有 which the greater purity of springs coming from : great depth may be ascribed. Stzll this withdrawal of orgavic substances is obviously only a partial one, for our spring-water is never free from organic substances-a fact which spring-water is subject. This perfectly agrees with the new experiments of Saussure, who found in all waters an azotised substance soluble in water. All these facts, thereore, give quite another result from that which L. has arrived ill a., that the water which filters through vegetable mould will always supply plants with some portion of organic matter. How far this substance influences the nutrive examine, but which he has neglected to enter into. Saussure has, however, made some experiments on the absorpby the roots of plants (Bibl. Unir. vol. xxxvi. p. 340 ) Although these experiments do not strictly prove that this is really the case, under all circumstances; still they go so are healthy, and do not, by their putrescence, vield humots substances to the water. L., in a subsequent refumous f these an error of calculation! In another part of this chanter (p. 109), L. says, that humus, if not properly exposed to the infuence of atmospaeric but that woter a in such soil, for the humus will consum ants can grow in such soly the air. It is (says ceivable how a man can write such things, when the inspection of any peat moss will show the fallacy of such

The second argument which L. brings forth to support his favourite assertion of plants not feeding on humus, is based on physiological grounds. He first announces as a general principle, that, under the appellation of food, from substances oniy can be included, as being derived from external sources, can maintain all the vital functions, and which the organs of a plant can use for the formation of the substances peculial to them. This ambiguous
definition includes (says Dr. Mohi), some anomalies, and
does not apply to several reputed kinds of food. Starch, does not apply to several reputed kinds of food. Starch,
for instance, is certainly one of the substances on which for instance, is certainly one of the substances on which
man feeds ; yet he could not live on it alone. In farther explanation of his views, Liebig adduces the example of a grain of Wheat, which contains the necessary ingredients of the germ, and the first fibres of roots ; and he adds that we have to suppose that these ingrelients are mized just in
the proportion that is required for the development of those organs. If one of the ingredients, say starch or gluten were superabundant, they would not serve either for the formation of leaves or otherwise. Carbon, also, as well as ammonia and water, are always combined in plants
with an azotised matter; and it is for this reason that with an azotised matter; and it is for this reason that and consequently no bumic acid (wlich stands next to them in a chemical point of view), are not used as food by plants, but would rather impede the vital process and kill the plant. ( \(p\). 116.) In analysing this string of assertions, Dr. Mobl observes, in the irsst instance, that is a fact doubted by no one; but he doubts whether the quantitative proportion between the absorption and igestion, be based on fact. L. says that this proportion must exist in the grains of Wheat. But Hermbstadt \({ }^{\text {a }}\) fine experiments on the different sorts of grain show quite the contrary ; for one sort of Wheat contains 41 per cent. of starch to 34 per cent. of gluten, whist another sort shows a proportion of c5 to 9 . But this varying proporthe organs of vegetation themselves, as may be seen in the roots of Beet cultivated on a soil rich in vegetable therefore, does not support Liebig's assertions. Indeed, he himself, in some degree, contradicts his own statements, when he says ( p .119 ) that if plants obtain a greater proportion of carbon than of nitrogen, then the or wood, nor for any constituent part of an organ, but or wood, nor for any constituent part, an organ, but resin, mannite, gum, sce. \(\qquad\)
aed.
Hooker's Icones Plantarum, Vol. II., New Series ; or oi. VI. of the entire work, bas appeared, with a most interesting selection of plants. The figures are executed in the same bold stgle as those of former volumes, and are remarkable for the vigour and truth of the drawings.
A mong them are many from the Straits of Magellan, A mong them are many from the Straits of Magellan,
which just now are particularly acceptable. Others are from New Zealand, and will be useful to the more scientific among the settlers in that colony; as, for example, the most curious species, thought to be of the same genus, with the habit of Lycopodium phlegmaria; Ourisia ma crophylla, a handsome herbaceous plant of the Fox-glove
tribe; Phyllocladus trichomanoides, the Tanehala Tree tribe; Phyllocladus trichomanoides, the Tanehaha Tree, one of the finest of the Conifere ; and a fine blue Lobelia
physaloides, from the woods of Wangaroa. Among Van Diemen's Land novelties are those curious plants called by Don, Athrotaxis, which form a very peculiar set of
Conifere, nearly allied to Cunninglamia. Containing such illustrations as this the work would be one of the most acceptable of all presents in our southern colonies, Library.
CALENDAR OF OPERATIONS for the ensuing week, modes of heating hotbeds, hy the trough system, \&Rc. \&c., some o nnswer from time to time, in obscrvations at the head of the Caiendar
but as this can only be done ir an unconnected form, to suit the dif. ferent uueries, I shall draw up a paper or two on the subject, the firz water do you recommend for tic truyglis? almost every one inquires
and as this seems to be less understond, by the best advocates of the system than it ought to be, 1 shail answer it first, from my own
practice. The heat given out by a hody of water in these tanks does not depend on its depth; and this is one of the most important
 the water in the tank le half-an inch or 20 inclies in depth. One corre
spondent, in June last, almout ruarrelle, with me on this point, but with my own troughs, and my atteution was first drasn to it by the
young men who attend our fires insisting that the less water they inches depth of water in the troughs at the time, and the housc was Fater at the surface was \(140^{\circ}\), and as the frost increased we had to increase the heat of the water up to \(150^{\circ}\), and a few degrecs hy her
once or twice. This lieng ascertained, the water in the trough was water kept up the temperature as usual, that is, two inches in depth a was \(10^{\circ}\) out-of-doors. Except in hard weather our troughs were never not in prophortion to the slepth of water, but to the surface it presents
to thic led to be heated, the most economeal plan in the end will ine to nale the tank as wide as the bottom of the bed, or nearly so. A
three-light Mclon hed, gix or seven feet wide, will probably require for use early in FFbruary. This depth is not suitable for incrensed
heat. but as a riservorr of heat, which will hold out 12 or 15 hours.
 Now, this may not be the exaet ratio, but it is near enough for
practice; nad reotlect the calculation refers to Melon and Cuccumber
beds, whinre 2u inches or two fect of moil lies over the top of the tank;
 previus arrangements; he makes no provision for moistening the
Wotom of such a he l, and a kardener cannot well ascertain the
muisisure of te soil in the bottom of lis Melon beds. In a para-害taple detheleading article tanks become foul with soil that drains into them, mere by degree
are choked.". Now, this mere mud is the very best thing that can
be for prowing Melons and Cucumbers in, providing you keep a dry
atmosphere over it, and the surface of the bed also quite dry, and
stirred thrce or four inches deep. Melons and Cucumbers for the marikets of Mexico have been grown on beds of mere mud, floating
on the lake of Chalco near that city, time out of mind, to say nothing of the floating beds of Cashmere, where great quantities of Melons, Cucumbers, and Gourds are grown every year on mud beds
two feet deep. Melons could thus be grown in any part of the world where strons, dry hent prevails; and here, in England, we can now
imitate this state of things. Dr. Lindley's "Guide to the Orchard," the best book on the suhject in our language, has this remark bearing require a very high temperaturc and dry atmospherc, and an ex-
tremely humid soil." I.-IITCHEN-GARDEN AND ORCHARD.

Pinery. - Now that the beds are settled down to a more tem-
perate bottom-leat, see that they do not lower too perate bottom-heat, see that they do not lower too much, for want of
turning the linings; as they are growing fast, they will stand a brisls
bottom-heat of \(80^{\circ}\) or \(85^{\circ}\), as long as the weather keeps fine : they bottom-heat of \(80^{\circ}\) or \(85^{\circ}\), as long as the weather keeps fine; they
will also stand a good current of air: this will harden therr lenves
and riper them and ripen them, as it were, before the dull days overtake thema in a
green succulent state. We can never pay too much attention to
plants of all soits, in plants of all sorts, in order to assist and hasten their growth when
they are in motion; if we get them well ripened, as the season advances, they are better fitted to stand against our long dull winters; keep then longer in growth late in the autumn, and fires may, therefore, be applied sooner to them than to other stove plants.
Vinery. In spring we give most air at the top of the house, in regularly all the way donn; but in autumn we reverse this plan with the younger portion of the shoots well ripened, as these are to sumays
more suculent than the bottona shoots, and though they may apear bromn on the outside, the maner portion of the wood still requires heat to sipen it, there is nothisg like getung all the young woud well
ripened throughout while the leaves are yet fresh. Laterals and the tol,s of long rods may now do more harm than good, if heft grow.ng.
as all the buds are fully organised; these send down ther organised would otherwise do. Whether tlis be so or not, experience has taught us that these had now better be cut away. houses, except any of the latter that are in bearing, might now be
turned out bebind a north wall, and pruned at once. Some of the turned out betind is north wall, and pruned Strawberries in pots for forcing often throw flower of the at this time; if there is a good stork on hand these might be en-

Wheeling in rotten dung, for vacant pieces of ground, and digging
or trenching them; looking after the Onions, to get them well dried, tying up Lettuces and Endive occasic,nally, witin the general routine
of weeding and keeping the grouxd clear, is the principal worl now in the kitchen-garden
what we call universal compost, and put it under cover while dry is made up of exhausted Melon-mould, rotten dung, and leavea, the
refuse of the potting-sheds, also last winter's gatherings from hedges, post-yard, and exposed to the weather all the season. Not a blade
of Grass or a withered flower should be lost. Depend on it, if there be one gecret in gardening more than another, it is to keep a sharp
eye over the compost-yard. plenbbage, -If you have any more left on the seed-beds there in CAD purpose hy-and-by. Lettuces. - While the weather is fine get in the lust sowing for Celery may get a good earthing-up now, when the soil is dry,
and so may the Cardoons, as they have now finished the greater part Tomatoes promise well; pinch off all their lateral shoots, and
stop the leaders just as you would the Vines ; but they like mor sun than Grapes, and you may cut off some of their leaves, to let the
sun reach them. Orcmard.- Any of the weak, useless side-shoots mary now be cut stallis among the Peach-trees, if there be any earwigs, and blow them
into a pot of water in the morning; this will soon thin them. See is over if you paid attention to the size of the flowers, the leaves an fruit will now go a good way to determine their right names. It is impover Gooseberry and Currant bushes might now he taken off, and the put on the coverings apain. Wasps and flies are not very trouble-11.-FLOWER-GARDEN AND SHKUBBERYY. Srove.-After this time the syringe need not be much used, and thrown about as possible; admit large portions of air, and let the his will prepare the plants gradually to go quictly to rest hefore the winter. Any more growth care what is made, and be contented.
etter irst served" is always adhared to in this business; they also houss it is much better to order soon what plants are wanted, so that one
may get the cream of the stocls, and have time to recover the plants may get the cream of the stocl, and have time to recover the plant
from the effects of carriage, before the winter sets in. Conscrivatory. - I have just heard that anew plant for the conthus nigricáns; and if it proves such an acquisition as L. Russelligive us a paper on his treatment of the lattcr? many people find a
difficulty in managing it. Little shade will now be wanted to ward difficulty in managing it. Little shade will now be wanted to ward
off the sun from this house; the plants will require much less water,
and the house should be kept close, and shut up carly in the after-

Pits and Frames should be filled with good things for next
year. As soon as the cuttings are struck let them have a few weeks out. of-doors, if possible; it will revive them much before wnter, and
will also enable them to stand the confinement with greater freedom. Flowea-Garderi-middle of June, will begin to have blanks among their beds, while
those who deapise these temporary plants will have full display till cut off by frost. From the middle of April, therefore, to the middle hings are cuming forward to take their places,-D. Beaton, Shrub

The highest temperature during the abave period occurred on the 12 in

REPORT ON COVENT GARD EN MARKET,
For the Weelc ending Sept. 8, 1843.
Turf continued fine weather has improved che quality, and in-
creased the supply, of Fruits and Vegetables of almost every kind but in consequence of a great number or the nobinty having retired exceedingly plentiful, and are said to be of excellent quality. Grepes are supplied in very large quantities - particularly Black Hamburgh and Muscat of Alexandria- and are selling at from 28 . to \(4 s\). per 1 lb .
Apricots are offered at nearly the same prices as last week. Plums Apricots are onered atiful, particularly the Greengage, Violet, and Muscle; the Orleans are becoming less plentiful. Peaches are very
abundant, and bring from 45 to 6 s. per doz. Nectarmes fring fri na 1s. to \(4 s\). per doz. Figs of good quality are offered at from \(4 s\). to \(6 s\).
per doz. Good Filberts continue plentiful, and are sellung at fromz Cucumberaw per brace, are from \(5 d\). to 1 s . Cauliflowers are rood and plentilul, and bring from 2s. to \(6 s\). per doz. Cabbages and Tiur-
nips are plentiful. Peas are offered at from 3s. to 4. per half - sieve nipsare plentiful. Peas are offered at from \(3 s\) s. to 4s. per half sieve, Tomatocs are from 6s. to 7s. per half-sieve. Some good Endive may
be got, at from 1s. to \(1 s\) 6d , per score. Carrots and Shallots are plentiful. Among Cut Flowers are Ericas, Fuchsias, Pelargoniums,
Verbenas, Calceolarias, Stocks, Dahlias, and Pansies.

\section*{Manurgs.-B. F.-Thices Correspmdeni.}
piter top-dressing should be applied when plants arc in full growth, or are just about to grow ; the Asparagas is now ceasing to grow. Yut nid of stem is dead, and then Potter's Guano, at the rate of 2 lbs , to a rod, in April, repeating the dose in June and the beginning
of Angust. Two cwt. an acre of this manure will be found excellent for any field-crop. used any Guano in growing their Tulfis last season; and if so, Guano used.
Fruit-frer borders, - \(R\). E.-Your garden being on a slope
affords you the command of drainage; but to drain ofl the affords you the command of drainage; but to drain ofl the
water after it has gone through the substratum of your garden, water after it has gone through the substra not all that could be desired; for in its continual progress it chills the roots of your peraturg proportion to the dificrence there is between ing the growing scason. It will, therefore, be advisuble to cut nir the top. With regard to the wall borders, as the subsoil is bad, it will be better not to disturb it; for to break part of it up and mayer of concrete interposed, sloping from the wall, between the bad subsoil and the top portion is the best remedy phe trees should be carefully taken up in autumn, and as the border is prepared, replanted very shallow, covering their roots with ich turfy laam. A draim should be made in front lower than stagnant moisture, a sufficient supply of water should not be withheld. If you trench as near the stems of your standard trees as you can without depriving them of too many roots, they will begin to bear as soon as young roots are struck out vigorously, instead of shortening in winter, have recourse to summer pruning. Il June 30. We have to apologise for the
answer to this letter having been mislaid by our assistant till now. It is, however, still in good time for operations. featino.-R. G. L. - In our opinion it is or nogreatconsequenld be guided in some measure by their price. Most of them answer the purpose very well. As to their size, that; too, is immaterial; the larger they are the longer the fire whil be in pro-
ducing its cffect, and the longer the eflict will be mantained when the licat is up; and mere rersâ. When small boucis are others prefer the horke.shoes, which, f whell sec, are excecdingly good. For such houses as yours, what the makers call
second-size bilers are periaps the best.- \(A\) broblier Sat as possible, he would inform him through the medium of the
Chroncle, where such a boiler as that described at page 38 of the vol for 1842 may be obtained; and, if posside, how
must be set, so that the fire flue may, as stated, pass below, round, through, that over' it.

Protecriva Pits-Caranensis will find these fully described at
p \(6: 9\) of our volune fur 1841 . All that is necessary is to kep
them rliy, and to exclue severe frost ; some froct, undcr sucli circumstances, will coless ham than fise-hent mudicionsly
applici. If you think nome kind of heatmg eoparatus rcally
necessary, use a floc, or, better, bot water pipes, but do not ncessary, use a flue, or, better, hot-water pipes, but do not
 ing jants in winter. Pliey do not olvstruct the light too much
fo such plants as merely require shelter. Pits with peat walls.
spoken of about a y car ago as being very warm and good, will spokell of about a y ear ago as being very warm and good, whi
last for many years, if well made. They merely require to be supported inside by upright stakes here and there, e
at the corners, and to slope at an angle of \(45^{\circ}\) outside. Mimulus,-H. 1 . - The valieties of M muius sin have sent will
form excellent border flowers. Seedining of the same colours
we have had sent from other parts, but your flowers are the Lorbospmenum, -H. \(T\).-Unless the spoting on your seedling
comes more distinet than in the specimens sent, it will not be Worth keeping.* Niller.-We should like to see some flowers Warwirk. - Yuccan.- Cat the fiower-stem off your Yacea gloriosa
directly it has done flowering, and take away all the suckers except three of the strongest. Then remove a tittle of the soil of equal parts of sandy loam and cowdung. q/
Loberral Furams.- Persona.-This plant wili do best planted
out in the open border, in a rich ligit soil, as early in spring out in the open bnrder, in a rich light soil, as early in springg
as the weather will permit, where it may remain until Autumn;
when the roots should be taken up and packed closely together into a cold frame, and kept free from frost during winter. \(\ddagger\)
Roses. \(-A\). \(C\). \(E\), The following list of 24 Roses comprises good fre-flowering kinds for an amateur's garden, which are easily
procured, and not expensive:- Bremus, camine red; Mor-
dannt de Lainny pale blush; Double Yellow Sweet-briar, bright yellow; White rese; Glote White Hip, white; Rose du Roi (Perpetua),
rermson; Madam Desprez, rosy purple; Bizarie de la Chine dark crimson; Madampe Campan, spotted, Triomphe de Laffay, white ; Duchesse d'Angoulene, rose; shailer's Provins, pale
rose; Quen of Deamark, blush; Riego, rosy lilac; Parny, slate; General Lamarque, dark crimson; Jean Hachette, rosy Fuchsias.-A Cunstunt Reader:--It is very doubtful whether Jou may succeed in raising plants to produce (as a permanent cha-
racter) blooms similar to the one you sent. It is a mere sport, a thing not at all uncommon with this species; you may, how To flower Fuchsia affinis, pinch it well in the pot, nnd give it good shift, and treat it well, t-M.L. W.-- A Correspondent Fuchsia has been raised with the true Fulgens' bloom at every leaf, instead of being in clusters at the end of the branches? * clear away the soll carefully all round them, and examine the
state of their roots, as prohably the old ball may be very dr below, of very damp, or probably the soil in which they ar planted may not suit chiem; in either case they whill have lost
all their small routs. If their soots be found to be in a very ad state, take them up and clear as much of the old soil off a and give them a good a mixting; afterwards place them in the roots be sound, take away a portion of the old soil, and
replace it with a mixture of three parts sandy leam and on part peat, to whicli may be added a small portion of well decayed cowdung-. then five them a good watering; and pointed at one end, and picrce the old ball in various directions, old of Pheasure.-C. M. L.-This plant is Camelina sativa formerly called Myagrum sativum, a plant allied to Rape, and
possessing similar qualities. It is the equoppo of Theoplirastus, the puacyay of Dioscorides, and probably the Irio of Pliny. I oned for thentinent it is cultia ware that it furnishes thread.
lized without the assistance of single ones, if they are really metamorphosed. Nor will single flowers produce double-
flowered seedlings, unless in the presence of flowers partially louble. If you are right in saying that the double Ten Weeks Stocks in your friend's garden had meither male nor female have not examined them with sufficient care
respers.-H. C.-The following are showy and liardy :-Clé
matis Hendersonid, deep ilue, fowers from July to September Cl. monlana, white, Bowers in May; Cl. azárea, large blue
flowers in May and June; Cl. Siebobldi, white, with purplish centre, flowers in June and July; Tecoma radicans major, searlet, flowers in August and September; Rose Janne Desprcz,
buff, very fragant, in dower all the antuma; Rose Noisette Lamarque, white, annual or tender: -Tropeolunn pentaphyitum, green and
purple, in Hower ali the autumn; T. peregrinum, pale yellow,
in flower all the summer and autumn; Rhodochitom volubile, brow, in flower all the autum, forhospermum erubescens pink, in flower all the autu
inks.-J. \(M, G,-\) You may as well attempt to multiply a pound
of salt by a bushel of feathers, as to graft a Fig on a Vine. To be sure there is an old statement, as old, we believe, as Columella, that the thing may be done, but is apiece of absurdity, the quite Mr. Thonin.
Mulberraes. \(-f, f\), -The Mulbery Tree does not usually fruit
at an early age, and when subjected to close pruning and training against a wall, as yours has been, till within the last four years, it is in consequence retarded to lose the benefit of the
rahher cold, you must endcavour not
wall, which you will do ina great measure by allowing the tree to grow without pruning or training. You must only regulate
and thin the branches at the winter pranisg; and stop and thin the branches at the winter prunisg; and stop the procuring information respecting Currant-bushes from Haines's
pork, will, in a sloort time, send the requisite extracts from the Work, will, in a short time, send the requisite extracts from the Relons.- J. \(M, G\), and very many more correspondents, must
inquire for the seeds of the Eastern Melons of their friends or
of the nurserymen. We cannot give away such things; our of the nurserymen. We cannot give away such things; ou
duty is done when we point out their existence. Asparagus; they are both one kind; the difference in colour Mildew on Pras.- \(P\). A. - There is little doubt but that this
disease is produced from your soil becoming hard and caked disease is produced from your soil becoming hard and caked
abolut the roots, of the plants; stiring it up and keeping it Clear of it by altering the condition of the soil. \(\ddagger\) fifferent kind

having, - c. L. - The bad state of the herbage on your meadow, is owing, probably, to an excess of tannin
having in this casc. Any kind hime and dung are the best correctives prove the Grass. Sand, marl, or chalk, in sufficient quantity will produce white clover, and destroy the coarse tussocks but if this has been tried without effect there may be some other cause of the growth of poor Grasses, which a carelu
analysis of the soil may discover. \(M M\). Coss.-Teodore.-Acoording to Gorham, Maize contains 2d per
cent. of albumen, and 3 per cent. of gluten; good Wheat, on the contrary, contains, according to che cent. of gluten
the end of its stem, where the fiowers rise, and the singular Pear growing out of another Peal, are not very rare, but are
highly curious proofs that all the organs of flowers and fruit are fornsed from conversions of leaves, You will find figures
of the latter in the "Theory of Horticulture," p. 59 and 61 , Truprins.- Persona, is anyious to know whether our kind
correspondent the Rev. Mr. Berkley has grown any Truftes, and whether the Tuber moschatum would not be a good sort to with some observations on this point. Moving Plants.- A Young Lady may move her Pelargoniums,
\&e., to a distance of fifty miles, by turning them out of their
pots, or digging them out of the ground, and packing them tightly in moss, in a wooden case or basket. If space is an injury to them.
Moss on Frotit-Trens.-Ignoramus.- Scrape of as much of the Moss as you possibly canl, and wash the trces with lime-water,
Shorten brancles in autumn, with a view to the production of Joung shoots, a sprinkling of which will greatly invigorate the trees " Shows.-G.-We ferfectly agree with you that the reports of Country Shows are too offen interestung to none
hut the parties concerned; but it is interesting to them that they should be recorded. As we give them at a great expense
to ourselves, and at no expense to any one else, for they appear hardly complain of them in fairness.
 common species.--A.B. \(C .-A\) dark-coloured Thrips appears witl water, so as to give them a good washing, repeating the with water, so as to give them a good washing, repeating the
operation three or four times at intervals of a day or two,
Should not this rid you of the nuisance, mix with the water Should not this rid you of the nuisance, mix with the water one-tenth of gas-liquor, and proceed as before,--philo Veritas.
-If your Pines are covered with the white scale in the way you describe, we recommend you to destroy your plants a If, however, you wish to try a remedy the best is the one
mentioned in last week's Gardeners' Chronicle, No mentioned in last week's Gardeners' Chronicle, No. 35, page 616
Insscrss, in the "Answers to Correspondents." This remedy consists in exposing the Pine Msckilankovs. - \(P\). Mackenzie.- The term "factitious" signifies those short characters which are used to characterise
genera in the classes where they are placed, without reference to other considerations. Thus, "Corolla tripartita, labio ovato," was the factitious character given by Linnæus to
Amomum in Monandria Monogynia; signifying that all Monandrous Monogynous plants which have that character belong omomum.-We regret an Old Subscriber should have to complain of the way his Gardeners' Chronicle is folded; he
should write to the newsagent who supplies him, as it is his fault.-Rhodon- Cistus and Deutzia scabra will do in peat.
Smith's Queen Victoria, in our oplion, is a finer variety than Eppisil. It is usual to prune Rhododendrons and other American a Grecuhouse plant. \(-Z\). can have Nos, 13 and 14 for 1842
if he whl send his address and \(2 s\). H. \(O, K\). The spots on Copan.- It is not much to the credit of a nurseryman that he Copan, - It is not much the sold you the Crimson Nerine rosea, a Cape plant, for a new yellow Brazilian Ar.aryllis.- S. Y. - Your Plum is the
Nectarine Plum. H - Z - The frut you sent is that of the Cydomia japonica. - Samuel Buckland.- Abroma augustum,
a leaf, it is impossible to say what species, kind, but, without youndish obovate Pear, red next the sun, and speckled, which
you have under the name of Imperial Swan's Egg, is the Beurre de Mons. The other, under the name of Aston Town try to help you with the Echinops.- A. B. - We are unable to
recognise your plants by description. The Ipomced is possibly an Arcyreia-but it is of little use to corjecture. What is known, and most surprising things they are, All sorts o called Dutch roots would be the very thing for that colony.-Discipulus.-There is no good treatise on forcing Figs; but
papers on the subject lave becn pablished by many modern gardeners. Perhaps we may get some one to see what can be done to meet your wishes.- Hste.- Many thanks, but the
garden of the Horticultural Socjety is so overstocked with plasts, that in woura be inconvenient aised there. The Solanum is probably \(S\), pinnatifidum. - A. Z.-It is illegal for any person to flower at this season is merely accidental, and in all probagracilis can only be preserved by cuttings. There are no greengracilis can ondy
fieshed Cantaloupe Melons \(\ddagger\)--Persona. - We do not think
that Mushrooms would succed in the situation you mention, during winter, as they would require a temperature of from in the row should be about 9 inches. \(\ddagger\)-Croydon-Mesembryánthemum dilatatum, Pyrethrum Parthenium flore pleno. \(\ddagger\)
 Parthenium, Mesenbry onthemum hour Tobacco in a dry airy situation, excluded Spread out your
from the sun's ray. \(\ddagger-\) - Edward Spary, -Your blooms have
not arrived. \(\ddagger-\).

\section*{SEEDLING FLORISTS' FLOWERS.}
alcbolarlas.-Messys. Fogers and Son.-Your seedling No,
is a fine variety, having curfously-formed blothes of a ligh
maroon colour, distributed over the entire front of the fiower, maroon colour, distributed over the entire front of the fiower,
upon a light buff-ground, it resembles the singular varieties
raised by Mr. Standish; it is a beautiful and desiralle fow raised by Mr. Standish; it is a beautiful and desirable flower
No. 2 , another varicty of the same character, but differng in No. cclours, having red. brown blotches upon a yellow ground,
the some of the old varieties, and falls far short of the beautiful
flowers introduced of late years.* flowers introduced of late years.*
promise well, but we want to see better specimens before we promise wel, but we want to see better specimens before we
can speak with confidence abont their properties; the flower
with the darkest tip has the better former with the darkest tip has the better-formed petal, thoughr rather
ribby; but both these specimens show the disk. The petals in ribby; but both these specimens show the disk. The petais in
the lighter varjety are rather pointed; and though the centre is weli up, there is some coniusion in the
petals. We should like to sce them again.*
uchsias.-T. B.-Your seedlings are nue varieties, but thare is
too great a smilarity in the colour, especially in the corollas too great a similarity in the colour, especially in the corollas
a selection of the finer sorts would be the most desirable a selection of the finer sorts would be the most desirable.
No, 20 is a flower of good form, with rosy red tube and sepals,
the latter terminating in a decided green; corolla large and
stout, of a crimson purple. This is a fair-sized flower, an though not so large as some of the others, it is the one we the next in order of merit: this is a fower of fine size an the next in order of merit: this is a fower of fine size and
substance, it is 2 anches long, tube and sepals of a bright
red, corolla stout, with rather more purple, forming a quod red, corolla stout, with rather more purple, forming a quod
contrast. 15 is also a good flower in form aurl substance; it, however, wants purple in the corolla, and is surpassed by
varieties we have lately seen. 16 is inferior to many we have varieties we have lately seen. 16 is inferior to many we have
scen of the same charater. 14 and 17 are deficient in the
corollas, 13 is no improvement. 19 a good showy flower, but wanting purple in the corolla. 21 is a very pretty fower, but also wants a greater contrast in the colours
Your seedling is an extremely pretty flower, very like DevoniYours seeding is an extremely pretty flower, very like Devoni-
ensis the bright and attractive; its habit is fine,
throwing out several flowers from each joint, and throwing out several howers from each joint, and, as you say,
the present year's shoots are more thian six feet long, its igorous growth and freedom of blooming points it out as an Waldron.-The small seedling is a pretty, lively-looking
fower, and most abundant bloomer; it is very small, and wi.l not suit the present taste, which is directed towards the large
varieties. The larger seedling, bloomine in bunches, termination of the branches, wants sobstance, particularly in the corola, which is thin and not equal to others which are
out. \(-T . B .-N o .25\) is a large and showy flower ; it measures nation of the having but a slight tinge of purple in it. 26 is also showy, but
the corolla is objectionable, from the divisions separating and forming into ridges. 27, tube and sepals bright red, curolla vermilion, the latter tipped with green and expanding well, verminon, the latter tipped with green and expanding well,
corolla maroon purple; a pretty variety of a modinm size.
The two latter flowers we consider the best.- W. Diller.Your hybrid between fulgens and corymbiflora is a very hand increasing in size till the diameter is a quarter of an inch; the tube is of a delicate pink colour, having sepals of a greenish primrose, forming a strong contrast to the bright red corolla
seen between them; the flower altogether is s, 1 inches in length, and the buds are very handsome as they approach into branches, coutaming altogether 150 flowers.-H. I.-The Fuchsia is a rich-coloured flower, with sufficient purple in the able.--T. \(B\).-The sepals of 30 are rather coarse, and appear but it wants more colour in the corolla. 31, large and singular in colour, being of a rich dull crimson; the corolla in this forms a contrast to the lighter flowers, *

\section*{NEWS OF THE WEEK.}

Her Majesty's visit to the King of the Frenci is, as might have been expected, the chief topic of interest both at home and on the Continent. The reception given to her Majesty by the Royal Family and people of France cannot fail to be satisfactory to British feeiings ; and the French journals, with few exceptions, regard the event as a graceful compliment paid to the nution at large in the person of its Sovereign. In their leading features, the details of the Royal Progress are not less picturesulue than those of her Majesty's visit to the Highlands last year, while they surpass them in those incidents of persomal and national character which will ensure the meating at the Chateau d"Eu a conspicuous place in the history of our time. Notwithstanding the visions of commercia treaties which baunted many of the French papers on the first announcement of the Queen's visit, they now express regret that her Majesty did not extend her excursion to Paris and Versailles. They accept the fact, however, as a proof that the visit to France was not one of curiosity or pleasure, but a mark of friendship towards the reigning dynasty, which is all the more welcome, because associated with no object of merely temporary interest. The Ministerial journals hail the visit of the Queen as a pledge of peace-the most sionificant, perhaps, which has been given to France for 13 years, and welcome it as a proo that, after all the vicissitudes of their history, the happiness of a King or Queen still excites the sympathies of the French people.

From Spain we learn that a battalion of one of the royal regiments at Madrid demanded their discharge on the evening of the 29 th , and were immediately disbanded. The new Government, either from alarm at the movement or from a desire to declare Madrid in a state of siege, arrested the non-commissioned officers, and ordered them do be shot on the following day, without even the form of a court-martial Considerable excitement ensued, the military were placed under arms, and all the generals in the capital who were supposed to be favourable to Espar tero were summarily compelled to leave the city. In the meantime, Barcelona had manifested an increased opposition to the new Government, and Saragossa and other town were in a state little short of insurrection. The British and French Ministers, however, had officially recognised the Provisional Government, and the diplomatic relations of the three countries continue as heretofore -From Switzerland, we learn that the long-pending dispute respecting the Argau convents had been no sooner placed in a fair way of settlement, than a civil war broke out between the French and German inhabitauts of the Valais. A confict has already taken place in the neighbour hood of St. Maurice, and it is feared that the Diet will be compelled to divide the canton into two independent governments.-.The insurrection in the Papal States has also assumed a formidable aspect; guerillas have formed not only in the Bolognese, but also in Romagna; and large bodies of troops have been despatched from Rome to the March of Ancona. The armed bands of the Papal

Legations, driven along by the military, have entered Tuscany; and have cause wotering-places are deserted. Grand-Duchy that all the watering-places are deserted.
The Tuscan troops have been put in motion in all The Tuscan troops have been put in motion in all to cross the Frontier. - The news from the Levant contains some interesting particulars of the massacre of the Nestorian Christians by the Turkish Pacha, and of the renewed disturbances at Jerusalem.-The delay in the arrival of the India Mail, which was expected at Marseilles on Friday last, has excited much surprise. Government on Wednesday, announcing that the steamer which usually brings the despatches from Alexandria had returned to Malta, having waited six days at Alexandria without procuring any tidings of the mail. The conclusion drawn from this fact is, that some accident has occurred to the steamer between Bombay and Suez, or having been atteropted, and without due regard to the probable state of influence of the winds at the period of crossing to Suez.

\section*{静品me NTems.}

Court.-The Queen and Prince Albert, after visiting Plymouth and Falmouth, took their departure for the French coast on Friday, and landed at Tréport, on a visit Mo the King of the French, on Saturday afternoon. Her Majesty remained at the Chateau deu until Thursday, when she left France, and landed at Brighton in the afterThe Court will remain at Brighton until Monday, when the Queen is expected to embark for Ostend, on a visit to the King of the Belgians. The details of her Majesty's in the general account of the Marine Excursion, in in the general account of the Marine Excursion, in the Prince of Wales and the Prices remained at Brighton.-The King of Hanover left Kew on Saturday to return to his own dominions, after a sojourn of three months in this country, his Majesty having
arrived on the 2 d of June. His Majesty was loudly cheered on his departure from Kew. The Admiralty
barge, having on board Lord Bloomfield, Sir F. Collier, barge, having on board Lord Bloomfield, Sir F. Collier,
and Admiral Brace, had previously arrived from Woolwich at the Brunswick-pier, Blackwall, to attend his
Majesty on his embarkation. His Majesty went on board Majesty on his embarkation. His Majesty went on board
the Admiralty steam-yacht, Dover, at a quarter-past the Admiralty steam-yacht, Dover, at a quarter-past eleven, and immediately left for Antwerp, under the usual of Kent has returned from Witley Court, the residence of the Queen Dowager; on Tuesday she accompanied her
Majesty on a visit to Malvern, and on Thursday arrived in town on her way to join the Queen at Brighton.
Health of Sir Robert Peel.-The Dublin Evening Post gives the following from its London correspondent: pain, that the fatigues and anzieties of office have again impaired the health of the Premier. About three years since there had been symptoms of internal disease, which, fortunately, yielded to judicions treatment and a vigorous constitution. Latterly, however, similar symptoms have will find it necessary to relieve himself from the cares and turmoils of public life. There is, I am happy to learn no cause for serious apprehension at present. The Queen, I understand, had expressed a desire that the Premier should accompany the Royal party to France; but the account of delicate health, of some relaxation amongst his family circle, and Her Majesty kindly dispensed with his attendance
Illness of Lord Western.-We regret to state that this venerable nobleman and well-known agriculturist, while on his estates, was taken suddenly ill which he is making accounts received in town from Felix-hall, Essex, during accounts received in town from Felix-hall,
Military Pensions.-The following \(G\)
Military Pensions. -The following General Officers have been added by the Commander-in-Chief to the list of
those already in receipt of pensions for distinguis those already in receipt of pensions for distinguished services :-Major-Generals Sir Henry Watson, Sir Dudley
St. Leger Hill, Sir Richard Armstrong, James Ferguson, St. Leger Hill, Sir Richard Armstrong, James Ferguson,
Post-office.-Her Majesty's Government having decided that Southampton shall be made the port of arrival and departure for the Peninsular, Mediterranean, Oriental, and West India mails, instead of Falmouth, notice lhas
been issued that the following arrangements pinll come been issued that the following arrangements will come
into operation on and from the 18 th inst., on which day the next West India packet will be despatched. The respective mails to be forwarded by the packets from Southampton will be made up in London, and transmitted from London to Southampton by the morning, instead of
the evening mail, as at present, upon the undermentioned days :- Peninsular mail, viz., Vigo, Oporto, Lisbon, Cadiz, and Gibraltar, every Thursday. Mediterranean, v Malta, Greece, and the Ioniar Islands, Ist of the month, and the Thursday nearest the 15 th of the month-except erranean and East India mails will be made up in Lon don, and despatched on the previous morning. Epypt and India, 1st of the month. West Indies, 2d and 17th of the month-except the 2 d or 17 th of the month falls on a Sunday, when the West India mail will be made up and despatched on the following morning. The Brazilian packet will continue to be despatched from Falmouth af
at present. Letters to and from the Mediterranean and the East Indies, \&c., intended to be forwarded by the ward be addressed via Southampton.

Parliamentary Returns.-It is stated as a proof of the expense of these returns that during the last session, one return connected with one of the metropolitan prisons, moved for in the House of Commons, occupied three
clerks upwards of thirty days, and contained, amongst other particulars, upwards of 13,000 names. It was also carreighty that it was almost more than a

National society. The subscriptit \(2,000 l\).
National sociey.--The subscription in aid of the new movement of the National School Society, in behalf of education in the mining and manufacturing districts,
already exceeds \(90,000 b_{0}\) of this sum 630 individuals have contributed no less than \(70,000 l\).

Church Preferment. -The Queen has been pleased to make the following appointments to benefices in the
Church of Scotland, vacant in consequence of the late secession. Rev. R. H. Whyte to the parish of Dryfesdale, Dumfries, in the room of the Rev. D. B. Douie; Rev. J. L. Rose to the parish of Markinch, Fife, in the
room of the Rev. J. Sieveright; Rev. R. Stewart to the parish of Lochs, Ross, in the room of the Rev. R. Finlayson; Rev. G. Greig to the parish of KirkpatrickDurham, Kirkcudbright, in the room of the Rev. G. J.
Duncan; Rev. W. F. Burtt to the parish of Ferry-Port on Craig, Fife, in the room of the Rev. W. Nicolson ; Rev. G. Addison to the parish of Arbirlot, Forfar, in the room of the Rev. J. Kirke; Rev. W. Hunter to the parish of Baldernock, Stirling, in the room of the Rev. J. Pollock.

\section*{JForeten}

France,-The visit of her Majesty to King Louis Philippe is of course the exclusive topic of the Paris journals. Of the landing of the Queen at Triport, and
her arrival at the ChAteau d'Eu, abundant details will be her arrival at the Chateau d'Eu, abundant details will be
found in another part of our Paper. The columns of our Parisian contemporaries are chiefly filled with accounts of the visit, and with speculations on its consequences, but
they almost unanimously greet the arrival of the Queen they almost unamimously greet the arrival of the Queen visit has not been extended to Paris and Versailles. The Journal des Débats, the Ministerial organ, does not underrate the importance generally bestowed by the French press on her Majesty's visit. "In accepting the
King's hospitality," it says, "Queen Victoria to g hospitality, it says, "Queen Victoria has wished her aur ber confidence in and her personul attachment to as Queen of England to rive family. She has also wished, of France a pledge of political sympathy and good understanding. It is for this two-fold object, and we thank her for it, that the Queen of England has come to France; and it is as being a pledge of peace, and the most significant one, perhaps, given to our country for thirteen of this young Queen, who bears with so much gracefulness, and with so serene and charming a brow, the weight of a great nation's destinies." In a subsequent paper it visit of the Queen of England. Whatever may courteous done to the contrary, public satisfaction is expressed on but with therywhe one meets, utmost good-will. We are happy for the sake of our country despite of all, and even after the terrible vicissitudes of our history, a King or a Queen is still a great deal with us The mark of gracious deference given by a Queen-by a -to a Prince subjected to such cruel trials, and at the same time, so visibly protected by Heaven, will not be an in different or unperceived occurrence in bistory. That meeting of the two first crowned heads on the globe mus not be viewed by us as a mere vain ceremony. It is more another guarantee given to the security of the world. We thus realised, and that universal neace is henceforth esta blished in the world. No, certainly. France and England will continue to follow their various, and often rival for tunes; touching one another at all points of the globe, they bear the glory of it: but it will still be a greats, as they bear the above all those hazards, the good-will of the two Govern ments and mutual sympathies of the great bulk of the two tions, express themselves on the subject with much polite ness ; several that are habitually opposed to the Administration evince the utmost courtesy towards ou but as in history. The Commerce, however, persists in believ ing that the treaty of commerce is already settled, and that the Queen has had nothing to do but to request the signature of Louis Philippe! Another exception is the National, the principal organ of the Republicans, which do unable to drop for days the catalogue of grievances it has solong been urging against this country and the resentment slumbers not for a moment It bewails the expense to which the brief sojourn of ber Majesty may put the nation, and foretells that there will be a chapter in the next budget under the head of "Voyage de la Reine Republican party is the expression used by her Majesty Republican party is the expression used by her Majesty
on meeting M. Guizot-m' 1 am delighted to meet you
again." On this point the National contends that Me Guizot has been thus affably noticed solely interests of his country to the will and pleasure of Ta and nterels A melancholy accident has happened at villequier, on the Hugo and her husband were drowned. They had accompanied their uncle, M. Vacquerie, and his son, to Caudebec, in his boat, which unfortunately upset upon a sandbank, and all the party perished
Spain.-Accounts from Madrid to the 30th alt. announce that, on the night of the 29th, a battalion of the regiment del Principe revolted in the capital. The men them. This battalion was immediately disarmed . Tive sergeants, the sergeants, two corporals, and one private were shot on the
morning of the 30 th, in presence of the garrison, which appeared to be devoted to the Government. It appears that the soldiers made no political demand, but merely asked for the fulfilment of the promises made by Gens. Narvaez and Concha, viz., that every non-commissioned
officer who deserted the Regent should be raised a grade, and that the soldier who wished it should, if he had grade, a certain number of years, be dismissed to his home. The Juntas forced the military chiefs to keep their promises in the provinces ; but in Madrid Gens. Narvaez and Serrano refused. A disturbance conseguently ensued which terminated, as above stated, in a probic execution, without even the forms of a court-martial. The Queen and Infanta returned to Madrid on the evening of the 30 th. They were received with the warmest enthusiasm. Madrid was then perfectly tranquil, but the troops were kept under arms, and several generals whose adiesion was suspected had been ordered to leave the city. Mr. Aston, Minister Plenipotentiary of England, announced, on the 28th, to the Minister for Foreign Affairs, at an andience which he bad asked for that purpose, that his Government had acknowledged the Provisional Government of Spain, and that the relations of good harmony and friendship which had hitherto prevailed between the two countries would continue as heretofore. The Duke de Glucksberg, the Charge d'Affaires of France, had also presented his credentials to the Provisional Governments Barcelona was sill much agitated the 29 th ut. The lists of electors had been torn off the doors of the provincial deputation, and the arrival of the long-expected troops was anxiously occupied bs the Patulea, who refused surrender itil the regular troops. General Ametler, who had quitted Saragossa with several battalions for the purpose of reinforcing the Governor of Barcelona, had not advanced further than Lerids, being fearful of an insurrection at Saragossa. The committee instituted at Seville for the pertainin the extent of the devastation sustained during Gen. Espartero and Van Halen's bombardment, commenced their labours on the 12th. Above three hundred buildings are stated to have been destroyed, and the loss is estimated at \(4,000,000\) reals.
Portugal.-Letters from Lisbon of the 28th ult. state that the unfavourable reception which the Duke of Palmella met with from the Earl of Aberdeen has been the subject of a good deal of political speculation and surmise respecting the probable issue of the treaty. Petitions, statements, complaints, and representations have been made to Government, pointing out the impropriety of giving the final blow to the lingering industry of the
country. It is generally stated that Lord Aberdeen will not depart from gions altimatum, and that the Dake of Palmella will be obliged to give way.
Germanx,-Accounts from Munich mention an interburg between King Leopold of Belgium on AschaffenBavaria. The King Leopord of Belgium and the King of of the King of the Belgians to have the iron and woollen manufactures of his kingdom allowed more advantageous entrance into the German Union.-From Berlin we learn rel his Majesty has already issued a cabinet order for the revuinding of the Opera-house, for which purpose he has within 80,000 dollars, and that it is to be finished Duke and Duchess of Cambridge have arrived at Rumpenheim, on a visit to the Landgrave. Letters from Cologne state that sentence has been passed on Lieutenant Ton Pelzer, of the 28 th Foot, who had killed a M. his second, a Lieutenant in the same regime death, and labour in a fortress for ten years. It is expected, however, that his Majesty will commute Lieut. Von Pelzer's abridged, and that the punishment of the second will be who was the second of M. Hein.-Accounts from Carleswhe state that a nobleman who shot his servant last week in the reighbourhood. of Mannheim, has, notbrought to justice, and it is supposed that he has made his escape to England. Meanwhile, the affair is the topic of the day, and even his best friends do not attempt to speak a wrord in his defence. The cause of the murder is now ascertained to be that the servant ill-treatment af which the master inflicted on account of Ministment of his borses.-M. de Lindenau, the Prime Minister of Saxony, has resigned his office, on account of Gilhealth. - From Hamburgh we have a report taat Gen. Espartero has demanded, through the Englishi Chargé d'Affaires, whether, in the event of his wishing to go there, be would be permitted to reside. The reply permisaio under the will. be granted. The company of equestred to the management of the \(\mathrm{Mr}_{\text {, }}\) Ducrow, after having performed in the various towns
of England, were induced lately to visit Hamburgh for a professional experiment. After a few weeks stay, during which time their performances were miserably attended, stud of horses, dreases, property, \&c., to satisisfy his creditors, and return with his company to England.-A fatal duel has just been fought at Baden. About a month since a ball was given by subscription to the Grand Duchess Helena of Russia, to which M. de Haber, the list was revised by the directors, M. de Haber's name was objected to by M. de Goler, an officer of artillery in he gave M. de Haber blows, which the latter did not gentlemen Hat he was therefore unfit for the society of gentem. M. He Haber sent his friend, M. Verifkin, a Russian officer, to M. de Goler, positively denying his statement, and calling upon him for satisfaction for the calumny and injury fastened upon him. M. de Goler, by the advice of Haber, saying that he did so because he could prove that he was not entitled to be treated as a gentleman. M. de Haber then had a letter printed and posted, saying that M. de Goler had calumniated him by false statements, had misled his brother officers, had refused to give him
satisfaction, and that he therefore was a liar and a coward. This led to violent language between M. de Goler and M. Verifkin, the friend of M. de Haber, and blows were given by the former to the latter; the consequence was a meeting on Sunday at Carlesruhe, between Mide Goter M. Verifkin was shot dead, and M. de Goler received a ball in his chest. M. de Haber has fied to Switzerland. state that while - the long-pending dispute of North Switzerland is in a fair way of being appeased, by Argau consenting to restore the nunnery of Hermetschyel, the
Liberal party of the Valais-the one speaking the French tongue and inhabiting the Lower Valais, the other speaking German and inhabiting the Upper Valais-have
resorted to a civil war at and near St. Maurice. The accounts of the conflict in the \(S\) wiss papers are as yet confused; but it is to be feared that the Diet, to restore
peace, must treat the Valais as it treated Bale, Schwitz, peace, must treat the Valais as it trented Bale, Schwitz, ent governments.- M. Thiers, the historian and late premier of France, has arrived at Berne, for the purpose of making himself personally and minutely acquainted with purpose of his forthcoming volumes of the "History of the French Revolution." M. Michelet, professor of nearly at the same time, to study on the spot the movements of Charles the Bold, of Burgundy, whose life will be treated in the sixth volume of his "History of France." A letter from Chamouny states that the ascent of Mont Blanc was made a short time since in a most rapid and E. Tairraz, of Chamouny, and a party of thirteen persons. They left the Prieuré at noon of the 23d; at half-past six in the evening arrived at the rocks of the crand Mulets, two in the morning. They were seen ascending by the old road exposed to the avalanches, where the three guides of dinaire, who was in advance of the other travellers with two of his guides, arrived at the summit, where the rest of past eleven they commenced their descent by the new past eleven they commenced their descent by the new
road, and at seven in the evening arrived at Chamouny. ITALY.-The Cardinal Legate of Bologna has issued a proclamation which removes all doubt as disturbpapers also state that the bands which have retired to the pountains of Tuscany have spread alarm throughout the country. According to a letter from Leghorn of the country. According to a letter from Leghorn of the
27 th, great agitation was observable in the towns on the coast, and such persons as bad come to bathe at Leghorn stated in our last, the insurgents are now committing stated in our last, the insurgents are now committing basis of their organization. They have drawn nearer to the duchy of Modena, and several reginents
have been marched against them. Tidings of the result are the more anxiously expected, as the insurgents have spread the report of all Italy having risen.-
A riot occurred at Naples, in the church of the Annunziata, A riot occurred at Naples, in the church of the Annunziata,
on the festival of the Assumption. The crowd of people, many of whom it was suspected were drawn thither by other motives than devotion, was so great, that in spite of the spaciousness of the church (the nave of
which is supported by 24 Corinthian pillars of white which is supported by 24 Corinthian pillars of white marble), a terrible pressure ensued; thefts were committed, aud such a scene of disorder arose, that it was found necessary to call in the aid of the military, and a party of Swiss troops arrived. The people, irritated by the presence of the soldiers, began to attack them with
knives and stilettoes. Meanwhile a party of Sicilian troops, on duty at Porta Capuana, arrived, and with the view of awing the mob, discharged some balls from a small cannon, and some blank shots. Order was soon restored, but not without the sacrifice of several lives, and about 20 persons were carried to the hospital, all more or less seriously wounded. The church having been proconsecrated by the remains closed until it las been again terceded with his Maiesty in behalf of the criminals, sentence of death has been commuted to that of 30 years? banishment to the galleys. Another source of uneasiness

Walking in the streets, wlose dresses liave been burnt by means of some combustible preparations thrown upon crowded time, was thus attacked, and bas died from the injuries received. Amongst other victims to this outrage are the Duchess de Grotoletta and the Princess Canit Greece.-A letter from Athens, Aug. 10, states that a gang of twenty-six coiners, Greeks, Turks, Italians, and handed have been discovered and arrested in that city, and fabrication of Greek crowns, and French two-franc pieces. Other parties connected with this gang, to the number of by birth and fortune, belong to the higher ranks of society, Turkey and Symia. - The Levant mail has brought Constantinople letters of the 17 th. The Porte seemed inclined to pursue an Anti-Christian course of policy.
The expedition of the Pacha of Mosul against the Nestorians, has been stained, as was to be expected, from the co-operation of his ausiliaries the Khurds, with every sort of atrocity. The houses of the inhabitants were fired, hey themselves hunted down like wild beasts and exter mother, brothers, and sisters of the Patriarch, were the objects of peculiar barbarity, the former having been literally sawed in two, and the latter mangled and mutilated The Patriarch himself succeeded and has taken refuge in the house of the British Consula Agent at Mosul. The number of victims who have pe-
rished in this massacre is not yet known, and can only be known when that of the fugitives has been ascertainied The population of the mountains amounted to 100,000 . Musir fate has been truly extraordinary. Surrounded by Mussulman hordes, pent up for ages in their native for-
tresses, the very existence of these children of the primi tive church had remained almost a secret to the rest of
Christendom, and their obscurity seems to have been their Christeadom, and their obscurity seems to have been their
best protection. No sooner had their country been ex best protection. No sooner had their country been ex-
plored by Missionaries, than this visitation befel them, and the public is called upon to sympathise with them in their destruction, before, perhaps, it had become generally aware of their existence. Letters from Mosul
throw much of the odium of this sad affair upon Eurothrow much of the odium of this sad affair upon EuroMissionaries that first excited the jealous apprehensions of the Pacha of Mosul, and caused him to attack the tlemen, with is is affrmed even that some of these genthe American missionaries, suggested to him that they were assisting the mountaineers to raise forts, whereby
they would be hereafter enabled to set the Sultan's rity at defiance.-Letters from Jerusalem state, that an sequences, had have been attended with serid French consulate. It appears that the Consul, contrary to the usages established, had insisted upon hoisting the tricolor on his house. A fanatical multitude resented the supposed insult to their holy city, and the flag was torn from the building. Reschid Pacha endeavoured to disperse stone. On the following serely wounded on the hand by a because the pole had not been destroyed, and much difficulty was again experienced in quieting the tumult. Guns were discharged into the windows of the consulate, but fortunately no lives were lost. An assault has also been physician attached to the episcopal establishment. After an altercation with a guard, he was dragged from his horse, beaten, ad Prussian consulate on demanding the doctor's liberation was also insulted and illtreated culprits, however, have since been punished, on the demand of the British and Prussian Consuls.-Accounts from Erzeroom are far from satisfactory. The negotiations are for the present suspended, and the Persians are beplague to be assembling troops on the frontiers. The plague has broken out betwen Eral coravan obizona, and also at departed from Scutari, in presence of the Sultan and the great officers of state, with the usual ceremonies West Indies and Mexico.-The Royal mail-steamer Medway arrived at Falmouth on Sunday with West India, Mexican, and other mails, bringing twenty-five passengers, and on freight 344,478 dollars, \(102 \frac{1}{2}\) abibous, 1,270 ounces of silver, 1,533 ounces of gold, and other valuable cargo. Of the dollars thus brought 33,525 are on account of the Mexican dividends and 85,024 are a consignment to the directors of the Real del Monte Mining Company. The Severn brought the Jamaica mails and dates from that island to the 8th of August to st . Thomas's, where they were transhipped to the Thames on the 14th. That vessel brought them to Bermuda, at which island a severe hurricane was experienced on the 18 th ult., which did considerable damage to the breakwater, and to several small vessels. In addition to this catastrophe, the fever pecular to the group was raging with great virulence at St. George's at the time the steamer left, and was considered as severe as the epidemic of 1819. It commenced early in August, and by the 20th of the month, more than half the military had been attacked, aud were then in at the latest accounts sixty men were ill, including nearly all the nou-commissioned officers and officers, with Colonel Barry, commanding officer of Engineers, All kind of labour had been suspended, the civil population having experienced the effects of the feyer to a great extent. Lieut.-Colonel Arabin, commanding officer of the artillery, had also died of it. The mails from Demerara come down to the 4th,
and from Barbadoes to the 9th August. The Windward Islands are reported to be generally healthy and the crops truck by lourtnining. On the 4 th Angust the Medway was By this arrival accounts are receivel from Tampico to
the I9th July, and from Vera Cruz to the \(2 d\) August. The Mexican squadron had returned to the latter port on the entered into for six montho. The commissionels from Campeachy appointed to settle the differences came up in a Mexican brig of war. The commander of the Mexican orces was imprisoned in the castle of St. Juan d'Ulloa to inquire into the was about to sit in the city of Mexico, from Port-au-Prince, dated 7 th August state Advice opposition to the present order of things had declared tself at Aux Cayes, headed by a black General Salomons, ho had some hundred armed supporters; but it had been effectually put down, the general having taken to the woods. New South Wales.-A letter in the Northern Slar from Mrs. Williams, states that the paragraph which has appeared in the papers stating that her husband, Zephahad committed the Chartist colleague of Frost and Jones, hanged, is wholly under in New South Wales and been letter from in say it she has had a letter from the Home-office, in which it is stated that a
person of the name of Williams had recently been executed person of the name of Williams had recently been executed
in New South Wales, but not her husband, who is alive.

Return of the South-Sea Expedition.-Captain James Clark Ross has just returned from his voyage of explorada the South Seas. He transacted busimess at the Adraly on Wednesday, having left his ship at Portsont. He was in exceltent beath and spirits, and General Espartero. His the result of his voyage. and the Dispartero.-His Highness, with the Duchess oon having previously obtained permission to inspect them on that day. Mr. Barry, the architect of the new Houses of Parliament, and Mr. Eastlake, the secretary to the Commission of Fine Arts, were in attendance to receive his Highness, who spent upwards of an hour in the Hall, and on his departure expressed himself much gratifed with the drawings. Mr. Barry afterwards accompanied the Regent over the worlss of the new Houses of Parliament. On Tuesday His Highness, the ton by the day mail train to visit Windsor Castle. They frst proceeded over the state apartments, and from then through the private apartments of Her Majesty. They afterwards ascended the Round tower, and remained on the ramparts for a considerable period. The Regent They left the Castle about two o'clock and as ceeded through the the prod ings of the inhabitants with the greatest courtesy. They then drove down the Lony Walk to Virginia Water, where they remained for upwards of an hour, and returned to town in the evening.

The Fate of Col. Stoddart and Capt. Conolly.-On Thursday a public meeting was held at the Crown and Ancbor Tavern, for the purpose of opening a subscription ascertain the fate of Col, Stoddart and Capt. Conolly, ascertain the fate of col, Stoddart and Capt. Conolly, captivity. Capt. Grover presided, supported by about 100 gentlemen. After referring to the facts already noticed in this Paper and dwelling at some length on the narrative of the Persian servant, which we published a fact that three months before the statement apmeared in the papers, the friends of Col. Stoddart had received a letter from him, in which he used these words, "I am in high favour with the Ameer, and I pray you not to believe any reports of my death that may reach England. He had made strict inquiries at the Foreign Office for the purpose of ascertaining whether Govermment had received any official report in confirmation of the statement, but he found nothing, unless some vague intelligence to the effect that Col. Stoddart's head had been cut on consenting to become a Mussulnan-that he replied "You have murdered Col. Stoddart-I will die a Christian;" upon which he was led out and decapitated. Beyond that there was no document to be found in the Foreign Office that was not a repetition of the Persian's statenaent, to which he should invite the attention of the meeting, believing, as he did, that it was a fabrication from first to last. The following resolution was then moved by Mr. Buckingham; seconded by Col. Humfrey and carried:-That in the uncertainty which exists respecting the lives of C )]. Stoddart and Capt: Conolly, second resolution ascertain the real facts of the case. The of the Institute of Civil Engineers; and seconded by Dr. Burnes, brother of the late Sir A. Burnes :- That a Committee be formed, to communicate with the British Government on this subject, to send out immediately the Rev. Dr. Wolff to Bokhara, and to take such measures as may be necessary. This having been likewise carried, Capt.
Downes, Ran., Lieut. Raper, R.No, Mr. Buckingham,

Col. Humfrey, Capt. Moorsom, and Capt. Grover, were appointed a Committee, with power to add to thei number; and a subscription was opened for accomplishin The Cartoons.-This extibition having closed to the public on Saturday, the removal of the cartoons was com menced on Monday. The drawings which were successfu n the competition will continue to be exhibited in the Suffolk-street gallery. The unsuccessful competitors ar also, it is said, about to get up an exhibition of their sub-
jects, though it is not yet fully arranged where it will take place. A large proportion of the artists are in favour o the Pantechnicon, while a section, with Mr. Haydon a of 4000 persons were admentted in the course of the day, and it is calculated that upwards of 300,000 visitors of all classes have attended the exhibition. The greatest order and decorum have been observed throughout, and not single robbery has been brought to the police ofinces a exhibition place
attended. The fittings will not be removed from th Hall, as the commissioners have another exhibition in
contemplation for the ensuing year, which will consist of frescos of moderate size, executed on portable frames.
Middlesex Mayistrates.- The Lord Chancellor ha appointed the following gentlemen as magistrates for the
county :-Mr. Dodd, M.P., Montagu-square ; Mr. Pil cher, the late Sheriff, Russell-square; Mr. Walter, Bearwood, Berks; \(\mathbf{M r}\). Ewin, Park-crescent; \({ }^{\text {Mr }}\) Mr
Hooper, Stanmore; Mr. Carter, of Brockley-hill ; Mr Rowe of Covers House, Laleham; Mr. Platt, Hyd Park-gardens ; Mr. A. W. Wood, of Uxbridge; Lieut.
Col. Sydney North, of Arlington-street; Mr. J. R. Mills, ftamford-hill; Mr. W. Crake, Stanhope-street, Hyd Park-gardens ; Mr. F. T. Young, Great Cumberland place; Mr. T. H. Black, St. Anne's, Limehouse; Mr. E Kingston ; Mr. J. W. Marriott, of Sunbury ; Mr J. Bentley, of Highbury-park; and Mr. T. B. Herring ing-hill, has also J. peace for the city and liberty of Westminster
Metropolitan Improvements.-The new street from Shoreditch Church to the St. Katharine and London Docks is making rapid progress. Nearly all the houses on th have been taken down, and in a few weeks there will be direet thoroughfare from Spitalfields' Church, in front o which the new street will pass.--In consequence of the progress of the new Royal Exchange, orders have been adjoin' the east end of the structure. The space to be cleared away will be from Cornhill to the Church of St. Benedict, at the corner of Threadneedle-street. In the latter street several houses have been pulled down, facing thoroughfare..-Mr. Barry has received instructions from the Woods and Forests to value the property from Chelsea Old Church to Battersea Bridge, preparatory to its removal for the purpose of constructing the new road along area surrounding the enclosure in St. James's. park has long been remarkable for its soft and wet state in winter and for its uneven condition in summer, cutting the shoe of pedestrians with the sharp gravel which forms the sur face. A new experiment has just been tried between th culated to obviate these objections. The gravel alread used in the park has been taken up, and a stratum of concrete, 6in, thick laid down in its place. The concrete has the old gravel, and, in order to produce a good colour, small quantity of the screenings of yellow gravel has bee lightly spread over the surface. The experiment has only terminated a few days, but the part laid down is remarkabl sence of large stones.-The Marylebone vestry on Thursday resolved by a majority of i1, to adopt wood-paving in the New-rosd from King's-cross to St. Pancras' church, a dis tance of \(11,000 \mathrm{yds}\). The cost for paving with granite would be 4s. \(6 d\). . per yard for three years, and the expense would cost ils. per yard, 6 . per year, whilst the wood parish for two years, and after that time only \(6 d\) per yar per annum. It was stited that in 19 years the paris would save \(2,000 l\). by the adoption of wood-paving. - The works of the Nelson pillar continue to advance rapidly and the castings which form the Corinthian capital hav several tons. They are fastened together by immense hooks, and strongly rivetted. Several tons of stone wil which the statue is to be placed. The statue is hewn ou of two pieces of Cragleith stone of great hardness, and when joined will stand 17 feet in height
Temperance Meetings...On Saturday Father Mathew administered the pledge at the New City Burial Ground, Bunhill Fieds. He had previously breakfasted with the meeting, and publicly took the pledge apidst the cheering of the people. Father Mathew, in the course of hi aldress, congratulated himself on the support of hi administered the pledge to the Marchioness of Wellesley administered the pledge to the Marchioness of Wellesiey. 2,200 in this spot. On Sunday Father Mathew revisited the apening scene of his labours in the metropolis, and again administered the pledge to 2,000 persons in the
Romandatholic Cemetery, Commercial-road. On Monday
he concluded his mission in the metropolis by administering the pledge in Calmel-buildings, Manchester-square, which Mathed upon as the st. Giles of Marylebone. Fathe Chapel , Chapel, breakfasted with the Rev. Dr. Piquot, the minister
in company with the Spanish Ambassador, the Dowage Countess of Clare, who took the pledge at the hands of the rev. gentleman, and a large number of the nobility. The proceedings of the day were commenced by the Hon. Staffor Jerningham, Mr and Mrs. Buckingham, and a batch o pearly twenty other ladies and gentlemen kneeling and receiving the pledge on the platform. A party of brewers draymen forced their way into the cro path a barrel o ale, but they were ultimately expelled, after a violen the pledge in the course of the day was 3,000 . The result of the rev. gentleman's labours in the metropolis and suburbs are 68,000 who have publicly taken the pledge, and about 6,000 made up of schools and factory workmen, to whom it was administered privately. Im mediately after the last batch, Father Mathew came on The rev. gentleman, in an affecting manner, spoke of the reception with which he, as a stranger in the metropolis o England, had been everywhere received. Since he ha been in London not a single word had been uttered against him, personally, which could at all be painful to his fee ings, and the public press, of every description of politics, had acted in so kindly a spirit towards him, that he powery begged to tender the conductors or that great and clusion, he ural engine his heartfelt grasing of sobriet as comparged upon all a hope that the grace of the Almighty might enable those who had taken the piedge to keep it. Father Mathew been invited by Bishop Stanley, Thence he poes to Bi mingham and Liverpool, and then to Ireland, having on the 17th to preach, in aid of some public charity, in Dublin.
The Mayoralty. - It is said that a large body of the ivery are anxious to re-elect the present Lord Mayor fo nother year, on account of the satisfactory manner in particularly those connected with the hospitalities of the City.-Alderman Lainson has resigned his gown as Alderman of Bread-street ward, in consequence of indisposition He declined serving the office of Lord Mayor during the present year from the same cause.
Excise Seizures.-A few days since an extensive seizure was made by the officers of Excise, in Anchor-yard, Old treet, St. Luke's, where they found a complete actory fitted up for the purpose of drying and colourin pans end leaves. It consisted of two large furnaces, drying matter, drugs and a quatity of "ten" ready to sending with some in the process of transformation from green to although the a particle of good tea was to be found The persons owning it made their escape in weight entrance of the officers, as no person was to be found on the premises, but the state of the pan proved that the

Westmirister Abbey-
Wesme in ments are in progress in the little cloisters adjoining the
Coroner's Office. A small tenement, which has been built about 180 years, a portion of which projected over the east side of the cloisters, and was considered in to dilapidated a state to undergo a repair, has beea removed original building was discovered, which is supposed to have been erected during the reign of Edward I.-Th Dean has given directions that the public shall in future have the privilege of passing, after clivine service, from through the western entrance, which lias for many year been closed, the only entrance still being by the gate at
Poet's-corner. The monuments in the choir bave under gone a thorough cleansing, and all persons will now hav the opportunity of viewing them free of charge.
Old St. Paul's.--During the last few days, in the course of some excavations south of the Cathedral, for the formation of a new sewer from Paul's Chain to London House yard, several human remains were found. Many of the skulls were quite perfect. They were discovered at variou depths, some as low as eighteen feet from the surface. It is
 666. During the rich was destroyed by the great fire in massive walls, about five feet wide, have been cut throug at a depth of twelve feet from the surface, some of whic were constructed of suci solid materials that the workme were obliged to employ powder to separate them.
St. Olave's, Southwark.-The largest vestry meeting on Tharsdo of the parishoners of So Diave's took plac be taken in consequence of the destruction of the parish propriety the late fire, Along discussion arose on the the old one for the purpose of building a new whare but on the question being put, it was resolved by a large ma jority to rebuild it on its present site. A committee, wit intend its erection.
Knightsbridge-The papers have contained reports of What is called a "military outrage" at Knightsbridge, in which some pivates of he R-by with swords and pistol The affair, however, which was a drunken brawl, has been reatly exaggerated. Some soldiers were assaulted by the irequenters of one of the low public-houses near the
barrack-ates; their comrades rescued them; in the fra some heads were broken on both sides, and a woman wa alass of a was all that by the soldiery

Kingston.-On Wednesday morning, at three \(o^{\prime}\) clock the inabitants on the Mation, situate between Kingston and Ewell, were alarmed by an explo sion, which shook the cottages to their foundation, an entirely demolished the glass in the windows. It wa of discavered thal Everythinge had exploded ma beed redaced to ruin Everything contained in them was destroyed, but no live were lost. The foreman had only locked up the mills, and left them apparently in perfect safety, ten minute before the explosion
Mortality of the Metropolis. - The number of Deaths registered in the week ending Saturday, Aug. 26, was a follows :-West districts, 125 ; North districts, 189 ; Cen tral districts, 166 ; East districts, 199 ; South districts 213. Total, 842. Males, 433; females, 409. Weekly average for the last five years, 903 -
females); for the last five summers, 846 .

\section*{非robincial Nolos}

Her Majesty's Marine Excursion.-The Queen and Prince Albert, as mentioned in our last, held a levee on Thursday at Plymouth, on board the yacht, and afterwards paid a visit to the three towns. Her Majest port and Stockyard, and atter passing through Devo mouth by the Mayor and Corporate Officers, who pre ceded Her Majesty through the streets leading to the Hoe, and returned thence by nearly the same route to the Borough boundary on the Stonehouse Mill Bridge, wher the authorities of Plymouth took their leave. The processio then returned through Stoke and Devonport, to the dock yard, where Her Majesty re-embarked and went on boar the yacht. Her Majesty and the Prince then went to vie the Breakwater, upon which they landed and remaine some time, when they returned to the yacht, and dined and slept on boara. la the evening the ships of wa lue Te Whal What Falmoub, aids Maie \({ }^{2}\) Prince Albent to the wher Majesty and Pe hor putting out to sea. A few minutes before tel she took
her departure, steering towards the Eddystone light-house which the Royal party were desirous of closely inspectFal. From the Edaystone the yacht steered toward Falmouth, which she made about half-past one, and jesty did not land at Falnouth, but proceeded from the yach into the barbour in the barge, accompanied by Prince Aldert Salla in the shipping, and everywhere as her Majesty passed she wa
received with the most enthusiastic cheering. The mayor and corporations of Falmouth, Penryn, and Truro, put o in boats to wait upon her Majesty while in the barge, an were most graciously received. After palling round the harbour, and inspectirg all that was worth attention, he Majesty and the Prince returned on board the yach Which immediately got under weigh, and steered for the coast of France. The yacht passed Cherbourg about hal past 6 on Saturday morning, and was saluted by the
batteries of the town and fort with 101 guns. All the ships de Joinville were diessed in the Plutor to esco her Majesty to Tréport. At 4 P.M. the royal yacht came in sight of Treport, when a cannon was discharged as the signal of her Majesty's approach. At \(50^{\circ}\) clock the royal fumily, consisting of the King and Queen of the French the Gucen of the Belgians, the Duchess of Orleans, an the Princess Clementine, accompanied by M. Guizot Châtean d' Eu to meet thiral Mackau, ©c., den the and the Prince Augustus of Saxe Coburg accompanied the procession on horseback. On reaching Tréport, his Tajesty entered a state barge and proceeded to meet th the Belgians, while the Queens of the French and tent erected at the landing-place to receined in royal visitors as they stepped ashore. As the King ap proached the royal yacht, a salute from all the steamvessels was fired, and this being taken up by each esserin the roads and by the batteries on shore, a con meeting of theled during the entire ceremony of the firs the yacht backed stern, out of siftr of the spectators ashore. The Kine on reaching the deck, embraced her Majesty, and shook Prince Albert most cordially with both hands. A few minutes afterwards, the Queen and Prince Albert, led b the Prince de Joinville, descended from their yacht, and took their place with King Louis Philippe in the state barge, amid'st renewed salvos of artillery. The reception Queen Royal visitors by the Queen of French, the Quee of belgians, and the graceful and heartfelt kind ; and this part of the ceremony was also hailed by the assembled multitude with the mos expressive demonstrations of concurrence and of joy. He Majesty saluted on the cheek the Queen of the Frencl, and afterwards kissed the Queen of the Belgians in th most affectionate manner. Having taken their seats in the first char-c̀̀-bano, drawn by eight horses, the Roya personages proceeded onwards towards Eu, followed by nations present. On their arrival the bands of the French
regiments struck up "God save the Queen," and in a few moments King Louis Philippe appeared at the balcony, radig our Qucen, whom he presented to the peope The enthusiasm with which her Majesty was received is said to have been extremely fine; even the troops joined in the repeated cheers which burst from the crowd assembled, and the voice of the King of the French himself was heard louder than them all, as he waved his hat and led each round of cheering. The delight risible in the King's He became young again, and trod, and spoke, and acted, He became young again, and trod, and spoke, and acted,
as though he was the most delighted of the party. At eight o'clock the King led Queen Victoria and the Queen of the Belgians into the banquetting-hall, Prince Albert following with the Queen of the French. Nothing could surpass the magnificence displayed at this truy royal feast. The decorations of the hall, the costly
ressels, plateaux, chandeliers, \&c., of gold, were disposed in 'the utmost taste, Queen Victoria sat ou the right hand of the King, and, flushed with excitement, and undisguisedly happy, chatted and laughed alternately with his
Majesty and the Prince de Joinville, who sat on her right. Majesty and the Prince de Joinville, who sat on her right. Prince Albert was seated between the Queen of the French, in a dress of crimson silk, with a profusion of diamonds, and wore the insignia of the garter. In the evening the Ville d'Eu was illuminated, and the spire of the ancient collegiate church, adjoining the chateau, was covered with
lights to its summit. On Sunday, Her Majesty and Prince Albert and suite assisted at the Church service, *hich was read in a chapel prepared for that purpose in the château, by one of her attendants, no chaplain having been appointed to the yacht or to attend the Queen in her arsion. The royal party walked through the grounds of the Palace, but did not make any public appearance or take any other recreation, keeping the Subbath strictly.
On Monday, the Royal Family of France, the Royal ctive suites, with the Ministers, guests, and officers, residing at the court, left the chateau to proceed to the forest, about five miles from the town, extending upwards of twenty miles in length, and having a main breadth of two miles. The "Mont d'Orleans, \({ }^{\text {J }}\) Where the fete was held, is a hill embosomed in the forest. The advance of the royal party consisted of horsemen, the de Joinville and the Duc d'Aumale, the Duc de Montpensier, the Prince of Saxe Coburg, and the other Princes, all in plain clothes, Prince Albert alone being distinguished by the ribbon of the Garter. Six chars- \(\grave{a}\)-bano contained the rest of the company. In the first was seated his
Majesty the King of the French, having our Queen at his ight. The Queen of the French and the Queen of the Belgians occupied the second seat, and the third seat was filled by the Princess de Joinville and the Duchess d'Otleans, the latter in deep mourning. In the first seat of the second char-a-banc M. Guizot sat, between the
Earls of Aberdeen and Liverpoo. Lord Cowley, and the other lords and official personages, occupied the other vehicles. The young Count de Paris and the Duc de ants, and by a different direction. Nothing could exceed the enthusiasm of the people as the royal party passed; they hailed the appearance of our Queen and Prince with Sovereign seemed enchanted with the reception given everywhere to his guests. His Majesty, in fact, is said our Queen. His own subjects hardly recognised in the light, exhilirated, and enthusiastic cicerone of the fair the Freng of England, the serious, anxious Monarch of the hill, an English party approached, and one of them having shouted "God save the Queen," his Majesty all the fervour of deep sincerity, and in English,
God bless her." Arrived at the top of the hill, which tey did about four o'clock, the royal party entered the
tent, and partook of a dejeuner. The King then led her Majesty round the green platform, thus exhibiting himself and his roysl visitor freely and without restriction to the crowd which circled the enclosure. The two other the promenade, playing "God save the Queen" and the spectators cheering to the echo. The royal party then entered the reception tent, where a few presentations were made. Her Majesty, during the jetce was remarked to the Prince de Wirtemberg, the son of the late Princess Marie, most affectionately. The Royal party returned to route with increased enthusiasm. In the course of the evening a concert was given by the professional persons the had been summoned from Paris for the occasion. At musical party to join the general company. On Tuesday morning Prince Albert, attended by ihe French Princes, tant arout lst Regiment of Carabinecr, in a plain disand afterwards inspected the infantry barracks. In the afternoon the Royal party visited the sncient collegiate Which is dedicated to St. Lawrence of Dublin, its founder. Itaving inspected the several chapels, the architecture of into interior, and the stained glass windows, they descended d'Eu, They then proceeded to Treport. The King of the French having handed Queen Victoria into the chasHighness said be could not precede his Majesty, the King, with the utmost grace and humour, exclaimed,
laughing, "Ah! there is nothing of 'Majesty' necessary replied the Prince. "True", said the King, "I am a little stout, but I will sit sideways," and he insisted on placing Prince Albert betwixt himself and her Majesty ; and, thus sitting three abreast in the first seat of the charabanc, they proceeded to Tréport. They were cheered designed to inspect the vessels in the port and road, but the tide being low, and the sea running rather high, the excursion was postnoned. The Royal party drove to the jetty of Trénort, and returned to the palace to dinner In the evening there was a concert of vocal and instrumental music. On Wednesday, the royal diversion consisted of a drive through the forest of Eu, and a cold
collation at St. Catherine, distant about twelve miles. Passing along the same road as that which they took on Monday to the féte champétre, until they got embedded Route Madeline, and halted at those points which afforded the best points of view. During the drive, than which few could be chosen more diversified, her Majesty seemed by ils church, palace, college, and other edifices, which by ils church, palace, college, and other edifices, which
are seen to great advantage from the hills leading to the forest. The Queen turned several times to gaze at the forest. The Queen turned several times to gaze at, the
several objects that most forcibly struck her, and expressed her pleasure at what she saw to the Queen of the French, who sat beside her. In this excursion the Prince de Joinville, the Duc d'Aumale, the Duc de Montpensier, the Prince Augustus of Saxe Coburg and saite, King of the French occupied the first seat of the first char-à-bane-the three Queens of Great Britain, France, and Belgium, being seated in the second banc. In the first seat of the second char, M. Guizot sat, as usual, with Lord Aberdeen on his right, and Lord six in all-contained the other remaining carriages- strangers, and officers staying at the chateau. In the evening there was vaudeville, M . Ancelot, the direcieur, having arrived to superintend its performance. On Thursday morning, abont 8 o'clock, her Majesty and Prince Albert left the chateau, accompanied by all the members of the Royal family, and proceeded to Tréport, where they were ceived with the greatest entbusiasm. The king of the Guizot, the Dukes d Aumale and Montpensier, with M. others, accompanied the Queen ou, boaluted with a Royal salute from all the English slips. The yacht then got under weigh, attended by the St. Vincent Tapoleon de Joinville accompanied her Majesty in the yacht. The Queen's steamer soon ran all the others out of sight; and arrived at Brighton about half-past 3 , exactly 6 hours and quarter of a mile off the pier, the water being too low to permit her coming alongside. Her Majesty's barge was ng being made at the pier to facilitate the landing of her Majesty left the barge much below the lowest point to which the platform could be carried. The Queen became rather nervous at the delay and alterations necessary, and the
cheering added to the excitement. Her Majesty waved her hand, and the signal being at once understood, the cheering instantly ceased, and the boats which were crowding round the royal barge kept off. In a short party landed in safety. On reaching the entrance of the pier her Majesty was loudly cheered by the assembled thousands on the cliffs and beach. Her Majesty acknowledged the hearty greeting of her subjects by repeatedly Her Majesty and Prince Albert appeared to have borne the voyage without the slightest inconvenience. At the end of the pier esplanade her Majesty and the two Princes got into a close carriage, surrounded by a guard of honour, will remain at Brighton until Monday next, when she will go to Ostend on a visit to the King and Queen of the Belgians, accompanied by the Prince de Joinville. A mong the other incidents of her Majesty's visit to France, artists were sent for by the King to make sketches of the different scenes for the Royal Gallery at Versailles. The Royal landing at Tréport was confided to M. Juge at, the command and marine painter, whis expressly to paint it This picture is said to be already finished, and is described from sea, looking into Treport, as the Royal barge of the King approaches her Majesty's yacht. The barge having come alongside the yacht on the seaward side, made this necessary, but that very necessity has contributed to had the point of view being taken from any other quarter. The picture is about l8ins. long, and a foot high. It has all expressed their approval of it. Among the numberless questions to which her Majesty's visit has airen quew have been mooted respecting the supposed incapacity of the Queen to leave her Britisli dominions without the sanction of an express act of Parliament. Some lasve is the person affected by this restriction. It appears, however, that the third clause in the Act of Settlement, hich enacted " that no person who shall hereafter come to the possession of this Crown shall go out of the domi-
nions of England, Scotland, or Irelaud, without consent of Pariament," was repealed very soon afterwards, in the frequent journeys to Henover" says Mr. Hallam "were frequence of the racionover, says M. Hall, "were consented to en "Me The ariament upon record of a British Mose Continent, was in 1821, when George IV visited Hanover Upon that occasion a commission wes issued under the Gpon that occaitio cortain Majesty's Guardians and Justices of the United Kingdom Majesty e Guardians a same during lis Majesty's absence from the said United Kingdom, or till further sigaification of his Majesty's leasure; any four or more of whom The Harvestereign during his absence
The farvest-The favourable and steady change in effect upon the crops throughout the United Kinedom and the harvest has nearly all been housed. The reports received on Wednesday, from the agricultural districts, at Mark-lane, were most cheering and on the whole, the aryest has been far beyond the expectations of the agriculturists and factors. Seldom has such weather been now at this season, the temperature during the last week varying from \(70^{\circ}\) to \(75^{\circ}\), and occasionally as high as \(87^{\circ}\) in the sun; the average state of the barometer has Middlesex Middesex, Kent, Surrey, Sussex, Wils, Berks, Bucks, Herts, Bedfordshire, Suffolk, Norfolk, Lincolnshire, Leicestershire, the Home and the Midland counties, the fields are open to the sportsmen. In Yorkshire, Durham, Cumberland, Northumberland, and the whole of Scotland, the harvest will be over by the end of this week or next. In Hampshire, Gloucestershire, and Wales, the crops have been most abundant, and all safely stacked. In Scotland the Barley and Oats are extremely fine and full, and the average is far above what was anti. cipated, as in the Highlands they expected rather a failure. The accounts from every province of Ireland are most satisfactory, and the greater part of the crops have been housed. The Turnip and Potato crops, both in Eng land and Scotland, which were rather threatening in conse quence of the excessive rains, promise to render a good return, as the sudden change in the weather has had a beneficial effect on the fields. From the Hop districts of Kent, Worcestershire, \&c., the Bines are reported to be looking extremely fine, and will return more 150,000 average. The duty is now estimated at 8b. The snecue packet of new Hops sold as high as tous in not making large purchases. The importationof foreign wheat, in consequence of the The importations to 14 s ., have been rather larger than daty having fallen 60,432 quarters, barley 7,826, and oats 2,670. English 14,300 . The quarters, 6,720 sacks of flow ; Irish oats ber quarter on wheat, Kent and Essex is at 36 . to \(3 s\). Norfolk, 40 s . to 54 s . ; Suffolk, 36 s . to 54 s .; flour, 40 s . to 45 s . ; ditto fine, 46 s , to 52 s . Notwithstanding the fall in the market, the bakers throughout the metropolis still charge \(y d\). for the first quality and \(7 \frac{1}{2} d\). for the second bread, per 4 lbs . The price of bread in Paris is for first quality, \(6 d . ;\) second ditto, \(5 d\). per \(4 \mathrm{lb}, 8 \mathrm{oz}\).
loss of th. - Information has been receired of the total Navigation Queen steamer, belonging to the Bristol Steam Navigation Company, on Saturday night. She had only
been built about four yeare, of 500 tons burden, and 180 horse-power, and is one of several vessels which the Company have lost within the last three or four years. it the weather fair and cling dotil they were abreast of St. Ann's, when there came on suddenly a thick bank of fog ; they never saw anything after until they struck on the north-east side of skokham Island, at 11 P.M. The Captain reversed the engives, and backed off, when they drrected their course for Miford, thinking to save the ship. About the distance of one mile from the island they saw a sloop, and calted her alongside to assist. At this time there were ten feet water in the hold, aud the vessel was fast setthing forward, when the Captain put the quarter of an hour the steamer sunk in 16 fathoms. All the crew and passengers were saved excepting one, but they lost their clothes and luggage, and nothing was saved or the ship's property but the plate, two compasses, and the boats. The ladies were nearly all in their night venin, and arrived in that state at Mifordon could not find the harbour. It was most fortunate that this little vessel hove in sight before the steamer sunk, as all hands would otherwise have been lost. There were about 20 cabin passengers and rather less than that number on deck. It is remarkable that in all the wrecks of steamers, off and suak in deep water; whereas in the case of the Clumbir, recently lost on the coast of America, she was allowed to remain on the rocks until all hands and a great portion of her cargo bad been sared.
Carlisle.-Mr. Stephenson, the Civil Engineer, was Intely engaged by the corporation of Carlisle to give an means of introduciog water into that cily. He totimest tlee expense of the morks at the large sum of \(30,000 \mathrm{l}\) Carmarthen. - A reward of 500l. Las been offered for the discovery of the persons who, on the night of the wernen, in the parish of Llanon, Edwards, of Gally-噱 this paper at the time.-The Welchman newspaper publishes a letter from Rece in which she
gives an account of herself and her proceedings. Th
following are extracts:-" Rebecca's rights once obtained we shall be as quiet as mice; there will then be no further strife between the slaves (slaves no longer) and the slavedrivers. It is in vain to employ special constables; the should think, sir, that English gentlemen and brave dragoons might sure be more suitably employed than by being turned into pike and toll-men; they are, however, of no use in the world, and to their long swords bids defiance to all of them : we don't care a straw for all the soldiers, rural police, and special constables. for Rebecca can bring into the field a better force and a mach more numerous one. Rebeca is more than 100,000 strong. The people, the masses, to a man, throughout the three cowntice of broke are with me. Oh yes, they are all my children." them. My childreu are simple, without information and politics. They shall not always be thus. If God spar and if she dies, Miss Cromwell and a band of brave mountaineers can cut their way through every obstacle. We and Regenerator." " "The Government commission sent down to listen to and redress our grievances is English Rebecca and her children rejoice. For we know that England will do more for oppressed. Welshmen than Wales itself with its jobbers and degenerate gentry would ever have done. But it was Rebecca who gave the word of command. It was she who brought down the envoy from the seat of the Imperial Legislature. Once more, sir, ffarwelwch; Rebecca's heart bleeds for her countrymen she hath compassion for her countrymen, contempt for cowardice, hatred for oppression, and love for all honest independence. By these presents let all men know Rebecca."-On W ednesday night, a collision touk place between the police and the Rebeccaites, near the Pontardulais gate, between Swanseu and Llanon. The riaters attacked the gate in a considerable body, and completely destroyed it. The police then advanced, and commanded them to desist; instead, however, of doing so, the Rebeccaites fired a volley at them. The police were then ordered to fire, which they did twice, wounding several of the Rebeccaites, and shooting the horse of the leader. A egular battle took place six prisoners, three of whom were wounded, two severely. While they were securing their prisoners, the rioters returned to the attack, with a view of rescuing them; but two of the magistrates having ridden off for the troops, a party of the Dragoons from Swansea, Who were out on the road, and some of the the prisoners have been seat to Carmarthen, and three to Swansea. They were taken in their disguises, with faces blackened, and bounets and nightgowns on. Upon the arrival the toll-bouse, and a sentry placed over them ; four Dragoons were stationed at the gate, and the remainder patrolled the country, but could not succeed in capturing any other prisoners
Mr. Baron Rolfe, at the of his wife at Stock port, underwent the extreme seatence of the law in this city, on Saturday. The circumstances under which the murder was committed were of an aggraa tod character. It appeared that the prisoner, who was of indulging in the use of intoxicating liquors, and that after having long liarboured bis intention, he stabbed his wercy, athe judge beld out no hope of ing for a commutation of punishment, were forwarded to the Home-office from Chester and Stockport. They were, being that be could not, consistently with his public duty, comply with their prayers.

Derby.--On Saturday, Willian Grocock, the youth mentioned in our last as having surrendered himself to the police as a murderer, was brought before the magistrates for examination. The girl whom he had enticed from her home, and then attempted to murder, stated various acts of violence he had committed before he struck her on the head with a hammer. Her evidence was confirmed by the surgeon, and th
trial at the assizes.

Gravesend.-During the whole week, the village of Cobham, perhaps one of the most retired and beautiful in Kent, has been the scene of much excitement. Numerous visitors from London have arrived, attracted by the
details of the murder of \(\mathrm{M}_{3}\). Robert Dadd, noticed in our details of the murder of Mr . Robert Dadd, noticed in our
last. The melancholy tragedy bas created a feeling of deep gloom among the inhabitants of a district seldom disturbed by deeds of violence. The Earl of Darnley is at present in Scotland; his mother, the Countess, was residing at the hall when the catastrophe occurred. Mr. Dadd was the son of Mr. Stephen Dadd, timberfor himself in Chatham as a chemist thirty years ago, and remained there until a few years since, when he took the silver gilding and ormolu business of Messrs. Pincott, of Suffolk-street, Pall-mall East, in which he commanded a Hreat share of Court patronage up to the hour of his death 3 daughtera, but has been a widower some years. Hewas a lecturer on chemistry, mineralogy, and geology; an active member the first presidents and founders of the Mechanics' Institute in that town. A few days before his death he was
earnestly advised to place his son under restraint, but was such a course, expressing at the same time his opinion that retirement for a short time in the country, with kind treatment, would operate beneficially. As stated in our last, the son was an artist. The Cartoon, No. 14 in the George after the death of the Dragon," was his composition; and it is remarkable that the work was begun immediately on the return of Mr. Dadd from italy, and occupied only a few hours. It is, of course, little more than an outhe, and bears marks of haste in other respects, the mposition being generaly considered exaggerated. The leaning on the shoulder of St. George, is considered as stood for this figure, at his own earnest request. The motto chosen for the drawing is the word "Industria, its completion. The latest accounts of his noovements route for Marseilles. The fuct of the murder having been committed was then fully known, but the passports being committed was then fully known, but the passports being however, set the telegraph to work, and on his arrival at Marseilles he will no doubt be arrested. He is said to have plenty of money with him.
IIastings, -On Friday last, being the 1 st September, the Rev. Henry Pratt, of Worthing, left home in his chaise
for the purpose of enjoying a duy's partridge-shooting on the estates of his father, the Rev. J. Pratt, at Seddlescomb, and while in the act of removing a fowling-piece off. The contents of the barrel entered the body of the unfortunate gentleman, and his death was instantaneous. Mr. Pratt had only been mev. Sir I. G. Thomas, Bart., Rector of Bodlam, in that neighbourhood.
Lyme Regis.-A fatal accident occurred in this town during the recent visit of her Majesty. On arriving off
the harbour, the yacht shaped hex course for the landslip, towards which point a general movement was made by a large number of persons who had congregated to see her Majesty. Amongst the equestrians was Mr. J. J. de Bruen, who had been residing here with his brother for the season. His horse went at a rapid pace towards the margin of the cliff forming the deepest part of the chasm. On approaching the brink the horse made a sudden stop, and it is supposed that Mr. de Bruen, on perceiving the over the gentleman survived but on hour and a half. He was a wealthy merchant of Holland, and only in his 24th year. A coroner's inquest has been held on the body, when the jury retorned a verdict of "Accidental death."
Norwich. A meeting of the committee for erecting a monument to the late Earl. Helchaster opinion was in favour of the high ground on which the obelisk now was the first structure erected upon the estate by the first Earl of Leceister, the present Earl was averse to remove The committee decided upon a column without sea, so that the monument may be useful as a landmark. issuedthampton. -The Lords of the Admuraly have Madeira, the West Indies, Mexico, and the Mediterranean, are to be embarked and landed at Southampton, instead

Falmouth, by which the steam-ships and their passengers will be allowed to proceed direct to their desti-
nations. At the meeting of the Southampton Dock Company last week, the report announced that the tidal ock was completed, and opened for trade on the ist July wick, the architect, to construct warehouses for the northern quay of the tidal-dock, calculated to contain northern quay of the tidal-dock, calculated to contain
2,500 tons of merchandize, which would be completed by about the end of the year. The revenue account showed a total receint from the commencement of the undertaking
of \(326,788 \%\). and an expenditure of \(319,731 \%\)., leaving balance of \(7,056 l\).
Tyne.-The local papers state that Mr. Roberts, the barrister, has been retained by the Miners Association o this and other coal districts as behalf at the signing of bonds, and to give them general advice. He is to have a salary of \(1,000 l\) or the first year, and \(500 l\). annually thereafter
Railways.-The following are the returns for the past week:-London and Birmingham, 17,356l.; Great Eastern, 4,202l. ; Eastern Counties, 2,881l. ; North Midland, 5,045l. ; York and North Midland, 2,011l. Greenwich, 825l. ; Croydon, 362l.; Brighton, 4,990l. Counties, 2,753l.; Grand Junction, 8,527l.-The pressur of the railway meetings has now nearly passed, and few of any importance remain to be recorded. At the meeting of the Manchester and Birmingham Company last week, the payment of 26,911 l. to the Grand Junction Company amounted to \(52,118 l\), and the expenditure to \(29,555 l\). leaving a balance of \(22,562 \mathrm{l}\), out of which a dividend was declared at the rate of \(15 s\), per share. Compared with the previous half-year, the increase in palls to 10,000 tons surplus profit, \(10,801 l\). The conveyance of the mails from Manchester to the South was still under the consideration of the Treasury, but the dispate with the Sheffeld Company had been decided by an award against
that Company to pay to the Manchester and Bir mingham Railway \(3,490 \%\). per annum for further station accommodation. - At the meeting of the Hull and Selby Company, the report stated that the receipts for the half-year were 25,7361 ., expenditure \(17,1 /\)..; lear of \(9,910 \mathrm{l}\). for the disbursement of a dividend of 20 s . per share, being at the rate of 4 per cent. per annum on the subscribed canital.-The Birmaingham and Derby Company have announced a dividend of 58 . per share. The most prominent point of discussion at their meeting was the amalgamation of the Midland lines, for the consideration of shich a special mefting of shareholders has been called.-The report of the Yarmouth and Norwich Company at their meeting last week announced that the per-
manent way would be laid nearly throughout the whole line by the end of November, and the railway completed for public traffic by June, \(1844 ; 49,759 l\). had been rethe payment of expenses, \(10,686 \%\). in the hands of the bankers. The original estimates, however, would be ex ceeded by about 15,000 ., to meet which and other contingencies, the director's were empowered to borrow a further sum of \(50,000 \mathrm{l}\).-At the half-yearly meeting of the Maryport and Carlisle Company last week, the report stated that the line was now open from Wigton to Carto \(3,675 l\), being an increase of ubout 1000 l . over the average produce of the past five years.-The Glasgow, Paisley, and Kilmarnock Compuny continue to pay a dividend of \(12 s .6 d\). per share, receivable on and after the 15 th but the passenger traffic, on the other hand, had slighty declined. The mortse debt of the Company has been renewed at the lower rate of 4 per cent.-The Dublin and Drogheda meeting took place this week. The report stated that the expectation of completing the undertaking at the rate of 14,000 . per mile is still relied on, next May. It appears that there is a movement in favour of extending railway communication from Drogcrease the traffic of the Dublia and Drogheda line. The receipts from the portion at present in operation were \(102,888 \%\)., the expenditure 94,921 ., leaving a A new line, to be called the Great North British Railway, has been proposed; to run from Edinburgh to Berwick upon-Tweed, which will complete the chain of railway communication from London to the North. By its communication with the Edinburgh and Glasgow, and the Great Northern lines, which will be completed to after, it will form an uninterrupted route, between Edinburgh, Glasgow, and all parts of Engldad. The journey between Edinburgh and London will then be effected in the space of sixteen hours. The cost of construction is missioners, who have surveyed the route, it appears tha the tothl traffic from passengers and goods will reatize about 110,000l. per annum.-A branch railway is now in隹保 arn Ralway at Bishopstok. Its coastruction South Eastern Nailway with Folkestone Harbour is the rapidly progressing. Whe harbour ise Harbour is now large hotel is bullding near the Pavilion, with a frontage to the harbour, capable of containing nearly one hundred sleeping rooms. The number of passengers who let Dover during the week was 742 for Boulogne, 314 for
Calais, and 155 for Ostend.-On Ituesday week scveral huodred inhabitants of the north, from Yorkshire and pecial places, visted diverpool on a plis Ralway, and returned agam by the same route on the following day. The Londorn and Blackwall Rallway cost \(326,070 l\). per mine, which is the highest cost of any rallway in the \(264,733 l\). Tne three lines whinh were esecuted at the owest cost per mile are the Arbroath and Furlar, the Aylesbury Junction, and the Hayle Railways, which Londor and Birmingham , and \(6,940 \%\). per mile. The Great Western \(55,330 \%\) the South Western 27,7506 ; the Liverpool and Manchester 49,320\%, the Manchester and Leeds 59,8006., and the London and Brighton, 64,370l.

\section*{IRELAND.}

Dublin--Mr. Callaghan, M.P., has offered his services s one of the 300 delegates to form Mr. O Conneli's has already commenced his canvass for the Representation of Nenagh in the same assembly. The Lord Primate, Lord J. G. Beresford, has been sworn in as one of the Lords Justices, to act during the absence of the Lord Lieus Justices, to act duriag the absence of the Lor Lieutenant. The weekly meeting of 'the Repeal Associa-
tion took place on Monday. Mr. O'Connell having first ion took place on Monday. Mr. O'Connell having first Clontarf, on the 8 th October, when the chair would be Clontarr, on the sth October, wen the chair would the Danes and large mound erected over the bodies of thaceedel to wor means of obta it of obtaining it. As to the Queen's speech, he said, that palk rish people, had only acted as a stimulus to goad them on with him, instead of throwing any damp upon thei that there is not the slightest danger from Repeal agitation. Wore than is not the slightest danger from Repeal agitatilers More than half the people of Ulster had become Repealers.
They had given up their intended meeting on the 7th inst.
which was a cloud happily passed a way. Their Repeal meet-
ings would now go on without interference from any quarter. There was, however, one source of apprehension-arising referred to a letter which appeared in a Dublin paper, from a correspondent of the Morning Chronicle, in which the writer insinuates that such persons had been brought over from England to create a riot at the Tara meeting. not pass over lightly. By whom were these monsters employed? By the Government? By the police merely, or whom? Was it not terrific to think that underlings should be employed to get up a riot in order that slaughter might be done on the people of Ireland? Such persons the people of Ireland were determined to keep the peace, head with great vehemence for some time, and expressed his determination to hunt the matter up. He next alluded to Mr. Feargus \(O^{\prime}\) Cornor's plan for the workpeople of England - the obstance of a sacred month, in he sought no revolution-but a bloodless, stainless onea return to a former time-- acac 1782, or 1829 . To be sure the people of Ireland would,
if required, leave the harvest uncut-or give up the consumption of exciseable articles. "I throw out this hint to show that we are not deprived of peaceable resources. The harvest is now nearly cut, so that I am for the present like a man speaking the day atter the fair, and as to the non-consumption of exciseable articles, we will wait for
the emergency." He next entered into the subject of his statistical inquiries for the basis of the future constituency of Ireland, and repeated nearly all the chapter of last week on the same head. He again dwelt on the great necessity
of not being in too great a lurry with their work, He Establed by predicting the downfall of the Irish Church Establishment, and said that there will, shall, and must
be agitation in Ireland, never to cease till they have their Parliament in College Green. The rent for the week was announced to
Belfast.

Belfast.-A meeting of those noblemen and gentlemen the 7 thig inst., for the purpose of expressing their determination to resist the Repeal of the Legislative Union, maintain the integrity of the empire, and take measures testants of Ireland, took place last wreekerties of the MroDonegal in the chair. A series of resolutions was passed expressing thir satisfaction of the meeting with the Queen's
speech, and declaring that "as lopal subjects of her Majesty, determined at all times to support the authority of the Queen, and ansious to comply with the spirit,
well as the letter, of her expressed wishes, they feel their duty to forego the meeting fixed for the 7th Septem. their enemies, however unjustly, as the cause of continuing political agitation." They also declared "their full conbut a religious effort to organise their Roman Cotholic fellow subjects, for the purpase of dismembering the
British empire, desiroging the Protestant religion, overPapal domination in this country." A declaration to be signed by all the Protestants in Ireland, and presented to In their several spheres and stations, to maintain the
Holy Scriptures as the standard of Christian faith morals, preserve unshaken loyalty to the Queen, defend together to defend, with their properties and lives, the Untegrity of the empire, as cemented by the Legislative balloon on Saturday from the Botanic Gardens in this the Cumbertund d, if possible, to cross the Channel to descended near Craigavad House, the residence of Mr. returned, and within a few hundred yards of the sea, and occupied twenty-nine minutes ; the distance being about Corts from the gardens.
given at Cork in hous incident occurred during the ball exemaplified the adroitness of the Trish nolice. A nurich of the swell mob honoured Cork with a visit for the occasion, some of whom came express from London, and among them several female practitioners. The crowded and thitier of course they repairec. Aus inspector of police, dressed in ball costume, having observed one of introduction, and obtanne il the honour of ber hand for an Dext quadrille. The gentleman, of course, in the pauses mouch pleased with her military-looking admoirer. The menade, and when near the door, he quietly resigned his menade, and when near the door, he quietly resigned his
partner into the bands of a brother officer, about whose appearance there could be no mistake.
SCOTLAND.
Edinburgh.-An annual synodical meeting of the EipisArgyle clergy of the united diocese of Moray, Ross, and Argyle, was held at Inverness on the 17th ult., at which, the ocease to the umbrage taken by certain parties to \(t\) was the unanimous opinion of the Synod that there inght to be no difference between the Episcopal Church In Scotland and the united Churches in England and
Ireand, in the administration of the holy communion.

In consequence of this opinion, the Dean was requested requisite the desire of the Synod to the Bishops, that the that the English communion service should henceforth be exclusively used.
Braemar.- The presence of a royal Prince at one of those athletic exhibitions, a "gathering" in the Highlands, is an event so unusual, that the Braemar meeting this year possessed an extraordinary attraction to the men of the mountains." His Royal Highness Prince Alexander of the Netherlands being at the Mar-lodge, the annual gathering on Friday week by his presence. The Duke of Leeds, with many of his followers in full highland garb, and many of the gentry, collected at the park-gate, When the Duke received the Prince there on his arrival from Mar-lodge. The highland games then commenced, such as putting the stone, running, throwing the hammer, tossing the bar, leaping, dancing the strathspey and sword dance; and at the conclusion of the amusements prizes were awarded to those competitors who had distinguished themselves in the various games. At the termination of Castle, General Sir Alex. Duff, president of the society, of Leeds, Lords Prudhoe, Elcho, Lilford, and a numerous party of visitors.

\section*{fliscellameous.}

The Royal Banquet at Eu.-The following extract from a description of this banquet, by the reporter of the Morning Chronicle, who was an eye-witness of the scene, will hardly fail to interest our readers :-" In the
evening I obtained admission into the Palace, and the rare opportunity of seeing the Royal host and hostess, very splendid one. When a King of France entertains a Qbtained England, whatever of costly or gorgeous can be sion the magnificent stores of Louis Philippe were put in place is a large and very richly decorated one, looking on the garden terrace. It is hung round with portraits, set in handsome frames, and the roof is pannelled, richly gilt, and painted with subjects taken from the history of France. The plate, which was all gold or silver gilt, was of the most splendid description, and in the centre was a most magnimaterial, filled \(\mathbf{n}\) ith flowers. At 8 o'clock dinner was nounced, when his Majesty the King of the Prench, with her Majesty Queen Victoria at his right, and the Queen of the Belgians at his left, proceeded down the grand staircase to the chatteau. The King of the French appeared to be in excellent health and spirits, and to enjoy himself vastly semblance to some of the later portraits of George IV. He is a handsome and portly man, and not at ail the clumsy, vulgar personage which he is occasionally repre-
sented in lis portraits. He sat at the centre of the table. On his riglt pouds. left the Queen of the Belgians. The effect of her sea excellent health, but the sea and air have given her a more flushed appearance than that with which we are accustomed to see her ; nor has the sun been more sparing of her complexion than it would be of that of her fai the Prince of Joinville on her right hand, and carried on a most unimated conversation with him during the whole time of dinner.
enjoyment and freedom as if she were totally unconsciou that upon her shoulders rested the whole weight of the
government of Great Britain. She had on a dress of scarlet silk, and wore upon her arm the Order of the Garter, and across her breast the xibbon of that Order. Her head-
dress was very plain, the hair being simply braided, and har jewels were bandsome emeralds and diamonds. The Queen of the French sat immediately opposite the King,
having Prince Albert on her right, and the Duke d'Aumale on her left. Her Majesty on this occasion was very silent and the conversation dir not appear by any means so animated on this side of the table as on the other. However her Majesty, though reserved and silent, enjoys the pre-
sence of company, and the visit of Queen Victoria and Prince Albert have been peculiarly gratifying to her On the left of the Queen of the French-of whose dress 1 can say nothing, but that she wore a very long what all the world says be true, may hereafter be the Prince Albert of Spain. He is a good-looking, fair young man, anse approprialed the
of the sense of the family. Next to him sat the Princess of Joinville, an exceedingly handsome and pretty person, with a most superb diamond necklace about her neck. It younger. Her figure is very slight her looks two years fair, and her features small, delicate, and beautiful. Where there is so much of beauty it is not very easy to pick, but, upon the whole, Think the Princess of Joinville should left of her Royal father. She is so often in England the her figure is known to many of your London readers. She is handsome, and of pleasing appearance and demeanor, and is said to be the great favourite of her parents. Of her, I can only say that he is a very roung man, who is assiduously engaged in the cultivation of a pair of moustachios of great promise. His neighbour was the Princess Clementine, who has been recently married to Prince

Augustus of Sase Coburg, a cousin of our Prince Albert. he is not quite so handsome as the rest of the family, but hat says nothing in a family so distinguished for beauty as Shat of Orleans. The Duchess of Orleans was not present. She was at the château, but being in weeds, French etiquette does not allow her to dine in public. She was, howz ever, one of those who went to Tréport to welcome the Queen, and 1 have since learned that Queen Victoria ple," to she speedily became a preat and The only is and was moly ham was nuch admired bye Victoria huel beau garcon. rentiemens There is but one opinion among them rench her beauty, her exceedingly fine bust, aspecially her as to and shoulders, and her amiable and, especialy her neck and shoulders, and her amiable and gay manners. In a household 1 la tion dine tion during dinner, and the gaiety of her conversation both with the King and the Prince of Joinville. Of the other gueste, the most conspicuous from the position I occupien, were M. Guizot and the Earl of Aberdeen, both of whom looked very grave. I have only to add, that, with the exception of the King, who wore a military dress, and of M. Guizot and the Earl of Aberdeen, who were in diplomatic dresses, all the rest of the party were in mufti. The dinner party broke up at a quarter past ten, after Paris The nas some music. Tue mutucians came from Paris. The number of attendants, liveried and unliveried, The royal livery of fully equal to the number of guests. the royal livery of France is like our own-scarlet ; but with her made in a very Louis Quatorze style, loaded of our carvo worsted lace, like that used to trim the linings prised at the num, and the effect is heavy. I was rather surbat \(I\) understand of style in France, though to me the effect was a bad one, as it took away uniformity. I have given a very inadequate description of what was, in fact, a most gorgenus scene; but where there is so much to admire, and so much siomember, the whoie is apt to become a mass of confuson in the memory. The apartment in which the banquet most brilliant style ; but I may mention, for the information of those lucky people who may be fitting up handsome diming. rooms, that in the King of France's there are no chandeliers. All the candles were placed upon the table," The Chatleau d \({ }^{\prime} \mathrm{Eu}\).-We ure indebted to the same source for the following account of the building which our time.-"The Clateau d'Eu came into the hands of Louis Philippe, not as King of the French, but as heir to Duke of Penthievre, and from whom he helso inherited the Comte d'Eu and ather extensive inheritances. The Chate the beach The "stant from Treport, which is on the sea certainly bare of trees from its proximity he Chateau is it is otherwise one of great beauty. It has one great attraction, the want of which is felt by our countrymen it has a beautiful sward and green bills. None know bat those who have felt the want of these beauties how badly they are compensated by stunted vineyards or indifierent the a small, but pleasing river rumning through it, and studded witl cottages, orchards, and farm steadings, which reraind In strongly of similar scenery in the south of England. In prassing through all parts of Normandy, Englisimen they sontinally struck with the simfanity of the objects sible see to those they bave fen and and it imposin this counfry, without being struck with the fact, that we owe much of the beauty of our home scenery in England to our Norman ancestors, who only imparted to us The caste of the country which they themselves had left. The château was built in 1578 by Henry of Loraine le Bulafre, Duc de Guise, on the site of a castle which had
belonged in turn to the Lusignans, the Briennes, the Artois, the Clives, and the Saint Pols, and was burned of the successiou of its various jossessorg, and the dependence to be placed in this country on family greatness. At all events, it is certain that on the breaking out of the Revolution the chateau was seized upon by the so-called Nationsl Representatives, and consigned, with all its valuable effects, to the hammer. How any part of those effects happened to be kept not sho clearly explain ; but this is certain, that after being it was restored on the return of the Bourbons to France, to the mother of Lovis Philippe, who left it to her sons, and in whose possession it has been for several years. Louis Philippe, and it is splendidly fitted up, chateau by being clothed with a most valuable collection of historical and family portraits, includiog those of the Royal Famil and of the various lines or Counts ofthe the number of 1100 . The pictorial decorations are such as reader it superior to any palace in France, with the exception of Versailles alone; and from the beauty other appointments furniture, and the propriety of its other country, either in splendour or comforts Its greatest
deficiency is in room, the want of which is severely felt at the present moment, when so large and important an accession is expected to the number of its innoates. On ordinary occasions, however, it is quite large enough for the necessities of the Royal Family, living, as they do here, without ostentation or show. The park and pleasure grounds are limited, being only about 120 acres in extent, and the effect of even much of that is lost in consequence of its straggling position. Still it is not without beauty, and much is doing by the present King to improve it. Extensive walks, and drives of excellent construction, have been made not only through the grounds themselves, bu to all the most attractive portions of the neighbouring valley, and especially to the heights which command picturesque views of the château, the town, and the ses. The portion of the park adjoining the chateau is remarkably well wooded, not with 'weedy elms,' but with a variety of trees, carrying a beauty of foliage which would do no discredit to any park in England. The Chatteau nomenclature of 'fantastic,' for it has high roofs, pinnacles, enormous chimneys, and other excrescences, which do not accord with the architecture of modern palaces, but which still are not without beauty and pleasing effect. The building itself is of considerable extent, and its principal front handsome and imposing. In approaching it from Abbeville every one must be struck with admiration both of the beauty of the structure and its charming situation, surrounded as it is with woods and green fields, and in the immediate neighbourhood of the picturesque town of Eu, and the tranquil river below.'

A Royal Ode.-The following incident is mentioned by the reporter of the Times, among the other anecdotes of her Majesty's visit to France :--On Monday morning the King sent for M. Auber, the composer, and received him with his usual affability, and said-- \(E h\) bien! M. Anber, we must have by to-morrow night, or commemorate the auspicious visit of her Britannic Majesty to Eu.' 'Sire, it is impossible,' replied M. Auber, asto Eu. "Sire, it is impossible, rephed M. Auber, asare always thinking of time. Au reste, it must be done.' 'But I have no theme.' 'Pooh, pooh! you have her Majesty. You will act under positive inspiration.' mean, Sire, that I have no poem.' "No poem.
bonne heure. Let us have a poet forthwith." bonne heure. Let us have a poet forthwith.'
was sought for and found, and was kept safe und Was sought for and found, and in a very comfortable apart ment, with all requisite historical documents, and out of which he was not to issue till his wosk was complete. \(\mathbf{M}\). Auber was subjected to a similar impressment.

H EADLY＇S NANETTE ；purple edge，rather heavy， 105．per pair．Bond＇s．Countess of Winterton，after the style of
＂Trip to Cambridge，＂although distinct， \(7 s\) ． \(6 d\) ，the pair，and all the others that are coming out．John Dickson＇s Catal，gues for Aplications for Catalogues may be made at the Nursery，Acre
Lane，Brixton，and WARNER and WARNB＇s，Cornhill，London．

\section*{TWO NEW SEEDLING PICOTEES，－＂LADY}
 by that gentleman to Messrs Youshr oc o．They have already obtained prizes at the Norfolk and Norwich Horticulural Exhi－ bition；and \(Y\) ．\＆\＆Co．feel assured that no further proof of their
superior merits is necessary when they refer to the eminent
 guard－leaves and petals throughout of fine form and substance， confined to the edge．Whis is considered to be greatly superior to Mrs．Barnard，or any flower of its class，and carries a fine long pod．benvon＂（red edged）also possesses every character the substance，and the bloom expanding so correctly as no to
require the aid of dressing，and，like the former，has a beautiful lonk pod． The stock being limited，early application will be necessary，to may be had on application，and will be found to contain upwards of 800 of the very best varieties in cultivation，and which are 12 pairs of good show varieties，

Great Yarm
Warner and Warner Seed Merchants， respectfuly to inform the Nobility and Gentry，their importation of DUTCH BULBS have arrived in excellent condition．The Hand Splendid Varieties．Catalogues are now ready，and will be forwarded post free．

TULIPS，RANUNCULUSES，HYACINTHS，\＆c．
II．GROOM，Clapham Rise，near London（removed MAJESTY，respectfully informs the Novility and Gentry，that his Bub Catalogue for this autumn is ready，and will be for－
warded by post on application．He bers to state that he has a large stock of the beautiful New Lily（Eilium lancifolium）and a
fine collection of Auriculas，which he can supply at very moderate

T．RIVERS，Jun．，respectfully informs his friends， －that his descriptive，Catalogua of RoSES is now ready for
delivery；it will be esent as usuan，post－paid，as soon as possibly convenient，to all those who have ever honoured him with their have one by application，inclosing a twopenny stamp．
T．RAvERS takes the present opportunity of informing the Public，that his stock of Plants is of unprecedentedly fine and
vigorous growth，and from personal inspection，he can assert that Yigorous growth，and from personal inspection，he can assert
it is unatequaled in extent in Europe． Owing to the increasing taste for Dwarfs and Dwarf Standards，
he has paid more than usual attention to their culture；so that fine Dwarfs mayy be had of many sorts hitherto only，grown as
Standards．The Dwarfs of the various choice Varieties of Moss Roses in particular are more than usually fine，having made
shoots from four to six feet in length，and stont and robust in slioots from four to six feet in leng th，and stont and robast in
proportion．Plants of TTa－scented Roses and others in pots of
extra，size，can be，had，for immediate forcing．The＂Rose Amatcur＇s Guide，＂third Edition，is now in the press，and will
 tion of Roses in Pots for the Greenhouse and for exhibition，and
a notice of the leading new Varieties，forming a complete＂Rose DOUBLE ROMAN AND PAPER－WHITE NAR－ fragrant of fll the Narcissus have just been received in most ex－
 Hyacintbs for glasses，ditto for pots；Norcissus，Tulips，Jonquils，
Iris，Crocus，Anemones，and Ranunculus，of which lists，with re－ duced prices，may be had ree，per post． WILLIAM MILLER feels much pleasure in announc－ fortuante raiser of that extracordinarily large and distinct Fuchsia under the signature＂\(W\) ．Miller：＂＂Mour hybrid between fulgens and corymuifora is a very handsome fiower：seed－pod diameter is a quarter of an inch；the tube is of a delicate pink colour，having sevals of a greenish primrose，forming a strong
contrast to the bright red corolla seen between them：the flower oltogether is 3 finches in length，and the buds are very hand－
some as they approach maturity；it flowers in a large，broad bunch，which is divided into branches，containing altogether 150
flowers， N．B．－Plants next season at 12s． 6 d．each，with the usual alowance to the Trade，when not less than six are taken．Early
orders will be necessary，to secure plants，as many nurserymen that have seen it have ordered plants of it．
Providence Nursery，Ramsgate，Sept．13， 1943 ．

SATURDAY, SEPTEMBER 16, 1843.

\section*{}
 \(\pm=\)

The observations on the Tank system of obtaining bottom-heat, made by our valued correspondent Mr. Beaton, both last week in his Calendar and in a more extended article to-day, will be read with great interest, for they are the remarks of a man of much experience and skill. We are, however, sure that he will excuse us for differing from him on one point upon which he has strongly insisted, namely, the propriety of employing uncovered hot-water
gutters, which allow the steam to condeuse among the gutters, which allow the steam to condeuse among the
soil of which the bed they are to heat is composed.

We have already pointed out what we conceive to be the evils of this plan. It is impossible to prevent impurities in large quantity falling into the tanks or gutters, and it is to be apprehended that they will by degrees choke up the boilers ; it is equally impracticable to hinder the conversion of the soil into mud Mr. Beaton admits the facts; he also recognises the force of the first objection; but he contends that the second is untenable and that mere mud is the best thing possible for growing Melons and Cucumbers in, p. 632). Here we are at issue.

That both the Melon and the Cucumber are capable of digesting an unusual quantity of water is most true There is somewhere an account, we believe by Mr. into a tank of water through some solid masonry, and spread in the fluid in all directions. The practice in some hot countries, of growing these plants on beds float ing upon the surface of lakes, is familiar to everybody and therefore it might be true that open tanks convert ing soil into mud will suit the Melon and Cucumber without its at all following that they would be equally advantageous to other plants; in which case pits thus constructed could be employed for nothing else-a serious inconvenience in all except very large gardens, and no advantage in any. But we doubt whether excessive moisture at the roots is advantageous in this country, even to the Melon.
In the I'heory of Horticulture (p. 121) this question has been gone into; and mention is there made of certain experiments with the Melon made in the garden of the Horticultural Society with reference to this very subject. Those experiments all failed. Persian varieties of the Melon were grown in baskets of earth standing in a tank of water, and they were trained under the glass of a curvilinear iron stove, where they received all the heat and light they can have in this climate. The plants for some time grew vigorously, their roots struck into the water in all directions; but some of them rotted at the ground level, and in those which bore fruit the produce was quite inferior to what would have been obtained under ordinary cir-
cumstances. Yet in this case the conditions of the floating gardens of Cashmere were fulfilled, as far as ircumstances permat,-but they were not all fulfilled, nor can they ever be: the bright light of the East was wanting, and the water was stagnant. In a Persian lake the water is in continual agitation, from many causes; and the intensity of light is such as the ey All scarcely bear, while the heat scorches up the skin All these conditions are necessarily wanting in this country; and therefore we submit that the pructice of advantage. But if we understand Mr. Beaton rightly he prefers the muddy state of the bed where Melons are cultivated over open hot-water gutters, because it hus approaches the state of Eastern lake-gardens.
It strikes us that there is another serious objection to obtaining wet-we do not say moisture, but wetby conveying it from below: it cannot be regulated, nor can the amount of it be ascertained at any time; while, on the contrary, if water is communicated from above, and proper drainage is provided below, no gardener need be ignorant of the state of the
roots of his plants. And this is, in fact, the practice of Persia, whose Melon-gro
by water let in from above.
Mr. Beaton attaches importance to the dryness of he atmosphere in which Melons are grown, and we perfectly agree with him that it should not be wet; but if the soil is dry on the surface, and only moistened below by condensed steam, we do not understand how the red-spider is to be kept down. Mr. Knight, the best Melon-grower we ever heard of, found no remedy except sprinkling the leaves frequently and lightly
For these reasons we adhere to our opinion, that, for all purposes, Melon-growing included, it is adris-
able that the hot-water gutters used for affording bottom-heat should be closed up with sorne kind of porous material, either all round or at the sides. And, as far as we are at present aware, it will be found that if the spaces between the gutters are filled with rough materials, such as fragments of bricks and pottery, beds by the ordinary modes of watering, where excessive moisture is desirable.

When the subsoil in which the drains are to be formed is not a compact clay, but a loamy gravel, the labour in draining is greater. Loamy gravel is quite as impervious to water as clay, but it often lies on a sandy stratum which is porous. In this case pits may be dug, into which the drains may be conducted and the water will sink down; but if this is not the the gravel crumbles, and no clear channel can be dug with the narrow spade, tiles or earthen pipes must be used : some of the latter are now made with a very small bore, and at a low price. They will answer admirably to lay in the narrow drains; and if the sides crumble in, the pipes will always carry of the water. Some of these pipes are manufactured at the ow price of 20 s , per 1000,13 inches long. They are not close, but there is a sufficient opening left at the joining of the edges, bent round, to let the water in and they are not likely to choke up soon. The most roublesome subsoil to meet with is a running sand, ull of water, which is frequently the case where the boundaries of a stratum of clay approach to those o sand and gravel. If the loose sand lies in a small compass, some very stiff clay may be first thrown into
the trench, so as to make an artificial subsoil for the drain to be cutin; but if it be extensive, the only rmedy is to find an outlet for the water accumulated in the sand, after which it will become dry and porous, and no further draining will be required on that spot But the subsoil, without being a quicksand, may be wet, and thus the drains will not stand In this case pines are the best rais un guiter of concrete, according to the plan of Lord James Hay, which we have not yet had an opportunity of trying. This, it is said, will traverse a quicksand or bog, and carry the water through any soil.
In many fields of which both soil and subsoil appear light, traces may be seen of water having stagnated in winter. The cause of this can always be traced readily, by digging holes here and there around the wet spots, in spring. If water stands in them for ny time after rain, draining is required, but not always complete thorough-draining. The water in his case filters horizontally through the upper soil and meeting with a bank or obstruction, is accumulate where the subsoil is impervious, and lies in a kind of basin. One large deep drain carried judiciously through this basin and the obstructing bank, will lay the whole surface dry at a trifling expense; or some diverging branches may be required to collect the water from different small basins. The application of the system of thorough-draining on such lands would only be expense misapplied, and perhaps render the land less productive than it was before. But where a loose sand lies on a stiff clay or marl, no cultivation can be successful till the subsoil be laid quite dry in summer and winter. We find, in consequence, that it is in such lands that the system of under-draining has been practised the longest, and been considered as an essential preliminary to all good farming. Practice invariably anticipates theory, and the application of common seuse by a sensible practical man leads to much sounder systems than the theories of the most acute philosoplier, which very often are logically deduced from uncertain principles. The shrewd, well-informed farmer learn more by walking over a field where the crop
has failed from the land being too dry or too wet, than he probably would by reading the mos reputed system of Agriculture. We are far from disparaging the labours of those who collect facts and record them, judiciously explaining, the principles which these facts establish; but we defy any man to have correct notions on soils and cultivation who has not had long experience, and often corrected opinions hastily adopted by the inspection of his crop in seasons which widely differ-as is so often the case in this
climate. The same may be applied to draining. It is one of the best means of obviating the evils of a moist climate: but in some very dry seasons the undrained land may have the best crops; and in some situations draining may not be necessary, and be a useless expenditure. Before any one begins expensive improvement, it is prudent to consult some experienced practical man, and notallow himself to be led away by the wonderful increase of value of some lands produced by simply draining them. If your land is dropsical, tap it; but do not draw off the moisture which is conducive to health. The same observations apply to subsoilploughing or trenching. When the subsoil is porous or well drained, and the top soil is of a good depth and mellow, his last should be stirred to its full depth, and a few inches more, to mix some of the subsoil with the upper soil, and in the course of time the productive soil will be much deepened. In a few years the subsoil or the trenching-plough may go still deeper, and the depth of good soil will be much increased. But suppose you bave six inches of a very moderate soil over a stiff yellow or blue clay, however well drained, and you use the subsoil-plough to the depth of 14 or 16 inches at once, (which will require six only make a temporary channel in the clay, which will close up by the first rains; and if you examine it the year after, no traces of your subsoiling will remain, and all your labour and expense will be thrown away. This is the consequence of applying a useful principle injudiciously: but if you only move three or four inches of the subsoil, some of the upper soil will be wasned into the openings made by the subsoil-plough, and prevent their closing, while the roots will follow the good earth, and be kept moist at that depth. This has a reference to the depth of the drains laid in such a subsoil: in many cases 14 inches is a sufficient depth for the small pipes to be laid, 20 inches for the conductors, and 26 for the main drains. The depth of these last may be as great as the lie of the land will allow, for they have no communication with the surface, except through the conductors; but the nearer the small collectors are to the surface, and to each other, the more perfectly they will dry the land. It must, however, be kept in mind that you may over-
drain, and lay your land too dry : on a clay subsoil this is seldom the case.-M.

\section*{BOTTOM-HEAT}

At the moment when Mr. Rendle thought his tanksystem had settled the question of bottom-heat, which has been in agitation for the last quarter of a century, it appears he has only formed a link which unites the two fied with great chain-thus forming a circle. He is satissolid pieces of slate, differs nothing in its properties from that obtained by Mr. Forsyth's primitive Killogie system. The Gardeners' Chronicle occupies an intermediate station between Mr. Rendle and myself, and recommends the use of porous tiles to cover the tanks, so that the heat should not altogether be deprived of its moisture: while of convere heal saturated with moisture, with the power these jarring principles, how are the uninitiated to arrive at just conclusions on the subject? I recollect being in But predicament ia 1825 , between steam and hot water. chain, whose ends Mr. Rendle has united :-About 1820, the late Mr. Stewart, gardener at Valleyfinld, in Fifeshire, one of the best gardeners of the day, began to give bottomheat to his Pines, from a chamber heated by a flue, and covered close with thin flag-stone-hot water and slate coverings not being then thought of. After three years' trial, the advantages of this system were laid before the "ondon Horticuitural
But the gardening world, like the rest of mankind, is slow to adopt improvements, and is sadly put out at any new or startling idea. This innovation of bot-tom-heat met a host of ridicule and objections on the threshold, and was firmly reesisted by the advocates of tan-beds and dung-linings : a proposition for obtaining could not well be surpassed in absurdity; and when they were told that a lajer of sand-piaced under the pots to receive the drainage, or otherwise watered - pould supply the necessary moisture, they were panic-struck with the idea:-turning linings for one's life-time wack with the in Now we must relle was Mr St in the the Mr. form vapour instead of having it direct from atal oraising Rendle had proposed his system in those days, it would have been sure to have met with strong opposition from gardeners of the old school. However, this opposition did some good, in so far as it paved the way for, or rather gave rise to, a less objectionable mode of obtsining bottom-heat, accompanied with the great desideratum of moisture-this was steam, discharged into chambers filled with stones: steam itself having previously met with a "powerful opposition," (vide M‘Phail, "Gard. Rem.," 2d d.) But now, the comparison with dry bottom-heat turned element which gave it birth was found to answer better ;
and bere a second struggle ensued-between the adrocates
of sleam and hot water (see the first 4 vols. "Gard. Mag.") No sooner, however, had the advocates of hot water influenced the public mind in its favour, than the most extravagant ideas were formed respecting the efficiency of beatame a question whether laundries could be heated by became a question whether laundries could be heated by
these pipes, or whether the moisture transmitted through their pores should not damp, rather than dry, linen! Thus it generally is with the public mind : a new proposition for facilitating operations must either be nothing at all, or perfection at once-there is no room or time for interme iate degrees. Experience, however, soon determines the quickly with our subject of bottom-heat. Then hot-water pipes were placed horizontally, in rows of 6,10 , and even ver them. A coat of tan or sawdust placed over the pipes did not mend the matter-line former soon rotted, and the latter, if kept dry to hold out longer, resists heat of perfectly dry bawdust over pipes will resist all heat up to the boiling point-a circumstance taken adrantage of in etting conical boilers.
This being ascertained, the next step was taten in 830, by a clever gardener, Mr. Cameron, at Woburn House, near Beaconsfied, who directed Messrs. Grange under his Melon-beds, heated by a 2 -inch leaden pipe connected with the boiler and pipes that heated the pits across them, and at two inches apart, a thin covering of urf over that, and then the soil for Melons. This answere acceedigly well, and Mr. Cameron grew fine crops in rears afterwards Mr. Weeks made a more efficient and less expensive application of this principle, by the use of rick troughs, and by passing an iron instead of a leaden pipe through the water; the covering of the tarks was the sam rater coull be lowered in both cases, also, and dry heat obtained, when thought fit. These are now called Green's pits, and have been in use ten or eleven years, by scores of ardeners and nursery men, without a single objection having oo expensive raised against them. But Green's pits are bave come in as a substitute. These Mr. Rendie's tanks complete, and unobjectionable as far as they go, and for tove plants in pots, for propagating-houses, or for all I have been working upon the very same principle an with porous covers, ever since 1837. The best gardeners and most scientific men in our line in. Europe have seen my bed and Mr. Loudon, among the number,-and an account of its management is given in the "Proceedings of the Herefore, 1 ought, nust be more for the want of brains than of practice Now, I contend that no gardener can grow Pines out of pots, winter Cucumbers, or early Melons, in these closed most objectionable modes of the old school, and for this very reason-that the principle is in direct opposition n this summer in the aware of the experiments carried the tank system; I went to see them in May, June, and July ; the plauts and fruit looked exceedingly well, but ithoutany heatatall. I cutmy earliest Melo pitmaston, same week that these were planted. In three yegre in the hear of gardeners-and good gardeners too-having lost their places because they could not grow early Melons a Cumbers by this system, just as others lost thei places through Mr. Penn's apparatus; and is it, there all this, should thus remonstrate against it? Let Mr Rendle consider these objections, which I offer with th est feelings to all concerned. From actual experience, find he has already effected a very great improvement, and The objection raised in a late Chronicle about the so draining down into the tank and boiler is a valid one, and must be borne in mind; but that about the vapour turnifg he soil into mud is not borne out by experience. From last January to August I had beds constantly subjected to trong vapours from below, one of which I turned over bout the midale of August, to renew it for late autumn Cucumbers; the soil, for the first few inches on the top, fter the plants got established; the next foot of soil was a moist friable state, such as you would choose for rdinary purposes ; but the bottom spit, next the turf, was fter a fall of rain, and the roots of the Cucumbers formed net-work over the turf. Now, if my bed were turned upside down, it would nearly represent one placed on only the first foot below would be like ashes, while the My cid plan of running an inch of rough cinders between
ind the prf, and pouring water through holes
stret in, hould save the surface-soil from this; trivance for watering their beds. After I hear all that can on said for or againgt all this, 1 may perhaps write

THE TREFOIL DODDER
1 buava just visited the Clover-field in this parish, which
stated to be two yards in diameter three weeks ago, now six yards in diameter; which gives us a minefold received appears to have promoted the spread of the Cuscuta, possibly by laving retarded the development of the flowers and by thus fitting the numerous fragment eft unon the Clover for makiog independent and more igorous shoots. Another patch is now a perfect mass of cream whe fow fles stationed themselves, in eeeming enjoyment of the succu lency of the heads of flowers. As you have thrown out suggestion that this Cuscuta may possibly become a checked, I directed my attention to the plants upon which it is now growing and I observed it was attached to and evidently attacking the following species-Geranium dis sectum, Dancus carota Cardaus arvensis Euphorbia exigua, Viola tricolor Malva splvestris, Linaria spuria Senecio vulgaris Medicacolupulina Alopecurus arvesi and anor Some of the plants do injured by it, as they continue vigarous where the Clove is completely dead. I was surprised to find it had so firmly attached itself to grasses, because I was impressed with a notion that no Phoenogamous parasite ever attack an Endogenous species. I had imbibed this notion from De Candolle; but upon referring to his Physiology find that he does not speak quite 80 positively o the subject as I had imagined he did. He mention an Orobanche said to have been found in Sicily the roots of Chamærops, and our very Cuscuta which is found twining itself about grasses, though he still doubts its deriving any real nourishment from them. The fact, he sys, may be observed in fields where clover an grasses are composcd ors ge min among s bis bus to grow upon an Endogen. He names a garden whinch the unsetting of a waggon loaded with infected Clover in this garden be noticed the Cuscuta on plants belonging to thirty different families, but still they were all Exogens. He concludes from these observations, that apparently Cuscutse can exist only on Exogens, or at least much more readily than on Endogens. The determination of this question may be worthy experimental research next year. Y cer and attacked the stems of the grasses round which it has
twined itself; but very possibly its attacks may bear some twined itself; but very possibly its attacks may bear some analogy to those of animal parasites, which cannot long upon very few species of animals. Thus the dog-flea will sometimes bite ourselves but will not remain with us and thus the lice which infest partridges will often annoy the sportsman by crawling about him, but he runs no risk of a colony permanently establisbing themselves on any part of his person.-J. S. Henslow.

AMATEUR'S GARDEN,-No. XXXVII
In the propagation of the Verbenas mentioned last week, the compost used should be poor and sandy, as the object is to get the cuttings to make plenty of roots with out producing much top; for as in most gardens it is indispensable to store joung plants through the winter are kept, there will be the less fear of their damping off are kept, there wincough being overcrowded. The soil we use here consists of the refuse of the potting-bench, such as peat, leafmould, and loam laken from the balls of plants in repotting, to which about one-third of sand is added. In this soll common plants root with great freedom, and by allowing it to become dry before the plants are potted o root is lost. In making choice of cuttings, we take the short-jointed branches, and we insert from 18 to 24 cuttings in a 48 -sized pot; 80 that on an average we store about six dozen plants on every square foot of a pit or
frame, so that a frame six feet square is capable of wintering nearly 2,600 plants.
The various kinds of Anagallis and dwarf Lobelias mak beautiful beds ; and of the former, A. crerulea grandiflora Phillipsii, and Monelli, produce beautiful blue flowers while A. grandiflora makes a good pale orange-red group A. Parksii a bed still paler, and A. carnea is of a pale flesh colour. A. Brewerii is highly spoken of by the raiser,
but as I have not seen it, I cannot speak of its qualities. Of the Lobelias, L. azurea is a lovely colour; also L. erinus, pubescens, and erinus grandifiora, of the
Pineapple-place Nursery. L. bicolor farnishes Pineapple-place Nursery. L. bicolor furnishes a bed with pale blue flowers very quickly; \(L\). unidentata is a stransable for vases and baskets ; and L. hutea, though not be dispensed with. \(L\)., or, as it is a plant that canIsotoma sillaris, makes a good pale blue group; and L. ramosa and heterophylla are two strictly annual kinds of great excellence. The whole of these varieties are very valuable, and ought to be cultivated in every garden
In the management of greenhouse plants, especially hard-wooded ones, as Heaths, Epacrises, and other Cape and New Holland shrubs, Amateurs frequently commit a great error in permitting them, or too frequently forcing not get ripe before the dull weather sets in, the consequence 18 , the points of the young growth become mi dewed, and damp off in the winter, and the plants do no bloom well, if at all, in the following season. Now it nould be quite as reasonable for Wheat cut quite green to produce good Corn, as for unripe wood to produce
fine fiowers, because maturation, in both cases, depends upon the due elaboration of the sap, by which it becomes
organisable, and fit for the reproduction of its kind ; and the first effort of reproduction is the formation of flowe the object for which decorative plants are cultivated. find to make these remarks, because in my rambles 1 find many persons encouraging their plants to grow at injudicious thing. As however, the weather is promising there is yet time to ripen the wood, and to effect thig, water must be gradually withbeld, and the plants have all the sun and air possible, but if the weather should become dull, a little fire may be used, with air in the daytime to expel the damp from the house. These remarks are applicable to all hard-wooded plants, let them begrown on whatever system they may, but more especially to plants grown on the one-shift system, as the rate of growth is so ranid on that system, that more than ordinary attention is necessary to get the strong shoots properly ripened. The progress and great improvement which this system of poting is generally effecting in collections of plants is very pleasing; and though a few may traduce the system, because it does not accord with their preconceived notions and prejudices, it is a source of high aratification to me, that no pen of acknowledged ability has yet ventured to combst the princinles upon which the practice is founded and therefore if the principles are sound it is the error of their application, and not of the system to which want of success is attributable.-- W. \(\boldsymbol{P}\). Ayres, Brooklands.

\section*{HOME CORRESPONDENCE.}

Encouragement to Planters.-Sbould you deem the following circumstances worth inserting, I can, from personal investigation, vouch for their autbenticity. It may possibly be an incitement, to persons to plant who otherwise might not be inclined, holding out a hope to them of seeing timber Society own planting, both ornamental and valuable. The and Commerce were pleased to Arta three different years, their gold medal to Dr. Thackeray, of the city of Chester, for planting the greatest number of forest-trees, amounting altogether to 850 acres, from the year 1804, 400 of which belonged to Mr . Wilson Jones, of Hartsheath Park, Flintshire (late M.P. for the borough of Denbigb) in the counties of Denbigh and Merioneth, and the remaiader on his own property in the counties of Denbigh and Flint. The plantations of Mr. W. Jones were from their being formed, regularly praned till this pentle man came of age to manage them himself, and those planted from the year 1817 to the present time, upon his own Iand, have been regularly and annually pruned and thinned under the superintendence of Dr. Thackeray himself. More than 200 bushels of Acorns have either been dibbled in the 20 or sown in the nuseries for the purnose of filling up all vacancies which may arise. The purpose of filling up all vacancies with fied arise. The taken from th wo been thed wise foung trees asunder: and being judiciously pruned, the tenants have to cause to complain of their land being in any hay injured by these ornaments to the country around It will occur to those experiaced is cuch matera, that effect of oeglect in thinning and pruning is very injurious effect of aeglect innoig an prilng mode of perform ing this duty; and it is to be hoped, therefore, that a few hints be useful to to be jour readers as are ancious for information this subject from one not unaccut tomed to the busineses and having no personal interest promote in the suggestion he offers, but a sincere desire prose \({ }^{2}\). from an from an apprehension of injuring the stem of a tree, by the bor the should undoubly be and the bark doubtedi be calla the bark receive a to lung consqueace, ghorance this, I res am the pri as leave notho but an the the proprietors of entes sensile of thus do to their platations, they would no longer withold an improvenea. I would beg lese tall ine antion of those who lave any plantations to this important trath. Orderly thinning the trees is the next essential to pruning and for ibis purpose the following simple method ahould be and inving and impeding the progress of the neighbouring flourishing trees, ac., and then the pruning of these will be found most beneficial; and the training off judiciously the large side-branches will cause the upright ones to shoot the stronger, and by cutting out the dead and decayed wood, the tree is preserved alive : this simple method will prowace clearness from knots, straightness, and length, and will advance the quality nearer to that of foreign timber; for it may be traced taat where trees are tall, and clear from boughs or knots, the whole substance of the wood is ill always be grain ; and experience proves that such will always be the case. A considerable additional increase in circumference may certainly be expected, in ins whip each other, and for the admission of those nowerful agents, sunshine and air. The practice should be decidedly condemned of cutting off large limbs to improve the timber, and lamentable effects of it may every day be scientific though pruning of forest-trees is but little understoodidoh instructions may be easily had by any in every way profiman earnestly seeking it, and must prove in eving Wherever there are ap plantations, or hedge-row trees, to the benefit of the proprietors and the ornament of our country. A long and progressive work of thin-
ning and pruning demands a skilful and anxious master, and ought to be begun early : in this they differ
from single trees in lawns, \&c. \&c. One common and great error has been to cut off branches to the height of 14 feet from a tree not above 20 or 30 feet high. When this is done the trees remain stationary, and are often
stunted, to such a degree as to assume the appearance of stunted, to such a degree as to assume the appearance of
old age. The leading shoot has always been encouraged and all others checked which have a tendency to compete with it, so as to divide the stem into forks; it being well known that when the leading shoot is destroyed, the
growth of the tree is greatly impaired. By increasing the growth of the tree is greatly impaired. By increasing the
number of leading shoots, the strength of the nutritious principle is in a great measure diminished. To confine to the production of one valuable stem the vegetative power which in a forked tree luxuriates unprofitably in a multiplicity of branches, has been the main object of this gentleman's system for nearly 40 years. In short, from three to five of the largest and strongest side-branches, which would have borne too great a proportion to the leading thereby modifying the tree, and directing its energies gradually to the top, preserving at the same time a sufficient quantity of foliage. Trees thus managed will form close and healthy stems, without any exterior blemish, and be trained to any reasonable altitude, according to the sol neglected, - such is the propensity of most descriptions of trees, or what may be termed "round-headed treess" in open spaces, - they run into branches, without due attention the thus check their loftiness ; and thus the formation of useful timber will not ensure, as may be observed in all parts of the country. The only rule to attend to is, to and free from clefts, the trunk free from all the large branches, leaving those only of the smaller kind that are necessary for the health and support of the trees, and advances in age. But the trunk must be cleared very slowly at first, when the trees are young. Only keep the branches that are left thereon small, by pruning, so as not to injure the tree when it becomes timber. No man can ever plant to profit who does not go through his plantacold, calculating heart , Nothing can he more unpleasant than to cut down a thriving tree; but it must be doasan you will have no timber. Plantations should be thinned and pruned on a regular principle, which will prevent the trees choking each other. If they have been neglected loss of time, and if taken early they will want but little loss of time, and if taken early they will want but little
trouble and expense. I think from experience we may trouble and explense. I think from experience we may
fairly conclude that, providing proper caution is used in fairy conclude that, providing proper caution is used in
pruning, and that we do not cut very large branches, it ia pruning, and that we do not cut very large branches, it is operation, for those smaller wounds caused by prudent operation, for those smaller wolnd's caused yy prudent and gradual pruning, whil heal an a reasonabo the, and P.S.-It has been suggested by a highly-respectable Scotch gentleman residing near Cupar Angus, that much
benefit would result from the encouragement by planters of some experienced and well-qualified pruners and trainers, who should go from estate to estate, to show to young pruners and trainers of young woods a proper
system of management in thinning and pruning, extending their pretensions no further. He is certain, and I agree with him, this would answer, could gentlemen be prevailed upon to shake oft old prejudices and fancies. An inti-
mate knowledge of the habits of growth of the different mate knowledge of the habits of growth of the different
species of forest-trees, and of the influence of soil and species of forest-trees, and of the incluence of somber, is absolutely required in the business of valuing plantations prospectively. There can be no doubt of the great adyan-
tages arising to the country and to individuals from a continuation of the system of planting which has already done mo much good for Scotland. The amelioration of the climate, the improvement of the soil and pasture, the con venience to the poorer population, the profit to the richer,
the independence and defence of the country; every conthe independence and defence of the country; every con-
sideration, in short, only impresses more deeply on every sideration, in short, only impresses more deeply on every
thinking person the conviction that the landholder acts at once a prudent and a patriotic part, when he covers his barren acres with wood. It is one of the few modes by which he can add anything to his income, beyond his mere rent-roll. When an old hedge is planted the labourer should be allowed one penny for erery young tree he saves,
by which means the estate will soon be covered with fine by which means the estate will soon be co
growing timber, at a very trifing expense.

-H.W. Humphreys, Vicar's Cross Nursery.

Clover Pests; Clover-Rape, de.-For the last seven or minor in the Clover-fields in this neighbourhood, but never so much as in this summer. In the latter part of the almost every field which had been cut for hay, but more particularly on gravelly soils, and in many instances the Clover plants were much injured, so as materially to affect the second crop. If the attention of the farmers be readily extirpated, as it is a wery conspicuous plant, show ing itself above the Clover; and in all cases where the Clover is left for seed this should be carefully attended to. The Orobanche does not show itself again in the same field till it is again somn with Clover. I can fully cor roborate Professor Henslow's remarks upon the "Cuscuta not noticed it till this year : it is now committing great ravages in some fields directly under my notice, being now in full blow and vigour ; it destroys everything it comes in contact with. I intend carefully to notice its habits, and shall on future occasions give you the result. I thin patches, at present only in the Clover, -Henry Dixan, Witham.

Transplanting.-"Ortolano" appears to be surprised standard Rose and Pear-trees; but I do not see how could have been expected that a Pear-tree, (which is one of the worst trees to remove, as it is frequently badly rooted, when the fruit is just forming and the tree making its growth, should succeed. All gardeners know that to reot then would be certain death. Wrolan does teen sorts being grafted on it, "and each shoot producing fruit true to its kind, year after year," I conclude that i was of no small size. In removing a Rose-tree in June Chave frequently succeeded ; but there is a wide difference between a Rose and a Pear-tree. By frequent watering think it impossible to save a Pear-tree of considerable size at such a seasor.- Timothy.
Wasps.-I find that these insects are very numerous and roublesome both in my house and garden, near Taunton nd a centleman, not a mile distant, informed me last week hat 14 nests had been destroyed within a bundred yards of his house ; and another friend states that they were so ploughing, as well as having made a nest in the thatch of his farm-house.-C. A. Roeford.- In the vicinity of Bristol, although not so numerous as last year, still they annoy us very much, attacking the fruit, and spoiling it before it is near ipe. The working Wasps did not make a great many Queens in the spring.-Hesperus.
Potter's Guano - A neighbour of minethe
received some of this manure a few monthe that he he had shaken out of the sacks as much as he could, he washed them, and the water produced a very striking effect upon his grass land.-* South Wales
Vines.-In looking over the Chronicle lately, I wa glad to find one of your correspondents, (page 573,) since in your Paper, on Vines growing all sumnaer without stopping. He says you startled many Grape-growers in nd thing. 1 mast acknowledgo hlo 1 was or these Subscriber" has chosen the highest authority-One that "knew all things and spoke as never man spake." I do in some measure,'understand Him when speaking of Him many of these, that have brought forth fruit purged, that they might bring forth more fruit. Some, like himself have suffered poverty, -others He has suffered a wicked world to persecute,-and many have had to pass through brought them forth as gold. Have been endeavouring for some years to understand it on the Grape-vine, but I must confess that I have not yet found out the secret A Subscriber" quotes the xpth chapter af John and 2nd taketh away, and every branch that beareth fruit He purgeth, that it may bring forth more fruit." And then he says-"this is my system," "ithout telling us what hat system is. Are we to understand that those that in the spring, that do not show fruit? I am afraid we hould have very irregular crops of Grapes, and very unsightly Vines. Whatever system of pruning and trainregular crop of fruit from the top to the bottom of the regular crop of fruit from the top to the bottom of the
rafters. "A Subscriber" cannot mean the Long.rod system, because he says he purges or stops all fruit-bearing brunctus, has practised the Long-rod system knows that
one that hat those brandis the win e and their places taken up with branches linto the brought forth little or no fruit. This cannot be his system. I shall he glad if "A Subscriber" will be so obtaining good crops and fine fruit.-A Subscriber from he Beginning
Melons.-It is said that pigeon's dung is the best manure for Melons; and that the Persian fruit thence derives its superiority. nobles and wealthy individuals are said to keep ten, fifteen, twenty thousand pigeons, chiefly for their Melon beds. Not having been in Persia, the writer of this note
cannot speak from actual knowledge; but what is here stated is given on very good authority.-E. M. [We towers with to be the fact. It is said that sma dung can be cleaned out, are built in the Melon-fields of Persia. No doubt Guano would have the same effect. But those Melon-grounds are said to be regularly irrigated.] Amaryllis Josephince.-Some of your readers may feel interested in a short notice of a specis Stan the near Ludlow. The 8 sem is 23 inches in height, by two inches in width; flattened, but thickest down the middle, and slightly iwisted. From the head of this spring twenty-nine stalks, about 11 inches in length, bears a flower, 4 inches long, from the base of the germe to the extremity of a petai; pale orange-coloured in the tube, dull red at the moulh, but appearing rich and brilliant in a transparent light. The six stamens are of unequal lenath: the filaments and pointal carmine coloured, and the pointal is about a of an carmine than the petals. The germen is triangular and \(\frac{s}{5}\) of an inch in length. The plant is leafless: it is now in full flower, but its beauty is begianing to decline. The soil vegetable mould-with a little sandy bog-earth. The buib has been blown in a common pinery.-J. Smith. Grape Wine.-I gathered my Grapes one fine day, (rather an inch into a tub, and presseld hit joll cricket-bat. Each bunch was thus pressed as it thrown into the tub, and the produce was about four gallons of juice. To this was added about fourteen pound of loaf sugar and about four gallons of pure pond watei I allowed the stalks and seeds to remuin during the fermentation (which was very steady for some days); then strained off the Wine, and allowed it to remain exposed eight-gallon cask, which I did not bung down for three weeks or a month afterwards, when all fermentation bad entirely ceased. The wine was bottled off in about ten or eleven months, and has been mistaken by experienced
travellerg for Moselle. Encouraged by have since made two more quantities, but I bue ins, instances made wo nore quanties, but 1 have in bot the fermentetion: 1 an cas sugar the consequal is mine now is like "CC pagne non mousseux." I may add that the strength of the wine is very considerable; it burns like brandy, particuarly that made last year, in which the proportion of juic to water was as three to one. All wine-makers that I the consulted have some nostrum or other to improve indispensable, but I have not used anythiug of the kind. The Grapes \(I\) used were chiefly early white varieties, but being ripe. The time was October.-An Original Subscribet
Peas.-I sowed a pint of the Prince Albert Pea early in the spring, and at first felt disappointed at their slow progress. However, they realised my expectations a last by coming in a week earlier than the Early Frame,
which were sown siz weeks earlier. As \({ }^{\text {s. }}\) soon as the first crop of Prince Albert's had ripened seed, I again sowed few short rows under a wall exposed to the sun On the 6th day after they were sown they were geneon the 28 th day from sowing they were in full flower. They are, however, very dwarf, and the pods are not large nevertheless, I think it is a remarkable instance of rapid growth and perfect

Double Slocks.-In looking over your "Notices to Correspondents, in last Number, p. 633, what you say to "Timothy" about his double flowers attracted my notice. You observe that double flowers cannot be fertil's.d with You will pardon my saying that some (I do not say ell) double flowers cannot be fertilised at all, of which ti.e Stock, the plant specified is one. I well remember its being a common notion that double and single Storks
should grow in close contact, (I have often seen them tied ogether, heads intermixed, ) with the view of the double mpregnating the single, that the progeny from the seed might be double, this was the result of mere ignorance, for if you take a solitary flower from a double Stock and examine it, you will find it possesses no organs of feriliza-
tion whatever ; but is a mere mass of petals without either stamens or pistil ; consequently, impregnation cither way is a natural impossibinity. Some double flowers, however, bear seed, of which Delphinium Barlowii is one instance; and I have known the double-flowering Peach bear fruit, which was spoken of as a "great marvel" at the time. I was then young, and never thought of examining the blossoms. Again, you observe, "Nor will single flowers produce double-fiowered seedings, umless in the presence of flowers partially double." This also think a mistake, and for the following reason: Some years ago I was very anxious to get double Stocks, and selected and marked flowers with \(5,6,7\), and 8 petals, making sure of success, and yet utterly failed. Whence hen, you will say, are we to get doube-flowering Stocks? for as "Timothy" describes his friend's Stocks being without male or female organs, they certainly are "absolutely sterile." Double Stocks, then, are mere monsters, the effect of culture; and if you will promise not to teil all the world I will endeavour to instruct you how to produce them: that, however, I shall reserve for an other day,-Querous. [Of course when flowers ule respondent observes, some which are not entirely mitso

THE GARDENERS CHRONICLE.
formed will do so. The doubleness of flowers usually arises from a change of stamens into petals, as in the Rose, Ranunculus, Anemone, and Cherry; but it often happens that in such cases the pistil is not transformed, and when that is the case the assistance of flowers either wholly or partially single is required, and will produce the usual effect. As to Stocks, we should like
opinion of Stock-seed growers on that point.]
pinion of Stock-seed growers on that point.
Hydrangea.-A fact has come to my knowledge which may be useful to the lovers of blue Hydrangea. A lady, a friend of mine, removed some plants that had always showed pink blossoms from a former place of residence, and planted them in a bed of bog-earth. They immediately began to blow blue, and have continued to do so for the last three or four years,-as fine a blue as the
plant is capable of. On examining the bog-earth, I find plant is capable of. On examining the bog-earth, find matter, which I suppose to be an oxide or a carbonate of iron (sand, a little clay, and peat, forming the bulk of the
mass). The springs which feed the peat-bog from whence mass). The springs which feed the peat.bog from whence the earth was taken are strongly impregnated with sula smell of sulphuretted hydrogen is sometimes to be perceived about them ; and I have seen sulphur sublimed amongst the peat-turf fires of the cottagers, who burn it. In the chemical changes which take place also amongst the bog where the water throws down its iron, I think it a portion of the aluminous matter of the clay, and the plants may thus get alum in its nascent state. But, whether it be the superabundant oxide of iron, the sulphur, or the sulphuric acid, or the aluminous compound, the fact of ferruginous peat-bog being favourable to the blueing of Hydrangeas may be relied on. Perhaps it may be right to mention, that the subsoil of the aboveOn the Proftable Management of Bees.-The object of the writer is more particularly to address the Bee master, who may have for years past kept Bees, on what is now called the old system,-and if I can induce such persons, at present averse to any change, to advance just one step, it will, I feel confident, be the means of their advancing many paces by another season, for their own profit. It is not to be expected that the cottager can purchase one of Nutts he could not make one complete under 40 s. He must be shewn a cheap way to arrive at nearly the same end, and if he does not procure within a few pounds weight what might be gained with a collateral made, and that on a very simple plan. I commenced keeping Bees when I found it practicable to procure honey without destroying the Bees. From expericato of their habits, to gain some little knowledge of the subject; having rept Bees on several plans, and in differently formed hives. I will begin with the most simple, and and and tempt the owner of a stock to prepare a hive for his swarm next nseasol, Bay 16 in. diameter, left with a flat top, about 12 in . diameter, into the centre of which make a hole 2 in.-_take the edge of in the inner side to allow more room for the Bees to ascend-fit a bung in moderately tight, and 1 . the top without any aperture to allow the Bees to go in and out. Let a swarm be procured in the usual way, which covering to protect it from the weather, on a pedestal, but not too near a wall. Should the swarm be a very early one, syo dress the top hive and withdraw the covering to the 2 in . hole; this will most likely not be required till the following year; , when the top hive has been on-say
from the Ist of June or middle of May, according to the season, about the first week in August, in order to pro cure the honey moun the previons mons and sepa rate the fastening the Bees have made-draw the top hive upon a clean board or sheet of tin, and carry it 10 yards off ; have ready a large garden-pot to stand the hive in, and should the operator have sufficient nerve he may shake nearly all the Bees out into a large dish and replace the hive in the pot, and in 20 minutes all will have lefthave done this frequently without a sting. If when the hive wos it had been weighed and also the stand, and the weight had been on the side of the stand so as not to b the weignt hald enable the owner to ascertain sufficiently correct the amount of honey left for the stock for the correct the awo stock is always the cheapest to main siner. A Ans Theve known many willing to try the above plan during he the winter. When Bees are torpid, cut ofthe hop of the ive and and nite it the hive with long brads. The prepared, and unfficiently provided for the pinter, and himself sufficiently ufficiently provided for the winter, and himself sumcient epaid for ant ine crouble a aving or looking and and and and days time lost, and not so numerous a collection of hives, ordinary cottage hive. This must be the first step, and should success attend it, books on the subject will be read, new plans talked over, in order to find a mor improved way beyond this our first step in improved
Bee-keeping.-G.C. Bee-keeping.-G.
Aromarias. "Oriental," at p. 609, seems to doubt the power of aromatics-as stated at p. 559 , I would beg leave to inform him, that a friend writing to me from Columbo, the odour of the Cinnamon was perceived by all Columbo, the odour of the Cinnamon was perceived by all

Magnolia fuscata.-I shall be glad to know if any of the flowers of the Magnolia fuscata possesses any attraction for blackbirds and thrushes. We have had a fine plant in bloom all the summer in our conservatory, and some time ago I was much surprised, upon going to shut the house up, to find several very large panes of glass They were repaired, and, to my chagrin; I found the same they for a fays afterwards: but in this instance the cause was apparent for a bleckbird, which had been killed y the violence of the concussion, lay dead amongst the fragments of glass In order to prevent such an occurragments of glass. In order to prevent in future, \({ }^{\text {I }}\) I fastened a net over the windows necessary to be opened, and this proved sufficient for some ime, but yesterday I found that a thrush had effected an norance, ind it could only have been through a broken mesh in one corner of the net, as that was the only mesh in one corner of the wet, ahich a bird of its size puld enter. Tit thong did not strike me could enter. Until then, the lhoug of the abore plan (smelling a between Melon and Pine apple) that caused their ertinait in and that they had mistaken it for that of fruit. I do not like to discard the plant on such a supposition, which, after all, may be only thought ridiculous one; therefore I shall feel obliged by information thereon.-Jno. Cox, Thame Park.
Disease in Pansies.-I agree with "R. L." that the otting of Pansies is many growers are of opinion that the anpeles (Juli) are the cause, I shall endeavour to prove a large plant, just beginning to flag, be carefully taken up, and the roots washed, on in of the principal roots, and to have extended thence ppwards to the main atem. The affected part will be brown and decayed, particularly where it was irst diseased nod if illas been some the tibres will have quite rotted away. to the main stem, those roots proceeding for the stem this case extending downwards. In no instance in which I ave taken up plont which has just begun to droo ave I ever found pne of the Millipedes, although, on the contrary, there will be numbers if the plant has been long ffected. These insects, as I believe, only attack decayed matter, and never, to my knowledge, undecayed. In this opinion I am borne out by your correspondent Ruricola, see vol io, p. 196, and in conirmatio of what he there states, lately saw Julus complanatu with a small fly in tis mouth. I am unable to assign the cause of this sudden decay, but as some soils and localities are more subject to 1 , than others, I wil give my observations upon in. 1 have always found pansies grown in soll which has been longest in cultivation, and therefore containing the greater quantity o humus, to be most liable to it; while, on the contrary resh loam, rather stiff than otherwise, is the best suited to them. The real secret, however, I think, for the healthy growth of Pansies, is good air, as smoke and the vicinity of a town are most prejudicial to them. This is the conclusion at which 1 have arrived, from an examinafion of most of the metropolitan nurseries, as well as thos in the country. In connection with what \(X\) xecommended . 147, 1 beg to state that now much prefer dry airy situation to a moist one ; and instead of shading plants, whether for exhibition or not, I think it mor advisable to keep them as open to the light as possible, from their tendency to draw. When seed is sown, the sowing sould never be delayed beyond the autumn, as it make a great difference in the quality of the seedlings, and these should always be transplan
luxuriant growth.-An Amateur.
Hyaraur Chronicle, asks if Asphalte will answe better than Roman Cement for Tanks, \&c.,-I reply, the former material is wholly unsuitable for upright walls or any description of water-work. Roman cement, if properly used, will uniformly succeed; it is applied to a great extent in the reservoirs of water and of gas companies, as well as in docks, \&c.. The material should no be used too late in the year; the frost will never affect it if the work has had time to dry. In the formation sand, but the inside stuccoed with cement alone, the bricks being first well wetted. If "J. B. H." will adopt these precautions, he will not incur further failure.-Nine EIms.
Wheat-sowing.-In the review of Davis's tract on the Injury and Waste of Corn from the present practice o too thick Sowing," it is stated that different opinions are beld respecting the tillering of Wheat, some maintainin that it should be allowed to tiller, others that it should not. Without entering at all upon the question, I would simply ask if the cause of the tillering of Wheat is ascertained by Agriculturists of the present day? for find that various opinions were entertained respecting it by farmers forty or fifty years ago. According to 1807, "Tillering depends much on the expansion of the soil properly repressed." Dr. Cullex, again, in 1768, gives it as his opinion, that tillering is promoted by resistiog the progress of vegetation in the yoots, by the ladhesion of the soil, and by cropping the leaves. In more recent cimes, it appears to be the opinion of others that it proceeds from a certain property belonging to the plant. In the description of the variety of Wheat called "Mongaswells " we are informed that it tillers well, and again, in the Gregarian variety we are told that it tillers sparingly. Perhaps the opinion of Vegetable Physiologists of the present day respecting the caise of the tillering of Wheat

Chronicle, and would oblige your humble servant,-Peter Mackenzie.

\section*{MISUELLANEOUS}

New Kind of Corn.-Mr. R. Clarke, the Senior lately brought into notice a kind of grain called "Fundi," or "Fundungi," (Paspalum exila Kippist,) cultivated by industrious individuals of the Soosoo, Foulan, Bassa, and Joloff nations, by whom it is called the "Hungry Rice." It is a semi-transparent cordiform grain, about the uize of Mignomnetteseed ; the ear connisto of two
conjugate spikes, the grain being arranged on the oute edge of either spike. "The ground," says Mr. Clarke, wood and hoeing between the roots and stumps. It is sown in the months of May and June, the ground being slightly opened, and again lightly drawn together over the eeds with a hoe. In August, when it shoots up, it carefully weeded. It ripens in September, growing to the height of sbout eighteen inches, and its stems, whic are very slender, are then bent to the earth by the mere weight of the grain. The patch of land is thea eithe suftered to lie fallow, or is planted with Yams or Cassada, in rotation. Experienced cultivators of this Lilliputian grain have assured me that manure is unnecessary,-nay njurious, as it delights in light soils, and it is even raise Kissy. When cut down, it is tied up in small sheaves and placed in a dry situation within the hut; for i allowed to remain on the ground, and to become wet, the grains become agglutinated to their coverings. The grain in the sun, to allow of the more easy removal of the chaff in the process of pounding, which is performed in wooden mortars. It is afterwards winnowed with a kind of can fanner on mats. In preparing this delicious grain for ood it is first put into boiling water, in which it is poured off, and the Foulahs, Joloffs, \&cc. add to it palm oil, butter, or milk; but the Europeans and Negroe connected with the colony prepare it as follows: to the grain cooked as above mentioned, fowl, fish, or mutton, With a small piece of salt pork for the sake of flavour, is
added, the whole being then stewed in a close saucepan. This makes a very good dish, and thus prepared, resemble "Kouskous." The grain is sometimes made into puddings, with the usual condiments, and eaten either hot or cold with milk. By the few natives of Scotland in the colony it is dressed as milk-porridge. This grain could be raised in sufficient quantities to become an importan article of commerce; and I have no doubt would prove valuable addition to the list of light farinaceous articles of rood in use among the delicate or convalescent. The paratie with which Mr. C. has favoured us, is, before prethe husks, it car dull brown colour. We, very fine millet
Receipt for making Grape Wine.-Water, \(4 \frac{1}{4}\) gallons, and soaked in Grapes, 5 gallons, beer measure, \(10 \frac{1}{2} d\). per lb,-the Grapes, perhaps, 5 s . The cask in which it Was made held exactly \(6 \frac{3}{4}\) gallons, beer measure, and produced 34 bottles of wine clear. A bottle of the above wine kept ten years,

GARDEN MHNORANDA.
Windsor.heard much of the castle and its noble and commanding terrace, I first directed my steps thither. I will not attempt to describe
the sensations which I experienced as I traversed the magnificent the sensations which 1 experienced as I traversed the magnificent
suite of apartments which distinguish this Royal residence from all others of its class; strll less will I seek to give utterance to the intense delight with which 1 gazed from the castle windows upon the widely extended and riclly-wooded landscape which
was spread out before me. The castle and the view from its ter race, as well as the splendid old chapel, have bren described a
hundred times, and if nothing be so "tedious as a twice-told tale,' it would be very bad taste in me to launch rut upon a topic which has been so often exhausted. Let us turn then to a sub-
ject which combines within itself all the charms of novelty, and in which nature and art seem to vie with each other, in their endeavour to excite our admiration and surprise; and such a
subject was brought under my notice by a vist to the new Royal Gardens, situated at Frogmore, about a mile from the castle. I hat often heard of the great operations which were carrying on
within this spacious area; but I confess I was not prepared to expect such a coup-d"ceil as greeted my approach to the forcing department of the gardens. Let any one imagine a range of
Horticultural buildings, upwards of goo feet in length, all comHorticultural buildings, upwards of 900 feet in length, all com-
posed exclusively of metal and glass, and presenting the elegant and fairy-like appearance peculiar to these structures, although
united at the same time with real strength and durability. Then let him enter this noble range of forcing-houses by the door at the eastera end, and, looking directly before lim, he will com-
mand a vista of 400 feet, comprising a greenhouse, two pineries, two peach-houses, and a vinery, each one communicating with the other by means of a glazed corridor or lobby; and all the doors being stationed exactly opposite to the one by which the
range is entered, an effect is produced which no words can aderange is entered, an effect is produced which no words can ade-
quately describe. Then, as the visitor leisurely walks through quatery describe. Then, as the visitor leisurely walks through and he will find that the principals, or framework, by which is to
be understood the rafters, standards, gutters, and sills, are all composed of cast-iron, whilst the bars or divisions between the panes of glass are of copper, and the rims of the sashes or ligits liarity which he cannot fail to observe is, that the whole range of from st to 80 inches long, and of such a thickness as to obviate
arises from the action of frost is effectaally prevented by the curved form in which the ends of the panes ara cut, and by the The particulars which I have thus noticed with reference to the east wing of this range, will equally apply, in all points, to the

Dr. Justus Liebig, in his Relation to Vegetable Physiology. By Dr. Hugo Mohl. (Dro Justus Liebig' Verhältniss zur Pflanzen-Physiologie.) Tubingen. Fruas. 1843.

\author{
(Continued from page 632.)
}

The assumption (continues Dr. Mobl) that the organs of plants consist of gluten, albumen, and wood, and that ther constituents, like sugar, starch, \&c., are mere secretions, is decidedly wrong in an anatomical point of view, fibre alone and all ther ingans consists of woody served in the cellulare substance, \&cc. The same objection may be raised against the opinion, that starch, gum, \&ec, may, be raised against the opiniog, that starch, gum, \&c, stituent parts of the organ. On the other hand, Dr. Mohl considers Liebig's opinion, that a greater amount of nitrogen is required for forming woody fibre, than sugar, gum, starch, \&cc, as perfectly true. This is corroborated by the experiments of Payen, who found in all young organs, while in a state of vigorous development, an abundance of nitrogenous juices-which leads to the conclusion that nitrogenous substances are esseatial to the development of new elementary organs, a position fully borne out by recent microscopical experiments on the formation of the celluar tissue in prms. Of this the case, neary related to wood smount of nitrogen. and that a less requres alo a it may suffice for the abundant forma amount, althouga a all on produce a smatl tion of thest by tielt The of woody fibre, is an opinion auopted by Lieoig. It may be also assumed, that if such an amoun or nitrogen as is sumcient is the dided hetween the formation gum and other similar substances (composed of carbonic acid and water, ) and that of woody fibre-the same amount of nitrogen might suffice for the formation of a greater amount of woody fibre, and therefore, for the more vigorous grow . where the plant has already absorbed part of its food in the form of substances, which (being composec of carbonic
acid and water) have also attained the first degree of vegetable assimilation.
Liebig believes, that, in this case, the function of the leaves will be impaired. This, however, it is impossible to decide, as we have not even an idea of the variations which the assimilative process may undergo, according to the aiference of the substances on which plants feed. It is also, in most cases, less essential to know whether plants absorb only organic substances and water, than whether it is necessarily in conjunction with inorganic matter, that sach a the digestion (Verarbeitung) of inorganic substances would not be suspended ; bat, ia conjunction witi his assimalative process, another and different one wound make ita appearance." To decide on the existence of these prowhich , as we neitherdergoes in plants. manner in which gum or sugar are formed, nor of the further changes of these sub. stances into woody fibre. Chemistry, it is true, can change wood and starch into sugar, but only by the application of strong chemical agecies, wich we know are not made use of by plants. 10 imitate the real process is beyond the reach of chemistry; still, it is to this very process that plants owe their growth. Under such cirorganic substances, and to observe make plants absorb their growth exhibits subsequently. It has been shown already that certain plants live only when they absorb organic substances; our cultivated phants prope the same Saussure, which have not been hitherto disproved. The theory of Liebig, therefore, is untenable, and is equally

\section*{the nutritive processes of plants}

Liebig has himself felt that arguments found fact are required for the support of his theory, and he has pitched upon Mount Vesuvius to supply it. He dwells, therefore (page 181), on the luxuriant crops in the environs of this mountain, in a " soil, which, according to its origin, does not contain the least trace of organic matter, and sill is considered as the very type of fertility. We possess, however, no chemical analysis of this soil, L. say anything on the subject, cinders, neither does Leneral volcanic origin. But it would be a surprising thing (says Dr. Mohl), if a soil, on which, for many centuries past, most extensive farming operations (Dreischwirthschaft ?) have been carried on, should be destitute of humus. This could be only the case, if, after every few years, it was again covered so deeply with the ashes of
constantly new eruptions, that the ancient soil and all constantly new eruptions, that the ancient soil and all its organic mater should be placed beyond the reach of new cropy. This, however, we know is not the case, and even such eruptions as do take place at intervals could not effect this. destruction of Pompeii) was that of 1822 , which amounted on the slope of the mountain to 3 feet, and in the plain
from 15 to 18 feet; but this was (according to Humboldt) from 15 to 18 feet; but this was (according to Humboldt) over, that even the slightest fall of volcanic cinders kills vegetation over an extensive area, so much 80 that one crop amongst eight near Mount Vesuvius is always lost through such calamities. It is, therefore, these very falls of ashes which cause the formation of a vegetable stratum on a large scale, and such must contain humus. This corresponds entirely with what Mr. Lyell states
( \({ }^{6}\) Princ. of Geol." \({ }^{\text {in., }}\), 148), that he found, near Pompeii, under the volcanic cinders of 1822, a layer of vegetable mould of the thickness of three feet.

\section*{The Guide to Service. The Farm Bailiff:}

Amongst the tracts published by Mr
Amongst the tracts published by Mr. Chas. Knight under the title of "Guides to Service" there are few in which so much practical matter has been condensed in a very small space. When we say that we have reason to
believe that this little work is from the pen of our old believe that this iittle work is from the pen of our old friend Martin Doyle, we prepare our readers for finding it
full of aseful practical information. We have perused it full of useful practical information. We have perused it with attention and much pleasure; and we can safely recommend it to be placed in the hands of every young farmer, as well as into those of young bailiffe, for whomit is intended. As a specimen of the style in which it is fritten, w
' Now, though a [worn-out and tired animal requires rest, as well as nourishing food, to recruit his exhausted powers, this cannot be correctly said of the earth, which is perpetually reproducing, and only fails in yielding her productions from the exhaustion of those properties which constitute the food of plants, and which are only supplied, in an effective degree and quickly, by manures that contain the required principles. The earth, so far from taking advantage of any kind of rest which a farmer may be disposed to give it, will produce something-it will not rest energies; and, therefore, on the same principle that a parent will give his children some useful sources of occupation, to prevent them from doing mischief, which he knows they will commit rather than be idle; or as he will cultivate their minds, and sow the seeds of useful know ledge, lest noxious weeds should spring up in their room, so will the prudent farmer sow something that will produce a profitable return; he will imitate the practice of the gardener, who never dreams of letting bis garden rest, because he knows that it will perpetually produce useful plants of one sort or other, and that if he does not cultivate some of them, a rank and luzuriant crop of weeds would be the spontaneous growth of the teeming earth."
We need hardly add, that the most experienced farmer will find something to learn by the perusal of the 125 pages of which this little work consiata. \(-M\).

Rivers's Descriptive Catalogue of Roses for 1843-44 has just appeared. Its excellence as a guide to purchasers announce it. We must, ecrever, state that, in thi edition, Mr. Rivers has done additional service to Rosefanciers by pointing out the best sorts, by paragraphs, calculated for small or large purchasers, and by marking those that are remarkably sweet-scented.
CALENDAR OF OPERATIONS for the ensuing week. IN all lofty conservatories, where mixed climbers are intended to be brought to the greatest perfection, the roof-sashes should be
fired down, and no air given at the top of the house. All the front and cond sashes if the house lie detached, should be made to open; and if the back part be a solid wall, there should be ample provision
made for giving air along the top of it ; or, what is better, let open. made for giving arr along the top of it ; or, what is better, let open
ings be left in the back wall from top to hotton, and fitted up with
folding shutters, for the purpose of ventilation. Mr. Paxton has
 hody of a house thus arrarged can be kept as cool as that out-of-
doors; while the top of the house sa as lot as a stove, or at lenst as
hot as au intermediate house ; and clumbers will grow and flowe with great freedom in such a temperature. Now this arrange-
ment is neariy the reverse of uhat you gencrally see ; and the Calenplants we find it to answer very well, and it is very casy to manage The roof in nearly air-ticht, and the panes of plass are 45 incles in length, by six inches in breadth, and are of the bent slicet glass. In lens, flower as well as you could wish, with others nearly as tender The grand desideratum for conservatory climbers is, that they should that they are of thone kind that are not yery liable to ingects: but
if they be judged by this standard their number will become
scarce indeed, Here and there one may see a climber flowering in all tlie gorgeousncss of its native dingle, while others in the same
house may be under mediocrity, and perhaps only a source of vexahouse may be under mediocrity, and perbaps only a source of vexa-
tion or dsappointment., Now, instead of trusten, to one person's opinon, as "Devonian, " proposes, how much hetter would it be
others would follow his example, and say what best succeeds wit them, and what failed, or what they did not like; we might thus, in a few weeks, be in posseasion of all that is known on the subject.
As a proof of the fallacy of trusting to any one's opinion implicitly As a proof of the fallacy of trusting to any one's opinion implicitly,
however extensive his practice may have been, I may state that I did not previously know that Bignonia cherere flowered from the 1st o who tried and flowered it in a cool house. The one from which th Dropmore in 1829, and from this plant mine originated in 1830, and flowered in 1833, and for two or three years flowcred only from the middle of June to the middle of August. Canavalia Bonariensis, like Thunbergia coccinea, is too much like the Scarlet-runner Bean to
of much interest. Duranta Ellisiii 1 never saw grown as a climber
Duranta Suranta Plumieri answers hetter, but Plumbago eapensis, whe Ne thing; and, like the Durantas, is a thirsty plant, recuiring until Octolmer, by shortening some of the strongest branches through
the summer. Jasminum heterophy hum I fluwered three year the summer. Jasminum heterophyllum I fluverce, three year
rumnung; it is only fit for the rubbish-heap. 13ignonia, or yathe
Tecoma jas minoides, is a grand climber, nnd one of the verv lost handy ones. A friend of mine, at Cheltenham, who , s sery fond of clinllerg,
thus writes concerning it:- This plant has bens so fine thi season that I really do think we have nothing at all so truly beauth the giass; early in spring I had it taken down and bent in all forms
so as to cover about four square yards; from the middle of July it has been one mass of bloom, having from 400 to 500 blossoms ex-
panded every day." Siphocampylus is best trated as a pot plant
for winter fow October. A plant of it against our conservatory wall has acarcely been out of flower for the last two years and a balf.
1.-KITCHEN-GARDEN AND ORCHARD.

Pinerr.-The late heavy rains, though partial, have reduced the houses; at any rate no sudden depression should be allowed yet ndecd, young Pines will be in full grow th for two months to coine;
it is much better to assist them well now than to allow them to grow winter. See,
long time hence
Vinery-AAl young Vines, and those grown on the long-rod
system, should bave the top sashes now kept up day and night, till system, should have the top sashes now kept up day and night, till
the wood is perfectly ripe, and the air necessury for the fruit admitted by the front sashes only. It is an excellent old plan that of growing \&c., towards the top, and the hardier ones at the hottom, of the heat at top, while the
Late Merons, Cucumbras, Musurooms and Kidney Beans,
to come in next November, and some other things which are never attempted but by good gardeners
be excused if I pass over quietIy

On Sunday, the 10 th inst., an awful thunder-storm passed o previounly very dry, and could take in the net but slowly; in wess
than 10 minutes all the level portions of the kitchen-ecardens were covercd ankle-decp with water, thus putting a stop to all operations on the soil for some time.
Listrucs.-The last sowing of hrown Dutch Lettuee is gencrally says he lias not lost a plant from this sowng fur the last 10 years,
because they come up slow and stocky through the cool of the autumn Sprinack.-The Winter Spinach, Onions, and Carrots, sown in as the surface is dry, after every rain. Recollect, stirrings in this Water-cresses.-These will grow just as well on a damp, shaded border in the kitchen-garden as along the brook side, and will be ten
times safer for use from such a place than in the natural win they are always more or less sown over with the eggs of insects and
other creatures frequenting pools or running atreams. Now is the other creatures frequenting pools
best time to plant slips of them
CADLIFLOWERS.- Sec that the plants for next year are all right;
cially the plants from the last sowing. insects, which is not difficult this geason, there is little to do now in
the orchard. Mr. Rivers tells me that his dwarf root-pruned trees are better this year than ever they have been.
I.-FLOWER-GARDEN AND SHRUBBERY.
Srove.- Some years ago people used to light fires to ripen off
their stove plants about this time ; but a better plan prevalls now when the plants have begun growing freely in spring, the heat is arrly, so that by this time no ripening of wood or late growths
is needed, and the plants are gradually put to rest by the natural decline of our seasons. Plants thus managed should never receive more than \(55^{\circ}\) of artificial heat in the dead of winter; yet there is
no danger if a warm day rises the temperature up to \(80^{\circ}\) or \(85^{\circ}\), with a little air. Orchidaceæ growers will he glad to hear that the queen
of these gems, Lolia superbens, is throwing up a strong flowerpike, treated on the cool system, but not with me.
Gremgovss.-This house should now be in thorough repair,
and in a clean, sweet condition, as many of the more tender plant and in a clean, sweet condition, as many of the more tender plants
must soon be removed in-doors. If the weather holds tolerably dry all the stronger grecnhouse plants should be left out as long as pos apparent, as the tights can be left off, except in rainy are mos frosty
weather, whereas the weather, wherean the greenhouse has no such advantage.
Co NSERYATory. - What a luxury a nice light conservatory is, Iet
ite ever so small, when attached to part of the sitting-rooms and what a contrast, too, with the heavy, ill-arranged, old-fashioned greenhouses, only fit to winter half-hardy shrubs for planting out
in summer! There are scores of such greenhouses all over the country, which should be pulled down and converted into modern mach, and the enjoyment and luxury which thus may be obtaine will pay all the trouble and expense in a very short time. Now that shall be excused for loading the Calendar with these digressions, an foreign to this part of the Chronicle. in when the frost overtakes them in the flower garden. No one need be afraid that 1 shall lose sight of this subject; but without going
arther, I may state that I want more information on the sulbject which I lost half-a-dozen; the rest are looking ns well as can be until they get too big for the place. But for flower-gardening lunged in pots. Next, weck I shall say how I think they ought t Flower-garden. - Having a little spare room, under this head The suyserymen put four Heang for Heathe flower-garden next season mall pot, for the winter, and next May these are separated, with pots are now full of roots, and this is the besto gized plant to order
for turning out next May, ns they cannot be too young to begin with:
you ofter see advertisements offering 100 of these for \(5 l\). From this
time to the end of you often see advertisements offering 100 of these for 5 . From this
time to the end of October is the best time to order them. As soon
as as you get them home prepare a frame for them, from which you
can exclude the frost hy putting a layer of rough peat at the bottom, then an unch of sandy peat mixed fine, but not sifted ; on this bottoni place your little Heaths about 6 or 9 inches apart out of therr pots,
and fill in betwen them with the nixed fine peat, pressing it gently
round their balls; the tops of the plants should be about 6 nelhe round their balls; the tops of the plants should be thout 6 neles
from the glass; they will snon root into the fresh soil. Kecp the glass of every fine day till next Mar, then take them up with a Yowel, and they will carry a grood portion of the soll with their roots.
You wis lose operin ball far licter than if you left them in the pots all winter; bestles, the plants are much safer in this way than
in pots through the winter; the ronts also hemg in a free open state, where sets in next autumn you may take them up with a trowel, and they will carry large portions of the soil with them, like a young Rhodo.
dendron plant; ;ome of this soil you can trim away from them remove them back to the frame, to be planted as before, them, and wider apart; and recollect, by this system they are never to be put into pots at all, whatever their age or size may be; unless, indeed,
stch of them as may form very fine specimens; these, perhaps, you

\section*{NEWS OF THE WEEK.}

The announcement of the Queen's return from her visit to the French Court had scarcely reached the remoter parts of the kingdom, when Her Majesty set out on her second marine excursion. The visit to Belgium which we have this week to record may be deficient in the political importance which was inseparable from the excursion orestrance, but it is nevertheless suggestive of
many interesting topics. The visit of the Queen to those fine old cities plentifully scattered over the Belgian territory, and which for centuries have been associated with important events in the history of Europe-the promised visit to Brussels-and, above all, to the plains of Waterloo cannot fail to be regarded bereafter as remarkable inci dents in Her Majesty's reign. The details of the Royal progress, so far as they bave yet reached us, are confined to the preliminary ceremonies and receptions, but nest general interest, to engage attention.
The accounts from Spain contain the details of another insurrection at Barcelona, which has again made that unhappy city the scene of fresh anarchy and bloodshed. The collision anticipated in our last took place on the 3rd, between the forces of the Government and the troops of the revolutionary Junta, the president of which fell in the first attack. The insurgents made themselves masters of the city, while the citadel and the fortress of Montjuich remained in the hands of the Government troops. On the evening of the 7th, the fortress of Montjuich commenced firing on the town, and with resalts even more Espuctive than those wich followed the bombardment of spartero and Van Halen. The Exchange and other public buildings were seriously damaged; upwards of 50,000 inhabitants quitted thecity, and the canals which supplied the fountains were cut off. The firing still continued at the date of the last despatches, and a general rising throughout Catalonia was hourly expected. Meanwhile, the proceedings of the new Government at Madrid are said to be impeded by disunion in the Cabinet ; an open alliance had taken place between the partisans of Espartero and those of the Infante Don Francisco, and doubts are entertained whether the Administration will be able to hold together until the meeting of the Cortes. The insurrection in Italy also continues to excite alarm; Bologna was proclaimed in a slate of siege politan frontier were overrun by numer men. Several arrests had been made in the northern provinces of Naples, and the king had adoper dinary precautions to prevent the movement from extending to the south. No authentic explanation has yet been given of the origin of these disturbances, but they would appear to incicate a more extensive combination than the Itaian Governments are willing to admit.-No tidings of the Indian mail have yet been received, and there is now
little doubt that the steamer from Bombay has been compelled to put back by the monsoon or by some accident to her machinery.

\section*{710me News.}

Court.-Her Majesty and Prince Albert left Brighton on Tuesday for Ostend, on a visit to the King and Queen found in another part of our Paper. During her Majesty's absence, the Prince of Wales and the Princesses will remain at the Pavilion. The Duchess of Kent returned
from Brighton to Frogmore Lodge on Wednesday. The from Brighton to Frogmore Lodge on Wednesday. The proceeded to France in the steamer Pluton on the same proceeded to France in the steamer Prders have been received at Windsor Castle to prepare for her Majesty's reception on Wednesday next.

France.-The Ministerial journals contain a series of Royal ordinances, granting promotion and decorations to a number of officers of the navy and army who were preEu. The King intends founding a new picture gallery at Eu, to be called the Victoria Gailery. In it will be placed a series of pictures connected with the proceedings of the
Queen's visit. It is at present intended that the number Qhall be about 30 , of which six will be of a large size, 9 feet by 6 , and fourteen of smaller dimensions, the remainfeet by 6, and fourteen of Amater bpecial building is to be of the ensuing spring. The King of the French has conferred on Prince Albert the grand cordon of the Legion of Honour. Previously to her departure from France, her Majesty presented to General Baron Athalin, first aide-
de-camp of the King, a gold snuff-box, with her Majesty's cipher in brilliants : on the cover, and on leaving the Châteaut, her Majesty left \(1,000 \mathrm{l}\), to be distributed amongst the household. A Havre journalistates that it is contemplated to erect at ing of Queen Victoria, with two allegorical figures, representing England and France holding each other by the hand. Oneen from Brighton, brought news of the safe arrival the Queen from Brighton, brought letters from her Majesty, addressed to the Queen of the French, was delivered to her Majesty by the Captain of the steamer. The Patrie
announces that apartments are fitting up in the Palais announces that apartments are fitiong , of the King of Royal, for the reception, it was believed, of, of 450 horse
Napies. The transatlantic steamer Darien, of power, was launched at Cherbourg on the 3d. She is one of 14 steamers of 1000 tons burden, and 450 horse power, which commodious manner for passengers and commerce, and armed with four carronades and Nantes, , ordeaux, will sail for the French possessions in the which they will sail for the French possessions
West Indies and the foreign ports in the New World, West Indies and the foreign ports in the New World, Spaxi.- Barcelona is again the scene of anarchy and
bloodshed. On the evening of the 3 d , the Government steamer, which was despatched to Tarragona by General Arbuthnot for reinforcements, arrived at the quay with
some companies of the line. The terrace and parapet some companies of the line. The terrace and paraped
above the quay was lined with volunteers, who warned the troops that they would fire upon them if an attempt to land was made. Unintimidated by this threat, the commanding officer on board the steamer ordered his men to disembark, which they did under a heavy fire from
above. The engagement then became general, and the above. The engagement then became general, and the citadel fired several well-directed rounds of grep
canister into the insurgents. This checked them, and enabled the troops to effect their entrance into the citadel, but not without experiencing a heavy loss. Among the slain was Gen. Baiges, president of the Junta. The firing continued during the whole of the 4th, and at 7
p.M. the artillery of Atarazanas was playing on the P.M. the artillery of Atarazanas was playing on the
soldiers of Col. Prim, who were endeavouring to get up a soldiers of Col. Prim, who were endeavouring to get up a
battery at the Mole. M. Degollada, the new president of the Junta, showed himself everywhere, in order to refute the report of his having left Barcelona. The
innurgents had planted a battery at the breach of Cana-
eta, which had compelled the forces of Prim to retrograde On the 5th, the three battalions of volunteers who wer
lately at Saragossa, under the command of Brigadie Ametler, were expected from Lerida. The garrison which consisted only of 2,500 men, occupied the citadel and the barbour. The revolters were in possession of the city ; the National Guards remained neutral. Emigration had recommenced, and upwards of 50,000 inhabitants had quitted the city. On the evening of the 7th the fort of having superseded Gen. Echalecs in the command of that fortress. A brigade of artillery from Molino del Rey, and 400 militia men of Igualada, had arrived at Gracia, and the militia of Vic, Villafranca, Manresa, and Berga General against the insurgents. On the 8 th the state of things at Barcelona was nearly the same. In the evening the fortress of Montjuich recommenced the fire on the Atarazanas. The fire had dismounted the batteries directed on Barcelonetta, and the citadel, and the canals to be cut which supplied the fountains; but there were a great many wells in Barcelona, which had rendered this measure abortive. Col. Prim had done serious damage with his artillery, and three 24 -pound
shots had traversed the drawing-room of M . Penleaze, the British Consul. The Exchange had also been much damaged.-Our accounts from Madrid are of the 4th inst. Division among the members of the Lopez Cabinet daily more serious, and it was doubted whether they would hold together until the meeting of the Cortes, The summary justice done by General Narvaez on the occasion of the mutiny of the Princesa regiment had displeased two of the Ministers ; another motive of dissen which Adould maintain athers set aside; a thir rause of strife was the appointment to places and com mands, each wanting to promote his favourites, Althongh the news of the sanguinary struggle at Barcelona had not reached Madrid, the accounts from Catalonia created great anxiety, and it was said that the Minister of War had determined to act with vigour against the Barcelonese, Much uneasiness was also felt regarding Sevile, where de Paula have combined with a portion of the Exaltados, in order to cecire a wor tion Cectel The Andalusian prints of the 30 th and 31 st Seville as adopting extraordinary precautions. Notwithstanding these causes of slarm, and the many other difficulties that beset the new Government,
that was thought Cortes would be enabled to meet on the 15 th October The Gazette officially announces the recognition of
new Government by the English Cabinet. Accordin new Government by the English Cabinet. According the offer of a loan of \(400,000,000\) of reals, to be applied to the construction of roads, canals, bridges, lighthouses, and telegraphs, made to 1 by Don Jose Salamail. The following are the roads which the contractor will have to called Delas Cabrillas, from Madrid to Valencia. A branch from La Minglanilla to Cuenca, and from thence Guadalajara, on the roads of Barcelona by Saragossa, and of France by Soria and Lagrono. A road from Madrid to Lugo and Corunna, with various branches. From Madrid to Barcelona, the line not yet made between Sara gossa and Lerida. From Bailen to Mengibar, from Grenada to Malaga, from Cordova and Andujar to Luceda, and from that bridge to Malaga. From Albacete to
Murcia and Carthagena. From Madrid to Toledo. These works, if the state of the country allows them to be undertaken, would give employment to 80,000 men.
Portugal.-We have accounts from Lisbon to the 4th event, the mission of the Duke of Palmella being the talk of the day. Sir R. Peel having declared in Parliament that the Cabinet of Great Britain had not solicited in the slightest way a renewal of the question regarding the treaty, the issue is anxiously looked for, the united wish o growers, that it may again fall to the ground. The Royal Family has returned to Cintra, the palace at Lisbon being about to undergo alterations and improvements; and everything is in a state of perfect tranquillity,
Gibraltar.-Accounts have been received of the total loss of the steam frigate, Missouri, one of the finest vessela in the United States Navy, which was destroyed by fire
in the Bay of Gibraltar, on the 28th ult. She was found to be on fire about 8 P.M., and the discovery was immediately followed by flames issuing from the engineers store-room, where it is supposed it originated amongst the combustible spirits and oils. The large pumps were put into operation without a moment's delay, but the nature progress of the flames. The moment the fire was discovered, Captain Sir G. Sartorius, of the Malabar, 72 , then in the bay, afforded assistance under his own immediate superintenderce, and the Locust, steam-vessel, Lieutenant Lunn, got up her steam, and on coming alongside "the Missouri, endeavoured to tow ther into deeper water, but she had unfortunately already grounded, and could not be moved from her position. Finding it impossible to scuttie the vessel, and great danger and loas of life being apprehended, should the fire, which was making rapid progress all over the vessel, have communicated with the powder magazines, it was resolved to flood them, which was done, and only a trifling explosion took place whout 3 'clock an Sunday morning. Sir R T. Wilson, the gevernor of the fort, on the fire breaking out;
proceeded personally to the wharf, and despatched two fire-engines, under the charge of the Sappers and Miners, but their united efforts with others and the crew of the vessel, proved unavailing to check the progress of the flames, and it was only when all hopes were given up of further assistance being useful, that Captain Newton of the Missouri could be induced to abandon her, which he did, with his crew, by the assistance of the boats of the Malabar and other vessels in the harbour, withou saving anything except the clothes they had on. Mr.
Cushing, the American Minister, appointed to proceed Cushing, the American Minister, appointed to proceed out, and fortunately secured his papers, and conveyed them safe on shore. When this was accomplished, he returned to the vessel and united with his countrymen in their exertions to save the vessel. The sight was one which will not soon be forgotten; the dark lines of the masts, spars, and rigging for a long time forming an mposing spectacle amidst the brimant fames, relieved oy surrounding objects were as clear and distinct as at noonday; a sight of a similar description has not been witnessed since the memorable conflagration of the floating batteries in the celebrated siege of Gibraltaro The was crowded, until an early hour on Sunday morning, with spectators, anxiously watching the progress of the flanes; but it was not until eleven A. M., that Capt. and converted into one mass of charred wood and cinders, which sunk soon afterwards in four fathoms water. The Missouri was nearly 2000 tons and 600 horse power She mounted 28 guns, and was pierced for 44.

Germany.-It is stated in some of the continental papers that a meeting between the Emperor of Russia, the has been arranged for the purpose of conferring on the possibility of exchanging the right of succession of the duchies of Sleswick and Holstein, for the samie hereditary rights, to Hesse Cassel. The Emperor arrived at Berlin righta, to Hesse Cassel Grand Duke Michael, the Duke of Leuchtenterg, and the Grand Duke of Saxe Weimar, of Leuchtenberg, and the Grand Duke of saxe Wermar, had also assembled.- In consequence of the permission granted by bonaparte, his Cow, morning of the 5th inst near the village of Dhelboan. morning of the 5th inst. near the village of Dhelboan. After a combat which lasted ten minutes, the second a separated the combatans Pron Count Pound Frank Fronkfort papers announce that M. Nabe, who was the cause pher (was been which were publisach in the for arrested, and an inquiry into the facts instuted by order or the Government. On hear of the surviving combatant, M. de Goeler, the populace assem bled before the hous i.m. de Hab Caruhe, and proceeded to break and demplete a strong body of the work of destraction was complete a strong body o troops was called out, and the people were dispersed From the same authority we learn that those opposed to the reform in the Jewish religion, which makes of the progress in Frankfort, had considered the Rabbi, Dr. Reisser, to join them as signal triumph. But now it is understood from the Jews' Gazette that he besitates to join the new sect, merely because, in his opinion, the doctrines of it do not extend oo far as to cause a thorough reform, particularly as wants to have abolished altogether. The Senate of Frankfort has authorized a loan of two millions of florins, at an interest of three per cent. towards, and expense of the railroads from the Mein to the Necker, ast from Frankfort to Offenbach.- We mentioned in our the retirement of M. Von Lindeaau, Prime Minister Saxony, after an official service of forty-five years This venerable statesman has announced his intent flowapply his state pension of \(3,083 \mathrm{rix}\) dollars in the follow ing manner :-" The principal and 700 rix dollarstist, nually to purchase a historical picture by a saxon ais to remain the public property; 300 dollars to a diseuds guished pupil of the Technical Institution, who intem to to qualify himself as a civil engineer, to enable himical travel for two years; 400 dollars to eight Evanges at clergymen, whose income does not exceed 400 dollars, the rate of 50 dollars each ; 900 dollars to 36 Evangelica schoolmasters, whose income does not exceed 200 m Huat the rate of 25 dollars to each." We learn fromed in gary that the magnates have now unanimously joinat the the representation to his Majesty, requesth.
Imay be removed from Presburg to Pesth. of the 3d Fracy.-According to letters from Legculating reports of the overthrow and dispersion of the insurgents in the legation of Bologna. Numerous bands, nevertieless, have raversed the mountains of the country. A great by a of persons had been arrested, who were to Spinola, the military commission. On the 26th, Cardinal Spi of siege Apostolical Legate, proclaimed Bologna in a state ding the in virtue of an order from Rome. Notwithstanarg again display of numerous forces, some armed bands bast Cast appeared. One was commanded by a prestis atate of Bolognese, in the district of Ravena. things does injury to trade and business of ever their funds tion, and most of the depositors have with been sent round from the savings banks. A circular has been description of eight persons, for the arrest of each of whom a sum of 300 crowns is offered. They are the Counts Zambeccar!
and Biancoli, the Marquises Messara and Tanara, and the brothers Muratori, Turri, and Giovanni, landowners. A circular of the 2 d gives the description of eight other persons, without, however, offering a price for their arrest racter than was at first attributed to thextended chaacter than was at first attributed to them. The last ccounts from Naples state that a great ferment exists in me kingdom of the Two Sicilies; that bands of armed and on the frontiers of the abruzi ad on the frontiers of the Abruzzi. The King of Naples ad commanded severad arrests to be made, and had taken the Southera provinces and to Sicily.-From Palermo we learn that for provinces and to Sicily, -From Palermo we have been committed in that city in open day, and the Sicilian police seem, to a certain degree, to be on an understandiag with the robbers. On the 16 th ult, at he moment when a shop was plundered, the police receiv arrived, headed by an inspector. The inspector ar him a bullet in the stomach, and the agents fied, leavAg him on the spot.-The German papers announce that Austria has persuaded the smalier states of Italy to join and Naples southern Customs' League, but that Sardinia Naples bave refused to do so.-The elobe states, upon the authority of letters from Marseilles, that the article published a short time since as a decree of the Inquisition of Ancona against the Jews is a fabrication. for a dilload from Venice to Padua is open to the public or a distance of about eight French leagues. The bridge Which will cross the Lagunes in order to bring the line into Venice, will be 1700 metres in length, and will not the completed for two years. The distance from Padua to the Lagunes is run in two hours, and the Lagunes are crossed by boats, specially appointed for the service, in
half an hour. This railway has cost in construction about half an hour. This railway has cost in construction
\(180,000 \mathrm{fr}\). per kilometre, or \(720,000 \mathrm{fr}\). per league.
Holland. - The first trial on the railroad from Utrecht to Amsterdam took place on the 10 th with complete succese, on the section from Utrecht to
Brenkelin. The project of a railroad from Antwerp to Breda is engaging public attention at the former place, as well as in the Dutch cities. In the event of Belgium carrying the line to Breda, it is understood that the Dutch Government will undertake the continuation of it to to Rotterdam. Some objections to the contemplated measures are offered, but the general feeling seems to be in favour of them, and there is, accordingly, a fair prospect of their being carried into effect.
Sweden.-Letters from Stockholm of the 1st state that amongst the foreigners lately arrived in that city are mer a merchant from London of considerable property, Who with great zeal devotes his time to effect the abolition of slavery. For this purpose he visited Stockholm three years ago, to persuade the King to an emancipation of the slaves on the island of St. Barthelmy, but did not succeed in getting an audience. Whether his endeavours this time although the successful is said to be very questionable,

Turkay. -The Levant mail has arrived, with news gade, Constantinople of the 23d ult. An Armenian reneagain, who subsequently recanted and became Christian
was, notwithstanding the endeavours of Sir S. Canning to ob, notwithstanding the endeavours of Sir S. Cancated in the fishmarket of Constantinople on the 22 d . It Wag generally expected that this compliance with the prejuretrib of the populace would eventually be visited by a severe not only . The efforts of Sir S. Canning were dictated Turkish by humanity, but the desire of rescuing the mast necessarily draw down upon it from all civilized Bince re. On the 17th, a Princess was born, who has Bospheceived the name of Jemileh the Beantiful. The the ehorus was illuminated for three nights in honour of Eevpr.
8teamer Polyphemave advices from Alexandria by the the Indian mail. The Memnon steamer, which was to Aden left Bombay on the 18th July, had not reacked town on the 14th August; and the Governor of that to Suez, to bring back the mail from England. The Membad, it is thought, must have put back to Bombay from did was to return to Aden immediately, conveying the Luonleft Overland mail of the 5 th of August. The Polyphemus letters from Alexandria of the 29 th ult. There are sad complaints Alexandria of the 29th ult. Therely on the part of English but of the commercial people, of the Pacha's disposing of his produce of the country by private sales, contrary to intelligence of the discovery of a gold mine in the Soudan ar \(\mathrm{Dj}_{\mathrm{j}}\) Doslebel Tull, in 8 degrees 28 minutes south had sent Achmed Pasha, the Governor of this province, expected specimens of the ore to Alexandria, where it is expectations be realised, it will be an immense advantage U conamerce of the country
bome days States.-Great interest has been excited for And the Hist respecting the voyage of the Great Western bettint., the latter leaving Boston on the lat inst. againg beas been in favdur of the Hibernia, and she has lights were her rival. On Truesday, at midnight, her froma the river after another rapid passage of nine days from Halifax, and eleven from Bosston. The Great

Western did not arrive till Thursday, at 4 A. M., but it appears that justice was not done to her powers this voy quality that it was difficult to keep steam up the greate part of the passage. In her outward voyage the Hi bart of the passage. In her outward voyage the HiWestern. This arrival brings news from the United States 6 days later than that received by the packet-ship Liver pool. The heaviest rain-storm ever experienced at New Yor though with dimin clock on the 21 st ult., and continued day. The damage done to property in the city and Brooklyn was very great, and the accounts from neighbouring town cases of yellow fever had takt of disasters. Some alarming cases of yellow fever had taken place at New Orleans, and
great apprehension was felt that the disease would prove great apprehension was felt that the disease would prove
more fatal this year than usual. One or two cases are reported even to have occurred at the Quarantine at New York. Mrs. Christina Gilmour, alias Cochrane, charged with the murder of her husband, by poison, at Inchinnan, board the Liverpool, from Nep York. She came over in the custody of Mr . M \({ }^{5} \mathrm{Key}\), a police officer from Scotland, and, after having been confined in the Bridewell of Liverpool during the night, sailed for Glasgow on Tuesday, Auburn State prison have recentiy substituted the effusion of cold water upon the bodies of refractory prisoners instead of scourging. This is an important change in
prison discipline, and is likely to be adopted very generally throughout the United States.- By a tabled very generally it appears that the aggregate annual expenditure of the several States, in their executive, judicial, and legislative departments, was-Executive, 198,470 dollars; Legis-
lative, 747,253 dollars; Judiciary, 646,185 dollars-total 1,591,908 dollars.-The Caledonia mail steamer, which left Liverpool last week for Boston and Halifax, took out field, Mr. Macready, and Judge Haliburton, author o Sam Slick.

Elidia, Espartero.-The Duchess of Victory and Donna inspection of the interior of Westminster Abbey a hasty previous to the morning service, at which they were present. Having expressed a wish to hear the service, The Duchess signified that General Espartero and hersel would shortly make a more protracted visit, so that they might go over the entire edifice. His Highness has accepted an invitation to dine with the Lord Mayor on the 26 th, at the Mansion-house, when a distinguished party will meet the Regent, including Viscount Palmerston, the Earl of Clarendon, and other noblemen. The Regent has hitherto enjoyed a far better state of health in this country than his previous indisposition led him to expect. His Highness, with the Duchess of Victory, and Donna Elidia, Metropolis, but preserve the strictest incognito. On Wednesday they visited Greenwich Hospital, and were conducted over the whole of that establishment by Adm. Sir J. Gordon.
improved.

The Murder of Mr, Dadd.-The unfortunate young man whose parricide has excited so great a sensation has been apprehended in France, but not until he had nearly passenger with a razor. It appears from the statement of the French gentleman that, on the night of the 30 th ult., he and was seated on the imperiale of the diligence by the side of a young Englishman, whose looks seemed to be wandering, and who had been for above a quarter of an hour amusing himself by lowering the gentleman's cravat and collar. This singular practice provoked the traveller, who desired his neighbour to have done with it; the latter then drew from his pocket an English razor, and set about cutting the throat of the unfortunate Frenchman, who, despite a vigorous resistance, received four rather deep mastering the younding his wounds, be succeeded in justice of the peace at Monterear, quietly declared that his name was Richard Dadd, and that he had just arrised from England, where he had murdered his father. He was lodged in the Melun house, and was soon after sent to Fonged bleau Mo most surprising story is that the momeng circumstance of this strange give all he had on him in order that his victim might be taken care of! His apprehension is the first instance of the operation of the new law between France and Eng lagard to the young the Royal assent last session. In that immediately after the commission of the parricidear that immedately aiter the commission of the parricide he prosted to Dover, at which place he took a postchaise and Tuesday, the day after the murder anived aoout 4 A.m. on the Ship Hotel. His dress was torn At Dover he went to the ship Hotel. His dress was torn and disordered, and he had met prith ancident having his appearance that he had a large sum of money with him, and exhibited a purse one side of which was filled with notes, and the other
with gold. Shortly after his arrival he engaged an open boat to take him across to Calais, for the hire of which he paid 10l. On landing at Calais he was stopped and taken to the Passport-office. He said he was engaged on business of the utmost importance, and was desirous of proceeding by the shortest route to Marseilles, and his passport being found strictly en regle, he was suffered to proceed on his journey. The passport had been obtained by Richard Dadd, in his own name, from the French Am bassador in London, on the Thursday before the com mission of the murder. Whilst at Calais he purchased a new suit of clothes. The clothes which be had worn
from Dover he left at the inn at Calais, and when they vere examined after his in was discovered tha they were saturated with blood. At his examination before the French authorities he stated himself to be the son and envoy of God, sent to exterminate the men most possessed with the demon. He relates with the greatest coolness that in the park of Lord Darnley "he was seized being with him who is said to be his father, with a divine inspiration which commanded him to sacrifice him; he mmediately plunged his knife into his breast, and as death did not ensue fast enough, he made deep wounds in is neck with a razor. Dr. Leblanc, who was com missioned to examine him, asked what he thought of such an action, when he replied that he considered it a good one ince he had destroyed an enemy of God. He also con sidered his attempt on the French gentleman a good action, and is said to have but one thought, which is the extermination of a large part of mankind. The money he has with him is believed to be his own, as it is known that e has recently realised a considerable sum as an artist. He was recommended to Sir Thomas Phillips as a traveling companion by Mr. David Roberts, the academician. Soon after his return from Egypt, Dr. Sutherland, who had been consulted in his case, stated his distinct opinion that he was suffering from sach an aberration of intellect hat he could not be considered as a responsible agent, and had directed that he should not on any account be permitted to go at large. His father, however, who had in early life practised as an apothecary, paid little attention to this, but said that quiet and retirement was all that the son required; that be would take him down into the country, and he doubted not that his son's health would soon be restored.
will court of Aldermen.-It is supposed that there Bread-street, vacant by for the Aldermanic gown of Lainson. Four candidates started at once for the rown -Mr . Hughes Hughes, barrister, late Member for Oxford, who was returned some years ago in the room of Sir J. Shaw, as Alderman of the ward of Portsoken; Mr. Cripplegate; Mr. B. Lawrence, solicitor, in Council for Bread-street; and Sheriff Pilcher. Mr. Pilcher retired after a very brief canvass, but the other three are determined to go to the poll.

City of London Registration.-The following are the Liberals :-Livery objections-Conservative, 610. Liberals, 300 ; total Livery objections, 1,000. Household ob-jections-Conservative, 724 ; Liberal, 350 ; total household objections, 1,074. Livery claims-Conservative, 13 ; bond fide clatal Livery claims, 24. The above are the only of addresses, \(\& \mathrm{c}\). Household claims-Conservative, 60 Liberal, 41 ; total household claims, 101.
street-Sweeping.-Arrangements have been entered for the daily cleansing of all the commissioners of sewers the City, with the strect-sweeping machines. of the City whe or six different contracts, will now be cleansed under five and ther removed, the machines being capable of passing through the most crowded thoroughfares at the rate of two miles an hour, and without causing obstruction to the traffic.

Accidents and Inquests.-On Friday evening an inquest was held on the body of \(\mathbf{M r}\). John Rogers, aged 47 , which was found on the same morning on the shore of the Thames, nearly opposite the Penitentiary, Mılbank. From the testimony of the witnesses, it appeared that deceased, who was the well-known nursery seedsman and florist, of Ebury-street, Eaton-square, had lately met with some disappointments in trade which hed a certain extent affected his mind. On Wednesday morning last, be left home to go to Epsom for some money, but had not since that time been seen or heard of by his friends, until bis body was identified at St. Margaret's workhouse, where it had been conveyed after being taken out of the water. A police-constable who was on duty between one and two o'clock on Friday morning, near the Penitentiary, was called by a person mamed Davis, who said that a man was in the water in the act of drowning, but when he came up he had disappeared near some barges. A bargeman was immediately hailed, and, after a short time, a hat and hand. kerchief were found, but the bo w wat nearly five o clock. There mas match ory, but two pocket-books, containing a verdict of "Found drowned."- On Tuesday an inquest was held at St. George's Hospital, on the body of G. Bolton aged 12 years, a fine youth, son of the head-gardener of Osmond Sampayo, Esq., of Peterborough House, Fulbam, who for the effec of a gun-shot wound whis be received und the following circumstances. it appears home, accompanied by a boy named Buller, for the pur pose of attending alace of worship. On their way phither they met two youths, named Bagnard and Whitley,
the former of whom carried a gun with a percussion lock, accompanied them to the grounds of Mr. Bagley, the gardener, near Broon-house, where they were joined by a lad named Russell. Bagnard was subsequently in the act of holding the gun while Whitley fixed on a cap, deceased at the time standing in front of it, when Russel cautioned him to move away, but he the lock went down, and the contents of the gun loaded with powder and small and the contents of the gun loaded with powder and sman ground. Mr. Bannister, house-surgeon of St. George's Hround. Mr. Bannister, house-surgeon of N . Geopital, said that, on deceased being admitted, he was found to be suffering under a gun-shot wound, about an inch it length, on the left side of the abdomen. Deceased the intestines were found to be ruptured, besides other serious injuries, which had proved mortal.
Accidental Death; deodand on the gun, \(8 s\).
Shipwrecks. The particulars of the following shipWrecks have been received in the Caty this week:- Tndia ship Regular, Capt. Carter, on her passage East India ship Regular, Capt. Carter, on her passage
from London to Bombay, with a valuable cargo of iron, from Londer, \&ca, sprung a leak on the 84 h July, in lat. \(37^{\circ} 30^{\prime} \mathrm{S}\)., long. \(36^{\circ} 80^{\prime} \mathrm{E}\). The captain, crew, and passengers, after vainly endeavouring for four days and nights to stop
the leak, at last took to the boats, the former not leaving the leak, al last took to the boats, the former not leaving
her till her gunwales were under water. They were on the following day taken on board the Cleopatre, French frigate, where they received every attention.-The Queen Victoria, also an Indiaman, left Bombay for Liverpool on
the 11th March, with a cargo of India produce, and, on the 11 th March, with a cargo of India produce, and, on the 7 th April, during a sharp gale, struck on the south-
weat reef of rocks off Rodrigues, and soon became a total wreck. The captain and some of the crew were saved, but Mr. Serle, first officer, Mr. R. Plankett, Thomas Rickinson struck, on the 27 th May, on the reef of rocks off Ponte d'Oror, on her passage from the Mauritius to London. The officers and crew got into the boats, and succeeded in reaching the beach in perfect safety--
The Amelia Thompson, the property of Sir J. Pirie, Bart., The A melia Thompson, the property of Sir J. Pirie, Bart.,

May, having been suddenly overtaken by a heavy squall, which completely threw her on her beam-ends. Part of the crew were saved, but Mr . Quarry, chief-mate, Mr.
M'Neil, third mate, and five of the crew, were drowned. M'Neil, third mate, and five of the crew, were drowned.-
The Princess Augusta, a schooner, from La Have to HaliThe Princess Augusta, a schooner, from La Have to Hali-
faz, was lost on the 20 th ult., about twenty miles west of Cape Sable, after being thrown on her beam-ends, so that no exertions of her crew could right her. Only one out of the whole crew was saved.-Accounts were received
by the last mail from the Brazils of a storm which hapby the last mail from the Brazils of a storm which hap-
pened during the 24 th and 25 th June at Monte Video, and occasioned the most dreadful consequences. H.M.S. Fantome, 16, commanded by Capt. Haynes, was totally lost during the violence of the hurricane. All the crew
were saved, and are on their way to England to await a were saved, and are on their way to England to await a
Court-Martial.-By accounts from Sydney intelligence has been received of the partial destruction of the schooner Catherine, Capt. Bannatyne, in April last, off the Isle of Pines, by the powder magazine being purposely fired, in order to prevent her being captured by a gang of native pirates, some of the crew having been murdered in a conflict with them. The surviving portion in extinguishing the flames and getting the vessel out to sea, they endured severe sufferings for several days, when a vessel hove in sight, which proved to be the the distressed vessel, and through his exertions the lives of those on board were preserved. It is feared that three
other versels which are missing, and trade to the islands, have been captured and their crews murdered.
Fires. - On Saturday night a destructive fire broke out in the floor-cloth and table-cover manufactory of Mr. Cleverley, on Walworth-com the fire originated in what is termed the ovens, buildinge used for japanning, about one story high. The flames spread with great rapidity, and in a short time the range of buildings, 60 feet long, and
about 25 in breadth, were entirely destroyed.- A fire broke out at nearly the same hour on the premises of Mr. Cropper, hatter, New Brentford. that the whole house would have failen a sacrifice to the flames, but they were prevented extending further than the shop. The two adjacent houses were slightly injured.In the course of Sunday morning the engines of the brigade force in the east end of the metropolis attended were of no particular importance.-On Tuesday morning a poilt premises of the Religious Tract Society, Paternosterrow. The officer alarmed the inmates of the adjoining houses, and having despatched information to the fire
stations, Mr. Braidwood with two engines promptly stations, Mr. Braidwood with two engines promptly
arrived. Water was soon procured, and an entrance arrived. Water was soon procured, and an entrance
having been effected, the men succeeded in preventing the fire extending beyond the cellar, where it originated, through some unslaked lime having been left by the workmen among the timber on the previous night. To the vigilance of the offcer may be attributed the saving of much valuable property belonging to the leading booksellers.
Mor tality of the Metropolis.- The number of deaths
registered in the week ending Saturday, Sept. 2d, was as registered in the week ending Saturday, Sept. 2d, was as
follows:-West Districts, 151; North Districts, 169 ; Collows:-West Districts, 151 ; North Districts, 169 ; Central Districts, 160 ; East Districts, 222 ; South Dis-
tricts, 207 ; total, 909 (males, 489 ; females, 420 ), Weekly tricts, 207 : total, 909 (males, 489 ; females, 420 ). Weekly
average for the last 5 years, 903 ( 461 males, 442 females); average for the last 5 years, 903 (

Her Majesty's Marine Excursion.-On Saturday the Queen and Prince Albert, accompanied by the Duchess of Kent and the ladies of the suite, took an excursion in the royal steam-yacht to Worthing, and landed at Brighton Pier after an absence of three hours. On Tuesday morning her Majesty and Prince Albert embarked for Ostend, on a visit to the King and Queen of the Belgians, und the
salutes from the Chain-pier guns, the battery, and ships-of-war in the offing. All the vessels manned their yards, and were decorated with flags. About \(30^{\circ}\) clock the yacht passed Dover. A royal salute was fired from guns of the Castle. These alutes had hardly died away before the yacht rounded the South Foreland, and in a very short time was out of sight. About haif-past 3 the and half from the shore, and 'immediately afterwards the first gun was fired from the Admiral's flag-ship the \(S\) Vincent. A royal salute was simultaneously given by the
St. Vincent, Caledonia, and Camperdown, as the yacht steamed down the Channel. Twenty-seven galleys put off from Deal on the first intimation that her Majesty was approaching. The men were all dressed alike, and the On the royal yacht arriving abreast the St. Vincent, the yards were manned, and the band struck up "God save flags from. All the men-or-war wele scene beigg one of extreme beauty and interest. The yaclit proceeded on her course down Channel successively passing inland of the men-of-war, and affording the spectators, who thronged view ench to the number of some thoush were seated on the deck, near thesty and the Prince, Having passed the Camperdown, which was the most easterly ship, the royal yacht was put about, and returned to seaward of the ships-of-war, coming round the flag-ship, which was moored between the St. Vincent and the Caledonia. At this moment a royal salute was fired from the terrace battery in front of Walmer Castle. The Ariel mail packet, having on board the Duke of Wellington, had by this time approached the yacht ; and bis Grace having end been gig which had put him aboard from the pier, and been the royal squadron, which had been far outstripped by the yacht in the run from Brighton, now began to arrive. A mong the first was the Lightning Government steamer, and the General Steam Navigation Company's ship Mercury, which left Brighton with a large party to proceed on an excursion with the squadron. with several packets, soon followed, and by the gaiety of their appearance contributed very much to the beauty of the scene. The Duke of Wellington having proceeded on board the yacht, the off in his barge, to pay his respects to her Majesty. The Penelope war frigate arrived off the Castle about half-past 5 , and fired a royal salute on joining the squadron. The galleys and sailing-boats remained near the yacht until Duke of Wellington had accepted an invitation to dine with her Majesty on board, they one by one returned to the shore, and the crowd on the beach dispersed. The which time the wind, which throughout the day had been blowing fresh from the northward and eastward, had considerably increased, and her Majesty, upon the Duke's landing. His Grace, however, in thanking her Majesty for the concern she evinced on his account, made light for the concern she evinced on his account, midel, which brought him as near the shore as possible; here he got into the barge and rowed towards that the pier from which he sta yard, where the surf was not so great as at any othithout a
of the shore. Here the Duke landed, but not withor consideryble ducking, for no sooner had the bows of the boat touched the shore, than a heavy sea broke over her ktern, and completely arenched his mrace, and rode of to Waimer Castie. A numerous assemblage of persons had congregated on the beach where the came on shore, and loudly cheered him. Several o Royal yacht, did not arrive until some time after her, and then they came up one by one, according to their several rates of steaming. At nine o clock the men-, ach of the
steamers illuminated and manned their yards, each men ers illuminated and thaned At Waluner Castle there was also an illumination, and rockets were sent up by the shipping, and also on shore. At an early hou and Wednesday morning the squadror got their steam up, and made preparations for taking heir departure. About
weather had moderated, and the day was fine. seven o'clock the Royal yacht got under weigh, and stood out to sea, followed by the other steamers which forst the squadron attending her, and also by the Penelope steanfrigate, which had been ordered to join the Royal Her Majesty arrived at Ostend shorthy atir 2 oclock, and disembarked immediately, the yacht having made the voyage full two hours earlier than was expect for the landing sequence of this, many of the preparations sorl busily employed at the payed an the arrival of the yacht, the King and Queen of
the Belgians went on board, and were received with every
mark of affection on the part of her Majesty, who was apparently in excellent health, and the lighest pos. sible spirits. The Royal party then landed, King entered his Majestys carriage. The Leopold occupied the back seat; the Queen of the Leopold occupied the back seat; the Queen of The Beigians sat opposite Afeem, win Grand Marshal of the Minister of Foreign Affairs, the Give Inden the Burgomaster of Ostend, with the other dignitaries of the town, together with our own Consal, and a crowd of generals, omcers, gentlemen and ladies of rank, were in atmendantely
upon their Majesties. The Royal party immedial drove towards the palace, amidst the enthusiastic cheering of the multitudes who lined the streets along the entire route. Ostend had poured out all its populace, whose numbers were increased by the strangers present in the town. Soon after their arrival, the Royal party dined in occasion. Sir Hamilton and Lady Seymour, and the Burgomaster, were the only persons invited to join them. In the evening the town was illuminated, and about ten o'clock the Royal party returned to the palace. On Thursday, King Leopold and Prince Albert visited the yacht and afterwards reviewed the infantry. The Queen took a carriage airing, and in the evening the Royal party dined at the Hotel de Ville and afterwards honoured the theatre with their presence. The Royal yacht and the convoy of steamers left in the course of the day for Antwerp. Hers Majesty intended to visit Bruges yesterday, and return to
Ostend at night ; to visit Ghent this day (Saturday); spend the Sunday at Ostend, visit Brussels and its environs on Monday, proceed to Antwerg on Tuesday, and embark for England on Wednesday.
Birmingham.- Father Mathew arrived in this town on Saturday, on his way from Norwich to Dublin. On Sunday the Hon. and Rev. Dr. Spencer arrived from Oscott, and preached at the Catholic church in avorr of Me tem preached to a crowded congregation. On Monday the rev. gentleman was entertained at a public breakfast by nearly 200 ladies and gentlemen, including many influential inhabitants. Mr. James, the Mayor, presided as magistrates, by Mr. Joseph Sturge, and a large number of dissenting ministers. The pledge was then adminis cered to about 1,000 persons. On Tuesday a public breakfast took place, at whick the Right Rev. Dr. Wiseman presided, and advocated the teroperance movement at and administered the pledge to several of the students. Brighton.-On Sunday morning at nine o'clock her Majesty and Prince Albert walked out unattended, and after taking a promenade on the Grand Junction Road, where they escaped recognition for a considerable perion, they walked on the Chain Pier. They passed through he turn-stile entrance, and came so unexpectedy upon payment of \(2 d\). a head before he discovered the rank of his visitors. After passing half-an-hour on the Pier,
her Majesty and the Prince returned to the Pulace. The greater number of persons who witnessed the Royal party leave the Pier contented themselves with bowing, bur closely on their footsteps; and her Majesty and the Prince quickening their pace as they reached the Castle-square the porter's lodge instead of the usual entrance. A prilikely ther in a morning paper states that it is not a vulgar that public (be they inhabitants onother opportunity, during the short stay of the Court here, of annoying the Queen in a similarly rude and indecorous manner Her Majesty who has more than once expressed her feelines on the subject is not likely to pive them anothe chance. How different is the case at Windsor, and how extremely different was the behaviour of the public at Walmer, during the Royal visit last autumn. Unless the Brighton people mend their manners, I very much quesBrion if the Queen will often honour them with a pisit." " Bristol, - A fire broke out at the Castle Inn, in this city, on Wednesday week, attended with loss of fiden for ana W, Whal having died from the injuries they sustained. It appears that the fire originated in the bed-room of the landlord The little girl had been sent up with a basin of gruel, and the cuppose foll a plaber of people in the house at the time; but the fire had 80 fal made head when the alarm was given, that the house furniture were completely consumed ; the property wan not insured. By the exertions
the adjoining houses were saved.
Cambridge - We
Cambridge. - We Jeam from a correspondent whe visited Cambridge on the 8th, to inspect the damug by the late terrinic tempest to the glass in the btent Garden, that no one can have an idea or the houses. Whole sashes are without a single pane of glass left in Whole sasbes are without a single pane of glase bars
them, and some have, in fact, little more' than the puit. Woodwork, with small fragments of glass jutting irn They look exactly as if they had been thrassed with abot rods,
4,000 feet of glass to be restored, and of course many the plants have suffered severely. There is no storm record that ever happened in this county at all like it. Carliste.-The Bishop of Carlisle has just comple his triennial visitation of his diocese. for the general condition of the Church, there was much cause for thankful-
dis.
ness, and referred at some length to Acts of Parliament recently passed, having for their object the welfare of
the Church. He then dwelt at great length on
He the Courch. He then dwelt at great length on
the controversies within the Church, and expressed a hope that on all matters of this nature the clergy would so conduct themselves as not to render themselves liable
to the charge of using unseemly taunts. In removing the to the charge of using unseemly taunts. In removing the Bought only the cause of truth, and they condemned those errors, not for the Eake of condemnation only, but for
that truth by a regard for which he trusted they would ever be actuated. The Bishop then proceeded to the consideration of the authority of the Church, as Holy, Catholic, and Apostolic, and pointed out the great difference
between that claimed by the Church of England and the assumed infallibility of the Church of Rome, noticing in detail several points of doctrine in which the two Churches differed. Much of the discussion, he believed, which had recently taken place, and many of the irregularities which had been complained of, would have been avoided, if the
parties had, in the first instance, submitted their doubts parties had, in the first instance, submitted their doubts to their Ordinary, a practice strongly to be recommended
in all cases where clanges were contemplated. The Bishop, after some remarks on the daily service, suggested the propriety of a due attention to divine worslip, and the ordinances of the Cluurch on Saints \({ }^{\text {d }}\) days and other
festivals, and proceeded to notice the subject of the dress of the clergy. He did not concur in the opinion that the whole service should be performed in the surplice, for although there was no canon that treated on the subject expressly, he thuught it was to be inferred from what was enjoined-tbat those parts of the Church service which
were purely ministerial, should be performed in the surplice ; but during the sermon, which was more to be con sidered as the opinions of an individual than as the appointed service of the Church, it was not improper that the gown should be used; but in this, as in similar cases, the best plan would be for the clergy to adhere to the apply to the Ordinary. His Lordslip made some remarks on the educational clauses of the Factories Bill, and the check that their abandonment had given to the was occupied with the consideration of local matters.
Carmarthen.-Last week the parishioners of Llandefeilog parish, about six miles from Carmarthen, met for the purpose of discussing their grievances at a place called Raymond Lodge-a public-lonse by the road-side. There
weie present about 60 persons, most of them substantial farmers. The proceedings were cliefly conducted in chair. Dr, Paicton, a relative of General Picton, and possessed of considerable property in the parish, was reporter of the Times obtained permission to attend the meeting, and states that the following resolutions were put to the meeting in Welch, and agreed to unanimously: gates are too numerous, and the tolls too high. 3. Poor this is to be done under the direction of the guardians. Third, the guardians ought to choose and pay all the
officers connected with the workhouse, Fourth, there ought not to be any separation of man and wife. Fifth, Sixtld law was better in cases of bastardy than the new before the accounts ought to be passed before justices, as 4. Tithes. First, the meeting wish that the tithe should go thewards keeping the poor and the Church. Second, of the land. Third, they ought to be reduced at least 4 s . 6. Ch. in the pound. 5. Cuurch-rates ought to be amonded. Second, that the law . First, they ought to be separated, as in Madagnscar and Otaheite. 7. County Stock. The meeting thinks the same with regard to this grievance a to be ynydd Selen meeting did. 8. The Corn Law ough Fithout. 9. There onght to be no by-law on the highway, Every gates, the poor, the tithes, and income.tax. 11. The Archbishops and Bishops"have better work to do are to be in Parliament, 12. No clergymen or preachers \(f_{\text {aithfully. 13 }}\). The law ought to be amended in many other raise meeting thinks Sir Robert Peel will take off this tax if he is dre to do so. 16. Soldiers are serviceable where they as to tithed to adopt a petition relative to the grievances of Tyyywern, A daring attack has been made on the farm of Llanwern, belonging to a magistrate, Mr. W. Chambers, morning, fetween I and 2 oflock, the barns and out building, between I and \(2 o^{\circ}\) clock, the berns and out300l, worn stacks, all of which were consumed, and about
property destroyed. One of the farm boys on fire, and and, and on looking out saw the out-buildings Bame, and about 15 men disguised leaving them. The
anen were then seen to go across the country to HIn her farmo occupied by Mr. Chambers, called GelbyThree, where they set fire to the corn and hay stacks. liet fire to toly consumed. On the same night the rioters Leanelly to to toll-house at Hendy Gate, on the road from tipwards of 70 years of age, who had received frequent motices that if she did not leave the gate, her house should
be burnt down. The old woman on being awakened ran into the road, and to a neighbouring cotlage within twenty yards of the toll-house, shouting to the people who lived in it, to "come out and help her to put out the fire
as there was not much." The occupier of this cottage, a as there was not much." The occupier of this cottage, a
stout able man, was afraid to go out, and begged the old stout able man, was afraid to go out, and begged the old
woman to come into his cottage, which she refused, and *oman to come into his cottage, which she refused, and
went back to try and save some of her furniture. It appears her exclamation had been overheard, for the rioters returned, and set fire to the thatch again. The
old woman then ran across the road, and shouted out "She knew then ran across the road, and shouted out, dead. She staggered as for as the neighbouring cottage door, and there sunk down dead. An inquest on the body was held on Monday at Pontardulais, when the
surgeon distinctly stated that on a post mortem examinasurgeon distinctly stated that on a post mortem examination he found the lungs considerably congested, with marks the substance of the left lung. Nothwithstanding thi evidence, the jury returned the following verdict :hest, is to this jury unknown. -The Carmarthenshire magis trates in Quarter Sessions, on Tuesday, resolved to defer the question of a rate for a rural police to October next and the magistrates of Cardiganshire have assented to reduction of the turnpike tolls.
Dorchester.-The Dorset Chronicle publishes a long on the of hefestive celebrate the prace at Milton abbey Henry Damer. On the first day, beef, breat, age of Mr. distributed among the people, and the tenantry dined with their young landlord. On the following day a déjeuner and bail took place, at which all the principal nobility and gentry of the county were present
Exeier.-The salutes fired at Plymouth in honour of
or the hills s late visit to that port were distinctly heard steignton, Black Torrington, \&c. In one instance, near this city, the eminence on which the firing was heard cannot be short of 46 miles from Plymouth by the mail-line road.
Harrogate.-It is said that there are at present upwards of 2000 visitors congregated in this town; and all the Carew, Redcar, Tynemouth, Shotley-bridge, Gilsland, as well as the Lakes, are full of company.
Hereford.-The Musical Festival, which was held on Suints? \({ }^{2}\), Wednesday, and Thursday of last week, in All the Cathedral, was on a late years been usual with the three choirs of Worcester, Gloncester, and Hereford, and the attendances at the had been studiously kept down, and it is hoped the receipts may cover them. Tho collections after the three services amounted to \(865 l\)., being 200l. less than in 1840 , but \(50 l\).

\section*{more than in 1837.}

Liverpool. - The local papers mention a rumour that John Anderson, convicted at the Assizes for having
knowingly become possessed of the notes stolen at the Preston Guild, has declared that if any hope of a commutation of punishment were held out to him, he would give recollected that this gentleman was found dead in the summer of 1840 , near Bootle, under circumstances of a mysterious character, which have never since been cleared up.-A Repeal meeting took place in this town
on Wednesday, which was attended by Mr. D. O'Counell, un., and other members of the Dublin Association. About 40 persons were present. Mr. Mithen, which set forth that this public demonstration was held, not only as evidence of increasing
in Liverpool, but with a view to express a fixed resolve to persevere in constitutional agitation till Ireland should obtain her right of self-government. In the course lection of "rent" in Liverpool averaged only 2l. or \(3 l\). per week; at the present time it had reackitio., so that the "Repealers Treasury" in Dublin, at the funds about 1000 l. per annum. Mr. O'Connell, jun., then came forward to support the resolution. He spoke at some lengtb, and retired at che close or his address. A riot then the proceedings should be stopped; for fights commenced in different parts, many of the benches were torn up, and an attack was made upon the stage by the anti-repealers
in the pit. In the confusion the table at which the reporters were stationed was destroyed, and they had to effect their escape as well as they could. The police secured the assailants, several of whom were seriousiy building, order was eventually restored, and, with a few trifing cxceptions, it was preserved to the end of the profor Liverpool, and a petition to Parliament for immediate repeal was adopted.
Leicester- - Mr. Messenger, the master of the man receritly murdered at Gaddesby, was fully committed on
Wednesday week, on the charge of Wilful Murder. There Wednesday week, on the charge of Wilful Murder. There
were several additional witnesses, but the examination, which lasted the whole of the day, being private, the pariculars have not transpired.
Norwich.--On Thursday the 7th, the great demonstraFather Mathew took place in St. Andrew's Hall, which was illuminated for the occasion. The hall, considered one of the finest in the kingdom, and said to be capable of
accommodating from 5,000 to 6,000 persons, was crowded
to suffocation. The orchestra, used on the occasion of the musical festival, was appropriated as a platform; and long before the time appointed it was crowded with the ladies and gen or city. Father Mathew, accom panied by the Hon. Stafford Jenningham, and the Rev Mr. Nellyan, rector of Carlton, arrived on the platform shortly after seven, and on making his appearance, the entire assembly rose, and received him with enthusiastic cheering. Mr. J. J. Gurney, on taking the chair, said he felt great pleasure in doing so, as, although he some time since looked upon the principles of total abstinence as a faltacy, he begged firmed, absolute, and pledged teetotaller. The total abstinence movement was in harmony with the Christian doctrive of the Gospel, and, therefore, it was a neutral ground, on which they all could meet and join heart and hand without political or religious differences. Upon that understanding he had taken the chair, and he hoped that the procedigs would be carried out in the true principles of Christian charity and love. Shortly after this the Bishop of Norwich, acconopapied by several hadies, arrived, and his appearance on the platform was the signal for the most enthusiastic cheers. The entire assembly rose, and the applause which ensued was tremendous for some minutes, which was renewed on his Lordsuip walking up to Father Mathew and shaking him cordially by the hand. The Bishop then addressed the meeting at great length, stating that he had come there contrary to the advice of many of his friends, but he should have considered himself degraded if he had been induced to remain away by the calumnies circulated against him and the Temperance cause by certain parties in that city. He had watched over the character of Father Mathew, and he would sayand say it publiciy-that he sincerely believed that it was embodied in the words in print which he held in his hand. He then read an extract from a printed document, which declared that Father Mathew was a gentleman by birth during his whole life, although possessed of the franchise he had never given a vote, meddled with politics, or mixed with any agitation; and that he was a meek and spiritual-minded man. The Bishop then proceeded as follows:-" Where did this excellent system commence? Its birth-place was the land of freedom, in Acuerica, raised by the descendants of British But where did it alight? Not in England, but in the Protestant town of Belfast, where it began, not with the Catholic, but with the Protestant clergy. It then winged its way to Liverpool, and the manufacturing districts, where I met, and to my shame be it spoken, I opposed it Yes, three years ago I opposed teetotalism as Eutopian treatedit with ridicule and asa thing which would pass away as the dew before the sun. I have since, however, looked at both sides of the question. I have followed it from house to house, from cottage to cottage, and conviction was so strongly enforced upon my mind, that instead of being louger ts enetay, became its staunch and enduring friend with the religious tendency of temperance societies. shall neve fors isiting the cottage of a man who had been all his life a drunkard, and which was the abode of misery and wretcledness. He became a teetotaller, and in six moth is the scene of comfort and dioss This man, with tears in his eyes, placinc happiness. quarto family Bible, said, 'This is the frat thin I purchased with the money I saved by piving before by drunkencon daily comfort and companion ever crime since. In proport His Lordship concluded by crime has diminished." His Lordship concluded by
calling on the meeting to receive Father Mathew in the saling on the meeting to receive Father Mathew then came for honest Christian charity. Fable length. He said t could no beot that he should reply to the charge not be expected fallen frade against , phose friendship he had long snomin going to Ireland, in order to thank his Lordship personally, and if there had been any deviation from the path of rectitude on his part, he would not have dartank how himself. He left Nors, and administer th on saturaay for Bron, under the patronage of Dr. Wiseman the Roman Catholic bishop.
Oxford.-On Friday the remains of Dr. Bridges, Preident of Corpus Christi College, arrived here from Ilfracombe, and the interment took place on the next day in the chapel of the College. The suneral of Dr. Grayson, Principal of St. Edmund-hall, took place on Wednesday, in the chapel of that ball. 1 is Pregident of Corce that, in 1823, the Rev. Dr. Cokr, Pipal of St. Edmus, and the Rev. Dr. Thompson, Principal of st. Eamundhall, the predecessors or the daily papers state that it is dead at the same time. - Littemore, near Oxford, a college in which young men holding Tractarian principles may be trained for missionary labour ; and that the Right Rev. Dr. Coleridge, formerly Bishop of Barbadoes, will be principal of the institution, - Oeford, that Mr. W. Lockthe authority of a letter from Oxford, that Mr. W. Lockbart, B.A., of Exeter College, who for the last twelvemonths has been an inmate of Mr. Newman's house, at
Littlemore, and about four years ago adopted Tractarian principles, has declared himself a convert to the Roman Catholic Church.-On Wednesday Mr. Cobden and Mr

Bright visited Oxford to address a county meetiug, convened by the High Sheriff, on the subject of the Corn laws. The meeting was attended by the members for the county and city, and several of the landed proprietors,
but by very few farmers. Mr. Cooper, Deputy Sheriff, but by very few farmers. Mr. Cooper, Deputy Sheriff,
presided. Mr. Cobden spoke at great length, after aliich presided. Mr. Cobden spoke at great length, after which
Lord Camoys came forward, and concluded a brief address by moving the following resolution :-"That the Agricul tural interest being the paramount interest in this country to depress that interest would be injurious to the entire community-that suddenly to adopt free trade in corn must produce that effect, and that therefore it is the opinion of this meeting that a moderate fised duty upon the importation of foreign grain is the one best adapted to the present position of the agricultural interest, and the welfare of the country." This resolution was seconded by Mr Langston, M.P. Mr. Bright then spoke for upwards o sn hour in favour of a total repeal, and was followed by Lord Norreys in favour of the existing Corn-laws. The noble Lord said, that while he fully subscribed to the ing very great depression at the present time, he at the same time felt that the remedies proposed by the League could only aggravate the distress-whith be attributed in great measure to the enormous over-production by th his Lordship while speaking, which induced him observe that he had attended the meeting becouse it had been convened by the high sherifif, but he was perfectly eware that it was not a meeting of farmers, for very few of that class were present. Mr. Henley, M،P., followed the variation in price is far greater than in England. He spoke at considerable length, and concluded by expressing his concurrence in the opinion of his colleague, that although some farmers might be present, he grat Corn-Law League, had purposely absented themselves. Mr. Cobden replied, and an amendment in four of trade was carried by a large majority.
Portsmouth.-The Pluton, Archimede, and Napoleon, French war steam-vessels, whicl joined her Majesty's escort, from Treport to Brighton, arrived here on Friday
thorning, and came into harbour for coal, which was immediately supplied from the dock-yard. They were saluted by the flag-ship and the garrison. The Napoleon is propelled by Smith's screw, and is a remarkably handsome ess the respective merits of which a commitee of, gineers were appointed in France, who decided in favour gineers were appointed in France, who deciced in favour adopted in the steamer now fitting therewith is the least ffic ent of the whole. The Princ de Joinville arrive Brighton, alighted in the dock-yard, and immediately Brighton, alighted in the aock-yard, and immediately his flag. His Royal Highness soon afterwards landed nd inspected for Nayolcon under another salute from the Virtory and and from the garrison, as his Royal Highness passed out of harbour. The Pluton immediately atterwards hoisted the Britisla colours and returned the sal
Plymouth.-On Monday last the fourth story of the Breakwater lighthouse was completed. The air chamber
only las now to be put up, when the entire building will e ready for the reception of the lantho making in London. The part now up is 46 feet above the level of high water, and when finishe
Ranisgate.-A fishing smack, belonging to this port a box floating on the water; they picked it up, and on examination it was found to contain about \(\mathfrak{0} 0\) letters, besides a number of newspapers. From the address on office by the ship George, or Royal George, to Sydney some time last year. It is surmised that the vessel has made the voyage, and returned without delivering the letters, and that in order to avoid discovery and evade the penalty ( \(500 l_{\text {.) }}\) the box was thrown overboard at the
entrance of the Thames, as two 7 lb . weights were attached oo the box, on purpose, apparently, to sink it. it was delivered to the Customs, for inquiry to be instituted. Shrewsbury.-The Shrewsbury Journal states that
few years ago when the late Earl of Leicester held hi few years ago when the late Earl of Leicester held his
agricultural meetings at Holkhano, a sheep was sheered in the morning, the wool washed, combed, spun, and wove the cloth made into a coat, and worn at dinner the same country A somerthat simiustry and ingenury of the effort was accomplished on Saturday last in Salop. Mr. past nine in the morning; at half-past one some of the morning's produce was in loaves, one of which Mr. Davies presented to his landlord, the Earl of Powis, as a sample of the season's production
Ware.-The churchwardens of Ware, finding that \({ }^{\text {Th}}\) the Bishop of London refused to aid them in their quarrel whanges in the Church Service, determined on appealing to the Archbishop of Canterbury, who declined inter-
ference. The parishioners therefore resolved on holding meeting, which took place on Thursday, when it was resolved unanimously-1, "That the Vicar of this parish having refused to comply with the wishes of his parishioners, in regard to the performance of the church service, under the plea that he is bound by his ordination vow faithfully to observe all the rubrics of the Church, and
notwithstanding which several of them are not so observed-Resolved that the churchwardens be desired to
take all proper and legal means to have the rubrics rigidly and strictly adbered to.-2, That it is the opinion of thi meeting that the congregation should quit the church im mediately after the conclusion of the Nicene Creed.
Windsor. - The embellishments and renovations which have been for some time in progress in St. George's
Chapel, having been completed, the edifice was thrown open gratuitously to the public on Tuesday and Wednes day by order of the Dean and Canons. On Tuesday it was visited by upwards of 5000 persoris, from all parts of the beighbourhood of Windsor and Eton, and many from the metropolis and the various towns and villages on the line of the Great Western Railway. The whole of the private chapeis, which have undergone extensive repairs an embellishments while the works were in progress, an which contain many objects of great interest and high antiquity, were kept closely locked by the attendants, and the public were carefully excluded from every part of the nd building, with the exception or the nave and choir, intention of the authorities to pernit the public to viem the interior two days in every week, when the vergers will be prohibited from receiving any fees. Tuesdays and Fridays are the days mentioned for the chapel to be thus At the next chanter held by the Deani and Canons this matter, it is said, will be discussed and determined upon. is also expected that at the same time a scale of fee vill paid to the vergers (on the other days of the week content and grumbling which now prevail between the public who pay, and the vergers who recelve, fees.
Railways. - The following are the receipts for the past week:-Green wich, 8292. ; Brighton, 57532 . ; Black wall, chester, 4867. ; Liverpool and Manchester, 52871. Glas gow and Greenock, 1534l. Hull and Selby, 11112. 1233l. ; Birmingham and Gloucester, 2034l. ; Edinburgh and Glasgow, 25691. Midland Counties 26181, Nout Midland 47061 . Grand Junction 8277l. South-Western, 8227l. Great Western 15,1401 ; London and Birming ham, 17,404l.; Northern and Eastern, 1574l. - The meeting of the Croydon company took place last week The report showed a balance in favour of the company o ation of stock, leaving a had beet set apart for deprecihe directors recomended a ividend of \(4 s\) per share The works for the new line to the Bricklayers' Arms were now in operation, and the directors congratulated the proprietnrs, that the exertions made by the Greenwic Company to establish a case since it had been proved before committees of the House and the Board of Trade, that the Greenwich Company had undertaken the widening of the line by their own free will, and with the understandiog that if the rate of tol asing the line, that then the other companies might seek another. The directors had canvassed, with the Greenwich committee, and with the directors of the Brighton and Dover companies, the propositions made har an ome to the conclusion hat it was not advisable to ente nto any further negotiation upon the subject, \(\begin{aligned} & \text { out that } \\ & \text { heir efforts should be directed to the construction of the }\end{aligned}\) Bricklayers' Arms branch, where they had no doubt that he great bulk of the cheap traffic might be satisfactorily conducted. considerable length on the questions in dispute between meeting of the West London Company, the report stated that the works were rapidly approaching completion although some delay had arisen from negotiations betwee The junction of the line with the Birmingham and Grea Western Railways would soon be effected, and the whol was expected to be completed before the end of Novem ber. The total receipts up to June last were \(174,000 \mathrm{l}\)., en a batac at the brikers of about 4002 . Ine he meeting and cadopted, Lord Kensingolders on th mproved pren directions was then discussed, and it was resolved that 6002. per annum be allowed the directors from the da when the line is opened.-The Manchester and Leed Company at their meeting have announced a dividend of 23 per cent. on the \(100 \%\). and \(50 \%\). shares, and a dividend or 5 per cent. on the 250 . shares. The traffic of the line has increased, and the management have turned lheir attention to the curtailment of expenses. According to the report presented at this meeting, the directors ard now occupied with the subject of the extension of railway ommaication to liverpool-A project Hastings with plation for uniting Rye, Tenterden, and Hassings Dove railway at Headcorn Th a bramen for a single line of rails is \(250,000 l\)., exclusive of land, and it is expected that the line, when completed, win be leased by the propeatern Company. A meld at Rye last week, when resolutions were passed for opening a subscription imme-diately.-The works of the new railway to Oxford have been commenced at the junction with the Great Western Railway at Didcot, and it is expected that in nine months the line will be opened to Oxford.-A new railway from Worcester to Cardiff is proposed, in order to connect the populations of the north of England and the midland
counties with South Wales and Ireland. It will com mence at the Taff Vale railway, pass through Wales, cross the Severn, and unite with the Birmingham and Glouceste Railway at Worcester. The cost will be 1,500,000l.-Th nhabitants of Plymouth, after a conference with Mr Branel and Mr. Saunders, of the Great Western Railway, hate resolved on adopting th
communicate with their town.

\section*{IRELAND.}

Dublin.-Mr. J. P. Malony has been superseded by direction of the Lords Justices, for baving attended Repeal meeting at Gort, nearly three months since. The Commissioners of Education have dismissed a schoolmas fer named Haydon, the master of the National School at Owning, Wicklow, for having altended the Repeal meetng at Waterford, in opposition to the rule of the Board, which prohibited teachers. National Nchools from attend ing politicyl meetitigs.-The weekly meeting of the Repeal Association took place on Monday, but nothing of an consequence occurred, Mr. O Connell being absent on his Western tour. The rent for the week was 735h. Two subsequent meetings bave been held, and at the last. Mr \(0^{\prime}\) Connell brought forward his address to the nation in reply to the Queen's speech. This document was exremely long; it contained a minute reeapitulation of the grievances of Ireland, and concluded by advising the people to continue in consututional agitation, uncir the obtained their Parliament in College Green.-At the appeared of police on Monday, two M o Mr. M. mick, a bookseller, in reference to Mr. Edward Kelly, who conducted himself in a very singular manner in un Cormick's shop on Friday and Saturday last, usiog anguage which appeared to him seditious, and speakin M. Coapon which he called a Repeal gun turday, from which it appeared that Mr. Kelly went int his shop on Friday, and after having asked for a copy o and "The Irish in Army ters on the" commence alluding in strong language to the Repeal question, intimating that physical force must be resorted to for its in this strain, be spoke of a " Repeal gun," which he said he had at home, and which lie would bring with him, and show to Mr. M'Cormick when he was passing by that way gain. On the day following, he called again at the shop, bringing with him the gun, which was made to reMrs. M•Cormick, and told her to take care of it till his return. No sooner had he left the shop, than Mr. M1.Cor mick, acting upon the advice of counsel, apprised the police of the affair, and having lodged information, pro cured the arrest of Mr. Kelly. Mr. M'Cormick's coun sel stated that Mr. Kelly liad rendered himself liable to a prosecution on many grounds, either for his having visions of the Arms Bull, by leaving a weapon in the house of an unlicensed person, or else for carrying such a weapon, he being himself unlicensed to do so. The informathons having been read over, the magistrates decided on holding Mr. Kelly to bail in the sum of 1002 ., and two supon ond binding, Mr M‘Cormick in sum of 50 o is a young Kelly, of Kellyville, Queen's County, is a barrister, and formerly held a situation in the Post-office. He peal dinner at Maryborough .-Much conversation has peal din aftin in bias become embroiled affain in ain the it is saich, wa placed \(p\) that placed he relerred the whel Blatio thy 1 lio

Loughrea.-The Repeal meeting in this town, for whic extensive arrangements were made, took place on SualinaMr. O'Connell arrived on the previous evening it in the sloe, about 17 miles from this town. On concourse of people from the surrounding districts. He was met at the villag of Kilreecle wre the regularly formed by the traties of Luughrea Galway and Ennis, and by perpm from Aihenry, Tuam, Gort, and other places, all of which Repeal sentiments were inscribed. During the entirs proceedings the rain came down in torrents. Res Queen's were proposed and carried condemning its efforts speeck, and pledging the med to obtain Repeal. At the \({ }^{2}\) Mr O'Connell on Bodkin, M.P., presidea, his right hand, and by O'Connell said that as be worthy and honest Repeal in his countenance, but a happy facs afrid of the asked him this question: Heplied at once he sawn no Queen's speech? terrified by the ghost of a speech. The Queen's speech was the speech of her Ministers. The people were
always so ready to make the distinction; but it was his solemn duty to point it out to them, to make them understand it. It was his duty to diminish as much as possible the tendency of the speech to create an unpleagant feeling towards the Soverelgn-a result which would be as wrong, constitutionally, as it would be melancholy There, indeed, the Queen's name was a tower of strength. Until ber accession to the throne, Ireland had received nothing but insult and injustice from sovereigns of the House of Hanover. After the Arms Bill, Ministers had one trick untried, and out they brought the Queen. All Europe was to be astonished by her speech against Ireland. Oh, what a trick! It was even worse than a
scolding match between two fislu-wives in Bilhngsgate : they were obliged to bear one another in reply; but here advantage that Judy took of them. When Ministers advantage batingudy took of them. When Ministers shillelaghs, and if they would give them fair play at scolding, there he was ready for them. Wher had ause to or the Queen's speech? No one; but they had cause to
rejoice in it. Ministers would not have used so rotten a weapon as that if they had any better. If anything could resist a repeal of the union, it would not be putting a few paltry words into a respectable lady's mouth. Peel
supposed that the Iriish were a changeable nation, and supposed that the rish were a changeable nation, and
that they would soan get tired of the repeal agitation ; but he was grossly mistaken. So far from shrinking from but he wrs grossly mistaken. So far from shrinking from will you let us at them?" These mighty meetings were people evaporated. After some further observations he people evaporated. After some further observations he Tuesday; at Lismore on Sunday next; at Mullagah on the 1st October; and Clontarf on the 8 ih . In this course they would proceed; but their measures were not limited He was making averagements, to have his parliamentary scale complete and ready against accidents; for who could calculate how soon they might have their Parliament? Let England be involved in any awk ward dilemma with one of the states of Europe-let any other country on
the fuce of the earth attack her, and in 24 hours they would have their own parliament. Ireland had his plan before it, and he was going on with it. He hoped that
every town mentioned in bis scheme. would furnish two every town mentioned in his scheme would furnish two
persons to act as repeal wardens for the purpose of persons to act as repeal wat was done he would call his protective society of three hundred Irish gentlemen about him. More than one member of Parliament had
offered himself as a member of this society already. He would proceed cautiously and deliberately, with an eye to shoal-water, steering the bark of Irish liberty through every danger, till it should reach in safety the port of
repeal, He called on the people to rejoice. The day of deliverance was not distant-the day when the country should be a nation again was not distant.'
Cavan.-A meeting of the Protestants of Killyshandra, in this county, in favour of the Legislative Union, was beld on Saturday week. This is the first out-of-door meeting against Repeal which has been held ; and it is
mentioned as remarkable, that no party emblem or banner mentioned as remarkable, that no party emblem or banner The resolutions agreed to bore reference chiefly to details of organisation. Those of most general interest were the following:-"That the Committee be requested to confer with the noblemen, gentlenien, magistrates, and clergymen connected with the district, and in whom they place confidence, in order to appoint from amongst them prethe view take-presidents, «c. and gentlemen who signed the requisition for the meetIng in Belfust on the 7 th September, there shall not be a general meeting of the Killyshandra District Association at present. But that in case the agitation of Repeal continues to be carried on in defiance of the wishes and
determination of her Majesty, it sball be Ieft to the Committee to call such meetings as they may think necessary. That in compliance with the existing law, no members of the Association shall parade together or join in procession, wearing, or having amongst them any banner, emproveke fan, or symbol, the display whereo way ferent religious persuasions, or accompanied with music of a like nature or tendency; but that the appropriate 'Rule Britannia,' and that its proper flag or banner be the Union Jack

> Edinburgh.-The Special Commission of the General Assembly of the Free Church of Scolland have issued a minute, signed by Dr. Chalmers and Dr. Gorden, calling of wealth and influence, to various representations that have been made to them from difterent parts on the coun-
try. They state that they have learved, on undoubted authority, that in some cases proprietors of land have refused sites for buildng places of worship for the free church; that in other cases servants and dependents have world, on no other ground but that they have left the Establishment ; that the cottagers in some parishes have been warned, at their peril, not to shelter under their roofs the ministers who have left their manses for conscience' sake; and that in one instance an interdict has been applied for to prevent a minister from preaching
on a cerlain estate, or on the sides of the roads and high
ways that pass through it. The Commission do not disbut, after recapitulating the grounds of the late secession, they state that any attempt to check the growth of religious opinions by such means must obviously be unsuccessful. "If," they say, "the most unlettered peasant in our land is to be reclaimed from what we regard as error, Any other by an appeal to his understanding and heart, weakness of the cause that needs to be supported by such instruments; and while he will be alienated in affection from any one who can resort to such expedients, he will be more rivetted to the doctrine he has that the mere force of secular power cannot bury religion, and that every effort to do so always leads to the most facal results. They proceed to show that even an fere with the rights of conscience will surely lead to dislocation of the different orders of society; and they coenclude as follows :- The inhabitaus of sotland have and for their attachment to their religious institutions and no efforts on our part will be wanting to cherish in their hearts feelings of loyalty to their aing to cherish in respect for thelings of lue the and due if their for those who occupy the hyer waks of life; but trampled on, they cannot possibly entertain any feelings of regard to those who do 80 . It is earnestly hoped that a sense of what they owe to God and their fellow-men, will keep the industrious classes in this country from any finose excesses which have disgraced other parts of the kingdom ; but we feel bound to state, that should the measures adopted towards them by some of the higher rill unavoidably be kindled in their bosoms, and will be transmitted from generation to generation. Such a result every man will surely deprecate, even should it never lead to open outrage, for it win tend to check industry in all land, and ultimately it may engender a disregard over the land, and ultimately it may engender a disregard towards duty to bring these things calmly and earnestly under the notice of the wealthy and powerful among us, and it is our has dictated them they may be received in the spirit that as mill tand them, and taat they may lead to sucli an issue land, and to the promotion of that brotherly kindness, peace, and good-will among all classes, which are its genuine fruite
Glasgow. - We regret to learn that fever has of late progressed to a very alarming extent in Gorbals, in couseof the poor, and other inhabitante, was held on Friday last, for the purpose of taking measures to alleviate the distress and disease so extensively prevalent. Some
details of a painful nature were laid before the meeting, amidst preceding day, no fewer than 71 persons afficted with is borne in mind, that the barony embraces a population of nearly 60,000 , and that fever is not confined to one locality, but to a greater or less extent prevails over all
the poorer districts, some idea may be formed of its extent. The parties, it is said, are, for the most part, in utter wretchedness, and some of them lying on bare straw. A committee was appointed by the meeting to receive subscriptions for their relief.
Zetland.-It is stated in John o' Groat's Journal that another shoal of whales has been captured in Sandwick, numbering nearly 450 , and producing to the parties concerned upwards of 1400 .

\section*{型a!}

Policr,-Mansion-House--Capt. William Tune, commander commercial Company, appeared to answer the complaint of the directors of that company, under circumstances of a very serious
nature. Mr. Clarkson said, it was with great regret the directors nature. Mr. Clarkson said, it was with great egret the directors
found it necessary to hring forward a charge against Capt. Tune, who had beens ror several years in their employment, and had uniformly conducted himself in the most irreproachabe manner.
The facts of the case, as far as the inquiry had hitherto gone, were these:-On the 5 th inst. there was delivered to Capt. Tune,
at Boulogne, six packages, each contanumg golid, checks on
 vinisly booked at the company's office in Boulogne, and paid for
according to the rates agreed upon by the company. The Captain according to the rates agreed upon by the company. The Captain
admitted that five uf these packages were contained in a bag, and adm sixth package, tngether with the bog whicl contained the others, was delivered into his thands by the clerk to tl e agent just
previously to the starting of the vessel for England. He further stated that, arter the vessel had gos under weigh, he went down inter he opened the beg and countel out the five parcels, which,

 don, and, put the key in lis pocket; that he remanned on deck
dinar
duitiil the vessel reached thic Margate Roads, where the anchor was dropped until the diay broke. That after the anchor was
droppedic retired to lis cabin and went to bed, but clid not lick limself th; and after ly ing about two hours lie was called by the ancluor, and proceded to Loudon, Tue Captaiin's statement fur-
ther reprisented that on the ship's arrival at the wharf, and after
 Louscin agent into the e abun to get the packages, but on going to
the drawer in which lic had deposited them, he found only one Wem there. It was due to Calt. Tune to say that he gave an imp-
mediate alarm, and caused the vessel and the passengers to be searcher, and every thing else to be done, which, under such cirunconscious of any ksowled ge of the disappearance of the property, In vain were the passengers then remaining on deck and their luggage searched; the other passengers who had proceeded
to the custom-house with their luggage were also subjected to examination, but no trace of the minsing parkages could be found.
Police-officers were also called ins, and they, with the castom.
house officers, made an examination of the vessel, but without
success. \(A\) short time afterwards a third officer belonging to the
Custo

 side floonng, through, which a parcel migit thave dropped bet treen
the timbers, the fion.ing of the yearel was strippd off, and cept a note addressed to the Captain hy the agen' at Boudrg ex
nn some business relating to the vessel. It was proper to adt
that the barth that the berth just alituded to was not used by any person, and compass, ready for use in case of necessity. lights, ruckets, and compass, ready for use in case of necessity. These were the reat present might be formed to solve the apparent mysterious dis-
appearance of the four missing pickages: the one, that if the
were delivered were delivered on board at all they were faken back again, and those who delivered the money, and the party to whom it was
delivered. The other assumed that the money was on board, bat through the connivance of some of the crew with other persons
 in the care of the Capath, was found \(n\) a place clowe to the wise subritted the extreme improbability that any perstn could
have extered the cabin without his knowletge while he was resting, and abstracted fron drawers, which it was difficult to open
at any time, the property confided to his care. It was needless, he said, to state property conat suspiciou pointed very strongly to the Capt., them in his cabin, that he deposited them in the drawer, that he had access to the cabin while he was on deck, for he fromad it after having been called by the mate, and all the circumstancts
seemed to forbid the supposition that any persin entered the catin while he was aslee \%. The steward and co k of the sessel, dance, ant prove that the robbery coul I not have bees effected
b) strangers, without exciting the attention of some parties in
the fore eabin. be remarted for a week, and stated, that the d rectors being
anxious that he sloculd receive as much recommodation as might be consistent with the respectainility of his character, and the
natue of the difficulty in which he was at pres ntinvolved, wert day of investigation. Alderman Gibbs Chen required two re-
spectable securities for 500 . Each, anti Capt. Tune to be bound himself in the sum of 1000 , The Captan was then ramban fed for as containing a sum wf money munch inferior to what each
package eally contailed. The Captain and the whole of the
crew, inctuning stewards and waiters, have been dischargent, ant QuReN SQuArs, -Alfred Wager, a gardener's labourer, was ber of valuable plants from the nursery-grounds of Messrs. Buc
 object clearly being on these occasions to observe where the mos-t with a large dog that was lonsed in the ground at night. From
time to time pots were misst d from the greenhouse, and on
 \(5=4=5\) \(2=2\) taken from his narcely. Sedich was made for the prisoner, and
on Sunday evening he was apprehended. Mr. Burrell asked the prosecutor if he could swear positively to the plant produced.
Mr. Buck replied most positively , with the same certainty as any Taylor wished for time in this case, 111 order, if possible, to find the reniainder or some other portion of the stolen property.
Mr, Burrellsaid he woulf give the, but wished to hear the other
 covered that his week's earmings, which he had received from
has master on Saturday mght, and which amounted to 14 . 2e
had bean had been stolen. Pri-oner l.ad got up carly that morning and
gone out, and, on his return, was given nnto custody on both the shrt, wastcoat, and landkerchief which he now wore after
the inutiey had bechs stol \(n\) on the Sunday morning, and found with seyell shinimgs in plant identified by Mr Buch defence man whom he did not know, in the street, and asserted that he
had never touched the poor roan's money. He was remanded
until Saturday.

\section*{SPORTING \\ Doncastar racks, Monday.- The racing commenced, rather inauspiciously, with a match, in which Blue Bonnet, the winner
of the St. Leger last year, showed temper before she had ran a of the St. Leger ast
quarter of a mile, and got rid of her jockey; her opponent Mania
was thus left to carter over, and will thus appear amongst the starters for the St. Leger, Le, Ster course. Mr. Payne's f. to the judge. St. Leger Course. (127 subs.-Mr. S. Wrather's Nutwith, by Tomboy (J. Marson), beat Mr. Bowes's Cotherstone,
by Touchstone (F. Butler); Lord Chesterfield's Prizefighter, by

Gladiator (Holmes); Lord Exeter's cby Beiram, out of Jucetta by Muley Moloch; Mr, D. Cooke's 'Trueboy, by Tombay; Mr. Bell's Reviewcr, by Romulus; ard Major Yarburgh's Dumpling, accomplished, Prizefighter quitting the crowd in a few strides, and taking up the running at a steady pace, Reviewer following
in his wake, Nutwith third, Cotherstone, Lucetta, and Trueboy
next, and the others in next, and the others in good places. The speed increased up the Lucetta colt was observed to move up, he mis position in the race on passing the T.Y.C. beilig next to Reviewer; this horse, however, fallen back to the ruck; Lucetta colt tired immedrately after,
and ere he was round was passed by every horse in the race. Up to this time Prizefighter had a strong lead, but it now graduand Aristides were lying close up. This lot ran in a body to the and Aristides at their quarters. At this point Aristides made an attenpt for the lead, ald fairly reached the leading horses, but
died away in two or three strides, and left the three to finish the
race. At the stand Cotherstonc's lieail was still in adivance of Nutrace. At the stand Cotherstone's lead was still in advance of Nut-
with, prizefithter bugg at the latter's quarters, and in this way
the race continuea thll within a dozen yards of the chair, when Marson made an effort, ar d landed his horse first by a head,
Cotherstone beathig Pruefigliter for the second prize by a nek. So finc ran a a capital l lace thrnughout, and fmished at Prizefighter's were tailed cff. The race a as timed at 3 minutes and 20 seconds.
Value of the stakes, subject to the usual deductions, 3,100 . Value of the stakes, subject to the usual deductions, 3,100l.
The Selling Stakes, of 10 sovs, each, with 60 added. The winner

 Plagsman, 4 yrs,
\(3 \mathrm{grs}, 6 \mathrm{st} 12 \mathrm{lbs}\). WEDNESpAY.-Match for 200 sovs., h. ft., 8 st 4lbs each. Red
House in. Lord Chesterfield's Joan of Arc, by Gladiator, 2 yrs, beat Lord Glasgow's f. by Voltaire, out of Snowball, 2 yrs.
The Foal Stukes of 100 sovs.

 Lord Glasgow's b, c. by Velocipede, out of Amulet, Eeat Lord Joe Lovell, by Velocipede. ond the third saves his stake. St. Leger Course. (76 Subs. 45
and
declared.)-Lord Eglinton's Pompey, 3 yrs, 7 st
glbs beat Mr. Forth's Venus, 3 yrs, 6st; Duke of Richmond's Lothario, 3yrs, struggle was maintained to the close, Pompey winning the best
handicap of the season by a head, Venus beating Lothario for the handicap of the season by a head, Venus beating Lothario for the
tecond money by a neck, and Priscilla Tomboy finising an ex-
cellent fourth. Semiseria, Eboracum, Portrait, and the Silkworm fily were next, but all beateu oft.
 Dumpling, Peter the Hermit, and Gorhambury, also ran. Won by
twenty lengths.-The cup this sear was a novel subject for aracing
match. It was not an imagimative illustration of racing or fieldsport, but a miniature equestrian statue-and an adminable elike-
ness, moreover-of the Duke of Wellington. It had been moulded in silver from a model originally designed by Mr. Baily, R.A.A., sent composition belongs solely to that gentleman.
Svoepstakes of 200 sovs. cach. -Mr . Bowes's Cotherstone beat
Col. Anson's Napier and Lord Eglinton's Aristides, in a canter. Two-year'old Stukes.-Colonel Anson's The Princess brat Lorrt
G. Beninick's All ronnd my Hat and Mr. Williamson's The Curé Nine ran. Won easy,
The Inteeper's Plute.-Won by The Bishop of Romford cob,
beating ten others by twenty lengths. MARK LANE, FR1DAY, SEPTEMBER 15 - We had a few arrivals

\section*{SATURDAY, SEPTEMBER 23, 1843. \\ MEEETINGS FOR THE TWO FOLLOWING WEEKS
Tuesday, Septembar 26 . Floriculural ... 7 p. \\ }

The newspapers have lately contained an incom plete account of an interesting experiment on the which it appears that a field may be cropped with Wheat without employing more than the \(2,400 \mathrm{dth}\) of the usual quantity of seed-corn. By the kindiness of Mr. Archdale Palmer we are now enabled to state the exact facts, which are explained in the following letter from that gentleman :-

As my triend Mr. Pownall has anticipated my intention to make the following experiment public, which have no doubt has attracted your attention, I cannot longer delay transmitting it to you for the readers of the Gardeners' Chronidle, agreeably to my original view, as soon as I had ascertained the actual result, and that could this week.

1842:-July. One grain of Wheat sown in a potAugust. The same divided into 4 plants, which three
weeks after were again separated and made 12 plantsweeks after were agan separated and made 12 plants-
September. The same 12 plants were again separated, and made 32 plants-November. The same 32 plants were again separated into 48 plants which were then planted in the open ground, not particularly prepared for them, 18 inches from each other, occupying a space of 11 yards by 1 yard, being the 440 th part of an acre; consequently 440 weigh \(\frac{3}{4}\) of an ounce.
weigh of an ounce. Then of the 48 plants died, and the remaining 38 plants were cut down, unfortunately, before the Corn was ripe, as the lirds had already tuken one-fourth away. 1972 stems were counted. It was turested this
week, and the weight is 2 2 16 ., which, according to the preceding calculation, consists of 22,000 grains. The Wheat sown is known by the name of Eclipse. I have thas stated the simple fact, but there are many observations which will naturally arise in an inquiring mind, when it is known that the cultivators of the soil in this country do not reap, upon the average, above 30 bushels for 3 bushels sown. I am aware that a remark will be made of the trouble and some little expense for the garden-pots, which were 48 s , if the experiment is carried on to a larger extent. But let every person interested in this account try themselves-they will, as well as myself, be nstonished at the result.-Archdale Palmer, Cheam." It appears from this experiment that by a new application of manual labour, three quarters of an quantity now used may be averaged at two bushels qual a weighing about a hundred and fily pounds. and ally not be too high a price to take as the average value of seed-wheat, and there fore the saving in corn will be about eighteen and sixpence per acre.
Of course the practical question is whether this cighteen and sixpence will cover the cost of manual labour required for the operation of setting Wheat instead of sowing it. If it does cover the expense it would be an enormous gain to the country, because it would immediately afford a large amount of employment to those labourers who not being able bodied are most in want of it. We doubt whether eighteen and sixpence an acre could be possibly expended in the operation, if judiciously conducted on a large scale; but that is a question which any intelligent farmer can answer better than we can
We would only observe that if, as we are told, \(3,800,000\) acres are annually planted in Wheat in England and Wales, the application of solarge a sum as \(3,500,000 \mathrm{l}\)., -which would be the amount of saving by Mr. Palmer's operation at the prices above assumed,to the relief of the poor, is something which demands a very different notice from that of a passing comment
a newspaper
We shall take an early opportunity of returning to this matter.
\(W_{\text {Ith }}\) a compact subsoil within 18 inches or less of the surface, and which lies nearly parailel to \(i t\), there is very little difficulty in contriving artificial channels of various dimensions, so as to carry off the superfluous moisture, or, more properly, to prevent its stagnating
and accumulating between the soil and subsoil. But the case is very different when the subsoil varies continually, and is never parallel to the upper surface, but undulates, or has various dips, quite unconnected with the declivities of the surface. This is very frequently the case where there is a change in the geological position of different strata. To take a familiar example, tion of different strata. Wi take a faminar exampe, Metropolis: the London clay-one of thost uni-form-lies in a basin of chalk, which crops out all around it; in some places the clay is 300 feet deep, or more; and in others, at no great depth, the spade can turn up solid lumps of chalk. The pure chalk is always pervious to water, and if it lies within reach so that pits may be dug into it, these will often carry off all the water which may be conducted to them by drains or ditches. It is possible that, in some cases, the chalk may be saturated with moisture which has o outlet , but this case is uncommon, except where the chalk itself lies in an impervious basin. We only wish to point out the situation of those lands which border on the transition from one stratum to another In most cases, especially when the chalk and clay meet the circumstance is pointed out by numerous springs coming out of the chalk. It requires good practice anc some science to drain land which lies in such a situation, but by adopting correct principles founded on experience, the difficulty is easily overcome. General rules and directions, however, are not applicable to cases which vary without end. Where the London clay has another soil superimposed on it, which is generally of a poor gravelly nature, abounding in round pebbles and loam impregnated with iron, or, as in Suffolk, with a marine crag, there the meeting of the light soil and clay subsoil is accompanied with endless variations. One would imagine that the upper soil had been carried by currents and whirl pools, which had mixed it in the greatest confusion ; here producing a bed of gravel of great thickness, and there scooping out the clay into holes, which were immediately filled with this chaotic mixture of every kind of earth and stones. In another place, a complete bed of fine sand has evidently been deposited over the clay, and this again washed away by subsequent currents, leaving the clay bare in the valleys. These soils generally require draining, wherever the sand meets with the clay. If the clay were level, or had any regular inclination, the task would be easy; the springs being cut off at a certain depth by deep-lying drains, the wet ground below would immediately become dry and sound : the upper soil, being porous, would require no other drains than the ditches. But this is scarcely ever the case, and the loam, which is formed by a mixture of clay and sand, usually called brick-earth, is as impervious to water as the clay itself. In good brick-earth, dranns may be laid as we described before, but where there are continual variations in the subsoil, from loose running sand to loamy gravel and stiff clay, there pipes alone will act effectually, and they must be so made as to fit into each other, to prevent their shifting. Where the sand is loose and running, a foundation of brick-earth or clay must be made first, or of concrete, if that can be done sufficiently cheap, as we are assured it can; the pipes may have holes, or what is better, merely a slit to let in the water, without letting in the sand, which must be kept out by a layer of straw, or furze or heath, as can be most easily procured. Pipes are now made by a machine, which every brick-maker can have constructed for a very few pounds. It is merely an imitation of that by which macaroni is made in Italy. A quantity of well tempered clay is put into a wooden or iron cylinder, in the bottom of which is an iron plate or disk, in which the exact section of the pipe is cut out; a strong piston forced down by any simple machinery drives perpendicularly of the size of the bore of the pipe having a shoulder and handle at the bottom. When the pipe is thirteen inches long, it is cut off with a wire, a boy seizes the handle of the mould with the pipe on it, and places the pipe on a barrow with a fla stage on it, which, when full, is wheeled away. A the moment the first boy removes the mould, another boy places another vertically, to receive the next pipe One cylinder when filled will squeeze out 12 pipes, or more; it is then removed to be filled again, while it is replaced by a full one. With a little practice the operations go on most rapidly, and the greatest portion of the labour of moulding pipes and bending them is saved. We have no doubt, that, with fair competition, pipes 2 or 3 inches in interior diameter may be thus made and burned, where fuel is moderately cheap, for less than 20s. a thousand, and larger in proportion. In the machine we saw at work there was no contrivance for making one end of the pipes wider to receive the smaller end of another; but it is obvious that a slight enlargement near to the handle of the mould which receives the pipe, as it is formed, would effect the purpose completely. With such pipes any soil may be cheaply drained; and we hope that the very simple machine which makes them may
be so generally adopted, that the expense of thorough-
draining with tiles will never be urged as an objection. If the draining costs \(4 \%\). per acre, which it seldom will come to, we will venture to affirm, that the first Corn crop of any kind, grown on the lamd after it has been drained, when the winter and spring have been wet will amply repay the whole outlay; and every succeeding crop will give a considerable increase of the former average of crops on the same land.-M.

One reason why the obtaining heat by hot water circulating in earthen flues or gutters has met with so favourable a reception is its cheapness. Although iron pipes and evaporating-pans may be the best materials where durability is important, and there is much work to perform, yet there are thousands interested in garderis who cannot afford their expense, and who therefure have been obliged to dispense with heat ing apparatus altogether until the tank system was again brought ford mens were pointed out of applying it economically. There is, however, still a difficulty with almost everybody in knowing how the apparatus can be best constructed ; and, therefore, we think it desirable, without waiting for perfection, to state the general result up to the present time of experiments on the subject in the garden of the Horticultural Society, where it is at this moment either used or about to be used in several different places.
The gutters there were originally constructed of old flue-tiles and bricks set in cement, rendered insid with the same material, so as to be water-tight, and covered with flue-tiles, having moreover common chimney-pots adapted to them here and there, so as to allow steam to rise out of the gutters into the house upon occasion. An attempt was afterwards made substitute cutters of Stourbridge clay a very hard material, but it was found impossible to prevent the fracture of their joints, in consequence of the expansion and contraction of these gutters ; the attempt was therefore discontinued, and the materials of construc tion first employed are still in use.
It was also supposed that leaden pipes for the flow and return of the water from the boiler to the watergutters could be secured by being passed through bricks well coated in cement. This however failed, in consequence of the expansion of the metal when leated, the joints again breaking and allowing the water to run out. This difficulty is now completely overcome, by building into the end of the watergutters next the boiler a piece of stone, pierced with gutters next the boiler a piescrews are secured. To these union screws the flow and return-pipes are afterwards adjusted.

As the porous nature of the materials purposely employed for gutters, and the unsound joints, caused a perpetual leakage to some extent, it was found necessary to be able to examine the height of the water in the gutters at all times; and this was effected by continuing them into a cistern, built in the wall of the stoke-hole, and always uncovered. By this means, or the y y wation, leakage, or otherwise
In Mr Rendle's plan, the whole under-surface of propagating or other beds has been made to rest on a tank of heated water, whence the name of the "Tank system." But this seems to be a superfluous expense. As far as can be at present judged, quite heat enough is obtained from a gutter running all round a pit, near the exingal wall without touching it, and by allowing the outer wall to communicate with he ir furthe air or thently, and, as it seems, effectually.
These preliminary remarks will enable the reader to these prethe reasons which led to the construction understand the reas long and 6 feet wide, of which the following are the plans and description :-

Fig. 1 represents a section of the water-gutters, \&c. at the stoke-hole. The boiler is one of Stephenson's, which requires no setting, connected with the gutters by means of inch-and-quarter leaden pipes, and the cistern A. This cistern is formed by a vertical stone, tapped with two holes and fitted with union screws, and resting on a horizontal stone. The flow-pipe is
adapted to one of these screws, the return-pipe to the other. The bottom of the cistern is kept about three
inches deeper than the bottom of the gutters, so as to permit sediment to fall into it, as has already been stated.

Fig. 2 is a section of the pit, showing the hot-water gutters, which are made by placing a 14 -inch tile on hollow brickwork, as indicated more particularly at Fig. 3. A brick on edge forms the sides ; the inside is then cemented, as shown by the shaded part, and the whole is finished with a 14 -inch tile on the top. A space of about two inches is left between the gutter and the front wall, and allows the air from the under side of the gutter as it becomes heated to ascend and pass over the partition marked B, to be made available for top-heat.

\section*{ON THE VARIETIES OF CYCLAMEN.}

In enumerating the following species, I have divided them into two sections. The firstare those with orbicular or reniform leaves ; the second are those with angular or
hastate leaves. hastate leaves.

Sgction I. - (Round or kidney-shaped leaves).
No. 1. Cyolamen coum (the round-leaved spring-
fowering Sowbread).-This species has entire round flowering Sowbread). -This species has entire round
leaves, heart-shaped ate the base, of a dark green on the upper surface, and reddish parple on the underf. It is destitute of that white marbled appearance ont the upper
surface so common to most of the other species. The surface so common to most of the other species. The flowers are rather small, scentiess, of a bright reddish
purple, and produced from January to March. The roots are also rather small, flat, and quite hardy. It is to be found

\section*{No. orbiculare.
No}

No. 2. Cyclamen Europcum (the round-leaved summer-flowering Sowbread). - This species has small leaves, which are slightly denticulated, and roundly heartshaped, strongly marked on the upper surface with an
irregular white band. The flowers are rather small irregular white band. The flowers are rather small, bright-reddish purple, and very like those of the preceding
both in size and colour. They are produced from July to both in size and colour. They are produced from July to
September, and are sweet-scented.
The roots are small and quite hardy. It bears the following names in collections :-C. Clusii, C. westivum, C. Jittorale, C. officinale, C. retroflexum, C. Hungaricum.

No. 3. Cyclamen vernum (the round-leaved winterflowering Sowbread).-This species has leaves double the
size of those of \(\mathbf{C}\). coum, and nearly four times those of C. Europesum ; they are quite round and entire, with the lobes at the base overlapping the stalk, and marked on the upper surface with an irregular band of white, which is not the case with the leaves of C. coum. The flowers are like those of the two preceding kinds in form and colour, but a little larger and produced from November to January. The roots are rather larger than those of the
two preceding kinds, and the plant is frequently confounded with C. coum in collections. The name hyemale (winter) would be far more appropriate for this very distinct species, for it has done flowering before spring commences; this may account in a great measure for its
always being confounded with C. coum, (the spring-floweralways being confounded with C. coum, (the spring-flower-
ing kind, ) but it may be distinguished at first sight by its larger leaves having a. very conspicuous white band on their upper surflice. 1 have raised this species from seed, and the plantt byve always retained this character, and that of flowering during the winter, if protected from the
wet. It has the leaves of C . persicum and the flowers of C. coum.

No. 4. Cyelamen Persicum (the reniform. leaved spring-fowering Sowbread.) -This species has rather large upper surface and deep purple on the under side. The flowers are white, but there are several varieties raised from seeds, some with white flowers having a pink eye, others all pink or pale lilac, some with jagged petals,
others with double flowers, others with
sweet-scented flowers, and others quite inodorous or with dotted flowers, It blooms from February to May, according to the treat-
ment it receives, and is an excellent plant for moderate
forcing. The roots are rather large and flattish ; they tender and soon destroyed by frost. It bears the following names in collections :-C. pyrolæfolium, C. odoratum.

Section II.-(The angular or hastate leaved.)
No. 5. Cyclamen Neapolitanum (the anynlar-leaved autumn-fowering sowbread). - This is the largest, most
robust, and hardiest of all the Cyclan.ens; with large various shapad leaves, mostly five angled, but sometimes triangular or hastate. They are, however, always the same shape on the same plant, and very much resemble the leaves of the common Ivy, but are distinctly marked on the upper surface, and have an irregular broad band of white and purple on the under surface. The flowers are Aug, purple, scentless, rather large, and producen from
Aupptember. There is a white variety, differing in nothing except the colour of the flowers. The roots are very large, rough, flat, and quite hardy. It bears the rollowing names in collections :-C. autumnale, C. purpupurpureum. It is to be found in nearly all collections under the name of C. hederefolium, a very appropriate appellation.

No. 6. Cyclamen hederafolium (the angular-leaved spring-fiowering Sowbread).-This is a very desirable species, with broad, denticulate, marbled, dark-green, and purple on the under. The flowers at first are white, but as they adrance and get fully expanded, they change and narrow. It flowers tropetals are particularly twisted and narrow. It flowers from March to May, and is very tender. It bears the following names in collections:-C. repandum, C. latifolium, C. ficariæfolium, and C. fra-grans.-George Gordon.

\section*{COTTAGE GARDENS IN SCOTLAND.}

Tre letter, some months ago, of a Stirling correspondent Who wishes the subject to be taken up in the columns of the Gardeners' Chronicle for the benefit of the cottagers fore pointing out to the cottarticular those articles which he ought to grow in his garden, and how he ought to crop with regard to succession, something else must be done, otherwise the generality of such persons will look on the suggestions as merely to be read, but not to be put into seems to be, and the aristocracy of Scotland, who have means and infuence, must take up the subject, and hold garden well, and to to the cottager to coltage and all connected with it neat and clean. In England this system is now pursued with the best results ; and although there are some societies in Scotland for the same purpose, they are
far from being so general as they ought to be. These objects should be carried out, in the first place, by purchasing kitchen-garden and flower-seeds for distribution amongst the cottagers; and in the next, by holding out to them. The prizes should not be confined to the first, second, or third best, but a large number should be rewarded in some way; in fact, all who have shown anxiety about the matter should be stimulated and encouraged. This has a much better effect than when the best only receive the prize, because in this case the great mass are apt to be discouraged.
tellize cottagers of Scotland are a slarp-sighted and incondition clase of persons; and, in order to better their propose to do is really for their hefit. Every we propose to do is really for their benefit. Every one
knows that, until a few years hack, they. were notorions for the manner in which ashes and filth were allowed to accumulate in front of their doors and round the walls of in the country attempted to make them a little cleanlier and more tasteful in this respect, and they have certainly succeeded, for heaps of ashes or dunghills in front of cotwitness now almost unknown. But it was curious to round. The lord's commands went forth, directing the dunghills to be removed; the gardener from the Hall was sent to make gardens in front of the doors, and to plant too with shrubs and flowers. The walls of the cottages all was done, it was of course expected that the cottagers would attend to them and keep them clean and neat; but many of them felt much to grand to be comfortable, and that it into their heads that it was not for their benefit planted these gardens was obliged to attend to them himself; and in one place, which I had an opportunity of (which a few weeks agos the pales in front of the doors down, ware everything destroyed, excepting a few stronggrowing trees.
The aystem of changing masters too frequently operates this is pagainst the improvement of cottage-gardens: in the south of Scolland. The cottagers here are of two
in classes-either "Shinds," that is, farm-servants, engaged to work horses ; or "cottars," who merely rent houses and the former are engaged by the year, and are paid chiefly in the produce of the farm, that is, a a certain quantity of Corn, with Potatoes, food for the fields, which they can plant their houses for the ame ends at Whitsunday. Many of both classes change houses ends at Whitsunday. Many of both classes change houses
and masters every year or two, and of course it would be
difficult to make such persons feel much interest in the gardens which are always attached to their houses.
Taking these things into consideration, and having mingled in the society of the cottagers of Scotiand for mately acquainted with their consits and fy become intiadvise all those who are anxious to improve the 1 cend tion to begin by making their homes comfortable. Having done this, try to make them feel an interest in their gardens by those means which I have already pointed out, and it will soon be found that they will not be behind their English neighbours in their love for vegetables and for flowers. I have often heard many of the higher classes of society, who are in the habit of visiting England, regret the difference between the two countries in this respect. The English cottager has his house covered with Roses and other creepers; his Pelargoniums in the windows are attended with anxious care, and he has generally a little plot of flowers and neat walks in front of his window. His vegetable garden contains, besides the more common things, French Beans, an arbour of Scarlet Runers, Celery, Cauliflowers, Cucumbers, and various other ardens of are rarely or never seen in the cottageMr. Paxion's Cottage Calendart in the state to profit by tage Gardening published weekly in the first volume of this Paper. The higher classes in Scotland, therefore, have the power in their hands to raise the character and enjoyments of their cottagers ; and in making this appeal to them in behalf of our countrymen I would at the same time remind them that they will thus contribute greatly to their own enjoyment. What can afford higher gratification than to see the cottages converted from a kind of table or cow-house into a comfortable dwelling-place, the
 atis, and Honeysuckle, and the cottager and his family
taking an interest in his garden.-R.

\section*{AMATEUR'S GARDEN.-No. XXXVIII.}

The time bas now arrived when the Amateur who Ginks of having a show of fowers through the winter and early in sperg, purpose. If my former instructions have been attended , a great number of plants will have been prepared, motted on, and now be strong healthy plants, well esta heir to brave the whiter's dulness, and cheer us with of Caforial tock of Chinese, Tea-scented, American amnuals, a nice tock of Chinese, Mea-scented, and Bourbon Roses, with bundance of Cinerarias, Violets, and Mignonette in several diferent stages of growth. If these things have not been preparta, there is not a day to be lost, as, though he feather is and mromising at the present time, it is ot be expetan long continue so ; and if the plants are not well established, at the latest, by the hoom with anyitho after management will induce them to Oom with anything like freedom before the spring. wilf be those to bloom next of the plants now potted nusu anusually large specimens it is recommended to put four rive pran s in a por for those persons Shows, to to compete for prizes at the Horticultural Shows, to consider whether such specimens will be per mitted to compete under the bead of "the best 12 flants." I throw out these hints, because I hear that ome persons are preparing plants in the above manner, Which will most certainly disqualify them for exhibition. cinerarias do not like to be too muct exposed to currents of cold air in the winter, as I have frequently seen them much injured by being set out some distance apart after they lad become crowded in the frame. The proper way lo set them so that the leaves just touch, but never to rew them to be crowded. If the runners have been regularly taken from the Neapolitan and Russian Violets,
 quite time that the best of the plants were potted, and the remander planted in a frame or on a warm south border, Some inended in my former article on this subject.
Some importance is attached by some cultivators to the potting of Hyacintlis and other bulbs early in September, fut, in my estimation, quite as much depends upon the Fofter treatne ent of the bulbs as upon the time of potting. For bulbs to bloom at Christmas, the most hardy of the blishle varieties should be used, and after they are established in their pots, they should be placed in a brisk bottom-heat, and be kept covered with inverted pots, and four inches long. One of the London nurserymen, in the instructions ong. One of the London nurserymen, in the recommends filling the pots with soil, and placing the bulb on the fining the pots with soll, and placing the it in a conical form very lighty with soil. This plan I thed several years back, and though it answered very well, trude themselves over to it, viz., the roots frequently proget brokenseres over the sides of the pots, and therefore material. The old system of potting with the apex of the bulb leve old system of potting with the apex of preferable. It is top of the pot is, in my estimation, the buibs are plun matter of little importance what soil as the cap necessary for the production of the flower is already stored in the balb, aud only requires proper treatsoil, or placed over whether it be planted in moss or planting a number of Van Thol Tulins in small 60 size pots, and also the different kinds of squills, such as Scilla Chinese bifolia, \&c. These, with a few Hyacinths and Chinese Primroses, make admirable little groups for the ar trag-room table when neatly arranged in flat baskels or trays, and the surface of the pots covered with moss.

I do not consider it necessary to give the names of the various kinds of Bulbs, 8 s, if the amstenr purchases at a respectable house, he may depend unon getting proper
kinds-that is, if he applies in time. \(-W\). \(P\). Ayres, Brooklands.

\section*{HOME CORIRESPONDENCE.}

Bollom Heat.-I am sure that the Editor of the Gardeners' Chroniclewill give me credit for maintaining an
opinion formed from my own practice until I am satisfied opinion formed from my own practice until I am satisfied
that it is untenable. At first, I jutended to hear all that could be said on both sides of the question before I made a reply; but now I see that the Gardeners* Chronicle
and myself are in a position like unto the travellers with the cameleon, and that some explanation is necessary. The Chronicle defends a totally different arrangement
from that which I wished to alter. Without a section, or from that which I wished to alter. Without a section, or
a more detailed account, I cannot say how I should like a more detailed account, I cannot say how I should like
the plan it defends; buthere it is:-"As far as we (Gard. the plan it defends; buthere it is:-" "As far as we (Gard.
Chron.) are at present aware, it will be found that if the spaces between the gutters are filled with rough materials, such as fragments of bricks and pottery, any quantity of
water may be communicated to the beds by the ordinary water may be communicated to the beds by the ordinary Now these observations camnot refer to Mr. Rendle' systerm, for he occupies the whole bottom of his bed with the two gutters, or the flow and return chanuels, with a the two currents, and for resting the edges of the covers on. These covers are "slate-stone, liz inch thick, cut square at the edges, and fastened to each other by lhoman and, of course, cannot have "spaces between the gutters" to allow of drainage, so that we are arguing two very
different things under one name. Then, with regard to Melon growing, I was not writing an article on their cul ture; nor do I advocate mud beds for them; I merely alluded to such mud as is supposed to be produced by the admission of vapour (not steam) from below, and
endeavoured to show that such mud is not produced at all and now, to simplify the question, I say distinclly thatneither mud nor anything like it is in reality produced in twelve effect produced is simply this-for 1 have noved it before the subject even originated in the mind of Mr . Rendle:open spaces, say one-eighth of an inch, were left at certain intervals between the edges of the slate coverings, with bottom-heat, then a layer of an inch or two in thick ness, of rough coal ashes, clinkers, or what is boy's marble; then cover this layer closely with thin the vapour never passes through this layen of turf; merely fills the turf like a sponge, and whatever moisture or "wet" that passes further up, is carried by capillary attraction, and when the roots of Melons get within the nary vigour, and no red spider will ever come near vigorous-growing Melon plant. When plants have grown the vapour openings, and their roots will suck the sponge dry; by degrees, the "circulating medium" thus cut off will soon tell on the branches above, and a great deal more fruit will be set in consequence thas the plants can
bear. You may then thin them, leaving about double the quantity for a crop, and let in the vapour again to swell ing, I deny in toto that he was either a first or a second rate grower; he only knew them physiologically better most intimate friends, and not far from Downton Castle and what was going on there at that time I was not a and good man to say, that, whatever attainments 1 have made in the true principles of gardening, I learned them from his lips. His Melons were always a source of red spider, through a defective apparatus,-and that defect too, which I wish in these pupers to obyiute. I must modify my assertion, however, so far as to say, that if Mr. Knight had had a properly-constructed apparatus, I saw bear as good crops, ss those of a first-rate gardener. In conclusion, let it be clearly proved that I am wrong, and Renly bottom-heat, such as is now in use in Mr. poses to which botom-heat is applied, and I shall imme diately explain another apparatus, which will supersede the tank-system altogether, and only cost one half the expense,-D. Beaton. [Since it appears that we have been speaking of one thing, and Mr. B. of another, there persist in stating that Mr. Knight's Persian Melons have never been excelled, and rery rarely equalled; and that as a Melon.grower he aras unrivalled. Lrat ine course of could ine ollerwise? The final result is what should be looked at, and that was perfect.]
Rendle's System of Tank-heating.--As I think that any and duty to assist in carrying it out to its full extent, I again observations that have recently appeared in the Chronicle relative to the "Tank system of heating," and, in the preeks since. This writer, for whom I entertain great respect, does not seem to have considered the matter well, or he would not have asserted "that there is one thing
which should not be overlooked, namely, it does not admit of the pipes being fixed one inch higher in the house than refer to Loudon's Magazine as far back as the year 1829, and he will find an article therein published relative to the syphon principle of lheating; by the same means nothing can be easier than to conduct water six inches, or even six feet above the level of the tank, care of course being taken that the flow-pipe be situated at least two inches higher in the water than the return, and that provision be made at the highest point with an air-cock or pump, to draw off the air which will be replaced with water. Thus easily, and I trust satisfactorily, have I explained to Mr. Slerwood how this presumed impossibility is possible, and if there are any other queries which the readers of the
Chronicle are disposed to put, I am willing to answer them through that medium ; for I should be sorry to hear of an apparatus being put up in an imperfect or incomplete manner. This offer will, I trust, be acceptable. Mr. Beaton, lately, in the "Calendar of Operations," has a long article on the "Tank system," in which lie states that he agrees (or rather agrees with me)
that "surface of tank is of much importance," and upon this rests what is considered MX great improvement over the pipe or gutter system, and what I have ever atudiously recommended and have always advised. The most economical plan will be "to make the tank as wide as the bottom of the bed, or nearly so." This is just the plan
that must be universally adopted. But with regard to the depth of the tanks, I think that Mr. Beaton is running into an opposite extreme to a rev. gentleman whose name appeared in your columns a few weeks since, who recommended that the tank should be two feet deep. The difference is certainly very great between these two ardent advocates of the system, but in order to avoid extremes, I advise that the tanks should be between six and nine mones deep. Io not state this without experiment, the tanks were only four incbes in depth whereas in the new one, (which is but 50 feet by 13 , and considered one of the most complete houses of the kind in the kingdom,) (he lauks are eight inches in depth; my motive for making this alteration has been already stated a body of water, when once heated, retains its heat for a considerable time." This 1 have fully experienced, and noy experience, I trust, will not be thought of a moderate depth, as being the most economical for the saving of fuel will be found very great. When the tanks are only an inch in depth, a very little fire will raise the water to a great leat, but the fire will equire constant attenc certainly have a atrong fire to get i up to a high temperature, but the firing afterwards re quired is trifing. Batisfied. Mr. Beaton then goee on to state that "Mr. Rendle's system falls short of pre vious arrangements, he makes no provision for moistening the bottom of such a bed." In answer to this, I would observe that in my treatise a plan is suggested for form-
ing a bed for growing Pines without pots. The first straum over the slates, or tiles, should be of rough mate rials, the cultivator applying, as the case requires, according to his judgment, liquid, which would filter to the ratio as iufluenced the heat below. This plan is equally applicsble to the cultivation of Melons or Cucumbers. 1 am gratified to think that it is the intention of Mr. Beaton to write an article or two bearing on the pron a more laudable pursuit.-W. E. Rendle, F.H.S. Disease in Lavch. - Can any of your Correspondents inform me through your columns the cause of Larch turnextremities of the young shoots with the leaves are the most infected; the Larch will be three years old next pring ; the side branches, especially the lower ones, make no growth; the leaves turn brown and fall off; the upper inches, while half the plants die, or nearly so; here and there one makes a moderate growth, (about one in ten, that were planted out into nursery lines in the sume year ( 1842 ) and are growing within 50 yards of the other; ye they are quite healthy, and have made very fine growth The lealliy three yeaserd were all one remained afte the lest had been selected, and there was no difference digging. The seedlings मlanted this spring are not in fected. I have had Larch discased in the same way before, but never to the same exient. One square of Larch may injurected, and another, only a few yards off, may not be the suring, but I can renember their being once slightly infected in the sume way about the latter end of summer I ought to state the chmate is late and wet, being in the I shall be glad to know if there be any remedy. - A Paddy Wasps.-Last year there was a great number of nest in this neighbourhood (south of Irelund); this year 1 have only heard of two, and seen one, and that one on the top are they a peruliar kind? The nest is about 6 inches in bottom, tha 7 to inches deep; the Wasps enter at the and appears to be enlaiged from the nest increases in size, Wasps.-We have a great qusutity of Wasps in this neighbourhood, near Shiffnall, (South ShropsLire,) but
not quite so many as last year. There has been upwards of 130 nests destroyed, and it has not weakened them much; the Bees, too, eat the fruit nearly as much as the Wasps. There was a great quantity of Queen Wasps this sprigg. We destroyed a great many, and the wet weathe in the beginning of

Transmutation of Corn.-I lately preached a sermon, at Northtawton, upon the parable of the "Tares" (§ईavia, most probably Darnel), in which I introduced, for the Chronicle inustration, a which icte respecting the Lolim arvense, or temulentum Droke, generally knowa among the farmers of Kent as Droke, and was understood to be-but which it really was not-uegenerated Wheat. In the partor Devon to which Drunken Plant" "n by the nated and observant farme Drunken Plant." A strong-minded and observant farmer of that parish, Mr. William Durant, afterwards observed, Your remark respecting the Droke was sufficiently cor rect as an illustration of your subject, but, depend upon it, you erred as regarded the fact. It is degenerated Wheat! It is not often seen in good land; but it almos uriformly appears where a rough moorland has been broken up and sown with Wheat. I lately met with a stalk of it, and upon pulling it up, brought up the entire root, with two ears of Wheat-(a fine illustration of "Lest ye root up the Wheat also"". "Upon the most accurate examination, by disengaging the earth from the fibrous roots, first by the finger, and then with my knife,-I found al three stalks growing inseparably upon one root. I laid it aside,-but lost it,-intending to have endeavoured, by cultivation, to restore it to Wheat again! ! 1 assured him it was a distinct plant, and not degenerated Wheat "Well," said he, "you may use my name as publicly as you please for the fact, that, Wheat or no Wheat, all the plant spring from one root." You will perceive that the misap prehension is not, by any means, confined to Kent.-T.D Morphology,-At p. \(630, \mathrm{Mr}\). Paxton has described as a monntrous state of the cone of the Spruce Fir, a not uncommon production on that tree, occasioned by injury done to the leaf-bud, by A plides. It is this which assume the charaster of a pseuco-cone, and which afterward develops, as he describes, into the usual condition of branch. He will find that this appearance generally extends about two thirds of the way round the axis. The cell-like cavities at the base of the abortive leaves are filled with Aphides, in an early state of their development and I have aso seen them contanning a species of Cocci nella, which 1 presume had entered them to attack the Aphides. If I remember rightly, this appearance has been noticed and figured in Richards Coniferg," and also somewhere in the "Magazine of Nuturul History." -J. S. Henslow.-一In reply to your correspondent from Chatsworth, I beg to state that the branch of Spruce Fi presenting, some appearances shich he supposes to proceed from cones never properly developed, is th production of an insect. These occurrences are perfectl familiar to my eye, although they are less prevalent thi ear than usual. They begin to appear in the spring and soon contain in cells humerous larve which finally merge in the shape of amall firs. These nests the become brown and hard, and are certainly not unlike imperfect cones. P.s.-Since writing the above 1 have referred to Selby" "British Forest Trees; at p. 465 you correspondent will find this matter fuly explained. The insect is there called an A phis-it has, think, rather the appearance of a Cynips, but is no doubt well known to naturalists, and perhaps some one may oblige us by giving its scientific name und history.-Aslerope.
Conservalory Climbers.-Allow me to correct a typographical error in my remurks on Conservatory Climber: in a late Number. After recommending Bignonia Che rere, and stating that it bloomed nost freety, in conjunction with B. jasminoides, 1 mentioned a few plant that refused to flower at all; among them Bignonia jus minifolis, not jasminoides, as it has been printed, an which contradicts the former part of my statement. bought the latter plant from the strong recommendation of a nurseryman, \({ }^{2}\) Hortus Britamicus," as an ornamental stove climber, ten feet high, of an orange colour and a native of Orinoco, introduced in 1826 ;-Dloes Ms Beaton know it?-A Devonian

Myatt's Pine Srawberry.-The information which you have collected on the culture of this valuable fruit will be very useful. 1 hav bern to every one; they ar ought in addition to ve km" of the "Botanic Garden" published on the lst of the present month, and as Mr Maund, the writer of them, is a careful expermenter, will copy them for your use. He has lately tried the effects of Guano on several garden crops, aud says, "It is quite evident that the luxuriant growth given by Guan 0 this shy-bearing Strawberry is higly adrantageous to Pistility. Most persous aree flannowng Myalt Pine strawberry to be the cult to cultivate successfuly, any no love, however, If compers be planted as early se the can be obtained, certainly not later than July, and the beds be supplied with Guano-water, 40 oz to the gallon once a week, for four weeks, commencing as soon as the blossom-buds are visible in the hearts of the plants, we believe they will not fail to bear abundantly; and by ma uring the latest flowerg, will continue longer jo bearing than many other sorts. Probably it would be advanta geous to apply a little Guano to the plants in September aulated at this ceason, be plants may pasibl diven into flower to the prejudice of the spring blossom."-ativa

Prejudices.-Wif your correspondent " \(Q\)." cצnects a favour frae ane, he might aye be civil, I think, a I ne misca'
ane; for though a puir chivid may hae the misfortune to be planted on a moor, and may be a "Moorland Gardener," it disna happen as a necessary case that he maun be a "Moor-
land Willie," sic a ane, ye ken, as a Scotch poet describes land Willie," sic a ane, ye ken, as a Scotch poet describes, Wha went a courting auld Gaffer's bonny Jean, wha lived to look for the lassie wi' his spectacles on, and when he saw her, sang to the tune of "Whistle o'er the lave o't." began reading the Chronicle; and anither thing I hae also observed by means \(o^{\prime}\) that periodical-that it is nae canny thing to be an innovator: it taks guns \(0^{9}\) nae small calibre, and bullets that wad fill the mou' \(\mathrm{o}^{\text {' }}\) "Mons Meg," to batter doon the walls o pride and prejudice, and
indurated custom. If ony ane like mysel' was just to say that "Wines do not work when Vines are in the
flower," he would soon be knocked down by the believers in antipathetical and sympathetical doctrine, with large extracts from the work \(0^{\prime}\) Sir Kenelm Digby, and mind \(\mathrm{o}^{\text {' }}\) thousands \(\mathrm{o}^{\text {' }}\) the readers \(\mathrm{o}^{\text {a }}\) the Chronicle "fhat an unco ado there was about the recommendation of reason to believe that mony a gardener disna think them gude things yet, just because they didna mak the discovery themsele, or had ony merit in bringing them before the times, and no gang sleeping through the world a'thegither, they would learn mony a usefu' lesson frae sources that they little dream of, for even bairns will speer things and do things that might mak auld folk wonder; and sae ystem" controversies were attracting the "one-shift mony, that an earthen dish that had been used for holding pickie met with an accident that made it of no use for the purpose it was intended for, and 80 it was laid aside as it requires a clay vessel to be weel burnt and weel glazed to hold pickle he bairns in their daffin would build hapand malk gardens, and they would have a flower-garden in the muckle glazed pot, and they managed to fill it with garden-earth, and planted a flowering sbrub in the centre, thing it was when they had finished it. Thought I to mysel', when I saw it, puir things! ye never heard \(o^{\prime}\) "glazed potta" and the "one-shift system," and yet ye about it ; ye little ken what division there is in the gardening world about the thinga that are gieing ye sae muckle delight. And weel the plants grew, as they were maturing o' out-door plants in dry weather. Giardeners hae got so recustomed to the Waterigg o certain crops in the plants, if they could speak, would say - "No more, I thank you;" but they will continue to pour it down their throats, or rather up their throats, although the drink that they receive may not be to their liking; it may conof lime, and carbonate of soda, besides nitrates and muriates, that I ken little about ; and the warst thing ava is, ates, that 1 ken hitle about; and the warst thing ava is, that mony gardeners neither ken nor care about the testing o their water-they dinna ken the use \(0^{\circ}\) the chloride Noo to understand the use \(0^{\circ}\) these and sic like things, Would be a wonderfu' help to dispel the mists frae their een, and they would be enabled to look upon the secrets nature wi as clear a sight as if they had rubbed their
een with eyebright. But it would, perhaps, be an easier way, and it would save a great deal o \({ }^{\text { }}\), trouble baith to the head and the hands, to be more carefu' 0 ' the ammoniaised Water \(0^{\prime}\) the heavens when it comes to the earth for the
benefit \(0^{\circ}\) the plants we hae charge \(0^{\prime}\); for I think we are taught somewhere in the Chronicle, that all the nitrogen O' plants can only be obtained in the form of ammonia and that the ammonia is supplied by rain-water, that carries it doon frae the air in which it had been hanging for I dinna ken how lang; but all the ammonia that falls wis the rain disna remain in the earth, for only a part of it is
taken up by the roots, and the rest flies awa again, maybe taken up by the roots, and the rest flies awa again, maybe
to be washed down on the sands \(0^{\prime}\) Africa. Noo I am thinking that the covering or mantle that is spread over the roots \(0^{\prime}\) certain crops answers a twafold purpose in escaping by means o' \({ }^{\text {' }}\) evaporation, and retain a sufficient quantity \(0^{\prime}\) moisture for assisting the decomposition of organic matter in the soil. It often taks awa the pleasure \(0^{0}\) 'gardening in summer when every muscle \(o^{\prime}\) the body is strained wi' the water-barrow and watering pots, and the same habitation wi' Callitriche and fresh-water soldiers. Noo I can assure your readers that it is a far pleasanter thing for the mind, and much easier for our mortal parts, Just to tak a walk among the out-door corops, and witness to their roots in dry weather ; and although I may hae succeeded to please mysel' in the material I hae used, cautiousness until anither season may test it better bot tell him wishes to ken what the covering may be, I may tell him something \(0^{\prime}\) its nature-it sucks in water nearly as weel as a sponge, and parts with it as reluctantly as the devotee \(o^{\circ}\) Mammon would part with his gowden gear. A Moorland Gardener.
The Early May Pea
The Early May Pea, alluded to by Mr. Noble, is, probably, the Early May of the seed-shops, Which is some-
times one sort, and sometimes another. The Pea known
feet high, and is, as I before stated, several days earlie than Farnes's First Early. Mr. Noble might easily satisfy
himself upon that point, by procuring the kind I salude himself upon that point, by procuring the kind I alluded to mine were obtained from Mr. Richard Gadd, Seedsman, \&cc., Dorking.-J. B. Whiting.
Peas.-I think that the paragraph headed "Farnes"
Early Peas," in the Chronicle of the 9th instant have escaped your usual penetration. It instant, must to be an advertisement, for the purpose of bringing into public notice a Pea which I have no doubt is a very good one; but I have no hesitation in saying that there is not any Pea known in this country (by whatever name it may before a good stock of Warwick's, procured from the principal houses in London, if sown in the open ground on the same day and under similar circumstances. And erring a great e Horticuitural society woud be con at large if they would devote a portion of their garden but I fear this would be imprabeticable, which are advertised too large a space); the public would then be introduced to many of their old acquaintances with new names. but was tod the foregoing ever, glad that I did not send it, as I observe in your present Number another articl headed "Peas," which requires a few remarks. Your respondent, an "Original Subscriber," says that in the spring he sowed a pint of the Prince Albert Pea, and which were sown six weeks before them ; this may be very true, but it proves nothing. Had he, at the same same Frames that he had previously sown, he would probably have found that they would not have been
before the others. The earlier that Peas are sown the longer time they require to come to maturity, as I have proved in my own garden; for two or three
seasons I sowed early Peas in November and some of the same Peas in March, but I always found that the latter sown were not more than a week behind the first. On the the same garden side by side, some " Prince Albert," The fir Kent," "Early Warwick," and "Early Frames." The first were fit to gather seven days before the War-
wicks, the Kent four days, and the Warwicks about four or five before the Frames. I beg, however, to ohserve the two former bore no comparison in the size of the pods or quantity with the two other sorts.-F. H. S. [The paragraph in question was certainly overlooked. All new it is possible that they should be] it is possible that they should be.]
Clover Dodder...Since
Henslow Henslow, on a species of Cuscuta which he suspects to
be introduced with foreign seed, \(I\) have observed it growing in some rows of Lucerne, which I sowed with seed imported from Khelat, and I am confident there was not a plant of Cuscuta on the ground, or anywhere near it.
On a piece of ground close adjoining that sown with the Khelat seed, I sowed some lucerne, saved in this country which is quite clear from the Cuscuta, which proves tha you a specimen, cut from the middle of one of the rows and which is a faint sample of the rows that are infecte with it.-W. Scott. [The specimen sent was not in flowe but it looked very like the Clover Dodder.]
To heep Wasps from Fruit. The bes
To keep Wasps from Fruit.-The best remedy to
prevent Wasps from attacking wall-fruit is to plant close against or near the fruit tree Symphoria racem) close the year 1836 (when I made the memorandum), in my rather's garden, we had a Moor-park Apricot with a quantity of fruit upon it, and near to it stood in blossom there was not a single fruit touched, although all day long the blossoms of S. racemosa were frequented by the Wasps.
Vegetable Marrow.-I perceive that a corresponden complains of his fruit falling off. Mine have this year fallen off by hundreds in the early part of the season, and Ill attributed it to the uncongenial early summer, which was can be produced of all the different sorts.-Rus.
Grouping Plants in Flower-Gardens.-If there is one feature more characteristic than another of the improve ment in modern Flower-Gardens over the old, promiscuous method of planting, it is the facility with which a plant's character can be determined at first sight,-from the large masses of one plant grown together, as well as the contrast of colour produced in grouping: this seems to me who urge as an excuse for plants, the abstruseness of the art; and it is in some degree to this circumstance that I attribute the rapid progress grouping has made of late years, and the prospect a wonderful increase to the number of its followers in thus years. Some important facts conspire to lead me which employers co-operate with their gardeners in carry ing into practice their intentions, and also the improved taste of gardeners ; for, after all, it may be safely asserted and proper that employers should suggest, but at the same time recollect that this is 80 completely a practical system, that large scope should be given to the gardener's inventive faculties, for in proportion as this is observed developed in the Flower-Garden. Another reason why I think it is progressive is the fact of an increased number
within the reach of all. And what better proof could cite than the circumstance of meeting with the grouping system-not only in the noble domain, but also in the system- 80 is House, and many others Priory ; also Brookiands, broo the man of leisure, as well as to the man of business ; . plex expression-all being distinctly seen, and the whol picture conceived with ease and facility.-

\section*{FOREIGN CORRESPONDENCE}

Salerno, August 27, 1843.-These latitudes have been visited with a summer of extraordinary coolness, accom panied by a long duration of dryness, which readers th ircumstance more singular still. Till within the last fort rage summer weather, and even now the mornings and nights are decidedly cold, though the sun acts with great intensity through the clear medium always afforded by the prevalence of north winds at this time of year. The conse quences have been prejudicial to the crops, especially the later harvest of Indian Wheat which was dried up ber the ears properly filled. The vintage will likewise suffer me the same causes. The ornamental vegetation has, some of the been subjected to the same evil, except in as Sterculia platanifoli and ther grow, such blossoms of which have never expanded, and are now falling off.-K

\section*{PROCEEDINGS OF SOCIETIES.}

Sept. 19.-G. Bain, Esq,., in the chair. The Rev. R. C. Jenkins,
C. R. Read, Eqs., Mr. Yonell, and Mr. J. Backhouse, were
elected Fellows. Fro elected Fellows. From Mr. Mills, of Gunnersbury Park, was length \(24 \frac{2}{2}\) inches, and \(\frac{12}{2}\) inches in diameter; ; the stem on which
 two curious specimens of monstrous Pears. From Mr. Fleming, gr to his Grace the Duke of sutherland, were three Persian
Melons, measuring reepectively 15 inches long and 7 broad, 16 inches Iong and
welghine

\section*{Banksian Melal was awarded., and 8 Mro Mr. Busby, for which a

Seedlings of 1842 . Four blooms: 1st prize was awarded to Mr. Bourne, of Chelsea, for a parple flower named The Model; 2 , to
Mr. Keynes, of Salisbury, for his Stundard of Perfection. The Mr. Keynes, of Salisbury, fer his for their of ood and promising gualities were, 1 , a light purple, named Kapartero, from Mr.
Cousins; 2 , dark purple, Mr. Wildman. PANBIEs.-. Seeding

 It is to be regretted that the universal complaint that names neglected 2 a it was at this exhibition. This omission should be remedied. If the committee were to frame a resolution to the effect that every collection of flowers should be disqualified, in Which this point is disregarded, and acts strictly up to that law,
we thould hear less of these inconveniences. Drampux. -In the Report of the Meeting of the Floricultural
Bociety, for " MI, Smith's Preeident," read Mr. Orson's.

\section*{COUNTRY SHOW,
Salt ITill Dahlian Shonc.- This exhibution was} of the Sloumh Nurscr. - This exhibution was held in the grounds of the slow yh Nurscry, where, in adwatinn to the inincoliate
attractions of the flowet-show, tie company had the privilege of strolling through the houses and the extensive and well-malnaged
gardens of Mr. Brown's establshishment. The day was remarkably
 numcrinus partics of vistors apperared much pratified. The stands
of Danhlias were yery numerons and good, many of tiem remark-
ably fine. The following is a list of the awards :-CLASS 1 .-

 vender; 2 , Mr. Brown, Lady Sr. Maur, white tipped ; 3 , Mr.
Brown, Rembrandt, dark ; 4 , Mr. Turvile, Champion of Essex,
 Mr. Whale, Duchess of St. Albans; 4, Mr. Headly, Meteor. The
second competition for the prize of iol., offered for the hest white, was a warded in favour of Mr. Bragg's Antagectisist. The names
of the flowers in the successful stands will be given next week.
NOTICES OF NEW YLANTS W HICH ARE EITHER USEFUL OR ORNAMENTAL.
ExONIENQ1s, The Exeter Fuchsia, (Greenhouse Shrub.) Onagraceæ. Octandra Monogy nia.-The Floricultural
markets are now rapidly beconing filed with all kinds of hy brid Fuchsias, between some of wheh the most discriminating judge
would scarcely be able to perceive any tar fible distinction, or
one which could be expressed in words. And this is in qreat part due to the hybridist taking hy brids which are not themselves
sufficiently distinct in habit, or in the form and colour ast their sufficiently distinct in habit, or in the form and colour on the
flowers, to breed from ; the result of which pratice must thways
be an increased confusion among the sol ts, without obtaning be an increased confusion among the soits, without outaining
anything novel enough to deserve special nitie eir culture. It
cannot be too mnch urged on the attention of those who seek to be very distinct species, or, if themselves seecilings, they should be equally different. This beautiful Fuchsia was raised by Mr.
Pince, of Exetcr, between \(F\). cordifolia and \(F\). giobosa, the former being the female, the latter the male parent. It was
thought, in the experiment, likely that the fine mong flu ers of hosit ; and this olject seems to have been very well accom-
pliched, tor F. Exonicnct, besides a kind of intermediate habit
and foliage, has large flowers, which have a lonie tobe expanded and foliage, has large flowers, which have a long tabe, expanded
deep crimsony scarlet sepals, and a dark nurrle corolia. It was raised during the sprirgg of 1842 , and planted cut in the open has proved to be quite hardy at Exeter. We cannot say much
concerning it from personal observation; but we are informed that it blooms freely, and is a very handsome plant. The flowers
are certainly fine, and of the very best colours. It would appear to bloom best when suffered to produce its blossoms at the
natural geason, and not at ail forced forward. A cool greenlionse or pit will therefore be minst favourable. Like all hybrids if this
class it should have a tolerably rich soil, and a raller large pot. oam to form a compost for it, and it will require to be carefully watered in the simmer, becanse Fuchsias are apt to lie infured
by drought at this season.-Puxton's Alugazine of Botany.

be remcved to a warm qreenhouse or conl stove, where it will
bloom protusely.-Paanton's Magazine of Botany. (Greenhouse Shrub,) Leguin inose. Diandria. Monogynia,
A neat and rather showy greenhouse shrub, the flowers of which remind us, in their size, form, and colour, of Enthales macrophylla, a handsome Swan River herbaceous plant, in its character, the present object is of more value, while, when grown favour-
ably, it will possibly be quite as profuse as the Euthales in its production of bloom. Seeds of it were imported by Mr. Low, of and the \(p\)
it seems
tain the tain the height of three or four feet when left tuchecked. Indeed,
it has much of the upright tall habit of Hoven eelsi, when that shough L. bipunctata has a freer develnpment of branches. The leaves, and are not at all inclined to be terminal. They abound most, however, towardis the top of the plant; which is perhaps doubt that, when differently managed, this plant would as reariliys
yield to culture as many other well-known greenhouse shrubs and become as dwarf, bushy, and free-flowering. To bring about these conditions, it should be treated pretty niberaly in regard the loam used for potting it in, and giving it a larger shift than is allowed to common greenhouse plants generally. growing, 80 as to induce it to remain low, and to throw out a
number of laterals. Such treatment answers admirably with Lalage ornata, and this is a species of a very similar nature. It
blooms in the months of March, April, and May; demanding only a light and airy place in any greenhoase. Cuttings, taken off in early spring or summer, root with freedom.-Dan's Magazine

\section*{Botany.}

\section*{MISCELLANEOUS}

Black Currant Wine.-To every gallon of water put 5 lbs of Currants, picked from the stalks, and a pint of Raspberries, Boil these for an hour, and strain them off, without rubbing the pulp through the sieve; then add \(2 \frac{1}{3}\) lbs. of raw sugar, and boil again for another bour; When cool enough, work it with a toast of yeast, it stand for three days in the tub to work, before tanse of four or five days afterwards, add a pound
of chopped Raisins to every gallon, and stir it for a day or two with a clean stick, and bung it down when fermentation has subsided. Skim all off that rises in the tub before tunning, wash the barrel out with spirits, and add
the latter in the proportion of a pint of spirits to 5 gallons of wine.-Anourmous.

GARDEN MEMORANDA

\section*{Hewell, near Bromsgrove. - Within a few miles of the town of} Bromsgrove lies a fair domain, long sisce wrested from the church
by the from hard of King Henry the Eighth, nho gave it to the
Earl of Windsor in exchange for the estate of Stanmore, in Berk shire. It was afterwards pllaged by the leaders of one of the petty risings in the time of James the First, and after other passed to 1 st presel, noble propictor, the Honnurable Robert
Clive. We had often heara of the excelient management of the rumour is much behind the truth, Hewell is a model

petala, the Minorca Sandwort (Arenaria balearica), Corsican Thyme, and all such things, overrum the place. Round the basin

until changed into humus, and decomposed into ammonia,

But our space is already much exceeded.
But our space is already much exceedrd. We must pass over
a pretty litte Grasc Garden, where the many graceful species
of that race which the crowd of that race which the crowd passes by without a regard, are
tastefurly collected into beds in front of the Conservatory.
We must pass the Cowsmratory itself, notwitlistandinm the excellent health of the Camellias, Oranges, and other plants. We camot even stop to describe the copper sash-lines on which the
heavy perpendicular wrindows are suspended, nor the neatest of
all artificial edgings to the walks, formed of hard all artificial edgings to the walks, formed of hard Stourloridge
clay; but we must at once proceed to a little gem, called the
Durch Garne. It forms a semicircle, with its back resting against the wails of a temis-court; around it is a walk, formed of the frapments of
sandstone, used in this country as a substitute for gravel; beyond
the walk is a dwarf hed Arbor vitæ belt are the usual shrubs and trees. The garden itsel broad tessellated circular area in the centre, and paved with red gravel path, which, joining the gravel walk of the circumference, points towards the centre. Each of these fow, with the
edged with Box. The i edged with Box. The space within them is divided into two equal parts, by a series of three lozenges, commencing in the The lozenges themselves have two ed dings of dwarf Box separated
by a narrow path, paved with white pebbles. By these means in pattern is formed of very great beauty. The general effect thus boxes, holling small plants, disposed in lines alonge the main between the gardicn and the wall of the teunis-courct. Nothing can he prettur than this, and it well deserves imitation; but it
should be borne in mind that such designs will not be effective unless there is the same happy arjustment of proportions, colonirs
and accessories, and the same favourable circumstances in natural situation, of which advalitage has been taken with so
much good taste by Lady Harrset Clive.

\section*{arebitotos.}

Dr. Justus Liebig, in his Relation to Vegetalle Physiology. By Dr. Hugo Mohl. (Dr. Justus Liebig's Verbältniss zur
Frues. 1843.
,.mirca-Physiologie.
(ind

the end, insteac In a subsequent part of this chapter (p. 124) Dr. Liebig expresses his surprise, that in all the works or Agronomists
and Physiologists, one looks in vain for the leading principles of cultivation; nevertheless, at the end of this part of his work, he states that cultivation supplies every plant
with that sort of food which it requires for the developwith that sort of food which it requires for the develop-
ment of such organs or substances as are most available to ment of such organs or substances as are most available to
man. He further dwells on the means of arriving at that man. He further dwells on the means of arriving at tiat
end, viz., the chemical analysis of the inorganic ingredients of soil. But these latter facts, says Dr. Mohl, were known long before Liebig, Charles Sprengel having written a series of memoirs, to demonstrate the importance of the Growth of crops, and for that of certain organs in particular. Under this head, Liebig certainly ought to have mentioned the name of Sprengel, and although he has not
done so (concludes Dr. M.), the history of science will done so (concludes Dr. M.
In the last clapter, which is headed "Rotation and Manures," L. opens the difficult question, why several crops of the same plant will not succeed on the same soil in an uninterrupted succession, and why, therefore, farmers resort to rotation. He thinks De Candolle's theory the
best explanation of this, forgetting, it seems, that that best explanation of this, forgetting, it seems, that that coarse excrementitious theory has no better foundation
than bad and injudicious experiments of Macaire Prinsep, the same man who misled De Candolle on other occasions also. Liebig, however, (says Dr. Mohl,) who has no idea that these experiments are fallacious and controverted by all succeeding ones of the same kind, works out this theory
in its most minute details, and proves, \(\alpha\) priori, (p. 149, in its most minute details, and proves, a priori, (p. 149,)
that plants must have excrements. He divides the latter into two classes: those, namely, which have been absorbed by the roots, but not being adapted for the nourishment of plants, are again returned to the soil ; and secondly, stech substances as having been transformed in the vegetable organism by the process of nutrition, are the result
of the formation of starch, woody fibre, gluten, \&c. Excrementitious matter of the first class may serve as food for other plants; nay, they may even be essential for that purpose. Those of the second, however, cannot be used by other plants in the formation of woody fibre, \&c. * Which is abundant at Hewell in other places, in consequence of Mr. Marizham having discoveren that it may be pro-
carbonic acid, \&c.
This theory,
This theory, says Dr. Mohl, is not only destitute of all reasonable foundation, but is directly contradicted by the experience of Rotation. There is no known evidence in proof of the existence of such excrementitious matter. It is
true, Liebig says, that such must be the case true, Liebig says, that such must be the case, but then he
adduces no proof except an ambiguous analogy with the adduces no proof except an ambiguous analogy with the animal kingdom, and forgetting, as he so often does, that unfortunage 24-" that analogy is the parent of animal functions which places both on the bed of Procrustes, and is the cause of all error." "There is not," concludes Dr. Mohi, "the least necessity for assuming a
secretion from ronts. If secretion from roots. If substances formed by vital prothe form of na further use to a plant, they are excreted in of secretion in though the leaves, or deposited in the form with decaying leaves." This theory is, moreover, at variance with the experience of what takes place in the shifting of crops. According to Liebig's views, the excrementitious only injure the second class above mentioned would not be assimilated by any others before it is transformed into bumus. But experience points quite another way, which the stubble of Clover, Lucerne, or Saintfoin, at once produce for the growth of those species, will Liebig should attempt to crops of other plants. If that such excrementitious matter cannot be assimilated by the plants, whence they are derived, but may be used nutrition, he will upset his whole doctrine of vegetable compou, according to which not only all the organic starch, sugar shem remain behind after the formation o (and thus all the organic substances of plants) are abso lutely deleterious to other plants. It is impossible, there fore, not to arrive at conclusions entirely opposite to those of Liebig, especially if we consider the phenomena the growth of greater length. The baist it is still fertil for others, can only depend (says Dr. Mohl) on two causes. The first generation of plants may exhaust the soil of such substances as are indispenable to rowth, 50 that the second generation will be starved; and this cer tainly takes place: but it cannot be the main cause or the failure of crops, else manure would sagin render th soil suitable for the same crop, which is only the to to a slight extent. We must, therefore asure that first crops do communicate to the soil substances detrimental to the subsequent crops. These substances must be of an organic nature. It has been shown that these cannot be excrementitious, and therefore it follows that such deleterious substances must consist of organic compounds, derived from the roots which have accumulate with the remains of roots, the same after a lapse of years, whilst other crops will thrive luxuriantly, we may conclude, that the organic compounds of such roots will be absorbed by plants previous to thei eing decomposed into inorganic substaces; and that, food, although those of the same kind will be ipjured by them.
(To be concluded in our next.

CALENDAR OF OPERATIONS for the ensuing week, the Achimenes family, and a pretty race they are, even in their

 hybridisation. Another botanist and acute naturalist writes me, in
answer to a remark I made on crossing-" "I do not dislike the answer to a remark I made, on crossing- "I din not dislike the
hylriodissation of plants at all, when jurdiciously done; but tilere are
so many nulen

 Which has been in fower with me since last June. 1 impregnated
them about this time least fear, and he remarks-"Your Achimenes will be improved I doubt not. Try the same process with coccinen
and
longiflora, grandififora, \&ec., and some varieties might turn up, ", This, 1 have already done, but I find
longifiora rather difficult to seed. Toses is merely

\section*{NEWS OF THE WEEK.}

Her Majesty's progress through Belgium, and her return to Windsor on Tharsdays after a flying visit to some of the most interesting cities in Northern Europe, will be found recorded in detail in our general account of the Excursion. The reception given to her Majesty by the Belgian people, and particularly by the citizens of the ancient seats of European commerce, was at once gratifying and honourable to both countries. The details of the visit to Bruges, more especially, will be read with interest; nothing can be imagined more picturesque than the welcome given to our Sovereign by that fine old capital of the merchant Princes of the middle ages.
From France we learn that several political arresta were made last week among the lower classes in the capital, and that papers have been discovered which prove the existence of a secret society among the idlest and most dangerous portion of the people. The Republican party are beginning to show their opposition to the arming of the fortifications of Paris, which are now so far advanced that the Government may be considered inde. pendent of their hostility. The National Guards at a review last week made a public demonstration against the armaments, and the Republicans of Nantes have published a protest to the same effect. The Minister of Marine, notwithstanding the clamour raised at his. supposed reduction of the fieet in compliance with the views Dugland, has issued a report statiug that he needs a supplement of 15 millions of francs to his Budget, in order to meet the charges of an extra force of armed vessels, and to defray the expense of the mission to Chiaa,-The accounts from Spain announce a fresh complication of parties and of interests the adherents of Espartero having entered into a compromise with those of the Infante Don Francisco for the purpose of supporting the marriage of his son with Queen Isabella, and of demanding the Central Junta. The Government, however, beset by difficulties on all sides, have issued a manifesto, stating their objections to a Central Junta, and praying the nation to await the opening of the Cortes. At Barcelona both parties are inactive, and apparently await the arrival of reinforcements. Two commanders of the Government troops have joined the insurgents, and the neighbouring garrisons have sent in their adhesion to the Junta. The city is still closely blockaded, but a large force is collecting throughout Catalonia to march to the assistance of the insurgents. The insecurity of the Government is daily becoming more evident, and it is currently ramoured in Madrid that they have appealed to the intervention of France.-The state of Italy continues to give rise to much uneasiness; the rerolutionary movement has spread to the streets of Rome and Naples, in which seditious proclamations have been distributed in open day. The insurgents have formed themselves into armed bands, and are still masters of the frontier paases. Several arrests, however, have taken place, and the absence of a competent leader must ultimately produce the failure of the insurrection.

\section*{}

Court.-The Queen and Prince Albert arrived at Woolwich on Thursday morning, on their return from Belgium, having embarked in the Royal yacht at Antwerp on the previous evening. Her Majesty and the Prince proceeded from Woolwich to the Great Western Railway, and from thence by a special train to Windsor Castle. The Princesses also arrived at the Castle from Brighton on Thursdey afternoon. The Prince of Wales will not return to Windsor until the beginning of next month; the health of his Royal Highness has considerably jmproved during his stay at the Pavilion. The Prince and Princess Hohenloe Langenburg have arrived at Frogmore on a the enjoyment of excellent health and takes daily exercise in the neiglabourhood of Witley Court, paying occasional visits to the nobility and gentry of the western part of worcestershire.
Her Majesty's Visit to Belgium.-Our account of her Majesty's excursion last week, came down to Thursday night, and conciuded the festivities at Ostend. On Friday morning the royal party visited Bruges, the venerable seat the Counts of Flanders, and the regal residence of the Dukes of Burgundy. This fine old city once more appeared in her pristine glory, and the efforts of the inhawhich, for beauty, pomp, and dramatic effect, has rarely
been surpassed. From the railway station to the Hotel
de Ville, along all the streets leading from the Grand Place,
through each avenue or passage through which the procesthrough each avenue or passage through which the procesof every colour in the rainbow was formed by passing pieces of dyed stuffs from window to window-each being most of them having suspended from the centre some device or emblem complimentary to the royal visitors. In addition to this fantastic but really beautiful awning under which the procession was destined to pass in alternate shade and sunshine, trees innumerable were planted on either side of the streets, charming the eye with their ingular contrast, and decorated with festoons and gariands imaginable. Besides this avenue of a thousand dies, flowers, bouquets, flags, festoons, transparencies-in fact, every conceivable badge or emblem of festivity and welsteeple, and tower. All this, superadded to the picturesque and quaint gable-ends of the private dwellings, mingled with the ornamented scrolls and carvings or the old mansions, lit by a brilliant sun, presented a sight at once astounding and delightful. Provincial Governor, the Burgomaster, and the other political and municipal authorities. They then entered their carriages, and were escorted by two troops of Cuirassiers to the Hotel de
Ville. As the cortege passed along, the reception given to it by the multitude was most enthusiastic. "Vive la Reine d'Angleterre \({ }^{27}\) was repeated by every tongue in the mingled dialects of Duteb, Flemish, Walloon, Englisb,
French, and German, and altogether the scene was one of French, and German, and altogether the scene was one of
genuine pleasure to the visitors and visited. Mounted gendarmes and a great many companies of infantry, chasseurs, national guards, and other military, added
brilliancy to the entire spectacle. On their arrival at the brilliancy to the entire spectacle. On their arrival at the
Hotel de Ville, the party were led into the salle a manger, Hotel de Ville, the party were led into the salle a manger,
where a sumptuous banquet, under the modest appellation of déjeuner, was prepared for them. The Hall of Council had the honour of being converted into a break fast-room for this occasion. The plate laid out was splendid, a portion of it, for the old massive plate belonging to the ancient corporation of the city, the remainder having been lent by the King for the banquet. Immediately after the dejeuner the Royal party went to the residence of the Governor of
West Flanders, where they made but a short stay, and then proceeded to visit the Church of Notre Dame, containing the monuments of Charles the Bold and his daughter Mary, wife of the Emperor Masimilian, and the Etatue of the Virgin and Child, by Michael Angelo. From
Notre Dame the Royal visitors went to the Cathedral of Notre Dame the Royal visitors went to the Cathedral of
St. Sauveur, when they examined the pictures it contains, St. Sauveur, when they examined the pictures it contains,
and thence they passed to the Hospital of St. John, and its Chapter House, containing the masterpieces of Han Hemling. They then proceeded to the convent of English nuns, whence, after a short stay, they went to the hall of the Company of Crossbowmen, and from that to the Palais de Justice, in which, in the council chamber of magistrates, they stayed some time, admiring the famous chimneypiece, the Fifth, Mary of Burgundy, Charles the Bold and Margaret of York, sister of our Edward the Fourth all full of life and character. From this place the Roya party proceeded to the railway station, on their way back to Ostend. As our Queen and Prince passed through the Grand Place, which they were obliged to do several time during the day, they never failed to look up with admiration at the great tower or belfry which rises majestically above the ancient Cloth Hal, and from which, "Rule Britannia," "God save the Queen," and other airs. Her Majesty also, as she traversed the square, invariably glanced with interest at the house inhabited by Charles II. the company of Crossbowmen. As the procession traversed the square for the last time, it halted to allow the Queen ceeded, a midst the cheers of the peopter which it prowhere the authorities of Bruges received the thanks of the Royal visitorg and took their leave. The Royal party arrived before six o'clock safely at the Palacd theatre afterwards, as had been anticipated. On Saturday morning the ancientcity of Ghent washonoured by a visit of the Sovereigns, an incident as remarkable in its history as any among the long number of events by which its annals are distinguished. The Royal party entered the city about hearty congratulations of thousands of voices. The streets, as at Bruges, banners, dev, were interminable lengths of coloured fotton, banners, branches of trees and the ars acture of the place, and The Royal party on young firs stuck in the pavement through the principal streets all of a proceeded through the principal streets, all of which were
crowded with people. The corporation of the city crowded with people. The corporation of the city
and the various public societies, with their banners and ensigns, fell into rank, and a regiment of Cuirassiers and the band of the regiment of the Guides also joined the procession-the cannon fring a salute, and the bells of the celebrated belfry, as well as those of The royal party first stopped at the hotel of the welcome. Government, where their Majestie atighe Provincial Gonducted into the apartment in which refred, and were condact After having remained some timments were prepared. After having remained some tinae, they were way they passed under a triumphal arch bearing the inscrip-
tion "La Ville de Gand, à la Reine Victoria et à son auguste épouse; L'ancien voisinage d'Artevelde, salue the arch was painted in large characters "A la Reine Victoria et au Prince Albert;" and on either side "Victoria Reine d'Angleterre, 1843-Philippine de Haynault Reine d'Angleterre, 1343." Their Majesties were received by the bishop and clergy of the cathedral in full canonicals, and surveyed its stately monuments and fare specimens of carving and sculpture. The Emperor Charles \(V\). was christened, in the transept, was particularly pointed out to the observaThe candlesticks brought from the old palace of Whitehall which are also here, attracted her Majesty's attention. They are very fixe specimens of workmanship, and recall many historical recollections. From the Cathedral the visit to the Quai aux Bles, proceeded to the "Beguinage," make the reguin nuns-where everything that could The royal party then returned to the hotel of the Provincial Government, where, after a short stay, they proceeded concert was prepared for their amusement. As the royal visitors passed through the Place d'Armes, the acclamations increased, and on their alighting at the theatre a ledged their gratification in the most affable manner. Their reception in the theatre was a counterpart to Queen" was played by the musicians, the whole company tanding. The royal party, on leaving the theatre, went short. The cortege then made for the station of the rail road, and quitted the birthplace of the Emperor Charle Gaunt," amidst demonstrations of good wishes towards them similar to those by which they have been everywher tish Chaplain at Ostend, performed the service of our Church in a private apartment of the palace, and the Whole of the day was devoted by her Majesty to repose, sels, where they arrived about 2 P.M. The city was
densely crowded with visitors and troops, who greeted her Majesty with loud and repeated cheering as the pro cession made its way to the palace. After partaking of dejeuner at the Palace, the Royal visitors and their suite assisted at a concert given in the open air in the Park by
the Royal Harmonic Society. After this they visited the museum, the exhibition of Fine Arts, and other sights, and then returned to the Palace. They were followed in their course by crowds anxious to get a look at the Queen and
Prince Albert, asd were everywhere hailed with acclama tions. At eight \({ }^{\prime}\) clock a banquet was piven by the king at which all the distinguished persons in Brussels, and the chief civic authorities were present. Soon after 10 the Royal party went to Laeken. In passing along the illuminated streets they were recognised and cheered at every step. The illunoinations which Brussels exhibited in The number Queen Victoria are described as really superb ranspmber of illuminated temples, triumphal arches, and treets various-coloured many elegant shapes. The whole Allée verte up to the Park the devices and illuminated arches were trul magical. Her Majesty had every reason to be satisfied with her reception in the Belgian capital; and even at
Laeken, notwithstanding the lateness of the hour, the fes tivities were continued, fireworks were discharged, and si young girls of the village presented our Queen with a bouquet. On Tuesday afternoon the Royal party left Lawen for Antwerp. At Matines the train stopped for master Majesty. Madlle. Keitelaers, the daughter of one of the sheriffs, accompanied by a party of young ladies, were also in attendance to present the Queen with a bouquet of Antwerp, amidst enthusiastic cheering the train arrived pliments were paid to her Majesty by the civil and military authorities, and the reception given to the royal party by the people at large was even more cordial and interest ing than they had received at any previous part of thei route. They drove direct to the Palace, when the usua tained her Majesty with the procession of the Giant which perambulated the town with the ship, dolphins, \&c. all of which figured at the celebration of Rubens's festival After taking a short repose and refreshment, the Royal party left the Palace with the intent of visiting some of the sights of Antwerp. But such was the crowd, and their inspetion to them, that they were obliged to limit tiful spire and for the "Deposition from the Cross" by Rubens. From the cathedral the Royal to the Place Verte, where a concert was prepared for their entertaimment, and where a handsome pavilion ised for their accommodation, opposite the statue of Rubens. The fatigue, however, under which the whole party were suffering prevented them from waiting for more than one piece. A banquet at the palace, to which all the distinguished persons and authorities in Ahe city were hrillio, terminated the day seat onming The city was briliantly iluminated dumg the evening? pavilions, and transparencies, contributing to render the
general illumination the more beautiful. Fireworks were discharged in abundance, and the bells of the cathedral continued playing "God save the Queen" with extraor dinary correctness and effect. Her Majesty did not go to the theatre, or to the many other entertainments which the liberality of the city had prepared for her. During the entire evening and night, Antwerp was one continued scene of festivity out-of-doors and within. In the course of the day, a special envoy despatched by the King of Holland to compliment the Queen on her arrival near the confines of his dominions, and to invite her to honour his territory with a visit, was received by her Majesty, who returned thanks for the King's courtesy, but declined the visit at present. On Wednesday morning, the Royal travellers left the Palace, accompanied by the King and Queen of the Belgians, to visit the Museum, previous to their taking their departure for England. Her Majesty reanded an hour inspecting the various Works of Rubens, andyke, Matsys, Jordaens, and the other Flemish in the Royal yacht amidst a succession of salutes frod the steam squadron and the citadel. The Kin from Queen of the Belgians accompanied her Majg and ar as Lievenkenshoek, opposite to Fort Lillo they went ashore, and bid farewell to their illustrious gnests. The Royal standard was saluted by 101 guns arrived within the dominions of the King of Holland The Royal yacht bore away for the coast o England, and arrived in the night in Margate roads, where she hove-to till daylight, as there was scarcely sufficient water for her to run over the flats, and she could not make her way throngh the Queen's Channel, as the night was too dark to distinguish the buoys. The Cyclops also brought up for the night, but the smaller steamers were a long way astern, and were hull down before sunset. The Yacht got under weigh again soon after daybreak, and was much impeded by a dense fog in her passage up the river. She reached woolwich, however, shortly before 11, when her Majesty disembarked amidst the salutes of the batteries and welcomed by enthusiastic cheers from the people assembled at the landing* place. The Queen immediately proceeded to Paddington, ad arrived at Windsor by the Great Western Railway at 1 o'clock. Her Majesty and Prince Albert were looking
remarkably well, and have derived much benefit from their marine excursion. In the afternoon, the Queen and the Prince drove to Frogmore Lodice in pony phaeton the Prince drove to Frogmore Lodge in a pony pareton Princ and after remaining at Frogmore about an hour and a half, feturned to the Castle through the Park. Post-Office.-An inquiry having been made of the Post-master-General, whether, if a letter bearing the penny stamp be addressed to the residence of a person, and be thence forwarded to him at some distance in the original stamp will cover the further transmission by poat, the letter not having been opened, and having undergone no alteration beyond the mere substitution of address? the directed from one place to another is legally liable to addiional postage for the further service.
The Army.-Her Majesty has been pleased to permit the 22d (or Cheshire) Regiment of Foot to bear upon its regimental or second colour, and also upon its appointdistinguished gallantry displayed by the regiment in the campaign against the Ameers of Scinde, in the early part of the present year.

\section*{fforeton}

France, - Several arrests for political causes were made in Paris on Friday and Saturday last. For some time the police were aware that a society had been organised for their criminal projects into execution. Wuring the put of Friday the principal members of this association were arrested a pine in the Rue Pastorel, and in other quarters of Paris The individuls arrested are about 20 in number, and on a their places of residence, a quantity of seditious pamphlets arms cartridges, and gunpowder were discovered. All these individuals belong to the operative cosses and are destitute of the means of existence; they had refused for some time past to labour for their bread a fact explained by the principles of communiam which they profess. Notwithstanding the secresy they observed, the authorities traced them, and at once seized all the elements of this conspiracy. That the individuals just apprehended is affirmed by pere description, though or a verylow degre, who add by persons connected with the Goen then in due time in due time, and that the public will be surprised at the evidence procured aganat them. There are persons who rection this projected Republican attempt with the insur rection at Barcelona and the disturbances in Italy. There are those likewise who affirm, that if her Majesty had come to Paris, and a review of the Naino al Guards had taken place on the occasion, the Repul licins would have contrived to provoke some hostile demonstration. That something of the kind was meditated was hinted by Ropubican print, when it was ascertained that the Queen Would not visit the Capital.-Her Majesty's visit to the King and Queen of the Belgians is noticed at considerable length by several of the papers, and with much displeasure France of the ultra-Liberal prints as her brief stay in France offended. Thus the National, which maintains that if the Queen had come to Paris she would have been nothing more-declares that her Majesty extend her
excursions to Bruges, Ghent, Brussels, and Antwerp
solely because Belgium has proved ungrateful to France ; solely because Belgium has proved ungrateful to France;
and the Commerce deems it quite evident that, in and the Commerce deems it quite evident that, in
displaying more courtesy towards King Leopold than towards King Louis Philippe, the sole object of our
Sovereign and Government has been to diminish the effect Sovereign and Government has been to diminish the effect
of the visit to Eu! The Ministerial Journal des Debats replies to these insinuations by saying, that the Radicals, having been unable to make out as they wished, that the
visit of the Queen of England was an insignificant and visit of the Queen of England was an insignificant and unimportant act, have changed their tactios, and now
endeavour to transform it into a malevolent and lostile proceeding. "England, however,-and we are pleased to say it,--has cordially approved of the step of the Queen,
and unanimously expressed a hope that this kind of ad. and unanimously expressed a hope that this kind of ad -
vance may contribute to efface entirely the resentment and even the remembrance, of past misunderstanding.
Whatever may be said or done, it will be impossible to Whatever may be said or done, it will be impossible to prevent the Royal interview at Eu from being viewed in that is to say, as a pledge of reconciliation between the two nations."-The Commeroe contains a protest signed by the republicans of Nantes against the armament of the
fortifications of Paris, and states that, at a review of the National Guards of Paris, which took place on Saturday in the Bois de Boulogne, some cries were raised in oue of the legions against the arming of the fortifications conthe Finance Minister of Queen Christina, died in Paris last week, in his 55 th year.-The Moniterre publishes a report of the Minister of Marine, stating that he will Budget. The Minister begins by owning, that instead of 164 armed vessels, to which he was limited by the
Chamber, he kept up upwards of 200 . This surpliss of expense, together with that necessary to fit out three more vessels for China, has incurred an expense of five
and a half millions. The French naval force off China is to consist of two frigates and three corvettes. The half millions more; steamers for Senegal, a quarter a million; barracks in Guadaloupe, two millions. These, With a deficit of three miltions on the Marine Budget of plement to the Budget-of these, the Minister says he only wants sis millions immediately.
inst. No fresh disturbance had coarria to the 14 th persons said to be connected with a secret political association had been apprehended, and the precautions which insecurity of the Government. Such were the difficulties which beset it, that its enemies found the people disposed Which beset it, that its enemies found the people disposed being demanded. The Government has published a manifesto, stating their objections to a Central Junta, and praying Spaniards to await the Cortes, which will content
all. A complete schism had taken place between the Progresistas and Moderados, and a compromise had been entered into between the former and the Esparterists, Who have agreed to support the marriage of Isabella II.
with the eldest son of the Infante Don Francisco ; to demand the Central Junta; and to insist on the question of the marriage being decided at the same time as that of the majority. The Military Intendant-general has published through the Garette, a refutation of the statement
of the financial chief of Espartero's armoy, M. Paredes, of the financial chief of Espartero's armoy, M. Paredes,
who certified the fit appronriation of the \(1,500,000\) reals brought from Madrid by the ex-Regent. The Intendant asserts that only 563,650 reals of that sum had been lawfully employed; that the remainder was carried out of
the country, and, as stated by M. Cardero, distributed the country, and, as stated by M. Cardero, distributed
among the followers of Espartero at Lisbon. It is said, however, that the disinterestedness of the ex-Regent, and indeed his contempt for money, is so notorious, that even Gaxette, that he had stolen funds belonging to the public Gasette, that he had stolen funds belonging to the pubic
Treasury. The Queen was said to be seriously unwell, with an affection of the stomach. Mr. Aston left Madrid for England on the 9th. From Barcelona we llearn that the insurgents were in high spirits at Colonels Martell and
Amettler having joined them. The former had addressed Amettler having joined them. The former had addressed possible with Cols. Prim and Milaus. The city continued to be strictly blockaded, but a large force was collecting throughout the province of Cataionia to march to the
assistance of the insurgents. The Captain-General Araus, Assistance of the insurgents. The Captain-General Araus, Whostill contivued inactive in the citadel, had been obliged to discharge 400 of his men, who manifested an unwillingness to fight against the inhabitants of Barcelona. Col. Prim Was in the same inaction at Esprugas, three leagues from Barcelona, with a battalion and some hundreds of National Guards. Meanwhile the pronunciamento against the Government, and in favour of a Central Junta, was proFigueras described thoughout Catalonia. The garrison of Figueras, described as the strongest and most formidable Cortress in Spain, had declared in favour of the junta. Lampurdan, and another important garrison and fortress, Hostalrich, had also sent in their adhesion to the junta of Girona. An attempted rising at Vich, in favour of the Government, had totally failed. A Barcelona letter of the loth informs us that Mr. Penleaze, the British Consul, who had landed from the Medea, to which be had gone in consequence of his house being exposed to the fire of the forts, was arrested while walking in the streets; but upon the application of M. de Lesseps, the French
Consul, who interfered with great promptitude, he was instantly set at liberty by order of the junta, with many apologies for the conduct of the eivie guard, who had mistaken him for another person. On the 13th the insur
gents fired on a bat of the French brig of war Méleagre, Which was about to take in water at the fountain of the
port of Barcelona. One of the shots took effect and a sailor was seriously wounded. The Consul of France demanded satisfaction. The Constitutional of the 10 th had announced that the vigilance of the Junta had prevented the French from setting fire to four factories. The Consul bas also demanded and obtained satisfaction on this subthe same the 14th the condition of Barcelona was still Madrid made common cause with the Junta. The fire from the citadel and from Montjuich had already occasioned more damage than was caused by the bomParace, that of M. Cifré, one of the finest in several French manufacturing establishments, and other buildings, were in ruins, and some children had been killed by the bursting of the shells in the streets. It is said that no less than 100,000 persons have fled from the city. Portugal.-The accounts from Lisbon are to the 11th nst., but the news is altogether unimportant. The pend opes and with Great Britain shll codinues to agitate the immediately interested in the non-execution of the convention, use every means in their power through the press to for this important affair the public mind would scarcely have anything to engage attention. The Queen and Royai family are at Mafra.
GERMANY.-It is reported at Berlin that the King of Prussia has written an autograph letter to the Queen and excursion as far as Berlin. the extend their continental between the Emperor of Russia and the King of Prussia ; the two monarchs walk through the streets of Berlin unattended by any guard, whilst the inhabitants cause
them no inconvenience. It was said that community of Berlin were about to present an address to the Emperor in favour of their fellow Israelites in Russia, the Emperor in favour of their fellow Israelites in Russia,
who complain of oppression.-A review of the tenth corps of the army of the German Confederation is to take place in the neighbourhood of Lunenburg, between the end of this month and the 8th October. The whole number of troops assembled on this occasion will be 28,000 , of which Hanover sends 13,054 ; Brunswick, 2,096 ; HolsteinLunenburg, 3,600; Mecklenburg-Schwerin, 3,580; MeckLubeck, Bremen, and Hamburg, 5,019.-In Hanover the Lagistrates have given notice that, by order of the Treasury of Great Britain, the differential duties are abolished which Hanoverian ships have hitherto been obliged to pay on the exportation of coals from England to any other than Hanoverian ports ; henceforth Hanoverian
ships will not have to pay, in this case, any bigher duty than English ships. - An anti-temperance society has been founded at Hamburgh by a person called Bocker, and
numbers 2,000 members. The Government thought fit numbers 2,000 members, The Government thought fit to prohibit such opposition to the principles of Father
Mathew. The society consequently met on the Danish territory, and on returning to Hamburgh caused a serious hospital which M. Solomon Heine, the banker of Hamburg, has built at his expense for indigent Jews, in honour of the memory of his wife, who died some years back, was publicly inaugurated. The members of the Senate, the freign ministers, most of the public functionaries, and a M. Heine, in an address, to the spectators, declared that he had founded the establishment principally for Jews, but not exclusively, as the poor of all sects should receive assistance there. This hospital, called Betty's Hospital, from the first name of Mme. Heine, is situated in the midst of a fine garden. A library, a gymnastic ground, covered with piazzas for exercise in wet weather, \&c., are
provided in the building. From Hungary wo learn that a provided in the building.-From Hungary we learn that a weissenburg, about 35 miles from Pesth. The fire began on the 5 th, and was still burning when the despatch was sent off ; 400 , and according to other statements, 600 or 800 houses were already reduced to ashes.
Holland.-Her Royal Highness the Princess of Orange was delivered of a prince on the morning of the 15th and is doing well. A letter from Amsterdam states
that pauperism has become really frightful in Holland. "It appears," says the writer, "that, in 1841, the charitable institutions relieved 595,093 individuals, which number, compared with the whole population, estimated at \(2,931,143\) souls, is at the rate of one to tive. The expended by them in 1841 amounted to \(19,026,993\) florins about 41,000,000f.)"
Malita.-Accounts from this island mention the death of Cardinal Fab. Sceberras Testaferrata, at Valletta, on the 1st inst. His obsequies were performed with great pomp on the 2d. The Cardinal was one of the oldest noble families in Maita, and was Bishop of Sinigallia in the march of Ancona.-Lieut. Holman, the blind traveller took his departure from Malta on the 3d for Naples. He will afterwards proceed to the Roman States and Trieste. ITaly.-Accounts from the frontier state that, on the afternoon of the 29 th ult., at Rome, when the Corso was much crowded, a number of proclamations were distributed containing a most violent attack upon the Pontifical Government, and inviting the people to arouse from their apathy. Several persons were arrested, but no disturbance took place. Traveliers who had arrived a few days and Ceprano road, reported that the whole part of that road situated on the Neapolitan territory was infested by a numerous band of brigands, most of them mounted on
good horses, and all of them well armed. Two carriages, which preceded the diligence, were completely plundered by those robbers. All the way from Capua carabineers were posted on the road, but they were unable to check the brigandage, and had been more than once compelled to fly before the banditti. At the head of the band were three convicts who have escaped from the galleys.-The most contradictory reports were circulating as to whether assistancernment will act by itself or demand foreiga Meanwhile, the malcontents disseminated in the mounces, are daily increasing numbers. They propese to cains on a guerilla war. Most of them are well armed. They are now in the narrow passes of the Apennines, in the direction of Pistoja, the Bagni della Porretta, Savigno, and Vergato. It was said that the Government had offered passports to the leaders to quit the country and an rejected. The Tuscan Gut that those conditions bad been Dragoons the Tuscan Government has despatched 200 ment of Modena is about to do the same. It is believed that the insurrection would have extended throughout Italy had the insurgents possessed a leader sufficiently skilful to conduct the attempt. The cause of the insurrection is said to be the constant refusal public opinion. The derree relative to concessions to public opinion. The decree relative to the Israelites of Ancona and Sinigallia is now said to be authentic, but it is accurainted with the decrees. However, they who are cquainted with the real state of things are convinced that the 26 th wilt not be executed, -Letters from Naples of he 26th ult mention that symptoms of disorder were beginaiog to manifest themselves in that capital. Atlempts bad again been made to set on fire the clothes of ladies of rank in the streets of Naples, and with fatal effect. Several arrests had taken place. The Neapolitan Government was afraid to call in regiments from the provinces, where, it appears, considerable excitement the festa of the Madonna di Pie di Greats been sent to lace on the Bth Madonna di Pié di Grotta, which took Glace on the 8th without interruption, although the Governeat arrested several persons, in fear of a movehown themselves in at Naples that two guerillas had shown themselves in the Abruzzi, and that four battalions were about to be sent into that province. Mount Vesu. vius has lately given signs of an approaching eruption. The crater, after having sent forth for some days columns af fire and smoke, emitted on the 18 th, from six to ten in Grening, loud detonations like cannon shots.
Greece,-Letters from Athens of the 3lst ult. state British dismissal of General Church and some other was felt by the British residents as a proof of the ill-will entertained by the existing Government towards every thing English, which could only be counteracted by the appearance of a few British ships of war off the coast. and arable discontent had been created by extra pay and allowances made by the King to his favourites, to the Ministers of War and of the Interior for secret service money, which absorbed the whole of the economy made in other departments. An article has appeared in the Continental papers, dated from Constantinople, and pretending to be a kind of review of a pamphlet, published at Constantinople, under the title of "Divine Providence constantly watches over Greece," in which it is stated that King Otho's dynasty cannot last, and that the only way of securing the permanent prosperity of Greece would be to elect a descendant of the ancient Byzantine Emperors to the Grecian throne, of which there still exist many in different parts of Europe, such as the Courtenays, Montmorencis, Hohenlohes, \&c. Several thousand copies of this pamphiet have been circulated through Greece and Turkey.

Whst Indirs.-By the mail-steamer Dee, which from at Southampton on Wednesday, we have account farm Jamaica to the \(23 a\) Aug. The weather continued ing removed the anprebensions of severe drought. Generally in all the colonies the weather was reported to be seasonable and favourable, and the crops promised well. The combined Court at Demerara had discussed and passed a new tariff of duties for 1843 to 1844, by which the duties on imports from Great Britain were reduced generally from the surcharge of two-and-a-half per cent. on the specific duties to one per cent. Among the passengers by the Dee, is the Ex-President Boyer of St. Domingo, who has come to Europe for the benent of his health.-Accounts from Bogota state that Mr. Stenart the British Charge d'Affaires to the Republic of New Granada (formerly M.P. for Haddington, and a junior Lord of the Treasury), died in that city on the 15 th July.

MoneyMarket, Friday.-Consols closed at \(95 \frac{1}{3}\) to 4 for money, and \(95 \frac{1}{4}\) for account; New Three-and-Half per
 Bonds, 69 s . to 71 s . prem.

\section*{fftetropolts and its Eicimity.}

Gencral Espartero.-On Monday General Espartero, with his Duchess and niece, visited Woolwich with his avite. After witnessing the evolutions of the Royal
Horse Artillery and field batteries, of Lord Bloomfield, they batteries, under the directions the models and specimens of arms the Rounda, containing the models and specimens of arms, the barracks, stables, and hospital. After partaking of a déjeuner at Lord the Royal Arsenal, including the laboratory and store-
houses，where accoutrements are always ready for 10,000 horses and their riders．In this department General Espartero and his officers seemed struck with the immense number of articles to be seen at one view，and their sur－ prise was not lessened when Lord Bloomfield at the eastern wing，pointed out to them about 28,000 large
guns，and upwards of \(4,000,000\) of balls and shells guns，and upwards of \(4,000,000\) of balls and shells
arranged on the grounds of the Arsenal．The whole arranged on the grounds of the Arsenal．The whole practice was carried on，under the command of Major Horsby，and the firing was the best exbibited for some time，almost every ball falling at the font of the fiagstaff， about 700 yards distant．Two rounds of 10 rockets each were then fired by the rocket troop，under the command of Major Strangways，and went of beautiful＇y，some of them entering the target at 800 yards range． number of vessels entering the range causing considerable
delay，it was discontinued；and General Espartero，the delay，it was discontinued；and General to town． Tuesday they paid a visit to the public establishments the City．At the Guildhall they were received by \(\operatorname{Sir} \mathbf{C}\) Marshall，Sir J．Pirie，\＆c．，by whom they were conducted into the Aldermen＇s room，the council chamber，the freedom－office，the library，reading－roonis，\＆c． Court of Common Council were assembled at th
and received their visitors with loud cheering． Excellency and family next proceeded to the Mansion－ house，to pay their respects to the Lord Mayor，by whom they were subsequently accompanied to the Bank．A this establishment they were met by the Governor and Directors，by whom they were shown the various offices and departments，with the machinery and apparatus em－ ployed in printing notes for circulation．They examined and a new machine for weighing sovereigns．A highly respectable assemblage had collected inside the Bank，by whom they were enthusiastically cheered，the same demon strations being manifested both on theil approach to and
exit from the Bank．They also went to the Mint，where they inspected the machinery
Court of Aldermen．－Alderman Magnay has declared his intention of becoming a candidate for the ensuing mayoralty，the resignation of Alderman Lainson having placed him in competition with in Monday Wardmote was held Bread－street Ward for the election of an Alderman，in the room of Mr Lainson．The two candidates proposed were Mr．
Benjamin Lawrence and Mr．Hughes Hughes（High Sheriff of Hants）．The Lord Mayor declared，upon the show of hands，that Mr．Lawrence had the majority；upon which the friends of Mr．Hughes demanded a poll．At the termination of the polling for the day，the numbers were－for Mr．Lawrence the close of the second day Mr．Lawrence had a majority of 10 votes．On Wednesday at the close of the poll the Lord Mayor declared the numbers
Lawrence， 89 ；Mr．Hughes， 82 －majority．\(\%\) ．The Lor had not a derutiny of the votes been demanded．His Lordship，having read the names of the scrutineers Optober，for the scrutiny
Court of Common Council．－On Tuesday a Court was held，at which Mr．Bunning was chosen Clerk of the Woriss，in the room of the late M．r．Montage，by a ma－ principal clerk in Mr．Montagu＇s office．The number principal clerk \(\mathbf{~ w h} \mathbf{M r}\) ．Montagu Mr ．Bunning 106 ，for Mr ．Young 68 ．
City Revenues．－An article on the corporation of Nondon and municipal reform，which appeared the Westminster Review，has been reprinted as a pamphlet，with a view to its extensive circulation． It contains a general siew of the city revenue，corporate and parochial，from the summary of which for public and charitable objects prodace an annual sum of \(364,096 l\) ． 11s． 91 d ．But，notwithstanding these endowments，the local rates for the poor，the church，paving，lighting watching，\＆c．，form a heavier burd of London，or in any corresponding district of the United Kingdom，amounting for the year 1841 or taxes levied by the corporation on coals，provisions，ec．paid by the public at large to the amount of \(202,549 \% .12 s, 7 d\) ．These sums are annually raised for municipal objects withi

Bank of England．－At the general half－yearly meeting of the proprietors of Bank Stock on Tharsday，a dividend was declared of \(3 \frac{1}{2}\) per cent．for the half－yeur ending the
loth October next，deducting 7 d ，in the pound for income－ tax．In making this dividend of \(3 \frac{1}{⿳ 亠 丷 厂}\) of \(7,167 \mathrm{l}\) ． 17 s ． 11 d. ，the state of the banking business，and the difficulty which all banking concerns experience in realising profits，baving rendered this step necessary．The 5,8641 ， \(5,864 l\) ． \(0 \mathrm{~s}, 3 \mathrm{~d}\) ．；so that the tro sums together make about

Acceleration of the Indian Mails．
ing of merchants and others interested in the speedy transmission of letters to and from Irdia，China，Australia， Ceylon，\＆c．，was held on Tuasday at the Hall of Com－ meject of the meeting，the chairman explained that all that was expected was an expression in general termas in favour of improved commanication，without reference to any company whatever．Consistently with this view，the
resolutions had been carefly prepared so as to show what
the public desired，and to leave entirely to the Government the manner and the means to be adopted in carrying out their wishes．They were to the effect that the present from Bombay seldom reached England in time for the mem bowb to answer their letters and that a similar in convenience attended the arrival of the outward mails at Calcutta ；that any plan that could be adopted to remove these defects，by accelerating the communication between the two countries，would be of the greatest national benefit；that memorials on the subject should be addressed to the East India Company，and copies sent to Government；and that to manage and watch over the matter a committee should be appointed．The resolutions vere passed almost unanimously，and the commitlee was meeting on the 1st of December
The Iouses of Parliament．－In order to afford room for the employment of additional workmen，a portion o alace－yad，extending from the entrance o estmin ster－hall to the Terrace，has been inclosed by a high purpose of enabling the stone－masons to proceed in chiselling the ornamental designs．The construction of the external walls has advanced so rapidly within the last month，that Mr．Barry conceives that the roof may be thrown over a great portion of the main structure before be winter．There are at present ppard 300 mason engaged，including those employed in hewing the stones but as the latter operation is necessarily tedious，the con－
tractors have determined to carry out Mr．Barry＇s design so far as they can，by putting on the additional hand which the increased space obtained by the inclosure of Palace－yard will permit to work with convenience．Con－ Palace－yard will permit to work with convenience． siderable progress has been made in the preparation o
the carpentry work for the interior，which will conse the carpentry work for the interior，which will conse－
quently have the advantage of being well－seasoned，and The Pr Warp
The Prize Cartoons．－The eleven cartoons，which obtained the premiums announced by the Commission of
Fine Arts，have been placed in the Suffolk－street Gallery， Fine Arts，have been placed in the Suffolk－street Gallery，
for public inspection．The rest of the cartoons have been conveyed to the Pantechnicon，Belgrave－square，fo exhibition．At the Suffolk－street Gallery artists are already employed in making reduced
cartoone，for the purpose of engraving．
Custom House Frauds．－A few weeks since a large seizure of contraband tobacco was made by Mr．Fogg，an inspector of the Thames Police，on the premises of a baker in Eastrield－street，Limehouse，Which was removed been made by the Commissioners of Custom information of some of the parties engaged in the transac tion，which has terminated in Exchequer writs being issued against Fogg and 10 other persons．It appears that the revenue has been defrauded to a great extent by the smuggling of foreign tobacco，which was carried on uffic the Thames in the presence of the time previous the seizure，two lightermen had been in the habit of going down to Gravesend for chaik，which they brought up in large boat．Every trip they made to that place was to cover the contraband trade they were carrying on－ctuat bringing four or five tons of foreign mandact landing the tobacco at Limehouse or Ratcliff．The parties ultimately quarrelled，and information was given to the Fogg immediately put in bail for 1,1002 ．，the amount of penalties sought to be recovered by the Crown．Six thers have also put in bail，but two have cot been abo where they are likely to remain till next term，when the trial will take place in the Court of Exchequer．The sloop which brought over the tobacco from landers，and the Custome heen seized and condemaed．The Board ments，although，on their own slowing，they have been for some time engaged in extensive smuggling transac－ tions．They have been receiving weekly salaries for some time past，and one of them boasts that he is to receive a penerally appointment as gauger．They wes，in the pro－ ceedings against persons for employing non－freemen on the river．One of the principal purchasers of the con－ Whitechapel－road，against whom an Exchequer writ has been issued．The tobacco was generally conveyed to his house by a man dressed as a baker，in a bread－bask， carrien over his shoulders，and，to carry on the deceptich， Other dealers received it in like manner
Wesleyan Conference－The daily papers state that the Wesleyan Methodists have been compelled to abandon reduced immediately．The permanent income of the society is said to have diminished to such an extent as to render this step necessary．－The annual address of the Conference was published last week，and contains a general notice of the public occurrences of the year which bear upon the religious interests of their body．After referring pon the filts made to bring about a substantial union between different religious bodies，it proceeds to lament between ditterent religious＂odies，it proceeds settlement of＂emissaries of the at The riti，＂supported by the authority and force of a great European nation．＂It alludes to the late secession in the church of Scotland，and expresses a strong adherence to the principle avowed by the seceders，in asserting the right of every Christian church to exercise its ecclesiastical functions uncontrolled by the civil courts．In regard to
the Government measure for promoting education in the manufacturing districts，it congratulates the body on its Narawal，but states that the Conference must not in guise or overlook the fact，that their recent proceedings in erence to public education have involved them in a moa erious responsibility．＂The case，＂they say，＂stands thus to be greatly in need of education．It is proposed to ive them a certain amount of education upon cern tain terms；but we，in common with other bodies， object to the terms proposed，and are understood thus to prevent them from receiving the education offered．Un reat or greater than absolute ignorance or unless the erms proposed were such as to neutralise the benefit of education altogether，it is manifest that we must either exert ourselves to the utmost of our power for the instruc the gailt of depriving them of instruction altogether－ neither giving it ourselves nor allowing it to be given by dence suppose，indeed，that any private o deno which would result from an amount of good equal able patient zeal and self－denying liberality may find ample cope，and secure an ample reward，in almost any circuit in our contion．The establishment and maintenance of efficient day and infant schools in large towns，and the urther improvement of our valuable Sunday－schools every mend to your kind and most carefol attention＂I regard to the Church of England they state that they have been lier as one of the main the Protestant faith ；but her title to be解 by the encouragemend deplore，＂they add，＂this alarming departure from the plicity in divinpl doctrine，and hom its godly sim－ Yet we are aware that there is a numerous and powerful body of holy and faithful men to be found in the ranks of Cod the the and the authorities of that Church，may soon feel it to be a duty which they owe to Christ and to the souls of men， to stand Corth，and，by a purify their branch of the Christian community from the purify their branch of the Caristian commana

Allhallows，Barking．－At a meeting of the vestry of this parish a few days Bince，a correspondence was read departure from the usual mode of performing divine ser－ med several the parishioners to secede or absent themselves from the parish church．The Vicar had expressed regret that any alteration in the per－ formance of avine worship had tach place，or hat thing sach ported that the former mode had been resumed，and those parishis who had discontinued their attendance at the church had returned

The Spitalfields Weavers．－On Saturday a meeting of hand－loom weavers was held to recive hereport of an interview which took place at the Board of Trade on the previous Thursday，between a deputation of the operative weavers and Mr．M Gregor，on whe occasion a memo rial，signed by 8949 persons was presented to the Lords of the Privy Counch for Trade．The deputation stated to Mr．M－Gregor that the abodes of many of the weavers had been visited by them，and that they presented a seen of deplorable poverty．Several had no bed to lie upon，
and had scarcely any clothing．This was the case in many instances where the loom was at work deputation then referred to the advantages derived by the Spitafields Act，observing that since that act was repealed the effect had been injurious to the operatives and the tradesmen，as the average earnings of the former pex deputation wos informed that Government was aware of the operation of some of then allegations in reference to smuggling；that their case would be investigated by Government between that time and the meeting of Pur ment considered advisable would be introduced by them early in the next session．
Model Prison．－The commissioners appointed by Government to superintend the management of the Pen－ tonvilie Prison have just presented their report for the approval of the Secretary of state．The report，which signed by Lord Wharncliffe，Duke of Richmond，Earis of D．Bu and Chichester，Lord J．Russell，the Speaker，sid B．Brodie，Dr．Ferguson，Maj．Jebbs，Mr．Crawford，and Rev．W．Russell，states that it is intended to appropria 35 en pron to the reception of convicts between 8 a a age，under sentence of transportation not undergo te years，and that the convicts so selected slans in the prison of probationary discipline for 18 months Land under theirn they will be removed to Van Bisioners report that the prizoners evince a ready conformity with the rules and regulations of the prison，and that they have made considerable progress in the trades in which hey instructed，namely carpentry，joinery，shoemaking，hiont ing，rug－weaving，mat－making，and weaving．The repors， contains a letter from Sir J．Graham to the Commissioner be wherein he says－＂I propose that no prisoner shalit is admitted into Pentonville without the knowledge that the portal to a penal colony，and that he must thencere．＇ Statistics of the Metropolitan Police．－By a return just
issued, in compliance with an order of the House of
Commons, relalive to the city snd metropolitan police Commons, relative to the city and metropolitan police force, it appears that there are 20 superintendents in the
metropolitan division, receiving from \(200 \%\). to \(600 \%\). per annum ; 110 inspectors, whose salaries vary from 80l. to 200\% per annum; 465 serjeants, with incomes ranging
from 60\%. to \(80 \%\). ner annum; and 3790 constables, receiving from \(44 \%\). to 816 . per annum, including clothing and 40 pounds of coals weekly throughout the year. The amount paid on this account during the past year, including 3620l. for superannuation and retiring allowances to Thames police, amounted to 295,754 included a sum of 97211 . received from theatres, fairs, and races. The number of district surgeons is 60 , and the amount paid for books, \&c. is 757 l . The total rate received during the past year from the various wards in
the City of London and its liberties, for the maintenance of the City police force, is put down at 41, 714l., and the expenditure at \(41,315 b\)., the gross pay, irrespective of other charges to the force, amounting to 29,800 l.
Mortality of the Metropolis.- The number of deaths registered in the week ending Saturday, Sept. 9 th , was Central Districts, 160 ; East Districts, 182; South Districts, 241 : total, 880 (males 460 ; females, 420 ). Weekl average for the last 5 years 903 ( 461 males, 442 females);
and for the last 5 summers, 846 .

Aldborough.-On this part of the cosst of Suffolk last week the sound of the heavy firing on the occasion of Her weather was very fine, with a slight breeze from the The The distance from shore to shore is 88 miles. The firing during the siege of Antwerp was distinctly heard on the解 cosst
Bangor.-The Bishop of this diocese, at his fifth trienexcited much interest in North Wales charge which has adverted to the question which had occasioned so much interest in the principality and sympathy in the Eaglish sees of St. suspense; and although he could not encourage any sanguine expectations, he would not despair of the ultimate success of their appeals to the justice and good feeling of the Government and the Legislature. After adverting to the different mensures which have recently been brought ceeded to examine the progress of Tractarian principles. "After making every allowance," he said, "for the uprightress and good intentions of the writers, the soundness and orthodoxy of many of the priaciples which they from their labours, it must be confessed that they have in many respects taken a wrong direction, and assumed an exaggerated, and therefore erroneous, form ; and that able construction, liable to just exceptions and censure. In an address of this kind 1 cannot of course enter into an analysis of those writings and opinions, but must content myself with animadverting on a few of those leading features of their theological school-if I may so express the first place, they appear to have thrown-the phrase is, I belien, hemselves into a system, or \(I\) should which they call Catholic, and hold it up to admiration as something infinitely superior to the imperfect and lifeless Catholicism of their own Church; for I cannot discover that they have any clear or definite notion of the system which they admire, or have drawnany precise line between Catholic of doctrine and discipline. We must not, however, suffer ourselves to be led astray by the cloudy grandeur of this system. An attempt has been made to show that the Romish doctrine condemned in our 22 dirticle of Religion concern-
ing Pargatory, Pardonings, Worshippin5 and Adoration ing Pargatory, Pardonings, Worshippins and Adoration
of Imges, as well as Relics, as also Invocation of the \(\stackrel{\text { of }}{\text { Images, as well as }}\) Saints, is not the doctrine publicly professed by the Church of Rome, and ultimately sanctioned by the decrees of the Council of Trent, but certain superstitious practices and opinions, which, though tolerated and winked at by that
Church, form no part of its system. The inference drawn from these statements appear to be that-I will not say from these statements appear to be that-I will not say
Protestantism, for this is a term which the writers have taken great pains to repudiate-but members of the Church
of England may safely hold this doctrine, as it is authoritatively taught by the Church ofn vening the docirine of our own Church, or offending
against the spirit of this article of religion. Now, no one Who is acquainted with the history of those times, can those doctrines, as they were held and acted upon in the Church of Rome at the time when God's providence called them to their grest and necessary work; nor can it
be doubted that it was the object of that Council to give sanction and fresh authority to the doctrine which she had tauglit, nud which had been rejected and condemned by gro Reformers. That Church may have condemned a few ples on which they were grounded, and the practice phies on which they were grounded, and the practices to Which they necessarily led-untouched, but they were con-
verted into articles of faith, and added to the ancient Creed of the Church Catholic and Apostolic." The Right Rev. Prelate dwelt at considerable length upon these
points, and observed, that it had been urged that the line
of argument pursued in the last Tract, and the sense affixed to the several Articles of our Church brought under Church were intenced to confirm in their attachment to the going astray England certain persons whose minds were vinced that the tendency of this Tract is to draw sncl minds still nearer to Rome, by palliating the evils of her doctrine and practice, and cutting from under our feet that ground of necessity and of an imperious sense of obligation, on which our Reformation is based. The Bishop explained and defended the term Protestantism, observing that the eminent divines of the seventeenth century identified themselves and gloried in the name of Protestant. He did not look upon the movement with the same feelings of alarm that many, for whom he had a great respect seemed to regard it; being persuaded that through the favour of Providence, the effect of any erroneous doctrines would soon pass over. The Bishop next adverted to certain irregularities in the performance of the public services observed), must be discontinued, if they do exist (he made for the discharge of those public duties, as shall cut off the plea of necessity. Another statement, which he trusted was not correct, that clergymen do not scruple to give their attendance at dissenting places of worship, thus too cheir sanction to opinions that were, he feared, Church and the Meeting-houses, and that there is no such sin as schism. But (observed the Bishop) if there are any of the clergy who allow themselves this liberty, they may be sure that while they give offence to the sound part of denominations, whom they expect to conciliate by this show of liberality. The Bishop concluded by exhorting the clergy to observe wise and seasonable moderation.
Beaumaris.-The new quay in this town has been comnenced, and several stones have been already laid down. The length of the quay will be 570 feet, breadth at the work will be completed before next summer.
birmingham.-This town has been rendered very gay during the week by the Musical Festival, which has filled the town with company. The rehearsal took place on Monday morning at the Town Hall, and on the same was gone through at the theatre. The morning performances commenced at the Town Hall on Tuesday, with Rossini's Stabat Mater, a selection from Handel's De borah, and other oratorios. On Wednesday the performance consisted of scraps from Dr. Crotch's Palestine, and miscellaneous selection from Costa, Croft, Attwood, Thursday they included the Messiah, and on Friday they terminated with gleanings from Handel, Haydn, Mozart cc. At the theatre, on Tuesday evening, the English version of Rossini's Lady of the Lake was given with On wednesday Bellini's Norma concluding with extracts from Son of Mozart, Mendelssohn was a concert. The Festival concluded last night bere full dress ball at the theatre, the pit of which was boarded ver, and the stage fitted up as a tent, M. Jullien condon. The band, with Herr Konig on the cornet-à-pisthe General Hospital.
country into still the ejectent greater alaron, by adopting measures for the ejectment of the landlords. As Mr. Adams, of
Middleton-Hall, one of the county magistrates, was returning home last week, from this town, where he had been attending the adjourned Quarter Sessions, he observed a fire in the direction of his seat. Upon inquiry, he was coolly informed that Middleton-Hall was on fire. On approaching nearer, he found this to be too true, for the stacks in the farm-yard were in flames, and the wo near his house was literally alive with armed men entered his house, and found his family in a state of pair, the female members of it expecting every moment would be their last. After endeavouring to reassure them, Mr. Adams armed himself, and proceeded to secure his papers, title-deeds, and other documents, at the same time despatching an express to Carmarthen for the military, to protect his property and the life of himself and family. protect his property and the life of himself and family. as the men had before been out on duty it was not thought proper to send assistance. The feeling of want of protection in the midst of a lawl at midnight, with a part of his premises blazing near him induced Mr. Adams to take the determination of at once leaving the country with his family. The family of Mr. Chambers, of Llaneliy, hree of whose farms had the hay Mr. Chen Mr . Cbambers, jun., alone remaining. It is believed that Mr. Adams has been made to suffer from the vindictivefell from him the srand jury roome expressions that fell from ain the grand dinary verdict returned at the inquest on the old woman shot at Hendybridge-gate; near Pontardulais, the most grave appreheasions ate entertained. It is said that the of terrorism prevails, that men dare not render themselves obnoxious by even doing their duty. The attack by the police on the Rebeccaites at the Pontardulais-gate, attack, have been productive of the most serned in that quences. It was confidently predicted, by both the magistrates and the police authorities, that it would put
an end to Rebeccaism, but the result is directly the The murkdies of soldiers are oblised to mave throughout the night upon every rosd, in order to warch incendiarism and other acts of violence lais-gate, which the military went to protect on 5 . night, wes again destroyed on Sunday, and the wilurday given notice, that if any more tolls were attempted to taken, they would pull the house down. The rited to be also destroyed the Fishguard and Parkymorfa tomat gates, and cautioned the toll-collectors not to tornpike toll; but not lieeding Rebecca's warnings, they collected the toll as usual on the Saturday. This exasperated the Rebeccaites, and notices were sent to them to remove their furniture, or the toll-houses would be destroyed on Monday night. On Monday night, true to their threat, completely destroyed it. They then proceeded to Parkymorfa toll-house, and instantly demolished it. After firing guns and frightening a great number of the inhabitants, they leyelled a piece of wall belonging to the road surveyor and dispersed about 3 o'clock. About 2000 persons going onembled in the town looking on whilst this was going on, but no one interfered. A weir near Cardigan been given th destroyed. It appears that an alarm had pull down a small weir near a place called Velingigfran ; the marines small weir near a piace called Velingigfran; and during their absence the Rebeccaites embraced the opportunity of demolishing another called Llechryd weir. Though this weir had stood for ager, and braved many a The num flood, it was destroyed in about 15 minutes. 300. Wlite the marines were returning from Velingig. fran, one of the rear-guard, who was behind the others fell in with a party of Rebeccaites on a cross road. He Yes. Ca done. He was Yes. Take off the cap, which was house treat hen whed andicin Cardigad some ale, and hoerated. He arrived in Cardigan about two hours after his comrades. It is the coppermen at Swansea has ceased, and that all the men have returned to the works.
dimsoy. -The Duncannon steamer was lost on WedHumber. It ane Spurn Sands, at the entrance of the Humber. It appears that she had been engaged by a party of ladies and gentlemen for an excursion down the Humber to the Spurn light. She left Barton at an early hour, and during her passage called at Hull and otber places to receive the company, which amounted altogether o abo passengers, including a military band. On reaching the Spurn, the company were landed on the sands, which are ligh and dry at low water, and are a great resort for pleasure parties along this coast during pummer. The steamer was run on the sands for the purpose of more safely landing the company, and it appears that proper precantions were not adopted to get her of before the tide fell lower. The consequence of
this neglect was, that her stern kept lowering as the water this neglect was, that her stern kept lowering as the wates eceded, whilst her bow was firmly imbedad in the sand, until she slipped completely into one of the steepest parts of the Spurn. In the meantime the party was enjoying hemselves on the sands, unaware of che calamity which ad befallen their conveyance, and on their return to the vessel, about 3 o'clock in the afternoon, they found to heir surprise that the sea was rushing in at the cabinwindows. The crew failed in altering her position, and as the tide rose she gradually became filled, and was soon lost to the eye. It is presumed, from the manner in which she is imbedded in the sand, that her back is broken, and that she will conscquently become a total wreck. The company were rescued from their perilous situation by a sloop, and were safely landed at a late hour the same evening at Barton.
Guernsey.-The Bislop
Guernsey.-The Bithop of Winchester in his recent charge at several of the parishannel stands, delivered stated that of other he had lately published a charge to the clergy his opinions on various mattere, and especially on those points of controversial doctrine, which, at the present time, engrossed so large a share of attention. He had seen no reason to change the opinions he had then expressed. It was only in proportion as Church that they could hope to become faithfal instruments in their vocation, and to give glory to the name and word of God throughout the British empire, and the world at large. It was the duty of every minister of the Churcla to examine seriously the ground on which he stood, and by his life and teaching to avoid creating doubt and uncertainty in the minds of those to whom le was called upon to minister. His Lordship proceeded to speak of a few points on the right understanding of which the usefulness of the ministry depended. The first of these was the doctrine of justification by faith, as maintained in the Eleventh Article of the Church, and cited a long list of eminent divines, British and foreign, who in all periods of the Church had maintained it. One of these authorities had said, "If this article is lost all is lost;" and there could be no dispute that doubt on this point opened doubts on all points. If the clergy preached anything else they did not preach the gospel. The bishop then considered effect, not the means of justification. His
it was the Lordship deprecated 1 eserve in the communication of
religious knowledge. In regard maintained emphatically the great importance which was inherent in them; but they were not to receive undue
exaltation. With respect to preaching, his Lordship considered that too mucl prominence was given to it by some persons. Its efficacy was undoubted, but as a human instrument it ought to be kept in subordination to the sacraments. The bishop dwelt at great length on the character and claims of the clergy, and concluded by urging upon them the duty of renewed energy and fa Hafod.-On Tuesday, Hafod, with its magnifice domain and mansion, and the estate and mansion of Cwmelan, on the banks of the Elam and Wye, with other properties in the counties of Cardigan and Radnor, beonging to the Duke of Newcastie, were sold af consisting of about 30,000 acres. Hafod was formerly the property of Mr. Johaes, the translator of Froissart, and was for many years in Chancery, during which period it fellinto by the Duke of Newcastle. The property comprised, in addition to the land, several mines, farms, and sheep pastures, with the advowson of Eglws. Newydd. The estate of Hafod, as originally announced, was divided for sale into four lots; but, at the sale, the auctioneer stated that the of 13.500 acres, with the mines, pastures, advowsons, \&c.; and 1,390 acres of woodland and plantation, of which 400 was 1,979l. The auctioneer calculated the value of the estate to be about \(135,000 l\), at thirty years purchase, taking the woodlands at a valuation of from 50b, to 1000 . an acre ; and for the purchase of the annual income arising from the rental, with the profits from the mines, \&c. One article for saie Eglws Newydd, by Sir F. Chantrey, representing Col. and Mrs. Johnes at the couch of their daughter, in her last moments. Another article was excepted from the sale, which was a chimney-piece in the dining-room of the mansion at Hafod, which cost 1,4006 . The first ofter
for this estate was 75,0006 ; the next, \(80,000 l\), and it was knocked down eventually for 109,0001 . It was said that the reserve sum was higher than the sum offered. The next estate was hat called Cwncl, scres. For this 24,0001 , was offered. The reserve sum acres. For this \(24,000 \%\), was offered.
being stated to be higher, it was put up in lots, but relinquish stated to the third lot. The same result took place with the Dolyclettwr estate, consisting of 176 acres, returning
a rental of \(237 \% .2 \mathrm{~s} .3 \mathrm{~d}\)., for which \(7950 \%\). was offered. a rental of 237 l .2 s . \(3 d\)., for which \(7950 \%\). was offered. The room

Isle of Man.- It appears by the balance-sheet put forth by the directors of the Isle of Man Joint-stock Bank, that after deducting the doubtful and bad debts
from the assets, the capital of the bank has been lost from the assets, the capital of the bank has been lost three and a halt times over. Don Carlos, to be repaid on his entry into Madrid.
On the morning of the 12 th instant six criminals On the morning of the 12th instant six criminas escape from their cells, and to let themselves down from the parapet into the fosse, a height of 60 feet, by means of blankets. They climbed the outer wall, and seized a boat on the beach, by which they reached a pleasure-boat at anchor in the bay. In this they immediately set sail, and are supposed to have gone to Ireland. Liverpool.-A man, named Henry Eastland, alias James F. Bentley, was apprelended in this town,
on Tuesday, for obtaining money by forged letters of on Tuesday, for obtaining money by forged letters of credit, purporting to be drann on Messrs. Lubock's Fiampton," manager of the County of Gloucester Bank. The fraud was detected, and the prisoner was remanded for further inquiry.

Manchester.-A young man named Tyler, casbier in the employ of Messrs. Reyner and Brothers, of
Ashton-under-Lyne, whose warehouse is in this town, absconded last week, having received, in the course of the day, accounts to the amount of nearly \(900 \%\). It has since been ascertained that he sailed the same evening to New York, by the Caledonia steam-ship from Liverpool.

Oxford.-The Rev. James Norris, whose name stands the third in the list of Fellows of Corpus Christi College, was on Saturday elected President of that Society, in the room of Dr. Bridges. As the late President did not hold
any College living his death has occasioned no vacancy. Portsmouth.- A court-martial was held on Tuesday, on board H.M.S. Victory, Rear-Admiral Sir Hyde Parker, Piesident, to inquire into the circumstances attending the loss of H.M.'s steam-vessel Lizard, of Carthagena, on the Veloce \(y\), in consequence of the freach in tro, and to try Lieut. Postle, the officers aud ship's company, for their conduct on that occasion. The Deputy Judge curostances, addiressed to the senior officer at Gibraltar, Mr. Hosking, on the part of that officer, read a staternent Lizard were then called as witnesses; and having substantiated the statement of the Lieutenant, the Court delivered sentence as follows :- "That the loss of H.M.'s of-war steamer Veloce running foullof her, fon the morning of the 24th July, by which the Lizard was sunk ; that no blame was imputable to Lieut. Postle for his conduct on the occasion; that Mr. Slaughter, a supernumerary midshipman, serviug on board her, was highly blameable for having lelome was imputable to any other of the officers, or of the ship's company; and the court adjudged the
said Mr. Slaughter"to lose two years' time of service as a midshipman; and adjudged Lieut, Postle, and the remainder of the officers to be fully acquilted. \({ }^{31}\)
Reading. - Extensive repairs are in progress in St. Mary's church, in this town. During the course of last week three ancient sedilia, of early English architecture, were discovered in ruins behind the wainscotting on the south side of the chancel; the fresco painting at the back
of them, and the encaustic tiles, being still in excellent of them, and
preservation.

Southampton.-In accordance with the new regulations, making this port the station for the Royal mail packets, the first mails arrived on Monday by railroad. They consisted of 54 bags, weighing upwards of two tons, for various islands in the West Indies, and were immediately shipped on board the mail-packet Teviot. A numerous assemblage of persons collected on the pier, to witness the first embarkation of mails from this port. The Teviot, on passing the town, was saluted from the platform and from the Royal Yacht Squadron's house. All the estahave arrived here to superintend the packets.
Windsor.-On Saturday Capt, Fernyhough was installed in St. George's Chapel, with the usual cerein the room of the late Capt. Cummings, and on Monday Capt. Cochrane was installed one of the Military Kuiglits, vacancy having been occasioned by the appointment of nyhough to the Governorship.
ways.-The following are the receipts for the past and Glocester, 2,141l. Eastern Counties, 2,988\%.; Edinburgh and Glasgow, 2,629l.; Great Western, 15,053l.; Grand Junction, 8,4592.; Glasgow, Paisley, and Ayrshire, 1,5972.; Great North of England, 1,552l.; Hull and Western, 7,6141 ; ; Black wall, 1,1202 .; Greena ich, \(763 l\). Brighton, 5,58. ; Cloydon, Counties, 2,663l. ; Manchester and Birmingham, 3,255l.; Northern and Eastern, 1,711l.; North Midland, 5,024l. couth-Eastern and Dover, 4,393l. ; Sheffield and Manspecial meeting of the North Midland Company was held at Derby on Monday, for the parpose of considering proposals for the amalgamation into one concern of the capiCompany, with the Midland Counties and Birmingham and Derby Companies respectively, and upon other business touching the future maanagement of the traffic The attendance of proprietors from Manchester, liver pool, York, and London, was more numerous than on any negotiations between the directors of the three companies, with reference to an amalgamation of the three companies into one, and which had resulted in a mutual determination formal ratification of the proprietors. He believed it would benefit not only the railway, but the public gene and euhance the value of the shares; and in the other, it and euhance the value of the shares; and in the other,
would enable passengers to pass through to the north without those obstructions and loss of time now incident to the present system. The propositions were to the effect that, in future, the three lines, witdings, capital, \&c., should be consolidated into one buildings, capital, \&c., shonld be consonared which ehould be liable for the mortgages, bonds, \&c. of the other companies, to the amount of \(1,855,000 \mathrm{l}\) the united company to be also liable for all the contracts of the other companies prior to the union; the aggregate share capital to amount to \(5,158,0002\); each holaer to be to his amount in the other companies, the North Midland and Midland Counties holders receiving an equal amoun of dividend, but the Birmingham and Derby receiving 27s. \(6 d\). less per share. The number of directors not to exceed nineteen, three to form a provisional committee;
and finally, that an Act of Parliament be obtained in the and finally, that an Act of Parlianent be obtained in the using their united efforts for the efficient conduct of the traffic. A long debate ensued on the various propositions which were ultimately carried unanimously. The Birming bam and Derby Company have since met and agreed to the proposals.-On Wednesday a special general meeting of the
Northern and Eastern Company took place, in order to uthorize the directors to raise a sum, not exceeding \(67,822 l\). 4 s , 5 d , for the purposes of the undertaking. A resolution to that effect was submitted, and passed unanimously. Mr. Masterman, a director, said he had the satisaction to report that they had the offer of the whole of the money at 4 per cent. for five years. In reply to a pro prietor, the chairman said the Hertford branch was ex pected to be opened by the first week in November, and as o carrying the line northward, a special meeting would be called.

\section*{IRELAND.}

Dublin.-The weekly meeting of the Repeal Association took place on Monday. Mr. Connor, the well-known notice the in of ene adoption of a resolution to the following effect :-" That until our national rights of self-legislation, in the pospession of our own Pariament, and of a valuation and pay no rent, county cess, rent-charge, tithe, poor-rate, or any other charge out of land." This notice having been the galleries, but it was received with great surprise by
the rest of the meeting. Mr. Connor, appearing to get heated by the commotion he had raised, spoke a few
abrupt sentences. He said that humbug had been going on long enough. It was time now to do something for the people. There was much talk in this room about pounds, shillings, and pence, but in the meanwhile the millions were starving. The resolution was one which he would never give up ; he would sooner part with his life. Mr . John \(\mathrm{O}^{\prime}\) 'Connell called on Mr. Connor to desist. Such a notice as he had read could not be received by the Association. It would at once endanger their cause. such a matter there. The effect of such a motion, if adopted, would be to divert the public mind from th peaceable progress they were making, and to bring the in direct collision with the law authorities of the land. Had that notice come from any body else but him, it would not matter so much, and at a moment, informed that opposition to rent had begun in the of Tipperary. He was not surprised reached portions stitutional violence-this traitorism to repeal and the country spreadiug in Carlow, because that country was the blank in the repeal map of Ireland. Several orem expressed their disapprobation of the hotion, and after considerable interruption, the fol owing resolutions were passed :-1. That this Association pounded wh horror and indignacion the doctrines proounty cess, tithes, poor-rate, or rent-charge, this day, in the attempt he made to put upon the books a notice plainly and grossly lllegal, and directly tending to create and ancourage criminal outrage and violence throughout the country.-2. That if anything can add to these feemings, is the consideration of the time Mr. Connor has chosen for making such remarks-a time when, in the county of Carlow, where Repeal has hs yet made hittle progress, a violent and criminal opposition to rents has, according to this Association indignantly rejects, and refuses to inserk on its books, or to allaw to be for a moment entertained, Ar. Connor's notice ; and that they deckare that all who put forward such doctrines, and offer such advice to the people as is contained in that notice, are either maumen people who support that cause, and Old I reland." The repeal rent for the week was \(1,462 l .1 / \mathrm{s} .8 \mathrm{~d},-\mathrm{A}\) gunner of the Royal Artillery, at Ballincollig, has been sent away prisoner to Woolwich for trial by court-martial. His name is O'Brien, a native of France, but the son of Irish parents. He was heard to give a warm expression to his contempt upon the question of repeal, and treated wiss -Father Mathew arrived in Kingston from England on Saturday, in excellent health. The mail packet reached the jetty soon after seven o'clock, but even at that early hour there was a large crowd assembled, Who warmly papers state that the account of Lord Cardigan having placed one of his officers under arrest was exaggerated in all the material points; that the officer was reprimanded for lounging when on duty, and was told to consider himself under arrest until the circumstance was reported to the Lieutenant-General commanding, who was then on another part of the field, and who, on being made acquainted with the case, rode down, and after severely eprimanding the officer removed the arrest.-DDr. Prior, Vice Provost of Trinity College, died on Saturday, aged 79. The lucrative appointment of First Clerk in the Chief Secretary's office, vacated by the promotion of Mr. Hamilton to the Second Remembrancership, has been Pennefather
Clifden.-The Repeal agitation has extended to the far west" of Ireland, amidst the wilds of Connemara. A meeting was held on Sunday, at what may be called the mile western point of Ireland, Clifden, miles distant from Dublin, being a new town, not having supported by Dr. M'Hale, Mr. D. Browne, M.P., and a large number of ex-magistrates. The proceedings, which were greatly interrupted by heavy rain, commenced with resolutions expresing allegiance to the Queen, and condemning the Act of Union Mr. O'Connell then addressed the meeting at great length on the usual topics. He stated that as soon as the repeal of the union should take pho her ris argel to erery howoler abolished, the franchise extended to every householder and father of a ramily, absencee rents spent ia rreland, a equity of tenure increase, there would be good wages for everybody, and plenty and prosperity; would spread over the country,
Lesburn.-On Wednesday week, an anti-Repeal demonstration took place in this town. The meeting was called for the purpose of adaressing the Quees, and of endering to her Majesty the ants of Lisburn and its neighbourhood, for the especial reference which, in the Royal speech delivered at the
close of the last session, she was pleased to make to the Repeal agitation.
Carlow,-On the night of the 8th inst., about fifty men assembled on the lands of Coolmanna, in this county, and cut down about two acres of oats under seizure for rent due to the landlord, whose attorney, having received intimation of the proceedings, collected some people in the vicinity, who came up in sufficient time to prevent the property being carried off the land. Informations havo
Cork.-The fortifications of Cork, garrison are proceed-
ing with considerable expedition, and already have loopholes been formed in the different ungles of the building under the inspection of the Royal Engineers: To the north-east of the building a platform is in course of erec-
tion, which will command a long range of country, and it tion, which will command a long range of country, and it
is supposed will be surmounted with a swivel gun, of conis supposed will b
siderable calibre.

Eutinburgh.--The SCOTLAND. account of the Norkern Slar of last weekcontain from the pen of Mr. Hill (late editor of the paper), who has just been making a tour in this country. "The general complaint," he says, "which met me in almosi every town was, 'That agitation is dead ; ' the enthusiasm of the people seems to have greatly gone down everywhere, Great demonstrations, expensive and numerous proces
sions, and flags, banners, music, and hurraing noises, ar sions, and flags, banners, music, and hurraing noises, are people out to hear lectures. They seem tired of lecturing and tired of the agitation altogether."-The estimates for the execution of the works for the improvement of the Cecur in Canal show the differences which son tender were iten calculations of contractors. On were, in round numbers, as follows :-Lowest, 134,000l. ; second lowest 1360002 . ; third lowest, \(223,000 \%\); highest, \(230,000 \mathrm{t}\) It seems that the second lowest offer bas been accepted found guilty of the murder of his wife, at the Stirling Court of Justiciary. It was attempted to prove that be was insane in regard to his conduct towards his wife, The Jury, however, unanimously found him Guilty, and Lord Moncrieff passed sentence of death.-Colonel Wil liam Nicol Burns, the second son of the poet, has lately returuned to Dumfries, after an absence in India of 34 years. and conferences have been pubtished in reference to a minute of the Senate, stating public deed, Laid on the table of the General Assembly of the Church of Scotland, seceded from the Established Church, and has since joined himself with those who have openly and offcially declared their hostility to that Estaa correspondence with the Chancellor of the University and the adoption of a memorial to the Secretary of State, Andrews, for the purpose of holding a mutual conference in reference to the case. The meeting was unanimously proceedings of the Presbytery, but should leave them to proceedings of the Presb
follow their own course.
Hamilton.-Great festivities have taken place in this neighbourhood in honour of the first visit of the Princess
Marie of Baden, Marchioness of Douglas, to Hamilton Palace. The road from Douglas Mills to the palace (about 18 miles) was lined by the Duke of Hamilton's
tenants-some from as far as thirty miles off-chiefly farmers on horseback, who fell in after the open carriage, in which were the bride and bridegroom. The procession was headed by a troop of cavalry, and when a salute of cannon from Cbatelherault announced its entrance into the park, it was joined by a body of tenantry on foot, who
followed the horsemen to the palace. On the balcony stood the Duke and Duchess of Hamilton, the Countess of Lincoln, and the Countess of Dunmore, with severai gentlemen. His Grace descended the steps to hand the Marchinness up to the balcony, and her appearance there,
with that of the Marquis, was hailed with the heartiest cheers. After this, about 1600 persons, consisting of the Duke's tevantry, the yeomanry cavalry, and many gentlemen of the county, sat down to a cold collation in three large buildings fitted up for the occasion. In the Riding room the Marquis of Douglas, and in the third Sir Norman Lockhart, with Mr. Magee at a supplementary table. The tenantry were placed at the tables in clans, each clan wearing a different and appropriate device, and dis-
tinguished by a banner of its own. The magistrates and town council dined together in the town-hall of Hamilton under the presidency of Colonel Richardson.

\section*{fficsellaneous.}

Wellington's Birthplace.-Having visited some of the emarkable ruins around Trim, the chief of which is a vast pile called John's Castle, we hired a car, and at
six in the evening drove off to Dangan Castle, four miles six in the evening drove off to Dangan Castle, four miles domain, we entered a narrow avenue by an iron gate, which was opened by a woman whose house was one of two or three low thatched huts. There were no trees shading the avenue, but a high thorn hedge, bushy, wild, and lofty, skirted it on either side. When we
bad proceeded 300 or 400 yards, the park, that had once been finely wooded, but which, like a bald head, with a tree here, and two or three there, and a few more, stunted and denuded of their ornamental branches, eminences, once so magnificently wooded, now so shabbily bare, opened upon our view. The road went towards a gentle slopain wheeled to the right. On the brow of bari; gray, treeless, shelterless, and in most parts roof less. Broken cars and waggons, and ploughs that were idle because it was summer, and harrows idle as the ploughs, lay strewn about, aud told of people who were as idle as any of them, else they would have had them put tidily out of the
way. Cows were lowing in rear of the house to be milked cows were to give. The astes thatir allowance of what the ous places, keeping vagrant pigs and cattle asunder, were kept to their posts by old ropes and stones, which had to be rolled away ere they could be opened, and rolled back again ere the pigs could be restrained from accompanying the visitors to the front of the castle ; and even then, a sharp admonition over the snout was requisite to make them remember they were pigs. The dogs, which were ready 10 and calves, or at strangers like us, were lying on the dunghills that lay on the rondside: and those who bade them be quiet were leaning idly on the hay waggon or the stone wall, doing nothing more than On being think they were looking at us, and us only us entrance to the front of the castle, and another went and our request to be oudmitted to the interior inmates, showed us the windows partly built up and The fron wholly carried away. It may have been a pleasant house, it occupies a fine situation, and is surrounded by ground phich, if it has not been, might be made, one of the finest must have been plain. A ted arinted door the house its place by a great purtion of the doorway being built up 0 fit it, being opened to us from the inside, we entered cleared the main portion of the building entirely above; and what had once been the dining was all open and library floors, was now a flower-garden. During the lime the house was occupied by the O'Connor family, save in the wing towards the rear, where the present inhabitants now live. To this' wing we proceeded, and the young lady who kindly led the way, on taking us to what is belief was, that in this room the Duke of Wellington and the other members of the Mornington family were born. There was a spacious bow-window looking out upon the garden and farmyard, which occupied ground slopiug Inside the room was a large circular recess, now shelved round, the shelves filled with articles of ornament and use -glass, china, and such like. This recess is quite large hold the family couch of the Courtess of Mornington, and subsequently that of the mother of Feargus \(O^{\prime}\) Connor When about to leave Trims on this visit, 1 put a few questions to an old gentleman who stood by the doorway of
the hotel, such as "How far to Dangan Castle?" "Who ives there now" "and so on. He told me that he was a tailor, stinc carried on business in Trim, and had made
clothes for the young Wellesleys when boys. He made clothes for the Hon. Arthur Wellesley, now Duke of Wellington, when a boy. He also did work for him when he was the Hon. Captain Wellesley, and came to Trim on
the recruiting service. He remembered, "us distinctly as "it had been yesterday," when the corporation of Trim elected this young officer to be one of their merubers in
the Irish Parliament, when it was alleged that he had not the lrish Purliament, when it was alleged that he had not attained his majority. On that occasion the nurse who Trim, and he remembered seeing her, "as plainly as had happened but yesterday," put on the witnesses' table and sworn, and she proved that that very day one-and-
twenty years she saw the Hon. Arthur Wellesley born at Dangan Castle.- Morning Chronicle.
Imperishable Bread.- On the 13th inst, in the Mayor's private room, at the Town-hall, Liverpool, a box of bread years ago, and proved as sound, sweet, and in all respect as good as on the day when it was inclosed. This bread is manufactured of a mixture in certain proportions of
rice-meal and wheat-flour. The coarsest quality of may be used, and will produce bread not inferior four of the finest description by the ordinary method. It was stated that it is also extremely nutritions, very beneficial was eaten by, and a certain abti-scounced it excellent in which opinion he was joined by all present. It was asserted by M. Alzard, the discoverer of the process, that
the bread would keep two centuries without alteration. M. The Jacquard Loom.-A Lyons journal states that the principles of the Jacquard loom to musical instrument His first trial has been on the accordion. A card is used to vary the tunes as it is used in the weaving to change years and mu. Mirlaveau has, it is adue
The Eleotrical Eel. -Two fine specimens of this sin brought by the by rica, where they were caught in one of the tributary six inches in length, and appear to be male and female judging from the difference of colour, one of them being nearly the same throughout, with the exception of the have been purchased by the proprietor spots. They Gallery, and will have their powers tested as soon as they Thave recovered from the effects of their sea voyage voyage during a gale of wind. Form of Ships.-An important paper on the form of ahips was read at the recent meeting of the British Assoreport which was only given in anal of attention. The mass of papers and drawings would fill volumes, , formed
on a series of experiments extending over five years Which were perseveringly conducted by the late Sir Jame Robison, of Edinburgh, and Mr. Johu Scott Russell-; and for this purpose grants, amounting to nearly 1000 ., have It prould at different times by the British Association, of the experiments, and the varions platice even the nature ing at the form of ships hest adopted thed for water with least qualities of a good ses-going boat. The general results alone can be given, and these are of the most startling kind to those ship-builders who conceive the old plan of construce tion, of having a round head and a fine run aft, to be beat to be accomplished was to a rough sea. One great object wave, which resists the progress of a vessel as effectually as if it were so much deeper immersed in water. Tlis, it was found, would be best effected by increasing the length The ship, for length seems to be an essential requisite. The shortest lengtl for a boat required to move through found to we 205 velocity of seventeen miles an bbur was found to be 205 feet, and the shape of the water-line, or of that part of the ship which floats on the surface of the wrom the widest midshin :-The fore part of such a vessel, tapered off to midship section, must be 120 feet, ond be tapered of to a fine point, like a Thames wherry. The thongh mill thist be 85 feet; and the form more rounded, though still terminating in a sharp point. Mr. Russell said that when old seamen and ship bnilders saw this plan roughe positive that such a vessel could not live in a of shipea, as it was directly opposed to all their notions of ship-bullding, the cod's-head and mackarel-tail form being the one they had always preferred. Experi-
ments, however, were made on a large as well as on a small scale, with a view to test the qualities of the dif* ferently-shaped vessels, some of the experiments being made on ships of 2,000 tons burden. The resulfs proved of the plan now recommended is far superior to the beat cod's-head and of ships, and that, as compared with the when movina mackarel-tail construction, the advantage, than double, or, in other words, the resistance to the motion through the water, was as 52 to 129 ; and the
advantage of the new form was found to increase with the increase of speed. As sea-going boats, those of the phinted shape were found far superior, for they not only the waves-- which fact was ascertained after a series of experiments, also conducted at the expense of the British Association. The bottom of the vessel being of the sathe hem as the waves, they conceive that it moves through the undulat being so mucl tossed aboul as it would be the vessel moving through it. Be the canse, howe with what it may, the results of these experiments were so conclusive, that the ship-builders on the Clyde, where they partiality to the cod's-head and mackerel-tail form the have adopted the principles of construction which these experiments have proved to be the best. The practical fitect of these experiments is, that there are at this tica 20 first-class steamers constructed of the sbarpapointed form which surpass in speed, and in other requisites of a on The Paviour's Dog.-Everyone will remember the fireman's dog, which for many years was the constant attendant at a fire, let the distance bave been ever so great. Another instance, equally extraordinary, of the devotedness of oue of the canine species, to all her occupation, Borough. The commissioners of pavements ofthe easter division of Southwark have a number of men enstern employed in the parishes of Bermoudsey, St. Jóan's, St Olave's, \&c., and wherever they are will be seen a brown terrier running about the works they are engaged on, and never leaving till they leave. No one knows where he comes from, where he sleeps, or how he obtains his food, except what he gets from the men, whose strange companion be has thus been for no less than eight years. He boes regularly to the stone-yard near the Greenwich Railwinter, and waits till the men go to their work. Butif should should have missed them in any way, he proceeds over the
district till Le meets with them, and then takes his stalion by a barrow. No other dog dares approach the spot, or a a biped the clothes of the men. When the labour is over he goes anay, but no one knows where. As a matter of cousse, he is a great favourite among the men, and from Mr. Hall, the superintendent, having made his peculiariA N \(\epsilon w\) River. -Lieut. Christol her, of the Jndi
N \(\epsilon w\) River,-Lieut. Christol her, of the Indian Navy, of Africa, by Capt. Haines, has succeeded in discovering a large river to the northward of the river Jub, which he entered and traced for 130 miles. As he advanced, he found it increase in width and depth, and according to the report of the natives, a civil and cbliging race, it continued be from 200 to 300 feet wide and 60 fet described to meandering stream, with banks in hich st deep, a clear tion, yielding all kinds of grain, which are abundant and cheap. Lieutenant christopher has named his discovery the Hain
Hydro-Electric Machine.-A few days ago there was a private exhibition of Armstrong's Hydro-Electric Maw chine, at the Polytechnic Institution, the powers of which far exceed anything ever, before shown. Previous to the experiments, the lecturer, Mr. Backhoffner, gave a succinct account of the accidental discovery, in 1840, by a
workman at Newcastle,-that, when a common st. am
boiler was discharging its steam, a large quantity of electricity was produced, by the friction probably of the man thrust his hand into the steam, and received a severe shock, for which he could not account. Mr. Armstrong, shock, for which he could not account. proving that the workman received an electric shock, and larger and more powerful stream of electricity than any other apparatus. The machine now exhibited is notbing more than an ordinary steam-boiler, with a few metal points added at the top, the more effectually to produce the added at the top, the more effectual electrical state to which the machine was negative electrical state to which the steam is discharged. The pressure of \(90 l b s\). on the square inch had been in practice found the best for all experimental purposes; and with this pressure very large electrical machine, heretofore exhibited at this institution, was powerless. Instead of 60 spontaneous disinstitution, was powerless. Instead of 60 spontaneous dis140 ; and filled Leyden jars, having 80 square feet of tinfoil, in 12 seconds, whilst the former machine filled them only in 50 seconds. A constant stream to all parts of the
boiler was kept up, and with this increased power it may boiler was kept up, and with this increased power it may
well be supposed that all the former electrical experiments well be supposed that all the former electrical experiments the electricity over the tin-foil on the tubes was far more brilliant, and the aurora borealis exceeded in intensity and in beauty anything before witnessed, the violet coloux Was brighter, and at the same time deeper, and the exelectric spark. Five discharges were taken consecutively from the battery over beaten metal placed upon paper in a less space of time than could possibly have occurred by the aid of any electric machine hitherto made. Nor were creased though they were in brilliancy. The electricity was passed through and ignited common wood shavings and an electric spark easily and immediately ignited loose
gunpowder. The lecturer well observed, that with such a power, yet unworked in experimental philosophy, it was impossible to say what other new facts might be brough prising in the effects it produced, but this will far out Whinlwind.-The Piesse machines.
Whinlwind.-The Presse, Paris paper, says:-"A phenomenon as strange as it was frightful is now the sub-
ject of conversation at St. Pierre, in the Oise. Two children have been carried off by a whirlwind in presence of their parents. The whole country, within a circum-
ference of two leagues, has been visited without any news ference of two leagues, has been visited without any news
being heard of them. It is feared they were carried into the river Oise."

\section*{eve Garoeners \(\mathbb{C b r o n i d e}\)}

\section*{SATURDAY, SEPTEMBER 30, 1843. \\ meetings for the following wheis.}

Rumours of further important alterations in the Royal Botanic Garden of Kew having found their way into the daily papers, we have made such inquiry into their truth as enables us to state the exact facts. after a careful investigation of the state of Kew in the year 1838, by order of the Government of the day, and after an attempt made a few years afterwards by
some gentlemen connected with Lord Melbourne's Government, but not by that minister himself, to break up and disperse the collection, had been frustrated, this noble establishment was transferred from the Lord Steward's department of the Royal Household to the department of Woods and Forests, and placed under the able direction of Sir William Jackson the great improvements that immediately followed this wise measure, in conjunction with an immetiate discontinuance of that narrow-minded exclusiveness which had well nigh ruined the Garden. We have spoken of the altered system of cultivation-of the renovated collections,-of the excellent plan of naming of their rubbish,-old houses repaired and others built, -and of a general infusion of more than its former activity into an establisliment whose decrepitude had
for years been the wonder of Europe and the scandal of England.
Of such improvements there has been no cessation; on the contrary, all that a full examination of the state of the Garden has shown to be required in order to render it effective has been liberally sanctioned by the Commissioners of Woods and Forests. The noble personal interest in the works, and no doubt can now be entertained that the Royal Botanic Garden at Kew will soon become, as it ought to be, the first
establishment of the kind in Europe. While the parks near London are rendered, by the excellent plan of naming the trees and shrubs there, a suurce of information and delight to those who seek for no more knowledge than floats on the surface of things, others who desire to apply themselves to the study of
the Vegetable Kingdom in detail, and as a branch of science, can do so at Kew with all the advantages which the most extensive collections can afforl them. To enable the public to gratify their increasing taste in this way, the Garden is open freely to all comers, no sinall sonrce of enjoyment 1 to and that this is the fact that, although Kew is 7 miles from London, and few people yet know that the Gardeu is open gratuitously, upwards of 20,000 persons have visited
it within the last 12 months ; and, be it added, without any serious cause having arisen for regret at the adoption of so liberal a noeasure. Additions to the plants are flowing in from all quarters; communications are opened with almost every part of the world, whence valuable acquisitions may be expected, and collectors are despatched to foreign When Sir William Flooker took supplies.
garden in 1841, it consisted of only eleven acres, garden in 1841, it consisted of only eleven acres,
including the Arboretum. These, during the very first winter, were altered and improved, and the four acres Were added on which stand the large Conservatory, built by King William the Fourth, and the noble Orangery belonging to the palace-an old-fashioned Ribernatory, crowded in the winter with large plants The 1
The latter building has since been greatly improved, by having a large window opened out at each end, and
these ends made to correspond with the tront, while powerful ventilators have been constructed at the back and it is now a very handsome place, well adapted for the purposes it was intended for. A large double pro-pagating-house has been built upon an admirable conlruction, heated with hot water, and furnished with An Orchidaceous house has been doutled in size, completely renewed within, and heated upon the best principles, with a double hot-water tank in the contre covered with slate. This house, however, is not likely lection, for many species size for the Orchidaceous col-propagating-house, equally well suited to their growth.

One half of this fine Orchidaceous-house is occupied by a noble collection of such plants from Woburn, which his Grace the Duke of Bedford presented to the Queen, and which her Majesty graciously resigned to the Royal Gardens of Kew. There is an inseription indicative of this present. The Cactus-house has been cloubled in size, and heated by lot-water pipes, and is now wholly filled with a most extensive collection of such plants, many of which have been procured by purchase, and others presented by the late Mr. Lam
bert. Mr. Parkinson, and others bert, Mr.. Parkinson, and others, Among them is
the Cochineal Cactus, bearing the Cochineal insect, the gift of Mr. Bruce. The house, thus extended, is made to join and open into the Heathhouse, which, indeed, is itself almost a new construc tion, and filled with Heaths or allied genera. From this building the hot-water pipes are conducted into now side pits on the outside, where many varieties are now cultivated. The large Proteaceous-house, and
whas been called the Cape-house, have been much improved by the removal or alteration of the steep shelving which till lately deformed them, and the plants are seen to much greater advantage.
It was not intended to make any further alteration in the stoves at this season, because the almost immediate erection of a magnificent hothouse is contemplated; but in consequence of her Majesty's present of Orchidactæ, Sir W. Hooker felt it his duty to make a requisition to the Commissioners of Woords and Forests for the enlargement of the first large stove On the left hand side as you enter the garden. This, like every other reasonable application that has been made for benefiting these noble gardens, was immediately granted. The important alterations are at the present moment in progress, and the house will soon be completed on the most approved princi ples; the glazing of the new portion being with sheet
glass, and the heating partly on the tank system and partly with hot-water pipes.
Such lias been the progress in renovating the Kew garden up to the present time.-But othes and grander plans, more worthy of a great nation, are either in progress or under consideration. The excellent management of Lord Lincoln, and the skilful advice of Sir worthy alike of the establishment and of the cuuntry; and we are persuaded that in the erection of them,
utility, beauty, and needful economy, will be alike consulted. We know that the able architect and master of the works, Mr. Robinson, is devoling his best energies to the consideration of the plan of a magnificent stove, and it is probable that his designs will be completed in a few weeks. It is intended that this building shall be 200 ftet long (exclusive of the approach or vestibule), 100 feet wide, and 55 high Like the great Conservatory at Chatsworth, it will
have a lofty centre surrounded by aisles (forming one interior), with a carriage drive through the middle.
But it was impracticable to find a site for so large a building within the old and narrow limits of the garden; and this impossibility compelled Sir W Hooker to make application for an extension of the garden, from the adjoining pleasure-grounds, which in themselves are in the highest degree beautiful and ornamental, and are already stocked with fine trees. Seventeen acres were at first asked for; but if we are
not misinformed, upon this plan being submitted to the consideration of the Duke of Cambridge, who, as well as the Duchess, takes the deepest interest in all that concerns the prosperity of the Gardens, and their being made available to the public good, H.R.H. saw that by taking into the Botanic ground an area of rather more than forty (we believe forty-six) acres, surrounded by a magnificent belt of wood, and including a fine piece of water, the form of the Botanic Garden, and what remained of the pleawas also taken by the Woods and Forests ; and at this moment a light and elegant wire fencing-so light, indeed, that the grounds they separate appear to be but one-is actually in progress. The Garden, therefore, may now be reckoned to contain sixty acres, and a more suitable piece, whether as to extent, or beauty or convenience as to distance from the metropolis, cannot, perhaps, be found in the world. The noble
stove above alluded to will be erected on this area large portion of which will be occupied as Arboretum Having thus stated the facts connected with the Royal Botanic Garden, as far as they are at present within our knowledge, we cannot but advert to certain newspaper attacks upon the King of Hanover, in which that Sovereign is asserted to have "obstinately refused his consent to the proposed measures. This, and similar statements respecting Kew, tending authority for asserting are wholly untrue. It is in deed, not to be denied, that, at first, his Majesty showed some displeasure at the many alterations that had taken place, during his absence, in the domain which he had long been accustomed to look upon as regal and patrimonial property; but no sooner was the nature of the alteration in ;question explained to
him, with the improvement it would be to the property as viewed from the Palace and from the other Royal residences, together with the advantage the public would derive from it, than his opposition, if so it can be called, was withdrawn.
And now that we have alluded to this gossip of the day, we may as well contradict another story, of similat origin, which asserts that the King of Hanover would not permit the British Association to construct a pathway to an old Observatory in Kew Park, which has lately been placed at the disposal of that body. No such pathway was ever required by the Astronomer who formerly had charge of the building; the Royal Family never experienced the want of it when they visited it ; and to construct it would be so costly that we do not for one moment believe that the managers of the British Association would think of misapplying the money they are intrusted with in so indefen sible a manner. We believe the story, the origin of
which we can easily guess, to be either wholly unfounded or an enormous exaggeration.

When we were considering the means of increasing the comforts of agricultural labourers our attention by which they might be more independent of the vicissitudes arising from a greater or less demand for labour. A correspondent drew our attention to the subject of arly and improvident marriages-one of the natural results of that reliance on parish charity, u bich should be a comfort to declining strength and helpless old age, but which the young and active should look forward to as a great evil to be avoided, if possible. In those countries there there is no legal provision for he destitute, the idea of the wants of sickness and old age is continually present in the mind of "the daily
labourer. It is a stimulus to exertion and self-denial; and no man would feel happy and comfortable if he had not some little storereserved for sickness or accident. Hence young men hire themselves out to farmers, who lodge and feed them, and they lay by the greater part of their wages for several years before they venture to marry. The young women do the same. In Prussia a man is not permitted to marry until he has a certain sum wherewith to begin the world. This would be looked upon as an intolerable tyranny in a free country like Britain; but of all arbitrary laws few are
better calculated to increase the cumforts of the lower orders. In other parts of Germany, where there is no such law, custom and prudence have the same effect: a ycung man of eighteen will receive from \(8 l\). to 101.8 year wages, besides his board and Iodging; much less than half this sum keeps him decently in clothes and linen. In ten years he has accumulated a sum sufficient to buy a cottage and a piece of land. The young woman, to whom he has been long engaged, has also been in service, and saved \(3 l\). or \(4 l\). a year, sufficie the end of a few years amounts to a sum provict to furmish a cottage. As soon as this is provided they marry, settle themselves comfortably, buyues to work for his old master, or for another, the wife takes care of the garden, the cow, and the pig. They have children; but these are no burden to thern -as soon as they can run about they begin to subordination and the rudiments of learning suited to their station; and in the intervals of school-hours they assist the mother in her domestic arrangements. Her time is fully and usefully employed, and if she occasionally works in the fields, it is at harvest, when good wages are paid. The husband returns from his work in the evening, and finds a hot supper ready,-if it were only some boiled milk and bread, but most commonly a mess of vegetables stewed with a piece of pork, or a kind of soup chrefly made from vegetables, with the addition of a piece of butter or a little meat, in which his brown bread is soaked.
The comfort produced by a hot meal, as well as its economy, can only be appreciated by those who are accustomed to it; and the use of skimmed milk or butter-milk for this purpose is one of the great advantages in keeping a cow. With a cow and a little industry there is seldom any poverty. The cow is kept constantly in the stall ; grass is cut by the side of roads and fields, which otherwise would only produce weeds. A spot of Lucerne in the garden, or little field, may be cut five times in the season, if kept ciean by weeding. In winter there are Turnips, Cabbages, Carrots, and Potatoes. A few Beans soaked in water add richness to the milk, and these are easily raised in the garden. The butter is mostly sold. A calf is reared or fatted, according to circumstances; and a great part of the husband's earnings can be laid by for times accident or sickness. when they be spared in health, the time maycome daughter is to be married, or a son set up in some small business or trade. When time has brought grey hairs there are dutiful sons and daughters, who will not see their aged parents overworked or in want of comforts in their old age. With the same affection
with which the parents nursed their infant children do these, when grown up, attend to the wants and comforts of their aged parents. There is no Unionhouse in which they may seek a dismal refuge; and to let an aged parent be in want, would cause the children to be looked upon as ungrateful monsters, not fit to be associated with. This picture is no doubt a favourable one, and there are exceptions; but in those countries where prudence is looked upon as a cardina virtue the exceptions are few. Would that we could say that in Britain the exception was not the rule ! Boys and girls marry without a bed of their own to lie on; they have no thought beyond the day; and parish murst. They cannot, neither do they expect, parish must. They cannot, neither do they expect,
assistance from their children. As soon as these can assistance from their children. As soon as these can
earn bread to maintain themselves, all connection with the parent often ceases. A poor widow who asks for charity, if she is reminded that she has ablebodied sons who earn good wages, and who have no families of their own to maintain, will answer, without casting any reflection on her children,- they spend their own money : and so they generally do even before it is earned, it must be allowed that in
clean neat cottage-for it mus. England the cottages are generally neat and clean-ask what they have for dinner, and unless there are boiled potatoes, there will be nothing hot. The husband has taken a piece of bread and cold bacon or cheese, and this he washes down with a pint of bad beer at the nearest beer-shop. The children, if they go to school, have a piece of bread and drink water. No comforthave a piece of bread and of heal at night; a cup of hater miscalled tea, ande meal at night ; a cup of of bread and drjpping with it, is and at best a piece of bread and dejpping with it, is the chief food of the wife, and if thr husband comes
home sober, which is not always the case, he finds nothing comfortable, after a hard day's work. If the wife earns anything, it is by occasional work in the fields in hay and harvest time, and in destroying weeds. This barely finds her a few clothes. When accidents or sickness lays the labourer on his bed, accidents he belong to some club-which luckily is unless he belong to some case-and has a weekly allowance, the wife often the case--and has a weekly allowance, the wife
goes to the vestry or relieving officer, and demands goes to the vestry or relieving officer, and demands
an allowance, which is given as a cheaper alternative to "taking the whole family into the Union-house. Is this caused by a greater depravity among the British labourers? By no means, but simply by a disregard of prudence, and a want of foresight; by improvident early marriages; by beginning life without a provision for it, and by the utter cespair of rising above that class who earn their daily bread, and eat their daily bread, literally taking no thought for
the morrow. The greatest benefactor to the whole the morrow. The greatest benefactor to the whole
race of labourers would be the man who could impress on their minds that prudence is a virtue, and improvidence a heinous sin.-M.

\section*{ENTOMOLOGY.-No. XLVIII.}

The Small Brown Scale, Aspidiotus Proteus, nobis.-It was, I believe, upon the succulent leaf of some species of Aloe or Amaryllis that J observed a variety of
Cocci, which were transmitted to me as the Small Brown Cocci, which were transmitted to me as the Small Brown
Scale; they were scattered over the shining upper surface Scale ; they were scattered over the shining upper surface of the leaf, as shown in the figure 1 , which is a portion
of the apex only, and they were more crowded near the of the apex only, and they were more crowded near the
base. The first variety I examined resembled an elongated mussel (fig. 2): it was horny, of a dirty testaceous colour, brown at the middle and along the margins, which were edged with white; at the tip, which was attenuated, was a blackish spot; some of them were pierced with a round hole, from which I conclude that they had been stung by a minute Hymenopterous fly, called Encyrtus";

most of them were empty, but beneath one of the largest I detected what I suppose to be a dead female; the horny proboscis was long and visible, and some of the legs were projecting from the side: the body was composed of many segments; the apex was rounon, serrated by the angles of the segments (fig. 3).
in theryer tender, formed oval swots upon the same colour the anterior portion is orbicular (fig.4), with a smaller ovate scule (fig. 5) on its back, and projecting over the margin; * Curtis's Brit, Ent, foll, and pl, 395; and Guide Genus, 593.
this was easily detached, and must be one of the young which had just formed a shield; they both have an elevated ridge along the centre : this latter is the base o the large oval membranous one, which is opaque band across the middle, the apex being rounded and membranous, as are also the sides. On lifting up the large orbicular scale I generally found the female dead, with a few elliptical purple eggs beneath the brown space just alluded
to, with masses of whitish egg-skins, which, slining through to, with masses of whitish egg-skins, which, silining throgur tint to the surface; occasionally a living female was dis closed sticking by its proboscis to the leaf; the outline was somewhat orbicular, the head arow and semera and crenated, but the hinder portion was denticulated and ciliated (fig. 7).
A third kind of scale was elliptical (fig. 8), with an oval shield over the head, often blackish, with transverse
stripes; this occupied only one-fourth of the entire length, the semainder forming a separate membranous appendage two-thirds of which describe an oval of a chesnut colour beneath these scales either a pupa is concealed, exhibiting the black eyes, antennæ, and the slender apical process of the male, or the male itself, which is a mere atom, yet similar in form and colour to that of "Small White Scale," which we lately described and figured : the antennæ are as long as the aniwal, a slender, horny bristle, nearly as long as the antenne; the wings are large and rounded, with a subcostal and an oblique nervure; the anal betæ appeared to be wanting.
The Small Brown Scale, although unnoticed by authors, seems to be very abundant and perfectly distinct from the others. It evidently belongs to the second section, or Aspidiotus; and as it is undescribed I have given it the name of \(A\). Proteus, from the variety of forms it assumes 1 cannot, however, be certain that figures 2 and 3 may not becies but as an fhey wited they cannot belon species ba the ritioter thich they can Which they can be refrred. greatly magnined, and their natural sias are shown upon larger figures in their natural positions. It may be as rell to state that fig. 3 is a very minute creature, and was taken from under a larger scale than those exhibited on the leaf at fig.
That every endeavour ought to be made to extirpate the Scale insects on their first appearance cannot be too strictly insisted upon; for if this be neglected, all the plants, of a similar character at least, will shortly partake of the disease. "Mr. Knight found that a Nectarine in a pot taken from his Peach-house with a few of the Scales upon it, communicated them to the trees on the open wall, and during the succeeding summer and autumn, ancreased so as to extend over nearly a whole In the winter of 1832 a dressing of lime and flower of sulphur was applied to them, and in the following spring the insects wholly disappeared. In the spring of 1834 , when the blossom-buds of Peach-trees were as large as hemp-seeds, a solution of lime, sulphur, and soot, was thrown on all the trees by an engine, and not a single blistered leaf was to be seen." In the course of our researches we have found many gardeners who have spoken very highly of a mixture of equal parts of soot and sal phur, which they had dusted over their Scale, and at the ame perfect success in erdeffects to the plants. On the other hand, some cultivators state that the application of sulphur is of no use. Surely a course of experiment might be pursued without much difficulty, which would lead to the truth as well as to beneficial results in these important matters. The best means of cure may be brought into disrepute by careless operators, after which no one has any faith in them, and thus scarcely a remed that has been recommended, but bas either been con demned as useless or asserted to be injurious.-Ruricola

\section*{PLANTING.}

I have just enjoyed a great treat in a morning's ride through the woods of an old and respected friend in North Wales, who has adopted an improved system of planting and pruning, with such judgment and success that I am induced to communicate to you, fors yo sis and and for the benefit of your readers, his simple methots and a few of their results. I am not without hope hat by your recommendation, and his example, much migition done to render lands now uncutivated he healthiness and and add much to the beanty a
productiveness of our country
The system adopted is the plantation of poor soils and waste lands on the elevated parts of the country. He plants the summits of hills and ridges of elevated land which are otherwise unproductive ; and by his systematic method of pruning and thinniag, obtains healhy, turiving and profitable*, woods. By this means he not only improves the landscape by clothing its prominent features, but, as you will readily conceive, gives sh
The circumstances in which these trees are planted are by no means favourable to the growth of timber. They are 800 feet above the level of the sea; the poverty of the soil is such that its actual value in 1816 was so low that the fee-simple did not exceed one pound an acre. It is sidecring to keep ia mind these circumbund was formerly waste-land, covered only with_Moss and Heath.
The plantations were made in 1814.16, and the tree which I saw on this visit were of such sizes as the follow
ing. Six or seven years ago 1 visited these trees, which
were little more than healthy plantations; they now extend rere little more than healthy plantations; they now exten have made since that time has surprised me. The luxucisnce of the folinge and the clear skin on the bark testify the following list of sizes

Size of Tress at Merquis, in Flintshire, 800 feet above the level of
the sea, wlanted in \(1814-6\), the property of Dr. Thackery, M.D The sea, , ylanter in 1814-10, the property or Dr. Mackery, M.D
Cantab.

The method by which these are produced is very different from the common method of pruning-the method of Dr. Thackery is to prune always, not at stated periods of three and seven years,- not ac ound. His the year, but every day ar in system of treatment. grow th than its cure. These 500 acres are in the charge of one woodman-and but one; but there he is all the year round, not with hatchet and saw, butwh hs prang-kife or chisel-nothing larger. He does now harge braes to flourish and then lop tbem on, so destrong much of the produce of the soll, and leaving in the timber the unsightly scars of extensive wounds. He correts the errors in the young green twig belore it has developed itself, and in the following manner,-and this is a second feature of his system, viz., by pruning always, which is the first, and by prunimg downwards, which is the second; perhaps I may add, by cutting close and leaving no stump, as a third maxim.
Thus, then, the woodman spends his days in the woods, - he examines each young tree, beginning at the top: here his object is to select the leading shoot, and The immediately removes all who dispute its supremacy. for if strongest slioot is left without reference to direction, straight when its competitors are removed;-going down the tree, only the Jarge branches are removed, leaving an ample foliage of the smaller branches to cover and feed the stem of the tree; thus all the nourishment goes to increase the stem, and there is nothing to divert and health, light, and air pervade them. To me it seemed that the plants were happy -in short "the trees clapped their lands and sung in joy,"-not a decayed branch, or Found, or unhealthy plant was to be seen, and below wound, or fern and grass grew healtiful and rank.
Such is the pleasing sight which has made one of the most areeable and instructive morning rides I have ever enjeyed. The surrounding woods, which have not been educated under this gentle schoolmaster, present a lament educale such an education. Sho country, I hope you will not fil to por to these woods, and I wish you would brine your readers with you to see and judge for thembring your readers wo likewise.- \(-\sigma_{0} \lambda_{0}\).
