AMATEUR'S GARDEN.-No. XXXIX.
IN one of the best books that have yet been written on The Culture of the Vine under Glass,' the author, Mr. James Roberts, recommends a system of pruning, or rabicadisbudding the Vine, which 1 believe, prior to the pubrica tion of the work, was peculiar to himself. The peculiarities of this system consist in pruning the Vines while the leave are yet green, and of divesting the rods or spurs at same time of such of the buds as are not required to pro duce fruit in the following season, the effect of whe leaves get the organisable matter prepared by 60 . concentrated in 20 or 30 buds, instead of being dine old among three times that number, as it would be on thion or getreral system of management. This operation founded on a physiological law, which is brought in practice in the every-day occupation of the pras we grardener viz, the concentration of the sap. Thus ter all know that by divesting a healthy tree of the greater part of its fruit in the early part of the season, will be concentrated in that retained, and it will becom mull fine in consequence-a circunstance taken pantage of and mo the crops and we are equally well aware by pre very closely in the autumn, wy pil it had been left unpruned; and why? because the sap it had ben loted Now, in Mr. Roberts's practice, not only takes advantage of the concentration of the prently resource lut he also husbands the plant s all and while it is still capable of being improved thereby, buds therefore removes all the superfluous wood amn, or as (retaining the leaves uninjured) eard growth or elongasoon as the woodery considerable extent ceased; and tion has to a yets an immense volume of highly elabo full, result is, he gited in the plant; the buds become plump, sap concenly excitable, so that by the least application of
heat in the forcing season, the buds burst from their bonds with all the strength of giants refreshed. In this way Mr quite capable of performing; and thus he gets regular quite capable of performing ; and the to the bottom of the Vine, and not two or three large bunches at the top of the plant, with a few spindle
as is generally the case.
Ten days back, I took two young Vines, of equal strength, and growing side by side, and having pruned hivested one of half its buds, and this morning the buds divested one of half its buds, and this morning the buds ou the plant so treated are at least three times the so an I with the result, that I intend to disbud the whole of my Vines without delay. The only thing to fear is the bursting of the buds prematurely; but it a lateral cause of fear is removed.
Now, as the Vines in the greenhouses of a great number of Amateurs are generally in a very unfruitful state, I introduce this system of management to their notice with the hope that it may be of use to them, and has heen confusion. In the management of out-door Vines it is also equally applicable ; in truth, in the management of all Vines whatever, because it is a system of nursing the strength of the plant, and therefore must be good. I method of performing the operation :-"You may proceed to disbud, beginning at the bottom of the Vine, leaving a bud you think well placed on the side of the shoot, (preferring that to either the lop or cut clean out the two following, leaving the fourth, taking out the next two, and so on till you reach eight or nine feet in beight, as to that length the cane nottom, disbudding the other side in the same mamer, so that in that length you will be able to leave eight or ten permanent eyes to form fruit bearing spurs for the following year, or five on each side. I particularly caution against injuring the leaves when the budter, and may yet be useful in more perfectly maturing the stem and remaining buds. In a few days the wounds or cuts will have dried up, touch them with a little paint, keep them cool and dry until the leaves have commenced dropping generally." This system of disbudding may seem severe, and though the Amateur can use his own recollected it is recommended by a gardener of sound practical attainments, and is therefore not a theoretical speculation. Those who are interested in Vine culture would do well to peruse Mr. Roberts's publication.-W P. Ayres, Brooklands.

\section*{HOME CORRESPONDENCE.}

Encourngemient to Planters.- In the Chronicle of last week is an article of some length under this heading; and sofar as its tendency is to encourage plads out very consay everything in its favaur, in my opinion, be too strongly deprecated. Having formerly written so many ar paper in detail, but merely call on all proprietors and managers of young woods and plantations to consider well what they are about before they adopt the practice either of Dr. Thackeray or that man residing near Cupar, in Angus." Judicious thinning is absolutely necessary; but systematic pruning is unquesmay be presented by some plantations that have been pruned, yet I maintain that they would have been bette Without it, and that their thriving appearance is in spite of anxious that it should be published to all the plunting world that pruning is rather a discouragement, inasmuch as it retards rather than accelerates the growth of trees. It is much to be lamented that woods and plantations generaliy effo ts of M. Iumphreys tend to correct that evil, I cor dially bid him God speed : for one cannot walk or ride in any direction, but for a very short distance, without having taste and feelings shocked
plantations.-Quercus. [We quite agree.]
Destruction of Small Birds.-"Este," referring to an article in Gardeners' Chronicle two or three weeks back, on the Destruction of Small Birds, begs to say that he Caternillar. In a neighbouring parish, where a Small Bird Club exists, they are yearly overrun with vermin.
Fruit without Leaves.-In addition to the statements already naade, respecting the maturation of fruit upon There is here three healthy good-sized Peaches growing upon a shoot which has not an atom of leaf upon it, from the point to three inc back nearly to the first fruit would scarcely have believed this upon the testimony of nother: for I had imbibed the fe swelline and ripening to lhe well-being a fow lan end of the shoot pening purpose of attracting the sap. This is one thing \(I\) have had to unlearn. Gardeners have many things to unlearn R. H., Canlley, near Doncaster. [This matter' seems to be misunderstood. The necessity of a leaf above a fruit before swelling of seems clear; but after it has once
begun to swell, the leaves above it may, no doubt, be dispensed with, for reasons which we cannot now find

\section*{room for. Would "R. H.'s" Peaches
they had had no leaves beyond them ?]}

Interment of Bees.-A correspondent who signed him self "Yeoman" favoured your readers with a simple and easy method of preserviug Bees during the winter, namely burying them in leaves several feet deep. I made the trial with one hive of Bees in the winter of 1841-42, but from some cause or other the experiment was unsatisfactory, as the Bees were all dead when I took them out in March, 1842. "Yeoman's" communications were published in the autumn of 1841, and he mentioned that he found hill be difficult successur. enough to cover three or four hives; at any rate, they vould not be sufficiently free from moisture to be used for I shourpl he, unless they coutd be "rill inform me if he still continues to inter his Bees during the winter, and Whether he is still successful. instead of leaves: it might be cut into short pieces with a chaff-cutting machine, if required. What is the proper house or bnilding is most proper? Ought the Bees to be interred on a frosty day? Should they be stopped up with perforated zinc before the holes? It is stated by al -that damp is very injurious to Bees, and I scarcely conceive that leaves are dry enough ; but if "Yeoman" will give ns at lew lines in enty Number of the Chronicle, I shall be extremely obliged to him. Most of the cottagers in my neighbourhood destroy their Bees with sulphur ; could they not be smoked with the puff-ball recommended by Taylor, Cotton, and others, put into a hive, and buried in the way "Yeoman" recommends?-W. E., Suffolh. Saline Manure.-Mr. Potter kindly and promptly answered the queries of a Paper-make "espect a whetort refuse in the "hronicle of trials miaht Augst, when he hoped the result of any trials might be conmanisuggests, but one or two others of a practical nature which I made during the past and present year are quite at his service. Last autumn I carted into a Wheat eddisll (?) a quantity of mud washed down from off a sandy soil, intending in the spring to carry it over the land and sow it with Oats. To hirs mud 1 put about one cat-load to ten of the refuse, turning it over twice during the winter, and breaking the hard pieces, that it might amalgamate the better with the mud. This I carted over my held in February, leaving a sman portion without looked well, 1 sowed my Oats; they carae ap, and I perceived a foilure gion prop, of the field that was covered with it. On examining the spot more closely, 1 concluded the worm had got into them, and from that time it continued so to destroy the root of the other parts o the field ; but a luxuriant crop of weeds, \&c. Still must state further that the plant of Oats was destroyed a little beyond where this was not laid, but that only for Turill space. Itried it also this sum and ashes, with little dung, and added, as before, some of the retor refuse, turned it together two or three times, and laid it over my field (about 15 small cart-loads to the statute acre), ploughed it in, and then, after some time, ploughed it again, bringing it to the surface, and sowed my Swedes, putting over a few ashes also. I considered my season for wet, and the subsoil being clay, I could not sow till the 27 th June, and then, after repeated rolling and harrowing, I could not sufficiently pulverise the soil; but my Swedes soon came up, and I have never had any grow raster, or pre, consider this refuse very beneficial as I now use it With regard to the manganese that is left behind, 1 have no doubt the quantity is consufactory had been for some years superintending a concern of the same kind in Sweden; his master there was a chemist also, and he was aware of the manganese left, and tried to separate it by washing, but he could not sufficiently dos manganese by him, he is putting this refuse by till there is a large accumulation, and then purposes putting up some simple machinery to grind it in water, washing away all the saine and ohhelus using that as a manure. But there he had no thougbt oke which he did use for that pur pose; it is the liquid we draw away after builing our rags in lime; this liquid he carried to a distance in wooden shoots over a piece of pasture-land; but on applying it it was tolace dug out, into which he turned this liquid filling the hole with any description of refuse be could collect, and then after a sufficient time carried it over his land, and found it very beneficial in promoting vegetation We boil our rags for several with the others are dissolved. woollen rags may be mixed with the vegetating properties of this liquid? \(-J\). \(S\).
Potter's Guano.- have read with interest jour re conmendations of Potter's Guano, and as I have made an experiment with it for Wheat, the result, as far as I at present can give it, may be interesting. For many year ledge in chemical science would discover some concenirated dressing for land that nould equal, if not surpass, nures now in use. I was, therefore, greatly pleased io
observe lately the attention of scientific men turned to this subject; and having accidentally seen some circulars Mr. Potter himself was a practical chemist. I determined Mr. Potter hinasela was a phal What, Tetermine pose I prepared geld in are par pose 1 prepared a thira of the the directions
 nure, and the expect the D part had the ady it who saw it, though the other was a very good crop; it being thicker on the ground, the straw longer and firmer and the ears much larger, fuller, and heavier. I will also bbserve that I took several persons into the field, and as a trial, asked them to point out the part where the Guano was put on ; this they always did exactiy. I may add, that at harvest, when the crop wased, uonse, and the workmen who were eaplo 1 , ghin our ber, were sent by a friend, who as soon 1 saw him oum return told me that 1 had a very excelient crop generall. but much the better where the Guano had been. Wuen the Crop was carried, I was plensed to hear the men remark how very heavy the slieaves were, and large the ears of Corn. So far, this trial of the Guano has been perfectly satisfactory, and I intend to employ it again more extensively. I regret that I am not able just yet send you the result in quantity and weight.-George Wilkins, Wix, near Havwich

Bees.-In criticism and controversy it is difficult to avoid giving offence. This is applicable to myself. In the Chronicle of Sept. 9, Dr. Bevan complains of the tone which I adopted towards his esteemed friend, Mr. Golding." If I have gone beyond bounds I am very sorry for it, and sincerely hope that expressions I may have inbrethren of farther information from the sane source." My observations on one point in the "Honey Bee" are, I am happy to say, taken by Dr. Bevan in the true light I accept his kind offer of a copy of the second edition of his work on Bees, with many thanks, and I shall regard it as a great favour from the able Author.- John Wighton. [If it is sent to 3 , Charles-st., Covent-Garden, it will be forwarded.]
Mulbervy. - Lop off astraight branch, at least 8 ft . long, from a large tree in March, the nearer the trunk the better; a hole 4 fevery little branch, and leave it quite bare; dig from ise deep, plant the it a litte basin of earth to hold wor if the aron be dry give it every morning a bucketlul of water throughout the summer. In two years it will have made a good head and will bear fruit.-

Gardeners' Association.-From an advertisement in the Chronicle of last week I learn that the Gardeners in the heighbourlood of Stoke Newington are about to form an this, as I consider it to be essential to the happiness and well-being of the Gardening community. Having for some time witnessed lis deners, I think it high time that they should adopt for themselves some means of prevening the dircsa that aplears to await luem, and low gentlemen reducisg hieir estabescarce. There on my situations will become still morescarce. The many good practical Garueners at proser are and before this distress becomes mare pro the be call the attention of my brower Gar pron of forming a Society,-1 will say a Joint stock Company, and let the shares be 1. each; and onules and regulations Committee may be chosento I may suggest the further preondacing the Solishing a garden, to be conducted by practicabity of estading might be carried on in all its branches, and, if the funds should allow, likewise ornamental gardening, and when any member of the Society shall be thrown out of employment, if be bear a strictly moral and sober character, wat he should be employed, and receive 15s. per weck, unill something better offer for him. I beg leave to observe that all Gardeners should give this a fair and weighty consideration, as it is in their power to provide a confortable live. lisood for many of their now starving brethren, and as situations are generally uncertain, we do not know how soon me may want employment ourselves, and when such Society as that proposed is once formed and set a-going, it will pay itself, and will not require yearly subscriptions. - William.

Fumigating.-My standard Rose-trees being very much infested this year with the Green Fly and other insects, I bad recourse to the following useful, and at the sume time very cheap and simple, contrivance to ma myself ahem. 1 ordered my carpenter to make me fees no and four feet in diameter, of an octagon shape, with one of the sides made to open like a door, with a hole an inch in diameter three inches from the ground to admit the nose of the belloms. I then lifted it over one of my Rose-trees, and placed the fumigating apparatus in the interior; after a few minutes application at the bellows had the pleastre of seeing those detestable pests fall to the ground. After a good syringing the trees looked Of course the box may be made of any size.-G. Young, Iruleing.

Cover Dodder:-On looking through a small field of Khelat Lucerne, I found a great many patches of the inclosed plant, which I strongly suspect to be the Dodder
to which you have recently been calling attention. Wherever it has appeared the Lucerne is either dead or dying, to be sovethins wheth it is the Dodder or not, il appears [It is the Clover Dodder, certainly ; and this is an interesting fact connected with the probable introduction of this Tran
ransplanting, fc.-I am very much obliged to your Chronicle, at p. 645, and I am fully aware of the truth Cont what he states. I take blame to myself for not expressing myself differently when speaking of the Pear-tree mentioned at p. 630 . I should have said that it was
never expected to survive such a check; indeed, it was never expected to survive such a check; indeed, it was
never put into the ground after it was taken from the
place which it had occupied for about eight years before. place which it had occupied for sbout eight years before. To save any further doubt, and the to say, that it was
no sooner out of the ground, than it was chopped into pieces. The beight of the Pear-tree was about twenty feet; it was trained against a south wall, and its shoots were only allowed to be produced on one side of the main
stem. These shoots ran more than five feet along the wall, and produced a good quantity of fruit. It was by the method mentioned by "Timothy" that the Rosetree was saved; and I am quite sure it is impossible to June.-Ortolano
Vine'Disease.-You are certainly right (see "Notices to Correspondents,", p. 649) in imputing the want of But the cause of the disease puzzles me. The house is twenty feet long by twelve wide, with the usual height. I have about seven cart-loads of tan, besides heating with allowed the heat to be more than eighty degrees. I gave air by opening partially two lower and two upper sashes. Perhaps the current of air may have caused the mischief. described; here the sashes are so fastened that I cannot ventilate by them. Here I have no tan, and here the foliage of the Vines is in full vigour, whilst the Grapes,
Hambro' and Esperione, are as black as Sloes ; in short, I am puzzled. Perhaps you can throw some light on my failure from an examination of the leaves I have sent. The roots of all the Vines in both houses are from the same bed or ground, where nothing is allowed to inter-
fere with their growth,-A Subscriber. [From the appearance of the leaves sent to us, we should judge that the mischief has been caused by allowing a current of cold air to pass over the leaves while tender, and perbaps wet with dew.]
Vines,-I perceive that a correspondent has been endeavouring to prove the propriety of a certain system of Vine culture by arguments drawn from a passage in better if Scripture were not brought forward in cases where Scripture can be no authority at all. The object of the mission of the Great Founder of Christianity to this World was one of far higher import than the improvement quently, while He gave His followers a set of rules whereby to regulate their lives, which, unlike any other system of Ethics ever promulgated, was incapable of improvement, suited at once to every man in every age, adapted alike to
nations just emerging from barbarism, and to those which nations just emerging from barbarism, and to those which
have attained to the highest pitch of refinement, He left have attained to the highest pitch of reinement, He left slow progression of ages for its development. Whenever the arts of life are mentioned in the sacred writings, they
are merely alluded to in order to illustrate something else. In the passage in question, it was not necessary that the principles of Vine culture referred to should be the best that could be adopted; but it was absolutely necessary
that they should be such as were at the time universally understood and acted upon. Had they been one step in advance of the age, the illustration would have required a mental effort to understand it, and consequently would not have answered its purpose. It appears to me that we might as reasonably employ women to grind our Corn by tivate our Vines by the rules of Scripture. I would say, in conclusion, let your correspondents in their life and conversation adhere as closely as they please to Scriptural rules; let them make the Scriptures (to use their own
expressive language) " a lamp to their feet, and a lantern to their paths:" but they must seek some other guide in to their patbs: "but they must seek some other guide
the culture of their Vines.一W.H. M., Trentham.
Petunias.-From two or three pods of Petunias, viz. the one called "scarlet," but which is in reality a bright rose-colour, I have raised this year seedlings of several shades of peach-blossom and lilac, deep rosy-purple,
and pure white; also white, with the outside shaded with and pure white ; also white, with the outside shaded with lilac, and dark eye, without any hybridisation.-E. Double Stocks.-In compliance with your suggestion and \(I\) fiud them to be decidedly fructification ( we never have seed from the double flowers). I was in the Isle of Wight last week, and I consulted two or three eminent Stock-growers on this subject, and they were not aware of the double flowers being useless. At my request, each examined a flower, and their opinions exactly agreed with mine, viz., that they are entirely destitute of either stamens or pistils. Your correspondent "Quercus" agrees with me in this respect, and I hope to learn, others respecting this beautiful flower.-Timothy.
A Petrified Tree.-At the atone quarry of Mr. Littler, in the outskirts of St. Helen's, is a petrified tree, apparently a relict of an antediluvian period, which has attracted many
visitors. The lower part of the trunk of the tree, which is aboue, and stands out in alto-relievo from the side of the quarry in the solid stone, and at the depth of about 25 feet trom the surface. The top root is quite discernible, and in the stone for the space of several feet. The branches in the spone for the space of several feet. The branches
and upper part of the tree have been cut away in the course of excavation. The bark, apparently from the con-
tact with it of a slight stratum of coal, has a blackish appearance, and beneath the roots there are also traces o coal, in which one of the roots has been imbedded, least 10 yards below the surface of the tree, and at with vegetable fossils, some of which are marked in longitudinal or transverse ribs, whilst others bear the imf the of leaves, \&c. It is the intention of the proprietor of the quarry to present this petr
Mechanics
Institution. - Facile.
Camelina, or Gold of Pleasure.-There is a report feeding of cattle, has an acrid quality which disagrees with them. Perhaps some correspondent may be able to satisfy the public on this point. As it appears not to
exhaust the soil, this plant may be more safely cultivated than Flax, for the mere purpose of producing oil and oil-
Schomburgkia tibicinis. - I send you the following extract from the letter of a friend resident in Honduras, to seldom flowers. He says, "You talk plane, which so not flowering with you, or but once. When round at the New River lately in the dry season, they were all in flower of a pale straw-colour, (some are of a deep pink) hanging over the water, where there was plenty of air and sun. too moist and confined, at least for this sort." It would seem that there are very distinct varieties of this species, not be thought too glowing from the pale variety, mish Howered at Lady Ackland's.-PTons KElii.
Rats.-In answer to your Correspondent "Devonipowdered Assafoetida 2 grains, Essential Oil of Rhodium 3 drachms, Essential Oil of Lavender 1 scruple, and Oil of Aniseed 1 drachm, and prepare them as follows:-first, mix the Assafoetida well with the Aniseed, then add the Oil the oil of, and still mix all in a mortar, after which add wanted. Next, procure a large wire cage-trap, into which introduce your mixture on a small saucer, or any such
vessel ; close down the trap and place it in spicuous part of the garden, and leave it to work for itself, and communicate the result.-An Irishman.
Peat.-I think it is Dean Swift who says, that, howeve one thing assemblage is crammed or wedged together of room upwards; but then the difficulty, the veacata qucestio, arises, how are we to get at it? I am strongly reminded of this by the piece of kind information com municated by your correspondent "Thomas Cowan," to use pulverised dry peat to protect the roots of my marvellous " mackintosh." I "Churchill Gardens" are situated, perhaps in the "Moorlands" also, as the material recommended is not to be
found everywhere. Having been bred in a part of the country-

Mong Moors and Mosses, many, 011
I am very well acquainted with the virtues of pulverised question arises-Howions of chalk and clay, Dean Swift's there is plenty- 400 miles off, and some nearer-but, even jike age of railways and steam-boats, it is as much "Moorland Willie's" mackintosh; but, apropos of peat arth : when a youth, I went first to work in a new garden, the other half a dry sandy bank or acclivity. When the former remained in its natural state it consisted of a substance something like semi-liquid, with a tough surface of found immersed old Roman millstones, and some other antiques; but when dry and used for garden crops, it was in consistence a light porous peaty earth, and its produc-
tions were of a character I have never seen excelled. Every kind of garden crop grew in it with the utmost luxuriance-especially Celery and Cauliflowers; the former
came out as white as if new washed-some of the latter measuring from 20 inches to 2 feet over the crown, taking the convexity. Ever since, I have had a favourable opinion of peat as a garden soil, and if this should attract the notice of any of your numerous readers who have had the privilege of gardening on peat, \(I\) should feel gratified to learn the result of their experience.-Quercus.
Fungus on Bark -beds.-In the Chronicle of August 2 h 1 observed in the " Notices to Correspondents" that an inquiry had been made respecting a method to destroy with much annoyed with it this season myself, insomuch that was compelled to turn a great many plants out of their pots in order to clean the roots, which was effected by rushing the Fungus completely off with a brush, and this, my plants, and I has had the effect of wholly saving ay plants, 1 , one since in consequence ; although it had spread through Before replacing the plants, I watered the bed well all
over with boiling water, and covered it with salt, which quickly dissolved, and in half an hour afterwards I covered tover again with an inch of sand, to prevent the bottom and I can safely affirm that I have never seen the least appearance of anything of the kind since.-D. Z.
Onions.-The Obion seed was remarkably good this season, and in many places the crops were thicker than what they were intended to be. After some of my beds of Onions were thinned, some of the thinnings were left in
the ground. In a short time after they were pulled, I bserved that the bulbs swelled much faster than those that were left growing ;-the outside leaves of those that were pulled soon withered, and one or two of the heart leaves continued green for some time, after which they died. The bulbs were as large as common marbles, and had the appearance of being firm and ripe, while those hat were left in the beds were scarcely half the size, at in a bealthy growing state. Would the leaves drawy nourishment from the atmosphere, to swell the bulbs when the roots were dead ?-Peler Mackenzie
Hawthorn.-There is a brown knot-like substance common upon the young shoots of the Hawthorn hedges; it is full of small apertures. The mouths of the openings appear to be surrounded with fringes, something work of insects?-P. M. [This is the Fungus called ※cidium laceratum.].

0.5 water
"It may appear surprising that the Cinnamon plant should succeed best in so poor a soil; but, other circumstances considered, it admits of explanation. The garden is nearly on a level with the Lake of Colombo, its situation is sheltered, the climate is remarkably damp, showers are frequent, the temperature is high, and uncommonly equable. These are the principul peculiarities to which the excellence of the Cinnamon, and the luxuriant growth of
this valuable shrub, in a soil so apparently unpromising,
may be justly attributed. * * The interior is supposed not to be so well adapted for the growth of the Cinnamon thence is coarser and thicker in appearance, and of too rich and pungent a taste. The best description, and that Which grows in the gardens around Colombo, and at the he I places mentioned, is obtained from what is all size, from four to ten feet in heigh: the trunk is slender, with a number of branches shooting out from it on every side. The wood is light, soft, and porous, and in appearance resermbles that of the common Osier. A vast number of roots and fibres run out from the root of the tree, and whoot up rapidly into slender twigs, which form, as a green, resembles that of the Laurel. When the leaf first appears, it is of a red or scarlet colour, but it afterwards changes gradually to green. The blossom is white, and when in full blow, seams, as it were, to cover the tree in a very beautiful and striking mamer. This tree produces species of fruit resembling an acorn, but not so large which, when ripe, is gathered by the natives, in order to extract oil from it; this they use for perfuming their bodies and hair, and, when mixed with cocoa-nut oil, it also gives a very pleasant and good light. When the tre the rond decays, it is usualiy burned down to the ground plants, much better formed than the preceding ones. The bark of these shoots is extremely valuable. -Col. Camp bell's Exeursions in Ceylon, as quoted in the Athencuum. Ginger Wine.-Put 5 gullons of water to \(16 \frac{1}{2}\) lbs. of lump-sugar, boil and skim it, then put in 5 oz. of ginger
bruised, (not ground,) the peel of 3 Lemons and 3 Seville bruised, (not ground,) the peel of 3 Lemons and 3 sevil. and put it in a thin cloch, e it stand until just warm then put in 1 spoonful of good yeast, and let it remain unti next day slightly covered over. Wash out the barrel witb some brandy; pat into the wine the peel and juice of the Oranges and Lemons and 2 lbs . of Raisins cut open stir it every day for a fortnight, and let the bung be put and stop the 1 . . of isinglass ado porking, let the wine stand seven weeks before you bottle it.-A Anonymous. New Phlox.-Another of those pretty varieties of Phlox suaveolens, with red introduced among the white understand, in the possession of the Nurserymen under the name of striata delioutissima. Its flowers are delicately streaked all over with rose of different tints on a

\section*{}

Dr. Justus Liebig, in his Relation to Vegetable Physiology. By Dr. Hugo Mobl. (Dr. Justus Liebig's Verhältniss zur Pflanzen-Physiologie.) Tubingen.
Frues. 1843.

\section*{(Concluded from page 66 s .)}

After having assigned the utility of rotation to the formaticn of humus, Dr. Liebig states his views of vegetable nutrition at the different periods of growth. He says, that a plant returns just so rnuch carbon to carbonic acid produced by decomposing humaus. This supply of carbon is sufficient for many plants at the first period of their growth, but it is not sufficieat to supply food. But the object of agriculture is to main the maximum of produce, and this, says Liebig. p. 154, "stands in a direct ratio to the amount of food which bas been given to a plant during the first period of its development," therefore a!l pains are to be taken to increase the amount of humus.
The short and the long of these rather vague assertions (says Dr. Mobl), is, apparently, that a crop will be the soil before its period of flowering received from the although true in the main, is fomewhat contradictem another at p . 111 , where it is stated that bumus is useful to young plants by contributing to the increase of their organs of atmo-pheric nutrition ; but it is not indispenstages of development. The for detrimental in the inrs plant receives from the air in the form of carbonic acid and ammonia, is restricted within certain limits,-it can assimilate no more than the air contains. If, therefore, in the beginning of growth, the number of twigs, sproute, or lie begin ass this proportion in consequence of superahundance of food obtained from the soil at that superal when the plant requires more food from the air perios, whe pletion its development and for its flower or ing and ritis ill take in many food will merely suffice for the development of leaves, stems, or branches.
Here Dr. Mohl complains of the strange ambiguity of this part of Liebig's theory. In one instance (says M.), the usual quantity of humus in the soil suffices harvest, we must get it by conveying a maximum of food from the soil. On the other hand, humus adds nothing to the crops, but, on the contrary, is noxious, by conveying too much food, for it causes the production of too nuch foliage, a sufficient supply of food for which cannot be obtained from the air. Whence, then, oestar arrive the air the food required for blooming, although it can do so if it has only a few leaves ? It has been hitherto supposed that the reception ? proportion to the number and aize of leaves; and this is plausible, but the contrary is not. When a plan atanaing in a woist and shaded staation grows too lusuriantly, aud will not fower, the reason is not to be bought in a deficiency of food, but rather in its super abundance, and its infuence on the too lusuriant development of its vegetative organs, for that will counteract the contraction of the axis and the metamorphosis of vegetative into fioral organs.
Another statement, however, shows how Liebig arrived at the above conclusion. He says that, after the complean of its leaves, a plant does not require more carbonic cid from the soil; and that even perfect dryness of the soil will not impede the completion of its growth, if the plant continues to receive from dew and air the amount of moisture required for the process of assimilation : and that, in fine, it will derive in a hot summer its whole carbon eciusively from the atmosphere
This assumption (says Dr Mohl) is the result of an erroneous view of the fact, that in many plants-by no weas employed for the development of fruit, as, having been prepared by
the leaves before the period of flowering, have been depo-
sited in the stem or other organs, and are subsequently \(\mid\) fire-heat, and 1 am not sure that good sprinklings of water could plants will fruit even when taken out of the soil. But general assertions, taken from special facts, can only lead to absurd conclusions. Let Professor Liebig cut plants in bloom above their roots (unnecessary, he says, at that period), and expose them to as much dew and rain as he likes, and see what will happen; or, as he is fond of experiments on a large scale, let him take the hay harvest for a test of this theory; which, after all (concludes Dr. Mohl), seems to be nothing more than a distorted and overdone copy of the doctrine of the development of plants given by Schwerz, in his treatise on Practical Agri-
culture (Anleiitung zum Pract. Ackenbau, iij. 56). Besides the formation of humus, Liebig addu
Besides the formation of humus, Liebig adduces another reason for the rotation of crops, viz, the relation
wbich plants bear to the inorganic constituents of the which plants bear to the inorganic constituents of the
soil. As every plant deprives the soil of certain ingresoil. As every plant deprives the soil of certain ingre-
dients, it thus makes it unfit for feeding similar plants, dients, it thus makes it mafit for feeding similar plants,
until by subsequent decomposition a fresh amount of such ingredients is again set free. To this proposition (says Dr. Mohl) no one will object; but it has long been

Having thus examined in detail the work of Dr. Liebig, Dr. Mohl concludes with the following general recapitula tion. It appears upon the whole that Liebig has not availed himself of his chemical resources to clear up doubtful points in the nutrition of plants. Contrary to the spirit of a true inon the detailed facts of vegetable phenomena, but on random observations, or vague operations on a large scale, destitute of all precision. His calculations are based on arbitrary assumptions. His book, therefore, far from being a consistent and well-digested theory, swarms with contradictions and false reasoning. He does not possess a knowledge of the most elementary doctrines of vegetable physiology. His assertion that physiologists have hitherto The assumption that plants live merely on inorganic substances is by no means new, but has long been one of the controverted points of vegetable physiology. The assertion that all Botanists have doubted the absorption of carbon by plants by their decomposition of carbonic acid is untrue. The assertion that plants neither absorb organic substances, nor assimilate them, rests on mere theoretical speculation, and is destitute of all proof. The statements as to the relation borne to the atmosphere by plants in the dark is in direct opposition to every fact bearing on the subject. The assertion that the nitrogenous food of plants subject. The assertion that the nitrogenous food of plants, certain proportions, is uncorroborated by the analysis of certain proportions, is uncorroborated by the analysis of rotation of crops is contrary to experience, and unsound in its details. The assertion that plants receive their food during summer from the atmosphere alone, is incorrect. On the other hand, it cannot be denied that Liebig's dea that plauts derive their nitrogen from the ammonis of the atmosphere is very happy and pregnant with results.
It is also probable that the absorption of saline bases is in It is also probable that the absorption of saline bases is in in plants. These two views are a real gain to science, and it may be expected that his work will also have the merit of exciting others to make correct experiments on the nutrition of plants. But he has endeavoured to introduce into vegetable physiology a series of most erroneous notions, and his unbecoming outbreaks against other physiologists have proved him to be very little acquainted with the subjects on which his book is written.

CALENDAR OF OPERATIONS for the ensuing week.
Foz some years there has been a growing disposition on the part
young lauies to execute some of the lighter operations of the of young ladies to cxecute eome of the lughter operations of the Nocreased since the example set by her Majesty last year in Scotiand.
No sooner did it become known that Queen Victoria planted some trees at Taymouth Castle, to commanaorate her first visit to the
Highlands, than surmises were rife as to the probable effect the example would have on lady gardeners throughout her dominions:
and eardeners, too, in all parts of the country, looked on the event as an auspicious oment to their r craft. In the general excitement the
Gardeners' Chronicle was not behind:- "We trust (gaid the Editor) that our fair friends will thus be fortified in their hortccultural an example has been get them. Horticulture, too, wlll more than ever claim the dignity of an honourable profession, when it is known with her own Hoyal hands."-(Vol. il." p. 619 .) Notwithstanding all this enthusiasm, few gardeners will be prepared to learn that a
young English lady, following the example of her Sovereign, has, in
one of her late "horticultural resolves," outstripped the very best of thern. It will be recollected that a few weeks back I noticed, as a piece of interesting intelligence, the success of an experiment in
budding Rhododendrons, Rcc. in the open air. A few years ago nobody ever dreamed that this tribe could be increased otherwise
than by seeds and layers; but more recently this beautiful tribe has been found to yield with no great reluctance to the various modes practised in the laboratory of the skilful propagator. Judge, there"I was much pleased with the idea of budding Rhododendrons, but strange to say, on mentioning it to a very skil/wul lady-gardener in
this district, she at once took me to a bank of them, where sh nhowed me several buds she had inserted in the usual way, which looked as if they had taken, and I have no doubt they have. I met
her in the spring, with a bunch of the scarlet hybrid in her hand
which ahe which she had only then seen ofor the first time, and I found she
intended to bud it on the common varieties in her father's ground." Here is newa and encouragement to those who havecommonon Rhodo-
dendrons to clothe them with the finest hybrids, merely by the simple operation of budding.

\section*{I.-KITCHEN-GARDEN AND ORCHARD.}

Pings.-Those who do not know much ahout Pine-growing are
very apt to commit mistakes about this time. The inrease to meet the dechne of the seagon, is cith c defurrell too long or is too
suddenly applied. When Pines are in their highest growth, as they always are at this time, sudden checks of this sort are very injurious is greater. I once sawa whole row of young providence pines, next the
flue, throw up fruit like so many buttong on the first application of
prevent it ; this sort is very impatient of fire heat while young.
Now that the French system of growing them out of pots, and in
peat-earth, has been tried down at Hewell, we shall be curious to peat-earth, has been tried down at Hewell, we shall be curious to
learn if the experiment succecds. There cannot be a doubt that
Pines will grow better out of pots, but we have partially failed in the Pines will grow better out of pots, but we have partially failed in the
nise of peat for Camellias, which they find to answer in the Conti-
nent, especially at Berlin and Viente while in nent, especially at Berlin aud Vienna, while

\section*{}
 unian nurable weather the ground is much damagrot by the operation.
Now that the farmers and gleaners bave cleared the fields, and left little for the rats, they will begin to prowl about the garden and out-
houses, and if you once let them breed near you it is difficult to get Crops.-Except the usual course of salading, there is very little
sowing to be done for some time; and as soon as the surin Lettuces and late Cauliflower plants are pricked or planted out, little more will be needed in the planting way for a long time, except ept blanched, and the Celery rows not let grow too long withnut nouldine up, you may turn your attention to getting forward such
worke as will tornard you in thic spring. Your cropping book will Will you what plots want trenching, and to what depth: never trenct
one dlopth.
Orcirard.-It is not too much to say that young fruit-trees should nearer the surface, till they are 12 or 15 years old. After they hav may run to three or four years; this is much better than allowing then to run half wild in the first instance, and then use scvere and
unnatural means to correct them afterwards. Nonpareil and other unnatural means to correct them afterwards. Nonpareil and other
tender Apple-trees infected with canker, or otherwise unlicalthy, may be maproved by being taken up and replanted in fresh soil, using some turfy compost abont the, r roots, their young growth pruned off fresh hold on the soil. Early autunn prunng is the life and soul of
II.-FLOWER-GARDEN AND SIMRUBBERY.

Srove.-I have just been trying a little experiment with a few
stove plants, chiefly Gesnerias, but the principle is applicable to great numer of plants, perhaps to all that do not flower on terminal shoots nr heads. Then such of these plants as you cannot get to
fower until late in the autumn, if you take cuttings of them a short
time before they time before they come into flower, or even when they are in
flower, you stop the flowering of the cutting until \(i t\) begins \(a\) that it will flowere in the spring, or early in the summer. We oiten see little side-shoots growing out near the tops of Achigo on flowering all the winter, Gesneria longifolia and zebrina same way, but this hint is quite enough. I forgot last week to menton that the Gesneria molis has scaly tuberous roots, like the Achi-
menes, which brings it nearer to that family in affinity ; and it is
thereforc a fit subject to try to cross with A. pedunculata, or, indeed, GREENHOUSE.-The Chrysanthemums will soon requirc the shelter of this house, particuiarly the early ones, and some of the later sorts
should be left out as long as a mat or two can secure them from the frost; this will prolong their succession. They will require some
stakes, but avoid the exhibition plan of staking them, which, althhough necessary for bringing the flowers to view altogether at one time, is
most unsightly for general purposes. I have often heard gentlemen say, at the exhbitions at Chisw chk, how much they shoukd like thear gardeners to be therc, to see thic licautiful Yelargoniums strangled
up in this fashoon, that they might dus same it home, although nothing in the whole range of pardening could display worse taste.
Conservatory.-As little water as possible should be seatteres herc for the next two months, as this dull season is cnough of itself
to dump off the flowers without such aids. Slight fires will also be necessary in the daytime, if the bloom show signs of dampnes
This house and the late Vinery should now be manared nearly alik Ipomoea ficifolia grafted on Learin, it being a more robust growe makes a fine contrast to it, and succeds it about the beginning of
October. I always thought Mandevilla suaveolens would be more at home against a south wall out-of-doors, as it is so subject to red
spider by house confinement, like the Tacsonia; hut "Devonian's"
account of it shook my faith in the idea. A young plant of it, bowever, struck last year was turned out against our conservatory wa ast May, where it grew away with great freedom, and yesterday
noticed a great number of flower-buds on it, and as the wall is safely guarded from the frost, with plenty of iron pipes and conical
boilers, \(8 c \mathrm{cc}\). \&cc., I expect we may cut Mandevilla flowers through began flowering last June, has no signs yet of ceasing to produce its lovely, fragrant, snow-white flowers. forward a few Pelargoniums

\section*{NEWS OF THE WEEK}

A telegraphic despatch reached Paris on Monday, announcing that a revolution broke out in Greece on the 15 th inst., which has ended in the complete triamph of the popular canse, without compromising the personal safety of the King or the dignity of his crown. The details of this revolution present one of the most remarkable examples of national unanimity in the history of modern times. The people, the army, and even the principal authorities, had combined for the accomplishment of their purpose; and so seret were their movements, that neither the Foreign Ministers nor the King himself were aware of the approaching crisis. The people and the troops assembled in the middle of the night, surrounded the palace, and cut off all commumication between the King and his Bavarian counsellors. They then in one oice demanded anstitution. The King, aroused from his sleep, found that he was completely isolated, and that resistance was impossible. He had therefore no alternative but to assent to the proposals submitted to him by the Council of State, and to promise that the National Assembly should be convoked to draw up a new Constitution. Not a ssiot was fired, nor a voice raised against the obnoxious advisers of the King; and in less than 12 hours the immense maltitude had quietly dispersed, without the occurrence of a ble interest on the Continent, more especially in reference to the disturbances in the Italian States, and to the possibility that the example of the Greeks may be followed in the South of Italy. The Foreign journals concur in bestowing great praise on the moderation with which the Greeks accomplished their purpose, and contrast this result with the desultory proceedings of the Italian insurgente, whose attacks on individuals bave given to their rising the character rather of a systematic brigandage than of a movement for political redress.-In France, the clamour against the armament of the fortifications of Paris is still the leading topic of the Opposition journals; but the people as yet appear to regard the question with indifference. Some further arrests have taken place in connection with the late conspiracy, but no important facts have been made known. -From Spain we learn that ant engagement took place on the 21 st, in the neighbourhood of Barcelona, between the contending forces which dispute the possession of that city. The bombardment commenced on the same day, and continued until the insurgents had retired from their
position. An attack on the city by the Government
troops was hourly expected, and a fresh bombardment will no doubt take place before this second contest is decided. In other respects, the state of Spain continues to give rise to serious apprehensions. Saragossa has declared against the Government and in favour of a Central Junta, while a conspiracy for the same objects has been detected among the non-commissioned officers of the garrison at Vittoria. The Elections, also, in the great cities have terminated in favour of the Opposition, and unless the provincial elections present a very different result, th
At home, the Repeal agitation has begun to assume another, and not less important character. In addition to the attempt made last week to identify the movement with the non-payment of rent and taxes, Mr . O'Connell in his speeches at Lismore has declared his conviction that the people and the clergy are going beynnd him. He still before New Year's day, but says that instead of agitating as heretofore he must now moderate, and that it has become his duty to regulate the vigour and temper the onergy of the people. In Wales, the hostility to turnpike
gates appears, for the moment, to have given way to attacks on private property, and the disturbed state of the country has suggested the idea of proclaiming martial law in the Principality. Several meetings of farmers have been held, at which they have condemned the recent out-
rages, and adopted petitions to the Queen praying that the New Poor-law and the Tithe Commutation Act ma be repealed, that free-trade may be adopted, and that the present Parliament may be dissolved, and another convened more likely to attend to the wants of the petitioners.

\section*{聃ome Nroms.}

Court.-Her Majesty and Prince Albert remain at Windsor Castle with the Princesses, the Prince of Wales being still at Brighton. Her Majesty and the Prince have Princess of Hohenlohe Langenburgh, and on Monday and Wednesday Prince Albert and the Prince of Hohenlohe Wednesday Prince Albert and the Prince of Hohenlohe
shot over the Royal preserves in the Great Park, It is expected that the Court will leave the Castle in the course of next week for Claremont, to remain for about a week or ten days, in order that Prince Albert may shoot over the preserves of the King of the Belgians.-The Duke of House from Germany the week after next. The Duchess will remain some weeks longer abroad, .-Lord Hawarden has succeeded the Earl of Hardwicke as the Lord in Waiting, and the Countess of Charlemont has succeeded Viscountess Canningas the Lady in Waiting onher Majesty.
Her Majesty's Belgian Exoursion.-A paragraph appeared last week in the Eazaminer, stating, on the authority of accounts from Brussels, in a Belgian paper, that "the Queen of England and anotber personage had Fisited Waterloo incognilo on the morning of the 19th." It has since been announced, on authority, that neither Her Majesty nor Prince Albert visited the field of Waterloo during their brief visit to Belgium. The mistake must have arisen either from the Brussels or the English originally appeared, we believe, in Brussels, and distinctly stated taat a person in the suite of the Queen of England," \&c.,-meaning the Earl of Aberdeen, who went there to visit the grave of his brother, Sir Alexander Gordon, who fell in the battle.
Illness of Earl Grey,-We regret to state, that Earl Grey's indisposition has increased since his arrival at Howiok Hail, and that Sir Stephen Hammick is in atvourable symptoms, has lost the use of his limbs; but no apprehensions of immediate danger are entertained.

\section*{\(\sqrt{\text { Foreign }}\)}

Franoz. The Paris papers are principally occupied with the fortifications of Paris, which the joint protest of the Republicans and Legitimatists against their armament had again brought before the public. As yets however, the people seem to view this outcry with apathy, as the
real object of the fortifications must have long been generally known.-A person named Becker was arrested on Friday, at his residence, in virtue of a warrant from the Prefect of Police, charging him with being one of the most active and influential leaders of the communist plot detected some days ago. A clandestine press was seized at his print the proclamations of the conspirators. In 1833 , print the proclamations of the conspirators. In 1833 ,
the prisoner was sentenced to a year's imprisonment for an offence against the person of the King.-The Ministerial Journal des Dabats has an article on a recent speech of Mr. Tyler, son of the President of the United States,
in favour of Repeal, and observes, that "to do the French Radicals justice, their language is the most in offensive mildness compared to that of the Radicals of New York. If such extravagant language could be re-
garded as serious, we should deplore it even for the integarded as serious, we should deplore it even for the inte-
rest of Ireland, for not only is it of a nature to excite sentiments of irritation amongst the English people, but such language must at the same time totally ruin the cause of the Irish, by depriving it of its national character, in order to give it the appearance of a revolutionary move-
ment." In regard to Mr. O'Connell's proceedingg, the
same journal has a remarkable article, from which the that since the Queen of England, in proroguing Parliament, expressed in the most explicit terms her indignation against the attempts made to produce a dismemberment of the United Kingdom, there have been less meetings in Ireland, many less monster speeches from Mr. O'Connell, has deprived him of his last chance of any longer abusing the simplicity of his auditory. Here commences the embarrassment of the agitator ; he is in a dilemma where he an act of madness. He sees himself at the head of an army whose number astounds him, and whose force threatens to turn against himself. Formerly he called meetings to pass reviews, and, as he said, to count heads; at present
he confesses that he only holds them to suffer the boiling courage of the Irish people to evaporate, who are asking Thus Mr. O'Connell, in place of agitating, seeks but to calm: he only wishes to find an issue to give a passage to carried off. No one better than himself comprehends this critical position: he knows better than any other that the first step made towards violence would be his
destruction, and at the same time a sanguinary repression. He knows well that the repeal of the union is an insane dream-he knows that England, which is the stronger, the rank of countries of the third order-he knows that not only it would be the ruin of England, but that it would also be the ruin of Ireland, because the Irish people, in their present condition, are incapable of
living and walking alone ; but it is because be knows all this, and knew it beforehand, that a heavy responsibility weighs upon his head. There are, we know, evils to be remedied, but the Irish themselves appear to oppose an ventured his stak upon a dangerous card ; he has placed Ireland between Repeal and revolution. Repeal he cannot have; and as to a revolution, if it were attempted, which God fortunate and attempt would infallibly conclude in an dwell at great length on the Duke and Duchess de Nemours' progress throngh Burgundy on their way to Lyons, where they arrived on the 20th; according to the Opposition prints their Royal Highnesses met with a very cold reception. At Macon, M. Lamartine, the poet, as Regent, which has been severely ceasured even by the Liberal papers. The following are extracts:-" Prince, you ao us the honour of visiting us, and we receive you
with cordiality. Welcome. You will meet with neither adulation nor insolence in our language. We will show merely dignity. We welcome your young Princess with greet you everywhere, tell you that France is fanatically greet you everywhere, tell you that France is fanatically attached to personal monarchy, to the royal power institutions; that France sees all the future in a dynasty, and places its trust in the fortifications which guard it ; and, in fine, that France thirsts after priaces, to contradict this; but history will do it for us if you open its page. Our real sentiments are other. We Order his reign. We are grateful. But in return he owes his throne to France. And France has immense wants. Bezens, there stands an entire prance of which demands its place. If you wish this people to be monarchic, form a combats, and its image, \&c. The Mifsterial journal does not seriously fear, because such vague demands of universal suffrage and uncourteous remonstrances flung in majority of French Liberals. The venerable M. Lacretelle addressed to the Prince, in the name of the Literary Society, a very different speech, from which we make the following extr. Chateau \(d^{\prime} \mathrm{Eu}\), for ever consecrated in history, offered a great spectacle, a great promise to the world. In remote times, whose darkness the sacred volume alone has penethe visit of a Queen who offers herself to our veneration by this homage alone, for it is all we know respecting her. Here it is a young, amiable, and highly-honoured Queen, Who came to visit a Monarch whose wisdom, profound discernment, and indomitable courage have triumphed over such painful trials and such formidable attempts on sented on this greatest nations on the earth were repretime unlimited liberty, increases the majesty of the Sovereigns. She does not on this occasion display her pomp, but her elegance and grace. The heavens, ocean, and the two shores are brilliant with the festivities. The sentiment of the two Sovereigns is comprehended, and dilates all hearts. The object was to render more intimate and friendly the long peace which Europe has enjoyed. This is the representative Government in all its glory, since this peace is its work. To strengthen esteem by affection and by a free interchange of amiable and generous qualities,this is what an august example ought to inspire the two people in whom the world will see every day more and more thank yours and models. The Prince replied, - I recent visit, because I see in that event an honour for my country and a favourable omen for all. I see in it an
honour, because France, however great and glorious she may be, and worthy of such homage, cannot remain indifferent to the visit of a young Queen, who has appeared on that connects two great nations. I regard it as a favourable omen, because the union of two such powerful countries must accelerate the progress of humanity towards those happy destinies which peace makes it every day love more and more and better appreciate. I thank you for having afforded me an opportunity of giving utterance to a thought which was already in my heart, and I congratulate myself on concurring in the opinion of the illustrious writer to whom history has so often confided her most intimate secrets and her surest appreciations."-General Boyer, ex-President of the Republic of Hayt, landed at Havre on the 21st, on his way to Paris. M. Olozaga, the special ambassador it is sam spain, has arrived in Paris to demand, is is said, an then formances of Mademoiselle Rachel at the Comédie Francaise since her début in 1838. The sum amounts to \(1,503,000 f\). This is at the rate of 4900 f . for each repre-sentation.-Marseilles was visited on the night of the 15 th with a most violent storm. The visitors to the theatre could not reach their homes until three o'clock in the morning. A house in the market-place was washed down, the too celebrated cht.-The sale of the furniture, \&cc. of of Madalarated chateau of Glandier, the late residence vived the infaturge, has just taken place, and it has rehave recorded. The most all the newspapers in Europe the highest prices. The wedding dress of Mdiletched Capelle sold for 800 f , and still excited envy ; book she used at her wedding yiclded 50f.; s mere Prayerof her face fetched 25 f . ; some little albums, a few soiled pages of verses addressed to her, and other triffes, have attracted a crowd to Glandier for a whole fortnight.
Spain.-Advices from Barcelona of the 22d state that an engagement took place on the 2lst, between the insurgent forces under Brigadier Ametler, and those of Brigadier Prim. Ametler had his head-quarters at Badalona a town on the coast at two leagues from Barcelona, and on the Mataro road; his vanguard occupied San Andres de Palamar. Prim attacked the latter, and completely routed the insurgents. The engagement lasted two daye, and on the morning of the 22 d Prim's troops were master:s of all the houses. He made 200 prisoners; the rest were killed, or fled. Col. Milans was wounded, Brigadier Ametler abandoned Badalona, and retired towards France. The suspension of hostilities in Barcelona mentioned in the last despatches, only lasted 24 hours. The citadel and Montjuich both fired on the 22 d on the sea-gate and Atarazanas, but ceased firing after the retirement of Ametler. Brigadier Prim was hourly expected to attack the insurgents of Barcelona. The movement of Reus has failed, and the insurgents driven out by the inhabitants of the town have fled to the mountains. Vich
and Puycerda have refused to submit to the Junta, and Puycerda have refused to submit to the Junta, and the National Guard have refused to march to the succour of those towns recognising the Junta. A great number of those who left Figueras have returned. The weather has been very severe in Catalonia, particularly \({ }^{\text {gon }}\) the eastern frontier, and in consequence of the floods all communications with France have been cut off except by the Perthus road. Madrid was calm on the evening of the 20 th, in spite of the impression produced by the rising of Saragossa, which has declared against the provisional Government, and even against its Cortes, a 17th in having broken out there on the evening of the and the favour of the Central Junta. The municipality formed without opposition. Letters from Vittoria, of the 17 th, mention that a conspiracy had been discovered in that city among the non-commissioned officers of the cavalry Regiment del Principe. Their object was to proclaim a Central Junta. Seven serjeants had been arrested At Madrid the elections are the great topic of the day; dily paining party, or Anti-Ministeriaists, are steadilectorsing graund in the pol. Or the 7,000 or 8,000 ment journals assert that the had polled. The Goverument journals assert that the provincial elections will be more favourable to them. One of the powder magazines, Some workmen and guards were killed, but the city susSome workmen and guards were killed, but the city sus-
tained no serious injury. The cause of this accident is tained no seriou
not yet known.

Portugal.-Accounts from Lisbon of the 18th state that General Zurbano, who arrived on the 7th inst. at Oporto, was made a prisoner, and lodged in the castle of Foz. He was seized in the French hotel at Oporto, and had come in the packet from Vigo. An order, however, was immediately forwarded from the Government for his release, and Zurbano is now in Lisbon, He is said to be greatly broken down by the distresses which he has endured since he was driven from Madrid, and his spirits appear to be completely shattered.-Dr. Miller, of Kilmarnock, brother-in-luw of Dr. Kalley, of Madeira, has received a letter from the Foreign-office, in answer to the representation made by him to Lord Aberdeen, on hear ing of Dr. Kalley's imprisonment at Funchal ; in which it is stated that "her Majesty's Minister at Lisbon has been directed to require that Dr. Kalley be liberated on bail, and his case brought before the Conservatorial Court."-An official notification has been received of the formal installation of the Mixed British and Portuguese Commission, under the treaty comeluded last year for the suppression of the slave-trade, at Boa Vista, in the Cape de Verd Islands slave-trade, at Boa 7th June. The act of installation was signed by Mr. Rendall, Consul-General of England in those islands, by

Captain Dos Santos, as Commissioner for Portugal, and by Senhor d'Almeida as arbitrator.
GermanX.-Letters from Vienna of the 12th state that since Prince Metternich's return, the arrival and
departure of couriers has become even more frequent than it was before, and that the frequent conferences which the Prince holds with the French Ambassador leave no doubt that the object of the present important negotiations are
Spanish affairs. Upon two questions it is said the principal Cabinets agree. No immediate or particular proposals will be made to the Spanish Government, but all exertions will be made to secure the hand of the Queen to a member of the Bourbon family, exclusive of the
Orleans branch. The candidates, therefore, would be members of the families of Don Carlos or the King of Naples.-The Emperor of Russia left Berlin on the 19th
for Warsaw ; the Grand Duke and Duchess of Saxe Weimar for Weimar ; the Duke of Leuchtenberg for Stettin; and the Crown Prince and Pincess of Sweden, with their daughter the Princess Eugenia, for Stockholm. of the members of the German Confederation, for the purpose of contributing to the fund for rebuilding Cologne
Cathedral, has been responded to, and it is now understood that the Emperor of Austria has offered 40,000 florins a year until the work shall be completed.-Great preparations are making at Gratz for the reception of the naturalists who are to hold their annual meeting there in
the course of this month. A room has been erected, in which 1000 persons may dine. The Archdulie John will Which 1000 persons may dine. The Archduke John will
treat the naturalists with a Styrian fête. He has caused persons to come from all the provinces of Styria, who are
to execute in their different costumes national dances and songs. The governor will also offer to the scientific strangers a brilliant soirée in his gardens.--Prince Hohenlohe, of miracle-working celebrity, but of whom nothing
had been heard for some time, is stated, in a letter from Innspruck, to have performed some new miracles there during the last month. Among the persons stated to
have been cured were the daughter of a Councillor of the Court of Appeal of the Tyrol, after a painful illiness of three years, and a woman of fifty-five, who had been for seven years afflicted with paralysis.
Italy, -Accounts from the Frontier state that Count
Radetsky, militany Radetsky, military governor of Venice, has received instructions from Vienna to keep 4,000 men ready to march
at a moment's notice into any of the Italian States, as soon as their respective Governments should require and demand such assistance. The Bolognese insurgents have made an attempt to surprise the city of Ravenna, to arrest tions in that place. They had agreed to meet other conspirators at Imola, but the police discovered their intentions, and when the insurgents arrived before Imola they leund the gates closed and the garrison under arms. A contains the following:-" We have just received by ex" press information that the diligence (what diligence is not stated), and the dragoons who were escorting it, had been attacked by a band of 150 men, armed with English asserted that this band had suddenly attacked several posts of cavalry, and carried off their arms and their horses. In of Cardinals. The Government is said to have sent off immediately for Cesena several battalions of infantry." From Naples we learn that no instance of burning bas lately taken place, and the streets, which were almost
deserted by females, are again assuming that life and noise so peculiar to this city. Sir Woodbine Parish, who has been in Naples since the sulphur question, for the
purpose of extending our commercial interest in the kingdom, has returned to England, having failed in inducing the Government to agree to anything beyond the sulphur duties, which are already known and acted upon.
Greecr.-A telegraphic despatch has reached Paris Athens. The accounts of the proceedings of Kin out at Which have appeared from time to time will cange this news to be received without surprise. It appears that fired in the air announced the assembling of the people in the different quarters of Athens. Soon afterwards the inhabitants, accompanied by the entire garrison, marched tion for ever!" On reaching the palace the Constitucavalry, and infantry, drew up under the windows of the stationed front of the palace, and the people having a constitutions. The King appeared at a low window, and assured the people that he would take into consideration his Ministers and that of the army, after consulting with tives of the foreign Powers. But the Commander Majesty Calergi, having stepped forward, made known to his thatesty that the Ministry was no longer recognised, and best course to be adopted under existing circumstances. A document was soon afterwards presented to the King Cond deputation of the Council, composed of Messrs.
Conduriotis, the President, G. Eynian, A. P. MavromiConduriotis, the President, G. Eynian, A. P. Mavromi-
chali, jun., G. Psyles, and Anastasius Londos. Whilst of Majesty was reading the propositions of the Council sented themselves at the Palace, and were told by preCommander that nobody could be admitted at that moment, Conking being in conference with the deputation of the Wouncil with State. The latter came out two hours afterrecomanended by the Council then repaired to the Palace,
where they held a long consultation with his Majesty, who
shortly appeared on the balcony, surrounded by the new shortly appeared on the balcony, surrounded by the new
Ministers and A mbassadors, who had just been admitted, and was received with acclamation by the people. The cry of ' Long live the Constitutional King' resounded,
together with that of 'The Constitution for following Ministers entered inmediately on the discharge of their functions. Messrs. André Metara, President of Andre Londos, Minister of War ; Canaris, for Affairs; Department ; Rhigas Palamidis for the Interior, Mansoles for the Finance; Leon Melas, for Justice, and Michel Schinas, for Public Instruction and Ecclesiastical Affairs. The military revolution was directed, on the part of the regular Army, by the Colonel of Cavalry (Demetri Calergi), and on that of the irregular army by Colonel after defiling before the Palace, re-entered their quarters, anter dening before the Palace, re-entered their quarters,
preceded by their bands, amidst the acclamations of the people. An hour afterwards the city, in which order bad not been an instant disturbed, resumed its customary aspect, the whole revolution having been accomplished The students of the university joined the movement, and The students of the university joined the movement, and milar movements occurred at Chalcis, Corinth, and Nauplia. milar movements occurred at Chalcis, Corinth, and Nauplia.
Letters from Athens of the 17 th state, that all foreigners Lolders from Athens of the 17 th state, that all foreigners including even M. Lemaitre and other Frenchmen employed in the administration of the National Bank. The chiefs safet movement had adopted every precaution for the hand informe establishment ; the Directors were beforetake place, and 12 trusty soldiers were sent thither waring the night for its protection by M. Calergi. The revolution arrestected without any violence. The Ministers were A Bavarin Air houses, but liberated on the next morning hended, and confined in the barracks, where, however, he remained a prisoner only a few hours. It appears that the King yielded with bad grace, when he found that all o'clock when his part would be unavailing. It was eleven bands were then playing the "Marseillaise" and the "Parisienne," which gave his Majesty cause to suppose the affairs might proceed to unpleasant extremities. On saluted King Otho took his customary airing, and was people and soldiers of "Long live the Constitutional King!" An exception had been made in the decree of exclusion against foreigners in favour of the old Philhellenes who held office under the Government. The National Assembly will be convoked within 30 days from
the date of the revolution, to draw up the new Constitution in conjunction with the King.

Dinner to Gen. Espartero.- On Tuesday a magnificent banquet was given at the Mansion-house, as a mark of sympathy with General Espartero on his arrival in this country. Nearly three bundred sat down to dinner. The hall was decorated in the usual manner. There was a meeting of the Council in one of the rooms of the Man-sion-house previous to the dinner, when the Lord Mayor read the resolutions of the Common Council, which have already been noticed in this Paper, and to which Gen. Espartero returned a suitable reply: After dinner, the usual loyal toasts having been given, the Lord Mayor proposed the health of his Highness the Duke of Victory, expressing his belief that "if we do not see Espartero again at the head of affairs, we shall at least see his prinloud cheering ascendant. The toast was received with addressed the assembly in Spanish. Having been listened to with profound attention, the Lord Meror at the conclusion of his speech, said that as the Dake of Victory was not sufficiently acquainted with English to deliver his address in our language, he bad put a translation of his remarks into his hands, which he begged to read, His Lordship then read the following address:-" My Lord Mayor and Geatlemen-The generous and hospitable Queeption I have met with from the British people, their most grateful recollection. The British nation-the highminded and liberal British people-have thoroughly understood the feelings that have ever guided the actions of him who has now the honour of addressing you, and who carried it victorionsly constitutional flag of bis country, disappeared. Solemnly elected the enemies of liberty disappeared. Solemnly elected Regent of Spain by the national will, I was determined to govern the kingdom within the law; to preserve the law, and allow no
one to transgress the law. The enemies of the liberty and ne to transgress the law. The enemies of the liberty and
independence of my country and of the constitutional throne of my Queen are indebted for their momentary triumph to that religious respect which I have ever shown to the fundamental law of the state. But I shall never on that account regret that such has been my conduct; tional Regentinced such is the only conduct a constitution, when the ought to follow. Thus it was my inten. II. commencing the exercise of her constitutional authority should arrive, that she should find herself at the head of a flourishing and great kingdom ; quiet within, respected without, and progressing in that prosperity to racter is entitled by its position, climate, and the chaand it is with satisfection I now repeat it here-to secure and consolidate the public and civil liberty of my country; to preserve intact the constitutional throne of Isabella the Second, to deliver into ber hands the authority with which i was entrusted precisely in the manner determined by the law, and then to retire inlo private life, and become once more a private citizen-such were ever my wishes-such my determination. An evil destiny has prevented the fulfilment of my intentions, and I have been obliged to retire from my country; but in the midst of my misfortunes it is a great consolation to have met with so generous a reception in this, the classic soil of constitutional liberty, whence I offer the most fervent vows or the happiness of my country. And wherever fate may lead me, I shall always have the most lively recollection of the sympathy shown me by the British people, and more particularly by the City of London, the prosperity of which 1 now beg leave to offer as a toast. Vehement cheering followed the conclusion of this speech. The health or Gen. Van Haen and the other offcers of EsparGeneral. Viscount Canning returned thanks for the House of Peers and of Peers, and expressed his hope, whatever fature events may bring about, when Gen. Espartero and his countrymen, here and had been given them, they will feel the reception which had been given them, they will feel that it was given to a man who filled a station the high-
est to which a subject can be called, with a scrupulous honesty as regards the interests of bis country, and with unflinching fidelity to his young Queen. Mr. Ward acknowledged the toast of the House of Commons, and said that they came there to honour one who had been most undeservedly driven from the bighest station in his own country, and who would, in all probability, still fill it, if it were not for foreign interference. That Spain might be again restored to constitutionsl liberty, through the instrumentality of Espartero, was a wish in which every man in this country heartily joined, be he Whig, Tory,
or Radical. The Lord Mayor then bers for the City," praised the late Sir M. Whe Memhumane and useful conduct, and stated that Wood for his sell was anzious to attend the banguet to Gord. Rustero, but that he could not conveniently leave the country, where he was at present residing.
General Nogueras.-In connection with the banquet to Gen. Espartero we may notice a correspondence which Gen. Nogueras, one of papers on the part taken by murder of Gen. Cabrera's mother during the cont the Don Carlos. On the first amnouncement of the word Mayor's intention to give this banquet, Lord Ranelagh

Wrote a letter to the morning papers, asking whether the city authorities were aware that Gen. Nogueras was the perpetrator of that crime. To this Gen. Nogueras replied, that the imputation was false; "it was another General," he said, "who ordered the trial and execution, and neither the denunciation of his name." Loıd Ranelagh declared this letter a subterfuge, and explained that Gee. Nogueras did not actually shoot the unfortunate lady, but entreated Gen. Mina to do so ; quoting Gen. Mina's despatch, dated March 15, 1836, to prove the fact. On the
Gen. Nogueras published his reply, stating that "he had not the least interference in the affair; " and that "satisfied with the repeated public demonstrations of the affection of his countrymen, and resting on the conlic of this country any more on a subject to which it can attach but little interest." This bas called forth a rejoinder from Lord Ranelagh, containing the following passages in immediate reference to the maln facts:- In answer to the rendon's despatch to Lord Palmerston, dated March 7th, 1836, and not quoted by me before:-' I consider it my duty to inform yout lordship of an occurrence that has to its atrocity and its consequence, has produced a considerable sensation at Madrid. A Carlist chief, called Cabrera, shot the alcaldes of two small villages in Lower Arragon. The mother of Cabrera, a poor old woman nearly 70 years of age, lived at Tortosa, and General Nogueras, who commanded the Queen's troops in the neighbourhood, ordered the Governor of that place to mit this barbarous deed, upon which General Nogueras wrote to General Mina, the Captain-general of the province, for his sanction, which was unbesitatingly given and the mother of Cabrera was executed for the crime o her son. Immediately upon these facts coming to my found the Minister of War, and I told their Excellencies found Iwas come, in the performance of a painful duty announce to them what would be the feelings of hi Majesty's government, and the whole people of England upon learning those unparalleled acts of barbarity. M Mendizabal and Count Almodovar, with expressions of horror, admitted the facta, and seemed to be aware of the impression which they would produce in England. Ihat the matter, and his Excellency yesterday informed me that General Nogueras had been deprived of his command in Arragon, and that a court of inquiry had been ordered into all the circumstances of the case, to ulterior measures. Lord Clarendon, in another despatch of April 23d, says, in confirmation of his former state ment, that ' General Nogueras had to Valencia, where proceedings were to be instituted against him.' In addition to the above, there is Cabrera's authority on record that Nogueras is the murderer of his mother; and when he signed a treaty for the exchange of prisoners, he exempted General Nogueras from any such benefit. One mor Colonel Fentivero (a companion and brother officer o Nogueras) was shot, in retaliation for Cabrera's mother The Colonel presented a beautiful petition to the Queen calling for the trial of Nogueras, and denouncing him as the murderer of his wife. This petition from Colone Fentivero appeared in all the Madrid papers of the 24 th and 25th March. Lord Palmerston, in his despatch to Lord Clarendon, of April 2, 1836, says :- You will at the same time state to the Spanish Minister, that it is indignation which this atrocious crime has produced in the minds of all persons in this country, or to describe the degree of injury which such abominations necessarily do to the cause of the Queen. You will earnestly entreat the prevent the recurrence of such disgraceful acts, and to give the war in every province in which it may be unthe inbabitants of a civilised country." As to the little interest General Nogueras supposes that the English people take in such atrocious acts, it cannot be forgotten that General Moreno, the Carlist Commander-in.Chief, was ignominiously and properly driven from this country by the voice of public opinion, for his murder of an Deathon Sir Malthew Wood.-Alderman Sir M. Wood, Bart., one of the Members for the City of London, died atiness. He was in his 76 th year, having been born on the \(2 d\) June, 1768 . The name of Alderman Wood will be long remembered in the annals of the City for more than a quarter of a century the Corporation; has filled all the highest offices connected with it, and has taken an active part in every political question whic fond duriog his time. After filing several offices of lesser importance, he was chosen, at a comparatively early age, Alderman for his ward, and having served in his"turn the office of Lord Mayor, he was elected a second time to fill that chair. As a politician supporter of Whig principles, and was the Representative of London in no less than nine successive Parliaments. He was the son of a tradesman in Devonshire, and commenced life as a commercial traveller. He afterwards settled in Falcon-square as a brewer's druggist and hop of that derived under the celebrated will of Mr. Wood of of that derived under the celebrated will of Mr. Wood of
Gloucester. His adrocacy of the cause of Queen Caroline
first brought him prominently before the public. He is succeeded in the baronetcy by his eldest son, the Rev. Sir
John Page Wood, Bart., rector of St. Michael's, Cornhill, and vicar of Cressing, Essex. The death of Alderman Wood has created a vacancy in the representation of the Ward of Cripplegate in the Court of Aldermen, and of the City of London, in Parliament. With regard to the latter, active preparations are already in progress for a
contest. A requisition has been got up to Mr. Thomas Baring, calling upon him to come forward as the Conservative candidate, Mr. Wolverly Attwood having been obliged to decline on account of ill health. On the La Lord Morpeth, have been mentioned ; and it is believed that Mr . Patteson will comply with the invitation. The elecMr. Patteson wincome tion will tare some time Sere talked of for occur formio of Cripulegate. Among these are Mr. John Dillon, of the firm of Morrison, Dillon, and Mr. John Dillon, of the firm

Election of Lord Mayor.-Yesterday being Michael mas day, a Common-hall was held at Guildhall, according to annual custom, for the purpose of electing a forms had been gone through, the two senior Aldermen below the chair, Alderman Thomas Wood and Alderman Magnay, were put in nomination, together with the present ing the labour and expense of the office for anothe year, and Alderman T. Wood expressed his intention of retiring from the contest. A poll, however, had been demanded by his friends, and the sheriffs had no power to interrupt the voting. The polling was merely nominal man Magnay is virtually elected.
The Sheriffs.-The new sheriffs, Alderman Musgrove and Mr. Moon, were sworn into office on Thursday, with the usual ceremonies. The Rev. Dr. Vivian, rector of ffice of chaplain to Mr. Alderman Musgrove, and the Rev. Dr. Croly to Mr. Moon
East India Company.-On Wednesday the quarterly general court of this corporation was held at the India
House, pursuant to the charter, Mr. Cotton in the chair The proceedings were mostly of a routine character. After the presentation of various papers laid before Parliamen since the last Court, consisting of accounts relative to the reverues of India, salaries, annuities, compensation to the colleges of Hayleybury and Addiscombe, the number of students, \&c., various papers were submitted relating to dhe cuments connected with appeals in India. Mr. Poynde dhen brought formard his motion, complainine of the nenual payment of 60,000 rupees to the Temple of Jur gernaut, the attendance of the police at the temple, and the compulsory steps adopted to obtain coolies lind the car. the chaifuanges suggestere the the motion should be withdrawn for the present, to which Mr. Poynder assented, with the expression of a hope that the object he had in view would be accomplished in another way. Mr. Lewis then brought under the consideration of the Court a motion relating to appeals from India, the prosecution of 1 withdrawn on the withdrawn, on the waderstanding that the Board of Con trol had promised to give the subject its serious attention.
Metropolitan Improvements. - The mews at the Metropolitan Improvements.- The mews at the corner equerries' entrance to Buckingham Palace, were pulled down last week by order of the Commissioners of Woods and Forests, in order to clear the site for the intended improvements in the vicinity of the Palace. The demopres the whe menced will be limited to building a wall to James-street the wide space thas obtained will enable the Commissioners to remove the hackney coach stand several feet rom the present locality.-Mr. Cubitt has completed a Eccleston, and St. George's squares, to the river at the end of St. George's-square. He is about to erect a chain pier for the accommodation of the public.- 1 n consequence determined to remove a great portion of the wall and on each side, and to substitute a low wall, similar to that recently adopted at Blackfriars Bridge. The road and Hall has so rapidly advanced since the commencement of the year as to insure its being roofed by the early part of the ensuing spring.
e Murder of Mr. Westwood.-It will be recollected that some years ago the shop of Mr. Westwood, a watch-
maker, in Princes street, was broken open and robbed of property to a large amount, and the proprietor murdered. The criminals have hitherto escaped detection, although a reward of \(300 l\). was offered at the time for their appre hension. At the last May session of the Central Criminal stealing six person of Mr.Jeffs, arailway contractor, in Dublin, and sentenced to be transported for seven years. He is now confined in the Model Prison, at Pentonville, where some doubts are entertained of his sanity. At the time of his he was engaged in his business in London on the day of the robbery. A representation to this effect, supported by the certificates of several respectable persons, vouching for that fact, has been made to now states that he is able
hitherto without avail. Stocker now
to give such information as will lead to the discovery of
the murderers of Mr. Westwood, which he is ready to on having his sentence reversed, whicitigated. He asserts that, during the time of is imprisonment in Newgate, preparatory to his trial, he was employed by a fellowprisoner to write out his defence, and that in the course of his confidential intercourse with this man, disclosures were made to him which, if divulged and followed up, will enable the police to discover the murderers. This circumstance has been communicated to the family of Mr. Westwood, who have placed the affuir in the hands of the police, who have already set an active investigation on foot, so that the long-concealed culprits may now possibly be brought to justice.

The Nelson Column.-It is said that the statue of Lord Nelson will be placed on its column on the 21st of next month, the anniversary of the battle of Irafalgar. An public subscription to his surviviag companions in arms, and Sir R. Stopford has sent a letter to the committee, who shared in the victories of Lord Nelson, and whose present state of health will allow of their attending, amount to 199, viz.:-in the battle of Trafalgar, 130 Copenhagen, 31 ; the Nile, 25 ; and St. Vincent, 13. Prise Albert has contributed 20l. to the fund General Pension Society.- On Monday the annua general meeting of this society, formed to prant monthly pensions of 31 shillings to decayed citizens, mechanics, ad manufacturers, and of 22 shillings to their widows was held, Mr. Haywood in the chair. The report stated bat the society continued to receive distinguished patronage and support. Prince Albert had condescended to become its patron, and marked his ap probation of its object by a donation of 50 guineas bounty and another election for four men and two women as persis would shortly take place. The funded pro perty, exclusive of 500 l . in the life fund, was 4814 l ., the surplus fund 600l. The receipts for the wer 1794l. 12s. Gd., the expenditure, incluaing 628. 7. dis bursed in pensions, and the purchase of 500. stock, lef a balance of \(316 \% .14 s\). The report then stated that the Earl of Craven was the newiy-elected president, and tha in future decayed tradesmen and their widows would bo eligible as pensioners.

South Sea Company.-A general meeting of this com pany was held last week at the South Sea House, for th purpose of considering an address to be presented to he Majesty, and for making an alteration in the bynlaws Mr. Franks, deputy-governor, took the chair, ank pro posed the adoption of an address to her Majesty, praying flat her Majesty would be pleased to contian govestion whet Company. After a long discussion on qualified to act as governor, the address was agreed to by a majority of 13 to 6. A resolution was then agreed to, aitering the Thursdays, and Fridays; and for private slock to Mondays and Saturday

The High Tides.-The equinoxial gales during the week have swelled the Thames to such an extent as to create serious alarm to persons whose premises lie along hish banks. The tide of Monday rose to five feet above in passing under the arches of the different bridges. The wharfs \({ }^{\text {m }}\) Bankside were flooded to the denth of 18 inches, Westminster-bride were likewise under water. The tide flowed dered dered the streets leading to Vaxian-briage impassable, Lambeth Palace the water also rushed into the cellars. The embankments from the Horsefery-road Pier to bridge to Putney, were completely under water for nearly bridge to Putney, were completely under water for nearly greater height, induced by a strong wind from the northward. The overflow was very great along the Kentish coast from Woowich Marshes to Deption Rotherhithe, and from Blackwall to the Isle of Dogs, on the opposite side. Cellars, kitchens, and warehouses, were flooded ; causing considerable destruction of property. The market-gardeners were severe sufferers, and a great number of private gardens in low situations were inurdated, and the soil washed away. The Lewisham meadows were overflowed by the Ravensbourne, to the extent of many acres. The pleasure-ground in the rear of Dr. Smith's louse, in the Blackbeathn'oad, was two feet under water; and, on the tide receding, nearly 100 fish, flounders, roach, dace, \&c., were found on the lawn. In the afternoon, at four o'clock, the river was several feet above high-water mark, and the banks were overtlowed. Lo prevent an overflow of the ground surrounding the mbank Penitentiary, three large breakwaters wers not the the river had overflown the embankment and covered the road. Along the Lambeth side the water flowed into the cellars of several houses, and did considerable damage, The lower parts of Shadwell, Wapping, and Bankside were also inundated. On Wednesday, the tide rose mucli ligher than on either of the previous days. Although in siderablaces precautionary steps had been taken, houses near Chelsea, Wandsworth, Battersea, Lambeth, and at Bankside, were completely inundated. The timberyards near South, wark-bridge were entirely overflowed, and the roadway was above a foot under water, rendering the highway quite impassable for upwards of an hour. At
one time the tide rose so quickly up the iron gratings con-
nected with the sewers, that in some instances it forced them up several feet into the air.
The Stoddart and Conolly Fund. -The committee of this Fund had an interview with Lord Aberdeen on Saturday, at the Foreign-oflice, when his Lordship offered to render every assistance in his power to the Rev. Dr.
Wolff, for the purpose of obtaining intelligence of the fate of Colonel Stoddart and Capt. Conolly, and stated that Dr. Wolff's mission would not in any way interfere with the instructions he had already given to Colonel Shiel.
Anti-Corn-Law League.-On Thursday evening the Anti-Corn-law League held its first montlily meeting for the season, in Covent-garden Theatre. The building was commencing the business, and a great number of ladies were present. Mr . G. Wilson, the chairman of the League, presided, and opened the proccedings in a long address. The report for the past year was then read, from which it appeared that tracts had been distributed amoug 26 couties, containing 300,000 electors, and in
187 boroughs, containing 400,000 electors, exclusive of 187 boroughs, containing 400,000 electors, exclusive of
\(4,000,000\) tracts given to the working classes, and nonelectors, making a total of \(9,000,000\) of tracts, weighing 100 tons. 426,000 tracts had also been stitched up in magazines. 23 boroughs and 47 counties remained unvisited by the League. In 56 counties of England, Scot-
land, and Wales, 650 lectures were delivered by 14 lecturers, and 140 towns were visited by deputations from the League. The great Manchester meeting was attended by 20,000 persons and 501 deputies. The receipts of the
Learue Fund for the year were \(50,290 l\). 14 s ., and the League Fund for the year were \(50,290 l\). 14 s s, and the
expenditure amounted to \(47,814 l\). 3 s .9 d , leaving a balance expenditure amounted to \(47,314 \% .3 s .9 d\). , leaving a balance
of \(2476 l .10 s\). Mr. Hayward moved the adoption of the of 24761.10 s. Mr. Hayward moved the adoption of the
report, which was carried, and the meeting was subsequently addressed by Messrs. Bright, Cobden, and Fox. St. Paul's Churchyard...A few days since, in the course of excavations in St. Paul's Churchyard, the workmen came to a bed of peat at about 13 feet from the surbeen above 20 carts filled with it. A quantity of bones, earthenware, and various other articles, were dug up from the soil immediately above the bed, from which it what is called made earth.
Marylebone.-Within the last fortnight the board of guardians of St. Marylebone parish have publicly offered a reward of two guineas each for the apprehension of no their wives and children. More than one hundred individuals have thus become chargeable to the parish.
Fives.- Since the great fire at Topping's wharf, near
London Bridge, scarcely a night has elapsed but the metronolis has been visited by several outbreaks, some of them of a destructive character. A similar repetition of fires look place in Liverpool in the early part of the present destroyed property to the amount of half a million ; and it is said to be a fact, that for the last eleren yoars and period the brigade has been formed, all the great fires in the metropolis, namely, the Houses of Parliament, Royal Exchange, Davis's, Fenning's, and St. Andrew's wharl's,
and the Tower, have been followed rapidly by numerous and the Cower, have been followed rapidiy by numerous of late. From the returns made by Mr. Braidwood, it appears that the number of fires that have occurred in London from the lst January last up to Saturday night were 670. Most of the recent fires have occurred at the
east end of town, and on the Surrey side of the river east end of town, and on the Surrey side of the river.-
On Monday a meeting of the friends of the Royal Society for the Protection of Life from Fire was held at the Freemasons' Tavern. Mr. Pownall took the chair, and opened the proceedings by adverting to the dilapidated condition
into which the Society had fallen, notwithstanding its into which the Society had fallen, notwithstanding its
claims on the public. It was much to be regretted that the parishes of the metropulis did not co-operate with the Society like the parish of St. James's, where in the first year of the Socicty's existence aid was afforded by fire machines and escapes at 13 cases of fire, in the second
year at 25 , and in the third year at 14 fires. By the system adopted by the Society, it was proposed to place the fire-escapes, which at present amounted to only seven, at distances of from half to a quarter of a mile from each other in different parts of the metropolis, whereby assistance might be immediately given. 1t was then resolved that the meeting, feeling the paramount utility of the Society, which from untoward circumstances had fallen into decline, recommend the election of a provisional Mortality of the Melropolis.-The number of deaths registered in the week ending Saturday, Sept. 16, was as
follows:-West districts, 151 ; North districts, Central districts, 200 ; East districts, 189 ; South 152 ; tricts, 223. Total, 915-(males, 471; females, 444). Weekly average for the last five years, \(903-(461\) males, 442 females) ; and for the last five summers, 846.

Birmingham.-The receipts up to the close of the morning's performances at the recent festival, are said to be about \(6700 l_{\text {: }}\) : and there is little doubt the aggregate
will amount to 10,000 . Last festival the aggregate amounted to upwards of \(11,000 l_{\text {., }}\) but the expenses this time will be at least from \(1600 \%\). to 2000 l . Iess, so that the General Hospital will, iu all probability, be a considerable griner by the present festival. The Queen Dowager, the sum of 50 g. for the benefit of the Hospital. - The Birmingham requisitionists to get up the new. The movement, met on Thursday, for the purpose of consider-
ing and adopting the preliminary steps, The requisition
to Mr. T. Attwood has been very numerously signed. to Mr. T. Attwood has been very numerously signed.
Bristol. -In reference to the loss of the Queen steamer Bristol. -In reference to the loss of the Queen steamer,
noticed in our paper of the 9 th, the Rev. S. D. Waddy, Wesleyan minister, of Bath, who was a passenger on board the steamer, at the time of her sinking, states that, among che losses sustained on that occasion, was one of 2000 . in passengers, the entire saving of 20 years, by one of were going over to Ireland, to settle upon a farm which he had requested his father to buy for him. By carrying his an order upon the Bank of Ireland.
Cambridge. -The committee for conducting the restoration of the church of the Holy Sepulchre have just reported progress. The church is celebrated as the oldest Sepulchre at Jerusalem, now remainiog in England, having been consecrated in the year 1101. Part of the building fell in 1841, and prompt measures were rendered necessary for its preservation. The walls and columns have been strengthened, and Norman windows have been put up, flled with stained glass of great beauty, the gift of individual contributors, and an entirely new aisle has been erected in the south. The architect's estimate for the completion of the work, is 1206 l .10 s . The amount paid been received in subseriptions. Carlisle.-The directors of the Carlisle City and District Bank have published a circular, informing the shareholders and the public that their late manager, John Brown, has absented himself from the bank under
circumstances which have excited suspicion that he will not return. The directors have, consequently, made a careful investigation of the books, securities, cash, and vouchers, and have communicated with their London and other agents, and they now announce that they have found everything correct, with the single exception that Mr. Brown's own cash account has been overdrawn to the amount of \(2,554 l .9 s .3 d\)., which sum, however, is con-
siderably within the amount of the securities in the possession of the directors.

Carmarthen.-A bill has been issued offering a reward of 500l. for the apprehension and conviction of the murderer of Sarah Williams, the Hendey-gate toll-collector, and her Majesty's pardon to any accomplice, except the offering a reward of 100l. for the detection of the parties who destroyed the Lleebryd Fisking Wear on the 14th inst. About fourteen different toll-gates and bars have been pulled down during the week, and the system of lawless niglt the 21st the rick-yurd and out-buildings of Mr . Lloyd, of Dolhaidd, were completely destroyed, several ricks having been fired by some incendiary. No effort about \(800 l\). worth of corn and hay has been destroyed. Mr. Lloyd is a magistrate for the county of Carmarkhen. On the same night a party of the Rebeccaites assembled and set fire to a house and premises near the Black Mountain, in the hamlet of Gwynfe, in the parish of
Llangadock, the property of Mr. Bevans, of Cowbrid which was all burnt down. The premises had only just been leased by a person in the yeighbourhood, and it is reported that they were destroyed because the man had Unionists. 100\%. reward is offered for such information as will lead to the conviction of the perpetrators. A meeting of Welsh farmers was held on Friday at Cwm whel, in the midst of the mountains. A long discussion took place on the affairs of the principality, and a petition of the depression of the value of agricultural produce, arising from the inability of the people to purchase and consume the necessaries of life; of high rents, promised for several years, on the faith of enactments which have held out hopes to the farmers ; and they conclude by praying for a "a repeal of the corn-laws and protecting duties generally," and for the "dissolution of Parliament." Your Majesty's petitioners," they say, "conceiving that the present Parlidment was called under circumstances wholly different
from those which at present exist in this country, and, moreover, that events have occurred to enlighten your Majesty's subjects with respect humbly implore pour Majesty to exercise your royal prerogative to dissolve the present Parliament, and convoke a new
Parliament that shall legislate in accordance with the great changes in opinion which have, under the teachings of experience, taken place within the last two years. similar meeting was held at releach, about tweive miles about 70 farmers. After passing resolutions condemning the recent outrages, and pledging the farmers present not to attend any nightly meetings, a petition to the Queen was adopted, praying for repeal of the Tithe Commutation Act, and for permission to manage their own poar. They also pray for some measure which shall restore harmony between landlord and tenant, charge rates and tithes upon the land, and after expressing a desire for an reciprocity, they conclude by praying for a dissolution of Parliament, \(a^{\text {s }}\) by the present Parliament they cannot bring themselves to think that
Dover.-We last week noticed the account of the Saffolk. The Dover papers have since stated that the salutes at Tréport (upwards of seventy miles off) were heard at Dover on the 2d. The report was heard at five
o'clock, which, allowing for the time required for the
sound to travel the distance, exactly corresnonds with the sound to travel the distance, exactly corresponds with the time of her Majesty's arrival in France. They also state that during the time of the battle of Waterloo, the roar of the cannoa was distinctly heard at Dover.
Grimsby.-The Duncannon steamer has been rescued from her perilous situation on the sands near Spurn not so much as was feared. It was supo damage, but keelson was broken, and that, from the serious injury she had sustained, no hopes existed of her being got off. Her owner, however, went down with four vessels, chains, and other requisites for raising her immediately, and and Halifax.-On Monday week a meeting of the woolcombers was held in this town, at which resolutions were agreed to, declaring the propriety of equalising wages, and On Tues on the masters to assist the men in that object. two firms at Sowerby-bridge, and solicited an advance, which was refused. The men then returned to finish up their work, intending to take in their combs, with a determination not to resume work until they have accomplished an equalisation of wages.
Hudder sfield.-A meeting was held in this town on the memorial to thin Constable in the chair, to consider a mitted to them by Dr. Sleigh, of Brill House. About 5000 persons were present. Dr. Sleigh said that, perceiving that sessiou after session of Parliament, whether under Whig or Conservative management, terminated without doing anything to relieve the wants and necessities of the great masses of the suffering population of these realms, he had determined to take a tour through the manufacturing districts, in order to submit to them a measure which appeared not only to him, but to many others more experienced than he could be, the only efficient means of rescuing not only the operatives of the land, but the manufacturers, merchants, and tradesmen, from the impending ruin which threatened to overwhelm them. He was not sent there by any party, nor did he come thare for the purpose of advocating the interest of the operative to the detriment of his employer. Neither had he come for the purpose of exciting unfriendly feelings between them, or making them discontented with their employers. His only object was that the working classes of this country might have a fair day's wages for a fair day's work; and if they did not obtain this, it would be because they were not sufficiently united amongst themselves; because if they joined hand in hand in sending their voices to the throne, he had every receivel. After the petition would be most graciously petition, from which the following are extracts :"That as manual labour is the only capital of the working classes, and the great source of national wealth, it is unjust towards them, and impolitic towards the nation at large, unprotected. That in the midst of immense wealth hundreds of thousands of your Majesty's loyal subjects are destitute of the common comforts of life; wages having been, from time to time, through cupidity, soreduced that at length the reward of labour has ceased to be, in this country, equivalent to the procuring even the necessaries of life; and this even in what have been termed prosperous times;
so that while some were creating sast fortunes, the working classes, by whose labour those fortunes were made, have been rendered, by a reduction of wages, unable to purchase any of the comforts, and vast numbers of them unable to procure even the necessaries of life. That your Majesty's petitioners ask no exclusive privileges, but such as yould be beneficial equally to all ; nor the adoption of any mesures but such as justice demands, sound policy incule peratively require. While your Majesty's netitioners do peratively requin on the merits or demerits of the Corn Laws, they desire most unequivocally to declare Corn Law, that while labour remains unprotected if those those laws weres never be restored, but their condition laboung and worse, and consequently agricultural manufacturing, and mercantile affuirs still more embarrassed. They therefore most ardently trust that the first step taken by the Legislature prior to any further advance in the theories of free trade will be to protect the operative classes of the community. Your Majesty's petitioners do therefore most humbly pray that your Majesty will be graciously pleased to command your Majesty's Ministers to take this all-important subject into their immediate and serious consideration, so as to devise some means by which the laborg classes may be extricated trox theye fors they have been exposed for years, in consequence of labour being unprotected- 1 n consequence of the gradual withdrawal of protection from British industry.and in conness, cupidity, and avaricious competition." Various persons spoke in favour of this petition which was ultimately adopted, only six laands being held up against it. Isle of Man.-From the latest inteligence, it is ascertained that the pleasure yacht of Mr. Gawne, of Kenprisoners who lately escaped from Castle Rushen gaol, was scuttled by them off Bangor, North Wales.
Monday took on board Lord Yarborough steamer on gentlemen at Ryde, to convey them round the Isle of Wight. All went well till they reached Scratchall's Bay, rock; fortunately the Ruby steamer, which had a pic-nie
party on board from Cowes, was near enough to see the accident, and sent her boats to take off the passengers.
The steamer's forefoot was knocked off, with other damage, but she has since been got off; fortunately the wind was off the shore.
Knuts ford
Knutsford.-A meeting of the farmers, labourers, electors, and other inhabitants of North Cheshire, was held here on Monday, to hear addresses from Messrs. Cobden and Bright, as a deputation from the Anti-Cornlaw League, on "the operation of the corn-laws upon notice had been given of the meeting, and invitations by placard and circular had been given to every furmer, with agriculture in this division of the county. Mr. E. D. Davenport, of Capesthorpe, took the chair, who opened the proceedings by advocating a small fixed duty, to decrease at stated periods, and finally to cease in two or
three years. Mr. Bright and Mr. Cobden then addressed the meeting at great length in favour of a total and immediate repeal. Mr. Cobden read a copy of a Cheshire
farmer's lease, which had been put into his hand, and said, farmer's lease, which had been put into his hand, and said, the first place, it reserved " all game, fish, and rabbits." Then the farmer was "not to have in tillage, in any one year, more than one fifth part of the premises-summer work and potato ground included; the
to exceed one statute acre. He was not to take more than marling or liming the land while under the said cousse of marling or liming the lapd while under the said carrse of premises, nor to break up any of the ancient meadow land, nor to use any soot as manure, nor to s0w any vetches,
nor to mow wrore than once in any one year, nor to sow any wheat or rye on the brush, nor without a summer fallow ; nor to sow any hemp or flax, nor to break up or
mow any pasture land (excent the meadow and bonedusted land), in rotation and due course, and lay the same down with good clover and hay grass seeds at the end of considered as pasture, to embrace a stock. To imbarn or stack and consume on the premises all the hay, fodder, straw, and not to expend all the manure (except such as is used for rotation as aforesaid), arising from or to be grased from the premises ory." Now what would be said to the manust laid down onfold take a mill on such be said binding bim to use the old machinery without improvement? If this were to be done, the manufacturers would soon be in the condition of the farmers. He concluded by farm, the produce of which brought in 5351 ., and of which he said 360 ?. was swallowed up for rent alone. Mr. Henry Swinborne, of Knutsford, then moved the following resolution, which was carried unanimonsly:-"That in the opinion of this meeting the principles of free-trade are in welfare of mankind; and that all laws which interfere with the free intercourse of nations, under the pretence of protection to the agricultural, colonial, or manufacturing interests, ought to be forthwith abolished."
Lancaster.-On Saturday, Messrs. Cobden and Bright visited this city to address the agriculturists on the effects of the Corn Laws. Although a market-day was chosen rists attended, the bulk of the meeting being people rists attended, the bulk of the meeting being people
belonging to the factories. Mr. R. Bateman, an extensive belonging to the factories. Mr. R. Bateman, an extensive
laudowner, presided. Mr. Bright and Mr. Cobden addressed the meeting in favour of free trade, after which it was resolved unanimously-" That it is the opinion of this meeting that the principles of free trade are in accordance with the laws of nature, and conducive to the welfare
of mankind; and all laws which interfere with the free intercourse of nations, under pretence of protection to the corn or manufacluring interests, ought to be promptly
abolished." Upon the motion of Mr. Livesey, of Preston, vote of thanks was given to Messrs. Cobden and Bright, for their addresses, and their kindness in coming to address he farmers of North Lancashire.
Leeds.-The local papers state that while Mr. O'Connor recommends Dr. M‘Douall as a fit and proper person M'Dousll should hang himself on the first tree that pre gents itself, as he is an idle demagogue, who by his firebrand speeches puts the necks of his dupes into a halter, while he keeps himself out of danger." This difference of opinion as to Dr. M'Douall's merits has caused a rupture between Mr. O'Connor, the proprietor, and Mr.
Hill, the editor, of the Northern Star, which has ended in the dismissal of the latter.
Leicester.-Last week two of the metropolitan police apprehended at Waltham fair, near Melton Mowbray, a horsedealer, named John Britton, charged with committing a highway-robbery, accompanied by violence. It appears that about 16 years since, a robbery was committed on a farmer returning from market at Wells, in Somersetshire, when such violence was used, that he was left for dead, several blows having been, inflicted, and his mouth stuffed with clay. After some time a gipsy named Burton was apprehended, convicted as one of the parties implicated, and executed, From that time till about three weeks since no clue was obtained to the other parties, when the shire man, now in London, was recognised by a SomersetJack," one of the of the metropolitan police, as "Gipsy was made to the authorities at Wells, and the prisoner Was traced and appreltended. On being aeized he said, Burton," the name of the man who was executed. Upon searching his person, \(100 \%\). in bank notes were found, and
several sovereigns, besides a large string of horses. After the necessary forms had been gone through, he was conveyed by railway to London, on his way to Wells. Much prisoner, who had been known and respected in his line of business for 16 years, in the course of which he had accumulated a respectab'e competency. Last year he had a conge draught of horses, and there suly the army with a the neighbourlood that be had at any time formed improper connexions.
Liverpool. - The proprietors of the Bank of Liverpool recently held their 12 th annual meeting. The net profits were stated to be 56,0002 ., out of which it was proposed to pay the leave a balance to be added to the reserved fund upwards of \(5,000 \mathrm{l}\). The bankers of Liverpool have signed an undertaking to close their establishments on Saturdays alarm has been excited by the sudden disappearance from the Adelphi Hotel, in this town, of Mr. Dyce Sombre, a native of the East Indies, who married the danghter of Court of Lunacy. About ten days ago Mr. Sombre arrived in Liverpool from London, accompanied by a physician and three servants, and put up at the Adelphi
Hotel. The object of his visit was change of air and scene. It appears that about four o'clock on Thursday morning, he came down stairs in his night-dress, opened
the hall door, and went out. He has not since been heard of. It is supposed that he took with him a considerable sum of money, and that he has fallen into the
hands of thieves, who are keeping him locked up until his gold has been exhausted.
Maidstone.-A corporal of the 58th Regiment, named Henry Donelly, was accidentally shot in Brompton barracks on Saturday, while at his dinner, by another corporal, named Thomas Lawrie. The deceased had, on his return from Maidstone gaol with"a prisoner, forgotten to draw the charge in tis musker, and on Lawrie entering the barrackoff and shot him. The thinking and the jury at the inquest being satisfied that it was an accident, returned a verdict to that effect.
Margate.-The competition among the steamers from London to Margate has been so great, that some of them have begun to carry passengers for one shilling each, and embarking; two shillings each is charged for the return voyage. It is expected that the fares each way will be only sixpence next week, and the owner of two of the boats has threatened
Margate for nothing.
Margate for nothing.
Norwich. -The local papers state that Norwich Cathedral has this week assumed a new appearance, its spire being converted into an observatory, for the purposes kingdon, by order of the Board of Ordnance. A party of sappers and miners has arrived, and have commenced their works, by carrying a scaffolding up to the top of the
spire, from whence they will take their observations. The weather-cock is taken down, and its place will, for the
present, be supplied by the instruments used in the surveg.

Oxford.-The Rev. Mr. Newman, one of the editors
Tracts for the Times," has tendered his resignation of the vicarage of St. Mary's, Oxford, together with
other preferments he holds, to the bishop. Since the publication of Tract XC., Mr. Newman, it is said, has been subject to much annoyance from the University, and
the heads of the respective colleges have exerted themselves in prevailing upon the young men under their charge not to attend Mr. Newman's sermons. Other resign his benefice, but the one mentioned is stated to be the principal.- The Rev. James Norris, B.D., late Fellow of Corpus Christi College, and President elect, was admitted and installed on the 21st with the accustomed ceremonies into the presidentship of that society, vacant by the death of the Rev. Dr. Bridges,
Portsmouth.-The three pilots engaged to conduct back to Treport the French steamers which formed part of agreeably surprised, on their return to Portsmouth on deanesday week, by being presented with an order to draw on the French Consul for sums which may be reparatively trifling nature. The first was authorised to receive 24l., the second \(23 l\)., and the third \(21 l\).
Ware.-In consequence of the resolution agreed upon at the last vestry meeting, to quit the church immediately after the reading of the Nicene creed, a number of persons from Hertford and other places attended Ware church on Manday last, for the purpose of witnessing the scene. Many of the usual atsendauts were absent, and their At the appointed time, just as the curate was proceeding to the pulpit, about 100 persons, comprising a large proportion of the most influential inhabitants of the town, portion of the most infuential inhabitants of from their seats and quitted the church. The strangers remained in their seats, so that a tolerably numerous auditory was sermon to the existing differences.

Wetherby.-The annual meeting of the Wetherby Agricultural Society took place in that town on Wednesday week. The show of stock, of all kinds, was the largest and
finest that has been seen since the establishment of finest that has been seen since the establishment of the society in 1840. The annual dinner of the society took place as usual in the Castle Garth, where a apacions
pavilion had been erected. The Earl of Harewood, Prepaviion had beed erected. The Earir ofter the usual
sident of the Society, took the chair. After
toasts, Mr. Lane Fox returned thanks for the Vice Pre sident, and subsequently for the successful candidates Mr. Dent proposed "The Agricultural Servants and Labourerg. He wished to draw attention to this the last link in the chain of rural life, still not the least important, the agricultural labourers. They were the basis of all thos things of which they had heard to-day. It was a mos gratifying thing in rural life to see a well-ordered popuregarded himself as the head of the community and endeavoured to draw the link closer and closer between the abourer and the employer. He knew from experience that during the last winter the privations and suffering of the honest industrious low arer ond s these periods of distress were constantly recurring, it was the duty of both occupier and proprietor to rende whatevpr assitance was in their power, kither by improve ments in draining, or works of the like sort, which he was conital employed, but would afford labour, and conse quently money, to the labourer. And he was satisfied that if this was more attended to, it would be productive of great advantage the the three classes of the communitymended greater teDant, and the labourer. He recom dwellings of the atrention to the construction of the omfor ing them whe they were susceptible, and also in afford latter smail plots of Jand for cultivation. How far this he didomi should be carried out was an open question guantit know whether they should have a greate quantity than a rood or half an acre, or whether every cotager should be enabled to keep a cow; these were matters that experience would determine; but to improve herr condition was to strengthen the hands of the farmer pace point of view. Improvements were going on not to leave the acricultural labourer in them take care They wanted their minds enlarged ; and he thought there were some small farmers who were also in need of improve ment. Many of them kept their sons at home, who, no having had the means of observation and experience else here, follow in their steps, and do nor make that advance ment in the cultivation of the soil that they ought to do The toast was drank with three times three, after which Mr. Ferrand, M.P., said that as an humble labourer in the country, he had been requested by the commitle to this to the toast which had just been drank ; and on behaff of the labourers of this countuy benld beg to retura for the Christian, the Euglish, the old English which the lad just now which they had just now heard uttered by Mr. Dent ; for kept happy, peaceable, contented, and prospervus, England must soon sink into oblivion, destitution, and misery. It must soon siok into oblion, des and prisery. labour that they were indebted, from the lighest to the lowest, for every blessing which they enjoyed. And be was sorry to say that amidst the comforts and blessings which Providence had showered down upon them, they were too apt, as a people and a nation, to forget the
labourers of the country. God had declared that should earn his bread by the sweat of his brow, and should earn his bread by the sweat of his brow, and be had allotted stations like them, the means of bringing that labour into active existence; and he felt convimed chat although the labourers themselves were not now present to plead their cause, be had no occasion to make any strenuous appeal to their charitable feelings for the adequate exercise of those charities which were alike honourable to the rich, and merciful and kind to the poor. He cared not whether the mabufacturing or the agricultural labourer was in distress; they were both our fellow-countrymen, and they had a sacren public duty to perform towards them; if they did not wish to see this country the most degraded upon earth, they must suve them from want. How was that to be done? diey knew tast continuing to reduce wages to the lowest level was not the way; they all knew that enable the working-classes of this country to be, as usual, a happy, moral, contented people in the land, they must rescue then from their present degradation by an hour to spare; the emergency was more frightful than many now calculated upon, Hunger would break through stone walls, and the people of this country had borne their humility with a degree of forbearance and Christian world. He wished not to use one expression which was unfair topards their employers, but, having been deputed to reply to this toast, he had no desire to shrink from upon the the cuty, Mr. Ferrand went on to enlarge as the stewards of the devolved upon landed proprietors, of taking care of the prope fore some length upon the advantages afforded by the allotment system, and commended to public attention the late report of the Commons' committee on that subject

Whitehaven. - A collision has taken place between the colliers who have struck in Lord Lonsdale's collieries and those who were willing to work on the conditions laid down. On Thursday week, Lord Lonsdale's agent applied to the magistrates for protection, the result of which was a despatch to Carlisle for military assistance. A company of the 82d Highlanders immediately marched in to White haven constan were sworn in as special constables. The leading rioters have been appreWindsor committed for trial.
indsor,-On Saturday morning Prince Albert, accompanied by Prince Hohenlohe Langenbourg and Mr. G. E. Anson, shot over the Royal preserves near Flemish Farm, in the Great Park. The birds were very numerous,
the greatest care having been taken to breed and preserve hem since last season, and exceedingly strong on the the Farm, his Royal Highness bagged 13 brace, and Prince the Farm, his Royal Highness bagged orinkling of hares. Hohenlohe five brace, besides a fair sprinkling of hares. From the immense number of pheasants which were seen in this portion of the preserves, first-rate sport may
Raicipated by his Royal Highness on Monday following are the returns for the pas week:-Birmingham and Derby, 1,524l. 7s. 1d. ; Bir mingham and Gloucester, 2,212l. 16s. 10d. ; Eastern
Counties, 2,991l. 3s. 2d. © Edinburgh and Glasgow

 Come Blackwal Company and conveying passengers at Company, for the purpose of conveying passengers at a cheap and expeditious rate between Lonaon and Woolwich,
every quarter of an hour. The fares each way throughout every quarter of an hour. The fares each way throughout are to be, first class, \(8 d\); second class, 6 d , each passenger. The fares to Woolwich will be collected at Fenchurchstreet, or any of the intermediate stations. By this arrangement the journey from London to Woolwich will be performed in 25 minutes with the tide, and 35 minutes
against tide, giving an average passage of lalf an hour.

\section*{IRELAND.}

Dublin.-Mr. J. Primrose, of Cahirciveen, county of Kerry, agent and relative of \(\mathrm{Mr}, \mathrm{O}^{\prime}\) Connell, has been superseded in the commission of the peace, by order of the Commissioners of the Great Seal.-Some important law changes are understood to be in contemplation, which will
be definitively arranged before the opening of Michaelmas be definitively arranged before the opening of Michaelmas
Term. Mr. Baron Pennefather retires from the bench, chiefly, it is stated, on account of the impaired state of his sight. According to some accounts, Mr. Smith, the Attorney-General, succeeds Baron Pennefather; Mr.
Wilson Greene becomes Attorney-General ; and Mr.

Brewster Solicitor-General. According to others, Mr. Greene is to succeed Baron Pennefather, the Attorney General declining to take a puisne judgeship, but preferring bis chance of a chier's place.-Lord Eniot, on hearing of the recent arrival of Father Mathew in Dublin, sent a equest that the reverend gentleman would take up his residence in his house, in the Phoenix-park, during his stay in this city. Father Mathew soon after proceeded to the Castle, to thank his Lordship for his invitation, Fhich, however, previous engagements had precluded hic between the Protestant operatives of Cork and Lord Eliot, on the subject of bells in Catholic chapels, the operatives having sent in a memorial a a ainst the intended erection of bells in the Roman Catholic Chapel of St. Paul, Dublin. Lord Eliot in reply states that a similar representation was lately addressed to their Excellencies by the Dublin Protestant Operative Association, and that the legal adviser of the Crown having been consulted on the subject, is bells in Roman Catholic Chapels.--At the adjourned meeting of the Roman Cathonc Pi M J O Connell said
 W. Cor W. Conser, lad society. The letter brisy the general repudiation wich has a non-payment of all rents and taxes had met with on the last day of meeting, he begged leave to tender his resignation. Mr. J. O Connell said hat Mr. Con . beforehand with him, as, unless he retracted his proposition, it was his intention to have moved the erasurion had Connor's name from their books. That motion had become unnecessary, and he was now satisfied to the matter drop without further comment. He thought that under the circumstances Mr. Connor had been treated ne consideration. doctrine of non-payment of rent, and that so did the Association. They contended that property had its duties, but they did not deny that it had also its rights, with which they by no means sought to interfere. The ordinary meeting of the Association tonk place on Monday. Mr. Daunt handed in several sumas from Ulster, and announced that balf the contributors were Orange men. He next referred to the Repeal meeting in Liverpool, and said that the council of 300 would be sitting, and in full operation, before New-Year's-day. Mr. Hay then read a letter from Lord Friench, accepting the office of arbitrator in his district, another from the very Rev. Dr. M. Guinness, of Clones, inclosing the names of the Hon, Thomas Firench on the same subject. These documents were ordered to be inserted on the minutes; after which the secretary proceeded to read letters from various parts of Ireland, all of which stated that the appointment of arbiMrators had already begun, and was progressing rapiny Mr. S. G list of the absentees, the sums drawn out Ireland by them, and an accouut of the sums which were remitted back to this country by them in the shape of charities, and other ways. He considered this a very important motion at the present moment, and there could be no difficulty in getting materials for their report. He believed that the absentee-druin approached very nea could expect nothing but misery and destitution. In conclusion, Mr. Gordon proposed his motion, which was clusion, Mr. Gordon proposed, has carried unanimously. The repeal rent for the week was 6897. 118. 6d. An adjourned meeting tosentl. The chief feature of the proceedings was Mr. O'Connell's attack on Mr. Connor, whom ings was Me proclaimed ss the political enemy of Ireland, and inhe proclaimed as the poincablicly erased from the books, which was unanimously agreed to
Cork.-The three flag-ships, St. Vincent, Caledonia, and Camperdown, anchored off Cove on Friday, with the Eurydice frigate. The vessel bearing the flag of Admiral Bowles saluted the flag of Sir C. Rowley, Admirral of the squadron, by seventeen gung, which There are now 4 similar alute from the st. Cove. It is expected that the Admirals in commission at Cove. intil 10th October. ships will remain in the harbour until al meeting wa
in this place- Sunday, Sir B. Morris of Waterford in the chair. The first resolution, condemning the Queen' speech and the policy of Governm Mr, R. A. Fitagerald of R. Musgrove, and seconded \({ }^{\text {Muckridge, one of the recently dismissed magistrates }}\) Mr. Meagher, son of the Mayor of Waterford, moved the second resolution, declaring that the imperial Parliamen is unable to legiblate benencially for Ireland. Mr. O'Connell spoke at length on the various topics connected wita Repeal. He said, "though be was offered place and pension, and the highest onghed the offers to scorn and would do so again. He had the people's love and confidence, and he believed there was vo love lost between them. He wanted them, therefore, as they were ready, a little too ready, to keep quiet. The stage-coach of the constitution was going down the hill too rapidly, and he wanted to put a drag upon the wheel. Let hem behire them. Their keeping and safety were in his hands, and he would consent to the shedding of no man's blood save his wown , but they might depend upon his taking them safely owa, torour He had his plans maturing, and was prepared to to him. them by degrees, and before they again beheld him, deliver would find that he had advanced the cause. But they were in danger, and as he supposed they were not
aware of it, he would tell it to them. It was told him by an excellent friend, a clergyman. It was nothing less than clerg by payin to them 600,0001 per panm. The clergy by paying them 60,000. per annum. They an lo briests. Why an excellent plan, the suiracy in every parish. Why there would be a conprith in every parish, and the priest would finally get nothing at all; so the clergyman heartily over it. - It could never come to pass. The heartily over it. It coutconle, and the people bad stood by the priests, and both combining were sure to obtain liberty and prosperity for Ireland. He called on them to stand by him and take his advice, for he never deluded nor deceived any man. He would instruct them as to the mode of obtaining their indeped , and shour po moral, the temperate people of freand should possess their rights again." In the evennug a monas given to Mr. O'Connell, at which Mr. Fitzgerald of Muckridge, presided; about 300 persons were present. Mr. O'Condell said that he feared he should aoandon his avocation as an agitator, for the people and the clergy were going pupils were overtaking him. Heretofore his duty bad been to excite-lt was now to moderate. It was now his duty to regulate the vigour and temper the energy of the people-to compress, as it were, the exuberance of both, springing though they did from their love of country. He had sufficient force at his back, moral and plyssical, to insure success. The Tury newspapers were urging him on faster than he was willing to go. Like the barrister who said to the witness, 'Rascal, why don't you
say something I can lay hold of?' his enemies were angry that he did not give them an opportunity of pouncing on him. He defied them to go to war, and now reck the jury he must ha with him. If they did not prack the jury he must be acquitted, for he had committed no would make a martyr of him, and if they made a may would make a martyr of him, and if they made a to quit the lople (The comen re in a to quiet the people. (The company here rose in a body, hats for some minutes.) They might put him into hats for some minutes.) They might put him into frison; they would thourd make moderate men violent, and or they would thereby make modera men from that spot he defied them to go to law with him."

Edinburgh-The Edinb
Edinburgh.-The Edinburgh Witness states as an
 of the deputation at the Surrey Chapel meeting:-"John Thorogood. who is present, says he will cheerfolly give to the Free Church cause the 5 s. 6 d , he refused to pay as church rate, and for the not doing which he was imprisoned twenty-two munths in Cbelmsford gaol. Surrey Chapel, 18th August, 1843."-The local papers mention of Cas whel roof on Tues day week, after a long absence, and that the inbabitants or invergordan resolved to meet him in procession, and greet him with a suitable into two unfriendly parties, each furnished with an dd Mr. ce Gregor, blake , idrese which was apeedily snatched out to reads and torn to pieces. A non-intrusionist made a similar attempt attended with a like result, when a ra similar atempt ented in a manner fatal to several coat-tails and hats.-The papers announce the death of Professor Bell, professor of Scotch law in the University of Edinburgh, on Saturday last, after a protracted illness. Mr. Bell also held the office of one of the principal clerks of session. Ayr.-The visit of Colonel Burns, second son of the poet, to his aunt, Mrs. Beggs, at Bridgehouseocottage, last week, has given rise to a proposal, that, as the three surviving sons of Burns are an at present acotland, they ought to be invited to a pubilic entertainment on the banks of the Doon, at as early a period as the necessary preparations will admit.

\section*{SATURDAY, OCTOBER 7, 1843.}

IT is quite annoying to an admirer of good farming to go along the roads and by-ways in the country at this time of the year and see the abundant crops of winds carry into the fields with such great impartiality, that the farmer who has expended considerable sums in clearing his fields of these disagreeable occupants has as good a chance of being overrun with them next year as he who has slept and let the weeds take their chance. Every farmer knows that a Thistle or a Dock in a Wheat-field usurps the place and food of many
ears of Corn. Wherever Thistles thrive, the land will grow good Wheat ; hence the saying of the blind man, "Tie me to a Thistle," when he was choosing his land: but there is no necessity for allowing this sign of fertility to be always conspicuous. In some countries there is a law compelling farmers to cut down and destroy the Thistles in their fields before they ripen
their seeds ; and when we consider how easily this might beds; and when we consider how catting them down when they have expanded their blossoms, in which case they will assuredly die off, it appears incredible that they should be allowed to seed the fields for miles around, as they now do in many places. They are kept down in the pastures and meadows, and more or less in the cornbut how few farmers think of weeding their hedgelows and the strip along every ditch, which the plough leaves unstirred, and which every careful farmer
should invariably have dug up. In well-cultivated countries, where the spade is a great help to the other agricultural instruments, to make a field look like a garden the land is generally sloped down into the ditch, and cultivated with the spade where the plough cannot go, so as merely to leave a course for the water at weeds, and forms a barrier to the water, which, after a heavy rain, should run into the ditch, is never seen, and the headlands, where the earth accumulates, are levelled down, to carry the superfluous earth into the hollows. where the water might lodge. If this were for weeds, would become productive. The hedge-rows in many of the old inclosed lands in England are be believed, unless the whole were grubbed up and the ditch filled in. Theoretically, the ditch takes three feet and the bank three, and the bottom of the hedge is confined to the side of the bank nearest the
ditch; but, in fact, two feet are lost by the side of the ditch; but, in fact, two feet are lost by the side of the go nearer ; and if the bank be examined on the other side, it will oftener be found to extend six feet than thedge ; besides, the roots of the Thorns, of which the ploughed composed, spread out farther into the ploughed land than the farmer is aware of-to say the hedge-rows, and extend their suckers without mit,-unless the tenant has the sense to keep a ditch dug out on both sides of the row: but this again takes up ground; and the interval between the two ditches often a perfect wilderness of weeds. The reducing betwaste of land caused by old hedge-row is atter he will give and additional rent, where he is allowed o clear them of trees and substitute a covered drain for the ditch, and fully compensate the landlord for he loss in the increase of hedge-row timber, for we are fully persuaded that for every cubic foot of timber Which ihe landlord cuts down after a number of years, the annunt has lost the value of many cubic feet, in those parts of England where hedge-row timber abounds, when seen from an eminence, cannot be denjed: nor would we disfigure an estate by cutting down all trees in hedge-rows. But where inclosures of five or six acres are entirely surrounded with trees standing too close to grow, and only keeping the sun and sir from the fields, the look of the country would be much improved by devoting some small irregular perly managed, it would pay a good rent: while if proinclosures maged, it would pay a good rent: while larger them, at a distance of acres might have trees round would at a distance of 30 or 40 feet apart, where they Would in time be ornamental as well as profitable, ithout injuring the crops by their shade.
But we have been led away from weeds to trees,
not very unnaturally, for trees are permanent weeds, and affect crops as well as lesser weeds, with this
difference, that the farmers cannot remove them. To return to Thistles: we would suggest if no law could be framed to meet the case, that the occupiers of land in a parish or district, should agree to clear their herlgerows of all pernicious weeds-especially those whose seeds are carried about by the winds-and submit to a fine, if any weeds are found on their land or in the hedge-rows at the time when their seeds ripen. Or perhaps a better plan would be, to empower the surveyors of the roads to employ old men and women, who receive relief from the parish, to clear all the sides
of roads and hedge-rows of Docks and Thistles, and to of roads and hedge-rows of Docks and Thistles, and to burn them, paying the expense out of the highway
tate, or, if that be not legal, to make a small rate for this especial purpose. In many parishes abounding in hedge-rows, the cluurchwardens were accustomed to pay a certain premium for the heads of hedgesparrows ; but sorne conscientious opposers of every irregularity found out that there was no law for this;
the sparrows increased ad libium, and it was found the sparrows increased ad libitum, and it was found club, and pay for the heads as before-so there might be a weed-ciub, much to the advantage of those who love clean crops. The general destruction of the weeds which most infest crops can never be effected but by the zealous co-operation of all the occupiers of land, and this, perhaps, may in many cases be impracticable without a special law made for the
purpose. Wolves have been carly destroyed in England hy an old law as it is said ; but the damage caused by a few wolves killing sheep is a triffe to the loss occasioned, year after year, in the Corn crops by the rank weeds, which might so easily be exterminated if the seeds were prevented from flying all over he country for miles around, owis of some small occupier of land who does not know his own interest and cares not for that of his neigh-
bours.-M. .
IN March of the present year we directed attention to a mode of growing plants in very large pots, with-
out taking the trouble to shift them gradually in the manner usually practised; and on some subsequent occasions we insisted upon the expediency of adopting this plan when the best possible cultivation is sought after. At that time we were not aware that Mr Wood, the experienced foreman in the Nursery of Messrs. Henderson, of Pine-apple Place, was the puroon to whom the promotion of the practice was
principally owing; but as he has since that time stated his own views on the subject in two elaborate papers " "Paxton's Magazine of Botany," we have thought it desirable to reprint them in our own columns, wheh with Mr. Paxton's permission we commence doing We have been the more anxious about this because some gardeners fail in their application of the system, ither from want of skill, or from a misapprehension of the principles on which it depends, or from both and because the papers themselves will form the best of
all introductions to some communications on Cultivation with which we have been favoured by Mr. Wood himself, whose correct physiological views and great practical experience render them particularly valuable.

Ovr readers are, doubtless, aware that luminous appearances have been occasionally observed on certain plants, and that physiologists admit the presence of phosphorescent properties in vegetation. Fungi, in particular, are reported to possess such qualities. Cer-
tain Rhizomorphas are said to be so luminous as to light up the mines where they grow, as if the rays of a feeble moon were playing on them; and the Agarics of the Olive-grounds are said to behave in a similar way in the south of Europe. The younger Linnæus also reports that the flowers of the Nasturtium, the African Marygold, the Orange Lily, and other orange flowers, exhale, at the end of a hot summer's day, intermittent phosphoric discharges, which resemble little flashes of light. Such appearances as the last have, however, been sought in vain by ourselves and others; but it appears," at Cork, that the phenomenon has been observed by an Irish gentleman.
Mr. R. Jowden is said to have made mention of luminous appearance on the double variety of the common Marygold (Calendula officinalis). This circumstance was noticed on the 4th of August, 1842, at eight, P.M., after a week of very dry nomenon; by shading off the declining daylight, a gold-coloured lambent light appeared to play from petal to petal of the flowers, so as to make a more or less interrupted corona round its disk. It seemed as if this emanation grew less vivid as the light declined; it was not examined in darkness. The single kind is not suited to examination, because it "goeth to sleep with the sun," and has not the disk exposed to observation.
When, however, this matter was discussed, Dr

Allman expressed his opinion that the phenomenon was not at all due to phosphorescence, but it was referable to the state of the visual organ, as he thought had been satisfactorily explained by Sir David Brewster. If it were phosphorescence, it would appear
brightest at night, and it would be expected to in other plants than those of an orange or flame colour. 'This led Mr. Babington to mention that he had seen, in the south of England, a peculiar bright appearance produced by the presence of the Schistostega pennata, a little moss, which inhabited caverns and dark places, but this too was objected to by a member present, who stated that Prof. Lhoyd had examined the Schistostega, and had found that the peculiar luminous appearance of that moss arose from the presence of small crystals in its structure, which reflected the smallest portion of the rays of light
It would be interesting to examine this matter with more care than has hitherto been bestowed upon it; and we should be glad to know whether any of our readers can mention cases of vegetable luminosity riinessed by themselves. We confess our doubts as to the fact of crystals being present in the moss, whose illumination was mentioned by Mr. Babington, but we have no access to fresh specimens for examination.

AN OUTLINE OF GAVIN CREE'S, (of Biggar) SXIEM OF PRUNING FOREST-TREE
Chronicle of Sept. 10, headed "Encouragement to Planters," wherein the author appears to have many correct
views, but otherswhich I think are notaltogether consistent with the princip of V with the principles of Vegetable Physiology, I have inclosed you an outine of Cree's system, written by him, which I which I have found the most beneficial effects.]-J. M . Nasmy, Ban
To cultivate wood on physflogical principles it is necessary to have a knowledge of the organs which constithe various function external structure of trees, and of the various functions these organs perform through the instrumentality of external agents. Trees are generally treated us if they were mere inorganic matter; they are operated on as the proughman operates on the ground, or as the carpenter and blacksmith on the wood or iron under cheir hands. Many eminent men have written treutise on Vegetable Anatomy and Physiology, and many bave promurgated their notions on the pruang of Forest-trees, while neither party understood how the science of Vegetablo pruning growth and bealth of the tree. There is in trees, as in tions. This power is the agent by which the ascent and descent of the sap is produced, and certain internal and external causes facilitate the exercise of this phenomenon of air, heat, light, and moisture, and the system of operating on the lateral branches by shortening them.
I shall give an outline of the principles which led me to the conviction that the system of prunivg by shortening of years branches, which is calculated man any other, to fecure for the benefit of the tree an extra nourishment.
The organs of nutrition and vegetation have one common bject to support, zamely, life in the vegetable, and the nical means. In order to use these means in a way to assist naiure, some knowledge of the physiology of plants is requisite. Either the operator or the superintendent must understand how the organs exert their functions therwise they cannot reasonably expect to be successful The different processes of the sap (or vegetative blood) The different processes of the sap (or vegetative blood) growth and vigour are sustained. The sap is acquired and influenced in divers ways. In spring, the small sponcelets or extremities of the roots absorb the fluids and gases from the soil, which are conveyed by an inherent power depending on the life of the tree; or, more properly, the ascending sap is acted on through the roots by atmospheric pressure; up through the capillary tubes, till it reaches噱 nd expanding leaves. ares ant the branches, mingles with the and the leaves, and, losing the watery and aeriorm principles, Which are useless for nutha, by ern cambium, which forms the annual rings of wood; then extends to and strengthens the extremities of the rootlets, Whereby they are made to extract more nourishment from the soil throughout the season, and as the two saps commingle in the leaves, the descending sap, which has not he rootlets, and is again carried up with the escending sop How to economise these fluids for the advantage of the tree is next to be considered. It is obvious, then, that When the uppermost lateral branches are shortened to half the length of the leading stem, and the others proportionally, the sap has less superficies to cover than when they are allowed to extend to an improper lenath and thickness; in consequence there is a creater supply for every part of the tree; and as other flunds sinch as water mowing in a channel, actuite additional in entum whem agmented, sreater vigour and velocity of movemert are imparted to the sap by the abundance of quanti \(y\), and so great is the beneficial effect resulting theretrum to the tree that from the extre sesulug dheath of foliage which clothes the branches, it attracts more than
three times the nourishment ordinarily imbibed from the
atmosphere under different management.
The branches which are shortened always remain slender. By reason of the small superficies of the branch, and the rapidity with which the sap moves, very little of it is retained by the branch; and, of course, nearly the whole is deposited in the body of the tree. This truth, longer on the trees so shortened than on others, accounts for the wonderful rapidity of growth effected by this mefor the wonderful rapiaity of growth effected by this meadvantage likewise when it is necessary to prune close to the stem, as the wound made by that operation is propor-
tionally small, and may be expected to cicatrize in the course of three years.

It nuay be worth remarking that, if the branches are properly shortened, trees never become what is termed instruments for ripping the bark of Oaks (which never could increase nutrition, and for scraping off the lichens; descending sap would have been so augmented through descending sap would have been so augmented through means of a more healthy foliage, as to have olviated the of sap carried down, and if that be abundant it soon clears itself of all impurities. Even mismanaged trees, on which a dryness of bark has occurred, may be brought to a proper condition in the course of three seasons. In
cases of this kind, the distance from the body at which cases of this kind, the distance from the body at which
the branches are ampu:ated must be regulated by the size of the tree--the larger the tree the greater the distance.
It bas been found experimentally that trees under 18 feet in beight and 15 inches in circumference advance, on an average, as much, both in height and circum-
ference, in 6 years, if the branches are properly shortened, as they do in 15 years if these are not shortened or are improperiy pruned. The more trees are pruned up close to the stem before they are 18 feet high, their growth is
proportionally retarded. Trees pruned close to the stem, when the circumference of the part is under 15 inches, take in damp, so that the tree, if dissected, after a certain period at the part where the branches lave been cut, will
be found black info the pith. This department of pruning, when improperly managed, is the principal cause of rot more particularly in the Larch. The reason is, the
wood in young trees is more open in texture than in older ones.
I refer the reader to my Treatises on Thinning and Pruning in the "Glasgow Farmer's Register, 1828" "to Vol. iii. of the "Quarterly Journal of Agriculture," No, XXIX. of the same Work; to "Loudon's Gardeners"
Magazine." Nov., 1841, Jan., 1842, June, 1842 , Sept., 1842, and the "Gardeners" Gazette." 1842, ppo 494, 671 , 703, 718, 766 , and 783 ; and to Sir John M. Nasmyth,
Bart., of Posso, Peebleshire, Dr. Balfour, Professor of Botany, Glasgow, and Dr. Neill, LL.D.

\section*{AMMONIA.}

No person can peruse the writings of the German or the vast importance attributed by them to the employment of Nitrogen or Ammonia as a manure for plants. Liebig says that, with every pound of Ammonia that evaporates, we lose 60 lbs . of corn; and from Boussingault we of a meadow 1001bs. The latter author also gives Tables in which the value of manure is estimated by the proportion of Ammonia contained in it. Since the publication of Liebig's work on Agriculture the attention of Agriculof substances containing Ammonia. But I believe that their success has been by no means equal to the promises held out to them. Liebig has, I think, satisfactorily proved that a certain quantity of Ammonia is supplied to plants by the rain that falls on the surface of the soil; as this is nearly a constant quantity, if plants were unable to
obtain their Ammonia from any other source, it would be obtain their Ammonia rom any other source, obtain the full amount of produce which the soil is obtain the sull amount of produce which the soil is
capable of yielding. But a question arises-What proof capaule of yielding. But a question arises- wate that plants are unable to supply themselves with Ammonia from sources unknown to us? and horv far may the increase of crops, by the addition of substances containing Ammonia, be attributed to that element?
If we observe the practice of the Agriculturists of this
country we shall find that the great balk of manure is country we shail find that the great bulk of manure is
applied to the Turnip crop. The dung which has collected in the yards during the winter is thrown up for some weeks, during which time a large proportion of Ammonia
escapes into the air; but at the same time, the inorganic escapes into the air; but at the same time, the inorganic
matters-such as sulphates, phosphates, \&c.-are reduced matters-such as sulphates, phosphates, \&c.-are reduced
to a state which the Turnip is capable of assimilating. On to a state whish the Tumip is capable of assimilating. On
reading Sir H. Davy's works some years ago, I was induced, and I also persuaded some of my friends, to cart out our manure without previous fermentation ; but after two or three years we were obliged to return to the old I custom, on account of the inferior crops that it produced. Inave since tried the fixing the Ammonia by means of sulphate of lime and sulphuric acid. But the success Which attended these experiments has been so slight as to make it appear to me that the escape of Ammonia in dung dung, each weighing 5 ewt., were placed in separate heaps one had a certain quantity of sulphuric acid added to it, another was mixed with one bushel of caustic lime, the third was left alone, the fourth was converted into charcoal by being burnt in a close chamber, and the fifth was burnt to ashes. The first three remained six weeks before
they were put into the ground ; an equal space of ground

\section*{was sown with Turnips,
in each case nearly equal.}

Lime and ashes of coal and veretables ore used in large quantities as a substitute for dung in growing Turnips; they can only act by the inorganic matter contained in them. Superplosplhate and sulphate of lime are other substances capsble of producing very large crops of Turnips. I found that a field sown with Turnips, and manured, alternate rows, with calcined and unburnt bones, decomposed with the same weight of sulphuric acid, produced equal effect. If we examine the substances containing Ammonia which experience has proved to be beneficial for increasing the amount of Agricultural produce, we shall perceive that they contain some inorganic substance, to which their action may with equal probability be attributed. In Guano we have a
substance containing from one to fifteen per cent. of Ammonia (part of the Anomonia combined with phosphoric acid, and a large proportion of phosphate of lime. This phosphate of lime is in a state similar to that which same as the phosphate of lime in burnt bones, still its effect upon plants would be infinitely superior. The nearly an equal proportion of nitrogen and oxygen combined with a different base; but their effect is known to differ on different soils, and this could hardly be the case if the nitrogen was the substance which produced the effect. On my own soil, nitrate of soda produces a much larger increase of grass than nitrate of potash ; but
they are neither of them capable of producing a crop of Turnips. On the soil where nitrate of soda produced Turnips. of Ammonia, although this salt contains about forty per of Ammonia, athough this salt contains about forty per
cent. of Ammonia. published some time ago, in the Gardpeners' Chronicle, some experiments on the salts of Ammonia. Cabbage.plants were watered every other day with very dilute solutions of the salts of Ammonia; and I have repeated the experiments on a much larger scale upon Turnips; and although the increase of weight for the same weight of the salts has varied in different
seasons, still the value of the salts has always remained seasons, stin the value of the salts has always remained
the same. The phosphate of Ammonia was the best, the same.
then the sulphate, then the muriate; 4 th, nas nitrate; 5 th, then the sulplate, then the muriate; 4 th, nitrate; 5 th,
carbonate. The result of other neople's experiments, I carbonate. The result of other neople's experiments, I
think, proves ph.osphate of Amnionia to be one of the think, proves plosphate of Amnionia to be one of the
most powerful manures known. Sulphate of Ammonia is most powerful manures known. Suiphate of Ammonia is
allways found by those who have tried it, to be a very powerful manure, and the employment of it in Agriculture is rapidly increasing. The muriate has also had a considerable trial, but, I believe, with little advantage, know of no experiments with the carbonate and nitrate; the carbonate that I used was the solid Carbonate of
Commerce; the results obtained from diluted gas-liquor Commerce; the results obtained from diluted gas-liquor
cannot be considered of any value in this ouestion, aह̂ it concannot be considered of any value in this question, afi it conAmmonia of these salts \(p\) hich proves so beneficial, they ought to be valuable in proportion to the weight of Ammonia contained in them, which is as follows:-nitrate, 14 ; nitrogen in the acid, \(26=\) Ammonia, 40 ; muriate, 31 carbonate, 28 ; phosphate, 25 ; sulphate, 22 : in 100 parts. Whether the addition of Ammonia to the soil is necessary or not, it is certain that the employment of it on a son that is deficient in the salts of phosphoric and sulEngland of taking corn-crops so repeatedly from the land, has rendered a great proportion of it very deficient in all inorganic matter; and until this is supplied either by a more extended rotation of crops, or by artificial means, atmosphere will be insufficient for the wants of a crop.

\section*{OBSERVATIONS ON TLE NEW SYSTEM OF} By Wm. Wood, Foreman at Messrs. Henderson's Nursery.

Public competition has of late greatly excited emulation, produced many ingenious experiments, and led to many valuable results, in every department of gardening. Whatever may be the balance of merit and demerit in the influence of Horticurtural exmiotions, it is certain that the encouragement they have held out to practical
men has greatly favoured that large advance which has men has greatly favoured that large advance which thas
been made in the production of fine plants and blossoms. been made in the production of fine plants and blossoms. been produced, because in attempting to attain higher excellence in the ultimate objects of cultivation sigecia attention he the greater has been called to the means of attairm de velopment of bloom
Although the periods selected for public competition are often unfavourable to the timely production of a particusar class of plants, yet this very circumstance has secured a better knowledge of the means of meeting such exigencies. But the same cause has also, in conjunction with the attainment of superior growth, been attended with unfavourable effects in over stimulating growth by an ing plo appication of fillisinture than is favourable to the production of bloom.
Though it is almost universally understood that any course of treatment which tends to cause an excessive exuberance of growth-is unfuvourable to the formation of bloom, yet there are instances of many splendid exotics, in which, without nn immediate application of those principles which involve the requisite treatment for mataring each successive year's growth, the most persevering cultivator will fail to realise those results which the ob-
jects under his care are, with such priuciples in view, calculated to produce. It would appear almost unneces sary to urge a specialatention to this point, which must (in theory at least) be familiar to many excellent practitioners; but, up to the present perind, it las not been unusual to meet with instances of cultivation, which for their splendid growth alone have excited admiration, but which are far from being equally interesting, by the presence of that whicla constitutes the primary object of all cultivation in ornamental flowering plants.
Instances readily occur of plants which, in consequence a tardy development of leaf-buds, have caused disappointment by the scantiness or total absence or bloom and the attainment of several years growth, or some achental cause has tended to retard the circulation of sap diversiry its currents, and has thus induced a disposiarnan form flower-buds. Wistaria sinensis, in the the greenhouse ; and Stephanotis floribunda, Mandevilla suaveolens, Iponcea tyrianthina, and Thunbergia grandiflora, in natural result of lusuriant growth is a partial and uncertain bloom.
As the present test of good cultivation is the attainment of the greatest constitutional vigour within a limited period; and as this test is proved, by repeated instances, to be unfavourable to a uniform development of flower-buds, unless such growth be regulated by principles hereafter to be adverted to, it becomes an inquiry of much interest to ascertain the means by which a certain amount of fertility may be attained in plants which are subjected to an excessive and continual supply of stimulants, whether planted out or in pots, admitting of an extensive growth on account of their large size. It is in illustration of the foregoing remarks that the following principles of Horticulture are brought forward, with a view to prove that it is only by their application that such a proportionate maturity of prowth can be attained as is essential to uniform development of bloom.
1st-All flower-buds, being analogous to leaf-buds, it follows as a corollary, that every flower with its peduncle and bract is a metamorphosed brancli.
the laws of arrangement in branches, with respect to each other, the same will be the laws of the arrangement of flowers with respect to eacl

In adducing evidence in favour of these principles, it Will be seen that the formation of Hower-buds neces sarily depends, as a general rule, upon the presence of developed leaf-buds or axillary branches, and that the same laws which operate in the production of the one, necessarily act in the production of the other. In given, which will clearly illustrate the analogy that exists between the first formation of a leaf-bud or axillary branch, and its ultimate transformation into The engraving represents a plant of Zichya coccinea,
which, in the month of July, 1841 , was transferred from a. 60 pot to a large

16-being removal at that advancedseason. The plant was subjected with others similarly treated to the an intermediate house. To preserre a regwar
circulation of moisture, a promiscrous middle
drainage used in potting, in addition to
the ordinary mode, and the texture of the soil was rendered more open by the disuse of ing portion. Its growth portion. Its uriant and raid and

raged, have extended over a pyramidal trellis of two feet six inches in height. Finding the circulation of sap too rapid to permit the formation of leaf-buds by axillary growth, recourse was had during its progressive growth, to pinching off the terminal leaf-buds or fore-shoots above each second and third joint, which caused an equal dis tribution of lateral or side branches. In thus obtainiug an accumblated vigour, by aiding the development of teal buds, which ultimately became matured axillary shoots, the season's growth was necessarily limited, covering the circular trellis to about 12 inches from the base upward The practice of removing the terminal growth at stated distances was adonted apart from any recognition, or eve it knowledge, of those principles of Horticulture to which
was ultimately referred; and in the following spring of
* Principles of Botany, 287, 288

1842, the plant presented a beautiful and interesting instance of their application, in the uniform development of nearly 500 clusters of flower. Had the specimen been encouraged to continue its accumulating vigow formed a still more striking example; but the presen result proved most satisfuctorily the possibility of attaining a perf
There are, perhaps, no plants in cultivation to which the treatment here adverted to is more applicable than to Stephanotis floribunda and Mandevilla suaveolens, two most desirable exotic climbers, each remarkable for the slow and rare development of leaf-buds, owing to a and stitutionally free and exuberast habit of growstances, when allowed to extend themselves without having recourse to the occasional operation of removing the rore-ss, is an and thereby aiding the development of side branches, when it attenuated and useless length of grow, wich, w, more has attained its ultimate vigour, seldom prod he extremities.
The rules from which the foregoing remarks are derived, or on which they are founded, may be stated as follows:1st. As the secreted mutter (pecus, is essential to the primary formation of flower-bude, and as this secreted matter is in strict proportion to the quantity of lenses,* may be inferred that an equal formation of
2ud. In accordance with a previously stated principle hat the laws which operate in the arrangement o rranches, act simultaneously with respect to the arrange ment of flowers, of branches (or axillary growth) will be found the mos conducive to a liberal development of blossoms.
3rd. As an excessive vigour is (as a general rule) ing an ace the most pecumulation of sap, tivation will be that which is perfect system of earlar development of bloom from any proportionate extent of matured growth.
It appears from the evidence of general practice, that those priaciples upon which the growth of plants depends, are generally better understood than those whichr rela surprising when we consider that the causes of the former are such as may be successfully applied apart from a knowledge of those reciprocal as well as counte acting influences which operate (independently of mecha nical means) upon the organs of plants, under every modification of treatment or situation to which they are subjected. But a reason stil more oly, that the agencies thich lead to a ment of exuberant growth, are invariably found to exert, predisposing causes of fertility
It is, however, in proportion to the attainment of a system of cultivation which embodies a progressive and sive step can be made towards the ultimate object of all ornamental cultivation: viz., bloom. The present modes of culture combine more than at any previous period the investigations of science with the deductions of pracice, obstacles to gaining a knowledge of first principles, and to their application to professional expericnce. In testimony of the approximation of the present age to a compara-
tively perfect system of cultivation, there is perhaps no instance of higher interest than that which involves mode of culture having for its ultimate object a constituTional maturity of growth, by dispensing with the attend ant risk, and restrictive in
fom smaller to larger pots.
The principle upon which such a practice is founded i now successfully applied by the most eminent cultivators, and the same principle, so easily adapted to strongerrooting ornamental plants, has also been rendered appliable to those the most difficult to rear
It is well known that growers of plants for public competition have often urged the difficullies and disadvantage a treatment in some respects opposite to that which they are desirous to adopt, and in many instances they have considered it essential to the accomplishment of their system of management from the first, or initiatory, state of growth. These disadrartages are, heren overcome by a mode of potting (subjedes acerrespondin treatment) which, not unexpectedly, has been a subject of surprise to sonie, and a stumbing ordinary method, have failed to apprelend the principles upon which such
The rule which is implied in the principle now adverted
difficult to dear arght to be removed from their younge: 6 state of grouth, into the latyest sized pot in whith thay
are to be exhibited as specrunchs. However opposite to prevalent opinion and practice such a rule may appear to compere whe are unareustomed to view farts be shewn to be consistent with the finst pruciples of Horticulture, and rendered conformable to geveral practice.

Having stated the rale, the followng directions are
necessary in tl e meelanical process of notting. "Take a
First Principles of Horticulture, 141

16 or 12 sized pot, place three inches of bottom draingge, and fill up with pieces of peat from one to four of peat, and pieces of crocks, till the pot is quite fall then plant a seedling or struck cutting of Heath of similar habit, give very little water till the little plant shoots freely; and in this treatment is contained the only secret in growing fine specimens,"
Such is the most ingenious and easy mode of potting yet offered to the attention of the cultivator; and though the plan of dispensing with intermediate shifts has been recognised nearly fourteen years ago, yet, for this most successful application of the system, the profession is Tark, near I rists of the
rists of the present day.
This novel and origiral mode of attaining mature growth in the cultivation of plants may not inappropriately be termed the acoumulative system, and involves, imon mechanical application of soil, one of the most important and essential desiderata in all systems of culionvigour and fertility must prove abortive-namely, uniform circulation of moisture.-From Paxton's Maga zine of Botany.

AMATEUR'S GARDEN.-No. XL,
est difficultie which the Amateur has encounter, after he has procured a stock of plants for bedding out, is to keep them through the winter; and though the construction of pits for this purpose has en explained in previndyert to the subject again, nom that every one begins to think of getting his plants into their winter quarters. The great requisite of wider evere went is sets in them into a perfectl dormant state, that is, without any sign of growth and to keep them as dry as is consistent with their not suffering from the want of waticult matter, but never theless it can be accomplished by proper mauagement In the first place, the site chosen for the pit or Hybernatory must be on a perfectly dry subsoil, and the more deeply it is sunk in the ground, the more warm it will be from the circumstance of its sides not being exposed to the chion of the weather, and from the interrupionig in: space, so long as the superincumbent atmosphere is less heated, and its escape is not interrupted by the "Ice King", ar some other equally impenetrable covering. Thus widd the if our greenhouses were connected with a series of deep underground draine with the power of forcing the air contained in them into the we should obtain sufficient terrestrial heat for all purposes of protection, if not for the cultivaion of half-hardy plants.
Ir the construction of the pits, the ground must be excavated to the depth of two feet, and the mould placed as an embankment rend the side a good slope, so solid as you proceed, It has been recommended to have the Hibernatory fronting northwards : and for the purpose of Hibern the plants in a dormant state, this is an excellent fun: but as the plants frequently suffer more from damp fan, buy other cause, it is as well to lave the pit fronting than any other cause, thas is, with a span roof ; so that both side, adrantage may be taken of a dry sundy day, to dry the plants in case of need. At this ary suman how how and covered place, our plath gis of which is covered with glazed sashes, and the other with sashes covered with strong ainted convass. These sashes are adapted for either side of the pit; so that we have a command of either light or shade, whichever ware the ridge of the roof, and re adjusted by an iron support, with a thumb-screw in the front rall of the sash; current of air among our plant
against sudden showers of the pit is formed, the bottom, to the depth of a When the pit is formed, the be filled in with perfectly oot or eighteen inches, showd be fine iln all perferly dry brick-rubbish-if resh fromes, in which the pots may be plunged. This brick-rubbish will prevent all escape of moisture from below, and at he sam hindronce
terrestrial heat escaping without much hindrance
Where it is inconvenient sub soils, the side-walls must be built of dry peat turves, te or twelve inches wide; and where these cannot take dry adhesive turves the anmost importance that ever be resembered it os dry as possible, and that on part of the pit be kept as dry do them more harm than Thee or four degrees of frost. I lay particular stress on this point, as it would be far better that the plants should suffer for the want of water, than that the atnosph Ayres, Brooklands.

HOME CORRESP()NDENCE
The Daisy, a Guard against Wirerorm.-In order to have fine plunts and blooms, fresh soll obtained by paring the turt from a pastule is of such impardening. Amacollstanthy fore specific directions, are often defeated in teurs, in foll by not knowing some little sequence involved in even the plainest directions. Such was my lot, for I took fresh soil obtained from a meadow, but although I cut and best it about and turned it several times, the

Wireworm has always been so numerous, that my Pinks, Carnations, and Picotees, are ahways more or less injured, constantly picking out the vermin (when, of course, the fresh soil has become rather stale), that I have been able to free the beds of this most tromblesome arnoyar rid of which I have unsuccessfully tried salt, lime, soot, rape-dust, mustard-dust, traps of sliced potatoes and carrots, ac. ec. ; and h merhaps, often as mol iniured the objects of my solicitude as the Wireworm. However I am gratified by having at last stumbled upon a method for controlling, and indeed presenting, the attacks of these pests. An ounce of practice is morth a pound of advice, the proverb says, and man ande Pansy-grower his experience on the mather, the 1 s.sis nt Which appears to me to be of such impod that i.e had tried most of the plans recommerand fir catching, or
 of his object, I rather wond red, more than ome lidis somone fow with edgings of double Daisy, but I now know his object 1 so doing was, not merely to do honour to the almost domestic Daisy, but that it was to entice the thireworms, which always concentrate their attacks on Indeed they appear so greedy of this little plant, that he assures me that he has from one row, 300 feet long, planted as an edging, in one day this summer, taken the extraordinary number of 2,000. I should mentions that his soll is quite fresh; an immense turf and weedy surface has been turned in, so that the ground swarmed with the by stocking out or tillering, to survise without show, ing to any but a close observer tbe "Worm i the bud Carmion and Pieotees - an entire bed or thed : had I known that the Daisy was so good a protector, I shonld most cheerfully he Dais or have soug its humbe but eflectual aid ungruaginghy protectors- which it no means deprecate, but they do not keep off the Wireworm.-S. Oram, Winchmore Vales

EIeating with Earthenware Pipes.-All will agree that economy in the application of artificial Heat has of late deeply engaged the attention and study of scientific finticulturists, and that highly important advancases thus already accrued from the labours of no longer necessary distinguisued themselves. It is now on that the erection of structures contan formerly, imply an immense outlay of cayital ; and probably, ere lonç, we slall have a beautiful apparatus complete for the same or less outlay than the "old-fine" system. I saw yesterday at the gardens of J. Greenall, Esq., a pit erected under the supetinteudence of his gardener, Mr. Culderbank, which combines extreme simpincity and ecomomy. The pi is between 30 and 40 feet long, with front and back liggts; the of large calibre A por with circular earthenware pipes of large calbe. a por tion of these pipes passes into a vaurtar moin bot m-k Wich is affucded exty effectuaty from oper ate size, at certain distances, in the luics. 1, pe plyes are continued all round the pit between ford mor or ed, and from the abore contmpance aford anoist or dry apparatus, unswering admirably every purpose, at a bery hoderate cost. I have been informed by Mr. Spencer, the maker of the pipes, that he would warrant them to stand any lengtl of time, provided they were not intenionally injured. If this be true, we may expect-from he way in which they fulfil the desire end, then chensess and durability-that they will ultimately superscde he use of iron.-W. IIumt, Warringlon
Budding Rhododendrons.-Mr. Beaton, in his "CalenBuad of Operations" for Sept. 30, mentions the success of an experiment in budding Rhododendrons in the open air, and also that a young English lady has outstripped the ery best of gardeners in this operation; butll beg to inform him that it has been practised here with great success fim may years, and we have now standards with farce fine heads from buds; also a quantity of buds whe he been inserted this season, that have taken will aill, without doubt, be a great accuisition to ardening, is fiower-buds are generally formed on the first season's growth.-II. G. Y., Dorking.

Ted Seeds-reruaps there has been no season in wich Verbens have been more prolinc in seeds than the present, in consequence of the very fine weather we had in September. Those who are fond of new varleties hare only to save seeds from beds where plants of difititit secure seedlings of innomerable shades of colour. So secure seeds were saved from different species apart from long as seeds The seedlings typical of the parent plap. But if the self-fecundating organs be displaced, and others substis tuted in thelr sead, if the seed ho end to the variety saved from hyorids. If I ans correct in these remalks, they will in some measure explain how Petunias, (p. 678, E. J. 1 ) shomld be of such varinus shades of colour. Hat have noticed in this cross-breeding is, that when eng tog the aeds have been saved is pretty much shadowed out in the seedlings,
while the colour of the flower approximates to that of the gathered from hybrids-for then the fixed colours are broken up, and nothing stable can be depended upon.- \(C\). Polato Crop.-In several Numbers in the early part of the Potato-crop. I beg to make a few observations on the subject, if you think them worthy of a place in your plant, I consider that the some experience in growing this one locality for a length of time is the principal cause of were free growers, and of first-rate qutd varieties which were years ago, which I have been unwilling to part with, are Kidney, one white and the other red. The white one was sent out by the Horticultural Society about 12 or 14 years ago; the red I bought in Covent Garden Market. them have not come up, and the defect has been progressing, and in this season not more than one third of entire, which proves that they were principally planted entire, which proves that these two varieties have nearly
lost their vegetative powers. In a tour through Scotland, I observed large breadths of Potatoes yielding not more than one-fourth of a crop, and the vacancies were filled up with Turnips. I made several inquiries respecting such a
failure, and all agreed that the old varieties successively grown in one place were most subject to the disease. In planted with tubers imported from America two years ago and a friend of mine in Kincardineshire informed me that he renews his stock of Potatoes every two or year, and selects the best sorts for a stock, and he never fails to have a good crop, although the failures in the old I trust these observations will be a means of calling the attention of the great growers of so valuable a root to the more careful procuring and selecting of their stock for seed, as by so doing many failures will be obviated; and I beg in conclusion to state that to plant from a field that avoided if possible. \(-D\). S disease or failure should be Rhododendron.-There is
dron ponticum growing here, which appears to be different same time as the others, It comes into flower about the blossoms at the same rate as its neighbours, it only opens a few at a time, and continues long in flower. It did not consequenting this season the whole month of August, the others. It has a southern exposure, and is sheltered from the north and east. - Peter Mackenzie.
Propagation. - Perhaps there may be no harm in stating the fact, although it may be known to some of your readers already, that young plants may be propagated by will sometimes putforth roots into the old moist nests of the wren and hedge-sparrow.-Peter MacJenzie. Cow Bormous Mushroom.-A Mushroom of the species Cow Boletus (Boletus Bovinus) has this week been got
on the farm of Mr. Thomas Beesley, Higher Bartle Wood, Plompton, which measured 43 inches in circumference and weighed the extraordinary weight of \(5 \mathrm{lbs} .-\) Facile. Prolific Hive of Bees.- Mr. Anthony Balderston, of
Barnfield, Mervith, has a hive of Bees that swarmed twice in May, the plumb swarm from which swarmed twice in July. From one swarm (including the old one) he has at the present time five flourishing hives,-F Facile
Blight on Corn from the Barberry.-In the of August 19, under the head of "Vulgar Errors" Chronicle as follows :- "People still maintain that the Barberry blights their Corn." This is nevertheless a matter deserving attention; for in this, as in many other inalthough the real cause has been often overlooked. Some Writers have treated this subject with respect, and among are very subject to the Rubigo, which will infect the Corn explained, and the aversion of farmers to the Barberrybush at once justified. The vulgar notion is, that the certain distance, and accordingly farmers will never suffer it to grow near their fields. They are right as to the some remarkable instances of Corn perishing in a semicircle, in front of a Barberry-bush, and extending a good way into a field. Any one who bas but superficially
noticed the Barberry, must have observed that the leaves and young shoots of the shrub were covered with a peculiar kind of blight or mildew. Now it is by no means extra ordinary that this should be carried by the wind into Corn-fields, and infect the Corn, so as to cause its des-
truction. This is the true explanation of the mischief truction. This is the true explanation of the mischief
caused by the Barberry to Corn in its neighbourhood.J. Wighton. [This is the common explanation, but if any one will take the trouble to examine the parasitical will find that they are totally different things. One is the Acidium Berberidis and the other "some species of Uredo or Puccinia, for it is sometimes one and sometimes
the other. We should as soon believe would be hatched in as soon believe thau a hen's eggs Are aware of the facts meduce an Uredo or Puccinia. We have seen them ourselves, and they form a curious problem Mr. Loudon
hat I am now lying dangerously ill at Southampton. It Isle of Wight, and afterwards to Southampton, for change of air, and that I remained at the latter place a month but I am now recovered. As a proof of this, I may just Bath, making a plan for laying out a gentleman's grounds there, and also a cemetery; and subsequently to Kid dington, in Oxfordshire, for the same purpose. I re little surprised at various statements and doing was not a I have referred in the advertisement sent with this note pity that busybodies are so numerous; [It is a great regret that Mr. Loudon should have been annoyed by their foolish proceedings. They, however, give us an opportun
health.]
Clover Dodider.- -As it may be interesting to keen a Dodder has made its antances under which the Clover add to your informant at stance of its introduction with Lucerne-seed from Affghan istan, and heard of another- the former near Colchester the latter near Bromley in Kent. A correspondent ha he believes to seed. It is rather singular that it should have bee brought among us both from the Last Indies and marked difference between the plants from both localities Mr. Darwin also writes that he has seen a field of Clove appearance of having had a dozen or more bonfires in it each from 6 to 12 feet in diameter.-J. S. Henslow.

PROCEEDINGS OF SOCIETIES.

\section*{}

 timm amocnum, Witsenia corymbosa, a plant of casy cultivationcra-
hinhly beautiful when well grown ; also Hippeastrum Grifily beautirul when well grown; also Hippeastrum aulicum,
nii. Griffinia. From Messrs. Rollisson, of Tooting, was a veria and plant of Cypripedium purpuratum; beautiful plants of Miltonia covered with flowers, whose pretty whitc labellum makes a good
contrast with the dark-colourcd uphly

 a fine spike of its brilliant scarlet blossoms. This plant is a native
of China, whicre it clings to old walis, scrambles
face, face, and luxuriates in its native grandeur. A Knightian Medal
was awarded for the Cypripedium, Sobralia, and Renanthera.
Mr. Quesnel sent cut fiowers of a very pretty Epidendrum, from
Peinemper
 Miltonia Clowesii, Acanthophippium hicolor, curious and rather
pretty ; it was the second time of flowering this season;
also a speciss of Epidendrum; a supposed variety of Onci-
dium trulliferum, which had been imported from Brazil, having dium trulliferum, which had been imported from Brazil, having
very long psendobulbs, and thre nvate lanccolate leaves at the
top of eurh bulb; a beantiful dirk, rather fragrant varicty of
oncinium Canceanum, which is the bect of ucularly worthy of cultivation. Cattleya Lodidigesii, Maxillaraa
Deppei, Huntleya volarea, Cattlcya crispa, and Maxilaria ma
crophyl continuing in bloom for a tength of time. Mr. Appleby stated
that the plant from which this specimen was cut
fower for that the plant from which this specimen was catt has been in
fower for beariy six months. \(A\) Banksian medal was awarded
for the Odontoglossum Cattleya crispa. From the garden at Syon was a very re-
markable cut specimen of Elate sylvestris, one of those noble
Palm-trees which can only be cultivated in larme tories. This plant possesses little beauty in its flowers, but
produces pancles bearing a multitude of very pretty, oblong
oranurcelo orange-coloured berries, with a very curions flat stem, strong
and tough, differing much from the usual form, and pre
sentingl senting a good subject for physiological investigation, Messrs
Lanc and Sons sent a beautiful collection of namerd Roses,
for which a certificate was awarded a very pretty plant of Lisianthuarded. Russellianus. Mr, Mr. Guthill Whas
gr to Lord Blantyre, sent from Glasgow Black Hamburgly
Grapes weighing ylo, Grapes weighing, 11b. 7 oz , and 11b, 8 oz ., that had been grown
on a flucd wall in the open air, where, notwithstal
unpre umpropitious weather in spring, and in the early part of sum
mer, they fincly swelled and beautifully coloured. Mr. Shells
states "s that the Vines states "that the Vines produce an abundant crop and rip
their fruit in gond time, and that some of the bunches whic
are are not so ripe as those sent are twice as large, but that the
beriea are not quite so well swelled." From 13 . Maund, Esq., were
specimens of Grapes grown on a will specimens of Girapes grown on a wall protected by a glass-case,
which is fixed close to the face of the wall, with a hole in the end
to allow the Vine to although beautifully coloured, were not Iarge, but those unprogr at Hewell, sent two excellent bunches of Black Hamburgh
Grapes, weighing i lb. 4 oz. and 1 lb . 2 oz. also two Queen
 wise an Antigua Pine, weighing 5 lbs . 12 oz , and measuring 6 b , inches long by 6 inches in diameter; number of pips in length, Itamburen medal was awarded to Mr . Markham for the 13 lack Scott, of Leigh Park, was a bunch of Bananas, weighing upwards
of 129 lbs. The plant on which it grew was imported a few years ago from St. Helena, to the Edinburgh Royal Botanic sent a curious specimen of a Trumpet Gourd, measuring 4 feet
2 inches long. From G. T Lay, Esq., Interpreter to her Majesty's mission, China, was fruit of the Wung Kwo or Shan be a kincl of Cratersus. These unfortmately were much decayed and shrivelied up, so that it was impossible to say what the
quality once had been. It is stated by Mr. Lay that the pulp
is made into red transtucent cakes, which are very pleasantly

 good condition. From the (arclen of the Society were plants of
Oncidium recurvum and sanguirieum ; the beautifal
cand candida, Brasavola venosa, Gloriosa superba, Gesnera lonitifolia, and Sedum Sieboldii-a a plant of considerable beauty, of easy cul-
tivation, and can be grown by every one possessing a common
precnhonse
 and although rather large, is likewise a good table Apple. CERCLE GENERALE D'HORTICULTURE DE PARIS,
Tre second exhibition of this Society was given from the igth to 25th September, at the Orangerie of the Louvre, As this was
the only autumnal show in or within 30 miles of Paris, a good
sprinkling of Fruit, Plants, and Cut Flowers was anticipated.
Country sprinkling of Fruit, Plants, and Cut Flowers was anticipated,
Country forists and amateurs who make but one annual
visit to the visit to the capital, look forward with anxiety to the spring nad
autumn shows, which are considered as botanical reunions from
the most distant parts of the most distant parts of France. Alas for the disappointment
that awaited them! for a more meagre display has been scldom
witnessed, even in Paris. the witnessed, even in Paris; the room was not above half filled, and
the Soclety is much indebted to Messrs. Cels for sending a very
large collection of about 500 plants. Past failures
\(\qquad\)
\(\qquad\)
\(\qquad\)
\(\qquad\)
\(\qquad\) necessity of replenishing cut flowers, such as Roses and Dahlias,
every other day, was quite sufficient to deter very many fromi
exhibitug exhibiting. These observations are not appicable to the fruit,
but even in this drpartment but comparatively few persons
ehowed; nevertheless some of it wis. Apples, and late Peaches, which were allespecially Pears,
Wished; the Grapes werc far inferior to those of last yeard be
of the bunches of Gros ribler de Maruc, Gros Chasselas de ia Palestine, de Bar sur Murue, Gros Damas Blanc,
and cornichon Blane, were very latge, but none of d'Alexandrie lusclous gronden appearance which generally eharacterizes the
Grapes here. The Melons, of which there were only the varieties of Coutalonpe, had nothing to recommend them. The
 Pines of great beaity, and very large fruit; one of them of a remarkably waxy sea-green colour. As to Vegetables of a
were literally no were literally none, except Patates and Aubergines; one of the
former, however, weighed slbs. Cut flowers (Danlias and Roses),
were numerous; but the late dry weather but favourable, and the blooms were geatherally ins becnall. Mrything
exhibited exhibited a seedling Perpetual Rose, tamed La Reine, Mr. Laffay
pears to be an hy brid, lotween Quatre Salsons and Ile de Bour-
bon du Luxembourg ; the flower is very
 be no doubt in every, gool cullcctun, when it is lavour out, which whill
be as soon as he gets 200 subscribers at one guinea each. The
Society offered silver and bronze medals, which were awarded for
the following subjects. For the finest collection of

 Colpareil, Belle de Berri, Bon Chrétien d'Eté, Napolocon, Gros
Colmar, Van Mons, Enfant Prodigue, Ferdinand de Meister, Ma-
rie Louise, Louise bonse d'Avranche, Passe Colmar Dorci, Prince

NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL.

Paris, by M. Euqene Melinon, who wbtained
Cayenne, in South America, where he was curator of some public Giace the Duke of Devonshire, Chatsworth, by the same indivihas, in the simm of 1812 , at whichime it was in from shots which it is now producing, blossoms are again expected during the pre-
sent month (September). It is not so straggling as many plants,
of this class. while the Bromeliaceese, besndes rieing of a greater size. Scarlet and blue,
both very deep and rich, are the principal tints in them. Beyond its more pleasing proportions, however, and showier inflores cence, It promises to be a mnre managrable plant than most of
ita allies in point of culture, appearing to bloom with considerable
freedom. richlom. soil; and a comporoust of open loam and leaf-mould, in equal
proportions, would doubtless be very suitable. It is necessar to water it very sparingly when in a torpid state; though it
requires a tolerable share of fluid while growing, and should be freely syringed. The best way of treating it in the summer, is,
most likely, to plinge the pot containing it in a bark or drng bedl, supplied with bottom-heat. Being, in all probabilsty, par-
tially epiphytal, it would no donbt succeed in a suspended hasket filled with either very turfy loam or heath-mould, or moss, and
watered Jiberally during the growing season. It would have a watered jiberally during the growing season,
more interesting aspect in this condition, and a better oppor-
tunity would be given for keeping it properly dry jn winter. On the last-named circumstance its flowering must greatly depend. agreeable diversity in the house. The plant is propagated by
suckers, which it throws up freely, in the manner of the Pine apple; to which, in fact, it is related, and would do with simular
treatment. The generic name is taken from aichme, a polnt Maguzine of Botany.
Be'rberis bu'Lcrs. Sweet-fruited Berberry, (Hardy Evergreen Shrub.) Berberace Be. Hexandria. Monogynaa.- Ou
object in introducing thrs beatiful shrub, which has now been mental it is when covered with its hando show fruit, and to press
our readers to cultivate it more, with a view to the production that fruit. This plant is an evergreen shrub, of a rigid habit
sometimes attaining the height of 4 or 5 feet, but more generally keeping about 3 feet high. Its brauches are a little inclined to
turn downwards towards the top, and bear a cnnsiderable num l,cr of spines, with clusters of small fohage. The flowers issue
from amidst the tufts of leaves, and are solitary, drooping on long
stalks, large, bright deep yellow, end more cxpanded than in stalks, large, bright deep yellow, thd more cxpanded tish be
some other species. They are succeeded by fine roun March
ries, of a rich purple tint. The blossoms appear from March June, and the berries ripen io August.
have a most delicious flavour; and they are used, both in the
green and ripe state, for making tarts and preserves, which are green and ripe state, for maling taxts and preserves, whin
said to be cxcelient, in the native country of the plati. It a

\section*{MISCELLANEOUS}

To make British Champagne.-To 1 pint of Grapes (when picked and bruised) add 1 quart or water; let it stiquor put \(3 \frac{1}{2} 1 b s\). lump-sugar. Tun it the following dat, and liang an ounce of isinglass in the cask; in two or three days stop
Wheat-planting.--In the "Philosophical Transactions," vol. lviii., is a paper by Mr . C . Miller, upon the same sub ject as that which has lately ArchdalegPalmer (p. 659). As the matter is likely to give rise to some discussion, we think it right Wr Wis Mr. Charles Miller informed him, that having made, in the autumn of 1765 , and in the spring of 1.766, an experiment of the division and transplantation of wheat, which near 2000 ears were produced from a single grain and he having reason to think, from the success attuaing this experiment, that a much greater quantity migat be produced, be determined to repeat the experment next year. Accordingly, on the 2nd of June, 1766 , he sowed some grains of the common red Wheat, and on the 8 th of August, which was as soon as the plants were strong enough to admit of a division, a single plant was taken up and was separated into 18 parts. Each of these parts was planted again separately. These plants having pushed out several side shoots about the midde of September, some of them were then taken up and divided, and the rest of them between that time and the midale of October. This second division produced 67 plants. These plants remained through the winter, and another division of them made between the middle of March and the 12 th of Apin, properted to remain. The plants were in further, butrer than any of the Wheat in the fields. general sords of 100 ears from a single some of the ears measured seven inches in length, root. Many between 60 and 70 grains. The whole and contain whel by the process before mentioned number of ears, were produced rom and three quarters of clear corn, the yielded three peh 47b, 702, and from a calculation made by counting the number of grains in one ounce, the whole number of grains might be about 576,840 . By this account we find that there was only one general division
of the plants made in the spring. Had a second been
made, the number of plavts, Mr. Miller thinks, would have, the number of plavis, Mr. Miller thinks, would produce have been much enlarged ; for he found by the experiment made the preceding year in which the plants weakened by the second division that they were no weakened by the second division. He mentions this to The ground in which this experiment wis made is a list The grown in which experiont made is a light backish sol, on on the round was a bad soll much dunged, the other half was not prepared with dung any other mano mo disthere any in their produce.

Instance of the Sagacity of Bees.- A few pounds of honey had been taken from a hive (about six miles from London), and placed in a closet, under lock and key. The btained fore loom having been the closet und bees abine adoission, and entering the closet under the were left entire, and the honey was conveyed to the cen tral division of the hive, where it was saftly deposited in the course of the day. It is evident that spies must have been employed to observe where the honey was placed, ne hive the son as the information was commure for the ecovery of the stolen property. It is remarkable that they should have succeeded so completely and in so short nly enter by a crevice under the door.-Pharmaceutica Journal.

GARDEN MEMORANDA
exertion is making to get the beds on eirlser sicue of the long walk, newly.formed in these gardens, and we understand that 1000 Pelargonums, Petuniac, Verbenas, and Anagallis, have been purchased; besides 2000 Pelargoninms buted by brivate individuals. Mr. Henderson, of Pine Apple Piace,
han liberally supplied some of these gratnitously. The walk is about nuires a great many plants to cover such an extent, inie two ornamental, which will produce a pleasing variety of scenery,
and add considerably to the beauty of the Garcis. The naming effect upnn the public miud, in awakening a spirt of inguiry,
and excting a taste for Botancal and Hoficultural pursuits, so
much so that mentlemen tro direct from these Gar.? nurseries, with their lists made out from their own inspection.

bulbosa, Russellia juncea, Ceropegias, four Glox'nias, Achmenes
(longiflora, coccinea, and rosea), beautiful specimens of several
varieties of Thunbergia and Salpiglossis, three Ipomoeas, seven Passidoras, as also a fine collection of Cape bulbs, and an excelient
specimen of Arum esculentum, with very large leaves. Not the
lcast interesting feature of the Holme gardens is the good feeling and professional zeal inspired among the apprentices and jour-
neymen, by the enthusiasm of the head gardener, Mr. Ross, neymen, by the enthusiasm of the head gardener, Mr, Ross, Whose ingenuity and devotedness to his employment are un-
bounded, and much of the harmony which prevails is, no doubt,
owing to the considerate attention of the proprietor, who has
furnished each of the workmen with a substantial and neat lorence Court, the Residence of the Earl of Enniskillen.-On The iawns here, are some extremely handsome ornamintal awart
Fir-trees; some of them are about eight feet in height, and the
branches at the base of the tree extend nearly the same distance, and much resimmble pagantic specimens of the Clanbrazil Firs \({ }^{3}\) grow, as the pale green colour of the young shoots contrasts
well with the dark green winter foliage, and renders them highly interesting and truly beautiful. Their management is to secce plants, or those which have lost their leading shoots, and to plant
them in a poor moist clay soil, and to shorten back to half their length a
leaders.

\section*{IReníéns}

Arborioulture: A Paper read before the Geoloyical and Polytechnic socvety of the West Riding of Yorkshire. By James Hamerton, Esq. Leeds : Bains. 8vo. This is a pamphlet of two sheets, with ive ithographic foresting are essentially the same as those which have been constantly advocated in our columns, to which he has indeed been occasionally a valuable contributor. A neglect cous pruning, are the giant evils of our ordinary system of mismanaging woodland property ; and Mr. Hamerton adduces through every page of his pamphlet striking proof
of the mischief caused by those means. Like us, he does
 but then only, and in cases of absolute necessity, wound with extracts, the matter of which would differ more in words than in facts or ideas from many parts of our own columns ; but we shall content ourselves with expressing our gratification at finding that foresting has so able and earnest an adrocate.

Natural History; a branch of School Education, is a small pamphlet (reprinted from the "Bible Christian," for Sept., 1843), strongly advocating the introduction of
Natural History among the studies of children. We perNatural History among the studies of children. We per-
fectly agree with the author in the views he takes upon fectly agree with the author in thect but fear that it can hardly become a practicable measure, until teachers are induced to make themselves acquainted with such matters. To go into the Whole question, however, would require more space than
we can at present spare; we shall therefore only quote a we can at present spare; we shall therefore only quote a
paragraph from Mr. Patterson's remarks, and leave them paragraph from Mr. Patterson's remarks, and leave
for the present to the consideration of our readers.
"What are the objects to which the child, of his own accord, directs his attention? What are the things on which he exercises his touch, his sight, his hearing, his smell, and his taste; and about which he asks a thousand simple, yet often puzzling, questions? They are the
most conmon articles of household furniture; the ordinary implements of agriculture; the horse; the cow, with ber grateful milk and her fragrant breath; the joyful bark of the dog ; the quiet purring of the cat. They are, in fact, the objects which surround him in early life. We are thus naturally led to inquire: might not these objects be made systematically the means of cultivating the senses and the observant powers? Might not every school-room have a portion of time devoted to such exercises; and question and answers, in quick succession, be made to minister both to the improvement and the relaxation of the pupils? from books? This principle, if recognised, would admit of a great variety of application, suited to the tastes, habits, and acquirements of the teachers ; the age, situacamstances of every different school. It would sanction the use of the most common flowrets of our glens, and our hedge-rows, as objects of instruction ; and gradually lead the pupils

\section*{Books in the running brooks-sermons in stones-}
t may be permitted therefore, to inque by what proces thay be permitted, therefore, to inquire by what process any information on the subjects which are embraced by the term "Natural History," be communicated to those whose previous acquirements are often "poor indeed," and whose future prospects in life are such as to forbid the supposition that science can ever form the object of pursuit for its own sake? Is such teaching compatible with
the school business? Wouldit not interfere with the true objects for which the children are sent to school, and for which the parents pay? Would the children understand
it? Would they care about it ? And if they did, what good would it do them
How this is to be done Mr. Patterson next explains, and ats me thind with much good sense; but for this we usk sefer to the little pamphlet itself.

CALENDAR OF OPERATIONS for the Ensuing weet. I lately received in a letter, a blossom which at first sight I took
to be that of anew Clbxinia or Achmenes ; the colour was that soft Blue lilac tint peculiary to Glozinia maculata, The want of union in

seeing that it was propagated from mere morsels of the roots and
young wood within the last two years. I wrote back immediately for young wood within the last two years. I wrote back immediately for
the putticularsof cultur, and for permission to publish them, with
the the names of the parties who have thus signailised themselves by
flowering this splendid tree for the frist time in England. In the meantime I examined the flower minutely, and compared it with
Dr. Siebold's figure and description, and had it not heen that the same plan and that the name is acquieseced in by the French botanists, I should say that Panlovnia imperinlis was yet a desideratum in
Farone. Be this as it may, our plant is a most ralualile acquisition
 paranala, rexpecting it which were previously unknown. In the
parst place, the flowers are deliciourly sivect, and are producel freely

 growth, have befun to show their flower-buds, and to cast their
leaves they will the require less water, and in six weeks or two
 roon, as they may be set anywhere, only, earing their heads of
flow crs free ahove other n'antst which surround them. Now, we call

 faster than we wish, the plants may be set out-of-doors in a cool
frame, to keep them back, als under this culture, the young wood will hecome perfectly ripened, and the the tree rendered young wood more
hardy. But, as Mr. Brewter, Mrs. Wray's successful gardener, remarks - "If yout ailow these plants large pot-roon you are only
laying the foundation for thant great superstructure of wood and foliage
 Hulesy you get the wood well ripened, you must be content with large
leaves only." Last year I kept one of our plants of Paulovnia in the stove until it was quite ripe, then inured it by degrees to the open
air, and by the beginning of July had it planted out in an exposed air, and the pleasure--ground, giving pit no protection in winter
situation in
early in May it was in leaf, and about four feet high; after afew weekg a strong sucker came up from the collar; ; But down the ofd plant to this sucker early in June last, and now the sucker has like leaves. Might not the Catalpa wyringefolin be treated like
Paulownia for the sake of its larke, trumpet-like flowers ? which are produced in abundance in the neighbourhood of L.ondon and farther I.-KITCHEN-GARDEN AND ORCHARD.

Privs.-Artificial heat, to krep up the temperature ablove \(60^{\circ}\) in
 this time, but given by fits and starts will run them prematurely into
fruit. Another great evil often occurs about this tine to count fruit. Another preat crii often occurs asout this time to counteract
the diry heat of flues or pipes the plants are syinged over-head too
oiten, and many of the pots get soddened, and the roots herish in conseguence, before the winter is over. Dry bottom-heat from tanh 1 s
would cure this certainly; but this remedy is as bad as the di.sense ;
 long ntervals through the whiter ; hut if dry hot tom-heat is applied
to them they must be watered daily. I shall perhaps offer a few remarks on this dry bot tom- -heat by- and-byy but what I have already
ruid will modify the subject in the hands of beginners.
 may be pruncd at the same time. In 1827 I snw a house full of Vines
just setting their fruit in the first week in Octoler, and I learned jus setting their fruit in the first week in October, and I learned
aftervards that there was a good erop, which began to ripen in
Feloruary. This house, as far as I I can recollect, was mismannged by February. This house, as far as 1 can recollect, was mismanaged by
pating on the lights too early, and then leaving the Vines to theyr
fate for five or six weeks, when they were found to he breaking into leaf, and then it was too late to stop their growth. Any houses
that are uncovered for a few of the summer months ought to be carethat are uncovered for few of tie summer months ought to be care-
fully loiked townen overed up, an if they are not properly venti-
lated at first, the plants may suticr, although not altogether apt to

Out-door Deppritment.
We never believe that we are so near winter until we are actually into October. You may see crops seeding, ripening off, or falling
into the sear leaf, all through the summer months, and yet think no more ahout winter than if cyerything was freal springing up around
you. How altered now! not a leaf that turns yellow and drops from youd How bugh but anks you in your hand glassea are in properp repair,
for protecting your Caulfflower pulants, or your frames cleared out,
 You plainly that your tactics must now be altogether changed. Tem-
porarr hotbeds, gagain, must boon be in requisition for Asparamus. Nothing can be too g .
the 9 gth of November.
AsparnGus - Those who still adhere to the old practice of giving
all sortsof of rech manures to Apparagus beds in winter and spring,
when the plonts when they rectsirc it, whll now have thece sanisfaction to sec the tops hands can be spared for the work; but those who neglect them altogether in winter, and feed them the whole summer through,
cannot tell when their crop may heready for the sickle, for their beds are yet as green as Leelss.
Crops. - No one, I presume, will leave their crops of Carrots, Parsneps, Potatoees, \&c. \&cc., long now in the ground, if only for the
sake of getting the ground dug over before wet weather comes on,
Ste sate there is oric mixed sort of crop, viz,, weeds, which by some are
But
never But there is oric mixed sort of crop, viz, weeds, which by some are
never though worth gatherimg after this time, as it is either not
forward enought, or too far tone, to be touched before next spring. Orcmaro.-After the fruit is all gathered in thore will bea a good deal of work in the fruit-room for some weeks, arranging, naming,
and stowing away the late sorts, after they are ascertained to be quite sound. Large currents of airs should be admetted during this time,
but after this work is finished the fruit-room slould be kept close and as unform in temperature as circumstances will allow. The this is ispracticable, the fruit-trees ought to be ordered without waiting till the ground is ready, , as they are sure to be good thus
early, wherene, if you delay your order until the spring, the stock is early, whereas, if you delay your order until the spring, the stock is
gelected from by so many other customers that you must be content with what you can many
II.-FLOWER-GARDEN AND SHRUBBERY.

Srove.- When stove bulbs are about done growing, water is with-
held from them by degrees, till at last the leaves turn yellow and die off; the pots are then turned on their sides, and placed out of the
way, on shelves near the plass; but where room is scarce, and the way, on shelves near the plass; but where room is scarce, and the
bubs ane at terst through the winter, they are often shook out of the
sonl
 winter, and more especially those of them whirh cast theer Pcenves,
mav he tratated after the manner of stove bull)s, and to those who find any difficulty to winter them in the usual way, this is the safest
plan. I have repeatedly kept sonres of them this way. The winter growers, on the otncr Land, require now to Lc put nearer the glass,
and all shading is of course dispensed with after this time. Lselia Ruperbens throws op its frowerrspens at the rate of an incha day, and
they are now upwards of two feet high, and promise to po up a long

phace, Chantla, is very cold., I I suspect Mrs. Wray, of Cheltenham,
will also be fortunnte enough to flower this (Qucen of beauties for the will also be fortunnte enouph to flower this (Qucen of beauties for the
first time in Furope; ; and, strange to say, if antllung can be strance in these days, the old and ohstunate Rerianthera coocinea is throwing up three strong flower-spikes at Oakfield, treated on the cool system, GRERNIODEE.-- We scarcely exer
between the 15 th and 25 th of 0 coser miss a slight frost or two that if our plants and flowers escaped this early frost, they might have gone on safe enough for the next month or six weeks. Except very young and soft-woodled plants, there are few greenhouse plants
that are muct hurt by a rainy days do them much more harm, and it is really a very bad plan their the these plants early. Nurserymen never consider nome of almost all their plants from the middle of September the the middle of strongly forced for propagation, and have hardly yet got over the
confinement of the propagating-house, so that they require carly confinemen
Conskinvarr. - The finest plant that can be placed in this
house for the next twelvemonths is the Luculia gratissima, the earliest of which is now about opening its delightiully fragrant towers. cme of the Loudon propagators are aware that I have been experion which to graft it, asit is very diff cult and uncertain to get a large tock of them by cuttings. Thave at last succeeded, and grafted it say at this time what the stock is, but I shall not fail to do so in due time. Meantime a correspondent who is "going to manage the top
of his conservatory next season on the close system, but has no room or a stove pit behind,", \&c. \&c. may graft or inarch the whole of the ove Passion-flowers on the top of long shoots of the cerulea, or any rom the cool stratum" at once, and they will all flower as freely as Cold Pits. - All the Roses that are to be forced on this side of
Christmas should now be pruned forthwith, and placed in different pits, for forcing and protection; at any rate, let no more rain touch them this season, it chills and soddens the soil about their roots. A good way to begin to force Roses is to stir up the surface of an old
Melon-bed, after removing the soil, and perhaps to add a few fresh pots in this-not to cover the frame for the first week, and then to begin by drawing the lights only half over the frame for the next
weck, and to draw thom closer by drgrees, but still having large portions of air, til. the flower-luris appear, \&c. \&ec. Moss and Cab-
bage Roses worked on free stocks of China breeds will thus flower three weeks or a month sooner than others on their own roote, or on the Dog Rose, because the roots of China hoses begin to grow keep in advance of the tops, if properly managed as to air,
FLowrr-GARDRN.-The Heliotrope is the first affected by frost; many of our tender stove-plants stand more cold than this. It may seem strange to some to have flower-beds matted over, to save them
from early frosts, but it has been a regular practice here and in many other places for years, and some of the bed nnext this house, or castle, are oiten sated till the middle of December. We had a bed of
Pelargoniums in full flower in the open air last Christmas-day.-D.

\section*{report on covent-garden market,}

Thare has been a good supply of Fruits and Vegetables of every kind during the past week ; and they have been, generally
speaking of excellent auality. The we.ther has also been very speaking, of excellent quality. The weather has also been very
mild, and congenial to vegetation. Pines are not so plentiful as last week; they are selling at from 3s. to \(6 s\) s. perib, Blaci Hamdemand, and are offered at nearly the same prices as last week. Plums of good quality continue rather scarce; a few of the
Golden Drop are still to be seen in the market, and are selling at \(2 s\). per punnet. Damsons continue very good and abundant. Peaches are sufficient to meet the demand, and are of excellent quality. Figs are selling at from 3s. to 6s, per dozen. Filberts during the werk. Apples anish Melons are selliner at about \(4 s\). each; a few Spanish ones have been mported during the week, which, if they had not been gatherecl rather too early, would
have been of excellent quality. These are selling at from 4 s . to 6s. each. Cucumbers bring from 4ld. to Stl. per brace. Cabbages meet the demand, and are rather improved in quality, Endive Cut Fhallots are offered at nearly the same prices as last week. verticillata, Rondelelia speciosa, Ixora coccinea, Sedum sieboldii, Alstromeria peleprina, Camellias, Calceolarias, Verbenas, scariet
Roses.

\section*{NEWS OF THE WEEK}

The anxiety occasioned by the non-arrival of the Overand mail for July has been painfully set at rest by the announcement of the total loss of the Memnon steam-ship, with the missing mail, at the entrance of the Red Sea. The particulars of this accident have been received by the Hindostan steamer, which left Calcutta on the 11 th August, with the mails for that month. She reached Suez on the llth ult., but her advices from India and China have not yet arrived. We learn, however, by telegraphic despatch, that the Memnon, after a remarkably fine voyage of 10 days from Bombay to Aden, performed in the very height of the monsoon, left Aden on the lst August for Suez, with 170 persons on board. In the evening of the same day, when off the African coast, she struck on a reef of rocks, and so speedily became a wreck, that it was impossible to save more than the crew, passengers, and five chests of treasure which were on the deck at the tme; all the passengers baggage, the cargo, and the mately ately occurred within reach of Aden; the political agent fhat place sent three steamers to their assistance, and recently built in London for the East India Company, and was one of the finest ships employed in the service of the Overland Mail.
From France we learn that considerable astonishment has been excited in Paris by Mr. O'Connell's recent attacks on the reigning royal family of France, and by his offer to send an Irish Brigade to place the Duc de Bordeaux upon the throne. The Ministerial journals of course condemn this threat as an attempt to disturb the tranquillity of France, while the Opposition and Republican papers denounce it as an interference with the popular will as expressed in the Revolution of 1830, and as an ungracious return for the recent sympathy of the French Repealers. Several of the persons arrested in connection with the late plot have been set at liberty, and the appre hensions excited by the first announcement are beginuing to subside.-A ccounts from Madrid state that a conspiracy was detected in that capital on the night of the 25 th, ew hours before the time appointed for the outbreak. The troops of the garrison were immediately under arms the streets were guarded by picquets of cavalry ; a num ber of persons were arrested, and a large depot of firearms was seized. These precautions appear to have eterred the insurgents, and no attempt had been made at the date of the last advices. The Government are still in an uncertain state, but most of the recent Elections have been decided in their favour. At Barcelona the insurgents have gained no fresh advantage, and those at Saragossa have begun to quarrel among themselves; the latter city is closely blockaded by the Government troops, and additional reinforcements are expected.-From Italy we have further accounts of the disturbances in Romagna, but they merely indicate continuance of disaffection, and confirm the rumour that Austria has offered armed assistance to suppress the move ment.-In Greece everything continues tranquil, and the new Ministry are actizely engaged in the arrangements for he National Assembly.-From the United States we have accounts to arecent date. They relate chiefly to the progress of the state elections, and their probable infinence on the approaching contest for the Presidency, for which Mr. Clay, Mr. Calloun, and Mr. Van Buren are the can-
didates. From Canada we learn that the prosecution of \({ }^{\prime}\) Messrs. Papineau, O'Callaghan, and Brown, who were implicated in the late insurrection,
by order of the Home Government.

\section*{}

Court.-The Queen and Prince Albert arrived a Buckingham Palace on Saturday morning from Windsor Castle. Prince Albert went to Somerset House, and pre-
sided at a meeting of the Duchy of Cornwall. The Prince sided at a meeting of the Duchy of Cornwall. The Prince her Majesty and his Roval Highness left Great Western Railway for Windsor. On Sunday, the Queen and Prince, with the Prince and Princess of Hohenlohe Langenbourg, attended divine service in St George's Chapel. On Monday, her Majesty held a Privy Council, which was attended by nearly the whole Cabinet Council, with the exception of Sir R. Peel, who remained on a visit to her Majesty. The Prince of Wales arrived at the Castle from Brighton on Monday afternoon, and the Hon. C. A. Murray. His Royal Highness' health has greatly improved during his visit to Brighton. On Tuesday the Queen and Prince Albert paid a visit to the Duchess of Gloucester at Kew, and afterwaras Hooker. His Imperial Highness, the Grand Duke Michael, only brother of the Emperor of Russia, arrive Tuesday, on a visit to her Majesty, and returned yes-
erday to town. The Hon. Col. Grey and Col. Bouverie have resumed their duties ; the former as the Equerry in Waiting on the Queen, the latter as Equerry in Waiting on Prince Alber
Imperial Parliament.-At the Privy Council on Monday, it was ordered that the present Parliament, which stands prorogued untii furseday the 19 th ins
The Army.-The Queen has been pleased to declare H.R.H. Prince Albert Captain General and Colonel of the Artillery Company, in the room of the late Duke of ussex.
Order of the Buth.--The Queen has been pleased to appoint Major-General be Knights Commanders Be Drowne ma A. P. S. Wilkinson and H. Wade, of the 13th Light A. P. S. Maninson and Colonel G. Huish, of the 26 th Bengal Native Infantry, be Companions of the Bath
Earl Grey.-Favourable accounts have been received in town of the health of Earl Grey, who has rallied, and is now able to take carriage airings at Howick. Sir Stephen
Hammick, his Lordship's medical attendant, has returned
Church Preferment. - The Queen has made the following appointments to benefices in the Church of Scotland, void by the late secession:-Rev. W. Menzies to Thomson; Rev. P. Bell to the parish of Carmylie, Forfar in the room of the Rev. W. Wilson; Rev. J. Crosbie to the parish of Westruther, Berwick, in the room of the Rev. W. Wood, Rev. R. Williamson to the parish of Knockbain, Ross, in the room of the Rev. J. M'Rae Rev. P. M'Intyre to the parish of Edderschillis, Suther Robertson to the parish of St. Fergus, Aberdeen, in the room of the Rev. J. Anderson.
Ecclesiastical Commission,-Sir Robert Peel has, within these few days, formarded a cheque of 40002 . to the Ecclesiastical Commissioners, in aid of the fund for the building of new churches. The gift was accompanied by a him in consideration of the large fortune he had derived from trade. It will be remembered that \(\operatorname{Sir} R\), Peel was the first who subscribed 10007

\section*{National Society}

Post Office.-The following notice is put up at the General Post Office:-" With reference to the notice issued from this department in May last respecting the appear that some misapprehension exists respecting the uniform rates on letters between that country and the United Kingdom, it must be understood that the French
uniform rate of \(5 d\). single, and so on in proportion, has reference to those letters only the postage of which is paid, whether on despatch or delivery, in the United King dom ; but that if the French rate be paid in France, it then varies according to the distance, in conformity with the laws of France. The Britisi rate or Kd. single, \&c. is the same, whether paid in the United Kingdom France.'
Light Gold.-A proclamation was agreed to at the Privy Council on Monday, ordering that, as a great quan tity of light gold is still in circulation, no gold sovereign of
less weight than five pennyweights two grains and a half, less weight than five pennyweights two grains and a halr, weights thirteen grains and one eighth, be allowed to be current or pass in any payment whatsoever. And the from and after the lst day of January next, to cut, break and deface such pieces of gold coin as shall be found deficient in weight.

\section*{jfaretgn}

France.-The fortification question is atill the principal theme of the Paris papers; but though a subject of
little interest to the English reader. Some attention i also bestowed by the Opposition prints upon the satisfac French flag at Jerusalem, by which the Pacha is to be dismissed, and his successor is to make an apology to th French Consul, besides saluting the French flag at Bey them a fresh insuit to France, because the flag is to be hoisted and saluted at Beyrout instead of Jerusalem. The Ministerial Journal des Délats dwelis at great length on he disturbances in wales, and expresses surprise that no "The Reformers of Wales," it says, "have taken the law to their own hands, and executed it according to thei hings has nothing to do with politics ; it constitutes bevertheless, an extraordinary anomaly in a civilised state subject to regular laws. The insurgents of Wales have before them the example of Ireland and Mr. \(\mathrm{O}^{\prime}\) Connell We may courts of arbitration, demanding their own local Parliament, denouncing the Saxon, and swearing that Wales shall be a nation. Without doubt, the English Government is strong enough to repress these disorder both in Ireland and Wales, as soon as it pleases to do so rudent to wait and let things take their course ; but it in unsatisfactory position for a Government to submit as a necessary and inevitable evil, to permanent insurrecpapers of Monday, of all shades of politics, express thei mazement at Mr. O'Connell's threat at one of his recent meetings, that he would send an army of Jrishmen to place the Duc
Henry V. The banquet given at the Mansion-house, in honour of General Espartero, is noticed by the papers; but, owing to the absence of the Members of our Cabi net, and the very few persons of political note who at that five of the persons arrested as participators in the Communist plot of the Rue Pastourelle have been set at liberty. Other warrants, however, had been issued by
the Attorney-General, but the charges against the accused not of a very serious nature. A M. Guizot has annexed a special convention, to which M. Guizot has continued in France. Literary property thus guaranteed, extends not only to books, but to drawings, evgrav ings, and music.-THe Journal and Loin slates that o diocese of Montaubon, and Knight of the Legion of Honour, abjured the Catholic religion in the Protestant Cburch of Orleans, in presence of a numerous assemblage M. Bruitte had published a pamphlet, entitled "M which had indus" -The Courier Francais says, that a young Englishwoma of Glandier, the glass in which Madame Laffarge gave her husband his drink
that the capital had just been visite On the 25 th, at midnight, all the troops of the garrison which summoned to arms, and various parts of the town, picquets of cavalry. The military were placed in the from being rung under any pretence. General Conch stationed himself at the Puerta del Sol, whilst General It appears that the the following morning. The design of the conspirators was to take possession of some of the churches, spread alarm by ringing the bells, set fire at the same time to severai houses in opposite directions, and whilst the to their barracks. Owing to the precautions immediately adopted by the Government, no such attempt had been made, but a number of persons had been arrested, and a depot of fire-arms had been discovered. The garrison was thesg" hese adices lef,, and it was probable that the trops would continue under arms on the night of the 26 command without consulting his colleagues on his policy. Among other proceedings he had sent a passport to Colonel Bristow, an English gentleman, who repaired to Madrid last year to rnake arrangements for the establish ment of an Anglo-Arispanic bank. The Colonel protested against this measire, which was to be carried pro elfoct within 24 hours. The British Charge d'Affaires had expostulated with the Minister for Foreign Affairs, who, it appears, had not been consulted on the subject. General Mazaredo, the military governor of Madrid, has concession by the Ministry political chief, in order to save the capital from being declared in a state of siege. The liberty of the inhabitants is thereby entirely placed at the mercy of the latter. The inquiry into the cause of the explosion of the gunpowder magazine was still in progress; most of the individuals arrested were kept in solitary confinement.-From Barcelona our accounts state that on the 25 th the new Cap. tain-General, Laureano Sanz, notified to the consuls that he bad thought proper to declare the province in a state of siege, and that he was about to lay the strictest blockade to that city. The French residents had accordingly retired on board the vessels of war, where they were fed at the expense of the state. The Captain-General
expected shortly to have a force of 34 battalions at his disposal. There was no change at Saragossa on the 27th The insurgents were beginning to quarrel among themclves and General Canedo had assumed the command of the Government forces. The blockade is extremely strict and the city has consumed its provisions. The Junta has evied extraordinary contribution on the inhabitants. Gen. Zurbano, one of the followers of Gen. Espartero has written from the castle of Foz in Portugal to decler is adbesion to the Provisional Government, and has bee athorised to peturn to Spain and take up his residenco t Palencia.-Mr. Henry Lytton Bulwer has left London for France, to wind up his private affairs in that country preparatory to his departure for Madrid, to succeed Si Arthur Aston, as Minister at that court.
Germany.-Letters from Berlin of the 24th ult. state deaux an exceedingly warm reception s to proceed from Berlin to Hamburgh, thenge trince Hague, on a visit to the King of the Netherlands, and wil embark at Rotterdam for London. He intends to remair in that city for some time, and receive a great number of his partisans, amongst others M. de Chateaubriand, who had hitherto refused to undertake the journey to Goritz nisuer not to meet Prince Metternich. His Royal Highness will visit Scotand before his return to Austria Adelbert, of Prussia, second son of the heir apparent to the Prussian throne, and Princess Eugenia, the eldest daughter of Oscar, Crown Prince of Sweden; and it is mentione that the Emperor of Russia, during his late visit at Berin, Rhenish papers anxious to forward this plan. The cession of Hesse Cassel being exchanged for that of th Duchy of Holstein in favour of the Duke of Holstein Augustenburgh, next heir to that important part of the Frederick of Hesse heir presumptive to and heir apparent of Hesse Cassel, had, during his lat wisit at Cassel, obtained a formal consent from the reigning Landgrave to his alliance with the daughter of the Emperor of Russia.-Letters from Cologne state that M. Peitzer, ierenant in the army, who, as will be recollected, killed M. Hains last winter in a duel, in consequence of quarrel ala do and was a do do min res fir or and his scond who is sentenced to ben Tor te years have arrived at Ehrenbreitstein where they re to be confined. The two other persons implicated in o duel have been condema the he recent discovery of the 'Venus,' by Titian, now excellently object of the greatesadmiration with all amateurs. This
 under a mass of unimportant paintings and diffierent kinds of rubbish. For the discovery of this treasure we have to thank the Director Mathai and the Academy Council. It Exquisite as are some of the paintings of 'Venus' we already possess, they are far behind this master-piece, par ticularly in the handling of the flesh and background.' Traty. -The latest accounts from Bologna are of the 24th. They state that altuougli the Government troubles continue, although the failure of the attempt on Imola has certainly discouraged the band. The prisoners had been brought to Fort St. Leo, near Rimini, not being secure at Bologna. Austria has offered armed succoul, Aulic councillor, Sebregandi, to Rome, who, in concert with Count Latour Maubray, will examine what modifications ought to be made in the Roman Government, to prevent such disaffection and manifestations, It is said Engli h and a French Colonel quittel Spain to join them, but with affairs. There is no Italions
 in Cataloni ane joined the bands of Romana, bande sans than therwise they would have been. Letters from Milan of the 22d ult state that a number of persons had
 bardo-Venetion prito pornor had been directed to hold a fer battalions of infantry and a brimale a Bologno of light cavalry in readiness to march their co-operatiouthe auther sions thon. The insurgents have extended their exands appear to Horth as far as Hedur. Hese bority said to are suppied wila money. A propagandout Italy exist, which has ramifications, not oniy throug ance. eritherse in swizerland, Malta, and evel source that the daper announces from an authentist issued under the dree of the Roman Inquisition, first in force by the Invorty or Leo XIN ., and recently parain suspended. The ar-General of Ancona, has been produced not only throughout Tely but everywhere in the Mediterranean, both among the Jews, and among Protests ant Christians, either subject to Catholic government or surrounded by Catholic populations, at this revival o the Inquisition. Some misapprehension has existed as to the genuineness of the decree; but the same paper states that certain of its clauses had already begun to ve acted upon:-The two bandits who, about three years ago,

The usual ceremonles were then othroagh, and the Sheriffs and their friends returned Cllena the inauguration dinner, which took phes Clothworkers' Hall. About 200 gentlemen sat down to Mayor, who company present consisting of the Lord Mayor, who took the chair, Lord Burghersh, the Cursitor

Baron, several members of the Royal Academy, and the principal authorities of the Clothworkers' and Stationers' Corapanies, to which the Sheriffs belong. The usual loya and civic toasts were drank with the customary honours, Laurie, who said he had a toast to propose which he knew would be received with great warmth of feeling. They all hoped for the benefit of clergy, and he felt much gratifica tion in proposing the health of the Chaplains to the Sherifis alluded to benefit of clergy; he should exhibit his gratitude aluded to benefit of clergy; he should exhibit by hoping that the worthy knight may never require the plea; buting case it should fail him, he promised that the Sheriffs' Chaplains will feel bound to see the best ceremonial of the law administered with all the considera the City members, the Recorder, and other personages afterwards spoke in acknowledgment of various toasts.
Denth of \(M r . G\). Wood, M. P. Aocounts reached town on Wednesday of the melancholy death of Mr. G.
W. Wood, M.P. for Kendal, which took place suddenly W. Wood, M.P. for Kendal, which took place suddenly
on Tuesday evening in the rooms of the Manclester Phi losophical Society, of which he was a Vice-President. Mr Wood had just entered the coffee-room and was sitting on a bench between Mr . Joule and Mr. Clare, conversing about the Ordnance Survey of the Northern Counties torously, and feeling him tremble. At first Mr. Clar thought he was faint and laid hold of his arm, but Mr
Wood appeared to be unconscious. Mr. Clare imme diately rose, and said aloud that Mr. Wood appeared t be very ill, and Mr. Stanway immediately got hold of Mr able on the other side of the room. Dr. Clay, o reaching Mr. Wood, directed some one to remove his neckcloth, and open the windows to admit airs An ineffectual attempt had been made by two gentlemen to raise Mr. Wood, and he was then placed on the form; his head was propped up with cushions, parations were made to bleed him. There were two other medical men in the room-Dr. Marshall and Dr. Jarrold. Dr. Clay instantly made an incision in the left temporal artery, but no blood followed the lancet. He next tore up the coat sleeve to open a vein in the arm, but it was found the eyes, Dr. Marshall perceived that the iris ene eyes, Dr. Marsuall perceived that the pupil did not contract, and thence inferred that there was a total loss of nervous sensibility. All these proceedings passed in less time than it has taken to describe them, and the medical gentlemen agreed that Mr. Wood must have exps neither the slightest pulsation nor any tremor of the flesh, or in short anything to indicate that a spark of ife remained; t
more instantaneous than if he had been shot. At the time the attack commenced, Mr. Wood appeared to be sitting at ease; one arm was thrown across the back guard chain of his eye-glasses. He liad not partaken of any coffee or other refresbment. Mr. Wood was formerly one of the representatives for South Lancashire, and by Kendal. Mr. Wood was the son of a dissenting minister, and a native of Leeds, and it is supposed that he was in his 66th year. He had been in the commission of the
peace for Lancashire for several years. The Jury at the peace for Lancashire for several years. The Jury
St. Stephen's, Wallrook.-A meeting of the parishioners was held last week, for the purpose of receiving a statement from Alderman Gibbs, relative to the present state of the parish accounts. Dr. Croly, the Rector, took of all who were not legally constituted vestrymen. This gave rise to a long discussion as to what was considered to several inquiries, the vestry clerk stated, that since 1775 it had been the custom in the parish, that no person should be a qualified vestryman who had not previously on the side of justice, and thought that an account ought to be laid before the parish, concerning the receipts and disbursements of the parish estates. existed, he held that the obligations of that trust oumht to be strictly respected, and he hoped that in this case the truichwarden would be known and felt, and clearly re cognised. On the part of the churchwarden he was satisfied that there could be no unwillingness to give an account of these monies, though there might be some etiquette as ertal say no more on his behal unless he fully cleared up these accounts, and so saved them the only means of putting an end to these unpleasant differences. Alderman ime from time immemorial, as described by Stowe, been considered a select vestry, and to such properly constituted vestry alone did he consider that his his accounts before a legally constituted vestry of the parish. He then left the vestry-room amid hisses and week he would call a meeting to revise the accounts. Mr Rock, in a lengthy address, gave a detail of the circum atances which had instigated himself and fellow-parish ioners to adopt the present proceedings. He stated that from inquiries instituted, he had learned that the parish possessed estates of the value of \(1,000 \%\). per annum, of
which Alderman Gibbs was appointed one of the trustees
in 1812, and that after the death of his co-trustees, be
became sole trustee for the disposal of the funds, not having thought fit to renovate the trust by the introduction of new coadjutors. He had further uscertained that since 18.5 10 allditors bad been appointed to examine the vestry books, Alderman Gibbs having acted as his own auditor, and that within the last ten years only twelve vestry meetings the chairman suggested that time should be allowed for the production of the accounts, and the vestry adjourned for a week. They met again on Thurs
day, when a protest was read from Ald. Gibbs, who said be would lay the accounts only before a select vestry. A vouring to obtain the accounts, and to report thereon at a future meeting. It was also resolved that the Church hould be insured forthwith;
Rebuilding of St. Olave's Church.-The parishioners of receiving the repurt of the committee appointed consider the best means of providing a new church. The Rev. Dr. Kenny, the Rector, took the chair. The report mended four distinct plans for the parishioners to decide unon. The first was to restore the church on its present site, with all its fittings, which, as it would require the bells, would, according to the surveyor's report, involve an expenditure of 9.451 ., being \(3495 l\). beyond the insur ance money. the church, but to dispense with all the bells restoration of the torer rebuilt, only to be repaired, whereby a saving of nearly 30002. would be gained, reducing the estimate to \(6445 l_{\text {o, being only }}\) 495l. above the amount of the insurance-money third plan was to erect a new church altogether, on the same site, on modern principles. The last pian was restore the church, dispensing with all the bells, and save the expense of rebuilding the tower; and by removing the east end of the church somewhat to the westward, obtain sufficient space at the east end for the erection of a rec tory-house. A stormy discussion arose, in the course of which a letter was read by the rector from the bishop of Winchester approving of the second plan. On the question being jut, the adoption of the second plan was carried by a large majority. The church will therefore be restored, with the exception of the peal of bells. vous meetings ever witnessed in the metropolis was held on Tuesday in this church. A vestry meeting had been convened to make a poor and churchyard rate, the churchwarden in the chair. The proceedings commenced at that period the church presented one continued scene of clamour and altercation, which ended in a general fight.
the parish money to be embezzled by their collectors to ant 12001 , and resolved, with cew disseniens, "ay tradesmen should be disallowed." The clergyman having ascended the pulpit at six o'clock to read evening prayers, the meeting adjourned for half-an-hour; after which the proceedings were resumed with increased uppenny rate was voted and carried against an elevenpenny ate pronosed by a trustee. Several rate-payers accused Mr . Coste, the relieving-officer, of great cruelty in telling poor widow, who had applied for crutches for ber lame child, that she might get a pair of broom-lasidles, as other similar charges, drove the meeting into a state of fury against the officer. It having been proposed that a farthing churchyard rate alluding to the "Puseyite doctrines" cated in the sate allowed, as it was principally applied for the suppor of the church. The motion was carried by a majority of
123 to 19 . A vote of thanks to the chairman was also lost by an immense majority. At the termination of the meeting a conflict commenced, during which blows were struck, and the church seats were overturned. The affai was ended by the beadle and constables ejecting the parishioners, and closing the church doors against them

Inversity College.-I he by-laws of the college, passed
general meeting of the proprietors, in May, 1842 contain a regulation for the gradual admission of alumn of the college to a participation in its government. With this view, the council are authorised to constitute stude Universitege, wors body, by conferring on them for life such shares as, in consequence forfeiture, or or being cedea for the members to be so constituted are to be styled "Fellows o the College," and to enjoy the privileges possessed by other proprietors, especially the light of taking part in the members of that body. Not more than one-third of the shares to be so disposed of in any one year are to be conferred on graduates in medicine, nor more thaw has lately mong graduates in arts and law. appointment of three fellows-one for each faculty. The pentlemen sho have received this distinction are Mr. Joln Richard Quain, of the Inner Temple, Bachelor of Law Dr. John Taylor, Keppel-street, M.D. ; and Mr. Jaco Waley of Lincoln'sinn M A
The Murder of Mr. Dadd. - Considerable doub appears to exist as to the actual position of the unfor-
tunate young man whose parricide has given such notariety to Cobham Park. It appears that he is now in custody at Fontainebleau, and that his family have memorialized the Home Secretary for permission to allow him to remain in France, where the widing a trial in this country, which can terminate only in his confinement for life
ustom House Frauds.-Several new frauds were dis covered at the Custom-house last week, in which parties before unsuspected, are implicated. The greatest secresy is observed by those who are conducting the investigation, and consequently the particulars have not yet transpired portant generally understood that some or the more quantities, it is said, have been admitted from foreign shores either entirely duty free, or at a very reduced rate of duty. Owing to the dismissals and suspensions at the Officers-house, in consequence of the recent frauds, several the metropolis until those vacancies are filled up.
Excise Notice.-The Commissioners of Excise having been informed that the medical profession continue to retail spirits of wine without a license, have issued the 12, 1843. -It having been discovered that various apothecaries, chemists, and druggists, have been selling spirits of wine in a pure and unmedicated state, by which they have incurred the \(50 \%\). penalty imposed by 6 Geo . IV. C. 81 , s. 26 , for retailing spirits without a permit: Ordered, that the attention of the several collectors, supervisors, and officers in the United Kingdom be directed to this geons, pothecaries, chemists, and drugrists, in their respective divisions and rides, and respectfully explain to each of them the liabilities which they will incur under the above las should they sell pure and unmedicated spirits of wine without And if any erses be discovered where such practices are continued after the parties have been cantioned, the same must be stated to the Board for prosecution." If this order be strictly enforced, no chemist or apothecary will be able to dispense less than two gallons at a time, even in an urgent case. Kensingtan.-At the petty sessions last week, a quesin which of bur of deciding in this parish, was revived for the purpose of deciding What chass of jurors is entill the the Captain Bague said, he found that the nas Chancellor was described in the prod " master, while it now stood as Esquire. He should, therefore, require the senior churchwarden to explain the reason for the alteration. Mr. Chesterton, in explanation said, the parish officers had been instructed that every person ought to be called an "Esquire" who held the office of Commissioner of Land-tax, as, although they were not holding a commission direct from the Cromn, they were entitled, as " filling an office of trust," to be so termed. Mr. Hanson, as one of the parish Officers, would contend that all gentlemen who filled the office of Commissioner of Land-tax, held an "office of trust under the Crown." By the 43d of George IIl., cap. 99, Mr. Thomas Chancellor and other gentlemen resident in the parish of Kensington are mentioned by name as the com missioners appointed to carry the provisions of those act into effect, and they had all gualitied according to law Now he would contend that it Mr. Chancellor had no been a man of trust, he would never have been appointed by the Crown as a Commissioner of Land-tax, and as the nct of Parliament had received the sign-manual of the King, all apoointments under it became appointment under the Crown, as well as under the Parlament, and being thereby placed in an "office of trust under the Crown," he submitted that the Commissioners of Land ax were as much entitled to be in the jury list designated "Esquires" as any other class of persons, As the question was an important one, and necessary to be ecided, he would, if the bench would postpone their cecl ion, obtain a legal opinion on the subject. Captain bro pas any the chairman said, according - Mr H 0 Mr . Hanson He considered Mr Hangon her of court and he for Hanson had provedion the subject less wan pay than the opimon of juge hern then drected the clerk to givetion was objected to to attend of the persons who des. he next meeting of the desigation should magistrates held an adjourned sessions, and after hearing some further argumente, the chaimalor wa the opinion of the bench that Mr. Chancellor, and the or not gentlemen acting as commissioners of ladrtax, in fact, hold offices of trust under the Crown, and were, in Mr. Hanson said it as beforenson said it was his intention take the mase of Mr. Pitt, who had been a captain of volunteers, tha that gentleman was not entitied io esquire, and bi designation was altered to that of "gentleman." Upion this case, also, it was intimated that the opinion of disJudges would be sought. We may here state that a the mapistrinar to the abo results. Lolleries and "Distributions."-On Monday night meeting was lield at the National Association, in Hoborn, to hear a lecture from a Mr. Mudie on Scotish minstrom and to witness a distribution of pra by Mr. Lee, the one shilling to one guinea, promise to all purchasers. The
- prioikal, lo all by
hall was crowded to excess. As there was no appearance of the promised prizes a general row ensued. Mr. Mudie in vain attempted to address the meeting, and ullimately the anger of the assembly was vented upon the building. An attack was made upon the forms, tables, chairs, and gas-fittings of the hall, which were quickly demolished.
The gallery railings were destroyed, and the violence of The gallery railings were destroyed, and the violence of the mob extended to the adjoining houses, the windows of which were broken. A messenger was at last dis-
patched to Bow-street for the police, by whom the rioters were ejected, but not before \(30 l\). worth of property were destroyed. A woman's arm was broken in the affray
Wood Pavement.- The Commissioners for Improving the Liberty of Saffron-hill have resolved that Hatton garden from Charles-street to Holborn shall be paved St. Pancras vestry, on Wednesday, contracted with the Metropolitan Company to Lay down 11,000 square yards in the New Road, at the rate of \(11 s .6 d\). per square yard, the works to commence forthwith, and the entire within two monthe

Bristol.-We leam by the local papers that a proposal has been made to erect a monument in Redclife church o the poet Southey, who was a native of that city.
ween Lord Nugent and Mr. Edmurd Dayrell, of this county, in reference to a petition presented to the House of Commons by Mr. T. Duncombe, bearing the signature of Lord Nugent, the high sheriff, and 0thers, iu which were expressions Mr. Dayrell considered objectionable, if not personally offensive. Several letters passed, which aniy served to widen the breach, and a hostile nuessage of frieus result. The affair was then paced in the hanu bly arranged the matter, by withdrawing the expressions objected to on both sides. The seconds decided that the petition was drawn up by a lawyer, that its language was such as is commonly used in official and legal documents, Carmarthen.-A proclamation was issued by the Queen in Council on Tuesday in reference to the late Queen in South Wales, calling upon the local authorities to use their utmost endeavours to bring the offenders to justice offering a reward of 500 l . for information which may lead to the conviction of a principal in any case of incendiary other liss ere, and offence, in case the person making such discovery shall be liable to be prosecuted for the same. - At the recommenmen of the Lord Lieutenant the names of twenty gentlethe Lord Chancellor. This step has been taken in consequence of repeated representations from various quarters the inadequacy or the former the present.disturbed state of the county. Mr. Maule, o the Treasury, arrived at Carmarthen on Thursday night Trevor. His visit appears to have been well-timed, for in the evening there was riarched into town, in the custody of the Lonion police, one of the most notorious disturbers in the county, named Jones, who bad long been a terror to the inhabitants. Latterly he has been seen going about
with a gun and a brace of pistols, and it has occurred in
many instances that farmers and labourers were, under the fear of death, forced by him to the perpetration of by Inaloutrages. At lengthin informailice who with 17 by Inspector Tieruey, of the London police, who, with 17 men, marched from the Gwendraeth iron-works on Thurs day evening, and scoured the mountains round for ten miles, and at length captured a companion of Jones at a public-house on the Pombray mountain. This man was instancly sent back in custody, when the remainder of the police started in search of the principal offender, whom hey arrested without receiving injury, though he was fully armed at the time. Both prisoners have been lodged in Carmarthen gaol. The nightly outrages continue more less frequently in different parts of the county. On Thurs day night the house of a poor woman who had given them some offence, situated at Penhrw-common, near Cross hands, was attacked by a party in disguise, and razed to the ground. The meetings of the farmers and turnpike rusts are also very frequent, and the latter in most in
stances have decided on not re-erecting the gates. At St.Clears, where the late outrages had their origin, the far moers met on Friday week to discuss their grievances, but the only one named was the unsatisfactory manner in which the affairs of the Whitland turnpike-trust had been managed. It appeared that this trust was first estabhished in the year 1791 , and that the money borrowed at the gates had been let at \(500 l\). and more per annum, but even with this large rental the tally-holders had lost the interest of several years. The farmers were of opinion the money originally borrowed must have been long since paid, and that they should be now reaping the benefit of having their lime and coal free of toll. A strong feeling was expressed against the managers of the trust, and some of the farmers were desirous of moving that they should be proceeded against for expending money contrary to the provisions of the Act of Pariamenc. Ald for the pur pose of seeking a redress of grievances, the mayor of Kido adopted, embodying the question of legal fees, fixity as rent, and concluding with a prayer for the dissolution of the present Parliament.- A meeting was held on Wed. nesday, on the mountain Ben Crag-y-balog, at whicla petition to Parliament fembodying the grievances of the by ballot, fixity of tenure, or the dissolution of Parliament. Deal. - Preparations lave commenced this week unde he direction of Captain Bullock, of the Trinity-board, for the purpose of fixing on the Goodmin ponderous-footed pile, which is th great dovelty in Mr. Stewart's plan for the formation of a harbour of refuge.
Derby. - The Rev. H. L. Oxley, late a priest of the Church of Rome, publicly renounced that Church, and re ceived the Sacrament on Sunday week, at Christ Clurch in this city. Mr. Oxley had deen for some years priest of Leicestershire, and a member of the order of Dominicians Gloucester- The funeral of Sir Mitthew Wood took place on Monday, at the parish church of Hatherley, near this city. The ceremony, in accordance wilh the chirec-
tions of the deceased, was altogether private, and attended only by the irmediate relatives. Hatherley is part of the property which the late Sir Mattbew inherited from Jame Wood, the banker.-On the debate Whicls arose on the sees of St. Asaph and Bangor, the Drke of Wellington and the Bishop of London stated that as far as they had wa, hise union of tive sees of Gloucetheardace with ha feelings of the Church. The Times now announces tha a circular, signed by a majority of the resident clergy of and the Bio sure disadvantageous to the Church.
Halifax.-A few nights ago a large barn in the occupation of Mr. P. Dixon, of Liversedge-han, near Heck mondwike, was burnt to the ground, stacked within and around the building, were entirely consumed. Mr. Dixon estimates his loss at more than 300 l , and not haring secured his crop before the preceding night, he had not taken any steps towards insuring his produce, which is therefore lost. There is no doubt that the fire was the act of an incendiary Ilford.-During the last two or three weeks considerable sensation has been created amongst the parishioners of Great Ilford and Barking-side, in consequence of the Divine service. Some of the influential gentry of the disrict have left the church in the midst of Divine service prossing himself on approaching the communion table. These circumstances bave led to a strong remonstrance from the parishioners, to which the vicar has replied by denying that the crossing and bowing before the communion has his sanction; but, at nae same time, he procech states that it is practised in all Protestant churches on the continent; and declares that the Bishop of Exeter although he does not himself practice clergy in crossing themserves on common among ministers of the "High Cburch" party, of which be avows himsel a member. He concludes, however, by expressing his willingness to ohey whatever commands the bishop mas lhink proper to make in the matter.

Isle of Man. - We mentioned last week that six riminas pleasure boat, had put out to sea, seized the governor pleasu that they had put out to sea, subsequent account Ancleser, and immedinely resumed busin the the A ghesey, o melly equamited 10 enumaris for thel ther has been commited seaumaris for trial. They are repre-Ipsuich.-The Temperance Recorder for this month contains an "Essay on the Town of Ipswich," from which it appears that no less than 50,000 l. a year are pent there in beer, porter, wine, and spirits.
Lichfield.-The ansual meeting of the Lichfield Agricultural Association too place The show of cattle was described by sos to be exceed ingly good; but, notwitustanding display of Agricultural ming ham, there was but a poor cisplay of Agnicutural implements. The dinner took place as usual at the close o the show, Lord Hatherton as President for the year in the chair, and Sir R. Peel officiating as Vice-President. Lor Hatherton, in proposing "Success to the Society, inculcated the necessity of farmers and their children visiting those parts of the country where the best systems of cullivation were known to exist. They would then becom acquainted by ocular survey with many advantages of which they had previously been unaware, and be enable to apply them with efficiency in the tillage of their own armer, and had never less than 2,000 acres of land on band. He was happy now to say that vast improve ments were taking place in his own neighbourhood, tha some of his tenants, distinguished for their enterpris and skill, had visited Scotland and the northern parts of England, and the result was, that they were knockius dow their hedges, removing timber from encumbered land laying out their farms on new plane, incurring increased expense in draining and sub-Eoiling, reducing thei hand-weeding; all of which operations luad been for year in practice in those parts of the country to which he had referred, and to which the farmers were indebted for the good results wituessed in those districts. There was, referring, it ohs the ptmost ich he coule not hel mizing of water. Many farmers were not aware of the nature of water which was dramn from the land by draining, and instead of esteeming it as a precious gift rom heaven, treated it as an enemy, suffering it to be entirely lost. Now he himself, acting under the advice ar Teddesley to be directed into one stream, and at the emall expense of 1,000 . We had obtained a mill power, thereby he effected a saving of \(450 \%\) per annum in other agricultural operations. His Lordship then directed the attention of the company to the beneficial effect of stall-feeding, and stated, that as he had become an his his experience as a stock rigidir preserved, it was his in
 tention to destroy Hatherton then proposed the health of Sir R Peel, stating that be could affirm in the stronges , that although the right hon. baronet ha mavy political opponents, he had not one political enemy throuphout the country. Sir R. Peel returned thanks a great length. Alter expessing opinion of the chairman, that his and result to the agricultural interest of the opportunity ties if they nould themselves the experiments in other watching England, he proceeded to the question of giving to the occupying tenant a wore phere the duration land than that whick he can tor "Much" be sid the tenancy is only from year depends upon the curto of Scotlad, no tenat of England, and in be found who would expend his capital on a farm unles he had the benefit of a lease. ha prevail in this part or the country; but hope that a feeling of reciprocal confidence betwent hand tenant has more the effect of giving the same feeling of security to the later than the ling form gives in Scolland. I believe, in fact, that where the practice o temancy at will exists, here exists also an almost universal feeling of reciprocal confidence between landlord and tenant. But at the same time I do not hesitate to say, though I have not a single lease on my estate, because it is not the custom there, that if any tenant of mine did say to me that he would feel his cbaracte exated by having a greater permonency of tenure, that it would induce in him a greater disposition to embarir his capital in culliva tion, or that it would be more agreeable to him to have that permanency of tenure which a lease would give, should hesitate very long before I declined to accede to his proposition. Of this I am confidert, that unless tenant, either by a lease or by a full confidence in the generosity of the landlord, a full assurance in some way or other, eilher legally or morally, that advantage will differences nor any other cause will be allowed to disentitle him to the benefils derivable from the capital he may expend, -I am certain, I-say, that unless this condition be complied with, agriculture will not make that progress the country. Now, one word as to the condition of those who are immediatcly occupied in the cultivation of the
soil. I think it is impossible not to see that it is of immense irpportance to the possessors of property that the farm-labourer should have a deep interest in the soil. The question was agitated last session with reference to the policy of allotments to farm-labone the subject before committee of the House of Commons. I have read that evidence, and the impression on my mind, whether in a political or a moral point of view, is in favour of allotting to the respectable labourer on a farm such a small portion himaself and his family, and give him an interest in the soil common with the great proprietors. I do not know a better occupation for the few leisure hours he has to devote to the superintendence of his family, than the attention to a small portion of land for the increase of his only, and not referring to those in towns and villages; and I must say, as far as my experience goes, limiting the and his family-not converting him into a small occupier of land, but giving him only a garden allotment-that I consider such a system of allotments would have a great tendency to raise the moral character and merease the condition of the labourer will do more to raise these institutions in general estimation than anv improvements we can make in machinery or in stock. You who have witnessed the scene of the last quarter of an hour-who have seen respectable labourng
prizes for their good conduct-cannot have seen it without the bonds of connexion between the tenant and the landlord. Gentlemen, if my life and health are spared, I shal have the satisfaction of presiding at your next meeting. Meetings of this kind have a great tendency to remedy
one evil under which the agricultural community labour one evil under which the agricultural community labour.
From the eatent of your farms you live separately, and do not possess those means of meeting frequently and of profiting by mutual intercourse which ate posstest d persons in the manufacturing districts. These mat ings
bring you together in unrestrained and free intercourse, an tend to destroy that unhappy prejudice among farmers that the particuiar course of agriculture pursued by each is the best. Why, there was not a competitor here to-liay alio
did not leave home under the perfect conviction that his beast was the best. I myself participated in that delusion when I left home, but I found out that I was unsuccessful. So with the farmers generally. When they come to these meetings they see better beasts than their own ; and the go away with the opinion that they have not yet arrived at the utmost limits of success, but that increased attention been successful this day will strive to maintain their position next year, and that
deprive them of
hope, gentruen,
meeting you again next year. I am afraid that...1, 11, e not be able to give you so excellent a lesson as my moble you, that I shall equal him in the desire to promote the prosperity of this instifution, and that there is no one ceis, whether
sincere desire on private or on public grounds, a more the agriculture of this country so prospering tuat it a.ay

Liverpool.-I It is understood that Mr. Dyce Sombre who, it will be remembered, disappeared from the Adelphi in which he gives them to understand that he is in Paris -The sales of cotton on Monday amounted to not less than 25,000 bales, and an advance of \(\frac{1}{d} d\). per 1 l . was estalished. This is one of the largest daily sales that has
ever taken place in Liverpool. The hand-loom weavers ever taksen place in Liverpool. The hand-loom weavers
have also had a full share of the benefit of the present revival in the cotton trade. From the great demand for the mousselines de laine, the cloth of which is better manufactured by hand than by the power-loom, they are mostly fully emoployed, and are receiving better wages than they have received at any time for the last 10 or 15 years Lutterworth.-A serious accident occurred Sidney Gurney, son of Baron Gurney, whilst shooting with Mr. R. Gough, at Miaterton, near this place, on
Tuesday, the 26 th ult. In getting over a hedge, both Tuesday, the 26 th ult. In getting over a hedge, both
barrels of Mr . Gurney's gun accidentally exploded, the ontents lacerating the muscles and flesh of the left arm The hemorrhage was so great that, had not Mr. Gough immediately tied his handkerchief tight round the arm fatal consequences might have ensued. Mr. Gough then placed Mr. Gurney upon his shooting pony, and conveyed him to the Lutterworth mill, where a surgeon dressed the Wound, and it is hoped thiat the limb may be saved. The broken to pieces.
Fieldenam.-The local papers state that Mr. Thomas Fielden, brother to Mr. Fielden, M.P. for this kown, has permitted the sale of his property, ratber than pay the amount claimed by the Income Tax Commissioners. It appears that the three years on which the return of income was made were most disastrous to the firm in which Mr. Fielden is a partner; and though the usual statements were made by the firm, and sworn to as correct, yet the Commissioners assessed the from in a sum which Mr. T. Fielden refused to pay. The consequence has been the sale of pome hay and a horse for the amount due.

Oxford.-The Rev. William Thompson, M.A., Fellow of Queen's, has been appointed principal of St. Edmund's Hall, vacant by the death of the Rev. Dr. Grayson. The naines of the Rev. C. P. Eden and C. Marriott, Fellows Newman the gift of the vicarage of Nellows of Oriel, by whom Mr. Newman was appointed in 1828. The Rev. Dr. Pusey has returned to Oxford, with his health quite restored. It is understood that Wednesday, Oct. 11, is the day appointed for the hearing of the appeal from the Vice Chan"Macmullen \(v\), the Regius Professor of Divinity"
Ryde.-On Sunday last, the Rev. R. Waldo Sibthorp ceived the Holy Communion at the parish church St. Helen's, near this town. It is presumed that this is
virtual renunciation of his connection with the Church of Rome, and of his return to the Church of England, from which he seceded about two years since. his county on whose estate the author of "Hudibes " was born, bas erected in the parish church a monument to his memory. The following is the inscription:-- This tablet was erected to the memory of Samuel Butler, borna mind so celebrated. In W'estminster Abbey, among the Poets of England, his fame is recorded. Here, in his native village his memory has been erected by the possessor of the place of his birth - John Taylor Strensham." Samuel Butter, \(161 \%\), n, \(i_{1}\) was buried in St. Paul's, Covent Garden.

> IRELAND.

Dublin.-On the 28th ult. an adjourned meeting of the Repeal Association took place, at which Mr. O'Connell noticed the article in the French Journal des Debats, larly on the statement of the Debats, that " Ireland was blind to wish for repeal, and as to England, she ought never to consent to it, inasmuch as her separation from reland would cause her to descend to the rank of a thirdpate power." He then proceeded to attack the King of
the French, and condemned in violent language every member of the junior branch of the House of Bourbon. He apologised, however, for the elder branch, which, he said, was always friendly to the Irish, and terminated by declaring that if Henry V. would give a charter to France, and should ufterwards require an Irish brigade to enter Paris, he should lave it in forty-eight hours, place us Monday meeting of read the took Mre on Mfonday. A letter was read reople of Ahas cragh, who had been punished for pulling down an arch erected in honour of Mr. O'Connell's visit, might be now forgiven. According to Lord Ffrench, they have expressed the deepest feelings of sorrow at having, how ever innocently, suffered themselves to be mized up with
any transaction which should cause them to incur the displeasure of their august leader and of the Loyal National Repeal Association;" and his lordship offered himself as a guarantee that "they will in future conduct them-
selves peaceably, and strictly observe the counsel and regulations of the association upon their being graciously pardoned by the Liberator, and the town of Ahascragh once more replaced within the pale of the association. Mr. O'Connell said that any request from Lord Firench must be granted, and Alasenagh was accordingly forgiven and restored to the repeal map of lreland. He announced that on the reassembling of Parliament he would devote one or two days at the commencement of the session, if the union repealed before that, to presenting petipetitions, with 100,000 signatures each. He then read a etter from the United States, signed by Jolin Arlington Bennett, major-general, and John Clinton Beckman, adju"Of course," he said, "I spurn it (tearing the letter in pieces). That is the way I treat their military organ next announced a return of the population and prom said he, completes letter \(A\), and we shall now proceed in order, for we must finish these returns before we get up them. As yet we have but four-ah! this is what delays me-for I can do nothing without these returns. We mayatonceissue her writs and summon the Irish Parliament to meet in Dublin." He therefore moved that similar returns be procured from the towns of Carlow, Clare, 814l. 7s.-Another adjourned meeting the week was Tuesday, at which Mr . O \({ }^{2}\) Connell complained that his abservations on the Royal lamily of France had been misepresented. "He had never bestowed unqualifed praise upon Charles X. of France. He might have spoken commendingly of his domestic virtues, Dut he bad committed the gueatest of all crimes in having put down the constiSolian of Trance, probably minted hy thit madman Charles X. Henry V.; and he repeated that eulocium now aleo repeated that he mould wish to see Louis Philippe-who was the friend of an infidel university, who ury where it was most recuired, secutions-succeedea by Prince Henry, nrovided he gave thanding the taunts of the journals oortio the agitation tion wonle fas oner without the Government coming to tak to them of an arrangement for a domestic Par
He certainly would not go to war to please the French democracy or the English conservatices." her 29th at Blackrock, five rniles from Dublin. The tion, were in attendance:-Dr. Gray, (chairman), Mr. J. O'Comnell, M. P.; Major Nicholson, Messrs. James Nugent John Rafferty, and Matthew Moriarty. Immediately after the arbitrators entered the court, it became densely thronged and the liveliest interest appeared to be taken by the spectators in the proceeding. Not the slightest interruption took place throughout the day, and two cases were heard and disposed of to the satisfaction of all parties Dr. Glay stated that the origin of the court was the dis missal of certain gentlemen from the magistracy, because they exhibited an attachment to legislative independence, and the people had therefore determined to appoint their own magistrates-a right which the constitution and sta vested them whth, and which they thus resumed a be recommendation of the Association. The court would scrutiny in all the al, and would submit to the strose made a solemn pledge to do justice to all parties impartially Mullaghmast.-Another of Mr. O'Cornell's "monster" assemblages took place on Sunday, at the Rath of Mullaghmast, in the county of Kildare. The matter had been much spoken of beforehond, and consequently a vast concourse of people were assembled. With the associations massated with the locality of Mullaghmast-the alleged district in the early period of English rule, the public had been made familiar, as the subject has recently piven rise to much controversy. Mr, O'Connell appeared in the carlet velvet robe which be wore as Lord Mapor of Dublin, and was accompanied by the Aldermen in their robes of office, which appeared to be objects of great suriosity to the peasants. Among those on the platform was Mr. Hughes, one of Mr. Gurney's short-hand writers, Who attended on the part of the Government. This is the first occasion on which a professional reporter was sent by the executive since the commencement of the present agitation. Mr. O'Connell said be thought that Mullaghcoming the scene of English treachery has a int and becoming spot on which to show their unanimity, and on to be misted oper all to be misled by any treachery. "Oh, my friends, I'll be no bargain, no compromise, nothing but-there shall Parliament in no for own. My advice to you is to confide in nothing hopes that may be held out to you-to confide I'll tell youn William in Colle our determination to die to a man, if necessary, in the cause of Ireland. We have come here to take the advice of each other, and above all I belicve you have come to take my
advice. If you obey my advice, repeal is certain. I'll go slow,
you must allow me to do that, but I'll ro sure. Noman shall you must allow me to do that, but I'll go sure. No man shall I have led you thus far in safety: I lave swelled the ranks of the Repealers until they are identified with almost the entire population of Ireland. I have seveneighths of the people enrolling themselves as associates. I don't want more power. I have enough, and only ask that you should allow me to use it. The arbitrators are beginning to sit, and the people to submit to them their differences. You will have in those courts friends who will do justice to all parties alike, and without costing you
one farthing. I'll go on with that plan until all digsutes are decided. I wislo to live until I see justice to Ireland and liberty proclaimed throughout the land. It will take me some time to arrange my plan for the new House of her Majesty, when the present miserable Administration shall be supplanted by one that can be regarded as frieudly to Ireland. The Conciliation-hall, in Dublin, will bo
soon finished, and when it is Ill call together 300 bogtrotters, as the Times calls them, although better men never stepped upon pavement. But, until I ascertain the form of the new House of Commons, I do not wish to go further. It is theory, but it may be ascertained in thee weeks." A resolution was then passed in favour of place. "The national cap" was presented to Mr. O'Connell, with anaddress from the committee of manageup with light blue, and richly ornamented with gold lace. The form, as described in the address, is that of the old Milesian crown, to which is added a wreath of shamrocks on a white band. When the cap was placed on Mr.
\(\mathrm{O}^{\prime}\) Connell's head, the plaudits of the people rent the air. The address was signed, among others, by Mr. Hogan, the sculptor. Mr. O'Connell said he accepted witl pride and pleasure the national cap as well as the address, which at the head of the list of those signed to the address the name of the first sculptor of the day, Mr. Hogan, the fame of whose genius was recognised wherever art was lection of its having been presented to himg at the Rath of Multion of its having been presented to him at the Rath of
Mullagmast, and when he died it should be buried with him in his grave.
Cork.-A ridiculous story has been published in a Cork paper respecting the Lynx brigantine, while under that officer to fire upon the town while lying in the Cove that officer to fire upon the town while lying in the Cove
of Cork. There is not the slightest foundation for the of Cork. There is not the slightest foundation
statement. Lieut. Burshem has been invalided in phenre of severe \(1 / 1\) uess, having bien altarked by the When on that ctation of Africa, to which he wns sirljected has since repentedy attacked him on this conniry. Whith story of che first litutenaut having talose the eyoma: officer on board equally erroneous, there being no sucin Sir Josias Rowley sailed on Saturday, previous Prevost, of the flamp-ship, by Captain Rowley and Lieut. Prevost, of the flag-ship, paid a visit to Father Mathew, who received his gallant visitors with his usual urbanity, und on taking their leave, presented each of them with a
silver medal. Father Mathew proceeded to Cove next morning to return the admiral's visit on board the St. Vincent, where his reception was of the most compli-
mentary character.

\section*{SCOTLAND.}

Ross.--Several sth the induction ocurred in East appointed to benefices void by the late secessionisters Resolis last week the Presbytery was deforced at the setattacked by a Rev. Mr. M M \({ }^{〔}\) Kenzie. The authorities were of stones, which compelled the sheriff to read the riot-acs and to direct a party of the coast-guard to fire upon the rioters. One man was apparently wounded in the lew,
but being on an elevation, the pistol, although loaded wit, ball, did not do much apparent damage, and not possess party to charge with their cutlasses and sticks. juncture, and while leading his men on, he was knocked down, and it is said had a rib fractured by a blow fromed stone, and unfortunately, about the same instant, he re-
ceived a severe wound on the back of the neck, ceived a severe wound on the back of the neck from a
maissile, which covered him wilh blood. One Care bold than the rest, advanced so near that Mr, however, so vigorously, that it was not until thesisted, bla fallen and rolled upon the earth that she was secured Placed in a gig, and driven off to Cromarty gaol by a mesher to prison was waylaid, seriously maltreated, and his ve Cromashed to pieces. A mob also surrounded the gaol at Cromarty the greater part of the night, and an attempt to Wencue was auticipated by the authorities. The presbytery ormas, inducted in the inn; but the rev. gentlemen were stones. Mr and leaving Fortrose, hooted and peited with on Sunday, but the people again assembled, and violently Among othery one who attempted to enter the church escape amidst a shower of stones. The mob tolled to son as they had carried their point, and assembled at \(\mathrm{R}_{0 \text { sskeen, but the Presbytery did not appear. At Kiltearn, }}\) on the 27 th ult. a similar disturbance was expected, but ful. The lord-liento prevent it were fortunately success-

The lord-lieutenant, accompanied by the sheriff and
the seceding clergy, among whom was late minister of the parish whom was Mr. Campbell, the was no interruption to the business, and the Rev. Mr. Mann was quietly inducted. The seceding clergy have pulpits, and have abjured all such aid and adherents Glasgow. - The local papers 'state that for some tim past a kind of secret expedition has been fitting out at under sealed and the vessels that have already sailed are under sealed orders, which are not to be opened until the
ships have crossed the line. In spite of the secresy served, it is now known that the expedition has sailed for an island said to be west of the Cape of Good Hope, and engaceculation is likely to be not only lucrative to those as well as to the shipping and commercial interests. It is said that the island in question contains guano of a richer description than any bitherto known. Several of every description, and from this port with implements pose of carrying the cargo from the shore to the ships. follow. In Lond ships, of large burden, are about to for the same destination, but the Clyde shippers have had firms in Glassow is understood that the speculators are two firms in Glasgow, who have chartered the vessels.

\section*{THEATRICALS.}

Drury-Lane.-This theatre opened for the season on Balfe's popular opera, "The Siege of Rochelle," and o class at the Grand Opera of Paris. In opera and ballet Mr. Buna has endearoured to provide the stronges all the musical actors and actresses of the Metropolis ; has committed the musical direction to M. Benedict ; his rchestra is excellent, and his chorus numerous and apparently efficient. The opera was well cast, and well got up,
Miss Rainforth appearing as Clara, and Mr. Templeton Miss Rainforth appearing as Clara, and Mr. Templeton
as Valmour ; but the audience throughout appeared indiferent to the piece, and were more alive to its defects than ormerly. The opera, however, was announced for repeThe " Peri" is one of the applause from its supporters. duced on the English stage. Carlotta Grisi is already known at the Italian Opera-house; but this, ler first
appearance on the English boards, threw the audience absolutely into transports of delight. Their enthusiasm Was exhibited at the falling of the curtain by acclamations
which lasted for several minutes. This applause was well bestowed, for certainly a more delightful vision than her Peri never appeared upon the stage. As a whole, the
ballet was got up in a style of splendour and beauty which has rarely been surpassed at the Opera-house; and it will undsotedy be a favourite entertainment during the
scason. The house was crowded, and the boxes had a brilliant appearance. under the management of Mr. Wallack, with a new fiv act drama, entitled "Woman," from the pen of Mr.
Bourcicault, the author of "London Assurance," which was so popular two seasons ago at this theatre. On the
rise of the curtain Mr. Wallack delivered an address for rise of the curtain Mr . Wallack delivered an address for
the occasion, cleverly written by Mr . G . \(\mathrm{A}^{\prime}\) 'Beckett, which was very well received. It alluded to the boldness of the enterprise, to the cold water that had been thrown upon it to the overflows that were hoped for, and to the reduction of prices which, among other things, it was hoped would ment to encourage native talent in every department, an to promote success by the production of novelties. The and Doria (My fonowed. Gaston de (Miss Vandenhoff) a young lady of great wealth, who ba been confided to the charge of Giotto, a Genoese artist by incurs the enmity of Gaslon, whose conduct and speeches resemble those of Iago. Gaston first excites writes, under an assumed name, to Cola de Foix (Mr. W. Lacy), in order to please Lina (Mrs. Nisbett), Giotto's daughter, who is in love with him, but wishes to play him works upon the mind of Doria, until he believes that his young wife has been unfaithful. Having thus rendered the husband miserable, Gaston does not prevail upon him poison, which he obtains from the Jew, Benoni (Mr. Vandenhoff?. The Jew has a daughter, who in compassion sub stitutes a sleeping draught for the poison, so that Inez is preserved, when evervbody but the young Jewess imacine that she is destroyed. After her supposed death Dorica rushes into every species of excess and extravagance, and by the instrumenality of Gaston loses the whole of his property ; and turns out to be Ruth (Miss Cooper), the daughter of the Jew, in disguise. Gaston, pursuing his career vilany, betrays Benoni to the officers of the Inquisition; and when he imagines they are on the point of seizing the Jew, aha carof her robe and can, back ministers turows ofl her robe and cap, and discovers herse. life. The Jewess disinere tedy give back all her weath to Doria, and he hile Gaslon quits the cene and his innocent wife, whill caslon quin vengeance against all womankind. This is the merest aketch of the serious incidents, to which we ought to add that it turns out in the end that lnes is, in fact, the
daughter of the Jew, and that she alone had been saped
out of a wreck at sea. The piece was admirably brought Mrs, Neshise, but in many respects inefficiently acted and did their best for the Lacy alone played earnestly plause was not great at any time, and in the the ap. some disapprobation \(\pi\) s s curessed but afterwards the action became more rapid and at the fall of the curtain, when the piece was given out for repetition, the applazs well, followed, which met with very merited sy Mr. Rudis called "My Wife's Out "" and Mr. and Mrs. Keeley Miss Jane Mordaunt, and Mr. Wigan had parts in it, an Keeley, in partion, The performance of Mr. and Mrs. Keeley, in particular, was attended with loud laughter
from all parts of the house, and the piece is sure to have Adelphi.-This house opened on Monday for the season. During the recess it has been cleaned, the orta Adelphi ennisned, and it looked altogether as well as the Trom the ean look. The pieces were a three-act drama appeared as Marie, called "Marie," in which Mrs. Yates ballet of "Ondine," concluding with the farce of "Bink the Bagman."
During the recess theatre also opened on Monday boxes, pit, and gallery are now clean and commodtond The pieces selected for representation were the drams, Our Village, or the Wreck of the Rattlesnalke," which, faction as ever; a furce called "The give as much satisand a burlesque on the "Malled "The Litile Offspring," Merchant of Venice."

\section*{5visctlancous.}

The Fine Arts of England.-At the Sheriffs' inaugarahanks as oue of their Chaplains, Dr. Croly, in returning quent remarks on the present state and prospects of much in the l-" I have always regarded the fine arts a helpmate for him. Ther of life and nations-war, law, commerce, science, if they The fine arts, periaps the spirit of man. dote to 1 s, on the other hand, present a perpetual antiseverity, softening it without weakness, teaching it enjoyment without offence, and opening a new and brilliant way to fume without the crimes and penalties of ambition. It seems to me beyond question that the country is at this moment preparing for a new and rapid advance in this direction. l see a new and powerful combination of
ciseting and invigorating impulses, all movina in this ma, writnt road to national greatness. The illustrious pcrsonage at the head of the empire, our Queen, whom none can name withunt honour, and whose cultivated tastes frito cF. In \(r \mathrm{r}\), pal consort, whose conduct has already ' won such rolden opinions' from all men, and who, though born rangel, shows the its a Un' Ne, is an eceonyitile.l athist. The members of the
rbonent, and chlecialy the distinguished statesman at its head, are hnown fur their personal patronage of painting and sculprare. A sudden sense of the beauty and anterest of the iats is obvwus!y pervacting all rai,ks and if the expetiment of the cartoons has demonstrated hat there ware mannected orignalty and firce among our riang generation of atists, it has equalky demon strated, in the nultitudes of even the huabest ranks who crowde to sia then, thet serse of ammation and ratronal chbrit which the aris hue the poner to crate among the frome I hope that fais aspurnmat win be repeated, convinced that the visoti of the present display will be surpassed, that the futare teems aith powerful talents, and th, it the national vosce has but to be utiered to bring ip a hust of new and millamat spirits to the ning, ready to thans a portion of then lustre on the name of their donbty. 1 altosether disrescart the scepticism Which country pred say nulhum of unished of whom I see aronnd me-has already given frefges to emineme. But ever if we had not a single Win artist, 1 conla not comcide in the dea that this counuy could be exchuted from any frovince of national thiority. I have such strong fain in the mexhakstible vity of England, and such tribence of her success in every pursuit on which she has once fixed her mind-I see the miracles of her predominance, her supremacy in government, her glittering triumphs in war-1 see the of so many victories-I I see such ancient and various quarterings of renown on her heraldic shield, that I can never suppose her incapable of the highest honours in the most tempting and the most self-rewarding tract of national glory. I disdain all notion of cespair in a country which has such memory to give her hope. I disdain all idea of falling short of the highest elevation in a country which genius has so long lent its most soaring pinion. In the latter part of the fifteenth century all the depreciators of national ability cried out that the when all thre in the year 1589, at the moment the sumposed death bed, Shakspeare started ing round mortal career. In 1667 the poetry of England was pronounced to be ruined. Before that year was at an end,
 a. nation, and we shall find a noble answer. I say as a
nation－for if ever our artists have been tardy，it is for the want of mational patronage．for the nation．There is ro charm in even the higheat personal emolument equal to the generous and ennobling consciousness that he is cootrobuing to the national drstinction，and taking a p＇ace in the memory of an empire．This made all the geatartists of the Continent，and it is this largeness of purpuse and citizenship of the great commonwealth of
fare or．hich alone will stimulate，as it alone can reward， the full exertion of a man of genius．Make your art national，and you make them at once grand and secure Never call the soil barren ；propel the stream of public patronage over it，and then leave the rest to prolific nature．Yorti．You have only to break in the crust of the earth under your feet to gise the treasures of a Hercula neum to the light of day．If I nim not altogether mis taken，the arls may become even an energetic assist－ ant to the political power of the country．In casually time since，especially the reign of Louis XIT．，I was stiurk，not for the first time，by the singular policy of his earlier years．He carre to the govern－ by the ferocions tyranny of Richelieu，and sicklied by the subtle Jesuitism of Mazarin．Though by nature grasping，vain，and unprincipled，his first efforts were applied to the most magnificent patronage of the aris．In ten years France was sovereign of continental opinion－ Paris the wonder of Europe－Louis the mover of every cabinet．He violated at length his own maxims，and grasped at teritory instead of mastery of the unversal mind．Yet，such was the eleva－ tion to which those ten years had raised France took a long life of waste，profigacy，and misfortune to doms．Or look to the extraordinary man whose name has scarcely lost its terrors for Europe，whose horse－tracks has scarcely lost its tercors ior man whose soul was ambition，and the breath of whose man whose soul was ambition，and the breath of whose nostrils was fire．What was the first act of his poser ？ To make his canital the centre of the ants．What the first fruit of his victonies？The seiznce of the than galleties， The Lourre．Or，look to that great and mont sararious The Louvre．Or，look to that great and mont sararious Sovereign，who bas solved the problem which Napoleon without war－thss Napoleon of peace，a leftier，and，per－ haps，a more d．fficult tille than the Napoleon of war： upinthe aris of France？IIas he left them to gatl．er a precar ous snbsistence from the chance liberal：ty of the precar ous smbsistence foanthe Ha has nrged alnost the perple？Quite he contary．Tre has Hoed alyost the Whole strength of national patronage into un from his person？enernsity the fount Which the national necessities had left dry．And this is the ni：dom of a great monarch，ns fuily acquainted with the events of royal power as sullv，or denty I ；as
jealous of nutional fame as Louis XIV．，and as resolved to raise Prance to the ligigest pmande of European power， by the influence of peace，as ever it was raised by the fiery gusts and expinsinns of Napocon．
Roman Tumulus．－Professor Henslow has addressed a letter to the Editor of the Bury Post，giving an inte－ resting account of the opening of a Roman Barrow，on folluwing is an extract：－＂The Barrow explored on thi occusion corered a space 82 feet in diameter，but was of low eh vation，not bring raised more than 6 feet above the general level of the sol．When I arrised at t．e spot，the workmert bad alrcady dug a trench arout 4 ，and nearly down to a level with the surface of the fild．This trench ranced nearly N．E．and S．W．，its direction being a little more than this to hee i．and th．pon digging a litte deeper，some masonry，and on clearing away the soil，we laid bare a sort of low dome covered with a thin layer of mortar，and not very unlike the top of a cottager s oven pread oser a layer of pounded brick about \(1 \frac{1}{2}\) inc thek，which had leen redaced to a cuarse powder，inter mised with small fiagments．Under this uas a layer ight brown loamy clay，which wearth from which the bricks had been fabri－ cated．The three layers together averaged about \(2 \frac{1}{2}\) or 3 nches in then and bricks， pread confused piled round the sides and over the top of a regular piece of masonty within them．The resul of this part of the insestigation was the discovery of a chamber of thick．The general character of the masonry was the same as that which is described in the＂Archarologia，＂wol．xxv．，and fissired at rlate 3 ，by the la \({ }^{+}\)e excellent anțiquary，and greaty regretted
Gage Rokewode，Esq．，in his first paper on the Barows at Barlow．The floor of the chamber was 2 feet \(2 \frac{1}{2}\) inches from N．E．to S．W．，extending（singularly enough）in the very firction the trench which crossed the Barrow was nearly square．The walls were composed of five coursts of biek－un．li，cemented by ralher hick layer of homizontally so the a ach range lapped over and projected our every jile ty about 1 is inches more inas ardly than the one beneath it，until the opening was finally closed by wo narrow strips of tile，fillitg in the space left in the two narrow strips of the the height of the chamber from the floor to
the top was 2 feet 3 inches．The whole was covered by mortar and clay between each layer had received the im－ mossions from the tiles above it in a manner which at first conveyed a notion that they had been painted．On removing one of the smaller tiles in the upner range， 1 had the satisfaction of peeping into a chamber，with its scribed by Mr．Rokewode ：with the unlucky exception that a lorge class vase owing to the joint effects of time that arruion，lad fallen to pieces，and its fragments wete now lying towards the N．comer，in a confused heap，intermixed with the burnt human bones it hed con－ tained．Upon the heap was lying a beautiful glass lachr matory，slightly injured．in its projecting rim．Everything else was entire，and eight pieces of pottery appeared stil by the sorrowing friends and attendants of the deceased， 16 or 17 centuries before．

\section*{SATURDAY, OCTOBER I4, 1843.}

\section*{}

Is our answers to correspondents, an inquirer was Jately directed to select his cuttings at a time when they contain much organizable matter. But the meaning of that advice was unknown to him, and will probably be equally mysterious to others. It will therefore be as well if we at once explain it, especially as it is connected with points of cultivation of very considerable importance.
The term organizable matter is equivalent to what has been called true or descending, or arterial, or vital or autumn sap, in contradistinction to the term aqueous or ascending sap. Although in some respects the old expressions were useful enough, yet their diversity showed the insufficiency of them in the minds of
physiologiste, and they had the great fault of conveying incorrect notions of the nature of the matter :spoken of. In particular the word sap necessarily recals the idea of a fluid; Purpurea sapa was the term autumn, \&c. sap belongs is more viscid than fluid, and to a large extent, especially in autumn and winter, is not only solid but insoluble by ordinary solvents. "This fluid," says Mr. Knight, "is closely analogous to the arterial blood of animals," and then he goes on to say that it also "assumes an organic at first it is fluid, like all the solid tissues ; by degrees changes, starches, albumen, gluten, and other substances, ali which, taken together, constitute "organizable matter" Such, taken together, constitute "organizable matter." called sap, but can scarcely bear the name when consolidated and finally elaborated.
The history of organizable matter is this: When a intreproduces itself, lature introduces into a small all the qualities of its parent, and plant, formed of mixture of subsiances calculated to feed the veretable infant when it first begins to be animated and This bag, with the matters it contains, we call a seed. As soon as the vegetable embryo is excited within the seed, the nutritious substances laid up there quit the solid and assume a fluid state, and are quadually
converted into the new organs or parts wit embryo is clothed : hence the name organizath which the to such matter, that is to say, able to form organs. The parts which are thus formed possess the power of producing, under favourable circumstances, more of are formed and matter, out of which additional parts are formed, and so on incessantly. But in the absence of such matter no new growth can take place, while the extent of growth, and the nature of the parts that are formed, depend entirely upon the quantity of There is matter that the prant produces.
Physiology which more concerns the cultivator table this; and the history of organizable matter, the circumstances favourable or unfavourable to its production. the way in which it changes, the places Where it is stored up, and the organs to whose action and a large part of the fabric of the science of Organic Botany. This, indeed, will be apparent to everybody when it is once understood that organizable matter is formed. Nevertheless a few examples of its impare are ance will assist in making the matter clearer.
The cause of these remarks was a question relating to cuttings. Every one knows that cuttings are generripened; at that time organizable matter is collected Within them, and enables them to put forth roots and neither. Moreover, the reason of the common practice of allowing an old leaf to remain on a cutting, is that the leaf may secrete more organizable matter to replace supply which is expended in forming roots, so that the supply may not be exhausted.
if it young Melon plant is unable to set its flowers, or inferior quat them, the fruit produced is small and of is not formed abundantly till after the plant has made the fruit, under the progress in its growth. When to swell, it attracts to itself so large a proportion of the organizable matter that has been secreted, that the
formation of leaves is obstructed, and then the supply required for further nutrition is interfered with, because fruit has to depend upon leaves for
its sustenance. Or a Melon plant with half-grown its sustenance. Or a Melon plant with half-grown
fruit suddenly loses its foliage, in consequence of negligence or accident; the fruit will swell but little afterwards, because the organisable matter, constantly forming by the leaves, is wanting.
An orchard bears a very heavy crop of late fruit; Ine next year the trees are stunted, and hardly grow. In that case the crop of one year has consumed so
much of the organizable matter of the trees that little much of the organizable matter of the trees that littie
is left for future growth, which is consequently arrested till more organizable matter shall have collected.
Gardeners dig between the rows of their Strawberry plants, in auturn, or winter. There cannot be a more mistaken practice. By such means the roots, filled with organizable matter for the nutrition of the plant next year, are destroyed; and what is sulistituted in place? Nothing.
Grapes shrivel : although more causes than one are probably connected with that malady, yet there can be no doubt that the want of organizable matter is a are exhausted by over-cropping ; organizable matter is for the time diminished; before it can be replaced the new crop of Grapes has consumed all that the trees contained, and then, their food failing them, the berries necessarily shrivel. But this deficiency in organizable matter may arise from other causes than over-cropping: injuries to the leaves, of mnany kinds, are a fruitful source of the mischief; yet in all these instances the way in which the injury tells is the non-production of organizable matter.

In conclusion, it must never be forgotten that plants, like animals, consist of two essentially distinct parts: the one the organized material of their struc-
ture, the other the organizable matter out of which additions are to be made to that structure; and that under no circumstances whatsoever can growth take place, except in the presence of the latter. This law is not only one of the foundations of Vegetable Physiology, as we have already said, but one of the most important of all facts for the gardener to bear in mind, explaining, as it does, the sources of success or failure in multitudes of the operations in which he is daily engaged.

Ween the harvest is over, and all the corn is safely stacked or lodged in the barn, the farmer naturally
feels inclined to rest himself and his horses and to reels inclined to rest himself and his horses, and to
relax in his labour; and if the weather has been fine and they have worked early and late, they require a little rest to recruit their strength. Light work, such as horse-hoeing between the rows of Turnips, more to stir the ground than to mould them up, carrying mould to mix up with the farm-yard dung, and other jobs, may be done, so as not to work the men and horses too severely. But this must not last long, so long only as to let men and horses recover their strength; for no day should be ever lost in a wellregulated farm. A portion of the Wheat or Oat hoed by hand, which last is an excellent practice, and gives employment to many hands which otherwise would not readily find work. The weather is generally fine for some time after harvest, and advantage should be taken of it to clear the fields of weeds by raking them together and burning them. If some heaps of manure or compost have been prepared
during the summer and laid on some corner or headduring the summer and laid on some corner or head-
land, where they are now in a fit state of decomposition to be carried on the land, five or six tumbril loads per acre may be laid on and immediately spread and ploughed in. According to the size of the farm and the stock kept, especially working horses, a certain portion of this land is to be sown with winter Tares, as soon as possible; and this sowing is to be repeated every fortnight till near Christmas, at the rate of two bushels of seed per acre. They may be drilled or able than Tares, to be cut green or fed off with sheep in spring. On very heavy land unfit for Turnips, they are an admirable preparation for Wheat, giving ample time for a bastard fallow in the following summer. On good loams they come off in good time to sow Turnips, which, if properly managed, will grow
as well after a crop of Tares as they would on a as well after a crop of Tares as they would on a
summer fallow. We will take another opportunity of giving directions for this important crop. We are weil aware that we are only stating what every good farmer or bailiff knows weil, or ought to know ; but we write for young farmers and amateurs, and if any practical experienced farmer has any objection to make to our suggestions, which are all taken from our own practice for many years on very different soils of moderate fertility, we shall be very ready to receive
information, and to compare the experience of others with our own, provided the facts be stated with accuracy, and sufficient reasons be given for adopting a different course. Our object is to diffuse the knowledge of those practices in husbandry; which are
sanctioned by long experience, and which have greatest quantity increase the crops, and to raise the greatest quantity of produce at the least possible expense. We have no theories of our own to support, and claim no new discoveries; but we are ready to impart to younger farmers the knowledge, such as it which time we hesuit of thirty years' practice-during which time we have read and studied the works of the
most celebrated agricultural most celebrated agricultural writers, testing their doc-
trines by actual experiments trines by actual experiments-which have often led to
disappointment and loss ;-and no disappointment and loss; -and now, near the close
of our career, it is a pleasure and vour to give to others what to ourselyestion to endeabeen invaluable at the beginning of our agricultural experiments: yet we are not too old to learn, and are fully aware that every year tends to correct errors, and to suggest improvements in the cultivation of the soil. To return to our sowing of Tares. It is of great consequence that the seed be good, and of the genuine winter Tare, of which there are several varieties. It is best to save as much seed every year as is required for the next sowing. A careful farmer will take care to have some to spare for this purpose ; and if his seed degenerates, or is of an inferior variety, he will look amongst the crops of his neighbours, or elsewhere, to be sure of having good seed. The nature of his soil must be taken into consideration, as some soils are more favourable to the growth of Tares than others; but with good tillage they will succeed in soils of very different qualities, provided these are properly prepared and well manured. It is more profitable to have one acre of Tares which grow luxuriantly and cover the ground, than many acres which give but a moderate crop, and allow the weeds to spring up in the intervals. No crop cleans the land better, especially those soils which are subject to be overrun with Charlock, or wild Mustard. If this troublesome weed be watched, and the Tares cut or fed off before the seed of the Charlock is fully formed, this weed is not only destroyed, but increases the fodder, without any injury to the cattle or sheep. If fresh seed is brought to the surface when the land is ploughel again for Turnips, the weeds will be destroyed in the hoeing of this crop, and none will probably appear in the next Corn crop. In land which has been badly cultivated, and ploughed with a very shallow furrow, for fear of "bringing up
Charlock," as the old farmers say, this is the most effectual mode of destroying it : but it requires patience and perseverance to do so effectually.
Iu some favourable situations, where the harvest is early, the land may be ploughed and sown with Stubbie, or Eddish Turnips, as they are called, and these will give good feed for sheep at the end of winter;
but if the soil be heavy and wet in winter, it is better to plough it in small round stitches, or ridge it, as is done in Essex, to let the frost penetrate the ground as much as possible. There is no tillage like a frosty

OBSERYATIONS ON THE NEW SYSTEM OF POTTING PLANTS.

\section*{By Wm. Woon ; at Messrs. Henderson's Nursery.} No. II.
In the remarks, to which the following are intended as a sequel, an opinion was offered that the present test of superior cultivation is "the greatest amount of constity-
tional vigour within a limited period :" and as this, whe tional vigour within a limited period ; " and as this, whea attained, can but be regarded as a primary step towards an ultimate object, it may with equal certainty be uffirmed that the higbest purpose of cultivation is a constitutional vigour, combined with a uniform development of bloom, In attempting to define the means generally adopted for the uttainment of this, it will be of interest to glance at the principles or conditions upon which such results depend.
The present modes of potting may be considered as two distinct mechanical operations. The first, from the Progressive unitormity or its process, has oeera termed from its necessany Accumudative system; and the second, citement and repose, may not unaptly be degignated ad Alternate or Restrictive system. The leading feature of the former (the Accumulative) is found in its leading to a maturity of growth, without the aid of intermediate shifts, due proportion in size fertility. The latter, or Restrictive syatem, is well characterized by its dependence for the same end urion the ordinary practice of shifting gradually from smaller to larger pots.
dicability of the first mist many doubts as to the pracis totally opposed to general practice, not being a s gradual process of repeated and protracted efforts, but an applicadifect of first principles towards producing an imwediate details than in its natural tess opposite in its mechanical being an immediate application of large the Accumulative bearing due proportion to a perfect darge quantities of soins, and so approaching natural condutions, while the Restrictive or frequent shfting system is the successive applicahon of materials proportionate to the earisting vigour of The value of the Accuges of growth.
The value of the Accumulative mode of cultivation will be more readily understood by tracing its connexion with
those principles of Horticulture on which the nost perfect vegetable growth depends.
The only natural mode of perpetuating the constitu tional vigour of a species is by reproduction from seed; and it is strictly in harmony with this law of Nature that be various modes of propagation and cultivarion are to be viewed. Thence it follows, that in proportion as the means employed for the multiplication of plants are artificial in their character, will be the premature exhaustion of the individual parts thus multiplied ; in other words,
if, in the propagation of any plant by cutinus, the if, in the propagation of any plant by cutinus, the exhausted by excessive development of its parts, or by excess of bloom, the parts thus detached will partake of the impaired vigour of the parent. And upon the sume princrple, a plant which has been in the first instance derived from its parent stock as a layer, will possess less constitutional energy than others derived from the same source as cuttings, in consequence of the layer already approaching its final maturity more nearly than the latter. The conclusions to be derived from the foregoing remarks are, that the several organs of a seed, a cutting, and a layer, are each endowed with a principle of vital energy varying in power from a seed downwards. It may further be stated, that the vital functions of plants are diminished in force in proportion as the primary development of their parts is prematurely hardened or matured whether that arises from excess or deficiency of the elements which sustain them. Much that is superior in cultivation is known to depend upon the skilful applice tion of materials adapted to the variations of loca influence and after-management. In support of a pro gressive and accumulative system of cultivation, the following principles may be offered, apart from those minor evidences which every successfar rout of practice supplies.
indispensable maintena indispensable that the supply of fluid by the roots should be continued and uninlerrupted*
2d. "The smallest leaf at the extremity of a branch of a lofty tree must assist in setting in action the absorbing power of roots, at whatever distance from the other
organs those roots act. If this reciprocal action is not organs those roots act. If this reciprocal action is no maintained without interruption, and if anything occurs to cbeck it during the period of vegetation, the plant wil suffer in proportion to the amount of interruption. \(\dagger\)
From these statements, it appears that whatever tend to protract or suspend the reciprocal action of the organs of plants, will, in proportion, impair their vital energy; and it is the fitness of the uccumulative system to secure a continued supply of those fluids which are essentially necessary for mature growth in plants, that constitutes its superiority over other modes of cultivation. This advantage is obtained by transferring planta, in their young and excitable state, to large masses of soil, of a texture and
quality adapted to their growth, and so mechanically quality adapted to their growth, and so mechanically arranged as to enable their tender organs progressively to moisture, or to be retarded in their after-growth
A strong argument against the fitness of the restrictive system of shifing of plants, to attain simultaneous and accumalative vigour, is found in the tendency of that system to reverse the laws of Nature in regard to the formation and disposition of roots. This is an evil inseparable from the ordinary modes of cultivation. The through the medium of their extremities or spongioles, it is plain that their capability of answering this importan end will be in proportion to the facility afforded them extending and ramifying in search of the elementary substances required for their respective organs. In admitting this view of the subject, it will probably be found that the amount of food thus obtained wrobably be commensurate with the diffiusion of the roots over a given surface.

These opinions are strengthened by their coincidence with the physiological fact, that "roots augment in diameter simultaneously with the stem, and under the an important inference is to be an important inferese is trawn in favour of the present argument; namely, that as an inverted or hori-
zontal position of the stems and branches is calculated to diminish vigour and dispose to precocious fertility, so diminish vigour and diapose to precocious fertility, so similar effects will attend an inverted or circular direction of the roots, by limiting their expansive movemant, and lessening their expo
But it may be said that cultivators can avert such an unnatural position of the roots, by reshifting previous to those organs being too far advanced; to which it will be sufficient to reply, that such a mode of transferring plants previously to their being tolerably established, would not only be opposite to successtul practice, but attended by a Thisk with which few practitioners would venture to incur. That plants of slow and rigid habit (and others proportionately) should be fairly established in their respective stages of growth, previously to being further excited, is would not only endanger the fowers, but tend to frustrate Me principal objects of cultivation,-From Paxton's Magazine of Botany.

THE CLOVER DODDER.
I have caretuliy examined this Cuscuta, 或but cannot yet say precisely whether it should be considered distinct from C. epithymum or not., I have no specimen, recent or dried, of the latter at hand, and so cannot institute any
direct comparison, and the figure in English Botany is
"Lindley's Principles of Horticulture,"
\(\dagger\) "Theory of Horttcult nre," \(p\). ED.
t "Sindley's Theory of Vital Actions."
not to be depended on for euch a purpose. I do not consider any of the descriptions of C. epithymum which I can refer to sufficiently detailed to enable me to judg from them. From what I recollect of this plant, it is plant does not possess; but these are doubtful characters The essential characters of two species so closely allied and unfurnished with leaves, must be taken from minute differences in the parts of the flower, and it is impossible to speak very decidedly how far these may be permanent without seeing the two together in a fresh state. I find one character in the flower of both this and C. europra, Which appears to we have been hitherto imperfectly noted; and I shall take the liberty of directing the atten tion of future obsers "The flowers have been described as furnished the stamen. seated on the co-
rolla rolla, and opposite to the stamens. But instead of dis tinct scales, I forma adherent to the base of the corola, but perfectly free above throughou its entire circuit. teeth, seated before the stamens, and it is these which have been described asetch may convey an idea of thi rude and imperfect sketch may convey an idea of this
corona as it occurs in the two species here alluded to.

\section*{Opened flower and scales of Cuscuta Europea.}

Opened flower and scales of Cuscuta trifolii.
I observe, also, on opening and extending the corolla on fiat surface, that the corona ruptures readily at the base f each lacinia, creating a suspicion (for I can urge no more) that it may possibly be formed by the cohesion of ubordinate parts (abortive stamens ?), which thus alter nate win the stan, These parts are very swal, by the figure and descriptio of C. europses in English Botany phere that apription of C. europæea Hitcham, Suffolk, Sept. 13, 1843.

AMMONIA.
The observations of Mr. Lawes on the value of Am nonia as manure, in last week's Chronicle, are very interesting, and in several respects I entertain the same opinions; some of his statements, however, appear more questionhardly be justified in adopting bis conclusions, and giving up the old theories which have hitherto been received. Mr. Lawes considers that it is more important to supply plants with Phosphates than with nitrogen, and in this cordially agree with him, but when he seems to think Ammonia of little or no value as manure except indirectly feel hardly prepared to follow him. It is pretty geneally considered that plants must derive the nitrogen which they contain, either from Ammonia or some other compound containing it, and that they cannot assimilate it direct from the air; if this be the case, it is evident supplied with Ammonia, or some other compound containing nitrogen, either from the air or from the soil. Now the quantity of nitrogen which can be supplied in this way to plants is by no means large ; if therefore the supply of it can 'be increased in moderation, the means means of luxuriant matters, and consequently one of the examination, it appears, that the great majority of the perations of culture, amongst other thinge, facilitate the bsorption and retention of Ammonia and the compounds nitrogen
In studying the action of inorganic manures, it is necesary to consider their action in several points of view: their chemical effects must be distinguished from those which are merely mechanical, and the chemical nature of he soil must be known, that the chemical effects of the nanure may be ascertained. In adding, for example, to powtain soils lime or other bases, we give to the soil the nitric acid. We may merely add porsh Ammonia into pitric acid. We may merely add potash; but by so doing we give to the soil the power of fixing a quannity of nitro geans. as nitric acid, and thus ebrica the soil by indirect means. The nature of the soil is of very great importance in examining the action of saline manures: we apply arious salts of Ammonia, and carefuliy measure the produce obtained by the use of each; but we forget that the salts may be decomposed before they reach the roots of the growing plants, and that, by the ordinary processes of double decomposition, the salts we apply may be completely changed in the soil
On soils rich in azotised matters, containing Ammonia or salts of nitric acid in considerable quantity, it would not be reasonable to expect benefit from the use of ammoniacal manures; butin soils not of this description I believe they will always be found of value; how much contain is a separate question, but I ana convinced that
the Ammonia itself is of great value. If the sulphuric acid of sulphate of Ammonia is the most important ingre dient of that salt, then sulphate of Ammonia would produce but little effect on soils containing much sulphuric acid whilst the contrary, I believe, is the fact. The compara tive effect produced by different salts of Ammonia varie much, and appears to depend principally on the nature of
the soil. I have recently seen the muriate producing larger crops than either the sulphate or the phosphate when applied to Wheat and Potatoes. Whilst speaking of the effects produced by Ammonia, I may mention curious fact which tiately observed, and which bears upou the subject. I found that plants of Tobacco manured With salts of Ammonia contamed, in proportion, a fa larger quantity of potash than similar plants grown in the think, evident, that the salts of Ammonia increased the vigour of the plants, and enabled them to absorb from the soil, a larger quantity of potash than they could otherwise have done. The effects of guano are certainly not wholly due to the Ammonia which it contains; a great part is no doubt due to the presence of phosphates, but I have richest in Ammonia.
Mr. Lawes asks, "What proof have we that plants are unable to supply themselves with Ammonia from sources unknown to us? -and how far may the increase of crops by the addition of substances containing Ammonia be attributed to that element?" To prove that we know all the sources of nitrogen is of course impossible; we know that plants may obtain it, both from the soil and from the unacquainted with, though it certainly appears more than probable that they can and do obtain it from Ammonia and nitric acid-sources which are quite sufficient to account for the quantity they commonly contain. The fact that rotten dung is for superior to fresh dung. The fact that roten do prove that the Ammonia lung, does its putrefaction waring the rotten dung is in a state which plants can assimute whilst that in fresh dung is less capable of being sbsorbed Whilst that in fresi dang is less capable of being absorbed by them. . do not for a coment suppose that plant would grow but inpled with Ammonia, any more than that they would phates. The best of all manures are those which supply phates. The best of all manures are those which supply
both phosphates and Ammonia. Furm-yard manure is of his description. It is a question well worthy of consideration, whether plants do not derive a very notable quantity of earthy matter from the air. I need not mention the great distance to which sea-salt is carried by the wind, but 1 cannot belp suspecting that a greater quantity of solid matter is carried about in the air than is commonly upposed
I hope these hurried remarks will elicit further observations from those who have practical experience in
the action of manures.- \(E\). Solly.

\section*{AMATEUR'S GARDEN.-No. XLT.}

Were I desired to point out what I consider the reatest defects in garden scenery, I should have very little estation in enumerating deep and irregular raw-edgings the waiks, as the first defect; walks and borders ox-edgings, as the third. In my estimation, deep and rregular edgings are a most intolerable deformity, and ye, to such an extent does this deformity prevail, that of the gurdens 1 ever visited, I could not name half-adozen that are free from it. At this place, though the waks have been all made within the last five years, the edgings are so irregular, that in one place they are from hree to four inches deep, while, perhaps within a few ravel. I do not attribute soy foult, in this respect, to my predecessor, because the irregularity is not greater han may be noticed in most other gardenc but grealy an may be noliced in most oher gardens, but merlis highly kept garden. Now, the first operation in the way of improvement which I shall undertake this autumn, will be to have all these edgings properly levelled, and in doing this I shall have all the grass taken up two feet wide from the walk on both sides, and then make them perfectly level, हllowing for the grass, when laid down again, to be not more than one inch above the level of the gravel. I shall then have this grass rolled once a week through the minter by a heavy roller. so that in the spring, when dress the edgings off before trimming the walks, they will not be more than haif an inch in height,-and after they Iave been once properly formed and cut, I sisall neve edge I can possibly avoid it, allow them to show a raw edse again, 一at least, not more so than is necessary to keep the hnes and curvatures of the walks as true and regula
Foreigners, when viewing the gardens of this country, are always pleased with the beauty of our close-cut much to how to say, they are the finest in the world. Helieve it has been a pros this fact is to British vanity, I beading us to be satisfied prolific source of carelessness, in leading instead of making them what they ought to be. When the walks contain st fficient gravel to torm a good path, and yet che edgings are too deep, they may be made to stope gat dually towards the walk, but this is no god pla where it can be avoided, as the middle of the walk shonld always be as high as the adjoining grass, if not a little * That the vapours given out by fermenting dung increase vegetation, is proved by the luxu
the vicinity of dunghili grow.
higher. In walks from three to five feet wide, the centre should be level with the highest part of the edging, and curve very gradually to the sides; but in walks of greater
width, they should be somewhat bigber: say, increase an inch in height for every additional three feet in width. I have been thus diffuse on this subject, partly from love of seeing good walks, and partly from a conviction that the amateur, or professional gardener, cannot introduce a greater improvement into his garden than
the edgings, and fill his walks brim-full of gravel.
Burke, in his Essay on the Sublime and Beautiful, has a remark so applicable to this subject, that I cannot do better
than quote it, to sliew how necessary the above improvethan quote it, to sliew bow necessary the above improve-
ments are to the beauty of a garden. Speaking of smoothness, he says, "It is a quality so essential to beauty, that I do not now recollect anything beautiful that is not ful;-smooth slopes of earth in gardens,-smooth streams, in the landscape,-smooth coats of birds and beasts, in polished surfaces. A very considerable part of the effect of beauty is owing to this quality: indeed, the most considerable; for take any beautiful object, and give it a broken and rugged surface, and, however well formed it may be in other respects, it pleases no longer ; whereas, tet it not this, it becomes more pleasing than almost all the others without it." It will thus be seen that smoothness is one of the fundamental constituents of beauty, ergo,
walks or edgings can be befutiful that are not smooth.
dgings: they onght never to exceed an inch in height, and the walks should be full of gravel.
T. P. Ayres, Brooklands.

\section*{HOME CORRESPONDENCE.}

Luminous Plants.-As you have drawn attention to What is called the "phosphorescence of plants, 1 send and is of frequent occurrence in the animal kingdom. Amongst the higher forms of animals, the light of the glow-worm, ath insect, and several species of Annelides, are well known; but in the lower animals it is much more common. The light given out by jelly-fishes and variou on bright still nights, and this glory of the tropical seas serverl in warmigts, and this phenomenon in these cases it seems connected more with the vegetative than the animal function, not being dependent on the nervous system. In plants a luminous appearance has been observed, under two circumstances, amongst the living and not appear to be a merely chemical process, as it only occurs in the wood of plants that have been recently cut luminusity has been frequently witnessed Young plants in the last Number the well-attested facts of the Rhizomorpha and the Agaricus olearius, numerous examples of Which might be brought forward by good observers. This light, as well as that from decaying wood, is stated by into oxygen gas; and he attributes the phenomenon the chemical action going on in both the living and decaying tissues. The light from the moss, mentioned by Mr. Babington, has also been observed in Germany on has been observed by Funk, Brandenberg, Nees Von Esenbeck, Hornschuch, and Struve. Bridel-Brideri and Agardh, attributed this light to a small Alga, which the Protococcus smaragdinus, which theysupposed occupied the moss. Unger, however, has examined the moss accurately and finds that at certain seasons the peculiar utricles of this moss assume a globular form, and being partly transpamoss assume a globular form, and being partly transpa-
rent, the light is refracted and reflected in such a way as to present a luminosity on the surface of the vesicles. These tions. With regard to the light given out from the fowers of plants, there can be no doubt as to the plienomenon not being an unfrequent one. Since the time that it was corded the same fact. Linnæus, the younger Linnæus, Haggren, Crome, Zawadzki, Hagen, Johnson, and the Duke of Buckingham, are amonyst the observers who have recorded their experience on this subject. The plants in the flowers of which it has been observed, are the Troprolum majus, Helianthus annuus, Calendula officinalis, Tagetes erecta, and T. patula, Lilium chalcedonicum, and L. bulbiferum, Polyanthus tuberosa, Papaver orientale, Chrysanthemum inodorum, Enothera macrocarpa, and Gorteria rigens. We are, perhaps, not in a position to say this is not an optical illusion; but if it were, one would expect that it should be more constant. It has also been seen by several observers at the same time, in different positions, and when one has seen it, the others have seen it. Using analogy as our guide, one would be more inclined to attribute it to the same action, whatever that may be, which produces the same phenomenon in the The phenomals, decaying wood, and the Cryptogamia. optical illusion, is only occasional. In addition to these observations on the light of flowers, there are some on the phosphorescence and luminosity of sap. Mornay describes a tree in South Anaerica, called Cipo de Cunabright light. Martius, also, in a plant which he named

Euphorbia phosphorea, says, that when wounded, the sap gave out a light. When this was observed, the tempera\(16^{\circ}\); he could not find that it affected the Galoanometer in the least. Senebier states, that in his experiments on the Arums, he observed on one occasion, when confining an Arum in oxygen gas, that it gave out light as well as Meyen, in his Physiology rejects all the phenomena, Meyen, in his Physiology, rejects all other explanations, and conceives that the facts hitherto observed, favour chemical processes involved in the process of decarbonising the plant. In conclusion, I would point out also the relation between these phenomena and that still more remarkable one, the spontaneous combustion of the human frame. In this case there appears to be a combustion going on intermediate between mere osidation and fiame. I hope these observations may induce some of your readers, with ample opportunities in the field and garden, to take up the subject, and record any facts they may have Luminous Appearances in Plants.-I am surprised that doubts should be entertained of the luminous appearances on certain garden flowers. I have observed it frequently, and have looked for it in each succeeding summer, on the double Marygold, and more especially on the Papaver pilosum, the at Moseley, in Worcestershire, In the evening, after a hot dry day, the flashes of light afforded much amusement has recorded, in one of his poems, the same beautiful appearance on the Marygold, observed at Stavey, in less congenial to floriculture, the same flowers do not present the same phenomenon-at least, I have not seen it.-P. M. James
Wintering Pelargoniums.--In the month of October, ast year, I took up a bed of Pelargoniums which had been pranted in ap arden the shoot, and in the middle of June I had them cut down and planted in the garden, not having the convenience of a in full blosed. For the last two months they have been in full blossom. I did not lose one scarlet one. Man idea was not ny own; it was suggested by Clowe.

Myatt's Pine Strawberries.-At p. 587 of this year i stated that I planted out a bed of second runners on the 26 th of Oct. last year; which, to my surprise, stance of rather uncommon occurrence. At the presen time, the bed presents the appearance of midsummer more
than that of autumn, for it is now producing a second crop, and I have no doubt but that it will be some week yet before all the fruit, will be matured. Is it usual for Humphreys's runners to do ?-D.
Humphreys's Compournd. - I have seen several inquiries respecting this Componnd, and I beg to state that Ihave tried it sparingly on Heaths, Pelargoniums, Chrysanthemums, \&c. It appears to improve the foliage and give
the plants strength, so that I intend to try it further.- W. Fruit without Leaves.-In a late Chronicle there is an article under this head, by "R. H.," who is a young man employed in Cantley Gardens. I have had an opportunity of examining the Peaches which he mentioned as being healthy good-sized fruit. They are the late Admirable Peach; the fruit when gathered were not much more than half the usual size, and were of inferior flavour, without were very much injured in this neighbourhood last spring by the cold winds, consequently there are many instances where the points of the young shoots withered after the fruit had attained a considerable size.-G. Doneaster. Ancetochilus setaceus.-In looking over Bennett's recen work on Ceylon, I found the following allusion to this prety pant, whessful cultivan:-"The botanist will be delighted with the beautiful little plant called Rajah Wanya, or Jungle King, which delights in marshy places, and natives, trees, ascribe the bending of their branches over the Wanya, to tharshy places, inhabited homage to the Jungle King plant -Pons 压lii.
Fruit Trees in Gravel. - "Este" ventures to suggest from experience of thirty years, that the most productive Pears in the gravels common in the blue clay formation, areLammas. The Bon Chrêtien answers fairly; other Pears may grow, but the Chaumontelle alone is perfectly uniform bearer, and this, perbaps, because the fruit being gathered early, the tree is not exhausted by having to ripen its fruit. The Code. The question has uniformly slight ridge on oip sin and Warwickshire Pippin are the The Franklin Pippin and Warwickshire Pippin are the next best. No good Nonpareils ripen in this gravel. Vines.-_In reply to "A Subscriber from the Beginning," at p. 645 , who seems to think that "to take away all un. fruitful branches" will render his Vines unsightly, and his crops irregular, I beg to state that I cannot understand how the taking away of "a barren branch" have that effect. The Vines that I usually force first ar trained up the rafters of a succession Pine pit, and are planted inside. between the flue and front wall, which built on arches, in order to allow the roots to pass outside, where there is a border along the front 18 inches wide, and then a gravel walk runs parallel with the range of
houses, which 18 eight feet wide. This is all the space the

Vines have for their roots to feed in ; and, moreover, some rave largest of these are now above the level of the gravel. These receive no covering, nor manure of asy struction of the bonse the are at work; and from the conweather during their season of rest ; but in order to re medy this as much as possible I have them tied up quite medo to the glass. This house is planted with Black Hamburgh, Sweetwater, and with what some call the Black Prince From these notwithstanding the Priace. From these, bunches of Grapes particularis one from Blat burgh, which wiod 2 lbs, and ipon one burgh, which weighed 2 lhe rod not all equal in wisht to the one specified, not all equal in weight to the one specified, and on those bunches from the Black Prince weighed 3 ths Thi hous bunches from house is 12 feet high, by la feet and wheais of the for cumstances, are some rads whih faily set 4 Suber than 50 bunches. From these facts I trast sut a Subscribe from the Begin will be sarioned my success in the culture of the Vine, asd be will 1 ficulty, I have no doubt he will meet with assistance from

The Harvest Mouse.-Mr. Thomas Chapman, of the Dungeon Farm, Hutton, Lancashire, was setting up the sheaves of Wheat after his reapers, when his attention was arrested by a peculiar sound issuing from the newlymade sheaves. On examining it, he was surprised to find a nest of the harvest-mouse, containing nine young ones, in the midst of the sheaf, and about 18 inches above the band; presently afterwards, he discovered two other nests, similarly situated, and likewise containing young. These nests are very ingeniously suspended from two or three stalks of the Wheat, are round, and about the size of a cricket-ball, with the aperture so ingeniously closed as not to be seen, and it is supposed that the parent mouse opens the nest at diferent parts, and so affords nourishment to each one of her offspring, tuking are to close all safely again. They are so compact and wellfilled that they might be rolled across a table without being discomposed, theugh containing poung mice ; but what is most surprising is the Wheat was cutand the sheaves bound up without the reapers discovering the nest, or in the least degree having injured either it or the young. Before the Wheat was cut the nests would be about four feet from the ground. I have also seen those nests found in tall Rye grass in this neighbourhood.-F acile.
Strawberries.-Having been successful in securing an xcellent crop of Keen's Seedling Strawberry at this seaon of the year, I beg to state the mode in which they vere obtained. The plants, which were forced early in piing, were planted out into a rich border, where they remained until the last week of September, when they threw up yery strog sikes in wich they were growing, and placed in Pine frames. From these I lately gathered a dish of very good fruit, and in all probability I hall be enabled to do so twice or three times a weet, and they will continue to bear until Christmas, as there not be anamion mode, it may perhaps prove an acquiition to gardeners. - W. Godwin
Linncea borealis.-I have been making a plantation of Linnæa borealis, which I discovered in a neighbuuring wood. Has that as well as other plants, been splend extensively during the last 50 years? It was unknown to Lightfoot, and 1 remember getmig a spermen of 14 rom the late Professor Beattie, who found for the first time locatity it was supposed to be cor.fined.--H., Alerdeen. Dahlias.-Last season 1 had some Dabias from nurseryman which bloomed beatitifuly, but this season they have, almost without exception, flowered with open oil is, and some of them is of the same description soil in which they are growing is of the same It is a light sandy loam. The ground was cleared of Gooseberries last year, trenched, and richly manured with thoroughly-rotted cow-dung. The Dahlias were turned out in the midale of June, and the ground was again dressed with bone-dust. The plants have grown very luxurianly : this seamon has been exceedingly fine, but dry. I have wacered only sparingly, and pruned almost none; and it may be in some of these last points that I have erred. Perhaps some of your more experiened correspondents in these
One-shift System for Strawberries.-I force a few Strawberries, and have hitherto followed the usual pracing them into larger In this I ranged one-half my stock of full-sized pots (a size larger than the usual Strawberry-pot) ready filed with cood soil, alongside the parent plants. and, without sinking the pots into the ground, raised the rumerg ove the sides of the pots and pegeed them down and the sides The pther half pegged them down, and so usual way. As they appear at present, the first-mentioned are by much the finer and stionger plants, and promise o produce a better crop than those shifted.- \(P\)
Refuse Sulphates as Manure.-At a manufactory on my farm I have large quantities of the sulphate refuse from the manacture of chlorine, and thave tried a variety of experiments for the purpose of making it useful for Agriwill ever be of much value. It proves most beneficial when mixed with lime, to precipitate the manganese, and then turned over repeatedly with a quantity of rich earth for some months.-J. B. Laves.

Transplanting. - As the season for transplanting is now fast approaching, I beg to warn those who are not proficients in its nature, of the necessity of endeavouring as plants that are to be removed; for instance, in removing ornamental trees, or in planting out specimen in removing in making an Arboretum, it is necessary to euit the soll to the different kinds of plants. When plants are put into a toil altogether contrary to their nature, they become the spring, if the season be dry, ought to water frequently, and give the plants every encouragement that they possibly some and well-grown specimens under his care, and it is a convincing proof of good management. This can be easily effected by proper attention being paid to the plants, such as staking, pruning, and watering if required; and I would gardeners about to transplant, to bear in mind that the principal thing in growing trees and plants to perfection, planting great care is required, and it is very beneficial to the plant to spread out its roots properly, and in some
cases to lightly prune them. Although these few observacases to lightly prune them. Although these few observaparticularly attended to, for by such attention in a few years the g

\section*{PROCEEDINGS OF SOCIETIES.} YORKSHIRE LAND-DRAINING ASSOCIATICN Uron the uccasion of the Rechmond Agrocilaticin. Friday, the 29th uit., for the proposition of this association, and county, and others desirous of forwarding the object in view,
among whom were the kight Hon the Farl of Zetland. Marmaduke Wyvil, Esq,, Col. Arder, R. M. Janues, Esq., T. CharmaEsq James Smith, Esq. 1 Deanton), L. Hartley, Esq., \&ia. \&cc. On the motion of the Earl of Zetland, seconded by R. M. Jaques,
Esp., Mr. Clarrock was requested to open the business ty
explaining to the meeting the objects of the association, explaining to the meeting the obbects of the association, and the
progress made in its nutroduction. In complance with the
reonest, Mr. Charnock berefly rection request, Mr. Charnock briefly recaptulated the leaning features mutual bencit, the agricultural and the monied interest ; and he expressed a fim conviction that from the great redundance of money, for which there lacked employment, it required only that
associations like the present should be submittea, ander proper auspices, to insure the confidence of the capitalist, whose sur plus we might then see securely employed in the profitable and permanent improvement of the soil. Mr. Snith (ot Deanston),
gave his fullest concurrence to the project ; and in a very able gave his fullest concurrence to the project; and in a very ab)
address, entered at some length into the incrits of the plan, show ing the nsefuluess and practicability of such assoclathons, the adve present moment, when the necesinty for agicultural
advancement was mamiest not only to the owner, but also to the occupier of the soil, whose practical improvemients were retalded placed witnul his reach rn easy and ef,utanhe terms. Mr. Smith drainage bring conducted under the systematic operations of such an association, which would be in a position to apply th charge, and thereby to guarantee the most effective dranage a character of the undertaking, which obviated the necessity for and, in conclusion
great moral and national gond which might be confidently looked for from the extensive and regular employ ment which such asso-
ciations would be the means of securing to the able-bodied labour ing population of the ruralusintracts, Aconversation then ensued, in attending the requisite application to the court under Mr. Pusey' recent act enabling tenants for bife to obtain \(n\) oney by way o
mortgage and a rent-charge on the land, fi, draming tl.ent removed. An a proof of these impedimerits, Murmad would \(W_{3}\) Esq., stated that he beleved there had only, been one instarice in
which that act had been made avallabic, aurl he thought trat as emanating fron the present meeting, it would be no ui suitable cration, and all that might be formed after this precectent, would
perhaps be the best mediums which, under existing circumstances perhaps be the best mediums which, under existing circumstances, referred to; for that, whle their executive committees and
advising officers would forward by every means the interest the applicants: yet they would, at the same the e, exercise a
wholesome discretrin until some amendment \(n\) ight be obtaines -possibly by the introduction of suitable provisions in the pro advantage of was the reluctance on the part of individuals to advance monty on mortgage which should be repaid by instal-
ments; whereas in the operations of our association such transments; whereas in the operations of our asserith the interest of all parties. After some turther discussion on sevcral polnts of appontment ot the provisional committee was confirmed, with
power to add to their number, and a iecotumendation to jnidure emplosing the association, and to report be given restalt nit partics
investigation the The following gentlemen constitute the committee:-Provisunal

MISCEIL
MISCELLANEOUS.
Itan Fire-Fly in Norfolk.-I wish, through the nedium of your valuable publication, to make known a cromstance which, as far as I can learn, has been bitherto unnoticed in England. On going into my greenhouse between seven and eight \(0^{3}\) clock in the evening of mering light amongrt the Vines at perceiving a glim vation, I discovered to proceed from a "Lucciola," or Italian Fire-fly, with whose habits and appearance a Iong residence in Italy has rendered me familiar. Although the windows of the greenhouse were always open till within
an hour of sunset, so that every facility was offered for its escape, the little stranger regularly became visible after
dark for ten or twelve evenings in sucession, and was dark for ten or twelve evenings in succession, and was
seen by many of the inhabitsints of Swaffham, whose seen by many of the inhabitants of Swaffham, whose
curiosity attracted them to the spot. I can only account curiosity attracted them to the spot. I can only account for this circumstance by having lately received from Italy
five or six Orange-trees, the roots of which, being encased in balls of mould, might have afforded a shelter to the insect in its chrysalis state, subsequently developed into active existence by the heat of the greenhouse. May I if the appearance of this insect in England be hitherto unrecorded? and any light which can be thrown on the subject will greatly oblige, John Dugmore, jun.-Annals of Natural History.
Mr. Fortune. As we were going to press letters reached us from this gentleman, dated Hong-Kong, July 27, and we hasten to acquaint his friends with his safety and good health.
have two species of Convolvolus - Convolvulacex. - We rivers, the seeds of which are sought after by the bronzerivers, the seeds of Which are sought after by the bronze-
winged pigeons, at one season; and we have Brown's Calystegia sepium, a beautiful plant, with us only found in salt marshes, about Australind, the Vasse, \&c. . fection, near the mouth of the Sabina river; the fiowers a beautiful rose colour, with five broad white stripes. This
plant certainly comes very near the Convolvulus sepium plant certainly comes very near the Convolvulus sepium
of Linnæus, but \(I\) think it may be distinguished from it of Linnæus, but I think it may be distinguished from it
as a species by its more slender habit, and from its only as a species by its more slender habit, and from its only
growing in salt marshes. Wilsonia humilis is plentiful growing in salt marshes. Wilsonia humilis is pplentinu near the Vasse inlet, and we baves.
cuta.-Drummond, in the Inquiver.

\section*{9Rebiétus.}

The Orchiducee of Mexico and Guntemala. By James Bateman, Esq. F.R.S. Imperial folio. Ridgway. Parts VII, and VIII.
AT length we have before us the conclusion of this, the most magnificent Botanical Work in the English language.
The Part now produced is inferior to none of its predecessors in the beauty of is influstrations, and is, moreover enriched with some valuable observations of a general kind on various subjects connected with Orchidaceous plants, their habits, and cultivation.
Among the more remarkable of the plants whose portraits are now given, we find Leslia superbiens, Sobralia from dried, the latter from living specimens, and a charming species of Epidendrum, from Mexico, called Erubesach, of which living plants did, and possibly still do, exist manner:- "Stems probably short, and bearing but fow ancenlate acuminate leaves, two or three inches long. Panicle terminal, usually compound, and sometimes rising to the height of a foot and a half, bearing a multitude o Pedicles longer than the flowers. Sepals nearly an inch long, oval-lanceolate, much narrower than the spatulate petals. Lip about the same length as the sepals, united to the column of its apex, and three-lobed, the lateral
lobes being short and rounded, and not half the size of the intermediate one, which is kidney-shaped, and balf an nch long. Cultivators will be disappointed to learn that this superb Epidendrum is at present known only by dried specimens belonging to the Royal Herbarium at Munich.
The flowers, although faded, still retain a rosy tint; and, when fresh, could scarcely bave been arraved in less attractive hues than those in which Miss Drake has ventured to portray them ; but whatever their precise colouring
may have been, there can be no doubt that the species to may have been, there can be no doubt that the species to Which they belong may take rank among the very finest
plants of its tribe. It was accordingly made a special object in the instructions of the various collectors who have been sent from time to time to ransack the forest treasures of Oaxaca ; but neither Hartweg nor Ross (who closely followed Karwinaki's steps, ) succeeded in discovering its retreat. Signor Galleotti was more fortunate, be feared, entirely perished. But let us hope that as this species, independently of its beauty, belongs to a section newed the gus which is usually of the easiest growth, re stoves." To this we may add our own testinony as to the plant being the finest thing of the sort in Mexico.
slendiding of Sobre, Mr. Bateman observes, upon the authority of Mr. Skinner, that "in the situations where the plant frequently overflowed with water for two or three months together-in the rainy season, of course. Cultivators will, berefore, do well to bear this singular fact in mind, and approximate their treatment as closely as circumstances
will permit. All Sobralias require a season of rest, which Will permit. All Sobralias require a season of rest, which is readily obtained by merely removing them from a warm Upon Coryanthes macrantha are the following judicious to sueceed "In Mr. Rucker's collection no genus appears others its more perfectiy than Coryanthes, although in therstion its cultivation is attended with much difficulty and Vexation; but by noting its peculiarities, such frequent
disappointments may, perhaps, be avoided. The supplies of heat aintments may, perhaps, be avoided. The supplies for if either be permitted to continue in excess, the plants will quickly perish :-on the other band, a cold or dry atmosphere is always prejudicial. Suspension in the air, Which is usually adopted with so much advantage in cases
and if on a block of wood, is certainly fatal. Another danger to weakly plants is their proneness to make a succession of attempts to flower, which, although abortive,
are still persisted in until death ensues from sheer exhaustion. To meet cases of this description it is advisable to remove the flower-stems as they appear, until the plants have gathered strength enough to support then without risk of injury. C. macrantha is, perhaps, the more robust, as it is certainly the most wonderful, species of the genus; it may, indeed, be questioned whether the whole tribe of Orchidaceæ can offer anything more unaccountable or extraordinary than its huge elaborate flowers, which are world as aught that is ordinarily met with in the vegetabl ples of the modeller's skill than of the plastic powers of to the natives of Trinidad-albeit accustomed to the wonders of a tropical Flora-they would not be persuaded that no imposition was intended; even a sight of the plant their suspicions."
Those who are familiar with the author's lively style will recognise in the following clever sketch of the oddity of Orchidacee even more than his usual talent for popular description. We only wish we could add to the extract a charming device, invented by Lady Grey of Groby, to
illustrate their fantastical peculiarities :" Butrate their fantastical peculiarities :-
tention they require, suffice to explain the stare; and atof fascination which they are felt to possess? Or is it to be accounted for by the beauty, the fragrance, or the duraqualities combined? No: other plants might be mentioned as rare, and as difficult of culture, and scarcely inferior to them in personal charms, and yet they could never boast of the train of admirers that has lately been attracted round these mighty vegetable enchanters. In What, then, does the secret of their spell consist? We floral pleasure ordinarily'springs, in all that constitutes the charm of other plants! Neither can the question be disposed of by looking merely to the end for which Orchidacees were designed, and which we believe to have been solely to afford ushigh and innocent enjoyment; but it is the means to that end,-the secret of that power which we are that forms not only the pride of Orchidacee, but which a once distinguishes them from every other tribe-and where Wha character so marked and so peculiar to be found conformation, 'and imitative character of their flowers ? Yes; here we have that which is more than sufficient to explain all the wonder and admiration they have excited, and here, then, we may safely affirm the seat of their for us to prove that the attributes with which we have invested them, and from which we believe their interest to be derived, are neither idly nor fancifully ascribed to them; and this, we apprehend, we shall have but little difficulty in effecting.
regetahle kingdoms we are to look upon the animal and cgetahle kingdoms as altogether distinct, our astonish ment may the we appropriated by the flowers of the other,
forms of the one and yet such encroachments are but a part of the liberties which these Orchidacee are perpetually taking ; for, as i it were they mimic, absolutely mimic, the productions of only, they mimic, absolutely mimic, the prouctiosia a restless faculty of invention fully equal to their powers of imitation, and arter having, like Shakspere, 'exhausted worlds,' like him, too, they seem to have 'imagined new:' and thus we find their flowers exhibiting a variety of strange and unearthly objects, such as bear no resemblance to created things, nor yet to any of the works of man. Such a host of examples of their freaks in all where to it may be well to take first a cases in which they have adopted as their models sundry kinds of insects, birds, beasts, fishes, and reptiles. \({ }^{1}\) We will begin, then, with the insects, not only because they are the class most frequently imitated, but because we may draw a portion of our illustrations from the meadows and pastures of our own country, where, at the proper season, flies, bees, dronef, and spiders,? may be seen, which really present us with very striking likenesses of the originals. dragon-flies, moths, \&cc., \&c., \({ }^{3}\) in the greatest variety, and we have also the gorgeous vegetable butterfly of Trinidad, whose blossoms, poised at the extremity of their long elastic of that fixture by which they are differenced in kind rom the flower-shaped Psyche, that flutters with free wing above the Orchidacea borrowed their swsis, eagles, from which the Orchidaces borrowed their swans, eagles, doves, f wings, feathers, beaks, and bills. \({ }^{\circ}\) From the beasts they have not copied quite so freely as from
the birds, yet resemblances may be traced to tigers, leopards, lyaxes, bulls, rams, and monkeys, and even to man himself. 7 In the catalogue of
rentiles we find an endless variety of snakes, lizards, toads, nd frogs. \({ }^{\circ}\) Of shelles, likewise, there are many kinds. Then follows a mixed multitude of masks, cowls, hoods, caps, and helmets ; swords, spurs, crests, pikes, arrows, and lances ; whiskers, eyelashes, beards, bristles, tails, horns, and teeth; combs, slippers, buckets, trowels, pouches, sadues, \&c., \&c. Nor is this mimicking conspicuous in their leaves and pseudo-bulbs, which have
been likened to Onions, Cucumbers, Bamboos, and Palms ; tongues and mouse-tails; hooks, whips, and straps; swords and needles, sc., \&cc. Of some the leaves are inscribed with Arabic characters, of others the roots are cased in coral.
We trust on future occasions to present our readers with further extracts from this most entertaining book, which sound practical of genuine wit, as well as of science and conclude with our sincere . For the present, we must upon so happy a termination to his labours.
1 Our examples will be principally drawn from South America,
for owing to the much greater conformity in the blossoms of the
Orchidacee of the old World the for owing to the much greater conformity in the blossoms of the
Orchidacea of the old World, the cases in which strange figures
nad animal likenesses and animal likenesses occur, are not nearly so numerons as 1 l
the new. Among the more remarakable of the Orientais we may
mention Vand Phalæonopsis amabills, the latter hears a moit strikne resem-
phance to

CALENDAR OF OPERATIONS for the ensuing veek. protected in the open ground during eeveral winters, Trer, have sucn
ficient evidence to prove, in some late wolumes nf the "Gardencrs"
 they make annually in front of the houses. Thas enailled hars to result of which 15 given in has excellent pamphlet on the Heath.
His pupils have carried the system into other parts of the kingdom. Hany gardeners have followed therr example, and large heds of
young Heaths are to be seen planted out every sumpier in the Londen nurseries, and in every instance the plants thus treated appear in
better health and vigur than those grown in pots. Therefore what to novelty, further than taking up the thing more systematically for
purposes of regular flower-gardening, and I have no doubts as ta
the result ; let but one gardener in each connty take up the gubject,
even without enlarging much on the beauties and diversity of forms
in this inimitable race. You never heard of any one who knew anything at all about plants but admired Heathe, and would be the first
tribe they woold cultivate, had it not been for the difficulty of growing they went in pots, \%here is, indeed, ar good deal of of skill and
attention necesary to grow them well in pots, and failures eve the system I propose. Verbenas and Petuniat are much more difficult to leep over winter than Hraths, provided they are never potted. This is the whoie secret in the husiness, and no argument is neces-
sary to prove the additional interest and gaiety their introduction
would inapart to our flower-gardens, to say nothing about the novelty sary to prove the additional interest and galety their introduction
Would inmpart to our flower-ardens, to say nothing about the novelty
of the thing. consideration, riz, the expense of purchase and the after-manage-
ment. A selection of sorts is of less moment, as every nurseryman who grows then can furnish a list of names to flower at any particu-
lar season of the year, or in succession through all the nummer and
nutuman months. the best way to buy small Heaths, to begin with, is to offer a nurseryman so much a dozen for them, leaving the sorts to be selected by himself, as it often happensthat he has scores
of some really fine sorts that he would be glad to part with on very rcesonable terms, snd at the same time be short of some inferior sortt that you might order, and therefore ank a good price for them; this
is elwayn my own plan, and I know enough of the trade to syy that it charge 98 . per dozen for good plants of common bedding Pelargo
niums, ready to plant out in Mify, and for \(12 s\). a dozen you may buy hundreds of such Heaths as I recommend to begin with, always taking them as young as you can get them; indeed, I would prefer
them taken out of their store-pots in April or May, divide them, and grow them the first season in a nursery bed, out of pots, in not plant out long frames of them at this stage, where they might remain until they got too crowded; it is the only true way of pre-
paxing them for the one-shift system. Some of these common
Heathe will seed freely Meaths will seed freely, and may be reared from seeds as easily as hushy the lower shoots may be layered like those of other piants they never require pottung; bessides, they whil all graft and inarch as this way, bo that between one way or another there is no great fear PINERY. - With respect to the growth of Pines in peat, one of our
hest Finglish gardeners writes ne thus: "I will venture to predict
that Pines will not do in this country in peat alone. I bave never that Pines will not do in this country in peat alone. I bave never pose round Paris and other parts of France. Their peat is rich
heyond description; of a greasy koapy nature, and alsa) contains
abundance of silver-sand. I have Queens now growing and fruitio abundance of silver-sand. I have Queens now growing and fruiting plan, as it saves a arent deal of labour," Ke. Re. I hope soon to be
able to give the rututne of culture, out of pos, for tle round. Meantime, ese that the late rains have not endangered the
heat of the linings, and that no sudden changes are risked before Vrinery.-A gentleman who called here last week told me that
had seen a place in East Suffolk -celebrated for taking the fi
 injudiclous, and that a contrary plan was recommended last year in
the Cheonale. I repled that we have every lap puttied here, down
to the common land-glass, and that the ehronecle did not recom-
 to our late Grapes, whether we used fires to expel camp or not. Where these things aree wanted early; but any dark place will do for
 meet the cost of rearing plants for that purpose; besides, the Sea
kale is so much asveeter and easier to manage in the dead of winter. It wonld require a large hook to contain a mere sketch of the every Pear-tree that has thrown out strong breast-wood for the last year or two w. th plenty of hussoms and little fruit may now or soon be
carefnlly taken up, buit on no consideration whatever is the fould puil them up-a bad practice, however ; cut them off you camnot puit them up-a bad practice, however; cut them off at once, and
reduce one or two of the weakest and strongest brancles of the head to correspond; train out the remaining roots at full length, and stinted next summer, water them well. Again, if your tree is a give them fresh soil, and reduce the head two thirds, otherwise throw degrees, but let there be no wavering about the extreme points. All other fruit-trees are to be dealt with after the same manner, and not
only once in 2 life-time, but as often as the symptoms appear. Then coraes the trenching and making of new borders-what a deal of work is involved in the mere name of the thing! it is easy enough to fit place of the pen if the work is to be done in earnest
plants, and if your Cauliflower and autumn Broccoli come int Endiveplants, and if your Caulifower and autumn Broccoin come into use too in the shade, where you can throw a mat or something over them if
frost sets in before you want them. After the first frost or so is over there is not so mucli danger for some time about young or succulent doors should be now or very soon in the ground ; perhaps the winter made them fill up the rows more than usual. See also that the winter in one of the sheds to dust over among young plants, in or out of in one of the sheds to dust over among young plants, in or out
frames; this will have the cfffect of keeping oft these creatures.
ORcBABD.-It is always a good plan to have a few young tree all the best sorts of fruit in reserve ready to fill up vacancies. Let up much room, especially if you keep transplanting them tavery second or thurd jear, and if they hear a few fruit so much the better,
as you will then be sure what they are before you renove them to their final situation. Young Peach and Apricot-trees should be thas from the nurseryman, and thlis having been a very good youson for the growth of these trees, no one who is not already provided, should neglect the opportunity of buying in a few young trees to be nursed
under his own eyc a few years before they are wanted on the walls, \&c

 cleaned the look of the thing, there iis nothing roore injurious to plants pots, after the fires are commenced. At this Michaelmas scrubbing, the balls shouid be first turned out to see in the drainage is perfert,
and 1 worms have frot into the pots get them out as soon as the pots
are conned are cleaned, stir the surface of the soll, and add a little fresh to it
of the same kind. If the plants are free fromi nasects, the walls
whitewashed, and the heating apparatus in good order, I should say you are in a good condition to face the winter, Stove-plants require
very little water now if the weather is dull, and the atmosphere of the
bounes ought to be kept rather dry than otherwise.
 the lights be down all day, and hall down through the inght, untess
rain or frost prevents it. With any new pots without holes in the
hotom, there need be no wet under the pots for the winter, thus saving the ronts and shelves also.

MANURB. Pons
now, but itio. You may apply gas-water to your lawns now, but it will act more beneficially if you delay it till April. manure for the lower part of Hampstead, where the soil is stiff, aud cracks, is an abundant dressing of old plaster and lime rubbish-- \(S\). \(W\).-Throw into a heap all refuse vegetables, grass-cuttings, cinder-siftings of the house, and moisten them months they will be excellent. Also form a compost heap of any refuse soil, and add to it the contents of all the cesspools
and simular places belonging to the house, especially the fiujd and similar places belonging to the house, especially the fluid
animal secretions. Let this remain a few months, and you will have a great additional potter's are not enough, buy a litte Potter's silano, or superphosphat one boiler, but it must be a good one. It does not much matter what its construction is, but it shoald at least be a rying the pipes through one end of your Vine-border, provided
you tunnel the distance; that is to say, ixclose the pipes in good casing of brick work; otherwise you will lose heat to an You will also find good kind of pit figured in the last part of the Proceedings of
the Horticultural Society; and we shall publish something of the kind presently, But, unless you have hot dung at un imited command, you will find it much cheaper and A Subscriber may make one pipe answer the purpose of a flow and return-pipe, in which case it should be at least three inches in diameter, and enter the trough at the bottom. But it is not an arrangement to be recommended. We have no experience
with Welsh's circular flue-tiles; but if they are very hard they are not likely to answex. We have stated on more than one
occasion that the lower half of an old flue, well cemented inside, makes a good hot water trough. We should think a thing else, but if you do not take care, it will be over-powerful for so small a length of guttering.--Junius.-Your plan is
ingernious, and at present we see no objection to it. We will,
however, consifter it further.-W. HI.- We see no reason wily however, consider it further.- W. H.- We see no reason why
you shouid ficur the expense of ifon pipes. Such hot water troughs as have been mentioned and represented lately, worked with a Rngers's boiler, will answer any purpose; and by placing
your bonler in the shed you may carry such heating troughs intu the greenhouse and stop of the circulation whell you do or white, and the Black Hamburgh, are among the most uselu for white, and the Black Hamburgh, are among the most uselul
Grapes you can have. Do not use smoke flues if you can avoid it.
oppyivo-T. L.-In the climate of England it is too late to sow any crop for winter food after the middle of August. After be eaten by cows and sheep, and probably by goats; also, in winter, Stubble Turnips may succeed, if sown immediately after harvest. We would not recommend Potatoes to be raised two
years in succession, on the same ground. On very rich land ears in succession, on the same ground. ©u veryel of when dibbled in at nine inches, two seeds in each hole; the plan of hoeing in Wheat is good, on some soils which will bear treading; but so little as one bushel of seed per acre could not be distributed regularly. You had better use a little more seed
What.-K. C.A.-Dig or trench your ground well, and clear it mixed weeds; then spread at the rate of 2 cwt . of guano, face, and rake it in. Draw drills four inches deep, nine inches part, and sow your wheat in these, covering the one and a half bushel per acre of good plump seed. If your
ground is loose and mellow, roli it, or tread over the drills to make it firm. If very stiry, let it remain in the yough state. In March sow the same quantity of guano and ashes as topseveral times, while the Wheat is tillering. If the plants stand nearer than six inches in the rows, thin them out. You ought ters per acre. We presume a clay subsoil, and this well drained

\section*{NEWS OF THE WEEK}
 topic of interest. On Saturday last the Government issued a proclamation forbidding the Repeal meeting announced to take place at Clontarf on the next day, ordering all magistrates and officers to assist in its effectual dispersion, and threatening all who attended it with prosecution. Previous to this, the Lord Lieutenant and the Lord Chancellor bad been ordered to return to their posts, fresh troops had been despatched to Ireland, and estensive military preparations had been made in Dublin to give effect to the proclamation. The Committee of the Repeal Association met immediately after the pamation appeared, and issued a counter mani festo, declaring that as the resolution of Government had been so long delayed, it would be ihopossible to give the proper notice to the people, but calling upon the Repealers to return to their own dwellings, and not to run the risk of a collision. Great efforts were made to prevent the assembling of the people, and messengers were despatched by Mr. O'Connell to all the towns and villages which were expected to send their contingent to the gathering. On Sunday morning, however, immense \(c^{\text {rowds }}\), ignorant of the proceedings of the previous evenroups anxiously reading. Mr . O'Connell's proclemation The road to Clontarf was covered with troops, and bore the appearance of a campaign, while thousands of persons proceeded towards Clontarf, to see the military display and apparently influenced only by feelings of cariosity Notwithstanding the excitement of the scene, the whole passed off withont the least accident or disturbance; and before dark the people had quietly dispersed and the troops had returned to barracks. On Monday the Repeal, Association held its weekly meeting, at which \(\mathrm{Mr} . \mathrm{O}^{\prime}\) Connell counselled obedience to the law, and declared that he would obey even the semblance of authority. The dinner which was to have followed the meeting at Clontarf took place in Dublin on Monday evening. Mr . O'Connell a ain counselled order and submission, but aid that Ireland would never compromise or accept an instalment of Repeal, and that justice could be obtained only from a local legislature. No subsequent proceedings have been adopted on the part of Government, with the xception of further reinforcements of troops, and no The Revenue returns for the year ending Oct. 10 , have been crease in the yea of \(4,076,346 l\)., and an increase in the quarter of \(1,565,931 l\). The increase in the year is attributable to the Income ax and the Miscellaneous department, which includes the money obtained from China. These are the only two branches of the ordinary revenue which give an increase for the ear; but in the returns for the quarter, the Excise shows 6, 6 crease of \(240,515 l\).; the Stamps, 18,886l. ; the Taxes, 0,6631 . ; the Crown Lands, 7,500\%. The main source of ncrease for the last, is the Income-tax, which shows an The Customs, on the other hand, exbibit a decrease of \(14,469 \mathrm{l}\), and the Post-office a decrease of \(8,000 \mathrm{l}\)., on the quarter, as compared with the corresponding quarter of last year.-The arrival of Col. Malcolm with the ratification of the Chinese treaty bas put us in possession of news from China to the 29th July, and from Calcutta to the 10th August. The treaty has been duly signed by the Emperor, and a tariff agreed upon, by which an important reduction is made in the duties on British commodities. The new system of trace was to commence at Canton on the 27 lh July, and from that day the monopoly of the Hong merchants was to cease. From India we have little news, the regular Overland Mail not having arrived. The accounts brought by Col. Malcolm merely state that the troops in Scinde have suffered severely from the extreme heat, and that the enemy appeaar to be still unsubdued. Several officers have died of the prevailing fever, and it was feared that the mortality would increase when the present inundations have subsided.

\section*{Home News.}

Court.-Her Majesty and Prince Albert, the Prince of Wales and the Princenses continue at Windsor Castle,
and are quite well. The Queen has taken her usual walk ing exercise during the week, and on Tuesday rode out in the Park on horseback, accompanied by Prince Albert Her Majesty and the Prince also rode on horseback on
Wednesday in the Ridingeschool. On Tuesday mornin Prince Albert shot over the preserses in the Great Park. His Imperial Highness the Grand Duke Michael of Russia returned to town from Windsor on Saturday, and took his departure on Wednesday on a visit to Scoliand. Ar left the Castle on Monday for Witley Court, on a visit to the Queen Dowager. Viscount Hawarden as bee succeeded by the Eari of Warwick as the Lord ing, and Cupt. Duncombe has been succeeded by Mr Ormsby Gore, as the Groom in Waiting on Her Majesty The Queen has been pleased to appoint the Marchioness
of Douro to be one of the Ladies of the Bedchamber in Ordinary to her Majesty, in the room of the Duchess Lady of the Bedchamber to her Majesty. The folowing personages have arrived at Windsor during the week, on a visit to her Majesty:-Prince Bariatinsky,
Count Woronzow and Son, the Earl of Devon, the Earl and Countess Delawarr, the Ladies Elizabeth and Mary West, the Chancellor of the Exchequer, the Belgian Mi nister, and Madame Van de Weyer. The Duchess of Cambridge, and the Duke and Duchess of Mecklenburg
Strelitz, are expected to arrive at Hanover at the close of the month, and to remain in that Capital for several weeks It is uncertain whether the Duke of Cambridge will accompany the Duchess, as His Royal Highness intends shortly to return to this country.
The Revenue.-The Revenue returns for the year and quarter ending Oct. 10 , were published on Wednesday. The total revenue for the year is \(49,346,273 l\), which, , compared ending Oct., 1842, shows an increase of \(4,076,346 l^{\circ}\). This increase is occasioned by the produce of the Income-tax, laneous receipts (including money from China, \(1,071,435\). To this must be added repayment of advances, 135.141 making a total increase of \(5,944,789\) l. Against this is cise 338 a decrease in the Customs or 1,136, 7 . Office, 10001 . ; Crown lands, 14,500l. ; Imprest and other monies, \(205,012 l\); ; making a total decrease of \(1,868,443 l\), which, being deducted from the above increase of \(5,944,789 l\)., gives as above, a total increase on the year
of \(4,076,346 l\). The returns for the quarter show an of \(4,076,346\). The returns for the quarter show an
increase of \(1,565,931\). On the Excise there is an increase increase of \(1,565,931\). On the Excise there is an increase perty-tax, \(1,734,0601\).; Crown lands, \(7,500 \mathrm{l}\). ; to which perty-tax, \(1,734,060 l\). ; Crown lands, 7,5006 ; to which
must be sdded, Repayment of Advances, \(50,721 l_{\text {. }}\); making a total of \(2,068,345 \%\). On the other hand, there is a decrease in the Customs of 414,4696 . ; Rost Office,
8000 . ; Miscellaneous, 3,1801 . Imprest and other mo8000l.; Miscellameous, \(3,180 l\). ; Imprest and other mo-
nies, \(76,765 l\); making a total of \(502,414 l /\), which, being deducted from the above increase of 2,068
The Navy. The following are the Officers of the Royal Yucht who have been promoted in honour of her Majesty's recent marine excursions :-Lieut. George
Snell, to be Commander ; Mates Robert Coote and F. P. Warren, to be Lieutenants ; Assistant-Surgeon H. R Banks, to be Surgeon ; Second Master Fox, to be Master. The Army.-A new chako for the Infantry has recently been introduced, which has been much criticised in Military circles. It is now stated that the projected cap is likely to be abandoned, as the Duke of Wellington has and her Majesty has been pleased to accede to his Grace's recommendation
New Commissions.-The Queen has been pleased to direct letters patent to be passed under the Great Seal Robert Henry Clive, and William Cripps, Esq., he Majesty's Commissioners for inquiring into the present regulate the turn pike roads; and also into the circumstance which have led to the recent acts of violence and outrage in certain districts of that country; G. Kettilby Richards, Esq, to be Secretary to the Commission. The Queen has Esqu, to been pleased to appoint James Pennethorne, Esq., her Majeaty's Commissioner for making a special inquiry into Majeaty's Commissioner for making a special inquiry into of the Union Workhouses in Ireland.

\section*{\(\sqrt{ }\) Foretan.}

Francr.-Some curiosity has been excited by an attempt which has been made in some of the churches in Paris to get up a neuvaine in favour of Henry V. I churches by the partisans of the exiled family, to such as were supposed to be trustworthy. Attention having at last been drawn to the matter, the papers were seized, and found to be in the form of a prayer to the Virgin, S Michael, and the tutelary saints of France, to "succou - According to the National, Marshal Soult has formall announced his determination to quit the Ministry before
the opening of next session, and his colleagues now conthe opening of nest session, and his colleagues now con sider him no longer as part of the Administration. Papers but no documents of a political nature are transmitted to him. These are directly addressed to M. Guizot, who is regarded as the real President of the Ministry.-Several confidential agents of Queen Christina had left Paris for Madrid, to be present at the opening of the Cortes on the
the moment a vote of the Cortes shall have proclaimed the downfall of Espartero. The Cabinet of the Tuileries was likewise awaiting that decision to accredit an ambassado to Madrid.-The Jowrnal des Débats states that the
French Government has just ordered M. Napoleon Garella, s young engineer of the Mining Department and M. Courtines, a member of that of the Ponts \(e\) Chaussées, to proceed to the Isthmus of Panama, an seek for the best direction to be given to a canal of com
munication between the Atlantic and Pacific Oceans. - Th papers state that since the arrival of the ex-President of Hayti in Paris, it has been ascertained that, instead of having placed, as has been previously stated, immense sums in the spanish small property. It is even said tha M. Barrot, the new Minister to St. Domingo, bas receive instructions to endeavour, after having obtained complanc Preside demands of Erance, to procure a pensular establish ments for China are to embark at Brest towards the latte end of the present month. The weather has become exceed ingly stormy in Paris, but remains very mild, although th season is so far advanced, that the removal of the orange trees which have decorated the gardens of the Tuilerie menced Lux French colonies in 1842, published by the Minister of Marine, show that their number amounted in that year to 766, viz., 286 at Martinique, 160 at Guadaloupe, 12 Guiana, and 1830 and 1841 had been 39,819 , making in all 40,585 . -The Presse states, that bourg, had succeeded in raising the hull of the vessel laden with stones, which the English sank between the piers of the harbour, when they took it in 1758.-A voyage to the Marquesas. It appears that in the nigh of the 19th May, as the Uranie was proceeding from Teneriffe to Goree, the wedges of the carronades wer taken away. M. Bruat, the captain, had the presumed authors of this offence arrested. One of them endea voured to excite the other prisoners to revolt; but on the same day a Council of Justice was held on board, and this commencement of insubordination was on the instant put down by legal means. In the report from Rio of the 12 th July, M. Bruat announces that the example had produced its fruits, and that discipline was completely re-established on board the Uranie
Spain.-The Madrid journals and letters of the 2 Z contain no intelligence of any moment. The capital was quiet, but the authorities were still on the watch, and their precautions were to continue until the meeting of the to the new Government. The results of the elections were considered highly satisfactory by the Ministerialists Fifteen thened to have voted for the Count de Toreno, the news of whose death arrived only after the elections, and for M. Montes, the late Minister of Finance, who likely to enjoy great influence in the approaching Catalonia and Aragon, that the journals supporting the Government confidently announce the approaching pacification of those provinces. Despatches from Barcelon of the 26 th ult. announce that, after their defeat at San Andres, the insurgents had separated into three columus, the one underAmetler, the other underMartel, and the thir commanded by Riera. The first had retreated on Girona, the second upon the camp of Tarragona, and Riera on Barcelona. This last was dispersed on its way, and the chief, made a prisoner of by Prim, was sentenced to b shot. On the 1st and 2 d the citadel of Montjuich an the fort of Pio fired on the fortified points in the city of Beasedona occupied by the insurgents, was, made an tempt to storm the citadel on the 7 th, but were repulsed with loss. An outbreak took place at Granada on the siege. siege. Ameria has also risen against the Government.
Portugal. We have accounts from Lisbon to the 4th, on which day the Queen set out for the Alemtejo, her from undertaking the journey. Many opinions had been set on foot concerning the motive of this unexpecte visit but that which has gained most credit is, that it ha been suggested by the numerous complaints and representations received from the manufacturers in relatio to the pending treaty between this country and Gre Bra her the purpose of petitioning Oporto have held a meeting for the purpose or peritil the Duke of Palmella from his mission to London.

On the \(19 t a\) the Counci of Ministers were engaged in making choice of the dele gates, and a proclamation has been issued exhorting the nation to appoint their delegates for the 13th November the day on which the National Assembly is to meet.
the Grisons, of the 18th ult., says:-"On Tuesday morn ing the mountain of Calanda suddenly gave way, with it was perceived that a number of crevices had taken place in the mountain longitudinally. Since then several large pieces of rock have fallen down, and some of them into the village of Felsberg. The Government engineer, M. Leccana, was immediately sent to inspect the place, and continually though slowly coming down, and that at 110 distant period the whole of the village of Felsberg must the Government at once ordered meare the emigration of the inhabitants, who are about 500 in number. A new village is about to be founded for them beyond the Rhine
Russia.-A paragraph has appeared in the German and French papers stating that an attempt was made on the life of the Emperor of Russia as Posen on the 19th ut. Several which may all be sumoned up to the eflin shots had been fred a carrage conta de-camp of the Emperor, for who the sho It is stated in one account that some persons pretend to have heard the report, and in others that aome slags have been found in the road, flattened evidently by collision with the opposite wall. But the aftair is now explaine by the announcement that the Prussian authorities having made strict search, discovered that a foot seated hind a carriage which conveyed a part of the Emperor' suite, in passing through an obscure street in Posen, are a musket from under his cloak and fired it. This was th foundation of the statement of a conspiracy organized by some members of the French propaganda to assassinat the Emperor.

India and China.-Accounts have been received rom Calcutta to the 10 th August, and from China to the 29 th July by the Ackbar steamer, belonging to the East India Company, which was dispatched from Hong Kong direct to Suez, with Colonel Malcolm, the bearer of the treaty just entered into between this country were ex changed on the 24 the Colonel did not reach Alexandria in time for the Oriental, which was compelled by her contract to leave for the second time without the Indian mal Colonel Malcolm, however, obtained passare from Alexandria to Malta by the steam frigat Geyser and ar the Oriental came i with the with the wails fro Chins advics ins passag derticulars respectin advices contaia a full detail of pare the ratification of the treaty with Conted to secure orde which the Plenipotentiary bad adop conditions upon among the European resideats, which trade is to be canied hod isuations, ment and sir H. Pottinger bad issued procing matually
agreed upon. The Imperial Commissioners in their proclamation announce the anxiety of their Sovereign the "weapons of war shall be for ever laid aside, and joy and profit be the perpetual lot of all, and neither merchants alike of China and foreign countries." Sir H. Pottinger, in announcing the conclusion of the negotiations, informs his fellow-countrymen, in plain terme, that he is determined to stand no trifing; and that upon any
"well- \&rounded representation that the provisions of the commercial treaty have been evaded, he will adopt the most stringent and decided measures against the offending parties, and where his present powers mayy not fully authorise and sanction such measures as may seem the Great Britain will hold him indemnified for adopting them in an emergency directly compromising the national honour, dignity, and good faith, in the estimation of the tariff a great and important reduction has been made in he duties levied on almost all the most important commodities sent from this country to China, and a mos beneficial effect is anticipated from the change.
China and in this country the tariff has been received with general approbation, and great commendations are estowed upon sir H. Pottinger by the local press of India for the ability heshas shown in conducting the negoCanton on the 27 th July, and from that day the Hong-
Cingen merchants' monopoly and Consoo charges would cease The other four ports, Amoy, Fuchow-foo, Ningpo, and Shanghai, which, according to the treaty, are to be open until an Imperial edict to that effect should be received from the Cabinet of Pekin. The edict was expected at Canton early in September, and in the mean ments made, so that there might be no unnecessar delay in the commencement of trade. Mr. G. Trades cant Lay had been temporarily appointed Her Ma and Messrs. Meadows and Meredith, as clerks in th Consular-office....The intelligence from Iodia, by way of Calcutta, does not entirely supply the long interval which has elapsed since our last advices. It was brought by the Peninsular and Oriental Company's steamer Hindostan, which dert Calcutta on heard of the Bombay mail at Alexandria on the 27 th ult. The steamer which was expected to convey it is the Victoria, which is described as being very small, and of little ther; and as the passengers by the Hindostan repor some apprehensions for her safety are expressed. Up to in Scinde-the nothing of consequence had taken place were suffering extremely from the heat and ill-health, with the prospect of an aggravation of their sufferings when the present inundations shall bave subsided. The enemy appeared to be still unsubdued, and to hover about in a
threatening way, but to be little anxious to come to a collision for the present. The party that moved out against
Shere Mahommed suffered heat of the sun, as did also those that remained in H yder abad, and Capt. Blood's battery in moving up from Sehwan lost nine European gunners in that short march. Sir C. Napier's report exhibits a total loss from this cause, in two days, of one officer and fifty European soldiers. The nature of these attacks appears to have been most sudden, those men who had led intemperate lives being the most predisposed to them; they were in more cases struck down unexpectedily, and seldom survived above a few of Lieut. Pottinger of the 1.5th Bombay Native Infantry - The Cabool Relief Fund Committee met on the 5 th tion of kurnaul, and propositions for the final distribupermanent annulties be granted to the widows of European officers, warrant and non-commissioned officers, and children, and to married persons according to the degre of their physical disablement. The amount at the dis posal of the fund is about 300,000 rupees, or, inclusive of the amount at the disposal of the Bombay Committee, 350,000 rupees
United States.-The New York packet-ship Hibernia, Which sailed on the 19 ch ult, has arrived at Liverpool, after a fine run of 18 days. She brings intelligence tbree days later than that by the Queen of the West and the Stephen Whitney, which had previously arrived. The Unist meeting of the delegates from every part of the place on the 20th, when Mr. Robert Tyler was appointed President, and various other Officers were elected. The Boston papers state that the British steamer North America, from St. John's, had grounded on the north
side of Governess Islaud. She had not sustained material injury, and was expected to be got off next tide. By an arrival from Mexico on the 18 th ult, intelligence was Mexico of a contemplated renewal of hostilities between thened with the news that no treaty had been concluded, the commission was dissolved, and the Mexican Commissioners bad returned to Vera Cruz. It appears that the anger excited by Mr. Dickens's "American Notes" is far surpassed by that since produced by his "Martin Chuzzlewit," and the popular indignation seems to have cazzelly fallen on Judge Haliburton for his "Attache, or Sam Silick in England." The papers argue that the position of
the latter ought to have prevented him from indulging in disagreeable reflections towards their republic; and as
a member of the bench in a neighbouring province, they warn bim of the bench in a neighbouring province, they diction, or if he wanders within that of Judge "Lynch," he will do so at the risk of being arraigned at his bar, West Indies.-The following are additional particulars of the calamitous fire at Kingaton, announced briefly last week. It broke out shortly after mid-day on Saturday, Aug. 26, near the furnace-room of James's foundry, close sive premise mith amazing rapidity, the flames soon caught the adjoining saw-mills and lumber-yard of Messrs. Da Costa and Maxwell, which in less than half an hour were one mass of flames, with the solitary exception of , whigh chimney-stalk, which stood uninjured during the sea.breeze blew very high, thereby rendering it impossible or the city engines, even if they had been in serviceable order, to have had any effect in extinguishing the flames : consequently, in a very short time they had crossed Har-bour-street, and jgnited the range of houses on each side of Foster-lane, crossing Water-lane, and extending as high up as Thames-street in that direction; from thence, the breeze blowing in a N.W. direction, the flames extended into Golden-street, proceeding up that street nearly as far as Lombard-street, missing in their course only two Chapel in Thames-street, the other the new Baths, which were only preserved by the extraordinary efforts made to preserve them from taking fire, by means of keeping th roof constantly wet. From this the fire extended up
Maiden and Rosemary lanes, crossing Lombard-street about which time (nearly \(30^{\prime}\) clock) the sparks and pieces of flaming shingle which had been carried aloft, and driven by the force of the breeze over a number of streets, fell Grst upon the old Athenæum in Law's-street, which was separgeduced to ashes; and thus com wenced a new and from the greater value of the residences in that quarter This continued till dusk, comprising both sides of East and Est, with the lanes adjoining between Law 8 -street as far as Mark-lane, during which the sugar-house ver narrowly escaped. If it had ignited, it must inevitably have led to the destruction not only of the Roman Catholic Chapel, and the Commissariat Office, but of the times on fire from the the prisoners should be removed, From East Queen Street, the fire still moving in a N.W. direction travelled up nearly another division on the west side of East-street and one division of Duke-street on both sides, extending as high as sutton-street, adjoining the Parade, where the conflagration in that direction was checked, though unhappily not before reducing to bare walls the French Romun Catholic Chapel in that street, as well as the whol range of valuable buildings adjoining and opposite. At this stage, however, the change in the direction of the wind, which saved the upper part of the town, began to threaten destruction to the commercial part; and the original branch of the fire, which had latterly somewhat wards, taking the east side of Hanover-street, and both sides of Rum-lane, which bad formerly escaped, and fo several hours after nightfall the whole of the lower part the town was in the most imminent danger. Providentially, however, the land-wind gradually subsided confluaration ant, streets, where the dag to been appalling and by the aid of the military, both from New Castle and the barracks in town, and several naval detachment from Port Royal, whose services are much extolled the ravages were prevented extending cownwards, the with great brilliancy conuing to issue from these part morning. Several serious accidents, and some death ensued, and the value of property consumed is estimated at from 200,000 . to 300,000 l. It is said that the black population rendered little or no assistance, observing your fire," and they were obstinately ignorant as to water estinguishing fire. There was no proof of its on ginating wilfully, but the Mayor had offered \(1,000 l\). for discovery. -The Bishop of Newfoundland has been trans lated to the Bishopric of Jamaica and the Bahama islands so that the diocese of Newfoundland becomes vacan From Bermuda we learn that the fatal epidemic still con tilues to prevail in that group of islands. Captain Si H. Chambol Arabin in August last, who succeeded Adjutant Jenkin, of the Engineers, nine gunners and drivers of and about 120 of the reserve battalion of the 20 th Re of the line at present serving on the station. It has bee equally fatal in private families, and labour is suspended. CAPE OF Good Hope.--Cape papers to the 26 th July are chiefiy occupied with the results of the mission of Colonel Cloete to the Boer settlers in the vicinity of Por Natal. He was instructed to announce to them the deter mination of the British Government to adopt Natal as British colony, and to place it under British laws and rule. The commissioner was received with every demonstration of aversion and hostility. But the most singular feature of the affiair was, that the Boer women were thrus into the foreground upon the occasion, and proceeded at once to repudiate British connection and dominion, as
well as to exhibit a long roll of grievances before the commissioner, which they compelled him to listen to, until at length, losing all patience, he escaped by force of arous Town. A body of troops anded, and returned to Cape Town. A body of troops and artillery, 200 strong, were immediately ordered for embarkation to Port Natal, whilst by land a corps of cavalry was despatched to the borders osserve the movements of the Boers on the other side of the Orange river. These precautions, it was thought, might probably prevent any outbreak, and induce the Boers to submit peaceably at last.

Money Market, Friday.-Consols for account closed t \(95 \frac{1}{8}\); Reduced Three per Cents., \(94 \frac{1}{8}\) to \(\frac{3}{3}\); New Three-and-Half per Cents., \(102 \frac{5}{8}\); Exchequer Bills, 63 s . to \(64 \mathrm{s}\). , and 62 s. to 63 s. prem.

\section*{3tetropots amo its Wicmint.}

The Grand Duke Michaet.-On Saturday his Impeial Highness visited Buckingham Palace and the Royal mews, af er which he proceeded to the Bank of England the Tower, and the Thames Tunnel. Baron Brunnow gave an entertaw Duke, at which a large party of the nobility, Foreign ministers, \&c. were preseat. On sunday morning his Imperial Highness attended divine service at the Rassian Chapel in Welbeck Street, after which he paid a visit to Sir Robert Peel, and inspected the collection of paintings in his gallery at Whitehall. In the evening the Grand Duke dined with Baron Brunnow. On Monday his Imperial Highness went to Woolwich, for the purpose o ingpecting the Royal Arsenal in all its departments. Afte visiting the storehouses and laboratory, he visited the convict-ship and the saw-mills, and thea proceeded to inspect the Royal Military Academy and the exercises o the Horse Artillery. His Imperial Highness dined and slept at Lord Bloomfield's ; and on Tuesday inspected portion of the barracks and stables, the riding-school, the hospital, the grand depôt, and finally proceeded to the Marshes, where a display of artillery and rocket practice took place. His Imperial Highness quitted Woolwich about five o'clock, and visited Greenwich Hospital on his route to town. The Grand Duke's visit to Newmarket, to see the Cesarewitch Stakes run for, was postponed in consequence of other engagements. On Wednesday evening his Imperial Highness left town by the Birming ham Railway for Lancaster, from whence he will proceed by Carlisle to Glasgow. It is understood that after visiting the principal objects of interest in that city, his Imperial Highness will go to Buchanan Castle, on a visit to the Duke of Montrose, and afterwards return by Edinburgh to Newcastle and Durham, and will most probably visit en route the Duke of the Marquess of Londonderry at Wynyard Parko His Im perial Highness, on arriving at Darington, win proceed to Leeds and Hull. He will then proceed to Chatsworth號 the tuke of Devonshire, and from thence to Drayton Manor on a visit to Sir R. Peel. It is expected that he will then honour the Dowager Countess of Pembroke with bis company at Witon House, near salisbury Tottenham Park. His Imperial Highness is expected to eturn to Mivart', on the 27th or 28 th inst. H. R. H Pribee Alexander of the Netherlands will most probably join bis uncle in Scotland.
The Stoddart and Conolly Mission.-A meeting was held on Wednesday for the purpose of taking leave of the Rev, Dr. Woolf, before setting out on his intended expe dition to Bokhara to ascertain the fate, or obtain the release of, Col. Stoddart and Capt. Conolly. Gen. Sir J. bryant presided. Capt. Grover addressed the meeting at that length, ater the officers, men, were now alive and prisoners at Bokhara, since he had received a letter from Mr. Steele, saying that his son was there in slavery, and another from Mr. Balfour, of Aberdeen, to the effect that bis brother, a surgeon, was also there. It was his intention to set out next Saturday first to Malta, then to Conslantinople, and then onwarc to Bokhara, baving been provided by the Foreign Office with despatches for the Ambassadors and Col. Shiel. On the motion of Mr. Buckingham, the thanks of the meetfacess of his mission. Dr Bunied by en thes fin Aler. Burnes, in Dr. Burbes, brotwer of he hate Alea. Burs, in sup porting this resolution, said pition 500 l of about 300 l. had already been subscribed. A vote of the several British officers had volunteered to accourpany Dr Woole it been found needful, and amongst others \(C 0\) Edward Napier. Capt. Moorsom then proposed the thanks of the meel the cour gallant Cbairman, who briefly acknowledged the han an expression of regret that Goversion motion of the mission.
Mexican Bonds.-A meeting of the holders of Mexirican bondholders, was held on Friday the South Ame best means of protecting their Friday to consider wa taken by Mr. Go. R. Robinson, who for fourteen year has acted as chairman of the committee. It appeared from the statements of the different speakers, that an issue of bonds in excess to the amount of nearly a million sterling had been made by Messrs. Linardi, the agents of Mexico in this country, in direct violation of an agreement with the Mexican Government, and in cobtravention of the decree of the 29th of July, 1839, in which it was
provided that the issue of new bonds should be limsited to the amount of the old bonds and the arrears of interest that it was not intended that the bondholders or the public should be made acquainted with the surreptitious issue, by which from 800,0002 , to 900,0000 . were added to the debt; and that the agents had applied a portion of the purpose of paying their own commission. It appeared also that the Mexican Minister had condemned the con duct of the agents, and had shown, by a public statemen of the accounts, that there would have been sufficient been confined to the legitimate amount, after paying th October dividends in full. The meeting was very nume rously attended, as the whole proceedings had attracted unanimously adopted, expressing dissatisfaction with the irregular conduct of the Mexican Government, and the surreptitious issue of stock. Strong disapprobation was surreptitious ith the conduct of the desire made known that it should be placed in other hands, and a recommendation was finally passed that the bondholders should cut off the April and October as to make all their bonds saleable alike in the marke.
The City Election.-Numerous meetings of the friend of the two candidates, Mr. Baring and Mr. Phen, have been beld this week The proceedings and the speeches were of the usual cha
 success. On Thursday evening a meeting to assist th election of Mr. Pattison and promote the cause of fre trade generally, was held in Covent-garden Theatre, unde
the auspices of the Anti-Corn-Law League. The Theatre the auspices of the Anti-Corn-Law League. The Theatre by numbers of persons who were unable to find room Mr C. P. Villiers presided, and the meetiog was addressed by Mr. Cobden, Mr. Bright, and Mr. W. J. Fox
Election of Lord Mayor.-On Tuesday,
Hall was held to receive the fofficial announcement of the state of the poll. The Sheriffs reported that the choic of the Livery had fallen upon Ald. Magnay and the pre sent Lord Mayar, when the Recorder announced that the Aldermen had selected Ald. Magnay, who was forthwith invested with the insignia of office. A vote of thank their conduct during their year of official duty
Launch of the Worcester Frigate.-This frigate, of 50 guns, was launched at Deptford on Tuesday, in the presence of a great concourse of spectators. Miss Hill performed the ceremony of naming, and the launch took glace without any accident. The Worcester has been many years on the stocks, her keel having been laid down as far back as 1819. She was launched to make room fo building a new war-steamer, to be called the Terrible.
The Savoy Chapel.-This ancient chapel, the propert Duchy of Lancaster, is now undergoing a complete Duchy of Lancaster, is now undergoing a camplete
restoration at the expense of her Majesty. The architec tural department has been intrusted to Mr. Sydney tural department has who has restored a very beautiful aitar screen originally designed by Sir Reginald Bray, in the time o Henry VII. The old carved roof, which consists partly
of emblems of the Plantagenets in succession down to the of emblems of the Plantagenets in succession down to the our Saviour's Passion, has been renovated and emblazoned under the superintendence of Mr. Willement. In addition to these improvements, her Majesty has determined to add a new organ by Mr. Bishop. The works are all completed with the exception of a new stained window over the altar, which Mr. Willement has designed to harmonise with the architecture of the fabrie. The Savoy
Chapel is one of the historical buildings of the metropolis Chapel is one of the historical buildings of the metropolis. Within its walls the Savoy Conference finally settled the Book of Common Prayer, the preface to the Liturgy was written there, and it is said that there is an olirst publicly read. Here also, in days of yore, many of the Bishops were from time to time consecrated, and among them Wilson, Bishop of Sodor and Man, by Archbishop Sharpe, in 1698. The chapel, according to Pennant, was restored 1508 and royally endowed by Henry VII., under his will, dated receiving an annual fee by Royal warrant. The chapel will be reopened on the 29 ch inst., before which it is expected her Majesty will ma
St. Stephen's, Walbrook.-Another stormy meeting o the parishioners and members of the select vestry of this parish took place on Friday, but without producing a more satisfactory result than the numerous preceding meetings. A long discussion ensued on the legaluy He meeting and Ala. Giobs objected tins willing to render a statement, in order that the accounts ander his controul might be passed. He was willing to stand the fiat of their decision ; and, having laid the accounts before them, they might post them at Charingaross if they thought proper. He was prepared to render an account of his trust to the select vestry, who alone bad the power to pass it. All be asked was that it might be done in a legal way. He was under certain responsibiliThere were many honseholders present who were not There were many householders present who were not vestrymen, and others who were not householders, who could have no business there. When the accounts came before the parish they would be truly astonished. He therefore he should not produce them. He was ready to conform to the I. law, but it was too much for those who
were loaded with responsibility to be goaded on by those quit office to-morrow, and he certainly would do 80 a Easter next. Another long discussion here arose, withas arriving at any satisfactory conclusion, and at length, meeting, it was settled that the select vestry and the parishioners should quit the church simultaneously, withmeeting reference to the furse proceedings. Anothe attend. A parishioner, Mr. Flight, offered to advance without interest, the requisite sum for the repairs of the adjous; and after much de
The Partes.-The police have received orders to prevent the continuance of Sunday preaching in the parks Not one of these preachers appeared in St. James's-park on Sunday, except a person styled by himself on his cards tributing puffs, printed on pink paper, of his "asthmatic amp, or air flame magnet to breath."-According to the ments of the average number of 50 persons, of both sexes and all ages who have no other shelter by night than what the tree and hollows in the embankments afford. The majority o of whom have been brought up from the country by th soldiers and abandoned. They may be found buddled logether at night in the parks; and there are many men and girls whose faces are quite familiar to the park keepers from the time they have thus existed. One poor and, judging from his winter preparation of old matting and straw in a hollow part of one of the pits, he appears to contemplate passing many months more in the same locality. One reason why the park is so overrun with till 8 aken ofr at 10 and also because the duties of the park-keepers are limited principally to Kensington-gardens.
Bishops!fate Ward Schools.-On Wednesday morning distribution was made of 5 s. each to 30 boys who produced specimens of fair writing, bestowed as an "Old boy of the ward school, and now Speaker of the Hows Assembly in the island of Grenada. The money was distributed in the presence of the clergy, the treasurer Wh others, in compliance with the directions of Mr his thankfulness to God for his great goodness, deciare that " he feels a pride in having uorn the garn of and the star of his profession, the lackered badge of the school, on his breast, greater than if he had ancestors of by honest industry they may acquire weath honour, and respect." The Murder of Mr. Westwood.- It was latel announced by the daily papers that a convict recently sentenced had given important information respecting the mur enirusted with the prosecution of the affair. The Observer contradicts this rumour, and states that the murdere Westwood escaped immediately to America, leaving hi two distant from that of his victim. It also states as an xtraordinary circumstance connected with the murdere after his arrival in America, that a young man who had personally known arrest and take him back to England, unless he immediately handed over to him half the watches and other pro perty which were the fruits of the murder. The murdere yielded to this demand, and gave up what was required. Hes.--The most serious fire which has occurred in out at inhabited neighbourhood of St. Martin's-conrt, between t. Martin's lane and Leicester.square, and has not only proved destructive in its consequences, but has been at premises of Mr. Labram, a boot and shoe-maker, at a shop called the Noah's Ark, and the alarm was no boone part of the premises were in flames, and that all escape, except by the windows or roof, was cut off. Mr. Labram and his family escaped at the windows, and by scrambling along the leads got in at the windows of the adjoining ouse, occupied by Mr. Batsford, conb pper part of the house were a Mr. and Mrs. Ponock, who ith their two children and brother-in-law, lodged on the danger, Mr. Pollock and his brother-in-law got upon the roof, in order to ascertain the best means of effecting an escape with the wife and children, but in the meantime the fire had made such rapid progress that the bed-room as already enveloped in the flames, and they coud not get back; although they heard the screams of the mother nd her children or assistance, which it was impossible for Before the engines could arrive, the houses of Mr. King bairdresser, on the same side of the court, of Mr. Aker man, the conlectioner, and of Mr. Dalton, the combburning with a rapidity which threatened the destruction of the whole court. The flames spread right across from one side to the other, forming one burning mass. It is stated that some of the persons who came to assist prevously to the arrival of the firemen, injudiciously broke out the panela of the doors, and, by admitting a current o
air, caused the flames to extend through the premises with the greater rapidity. The fire had thus got such a hold apon the four houses, that when the engines arrived was found useless to attempt anything beyond preventing arestraction of the surrounding houses. In this the succeeded, notwithsianding the closeness and crowde character of the neighbourhood. In addition to the lives aiready lost, it is feared that a fourth death may follow號 ment, and is at present in Charing-cross Hospital in dangerous state. Nothing is known as to the origin of the fire, although there is no doubt that it commence in Mr Tabram's hey the evening; and it is therefore probable that the fire had been smouldering for a long time before it burst out Mortulity of the Metropolis.-The number of deaths egistered in the week ending Saturday, Sept. 30th, was a follows:-West Districts, 143; North Districts, 190 Centra Dists, 270 ; South Dis
 Weekly average for the last five years, 903 (461
females) ; and for the last five summers, 846 .

\section*{邵robmial Nebs.}

Bolton.-On Friday night an attempt was made to set ire to the cotton-mill of Messrs. Ainsworth and Crompton, in Little Bolton. It appears that the incendiaries had thrown a piece of burning cotton waste through the venti without doing any damage. On the previous day a quan fity of cotton was lying at the place where the fre wa hirown, but it haa ortunaly becn wemo before mill was closed, and thus the intention of the parties was kind within a very short period.
Carmarthen.-A special commission for the trial of the prisoners concerned in the recent outbreaks in south commission nominates Baron Parke, Baron Gurney, and Mr. Justice Cresswell, as the judges. It has been considered advisable that the trials of the rioters shall tak place at a distance from the principal scene of the disturbances, and it is accordingly arranged to be held a Cardiff, in Glamorganshire. The day named for the firs sitting of the commission is Saturday, the 21st inst.-On Friday two men, David and James Evans, were arrested and lodged in Carmarthen gaol, for having, on the 30 th Sept, broken into the house of farmer named Thonas assaulting and demanding 40 s . from him. Upon his in formation the prisoners were arrested. Their associates were determined upon revenge; and at an early hour on Saturday morning the farm-house of Thomas, in the parish of Llanfiangel, Rhos-y-Cwm, was surrounded by cround. The infuriated mob encircled the house with guards, so as to prevent the approach of any one to extinguish the fire. Whilst they so remained, they employed themselves in hooting and fring shots. There seems to be a general anticipation that the approaching hiting-time in November, when farm servants are changed, will lead o extensive information of the recent outrages being given miles 1000 por miles from Cas building. An address to her Majesty was adopted ex pressive of the loyally of the people, and their determinaion to use their utmost power to preserve the peace in this part of her Majesty's dominions. It was also re olved that the weir which was so obnoxious to the people shall be removed. It is to be purchased from the pro prietor, and early next year it was promised to the meet-
ing by Mr . Lloyd Williams, on the part of the landholders, as this grievance i concerned, should be put an end to. The result was very satisfactory, for the poor, who felt themselves injured by the weir, perceiving the inclination on the part of the gentry to gratify their wishes, insisted upon drawing home in their carriage Mr. Lloyd Williams, the chairman of the meeting, with Mr. Lloyd, the proprietor, and Mr. Gower the lessee of the weir.
Derby.-A melancholy accident happened on Wednesday evening to Sir Henry Wilmot, Bart., who was thrown from his horse on returning from the meeting of the South Derbyshire Agricultural Association at Swarke stone, at which he had presided. The right collar-bone was fractured, and there is reason to believe that there is oncussion of the brain. Sir Henry was conveyed to the King's
langer
\(\vec{F}\) almouth. -The 11 th annual exbibition of the Royal Cornwall Polytechnic Society commenced on the 3d, and continued for three days. Sir Charles Lemon presided at the meetings, and alluded to the success which had ttended the recent introduction into Tresavean mine of the man machine for the descent and ascent of miners towards the expense of which 500 l . Were given in aid by the Polytechnic Society, which first started the idea, and ave many prizes for various plans proposed prior to the mo many other mines, and particularly in the deep ones. The hat, of any previous year
Frampton.-In the will of Miss Ann Wicks, late of Cheltenham, the following legacies occur :-after desiring to be buried in the chancel or memory ; \(1,000 \mathrm{l}\), for com monument tate for Frampton church; \(50 \%\) for a cloth for
the communion table; 5002 . to improve the church; \(500 \bar{l}\). the communion table; 500\%. to improve the church;
to rail in the churchyard ; 100l. to the vicar for preaching her funeral sermon. The interest of her bank stock, which is considerable, she directs to be distributed on her will has been contested by the relatives of deceased ; but, by a recent decision, Sir H. Jenner Fust has admitted the Will and granted administration.
Ilford. - The Bishop of Exeter has addressed a letter to
the Times. in reference to the statement ascribed to the vicar the Times. in reference to the statement ascribed tothe vicar
of Great Ilford, "that the Bishop of Exeter, although he does not himself practise it, sanctions the clergy in crossing themselves on approaching the communion table." The
bishop contradicts this statement, adding "I do not know, bishop contradicts this statement, adding to believe, that any one of the clergy of this diocese has adopted this prac-
tice. If any of them have adopted, or shall adopt it, he acts on his own responsibility, without the slightest right to claim any sanction from me.
Liverpool.-The annual meeting of the Liverpool Agricultural Society took place on the 5th. The exhibition sidered excellent in point of quality, but not quite so numerous as on former occasions. The dinner in the evening was attended by about 250 persons. Lord Stanley
in the chair. After the usual toasts his Lordship proposed "Success to the Association," in a speech of grest leugth, of which even the following is but a summsry. "I will not," he said, offer any observations on two subjects of primary and elementary importance in the science-ior which all other improvements are comparatively worthless. I would call your attention to the vast importance of regular, effectual, thorough draining of movement. Now, it is quite true that agriculture is not capable of that indefinite extension by which the manufacturing industry of world but it is equally true that agriculture is capable of vast extension and improvement. The surface of your limited also, but in a much less degree than is generally supposed. I speak with perfect confidence when I say that of the great bulk of the land of this country, tho ins
mense majority is capable of returning a large amount of mense majority is capable of returning a large amount of
profit upon a very large, an enormously large, outlay of capital judiciously expended on it; and, considering the condition of this country, considering the constantly and
rapidly incrensing population of this country, it is not only our interest, but it is our positive duty to exert our-
selves and to apply the best energies, not of our limbs selves and to apply the best energies, not of our limbs
and sinews alone, but of our minds and intelligence, to those means whereby the soil may be rendered more ca-
pable of supporting its increased and increasing millions. My father and myself, in the course of the last two or three years, have, for ourselves and tenants, put under ground nearer \(3,000,000\) than, \(2,500,000\) tiles, which I
think may be taken as a pretty fair indication of our belief in the success of the great experiment we have undertaken. And, having done this, I will add that every from having done enough, we have but made a beginning and effected only a very small portion of that which it is our bounden duty, but still more our abundant interest, to
do. In 1841 , my father was about to inclose in the park at Knowsley a tract of land about 80 statute acres in extent, 20 of which consisted of strong clay land, with a very retentive sub-soil, and the remaining 601 have from
boyhood known as the favourite resort of snipes and wild ducks, but good for nothing else. In the course of the first year the 60 acres maintained durng summer six there was a crop of very poor hay. You will admit, then, hardly be selected than land in this state; indeed, I may say that in the process of breaking it up we had in some places to dig the plough-horses out more than once, while plough at all. In 1841, that land was broken up and drained; the whole of it was drained, and the 20 acres of stiff soil was carefully sub-solied. This land, which was in 1842 in turnips, and we fed for five montlus and fattened for the butcher 80 beasts and 300 sheep off that land, upon which the year before we had to dig out the plough-horses, and in addition to all this we carted from year that land has borne a very fair, I might almost say a heavy crop of barley and oats. It 19 now worth 30 s. a
acre; the outlay in breaking it up, levelling old fences, and laying tiles and slate soles having been \(7 \%\). 10s. per statute acre, giving a return of 20 s . for every 150 s . of cent. on the money expended in draining land of so un" promising a character. In the same year we took into our tenant as bein farm which had been abandoned by the distant from the other spot about 12 or 13 miles, and the soil was of a totally different character. There was a field of 22 acres, which, being of a very porous sandy from admitted of the drains being cut at a greater distance statute acre, It was drained we fed off half the land 180 sheep, and the turnips on the remaining half we carted to the farm-yard. The consequence has been that the land, by an outlay of \(2 l\)., is increased 10 s. per acre permavaently to the landlord; and at least 10 s . more to the tions, and farmers cannot conduct them. Perhaps they can-
not, unless they have confidence in their landlords, or unless they have the security of a long lease. I will go further, and say that I would much rather the tenant were not at the original expense of this outlay; because by having and under one management, there is security given that the work shall be performed not with a view to the temporary but the permanent interest of the estate; and the outlay of say \(6 l\). or \(7 l\). per acre in thorough-draining, yet I am quite certain if this work were done by the landlord, there is notenant, be his lease long or short, who would not be able to pay interest on the outlay at the rate of 5 per cent. I myself know instances in which I has has been an increase to the tenant of 10,15 , and even 20 bushels of wheat on the large acre, and only takilate for yourselves how much profit they would derive from an expenditure which in no case could exceed 150 . or 166 . on
the large acre at the outset. I would also observe that the system of draining, to whatever extent it may be car ried, must depend on the co-operation of a number of parties. It is of comparatively little importance to have run are not well cleaned out too, and a sufficient outfall secured for the water. And for the parpose of securing larger general outfalls, the co-operation of many landlord and many tenants is required. But I wish to impress on you that with respect to the smaller watercourses which are not less important, it is not only your mutual duty bo your mutual interest, as farmers and tevants on neigh that each and all perform for each and all the common duty of keeping the ditches on their own farms open. In his matter you have a common interest, you have the not to be lost sight of by the practical working farmers of the country. This leads me to another subject on and the laying out of farms. I am no advocate for the try so flat and exposed as this, it is not ornament but protection that is offered by that hedge-row timber. som also aware that the size of fields form itself, while th some propartia must bear some proportion to the capital of the farmer who occupies it ; and with the full conviction in my own mind of the superior advantages and economy of large farms, I, for one, as a landlord, should be prepared to say that I would forego particular advantages, rather than remove from a farm an industrious
who, to the best of his abilities, was exerting himself to do his duty. But although I am not an advocate for clearing the country by the destruction of hedge-row
timber, there are some bounds to be set to the number and still more to the direction of fences ; and I am perfectly satisfied no agriculture can be successfully con ducted, when the buik of farms is divided into fields of acre each. The very space that is lost by these feaces running in every direction but the straight one, cousti tuting an enormous part of the land, and yielding no profit but doing a great deal of mischief, is no unimportant consideration. The other day 1 called for a practical return of the quantity of land which had been gannd 200 acres by the mere removal of fences and laying fields together; and to what do you suppose it amounted? Upon 290 acres of 22 statute acres, or 7 per cent. of the whole surface of the soil. But the loss of ground is not the only or the greatest evil. In this country we have a multiplicity of old rotten cops and disused marl pits, harbouring vermin -although, as a sportsman, I must also allow they harbour game, and for that reason I would noen on it, mos away with thern; but all these Ings, and exclude the sun, so that not only in the point of quantity is the crop inferior and much later in point of time, but it is absolutely impossible that it should ripen simultaneously; hence part or it low price. I have no doubt in the world, and \(I\) believe may be practically proved, that by thoroughly draining land you may not only increase the produce, but accelerate the period of your harvest by a fortnight or ten days at our climate is, and how apt the farmer is to be caught in the midst of the harvest by cold blighting winds and bad weather, must appreciate the great advantage to him of getting in his crops in the middle of August instead of the beginning of September. There are many who can testify to this having actually occurred in their own experiland could get on it ten days or a fortnight before his neighbour could put a horse on his land, at a time when the most successill all forgive me for soul commence I ams sure you will all forgive of troubling you with have wished to bring under your notice; but this is the main maxim \(I\) wished to impress upan you-this is no time for the farmer to remain with his hands behind his back, and going on just as his father or grandfather dia before him. Fresh demands are coming upon him; all classes in this stirring age are active and competing, and it will not do for the farmers to be less active, less ener getic, less intelligent, or applying less science to the cul trivin of the soll, than all older ches are actuall industry. It is of great inportance to the farmer that his
operations should be conducted economically. When I say economically, I do not mean without the expenditure of money, because very often a judicious expenditure of capital will in the end prove most economical ; but 1 do mean that in his time, in his cultivation, in his labour, whether manual or horse labour, whatever it be, he ought to direct all the energies of his mind to turn the labour and capital be employe to the best and most beneficial resuits. 1 do not, for example, consider it economy for a farmer in the month or September, to be pottering for three weeks over a field, because he would rather finsh the harvest at his leisure assistance. The probability isethat such a farmer loses property largely by shedding, and certainly he exposes mical plough because he won't buy an iron one, putting three or our horses and two men where a pair of horses and one man would do. If farmers think they can carry on their business in this style from one generation to another without change, they are quite mistaken, and they will oon find it ont to their cost; but with a judicious expenditure of canital, which I am satisfied the soil can well repay, with the application of science, with a good undersanding between landlord and tenant, I don't hesitate to say, that so far from being exbausted, the productive powers of the soil are capable of an increase which would astonish those who have not carefully examined che fact in their own immediate neighoourhoods. Several other toasts and speeches followed, but the only one whin cals oast of "Liberal Landlords and Indostrious Tenants" Mr. Neilson, in responding to the toast, said be held his farm under the Earl of Derby, upon whose kindness and consideration as a landlord he passed several encomiums. He strongly recommended draining, sub-soiling, and the throwing of several small fields into one. He had him self thrown no fewer than 14 fields into one, and by 80 doing, he had gained 10 headlands, and saved \(201 s\). every time the land was ploughed. He contended that the horses were less sworn at by a sulky ploughman, and that the animals were less pulled by the bit when the fields were sacious than when they were small, and whea there were many turbings to be made at the headiands. He aiso recommended the keeping of cattie within doors, because when fed in the house, they gave more mik and made three times the quantity of manure, which was all saved. He further recommended the use of liquid manure. Ho coincided with the chairman in believing that there had been a material improvement in agriculture within the last fifteen years, but so far as his observations went, he had noticed that this improvement took hace on those farms upon which the landlords had not to say that, with some exceptions, the landlords were more deserving of a great portion of that blame which had been cast upan the agricultural classes than the tenants themselves. When they looked at the condition of a farm on a tenant first entering into occupation, they beheld him labouring marem disadrantuges-such for inthe width of dithe the growth of hedge-row timber, the ack a for the want of docu ment or a lease for five or ten years con taining plassession, ofive of the landlord but not of the tenng clauses prony instances totally restrictive of culti vation. Circumstances of this kind were not likely to induce the tenant to expend his money in property which an when from thepended on confidence wh bim to deprecate to be handed down from genera tion had enabled and where a liberal patronage had been exten generation, and wod security, and was not easily dis turbed which aforded securit, many instances on the property of a nobleman in that neighbourhood, where this liberal system had been in existence for a period of 200 years. He appealed to the many present. He contende that seven years was not a sufficient time to enable a man to repay himself for bis outlay in the way of improvement without doing an injustice to the land during the latte part of his lease. The farmer should be given time. fairly stretch out his hand and make extensive improvements, when he saw that he might possibly be able to transmit the benefite arising therefrom to his family. Much had been done in this respect, but much more migat be done. There was a "tide in the affars" of agriculture as in everything else. It belonged to the landlords to make the first advance, inasmuch as they were componen parts of liberality, and not think themselves disgraced by putting their shoulders to the wh the other hand, the tenuat should shake off his lethargy ; and in this way, if both parties did their duty Enoland would be as independent of other countries for the production of her food as she was for their manufactures in times of peace, or their arms in those of war
Oxfford.-The Rev. Dr. Wynter, President of St. John's
 Vice-Chancellor of the Uiversity for the ensuing year cellor. Dr. Wyater then in a ble events of the pat then, in a brief speech, reviewed the events of the past year, makng honourable mention of the late Dean Ireland whose benefactions to the Unilate President of Corpus and the Principal of St. Edmund Hall. In concluding his address he said, that he ab-
stained at this particular moment from touching upon any events connected with the internal government of the put upon helying upon a favowing a continuance of the good feeling and co-operation he had experienced. The usual oaths having been administered, the following heads of houses were nominated Pro-Vice-Chancellors:Dr. Marsham, Warden of Merton; Rev. Dr. Hawkins and the Rev. Dr. Plumptre, Master of University. The delegates of appeal in the case of M'Mullen \(v\). Hampafter which the Proctor for the Regius Professor of after which ter Proctor for the Regius Professor of

with the members of Convocation.
Ruchester. - The Bishop of Rochester commenced the triennial visitation of his diocese on "Monday. After alluding to the "Tracts for the Times," and expressing
his disagreement with most of their doctrines, particularly his disagreement with most of their doctrines, particularly
those relating to the sacraments, the invocation of saints and prayers for the dead, on which points he thought the writers were in serious error, his Lordship pro-
ceeded to remark on some of the ceremonies which the writers of the Tracts and other persons in the Church were anxious to revive. In these enlightened days he could not have conceived that the adoption of the surplice during the delivery of the sermon should have occasioned feeling. It bad always been the custom for the preacher to wear the surplice, and in many country parish charches For some course was pursued as a matter of convenience. and his invariable practice during the whole of that time was to wear the surplice in the pulpit in preference to itself; bat, considering the temper of the times and the unsettled state of the Charch, he thought it most advisable, when the congregation objected to preachjudices, and abandon the practice, so that they might not be apprehensive of any danger. He trusted that so trifing a question would never be allowed to vex and badge of party distinction. The position of the readingdesk in churches had also become matter for discussion The Rubric directed that moraing and evening prayer should be said in the usual place, except differently ordered by the Ordinary. There was no rule to induce the
minister to turn to the north or the south, or to any other point of the compass. The only direction given was that he should place bimself in that position on which be would be most easily understood by the congregation. Turning the back to the congregation involved the Popish notion
of praping for and not with the people. The form of the desk had also been disputed. He regretted that such trifing should occupy the minds of the clergy; at the same time, he was bound to state that he rejoiced in the exertion- that were being made for the restoration of our ecclesiastical edifices. Psalmody was another subject on
which he wished to which he wished to say a few words. Various alterations had been made, and into some churches unauthorised and objectionable versions of psalms and hymns had been introduced. It was impossible for the people to join in
that part of the Church service anless they had those books in their possession, and that could scarcely be expected. He would recommend that from henceforth a return should be made to the new version of the Psalms of David, as found in the Book of Common Prayer, for which the Church had made especial provision. In some places offence had been taken at the practice of bowing to gelf had certainly never been in the habit of following this practice, still he did not see anything objectionuble in it. If it proved a satisfaction to any pious mind, he would certainly not say a word to discourage it. The duty of
daily service in our parish churches had been muich insisted on of late. There could be little doubt that the practice was productive of much good when carried out, but in
most cases it was utterly impracticable and incompatible with the discharge of the parochial duties to which every clergyman should devote a large portion of his time and
attention. In large and populous towns the revival of the attention. In large and populous towns the revival of the
custom might be attended with success. On this subject he would make no request, but would leave the question as it stood in the Rubric. Strict obedience to the rule would be found impossible, and had never been insisted on. At the same time be was anxious to impress upon
the clergy the necessity of a regular observance of saints' days and the other holydays of the Church. The weekly offertory and the prayer for the Church militant had provoked much discussion. He would recommend the clergy long. The remark of the Archbishop of Canterbury in Which he deprecated the use of obsolete customs, which to the ignorant might have the appearance of novelties, and occasion dissatisfaction and dissension, he fully agreed with, and was anxious to press it upon the attention of
the clergy of his diocese. In conclusion, his lordship exhorted the clergy to approve themselves faith ful ministers, and there would be no necessity for superstitious observances, or for the novelties of unauthorised and self-appointed reformers of the Church.
Shepperton.-The South-West Middlesex Agricultural Society held their meeting in this place on Friday. It
was numerously attended, and no less than 68 ploughs were on the ground. Colonel Wood, M.P., presided at ing, consisting of sums of money, ranging from \(5 l\). to \(1 h\)., and others from \(2 l .10\) s. to 10 s., were distributed to the successful competitors.
Teignmouth.-The Churchwarden of the parish of Exeter, informing him "that a large number of Be pop of ioners of that parish are decidedly opposed to the Offertory, that such is the hosilility shown to it, that a great part of the congregation bave actually left the church, and that there is great cause to fear that if the observance be continued, the church tio bishop has replied in a long letter, from which
this the following is an extract:-"The law, by which your minister is bound to regulate his miaistrations, requires him to read some portion of the Offertory whenever any
part of the Communion Service is read, whether the Holy Sacrament beadministered or not, and heis no moreat liberty to omit this portion of that service, than any other. For discontinuance of the Offertory' (as you suggest) than I have to forbid the sermon.
Whitehaven.-The colliers' strike may be considered at an end; nearly all the men have returned to their work roons
Windsor and Eton.-On Monday, Her Majesty and Prince Albert strolled through the slopes, across the Home Park, to the new dog-kennel and aviary, and from thence more. The Queen and Prince, who were plainly attired and unattended, promenaded for nearly an hour in the sence. Her Majesty and the Prince then walked through the private shrubberies, and paid a visit to the Duchess of Kent at Frogmore House, returning to the Castle through the new plantations in the Home Park. When shower set in, the rain descending in tarrents, and Her Majesty and the -Prince were completely drenched.-It is stom the entrance of the Long-walk to the double gates, will shortly be railed in; and that horsemen and carriages or between the trees.-Prince Albert's annual prize of 507., for the promotion of the study of modern languages at Eton, was adjudged on Saturday by M. Tasche and Dr.
Bernays, as follows :-French and German : first prize, 35 . in money, to be received on leaving school, awarded to Whymper; second prize, 5l. in books, to Marsh. The following were selected as having greatiy distinguished
themselves :-Richards, Beaumont, Stratton, Dugdale, and Duck worth. German (only): prize of 5 2. in books, Marsh; 2, Richards; 3 , Whymper; 4, Dugdale ; 5 , Beau.
mont; 6 , Stratton.- French (only) : books to the value
 5, Franks; Boileau and Sir M. S. Stewart bracketted as equal. There were twenty-two candidates for the French Railways.-The following are the returns for the past week:-Birmingham and Derby, 1,576l.; Birminghan Edinburgh and Glaskow, 2,5876 .; Great Western, 14,6544 . Grand Junction, 8,285l.; Glaggow, Paisley, and Ayr, Selby, \(1,216 l_{\text {. ; }}\) London and Birmingham, 17,705l. South Western, 6.897l. ; Black wall, 9351 ; Greenwich, M14l.; Brighton, 5,155l.; Croydon, 909l.; Liverpool and Midland Counties, 3,0706 . ; Manchester and Birmingham, 3,532l. ; Northern and Eastern, 1,701l.; North Midland, 5,071l. ; South-Eastern and Dover, 4,829l.; Sheffield and Manchester, 558l. ; and York and North Midland, 1,998l -It is fully expected that the Dover Railway will be Friday throughout before the end of next month. On twenty-five batteries took place upon the Cliff, at the end of the Abbott's tunnel, two miles from Dover. Upwards of \(3,600 \mathrm{lbs}\). of gunpowder were exploded.-The move-
ment of troops, occasioned by the Repeal agitation in ment of troops, occasined by the Repeal agitation in
Ireland, the Rebeccaites in Wales, and the Free-Church rioters in Scotland, has been beneficial to the railways.
On the Grand Junction line, soldiers are carried from BirOn the Grand Junction line, soldiers are carried from to Liverpool at the rate of from 9 s . to 10 s . a bead, so that the conveyance of a regiment of 800 mea, such as the 34th, which arrived at Liverpool on Friday
week, must have cost little less than 4003 from Birmingham, and perbaps half as much from Weedon to that place.-The Journal des Chemins de Fer says : "An which will reduce to a mere trifle the price of rails for railroads. He replaces the iron by a combination of Kaolin clay (tiat used for making pottery and china) with as to wear out iron, without being injured by it in turn. One hundred kilogrammes of this substance would cost less than 15f., and would furnish \(2 \frac{1}{2}\) metres of rail. The Kaolin clay is abundant in France, and the ," The Paris papers also state that a trial of an immense machine for nativg railroads, hined by "Thentor, Mr. Cuchrane, was made a few days ago in the premises of Messrs. Varrall and Co., engine and machine-makers, in the Avenue at one extremity of the yard, and the machine having been set to work by means of a steam-engine of 20 -horse power forming part of it, the greater part was cut through and
the rubbish thrown aside in a few minutes. Several scientific gentlemen, who were present, expressed their surprise at the tremendous power of the machine. Mr. Cochrane stated that the heap of earth was not of a sufficiently firm nature to afford proper resistance to the cutting part of the instrument. When the opposing body he remarked, infinitely better tested. One of these machines is now in -The following is an extract from a Frankfort paper: Philip Wagner, had so far finished his electro-magnetic ocomotive for railways, as that a perfectly successful result remained no longer doubtful. This was correct; and at present he has completed it at the workshops of
the Taunus railway. Next month, as we understand from good authority, a scientific commission, appointed by the German Diet, will examine and try it, for the purpose of reporting to the Diet, whether the engine is entitled to the national premium of 100,000 florins whic \(\mu\) the Diet promised for this important invention. Persons well acquainted with Mr. Wagner entertain not the slightest doubt that he has completely solved this great problem, which has engaged the scientific world, all over Europe, for so many years.

\section*{IRELAND.}

Dublin.-On the afternoon of Saturday the following proclamation was issued at Dublun by the Lord Lieu-
tenant and Council of Ireland :-" Whereas it bas been publicly announced that a meeting is to take place at or the alleged purpose of petitioning Parliament for a repeal of the Legislative Union between Great Britain and Ireland: And whereas advertisements and placards have been printed and extensively circulated, calling on those persons who propose to attend the said meeting on horsesaid meeting in military order and array: And whereas meetings of large numbers of persons have already been held in different parts of Ireland, under the like pretence, teveral of which meetings language of a seditious and inflammatory nature bas been addressed to the persons there assembled, calculated and:intended to excite disconent and disaffection in the minds of her Majesty's subjects, and And whereas at some of the said meetiogs such seditious and inflammatory language has been used by persons who have signified their intention of being present at, and taking part in, the said meeting so announced to be held at or near Clontarf: And whereas the said intended meet-
ing is calculated to excite reasonable and well-grounded apprehension that the motives and objects of the persons ppresesion that the motives and objects of the perserse of constitutional rights and privileges, but to bring into hatred and contempt the government and constitution of ccomplish alteraio the realm by intimidation and the demonstration of physical force:-Now we, the Lord-Lieutenant, by and with the advice of her Majesty's Privy Conncil, being satisied that the said intended meeting so proposed to be serve the ends Clontarf, as aforesaid, can onlys and to the violation of the public peace, do hereby strictly caution and forewarn all persons whatsoever, that they do abstain from attendance at the said meeting: and we bereby give notice, that if, in defiance of this our proclamation, the said meeting shall take place, all persoris to law. And same shall be proceeded against according to law. And we do hereby order and enjoin all magis public peace, and others whom it may concern, to be aiding and assisting in the execution of the law in preventing the said noeting, and in the effectual dispersion and suppression of the same, and in the detection and prosecution of those who, after this notice, shall offend in he respects aforesaid, Given at the Council Chamber in Dublin, this 7 th day of October, 1843 . - Edward B. Sugden, C., Donoughmore, Eliot, F. Blackburne, E. Blake-
ney, Fred. Shaw, T. B. C. Smith." arcumstances concurred in proving that this determinaion of the Irish Government had been formed atter the most mature consideration, and that they bad neglected no means to insure its efficiency. Lord De Grey and the Lord Chancellor arrived on Friday, having been ordered back to their posts at a few hours' notice; a sudden stop was put to Lord Cardigan's leave of absence from his regiment; the 34th Foot were embarked on Friday at Liverpool, and further reinforcements were expected from Scotand. The managing committee of the Repeal Association ssembled immediately after the Lord Lieutenant's proclamation appeared. Mr. O'Comnell presided, and dictated the following counter-proclamation, as it is termed in the Repeal organs. It was issued at six o'clock in the evening, in large placards, with the Irish crown and harp at the top:-"Whereas, there has appeared, under the signatures of 'E. B. Sugden, C., Donoughoore, Eliot, F. Blackburne, E. Blakeney, Fred. 'Shaw, T. B. C. Smith,' a paper being, or purporting to be, a proclamation, drawn misrepresenting known facts; the objects of which appear to be, to prevent the public meeting interded to be beld o-morrow, the 8th instant, at Clontarf, to petition Par ament for the Repeal of the baleful and destructive proare of the Legislative Uaion. And whereas such pron of chis Saturday not appeared until late in the impossible that the knowledge of its existence could be communicated in
the usual official channels, or by the post, in time to have its contents known to the persons intending to meet at Clontarf for the purpose of petitioning, as aforesaid, under cover of said proclamation, to provoke breaches of the peace, or to comroit violence on persons intending to proceed peaceably and legally to the said meeting. We, Association, do mosit earnestly request 'and entreat that Association, do mosil earnestly request and entreat that this intimation, repair to their own dwellings, and not place themselves in peril of any collision, or of receiving
any ill treatment whatsoever. And we do further inform all any ill treatment whatsoever. And we do further inform all
such persons that, without yielding in anything to the surh persons that, without yielding in anything to the
unfounded allegations in said alleged proclamation, we deem it prudent and wise, and, above all things, bumane, to declare that the said meeting is abandoned, and is
not to be held. Signed, by order, Daniel O'Connell, Chairman of the Committee; I'. M. Ray, Secretary. Saturdny, 7th Oct., 1843,3 o'dock, p.m." In the even-
ing Mr. Steele left town to disperse several thousand persons who were to bivouac on Tara Hill during the night with the intention of marching to Dublin next day to attend the meeting. Messengers were sent off by the
Reneal Association, in post-chaises, to Kells, Drogheda, On Sunddy morning, however, immonse crowds of Repeaters came flocking in, ignorant of the proclamation issued by Government on the preceding evening. Although it rained heavily, the streets in all directions were occupied by, groups, anxiously reading the proclamation of Mr, than that of the Government. The greatest excitement prevailed, more especially as the city was filled with troops, three war steamers having arrived during the preceding The guns at the forts were ready for action, and the guards were doubled. The road to Clontarf bore all the indications of a formidable military campaign. The 11th Hussars, the 60 th Rifies, the 5th Fusiliers, and the 54 th Foot, were marching along to the place fixed for the mecting; and a park of artillery, consisting of eight field-preces, in two They were speedily followed by large bodies of constabulary, who took up their stations separately from the Which runs along the sea-shore. Every species of vehicle was put in requisition by parties anxious to view the scene of operations. Thousands of equestrians and pedestrians moved towards Clontarf to see the military
display, but there was no manitestation of public feeling hatever. The vast crowds appeared influenced only by a feeling of curiosity. There was neither cheering nor groaning; and the multitudes along the line conducted on the ground also behaved with great good humour, and presented no obstacle to the people passing and repassing. day in inducing the people to depart from Clontarf day in inducing the people to depart from Clontarf, and a considerable body of pedestrians. There was no cheering, or noise of any kind. The voice of Mr. Steele, Who bore a small green branch in his hand, was alone home!" and the people, in all directions, readily obayed the command. Shortly before six-it being then nearly to town, and moved on towards their respective barracks On Monday the Repeal Association held their weekly meeting at Calvert's Theatre, instead of the Corn Exchange, over from Manchester and Liverpool. After come sympathisers from Livernool, Manchester, and Staley bridge had been presented in due form, several sums were handed in as "proclamation money," the parties stating Saturday contributed on account of the proclamation of He said he never, in the course of a long and eventful life, rose to address a public assembly with a stronger, a fore awful feeling of responsibility than at the present monent. Att the same time he never adfirmaness. He would say at once, it was not the porsonal the English Government that there was not a massacre. He did not hesitate to repeat it; and if he were to go to if he were to mo to the scaffold, he would not hesitate to say, that if the Government had intended to entrap the perple into a massacre, they would not have acted otherWise than they did. Such folly and absurdity had per-
vaded their entire conduct respecting the Repeal agitation \(v a d e d ~ t h e i r ~ e n t i r e ~ c o n d u c t ~ r e s p e c t i n g ~ t h e ~ R e p e a l ~ a g i t a t i o n ~\)
of giving rise to that which, but for his interterence, a might have ended-and probably would have ended-in a massacre. He therel proclaimed to all Ireland that
there was but one safety-one hope-of gaining Repeal, and that consisted in the most perfect obedience to Repery, thing that had the shape or form of legal authority. They legal. He did not question the legality of the proclamaof legal authed upon them to obey anything in the shape until the formand for resistance would not be legitimate, and the open and red hand of violence was distinctly raised. This had not happened-he was convinced it anything which looked like legal authority-to to obey give way which looked like legal authority-to yield-to and so long as it called itself legal, he told the people of Ireland, if they wished for safety, and above all, for Repeul,
they would obey it. Having first proclaimed that obedi. thorough conviction that the conduct of the Government was calculated to produce a massacre of the innocent people. He was not accusing them of any intention to do it ; but he would demonstrate from facts that they had
escaped the hour of that crime, and that innocent men escaped the hour of that crime, and that innocent men Dublin to explain to the people the line of conduct which they should follow. He would give dates. For nearly three weeks the Government were apprised of the
meeting. It had been advertised for more than a fortnight, and they were quite apprised of it. For more than week they were determined to take the step which they had taken. They had everything arranged, and two regiments were upon their passage, which were settled to arrive there the morning of the meeting, and were therefore determined to want them. They could want them for one purpose only; and what he complained of was, that put down the meeting, nor signify to the leaders of the people the necessity of warning them against falling into such danger. They had for ten months past promoted and countenanced similar meetings, at Mallaghmast, Connemara, Loughrea, Waterford, Tara, Donnybrook, and other places. All these meetings had taken place. They knew who had attended them ; their names were ostentatiously hint given, of their illegality? Was any magistrate, any policeman, sent to caution them? In fact, with the mos perfect knowledge of Government these meetings took stanced. If there were any meeting which had a superior distinctness and legality about it than another, it was that meeting. The others were called by a requisition of laymen and clergymen, the laymen being more numerous ; but the requisition for the Clontarf meeting was not signed by any man but a Roman Catholic clergyman, so
that it was marked, as it were, with tranquillity. The Government were in Dublin upon Fiday. It was the day upon which the Garette should appear, and was the legitimate day for a proclamation. He would, therefore, ask
the British Ministry how, in the name of common sense, they could account for passing by Friday? If they had issued the proclamation upon that day, they would have sent down to the different localities, and told the people to obey it; but they did not do it until Saturday, at iso late an hour, that the people had only a few hours of Repeal Association should still go on ; and if it were proclaimed down, he would be the first person to go to the association; but he would not oppose the law. He would obey even the semblance of authority. He then throughout Ireland after prayers on a Sunday (the day he would not yet select) to petition against the insult and assualt upon national rights which had taken place. He would see whether the Government would suppress those meetings, as they had done the "monster meeting." He concluded by again calling upon the people to be tranquil, orderly, submissive, and peaceful. A resolution, expressive of the determination of the people, proposed by Mr. \(O^{\prime}\) Connell, and seconded by Captain Seaver, was carried. Mr. M. O'Callaghan proposed a vote of confidence in Daniel O'Connell, which was carried by acclamation. Mr. O'Connell then announced the week's rent at \(1,105 l\). 3 s . 1d On Monday evening the Repeal dinner, which was to have followed the meeting at Clontarf, took place in the Rotunda, all the rooms in that vast building, the most spacious the entertainment. The doors were opened at five o'clock, when the rush was tremendous. All the tickets were disposed of early in the day, upwards of 2000 having been issued. The papers of both parties agree that nothing Dublin before the issuing of the government proclamation. Dublion Mr. O'Connell presided, dressed in the robes of Lord Mayor. The first toasts proposed were the Queen and Royal family. The next was-" The people the source of legitimate power." Mr. O'Connell then proposed--"Repeal
of the Union." He said that Ireland would never comthat she would never accept of an instalment the Repeal-that justice could be obtained from a loca legislature alone. In reference to the recent conduct of England, looking to their acts, would say that he had bribed them; but even if he had, they had not vicious ingenuity enough to serve him half so well as they had done. Then it was said that in case the union was resupposition was absurd and futile. The Catholics had been three times in power, and they, unlike their Protes tant brethren, refused to persecute at all. Let them proCatholics, and he would give up the cause of part of the they might readily know that he would not make such an offer, unless he knew it was impossible to meet it. It was said that if the union was repealed the House of Lords would be Catholic. That was ridiculous; for twenty to Protestant England and Scotland at their back, ond then they would have an equal share in the selection of the House of Commons. He had entered too much on the subject for an after-dinner speech, but his mind was filled with Repeal. He did not want the Repeal without the men. He was working for them as well as for the Catho lics. He would have no distinction. Liberty to all was lics. He would have no distinction. Liberty to all was
what he required, and that was what was meant by the

Repeal of the Union." Mr. O'Connell, in proposing the next toast, which was the last upon the list, took occasion peaceable demeanors upon the necessity of maintaining a peaceable demeanour, and yielding implicit obedience to He implored of them so vital to the country as the present. fe their fineir country by acting towards their antagonists in a spirit of forbearance and good feeling. More important considerations were at stake in the present contest than even in the struggle for emancipation. They would forego all excitement, and should approach the consideration of the great national question of Ireland with calm and dispassionate minds. Simultaneous meetings would, he trusted, be held all over the country, for the purpose of entreating her Majesty to dismiss from office the men to whom the executive powers were now entrusted. Six or seven millions of signatures should be procured to petitions begging that Lord de Grey might be sent to mind his oxen-that Lord Eliot might be permitted to go where he liked for his own diversion-mat Mr. Lucas should get directions to proceed to Monaghan-that Brewster, Smith, and the rest of them, should be sent to mind their own business, and not to meddle with theirs, and that the people of Ireland should be sent to College-green to make laws for themselves. Meantime his motto was "Peace, order, tranquillity and resolution" The company ace, three cheers for "The Queen and Old Ireland," and three for Mr . O'Connell; after which they quietly dispersed. The Association met again on Thursday; and was the least numerously attended meeting of any that has taken place since the commencement of the Agitation. Mr O'Connell said that his object was to remove, as much as possible, irritation from the public mind. When that should be effected, he would have simultaneous meetings in every parish in Ireland, to petition the Queen for the dismissal of ministers. He entrented the people to submit to everylhing which has even the semblance of legal authority. If they would only continue peaceable, he was certain of obtaining the Repeal of the
Union. He said he had heard a report that the issuing of the proclamation was heard a report that the issuing of thing determined on by Wellington, Sugden, and Lord de Grey, who met together on Tuesday or Weduesday last, and remained in consultation for four hours. It was intended to take the people of Ireland by surprise, and to attack them when they were unarmed. He might be blamed for shrinking, but his courage consisted in keeping others out of danger; he was careless what might occur to himself. He concluded by moving-That au address to the Irish people be prepared, calling upon them to persevere in their exertions for repeal, but without violence, force, or tumult of any kind, and without resistance to any legal authority

The first provincial demonstration in reference to the Government proclamation took place in this city on Sunday, within a few hourg after the manifesto had been received. The Rev. Mr. D'Arcy presided, confidence in Mr w' C adopted expressive of unbound course prescribed by him the present crisis. The tor poration met on the next day, the mayor in the chair, and adopted infraction of their legal rish to meat to petition Parliz ment unon the public peace would be disturbs of similar arity with wich or similar meetago, an by there with the and suppectario. \({ }^{\prime}\) Colitlither which has characterised the Repeal movement under his guidance.

\section*{SCOTLAND.}

Cromarty. -The Ross-shire papers state that the riot at Resolis has been followed by the rescue of the female prisoner, who was lodged in the gaol of Cromarty on Thursday week. Although the prison was surrounded till nearly daybreak by a mob, no attempt at rescue was then made. On the following night, however, some hundreds of men and women made their appearance in the tow, armed with stones and bludgeons, with which they commenced an attack on the gaol, and evertually succeeded in battering down the door, and in liberating The woman, who was carried off amidst yells and hurraing. The previous outrages in Rosskeen, Logie, and Resolis, on the adherents and ministers of the Church, have has applied for military aid to the Lord Advocate. This pplicatiod for military aid to the Lord advocate detachment of the 87 been promptyy replied arrived at Inverg Trish Fusiliers, consistigg Weith, on Wednesday. The Lord Kieutenant and Sheriff went to Invergordon on Tuesday week, to arrange measures for the prevention of further riots, the eatablishment of the deforced ministers in their parishes, and the apprehension of the offenders.
Stirling.-On Wedaesday, Allan Mair, an old man in his 84 th year, convicted at the last Stirling Circuit before Lord Moncrieff of the wiftul murder of his wife, by beating her to death with some heavy substance, was exented in front of the Court-house. The execution was attion through the whole of this part of Scotland. The old man protested his innocence to the last, and died uttering horrible imprecations on the witnesses at the trial
Inverness.-The annual gathering at Inverness commenced on Wednesday week. Prince Alexander of the mond from Gordon Castle, Duke and Duchess of Richsojourn in the Highlands, in order to be present on this occasion, as be was so much gratified with the Bratmar
gathering when staying with the Duke of Leeds, at Mar Lodge. The attendance of the aristocracy connected with on Thursday, above 80 noblemen and gentlemen were present. On Wednesday and Thursday the competition or prizes for the athletic sports peculiar to the North took place, viz., throwing the hammer, jumping a height and distance, tossing the cabbar, putting the stone, foot racing. dancing, and playing on the bagpipes, pibrochs,
strathsueys, \&cc., for which the contention was most pirited. There was a rifle sweepstatention was Prince Alexander, Baron Sloet, the Marquess of Douro, Lord Lovat, Mr. Russell, Mr. Cluny Macpherson, Captain Ross, Lord Gifford, and Mr. Grant entered. The contes was regulated at four shots each, at a distance of 100 yards. Baron Sloet, Aide-de-Camp to the Prince, was the successful competitor, the shooting being as follows:-
His Royal Hi, hiness, four shots, \(11 \frac{1}{4}\) inches ; Baron Sloet, 10s ; and Mr. Russell, 11 ; so that the stakes were gained by on!y \(\frac{3}{3}\)

\section*{H2m} Law of Landlord and Tenant. - The history of a case (Smith
Marrable), which was decided last Hilary Term, affords an example of the law in regard to the use and occupation of houses, which
muy he useful to record in a connected torm. It was an action for urnished house. The defendant pleaded the general issuc. At th ollows :-" Brighton, September 11 thh, 1842 . Mr Jobn sminth, eight guineas per week, for five or six weeks, at the option of the
aid Sir Thomas Marrable. Signed Thomns Marrable, John Smith The rent to commence on the 15th of Septemher.
Defendant entered on the occupation of the house under this angre
ment on Fridiny, Sept. 16, 1842, and on the foliowing day defendant wife entormed plaintiff that the house was infested with bugs, and wrote to the plaintiff's wife as follows:-"No. 5 , Brunswick-
place SPptember 19.1824 . Lady Marabe intorms Mrs Smith, place as soon as she can take a:10 ther, paying a weel's rent. as all
 The judpe told the jury that in point of law the house must be talken
to have been let on the impled condition that it was fit for habitation, and that if they thought defendant had left the house o
ccount of the nuisance being so intolerable as to make it uncomfortante to live in it any onger they ought to find for defendant
but if they were of opinion he had left merely because he preferred nother reswid oce, apd mad ne the bugs an execuse for leaving plotintifft
 tion of evidence. The second ground was supported by technical
argumento only. The first amounted to this:- the nuisance comargument, only. The first anounted to this:- The niassnece com

 tenant from year to year, wheo ald quitted without notice, and the state, useless to defendant, and unfit to rexide in. Lord Tenterden
beld that to he a cood defence, and told the jury that "Slight cirheld that to he a good defencee, and told the jury that "Slight cir-
cumstances would not suffice, but that such serious reasons might exist as would justify a tenant in quitting at any time, and that it was
for them to siy whether in that case any such did exist." A new trai

 to occury it for three years, had quitted at the expiration of six
months without any notice, and the landlord lad broughti an acction for use and occupation, to recover the rent accruing after
tbat time. The define was, the house was unfit for occupa-
tion ou aceount of linsuffieient drainaze. and Mis. that time. The defence was, the house was unit Mor occupa-
tion ou aeount of finsumficient drainazes and Min. Baron
Bayley said, "I do not see that the fact of the tenancy in thus case bining under a written agreement is material. In any
case the tenaut is bound to pay rent during the time for which he lhas contracted, unicess he satitsfeest the juryg that, under the cicroum-
stances, he was justrifed in ouitting. Ithnk, however, that in point of law he will be free from his obligation to reside on the premines, if he makes out, to the satisfaction of the jury, that anthe prem indesome to reside in, and that this state arose frove no default of his own." These cnses quite warrant the position, that unconfortable and unfit to live in. There was no contract in this case on plaintiff's part, that the house was tree from the nuisance the
contract was hy defendant, that he would take the house of plaintiff shall be in such a fit state was for the description of house might he reaz
sonably expected. In this view the other iudges concurred, Lord Abin ger saying: - " \(I\) am glad that authorities have been found to support
this detence, though, for my own part, I thinls the case one which
 that it is in a fit state for oceupation. Supose the defendant had
discovered the fact, that previous tenants had quitted the house in consequence of a person having recently died there of the plague,
would tot the law have iustified him in leaving as soon as he discovored the fact? T entertain no doubt on the subject; , and in this case Y only wonder that defendant remained so long, and gave the landiord
zo much opportunnty of trying to remove the nuisance." The Court was against Mr. Hityward on the seoond ground also, and the rule, well as to a furnished house.

\section*{SATURDAY, OCTOBER 21, 1843.}
mbertines por the two rollowing werks.
Kriday, Novemer
For the last few years the striking discoveries of some Chemists, aided by the rhetorical flourishes of induced to look to Chemistry for every possible and impuced to look to Chemistry for every possible and
impossible result. A fewr pounds of some saline ingredient were to restore fertility to exhausted land, and to cover our moors with teeming crops. We are not sure, indeed, that the farmer was not to scatter abundance around him from his waistcoat pocket as he rode across his fields. At all events the gardener Was to substitute his suuft-box for the dung-cart; dealers were to sell it by the dozen, not the ton. The very absurdity of these exaggerations made them current, and gained for them a belief which would have been refused to more sober statements. Now,
however, the hot fit is going off, it is to be hoped that it will not be followed by an access of cold.
Let us not be misunderstood. No one can possibly form a higher estimate of the importance of Chemistry to the arts of cultivation. The opinions upon the subject that have been from time to time expressed entertain conumns are daily strengthened; and we discoveries in doubt that alroad to most important ment of crops will in time result from the manifold researches now in progress among Chemists. But
favourable opinions like these must not make us blind to the mischief likely to arise from the anticipations of a heated imagination, or from a blind and ignorant
reliance reliance upon forces and forms of matter, the true connection of which with vegetation is only just which is most important, sollid, and well ascertained in a feverish chase after an object to which science has still to give true form and proportions. It is is like
quitting the open country to follow the stag through a Louitting the fog.
Such, nevertheless, has happened, wherever the certain but unobtrusive truths of Vegetable Physiology
have been postponed to the bright scintillation have been postponed to the bright sintiliations of
Vegetable Chemistry. When Professor Liebio made his inconsiderate attack upon Vegetable Physiologists, he carried with him many thoughtless and uninportant persons, and led them to undervalue that innregaining her empire, and people are now beginning to discover that whatever aid Chemistry may herealter give them, they must look for immediate and
sure assistance to the well-ascertained facts of Vege table Physiology, whose value cannot be destroyed or even diminished, although they may be enhanced, by future discoveries. They have also no doubt disCovered that chemical experiments are not very easily the unless by those who have more experience than although it is the lither gardeners or farmers, and that practice the results of exact chemical inally put in practice the results of exact chemical investigation, yet that until those results shall have been obtained another kind.
People have doubtless been in some degree led of Iate to direct their attention so exclusively to chemical Chemistry is scarcely troden the path of Vegetable likely to lead scarcely trodden, ant therefore far more
\(V_{\text {eer }}\)
to important discoveries than Vegetable ead hysiology, which has for so many years
been heardly subject of careful observation. But there can hardly be a greatier error. Vegetable Physiology and, and in which the aid of Chemistry is unneeded. vegetable all things, do the well-ascertained laws of \({ }^{\text {vegetable }}\) growth want correct application to practice. either, who fancies that all possible perfection has
been been arrived ancies that all possible perfection has
exclusive the cultivation of any one crop, \(\mathrm{O}_{\mathrm{n}}\) the of what Chemistry may be able to effect. ten years will witness astain no doubt that the next respect as the last have done great an advance in this edication of the rising generation takes aproved \(P_{\text {hysiology }}\) and leads to the careful study of Vegetable with the l , and, above all, if those who are intrusted think and act a little for themstlivestion will learn"to \(W_{\text {An instructive instance of the the is }}\)
Wood's xemarks on potting, of which we to-day
publish the completion, along with a capital paper on Salvias by the same cultivator. These papers canno be said to depend upon any new facts, but are founded upon a novel and better method of applying well known facts to practice. The main principles in his method of management are :-1. That plants while growing are to be kept growing without interruption; 2, That the effect of this is to augment (or accumulate) their power of development in a quasi geometrical ratio. The mode of carrying out these principles is regulated, on the one hand, by a skilful selection of materials, 0 which the quantity, together with their nutritive and mechanical nature, is well suited to the object of cultivation; and on the other, by taking care that the
influence of the sun and atmosphere shall balance the power of absorption which plants, under given circumstances, may be able to exercise. For a detailed explunation of the mode employed to effect these objects we refer to the papers themselves. At a very early opportunity we shall offer some further observaquences the views of Mr. Wood, and the consequences that are likely to grow out of them. For
the present, it will be sufficient to state that they are perfect in theory, and unobjectionable in practice, in every instance where fine plants are more valued than the space they occupy.

There is an old opinion, founded on a want of discrimination with regard to the nature of soils, that much ploughing is detrimental to the land-some farmers call it "ploughing the heart out of it " while, on the other hand, it is the practice of many farmers to plough five or six times as a preparation for Wheat sowing. It is evident that both opinions cannot be ally adonted in yet there is seldom a maxim generreasonable foundation. The error is, that every farmer who has no guide but his own practice and that of his forefathers or predecessors in his farm, and who inquires no further than what has been found useful, or the reverse, is satisfied with a single experiment-if he make any at all. When you converse with a plain, good, industrious farmer, who has worked hard, paid his rent regularly, and brought up a family-than whom there is not a more respectable member of society-and you propose to him to do something
which you think an improvement on his practice-for which you think an improvement on his practice-for which there are no visible springs, to sow a quickgrowing crop on the land which he intends as a fal-low-he will probably answer to each proposal, "I was induced to plough a field much deeper than ever had been. I sowed it with Wheat after a good mucking-and what was the consequence? my Wheat was choked with Charlock and all sorts of weeds, although the land was as clean as a garden before seed-time. I had not half a crop of Wheat, and it cost me ever so much for several years to get my field clean again. No more deep ploughing on my land, I assure you. I plough my fallows and cross-plough them as often as I can, but take care not to break the pan which the sole of the plough has made." All this might be perfectly true: and yet this very land, once cleared of its weeds-the seeds of which may have lain buried for ages without losing their power of vegetation, when brought within reach of the external air and dews-might produce much better crops than it and dews-might produce much better crops than it course or rotation.
We tried the experiment of deep ploughing with exactly the same result as that of the above-quoted farmer ; but we did not come to the same conclusion we saw immediately that the deep ploughing should have preceded the fallow crop, and not the Wheat; but we made the best of a bad bargain : we had every plant of Charlock weeded out as it came up. This weeding cost 25 s. per acre; but instead of having a deficient crop of Wheat, we had much above an average of good clean Corn. As the land was well stirred, and partly sown with Tares, and partly with Swedish Turnips
and Mangold \(W\) urzel, in the next season, with a suffiand Mangold Wurzel, in the next season, with a suffiand this field is improved at least 25 per cent in value by an operation which in the mind of an unreflecting farmer would have been pronounced to be decidedly detrimental to the land, and not to be recommended as an example. Here we see the advantage of a little science and refiection; in trying experiments we should
never be disheartened, unless the result entirely contranever be disheartened, unless the result entirely contra-
dicts our expectations, and it is evident that we have dicts our expectations, and it is evident that we have
miscalculated the consequences. One deep ploughing preceded by a slight scarifying to destroy surface weeds, and followed by a deep stirring with a heavy implement-such as Biddle's or Lord Ducie's Scarifier, another cross-ploughing and harrowing, and picking out and burning the weeds, will generally prepare the land for manuring and final ploughing in good time to sow a cleansing crop-such as rooss which require Wheat, Barley, or Oats, according to the fertility of
the soil in which Clover or artificial grasses may be sown, to be followed by Wheat, unless Wheat was sown after the roots, in which case Beans may be substituted. This is the usual process on good mellow Wheat land which has been drained, if necessary. In the old method of ploughing, the furrow-slice was often turned over and over several times, without being pulverised or the roots of the weeds being disturbed. If a dry season followed, the clods dried through and through, the roots were killed, and it was called an excellent fallow; for the first heavy rain made the clods crumble, and the land looked free and mellow. But in a moist summer the land was never thoroughly cleansed; the harrows destroyed some annual weeds but docks and thistles remained in abundance, as might be seen in the next crop, which was usually Wheat. The introduction of scarifiers and deepstirring implements, such as the subsoil-plough, has caused a great revolution in the practice of husbandry. So many ploughings are not thought necessary on Wheat land ; and fallows, except as a preparation for roots the same year, are almost excluded, except occasionally on the stiffest wettest soils which have not been thoroughly drained.
Many young and amateur farmers who are zealous in introducing improvements in Agriculture, will be surprised to hear that there is nothing new in these improved practices. They have been detailed in books for half a century 'and more; and in the Agricultural reports of the counties in England, published under the sanction of the Board of Agriculture, in the beginning of this century, there is scarcely one in which the most improved practices of the present day are not described and recommended. Every one interested in Agriculture read them, but very few put them in practice. The old plodding farmer had no idea of altering his old ways. The landed proprietor recommended his bailiff to try the new plans something was attempted, but ignorance and prejudice and sometimes conceit were the cause of failures and losses. The zeal cooled, and the old methods were thought the safest after all. Intelligent farmers were precluded from adopting or even trying new methods, by absurd restrictions in their leases, sometimes forcing them to follow a disadvantageous rotation, and sometimes forbidding the cultivation of profitable crops, such as Potatoes, for fear of exbausting the land. As well might Wheat and Oats be prohibited, for they are both great exhausters. There is a new spirit arisen, which has been diffused and greatly promoted by the exertions of the Royal Agricultural Society of England. If this Society will only let the practical farmer know what methods have already differented to be right; what solls are suited to each theory and collecting well-planned experiments and their results, will show how they tend to increase our knowledge of Agriculture, it will do more good to the nation than the soldiers or diplomatists who by their sword or negotiations should have added whole provinces to the Queen's dominions.- \(M\).

\section*{OBSERVATIONS ON THE NEW SYSTEM OF \\ POTTING PLANTS \\ By Wm. Wood ; at Messrs. Henderson's Nursery.} No. III.
The principal difficulty in adopting the system now large proportions of soil in the process of potting ; a diff culty which at first sight may appear really insung; a diffi0 those who are but partially acquainted with the systematic modes employed by experienced cultivators.
The principle involved in the application of large proporfions of materials in the process of potting may be defined as or chemical All powers and qualities, whether mechanical bers; that is to say, each part or parcel of a mass is raised to a higher value or intensity, when it forms one of a heap, than when left to itself; and the more complete and immediate the correspondence of parts, one with another, the more will this enhancement be accelerated." This principle is not urged as being merely applicable to the practical operation in favour of which it is now adduced, but is also applicable to all other modes of culture, however modified in their nature. The law remains the same, although its effects may be varied by the conditions under which it operates.
As the processes of potting need not be restricted to the application of soils in the proportions mentioned in a previous paper, nor are of absolute importance to the to the precautions considered essential to success in cul tivation generally.
lst." A proper selection of soil is indispensable, in the first instance. It is probably to the facilities possessed by some cultivators more than others for obtaining a suitable material, that the heavy mode of shifting is due, rather than to any original combination or previous preparation. It has only recently been proved that some kinds of peat in general use are greatly deficient in texture and quality, greatly preponderates, in a pulverised state, is preferred.

The superiority of such a material is generaily to be tested by the absence of all extraneous matter; and not unfrequently it is found quite free from sand. Perhaps the most simple and efficient plan of improving the texture of soils, without the aid of additional material, is simply by separating the close or binding portion, as follows :-Place the compost in a sieve of two-eighths of an inch in the wire-work, which by being partially moved will permit the loose portion of the soil (as the least valuable) to pass through, and the remaining portion when modified (if requisite) by being entirely passed through a sieve of a medium size, will be more uniform in its texture, and favourable to an equable circulation of moisture. This process may be varied for any quality of soil, either for the purpose of attaining luxuriant growth, or for the first potting of young stock.
2d. Suitable proportions and arrangement of material in the process of potting are also essential to superior cuitivation, particularly when young and tender plants are transferred from small to large pots. A rule of propos fatal errors in potting are, first, in so placing the large potsherd (or other material) over the bottom hole of the pot, as to admit a very imperfect passage for the superfluous moisture; and secondly, a very partial intermediate drainage, or even its entire omission A portion of porous material placed immediately upon the lower drainge prevents the soil from filing ut the intertices of the age prevents potsherds beneath, and modifies the fluctuations of temtexture, moreover, prevents the soil above from remaining saturated in extreme cases of exposure. Next to the saturated in extreme cases of exposure. Next to the upon the quantity and arrangement of its parts.
3d. A due exposure to atmospheric and solar agency is indispensable to the successful co-operation of other influences employed in the process of cultivation. The distinct agencies upon the mutual action of which the successful management of plants depend are, first, those to which they are subjected in the process of potting, \&c., viz, the organic and chemical substances; and, secondly, those which act upon their external surfaces, as light, air, heat, \&c., each affecting to a certain extent the whole vegetable system. Atmospheric and solar influence should be so modified as to balance the power of absorption to which plants are exposed; in other words, the intensity of the former should, as a general rule, be in proportion to the amount of material used in the process of potting, regulated at the same time by conditions of growth, situation, \&c.

An error in first principles can be rectified by no fter-application of scientific rules." There is ample evidence to prove, that it is "the elementary conditions of an organised being, which favour the ultimate development of its parts.
It has been a subject of surprise to some, that the system whose merits have been advocated has not been practised at an earlier period than the present. Perhaps the talismanic influence of custom, and the "ten thousand" daily determinations to reduce the " majestic proportions of Nature" to the pigmy restrictions of art, are not the only obstacles which science has had to remof truth, have ductions of reason, and the investigation art is limited in long ago proved that every operation from the laws which Nature has proparibed for the same end; andin appealing No the result of superior cultivation, or the records of prat practice, it will be found that every instance prose pre to have invariably an aproximation towards an accumulative system of cultivation.
I have been asked what is the probable period for which pecimen plants of mature growth may be cultivated with acces. ment of the greatest constitational vigour, with a uniform development of bloom, it is conent the more the more will be the vital energies of the plant-a development of bloom being matured or ultimate function o vegetable life.
The renovation of such plants will depend upon the kilful appliance of those remedial operations which Nature points out
The first means employed is the early and entire removal of decayed blossoms; and secondly, a removal (by pruning) of those portions of the plant which are partially exhausted by the production of bloom, at least so far a the proportions of the plant will permit. By thus limiting its circulation, the energies of a plant will again be excited by the accumulation of its sap, which, alded by a partial cessation of watering, and a closer and higher temperature, by a few degrees, will serve to unfold its power in the development of buds.
Two instances occur in the Pine-apple-Place establish ment, which serve to show that even renewed shifts to other pots is not necessary in all cases of plants in large (formerly Kirst is illustrated by the plant Zichya coccinea part of this Paper. The specimen was grown in a large 16 pot, and bloomed profusely in the summer of 1842 . Its consequent exhaustion appeared to preclude the pos sibility of the piant being again excited into renewed plant remained mpotted, and again so far recovered its vigourias afterwards to be purchased for a Continental exhibition in the ensuing season.

In a second instance, a plant of Gloxinia rubra was transferred in the spring of 1842 to a large 16 pot, the manure and peat The same penson it formed a luxurian
specimen, extending two feet in diameter. After blooming, the plant remained dormant in the same pos; and in
 and pot, having been in a dry state nearly five months, At previous season, extending three feet in diameter and Sine fet in circunference
Such are a few of the features that characterise the best mode of cultivation yet known ; and, whatever may b the merit of other systems, in which, by a skilful appli cation of artificial raeans, mature growth may be attaine by successive efforts, it may be confidently affirmed that the noblest specimens have been obtained by an application of the principles adverted to in the foregoing statements. In conclusion, the merits of each system are of peculia value. The restrictive mode of cultivation is perfect in it application to the objects of commerce. The accumula tive systern is an approximation to that state of things in Nature, which, as the manifestation of Creative power, is perfect in its parts and in its design.

\section*{WHEAT SPLITTIING.}

Tye leading article of the Gardeners' Chronicle, Sept. 23, contains a letter, signed " Archdale Palmer, on the produce of a single grain of Wheat; the return from this single grain was 22,000 : this beats the forty-fold Potatoes all to nothing, and may place in farming, provided it can be made use of at moderate expense. I have been requested by a gentleman interested in such matters, to make some calculations to the probable cost of planting an acre upon this priaciple. I am no farmer myself, therefore my calculations will apply only to manual labour and expense. But as this experiment is in print, there is no difficulty in examining what the resul was
Mr. Palmer sowed a single grain of Wheat in July, 842 ; the day is not mentioned, and the most important points for a farmer to know are left out. In August the first produce of this grain made four piants, three weeks fter; they were again separated, and made 12 plants: eparated again in September into 32 plants ; in November hese were separated into 48 plants, and planted out in the open ground; the letter does not 5 sy whether in a garden or in a field, but that they occupied 11 yards long by 1 yard wide, being the 440 th part of an acre, consequently 440 seeds were sufficient to plant an acre. In August, 1843, 10 of the 48 plants died, but the remaining 38 lants produced 22,000 grains, which weighed \(2 \frac{1}{4} \mathrm{lbs}\).
The farmer holds his land by the acre, and the average roduced from a good field of Wheat is about 30 bushels beyond what the farmer gets upon the old system, \(2 \frac{1}{3}\) lbs. to every grain sown, that is, to 440 grains for an acre 18 bushels and 12 pound the birds, making 24 bushels; add also one-fifth for dead plants, which makes 29 bushels and 12 pounds to the acre: the farmer has saved \(1 \frac{1}{2}\) bushel by the experiment, pro But I think this experiment is well worth a farm But. it may be ceaty improved upon by a pratical rial; it may be greatly improved upon by a practical man arter the for advanageous to poor people who have children going idle. A poor man having one acre of heat engear, his wise and children wous pero bushels and a haif would ime they were doing it
I am aware that my scale of expense will startle the armer in the first instance, because I shall be liberal in iving him plenty of time to perform the work in ; another thing, he must observe that it is made for able-bodied
labourers at \(2 s\) o per day. The idea of using pots of any labourers at 28 . per day. The idea of using pot
size I discard at once, without a single remark.
The first thing the farmer has to do is to provide a suitable piece of ground for a nursery for his plants-the nearer the field where he is to plant them out for good the better ; the space required ought to be about 40 feet by 30 feet, divided in four feet beds, for the convenience of getting at the plants with ease from each side; the ground ought to be well manured and well dug
I would not wish to confine the farmer to the exact number of seeds, but let him sow the ounce at once, as there will be failures of course.
The expense, according to my view, is this :-

\section*{Sowing one ounce of seed}

Parting and plantirs the first produce into 1760 plant Parting and planting 1760 plants into 5260
Parting and planting 5280 , into 10,560 phe
Parting and planting out into the field 10,560 plants
into 21,120

This calculation shows a loss of \(38.8 d\). beyond what farmer has under the present system.
But there is something else wanted: how is he to guide his planters to plant at 18 inches apart? to remedy this want he can make a light wooden harrow, with the bars et at the distance required, with a little rollo or iron inches in diameter in front, and a wooden tooth or iron in each bar at the other end, this is too expensive for the workmen to
such a purpose.
Now if the farmer finds that it is beneficial to follow the plan now sketched out for him, I will put him on a cheaper method to perform the operation, if done on a large scale, that is, to do it with boys from 12 to 14 years of age, who

This machine may be drawn by a small pony; this harrow loses one mark in every turn aft
off tooth in the last mark.
would be glad to be employed at any price; but the wages mean to put down for them are \(3 s\).
If done by boys at \(3 s\). per week :-

\section*{Sowing one ounce of seed}

Sowing one ounce of seed
planting and parting the produce, one day iv6 plants
Planting and parting 17 fo plants into 5280 , two days
Planting and parting 520 plants into 10,560, four days
Plantigg and parting 10.5600 plantsinto 21,120 , and plant-
ing them out in the field for good
ing them out in the field for good

This scale is given upon the supposition that the farmer might be inclined to plant four or five acres, or any num ber he likes; and an old experienced labourer should b put as a head to keep them in order
Some of your farming contributors may-doubt my scale fo boys if put in print; but if I was their master, they would do double the work put down for them. About the month of was brought up as a gardener at Lord A berdeen's, Haddo House, and was some time in the nurseries at Aberdeen came up and got employment in B.'s nursery at R.; this wages high. Mr. B. came by one day and said, "How do they plant seedlings in your nurseries?" "They dib them, sir"" said John. "And what do they give?" give you five-pence a thousand; I have a great man to plant, and you may begin as soon as you like." John could plant 10,000 Larches in a day himself; but he thought of another scheme. He saw a lot of boys at play in a field at- ; he went out and stood looking at them for some time to see who was the nimblest among them; he pitched upon six, and told them he would give them \(3 s\). per week if they would come and work for him. They came, and in three or four hours he taught them to plant, and at the end of the week they were perfect masters of their work. John brought in a bill to B. on the Saturday night of five or six pounds. Mr. B. in astonishment declared he could not plant the number in that time. "If you do not believe me," said John, "you may count thena." B. examined the ground, and paid him, but said he never was so caught before in any transaction he ever had to do with. John worked with me for a twelvemonth, and he used to boast that he saved more money in B.'s zursery in a week than all the young men employed did in two years. Now these were Cockney boys, and I see no reaso
Dingwell.
In connexion with this subject we subjoin four statements from practical workmen, who all agree that pots are an unnecessary expense.
No.I- - Experiment on \(\frac{1}{40}\) of an acre. Extended ratio for 1 acr July, 1 Grain sown, multiplied by 440 : 440 graitas sown. Aug. e,
Sept.,
Nov.,

\section*{Hours 13049 m .
Nearly 13 days 1 hour-or \(13 \frac{1}{2}\) days may be allowed. boys, \(0 \frac{1}{2}\) days may be reckoned for women and
plants, at 18 年 plants, at 18 , per day
Men, 9 days at 28 , yer day}

It would appear from this estimate that \(18 s, 6 d\). , the saving in seed, is short of the expense incurred to the extent of 4 s . ; whilst the expense of superintending the labour would be greater than is required for sowing. It also appears that in Mr. Archdale Palmer's small, and doubtless carefully"conducted experiment, 10 plants out of the 48 died; this is a large proportion, leaving more than \(\frac{3}{8}\) of the ground blank, whilst the return of produce does not warrant the supposition that the remainde 20 would make up for such deficiency; \(2 \frac{1}{3}\) los is destroyed by birds, still the amount would not equal an average crop.
The expense of labour more than balances the value of seed saved; and
The produce is deficient more than the quantity required to sow an acre in the usual way, labour is at the rate of 2d, per hour for a far man'slabour by the day. It is also supposed that the ground is prepared, ready for sowing, \&c.
To plant an acre of Wheat, the plants to stand one foot

division of 3 times, or 8172 plants, and planted at six
inches apart-labour for planting
Taking up and dividing the same
The same again taken up and diveded, about the begining plants, which are to be planted one foot and a half apart-labour for planting
Total for planting an acre of Wheat at 1 ft .6 in . apart \(\mathbb{L}_{1}\)
No. IV,-In my opinion the only way of executing this plan is to dibble in the seed, 2 grains in a hole, about 4 inches from each other, the plants to be taken up when they many on an average at that time as could skilfully be made and then planted out at once, where they are to remain thus getting rid of all the intermediate dividings. The number of grains of Wheat required for one rood would be 42,240 , which would not exceed one pint at farthest as I have ascertained by actually counting that quantity; and consequently, a pint of Wheat will plant 21,120 holes.
If each bole thus gives five plants on an average, which may be reasonably expected, there would be at the disto plant five acres, at \(17 \frac{1}{2}\) inches apart.
If farmers were at \(1 \frac{1}{2}\) inches apart
little doubt but it would soon gain Seed for the it would soon gain ground in the country about \(4 b_{\text {. }} 12 \mathrm{~s} .6 \mathrm{~s}_{0}\); whereas, one pint of Wheat would only cost about one penny. The plants may be taken up separated, and planted again by 50 people in one day :each to plant 4,221 per day, and this might be wholly done each to plant 4,221 per day, and this might be wholly done
by boys and girls at (i,d. per day; consequently, the farmer's saving, excluaive of the original coot of dibbling
the rood, would be \(3 l .7 s\) s. \(5 d\), per every five ocres,

\section*{FAMILIAR BOTANY.-No. XVII.}

The Water Flannele--A friend put into my hand the other day a yard or two of what seemed a coarse kind of flannel, gray on one side, greenish on the other, and a
full quarter of an inch thick. It had been thrown up by the river Trent, and washed ashore in vast sheets. Those who had seen it pronounced it a manufactured article, and so it was, but by the hand of Nature. It brought to mind a similar production, of which some acres had When it was said that clothing had three years since, by the country people, who took it for a sort of cotton wadding, fallen from heaven.
Whes this substance is haudled it is harsh to the touch, although composed of finest threads. To the naked eye it presents no character by whioh it may be known from any coarse and loosely woven cloth. The microscope reveals its xature. It is then found to consist of myriads of jointed and vertically; they are here and there transparenter side and vertically; they are here and there transparent, but
for the most part opaque, and rough to the eye. The white side is more opaque, than the other, and more unexaminable; but if a little mouriatic acid be added to the aminable; but if a little muriatic acid be added to the water in which the fragments of Water Flannel float,
copious bubbles of air appear, which are much increased in quantity by the application of the heat of a spiritlamp. By degrees they disappear. They were bubbles of carbonic acid, extricated by the action of the muriatic
acid on a coating of carbonate of lime, with plant is more or less completely invested. If, after this plant is more or less completely invested. If, after this
operation, the threads are again examined, the contents of the joints become visible; in the green parts of the Tlanniel they are filled with an irregular mass of green matter, in the white part with myriads of globales, intermixed with a shapeless substance. The globules are the
seeds. If a little iodine is then given to the flannel, it is readily absorbed, and the contents, shapeless matter, globules, and all, become deep violet, showing that all this substance is starch.
Hence it appears that the Water Flannel is a micro. scopical plant, composed of jointed threads, secreting carcomposed of starch within them. And when we sensids that the joints are smaller than the eye can detect, while each contains from 50 to 100 seeds, it may easily be conceived with what rapidity such o plant if multiplied.

Besides which, ss their contents consist to a great extent of starch, the most readily organizable of all vegetable materials, the means of growth with which the plant is provided are far more ample than anything we
in the higher orders of the Vegetable kingdom.

This curious substance has of late years attracted the attention of people in various parts of England, and the inquiries that have been made of naturalists have been so incorrectly answered, that it is full time to put an end to Agricultares about it, in the year 1840, the Royal Libraltural Society submitted specimens of it to the late the Royal Dublin Society Mr. Don declared it to be the Oscillatoria corium-one of the half-animal, half-vegetable productions which form entangled layers in the bottom of streams in the colder parts of England. But it is difficult to conceive what could have given rise to this statement ; for the Water Flannel has no one of the peculiarities of Oscillatoria corium, which, moreover, is glossy and slimy. Mr. Hardyman reported it to be a water-plant called Con-
ferva sordida, or, as he called it (Hibernicè), a kind of fresh-water sea-weed; and he was nearly, though not quite, right; for it is a true Conferva. C. sordida, howrendered impossible in this plant by the carbonate of lime that clothes it. Another authority assured the Linnean Society that the Water Flannel is the Conferva fluviatilis of Linnæus, a more extraordinary error than that of Mr. Don. I happen to know that, in two of these cases, them, for portions of it were placed in my hands at the same time; and there is little reason to doubt that the specimens laid before the Linnean Society were the same.
The Water Flannel is really the Conferva crispa of Dillwyn, or the C. capillaris of Linnæus, known for years for the singular property it has of forming beds of rough, entangled, curling threads.
And for what purposes, we may ask, is this small plant intended? Is it for food for man or animals, or for decorating the waters in which it grows, or for adding to wealth or comfort in any way? It is hard to answex
selfish questions of this sort. That it has its use we may selfish questions of this sort. That it has its use we may
rest assured ; but whether for us or our fellow-creatures it rest assured; but whether for us or our fellow-creatures it
is scarcely within my province to determine. I may, however, suggest, that it, like all such agents, is probably one of the great means of moving the hidden springs of the
natural world.--It swarms in waters, where it floats and grows with inconceivable rapidity. What does it grow on unless the decaying matter in which all water abounds, and which tends to pollute it? It is therefore a purifier of the streams.-- It is cast by the waters on the mea-
dows, and carries with every 1000 lbs. weight of it, 400 lbs dows, and carries with every 1000 lbs . weight of it, 400 lbs with at least 15 lbs of the air called nitrogen. These ara manures which the Water-Flannel rescues from the flood
to incresse the ticour und abundauce of the land. it increase the rigour and abundaryee of the land.- But
it
ine amidst its trackless fields and feed upon its produce Surely these are uses enough without a lacekDied appeal the admiration of what are called inquiring minds.
But it may be that nature intends such plants for higher purposes. One quarter of its weight consists of starch and azotised substance; that is to say, of the nutritious matter that gives bread its value. Why, then, might
not the Water-Flannel be converted into food in times scarcity ? ater-Fanael be converted into food in times of of barl and straw which has been sometimes used. \(-R\). \(E\).

TO OBTAIN FLOWERING PLANTS OF SALVIA
SPLENDENS IN THE MONTHS OF MARCH SPLENDENS
AND APRIL
\(\mathrm{THE}_{\mathrm{HE}}\) small lateral shoots from large specimens of in different vigour, and which were pretiously bloomed the of October, and struck in store pots of 12 each, with in span-roofed box, resting within two inches of a hot flue, potting off, pots of small and large 48 size were prepared by placing an inverted thumb-pot over the cavity of each as drainage (or circulating medium,) and around each decomposed adere ap to its level, portions of halfstate, pressed close.
A struck cutting from"the store pot was then inserted in each, and in many instances a flake of the dried manure was placed immediately over the cavity of the small in portion of roots, \&c. generally rested.
The compost used was two parts of yellow loam with third portion of the same dried manure reduced through a sieve of two-eighths of an inch wide in the wire-a small quantily of slaced when roofed box or frame in which they were struck, from whence, when fully established, they were removed for short period apon the pie or drcnidaceous-house ; and from this posith of a span-roofed stove, which was also employed in the spring as a Forcing-house. This structure was heated by an ordinary tue running round the bouse, which being in an exposed situation, required a high temperature during winter, and consequenty the atmosphere was dry. The plante were placea apos an elevated shelf against the over the flue, which was covered with sphagnum and surfaced with sand in order to counteract the intense hea by copious watering.
was applied to larger potted cuttings, the same proces
viously bloomed in an indifferent state of growth. The lion, in order back a short time previous to the operalaten, in order to accumulate their sap as far as their lateral growth permitted. The only difference observed with the shifted plants was, a great reduction of the soil which they had been previously grown, and the inverted portionate in size to the large twentyofours or sixteens to portionate in size to the large twentyofours or sixteens to which the plants were removed; the quantity of dried manure employed was also in proportion. The larger specimens, including the whole of the shifted plants, were excited to growth by being placed upon a bed of tan previous to their final removal to the stove. Being, as before stated, exposed to a high temaperature and ungenial atmosphere, humidity was maintained by frequent syringings, \&c. at appropriate hours.
The above
mode of potting was adopted apart from effect. In the instance of the potted cuttings nothing short of a failure was anticipated, from the extremely rapid circulation which was expected to follow; and on this account the plants excited little interest until their aniform and exaberant growth proved, satisfactorily, that the proportions, arrangement, and ouglity of the materials used in the process of potting, had answered the great end always sought for in high cultivation-namely, an uniform circulation of moisture.
The appearance of the plants during the progress of their growth, eapecially of the cuttings in 48 sized pots, up to the season of bloom, was luxuriant and uniform in the highest degree, indicating the vigour of seedlings rather than of cuttings, and even led to an inquiry Whether they were not some new species! During appearance, with they presented a very interesting appearance, scarlet, mingling at that beason with other gay produc-
tions of the forcing-house, but surpassing them all for elegance and beaut
I conceive that the principles involved in the foregoing instance of successful cultivation, with portions of plants previously exhausted by blossoming, afford conclusive avidence in favour of opinions advanced elsewhere, namely, that-
1st-The vigour of plants is in proportion to the excitability of their organs.
2nd-A progressive and accumulative system of cultivare is alone capable of obtaining the greatest possible flects, from any proportionate amount of agency to which plants are exposed
3d-The greatest possible effects in cultivation do not in any case depend upon the presence or absence of any single element of support, nor upon any given amount of material or agency, but in the judicious combination of all the materials or agencies which are essential.
five -An adaptation of those agencies to the progrespossible effects of cultivation are to be obtained.
5th-The subserviency of the highest given amount of material to the legitimate object of cultivation will be the nearest test of an ultimate effect.
6th-The best result produced by an inferior amount of material is obly an approximate effect,
7th-The greatest extent of beatchy development in the organs of plants is equal to an ultimate effect in growth. 8th-The subserviency of the greatest extent of growth to an uniform development of flower-buds is equal to an ultimate effect in bloom, which is the highest object of cultivation.

\section*{ENTOMOLOGY.-No. XLIX.}

Aspidiotus conchiformis (The Apple-tree Mussel Scale, or Dry Scale).-Upon the trunks and branches of Apple and Pear-trees there are found two species of Scaleinsects, the former of which we will now describe and figure. They are so small, and partake so completely of the ubstance, colour, and character of the bark, that an unpractised eye would not suspect they were the producfion and habitation of an insect, and I believe that some allied species attached to the Ash and other trees have The mistaken, even by philosophers, for Lichens, \&c. trees are so similar to Mussel-shells, bat Geoffroy called them "Le Kermes en ecaille de moule," but instead of ivirg then an appropriate scientific name, he designated , Gmelin has in under measure supplied the deficiency, by describing them appli the name of Coccus conchiformis ; but if he had have been mor sinich one direction, as others generally do, with their heads downward, for some of the Apple-tree Scales are placed vertically, others obliquely, and many have a transverse direction (fig. 1), and sometimes they are crowded together in immense multitudes in every possible position even ying one over another. The scales are hard, dark, and shining ; they are exceedingly like a minute Mussel-shell, but rather more elongated ; they are slightly curved ransversely wrinkled, rounded at the tail, and attenuated at the head, which is semi-cylindric, less opaque, and of a rusty colour (fig. 2). These adhere firmly to the bark, and 5 the margins broad beneath and woolly (fig. 3), hite Within the shell space they had covered appears occupying part of the cavity towards the mity (fig. 4), the hinder space being entirely filled with white oval eggs, amounting sometimes to 50 or more (fig 5 ); they are rather larger than in most species I think, and produce little white flat Cocci, with two antennse and six egs: theyara lively and run about for several days, but having. fixedfim maselves then grow, and by degrees become
very different creatures to what they were immediately fter their birth
On opening the Scale and taking out the female, I found that she was not attached to the shield, and that consequently this Mussel-scale is not a true Coccus, but an orbicular, very convex, shining, with distinct transverse strix, indicating the abdominal segment ; a pale brown line was visible down the back, from the alimentary canal, shining through the thin and transparent skin (fig. 6). I
looked in vain for a rostrum in the only female I could looked in vain for a rostrum in the only female I could find alive, and I was equally unable to detect any legs or
eyes; indeed, it seems very doubtful whether the latter are possessed by any of the female Coccidæ in their adult state, although they are very distinct, but very minute when they are first hatched.
"A contributor to the "Gardeners" Magazine" says, than half the size of a seed of common Flax, abounds in the North of Cambridgeshire, on the branchlets of old Apple-trees, and in unlading the trees in autumn of their rind one or more of these scales firmply adhere, and where it must have become fixed before the Apple's growth was finished ; as when the scale is removed, a slight depression in the rind of the Apple is perceptible." The same scale, it is said, is very prevalent in Cheshire on the Pear-
trees, where it is considered to be injurious to the fruit as by clinging to the rind it prevents the fruit from swelling to its full size. It is asserted that Peaches, Apricots, Plums, \&cc., suffer from the attacks of the Mussel-scale, and if young Ribston-pippins, and some varieties of Pears be planted near any other Apple or Pear-tree that already supports these insects, they will speedily migrate to them. The same observer says, "I believe this disease is mostly, if not entirely, confined to wall-fruit in the open air, stand-
ards not affording them sufficient warmth and shelter during our winters especially in Scotland, where they have during our winters especially in Scotland, where they have
been very abundant and very troublesome. They attach been very abundant and very troublesome. They attach
themselves to the bark, and by means of their rostrum they soon eshaust a branch so completely of its sap, that they soon eshaust a branch so completely of its sap, that
it withers and dies." Mr. Ingpen recommends "two or it withers and dies. Mr. Ingpen recommends three applications in the spring, at intervals of one or two
weeks, of strong lime-water with a brush, and a dusting of weeks, of strong lime-water with a brush, and a dusting of quicklime before the branches get dry; or a washing of
soft soap and water, using also the powdered lime," which soft soap and water, using also the pow
is perfectly harmless to vegetable life.

Although it is generally trained trees that are most attacked by the Mussel-scales, I have seen standards so covered with them, that they were completely hide-bound it might be said, so that it was impossible for the trees to increase in size. I doubt not that the best plan for get-
ting rid of these Scales is to scrape the hark with a wooden knife, so as to bruise and crush the females without lacerating the tree, and immediately after to wash over the truak and branches with some gas-tar. If any other it will be in May, when the young ones are creeping from under the scales, and are easily destroyed; but they are so minute that it will be necessary to use a magnifyingglass to ascertain when they are hatched and in motion.Ruricola.

\section*{AMATEUR'S GARDEN.-No. XLII.}

Ther frosts have at length settled the flowers for the season, and the falling leaves warn us that winter is at began, they will now require but little attention except to give them plenty of air and keep them as hardy as possible. Some of the most forward of the Cinerarias which are how some of the earliest potted young plants of Calceolarias and Pelargoniums would be the better for a little more potroom. From this time to the other side of Christmas you can scarcely keep your Pelargoniums too dry, so long as they do not trag, and young plants of kinds that do not The buds of the earliest Chrysanthemums are now swelling fast, and where they promise to bloom freely it will be ing fast, and where they promise to bloom freely it will be delay. The plants must be well supplied with moisture, and if a little weak liquid manure is given to them occasionally it will be of service--however, let it be weak, for it is wrong to give plants strong manure or gross food at a juices pron there is not sumcient light to elaborate the juices properly. Plants in frames cannot have too much air or be kept too cold, so long as they are not frosted;
but above all things keep them free from rain and from but above all things keep
becoming wet in any way.

In the flower-garden the principal work will be to get the beds cleared of the old plants, and prepared ready for planting with Tulips, Hyacinths, Ranunculuses, \&c., \&c. In clearing the old plants away, roots of Salvia patens, Lobelias, Dahlias, and the like, may be stowed in a dry
shed or cellar, and covered with dry tan, ashes, or leafshed or cellar, and covered with dry tan, ashes, or leat-
mould, until the spring. It is not advisable to keep Bulbs
of Tigridias dry through the winter, as they seldom get sufficiently ripened in this country, and to dry a bulb
that is not fully ripe is certainly iojurious to it. For that is not fully ripe is certainly injurious to it. For
some years \(I\) have made it a rule to place these bulbs under the greenhouse stage, and I have invariably succeeded in keeping them better than when I used to dry
them off. Where there is convenience and a little heat - if them off. Where there is convenience and a little heat-if
bottom-heat all the better-it is a good plan to pot a bottom-heat all the better-it is a good plan to pot a
quantity of the best scarlet and variegated Pelargoniums, quantity of the best scarlet and variegated Pelargoniums,
and shorten in the branches to where they are pretty well ripened. These, if forced for a few weeks, to make them form young shoots an inch long, and then hardened off in the greenhouse until spring, will make beautiful dwarf bushy plants for bedding out, and will bloom more profusely than young luxuriant plants. In the Chronicle of last year, Mr. Gordon recommended Pelargoniums and
such like strong-growing plants to be preserved through the winter in large boxes in layers of dry peat, and then to place the boxes in some dry room or cellar; and doubtless this is an excellent plan for a great number of things. The plants may be taken out of the boxes, and potted towards the end of March, and will make pretty plants for planting ont in May.
Trenching and all kinds of new ground work must be proceeded with as fast as possible, so as to get all alteraBrooklands.
LIST OF FLOWERING PLANTS FOR FORCING. As the readers of the Chronicle have shown much interest of late in Flower-forcing, I beg to submit a list, with a few hasty remarks thereon, which may serve to refresh the memory of those who are preparing for a winter campaign of this kind ; and, in the first place, the subject naturally divides itself into three heads: vize, 1st, autumn flowers; 3d, early forcing. This subject is yet in its infancy, if we consider the eligibility of many plants, which have either been introduced, or brought into public notice afresh, within the last few years. Mr. Beaton has, I perceive, fairly caught the mania, and has done much towards drawing attention to the subject; I hope he will continue his labours on this head, as he is both able, and has the opportunity, to advance the branch of gardening. I will now submit my enumeration of kinds as they occur to me , and I hope that critics, instead of railing at me, will employ their time in adding to or correcting the lists, as, under present circumstances, it is evident that proves interesting to the readers of the Chronicle, I shall be induced, as the long winter nights come on, to continue observations of a practical nature on the various subjects contained therein, as far as my experience has reached.

 25 Bletias, FN
Abbreviations used:- F , forced flowers; R ,
autuman flowers; \(N\), natural season of flowering

Most or all of the above list possess capabilities for blooming through winter or the dull season-say from the beginning of November to the end of March, after which flowers are easily obtained. For many of them a cool pit and hence the small amateur may indulge in fower-forcing as well as his more wealthy neighbour. For the generatity of plants in this list, however, something more complete is wanted, and one grand desideratum is, to secuplete manent bottom-heat of \(80^{\circ}\) to \(85^{\circ}\). The next grand point is abundance of light-at least a roof capable of receiving all that the season affords; and these, with a perfect command of atmosphere and moisture, constitute the three great requisites. However, much may be done during summer previous to the forcing of any given tribe; and country saying, viz., "Early to bed, early to rise." If thorough justice could be done to the subject, I am perslightly in the previous spring; in fact, take the old sightly in the previous spring; in fact, take the old
Provens and Moss Rose for instance: if these must be obtained by Christmas, they ought to be accelerated as early in the previous spring as the beginning of March, in some comfortable pit, with, if possible, a small amount of bottom-heat. These plants, with proper management, ought to be turning yellow in the leaf by the early part of September, and by the end of that month should be removed to the coldest situation the garden affords; in fact, behind some north wall, to gather the principle of excita
bility. \(-\boldsymbol{R}\), Errington.

\section*{HOME CORRESPONDENCE.}

Planting.-I read in the Chronicle of the 16th and of the 30 th September letters on the subject of Planting. In Vicar's Crer was one article, signed "W. H. Humphreys, was headed "Planting," the last was signed "Quercur," The sentiments conveyed in the one signed "Quer." are so much at variance with those of the two others that I beg to call attention to their contents. But it is necessary first to observe, that what I say on the subject of Plantations are not to be considered as objects of individual but of national importance; for the planter, in 19 cases out of 20 , does not benefit by his plantations in the way of profit, although he may rejoice in his work because he feels that he is doing good to his country and to those that come after him. This, I think, is true patriot ism : Now if this is so, I cannot concur in the opivion arcus," nor dn I think it of equal value with that or Mr. Humphreys, who, writing from a Nursery, is intehis side syows, by his signture, his readipst by his statements-nay more, he recommends the system which he finds profitable, after having practised it for a The other years on a large plantation of 450 acres The other letter, headed "Planting," is in strict accordance with Mr. Humphreys report; and he heartily re-
joices in that which he personally visited and examined. Now it is necessary that "Quercus" should bring forward some testimony to support his wo shilar to that Mr. Humphreys and "R. S. L. have done, and point out some plantations formed of the same extent, or at least of similar age, where investigation might be made 30 that those who may be disposed to plant might decide what method to adopt. The plantations of Dr. Thackeray are specined as evidence of the system approved of by Mr. Humphreys, after examination, and by the planter "R.S.L.") on the same conviction, viz., ocular demon stration. Nerquis (the scene of these plantations) is, believe, not 15 miles from Chester, and therefore can easily be visited. Now, let "Quercus" point out planta tions of the same age and extent in any district and a the same elevation, 800 feet above the level of the sea so that gentlemen desirous to serve their country and which it by plantations may visit each, and then decide I find course they ought to follow. I shall be gratined if mard even a single individual has been led by these re matter to make personal investigation into so important a matcer, in order that he may decide whether he should prune, as Dr. Thackeray has done, or only occasionally, as recommended by "Quercus." I think that Dr. ing the mo, in employing his means so largely in orna on his country, and setting an example well worthy imitation.Pro bono Publico.
Large Egg.-Mr. J. Cook, of Garstang, has a duck of the common species that produced an egg on Monday quarter. - Facile
Heating. - Wanting to get a great quantity of damp or dry heat, as the case may be, I have built a vertical tank or an intended warm wall round a small forcing-house, and while it is drying I should feel greatly obliged by a word of information and advice from any of your corre spondents as to the best plan to be adopted should my own scheme fail in operation. After various inquiries as to the merits and demerits of all manner of cements and from fear of any insecure plastered affair, I determined from my aggregate of information to adopt the following plan, executed by the best workmen and with the bes materials. I used a kind of soapynworking stome-moortar made from what in Norfolk we call Heydon Lime-they say that this lime will set under water; it is used in all water-works, and its qualities are much talked of. On a capital foundation laid in this mortar I had 12.inch pavements, (having been thoroughly soaked in water;) 12-inch backlof thesearelaid hard white bricks on edge, (also perfectly saturated with water,) with a half-inch cavity between the pavements and brick-work, which is filled with grouting All this was very carefully and slowly done with the afore said mortar; and which, supported all ways, I expect will form a perfectly solid mass to contain the water. My boiler allows me 18 or 20 inches in depth, which, by 5 inches in width, gives me a great body of water for heating. The question I want to ask is, whether you think thes plan will stand moderately hot, for it will not be boilthe, water? If not, what would you recommend to make the sides impervious to hot water? Will the water form the hot water asting stop the pores? Do you tbink to it? Is there any chemical solution that would saturate and harden so as to stop leakage should it occur? Would you paint the joints with any particular cement? I at first thought of your recommendation of Francis and Co. No. 2 cement, oiled and turpentined, but all the practical men say that this kiud of casing will not atand satisfactorily, or near so well as my plan will do. There is Rock Park Cement-and II thought of some kind of grease Naph with the lime, \&c. \&c., or perhaps, as 1 have I have my dubts for any such ar placceed, or should I ado suggestion, fhall be olad to propagate through 1 adopt any other, I shall be grad information I can give your Chronicle any particulars or informationce" Mr. W. respecting it. In your nions " heating by earthen pipes:" Hurst what material they are jointed, or how the joints are put
together, as this is a most important point of inquiry in so
good and cheap a plan.- W.B.H. [As these points interest a great cheap a plan - W.B.F. As these points interest We refer them to the kind assistance of our correspondents. We can only say that, as far as our experience at present goes, good cement, without sand, quickly and skilfully water apparatus. With the heat communicated by a hot about to be employed in the garden of the Horticultural Society, jointed with cement, by way of experiment. The pipes there employed are two feet long, of the red earth from which common chimney-pots are made, and formed fitted together, the edge of one rests upon the shoulder o the other. We cannot conceive that such an apparatus What B. H. has constructed can fail of holding be made damp or dry at pleasure; the walls will probably be always damp enough to affect the air of the house, though they will not leak.]

Clover Dodder. - In your last Number, Professor Henslow bas pointed out a character in the flowers of the species of Cuscuta which be supposes to have been hitherto Henslow and your readers to Mr. Babington's Paper on Henslow and your readers to Mr. Babington's Paper on
the Structure of "Cuscuta europaz," in Vol. XVIII. of the "Linnæean Transactions" \({ }^{\text {the }}\) in which the chaof the "Linnsean Transactions, in which the chafully described, and figures of the corona in the various fully described, and figures of the corona in the various species of Cuscuta are given. These figures, avd the
descriptions of the species, were copied into the "Phytodescriptions of the species, were copied into the "Phyto-
logist" for July, 1842 . It is also to Mr . Babington, in conjunction with Mr. G. S. Gibson, of Saffron Walden, that we are indebted for the past notice of the Clover
Dodder, which Mr. Babington described and named in the February Number of the "Phytologist" of the present year.-E. Lankester.

Speculative Manures.-It has struck me that prussiate I potash ought to be a very powerful manure-of course I do not suppose that so expensive an article could be used except in flower cultivation, but I think it worth trying in that; it bas all the elements which, according to Liebig, are many plants, particularly bulbs, which are very difficult to manure in any way, and I think it probable that by may find the of these organico-chemical compounds, we the risk of killing them, which there certainly is from applying manure. Did you ever hear of watering Orchidaceous Epiphytes with soap and water? I have experienced g
New Food for Sheep.-Whilst I was at Geneva in the autumn of 1837, I observed every one collecting carefully the fruit of the Horse-chesnut, and on inquiry I learnt that the butchers and holders of grazing-stock bought it readily at a certain price per bushel. I inquired of my butcher, who himself kept a very extensive grazing-farm, and he told me it was given to those sheep in partioular that were fattening. Ihe Horse-chesnuts were well Apples are, previous to cider being made. They are crushed or cut up in a machine kept solely, in Switzerland, for that purpose; then about two pounds' weight is given to each sheep morning and evening. Sheep eat it greedily ; it must be portioned out to them, as too much would disagree with them, it being of a very heating rich flavour to the meat. The Geneva mutton is noted for being as highly flavoured as any in England or Wales. \(-F\). D., Elysée.

The Coreless Pear.-I send a sample of Pears, pretty Corgely grown in the lower part of Kent, and known as the that name. It is a good bearer, generally, but the fruit is extremely liable to be shaken down by the wind. The merit of the Pear consists in its being the best baking Pear slightly-vendom: baked in a slack oven till soft, or till In this country, where baked Apples are sometimes the In this country, where buked Apples are sometimes the Enly out-of-doors ripe fruit, it descrves to be known.Este. [The Coreless Pear which we have cultivated under quently destitute of seeds, but always colourtains the is freTuently destitute of seeds, but always contains the cells. The flesh is apt to decay at the core: or, if this does not take place, as it softens it becomes mealy-at least this
Was found to be the case in 1836 . The specimens received are yet hard, and may be different. They certainly bake well in the manner described.]
Something Remarkable.-A short time ago a person Was cutting down an Ash-tree in the neighbourhood of Rutland, and having observed an excrescence on the trunk, proceeded to cut it off with an axe, when he was surprised to find a quantity of moss in the centre, which had every appearance of having been the nest of a wren. On taking out the moss from the hollow of the tree, a seemed very lively at the first, but in a few minutes became sickly and powerless, but did not die. The tree was growing, and on from the ground when the appeared to be twenty years' growth round the hollow part,-Facile.
Melon Seeds.-It is a common test of the excellence of minutes in To what degree may this teat be relied on? I will confine myself to Melon-seeds. A few years ago I had some of these sent me from Egypt, they all floated when tested as above, and yet I found not one in tea bad on actual exper
rience. A few days since I thus tried some seeds fresh from the fruit; they almost all sunk; I threw away those some more untried seed with these, I subjected the whole all (with the excention of some half-dozen seeds) floated. They had all, however, so much the app earance of good fine, that I kept them, nothing doubting but that like my Egyptian seeds, they would prove good after all. But weeks, case of the same seeds tried twice within three should be much gratified to see an explanation of this, if Spirits of Tar-As requested, I beg to state the result of my experiments with Spirits of Tar, to preserve Peas first Beans from the attacks of Pbeasants. As through thy soil, they were, as usual, voraciously attacked by the Pbeasants. I procured some Spirits of Tar, and having diluted it with water in the proportion of one gallon of the Peas and Beans with a watering-pot and rose : the Pheasants never touched them afterwards. I sheuld add that the solution appeared rather too strong for the Beans, as some of them turned black after the application, although they afterwards shot up three or four stalks to a root. I contrary, I purposely watered only half of my second crop contrary, I purposely watered only half of my second crop, had a sickly yellow appearance, and did not grow so fast or look so well as those left unwatered, although they pro Dwarf French Beans to come up very sickly, I examined the roots and found the cotyledons full of a small species of maggot. Thinking that the Spirit of Tar might do good,
when I sowed again, before covering in the rows, I watered When I sowed again, before covering in the rows, fatered they came up very strong and healthy, and the produce was enormous; whilst the first crop gradually dwiadled awav, and d.ied a premature death. \(-J\). W.
Turnips-I have sent you a Swede Turnip, being fair sample from a 7 acre field of poor strong Loam which was thorougbly drained in the spring, 4 yards apart and 30 inches deep, with tiles and stones. The Swedes state, having only received one ploughing and harrowing. No farm-yard manure was used, but 4 cat. of Guano and The sack of common salt were distributed broadcast per acre. since that time they have grown but little. They were drilled on the ridge 27 inches apart, and about 9 inches
between each Turnip; the intermedate ones were thinned out by hand, so as to have thero at uniform distances. It may be stated that this crop is the wonder of the neigh hitherto considered far too poor to grow either Swedes o Barley. The last year's crop was Wheat, and of course fallow. The expense of manuring, cartage, labour, and sowing, was \(55 s\), per acre, and I apprehend the crop will
be from 25 to 30 tons per acre,-but this will be exactly stated when sold and weighed. About 20 other acres, similarly treated, have produced abundant crops of Oats, (before drainage) only yielded last year 6 sacks and 2 bushels of Oats per acre.-J. M. [This was a green topped Swede raised by Mr. Skirving, and was of a globula shape, with a clear smooth skin, quite free from carbuncle or rust. Its greatest diameter was about 73 inches; it was very tirm and
Bees.- Mr. Juhn Richmond, of Scorton near Garstang, took a hive of Bees on the 26th September, 1843, the combs and honey of which weighed 92 lbs . The Bee
were only put into the hive on June \(12,1843\). F Facile. Observations made at the Lytham Agricultural Asso otion, Oct. 3, 1843.-M M. Lauder, of Salwick Hall, surpassed all competitors for the greatest length of drainage ; the extent of his draining measured 22 miles. On the whole of Mr. Clifton's estate, 182,615 yards or 103 miles of draining have been last year completed. 15 a further proof peat drains. Here men of esperience are adopting what Mr. Smith condemns, because they ard jus the reverse of Mr. Smith's opinion; perhaps the peat the opportunity of seeing. Lytham is about 20 miles from Nateby, and in the county of Lanark. This meeting has surpassed any other in this part of the country, A
Mr . Fail has introduced a new kind of draining turf, called tile turf. It appears from the description he gives, to be well calculated for draining purposes, and to be more available and permanent than the wedge-form turf. Mr. Ward, of Westby Hall, gained the first prize for Beans grown on land which previously to being drained was of a
swampy wat nature, and scarcely worth \(10 s\). an acre. The Swampy wat near grew six feet in height. Mr. Ashcroft of Halsall, near Ormskirk, had some Boklara Clover, which he sowed in the middle of April and mowed at the end of last August ; this plant emits a rich aroma, and is much used, it is said, in the adulteration of green tea. Some ears of the Egyptian Wheat which Mr. Ashcroft showed, attracted great curiosity ; they were the produce of a few seeds which had been inclosed with an Egyptian mummy 3000 years ago. The ears have a few awns on the upper end, and are very open and distant between the grains. The seed has been ia his possession three years and this year he has reaped three sheaves of the corn.

Mr. Fair stated the powers of various manures, and some results of experiments tried on land at Lytham-the
crop was Turnips. Upon two statute perches tilled with farm-yard manure he had obtained 55 perches tilled with and 15 stone of the the staned 55 stone of guano had been used prodrced 47 , quantity of Turnips, and 20 stone 6 lbs of tops. He wished to call their attention to the following facts regarding the difference between farm-yard manure and guano: farm-yard manure produced more Turnips-the most valuable part, but guano more tops; with gallazoide (??) he had 51 stone 3 los Turnips, and 19 stone 8 lbs of tops ; nitrate of soda, 39 stone 7 lbs , and 20 stone of tops; with compost, a mixture in which Moss copping formed a part, he had 49 stone 7 lbs of Turnips, and 42 stone of tops. From these results he was of opinion that farm-yard manure was the best.-Facile.
Weeds in Ponds.-In answer to "Aliquis," p. 721, you say "there are no means of keeping down Weeds in true, and the most simper make of to cut them with is a pair of swans. At this place, three years back, the lake was so crowded with weeds that it was almost impossible to get a boat across it, but a pair of swans were turned upon it, and they with their brouds that the water at the preso completely routed the weeds, could possibly be desired. It is considered, I believe, that five swans will eat as much grass as a horse, and as aquatic weeds are more natural to them than grass, it is easy to conceive how satal to them will rid a large pond of weeds. I mention this fact, knowing it will be o! use, and from the conviction that it is not generally coown, at least I was ignorant of it until I came to reside here.-W. P. Ayres, Brooklands,
Snails.-I have found decaying blooms of Sunflower
 lowing anecdote of one of the feathered race may not be unacceptable to some of your readers whose tastes agree with my own, and if so, I certainly owe some retura which I am quite willing to pay. The bird in question is the Motacilia boarula, the Grey Wagtail:- Before had left my bed on the morning of the 28 th ult., I heurd a continuous knocking, which at first I attributed to the servants, and thought nothing particular of it; but hearing it again repeated as I wus dressing, I went out of the diately found by the sound, that it was the noise of rapping outside a window. Was, then, some one kuockiug for admission? Soon I discovered my visitor, in the aforesaid pretty little bird. Tap, tap, tap, went its bull against the glass of a window over the staircase, and then tretired a little way up the tiling of a roof which slopes down by the side of the window, and shomly came back again, sometimes flying lightly against the upper panes. moruing for thing ! it is terrifying itself sadly.' There was some reason for this expression; for, in truth, if one may use such language in Ornithology, the elegant little creature looked sadly careworn, having really an appearance of overanxiety about it ; its neck, in particular, being very thin and pinched. Why and wherefore I cannot say, unless with a correspondent of the "Zoologist,' last August, I believe that the poor bird is a disconsolate widower, and seeing himself in the glass, " mistakes his own mould of form for the person of his lost mate. In this manner his emaciated appearance would be accounted for; but I fear me, the facts of the present case are against so romantic an explanation; for, to this window there is no blind (as there was in the other instunce,) to show to the bird the beautiful plumage of has consort or himself. And I should rather be inclined to agree with Mr. Doubleday, in another number of the same periodical
instance, that he has no doubt the bird faucies sees insects, a much more vulgar thought. But I cannot feel quite satisfied with this explanation. For why should the bird in so many places make the same mistake? (for we have four separate instances of the same kind, and why persist so continually in a useless search when it might find plenty elsewhere? Has the bird been to school and learnt "Non siae sudore dulcis est cibus? There is one circumstance, especially, which miltate against this supposition, viz., that sill lately supposed the samen pled same with M. aba Monsieur Bourula, and even have and thesill to see what engaged his come down the of have made the least attempt to peck at the supposed insects : and yet there were young birds, too, amore white parts), and surely some of these colour tint of in same error-or in all lkelihood they would have innitated, like all young things, the action of their elders, if this were not, as it appears to are must be the case, sume peculiarity of the species. I have thought the glass may bave the appearance of water to the bird, and in the morning, when covered inside with dew, this would not be altogether a delusion, and that thi might be the altraction, but the sane objections \(l\) ie against this explanation as against the other. I am bound in fairness to state that the window is rather spotted with dirt, which may look like insects, but then it would look the same to the other wagtals. I would have had the window clesned before this, to see if the cleansing of the difficult make any difference, but the window is very migh the at on the outside, neither will it open, that I might try to tempt my visitor to walk in. This was my
first acquaintance with Boarula-at least, I had never before distinguished him from his near relative, the Common yeltow wagtail, (M. flava or Rayi); but since Yarrells book on British Birds has been publisbed, nobody I was at first doubtful as to the species, chiefly because there are no signs of the black gorget on the throat, which I imagined could scarcely have disappeared so early in I imagined could scarcely have disappeared so early in
the autumn, though Yarrell states it to be lost in the the autumn, though Yarrell states it to be lost in the observing that I am perfectly satisfied as to the species. observing that I am perfectly satisfied as to the species.
It allows me to approach within a couple of yards when I stand on the top stair mearly opposite the window; and
out of doors I can look down upon it with a small teleout of doors I can look down upon it with a small tele-
scope from a bank above, and thence I perceive the size and plumage of the bird is that of Boarula decidediy. The bright yellow on the upper tail-crests is particularly
striking, and the same colour is also very rich underneath. Striking, and the same colour is also very rich underneath. larger bird than Ray's wagtail, and seems very nearly if not quite equal to its pied congeners. I need only further mention that it paid a visit to another window yesterday
(Sunday), where, however, it did not remain long. It is quite our constant guest, and I should say half an hour scarcely ever elapses from sunrise to sunset without our
hearing the tapping of this feathered angel. It may annoy hearing the tapping of this feathered angel. It may annoy I must fain confess it would be still more welcome if its visits were more like what those of other angels are said to be, "few and far between." I have traced it down to the
village, but I never see more than this one solitary individual of its kind, percbed on a stone by the water's edge, or running into the shallow stream to refresh itself for another flight to its favourite window. In conclusion, I will again state what I said before, that I cannot but regard the habit as arising from some curious peculiarity
belonging to this species. And if any one interested in the above account can suggest any way of discovering the object or instinct of the bird it will give me pleasure to washed. If your readers should be inclined to consult the "Zoologist" for particulars of the like instances I have alluded to, I may tell them it is published monthly by Van Voorst, of Paternoster Row, price Is.; and they will find it
Wood Pavement.-Some time since I addressed you on the subject of wood-pavement, and I regret very much that none of your numerous correspondents and readers could prevail on themselves to take the question up. It citement. The excitement, I trust, has abated ; but the so long as our great reetropolis and the great towns of the kingdom continue to be what they are, - the Emporiums be an unfiting vebicle of any information that might be offered; and, amongst your numerous friends I could not doubt ihere were many of science and ability, to desl with doubt there were many of science and ability, to desi with
the subject in a manner worthy of its importance; but all that I then said, and have given my mind most unremitingly to the sube to proved. I have a plan of wood-pavement (peryet to he proved. I have a plan of wood-pavement (per-
fectly novel, 1 believe, in its construction), simple, and I should say chtap, from the facilities it offers in laying
down, and its lasting properties; and withal, so secure to down, and its lasting properties; and withal, so secure to
the passenger and iruffic, that I think it can hardly fail of recommending itself to universal adoption: if I may so express myseff, it must establish the principle. There is
no dowelling, or rebating, or mortising; yet there is com. pactness that nothing can disengage, with solidity, durability, security, impermeability, applicability, facility, and every other ty (tie) that can be requisite for its purpose; any company or individual disposed to embark on the ex-periment.-H.
Mildew.
, Essew.
Mildew. - I do not doubt the statement at p. 694 respecting the difference in "Aecidium Berberidis, and
species of Uredo or Puccinia." But I exnect it will be seen, by the enclosed, that the Barberry is subject to what is commonly called Mildew; and as Mildew is contagious, I see no reason why the common belief which I stated I may observe that there are doubts (what doubts?) respecting the real cause of Mildew; however, it is gene-
rally understood to be a parasitical fungus, and some believe it is more contagious to Peach and Nectarine trees having rough leaver, than smooth ones. In the "Caleas an instance of the latter. That, however, is not altray the case; 1 have known that Peach infested with the pest subject to Mildew.-J: Wighton. [Our worthy corre in whicht has furnished an admirable example of the way sends some Barbuments are made to seem genuine. He genus Erysiphe, calls them Mildewed, says that Mildew is contagious, and therefore infers that Wheat may be MilWheat is not prodth a Barberry. But the Mildew of Erysiphe, but by an intesinal fungus of the genus Puccinia, and const quently to place such leaves among Wheat is not very bikely to Mildew it. We really wonder that argumentation.]

Anger, in the 1sland of Java, June 16, 1843.-We anchooed abreast or the little town or village of Anger this
of which a great number were now alongside, full of the varied animal and vegetable productions of the island for
sale. In rowing through amongst these boats I wis much struck and amazed with their varied contents; they seemed to be of all grades, some only having a few Bananas, Cocos-nuts, sweet Potatoes, and Yams, to trade with; while others added to these Pine-apples, Oranges, squirrels, musk deer (the small la jet-black monkeys, squirrels, musk deer (the sman (Javanese kind), minas, parroquets, Java sparrows, and many other articles on board. As we rowed through them and neared the shore, the Cocoa-nut and Banana trees, which are growing in great number all along the coast here, formed minded contras eatation, and reland of the East, the climate of the sun. A splendid Banyan-tree (Ficus indica), having the flag-staff upon it a very pretty appearance. The Government authorities have some very handsome shrubs and trees growing in their gardens, the principal of which are the double Pomegranate, the Barbadoes Flower-fence (Moinciana pulcherrima), Jatropha multifica, covered with its scarlet ticia, Ixora coccinea, I. rosea, and Michelia champaca full of its sweet-scented yellow blossoms. I also observe a curious little water plant indigenous to Java, growing in the garden at the Fort, named Pistia stratiotes. The Anger is built are covered with and the plain ont vegeta tion, and present to the eye a number of views of great
beauty. The little town or village is "much scattered having the houses built open and airy, a condition which is absolutely indispensable to the comfort and health of the inhabitants in a warm country like this. Here and there amongst the houses we observed Cocoanut and Plantain trees growing, as well as several other kinds, planted for the purpose of affording shade. The roads or angles are very broad, straight, and generally at righ Coral tree (Erythrina), and others have only fences mad of earth and turfed over, presenting the appearance of our common turf dykes. The Teak tree (Tectona grandis) are the Casuarma equisetifolia, with various other trees Casuarina particularly has a most gracefinl appearance The prickly Pear (Opuntia vulgaris), was also growing and forming fences in some places. The principal article of agricultural produce is Rice, which is grown in great quantities, particularly in the low marshy districts; and to irrigate the crops when necessary. The Paddy fields are perfectly level, and if not naturally 80, are carefully water. Indian Corn, Sugar-cane, sweet Potatoes, Yams, are also grown in great quantities upon the jeland The Buffalo is used in the plough, and for various gricultural purposes, but forming an opinion from the specimens of ploughing which came under respect: the plough ras shallow, crooked and rerg tha below our standad of good workmanship. In our rambles as met hundreds of the natives coming towards the village from the fields, loaded with paddy, which they carry across the she same loads of tea-chests. The Bamboo, which grows in great quantities all over the seems to be used for structed with it; it made the roofs of the houses, ladders, doolies-a kind of sedan chair for conveying persons of rank from place to place-and formed the little masts for natives took to cool themselves, several times during our ramble, in the heat of the day, when the thermometer in he shade stood at \(90^{\circ}\), and when it was probably \(130^{\circ}\) in the sun. By the sides of thestreams or wells of water the shell of the Cocoannt, with a handle of Bamboo, were left, seemingly for the public good. These the natives filled with water several times, and poured over their heads and naked bodies ; immediately afterwards, covering themselves with their kubaya-or slight cover ing, which is commonly worn round their iwaist-they watered the ship ang stoutly maintained afterwards that the water tasted strongly of the greasy skin of the Javanese; it is needless to say that on the island, besides those already mentioned, are Mangosteen, Mangoes, Guavas, Sour Sop (Anona muri cata), Tamarinds, and the Papaw Tree. The Cocoa-nut on the stem, by instances, notched at reguiar distances o cut down the fruit. These trees are quite unlike their representatives in the stoves in England, where they rarely having a tuft of leaves on the top, in many instances 40 feet from the grownd. Coffee is grown in great quantities, and forms an article of commerce. Cinnamon Cho colate, and Pepper, are also grown on the island. I had an opportunity of seeing the operation of husking or cleaning the Coffee-beans. This is done in a machine and poubs ap a the outer covering is broken off the beans are then picked and sorted by the nen out; the beans are then is much used by the natives, and vulgarly called the Betel nut, from being rolled up in the leaves of Piper Betel, and
which turns their teeth quite black, and gives them a curious appearance to Europeans; but they consider this grow all along the shore, as well as upon the hills. Vinca Ipomoea pes-Caprex upon the beach; Asclepias gigantea was also very abundant; a species of Lawsonia, Guaiacum officinale, Screw-pine, and various other things, which I had seen a little farther up the coast. But the most beautiful plant which I saw in my rambles was a species
of Dendrobium, very near D. secundum, with deep fowers; it was growing on a tree fully exposed to the

former richly co
rostratum, with

 collection were Oncidnum ciliatum and Suttoni, the latter with a
spike of bright yellow blossoms; Galeandra Baueri, which has kept blooming since the middle of August; Tetrancma mexicanum, very usefu, on account of its blooming at this season of the yaar, when
flowers are so desirable; and Hippeastrum aulicum, with large dark red flowers; and a large, specimen of Sedum Sincum, wili, a prettye plart,
with drooping branches, which terminate in fine masses of fowers. with drooping branches, which terminate in fine masses of flowers.
A Banksian medal was awarded for Erica Solandra, Zygopetalum
rostratum, Saccolabium denticulatum, and Tetranema mexicanum. Messrs. Lucombe and Co., of Exeter, sent an excellent plant of Cymdidum giganteum; this, a native of the East Indies, with large
flowers, striped with a tawny brown, and said to be very fragrant, is
upposed to be the firss specimen of the species that hos supposed to be the first specimen of the species that has been seen From the Rev.G.R.Rashleigh was an Anthocercis, having a tall panicle of small yeilow star-like flowers, striped with brown ; it did not possess seat to Mr. Rashleigh from Swan River. Mr. J. W. Dawson sent a
well-grown plant of Erica Bankan, with beautiful dark- greer foli-
age, long grecnish white corolla, and durk- hrown stamens; for this certificate was awarded. From Messrs. Veitcl and Son, of Exeter,
was a shrivelled specimen of Doiichos purpureus ; it had arrived in was a shrivelled specimen of Doinchos purpureus; it had arrived in

 100z.; a Banksian medal was awarded for the Muscats. Mr. Scott, gr to
Sir G. Staunton, Barto, sent fruit of the purple Guava, Psidiuma Catleyanum, from a plant which nas prodangularis, which measured gives.
June ; also fruit of the Passiflora quad
long by long by \(5 \frac{1}{2}\) inches in diameter, and weighed 1lbs; together with fruit
of the Ake tree, Blighin apida, and of the Jaurelleaved Granadila,
or Water Lemon - the Pomme de Liane of the French. This plant is a native of the West Indies, and not very frequently seen in this
country; the pulp, which is inclosed within a very prety orange-
coloured rind, marked with green spots, is what is catallic, it is rather acid to the taste, and agreeable in hot countries. A certificate
was awarded for the Blighia sapida. From Mr. Osborn, of Fullama,
 cantha, which were sad to have arroved to only about one thord ther
usual size when ripe. The tree from which thas speut covered with fruit ; it never bears fruit in this country heousc all the plants here are male. When the females shall have been pro-
cured from North Anerica, they will be most valuable hardy shrubs. From John Beadnell, Esq, came a heautiful new, hardy Pear, rawarm red ground It was stated to be perfectly barly, proved ol first-rate
quality, and received a Banksian Medal a rare reward 1or seding fruits of this class. From the gardens of the Society were plants of
Fuchsia Chanderii and racemifora, a species of Cestrum that had

NOTICES of NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL.
 This piant was imported by Mr. Knight, of the King's Road,
Chelsea, from some part of Bolivia, or Upper Peru, about foux
years since, having been gathered there by Mr. Kelly, z collector
to Mr. Knight. It flowered at the Exotic Nursery, Chelsea, in the summer of 1839 or 1840 , but as the plants ceased blooming rather suddenly, and as it has not again blossomed till June last,
we reserved our description till it should flower more That point having now been gained, we can publish it with. greater confidence, as depicting a beautiful and meritorious
plant. While it certainly does resemble \(T\). erulule in the fowers, it is a very different species in its habitude. The stems are more numerons, very much strunger, prow with ereater erectuess,
have to all appearance nothing of the twning coaracter, and bear their leaves far more denseiy. The latter, too, have broander
leaflets, which are less loosely and mure regularly disposed, and are glaucous on the upper surface. By all these characteristics are, from the greater closeness of the leaves, much less scattered.
They are of a deep vellow or orange colour, with a rather long Ther are of a deep yellow or orange colour, winh a rather iong
spur to the calyz From the rapid maner in which thn flowers of Mr. Kiight's spermens went of the firstyear, and the disin-
clination to bloom the plants have since evinced, it would seem to be a shy-fowering species. Still, these things are probably to
be accounted for by the nature of the plant, and the treatment it hac reveived for As it is ature of trong growing, species, the partial
had exposure re the tubers, as in other Tropæolums, may have
exhauated the specimens too munh, and thus deprived them of furictions. At any rate, this is the view we take of the matter; beneath the surface of the soil. If planted to the depth of an feature demalading notice in the culture of the species; as it may otherwise be managed like the rest of the genus, only it dnes not is increased by cutrings of the young shoots, before they have plant be to a flowering state; and if the principal stem of a up from the tober, and yleld ang abundance of cuttings.--Paxton's Magazine of Butany.
Barke'ria sprcta/bilis. Remarkable Barkeria. (Stove Fipiphyte.)
Orchidaceæ. Gynandria. Monandria.-For the jutroduction of this are indebted to \(G\). U. Skiner . the country with fine plants of ths charming tribe are familiar to every grower. Writing about it in the Botancal Register, Dr,
Lindley remarks that, "under the name of Flor de Isabel, this plant forms one of the votive offerings of the Guatemalese. It
forms a tuft of cylindrical stems about 4 or 5 inches hikh, each of Which bears two fleshy lanceolate acate leaves, separated trom
each other by intervals of about an inch. The raceme rists out each other by intervals of about an inch.

\section*{bears about six most lowely noddug blossums: but, aicorcu11g} to Mr. skuner, it variac in length from 3 inches to a tont, pro-
ducing as many as 12 flowers 11 a raceme. Ft.e evpanded flowers are nearly \(3 \frac{3}{2}\) mehes wiste, thene collur is a bight liac; the abel-
lum is whine at the base and in the mide, hac at tue edse and
point, and richly marked with small blood red spots. Ache its middle, below the column, are five parple lines, which pass into three elevated colourless ridges, beyond the place where the
anther touches the lip. It is with Cattleyas and such beautiful owe the following partion Wray, Oakfield, near Cheltenham :-"The plant was imported fromGuatemala in July, 1841 , when it immediately began to grow;
and, late in autumn, it showed flower-scapes, but the season was too far advanced to bring them to perfection. It then remained dormant, and lost all its leaves, till March, 1842, when it again of June. These were shown at Chiswick in July, and continued
perfect for five weeks. The temperature in which the plant was arown was never above \(65^{\circ}\), when it could be kept und indeed, my
ar freely; while in winter it often fell below \(40^{\circ}\). Ind
inly olject was to heep ont the frost : and I invariably gave a
 day; and I am of opinion that the Orchidaceze of Guatemala camnot be kept too cool in this country at that time, for the more air I give, the better they grow. I always, however, keep the open wooden basket, filled with moss. It will likewise succeed a a bluck of wood. Nothing could be more perfect than Mrs, Wray's specimen; and the advantages of the summer sir to the Orchidzece. Gondudria Monandria.-This plant is a native of uith the Rev. Mr. Clower, a zealous cultuator of Orcuidaceze after whom it is named. It is very hike a Catasetum 1 m habit.
The stems are from \(2 \frac{2}{3}\) to 4 inches long, ovate, clothed with the seen, are said to be three, lanceolate, ovate, acuminate, and at the point twisting a little to one side. The intlorencence prom
ceeds from the base of the stems, ajad consists of five or six, probat,ly more, erect delicate white flowers tinged with pink. hip broken up at the margin into numerous delicate giandular As a genus Clowesia is perfectly distinct from everything prein front suarest its belonging to the Maxillaridons divisiou. has its white habit and its singular apparatus of the pollen-masess oppose such an arrangement. The latter organs rest on, the gland and pare resemble an broad, this. wi.ether thet is the usual structure, or, as we suspect, meresy consequent uron
the separation of the part that connects shis gland and pr llenmasses, we have not had an opportunity of ascertaining. Upon
the whole it is probable that Clowesfa must stand in the same the whole it is probable that Clowessis
division as Catasetum.-Botanico Register.

\section*{MISCELLANEOUS}

Mr. Fortune's Mission to China.-The Fellows of the HorticuItural Society will be pleased to learn that this mission is proceeding satisfactorily. Mr. Fortune reached Macao about the 9 th of July, but had established homelf for the present at Hong with the greatest good-will Messis. use fi Den and and Colonel Malcolm had most kindly takell charge of a box of plants (whict has since been-received, with the contents in excellent order). On tean Fortun alloget fowered Cælogyne and Arundina chinensis. In the gardens he found a white Glycine, not so handsome as \(G\). simensis, but ratber pretty, and a charming Musswada, The Large white bracts and sweet-scented yellow fowers. The Lagerstrcemias were most
beatiful, flowering as freely as our Hawthorn, even on small plants. Above all things it is interesting to know that the difficulty of intercourse with the Chinese is rapidly wearing of. Mr. Fortune had bired boats, and landed, main land of Couloons opposite Hong Komg, and had
never been annoyed in any way. He was preparing for a awfully hot" at the date of his letters
New Public Parls at Birkenhead.-The populous town f Birkenhead, which has sprung into importance, and almost into being, within the last ten years, may be reopposite or Cheshire side of the Mersey, by a cheap ferry across which it is readily of an Australian colony than an English district; as an immense tract of ground has been ladd out in streets and quarter The inhabitants are, for the most part pereong carrying on business in Liverpool, and they seem to preer this to any of the Lancashire suburbs, on account its greater salubrity. The Comanissioners of the town-
ship have recently determined, in the same spirited manner with which they conductall their operations, to devote a large portion of ground to the formation of a public park ; and Mr. Paxton, of Chatsworth, having been apexecution of the entire affair. The plot of ground comprises about 180 statute acres, and is nearly a mile long It is of an irregular oblong figure, with an undulated variety of slope towards Liverpool. The plan we have seen provides eight entrances; and immediately within the inclosure there will be a belt, of varied width, for will be laid out as a park, with a Serpentine drive all round it and across the middle; and there will be two spacious lakes in this, surrounded by a sort of ornamental park-garden. We learn that it is intended to admit the public to all this part during the day, closing it only at
night. The operations have already commenced; and, when the lines of road, \&c. are all marked out, the whole of the works are to be conducted with the greatest possible celerity. At present the ground is mostly of a sterile and nearly useless character, destitute of drainage, with acarcely a tree upon it; but by the aid of science and
skill we have no doubt it will be rendered a really deightful place of recreation. Too inuch commendation can hardly be bestowed on the public body which have so nobly originated the scheme, since the day is now past when it is necessary to prove by urgumentation that such things have a highly beneficial effect on the physical and moral health of a country. With this, and the park at
Toxteth, also from the plans of Mr . Paston, and rapidly approacbing completion, Liverpool will, in proportion to its population, be quite as well suppli
A Plea for Birds.--" Miany amongst us are well satisfied of the usefulness of these little fellow-labourers, Whilst some are not aware of their ralue, and permit them following facts are stated, and every one is urged, as he values his fruit-trees and looks for a plentiful harvest, to extend to the birds the protection which they so richly orchards in Medford, Cambridge, \&cc. in June, with those in West Cambridge, and Lexington, where shooting and birds'nesting are permitted. Our most intelligent named towns of the Canker-worm, the pest which has cost so much labour and expense, and has ruined so many trees, is owing mainly to the great number of birds, which breed undisturbed in our fields and orchards. Let the mischievous loafers, of whatever age, size, condition, or colour, who roam about our fields with a musket in their hands, be dealt with according to law, or driven out like vermin, and we shall hear no more complaints that orehards are laid waste by insects, and trees destroyed by only bird that feeds ane Core the in great numbers, eating them voraciously when they are fhat grown. The numbers of these destructive insect incredible."-Connecticut Herald. "Every Crow requires at least one pound of food a week, and nine-tenths of their food consists of worms and insects; 100 Crows then in one season destroy 4780 lbs . of worms, insects and larix; from this fact, some slight idea may be formed "The Blackbird destroyse arecuted bira to the for. Last August I observed 8ior lo blackhirds of grubs, \&c. Last August I observed 8 ior 10 blackbirds busily engaged on the grass plat in front of my house, and the grass Where they were seemed dying, as was hinted, by thei
mischievous operations, find the gun was suggested as the mischievous operations, Suspecting the object of the bird's search I turned up a piece of turf with a spade, and found it literally swarming with grubs of various sizes. I need not say that they were allowed to pursue their game verdure. This is another instasses of the utility it verdure. This is another instance of the utility of pre - Magazine of farms and in orchards and gardens." inclined to extirpate the Blackbird, Wilson justly remark as a bulance against the damage they commit, the service they perform in the spring season, by the isomense number of insects and their larvæ, which they destroy as their principal food, and which are of kinds most injurious to the husbandman. Indeed, Kalm remarked, that after great destruction made amongst these and other birds for the legal reward of \(3 d\). per dozen, the northern states in 1749, experienced a complete loss of the grass and grain the time of barvest, I have uniformly on dissection found their food to consist of these larvæ, caterpillars, moths and beetles, of which they devour such numbers, that but
for this providential economy the whole crop of grain, in
many places, would probably be destroyed before it began to germinate. At this season to repay the gardener for the tithe of his crop, their natural due, they fail not to assist in ridding his trees, \&c. of more deadly enemies, Which infest them; for hours at a time they may be seen our Apple-trees and Elms."'-Nuttall's Ornithology. " may be safely said, that in a country so thickiy settled as Owls, but are vastly more useful than injurious to Man None of them should, under any pretence, be destroyed. It is not generally known that a pretence, be destroyed and Owls destroy poultry. The rough-legged Falcon may e observed the whole winter long seated on a tree watch ing for mice, of which it destroys great numbers. Thos ho shoot him, or sufer him to be shot, deserve to hav heir the common Harrier, and indeed all of this family of birds
that come so fearlessly to our fields and meadows, are equally harmless and useful." From the New England armer
Veyetable Nature of certain supposed Animals. M. Decaisne, an eminent French Botanist, las lately come posed to be animals, and called by productions, sup earing Polypes (Polypiers calciferes), are in reality se This view has been microscopically and chem ally confirmed by M. Payen. "In comparing Corallin officinalis and Halymeda officinalis with Chara hispida vulgaris, and translucens, Payen observed, that the minera endant on the powers of these living beings ; and endeaoured to trace in the tissue of the coralline, when free from mineral matter, a composition similar to cellulose, aving dissolved from the coralline the mineral matter, by ilute hydrochloric acid, and then got rid of the exce of acid by ammonia, the whole, after being well washed i water, was placed between glasses and submitted to the microscope. On the addition of tincture of iodine and sulharacteristic ic usual results were aftorded which are ranules were shegetable issues, and even amylaceou roving, without doubt, that the corallines above name are not polypes, but Algæ, and that they belong there fore to the vegetable instead of the panimal kingdom.
Comptes Rendus, July \(3 d, 1843 . /-\) London Physiological Journal.

\section*{GARDEN MEMORANDA}

Hendersons Ause
stove the first object that attracted our atoc.-Upon entering the plant of Eschynanthus grandiforns, growing on a block of wood
suspended from the roof, and producing a nulutitude of its pretty scarlet and orange-coloured blossoms. Another most beauutifol spe-
cimen of this plant was gro wing in a pot, in soil consistina of pel cimen of this plant was growing in a pot, in soil consisting of peat-
sand and a little leaf-mould, and had no fewer than 24 stems richly covered with flowers, both larger in size and darker in colour than those of the former, thus showing that although it may be
desirabie for the salke of variety to grow this plant unon a block desirable for the sake of variety to grow this plant upon a block, produce finer blossoms, if it is planted in soil. A pretty plant of
Centradenia rosea, with its gracefuly drooping dark purple
foliage, was growing very luxuriantly, treated on the one-shift contadenia growing very luxurnantly, treated on the one-shift
foxiage, was great
system, as was Ixora rosea, which, although not so showy as cumstance of its continuing to bloom for a lentth of time at this season of the year, when flowers are an acquisition. An excellent its golden treasures, and the fine dark purple foliage of the Dra-
cæna purpurea contrasted well with the green of the surround plants. There was also in flower Acacia kermesina, having fine ongs stamens, with purple filaments and white anthers, and a obelia longitolia, with its long tube and white spreading petals, yellow of Croton variegatum, and the pretty scariet wax-1,ke of pleasing tints, whisch accord well with this season of the year. Stephanotus floribundus, which is decidedly one of our best stove bloom; Thunbergia Hawtayneana was fowering beautifully, and ust about to disclose its light blue corolla. In the forcing-house Was Franciscea latifolia. very pretty and fragrant; a few beautiful
plants of A chimenes coccinen, densely covered with brilliant plants of Achimenes coccinea, dellsely covered with briniant
scarlet fowers ; also, a good plant of the new A. Hirsuta, said to
be arn excellent bloomer; Lettomia sulendens, although natube arn excellent bloomer; Lettsomia splendens, although niatu-
rally a very shy flowerer, was producing its beautiful light purple blossoms in abundance; it had been kept for some time in a
small pot, which has no doubt had the effect of throwing it into bloom, by checking luxuriance, and thereby favouring the production of flowerg buds; as soon as these were formed it was Thunberg a good large shif
In the Orchidaccous house were in flower Zygopetalum fowers, with large white lahellum striped with purple, and having the additional advantage of being a free bloomer; a fine five spikes covered with fowers; the beantiful Cattleya four months past. We also remarked Oncidium Lanceanum and
Harrisonit; a good specimen of Gongora maculata, having five Also a grod plantof G. atropurpurea, blooming freely; My anthus deltoides, with curions green flowers marked with dark. brown strans, more singular thaz handsome. Plants of Cycnoches
Ir dhancsii and veniricosinm were also in bloom, fikewise Trichopilia tortilis and Cologyne fimbriata. The Heath-house was lately undergone some alterations, which have the effect of showing the plants to more advantage. There were in bloom
Frica verticillata, with whorls of brillant scarlet; mutabilis, with Gue purple flowers; Bowieana, mammosa pallida, grandinosa, fiora lutea, a be autiful yellow species; tenuiflora with fine delicate light-pink blossoms; formosa, very beautiful; Lambersiana rosea, richly covered with bloom; purialis, light pink, with dark
brown stamens, which protrude beyond the corolla; and refulgens, very beantitul and conspicuous. The stock of Heaths in the pits was in excellent condition, and many of them were covered with Fuchsias, particularly F. conspicua arborea and Thompson's for
single stem, which threw out laterals radiating in every direction,
and richly covered with bloom. The spreading sepals of this variety finely showed the beautiful dark bpreading corolla. Tlie showhowever, was a good plant of Angelonia grandifiora, emitting the fragrance of a ripe Pine-apple. In what is termed the old Heathhouse were gond plants of Russellia juncea, Siphocampylus
betulgefolus, rather new, with red and yellow flowers, Amaryllis Fothergilli, beautiful dark red, and a good plant of Sollya linearis, which was trained circuitously on an ov
covered wrth pretty bright blue blossoms.

\section*{}

The London Physiological Journal is a new periodical apparently intended as a sequel to the Microscopical
Journal, now discontinued. The anthore Dr Goodfellow and Mr. Fin ane and Mr. Edwin Quekett, are well qualified to conduct support in their undertaking; for microscopical inquiries, when directed to the solution of difficult problems in the structure of animals and plants, are not second even to Chemistry in their importance. The one is iddispensaThe to the other, and neither can be neglected with safety of this statement the microscopical plants which cause the phenomena of fermentation and the horrible disease called Plica Polonica While we thus willingly offer our testimony to the skill with which this Number of the Physiological Journal has been prepared, we must except a lithographic plate, the execution of which is -_ we will not say what.

The October Number of the Journal of Agriculture and Transactions of the Highland Society is, as usual some experiments disproving the existence of excrementi tious secretions by the roots of plants, and a translation of Count Gasparin's paper on the Value of Manures, an im portant document, to which we may return hereatter we recommend our horse driving friends to peruse,

Messrs. Paul and Son's Descriptive Catalogué of Roses is before us, and deserves to be made known. It contains not merely the prices at which the sorts are sold, but classification and description of all the varieties, with some zeneral and useful remarks upon each section. The lovers of Roses cannot dispense with adding this to Mr Rivers's Catalogue, noticed at p. 648.

The Artisan is a new monthly periodical, intended for the information of those who are interested in mechanical operations. It is abundantly illustrated with good plans and sections, appears to carefully compiled, is very itself to its proper sphere, and avoids interfering between We mion this becanse we fancy we see symptoms of a disposition to take the oppo tie we sho of holion and can saal organ, which will ruin it
Suggestions for a more General Extension of Land draining. By John Henry Charnock. Loogman. 1843 THys litule mode pamphlet suggests a practical and extensive heavy lands. The great obstacle to this very useful and necessary operation in most cases is its expense when undertaken on a large scale; and altbough this expense is and of wonkg or draicing-ties, and from the greater dexterity pared wen, neither landiords nor tenants are fuky pro pide for meet their ince former have incumbances to pros are tenalts for life, and is regularly sppropriated, of theis successors' income. As Lord Stanley most judiciousi observed at the late Agricultural Meeting at Liverpool draining." But the difficulty is to find capitalists inclined to lend. But if difuculy is to find capitalists inclined mouch to the expense and mortgages are required, is not always evident. Some simple law is much wanted to facilitate such loans. The object of the pamphlet before us is to prove, first, the great importance of thoroughdrainigg in a national point of view : and not a word nea to said to confirm this proposition, which none will attemp torute. The next object is to facilitate the means Association is proposed. Without entering into the details, we will not hesitate to wish the plan may succeed; and we have no doubt but under proper management may become equally profitable to the capitalist as a safe investment, and to the company as a profitable speculation We would only recommend the shareholders to see that the machinery be not too expensive.- \(M\).
Theorie der Gärtnerei, von John Lindley. (Lindley's
Theory of Horticulture.) 8vo. Vienna. 184
Page 129.-" In order to render this important subject yet more clear we subjoin a report on the labours 's Zeitschrift. Messrs. Edwards (a member of the Academy of Moral and Political Science) and Colin (Professor Chemistry) read an article upon this subject before the Academy of Sciences on the 18th of April, 1837, which constitutes the third part of their Researches upon Agricultural Physiology. As the influence of vapour upon germination was not yet known, they considered themselves compelled to take up this subject. Their experiments have led them to the following results.
1. "In free moist air, yet considerably removed from the point of saturation, seeds did not germinate.
2. "Germination took place among the Cerealia, placed in an atmosphere fully saturated with moisture. 3. "When placed under water they required eight times as long a period before they germinated.
4. "If the number of seeds or grains be increased, and sohe employed instead of 5 , and brought into an atmariment under a larger bell than in the last instances, germination does not take place.
5. "The same is also the case if the original number, or instance, five grains are employed, and covered with a bell much larger, in which case germination is very much 6. "The circumstance
6. "The circumstances which produce this retardation temperature of germination, depend on

If the temperature is low and undergoes little or no change, germination will take place as soon under a small bell as under a large one
8. "If the temperature is higher, moderate, and change ble, the germination will be retarded under a large bell. 9. "This occurs when during the daily change the temperature increases, and the air has a tendency to depart from a state of perfect saturation, and if the space
is great, the diffused vapour is in part absorbed by the is great, the diffused vapour is in part absorbed by the seed, and the air never reaches the point of saturation.
10. "These effects probably do not proceed from the fact that the seed had not absorbed enough vapour, low constant temperature seeds absorb less water than in a higher, and in the first case germination takes
11. "These remarkable facts are produced by the air not being sufficiently satarated with vapour to allow of the necessary applicat
12. "In germination, two principal conditions with regard to the vapour are required to take place ; first, that the seed absorb enough vapour for the function of nutrition ; and second, that the external air be saturated with sufficient vapour to soften sufficiently the testa of the seed.
13. "Through the simultaneous action of water and where the air is sation constantly takes pl
14. "With regard to the application of these principles to seeds sown in different kinds of soil, the authors found that germination took place by the agency of vapour when seeds were placed in sand and clay, but in both cases the process was longer, especially in the clay, which absorbed he vapour slowly and imparted it slowly to the seeds.

The same principles apply to the remaining periods of vegetation, as \(\mathbf{M}\) M. Colin and Edwards grew large plants in air folly saturated with moisture, as well as in air imperfectly saturated.
16. "Observations made in the West Indies, where the air is constantly moist, completely confirm these results. The fruits there are not only very fine, but the woody abre of plants is very hard
. The practical result of the whole is that vapour han it be employed in hothouses to a much greater extent taan it has been. In England this proceeding has already one wonders. The Vines bear tremendous great Grapes ; plants flourish extras much as
Page 129.-We here present a figure of Mr. Daniell's hygrometer : \(a\) and \(b\) are two
 glass globes, which are
attached to each end of a glass tube bent in the the figure. This tube rests upon a stand. The globe \(b\) is filled twowhich is made to boil by means of a spiritthe tube and of the globe, \(a\), is expelled globe, \(a\), is expelled the latter, which must be hermetically sealed whilst the wether is boiling. Previons to this process a small thermometer is introduced into the tube \(c\), so that its bulb may be partly immersed in the æther of the globe, \(b\). Another
stem, \(k\), and a piece of thermometer is attached to the stern
If the hand is now applied to the globe \(b\), its heat will cause the gether in the globe to boil, and a part of it will rise in the form of vapour and fill the tube and the globe, \(a\). The instrument should now be brought into the open air, and the eye of the observer placed upon a level with the sther in the globe \(b\), whilst a
few drops of ether are dashed upon the muslin covering few drops of wether are dashed upon the muslin covering
the globe \(a\). The evaporation which takes place on the surface of \(a\) produces a condensation of the vapour within it and the whole tube. The consequence of this is the production of cold in the tube and globes, and the comdensation of the vapour in the atmosphere upon them, which is first observed upon the globe \(b\) in the form of a clondy ring. This must be accurately observed, and attention immediately paid to the beight at which the mercury of the thermometer at \(d\) stands. This is the dewpoint, and indicates the proportion of mossture contained
in the air. The more moisture there is in the atmosphere the less sinking of the temperature is required to reduce the vapour to water. The thermometer on the stand \(k\) exhibits the temperature of the atmosphere at the time of making the observation. If the internal thermo. meter has fallen only a few degrees below that of the external one, it indicates a great amount of moisture in the atmosphere, and it is probable there will be rain soon. But as the above apparatus requires great accuracy and plan out of "Loudon's Suburban Horticulturist," Part II. p. 76, wherein the employment of two thermometers is made to serve the purpose of an hygrometer. The therwetted are hung close together, and the ball ; and the other remains dry, to indicate the temperature of the atmosphere. The balls of both thermometers must be the communication of heat from the atmosphere; one of them is then supplied with pure water, which may be means of a skein of silk acting as a conducting tube The silk or muslin on the ball of the wetted thermomete and the skein require to be occasionally renewed. The greater the difference between the degrees of temperature need of moisture in the atmosphere.

CALENDAR OF OPERATIONS for the ensuing week. Now hat October has given the first notes of preparation for the others which are yet of a doubtful character, we ought to discard from our minds at once any reports tending to the prejudice of thi facts brought before us. The first witness, indeed the principal one on the side of the prosecution, is Mr. Frost, of Winternaugh, who
seems to have entertained views on this subject rather at variance seems to have entertained views on this subject rather at variance
with those of pood judges. Now, although the Calendar for next with those of good judges. Now, although the Calendur for next
winter term shows a heavy list of names for trial, there would be no great difficulty for those experienced in auch matters to decide in their own minds the general issue beforehand, were it not that there is a disparity of opinion as to the best manuer of conducting the trials, and
as this is a point of very great importance, we cannot do leeter than disas this is a pomt of very great mportance,
cuss thus early the ments of the case, for the bene itit of all concerned. In the first place, therefore, sume hold an opinion that half-hardy plants ought to be guarded from the cold north winds, by protecting
inaterials so cuntrised as to have the south side opened on suny days materials so cuatrived as to have the south side opened on sunny days
and in favourable ne enther, in order, if possible, to heep uf and revive the droping spirits of tie inmates. Others are of an entrely onposite
opmion, and wourd secure their prisoners from all southern influencess and expose themi on all tavcurable opportunities to the rigours of
the north; whle a thard farty sce many good qualities 1 m hoth pro the north; while a third farty see many good qualities in hoth piro-
positions, but would not run into cither extrem.ty, but rather meet positions, but whald not run mio cither extremity, but rather meet gou. afrar I may as wel say at once that I arrange myself with this hater, or haliway party and ofe are my reasons: the first party
act fillicinusly the first hall of the term, by securing their plants from the cold north winds, as long as there is any chance of ripennes the young wood more perfectly; and by exposins them thus to the Octoler to January, while for the next threc or four months nothing can \(i\) e more injudicous than their proceedings, in as fur as the rays of sun from that tinne stimulate the plants to grow, and are thus exposed to the vicisstunes of aren with less judgment (at least in our opinion), by exposing their plants to the north at once, when they are in a half-ripe state in october, thus denying them the benefit, such as it is, of our
short seasons, and exposing thens to dangers which they are not in a condition to meet. It is true, however, that after the turn of the season, plane.rly growth until the season is so far advanced as to put them out of danker. I hope you can clearly see now that wep, the
third party, would shelier our plants from the north from October to Jnnuary, and ental on ourselves and our followers the trouble of tume, point to the north. But of course you hil act according to
vour oun juigment. The first part of the tral is over already your own judgment. The first part of the trim is over already I. -KITCHEN-GARDEN AND ORCHARD.

Pinery, - After this time there is more danger from drips and over-watering than from the plants getting too dry, especially when bottom-heat is on the deciine, and the pots not well filied with roots;
these two causes soon tell on the black Pines. A uniform bottom these two causes soon tell on the olack Pines. Ather dry, and not
heat, if you can get it, with the atmosphere rather to general run durng this month
Vingry.- For the next six weeks a practised eye can see cleary if the half of the crops be already gathered. With the best-constructed houses, and other things well managed, over-cropped Vines, or nenkly ones in 111 -dra.ned borders, never carry then late crops well;
the ledst touch or speck, and away they co, and you cannot helu the least touch or speck, and away they go, and you cannot help xt
look, agan, at a healthy, vigorous, yuung or old Vine, under oupo look, agan, at a healthy, hgorous, young or old ine, under orpo you wished. If the sashes of the extyly Vinerics are off, no time
should now be lost in getting them in, as, if we should get cold should now be lost in getting them in, as, if we should get cold
rans, the boresers inside weuli! be chilled too much, and thus put rams, the borders inside wrult be chilled too much, and thus nut

\section*{When we get a cold day late intionent.}
patience, expecting to have a fine day to-mporrow; but now we can hardly enjoy a fine day in the anticipation of rough weather. This
state of ex ittement impels us to have all our crops and plants state of exditement impels us to have all our crops and plants
secured and well provided for against the winter long before real decnger is at hand. As soon as you hear of three or four degrees of
frost you must have your mats at hand, ready to cover up with. frost you must have your mats at hand, ready to cover up with.
Hiluse who hare neslected to prov1c thesc things think nothing of sending many miles for them at this critical time, while a third party
is unviling to expose their best mats yet, for fear of getting them soddened nith wet, and thus rendering them of less service when tbere 18 real need for them.
CADLIFLOWER - In a short time this will be the best flower in the garden, as country people say; tud who would not prolong the suc-
cessuman of the best fluwer at the dull season? - nothring is casler thins to do so w th (auaflow ers; pull up a quantity of thenc that are now
fit, or nearly fit for use, and lay tliem in by tae heels 112 some moist
 and dig it as well as you can, and the first mald day plant it all over in patches with good Caunlower
haud kia ses by-and-by, hand ala ses hy-and- Cab ages. This
about Cabbages, and that only to say if any failures have happened in the ruw anready planted the spaces should nove be filled up, uith
the strongest plants you have sin land; nothor louls wirse the strongest plants you have hi land; nothng louls wirse in
winter than to see gups here and there in any ruws or crous of plant Winter than to see gaps here and there in any rill be planted in coli

Orcaard.- Pruning may now be commenced in earnest, beginning first with the Currants, then the Gooseberries and Raspberries;
this will clear a cood deal of ground to be dressed and dus in fine weather. Aftor that Apple and Pear
trees indeed, any shoot you think will not be wanted in sprine hac better be cut out at once, to make more room for the others, and let
in the sun and air to ripen the bearing-wood for next year; the leaves of Peach-trees are of very little use after this time, and they do muce harm cut them off hy handsfull, but do not strip them off, for
knife and
fear of iriuring the buds. No uuthor has recommended this, but fear of irjuring the buds. No nuthor has recomen
many of the best gardeners practise it regularly,
II.-FLOWER-GARDEN AND SHRUBBERY.
Stove.-There are no plants more easy to manage in winter than this time sooner than any other tribe. Some years since I had a large house full of tropical fruit-plants, such as the Mango, Mar-
gostan, geveral sorts of Eugenias, the Marmmee-tree, with the Leee Chee and Long-yen, \&cc., and plenty of Granadillas overhead; for six
long weels we had very hard weather, and we could not get up the heat ligher than \(50^{\circ}\) during that time, except in the middle of the
day, and in the morninas it was often as low as \(40^{\circ}\); but not a plant pas hurt, and some of them were really improved by this treatment,
owever, \(60^{\circ}\) is about the lowest they ought to have this month, with rather a dry atmosphere and air on all fine days, if only to swecter the houses now that they are so full.
Grren iovse. -Those who have not the advantage of cold turf pits must have crowwed their grepance late frosts. Leti a place be so small there ought to be some contrivance for sheltering half-bardy greenhouse plants
late in the autumn, without crowding them into houses thus early. Iate in the autumn, without crowding them into houses thus early.
The Chrysanthemums and Pelargoniums ought now to occupy the best places here, and more hardy plants would be much hetter m
pits, where rain and frost could be kept from them till the Chrysanthemums are nearly over, to make room for them in-doors
Consmrvatory. - "After your sweeping charge against green-
houses how do you define a conservatory "asks a correspondent. I houses how do you define a conservatory asks a correspondent.
Would rather dig an acre of ground than try to answer this question its shape or size may be, where all or nearly the whole of the plants that flower on the establishment are kept during the time they are
in bloom, is, in the language of gardeners, a conservatory. Youz in bloom, is, in the language of gardeners, a conservatory. Youz
cannot manage such a house any das 11 the rear as your would a greenhouse, and here hes the difficulty in managing yinnts where
there is hut one smalf housc. From this time tul next March a conservatory must be kept close, more or less, to suit forced plants,
\&cce, while a greenhouse cannot have too much air whenever the Pather is fine.
PIrs AnD Frames.- Now is the time to pot all the Cape Irin dacese, with others from Mexico, Chili, \&ce. \&cc, the whole order
delights in light, open soil. The stronger Gladioli, and the like, are delights in light, open soil. The stronger Gladioli, and the like, are
much bencited by the additun of one-third rot ten leaf-nould, the rest peat and lichlit loam, in equal portuons, with a l.ft,e sand, and of loam and san, in equal proportions. Mirs Loudon's heautifin excel in the cultivation of these charming plants. Tropæolurns, be potted, and those first potted of these will now have the pots pretty well filled with roots, and may therefore be brought to a glass
frame, to get up the foliage and flower-stems slowly, when a smart forcing will not much injure the buibs.
Grafring House-Plants.-lf you commit yourself in a hurry ynu may repent at your lesure. A few days after I said in this
 I might hate liad plenty of stocks of the .I. hetermi 1 Ila to graft these Frow on, it beng one of the best of then fir that purpase. fowered by Mrs. Wray, and the Baringtonia speciosa, last summer, by Mr. Dodds, gardener to Col. Baker, of Salisbury, the next plant
to flower will be Bignoniacous plant, from West Africa, in the tions under the name of Spathodea campanulata.
FLower-Garosn.- People are now too busy taking up such of their flower- gardemng plants as the may sant another jear to th.nk
of auythine else at pirsent. but I have seen some people makng I shall be excused for saying there is nu reinon for disturtung order and neatness even
Gardens, Ipswich.

As usual, a host of letters have arrived too late for answers this week.

\section*{NEWS OF THE WEEK.}

The Government proclamation against the Repeal Meeting at Clontarf has been followed up by proceedings against Mr. O'Connell-the leading Officers and Members of the Repeal Association-and several others who took an active part in the recent demonstrations in the provinces.
On Friday last Mr. O'Connell and the other parties included in the indictments were called upon to enter into recognizances to attend in the Court of Queen's Bench on the first day of next Term, to answer the charges to be then preferred against them by the] Attorney-General.
These recognizances were accordingly entered into on the following day before Mre Justice Burton, and the depositions haye since been published. The principal charge is one of conspiracy, the proceedings at the Mullaghmast meeting forming the chief subject of the prosecution. The to seduce the Army and Navy from their allegiance to the Throne-with conspiring to establish Courts in order to supersede the ordinary and legal Courts of Justice, and pretence of seeking for a Repeal of the Union. Mr. O'Connell, it is said, intends to defend himself in person, and Mr. Sheil and other leading advocates of the Irish bar have been engaged for the defence of the other perBons charged. The Repeal Association held its usual
weekly meeting on Monday notwithstanding the rumour that Government intended to suppress it. Mr. O'Connell addressed the meeting at great length. He promised to abandon the use of the word "Saxon" as applied to Englishmen, as it was calculated to give offence; and
declared that he was ready to accept a federal Parliament, to procure for themselves the management of their own local and interual affairs, leaving matters of national importance to be legislated upon by the representatives of claim "countries in the Imperial Parliament. He disaccept these terms, for by so doing he considered that he not only took away all argument from his enemies, but followed a course to which the Association had already pledged itself, by the admission of several Catholic prelates applied to the establishment of Repeal only so far as it people both in Dublin and the provinces continue tranquil, and the peace of the country has not been disturbed by a
single outrage or act of violence. Government single outrage or act of violence. Government, however,
continue to strengthen the military force and to increase the fortifications of the capital.
In France public attention is chiefly taken up with the affairs of Ireland, and it is neither uninteresting nor uninstructive to observe the comments of the various journals on the late events. Their ppinions are of course given in
accordance with their different political views, but all seem to consider that the progress of the Repeal agitation has received an important check.-From Spain we have young Queen, and of the preparations for the approaching meeting of the Cortes. The session is to be opened by a sinaple ordinance without any speech from the throne, in remove all delay or obstacle to the proclamation and to Queen's majority. The affairs of Barcelona continue in pectame state, but in the other insurgent cities the prosPortugal an attempt has been made to get up another insurrection in the absence of the Queen on a provincial tour, appears to be considered of slight importance. - From the United States we have the particulars of a remarkable ing at Relivered by Mr. Webster at the agricultural meetmercial Rochester, in which he dwelt at length on the commercial relations with Great Britain, and indignantly denounced the doctrine of Repudiation. This speech has interest in this consation in America, and will be xead with

Windsor. - The Queen and Prince Albert remain at Majesty and the Prince attended divine service in the Private Chapel of the Castle; in the forenoon they took morning plantations of the Home Park. On Manday nade in the grounds round the Castle, accompanied by the Princess of Hohenlohe Langenbourg; in the afternoon
her Majesty near Bagstyot. The saddle-horses had been sent to \(S\) Rapley, and the Royal party on arriving at Swinley quitted the Carriages and rode on horseback round the grounds. The returned in carriages to the Castle. On Tuesday her Majned in carriages to the Castle. On Tuesday her
on hot leave the Castle, but the Prince rode out Prince Albert hunted with hia harriers for the first time
this season. The meet was at Mr. Mason's farm, a
Upton. The Prince had two Upton. The Prince bad two excellent runs, and returned
to the Castle to luncheon. In the afternoon her Majesty and the Prince took exercise on horseback in the riding
and achool. On Thursday morning they walked out in the pleasure-grounds; the Prince afterwards shot over the
preserves in the Great Park, and in the afternoon the preserves in the Great Park, and in the afternoon the
Queen and Prince took equestrian exercise in the ridingschool. Her Majesty and Prince Albert intend to honou the University of Cambridge with a visit on Wednesday Sir H. Wheatley and Col. Malcolm. Sir Wm. Follett, the Solicitor-General, arrived at the Castle on Wednesday morning, and after an audience of her Majesty immediately returned to town. His Serene Highness the Prince from Witley Court, the residence of the Queen Dowager His Serene Highness visited the Pantechnicon, and afterwards proceeded by the Great Western Railway to Windsor Castle, on a visit to the Queen. Her Royal Highness the of the Duke Gloucester has left Woburn Abbey, the sea at Witley Court. The Marchionesses of Westmeath and Ely have been appointed first and second extra Ladies of Royal expected to ress Prince Alexander of the Netherlands ensuing week, from the North. After attending the annual gathering at Inverness, his Royal Highness went to Drumhe remastle, on a visit to the Duke of Buccleuch, wher burgh s to Alnwick Castle, the seat of the Duke of Northumberland. The Prince will proceed from thence Worcestershire, on a visit to the Queen Dowager
Arrival of the Duke de Bordeaux.-His Royal High having landed at Hull on on Friday from Germany travelling under the titie of Count Chambord. His Royal Highness during his brief sojourn at Hull was treated with every mark of respect. On leaving for York on the Hull and Seiby railway, Mr. Broadley, M.P., and several at the terminus, and showed his Royal Highness every attention. The Prince remained until Sunday at York, and during the previous day was engaged in going over Museum, and went to the theatre in the evening. On Museum, and went to the theatre in the evening. On
Sunday his Royal Highness and the noblemen of his suite departed mass at the Roman Catholic chapel, and then departed for Durham, on their way to Scotland. It was remarked that on the Duke's carriage there was not any
heraldic emblazonment of the Bourbon arms, but merel the initial "H."" surmounted by a regal crown. His Royal Highness arrived at Durham in the evening, and stayed there for the night. On Monday norning his
Royal Highness visited the Cathedral, and afterwards left Ror Sunderness for sunderland by railway to witness the mining operations in that district, and thence proceeded to Newcastle
and Edinburgh, where he arrived on Thursday. The and Edinburgh, where he arrived on Thursday. The
Prince was cordially received in the Scottish capital, in Prince was cordially received in the scottish capital, in
which he passed his youthful days of exile, having left it at 10 years of age. If the weather permits, his Royal Highness, it is understood, will make a tour in the Highlands, and then visit the principal towns of England prior to his arrival in London. The Prince is of fair complexion, not above midule stature, bears a striking resemblance in his
features to Louis XVI., and has the appearance of being beyond his actual age. He was born the 29th September, 1820 , and consequently has only attained the 24th year of his age. In 1830, he quitted France with Charles X. and the other members of the Royal family. He still two years ago. His Royal Highness on Sunday attended Divine service in the Catholic Chapel in Edinburgh: His Royal Highness is expected at Alton Towers, on a visit to the Earl of Shrewsbury, on the 4th of November, where several
to meet him.
The Grand Duke Michael.-His Imperial Highness and suite arrived at Lancaster on Thursday evening. His who had preceded the Grand Duse After breakfast, relays of horses were ordered, when his Imperial Highness and Baron Brunow resumed the journey to Carlisle, where they dined, and remained for the night. On the following morning the Grand Duke and party left for Glasgow, and passed through that city in the evening on their way to Buchanan House, the seat of the Duke of panied by the Duke and Duchess of Montrose, Baron Brunow, and the visitors at the castle, went to Loch Lomond, "the pride of the Scottish lakes" as it has been frequently called. The Duke's pleasure boats were a attendance, the boatmen being attired in the picturesque costume peculiar to the country
The Church. The death of the Bishop of Lichfield has created a vacancy on the Episcopal Bench. It is rumoured that either the Rev. Dr. French, Master of
Jesus College, Cambridge, or the Rev. D.. Wynter, ViceChancellor of Oxford, will be his successor. The canonry in St. Paul's Cathedral, which became vacant by the decease of the Rev. J. The has been conferred on the Rev. Thomas Dale, Vicar of St. Bride's. The preferment antil the present time was worth 23000 . per annum, but its revenue under the Church Reform Bils is now reduced
to \(1000 l\). per apnum. Prebendal stalls in the cathedrals to 1000 l . per apnum. Prebendal stalis in the cathedrals
of Llandaff and Wells, and the vicarage of Penmark, Glaof Llandaff and Wells, and the vicarage of Penmark, GlaDr. Casberd. The Provost and Fellows of Oriel College,

Oxford, have presented the Rev. Mr. Eden to the vica. rage of St. Mary, Oxford, with. the chapelry of Littlenore, vacant by the resignation of the Rev. Mr. Newman. The Army.-The Queen has been pleased to confirm the finding of a recent Court-martial at Chatham, sentencing Lieut. John Piper, of the 26th Cameronian Regiment, to be cashiered for being druak and absent from duty, and for having obtained from the paymaster of the Invalid Depot at Fort fitt the sum of 402., or thereabout, stating it to be for the use of the 26th Regiment, and signing a receipt to that purport, whereas he had no authority to receive such money from the Colonel of the regiment.-On Sunday a notice was issued by the Lords and other Commissioners of Chelsea Hospital announcing hat any out-pensioners who may hereafter attend any meetings for the purpose of effecting a Repeal of the Union will be liable to the loss of their pensions
-Parliamentary Movements.-The election for London will take place this day, and the resultiwill be formally declared on Monday. The Hon. E. Bouverie, second son of the Earl of Radnor, has come forward as a candidate for Kendal, in the Liberal interest. Lord Morpeth was applied to by the electors, but declined. It is not known whether any Conservative candidate will come forward.
Order of St. Michael and St. George.-His Excellency the Hon. Patrick Stewart has been privately made a Knight Grand Cross of this Order, at the Palace of was specially appointed for the purpose by the Queen. Armorial Bearings.-According to a recent decision, the impression of a thistle on a common pencil-case, with the motto "Dinna forget," is chargeable as armorial bearings when used, and subjects the party to a duty of \(2 l .8 s\).

\section*{- Foreign.}

France.- The proclamation of the Lord Lieutenant of Ireland prohibiting the intended great meeting at Clontarf is the chief and almost exclusive topic of conment in the Thds the first inal. The Journal des Debats, which stands the frrst in importance, professing to forget its own "The English journals already reproach O'Connell severely with shamelessly giving way after so much severely with shamelessly giving way after so much
threatening and provocation on his part, and it must be allowed that they have ample scope for doing so. Mr. Connell, who is as good a lawyer as any one, seemed lately to comprebend that he was placing himself more
and more within the power of the law, and his reiterated and more within the power of the law, and his reiterated
protestations of respect for the constitution sufficiently protestations of respect for the constitution suficiently
testified bis apprehensions. As long as he did nothing but talk, he was allowed to go on-he was acting legally, the people having the right of meeting to petition. But lately the furthest limits of the law were attained, and the Government considered that they were overleaped. The proclamation of the council contains, as may be per-
ceived, all the elements of an indictment. If we make this remark, it is because it is probable that the measures taken against Mr. O'Connell will not stop there, and that
tale the Governmen Oill have wil not stop there, ansonally before the ordinary tribunals. A thonaand complications might arise from this event. In all cases, convinced as we are that the repeal of the union is an insane dream, and that the immense disproportion of forces renders desperate every attempt at a struggle on the part of IreLand against England, we cannot remember but as a fortunate event anything that may stop both in the path in Which they are proceeding. In whatever manner the English Government may succeed in restoring material order in Ireland, it must not suppose that it can reestablish moral order there by force. It may put down an insurrection by arms, but it will not extinguish by such means the agitation that lies at the bottom of men's hearts. It is impossible for Ireland to remain in her present state, and we have frequently severely censured Mr. O'Connell for the blindness which was leading him onward in a path the most fatal to the cause which be pre tended to be so anzious to serve." The Globe, Ministerial paper, speaks in favour of the measures of Government It says :-" "We were right in saying that the farce which Was being performed by O'Connell in Ireland was drawing that conclusion. The English Government has found juggling tricks of which the unfortunate Irish have been the victims. Apparently O'Connell has not yet recruited bis army of three millions of repealers, and no less a fore was sufficient to enable him to make a resistance. Con sequently he has fled at the first attack of the Ministry It remains to be seen whether he will not personally have an account to settle with the Government." The Chave tution the leat violent of the Opposition Consti"The Enolish Ministry bas at length taken paci step relative to Ireland. The determination of the Lord Lieutenant is exceedingly grave. It is well known what respect English statesmen profess for the right of all citi zens to meet and deliberate on public affairs. The danger must have appeared exceedingly manifest, or the political interest exceedingly pressing, to induce Sir R. Peel, after having allowed O'Connell to go on up to the present time to act in so energetic a manner. The coolness with which \(\mathrm{O}^{\prime}\) Connell took the mater, and his immediate obedieuce to an order he deciares to be illegal, are the objects of the remarks of the eagisa press. It declares that Connell is at bottom delignted with what has bappened, aud that the proclamation extrates him from the impossibilities which each day were increasing on his path. It is certain, that, notwithstanding his inezhaustible fecundity, the agitator had come almost to the end of his expressions, and that the new theme thus given him will vary a
little the repertory of hiselspeeches before the Corm Ex-
change auditory. But the difficulty for \(\mathrm{O}^{\prime}\) Connell will always be to pass from words to acts, from speeches to
effects, and this difficulty remains the same." The National affects to believe that the vigour of the English Government has resulted from the advice given to Queen Victoria by Louis Philippe, at their late meeting at Eu! The Courrier Francais takes a view more favourable to the Irish agitation than many of the other papers, and regards Mr. O'Connell rather as a moderator than an well known, writes in the same style:-" This commencement of hostilities between Ireland and the English Then, as now also, Mr. O'Connell advised the people to submit, assuring them that the agitation for Repeal would changed the direction of his guns. Will the struggle which has commenced like thar of 1831, finish in the same way as that did? This is a question which wre wil however, that there is not less excitement in England than in Ireland. In the one country there was a determination to proceed to extremes in the way of repression in the other men were The news from China is angothe subject of comment, and most of the papers anticipate immense advantages to France from the opening of the Chinese market. The Moniteur contains the official returns of the indirect taxes during the nine months of the present year ending on the 30 th ult., put forward appaenty amount to \(557,093,000\) f. (or nearly \(22,284,000 l\). sterling), and exhibit an increase, as compared with the receipts o the corresponding period of 1841, of \(35,652,000 \mathrm{f}\)., and over the last three months of 1843 . 9 7 7,267 , those of 1841 , and \(3,355,000\) f. over 1842 . The receipts of the registry duties figure in these returns for
\(153,982,000\)., the stamp duties for \(2 \pi, 612,0006\); the 153,982,000f., the stamp duties for \(2 \pi, 612,000 \mathrm{f}_{\text {f }}\); the Customs for 78,921,000f. ; the import duties on colonial sugars, \(27,146,000 \mathrm{f}\), on foreign sugars, \(5,145,000 \mathrm{f}\); ;
on
domestic sugars, \(4,902,000 \mathrm{f}\). \(;\) duties on salt, \(43,945,000\). domestic sugars, \(4,902,000 \mathrm{f}\); ; duties on salt, \(43,945,000 \mathrm{f}\);
on liquors, \(71,704,000 \mathrm{f}\).; on public carriages, inland navigation, \&c., \(28,043,000 \mathrm{f}\). ; on the sale of tobacco \(77,093,000\) f.; of gunpowder, \(3,614,000 \mathrm{f}\); postage of letters, \(33,653,000 \mathrm{f}\). ; mail coaches, \(1,531,000 \mathrm{f}\). ; mail packets, 732,000 . The augmentation bore principally on th registry duties, customs, sugars, liquors, tobacco, postage, and stamps; and the items on which there was a falling of were the duties on foreign sugarb, salt, gunpowder, quarter were-lst quarter, \(183,190,000 \mathrm{f}\); ; 2 d quarter, an excess in the latter of \(3,529,000 \mathrm{f}\). over those of the first; and a diminution, as compared with the second, of create the belief that prosperity was constantly increasing in France. Nevertheless it is stated that extreme distress presses upon most of the manufacturing and comd'Aumale left Paris on Saturday, for Italy. After visiting Turin, Genoa, Leghorn, Florence, Rome, and Naples, he is to proceed to Malta, whence he will repair to Africa and assume the command of the province of Constantina, Laval, of the ultra-Liberal Deputy, M. Ledru Rollin who lately volunteered to pay a visit of sympathy to Mr . O'Connell, fill many a column of the Opposition prints, Which also bestow great attention on an article of the Bien Puble, a journal recentiy estabiished al Macon by M. de Lamartine, for the diffusion of his opinions and
the promotion of his political views. In this articie he the promotion of his political views. In this articie he exhorts his new allies of the Democratic party to silence
their discord and unite to subvert the Cabinet in the next session, on the questions of extension of the electoral franchise and the fortifications of Paris.-The Council General of Corsica passed a resolution on the 9th inst, to the effect of repealing the law which banished from France
the family of Napoleon, improving the harbour of Bastia, the family of Napoleon, improving the harbour of Bastia, and establishing a military port in the gulf of Ajaccio.
-A superb block of Carrara marble arrived a few days ago at the Palais de l'Institut, in Paris. It is destined for a statue of the Queeu of England, for the Museum at Versailles or the Château d'Eu.--The Journal du Havre rublishes the following notice from M. Prevost, notary to the society :- "The shareholders of the society established for the salvage of the Télémaque are informed that the question is now completely terminated. The cargo is deposited on the quay of Quillebœuf-it consists of 52 also been slipped in the Télémaque, the remnants of which only were found, and it is evident from inspection of them that they contained nothing but tallow and oil. Until the 23d of September the bull of the vessel was encummade, gave a passage to the curreat, and the high tides at the close of the month sufficed to clear it entirely. Then the most minute search was made, and a certainty was acquired that the opinion relative to the existence of
treasure on board the Telemaque had been altogethe chimerical. A shapeless hull is all that remains of the vessel. The maritime authorities intend shortly to order shareholdere cargo and remnants of the vessel, and the proceeds.
Spain.-We have accounts from Madrid to the 10th, on which day the birthday of the young Queen was celebrated with enthusiasm. Her Majesty laid the fotudationnatoas" of the Paluce of Maje Cortes, and re-
viewed the troops of the garrison. At nigbt the Capital was illuminated. M. Aguilar, the Minister of Spain in Lisbon,
had been superseded: the Government charged him with had been superseded : the Government charged him with
having evinced too much apathy in the diplomatic negohaving evinced too much apathy in the diplomatic negonerce between England and Portugal. The Ministry were neglecting nothing to insure the opening of the session on the 15 th inst. Circular letters had been sent o all the deputies, requesting them to repair forthwith to Madrid, to enable the Congress to be constituted with the least possible delay. The session is to be opened by a simple ordinance, without any speech from the throne. The Cabinet considered that a speech would necessarily be followed by the presentation and discussion of an address, the proclamation of the majority of the Queen. Each Minister will confine himself to lay before the Cortes an provision Gounstration since tuted, will proceed to declare the Queen of age. The elections were almost everywhere terminated. Barcelona and Canary Islands had not yet arrived ; and Burgos, Lerida, and Salamanca, will have to proceed with new lections. According to Ministerial calculations, out of de 187 deputies elected there were 30 whose opinions belonging to the Progresiserados, between 60 and Francisco, Centralists, Republicans, \&cc. The Chamber, composed of 249 members, seldom reckoned more than 180 present, so that the Parliamentary party expect to obtain a considerable majority. The Barcelona journals state that no change had taken place in the situation of affairs there. The Junta had notified to the French Consul that it might be at any moment compelled prevent anybody from entering or leaving the town, and that all strangers must therefore quit it within twenty-
 emoned to Barcelonetta. Barcelona had been reduced to a dreadful state siace the failure of the insurgents in
their assault upon the citadel, in which they lost 80 men killed and 160 wounded. Immediately afterwards Miont juich and the citadel opened a simultaneous fire upon the juich and the citadel opened a simultaneous fire upon the
city, and in a few hours did more damage than heretofore after firing as many days. On the 4th the rebel Governor of Atarazanas presented himself before General Sanz, at Gracia, with 40 men belonging to his garrison. Horse flesh was becoming scarce and dear in Barcelona, and all ordered the door of every. stantly left open, for the purpose of affording a ready refuge to passers-by from the cannon-balls and shells of Montjuich and the citadel. In consequence of this order the patulea bad commenced plundering all the richly-furnished houses. The insurgents had barricaded and cut dry ditches across every stree,, and the hospitals and bat or medicines. Order had been restored at Granada and Almeria. The latter was occupied on the 5th without any opposition by the Government troops. General 5 th. Troops were to leave the capital to reinforce the army of Arragon, where the insurgents, it appears, are not so much discouraged as described by che of 6000 men was already organized in Saragossa, and that the moment when double that number should be under arms, the Cenralists were determined to commence offensive operations brated at Madrid with considerable pomp in the Church del Carmen. The Bishous of Valencia and Cordova officiated on the occasion. The pall was held by the Duke of Osuna and Hijor, and all the nobility and the élite o the society of Madrid attended the ceremony
Portvgal. - The Lady Mary Wood steamer bring the 12 th instant. This packet was detained a day by the unusual occurrence of a fog of such density at Gibralta that it was impossible to see at the distance of a fer yards; it lasted or full 11 A.M. on Monday-and several small craft were injured by running foul of each other. At Lisbon the absence of the Queen and her leading Ministers had been revolution. Attempts had been made to corrupt the
army, and some officers detected in tampering with the soldiers had been placed under arrest in the Castle. merchants of Lisbon were hopeless of a favourable resul to the tariff negotiations, and the clearing of goods at the Custom-house, which had been in a great degree sus retiring to the north of Scotland was held to be ver significant of the failure of the Duke of Palmella's mission The Queen and Princes are in excellent health, and continue ourney in Alemt dissatisfaction manifested on the part of those who have been called upon to contribute towards the mending o appears that this new impost, which 18 characterised as a voluntary donation, has been enforced and refused in many instances.
Germany.-The camp of the 10th corps of the Ger man confederacy, near Luneburg, was dispersed on the tary music, on a scale of unusual grandeur, had been performed during more than a fortnight, to the satisfaction of all the illustrious persons assembled there. The 9th insty had distributed a considerable mumber of deoo-
rations of the Guelphic Order of Knighthood to the offiHighness the Duke of Holstein Augustenburgh, heir apparent to the Duchy of Holstein, the question of whose succession seems at present to form one the leading topics in the political circles on the Continent.- Considerable excitement prevails in Bohema, in consequence Prince commerin added that a new hariff was again raised, and it was even uncertainty prevailing on the subject had created a considerable stagnation in all commercial transactions. The warehouses were filled with goods, and no buyers to be 10und. It was feared that a crisis was about to take place that rial Court, in a private audience, had formally demanded the hand of the Archduchess Maria Carolina (born FebruEugene Emanuel beh Sardinia Carignan (born April 14, 1816), and that the betrothment will take place in the course of this month.-In the kingdom of Saxony no less han 1.54 periodical publications appear dong langus and in French, one in English, and the rest in German. At Leipsic alone the number issued is 76.-We learn from Carlsruhe that the prosecution against M. Haber for his de Gape has bee duel between Minal He accused of having provoked the duel, but of this charge he was Gaving provoked the duel, bat of tharge he was taking measures to facilitate the flight of M. de Werefkin, e he survived the rencontre, was, however, prouounced upon him.-The King of Prussia has presented to Mr. Britton a " Goid Medal of Merit," as a compliment for his numerous literary works on antiquities and the fine arts; but principally in acknowledgment for his Dictionary of the Architecture and Archæology of the Middle Ages
Italy.-Advices from Leghorn of the 6th inst. state already pronounced several sentences, none of which, howver, had been carried into execution. An insurgent band had made iss appearance near Ancona, and a report was current that serious attempts at insurrection had heen made in Naples, Sicily, and the Abruzzi. The disturbances in the latter had even assumed an alarming aspect. lim
Sardinia and Piedmont the public mind was much agitated. Sardinia and Piedmont the public mind was much agitated King Charles Albert had been placed in a formidable state of defence. The Pope left Rome on the 2d for Castel Gandolfo, where he intended to reside a few weekso Previous to his departure his Holiness had ordered the execution of a clegyan, named Abbo, who had been capitally convicted of the murder obis nephew. He was executed on the 4th in the Castle of San Angelo, in presence of the garrison. A strange report has appearech in the papers of an attempt to assassinate the Pope. It is audience of revolutionury physician had demanded an fred a pistol in the court of the Vatican, when he was momediately arrested. A loaded pistol was found on himo. Greece.-Letters fromAthens of the 30th ult. state that tranquillity prevailed tarough the counatry, and that everywhere the people were preparing for the elections, which were to commence on the lst inst. The 30th belig the Majay of King Otho, a grand Te Deum, at which he The English and French Ministers, the only diplomatists present at the ceremony, were loudly cheered by the had arrived at the Piræus. The Princess of Oldenburgh \({ }_{\text {s }}\) the Queen's sister, had embarked for Germany.
Russia.-Accounts from Warsaw state that the exeitement caused by the rumoured attempt on the Enuperor of Russia, and of which he was first informed by Coun who had attended him to Warsaw, had afforded mucls amusement to the Emperor, and that during his whole tay in the Polish capital be had always driven at a slow notwithrough the crowded streets in an open carriage, Polish officer at Warsaw, who had followed the examp of his countrymen at Paris in endeavouring to spread and. illustrate the report, was the same erening sent to Siberid The papers state that the numerous bodies of troops as present assembled at Warsaw and the neighbourhood are to forma the garrison of Warsaw ; the others will be rent to join the army in the south. The late events in Seavia, th misis which is imminent in Moldavia, the revolt explent in Bosnia, and the revolution in Greece, are all caieuated to induce the Emperor Nicholas to concentrate imposing Tiflis of the countries of the Lower Danube, Letters from of the Transcaucasian provinces, had received despatches. of a most alarming nature from General Budburg, commanding the Russian forces on the nouncing, it was said, amongst other facts, the sarprise and capture by the Circassians of a Russian fortress on the Black Sea
Turkey and Persta.-The Levant mail which has. arrived this week, brings. dates from Constantinople of the 27th ult., Alexandria, 26 th, Smyrna, 29th, and Malte, \({ }^{5}\) the inst. On the 20 th ult. the Sultan repaired in state to the medical school of the Galata Serai, and was present at an examination of sixteen of the papis, the frst waddtiom to their diplomas, wowe invented, eack of them, with
the green velvet mantle of honour, worn by medical men in Turkey. According to the testimony of competent judges, they had made considerable proficiency in cheprofessors, the foundation for their studies having been laid by a knowledge of the French language. From Malta we learn that the Medea was in readiness to convey to Several officers belonging to the flag-ship have been appointed by the Admiral to join it. The Medea will pro. bably lay all the time at Macri; but, as the unhealthy be attended with any loss of life, as was the case on the last occeasion.

\section*{India. - Lieut. Crawford, one of the passengers} wrecked in the Memnon steamer, has sent an account of the accident to the Times, from which we extract the fol-south-west monsoon blowing strong; the direct passage across was attempted for the first two days, when the ship's course was altered to the southward, and we bad a very good run for the season of the year. On the 1st of mugust at noon we were somewhere between stand of wind at the of Cape Guardafui, it blowing a strong gale Iffind at the time. About 1 was just ashore. I had but just time to get on deck before the ship struck, and she instantly became a total wreck. The masts were cut away, and the hull having forged very close ashore, an officer of the ship managed to get to land parted, and the communication was consequently him parted, and the communication was consequently lost. Everybody elae remained by the wreck until daylight, When a hawser was got on shore and made fast by the party there, and all the crew and passengers safely landed, the number of 160 , with about 16 days bread and nome arms and ammunition. Some papers, I see, talk about cases of treasure having been saved: I do not believe there The any treasure on board--certainly bone came ashore. me mails were entirely lost. A particular account of our adventures would occupy too much space of your ve manaabled to get to a place called Hulloolah, some 40 miles from the place of the wreck, where we lived on very short allowance until the 17th of August, when Captain Powell got an Arab boat to attempt the voyage to Aden, sending in her the first lieutenant, a midshipman, and three of the Memnon's crew. He permitted any passengers to go in her who chose to run the risk of such a myself, availed ourselves. We sailed on the 17 th, and Ifter a rather hazardous passage reached Aden on the 25th. along the African coast, on the 23d of August, we fell in with and boarded the wreck of the ship Captain Cook, of crew had been taken off some days before by a brig and carried to Aden. On our arrival at Aden, Capt. Haines, the Political Agent, immediately despatched assistance to the rest of the crew left at Hulloolah. The Hindostan arriving at Aden on the \(3 d\) September, Lieutenant Southey and myself availed ourselves of the opportunity, and came on arrival of the ensuing Bombay steamer, which unfortunately is still due. The following is a list of passengers on board the Memnon :-Miss Dalzell ; Lieut. E. W. Agar, 3d Bombay Native Infantry: remained with the crew at Lieut. Leeson, Bombay Grenadiers ; Mr. Garrett, midShipman, came 48 c . Mout Crawford Boyb 48 th Madras Native Tnfantry; Lieut. Crawford, Bombay Engineers, came in the bo
and took a passage in the Hindostan to Suez."
China.-Our private letters mention that the barracks in Hong Kong had proved to be extremely unhealthy, both to officers and men, and were reported to be con demned by Lord Soltoun. Several murders had been committed on the coast. A small vessel, supposed to pirates, and the passengers had been martacked by English doctor was among the victims. It is believed that this vessel was taken by collusion between the pirates and crew.
United States.-The Royal mail steamer Caledonia
arrived at arrived at Liverpool on Tuesday, after a very stormy voy-
age of 16 days from Boston, which she left on the 1st inst. During the greater part of the voyage strong gales and squally weather, with heavy head seas, bave prevailed, and continued up to her reaching the Mersey. The longexpected Repeal meeting of delegates from the several states of the union has at length been convened in New York, and proved a failure. During their session advices were received of the adjournment of Parliament, without followerse anything to concliate denounce the Queen for her remarks respecting Irish affairs ; and this is all they did except publishing an address and appointing a national committes of five, with opinion, call another convention whenever, in their 21 st inst, the fair of the New York State Agricultural Society was held at Rochester, and was probably the most interesting exbibition of the kind ever witnessed in America. The number of persons present has been variwere Ex-President Van Buren, Ex-Governor Seward, Governor Bouck, of New York, the Hoa. Daniel Webster, \&c. Mr. Webster addressed the meeting at great length, indignantly denouncing the doctrine of Repudiamercial policy with England, which he had previously dis
cussed at Baltimore-expressed a wish to see the English Corn-laws relaxed, so as to admit of United States pro-duce-and dwelt with satisfaction upon the new and of the ang "provision" trade with Great Britain, the resur diation, Mr . tariff in this country. In regard to Repu contracted debts abroad is that of Pennsylvania, the richest state in the union in my judgment, perhaps Kought to excep New York, but taking her mineral, commercial, and agricultural facilities into consideration, I don't know on the face of the earth, excepting England, a richer state than the state Seward) Py Malia. ('Take off her debt,' said Governor her debt. Her debt! What can be the debt of a state like Pennsylvania, that she should not be able to pay itthat she cannot pay it, if she will Bolland's debt is ingrafted upon her very soil ; she is bound down to the very earth by it; and it will affect England and Englishmen to the 50th generation. But the debt of Pennsylvania-the deb of lilinois-the debt of any state in this Union, amounts not to a sixpence in comparison. Let us be Americansbut let us avoid, as we despise, the character of an acknowledged insolvent community. What importance is it what other nations say of us, or what they think of us, if they gentlemen, I belong to Massachusetts; but if I belonged gentlemen, I belong to Massachusetts ; but if
to a deeply indebted state, \(\mathrm{I}^{\prime} \mathrm{d}\) work these ten fingers to their stumps-I'd hold plough, I'd drive plough, I'd do both, before it should be said of the state to which belonged that she did not pay her debts. That's th true principle; let us act upon it; let us go it to its our comforts; if it costs us our farms, let us mortgage our farms. But don't let it be said by the proud capitalists of England, 'You don't pay your debts. You
republican Governments don't pay your debts.' Let us say to them, \({ }^{\text {' }}\) We will pay them-we will pay them to the uttermost farthing.' That's my firm conviction of what we ought to do. That's my opinion, and wate can't drown, fire can't burn it out of me. If Americ owes a debt, let her pay it-let her pay it. What I have is ready for the sacrifice. What you have I know would be ready for the sacrifice. At any rate, and at any
sacrifice, don't let it be said on the Exchanges of London or Paris, don't let it be said in any one of the proud monarchies of Europe- America owes, and can't or won't pay' God forbid! Let us pay-let us pay. Let principal and interest. Add it all up, and take your money.' Let us say to them, 'We are not your slaves will pay: produce your bond-here is your money-take it." (This was followed by repeated and deafening cheers, And until that is done, my friends, you and I cannot feel as if we could draw a free breath. I don't want to be indebted to the capitalists of Europe; if we owe them any thing, let them produce their bill. If my professional earnings are of any worth-if they are wanted-if my farm is wanted-if the conveniences of life for myself, for my wife and children, are wanted, so far as I am concerned, so far as America is concerned, come and take them. That's the right ground to take, and let us take it. In the north and south, in the east and west, if there live any who are descended from the fathers of the revolu-tion-any in whose veius runs a drop of their blood, and them rise up and say, that if we owe Europe, Europe shall be paid. I wish to breathe the breath of an independent man. A citizen of a pruad and honoured country, I abhor the idea that my daily happiness is to be marred by the consciousness that anything disgraceful hangs on the country or any part of it. Let us, gentlemen, be proud of our couna just and debt-paying nor that country the character of the nations of Europe that the United States of America -the nation that had its birth in the glorious scenes of 76 - the country of Washington-the example and great type of all modern republics cannot or will not pay its debts?" -The 59th annual convention of the Episcopal Church had been held at New York, and had been the ccasion of much altercation between the High Church and Evangelical Clergy on the subject of Puseyism Something like a charge of heterderdoull, but it fell was preferred aga it . the ground. The sittings of the Convention were stormy in the extreme. rida, which had thatroyed a consurten lives were lost, and property to the amount of 250,000 dollars destroyed by this catastrophe. The excitement of the state elections had subsided. Mr. Macready, who made his débút at belh, had been most enthusiastically received, and the critics are loud in his praise. Mr. Horsley Palmer, the well-known merchant of London, who arrived at New York by the last packet, is said to have determined to ment has taken place in Philadelphia in relation to the Oregon territory. The Sessions Court-house has been filled to hear Mr. P. A. Browne enlarge upon the American claim to the Oregon; and he so convinced the etizens of its justice that they passed resolutions_ calling on the United States Government ", remove all foreigners mittee of respectable citizens to correspond with other committees in all the states and cities, so as to produce united and powerful action on the United States Govern \({ }^{-1}\)解 Canadian Parliament was to meet in Kingston on the

28th inst. The forests of Beauharnois have been ravaged by a dreadful fire, extending many miles, and destroying numerous houses and farms. There had been a riot at St. Pie, Lower Canada, owing to some Baptist missionaries having been attacked by the Catholic population. Forty rioters were arrested, and peace restored. Five thousand men are now employed in enlarging the Welland Canal. The Court-nouse at Ottawa, with all the public documents, has been destroyed. It was rumoured that the British North American fleet is to assemble at Halifax, where 21 men-of-war are expected.

The Weather.-The weather during the last week has undergone armaterial change, and winter has every appearance of having thus early commenced. On Satur day the wind which had for some days been west and south-west changed to north-west, and the temperature, as the day advanced, gradually became colder. At day break on Sunday a heavy fog pervaded the atmosphere, by which the sun was obscured, the coldness increasing, and the thermometer varying from \(33^{\circ}\) to \(44^{\circ}\), with the wind due north. At twelve o' clock the thermometer stood at duri and blorty afterwards a sharp frost commenced during which the mercury rapidly fell, and by three \(0^{\circ}\) clock stood as low as \(24^{\circ}\). So intense has been the frost at night during the week, that the ponds round town So early coated whil ice of considerable thicknes. for many years, and is taken as a presage of an early and severe winte
Court of Aldermen.-At a Court held on Tuesday, Mr. the took his s-lected alderman of Cripplegate S. R Goodman was elected clerk to the Lord Mayor in the room of Mr. Hobler, resigned. The Court then resolved, in consideration of Mr. Hobler's having filled the ollice for 55 years, that a yearly pension of 6400 ., being the full amount of his salary, be paid to Mr. Hobler for life. At the Court of Common Council on the same day, the present Lord Mayor (Humphrey) was appointed Gover\(W_{\text {ood }}\)-The scrutiny of the voters at the late election of an Alderman for Bread-street Ward concluded on Wednesdoy after having continued for several dayb, during which the number of votes disallowed on both sides was so considerable, that the Lord Mayor expressed his belief that the affair its conclusion would afford a counterpart of the famous Kilkenny cats, which fought until nothing but their tails were left. On Wednesday the counsel on the part of Mr. Lawrence declared that it would be useless to pursue the inquiry any further : as were the scrutiny to be protracted to the utmost length the termina lion likely leave Mr. Hurhes in majority or perhans two votes. Under these in cumst they would withdraw from the con test with the understanding that Mr. Lawrence should not be prejudiced by so doing in any step he might be yet arised toltake. Serjeant Bompas agreed to the pro yet advised the behalf of Mr. Hughes, and the Recorder then stated that the termination of the scrutiny left the number of votes ajority for Mr. Hughes, 2. Mr. Hughes Lugres was therefore formally announced by the Lord Mayor to be duly elected Alderman of Bread-street Ward City Election.-On Monday, the Sheriffs made the usual proclamation in Guildaal of the issuing of a new writ for the election of a member for London in the room of Sir M. Wood. The nomination took place jesterday, and the polling commences this day. At the nomination yesterday the sheriffs declared the show of hands to be in favour of Mr. Pattison, and Mr. Baring demanded a poll. The result will be announced on Monday. Royal Mail Steam-Packet Company.-In conformity the desire expressed at the last annual meeting that the directors should present a six months report, a general meeting of the shareholders took place last week The report commenced by regretting the loss of the Soland which, from inquiry, was attributed to an error in the calculation of the navigator. Certain modifications of the scheme of routes had been approved by the Admio ralty, effecting a further curtailment of nteaming opera.
tions, and a reduction of expenditure; but as the modifi-
cations did not take effect till June, the result would be communicated at the next meeting. The disbursements and receipts for the half-year left a balance applicable to wear and tear and insurance, of 34,341l.15s.7d. Much progressing. The payment of the lastace, and was still the directors to reduce the debt to \(120,000 l\). The whole of the vessels were now ia a state of thorough repair and effectiveness. The directors were of opinion that, as the merly, there would in future be much less ground for opprehending misfortunes; and, under these circumstances, they proposed that on the termination of the present year, or as the policies expire, the Company tingency. The receipts for the March and June quarters from the Government were \(120,000 \mathrm{l}\), and from freigh and passage money 38,0481 . 14s, \(7 d\), which from freight \(158,048 \mathrm{l}\). 14 s .7 d . After a discussion respecting the loss of the Solway and other matters, the report was adopted.
The Great Northern Steam, Ship.-An experimental trip to test the powers of this vessel took place last week. She left her moorings at Blackwall with the tide against
her, and proceeded down the river to Greenhithe, where her, and proceeded down the river to Greenhithe, where she atered her course, and returned with her best speed to her original moorings. This vessel has very extraordinary powers, so far as trips in the river can justify an proof of the value of Mr Smith's furnishes an additional proof of the value of Mr. Smith's screw-propeller. The Great Northern is a sailing ship, and the engine and the screw are only auxiliary aids to assist her passage when sails and wind fail. The machinery consequently takes up much less space than in ordinary steamers. The rate of steaming was \(7 \frac{1}{2}\) knots an hour against tide, which was computed at \(2 \frac{3}{2}\) knots against her, making her steaming
ten knots an hour through the water; with 700 tons of coals on board-a great rate of speed when the large size of the vessel is considered. Her sailing powers are said to be considerable, and twelve knots an hour is her computed rate of performance. Among the company on board were many gentlemen connected with the shipping were the Bishop of Norwich, Sir F. Collier, and Mr. Lloyd, who attended on the part of the Government, and several naval officers.
Meeting of West India Proprietors.- A preliminary meeting of persons interested in the West India colonies was held on Friday, Mr. Hankey in the chair, to commence a subscription for the purpose of assisting the for Jamaica, said that at the Colonial-office, and through many private sources, the dreadful calamities occasioned by the fire, as published in the papers of this city, were fully confirmed, and he urged the necessity of instant relief. Trade, agriculture, and commerce in the West be afforded there to the sufferers, and an appeal to the British public had been resolved upon. After many statements as to the losses occasioned, a series of reso-
Intions was passed to carry ont the object for which the meeting was called, and a subscription opened.
Death of the Bishop of Lichfield. - We have to record the death of Dr. Bowstead, Bishop of Lichfield and Coventry, who, after a lingering and painful illness, expired on Wednesday last at Clifton, where his Lordship It is well known that for a considerable period the Right Rev. Prelate had, from severe indisposition, been unable to discharge the duties of his bishopric, and the Bishop obliged to officiate for him. It was only within the last obliged to officiate for him. It was only within the last
fortnight that his friends despaired of his recovery, although disease had made destructive inroads on a natu-
rally strong constitution. Dr. Bowstead was the son of rally strong constitution. Dr. Bowstead was the son of
the late Mr. W. Bowstead, of Beckbank, Great Salkeld, the late Mr. W. Bowstead, of Beckbank, Great Salkeld,
Cumberland, and was born in 1801. He early distinCumberland, and was born in 1801. He early distin-
guished himself at Cambridge, and in 1824 was second guished himself at Cambridge, and in 1824 was second Wrangler and Smith's Prizeman, and was afterwards Fel-
low and Tutor of Corpus. He was considered one of the low and Tutor of Corpus. He was considered one of the most distinguiahed scholars on that foundation, and since his elevation to the Bench he has maintained a high cha-
racter in promoting the interests of his diocese. His racter in promoting the interests of his docese. His districts gained for him the admiration of the laity and clergy. In politics he was a Whig, and strongly adverse to the tractarian doctrines recently introduced into the
chnreh. He was consecrated Bishop of Sodor and Man in 1838; and on the death of Dr. Butler in 1840, was translated to the see of Lichfield and Coventry. For some time he was prebendary of Salisbury
( UniversitylCollege.-On Monday the College Session commenced in the faculty of Arts and Laws. There was a numerous attendance of visitors and students in the Professor Brooke on natural philosophy. Two Flaherty scholarships are to be awarded this session, the one to the most proficient in classics, and the other in natural philosophy and mathematics.
Westminster \(\$\) chool.-It is announced that the Phorusual this year, with the Prologue and Epilog boys as second and third night.
St. Stephen's, Wralbrogue and Epilogue on the St. Stephen's, Walbrook,-Another meeting of the
vestry took place on Thursday, followed by another
adjournment. The Rect adjournment. The Rector, Dr. Croly, declined to take on the part of the parishioners, but because he had case tained from the Bishop of the diocese that he had anceradjournmentr were not within the spirit of the law. It
was ultimately resolved that three persons from each o should wait upon Alderman Gibbs, in order, if possible to see the parish deeds, and thus ascertain the trusts
vacant in the National - Four exhibitions are at presen Vacant in the National 'Nociety's College (St. Mark's, Chelsea, the election for which is fixed for the 26 th inst. of the candidates:-Rev. A. Thurtell, Rev. G. Maddison, and Rev. J. Hailstone.
elson Column.-The masonry of the Nelson column was completed on Monday, after which the stonemasons bad a substantial repast of roast beef. It appears that the statue to be placed on the summit this day (being the anniversary of the battle of Trafalgar), and that it cannot be raised before next week. A notice has also been to the Greenwich Pensioners on the completion of the Monument is postponed in consequence of the season
being now so far advanced, and the works still incomplete; and that the intended entertainment will not tak place till the 2 d of April nest, being the anniversary of Cattie of Copenhagen.
Capture of a Sturgeon.-On Monday evening the largest sturgeon ever captured in the Thames, above bridge, was mill-pond, Battersea-fields. It had been seen in the pond since Saturday, but the depth of water prevented its dimensions being ascertained. On Monday, however, the water was let off into the river, and the pond was left almost dry. There could not have been less than 300 people to shbed to witness the capture. After several attempts struck with the guns and pistols, the sturgeon was at last was 9 feet 6 inches in length, from the sear the mill. the tail; 3 feet 10 inches in girth, and weighed 280 lbs. Inquests.-On Saturday an inquest was held by M Wakley on the body of Mr. George Gibson, official as signee in bankraptcy, "aged 57, who committed suicide a his residence in Blandford-square. Witnesses deposed that he was found langing to the bed-post by a silk pockethandkerchief, snd, quite ,dead; that he had been for six months under, medical treatment, and that his mind had building specula consequence of the failure of some discussion, the jury returned a verdict that he destroyed himself, being at the time in an unsound state of mind -On Monday an inquest was held on the body of Lady Alice Palmer, who died suddenly at her house in Hanover that der, Regent's-park, on Saturday. The evidence showe returned a verdict accordingly.-The jury, at the adjourned inquest on Mrs. Pollock and her two chitdren, who lost their lives in the late fire in St. Martin's-court, returned their lives by fire, which appeared to have originated on che premises of Mr. Labram; and the jury cannot sepa the firemen and police on the occasion. the conduct of that so are a in so narrow and dangerous a state, as a similar occur rence might be attended with more awful consequences." On Wednesday an inquest which had been four time Mary Prevost, wife of a hairdresser, residing at No. 101 St. Martin's-lane, Charing-cross, whose death was alleged to have been caused by the ill-treatment of her husband and children. The sister of deceased stated that she had was no window, but only an iron grating, that she there was no window, but only an iron grating, that she had food and clothing. The medical and other bota in proved the same facts, and the landlady of the house at Woolwich to which deceased had been removed, deposed that she was allowed only toast-and-water and tea, and had no medical attendance. After a long jnquiry, the Coroner announced that the jury had come to the verdict same timed had died from natural causes; but at the Prevost and his daughtopinion that the conduct of Mr. criminal in the extreme, and had the medical evidence been a little more positive in all probability he and some of his family would have been sent from that place to prison The whole of the blame attached to him; and it was painful to reflect that he had made his daughters subject to a public censure. As it was, they would leave the fully without anyone feeling compassion for them. He had desired Wesiminster-Bridge
Monday order of the Commissioners of Woods and Forests. expected that it will remain closed at least two months Tridge traffic is now transferred principally to Waterloocreased at least ten-fold during the repairing of West-minster-bridge.

Embankment of the Thames.-On Monday the Earl o Lincoln, accompanied by Mr. Brunel and Mr. Cubitt bridge to Be hersea-bidge to ascervin fhem aushall plan for the embankment of the river Mr Brunel provided with the levels and the river. Mr. Bruel was at the reque the lols and plas that he had lately made road alongside the river from Battersea-bridge to the two Houses of Parliament.

Woolwich.-A court-martial was held on Monday in drummer called Hurbert, of the Chatham division, charged
with stealing the uniform of Capt. Johns, R.M., together with the MS. of a work written by the Captain, entitled "Chronicles of Victory," and deserting when on duty at ceived corporal punishment to the extent guilty, and rewhen fit to leave the hospital will be discharged the serMortality of the with the sentence of the court-martial. Mortality of the Metropolis. -The number of deaths registered in the week ending Saturday, October 7, was as Central Districts, 234; East Districts, 237 ; South Dis tricts, 263 ; Total, 1056 (males, 541; females, 515). Weekly average for the last five years, 903 ( 461 males, 499 females) ; and for the last five autumns 908.

\section*{骎robitricial Nems.}

Abergavenny.-Another advance in the price of iron crease. In consequence of the improvementin the trade, more employment is afforded to the workmen, who are not restricted, as they were some time back, to a certain the treaty with China become more developed, the low import-duty upon iron will cause a great exportation of that metal to the Celestial Empire, and that a further increase in the quantity made as well as an advance in price may be anticipated.

Bedford.-A melancholy accident happened on Sunday wakley, with Mr. and Miss Inskip, attended Divine service at Stevington Church on that day, and on re-crossing the at stevington Church on that day, and on re-crossing son's heng was between the church and Mr. Ander strencth of the boar was swamped, through the unusual J. Wing) J. Wing) was administering the Sacrament at the time, When be heard the cries, and with the communicants hastened to the river. On their way they met a young gentleman who had the conduct of the party, and who stated that during the squall, in pulling against the current, the boat had swa ped, Mrs. Anderson, Mr, and Miss Inskip had suak and he himseif had escaped with difficulty. On reaching the bank of the river, they found that the boat was sunk, and the bodies hidden in deep water. Every exertion was made to bring them up, and they were all taken to Mr. Anderson's house within an hour and a quarter after the catastrophe. Six or seven medical men to no purpose. Mr. Inskip exhibited signs of life when he was brought on shore, but animation could not be restored. He was a respectable farmer near this town, and with his daughter was on a visit to Mr. Anderson, the steward of the Duke of Bedford.
Birmingham.-A paragraph has appeared in the local Mr. Barrett, of this town. The Morning Chronicle Rev. that the fact appears simply to be this, that the rev. gentleman is in pecuniary difficulties, arising from his becom ing surety for a party, and that this is the reason of his semporary absence from his parish
Brith.-The local papers state that within the past Bristol Bristol to London (the Prince of Wales) ceased running The railroad has now, therefore, no kind of opposition. Carmarthen.-It was announced last week that the inst. From a variety be opened at Cardiff on the 21st been found a variety of circumstances, however, it has the 25 th has bessary to postpone the day, and Thursday mence. Although definitely fixed on for the trials to comcommission, Baron Parke will not accompuny in the Gurney and Mr. Justice Cresswell. hecompany Baron will alone undertake the duties of the committer judges accounts this week afford but on indiferens.-The return to tranquillity. They include an attempt to deprive a magistrate of life, the demolition of a toll-gate, outrages pere porperated stroyed first the toll-gate of the same gang: they dewhich was formerly garn orn but hat again erected tearing down the gates the mob proce destroyed. On dence of Mr Beynats, that he was at home and aslepistrate. It was supposed his bed was ane and asleep, and the rioters fired into absent, and on searching his roowever, Mr. Beynam was slugs were found in it. This outrage was committed not more than 10 or 12 miles from Carmarthen, and in the immediate neighbourbood of a cavalry station. In addi tion to the above, on Thursday night the haggard of a on fire and completydovery, named Thomas, was set had sending one obnoxious in his neighbourhood, by body of the London police bave arrived quit." A large have been distributed in different parts of the country Maws was a meeting of the parishioners of Parcel Maws was held on the summit of Mynydd Pysgodlwn, for the purpose of " taking into consideration the expediency of petitioning the Jeegislature for the re-enactment of the old poor-law, the removal of the rural police, and for the repeal other popular grievances." Mr. Jenkins read a letter be had received from Dr. Bowring, expressing a determination to bring the subject of Welsh grievances before Parliament, if the Welsh people would furnish him with alist of those things which they conceived to be oppressive and unjust. After a long discussion, the follawing resolutions were unamimously passed :- "l.
That a petition be drawn up and presented to the justices
at the quarter-sessions, praying them to abolish the rural police force in this district ; and that a committee be appointed to draw up such petition and carry it into effect has disappointed the expectations of the rate-payers; and that its unjust and demoralizing provisions have materially contributed to promote the present discontent. 3. That a committee be formed with the view of bringing before the public the grievances of which we complain, and to take such measures as may to them appear necessary for petitioning Parliament, as soon as it reassembles, to instipresent prevaling into the causes of the discontent at South Wrevailing throughout an extensive portion of to devise the means for its removal. 4. That this committee consist of persons from each parish or parcel of a parish, and that it be an instruction to such committee forthwith to prepare a form of inquiry, embracing the several subjects of rents, tithes, poor and highway rates, with such other additional heads of inquiry relating to the grievances of the people as to such com cheers for seem necessary." The meeting gave three upwards of three hours. The proceedings were entirely conducted in Welsh.

Cambridge. -The greatest excitement has been occasioned in this town by the announcement of her Majesty's intended visit. Professor Whewell, Master of Trinity and nouncemencellor, on Tuesday issued the following ancation of announcing to the members of the University that it is the intention of her most Gracious Majesty the Queen and his Royal Highness Prince Albert to honour the University with a visit on Wednesday, the 25 th inst The Vice-Chancellor is persuaded that there will be in al members of the University a wish to testify their deep gratitude for this act of Royal favour and condescension, their dutiful and devoted affection towards her Majesty unmingled satisfaction from their visit." On Wednesiay Professor Whewell, the Rev. Dr. French, and the Rev. Mr. Birkett, were appointed a Syadicate, "to make Albert in the Senate House." The Royal visitors are expected on Wednesday, the 25 th, on which occasion the Duke of Northumberland, Chancellor of the University, the Lord Chancellor, as High Steward, the Vice-Chancellor, the Heads of Houses, and the Masters of Arts in the lodge of Trinity College, which is now preparing to the lodge of Trinity College, which is now preparing for their reception. An inclined platform, covered with
cloth, will be placed over the steps immediately at the entrance will be placed over the steps immediately at the entrance of the front gate at Trinity, from whence the
paved way up to the door of the lodge will be similarly covered for her Majesty's accommodation. The Lodge is, by
co the door of the lodge will be similarly the charter of Heny the Eighth, who originally endowed this College, the residence of the Sovereign on the occa-
sion of any Royal visit, and is always made use of, acrording to a provision in the charter, by the Judges of Assize. stopped at King's College. On Thursday the Senatehouse will present a very splendid and interesting appear ance. The front seats in the galleries will be occupied by ladies, and platforms will also be erected in front of the
gallery opposite to the throne, and beneath in ti \(e\) body of the building. On this occasion the Chancellor will confer the honorary degree of Doctor of Laws on Prince Albert Royal party in state, and all the Colleges, as well as the town, will be lit up. In the grounds of St. John's College,
as well as in the adjacent ones of Trinity, displays of fireworks will take place. The preparations for illuminating Trinity have already commenced. During the course of Thursday her Majesty will visil the Fitzwilliam Museum, King's Chapel, Trinity Chapel, and a few of the Colleges short stay at Cambridge, and will leave, it make but a Friday, for Wimpole, the seat of the Earl of Hardwicke. Chester:-The institution in this city for educating the training up other young females as governesses, is to opened early in January. The Bishop of Chester has accepted the office of patron, and has interested himself in its establishment. The school will be under the direcelected in November
Chichester.-On Sunday morning last, at the cathedral of this city, an Italian gentleman named Vignati, who had been for two years a priest in the Roman Catholic comfessed Protestant five years ago left that Church and proRoman Catholic doctrines. The form of recantation was of same as that used by the Bishop of London on a similar occasion about tiree years ago. The Dean of Chichester preached a sermon on the occasion, and the cathedral was attracted many Dissenters and others who do not usually attend the cathedral.
Deal.-In consequence of the strong winds which have prevailed during the last week, it has been found impos sible to place the New Iron Beacon upon the Goodwin.
The weather having proved adverse, the Lords of the Admiralty have expressed their opinion that the season is too far advanced safely and properly to plant it. Next plang, by the direction of the Trinity Board, it will be side of the Spatch-way into Trinity Bay.
side
Doncasler.-On Saturday an anti-corn law meeting
 sons, Mr. T. Johnson, the Deputy-Mayor, in the chair.
Mr. Bright, Mr. Cobden, Earl Fitzwilliam, and others,
addressed the meeting, and resolutions in favour of a total repeal were carried.
Hull.--The Raymond, Captain M'Kay, from Macao, is expected daily to arrive here, having been spokea in the Downs on the 8 th inst. This vessel has on board about
8300 chests of tea, which are to be delivered here-being 8300 chests of tea, which are to be delivered
the first cargo of tea from China to this port.
the first cargo of tea from China to this port.
Leicester.-Messenger, the farmer at Gaddesby, who had been committed to the county gaol, charged with the murder of a young, man in his employ, was released on bail under a Judge's order on Tuesday week. The par-
ticulars of the case appeared in this Paper when the examination took place.
Liverpool.-A robbery, which for dexterity strongly resembles that committed upon the person of Mr. Blakecharges br., and upon which was founded one of took place on Saturday last. A young man, clerk in the house of milay and Co., was sent to draw a considerable sum 2002. in at the Branch Bank of England. He received consisted of a lool. note, and ten of \(10 l\). eacb. Having counted the paper, he carefully put it into the right-hand pocket of his coat, and kept his left hand upon it for fear As accident whilst he counted some gold upon the counter ally slipped upon the floor. He stooped to pick it up, and momentarily withdrew the left hand from the pocket in which the notes had been placed; during that shor period the money was abstracted from his pocket. He mmediately discovered the theft, but could not identify persarty who had robbed him, as there were about thirty immediately sent to the police-office, but no tidings of the thief have yet been received
Merthyr.-On Saturday week, as the cashier of the Aberdare Iron-works was returning from the bank in this town with money to pay the workmen, he was stopped by
three armed men and robbed of 2,0001 . The police immediately set out in pursuit and succeeded in recosering the money and captaring the robbers, who bave been ing the money and
committed for trial.
Nottingham.-On Sunday week, while Archdeacon Wilkins was preaching in St. Mary's Church, a fall was heard in the south aisle, and a cry was raised that the church was falling. A rush was instantly made to the
doors; several persons were severely injured, and some doors; several persons were severely injured, and some
limbs were broken. At length, when about two thirds of the congregation had made their escape, sufficient order was restored to enable the Archdeacon to make himsel heard, and to inform the assembly that the sole cause of from the left of him; but that, as the minds of all were too much agitated to resume with any composure the duties in which they had been engaged, he would only observe, that if any possible and real danger could have
been apprehended, as far as the tower of the church wns concerned, now that every precaution and support had been given it, he would not have hazarded the safety of any ildividual, nor would he have permitted his own
family to incur the risk, nor have braved it in his own person. The church, however, has been closed until a chorough repair has taken place, and in the meantime
divine service is performed by the Archdeacon at Stenton.
Portsmouth.-During the last few days the Lords of
Portsmouth.-During the last few days the Lords of containing intelligence of the loss of one of her Majesty's frigates, the Samarang, 26 guns, Commander Sir E.
Belcher, off the Island of Borneo. The circumstances attending her loss are reported to be as follows:-The Samarang was launched at Portsmouth in 1822, and was last year fitted up as a surveying ship in order to make a survey of the Chinese Seas. In the course of last spring the 22 nd of June. On the 28th of that month slie on ceeded to the river Burrawak, off the Island of Borneo. On the 17 th of July she had gained about 40 miles up the iver, when the master, Mr. Lozey, left her in one of the seamen, for the per by another oficer aids apary of coast. The ship was under weigh at the time, and was making but slow progress, when suddenly the ebb tide, which runs remarkably strong, carried her on a sunken coral rock, which she struck with considerable violeace. For a few minutes she kept upright, and then partly slipped off the rock and fell over on her beam ends, when he instantly filled, and it was only by the greatest exertion that the crew could save themselves; in fact, many of water, as the ship rolled over were precipitated into the who caught hold of them as they made their appearance on the surface. Having reached the shore which was not for distant, they commenced saving from the ship as ide permitted as much provision as they could as at ind the arms which they needed in order to protect thet, an from the natives An order was instantly the Captain, Sir E. Belcher, to Singavore for assisten by and in the subsequent day every means were resortance, to save the vessel. Her guns were thrown overboard and her masts cut away, but it had not the slightest effect When the mails left Singapore she remained in the same position, and Thery possible that she would become a Singapore, August 3, which furnishes some additiona facts:-"The wreck at high water is covered by four feet of water, and we fear she is bilged, as she is lying completely on her side. Her Majesty's ships Harlequin and pose of atternpting to raise her, which it is feared will prove ineffectual, although Sir E. Belcher entertain
sanguine hopes. There were 32 valuable chronometers, an immense number of mathematical and scientific instruments, and several rare surveys and charts on board of her, which were estimated at about \(32,000 \mathrm{l}\), all of which are lost. We have dragged several of them out of the sunken ship, but find them perfectly useless, and not worth repairing. Sir E. Belcher and several of the officers have taken up their quarters at the British Consul's residence at Borneo, and the crew are living at a small settlement about 3 miles off, and on half allowance." Southampton.-The Iberia steamer left this port on Saturday for Constantinople, with a fall cargo of Manchester goods, to the value of \(60,000 l\)., and 27 passengers; among whom was the Rev. Dr. Wolff, on his journey to Bokhara. He arrived here by railway, accompanied by Lady Georgiana, his son, and Capt. Grover, who, after witnessing bis embarkation, returned to London. Dr. Wolff was visited on board the Iberia by several of the most distinguished families of this place and its environs. From the number of arrivals of private steamers on Saturday, upwards of recived at the post-office here from Spain, France, and the Channel Islands.
Wakefield.-On Friday Dr. Sleigh paid a visit to this town in the expectation of meeting Messss, Cobden and Bright, and discussing with them the various questions connected with the corn-laws. He addressed the inhabitants in the Corn-Exchange, declaring that the repeal of the corn-laws would throw at least two millions of agriaddress to the out of employment, and proposing an address to the Queen on the subject. Mr. J. Murray polies. The amendment length decided that the amendment was carried.
Windsor-About two or; three years since, Prince Albert purchased of the executors of the Duke of Gloucester a large tract of land extending over several thousands of acres, consisting principally of heath land, in the vicinity of Bagshot, with a farm attached, known as the Rapley Farm. Upon this extensive property it is the intention of his Royal Highness to try the experiment of breeding and rearing the black cock. The cocks Which were presented to the Prince by the Duke of
Hamilton about two months ago, have been sent to the preserves at Bagshot, where there is every probability hat the experiment of rearing and breeding them will be as successful as can be [desired. They were bred by the Duke of Hamilton upon his estate in the Isle of Arran. It is the intention of Prince Albert to inclose and cultivate a considerable portion of his property in the neighbourhood of Bagshot.
Railways.-The following are the returns for the past week:-London and Birmingham, 17,532l.; Great Western, 14,888l.; South-Western, 6,848l. ; South-Eastern, 4.8976. ' Yastern Counties, 2,917l.; North Midiand, 6751. - Croydon, 491l.; Brighton, \(5,0460_{0}\); Breenwich, 8492.; Hull and Selby, 1,054l.; Midland Countil, 3,5292. ; Grand Junction, 9,006l.; Paris and Roven, 5,124l. ; Paris and Orleans, 5,702l.-A special general meeting of the Eastern Counties Company was held last week, for the purpose of adopting measures for an application to Parliament in the next session, for an Act to construct an extension of the Eastern Counties Railway from Colchester, by Hadleigh and Bury, to Thetford, and thence from Brandon to Norwich, with a branch from Hadleigh to Ipswich, and for raising the necessary capital. The report gave a summary of the negotia tions entered into by the directors, and concluded with a resolution, that the Board be authorised to apply abliariament for an Act to assist an applicalion for en abling an extension of either the Eastern Counties or the Northern and Eastern lines, as they might determine on. After some discussion this resolution was passed. The aext business submitted to the meeting was the report of the recent negotiations for a permanent amalgamation of the Northern and Eastern Railways, a measure which was thought the more desirable, since it would terminate all future Parliamentary contests, competition in traffic, and waste of capital. The terms on which the amalgama tion was to be carried out would consist in the East ern Counties Co being leased in perpetuity the the sam of 47,500 or such sum as might be required to 0 a 5 per 0 , ern rowed mone should be lowered uncer the present rates, the same to be carried to the divisible fund. Further that after allowing to the Eastern Countios 1321 ont the gross receipts, and the working expenses having been divided the surplus profit to be apportioned between the two Companies in the ratio of two-thirds to the Eastern Counties and one-third to the Northern and Eastern, the working expenses to be guaranteed by the East ern Counter 77 per for for the first, by either line to be guaranteed on capital expended cent., the amalgamated Company to be governed by eighteen directors, of whom twelve shall be directors o the Eustern Counties and six of the Northern and Eastern. The Chairman stated that these propositions would be laid before special meetings of the two Companies during the ensuing months for their approval-On Sunday last some person placed a plank across the line on the railway near Twyford, for the purpose of upsetting the mail train, but his attempt was providentially frus. trated by the discovery of the object by a policeman on duty. It is undursoome, as shepherd, is in custody on the
charge.-An accident occurred on Tuesday night on the reaches the London terminus at a quarter past 10 o'clock,
lost his life. It seems that, in leaning over the engine lost his life. It seems that, in leaning over the engine
carriage, he overbalanced bimself, and fell under the wheels. One leg was torn off at the upper part of the thigh, and the other above the instep. He was conveyed to town, and immediately removed on a stretcher to
Guy's Hospital, where be shortly afterwards expired. Guy's Hospitul, where be shortly afterwards expired. While the inquest on his body was sitting, the mutilated body of another man, named Postans, was brought to the hospital. It appears that deceased was a coach-trimmer
and being engaged on the railway just as the fast Brighto train from London had passed the station, he attempted to cross the line, when the "banking" engine, which always
follows the train to assist it up the New Cross incline struck him down, and both wheels passed over him. Both legs were separated from the trunk below the knees, and wher he was brought to the hospital, the house surgeon at once declared that it was quite impossible be could recover, and he died in the course of the evening.- O
Tuesday morning, as the first train from London wa approaching the Clayton tunnel on the Brighton Railway the tubes of the boiler burst. The breaks were engineer endeavoured to proceed to Brighton to procure assistance, but the escape of water was so great that put out the fires, snd the engine was left in the middle of the tunnel. The alarm signala were immediately hoisted and every precaution taken to prevent the possibility o an accident by collision with the other trains. engine soon arrived, and dragged the train and damaged engine in safety to Brighton,- -A few days since, as a Twy ford constable was conveying a prisoner from that place \(t\) Abingdon gaol by the Great Western Railway, the prisuner shortly after he started, and while the train was proceeding at the rate of upwards of 30 miles an hour, suddenly
leaped from the carriage, tumbling head over heels into the road. The constable immediately jumped out after him. Those in the train who witnessed the proceed ing imagined that both must have been inevitably killed Extraordinary, however, as it may appear, neither were
in the least injured, and the prisoner was again captured by the constable, who walked along the line to the nex station with his pri
place of destination.

Dublin.-On Friday evenind.
solicitor, addressed ay evening Mr. Kemmis, the Crown a charge of conspiracy and other misdemeanours having been brought against him, and informations to that effect having been sworn before Mr. Justice Burton, he requested to know when it would be convenient to enter into recog-
niz uires to attend on the fist day of nest tern in the Court of Queen's Berrh, to answer the clarges thit would then be preferred against him by ber Majesty's Attorney
General. Shortly before 12 o'clock on Saturday Mr. Jus tice Burton left his house in Stephen's-green, and pro ceeded to the Queen's Bench Chamber, where, after dis posing of a few motions, he remained for about an hour, in expectation or being waited on by some of the persons pose of entering into recognizances. None of them appearing, the Judge retired, having first directed the might subsequently present themselves that he wai returned to his residence, and would there remain to receive the necessary bail until half-past 3 o'clock. Mr
Kemmis had an interview with Mr. O'Connell on Satur day morning, at which Mr. O'Connell expressed his will ingness to comply with the request, bat demanded that he should first be supplied with a copy of the informations. This request, on consideration, not having been complied with, at 2 o'clock Mr. O'Connell received a second note required at the house of Mr. Justice Burton at 3 o'clock, to enter into the necessary recognizances, should he not in the neeantime hear to the contrary. At a quarter befor 3 o'clock, Mr. O'Connell, accompanied by his sons John M•Loughlin, and followed at the residence of Mr. Justice Burton. On entering the drawing-room, Mr. \(\mathrm{O}^{\prime}\) Connell, who is said to have looked paintings for which the learned Judge's residence is remarkable, and which he continued to inspect with appa rent interest until 3 o'clock, when Mr. Kemmis and Mr Bourne, the Clerk of the Crown, arrived. The entire party, consisting of about 30 persons, (many of whom, including Mr. O'Connell and his two sons, wore promin
ently on their breasts the Repeal button,) were then conently on their breasts the Repeal button, , were then con-
ducted down stairs to the Judge's library. Mr. O'Connell, on entering, shook hands with his Lordship, and the recognizances having been read over by him, he
took the necessary oath and subscribed them. Mr. John O'Connell having done so likewise, they acknowledged themselves bound in 10002. each to abide their trial on the charges preferred against them, which are conspiracy,
sedtition, and illegally assembling
The sureties sedition, and illegally assembling. The sureties, Mr.
Jeremiah Dunne (merchant), of No. 14, Fitzovilliame Jeremiah Dunne (merchant), of No. 14, Fitzwilliama-
square; and Mr. Cornelius M'Loughlin, of 14, Fitz square; and Mr. Cornelius M‘Loughlin, of 14, Fitz
williamm-place, acknowledged themselves bound in 500 l each for Mr. O'Connell, and in 500l, each for Mr. Johr nell having again shaken hands with the learned Judme nell having again shaken hands with the learned Judge,
retired. He was loudly cheered in his exit from the hol \(\therefore\) by the persoons who had followed his carriage from
nell was retiring, complained that the depositions on
which Mr. O'Connell was held to which Mr. O'Connell was held to bail were not furnished to him, and handed in a notice to that effect. Mr. Kemmis said that now that the parties had given bail for their
appearance, they were enticled by the statute to conies of the depositions, and as a matter of course they should bave them. A list of the names of the persons to be prosecuted was also delivered to Mr. Mahony. From this it subject of the prosecution against Mr. O'Connell, Mr.
Ray, Dr. Grey, and Mr. Steele. The Ray, Dr. Grey, and Mr. Steele. The speeches deilivered separate prosecution against Mr. O'Connell, Mr. John rett of the Pilot newspaper. In addition to the foregoing, the whole of the above parties, together with the
Rev. Mr. Tierney, the Rev. Mr. Tyrrell, and Mr. Duffey, Editor of the Nation newspaper, are charged with being " members" of the Repeal Association. The prinvarious heads. The accused are to be tried for seditiously and malignantly conspiring to and with each other to their allegiance to the throne-with conspiring to establish courts in order to supersede the Courts of Justice, as established by law, and with an attempt to overturn the constitution as established, under pretence of seeking
for a Repeal of the Legisiative Union. At four o'clock the following letter from Mr. O'Connell was published in a third edition of the Weekly Freeman:-"To the People Beloved Fellow-Countrymen-I announce to you that which you will hear from other quarters, namely, that I have given this day bail to answer to a charge of 'conspiracy and ake this announcement in order to conjure the
term. I make people, one and all, to observe the strictest and fect tranquillity \(\qquad\) Any attempt to disturb the publi may be wost Be not tempted by anybody beloved countrymen, to me. the law or to be guilty of any tumult or disturbance The slightest crime against order or the public pence may ruin our beautiful and otherwise triumphant cause. If
you will, during this crisis, follow my advice, and act as I entreat you to do, patiently, quietly, legally, I think I can pledge myself to you that the period is not distant when our revered Sovereign will open the Irish Parliament in College-green. Every attempt of our enemies to disturb the progress of Repeal hitherto has had a direct contrary effect. This attempt will also fani, unless it be Be tranquil, then, and we shall be triumphant. I have the honour to be your ever faithful servant, D. O'Connell.',
On Monday afternoon bail was entered into for the fol lowing persons, against whom information
on Friday evening before Mr. Justice Burton. The recog. nizances were, 500 . for each, of the parties accused, and names that the town council have completely identified themselves with the movement. For Dr. Gray-Alderman Gardiner and Town-Councillor M'Clelland. For Mr. Duffy-Alderman Grace and Town-Councillor O'Brien, Fraser. For Mr. Ray-Town-Councillor O'Brien and Alderman Roney. For the Reverend Mr. Tierney -Alderman M'Kenna; William M'Guiniss. For Mr. The Repeal Association met on Monday as usual ; the meeting was greatly crowded, and was attended by an inspector of police, who took notes of the proceedings. and spoke at great length, and concluded by entreating the Association and Repealers generally to abandon the use of the word "Saxon" as applied to Englishmen, as O'Connell then addressed the meeting. In reference, he said, to the remarks of the chairman, he would promise that for the future he, and he trusted the Association aiso, would give up the use of the word "Saxon," as th
was calculated to give offence. When they first used the term (and it should be recollected that the only phrase in rish to express the word Englishman was "Sassenach"), Lord Stanley was very angry, and they used it ten times
more on that account at the time. The use of it was subsequently revived when they were branded as aliens in Language, in blood, and religion, by Lord Lyndhurst, and it had been pretty freely applied ever since; but he now
promised that for the future the word should not pass his promised that for the future the word should not pass he would immediately retract it. Having denied that the people were obnoxious to the charge of disloyalty, but, on the contrary, entitled to the greatest praise for their strici
obedience to the laws. Mr. O'Connell came to the topic obedience to the laws, Mr. O' Connell came to the topic Repeal, he pariament in the Corporation a federal Parliament, and instanced Canada, where such a Parliament had done much good. Since then many persons ind joined that Association who went no further than a federal anion, and he had lately received a letter from a gentleman of high distinction in England on the subject, in which his attention was directed to two points, concerning which the writer believed it to be of the greatest importance that the people of England should have correct information before they would join generally, or extensively, with that Association. The first point was, that it should he shown to the people of England that Trishmen country, strove only to procure for themselves the manage
ment of their own local and internal affairs, leaving matters of national importance to both countries to be legislated upon by the representatives from both countries in the Imperial Legislature. The next point was that Englishmen should be satisfied that as they co-operated withs Irishmen, so Irishmen should assist Englishmen in their struggle to obtain a full, fair, and free representation. He (Mr. O'Connell) would meet such propositions in the spirit in which they were put forward, and he told that gentleman that, if a sufficient number of the English people came forward, there would be no difficulty in arranging Repeal on the definite points mentioned by him. these terms, for taunted with shrinking when he accepted argument from their enemies, but merely followed a course to which the Association was already pledged by the
admission of the Catholic Bishop of Killaloe and other gentlemen on the same terms. After accusing the Conservative press of inciting the people to violence, he proThe change of which they were on the eve must be blood. less and sinless. He had ascertained by a series of mon ther than a series of mon ster meetings that the pl milo \(\rightarrow\) that vio declar ascertained that voice so far in peace and quietness, and if the proclamation had not been issued he should have gone on as quietly to the end. He had been told the day before that he should be prevented from addressing that meeting to-day, but he replied that "that could not be," because he was the auxiliary of the Government in preaching peace. room would it soom, would in hot be said that, having failed to irritate the people by the Clontarf proclamation, they wanted to do so by arresting the man who preached peace. Therefore he was there to preach peace. Having cautioned the people agaiust Ribbonism, he read a letter signed by Mr . Sturge, of Birmingbam, in which the Repealers of that Locavily expressed their astonishment at the step taken by Government in reference to the Clontarf meeting. Ho that they might propose an answer, declaring their delight and gratugh propose anent of the men of Birmingham, and denying that they have ever desired the dis memberment of the Empire, although they would never give up their exertions to obtain a local Legislature. A "proclamation money," and Mr. O'Connell announced the rent for the week to be \(1,232 \mathrm{l}\). 13 s .6 d . The meeting then adjourned to Monday, in the New Conciliation Hall. -Mr. O'Connell did not open his "arbitration court on Thursday at Rathmines according to appointment, and, Exchange have not official nolifications from the Corn has abandoned the intention. It is now confidently stated forthwith for demanding a Federal Union, which they say will have the support of Mr. Smith O'Brien, M.P., Mr. Sharman Crawford, Mr. David R. Ross, and Lord Clement. Mr. Sturge is to have the management of the that Mr. O'Connell will abandon "Repenl and nothing but Repeal." Mr. Sturge arrived in Dublin on Wednesday, Banarter an interview with Mr. O Connell, set off for man Crawford and arrange the preliminaries of the movewhich the warrants were issued, have been published this week, but they contain little more than what has already appeared in this Paper in the accounts of the The Governeal meetings within the additions to the military force. The Scotch Greys have been ordered to Ireland, and are hourly expected, and the 24th Foot, from Glasgow, are on their way. When those two regiments rrive, the military force in Ireland, added to the constabulary, who have received a military training, will amount to upwards of 30,000 . Orders have been issued to supply he ancient Birmingham Tower in Dublin Castle, with provisions to the same extent as the country forts and garrisons. Orders have also been issued to convert the eve stables in the Upper Castle-yard inco barrack.- It is late visit 1 ar in late visit of the sympathising Repealers to Dublin from Be north of England, that amongst them was one, named Bryan or Gilligan, for whom the police has been long of the look out. He is charged with having been one of a Farty, who, in 1837, attacked and murdered Mr. Geo.
Faw the Queen's county, as he was going upon the occasion of a parliamentary election to vote for sir
Coote and the Hon. Mr. Vesey. He was seen about the Corn Exchange on Monday, and identified by a man on Whose evidence one of the party was convicted and trans ported, and immediately taken into custody. He has been transmitted to Maryborough gaol to abide his trial.
Limericle. -The trial of the prisoners charged with the urder of the Rev. Charles Dawson has engaged the ssimion Judge Jackson and two juries at the adjourne the Crown against two men for the murder of Mr. Daw son, at Ballinacarriga, perpetrated at so distant a period as eight years since, when he was walking on a farm that bad shortly before fallen into his possession, but which some of the occupiers on the land feared they would be day, on the Mr. Darrson was there murdered female disguise, who fired two shots into his body, and battered his lifeless remains with stones. The prisoners on trial wer Patrick Lynch and Edward Conway ; the former one of at

Tamily located on the lands of Ballinacarriga, and Conway, a stout able man, their farm-servant. The indictment was prepared, and the line of prosecution arranged by Mr. Barrington, Crown solicitor, and Mr . Bennett, Q.C.,
conducted the trial. The clothes of Mr. Dawson were conducted the trial. The clothes of Mr. Dawson were
produced by a policeman, and the marks of blood were produced by a policeman, and the marks of blood were dress evidently burat from powder. When the case for the Crown had nearly closed, one of the jurors became sick on the second day, and a medical gentleman deposed that to remain in court would endanger his life. At this advanced stage of the proceedingy, the judge and lawyers altogether and recommence the whole trial. The court sat again on the third day; the long panel was again called over, and a new jury sworn to try the two prisoners, who
were again arraigned for the same murder, and pleaded not guilty. The prosecution for the Crown only concluded on Friday evening at six o'clock, when Mr. Coppinger opened the case for the defence, and at nine o'olock the court adjourned. On Saturday the case concluded, and the jury were locked up, but they could not agree. late hour of the night, the judge, finding it incossible to expect a verdict from them, and also that they were suffering from their confinement without his having the power to order them refreshments, consented at their urgent request, to discharge them. The prisoners, however, will be kept in custody and be tried before a third jury
Mallow.-A meeting was held in this town on the 15th to consider the announcement of Mr. O'Connell's arrest the Rev. Mr. Collins in the chair. About ten thousand persons are said to have been present. The following right to petition is the common birth-right of every British subject-a right co-existent with the security of the throne and the integrity of the British constitution ; and that we are firmly determined to exercise this right in petitioning for the Repeal of the Act of the Union." "That in the present crisis, we will cheerfully submit to the counsels of our beloved Liberator, Daniel O'Connell, in whose dence." and wisdom we place the most unbounded confi for nearly an hour amid great applause. He dosired the people to follow to the letter Mr. O'Connell's advice, to and promised them that prong by keeping the law imprisonment, or otherwise, Mr. O'Connell was sure to people of Ireland moral, peaceable, religious, temperate The meeting then broke spon be legislating for themselves. Queen, three more for Mr . O'Connell, three for Repeal, and three for thore for Mrotestant Counsellor O'Hea.

On his returm to Boston he happened to see in
perties of Gapers an account of the character and pro-
a manure, and the high price it was bringing at every market where its uses were known. The description of the article reminded him of immense masses on that island, and accordingly he published a short ac count of his observations on the subject in an American Journal. About eighteen months ago a cony of that Journal fell into the hands of the master of a Liverpool forsel, then about to sail from that port for St. Helena cap a cargo of captured negroes for the West Indies. The island resolved on his way to pay a visit to the said samples of the Guano, which were forwarded forthwith from St. Helena to his father, a merchant in Liverpool. under was lost in fitting out two ships for the island covering the island, and got a full cargo of excellent Guano, which was lately discharged at Liverpool ; but the other ship could not find it, and returned empty. The secures of the captain of the successful ship have been sailed from the Cow house, and four vessels have already island. The captain states that he personally travelled and great beds of Guano, in some places fifteen feet deep present anere is apparentiy as much as will serve the Cromarty - On
worn in, and a second meeting of the count was held, and a Sheriffs, \&c. Immediately after the meeting the authorities proceeded to Resolis with a body of troops, for the purpose of introducing the minister of that parish to his pastoral charge and manse. The soldiers the the church, and the Sheriff accompanied the minister. About sixty persons were present, and no opposition was offered. In the afternoon three more rioters were appre hended at Jemimaville, and Iodged in Dingwald gaol.
The principal ringleaders are, it is said, still at large, some of them having left the district
Greenock.-A firm at Greenock have recently erected arge and commodious premises close to their mills, in Which the whole manual labour of wetting the flour, brakeing and chaffing the dough, and forming the biscuits, mills. The machines in operation are, a large revolving
mate an, The machines in operation are, a large revolving which is between whired to a table where there are two rollers, comes to the proper consistency. These rollers, which are raised and lowered by a screw, bring the dough to the requisite thickness prior to its removal to a patent machine for cutting it into the biscuit form. After going through this process, the biscuits are putinto the ovens, and are finally removed to the oven heads, which are horoughly dried. The quantity of biscuits pose of being daily is about three tons quantity of biscuits manufactured On Wednesday evening, during the height of the storm, as the British queen steamer was at the tail of the bank, on her passage across from Greenock to Helensburgh, it was found that she was making so much water as to render a continuance or the voyage dangerous, and she was imme diately put about for Greenock harbour. All the passengers and crew were landed in safety, and in a moment or two the vessel sunk. The cause of the accident is sup
posed to have been her striking against a small rock.

\section*{THEATRICALS.}

Drury-Lane.-On Wednesday night, an English ersion of Donizetti's opera of "La Favorite" was produced at this theatre with complete success, to which the admirable manner in which it was placed upon the stage no small degree contributed. The subject of this opera taken from Spanish history. Leonora de Gurman was of Castile and Arragon, who, to marry her, wished to repudiate his Queen. The "favourite," not content with her royal lover, had fallen in love with a young novice of The novice, Ferdizand having no vocation for the chur abtains a commission in the Army by means of his unknown admirer, and after a time returns a victorious un dier. As a reward for his services, he solicits the band of the lady he loved, whom the King discovers to be Lemnora. He grants the request; but the youth discovers the rea character of his promised bride, and rejects her hand at the altar. In the last act they are found inmates, without knowing it, of the same convent. They meet accirlentall and a scene of love and agony is terminated by Lponoras deather suitable to an English audience. a subject alto gether soes not excite the least interest ine heroine and therefore, though the piece is a vehicle for splendid spectacle and pretty music, yet it fails to have any effec on the feelings and sympathies of the audience. The music indicates, in many places, a change for the better opera was better acted than is usually the case with musical aramas on an english stage. The pricipar characters were sustamed by Mr. Templeton, Miss Romer, and Mr . Letter, who were called before che curtain at the close duced in the second act, which was worthy of the Italian Opera-house. It included a pas de trois by Mdlle. Galby, Miss C. Webster, and Madame Giubilei ; a Spanish castaa pas de deus by Carlotta Grisi and Petiva-mall of and were both applauded and encored, so that the ballet was
actuaily danced twice over. The scenery (by Messrs Greve) was extremely interesting, the last in particular e monastery and cloisters by moonlight, was of sur called "My Wife's Come," afterwards, by Mr. Morton, state of great hilarity durinm its perinemance house in capitally acted by Mr. Harley, Mr. Meato is, Mrs. Stir Covenn Grs. A. Wigan, and was completely successful theatre, has published an announcemert stating that hes has been obliced to close the theatre after a searg that he ortnight's duration, and that he has made arrangements or commensing a new season under an enturly new musement Fie statesthathisattemptstomatrin: apublic principally by those who should have been the first to and principaly by those whord his views." It appears, from the daily mapers that the actors have either declined to play 1 'l the yat wus dramas proposed by the manager for representati.n. nt have so performed their parts that success was impon-ilat. Shakespere's tragedies might be performed with advantage: at as each of thee prinupal actors deemed himself erious doubts the procanent characters, there were serious and ntina
 King \(J\) ohn, and Macbeth should be played, and the prin off, Anderson, and Phelps. It is even said that the right precedence in the choice of characters was decided by ranged micably was imagined the matter had been hen Mr Vander ar Macbeth came to be performed, any man. The howe positively refused to play second to end, and the manager reconcing matters was thus at an close. The public, in the meantime, seem to have given no encouragement to the alternation of Shakespeare's chaacters, for the audience was insufficient to pay expenses.

\section*{iftiscellaneous.}

Rebecca in 1727.-It appears from Seyer's "Memoirs of Bristol" that, about the latter end of February, 1726-7 a petition was sent to Parliament complaining of the badness of the roads about that city, and praying relief, and provision for ceeping them in quence of this an Act of Parliament, 13th Geo. I., 1727 was obtained, and turnpikes were first erected there about Midsummer, and tolls collected for many days. But the country people showed a violent hostility to the messure and great disturbances ensued, and the gates were soon cut down and demolished, chiefly by the colliers, who woulf not suffer coal to be brought there; whereunon the Mayor had the city supplied from Swansea, which, when the colliers perceived; they brought their coals as usual Soldiers assisted at the gates to take the toll, but the nex night, alter the soldiers were withdrawn, the gates were all cut down a second time, by persons disguised in women apparel and high-crowned hats.
Antiquities of Ceylon.-A discovery of great historical importance was lately made by a gentlenan at Manaar In digging under the foundation of a very old house, some Roman bricks of a flat form were found, and, in sifting the rubbish, a gold ring, marked ANN. PLOC. (our types cannot imitate the exact characters), turned up, of ancient manufacture, quite plain, and of a shape similar to those in the British Museum, which are said to have been worn by Roman knights. Now, we know from Pliny that the farmer of the duties in the Red Sea, Annius Plocanius, Was carried by a storm to the coast of Ceylon in the year little. he was of the equestrian order, and there seems It is ruson to doubt of the ring having belonged to him. damp much time-worn, or rather injured by the effects of damp and corrosion.-Ceyton Hexala, \(u\) un 4 .
Indian Mission.- When the last packet left New Fork for Liverpool, a deputation of chiefs and warriors rom one of the tribes of Indians located on the lands at the head of Lake supen Victoria, to lay before their way mist Court of Queen Victorig, to lay before their Royal mistress certain grievances andor which their people are labouring. The following account of them is from the New York Inquiver :- Wese veritableard rugged sons of the forest, with the wives come fully equipped and appointed with al the parapher nalia of war, hunting, traveling wigwam, \&c. The seventy years of age, being the oldest warrior of his tribe, and having fought upon the frontiers during the war between Great Britain and the United States, both his warriors and himself bave enjoyed the highest favour and confidence of the brisa Government. A difference having existed for some time between the Chippewas and the Upper Canadians, those warriors have been delegated o lay their grievances before the Queen in person. Their locality is at the head of hake superior, the most remote and isolated of any of the tribes of American Indians. It Was a party of this tribe that accompanied Captain Back in part of his celebrated expedition to the North Pole in search of his friend Captain Ross. Having yever lived ear the shore of the lake, every object connected with civilization is a matter of great curiosity to them. Their interpreter says that their astonishment upon beholding a ceam-boat for the first time was unbounded; and tiat in descending the locks of the Erie canal they went through variety of heathen ceremonials to propitiate the Evil the waters to sink or rise over hills and valleys. What their wonder will be in witnessing the scenes of a plas, or the wonderful exploits of the circus-riders, remains to be
known．They are certainly objects of great interest，and in fact the only Indians from that remote region of country that have ever been among us，or that in all pro bability ever will visit these parts again
The Royal Visit to Cambridge．－It is curious in connexion with the Queen＇s intended visit to the Univer sity of Cambridge on Wednesday next，to refer to the details of Queen Elizabeth＇s visit in 1563．On that occa－ sion，tragedies，orations，disputations，and other acade－ mical exercises were recited before her Majesty．The list of Honorary Degrees then conferred comprises many distinguished names in the history of thety from th University annals of the time：－Thomas Howard，Duke of Norfolk；Edward Veere，Earl of Oxforde ；Ambrose Dudley，Earl of Warwicke；Edward Manners，Larl Dudley，Earl of Leicestre；Edward Clinton，Lord High Admiral；William Howard，Lord Chamberlain；Henry Carew，Lrancis Knolls，Vice Chamberlain．Thomas Henage John Ashley，Richard Bartue，William Cooke，Edmond Cooke，Esquires．Historians differ as to the unanimity which prevailed amongst the learned doctors of the whion pron bities which other leading circumstances of those changing bities which other leadig circumstances ot chose changing times gave rise to；bat Fulter states wish that＂acts being ended，degrees conferred， university officers well rewarded，and all persons pleased， university officers well rewarded，and all persons pieasear
her Majesty went on her progress，and the scholars her Majesty went on her \({ }^{\text {，p }}\) progress，and the Bcholars

Quem divit tumulo Thoma Prestone scholarem
Insomuch for his good disputing and excellent acting in the tragedy of＂Dido，＂she bestowed on him a pension of 201b．a yar，whim hor commendation，whereor he not only friends in Trinity College，but also after her
 Majesty＇s neglect or ecclesiastical government．But Mr． Cartwright＇s followers，who lay the foundation of his dis－ affection in the discipine celabined ins consion not carnall discontentment，credirnoly commend though not reward him．But soon after he went beyond the seas，and fter bis travel returned a bitter enemy to the hierarchy．＂ Queen Elizabeth herself on this occasion delivered a Latin oration before the assembled members of the University， Diplomacy in China．－We copy the following amusing story from the Standard of Thursday，which it published on the alleged authority of a letter from a Naval Officer ： －＂At 5 P．M．the Captains in full－dress（thermometer and public being present to witness the ratification of the reaty of peace，which was done in great form，under salutes from the forts and ships．The Chinese did not seem to care about it，but it was some comfort to us to find that they felt the heat as much as we did；but when dinner came the scene was different．We sat down in white jackets，about fifty．The Commissioners appeared quite at their ease．They drank an enormous quantity of wine；chatted，laughed，and finished every glass，turning tover to show it was empty，and helping themselves from the decanters．Old Keying，the Chiel Commissioner，must have taken 50 large glasses of wine at least．When dinner was removed，the Queen and Emperor of China were drank to Keying＇s health，who would not be done out of his glass，but drank too．He then gave us a Chinese song uncle singing a song？After this he called upon the Governor，Sir H．Pottinger，who gave us an English 8ong， when Wang，the second Commissioner，gave ute another the old Tartar General，whose performance surpasses al description：such a collection of＇nuises＇I＇never heard before．He then called on Lord Saltoun，who gave us jolly song，when old \({ }^{\prime}\) Keying commenced again ：＇and so passed the evening till near \(11^{\prime} o^{\prime}\) clock，the＇id fellow passed the enough for siz at least，＇and walking off＇prett taking，
Lord Rosse＇s Telescope．－We have already，on mor than one occasion，noticed the gigantic telescope now con the satrong the the astronomer Af Arma becula speculum，which weighs and can bee loas，The tube，partly figure，and can be polished in a day，The tube，partly a cylinder of inch－deal，strongly hooped；and eight feet
diameter at it centre，is complete．＇Thice måsive centrês
on which the telescope is to turn are in their place，and the apparatus which supports the speculum，which is of wire and of great weight，is also complete．The telescope is not tolbe turned to any part of the sky，but limited to a range of half an hour on each side of the meridian，through which its motion will be given by powerful clock－work，indêpen dent of the observer．For this purpose it stands between two pieces of masonry of Gothic architecture，which har monises well with the castse．One of these pillars will sustain the galleries for the observer，and the other the clockwork and other machinery，one of which is finished and the other nearly completed．An extremely elegan arravgement of counterpoises is intended to balance the enormous mass，so that a comparatively slight force onl will be required to elevate or depress it，much of which also completed，and Lord Rosse considers that a coupl of months will be sufficient to have the instrument fit fo trial．The arrangements will not permit the examination of an object at any time，but only when near the meridian when objects are best seen．So large a telescope will al way there will always be enough of objects at any given time to employ it fully．The aperture is six feet，and the focal length fifty－two fee
March of Intellect．－There is no knowing how far ou American friends are to carry the science of music ；bu that it can be put to from which Mozart and Haydn di not dream of in their philosophy：－＂Mr．Russell，the Vocalist．The attempt of this distinguished vocalist to give the tent scenes of＂Richard III．＂through the me dium of song was triumphantly successful on Thursday still further with thes he will give Cato＇s solilaquy on the immortality of the soul at his next concert，in the same fashion．＂The Morning Chronicle suggests，ss a subject for Mr．Russell＇ next adaptation，the American President＇s Message．

\section*{亚栕。}

Polics．－Union Hall．－Thursday having been appointed for esuming the inquiry into the alleged charges against Mr．Isau
Bridg eman，minister of St．John＇s Clapel，Walworth，and \(J\) Joh Bridgeman，his son，of stealing a leaden cofinn and the remains on was very．T．G．Tawney，the Court from an early hour in the day after three o＇clock．Mr．Clarkson，counsel for Mr．Tawney＇s ramily，on entering the Court said，that since he was Jast ther to ayy of the accomplices corcerned in the disinterment of the remains，except the person who actually broke open the tomb．At
present he was not prepared wilh further evidence a gainst the soner，but from disclosures recently made he had reason to believe
seren that testimony would be produced on a future occasion，implicating another party in the offence．He，however，had pledged himself，
that the final hearing should take place before the next sessions， that the final hearing should take place before the next sessions，
in order that the charge might undergo investigation before in order that the charke event of a committal，but，under the
another tribuma，in the en
circumstances，he would not produce further evidence unless it allowed to stand over for that purpcse．Mr．Boakin，on behal of defendants，opposed the application，on the ground that ire
ouent aajournments had taken place，to which he made no objection，anxious that every opportunity should be afforded Mr．
Tawney of producing all the evidence he could to establish the charge，if he was in a condition to do so．Now，however，as magistrate woukd pronounce bis decasion．With respect to th
free pardon aluted to，that would have nothurg to do with the magistrate＇s gecisisin．Counsel then contendert that the evin enc lrate entertaned any doult on that pont，he would prefer，on
the part of his client，that the case should be sent before another trivunal，in order to pive hima an opportuxity of proving his
inns cence of the charge．Mr．Cottinglam said，that upon the estimnny airpady adaceet or misdemeanour，and that in the event of further evidence being arducced，it would not exclude complainant from applying to a Judge，and obtaining a further
postronement．The magistrate made some remarks on the evi－ deatponement．The magistrater defendant，and said that there were strong reasons for believing that he was cognizanthapel on
took place in the burial－ground attached to his own chaple he night of the 6 th September；he therefore held both defendant Criminal Court． Bow－sTress．－On Thursday Anthony Willett，a person
espectable appearance，was charged with feloniousiy forging a bill of exchange，by altering the surn from 46.108 ．to 146.108, ，
intent to defraud Mr．Thomas Tiltman，fruiterer，of Tavistock－ ow，Covent－parden．The prosecutor stated that on the 30th May last，prisoner，with whom he had bad some dealings，cailed upon hum at his stand in Covent－garden market，and asted balance
accept a bill of til． 10 s．，which he said he thought would bill heir accounts．Prosecutor considered he dian not owe him
much，but consented to accept the bill．Prisoner then produced a stamp with the figures \(4 l\) ． 10 s．written in the corner，but nothing else up
of Mr ．Solomon
mmediately returned it to prisoner．He did not at the time examine the stamp，and heard nothing more of prisoner or from Mr．Crocker，a solicitor，demanding payment of a bill of \(14, l\) ． drawn by prisoner，and purporting to have been accepteded a bill for such an amount，he called on Mr．Crocker，and w there shown the bill in question，which he at once identifed abse－ quently he had accepted for 46． 10 s．，bat a figure of up with the word＂fourteen．＂Mr．Solomon，a fruiterer in Covent－garden， May for the purpose of accepting a bill；whilst he was writing witness stood hy his side，and distinctly saw the sum or
\(4 l_{r} 10\) ．in figures upon the stamp．Mr．J．Wallis，of Cursitor－ \(4 l, 108\) ．in figures upon the stamp．Mr． he wonld discount it．He said he wanted the money to take up a \(15 l\) ．bill，which was due that day．He accordingly sent him a name of Marks．Mr．Henry Crocker，solicitor，produced the bin，
which had been placed in his hands by Mr．Marks，and upon which he had issued a writ against prosecutor for the recovery of the amount．A police constable apprehended the prisoner on Wednesddy cvening at 15 ，St．Andrew＇s．ins，him said it was alto－
when told the nature of the charge agains able to prove the bll gether a mistake，，ind that he should the charge，prisoner said that prosecutor accepted the bill－as it there appeared，that he did
so for the purpose，of meeting another bill of a similar amount， so for the purpose，of meting another bil or a similar amount，
and that the prosecutor would willingly have accepted for a much
larger amount had he wished it．Mr．Twyford said he should
leave a jury to decide that question，and committed the prisoner leave a jury to decid
to Newgate for trial．

Cheanside, Cbeapside, London.
H. LANE and So Ladies and Gentlemen whermselves they need not assure those their orders that the utmost reliance may be placed in having their future commands executed in the best possible manner and on the most liberal terms; at the same time they would take chins
opportunity of assuring those who may for the first time entrust hitherto been their guide will in no instance be deviated from. H.L. and Son would further beg to observe that they have
many thousands of ROSES in pots exalusively for Greenhouse culture and early forcing, and that their general stock of Roses, in point of extent and growth, is second to none in the kingdom.
Great Berklampstead, Herts, Oct. \(27,18+3\).
"PELOPS" AND "EVERTON", two of the best PANSIES in
cuitivation-raised in 1843 by THos, 0 'Grant, Esq., Grove JOHN LUCAS, Gardener to Mr. O'Grady, begs new and disay he is enabled, by permission, to cel out the abore the pair. The stock of both is limited.
CHRYSANTHEMUMS.
CHANDLER AND SONS, Vauxhall Nursery, London
having a large stocle having a large stock of Young Plants, well budded, and
now in a good state for sending away, of this beautiful Autumnal Flower, can supply good plants in pots at 12s. per dozen, and larger plants at 188. per dozen, \({ }^{\text {O. and SoNs }}\), Collection, includ
ing many new sorts, will be in full flower during the ensuing C. and Sons have also a fine Stock of Evergreens and Fruit-
trees which they can offer at moderate prices.

YOUELL
Gardenern AND CARNATIONS and PICOTEES , AND CO. beg to refer the readers of the of the above highly-esteemed Flowers, which appeared on the
Advertising pages, 706 and 707 , of this Paper, of the 14th inst.,
 - CaRNations pic
 Show varieties, with which they have grined 23 Prizes
this season, can be had on pre-paid application.-Bull-fields, \(\frac{\text { Woolwich. }}{\text { HOLLXHOCKS, HARDY HERBACEOUS PLANTS, Rec. }}\) WILLIAM MAY begs to state that he is provided Hollyhocks are of his own stock, which he has been selecting for the plants have also been carefully collected, and are of the most ahowy varieties, comprising the most popular Generas in present cultiva-
tion, such as Phloxes, Pentestemions, Acontums, Anemones, Delphiniums, Campanulas, Lupinus, Cinothera, clec.
The Hollyhocks in conlections of 100 plants for 408 , 50 plants, named for 425,550 sorts, 255 , of W . M .'s selecting, including
nall package. Hollyhock seed saved from best double flowers, 200 sedis
1or 2 2., (i,. ; 500 Beeds for \(5 s\), ; Pansy seed saved from best prize N.B. - To those friends who reecived their Hollyhock plants late last year, W. M. begs to state that any they may have lost in conse-
quence, he will be glad to replace free of charge. A remittance or reicrence from unknown correspondents is solicited.-Hope Nur-
J. KITLEY, Lyncombe Vale Nursery, Bath, begs to much-admired Collection of SEEDLING HOLLYHOCKS, 18 blooms of which won the silver goblet given by A. Lawrance,
Esq., and the first of 24 blooms in the Society's prizes at the Show, The best selected, and named, \(1 l\). JALSY. has now ready fine healthy plants of his SEEDLING PANSY, "Lyncombe Vale Riva,", at ss. each; (sce this Paper o
the 6th May, 1843.) Also his SEEDLINGCATUS (speciosa superba), 10s. \(6 d\). per plant ; (see this Paper of 17th June, 1843),
Orde London, and at the Nursery, as above. A remittance from
Fire-ball geraniums
W. MILLER offers this new sort of SCARLET tal dark velvetty flowers, dwarf habit, and glossy, smooth, green forlaye, will make it a ghod addition to every Greenhouse and
fower-yarden, and please every purchaser. It was taken to the June Show at Chiswick, aud much admircd. Plants will shortly be ready to send out, at 5s. each, post free. The usual trade
allowance when three or more are taken. \(\rightarrow\) Providence Nursery,

Ramsgate, October 27,
THOMAS BROWN begs to acquaint the Growers of PaNsirs that strong Plants of his fine collection are now offered for sale; also, an extensive collection of PiNks (compriso gill
J. MND WTM MYATT are now ready to send out their of which has been exhibited at the London Horticultural Society, and a Banksiau Medal awarded. It has also been
submited to professor LINDLRY, for whose opinion see Gurdeners Chronicle, No. 26 , p. 447. It is a most prolific bearer, exhibiting truss. Price, Deptford Pine, 2h. 108.; British Queen, \(1 l_{\text {, }}\), and W. HEALE AND SON, Nurshrymen, \&c., be§ and Trained, of their celebrated HYYKMD PLI'M, rassed between the Greengage and Orieanso And as in ir cucenar of last seasow yellow, inclining to russet next the sun, size of a modern Apricot, possesses the flavour of the Greengage, with the pronid
habits of the Orieans, and bears abundantly cither as a standard ruits, and oupht to be grown in all collections. Fine torl year-old trees, 3s. 60. each; do. trained, 5s, each.

SHILLING'S NEW EARLY GROTTO PEA.
J. abo S. SHILLING have succeeded in raising the Mar which they with confidence recommend to the Public generally, being quite as early, and neorril stand the winter well, and a good Bearer; the Pod large and long.

Gardeners.
Price \(3 s\). per Quart; 10s. per Gallon; 17s. \(6 d\). per Peck; \({ }^{305}\). per Half-bushel; \(2 l .108\). per Bushel. They have likewise a few Packets of Calceolaria Standishii Seed, at 5s. per packet; sent Order
London Agents: Messra. Fibld and Chird, Seedsmen, Seedsmen, 152, Fleet-street, London.

THE BRITISH QUEEN AND PRINCE ALBERT PEAS. W. J. CORMACK AND CO. beg to announce to
 packages, bearing the name of the firm, price \(3 s\). \(6 d\). per quart The usual allowance to the trade, N.B.-"CormAck's Early Kent Peas," 14s. per bushel. WIM A W M. STIDOLPH, Nurserrman, near the Promley, begs to acquaint Gentlemen, Gardeners, and Peet and upwards that will remoove with good roots and a ball of earth; 100 PURANS

\end{tabular}
The first step which a gardener should take in order to determine the best method of cultivating a plant is to make himself perfect master of its structure and natural habits. When he has ascertained what Nature has intended the plant to do, and what means she has furnished it with to accomplish the ends for which it is destined, then, and not till then, will he be able to judge correctly of the way in which it may be Theated under the artificial circumstances of a garden. Then, too, he may know how far it is possible to alter its nature in order to render it more subservient to his purposes. One would think this to be a truth which there is no disputing, and we do not imagine any one hardy enough altogether to deny it; and yet it is practically neglected every day.

We dare not ask a farmer whether he perfectly comprehends the natural habits of Wheat; and a gardener would probably be affronted if the same inquiry were made of him as regards a Strawberry plant. Nevertheless we will undertake that ninetenths of both farmers and gardeners bave never considered the exact mode of growth of either the one or the olher of these common plants. "It is impossible not to understand what is daily before our eyes," would probably be the gentlest answer we should
receive. However, let us see what the fact is as regards the Strawberry. It is not long since we were obliged to explain circumstantially the reason why the leaves of the Strawberry plant should not be cut of in the autumn, according to a barbarous practice
which exists in many parts of the country. The endless questions put to us on that occasion afford the most conclusive proof that the real nature of the plant, so far as its leaves are concerned, was not at all comprehended. Now we are asked why we object to plants, classing that too among barbarous practices; and this shows that the questioners have also not considered the manner of growth of this common heub.

A Strawberry plant consists of a very short stem, seated just at the surface of the ground, covered with slender woody perennial roots, which divide into a multitude of branches. The stem itself consists of a soft centre, with a woody outside, over which is the
bark, which bears the leaves. The soft centre is bark, which bears the leaves. The soft centre is a
very large pith, and the Strawberry stem is in fact not essentially different from the branch of a tree, one year old, with all its joints so contracted as to touch each other. The pith is a great receptacle of organifruit matter, it is the sonice when the leaves and starchy fed in the spring and early summer; its starchy and gummy contents may be observed at this time of year, by any one who will cut it across and touch it with iodine; the gum will then become brown, the starch violet, and the woody matter will remain of a clear yellow. The roots extend to a directions in search of food, and increasing in number as the stem increases in age. Their object is to water, unorganised food from the soil, especially water, of which we know the Strawberry to be greedy.
When undisturbed they live for a long time, and are at all times ready to answer the demands made upon them by the leaves and fruit.

This is the natural state of things with the Strawberry. We are aware that some persons believe that stem itself becomes annual, and that the Strawberryseason: but these are so evidently mistakes-as any one may satisfy himself by a little examination of the plant-that it seems almost unnecessary to notice them further: the only evidence we need offer in opposition to these views is to be found in those Straw-berry-beds which are allowed to remain for twenty years and more without replanting, and without any
deterioration of the produce. The stem of the Strawberry, no doubt, perishes-and so do the roots, after a time; but by no means after the first season ; and, so far as the roots are concerned, not till after even many seasons, if they are allowed to remain undisturbed. Mr. Knight long since exposed the error of supposing the Strawberry roots to be annual productions only. "I deny," said he, "their being annual productions only; and I contend that whenever they are found wholly lifeless round the surface of the mould of pots, as they often are after unfavourable winters, the growth and produce of the plants in the succeeding year will be much diminished." Nothing can be more true, as those Gardeners found to their cost, who, plants in pots to be exposed to the severe frost: the plants in pots to be exposed to the severe

Such being, as we conceive, the true nature of a Strawberry-plant, it is obvious that the roots should be preserved. If we ask what advantage is gained by destroying them-as necessarily happens by digging among them, for they are very long rooted-the answer, and the only answer, is, that the soil near the Strawberry-plants becomes so hard after a season's gathering, that it is unfit for their support. This may be, in some places; but if so, it would be better to loosen the ground with forks as soon as the crop is gathered, when the destruction of a few roots would
be of less consequence, than to break it up and destroy be of less consequence, than to break it up and destroy
a large proportion of the roots in winter or late in autumn.
No possible advantage can be derived from destroying the Strawberry-roots, whatever may be gained by loosening the soil in which they grow. But the disadvantages of destroying them are serious. These roots able quantity ; as soon as their growth is renewed in spring, they extend by the assistance of that substance, which enables them to form their spongelets, and to advance into the earth in search of water, \&c., which they immediately convey to the stem, while all the organizable matter in that stem is expended, as Nature intends, in the nourishment of new leaves and fruit. But if the roots are wholly destroyed, then the organizable matter in the stem must be directed downwards for the formation of more roots, and of course the supply intended for the leaves and fruit is diminished in proportion to the quartity of roots which the stem
has to form ; for it must always be remembered that has to form; for it must always be remembered thaw
roots cannot be organised out of nothing. The Straw berry-stem, which is intended to form leaves and fruit only, cannot have its power diverted to the formation of roots without diminishing the vigour of the leaves and fruit.

A much-valued correspondent says that he is well acquainted with the practice of market-gardeners, and has often regretted to see, in the process of digging that were destroyed; nevertheless that his theorizing has been sadly puzzled by the handsome crops that followed the operation. But it does not appear to us that this fact affects the question so much as he sup-
We have not to consider whether good crops poses. We have not to consider whether good crops but whether better crops would not follow its discontinuance. That Nature has a wonderful power of repairing her losses is well known; that this power should be assigned to plants in a greater degree than to animals is one of the most admirable manifestations of Divipe Wisdom: for without it the Vegetablē Kingdom would disappear from the face of the earth But it does not exactly follow that, because.plants have a wonderful power of resisting the effects of mutilation, they should be called upon to exercise it needlessly. Moreover, it is to be recollected that in marketrardens the cultivation of the Strawberry is much higher than in private grounds; that the soil is extremely deep and rich, the vital energies of the plants excessive, and that all the vegetable functions are in such a state of excitability, that the loss of a portion of the roots-for after all, but a small portion
is destroyed there--is of far less importance than in the majority of private gardens.

However useful and interesting it may be to the scientific Agriculturist to have extremely accurate and minute analyses of different soils with the view of discovering the is only interested in the ultimate results of scientific researches. These, however, have not yet been satisfactorily explained. Theories have been suggested, which may be founded on fact or may be erroneous, for all that has yet been proved; and until it shall have been satisfactorily shown that certain specific ingredients in a soil are either indispensable to the growth and maturity of certain plants, or at least greatly assist in rearing them in perfection, the practical farmer will not vary his usual operations for the sake of mere experiment; and if he did, so many circumstances may concur in rendering an experiment apparently successful in one case, or
defeating expectation in another, that the safe plan is to adhere to those principles which universal experience has proved to be sound. With respect to fertility, no man who has the least practical knowledge of Agriculture will deny that the best soils all possess certain mechanical as well as chemical properties, and that the former seem fully as important, if not more so, than the latter. These mechanical properties may be ascertained by persons the most ignorant of chemical science. The first of these is porosity: without pores in the soil no vegetation can go on. If the pores are too large and numerous to retain moisture in dry weather, we have a barren sand; we need only take some of this soil in our hands and we see and feel that the water will filter through it so east, that, unless there be a constant renovation of it, all moisture must soon be gone. Yet even such barren sands may be rendered productive by irrigation; grass will grow, if there is a constant and. regular supply of moisture, even in pounded glass. The roots of the grass will produce a greater continuance of moisture, and in time fill up so many of the pores, as to correct the barrenness. This is a fact which many can vouch for, who have converted the loose old beds of xivers, composed of round pebbles and sharp sand, into rich water meadows. In southern climates water is all that is mecessary to make any soil productive. The heat of a tropical sun supplies all the stimulus required for perfect vegetation. Hence the great ingenuity displayed, and the vast labour employed, to raise water, without which the most fertile plains are soon converted into deserts. But water alone will not produce the most useful products of the earth; something more is required, and this is organic matter, which, by its decomposition and subsequent recombination, affords all the substances usually found in plants. Some soils cuntain a considerable store of this organic matter, preseried by a wise law of nature in a dormant state, if we may so call it, requiring only light, air, heat, and moisture to call forth its latent energies, and to enable it to supply the elements of vegetable grow th.
Organic matter, however it may have been formed, does not seem to constitute any of the original minerals of which the earth is composed. We can generally trace it to some probable origin, and conclude that it once formed part of some vegetable or animal which had life, and of which it is the dead remains. All soils which contain much organic matter intimately blended with different earths appear to have been deposited from suspension in water, and consequently consist of very small particles, whatever be the uature of the earths, or the proportions in which they are mixed. If these particles are very minute, and, with water, form a thick mud, which dries into a hard clod, it requires to be made sufficiently porous to allow the roots of plants to strike into them, or else, however rich be its composition, no perfect vegetation can take place: but in these soils there is generally such a portion of minute crystals insoluble 1 in water, which are only kept suspended by the viscidity of the good magnifying glass, they show sufficient pores for the transmission of moisture and the expansion of the minute fibres of the roots. Such soils are eminently fruitful, so long as the organic matter is not exhausted. This is often for a long period, especially when the rich soil is deep, and fresh portions are brought to the surface by deep ploughing or trenching. It may be that in such soils an able chemist will detect minute portions of various mineral substances, and to these portion of the fertility. but may in part ascrin the but unless it be show. that the absence or these, or a different proportion in other silnilar soils, has a decided influence on the fertility, may we not, till we that these minerals are there accidentaliy-not necessarily

Experience has long proved that no soil which has a certain texture, neither too stiff nor too loose, and which contains organic matter in that state in which it is easily decomposed by exposure to the atmosphere, has ever been found unfruitful; and that where there is sterility there is always an evident cause visible in the texture, in the want or superabundance of moisture, or in the admixture of some mineral injurious to vegetation-unless it be from a total and absolute want of organic matter, in which case every farmer knows the remedy, and gives ample manuring. It is but seldom that lan with a grod texture, and without excess of water or noxious minerals, is entirely barren. It may have been exbausted, it may have been left untilledbut ordinary tillage and sufficient manuring never fail to make it productive
Experience has taught that the most fertile soils may be exhausted, and that repeated crops of the same kind of produce will exhaust it faster than if a variety of plants succeed each other. . But it also teaches that judicious cropping and manuring will perpetuate the fertility. It is proved that the exhaustion of the organic matter is not the only reason of a falling of of the crops when the same plants recur too often.

When science shall have fully determined the cause, and shown the easiest remedy, it will have rendered a most essential service to Agriculture. Let men of science keep this steadily in view; let them make experiments, first in their laboratory, then in the fields, to establish their conclusions, and they will be entitled to the lasting gratitude of all practical agriculturists. At present science has not yet thrown culturists. At present science has not yet thrown
much light on the subject, and the various theories much light on the subject, and the various theories
which have been proposed to solve this problem have which have been proposed to solve this problem have
scarcely a sufficient foundation in certain experience to be received without hesitation, however eminent the authors may be by their deep knowledge and accurate investigation of the nature and combination of the various elemental substances which may be found on the surface of the earth.
This is by no means said to disparage science-far from it ; it is to make science and practice go hand in hand; to prevent uncertain theories being received, Ind by their failure throwing a discredit on science. It is to render the result of scientific experiments certain before any new practice is recommended.
With all the expense incurred in the trial of various substances recommended as substitutes for the common manure which is made in the farm-yard, none, except ground bones, which have the sanction of long experience, on light gravelly solls, have yet obtained the general confidence of practical men. The interests of commerce and of individuals have exaggerated the virtues of various manures, which have been imported at a great expense. The xesults have been so various and uncertain that the practical farmer waits for further evidence before he lays out his money at a
venture, and in the meantime is content to apply the means which he knows will fertilize his land, because they have been tested by long experience.-M.

The author of one of the estimates of the expense of Wheat-splitting, published last week, has sent the following correction of his observations:-In the calculation No. 3, for planting an acre of Wheat, it should have been stated that the plants were to be
planted one foot by ore foot six inches apurt, and not planted one. foot by one foot six inches apart, and not have been mentioned that an allowance of about 10 per cent. (about one half of that stated by Mr. Palmer) from the entire number was made for re-
planting, an expense which seems unavoidable in such cases, for Mr. Palmer in his very careful experiment in pots had a failure of 20 per cent. after the final planting out; therefore, before any fair criterion can be formed, less than 10 per cent. cannot be calculated upon for failure, after planting, when the plants
are placed at such a great distance apart; for if failures were allowed to remain, the loss of ground would be very great.

NOTES on CUSCUTA TRIFOLII of BABINGTON. This apparenty new pest to the Agricultuist, and
 by Mr. Robert Gibhs, an intelligent farmer at Thorley,
ne ar Y Ymouth, who begged some information of me as
to the name and properties of a plant which he desime to the name and properties of a plant which he designated
as a kind of Vine without leaves, and which he complained bad overrun and greatly injured a field of Clover immediately adjoining the farm. On going to the spor, I
found large patches, of many feet in dismeter, quite matted with a Cuscuta, which I am aluost ashamed to say I hastily pronounced to be the greater Dodder
(C. europæa), a species very abundant in one locality on the wild top near Kerne, a farm about half-way between Brading and Newchurch, where it was pointed out to me
two or three years since by my friend Dr. T. B. Salter of this town, though previously noticed as a native of the Isle of Wight by Mr. Joseph Woods, many years ago, in
Turner and Dillwyn's "Botanists' Guide," and found by that gentleman at Lake, near Sandown, where I have often sought it unsuccessfully. I may here observe parenthetically, that the Hop is a most universal and pro-
fusely abundant inhabitant of this island, and I am persuaded is equally with the Red Currant (Ribes rubrum) truly and aboriginally indigenous here, occurring copiously in our moist hedges and deep boggy thickets, and occa-
sionalituted by the poorer classes for the cultivated plant in their domestic brewings, for which I am told it answers extremely well. But to resume our subject of to which I was led by the stouter stems of the plant, and their paler colour as compared withs those of C. epithymuy part of the island is entirely free, and which on our larger heaths and commons often infests that shrub as it paying more attention to the subject till again colled to it Numbers xis. and xxi. too late to obtain specimens. But last weels, being again
* Vine is a common term in the T8le of Wight and South of
Enyland grerally for any twining or scandent plant thus,

at Yarmouth, I was informed by Mr. George Gibbs, brother of Mr. R. Gibbs, that the Dodder had appeared
in another field of the same farm very remote from the in another field of the same farm very remote from the
first stated. Tlisther I immediately repaired, and found it occupying a spot of very limited extent, but still in flower (Oct. 12); nor were any seed-vessels yet formed. Having furnished myself with flowering specimens of C. epithymum from a neighbouring common, I proceeded to examine their relative character, of which the following imperfect sketch is the result, not being able to compare the capsules and seeds of each species together:--Even with the disad-
vantage of operating on dried specimens only, Mr. vantage of operating on dried specimens only, Mr.
Babington has displayed his usual tact for discrimina tion in most correctly assigning the characters of his pre sumed new species, as far as it was possible for him to ascertain them under those circumstances; nor to his diagnostic formula (Phytol., No. xxi., p. 467) have I anything at present to add; it perfectly agreeing with my
fresh specimens. The calyx, as Mr. Babington remarks, either quite equals, or very nearly so, the corolla in length; the segments are narrower, or more sublanceaand perhaps rather less deeply cleft than in that, colourless, or slightly tinged with green enly. In C. epithymum the calyx is mostly purplish, though occasionally also devoid of colour, and variable in its relative length to the
corolla ; as in some of the flowers in the before me, the calyx-points nearly touch the opening segments of the latter, though in general coming much
short of them. The corolla of the Clover Dodder is dently more terete, or inclining to cylindrical, than in C. epithymum ; the segment less abruptly acuminate or
more tapered, and very acnte. The flowers in cimens of C. trifolii are manifestly larger (nearily, I should say, half as large again), and of a purer white, than in the other ; the clusters fewer flowered and less globose, the stem in general stouter and paler red or yellow; hence
the cause, as before mentioned, of my mistaking it for C. europeca rather than for our smaller C. eqithymum \(\%\). do not find any material difference in the scales in the throat of the corola, though they may perhaps be somewhat more
deeply cleft in the Dodder of the Clover, as suggested deeply cieft in the Dodder of the Clover, as suggested
by the Editor of the "Phytologist ; these scales are, by ther
however, very irregularly laciniated in both, as regards the depth, number, and direction of the segments. The styles and stamens appear precisely similar in each; but I think none of the fiowers in the specimens before me of Cuscuta
Trifolii are four-cleft, which is commonly the case with some on every example of C. epithymum. I hope next year to be enabled more fully to investigate this important
subject, by an examination of the Dodicer in all stages of subject, by an examination of the Dodder in all stages of
its growth, and to obtain, if possible, some information its growh, and to obtain, if possible, some infor as the date of first appearance in the island.
Towards a settlement of the question,-whether the Clover and Furze Dodder be distinct species or not, fur-
ther esamiations of the plants in seed is necessary. am inclined to Mr. Babington's opinion, that it is probably specifically different from C. epithymum; and I
ground nay view not only on the characters just assigned, which may be liable to variation from soil or the nature of the plants on which the parasite grows, but from the extreme unlikelihood that a species of so rare occurrence island, should so far and so suddenly change its habits, as all at once to seize upon and infest, with still increasing pertinacity, a cultivated plant of yet more extensive dis-
tribution; for which, till within a recent period, it was never observed to evince any predilection. In other words, were efle Clover Dodder and the Maidenhair
of our Isle of Wight commons, one and the same species, would our Agriculturists have so long remained in happy ignorance of the mischief already caused to their Clover crops by the introduction-no doubt from abroad-of the
former rapacious parasite? Unless measures are taken to prevent the further spread of this pernicious annual, universal, than has been the more serious, because more of the gaudy but notorious Poverty weed, \(\ddagger\) (Melampyrum arvense, Linn.) which, from negligence in keeping the land clean, has been suffered to creep nearly across the entire breadth of the southern part of the island where-
ever the land partakes of a calcareous nature, the absence of lime appearing to be a barrier to its progress onward. As the plant is anuual, comes up strong, and pulls up under', if not entirely eradicated, by setting women to weed it out before the Wheat comes into ear. At present the plant is suffered to grow up and ripen its seeds with the to come up when the land is next laid down for Wheat, the rest gathered in with the sheaves are threshed out wirh the grain, which they most resemble in size an separated by winnowing to the great detriment of the
* I presume the same error is committed by Bertoloni in "TI, FI ,
Stal,", where he says, speaking of C europea, "Hæc stirps Stal.," where he says, speaking of C. europea, "Hæc shirps
perlis pratorum est, in quibus serunt Tyifina, aut Medcicagivema
sativam Lur;" and then goes on to propose a remedy, which it

 temen, be laconicaily English
seceds, and so save your crops."

FThe honaur of having conferred this undesirable ornament

 few in England known to produce it.
latter, to which, when made into bread, these seeds impart a hot unpleasant flavour, and communicate a blue colour the bendrain so contaminated. I apprehend the good huspyrum from tholk must now have banished the Melamnatural and legitimate place of the adjoiang where it can do no harm whatever. Bulky and prolific as this weed is, it is yet doubtless one of the easiest to subdue, provided the attempt at extirpation be made at a proper season, and with the requisite care.

In conclusion, I may remark that the present summer has been very unfavourable to the growth of those filiform parasites, the Cuscutas, at least in this island, where they to the works of many continental usual. From reference reason to conclude that our Clover Dodder lias as often, if reason to conclude that our Clover Dodder las as often, if
not oftener, been passed by for C. europæa, or for not oftener, been passed by for C. europæa, or for
C. e epithymum, since, judging from my own specimens, the Iately- introduced stranger unites to structural affinity with the latter the larger size and general aspect of the
former.- \(W\). A. Bromfield, former.-W. A. Bromfield, Ryde.

THE ACCUMULATIVE SYSTEM OF POTTING. The principal instances which led to a recognition of in thacticability of applying larger portions of material in the process of potting, and so of superseding the ordinary mode of shifting from small to larger pots, were in the Balsam, the growth of the latter having been deferred until so late a period, that no hope was entertained of flowering it under ordinary management.
Schiza well known that uniform success in the culture of with anthus retusus is, up to the present time, attended and application which nothing but a correct knowledge differences in the organs of plants can overcome At the period to which this statement refers, (1829 and 30), the plant in question was of recent introduction, and in many instances baffed the endeavours of cultivators in particular difficulty in its early roanagement, that is to say, from the seeding state up to its removal from sixty sized pots, the cause of which may be assigned to the increased temperature to which it would for that period be exposed, and which would maintain an excitability equal to the amount of light, heat and moisture to which it ture, and erposure was increas a by heavier quantities of soil in shifting to larger pog that by heavier quantities of soil in shifting to larger pots chat was manifested, whotever the position or variation of was maniested, whatere the position or variation of treatment it otherwise neous (inion to mould : and the practice I had adonted of using a portion of that naterial in almost every instance of cultivation is still brought to mind, by its unfavourable results upon all stil brought o mind, by its unfavourabie resulis upon and
plants whose quick growth requires such materials only plants whose quick growth requires such materials only the plant to assimilate as much food as the excitability of those organs demands
The effects which generally followed the removal of Schizanthus retusus to heavier masses of soil were, in the instances which rell under my observation, a suda stoppage in growth and a collapsed state of the parts ; and these symptoms generally succeeded the waterings usualiy required atter a long exposure to sun-heat, which ha
caused a full absorption of the previous supply of moisture ; caused a full absorption of the previous supply of moisture and in all cases the results were aggravated or fatal,
proportion to the fluctuating influences of a low and proportion to the fluctuating influences of a low and
clouded atmosphere, and vice versa. The material then clouded atmosphere, and vice versa. The material then
employed, and under which such effects followed, was a mixture of loam, peat, highly decomposed leaf-mould (the latter giving the peat, highy decomposed leaf-moull, and a portion of sand. The two first were wholly destitute of fibre, and the third was in such a state of decomposition as to leave no traces of organic remains; consequently the texture of the compost was such that the application of water served only to increase its retentive and binding effect. Having sustained repeated losses, I in vain con sulted, for a remedy or practical reason, those who had experienced similar failures ; and though I found instances of greater success up to a certant point, yet no consisteat reason could be assigned why plants of a finer growth should be subject to the same fatality as others. At that time I was unable to detect the cause, by seeing the neces sity, when plants approached maturity, of adapting the materials employed in their cultivation to their consitutional character or habits.
These unsatisfactory results naturally led to consulting Nature through the medium of her own works, and as her own interpreter. Having accidentally observed the difference between two plants of the same size, one of which had grown in the compost before alluded to, and the other in fibrous sandy loam with a little leaf-mould, and that the latter far exceeded the former in the healthy expansion of its leaves, I could not fail to connect the difference in their appearance with the opposite combination of material used in their growth
I have already stated that the compost previously used Was destitute of vegetable matter in a partiaily decou posed and friable state. Not having witbin reach sum resolved as appeared essential for the object in.
For some time previous to this experiment I had adopted successfully the practice of using coarse flakes of
unbroken state, as a substratum over the bottom drainage, in the cultivation of many ornamental plants, whose structure enabled them to assimilate food from gross vegetable matter; and from a recollection that however luxuriant were the growth of such plants, and however powerful their absorbent functions, the material alluded to never became so far decomposed as to lose its organic remains, but retained its friable and partially dried state when again exposed, after the completion of a season's growth, I adopted in the present instance the same material, when sufficiently reduced through a sieve, as a valuable substitute, in part, for leaf-mould. The proportions of materials were now as follows :-Two parts selected from the fibrous portion attached to patches of grass, upon a heap of close marly loam, with a nearly equal quantity of the artificial leaf-mould and wood-ashes (the two latter in a partially dried state) ; a portion of white sand was added. By thus substituting for the retentive qualities of the former mixture one with a very different mechanical texture, I was ultimately enabled to transfer plants from 60 -sized pots to 16 and 12 -size, with perfect success. And as a proof of the superior effect which this preparation exerted over others of an opposite nature, it will be as well to add that the loam was zaturally so adhesive as to form a crust over the surface daily, after watering, and for some time required attention to its removal, in order to admit the united agency of sun and air.

It was now most interesting to observe the graceful and expansive growth, manifesting a healthy circulation derived from genial food, and still more so to see the enlargement of the glanduliferous organs, which ornamented its stems, the unisual development of which induced me to regard them as significant symbols of health, and also as organs of respiration which Nature had designed as a means whereby the plant is enabled to balance its own excitability and power of absorption, and the fluctuating influences of atmospheric and solar agency.
The principle involved in the foregoing instances of cultivation may be given as follows, namely:-
An accurate acquaintance with the physiological or organic structure of plants, is of essential importance to a knowledge of the nature, extent, and application of the agencies which sustain them.-William Wood.

\section*{AMATEUR'S GARDEN.-No. XLIII.}

To relieve the nakedness of the Flower Garden occasioned by the destruction of the half-hardy plants, and also to render it a little gay and interesting through the dull winter months, I have lately been selecting a quantity of dwarf evergreen shrubs, which are either remarkable for early flowering, as Rhododendron dauricum and Daphne Mezereun ; for their fruit, as Gaultheria procumbens, and the different kinds of Cotoneaster; for the variegation of their foliage, as in many varieties of Euonymus, Buxus, and Ilex ; or for neat and elegant habit, as in Erica, Juniperus, Mahonia, \&c., \&c. These I intend to cultivate in pots; and at this season, when the garden is
cleared of summer flowers, I shall fill the middle of the cleared of summer flowers, I sholl fill the middle of the Acon with these plants, and plant the margins with Aconites, Snowdrops, Crocuses, Anemones, early Tulips,
and other spring-flowering plants. In this manner I hope and other spring-flowering plants. In this manner i hope to make the Flower Garden unusually gay at a very eary season, and next autumo, when I have had more time to ing Chrysen high, which, intermised with the shrubs, will render the Flower Garden gay up to Christmas, or in mild seasons with a slight protection on frosty nights, up to the end of January. Subjoined is a list of the shrubs on purpose to effect this desideratum with. None of them are expensive but all are beautiful and of easy cultivation.

A TANK HOUSE.
So much has been said on the Tank system of late, that I am induced to lay before my brother gardeners and the public, plans and section of a pit I have lately altered and put up for Lord Doneraile, principally for the growth of I have no doubters that purpose very well at present, and Thave no doubt of its giving every satisfaction. From the Rewhints I saw in the Chronicle last summer about Mr. Rendle's Tank system, I liked the idea much, and about last February I wrote to Mr. R., saying what I had intended for bottom-heat before I read of his Tank, and asked his opinion: he wrote me not to go on with my intentions, but wait for his treatise, which would explain the matter. Accordingly I waited until it came before the public-I might here mention, that about this time twelve months I got by a private letter from Mr. Beaton his opinion and plan for gutters instead of flues, which I plat up in our Pinery, where I have Vines also; these have succeeded quite to my satisfaction. The smoke from the boiler is used in the back flue, and has nearly as good a heat as if there was no boiler to serve first. At the boilers is a shaft, to throw the smoke into by dampers when not wanted in the house. I beg to be excused for deviating thus far from my first intention of explaining my new pit only, all of which I hope may be understood, and be of service to others that may intend to follow this mode of heating ; and as Mr. Beaton intends writing on this subject, I consider the more it is explained the better. All that I can add at present is, that I have had my fruiting Pines turned out of their pots into the bed since the beginning of August, and they appear to be doing as well as could be wished. My bed keeps a uniform heat of from \(80^{\circ}\) to \(84^{\circ}\). As I had it ready for the plants a month before I thought well to remove them, I had the opportunity of proving the heat by plunging a thermometer in it, and at six inches deep the heat was \(30^{\circ}\), and by adding to the fire I found I could raise it to \(90^{\circ}\) or \(100^{\circ}\) if I wished. My Fruiting bed is prepared as near as possible? according to Mr . Rendle's recommendation as possible according to Mr. Rendle s recommendation, except the addition of short lead-pipes at about every four feet along the back, to coavey water down to the slates by y capillary attraction must damp the soil; my plunging pat-mould peat-mould, which I find good. My boner is one of Ste phenson's third size. The botwor my farst left quite laid in common mortar; the joints were at first left quite open, but I afterwards filled them up with roman cement.
The sides and divisions are three bricks laid flat in cement, the sides and divisions are three bricks is then plastered over with cement about three quarters of an inch thick, and the top is covered close
with slates one and a half inch thick. The sides of the bed are all formed with brickwork, and the gutters with brick on edge, laid and plastered with cement, and covered with common slates; on the top are movable slates that can be taken off for steam, as occasion may require; on the back flue are boxes with Cucumbers trained over the back walk; the smoke can also be let off from the boiler into the back flue, when required, by a damper in the upright shaft ; and in addition to this, the fireplace is connected with the back flue in case of severe weather, or at any time the heat from the boiler may be found insufficient. I find the Tank efficient and simple, and I have no doubt this is more to the purpose, and cheaper, than Veitch's (of Exeter) system in the Chronicle. Messrs. Veitch's (of Exeter) system of heating, seems nearly on the same principle as this. I am certain it must work well, and I am sure that this mode of heating will become general after a time, as this heat is so regular and congenial to the plants.-John Hayoroft, Doneraile Gardens,
Sept. 31,1843 . Sept. 31, 1843.
A, represents the boiler.
B, flow and return gutters
D, Return pipe.
E, covers over the sluices with boxes the denth of the bed.
N. B.-The sluices in the middle of the bed I open by a bit of
strong wire riveted into the zinc sluice; after the water has trastrong wire riveted into the zinc sluice; after the water has tra-
versed the gutters it is turned into the tank at the first sluice from the return-pipe, and if not wanted in the gutters it enters the tank at the fow-pipe, all the other sluices being down, those other sluices are used to regulate the heat in either bed or gutters as required.

\section*{HOME CORRESPONDENCE}

Gardening on Peat-Bogs.-I was wondering, when I was reading the communication of your correspondent "Quercus," when he was telling you about the new kailyard that he had a hand in makin', gif he was an auld prentice \(0^{\prime}\) mine, for he described the situation \(0^{\prime}\) the gariefly out 0 ' a "sandy bank" and a "quagmire." for before we commenced makin' the garden, its lower part was a place where the wild duck was sometimes shot while floating on the surface 0 " the water, and as he says, there were mony "antiques" in and about it, such as arrow heads made out 0 grey quartz, and spoons out \(0^{\circ}\) clay slat, buld warld hing que the anid 0 gas, and were lang enough and broad enough to mak brigs for kintra burns; and fas he wants to ken the result \(0^{2}\) the
experience o' those wha hae gardened on peat, I for one will be ready to gin it as far as my experience goes. The peat in part o' the garden in which I hae earned my bread for mony a day is saxteen feet deep, and I hae had Celery and Cauliflower, sic as he describes himsel', and the dwarf Marrowfats grew gigantically, and at this present hour the stems o' the Jerusalem Artichokes are upwards o' ten feet high, and the shoots o' the Raspberry are not far ahint them, and if some wild beasts were let loose far ang them, it would somewhat resemble the jungles o" Hindostan. Noo it is a pity that such a gude material Hs peat is not within the reach \(0^{2}\) "Quercus," for I am as peated that it would be a great benefit for his cawk and his clay, for in my lifetime I hae lad a little practice and his clay, fony a happy hour hae I spent amang the wi' baith; mony a happy houre, looking for the white blossomed Heather; and I hae gathered the Teasel on the
chalky roadnides o' Hamp share, and I hae often thought that the nation sustained an ammal loss frae the great quantity o humus that is carmed away wi the floods \(0^{2}\) winter and summer frae the peat-hngs and other places
where peat has accumulated, and also fiom the incalcuwhere peat has accumulated, and also fiom the incalculable quantity \(o^{\prime}\) carbonic acid gas that lies dormant in
the chalky districts \(0^{\prime}\) England. Noo, we are informed by folk that should ken weel about kintra affairs, that in weel-drained land the mair organic matter there is in the soil the warmer it is; and if the soil can be better warmed than it is at present, nse doubt some o our crops will be carbonic acid gas and humus were added to the soil there is nae saying bow big some things would grow. But Liebig says that a' the carbonic acid gas that plants require is derived from the atmosphere ; but it is generally allowed tation, by supplying it wi' carbon ; but plants in general are none the worse of a wee thing of it at their roots
besides what they may set frae the atmosphere, and then they are sure \(0^{\prime} t\), for we are whiles ready to imapine that one cause produces an effect that is, maybe, brought about by a great number o' causes ; so it might not be the best thing at a' times to trust ower muckle to the atmosphere plants son the wants our when they want corbon, for something like bones that hae been steeped in muriatic acid, one may turn them round his finger. But a wandering awa frae peat. But alrhough peat may hae mony gude qualities, care should be taken baith respecting the quantity and the quality that is used; some will lay it on their ground as thick as if they were going to species of Erica, and if it be but partly decomposed, and containing a eaisture o' the seeds o' Polygonum avicuabout the evil properties \(o^{\prime}\) peat, and no ae word about their own ignorance; but peat should commonly be rejected whes Cryptogamic Botanists can tell whether the theca o' mosses that compose the peat hae double teeth
or single teeth, or nae teeth ava. Noo there is mony a part o? England that would be a great deal the better o' a mixture o' humus and carbonicacid gas, and as for the former, there may be plenty of it had in the shires o'
Lincoln, Northampton, Huntington, Norfolk, and Cambridge, besides what may be had in the northeru counties \(0^{\prime}\) England; and as for the latter, there is nae scarcity of
it in the shires o' Berks and Bedford, Hants, Wilts, and Dorset, besides mony other places that might be mentooned; the green sand \(o^{\text {' }}\) Surrey, the weald clay \(\mathrm{o}^{2}\) Kent, and the red sand \(o^{3}\). Somersetshire, the greywacke \(o^{2}\)
\(W\) ales, and the soils \(o^{\prime}\) other geological formation, might be all greatly improved by them; but some will be asking
- How are we to obtain them? Nae doubt some places -How are we to obtain them? Nae doubt some places will be more spread over the kintra: there are already arrive when there will be peat railway trains and chalk railway trains, conveytog these useful materials to where they are wanted, and it may turn out in the end to be far in improving the soil and its produce than sending learned men awa to Spain to look for food for British plants, or subjects on which ane like me maun speak warily, and leave it for others to judge who have had mair experience in the matter than-A Muirland Gardener Orchard Curiosity.- (High Bentham, Yorkshire.) There is now growing in the orchard of Mr. Richard Ray an Apple-tree in fuson; two Apples also of the first crop are still hanging and what, perhaps, may add a little to the rarity is, Mr . Ray has in his possession, from the same tree, fruit of the last year's growth in a state of preservation.-Facile. the same quarrel with house martins as your correspondent "S. W.," found that he could effectually counteract their building speculations by rubbing the corners of his windows, \&c. with soap. A thin coating of soft soap,
besides being offensive in its smell, renders the foundabesides being offensive in its smell, renders the founda-
tion too slippery for the swallows to build upon; but tion too slippery for the swallows to build upon; but able. It is, however, the only remedy that I have ever
met with. Whatever plan your friend may adopt, I do met with. Whatever plan your friend may adopt, I do
hope he will allow the swallows as much accommodation as he possibly can. They are eminently useful. In gathering their "appointed food," they certainly keep within bounds insect tribes, whose grubs would prove a terrible scourge both to garden and field. But even were
the swallow useless-which none of God's creatures are, the swallow useless-which none of God s creatures are, under our roofs, as if assured of a welcome? For my
part, I should be glad if "S. W." or any other W. of part, I should be glad if "S. W." or any other W. of swallows to build with me. In a house which I occupied some years ago, I had a nest in my bed-room window. The old lady who was tenant before me sent to say, that
she hoped I would not eject "her swallows." They lived and multiplied unmolested, and rewarded me for my protection by awakening me betimes every morning by their blithesome and business-like twittering. In all mations indeed the swallow has ever been, and must be, sence is with sunny skies, and all that is loveluest and most interesting in creation. Virgil, it is true, accuses
it of devouring bees, but every one knows that to be impossible. And Anacreon complains of its disturbing his loving strains has slumbers. But in what joyous and loving strains has it been sung by other poets of every
time and tongue! Above and beyond them all, "the
sweet singer of Iscael," "alluding to it in one of his noblest
lsalmi, tells us, that "even in the Courts of the Most High the swallow found a nest for herself where she migh ay her young."
respondent with a Greek signatis an article by a cor Planting, which in many respects is highly the subjectifying, and cannot fail to yield pleasure to any mind anxious to. see the barren wastes of our country clothed and ornamented correspondent in his morning's ride, my gratification would probably have equalled his. At the same time 1 should have been rather cautious in attributing so much of the pleasing result to an operation which I have seen so much reason to deprecate and condemn, but which our success-I mean '. Pruning;" nevertheless, according to the description given of the mode of operation pursued njurious than the wholesale haggling too much practised and recommended by others. Many apparently plansible things have been said and written in favour of pruning resulted only in mischief : some I well remember followed on the publication of Pontey's "Forest Pruner." It may be remembered that in several of the articles I have sent you in deprecation of pruning, I at once admitted that, so far as merely giving a direction to a young tree, the practice is commendable, but no further, and no in that view. I also feel no objection to the practice of Mr Thackeray's woodman in leaving the strongest of Mr hough its direction may not be perpendionlar, in thriving tree it will soon assume the upright. My only fear is, and my only reason for writing this is, to caution planters against carrying the practice too far by continu ing it after it should be entirely laid aside; for there is a nistaken tendency that way, far too prevalent among us scription of the original poverty of the soil and the luxu riance of the vegetation; that, however, it is not my usiness to reconcile; but are we infer from the judicious management of the wood One-Shift System of Polting.- Having been particu-
arly interested in this system of potting, I procured in the spring some plants of the following linds, viz., Ericas, Dillwynias, Boronias, Epacrises, and Lachnæas. A friend being anxious to ascertain the progress the roots heir made, induced me to turn some of the plants out of their pots, when I found that scarcely any roots had spread down vertically; and clung with the greatest tenacity to the sides of the inverted part, and even had penetrated through the bole in its bottom, so much so as almost to have filled the pot; and yet the plants are healthy. much recently on the syatem, will be kind enough to give his opinion on the

Hops.-I inclose for your examination a specimen of another lusus, the male and female Hop on the same plant. This was found in a Hop-ground at Farnham, and vater.-Allas.
Begonia Evansiana: Hardy.-I send you herewith leaf and flower of one of my plants which has been grow-
ing now for several years in the open ground, from which ing now for several years in the open gomb, fom better this year than it ever did; the flowers are larger and of much deeper colour than those of the parent plant, which I keep in the greenbouse in winter, and in my parlour in
summer, till the leaves and stems fall off.-J. B., Killan ley Glebe, Ballina.
Bees.-The accounts of Bees in your Paper are curious and interesting. I beg to give you a fact mentioned to me a few days ago by a neighbour. His Bees did not warm all this year, (nor did mine, but seemed quite inwall against which it stood. He rightly judged that there as no further room e placed besident and to which they almos After the lapse of a month or more, conceiving they had atce the lapse of a month or more, their new hey he removed it to a distant stand, secure of a new colony. After some days, seeing no resort of Bees attending it, he raised the hive, and found to his astonishment, that not a single Bee was there!-though there was a fine supply of J. B., Killanley Glebe, Ballina.

Bokhara Clover.-The seed I send with this note came into my possession about eighteen months ago, having ucerne. me m a riend, who state it grew to about three feet high in the autumn, but showed no seed. I cut it, dried it, and gave it to my horses ; they ate it equally well dry as green. In January, 1843, I gave it a good of August it had grown to ten feet high, and was covered with the white flower I now send you; and in the end of September part of the seed was ripe, when I cut it and beat it out by the hand. Having procured a quantity of Cabool Lucerne seed from the Botanical Garden at Sabarunpoor, and also from the India House, I was much surprised to fiad it totally different from what I had first obtained from my friend, having shown a flower precisely the same as our English Lucerne. I send you some of the stalks with the flower, and also the seed in them. The stubble appears to be dead, but I do not intend to meddle

Wth it till after next spring.--J. L.- [This is the Meli-
lotus lencantha, or Bokhara Clover lotus lencantha, or Bokbara Clover.
Dodder. - If left
Dodder. - If left to itself is likely to become a formid able pest, but may be much easier destroyed by an application of undiluted gas-water, or a solution of saltstromg enough to destroy vitality in seeds or vegetation for the time being, than by buruing or other methods recom mended.-I. : \(M\).
Luminous Plants.-Since my last communication I have obtained some specimens of Schistostega pennata from the herbarium of my friend, Mr. Edwin Quekett I have in vain looked for crystals in the structure of this moss. Mr. Quekett says in a note, "I cannot find any crystals, nor do the plants look at all sparkling to the eye hich they would do even after being dried, if their lumi flecting light." Professor Lloyd was probably misled by some of the particles of rock or sand on which these plant grow having got under the field of his microscope. In the specimens I have examined, it is difficult to form an opinion with regard to the explanation of the phenomenon as given by Unger, as the fructification is quite dry. The want of any luminous character in the dried specimeng is quite consistent with Unger's statement that it arise from the vesicular character of the fruit at a particular period of its growth.-E. Lankester.
Plans for Flower-Gardens.-There having been some nquiries respecting books containing plans of gardens, I hink it may be of service to state that "Laudon's Gar dener's Magazine" for the present year contains 15 plans or Flower gardens, viz in the numbers for February April, May, June, July, August, September, and October There is also some information respecting planting them In the "Suburban Gardener" there are 7 plans for Flower gardens, besides many for staall ones, and much discus sion on the subject. In the "Arboretum Britannicum" f the same author will be found plans for Rosariums American Gardens, Ericetums, \&c. - W. Ambrose, Gardener to Thomas Mashiter, Esq., Hornchurch.
Rats.-I have to thank an " Irishman" for his recipe or "attracting" these vermin, but be appears to have overlooked my peculiar case, which was, that I no sooner destroyed one set than another quickly succeeded to commi the same depredations, from the facility afforded them by the drain running through the garden. My object was not so much to destroy as to keep them out, and I think I have quite succeeded in my wishes by adopting the following plan:-At each end of the drain we placed what is here called a "Rat" or "Stink" trap, as it answers either purpose equally well; 'it is thus constructed: a large pit is sunk considerably below the bottom of the drain, and in this pit, about hal its depth down, is placed a slate or stone in a perpendicular position; the bottom being well cemented holds water, and the slate is thus immersed in pren stopped in ais journey ap or down the drain, and finds himself in deep water quickly, and with found before him which is impassable. I have neve side, neither dive under the slate and rise on the other lew rats that hapnened to be in the drain during the time occupied in making the traps speedily found their way through the mould of the garden again ; these we quickly disposed of by nux vomica, mixed with fish, of which they are exceedingly fond. If I am not sufficiently understood in the formation of the trap, the annexed section will perbaps render me intelligible. The slate of course stops the drain entirely, except the space immediately under it

, -Pit always filled with water, being below the bottom Swallows.-In draniensis
Swallows-In reply to your correspondent at p. 721, can conndently state that swallows may be prevented build ing under the eaves of houses by common twine netting which is easily removed at the
N. S. H., Bury St. Edmond's.
Dahlias.-If "A Subscriber" will state the names of the Dahlias with which he succeeded last season, and the names of those that have failed this year, - together witl he locality, some of your correspondents might be enabled to offer such observations as may possibly give him the
information he desires. Without this information any remarks would be speculative.-T.C. \(\mathrm{C}^{2}\). \({ }^{\text {. }}\). Warks would be speculative.-T. C. W.
Weeds in Ponds.-I beg to inform "Aliquis" that I nave a pond of 1 r .13 p ., which has been for the greater part of the summer covered nearly all over with weeds, fill had so unpleasant an appearance that I determined to fill it up. I had four ducks about my grounds, and occasionally on the pond ; about a month ago they attacked the weeds; in about a fortaight they had cleared them all from the surface of the water, and will now probably keep them out of sight. I must not conceal that my ducks have been very troublesome. I purchased them under the belief that they would benefit my garden by eating caterpillars, grubs, and snails; but I do not perceive that they have rendered me much assistance in that way Whist they have sadly injured my Potatoes. I see by the Chronicle that swans clear weeds from Brooklands : there was a pair of those birds here, but they were very savage and unpleasant, and did not clear the pond better than the ducks.-A Villager.

Pine-Apples.-There have been cut and weighed at Bic-ton-gardens within the last three weeks, four Queen PineApples, the united weight of which was 22 lbs. 20 .; the crowns were from 2 to 3 inches high, and the stalks
inches in length. These were well swelled and very handinches in length. These were well swelled and very
some fruit, one weighed 6 los. 2 oz.-W. Dawson.

cultivation of the soil. (Cheers.)

NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL.
 Making allowance for the effects of climate, we may idegnity this
plant with the Eleagnus parvifolia of Wallich and Royle plam the north of fludia, of which abundant specimens were dis-
from
tibuted by the former botanist tiibuted by the former botanist. They are more grey, indeed, and
their sivvery scales are more abundant, but this is a mere difference in degree. Indeed, tile Sirmose specimens, from the coliec
tions of Webb and Gerard, are as green as our own. The
\(\square\)
\(\qquad\)
 well in any good loamy soil. It fowers freely yn Junne and July,
and is only increased by seeds orby suckers, which are sometimes produced when the plants become old. It was raised in the
garden of the Horticultural Society from seeds received from Dr Acacia spectablus. Showy Acacia. (Greenhouse Shrub.)
Leguminose. Polygamia Moncecia. - Among 340 species of Acacia enumerated by Mr. Bentham this is one of the finest, and
it certanly is the very handsomest we have seen from New South Wales, bcautirul as many of them are. Unfortunately our means
of publication render it impossible to represent the softnes delicacy of surface which are among its principal characteristices.
The leaves and branches are covered with the most delicat bloom, and the Howers, produced in large masses at the end of

\section*{MISCELLANEOUS}

Iodine in Nastrrtium aquaticum. By Dr. Muller -From the remarkable smell of the fresh herb I was ounces of the treshi herb were burut to ash, which were
well extracted with distilled water; sulphuric acid was added to the solution, but not sufficient tatidestroy entirely its alkaline reaction; the mixture was then evaporated nearly to dryness, the residue mixed with alcohol, 112 order the filtered solution thate of potash whicl had formed, and treated with nitric acid and starch, afforded the characterphosphate of soda and oxide of copper juparted to the iodine, of the bluwpipe the w. 11 -hnown green colour of Ann. der Pharm. for July, as yuoted in the Chemical Gazette.-[It is a great pity that chemists are not more exact in their language when they travel out of their own useless by a neglect of Botanical accuracy fact rendered such plant as Nasturtium aquaticum. Does the learned author mean the common Watercress, Nasturtium officinale ?]
late gigantic Hollyhook.-As something has been said of spondent informs us that the Rev F V Tocked Ticar of Minster, in Thanet, had a Hollyhock cut down the other day (which may still be seen) measuring the extraordinary length of 17 feet from the surface to the in. Such a one has not, we believe, been heard of before - hosil lnfuric in Solt the rock elt by oxide for the occasioned by oxide of ron. This tus supposed to be reality caused by the remains of fossil infusorix, which, though now in a pretty pickle, have all at one time been acted non the muritic ecids This hat some the been filier to naturalists in referens for much of the rock-salt found in various parts of Europeit was suspected and now is verified in that of the Seikh country.--Bombay Times this describes two species of a new Swan River genus of C. minus, which he says are, both rather pretty shrubs, with one-sided spikes of flowers, whose pallid calyx strikingly contrasts with their conical corollas. These plants are both common near or in the town of Perth,
flowering in autumn. The beautiful Lissanthe verticillata, with broad leaves in distant whorls, grows among the hills by the side of the York road, and is sometimes called the Cosmelia rubra, found in swamps near Albany, Kim George's Sound. Several of this tamily bear fruits that may be eaten when nothing better is to be had. I have added many species since Dr. Lindiey wrote his Botany Sprengelia, met with in the journey to Mount William. GARDEN MENORANDA
Broughton Hall, the residence of the Rev. John Broughtun- hall gardens at Broughtua-ous plants of that establishment Cowes, to view house that 站 set apart for that purpose, the frrt thing that
 of the blossnm, and the richness of colour developing it, elf
throughout the whole, rendered the object indeed lovely. Amidst
the various plants in bloora was Mitoonia candida, which had upon it 13 flowering-spikes, upou which were expanded 78 blos-
soms, and was truly a novel beauty. I was informed had the gentleman to have sent these plants to the Horticultural Rooms,
Regent-street, or the 17 th inst. Catteya labiata was in fine Regent-street, on the of the same family giving evidence of fol-
splendour, and others on
lowing the example; the finest scarlet I ever saw was the Comparctia coccinea and others of that genus were fast hastening to
bloom ; the Oncidium bicallosum had open on it five large
fiowers; Phalcenopsis, 爫 judge, was at home, from the lucid dark green of its ponderous leaves, and the two lusty flower-stems
it is now sending forth, more than two feet long; with some 70 or
80 other genera and species, the names of which I had no time to collect. Gentlemen who wish perfection of arrangement
would do well to see this house; I have never wituessed any.
thing like it before. \(-S\). \(H\). Fairbairn's Nursery, Clapham.-The houses here are chiefly
filed with Heaths. These, notwithstanding the unpropitious season for this tribe, on account of sudden transitions of tempera-
turc, have made excellent growths. They were turned out of the houses in the month of May, placed in pits which faced the south,
and, excent fer a few hours mo the mulde of the cuay have been
fully exponsed to the influence of the sum. This has had the criect of them to stand the winter, axd preserve tuem more ficchally
from the attaks of mildew. Arong these we oberver monm
Erica Bowieana and perlata, densely covered with pretty white fowers with brown stamens, mammosa pallida ard graclis, the b'or \(m\), and gives the Heath-house a gay lively appearance at
thic senson of the ycar, when flowers are scarce. In the same collection were also Templeara blonming freely, Ewerana
sur crba, with very glutinous lignt pink flowers, curved, tipped
with green, alnt having pretty black stamens, which contrast blor m E. incarnata, pyramidalis, which fiowers abundantly at Tosy pink blossoms, blonmmg frecly; alco Lamberti resea, a
pretty flesh-coloured variety, of a darker tint than the old E.
Lamberti; good plants of E., princeps and mutabilis, the latter remarkable for the length of time the flowers continue to expand
in succession; verticilata, with numerous whorls of brilliant scarlet flowers, and caffra, with small white fragrant blossoms,
The stock of Heaths in the pits was also in excellent condtion,
and some of them were finely in flower. In a house near the Ileath lonuse were some excellent small plants of Crowea saligna, the brst kinds: these have nade good prowths, are covered
Wi hower-buds, and will make a fine display when in bloom.
Although Heaths and Epacris form the majority of this collecAtion, yet there were excellent plants of Azaleas and Boronias;
the foliage of the latter, in particular, although shy-growing plants, was of that dark green which is characteristic of goor a cistern in front of the houses were some plants of Furlishas
ahout 3 feet high, and nearly the same in diameter, thesc
flowered beautifully until they were destroyed by frost. They are cut down to within 2 inches of the ground, and their roots are
protected from frost during winter by a covering of old tan bark Or ashes.
Beit, near Dunbar, East Lothian.-In the gardens here is a
douthte scarlet variety of the Pomegranate in full fower; it is growing in a south aspect, cighe The latitude is \(55^{\circ} 55^{\prime}\), and the
with stone and is 14 feet high. The
altitude about 160 feet. The plant is full 30 years old, and 8 feet high. I suppose these rarely flower in this part of the country;
I never, before Oct. 15 , saw its flowers fully expand in the open border. Tt is compared by some to a fine double scarlet Ranun-
culus. The Chinese Privet is flowering luxuriantly near the whiter of \(18: \%\), \&c., it is now a strong bushy plant, 9 feet high,
 onmoca has surviled during the last four or five yearn in the
open border as a standard bush; it is now foll 5 feet high, and has fiowered freely for a long time. It produced seeds in they produced many healthy plants, which have been exposed in
the opeia air until 19th of Oct. Lobela pyramidalis las also
endured tlie tuo last winters in the open border here; it grows fuly slet high, and is now a fine speciment, having three main
 the same heleght, and is in full bloom. They all endure the milder mould, which certainly proves of positive advantage, and, if Street, oct. 20 .

THE NATURALIST'S CORNER.-No. XVI. 59. "There is one striking peculiarity in the works of the Great Creator," observes Wilson, the historian of the
birds of the United States, "which becomes more amazing the more we reflect on it, namely, that He has formed no species of animals so minute or obscure, that are not
invested with certain powers and peculiarities, both of invested with certain powers and peculiarities, boxactly suited to their pursuits, sufficient to distinguish them
from all others; and forming for them a character solely and exclusively their own. This is particularly so among the feathered race. If there be any case where these characteristic features are not evident, it is owing to our
want of observation-to our little intercourse with that want of observation-to our little intercourse with that
particular tribe-or to that contempt for inferior animals, and all their habitudes, which is but too general, and Which bespeaks a morose, unfeeling, and unreflecting paind These peculiarities are often surprising, always instructive when, upderstood, and
deserving of further minestigation."
60. The appellation John Dory-given by the fishermén to the Zeus fabier, Dory, or Dorée-has no conmexion with the nampe John any more than Anchovy has With that of Ahn; though every one must be aware of the punning allusion, fo eating Dory with Anchovy sauce, as being the legitimate marriage of John Dory and Ann Chevg. The Greels have left evidence of the estimation name of John Dory is clearly nothing more than a corrupt pronunciation of the French term for the colour of the lighter parts of the fish, which is yellow with metallic reflections when it is alive, and therefore styled jaune dorêe, or gold and yellow.
61. It is a fact worthy of attention, that the eggs of land-birds are, generally speaking, much more numerous are mucl more numerous than land-birds. Sea-birds, indeed, though they have at all times considerable labour in finding their food, have, nevertheless, plenty of it at all seasons; and besides, they are exempted from many of the casualties which land-birds have to suffer; not the From both of these the sea-birds are comparatively free and perhaps they owe some part of their safety to the unpalatableness of their flesh; for many of them are so rank, that it is doubtful whether even a starved raven-the make a meal of any of them and would the sea-eagles, ospreys, \&c., and larger sea-birds, they almost exclusively feed ou fish.
CALENDAR OF OPERATIONS for the ensuing week. a singular adventure hy a Suffolk gentlenana, which, it was sadd,
would be a practical illustrotion in farour of my views, but 1 thought ever, seen the saill gentleman, and had the fincts of the case from
hie own lips. They are these: there is a Vinery attached ot his house, with a large tank of water at one end, about two feet deep,
hod heated by the ppipes which heant the house passing through it;
and her the lower one ir within thre inches of the bottom. The pipes, tank,
and water were suppose that this tank might be used for a warm hatto occasionalily.
The first attempt of this sort was made last winter hy the gentleman himself; and \(Y\) question if the annals of baths and bathing could furnish a paraalel case, from the time of the costly baths of the
Roman Empers down to the hovel baths of the Russian boors of
dot the present day. The heat of the water was supposed to be from \(90^{\circ}\)
to \(100^{\circ}\) when he made \(a\) plunge into the tank, and in the next instant he was immersed up to the chin. "You may inaagine my horror," ues of my limbs at once, so that I had great difficully in in gettinin riid of
my bath," \(\&\). The truth is, however, he had a double bath ; the surface of the tank formed a tepid bath, while the bottom was a frigidarium, and instead of being scalded, his limbs were contracted
by the cold water ant the botom
All this is literally correct, and io Horeover an apt illustration of the disadvantage of deep tanks, as
applled for bottom-heat. Now, a tank hented by corculation hasa g great disadvantage over the above tank, in 80 far as a thin layer of water
only moves on the surface, and this layer glides atong without comnunicating heat to the next layer below it, as water, being a power
ful non-conductor, cannot thus be beated hy wontact; you migh as radiator, and consequently a bad retainer of heat. A slate coverin

owerful radiating surface is preserted to a good concucting strface
of cqual extent-an excellent arrangement; and we all know that
and herefore remans only for calculation to know what heat in the
water 1s necessary to give through the siate a botom-heat of, say
\(100^{\circ}\); would not \(120^{\circ}\) he sufficient heat for the water for this purpose \({ }^{\circ}\) - but, for argument's salee, let us say that a heat of \(1310^{\circ}\),
cyen \(140^{\circ}\), wll be neessary : and I firmly maintain that this is to
lisgh for pot-culture, unless the covering and plunging materials ar
badily arranged. Here, then, the question admuts of the precision o bady arranged. Hrre, then, the question admits of the precision of
a geometrical problcm. When the surface of a body of water is
heated to \(140^{\circ}\), 3 y the common circulation, at what depth does the same body of water mincate \(100^{\text {? }}\) ? that being the highest degree
required for bottom-heat. Any expernments to answer thas question have not yet been published, but I will advert to it soon. Meantime led people astray respecting the depth of gutters, when I publighed
and recommended the gutter system. Instead, therefore, of finding any fault with Mr. Rendle for the depth he recommends, I have
rather to apologise to him and others for leading them, though
indirectly, into error. The other great desideratum, of supplying nolsture along with heat for raising the temperature of masses of earth,
has been altogether overlooked by former writers, and among them are some of the best gardeners in the countrye Indeed many of the
plans that have been proposed for the last ten years for this purpose are a great deas worse than useless, Mr. Rendle might well appeal,
and say to gardencrs that any slight defect in h1s apparatus, which is
very simply remedicd, owed its existence to their own writings. Mr. very simply reme long, papers on radiant heat, \&cc., two years ago,
Ainger, whose
renoved mountains of prrjudices on that subject, is the only writer that I am aware of who took a right view of heating heds or border gardeners and scientific men, so chen. AND ORCHARD.

Pingry, - November is the dullest month of all the year, and the
most trying to all plants in confinement, and Pines among the rest. A drier atnuosphere, less watering, and a steady bottom-heat of about \(80^{\circ}\) or \(85^{\circ}\), are about the rigat points to ae actend of growing Pines in
no drips get into any of the pots. The practice of
peat is, Ifind, becoming prevalent. Mr. Malls, of Gunnersbury, has proved, long ago, that cucumbers of the finest descriptron may be
reared in peat alone. I believe an excellent plan for growing Pines now growing on this plan, and next year we may probably henr of
Providence Pines weighng from 10 to 12 lbs. regularly, and (Queens
trom 5 to 6 lis. Those of inferior quality from the West Indies will not pay for gathering if we attan tlins excellence athome. exposed to dangers now than formeriy, notwithstanding the season
being nore dull, as by this time all parts of the house are thoroughly being nore dull, as by this time all parts of the house are thoroughiy
dried, and the weaker bunches and worat berries have already been condition for holding out for a long time. a query or two respecting the new Suffolk varieties, and giving air in Winter. Where they are grown whe strong linings air me grow
adnaitted reguiarly, as recommended ly Mr. Mills; but we gre
them here over hot-water, and we often give them no air for a week together, except what is admitcd by the door when we go in and
out. Out of seven sorts ne tricd thas season, by way of experiment, but this varicly is excelled by Mr. Latter's Victory of England; thas we have not yet tried; hut as it is well known I put no stress whatis not the right yuarter to apply for ansuers on technical points. protected in frames, the grand point to be attended to is to have the lights drawn off whenever the weather is fine, and to let in no rain all hardy plants thar cold wind and even a slight frost. Stir the surhardy plants than cold winds and even a slight
face of the mould between them occasionally.
One of the best gardeners in Perthshist Fas, I believe, the fixst
who recommended (in the Caledonian Hort. Soc. Memoirs) to plant
out Shallots and Garric in October or beginning of November, as
preventive
 the suggestion has been more or less acted on ever since. Some the great screet, and that you cau safcly plant them in Feiruary or Marnured for a year or two. Now these serm very trifing maters;
manted - but the cuestion involved is of the utinost importance in Other branches of gardenngg, and one, too, on whicla a great deal of

 ready to receive it, and here is a prand point to le attended to in the
cuitivation of all bulbs whatever, let then, if possible, make a
 begnin to grov sinuutancously, and it orten happens that some weeks case grow faster than the roots, and exthaust the repources of the
hulbs faster than the roots can make up the defciency snid as inter of course the bulss are in a measure so far cxhausted. Thus at once; and before thacre is inne tor the emission of roots the leaves
are in full growth, feecing on the store of the parent bulb, which has little or no supply from the roots. The plant grows vigorously
and flowers well, nevertheless; because there was ample store laid up for that purpose at the last growth, but by this mismanagement there
is no time to store for the next growth, and the bulb dwindles away and often dies.
Crops. -All crops for winter storing should now be out of the
ground, and carcfully packed up in sheds, outhouses, and cellars; dampness gets among them. Onions are apt to rot ahout this thme, if put up too close together; indeed an and torcthought. When the
simple enough reruure some attention and ground gets a little dry on the surface, see that it is stirred among
young crops of Winter Spinach, Onions, Lettuces, Endive, \&ce., and cut off any decayed leaves. If you are in the habit of mulching your Artichoke-beds, see that y it is too wet. Ary tme between this and Christmas will do, when the ground is quite dry; and when you can get it in this state you may give a good earthng-up
trenches-it will help to keep the frost from the plants.
Orchard-I need scarcely repeat that all trees may be pruned
and planted now, and tlic soncr the better. Root-priming is also best done in the autumn, but it requires judgment ; only those roots effect that will produce; after all, I would rather take up an over-
luxuriant tree at once, cut away a few of the stronger roots, and then replant at; but nhen nther work is pressing, IIme, and will have arr-GARDEN AND SHRUBBERY.

STove, - Last year I increased a large number of Reschynanthus
grandiflorus, and to get large specimens of them early, I planted gran or 15 of, them in one large pot, placing them round the sides of
the pots. There was plenty of drainage, and some rough pieces of surface; the rest was filled with lumps leaf-mould; the shoots were allowed to hang down over the pots all Abound, and they have grown from two of August \(X\) turned them into a cool, dry Vinery, to
About growing on, until within the last fortnight, and \(I\) suppose it will be near Christmas before they uill bloom. About the same time
(August) I turned out a quantity of Cyrtopodimas, after they had made a strong growth in lottom-heat: these were planted in strong
soil, similar to that in which Pines are usually grown; they have soi, siminar to that in whichi a drop of nater, and are placed in a

dry Vinery, and their leaves are only just beginning to discolour. I siore them up in a dry room until next Februaty. Exery one of the
Orchidacese which enst their leaves in the autumn, and have stout stems, or large pseudo bulbs, oupht, in my opinion, to be treated prevents these charming plants from fowering after they attain their full size. all kinds of plants suited to nearly the same mode of culture. weather will admit. The inside should be kept as dry as possible;
and for this end the watering should be done early in the day; no
plant should receive more water than is absolutely necessary, and the whole ought to be tidy, orderly, and free from dead leaves and Conservatory.-The Chrysanthemums will have a superiority
here for some time, and well do they deserve it. How glad we all are to hear of Mr. Fortunes success in the cast, whence we first the Chinese would scarcely know them ! The climbers must now be
gradually pruned as they get out of flower, but this must be done very gradually, so as not to make any part too naked at once; and if
the work is finished in six weeks hence it will be time enough. Keep the house ratlier close and dry for the rest of the season, and 1 rom
\(40^{\circ}\) to \(45^{\circ}\) by artificial means, but give a little air erery fine day, to PrTs AND Framms crammed with half-hardy plants require now the common routine of kecping them clean, sweet, and dry; even
the night-dews had better be kept from them after this tzme, but have the lights off all day when it does not rain. "If the subject ton, relating to winter-flowering playts. What can be more interesting than this subject? He must not be allowed to put off his
remarks on the culture and management of the plants included in his list untilthe "long winter nights." Let us have them aม soon as posible.
FLowrr.
pulling upn.-It occurred to me the other day, on seeing bundles of these roots were cut off and placed in pots among noist
sand, leaving an inch or so of the thiclr ends out of the pot, they migbt easily be kept over winter, under the stage of the grecnhouse,
\&c.; if so, there is little doubt they would push away, axd make strong plants next spring; and a No. 12 pot could hold 600 roon as
which m.ght be cut into twice or three times the number as soon they began growing in the spring; thus one large pot wouid hees-
more Heliotrove plants in enbryo, as it were, than would be neces more Heliotrope plants in embryo, as it were, than would be neces-
sary for furnishing the largest establishment in the country for one season, and the trouble of keeping young plants of these over the but I see no reason why the thing sloould not answer well enough, not only with Hersotropes hut with Pelargonums for hedding oul, Here, then, is a happy adea at the dus senson, which will cost little time or trouble to prove, and which, of it answer, will be of great roots of different plants, and I wishs others to make the same trial. this experimg friends all over the country will best understand how tender plants are studded all over with latent cyes, like the roots of docks and thistles, and of other weeds which are so difficult to eradi-
cate; and when these tender roots are preserved in a noderately moist state, in a dry room or cellar, from the winter's frost, and
from damp, they are supposed to grow away freely in the spring, by more delicate Pelargoniums a I have taken with an inch or so of the stems attached to the roots, to afford them greater nourishment, and these I shall dwivide in spring according to the number of roots,
or rather according as I may want plants. These sort of roots are

Court，－Her Majesty and Prince Albert，attended by the Countess of Mount Edgecumbe as Lady in Waiting． the Hon．Miss Stanley as Maid of Honour，the Lord Chamberlain，the Hon．Colonel Grey and Col．Bouverie， Equerries in Waiting，and，Mr，G．E．Anson，Treapurer to
the Prince, Ieft Windsor Castle on Wednesday on a visit
to the University of Cambridge, from whence they are to the University of Cambridge, from whence they are
expected to return this day. On Saturday the Queen and expected to return this day. On Saturday the Queen and
Prince Albert took their accustomed early walk in the Prince Albert took their accustomed early walk in the
forenoon. The Prince afterwards went shooting in the Royal preserves, accompanied by the Prince of Hohenlohe Langenbourg. On Sunday her Majesty and Prince Albert, the Prince and Princess of Hohenlohe Langenbourg, attended Divine service in the Royal Lodge Chapel in the
Great Park. On Monday morning her Majesty and Great Park. On Monday morning her Majesty and
Prince Albert, accompanied by the Prince and Princess of Prince Albert, accompanied by the Prince and Princess of
Hohenlohe, walked out for some time in the Royal pleasuregrounds. Prince Albert afterwards went out shooting in the
Royal preserves, accom panied by the Prince of Hohenlohe Inoyal preserves, accompanied by the Prince of Hohenlohe. rode out in the Park in a pony carriage, Prince Albert and the Prince of Hohenlohe with the suite following on horseback. On Tuesday morning the Queen and Prince took their the visitors then staying at the Castle took a drive ia the Park. The Prince of Wales and the Princesses have also taken their accustomed airings during the week,
The following personages have been staying at the Castle On a visit to the Queen :-The Earl and Countess of
Erroll, Lord and Lady Lyttelton, the Earl and Countess of Orkney, the Earl and Countess of Rosslyn, Viscount and Viscountess Palmerston, Lady Grenville, Lord GranFille Somerset, Lord Adolphus Fitzclarence, the Hon-Seymour.-The Duchess of Kent with the Captain F. Seymour.-The Duchess of Kent with the Prince and Wincess of Hohenlohe left Windsor on Thursday for Duchess of Gloucester returned to town from Witley Court on Tuesday.-The Duke of Cambridge left Rumpenheim on the 18th, and travelled by way of Frankfort, Mayence, Aix-la-Chapelle, and Brussels, to Ostend, where his Royal Highness arrived on Saturday, and passed the
night, embarking the following morning for Dover. His night, embarking the following morning for Dover. His
Royal Highness slept at the Ship Hotel on Sunday night, Royal highness stept at the Ship Hotel on Sunday
The Queen's Visit to Cambridge.-Her Majesty and Prince Albert left Windsor Castle about half-past seven on
Wednesday morning, on a visit to the University of Wednesday morning, on a visit to the University of
Cambridge. The Royal party and their suite arrived at the Paddington station of the Great Western Railway at half-past eight, and proceeded through the Regent's Park and Camden-town, to the Manor House, Seven Sistersroad, where the first change of horses was made. A large
concourse of persons were assembled in the Manor House, and on the sides of the road. The Royal party on leaving the Manor House proceeded down the Seven Sisters-road to Tottenham, two of the horse-patrol
being in advance to clear the road. In the town of Tottenham flags and banners were flying, and at TottenhamCross' a large quantity of evergreens were hung, and a
triumphal arch, formed in festoons of laurel and other triumphal arch, formed in festoons of laurel and other
evergreens, was placed across the road. There were evergreens, was placed across the road. There were
several private carriages on the sides of the coad, and crowds of persons on the footpaths, by whom the Queen was repeatedly cheered. Over the Angel-bridge, Ed.
monton, flaga were displayed, and the bridge was covered with evergreens. The Royal party reached the New Inn, Waltham Cross, about ten o'clock, where another change of horses took place. In front of the New Inn and other evergreens, sufficiently large to cover the Royal carriage, which remained under it while the horses were changed. On leaving the New Inn, the postboys were directed on passing "Waltham Cross," to go slowly, in ment, erected to the memory of Queen Eleanor, but owing to this not being placed in an open and exposed it was seen. The postboys twice attempted to turn back, but were impeded by the great body of persons collected, when the cortege proceeded on its journeys. variety of evergreens. There the Royal Standard and a variety of evergreens. There were other displays of loyalty ties of Hertford and Middlesex were two Royal Standards, and a great number of persons, who expressed their loyalty by loud cheers. At Royston the Queen was met
by the Lord-Lieutenant of Cambridgeshire (the Eari of Hardwicke) and the High Sheriff (Mr. Greene, of Hiesean-Hail), together with the regiment of the WhitSmith, and a numemerous body of the gentry and yeomen of the county, to the number of upwards of 1000 . At a few minutes before two oclock, punctually according to
announcement, her Majesty's approach was heralded by announcement, her Majesty's approach was heralded by
the firing of small pieces of artillery and the pealing of the church-bells of Cambridge, which rang out merrily
together. At the gate of Brooklands, the seat of Mr. together. At the gate of Brooklands, the seat of Mr.
Foster, which stands at the end of the Sevior Wrangler's
Walk, about half a mile from the entranci Walk, about half a mile from the entrance of the town, a
triumphal arch first met her Majesty's view, to announce that she was approaching the town. Above the arch, Which ,was interwoven with evergreens, the word "Wel-
come" appeared, in letters composed of white and red Roses, surmounted by an Imperial Crown. The road
from Trumpington to Brooklands, and from thence to the from Trumpington to Brooklands, and from thence to the
Conduit Head, was crowded with thousands on either side, and immense numbers followed in the main road on Head, at the entrance sorts of vehicles. At the Conduit interwoven with laurels, with the name of Victoria in front, surmounted by the crown, met the Royal view.
Here the corporation of the borough, headed by the Mayor, received her Majesty with the usual ceremonies,
nity streets to Trinity College. On their arrival the
gates were thrown open, the Whittlesea Yeomanry filed off the corporation fell back, and her Majesty and the Prince proceeded to the Lodge amidst the loud burrahs of the gownsmen. When the carriage reached the Lodge her cellor and the various college dignitaries, and conducted to the Royal apartments. After partaking of refreshment her Majesty entered the hall of Trinitg College. All the forms and tables had been removed, and just where the portrait of Newton is placed, an elevated platform covered placed a single chair for her Majesty, in which, however the Queen did not sit down. Her Majesty entered the hall from the south-east door, leading from the Master's residence, the floor leading to the throne being covered followed Prince Albert, the Marguess of her Majesty Delawarr, the Chancellor of the Exchequer, Lady Mount Edgecumbe, \&c. Her Majesty was attired in a pink and purple satin dress. Prince Albert was dressed in black, with a star on the left breast. The Marquess of Civil Im The gallery had on the gowns or Doctors of ladies. As soon as her Majesty had entered, the hall doors were thrown open, and the members of the University entered in their order of precedence. The ViceHeads of Houses and Doctors fopying the centre, the distance from her Majesty, diately from her ajesty, and the Vice-Chancellor immediately commencer reading the address, which being concluded, he advanced to the foot of the throne, and kneeling, handed it to her Majesty. The address to The Lord Steward, the Bishop of Ely, the heads of houses, and other dignitaries, were then successively pre sented to her Majesty by the Registrar, and this ceremony ended, the immense mass, of gownsmen began to move
outwards. Her Majesty, taking the arm of the Prince retired and entered her corvias College Chapel. Her Majesty entered the College by the grand gate, and proceeding across the first court, the Majesty and the Prince were received by the Provost, who with the Esquire Bedells preceded the Royal party up the ante-chapel through a midway passage, railed off for the the screen, her Majesty was conducted to the east end, near the altar, in front of which was erected a dais with
a canopy over Queen Elizabeth's chair. The organ no sent forth its pealing notes, and the service commenced the chaunting of the choir, and on entering and leavin the chapel expressed their admiration of this beautiful structure. The Royal party went back to Trinity, and dent occurred on thisited the College Chapel. An incithe Queen much pleasure. It happened at the moment there Majesty setting forth on foot for the chapel, that walk upon. In an instant some of the undergraduates pulled off their gowns and threw them down before ber the ajesty; the example was quickly followed by others rank, over which her Majesty, smiling host graciously, there to pick her steps, in consequence of the here and hand with which the gowns were flung together, on her passage back the affair was better arranged, the gowns and order. The chapel was lighted with wax tapers, carried by undergraduates, the effect of which was extremely good. Whilst the Queen, previously to dinner, Highness signified his desire to the Master pay hoyal library of the College. In a few miuutes, his Royal Highness was conducted thither, through a long row of Royal Highness expressed himself much pleased with the library, and examined minutely some of the manuscripts, especilily those of Milton. In looking over a Saxon MS., so far back as the eighth century, his Royal Highness re that age. The Royal dinner party took place in King dinner her Majesty held a levee, at eight o' clock. After the heads of houses, and other principal members of the University. The company assembled in the first instance their precedence-the hames were called in the order of
Trinity. In this order they walked up to her Majesty's drawing-room, entering at one side, and going out at the flected very greaterediton the town and University-Trinity, works, which were exhibited on Parker's Piece, were also of the highest order of merit and gave general satisfaction. of conferring the honorary degree of Doctor of Civil Law upon Prince Albert, which took place in the Senate-house on Thursday morning. The preparations in the Senatehuse were of the most superb description. Her Majesty
was received at the entrance by the Vice-Chancellor, the Lord Steward, and a number of the bigher authorities of the University, and walked up the centre of the building with in arm with the Prince bowing to all, and smiling with evidently heartfelt pleapure at the very gplendid and

Queen and Prince stood for her view. At the dais the bowing and curtseyion in for about a minute and a half, rous cheering, which was continued with unabated vigour till the Queen and Prince Albert sat down. Even then Wales" was made, up a new cheer for the "Prince of the proctors. The ceremony of conferring a Doctor's. degree on Prince Albert, and robing his Royal Highness. in the scarlet gown, then took place. After this had been gone through, the public orator (Mr. Crick, of St. John'g College), delivered a Latin oration, addressed especially
 fexred upon it by their gracious visit, and cour they conthe leape the learned body on the auspicious occasion. The oration
also dwelt upon the historical recollections of former royal asisits to upon the historical recollections of former royal
visiversity, and pointed out the benefite visits to the University, and pointed out the benefits Which would accrue from the present one to religion and learning. The oration took half-an-hour in its delivery, during which time his Royal Highness stood almost in front of the Queen, and the public orator in frout of his Royal!Highness, but below the platform. His Royal Highness bowed frequently, and now and then really blushed at the very eloquent compliments paid him by the speaker. The Senior Bedel then took his Royal Highness by the right hand and conducted him to the Vice-Chanand f thupremacy. The Vice-Chancellor at the conclusion Highne bowed to her Majesty ; then, taking his Royal. bey and hand, he administered the oath (in Latin) to the Vicend daws of the University ; after which the ice-Chanceilor, addressing his Royal Highness in degree Latin form, admitted him to the honorary then of Doctor of Civil Law. His Royal Highness. invested with the scarlet of the dais, and was. took the velvet cap in his hand. A loud burst of cheering, accompanied with waving of caps, went through the hall as his Royal Highness, thus equipped, walked back to his seat beside her Majesty. Albert." Aftering were heard so the crics of "Doctor longed by the ceremony of admitting the Rev. R. Phelps to the degree of doctor in divinity, the Regius Professor cellor's seat. This ceremony wiating in the Vice Chanand the Queen once or twice spoke to Lord Delawan apparently inquiring of him an explanation of what was going forward, with which she appeared satisfied and than once before the ceremony was concluded yore at length finished, the Vice-Chancellor dis This being convocation. The Queen and Prince Albert, strended as before, then moved off to their corria midet euthu siastic cheering. Her Majesty wore a rich puce-coloured flowered border. The bonnet was a lilac silk covered with Brussels lace. Prince Albert wore a field-marshal's uniform, with the riband and star of the Garter. After attend by Sheire-house, her Majesty and the Prince, hened h , and some of fessor Sedgwick the nature of explaining to ber Majesty and the Prince nards ure or most or the specimens. The Queen afterthe Fitz willian lirough the public library, and inspected ntered the royal carriage, the path from the library to the gate opposite St. Mary's Church being strewsed with gowns gallantly laid down by the undergraduates. The procedrty next visited King's College chapel, and thence hapel ,d to St. John's College, visiting the library, ook of refreshment, and tiren returned to Majesty parthe library and ant, and then returned to Trinity, visitiags. past 1 o'clock Prince Albert, escorted by the Vice-Chara cellor, cce., visited Christ's College, and was received bia gates by the Rev. Dr. Graham, Master of the college the Tutors of the college, the Rev. J. Hilyard (senior Precto) and the Rev. J. Cartmell. Scarlet cluth was laid lown from the gate to the screens, whence his Royal Highuess proceeded between a double file of members of the colle to the gardens, and the party halting before the celebrated Mulberry-tree planted by Milton, who was a membated this college, the Rev. Master addressed his Royal Hi of ness in a short but appropriate speech. His oual sh ness having afterwards inspected the college-hall and cheers, again entered the carriage amidst enthusiastic mans, and having visited Sidney Sussex College in like half-past two her Majesty accompanied Trinity. At Aibert, who wore his Doctor's gown and cap, proceeded: in an open carriage, their suite following in two close of people had assembled. An accident, however imene mass at this point which might have been attended with serious. college, which was crowded with people, gave way, and dous shrieking. Fortunately no street amidst tremenbeyord a few bruises and broken injury was sustained party on quitting Catherine Hall visited the Pitt Library, visited several received with the warmest demonstrations they were The royal party returned to Trinity College loyalty. before four o'clock, and at to Trinity College at a little by a guard of honour of the Scots Greys, for Wimpole, the seat of the Earl of Hardwicke. The procession went along. the mtreet at a Walljing pace, and the Quem and

Prince Albert bowed most graciously in acknowledgment of the cheering which attended thema the whole length of the way. At a distance of about two miles from Wimpole, and about eight from Cambridge, a new road diverges from the main road up to the mansion. At the entrance gate of
this road the Earl of Hardwicke was stationed to receive her Majesty, and the Royal carriages, attended by their escort, passed off through the gate and up to the mansion itself. According to the last accounts, her Majesty leaves Wimdeparture is not yet pamed. Her Majesty will not come round by Cambridge again, but travel by the direct route bourne, the place where she changed horses on her way down. From Wimpole to Royston her Majesty will be escorted by the Yeomanry, but at the latter place their her Majesty towards Buntingford.
his Royal Highness honoured Sir Turday, the 14th inst., company at Grange House. On Monday, the Prince with his suite visited Leith, and inspected all that was and Granton in that town. Thence he went to Newhaven the Botanic and Horticultural Gardens on the grounds of Inverleith, with all which he seemed highly delighted. On Tuesuay, his Royal Highness, with his suite, and inspected Heriot's Hospital, and entered his name in the visitors' book-" Henri de France." On Wednesday, his
vered visitors' book-" Henri de France." On Wednesday, his seat of Loord Ruthven, where he lunched, and dined afterWards with the family of the Earl of Wemyss at Gosfordhouse. On Thursday, the Duke visited Mr. Mitchell Innes, at Pbantassie, and honoured Sir John Hope, of
Pinkie-house, and Sir David Wedderburn, of Rosebank, Pinkie-house, and Sir David Wedderburn, of Rosebank,
with a visit on his return on Friday to the Royal Hotel, Edinburgh. On Saturday, his Royal Highness left Edinburgh for Fordel-house, the seat of Admiral Sir Philip Durham, near Inverkeithing, and seturned to Edinburgh in the evening. On Sunday, the Prince attended divine
service at the Catholic chapel in Bronghton-street. It is said that his Roval Highness intends sojourning in this country longer than was at first contemplated, and that a mansion is about to be furnished at Edinburgh for the residence of his Royal Highness and suite.
The Grand Duke Michael.-His Imperial Highness Duke and Duchess of Montrose, until Wednesday morning, when he proceeded to Edinburgh, and remained sevethat city. His Imperial Highness then proceeded to York, and arrived at Chatsworth, the seat of the Duke of Devonshire, on Thursday night. The Grand Duke on Devonshire, Baron Brunow, Earl and Countess of Gramville, and, after remaining a short time with the noble host, His Imperial Highness and his suite retired for the night, being somewhat fatigued with the journey from Edinburgh. On Friday, about noon, the Grand Duke and suite, with the Duke of Devonshire and several guests of sure-grounds attached to the a mansion. His Imperial Highness then viewed the sculpture gallery and the principal apartments of the house, and went to see the fountain recently added to the hydraulic works, and the imgrand conservatory. The party then returned to the house grand conservatory. The party then returned to the house kitchen-gardens, and remained in them until nearly four \({ }^{0}\) clock. The Grand Duke, with the Duke of Devonshire that place they drove to Blakewell, to see Haddon Hall, the ancient seat of the Manners family, belonging to the Duke of Rutland, but the evening was so far advancing Duke of Rutland, but the evening was 80 far advancing building. They returned to Chatsworth at six o'clock. On building. They returned to Chatsworth at six oclock. On
Saturday His Imperial Highness, accompanied by the Duke Saturday His Imperial Highness, accompanied by the Duke
of Devonshire, visited Hardwick Hall, the noble Duke's seat, about seven miles from Chesterfield, where Mary Queen
of Scots passed a considerable portion of her captivity. His In Scots passed a considerable portion of her captivity. His
Imperial Highness and suite took luncheon there previous Imperial Highness and suite took luncheon there previous
to their departing by the railroad to Drayton Manor. to their departing by the railroad o Drayton Manor.
Shortly before three the Grand Duke arrived at the Chesterfield station, accompanied by the Duke of Deconshire, from Hardwick, and immediately left by the train for
Derby. The Duke of Devonshire saw his illustrious visitor to the railway-carriage, and there took leave of his Imperial Highness. The Grand Duke and suite arrived
at Tamworth about half-past five. On reaching the at Tamworth about half-past five. On reaching the
station, Sir R. Peel was in waiting, and the Grand Duke inamediately entered the Right Hon. Baronet's carriage, and proceeded direct to Drayton Manor. On Sunday morning his Irmperial Highness accompamied Sir Robert the ancient church of that town. His Imperial Highness and the visitors at the Manor were confined within doors
all the afternoon in consequence of the exceedingly unfavourable weather that prevailed. On Monday morning for Birmingham. After making a brief stay at that town, the Grand Duke and party proceeded by railway to the Droitwich station, from whence his Imperial
Highness went to Witley Court to lunch with ler Majesty the Queen Dowager. On leaving Witley Court, count Dillon, where he slept. On Tuesday morning Lord Redesdale's hounds met at Dytchley, the Grand Duke having expressed a wish to partake of that thoroughly Englink sport, fox-huntins A a pumerous field assombled,
and the hounds having drawn a cover near the house, soon
found a fox. His. Imperial Highness seemed much found a fox. His Imperial Highness seemed much
delighted, and rode well up to the hounds. After a sharp delighted, and rode well up to the hounds. After a sbarp
run of 35 minutes, the fox took to a drain, where all attempts to dislodge him were fruitless. One of his Imperial Highness's suite dislocated his shoulder while taking a stiff fence, but medical attendance was speedily to lunche. At two P.M., his Imperial Highaess sat down the vicinity, and at four started for Wilton House, near Salisbury, on a visit to the Countess of Pembroke. The
Grand Duke left Wilton on Thursday afternoon, and returned direct to London.

Parliamentary Movements.-A vacancy has occurred in the representation of Salisbury by the death of Mr.
Wadham Wyndham, the Conservative member for that city, which has just taken place.- The Hon. Mr. Bouverie, tion of Kendal, has retired and has been succeeded by Mr. Warburton, late Member for Bridport. Mr. Bentinck, of Remington Lynn, in Norfolk, son of the late Admiral Bentinck, has come forward as a candidate in the Conser-

The Army.-It is stated that an augmentation of the cavalry regiments has just been decided on by Governof each troop. This measure is to be carried into effect of each troop. This measure is to be
with the least possible delay.

\section*{\(\sqrt{ } \sqrt{ }\) orengn.}

France..-There is little news of general interest in the Paris papers, which are occupied chiefly with matters of domestic interest. Cardinal Borald, Archbishop of Lyons, has published a letter on the quarrel between the Church and the University. He declares his determination to respect the University and be contented with lay teachers, but he declares that whenever a professor shall teach pantheism or infidelity, he will call him to order, and appeal at once to the Minister and the public.- The King, accompanied by the Duke de Nemours and the
Prince de Joinville, reviewed on Sunday, in the Place du Prince de Joinville, reviewed on Sunday, in the Place du
Carrousel, six regiments of infantry, two of cavalry, and Carrousel, six regiments of infantry, two of cavalry, and
two batteries of artillery. His Majesty rode through the ranks, and looked in excellent health. The Commerce states, that it would appear from a reply made lately to a
contractor by the Minister of Marine, that his Majesty proposes next year to return the visit of her Majesty the Queen of England. The reply was-" We cannot undertake the works you wish to contract for, as in that case to transport his Majesty to England next year." Other papers and letters mention a report that the visit will take place even sooner.-The Legitimist prints press Don Carlos' son with Queen Isabella, the latter remaining Queen by her father's will, the former King by virtue of his father's abdication-both being equally Sovereigns, like Ferdinand and Isabella.-By a royal decree of the 22d inst., Admirals Mackau and Hugon, the Prince de oine, and several Naval Oficers, have been nominated into the situation of the five military harbours of France, in connexion with the construction, organisation, and of the papers contain accounts of certain alleged differences which have taken place at Otabeite, between the Captain of the French ship of war L'Allier, and Mr. Pritchard, the missionary and English Consul in that island ; but we have no authentic details from any of their columns to reports of a large portion grand scale which commenced on Monday at the thieves, called the "Bande du Faubourg Saint Germain" because they had long carried on their depredations in that aristocratic quarter of the capital, owing to the cooperation of a locksmith, who had secured the patronage hieves on their trial are 27 in number, and there are upwards of 60 separate charges against them.-The \(N a\) tional has produced considerable sensation at Bordeaux, and other wine-growing or wine-manufacturing towns, by it exposure It states that Royen is fomous for this marifacture. A boat-load of spurious wine was the other day seized ly the police, and the barrels emptied into the Seine, the contents having been found to be cider mixed with spirits of wine.-The papers state, that such is the penury in the funds of the charitable associations of the capital, that the 12 mayors of Paris have made the most
pressing entreaties to the inhabitants of their various dispressing entreaties 70,000 unfortunate beings who are at this moment destitute of bread, clothing, and fire. -The Count de Montrond, who lived during many years in the
intimacy of Prince Talleyrand, and was the confidant of many of his secrets, died on Wednesday at Paris in the 76 th year of his age, after a long illness. Marsbal Soult,
Minister of War, returned to Paris on Wednesday. General Boyer, ex-President of Hayti, and his family, were to leave Paris for Italy in a few days.- The population of France, as shown by the census taken a short time gave \(33,540,910\). The department of the Seine contains upwards of \(1,500,000\). It would appear that in less than a century and a half the population of France has been indeed doubled, but wis auguentaikes place in Great Britain, Prussia, Austria, and even Russia.
Spain.- Wo have accounts from Madrid to the 17 th insto The Cortes ware opened on the doth by commis-
sion with the most perfect order, the authorities having adopted measures for the preservation of tranquillity. The assembly was presided over by the President of the Senate, and was numerously attended by members of both bouses, attired in their official costumes. The pablic galleries were crowded with spectators. Two French deputies,
Messrs. Mauguin and Garnier Pages, occupied seats in the diplomatic tribune. The President of the Council read the decree of convocation, and having declared the session open, the house immediately afterwards broke up. Letters of the 17th state that the Chamber of Deputies was still engaged in preriminary arrangements; 128 Members were already at their posts, but 81 only bad as yet been sworn in. The Ministry expected that the House would be definitively constituted in the course of the ensuing week. Señor Onis had been named President of the Senate and the Duke de Rivas and Count Espeleter Vice-Presidents. Señor Carneirero had been appointed Minister at Lisbon instead of S. Aguilar. On the 12th her Majesty and her sister, the Infanta Louisa, attended for the first time a buil-tigat, the proceeds of which were to For this purpose upwards of 12,000 persons of both sexes were present; the Queen is said to have taken great interest in the proceedings, which terminated in the deaths of eight bulls and a dozen horses. The performance lasted three hours, and produced 1,000\%.-The town of Leon has pronounced, seized, and imprisoned its authorities, the regular troops and National Guard joining in the movement. Ovi Oposition zamora, Oved Gijon, and the town of Galicia, had prohave proclaimed the Central Junta; and the troops sent from the capital arginst Leon were said to have revolted at Rio Seco. On the other hand, the Government declares that Astorga had dolared against the Leon movementThere are accounts from Saragossa to the morning of the 19th. Some families had been allowed by Gen, Concha to quit the town. They represent the battalion of Officers and the National Guard as determined on obstinate resistance. Gen. Concha had not yet opened his batteries. On the 16th no change had taken place in the situation of affairs at Barcelona; hostilities still continued, and the Junta had issued a decree calling on all men between 17 and 60 years of age to take arms, under the penalty of
death. The patulea had committed great excesses, and plundered several provision stores.
Belgivm. - The Brussels papers contain the details of the ceremonies at Cologne on the five days, on the occasion of opening the railway from the Scheldt to the Rhine, which completes a line of communication between Viema and Cologne. These details fill 11 columns of the Moniteur. The fêtes were favoured by fine weather, and the greatest cordiality and harmony prevailed between the Belgians and Germans present on this remarkable occasion, which promises to consolidate the good understanding between them, and to be of great advantage to both. On the evening of the first day a grand entertainmeat was given at Cologne, at which a great number of Grinent persons of Belgium and Germany were prosent. Embassy at Turin papersed to sign the passport for the Marquess of Dalmatia, the son of Marshal Soult and French Ambassador at Turin, on the ground that the Emperor of Austria as King of Dalmatia could not possibly recognise the right of any individual to assume the title of Marquess of Dalmatia. It was further added that had court of Vienna did not recognise any twe wince belonging to the Austrian empire. The Marquess was therefore requested to assume some other title, and the Milan papers announce his arrival in that capital as Marquess Soult.-The Hungarian Diet is making progress in the task of obliging the nobles to pay their quota of the 5 th it was decided that the nobles residing in towns should pay not only the land-tax of the comilu but also the patent duty of the town. The attem, but alish a common and general house duty failed. The magnates have persisted in their edict to make Crete learn and plead in the Magyar languace Rusid. The Frankfort Journal states that the Russia. a having been fired at the Emperor of Russia's carriage at Posen was a mere device of the Emperor to cause the expulsion of the Polish refugees from that Grand Duchy. The Augsburg Gazette of the 19th states, that accorring to ans probabily the Emperor of Russia will protest agamstlogna of the 15th inst. states that fresh disturbances bad taken place in that city and its neighbourhood. In the evening of the 3 d the populace ame to blows with the carabineers and \(\mathrm{S}_{\text {wiss }}\) in the street of Borgo San Pietro and San Donato. Four soldiers and a workmail were troop of dragoons was immedintely sent to the assistance of the carabineers, and soon restored order. On the 8th several military posts were attacked in the lower city. Similar outbreaks were said to have Spinola was so much alarmed at the hostile dispositions evinced by the Bolognese that he applied for a leave of absence and quitted the city. On the 10th he was
succeeded by Cardinal Vannicelli. Casoni. Three phy succeeded beveral landowners of the districts tree phyin August last by Muratori's band had been arrested The prisons of Bologna contained seventy political offenders, and fifty more were detained at Pesaro until they could be safely removed to Fort Sau Leo. It was reyorted that in a recent congregation of Cardinals held dinal Bernotid recommended that concemionn bo made to
the people, and a general amnesty granted to all persons implicated in political conspiracies since 1831. This proposition, however, was rejected by the almost unanimous vote of the assembly. -The French papers announce that the Sicilian sulphur question is terminated. The indemnity to the British merchants has been fixed by a special commission at 130,000 Neapolitan ducats. The merchants demanded that this sum, which it was expected would not be paid for several years, should bear an interest of 6 per cent. ; but the Neapolitan Government then determined to pay in cash. A letter from Naples states that the regular line of steam-cupied with the establishment of a which will touch at Messina, Tarento, Gallipoli, Bari, Barietta, and Manfredonia, and correspond with the steamers belonging to the Austrian Lloyd's Company,
which leave Trieste. For this purpose, the Neapolitan Government are now constructing three large steamvessels, and a fourth will shortly be laid down. This line will commence running in January next
Turkey.-Accounts from Constantinople in the German papers state that the Turks are somewhat alarmed Albania and the northern provinces. An affair at Tbraila is represented as serious, being nothing less than part of a Thenspiracy for the rising of the Christians in Bulgaria, and had arrested a number of suspected persons, natives of Bulgaria. The troops were confined to their barracks, and their bayonets and sabres sharpened, as if they were on the eve of a battle. M. de Colla, the Russian Consul military chiefs, and assisted at the examination of the military chiefs, and assisted at the examination of the
prisoners. The conspiracy is said to have extensive ramifications throughout Wallachia and Bulgaria.
India and Carna. - The Overland Mail from China and which should have arrived in the early part of
the present month reached town on Monday. The dates are-Calcutta, 10th, Scinde, 19th, and Boubay, 26 th August. From China 26th of June only. The mails were conveyed from Bombay to Suez by the Victoria
steamer, which left Bombay on the 26 th August, but being driven back by stress of weather, did not finally leave Bombay till 7 th September. The mails reached Alesandria on the 4th inst, but her Majesty's steamer Geyser not having arrived, they were sent on to Malta by the French steamer Lycurge, which sailed from Alexandria on the 7 th inst., and arrived at Malta on the 15 th. The overland portion of the mail has been forwarded by her Majesty's steamer Alecto from Malta to Marseilles, and a.rived at the latter port on the afternoon of the 19 th inst., whence being despatched immediately, it arrived at Boulogne within 68 hours. The intelligence thus received has been in great measure anticipated by that brought by the Hindostan. India was peaceful throughout. In Scinde nothing of moment had occurred; Shere Mahomed
had recrossed the river, and taken shelter with his famly in the Murrie Hills. Ali Mahomed followed shortly after, claiming the same protection. Ali Moorad had been unsuccessful in the pursuit of his nephew; and had on his return visited the fort of Shaghur, where he supposed
Shere Mahomed and his family to be located, but on his arrival he found it deserted. Sir C. Nupier was busied making preparations for another campaign when the mentation of the force was expected to be made by that time. The sickness among the troops had nuch diminished. The affairs of Gwalior were tending to a complete for the immediate assembling of troops in and around Agra-but this has been countermanded in the meantime Bundelkund, on the other hand, is rapidly improving-the rural police being considered quite capable of holding the disturbers in check. Two of the leaders in the late disturbances in Jeypore have been executed. In Affghanistan affairs were most unsettled. Dost Mahomed had imprisoned Ameer Oolah and Suftur Jung, while Zeman The whole of those who were in any way favourable to on former occasions have been compelled to flee the country. The Dost is likewise said to be about waging war said to have been expelled. The difference formerly existing in the Punjaub between Shere Sing and his powerful Minister, Dhyan Sing, has been made up; but it is not thougbt likely to last long. The Nizam's country was
much in the same condition. The intelligence from the much in the same condition. The inteligence from the
Burmese erpire has been somewhat hostile, but the Burmese enpire has been somewhat hostine, but the Lord Ellenborough is residing at Burrackpore, 10 miles from Calcutta, and has appointed Mr. Bird, late Deputy
Governor, Governor of Bengal. Tro items among the local news for the month had caused some excitement First, the discovery of a joint stock company for robbery, plunder, \&c., whose average annual income has been their depredations for about 30 years. The other case was the decision come to by the court-martial held at
Poonah, on charges preferred by Colonel Hughes, commander in the garrison, against Major Seton, a case which is likely to occupy the attention of the Horse Guards. It appears that they had a dispute, and soon after which the Cold the whole affeir had been the quarrel, but was plaint to the Government. The complaint was referred to a court of inquiry, which decided, after having heard evidence, that there were faults on both sides. The Colonel then sent in a demand for a court-martial on the Major, on the ground of his having wilfully made a false
and unfounded statement. The Commander-in-Chief
refused the demand and censured the application as out of place, as the decision of the court of inquiry was then
under his consideration. The Colonel reiterated the under his consideration. The Colonel reiterated the
demand, but no notice was taken of it. Two months afterwards the Colonel had the proceedings, with his own charges and the letters, privately printed and sent to his friends. The pamphlet was shown to the Major, who demanded a court-martigl, by which, after the examination of the same witnesses, he was declared honourably acquitted. This verdict, which was supposed to be contrary to the evidence, has been much canvassed, as also severe on the Core for nothanhead of the Army. Party-feeling was warm on both sides of the question. The chief witnesses were the principal finding officers of the army-staff, and they conceived the evidence.-The satisfactory news from China informing us of the ratification of the treaty with this country and of the arrangement of the tariff, was not certainly known at Bombay at the date of the departure of the mail, and the papers are therefore in great measure filled by vague are already completely informed.

City Election.-The polling for the two candidates closed on Saturday 20 clock, when the retarns of Mr. Baring's committee gave a majority of 145 in favour of
Mr. Pattison, while Mr. Pattison's committee made the majority 201. About eleven o'clock Mr. Baring's friends assembled in great force, and from that time to half-past 12 there was a small majority in favour of that gentleman, but this soon decined, and at two o clock Mr. Pattison Was 121 a-head. The official state of the poll was
announced by the Sheriffs on Monday, when the numbers were declared to be, for Mr. Pattison, 6532; for Mr. Baring, 6367; leaving a majority for the former of 145 . Mr. Pattison was then in the usual form declared duly elected. The following is the proportion of liverymen and householders who voted for the respective candi-
dates:-For Mr. Pattison, liverymen, 2307 , house-dates:-For Mr. Pattison, liverymen, 2307 ; householders, 4225 ; total, 6532 . For Mr. Baring, liverymen, number of votes 12,899 . The Sheriffs alluded to this eircumstance at the close of the proceedings, and said that nearly 13,000 votes had been regularly and peaceably they wished to hold out for imitation and example to the constituencies of country boroughs. In connection with this subject we may notice the rumoured illness of \(\mathbf{M r}\). respecting, one of the other members for the City, were in circulation on Tuesday. It appears that Mr . Lyall has been seriously indisposed, but not to an extent Manse alarm, and that at present he is nearly recovered. entertainment to the clergy, churchwardens, and vestryclerks of the several parishes in the Borougla of Sonthwark Parliament and in the Corporation. The Lord Mayor elect and several Aldermen were present; 210 persons sat Anti-Corn-Law League. - The monthly aggregate meeting of the League took place on Thursday evening in An address of congratulation to the Citizens of London, on the return of Mr. Pattison to Parliament was adopted, after which the Hon. C. P. Villiers, Dr. Bowring, Mr. Moore, and Mr. Milner Gibson, addressed the roeeting. Mr. Post, that the Queen and Queen Dowager had given up their private boxes at the theatre on account of the League Meetings. He said that her Majesty and the attack of the Ministers. The meeting did not break up until a

Jllness of Mrs.Fry.-The numerous friends of this bencvolent lady will regret to learn that she has been so seriously indisposed as to admit of faint hopes of recovery. For
some months past Mrs. Fry had been suffering under some months past Mrs. Fry had been suffering under vented her from the continued exercise of those active
charities that have formed the chief business of her useful charities that have formed the chief business of her useful
life, but without creating any serious apprehension fur her safety. Within the last wek, however, the disease has assumed a more alarming character. Her medical advisers recommended immediate removal to a warmer climate, but her enfeebled state unfits her for the fatigue of a long journey. Her present illness is supposed to be the effect north of Europe which in her recent journey to the lungs, from which she has never thoroughly recovered.
Ilness of Mr. Farren.-We regret to state that this popular comedian has been seized with a sudden affliction which threakens, in its consequences, to deprive the stage of one of its greatest ornaments. On Tuesday night, When near the conclusion of Mr. Mark Lemon's new drama of Old Parr at the Haymarket, he was observed to exhibit an unusual tremor of manner and sink in the chair used in the scene. The curtain fell at the usual with a fit of apoplexy, and was uaable to speak. He was
instantly conveyed to his room, aud medical assistance sent for, when it was discovered that his side and arm were completely paralysed. He was conveyed home to Brompton and attended by the most eminent menobers of the faculty. This is the third attack of the same malady, but the first that has left such consequences, the two preHellenic Frestival.-On Saturday evening a festival ok place at the Ion Saturday evening a festival events in Greece, when abont 100 Greek gentlemen and friends of their cause sat down to dinner. The upper end of the room displayed the flags of England, France, and Greece ; and four pillars against the walls bore inscriptions commemorative of the various national asserablies of regenerated Greece, beginning with that of the 25 th March, 1825 ; of the battles won by the Greeks ; and of the surviving and deceased heroes who lad fought in the those who suppor. Ralit was in the chair; and among Col. Thompson, Mr. B. Cochrane, and Dr. Bowring. The principal speakers were of course the Gieek merchants and other natives of Greece resident in London, who addressed the meeting in Romaic. The English visitors abovenamed also spoke at some length on the obligations which civili sation at large owes to Greece, and on the interest felt in this country for her prosperity as a nation.

The Nelson Column.-In accordance with a general wish on the part of the public to have permission to see the figure of Lord Nelson prior to its being placed on the column, the public were admitted to Trafalgar-square yesterday, and will be admitted again this day gratuitously to Mr , Baily, In announcing this in the morning papers, Mr. Bally, the sculptor, states that it is done with the bope that the visiors may thereby be induced to aid Greenwich pensioners, in Trafalgar-square, on the anniGreenwich pensioners, in Trafalgar-square, on the anni
versary of the battle of Copenhagen, April 2,1844 .

Wood Pavement.-An injunction having been obtained by the Metropolitan Company against the proprietors o Perring's patent, the paving of Cheapside has been sus pended for some days past. On Tuesday, however, a
deputation of the inliabitants waited upon the Commissioners of sewers, with a representation of the extreme inconvenience arising from the continued obstruction of this crowded thoroughfare; and after some consideration, the Commissioners determined on giving up their intention of paving the whole of Cheapside with wood, and issued directions for completing that portion already unfnished with Aberdeen granite.

High Tide,-On Wednesday noon the tide again rose Limehouse, Wapping, Deptford, Bermondsey, and Bankside. The unusual heig, Deptiord, Bermondsey, and Bank to the storm of Tuesday night. At Wandsworth and Bat tersea the grounds of many market-gardeners were under water for several hours.
Lotteries.-The prizes in Mr. Boys's "Fine Arts DistriTwo Mr. Cooke, a barn offiated at the wheels of fortune, and Mr. J. S. Buckingham, who was to have replaced Mr. Bond Cabbell. Mr. Cooke spoke at great length upon the encouragement afforded to the fine arts by the present , 601 prizes were drawn, Mr . Boys gave, as a bonus on his originally announced prizes, other prizes, to the amount of 350 guineas, to the institawn tickets, and also announced his intention of course of another " Fine Art Distribution" in the that the landlady of a tavern at the west-end of the town, conceiving that ladies have as much right to sport their loose cash on sporting events as gentlemen, has determas ladies. A code of rules the been framed, the club to be limited to 30 members, winner of the first to be entitled to 18l., and of the second prize to \(3 l . ; 5 l\). to be divided among the drawers of starting horses, and the balance to be appropriated to Inquests -
body of Mr. Chenday an inquest was held on the Covent-garden market whoden, the fruit-salk sm in of On Thursday last, it appeared, he complained of being ill, and shortly afterwards fell down in a fit, striking his bead against the stones. He was assisted home, and medical assistance procured, but he died the same evening. A surgeon stated that he Eaw deceased on Friday afternoon, and found him affected with apoplexy, which bad been produced by concussion of the brain and rupture Mortality of the Metropolis.-The number of deaths egistered in the week ending Saturday, October 14, was as Central Dist Districta, North Districts, 159 ; Central Districts, 182 ; East Districts, 225 ; South Districts, 237; Total, 950 (males, 509 ; females, 441 )
Weekly average for the last five years, 903 ( 461 males, 442 Weekiy average for the last five years, 903 (461
females); and for the last five autumns 908.

\section*{Floomial Nepus.}

The late Storms.-The accounts from all parts of the coast contain detailed accounts of numerous shipwrecks, occasioned by the storms of the last fortnight. The principal places which have suffered are situated on the northern and eastern coasts ; and in many instances, the wrecks have been attended with loss of life. On the coast of Devon and Cornwall the storm was also felt with great severity, and many casualties are reported. At Margate, the ship Burhampooter, almoost . new vessel, with emia
grants on board for Port Philip, was wrecked off the har-
Carmarlhen.-The Right Hon. Frankland Lewis, the Chief Commissioner appointed to inquire into the causes of the present outrages in South Wales, arrived here on Tuesday, bringing with him her Majesty's Commission, which was opened on Wednesday with the examination of the clerk to the Main Trust, and of various books and papers relating to it. Not a night now passes but the morning brings an account of some act of incendiarism. On Mon-
day night two large stacks of hay, containing about 15 day night two large stacks of hay, containing about 15 tons, the property of a person named Evans, near Llanelly,
were set on fire and totally destroyed. A party of the were set on fire and totally destroyed. A party of the
London police, in their usual nightly patrol of the country, had passed the spot as late as \(80^{\prime}\) clock, and all was then safe, but when in another part of the country at 9 they perceived the ricks in flames. Mr. Evans had received two threateaing letters, stating that if he did not give up carting coals, Rebecca shuuld visit him; he subsequently received a second threatening letter, widay last this town
to take in or open. On Thursday and Friday was filled with county magistracy, who came to be present at the opening of the quarter sessions, and to take part in the dibcussion on maintaining a rural police in the county, Mr . Pugh opened the proceedings in a speech on the present state of the principality \(i\) after which the court ended in agreeing to a rate for tiat purpose. There are now at least 150 of the London police in the disturbed parts of Carmarthenshire, Pembrokeslire, and Cardiganof foot-soldiers under the command of non-commissioned officers, in all the villages and small towns throughout the country. - At the Pembrokeshire quarter sessions, following resolution, which was seconded by the Earl of Cawdor and carried: - "That the magistrates are of opinion that the police force which the Government has proffered to be put at the disposal of the Vice-Lieutenant proffered to be put at the disposal of the Vice-Lieutenant peace of the county, and that it be employed accordingly? The expense of this force will be about \(50 l\). a-week; and a rural police in the county, which is greatly objected to. At the same sessions, William Harris, servant of Colone Colby, R.E., was indicted witil unlawfully and maliciously Whitlaud trust. It is rumoured that the evidence brought before the grand jury was defective, and that it appeared before the grand jury was defective, and that it appeared
before them that the breaking down of the bar was an act done for the purpose of trying its legality, it being alleged to be placed within the borough of Narberth, contrary to law. The grand jury ignored the bill, and the prisoner information of one Richard Williams with being concerned in the destruction of the Porthyrhyd-gate and toll-house on the 7th August last, have been appreliended by a pasty of the metropolitan police, and lodged in the have undergone an examination before a full bench of magistrates, and been remanded for further inquiry. On the night of Triday week a farmer, named
Richards, occupying a farm called Gorse Goch, in the parish of Llanfrynach, between Narberth and Cardigan, and about 12 miles from the latter town, having bailifis in his house for arrears of rent, had his farm visited by about
100 Rebeccaites with their faces spotted with black. They threshed out all his corn, packed up the straw, and carried all his corn, straw, and stock, off the premises; they then ordered him out of the house, and packed up his furni-
ture, which they took away. Ifaving ordered the bailiffs, who were afraid to interfere, to be off, they carried all away with them, the bailiffs have been unable to discover where. The farmer says he does not know any of them, nor where they have carried his goods.

Chester.-On Saturduy week, about 9 A.M., a barn, forming part of the farm buildings adjoining Sutton Hall, the residence of Joseph White, Esq., was found to be on fire. So rapid was the progress of the flames, that before the engines could arrive the whole of the farm buildings, destroyed; the cheese was saved, and the efforts of the Chester police successfully prevented the fire from communicating to the Hall. The engines remained playing upon the buildings till 10 at night, when all fear of further mischief was removed. Nothing is yet known as to the origin of the fire; and the damage is estimated at from 2,000l. to \(3,000 \mathrm{l}\).
Dover.-On Tuesday, the Duke of Wellington, in his capacity of Lord Warden of the Cinque Ports, held a superanuation of old Cinque Port pilots, and the making of new ones to fill up vacancies. The proceedings commenced with divine service in St. James's Church, where
the Master of the pilots, Mx. D. Peake, was elected. The vacancies filled up were about twenty, and there were upwards of one hundred applicants in atterdance. The examination wardens are the examiners, and the points of the English Channel. The last Court was in Nov., 1839. Durham. The local papers recently anmounced the death, at an advanced age, of M1. Buddle, well known in the northern counties as a coal viewer, and as the agent
of the Marquess of Londonderry's collieries. He is said to have died worth \(150,000 \mathrm{l}\)., although he commenced life as a mere pit lad.

Gloucester.-The local papers state that the 8001. of Which Mr. John Gardner, of Painswick, was some time note, part of the amount, was lately stopped at the Bank
of England, where it was offered for change by a foreign Jew; and the remaining 300l. has since been recovered from the hands of an old washerwoman at
urrendered it on receiving a reward of July last an sccount appeared in our columns (p. 494) of a deiliberate murder committed at the village of Mount Tabor, near this place. The victim was a man named John Dobson, a weaver, who was shot dead by his own son, Joseph Dobson. The latter and his wife had gone, and during the wee some quarrel tok wice bete and during the week some quarrel took pice between the son and his father. The son on the 4 th July went about
a mile from Mount Tabor, and took a gun from the house of a man he knew, but who was not at home, and having phrchased some powder and shot, returned home and deliberately shot his father in the presence of his wife it missed fire, but he put on another cap, and before the old man had time to get out of the house, shot him The murderer immediately made his escape, and though great search was made for him no traces of him could be discovered. A coroner's jury unanimously returned verdict of Wilful Murder against the parricide. A Governbut he day last, when he was apprehended by a working man at Huddersfield, in the neighbourhood of which town he has been working for a few weeks as a weaver. He had cut his whiskers off so as to prevent identincation, and when out on being given into the hands of the chief constable be acknowledged that he was the man, and instead of feeling compunction for his crime, gave utterance to expressions of pleasure that he had taken his father's
life. On Saturday lie was committed to York on the coroner's warrant for trial at the next assizes.
Isle of Wight. \(\rightarrow \mathrm{Mr}\). Dawes, brother of the Baroness de Feuchêres, has purchased the Niton estate, formerly the property of Mr. Kirkpatrick, banker, of Newport, of
his assignees, for \(21,000 l\). It contains about 700 acres, taking in part of St. Catherine's Down, und some of the finest scenery in the Isle of Wight.-The English Churchman states that it is able to confirm the report the return of Mr. Sibthorp to the English Clsurch. The Rev. gentleman, it states, has after a deliberation of about six months, formally declared his renewed attachment to the English Church.

Manchester.-.The adjourned annual general meeting of the shareholders of the Bank of Manchester was held last week in report that Mr. Burdekin, the runaway ma. nager, would deliver himself up to the directors. This report, however, was wreat andation. A long statebe sufficient to remind our reaclers that this bank had branches at Birmingham, Liverpool, and other places, and suspended payment in 1840 . At the time of its
stoppage, statements were sent forth informing the shareholders that a small loss on their shares would be experienced, but that the securities held by the bank were of such a character that little apprehension need be entertained upon the subject. A sum of money was borrowed from the principal shareholders for the purpose of paying off the more pressing claimants on the bank, and to avoid harassing its debtors by prematureiy urging upon them the repayment of advances. Each succeeding year showed that the securities had undergone considerable depreciation. At length a final investigation has taken place, for for the reimbursement of loans made under the circum stances stated; and it is now discovered that, in addition to the paid-up capital of five pounds per share, another call of thirty shillings a share is necessary to enable the directors to pay off the present demands upon the bank. elected, and a committee appointed for the purpose of investigating the private accounts of some of the directors and other iodividuals, and to report to the proprietors. Charles Seager, M.A., Iate Fellow of Worcester College, has joined the communion of the Church of Rome.
Southampton.- Official notice was received here on Friday last announcing that Southampton had been made a second-class port, which doubtless will prove of importance to the town, as all descriptions of imported direct. The intelligence was welcomed with pealis from the church bells, and with a salute from the battery. It is said that arrangements are in progress between the merchants, Dock and Ruilway Companies, for the reduction of frights, dues, and carriage of goods, which, if carried into effect, will tend greatly to the increase of trade.
Taunton. -The Bristol Times siates that at the Somersetsbire quarter-sessions, last week, the chaplain of the prison said that no less than 360 prisoners had come under his notice during the last three years who were ignorant of the name or did not mean to say they never heard the name of Christ, but knew nothing of its meaning, and only used that sacred name in their profane oaths or conversations. If he asked them who was the Saviour
of mankind, they could not tell ; if he asked them who was Christ, they did not know. They were in utter darkness and jgnorance as to religion; as to moral and religious duties they were just as ignorant as heathens.
beagles, her Majesty, from domestic causes, has been prevented from hunting during a great portion of the regular season. This year, however, her Majesty has signified her intention to hunt with the beagles occasionally in the Great Park. When ber Majesty takes the field, bagged hares will always be at hand, in order to insure sport in the event of their not being successful in an early find The Queen is said to be an excellent horsewoman: indeed, her Majesty upon her favourite hunter takes a ditch and double fence in beautiful style.-It is stated to be the intention of Prince Albert to add to the present extent of the preserves at Swinley, between Ascot and Bagshot Park, by purchasing some portion of the land which the contiguous to the Cromn property. A large quantity of is brought down and bagged by a number of persons carrying game licences and culled "scouts," who make a point of hoverine round the extremity of the Royal prepor when the Prince and the visitors to her Majesty hooting over them. When any bird rises and makes are shooting over them. When any bird rises and makes away, if but one yard from off the Roy proped it is popped of Prince lices this year took place saie of Prince Aberts stock lor this took place las week at Norfolk furm, and attracter, from the high cha men and butchers for many miles round Windsor, and men and butchers for many miles round windsor, and several large buyers from we wow 10 Devon 8 consisted of 417 sheep, 33 Welsn oxen, 12 Devon oxen, 8 Hereford oxen, 2 West Higulanders, ank heifers. The prices realised were high, and the produce of the sale was \(1,743 l\). Mr. Ormsby Gore, groom in waiting to her Majesty, met with an accident on Wednesday week, while hunting with Prince Albert's harriers,
but was enabled to leave the Castle on the next morning for his town residence. The meet on that day was at Mr. Mason's farm, at Salt-hill ; and during the second run, when the barriers were in full cry, the horse of Mr. Gore While at full speed, tripped and fell, throwing his rider with cousiderable force on a beap of hard moun. Mr Gore fractured his collar-bone, and had several sever bruises, but 18 now doiog well.--A ire was discovered in the spacious corridor at Frogmore-house eariy on Tues day morning by one of the domestics, and bad it not been for its fortunate detection at the time, there is little doubt that the mansion must have been burned to the ground. It appears that the corridor, over which is the by flues, which had been overheated on the previous dar and set fre to the carpet and some furbiture. Prompt assistance was at hand, and the fire was soon subdued. Railways.-The following are the returns for the past and Gloucester 1.987\% : Eastern Counties, 2,8336. Edinburgh and Clasgow, 2,594l.; Great Western, 15,19yl.; Grand Junction, 8,314l.; Grasgow, Paisley, and Ayr, Selby, 1,053l. ; London and Birmingham, 18,097l. ; South Western, \(7,674 l\). ; Blackwall, 826 l. ; Greeuwich, 6932 . ; Brighton, 4,568l. ; Croydon, 251l. Siverpool and Man-
chesten, \(4,739 \%\). Manchester and Birmingham, \(3,716 l\). Manchester and Leeds, 5,1112.; Milland Counties, \(3,168 \%\); Nercastle and Carlisle, 1,360 . ; Dover, \(4,602 \%\); Shefheld and Mianchester, 4426 ; York and North Midland, 1,900l.-The jury, at the Coroner's inquests on the bodies week returned verdicts of Accidental Death in each case. - It is stated that the works of the branch railway from Oxford to Didcot are progressing rapidly, chiefly in the neighbourhood of Radley and Appleford; and there is little doubt that the opening of the line will take place in June, previous to the Commemoration which will take and Glasgow Company Lave instructed their engineer to examine the former plans of a branch railway to connect their line with Stirling, and to make a further survey of the country if necessary.-It is said that Mr. Geo. Hudson, of Yore will be apoointed chairman of the thre amalgamated Midland Railway Companies. Mr. Hudson will then be chairman of no less than six lines- the Midland Countes, and North and Selby.-On Wednesaay the propietors of the Nortaern and Laster the Shoreditch station, to take into simultaneously the propristy of an analgamation of their consideration the propriety of an ana.gamation of their Hues. There was alarge and the North. The meeting of the Eastern Cou Fom Nol the Northern and easter presiding, when the hends o'clock, Mr. Marshall, M.P., presiding, when the heads of the proposed amag io shor Company were submitied to the shareholders. The arrangement proposed was in the Enity of the Tompany should take a lease in perper cent. upon the shares and Eastern, at a rent of five per cent. upon the shares profits Counties, and the remaining net profts to be divided in the proportion of two-thirds to the Eastera Counties, and one-third to the Northern and Eastern; the former Company to have the the lines, and to guarantee that the working expenses shall not exceed 40 per cent. of the gross receipts for the first year, \(37 \frac{1}{8}\) for the second year; and 36 per cent. for ail futare years, 18 in all. After much discussion, in which Mr. Ward, M.P. for Sheffield, Mr. Masterman and others took part, the resolutions ratifying the above propositions were passed with but four dissentients. A
resolution was alco passed, empowering the Directors to
apply to Parliament to extend the Northern and Eastern
Railway from Newport to Cambridge. At the meeting of Railway from Newport to Cambridge. At the meeting of the Eastern Counties shareholders, the same propositions siding. Mr. Whitlle Harvey spoke for nearly two hours duration, contending that it would be a pernicious and suicidal act if the Eastern Counties Company were to take a lease of the Northern and Eastern in perpetuity. He entered largely into statistics on the subject, which were replied to by the Company's solicitor. Mr. Salamons, Mr. Tite, and other proprietors, also spoke ia favour of the proposed amalgamation, which was ultimately carried, with only six dissentients out of a meeting of upwards of that its adoption would not only have the effect of largely benefiting the public, but of terminating all existing Par liamentary contest and injurious competition for traffic,

\section*{IRELAND.}

Dublin.-The Lord-Lieutenant presided at a Privy Council last week, when it was agreed that a proclamation the Arms Act shall come into operation.-On Friday informations for perjury were tendered against Mr. Bond Hughes, the Government reporter, upon whose deposibail. It appears that this gentleman swore that onive Barrett, proprietor of the Pilot newspaper, was present, and took an active part at a certain meeting, while 13 sent, but it was physically impossible he could have been present. The case was brought before the magistrates of College-street Police-office, at two sittings, but they ultimately refused to receive the informations - In the Coriction, tion on Friday, Mr. O'Connell brought forward the following resolution :-" That we deem the transmission of the ing resolution :- the Lord Mayor about the hour of four o'clock on Saturday the 7th of October inst, to meeting to be held on the next day too lote forent pose of due caution, and especially too late for him to Warn the citizens of Dublim of the impending peril., The Lord Mayor declared that he had never experi enced any want of attention on the part of the Admini-
stration, and wondered much how Mr. O'Connell could stration, and wondered much bow Mr. O'Connell could have thought of alleging this matter as a proof to the ried by 38 to 9 .-The various wards of the city have sinc held meetings to protest against the recent measures Government. At the meeting of the Post-office lioard
Mr. ('Connell spoke at considerable length. He said that some misapprehension seemed to proar respecting what bad fallen from him on the previous Monday. It it had chansed his mind on the subject of Rejreal. It pression was totally erroncous. He had merely repeated on Monday what he bad often before and loug since stion respecting the attainment of a federal Parliament But then, as well as on Monday last, he fully retained hi own opinion, that nothing short of Repeal could or onght to satisfy the people of Ireland, and that nothing else would afford an efficient remedy for the manifold griev-
ances of the country. He was still firmly attached to the principle of independent legislation, but having reason to relly a considerable and very influential party, he had raly a considerable and very influential party, he had
expressed himself ready to make the experiment, because he felt conscious that the result would be a still deeper conviction that in Repeal alone the true remedy would be found. He had been promised the support of a very powerful party in England, and he had reason also to calculate upon the adhesion of a very influential party in Irebut while entertaining and expressing these opinions, he was bound to declare that he was still of opinion that it
was only in an Irish House of Commons, and in an Irish House of Lords, that the wrongs of Ireland could he redressed and the rights of Ireland maintained.-On Monday the Repeal Association held their weekly meeting in the New Conciliation Hall, which was opened on crowded, and many thousands were unable to obtain admission. A Government reporter was present. Mr. J. A. leogth. Mr. \(\mathrm{O}^{\prime}\) Connell then rose and said : I wish that the first sentence which I have to utter in this Conciliation Hall, formed now as it is into an assembly, shall be this Itut, that there is but one way to ubtain the Repeal of
the I'mon, and that is by strictly peaceable means. My second sentence, and the orly one I shall utter before 1 vided youney, is that the Repeal is certain. Yes, proGive your enemies no advantaze over you. I warn tive peuple against giving the Government the least pretence for using torce. I warn the people-in the cities, towns, the no single act of violence. If violence be attempted by any body else, the law is still open, unquestionably open, attacked by will be found to proted chose who are unjustly Inuved that Mr. Smith O'Brien, M.I. For the county of
Limerick, be id Limerick, be adminted a member of the assoclation. This Mr. O'Connell read a long letter from Mr. O'Brien detailing the reasons which had induced him to join the O'Connell, "Mr. O'Brien was years had been his teachers, and had shown him that there was
nothing for Ireland but the Repeal ; and he had boldly and manfully, as it became hime, scorned to be kept in fetters of former opinions, or to be taunted with inconbe was an anti-Repealer-he was hone was honest when amongst the Repealers. There had a good deal fallen from their chairman of the distinction between federalism and an independent legislature. It was an independent legislature he (Mr. O'Connell) was looking for. \(13 y\) iudependence he did not mean independent of Englandindependent of the Crown, quite the contrary; bound to England by the golden link of the Crown, with a mutuality of interest - most firmly attached to the insisting that Ireland has a right to the revival of that parliament of which she was deprived by the foulest means.
This language might be thought inconsistent with what fell from him on the last day of meeting, it was no such thing. He mentioned then that approaches had been would join him if he held out the hope of federalism; the second was a letter which he received from a gentleman in England, and he assured the gentleman who wrote to
him that the Repealers did not desire separation, and that they would give every guarantee that that was not their object. It was said to him that if he held out these hopes a considerable number of Whigs would join hims
recollect that it was on this ground that they were joined recollect Right Rev. Dr. Kennedy; it was on this ground that they Eought the junction of Mr. S. Crawford, and
received the support of Mr . \(\mathrm{O}^{\prime} \mathrm{Hagan}\) and others. They went far enough for the Repealers to act with him, but he never said that he would rest contented with a smaller
cuantity, as long as it was possible for him to get a greater quantity, as long as it was possible for him to get a greater.
He would be ashamed of being the colleague and com paniou of the chairman, and the friend of Smith O'Brien If there was the least hesitation about him in saying that the hopes of justice had been total delusions, and that he
was looking now for the Repeal. He would reject no man's assistance who went any part of the way with him Any man that joined him to repeal the 40 th of Geo. III. chap. 38, what was called the "Union Statute," was welcome amongst them; he would obtain the best parliament himself after he had been thus assisted on his
way. He had every disposition to conciliate-none way. He had every disposition to conciliate-none to ment if the hat had occurred noight teach the Goveramen of England, if they be wise, that they might win th Irish heart by kindness, and by conciliatory conduct they might bind Ireland with the link of faithful affection to e Brish connection. They might keep the Irish people never would be a rebellion again. There would be no there on the part of the people. Oppression might be continued but the people had perseverance enough to suffer patiently, at they were engaged until as large and addressed hurraed in College-green on the opening of the narked thanks and In conclusion, he moved that the offered to Mr. Smith O'Brien, that his letter be printed, and a copy of it transmitted to every member of both
Houses of Parliament. Mr. O'Connell then hauded in several large sums of money, among which was 100 . from Philadelphra, and \(50 \%\). more from the same place, transmitted delphia. He took that occasion of stating, for Mr. Steele, against whom informations hard been sworn by Mr. Bond
Hughes, that Mr. Sceele had been blamed for not having prosecuted Mr. Hughes for perjury, but seeing that in-
formations on the same ground had been refused, he thought there would not be at present any use in commencing a prosecution. It appeared that Mr. Hughes had
sworn that Mr. Steele, at a meeting of tie Repeal Association, made use of the quotation- "Behemoth, biggest had never used the lines, but he was in the habit of reporting his own speeches, and when writing his speech for
the Freeman's Journal, he had put them in, and Mr Hughes had thought proper to make use of them in his informations. After the routine business had been gone Association, recommending peace and quietness. The repeal cause, he said, had a to be 2,2846. \(5 s .5 d\). An adjourned meeting of the Association took place on Tuesday. Soon after its commencestate that he did not consider himself to be allowed to of thanks purporting to come from the lrish peopie and \({ }^{\text {Mr. Smith }}\) O'Brien. Mr. O'Connell then amidst anuch laughter moved that Mr. Gregy be not considered included in the vote, and beggeu the people to allow him quiedly to being checked at the desire of Mr. O'Connell and Mr. Steele. Mr. O'Connell tien attacked the Morning Chrosigned "Philaleties," which he attributed to Mr 'Trevelyan, secretary of the Treasury. He then moved that It would come conciliation be prepared by a committee. it would come, he said, very suicably from that hall, ciliate every class of bis fellow-subjects, but on just and manly grounds. He would not do it to buy off hostility, nor at the expense of principle. They would co-operate with any man that was for repealing the statute \(40 \mathrm{Geo.HI}\). c. 38 . As to the people of England, he would be glad to
couciliate them, but he almost despaired of being able to do conciliate them,
so. The Whigs seek to get into power through \(\begin{aligned} & \text { Ireland, but }\end{aligned}\)
the Whigs were a treacherous set-there was no escaping the extent of their calumnies. They had grossly per-
verted what he had said about the Bourbons; but he deprecated revolutionary violence in any conntry on the globe. As to the Chartists they made him offers of assistance, but he would have no alliance with them, and put their letters in the fire. Joseph Sturge and the Complete Suffragists were a small party, but he would be glad to assist them; however, his apprehensions exceeded his hopes. As to the wise and judicious people of England, in the first phe conciliate them, and he would tell them in the first place that he had no desire to separate. He Parliament to France, so neither could the Irish Parliament transfer theirs to England. This was the doctrine of such men socke Piunket Mas Bushe Hewno mere mea loike, Hunk and He would move that a committee be appointed to draw up a sort of ancy could never happen. That declaration would be the solemn pledge of the Repeal Association and of the people who confided in that association. That declaration would be the shield of every Protestant to resist persecution if it should ever occur, but there was no danger of it The spirit of persecution was not in the Catholic. Ireland had been stricken down by dissensions amongst Irer chitaren; but ocee all the Trish were for Ireland, Ireland would be legislated for by the Irish. He
desired, therefore, to proclaim in the Conciliation Hall desired, therefore, to proclaim in the Conciliation Hall
this truth as the basis of their exertions. - that they placed their exertions for Repeal on the right of freedom of conscience to all men-without ascendancy to
any, or political inferiority to any. He concluded by moving that the Committee be appointed, which was agreed to. Mr. O'Connell then said it was most important that tuey should bave as many addresses as possible to the in order theen that period and the sitting of Parliament, of plain real state or Trelana. Hose petiions should com Majesty will present administration, and pray that her confidence. It would be their duty to see that those petitions were properly sigued, and they would begin the next session of Parliament with a cartload of petitions. He did not mean that there should be simultaneous meetings, even of any one county, for this purpose, for in the presish state of irritation it would be better to have Corish meehings, one after the other, before Parliament sat night hills in the neighbourhood of Donoughmoore, in mystery. The Corlt Constitution says, "The lighting commenced about ten o'clock, und soon after aeres of fires were seen flaming round the country. What is the object? Are there any ill-advisers urging on the unfortunate people to deeds which they will by-and-by bewail in blood?" Limerick.-The Limerick Reporler of Friday says T The hills through the counties of Limerick, Clare, and Tipperary were illuminated last night by large fires, which miles. The scene was beautiful and amposing ; but what ocTipperary - Tial accurrence we cannoteven guess: Tipperary. -The Tipperary Constitution of Friday
alludes to the night-ires as follows:-"Last night, betwen the hours of seven and eight o'clock, the entire country was literally covered with fires. From every Tipperary a fire blazed counties of Limerick, Clare, and simultaneously. In several instances the fires blazed on the public roads, and torches were to be seen borne along by the people in every direction. It was really for miles round blazed into light, almost at the same moment. The meaning of those fires we cannot ascertain," Clare. - In the county of Clare, as well as in Tipperary, operation on Thursday night last. The Clare Journal contains the following :-"On Thursday evening, us far as the prospect could be commanded, lights were observinquir all the hills in the country. We have in vain made inquiry as to the cause-no one knew, or if so, they were large bundles of blazing straw carried round, followed by a crowd of laughing women and screaming children, to the ting fire to those houses covered with straw. Why some ting ire to those houses covered with straw. Why some dangerous aumusement, we are at a loss to account for""
dine

Glasgow. - The Free Church G.
is city on Tuesday wek, Assembly met in quess of Breadalbay week, and was attended by the Marsters deputed fibane, Mr. Fox Maule, and several miniRev. Cæesor from distant charches, anong whom was the the sermon, and Moderator, which was seconded by Dr. M.Farlan of Greenock, and carried unanimously. At the sitting on Wednesday Dr carried unantmousty. At the siting on milted the address of the Free Church to Her Majesty first Home Secretary immediately atter the rising of the swer from Sir James Grahana :-" I Thave had the honour of receiving and of laying before Her Majesty the address which bears your signature, and whicl was transmitted by you me. 1 am unwiting needlessly to refer to the late Church of a byaty hectiand; but the assurance of your continued he Queen relies with satisfaction on the declaration which you make on behalf of the minisisters and elders of a Church,
of Christ, that you will be steadfast in your obedience to the civil power, and that you regard that duty as demanded
by the highest authority, and as due to the peace and prosperity of the nation."

sions; or, 1 they prefer ed it, cetber by inctuctment or by actim,
When a trial would have taken place at the asizes, and 1 wil Venture to say that the appeal for justrce, by even the poorest
member of the community, would never have been made in vain. listened to with favour in a court of justice, and ample redress afforded If, therefore, any grievance existed in the shape of there are persons who, aftcr the money has, betn ecnt for tha
making of the roads, and tolls mpused for repayment, hav
wislied to wislied to hreak fath with the credtors by destroyng their
security, they must be dishonest characters. Many a widow, and many an orphan, are dependent upon these cecutithes for ther
subsistence. Instead of that peaceable apmination for redress which I have pointed out, there have been large and tumultuons essemblares of persons, gedern a manner to dely reststance, provided with implements for the their unlawful and wicked puryoses into execution by terror and by violence, extending event to an their duty. Ha acountry which is governed by law such excesses as these must be putcown with the ste who ergage in them. I am happy to say, that the cases which will be brought hetore yon, though heinous in therr character, are not humerous.
frum the depostions which lie before mat upon the mat of ne 6 th of September an attack the road from Swansea to Llanon, by a tumultuous asscmblage of persons, amounting, it is believed, mplements of destruction. The gate was broken down and the tables, accompanied by a magistrate, arnvid. mere canbe no doubt that the demolition would have been comple, but for the called on them to desist. Upon this, one of the leaders fired a pistol at the chief constable, and that was followed by a volley frum the rioters. This fire was returned by the constables, and David Jones, whd Juprus 11 ught Two charges aganst them are tated in the comminment- the oue constables. It will be your daty to decide on the evidence that brought home to the m , or to exther of the m . If the proor be such a verdict of guilty (if yon were the trying jury), the that case yol 12. To prove the guitit of the persons accused it is by no madin pucksaxe or to shew that they werc the very widh their own handsanything an the demolition of the house. The crime is the crmme of the riotous as
sembly, and all who formed part of that assembly-ali who by thei
presence swelled themr numbers and augmented their force, more
espectally all who by their disguises had prepared to avould detec- tion, and all who by their disguses had prepared to avoud detec-
ance ance and resist apprehensiou-all, in short, who by their conduct showed that they were concurring and assisting in the execution of
their unlawful purpose, are in law equally guilty. You will therefore attend to the evidence that will be adducen, and fad a true bil each of the persons charged. The same observation apphies to necessary to prove that the person charged was the very man who pulled the trigger; all who banded themselves togerher in such numbers with such weapons, indicative of suen a purpose,
are equally puilty Had any of these shots taken fatal effect, they would have had to answer for the crime of murder, and some reflection as to the dauger they incur by engaging in such
enterprises, which may, and continually do, javolve them in crume more conclign inge of ssankt upon the chief constable, for the purpose of preventing the apprehension against whom a warrant on a charge of felony had issued for depositions state that the chief constable, accompanied by others, hepa apprehended Henry Morgan on a charge of felony, when the great viulerice assauited him with different weapons, and the mother assaulted lim with a weapon which cut his head to the which one of the family was seriously wounded, aud for the pre hear the narrative of each of the officers, and find a true bill or not, according as the evidence proves or fails to prove the parthat I should state that where all the parties are equalliy engaged charges one a charge of an assault upon a woman who kept a turnpike gate, and cutting and wounding her. These charges intent to murder, more frequently with intent to maim or wos
figure, and more frequently with intent to do some grievous figure, and more freguently with intent
b. dilly harm. If yon find the charge proved you will find a true bill. There are also other charges of turnupe-gates. The destruction of a turnpike-gate, even though not done by a riotous assembly, is stllin a misde calendar. Gentlemen, you may now retire and consider the cases to be brought before you." The Grand Jury having retired, the names of the petty jurymen were called over, and the panel having been formed, Lord ames stuart, that he Grand Jury, reture name of that body, to state to the that he was deputed in the name of the observations he had addressed to them to be of such importance, that they were unanimously of opinion that it would be of great painted. Hi tage if his Lordship would allow his charge placed the document in the hands of the Grand Jury

TO GENTLEMEN PLANTING. and tainty upon which they hold the Manor-street Nursery (situated contignous to the Home Nursery, Clapham Rise, where
attention will je given to ail applications), to effect a Sale of the Stock at as enrly t pcriod as pussible, consequently beg to solicit
the attention of Gentlemen ansl the trade to the large and remarkably healtiy and well-grown stock, consisting of fine large
Laurels, twice transplanted, of extra giowth; Portugal Laurels, very handsome; Green Holles, of variuus sizes; Evergreen stanelard flowering Thorns, Almunds, Esculus, Robinias, and other Ormamental Trees, and Evergieen and tlowemmgs, shabs,
with a large stock of fise standard and fiwarf, trained and unwith a arge stock of file standard and finarf, trained and un-
trained Peaches, Nectarnes, Aplles, Pears, Plums, and Cherries, of the most approved kinds, aud of growth rately equellicd; also,

 invite the incpectum of Gentlomen and Numerymen, thatterng ensure unqualified satisfaction, tura when they are disposed to
offer at very to their advertisement of Heaths, \&ce., whech has alpeurcd in the Nurseries, Clapham, near London, November 4, 1843.

ATRONISED BY HER MOST GRACIOUS MAJESTY THE
QUEEN, HIS GRACE THE DUKE OF RUTLAND, THE
EARL OF HARRINGTON, THE LORD BISHOP OF LONDON, LORD VISCOUNT LORTON, LORD SONDES, VOUELL AND CO. have much pleasure in announcing above highly valuable and much esteemed Raspberry, nequalled
for the extranrdimary sizc of its fruit and richness of favour.
Those to whom Y. and Co. sent it last season have expressed their high admiration of its superiority over all other varieties, Exhibittons during the season. As a proof tbey have not exagge-
rated its excellent gualities, Fruit was submitted to Dr, Lindley
 we find it merits all that has been stated in favour of its excel-
lence. The fruit that we liave received is very large, obtusely other new and large varieties. The plants bear abundantly, and They also exhibited it on the 1 st August before the London Hort, Society, 21 , Regent-street, to which a prize was a warded.
It would therefore be unnecessary for Yourni, and Co to recomment it more fuly, or with greater connidence to the notice on riority in the most unfavourable solls and situations, and requires no other then the ordinary treatment of the old varieties. Fine Canes will be ready by the latter end of October, and can
be serst with safety to any part of the United Kingdom (on the receipt of a Post-office order) upon the following terms:-
Packages containing 100 Canes

Package included. The usual discount to the Trade, when no less than 200 are ordered.
Extensive orders are already received for the above, and to revent a repetition of the disappointment which many expe-
ienced last season, by Youkur and Co not being able to meet the emand, they therefore respectfully solicit early application.
Great Yarmouti Nursery, Nov. 1, 1843.
THMPHREYS' COMPOUND, BULBS.

\section*{SATURDAY, NOVEMBER 4, 1843.}

MEETINGS FOR THE
Tuesday, Nov. 7 . FForticult
Wednesday, Nov. LLinrean

With the most sincere regret we announce the death of the Rev. William Lewis Rham, M.A., a Member of the Council of the Royal Agricultural Society, and one of the best Agricultural writers of our day. We need only point to his excellent articles in our own columns under the signature
"M." and to his many valuable contributions to the "Penny Cyclopedia," and the "Journal of the Agricultural Society," to show what a serious loss the science of Agriculture has sustained in this kind, good, and amiable man, who died at his living of year of his age.

The attention which Professor Henslow and other writers in this Journal have directed to the new Agricultural pest, called the Clover Dodder, will, we time to spread. And it will doubtless be consolatory to the farmers to know that if it can once be driven off there is little or no chance of its return
Beveral writers have stated that it appears to have been introduced from Cabul with the Lucerne, of which we have lately had some importations; and we are enabled by the favour of a correspondent to confirm this supposition beyond all question.

I have witnessed," he says, "in the extreme north-western portion of Northumberland, a fact which seems to confirm the opinion that a species of Cuscuta Trefoil from Khelat. A packet of that seed was sown last spring in rows, in soil prepared for a hedge at the edge of a meadow which had meadows also on three sides of it , and no arable land near it. Cuscuta is said to have been previously unknonn in that district, and has not been seen, as far as I have learnt, this season. when, in consequence of the first notice on the subject in the Gardeners' Chronicle, an examination was made, removed and destroyed. As the latter had no flowers the species could not be determined. I have the pleasure of sending you a packet in the state in which it was prurchased at a bazaar with that which produced
the Cuscuta above mentioned. 1 . Close examination may possibly detect the seeds of the parasite mixed with those of the Trefoil.
We have carefully examined the seed alluded to in the foregoing letter, and we are able to state that small packet we have picked thirteen seeds, each wiih its snake-like embryo perfectly alive and fit for growth.
We are
portant . also enabled to state something more imseparated by sifting. Iucerne-seeds are about 2 line long, and \(1 \frac{1}{1}\) broad. Clover-seed is much the same; the Dodder-seed is spheroidal, and scarcely a line in diameter. It is of a pale-grey colour, in form like the quarter of an Orange, and looks more like fragments of grey clay than an organised body.

As there has been a little skirmishing in our columns about the priority of some imaginary discoveries relating to the name and so forth of this plant, we may as well take the present opportunity of staying all further expenditure of powder by stating that the discovery of the species probably rests with Dr. Roxburgh, in whose "Flora Indica," Vol. i., p. 447, it
aescribed under the name of Cuscuta sulcata.

We have seen with great regret some letters in the Daily Papers complaining of the conduct of visitors to Kensington Gardens, where of late so much pains esting by the introduction of named collections of shrubs and flowers. We regret still more to say that the allegations are true.

The first of these malpractices (says a writer in the Times) commences in the spring, when a systematic pillaging of all the birds' nests takes place; not a is so peculiarly attractive, is suffered to escape,-and Were it not for the protection afforded (by express command) to these beautiful songsters in the grounds
of Buckingham Palace, and the keeper's island in St. James's Park, not a note would be heard in any of our parks, and these joyous harbingers of spring would, near London, be exterminated. The second uisance is the plucking of the flowers, and the stealing of roots and plants almost as soon as they are put
into the ground. The best of the Dahlias last season into the ground. The best of the Dahlias last season
were carried off almost immediately they were planted, were carried off almost immediatey they were planted,
and the Pinks and Geraniums were all stolen, one after the other, within a few days of their being transplanted. The third nuisance occurs in the autumn, when the very seeds are stolen, and by persons wel dressed.

It is a lamentable thing that the excellent intentions of the Commissioners of Woods and Forests should thus be frustrated by the well-dressed, or ill-dressed,
scamps who abound in all great cities, and we should scamps who abound in all great cities, and we should
be glad to learn that the example of the good people of Frankfort were followed when such people are
caught Mr. Jessie tells us that "The public gardens at Frankfort are only separated from the high-road by a single rail ; and yet nothing is injured, although no one is excluded. In these gardens, a nightingale had to one of the walks. It was seen by every one, and yet no one molested it; until, one day, a foreign servant saw and took it. When it became known, the
man was hunted hy a mob, taken before the city authorities, and, the fact being proved, he was sentenced to have his coat turned, to be drummed out of the city with every mark of disgrace, and never to
Without, however, resorting to means of this kind, which suit Germany better than England, we think that a remedy may be easily found in the plan suggested by the writer in the Times, from whom we have already quoted; namely, that a few persons
should be constandly employed in Kensington Gardens should be constantly employed in Kensington Gardens larger number of notices warning the public against picking and stealing should be pusted about the grounds; to which we would add the dispersal of a few policemen in plain clothes among the thievish crowd, with orders to seize the best dressed persons they could see in the act of plunder. A morning at Kensington Police-office would prove a salutary lesson to such gentry. At Hampton Court, at Kew, at the Gardens of the Horticultural and Zoological Societies, no robbing worth talking of takes place; but then these places are al way siguarded by workmen engaged in their ordinary duty. We would not answer for their security if the well-dressed mob of London had free liberty of amusing themselves without control. We earnestly wope that the Commissioners of \(W\) oods and Forests Will adopt so simple a plan for preventing plunder The Long Walk in Kensington Gardens is, we understand, under the special care of no one. Altogether, there is only the occasional attendance of three men ber barely sufficient for the duty, even if constantiy employed. If each of the long beds-and there is nearly a mile of them in length - was placed under the constant charge of some one gardener, he would naturally take a pride in them, and there would be some responsible persons who would be ambitious of the credit of keeping the grounds in order, and would on the other hand have the blame and censure, should the beds be slovenly and ill kept.
The desire of Lord Lincoln is evidently to beautify the Gardens for the pleasure ot the public. We are sure that his Lordship only requires to be made aware of the evils now complained of, to cause effectual measures to be taken for preserving the flower-beds in the state in which they ought to be ; and, above all, for rewarding the gentry who have been thus offending, in the manner best suited to their conduct, and least agreeable to their feelings.

COMMENTARY ON CERTAIN PASSAGES IN THE PHYSIOLOGICAL WRITINGS OF THE LATE THOMAS ANDREW KNIGHT.

\section*{BY W. WOOD.}
table Matter as Manuee in a fresh State TAbLe MATtER as substances are best calculated to reassume an organic living state, when they are least changed and decomposed byi̊putrefaction.
Fyirst experiment, upon a seedling Plum-The seed placed in a small garden-pot, and nearly filled with living leaves and roots on grasles, mixd with artificial heat appeared in April-was removed into a larger pot three tines during the summer, each time with same kind of material for potting ; end of October occupied about onethird of a square foot, at which period its height was
9 feet 7 inches. Further experiments in manuring Turnips with green fermented Fern and black vegetable mould, and branches of trees in every stage of decompositionthe latter apolied four-fold more than the former-the result being greatly in favour of the former ; the growth, \&c. being much more rapid than the effects from either vegetable mould or stable produce, and distinguishable in the autumn from the rest of the field, by the deeper shade
of their foliage. The above experiments conceived to be satisfactory, in showing that any given (I presume pro-
portionate) quantity of vegetable matter can generally be pmployed in its recent and employed in its recent and organised state with much no inconsiderable wat it has been decomposed, and dissipated aid lost during component parts kas been and fermentation - Hort. Trans progress of
Remarks.-This interesting fact, though valuable in its results when applied to the cultivation of plants remarkably robust in constitution, or known to be gross feeders, and under the most favourable circumstances, does not appear equally appicable to the general cultivafion of exotic plants in pots. Had the experiments been applied to the management of ornamental plants, even in the attainment of a medium growth, 1 have no doubt that the results would have been less favourable, for the following reason:-The highcr we rise in the scale of ullivation, the more pouterful are the agencies required o effect our purpose. And in the cultivation of piants intended for buperior growth, there are many instances of of counteractive agency is unequal; and hence I infer, from abundant evidence, that the mechanical texture and effect of undecomposed vegetable matter would by no meaus balance the injurious infuence of its absorbent properties. The undefinable variations of vegetable structure and capability of assimilating matter as food under equal variations of atmospheric and solar agency would preclude the anplication of undecomposed veretahe watter in many elaborate processes of cultivation. The accumulative system of culture is negatived in the above facts.
No. H.-On the most Advantageous Form of Garden-pots.-"I have constantly found the growth of trees to be most rapia when the roots and leaves are cumstances ; and the horizontal space necessarily occupied by the leaves and stems of plants will in almost all case exceed widh of the pots, of the form now recom mended, he widn of each being as 8 , tes depth will be as 6 , and luallest sure. - Fort. Trans., vol. Iil., p. 378
Remarks.-At p. 110 of "Paxton's Magazine of Botany," an opinion is offered that "the capability of roots to fuln their natural functions will be in proportion as modes of cullivation approach Nature so nearly, as to perelementary substances and and that it will probably \(b e\) found that the amount of food thus obtained will be com irensurate with the dispersion of the roots over a given surface;" which opinion appears strictly to coinclde with Mr. K.'s view.
Lio. hin the Aphica of Manuke, in a and depth of soil seem therefore, to be no further requisite to trees than to afford them a regular supply of water, and a sufficient quantity of organizable matter; and the rapid growth of plants of every kind when their roots ar confined in a pot to a smalis quancity of mould, till that becomes exhausted, proves the truth (sufficiently) of this position."-Hort. Trans., vol. ii.
Remarks.-It would appear from the "rapid growth" were spoken of, that Mr. K. believed plants capable of the most rapid growth when confined in small pots and removed to larger, according to the oramary and restrictive system. But this oninion can be only maintained by showing that a small plant removed in its young and excitable state to a larger quantity of soil, of a texture and ranged as to enable its tender organs progressively to assimilate its food without being liable to an impeded circulation of moisture, * is, in reality, making a slower progress to maturity than a small plant, "confined to a small quantity of mould." But the real difference I presume would be, that the former, by a judicious adaptation of its or the increased amount of agen brought to act unon it, would be attaining an acoumulative vigonr by upor th development of its axillary buds, and con und of a uniform amoant of organizconsequent deposition arle a mater, if allowed to surpass the able matter, whilst the latter, if allowed oly surpass the other by a more rapid grown, attenuated growth, which if-buds. In the former, accuabortive or undeveloped progress, but maturation, in the mulation is not oniy progress, and loss of functional latter, rapid growth is abortion, and loss of functional power, by the repeated with an ultimate effect. This each of which iecognise any principle which involves the paper fails to recoger asencies in Nature, or any modificapplication of ic matter, to be rendered successively applicable to the different stages of growth.

\section*{ON THE ATMOSPHERE OF HOTHOUSES.} Whise the inpor seem acknowledged by Horticulturists, as your columns testify, I would beg to use the same vebicle for a few hints of a wider range, and take up the atroosphere of hothouses as a subject of more general and comprehensive import. In considering this subject, it obviously arranges itself under the four heads of heat, light, moisture, and chemical constitution; all of which conditions must be distinctly attended to by the practical gardener in the atmosphere of his hothouses, if he hopes to make their inmates emuate the luxuriance of their unaided sun are inadequate to the production of sufficient
* Paxton, p, 110.
heat for the growth of tropical and many other tender plants, artificial means have been resorted to in order to make up this deficiency. With the more early gardeners, the production of a sufficient heat in forcing seemed thei Alpha and Omega, for they were then unacquainted with vegetable physiology, and the conditions requisite for the proper development of plants : hence the heat and smok of an ordinary fire, conducted through? thin walled brick flues around the interior of the bulding, gave the hea required. This source of beat, however, has been found both unstable and impure : the plants in a house thus heated are liable to be scorched at one time and chilled at another, and subjected at all times to the influence of pernicious vapours, which escape from the flue at the joinings of its brickwork. The most obvious means to remedy the defects of the ordinary fue was to increase the thickness of its walls, and this practice has been adopted and given to the public by several of your corre spondents. The body of material heated being consider able, a house so warmed is not liable to the sudden altera tions of temperature of one with the common thin flue neither can hurtful vapours escape readily in to the interior myself have tried this plan to a small extent and find it much superior to the old five; and in small houses of cheap construction I believe it is the cheapest and best which can be adopted. One of your correspondents, if recollect right, recommended a nine-inch flue surrounded with two feet of brickwork to run through the house. would prefer and have used a flue of larger calibre, arche over the surface or upper side: this should run through the house longitudinally, and get gradually larger as it ecedes from the fre: in tbis way a pure and equable upply of heat may be obtained at little cost and trouble As this is a method of heating suitable for amateurs, who owever fond of plants, require to husband their mean ell in following out their fancy, you will pardon me in being a little more particular, even although I should to ome extent anticipate my fourth general head in pointing out the method of ventilation. In building the house mall openings like pigeon-holes should be left along the back wall, about the level of the ground, and two fee asunder; from each of these openings, on the inside, a bricks on fit for woles and covers should the sides, with house, under the flue, to its farther side: the bottom of these canals (which will be about four inches and a hal quare on the inside) are not to be on a dead level but to rise inwards, so that by the time they reach the middle of the bottom of the flue their base may be rather ger than their tops are on the outside of the wall. Along the bottom of the flue, (ere it is built, of course, ) build level, and uniting with them at right angles: The heating flue having been now built, and the outlets of the cross canals carried up a few inches on its front side, you possess an apparatus for ventilation which will supply your house at all times with pure and warm air. The eason of the cross canals being made to rise a little in per curse, is insure the escape of the warm air of the nouse instead of finding its house, instead of finding its way outwards into the ex ternal air. The port-holes may be allowed to remain open thitue, permithed to escape throust the roof and other openings fil pull down the sashes are or less, as you wish this to be. you wish good draf, the fiue should rie a little in its conrse above the level next the fire. To obtain mois fure a ledge of brick can be attached to the upper surface fich flue to confine a few inches of sand, by wetting hich, moisture is given off to the air of the house. For an amateur with limited means, a house suitable for the growth of almost any sort of plant may thus be cheaply obtained ; and it is on their account I have furnished these now getting into general use for heating Horticultural and other buildings. For large establishments we believe steam to be the preferable material, as one furnace and boiler will supply the whole. The temperature too of any building is perfectly under command, for with a few extra metal pipes or boxes, communicating with the steam-pipe by stop-cocks, a greater or less extent of beating surface can at any time be obtained, and the heat thus modified according to inclination or the rigour of the weather Water-tanks for bottom-heat can also be readily put in operation by steam; and any state of dryness or moisture kept up in the atmosphere by suffering more or leas of it to escape through properly-distributed minute openings. But while steam is quite suitable for extensive establishments, and in the neighbourhood of machinery where a steam-engine is at work, heated water is a more manageable medium, and much more employed for communi cating heat. For this purpose it is made to circulate either through close pipes of cast-iron, or open and covered gutters and tanks. The principle on which this circulation depends is the different densities of warm and cold water, combined with the hydrostatic fact of all fluils finding their level ; and any one thoroughly acquainted with these two princinles can at any time plan and modify a hot-water apparatus at his will. As a suitable soil-temperature is as necessary for the lixuriant growth of many plants as a suitably warm atmosphere, tanks of hot water are getting into general use for the purpose of Over theia, and into requisite heat to soil or sund placed pots plunged.t The elder gardeners and many of the oretan starase fermenting material for the purpose producing this bottom-heat, and, in some respects decided advanuyge, as will attempt to prove under the head of Chemical Constitution. When, however,
steady moderate bottom-heat is required, there can be
little dispute about the utility and docility (if I may use the phrase) of the tank system.-J. \(L\). Newhurst.

\section*{PLAN OF A PINE-PIT ERECTED AT HEWELL} FOR THE HON. R. H. CLIVE, M.P
Br permission of Mr. Clive we are enabled to publish he following plan of a Pine-Pit, whose bottom-heat i as it has been constructed by Mr. J. Jones, of Birmingham When we saw it, a month ago, the plants were in the best possible health; and Mr. Markham informed us that it orked so well, that he honed it would soon be lengthened Its length is 40 ft . 6 in ., its width inside 12 ft .9 in ., it
covered with wood, on which the Pine-bed lies, \(B\) is a smoke-flue, passing along the front from the fire-place at one end of the pit and discharging itself at the other end into an upright chimney. Tise sbaded line right and left of the section shows the ground line; so that a large par f this pit is sunk in the ground. The otherparts of th plan, which is drawn to a scale, speak for themselves.

WHEAT ON THE SAME LAND, YEAR AFTER YEAR.
rer accompanying letter from the Manchester Guardian appears to me to be of sufficient importance to deserve a place in your columns. I could wish to stimulate other parties to experiment in the same way, and doub not if the plan is followed up perseveringly in variou be obtained
I was led into these experiments by reading Liebir's book on the Chemistry of Agricultare; for, assuming his theory to be same land, year alter year; as, according to that theory, the carbon, oxygen, and hydrogen which constitute the great bulk of all cereal crops (both grain and straw), are supplied in abund ance from the soil and atmosphere (or perhaps, to speak mor organic substances, which, however numerous form but a smal part of the whole weight of the crop. With the view of testing Were the elements which built up and cemented the carbon oxygen, and hydrogen together; or, in other words, which con fitutd which fity, I began in the autumn of 1841 , to experiment on which had just becn cleared of one of Oats. I chose an exhansted ficld in preference to any other, as the only one in which I could test the truth of the theory; it was very foul, being full of Couch.
grass and weeds of all kinds; it was ploughed up and hastily picked over, for the season was so unfavourable for cleaning the land (from the great quantity of rain that fell), that I was almosi induced to abandon the experiment. Previously to sowing the seed, one-fourth of the feld was manured with a compost of
night-soil and coal-ashes, at the rate of 40 tons to the customary acre ( 7,810 ) ards); the remaiming three-fourths having the seed put in without any manure whatever. The winter was very unfavourable for the plants in our cold wet soll; and, in the
unmanured part of the field many of them werished, and those hat survived made very little progress, from having no stimnilus manures in moist weather, I waited antil the 6th May, when reated that part of the field which had not been manured (threeourths of the whole, in the following mamer :-1 applied guano ame weight of nitrate of soda over another fourth leuvint onelourth entirely without manure. The Wheat manured with the guano and nitrate of soda grew vigorously, and the ears, more particularly in the part manured with guano, were the finest and the sample was rery indiffcrent; the soil bemg evidently deficient in some property necessary for perfecting the grain.
The crop also suffered much from the depredafions of the birls.
 \(\begin{array}{lll}\text { Unmanmed part } \quad . & \text { ditto..... } 19^{2} \frac{2}{5} \text { ditto, } \text { ditto, } \\ \text { ditto }\end{array}\) give these detals the show that the land was in an exhansted now about to detati). After the crop of 1812 experiment I am wis immotlately phonghed up, and the season being vely favour ble it w'is tolerably Wht any manure) aloout the first week in October. After the over the entire field (about one acre three roods), to keep the blants alive throngh the winter. In the spring, being duvided hito three porlions, it was manured with the same numbor of of Chorch, near Accrington, who also analysed the snil and subsoll for me. These manures were applied about the 10 th of April, of each division with guano a fortnight afterwards, at the rate o 2 cwt. to the acre; but all the manure applied to the crop, ill
cluding the hundred weight of guano put on in the autumn, did
not exceed 6 cwt. The arop, whicए was wery thin one in the

Hring, improved so much by the application of these manures, be the best in the neighbinthood; but the heavy rains of Julv attacked by rust, and the sample is very indlifterent. In andditiol
to this drawback, there being yery
 of the other fickls, was attacked by the birds as soon as the grail revent them the ear. Notwithstanding all the effors made to and it is a very moderate estimate of the damage to say, tha hey destroyed one-fourth of the crop throughout the fiold. That part of the fiet covered with manure, No. 1, being the carlicsts
suffered most. There were patches of several square yard where there did not appear to be a single grain left; and whereve the birds took a grain from the middle of the ear, when in the milky state, the grains on each side of it appeared to grow no this portion of the field one-third of the crop was destroyed. Al this seems to reduce the experiment to little more than gues Whor ; and it will probably be very difficult to persuade those the devastation the field when it was cut, to credit this report the devastation made by the birds, even when they are told that
Clitheroe is a town of 7,000 inhabitants, and probably as many sarrows, and that apparently they were all assembled to feed in this field; and they became so accustomed to the grood living to eat, they continned to favour our neighbour's Wheat was ne erence to going elsewhers. I estimate the damage on No, 1 a one-third; No. 2 at one-fourth; No. 3 at one fifth. This was The follon the others, and suffered more from rast than birds No. 1, there were obtained \(1,042 \mathrm{lbs}\), of Wheat or manured wit a his. eacll, to the statute acre; if we add one-half to thig, will piss ume that one-third was destroyed by the birds, it will give \(41 \frac{1}{x}\) bushcls to the statute acre. The weight of
straw from this portion was 189 stone 5 lbs . 14 lbs , to the stone. From 2,856 yarcis manurefl with No. 2, 0621 lb s. of Whent were ontaned, and 145 stone 9 lbs . of straw. Thes is equal to 273 \(t\) is enper acre, or with one-thurd added for estimated damage, manured with NO, 3 there were we add one of straw, or 33 bnshels to the statute acre; to which, be eqnal to 41 thushels per acre. It will be observed that this ortion yielded a far greater weight of straw per acre than either pected that this would be the case, manure applied, it was ex
No. I yielded straw at the rate of 2073 stone per acre

Mary people may feel inclined to say, all these apparent data are heres, if they assume so much for damare ; but fo anything one ot all guess-wrork. I have stated previously that I covered a of the manures in Apml, intending to see what advantage was obtaned by the use of it; but, owning to the depredations of with guano were nons of the first and second divisions manured without ; but the third, being later from those which were lef injured by them, gave me an oppontrinty of ascertaining the effect. I measured off a land which had been so mannucel, and caped and thresherf it out separately. Frm this land of 100 arts lonk and 10 feet wide 3,000 srjuare feet), there was acre; and this was far from being the best portion of the field. do not mean that it was not the best partion of the cyop, brit 1 parts of the the soll is by no means so good these as it is in other the field the crop ; but, as I have before stated, in the best pan, and subsequently attacked by rust. it is the duty of everyone to promote the advancement of agricutture; and this is my contrisame field with wheat again not yet done, for I have sown the to reap a with Wheat again, and hope, with a favourable season You will observe that no notice is taken of De Candolle's
theory of excrementitious secretion. At the time the above should have stated it did not occur to me; if it had proved, for the following reasons. I think the difficulty of growing Clover in of growing Clover in many soils at less intervals than six to suppose that vegetable secretions will remain undecomposed in the soil for that length of time, and if they pose in the soil for that length of time, and if they are decomposed, they no doubt return to something similar to what they were before they were taken up by the plant. Again, an intelligent American gentleman in Illinois), where they grew good crops of Wheat for in llinois), where they grew good crops of Wheat for
many years in succession; and if this is to be set down as Yankee boasting, (which I don't believe,) there is the fact communicated to meby Dr. Ly on Play fair of land somewhere in the West of England, (I believe pear Bridgewater,) where good crops of Wheat have been grown for twenty years in true and if one theory of excrementious secretion is crue, and if one crop always poisons the land for a succeeding crop of the same kind, how are we to account for twenty good crops of Wheat from the same son in as many years? But if the theory which I have assumed in the soil is experiments is true, that the deterioration of the son is owing to the abstraction or matters fom it, we Heplace only to ascertain what these substances are, and to replace them, to ensure constant fertility. Withoutassenting entirely to Liebig's opinion, that plants obtain all their carbon from the atmosphere, I think there is great reason to suppose that much of it may be derived from that source, and it is a subject well worth investigating by those whose scientific knowledge will enable them to arrive at satisfac tory conclusions.-T. G., Clitheroe.

\section*{AMATEUR'S GARDEN.--No. XLIV}

At this time, when those who intend to extend their collection of Roses will begin to think of giving their orders, it may perhaps not be out of place to offer a few remarks on their management, and also give a list of those kinds which may be considered the most beautiful. In July last 1 in company with my employer went to Sawbridgeworth, to see Mr. Riverss collection in bloom, and the list which I subjoin are what we purchased to add to an already tolerably good collection. Our object was not to select a great number of varieties, but rather to choose those which are really excellent, and to take several plants of the best, in preference to having a number of Varieties, so that those who select from this list may make certain of having good kinds, if not the most modern Farieties; and in Roses, as in almost every other popular tribe of plants, it is to be regretted that the rage for novelties and collections has led to the introduction of many new kinds which are very inferior to our old esta-
blished favourites. The "Cloth of Gold "Noisette Rose, Which I noticed some weeks back, is an exception to the above rule, for a correspondent at Sawbridgeworth who saw it in bloom seys: "The Cloth of Gold has flowered, and most beautifully; it is very large, very double; and as yellow as Rosa Harrisonii." This I think will be good forms to the Rose Amateurs,
As a matter of taste Standard Roses are certainly objectionable, and ought never to be admitted into dressed seenery except their naked stems are hidden by some means or other, such as planting dwarl kinds in the front fism, or training the branches pendantly, so as to hide the stem and form the heads into fine expansive baloonlike forms. Trained in this manner they are admissible on lawns either in groups or as single specimens, but with deformity. That they should have been tolerated so long 3 a proof glad to find the demand for them is decreasing, so that fter a few years I hope to see them extirpated from parden scenery.
Pil:ar Roses, that is, dwarf plants trained to iron rods or strong poles, varying from six to twenty feet high, muke similar colours for the lawn, and when three or four disare certainly superlatively beautiful. At Sir John Broughton's, at Kingston, the Pillar Roses in July are Worth walking 50 miles to see, and I am not aware of any man garden near the Metropolis where they are so we of the Hybrid, China, and French Roses, Mr. Redding has imparted quite a new feature to the Rose-garden, and the Amateur has only to picture to himself a pillar ten feet high, covered with the beautiful flowers of Coupe d'Hebe, Triomphe de Laquear, or Great Western, to see how much more be
In Rose culture it is scarcely necessary to offer a remark; for though there are certain soils better suited to their growth than others, they will grow in any welltoo sandy. soll, if it be only removed from clay, and is not deep, and manured with decomposed hot-bed dung, is the beat; but as a general guide, wherever the Wild Briar varieties. As a manure for established plants, cultivated recommends night-soil, to be applied twice in the winter, gallons to each, when diluted with pond-water, of three and Tea Roses in beds, Mr. R. uses with great advantage Potter's Guano ; and for top.dressing pots, Lance's Carbonated Hunaus, used with a very sparing hand, is excel lent in giving them colour, though when mixed with the soil in potting it destroys the roots. The present is the best monthin the year for planting hardy Roses, and it

}

All the Roses in this list are excellent, but those marked with notes of exclamation are the best, and the notes are increased in number in proportion to their superior claims.-W. P. Ayres, Broolklands.

HOME CORRESPONDENCE
Turlle Doves.-A short time sincè a beatiful pair of Turtle-Doves was given to me. The feathered travellers came in a basket by the railroad on a cold day; to which, I conclude, may be imputed a disease with which the hen has been afflicted, and for which I now seek a cure. I think there can be no doubt it is asthma, as described in Bechstein's Work on Cage-birds ; or rather, what in the human species we should designate spasmodic astlima; the poor little sufferer under the attacks, which last about an hour and recur frequently, keeps her beak open and pants audibly; her tongue and throat are nearly black with inflammation; her feathers are rufled, and she appears
dying from exhaustion; but after a time she partially raldying from exhaustion; but after a time she partially ral-
lies and takes her food. If by means of your paper, I lies and takes her food. If by means of your paper, I
can receive any hints for the diet and treatment of my little pet (whose death will involve the loss of its mate, they will much oblige. Fright sometimes causes the asthma in birds: that could scarcely be the case with my
invalid, who is so faniliar as to prefer perching on a finger:-Maria \(W\)
John Dory.-I observe it stated in your Naturalist's Corner of last week, that " our common name of John Dory is clearly nothing more than a corrupt pronunciation of the French term for the colour of the lighter parts of the fish, which is yellow with metallic reflections when it is alive, and therefore styled jaune dové, or gold and yellow." As I remember that many years ago I read a very different version of the parentage of the common name of this fish, I turned to the passage, and send you a copy of it, and should be glad if you or any of your readers would be kind enough to decide this point, upon which Doctors thus disagree. The passage occurs in the "Quarterly Review " for July, 1813, and will be found at p. 269 of vol. ix., in an article upon "Tracts on the British Fisheries," and is as follows:- "Haddocks assemble in Vast shoals during the winter months in every part of the Northern Ocean, and bend their course generally to the southward, proceeding beyond the limits of the cod and the herring ; but it is remarked that they neither enter the Baltic nor the Mediterranean. The two dark spots a ittle behind its head are supposed to have gained the haddock, in days of superstition, the credit of being the fish which St. Peter caught with the tribute-money in itg mouth ; in proof of which the impression of the Saint's finger and thumb has been entailed upon the whole race of haddocks ever since. Unfortunately, however, for the tradition, the haddock is not a Mediterranean fish, nor can we suppose it to have belonged to the Lake of
Tiberias. The truth is, the Italians consider a very different fis os that is, the Italians consider a very difand which after him they honour with ife ne of il Giani tore, a name which we lave converted into Johnny Dory with the same happy ingenuity that has twisted the girasole, or turnsol, into a Jevrusalem Artichoke."-J. B. K. L.
Enormous Egg.-An egg was this week laid by a goose was 10 ounces, its circumference longitudinally was \(10 \frac{1}{2}\) inches, and it measured \(8 \frac{1}{4}\) inches round, - Facile.
Large Onions.-An average sample of 15 Onions
which weighed upwards of 10 lbs , was grown on a smal croft in the fertile village of Longton, near l'reston, which It is supposed more than as many tons have been gathered -Facile.
Verbenas.-The scarlet and pink Verbenas survived last winter in a dry situation not far from the southern coast, by being left in a mass where they had grown the previous summer, and being covered with a hand-glass in same way. - \(H\).
John Dory.-This fish, the Chalcis of the Greeks and

Fuber of the Romans, is now known in the Mediterranean where it is sufficiently common, as the Pesce di San Pielro, and Pennant says:-" The Doree is the rival of the Haddock for the honour of having been the 6 sh out of whose mouth St. Peter took the tribute-money, leaving on its side the incontestible proofs of the identity of the fish the marks of his finger and thumb." I have heard, as well as most of your readers probably, the origin of its English name, John Dory, ascribed to a corruption of Janitor-in the Italian, Gianitoré, which is one of the honourable appellations of St. Peter, the keeper of the portals of Heaven-in virtue of which office we always see him represented with his keys-

\section*{The Pilot of the Gulitean lake- \\ The mighty keys he bore of metal twain}
- Elecira.

Pine Apples.-Having seen stated in the Chronicle at p. 759, an account of Queen Pines which had been grown to the great weight of six pounds some ounces, will the cultivator of these Pines have the goodaess to say wisat sort of Queen's they were and wheher the treatment which brought them to that state of great perfection, was
different from that which is usually practised? By andifferent from that which is usualiy practised
swering these questions, through the Chronicle, he will oblige.-Doumhuil. [Another correspondent denies that oblige.- Pines were of the weipht represented.]

Tulip-root in Oats.-In the "Gardenerss" Magazine" I find the following paragraph :-"Much of the Corn crops in the Lothians are drilled; but Oats have suffered severely this season by what is there called the Talip root,' a disease the cause of which is not hitherto properly
understood." Will any one be so good as to give Ruricola understood." Will any one be so good as to give Ruricole some information upon the subject? particularly the character of the disease, its appearance, and the way in which it affects the Oat-crops; also, if there be any published

Slrazberries.-I beg to inform Mr. Godwin that there is nothing new or uncommon in the mode stated at p. 711 , for obtaining a crop of Strawberries late in the season, as I have seen it practised by others as well as by myself for upwards of 20 years past with good success. I am now gathering excellent fruit from plants that were forced in spring, and will no doubt continue to do so until the end of next January. These plants wete taken out of 32 -sized pots, disrooted, and repotted into 24 -sized ones. They were then placed in a slady situation, where they remaine until the weather caused them to be removed to a Pine-stove.-Scrutator
Slandard Pelargoniums.- I have about 40 Standard Pelargoniums; the wet weather last May killed about 20 of the largest and best sorts. I have one three years old, named Prince Regent, the girth of its stem is \(5 \frac{1}{3}\) inches, and is 30 inches in leagh; from the top of the stem to the top of its head is 42 inches, and the circumference of the head is \(10 \frac{1}{5}\) feet. In my opinion these are much more handsome than Standard Roses, when they are, like these, planted out on the lawn. Puchsia fulgens and other Fuchsias have also a fine appearance when grown as standards.-J. Waldron, Harrow Weald.

Apple-trees.-In the garden of Joseph Boultbee, Esq., Springheld Hall, Warwickshire, there is a Peach Appletree in full bloom; the late frost and snow do not seem to have hud any effect on the blossoms.

Seedling Pelargoniums.-In your columns I observe advertisements of Pelargoniums by Mr. Rendle, of Piymouth (all of which appear to have been raised by Mr. Iuyne, of that neighbourhood). These, he says, have obtained prizes in London, Exeter, Torquay, Plymouth, Truro, and Falmouth. I as well as many more of your readers would feel obliged to Mr. Rendle if he would explain which sorts got the various prizes at the different places named in his advertisements, when and at what shows, and what the prizes were which each sort won? This information from the advertiser would no doubt give great satisfaction to many of his customers, and to the public generally, and persons disposed to purchase would be enabled to judge better of their respective merits.- \(A\) Friund to Trulh.
Lobelia gracilis.-I beg to state that striking from cuttings is not the only or best way of propagating Lobelia gracilis, as stated in a Chronicle some time back. The mode I find to succeed best, is to take up the seedlings, quantities of which will be found in the autuma under the old plants. The seedlings may be put into pots as thickly as possible, and then placed in a greenhouse for stronger than from cuttings, at least they were so in my case.-A. \(B\).
Potter's Guano. - In the report of Sir R. Peel's speech at the Tamworth Dinner there is an account of an iuteresting and important experment made by his direction upon Potatoes, in which Guano, Potter's Manure, and Stable Manure appear in competition. It is said that this experiment was conducted with great care and perfect faimess. That such was the intenlion of the distinguished experimentalist, I entertain no doubt; but I shall make is appear that an error has been conmitted, which, as this the land, is calculated to do me very considerable injury. The error I allude to is, that the Guano (a bushel of which was found to weigh 85 lbs .) and my manure are assumed o bave the same weight in the same buik, but this is far from being the case. -A 4.busuel sack of my manure weighs 56 lbs . Now as the experiment was made by taking equal measures, not weights, of the two manures, for fentily mistake by cqualising the meights for woth rectily this mistake sold by weight), we shall find, by the
role of proportion, that Potter's Manure would have pro-
duced not 11 , but \(16 \frac{1}{2}\) bushels of Potatoes. Thus I think I have shown that, without the explanation offered, the statement of the experiment as given by Sir Robert is
calculated to operate to my disadvantage.-W. W.Potter. Gooseberries. - In the Chronicle of last year, at p. grown that year. Subjoined is the weight of the heaviest sis in each class produced in 1843, so that a comparison may be made with those raised last year ; and your readers
will find that they have grown larger this year than the last. Some new sorts have also appeared as leading kinds in size and weight; and it is now the season for plant-
ing Gooseberries, so that they may strike root in their new situations before the frost sets in, which is very desirable. and trained against a wall, will increase their size, and acquire more the appearance of large and handsome their flavour, and make themo a more interesting fruit for the table.

\section*{}

Weeds in Ponds.-Among the other interesting sub jects in the Gardeners' Chrowicle of the 21st October, is an answer to a query on the means of keeping down weeds
in ponds, by Mr. W. P. Ayres, Brooklands. His answer is, that "the most simple thing you can make use of to cut them with is a pair of swans; ", and he instances the
success of this scheme at Brooklands. success of this scheme at Brooklands. I regret to say that
so very simple and pleasant a plan will not be found of so very simple and pleasant a plan will not be found of
nniversal application. In the grounds where I reside is universal application. In the grounds where I reside is
a pond of an irregular oval shape, about 70 yards in length and 30 in breadth, a large proportion of which is occupied Wy two islands bearing beautiful evergreens and Weeping Whillows, thereby naterially curtailing the extent of water, small extent of water four swans, all adylts, are not able to keep down the weeds, apparently, to any sensible thickness, that a small light boat can hardly pass over them, and they have to be cut over every year. There are a few circumstances which it may be proper to mention, in The pond is from three to four feet deep, and is maintained by a very powerful spring, which keeps the water in it always clear and fresh. The swans are fed every day with a lippic of oats (one-fourth part of a peck) and and in consequence of receiving this food, along with the grass which they consume, they are remarkably large spirtited birds, of fine plumage, except when moulting ; their necks in the water in quest of something, which they mustobtain, otherwise they would not persevere in it as they do daily; and, besides, the grass margin around the pond except, perhaps, in the height of summer. It is possible that at that season they may neglect the weeds more than in the early part of the summer; but in answer to this out of the water grazing on the grass, I see them a dozen ing up their tails. quent the pond, as well as common ducks, all living in potatoes ! If an effectual plan can are of the boiled saving the trouble of cutting the dirty weeds every year, would be thankfui.-H. S., Edinburgh, Oct. 25. family, which I think is somewhat neglected in England. It is impossible to give any recipe for growing them,
because they are of very various constitutions. By far the greater portion of them may, however, be grown to perfection in the open air in the south of England, by therein planting them, covering the beds during severe frost or very wet weather. I used to grow a great many kinds in Devonshire, in small beds filled to the depth of two feet with a compost of two parts sandy peat, one part nature. The tough roots contained in the peat were laid at the bottom of the bed along with some stones for drainage, and the mixed soil laid loosely upon it. In such beds the plants will require no further care, except in winter. They do not generally suffer from the cold, but from the wet, or from the effects of the sun following a severe frost. They should never be disturbed after their
first planting, as many of the species are very apt first planting, as many of the species are very apt to rot if
removed; it is, therefore, obviously undesirable that any removed; it is, therefore, obviously undesirable that any
other plants shor' 1 be placed in the same beds. No stable other plants show \(l\) be placed in the same beds. No stable
man. . heunld on any aceount be applied, as it will certainly kill all the more delicate species. The best method of enriching the soil is to thatch the beds with straw, and let it decomplose as it wili. No other manure should ever be used; and if the beds are properly formed, the thatcl
may be made to supply all the purnoses of a covering, to keep of the frost and water during the winter. Although portion of the fall wily, yet it wiil not do for others : it will
not co and it is unnecessary species which flower in the spring, such as oppositiflorys for the very late and robust ones, ing species cennot be grown in the onsis. The spring-flower-
leaves aprout in autumn, and will not bear any severe frost; they must, therefore, be grown under glass, or not
at all. Certain other kinds require a very much more sandy soil, and will not thrive even in a sandy peat; but as these peculiarities can only be discovered by extensive results derived from the cultivation of upwards of hundred. The greatest difference in constitution observGladiolus. All the common kinds may be grown as I recommend; but to grow alatus, viperatus, roseus,
debilis, versicolor, and probably some others which I have never possessed, you must have a bed of nearly pure sand from the more barren parts of heaths. In a pure variety of hirsutus) 5 feet high, with 13 flowers on the stem; while in a soil still very sandy, but which would only about 5 flowers. Watsonia gracilis and produced varieties of \(G\). hirsutus flower very early in the spring, and sand. On the contrary, Natalensis will they also like ordinary rich soil of any kind, and oppositiflorus and its hybrids in a soil of light peat mixed with loam in about equal proportions. In such a soil I have grown the hybrid high, bearing 22 flowers on the main stem, and having latera branches. Almost all Ixias, Sparaxis, Tritonias, cmare may be grown in the ordinary Gladiolus require sand. Watsonias as, Lapeyrousias, and Babianas ticular in their soil, but are difficult to cultivate in parland, because they either sprout in the autumin org evergreen ; and their leaves will not bear frost which although it will not kill the roots, will prevent their flowering by destroying the leaves. I would observe that the sand of which I speak must be the sand from the nor must peaty heaths: it must neither be red nor yellow be a fine sharp white sand, rendered of a ace, but must by the admixture of a very small anantit imagine that the oxide of iron, which forms the colouring matter of the red or yellow sands, is very prejudicial to these roots; but if all the poor soils in the neighbourhood crape up the mere lose surface whin carefully much purer than the body of the soil, and will rarely injure Blackberry Jelly. -
and stew in a putting the jar into the oven; strain off the liquor, and put all into a preserving fruit add a pound of loaf-sugar will jlly upon a it will jelly upon a plate, it is fit to be put into jars for
use.-Warwickshire. [This is very delicate and excellent.]
Prolifí
Potato in April, and mentioned at the same time that was a very prolific variety. The Potato weighed about duce, which weighed 291bs., and consisted of 66 Potatoes, 26 of the largest weighing 21lbs. The above is the largest return I have ever seen.-Wm. Thomson.
Circulating Hot-water in Flues.-I beg to state that the system of heating houses by hot-water circulating in orick-flues is, after all, but a modification of the steam-
system, with this difference, that steam does not system, with this difference, that steam does not traverse
so rapidly as the thin stratum of water used in these flues for the cold air, not only in the ironepus but that about lhem, condenses the steam, until the resisting force of the
air is overcome. Limited as the eqantity has another advantage over steam, and that is, that retains heat longer; and what is wanting in quantity as compared with other systems of heating by hot-water, is made up by the brick-flues retaining their heat for a convapour and heat which rise from the surface of the water will be emitted into the house together, both up-
wards and downwards; the moisture may visible on the plants, unless the covers are in part removed, or have apertures in them. In this case a diminished temperature in the flues will ensue, and consequently less power to resist the cold air. In whatever way the heat at escape from these flues, condensation will take place house, if the the would do 80 even lower down in the of heating is carried on very extensively.- \(C\). Water a Non-conductor of Heat.-I beg to state that I never anticipated Mr. Beaton would tell us (as ha has done in the Caiendar, lately) that "water is a powerful along conductor of heat, and that heated water will glide any consident to it; in fact, from his statement, we are to what acid unites be seen in the fat of soap in water, when an water is a conductor of heat, and for an exemplification of this we have only to turn our attention to the great ocean when the noonday sun is shining upon it to be convinced of the fact. Water is a slight conductor and the ise of the fact that it is so may induce defective ideas on beating. It is on account of this that I have noticed it.- \(C\)
ear of manuring Strawherries. There appears an undue that all plants that throw out suckers or runners rapidy deteriorate the soil, and that a power of escape to new reason for the by the runners. Io sis is correct, it is a How rarely, excent where strawberies seen of manare profit, do we see room enough given. Beds of Straw-
berries are objectionable for this reason, and it is this cause rather than manure that leaves are more abundant than fruit. I have tried and proved this. Where Strawberries are grown for profit, (that is, grown at all in the
true sense, true sense, ) they should be planted in rows-the large sorts not less than 30 incles in the row, and 15 inches from plant to plant, and no rumners suffered to remain. By these means, with deep trenching and early planting, antly.-W. M.

Death of Drejer. The German papers state that this Den la snuff mised with lead

Lately, while the workmen of Mr . Harvey, of Glasgow, were cutting a log of Honduras, of about 19 foet long and 22 , centre of an otherwise surprised to find, in the very centre of an otherwise excellent piece of wood, about 10 fide, and tapering down towards the bottom. In the centre of this space they were still more astonished to discover what had bees, bees'entire hive of bees, with plentiful remane of which the wax, and a number of something similar to the kernel of a nut is still entire. On the discovery being made, Mr. Harvey paid attention to cut the log.carefully around, and to preserve every portion of the hive, and it is now exceednoy the edge trace the winding path of the bees all along the edge of the tree as long as its growth woundowth, and their industry put an end to for ever. Very little seems to be known of the age of the mahogany, but we should smppose that the tree question may be about -Dr. Troschel, a young and clever Berlin Naturalist, is appoiated to be sent he California, at the cost of the Pru.
Denmart.-The King of Denmarh has this year granted o the Botanic Garden of the University of Copenhagen two new greenhouses, namely, \(n\) large \(a m\)-house, at cost at the most, of 7,000 dollars; and a smal one, expense of 2,000 rix-dollars at the most. These sum are to be taken from the surplus income of the University for the present year, or, in case of necessity, from that of next year.-Hamourgh Corresponaenten.
Botanical News. - We leam from Geneva that De Candolle's 8th vol. is all printed except the last sheets of Decaisnc's Asclepiadra, which close the volume. It comitins Prmulace A Anocynere by A. De Candolle, and the Asclepiadex by Decaisne. The 9 th vol, is all ready to go on printing as soon as the 8th is done; it will contain 10th will-include Dunal's Solanaceæ, and Bentham's Scro phulariacer, and arrangements are made for the printing to go on without interruption from one volume fo another. Six new parts of Bume Griffith has reprinted in the Caloutta Journal of Natural History, Jack's de scription of Malayan plants, arranged according to their natural order. From Dr. Grisebach we have the first par of his Spicilegium Flore rumebrace. Professor de Vriese has translated Lindley's Theory of Horticulture into Dutch onder the title of Grondbeginselen der Hortioutturur; and has added some chapters on the importacion of piants from foreign countries, especially the East Indies, on from form Chrysanthemums, Camellias, Cacti, \&c the on the laws of hybridizing. A thies 4 to, with 80 and on the lurating the Algaceous order, has appeared from plates, ind of Dr. Kutzing. The fourth volume of Kunth's the hanatio, containing Xyrideæ, Mayaceæ, Commelineæ, Pontederiaceæ, Melanthaceæ, Liliaceæ, Asphodeleæ, has Pontederace the
issued re Vagaries of Flowers.-" Strange things," says Mr. Bateman, in his magnificent work on Orchidacea, -now, alas been recorded of Orchidaceous plants;" but have already been represented in the accompanying plate the case when frolics of this Protean tribe casts into the shace allow :-" Among Mr. Skinner's The facts are collections, attention was particularl earmest Gua mecimens of a plant which to the habit o directed to the speng pendulous stems of a Gongors a Cycnoches and for the possession . Some plants were speedily anxiety was by Mr. Skinner, but these, on flowering, proved transmitted by Mr.s.a C, ventricosum. A mistake was of
course suspected, and Mr. ,kinner being again applied to,
sent over a fresh supuly of wants, for the authenticity of which he vouched; but these aere scarcely settled in the stove when flowers of \(C\), ventricosum nere asam uroduced. Mr Skinner being importuned for the third time, and being then on the point of returnine to this country, determin to tate one of the plen under his spial protection during the voysce, which towering on the passage, seemed to preclude the possibility of further confusion or disapmorment The specmens puduced at sea were drabied and the plant itself wace in the stose at Knymexhibica, and it promed aro ing ith the vigour. The season of flowering snon arrived, but brought ith it a recurmen of the former scene of astumshment wind veration; for the Wlassoms, instend of those of the and vexation, for her dincuishahle from the old coveter ricosum. These were still hanging to the stem C. ventricur forth a spike of a totally when the inexplicable plat which was, in frecisely simy different character, and war in Guatemala, and to those lar to the specimens gathered a present, impossible to attempt any explanation of so strange a phenomenon, specially on the sumposition that the two forms of flower are analogous to the male and female blossoms of other tribes, for C. Ventricosusu alume not unfrectuen which seeds. The plant here alluded to in Crike, with at one time bears large green fowers in a white, wate broad fint sepals and petals, an a cones small, black undivided labellum; and at another produce smath ish, simple fowers in a very long drooping spike, with narrow sepals and petals rolled bsck upon the stak, and

many fingers, a lancet-shaped appendage at the point, and a kind of horn springing from the middle. These things are so totally different, that notwithstanding the strange sportings represented at fol. Mr . Bateman, there and the unquestionable trilled in the babits of Orehiwere many fersons, wed daceæ, who th ens impossible that such made, and that in reality totally different fowes an the same plant. But what is impor the 15th of September last, 1 received fom Rom ner Holford, Esqu, of Wils Gloucestershire, a flower-spike bearing flowers of cycnoches ventricosum, and C. Egertonianum intermidea; was exhibited at a meeting of the Hortiourtural society, and I now produce a figure of this specimen had been purchased by Mr. Holford, of Messrs. Rollissons, of Tooting, as Cycnoches ventricosum. Here it will be seen that fig. 2 is nearly Cycnoches ventri cosum, but its lip is here and there raised into warts, which are the beginning of the lobes of C. Egertonianum, and, moreover, some of the dark purple of the latter is appearing at the base of the columa and the the sepals. At fig. 3 the purple of Egertonianum is displacing the green of ventricosum, the sepals are rolling back, and the labellum is almost wholly changed, but the sepals are still those of C. ventricosum. At figs. 4 and 5 the trans formation is complete. Another curious point in this instance is that the transformations occur in no certain

Egertonianum than ventricosum ; the next above it, No., 2 , I rich and fertile, with a flourishing commerce, which fo is mase wholy ventricosum; that which succeeds, No. the last on the spike, are Ehertonianum, and 4 . What with such cases as this, the Dean of Manchester's Narcissi and the singular hybrids with which botanists are becoming familiar, all ideas of species and stability of structure in the vegetable kingdom are shaken to their foundation. Botanical Register

\section*{GARDEN MEMORANDA} Milton Lodpe, near Woodbridge, Suffolk, - This is the
seat of Captain Aplin, and is the place alluded to by Mr
Beatou, in the Calendar, "where every class was putticd." It is particularly evelergrated for the cultiva-
tion of Cucumbers. I have frequently visited this place during superior mode in wonths, and can bear to
suld this establishment is in buccession, by the aid of hat-water, ding. Teares, \&c. Thi best scariet and green-flesh Melons are ince. Two sorts of the forcing, and the other for late. are two Vineries; one for earl lowing Vines, viz., Black Hamburgh, Black Prince, Muscats, lent crops of and Muscadine. Both honses have prodineed exce bitions during the season. Keen's Seedling, and some of Myatt's best kinds of Strawberries are also cuitivated here in great per-
fection. Thesc, both forced and grown in the open border, pro duce excellent fruit. It need scarcely be mextioned that there Frencl Beans, Potatoes, Rhubarb, and Mushrooms, are all forced ear'y, and in addit scedlings of each; also a few citrantic Colirias, with a few grood place is characteristic of skill and pood mane appearance of the much credit on the gardener, Mr. Thomas Latter.-A Cor-

\section*{Familiar Letters on Chemistry, and its Relation to Com-} mevce, Physiology, and Agrioulture. By Justus No book from the pen of this Author can be destitute of interest, and least of all a work professing to place his novel and somewhat abstruse doctrines before the reader in a popular form. We have no doubt, therefore, that the present publication will be eagerly and profitably read and that it will prove a useful introduction to Professor Liebig's larger works. We cannot, however, promise the Author ventures into that field of Vegetable Physiol the which he affects to despise so much, and of which knows so little. Then, indeed, there is novelty enonghwe only wish it were of better quality. It is, indeed subject of serious regret to us that an author indeed, so talented, should be so wofully unacquainted with the very foundation of that chemical physiologr by which notwithstanding, he has so much distinguished himself. As one instance, let us take the following passage :-
"s How different are the evergreen plants, the oleaginous plants, the Mosses, the Ferns, and the Pines, from our annual Grasses, the Ceralia and Leguminous vegetables The former, at every time of the day during winter and summer, obtain carbon through their leaves by absorbing carbonic acid, which is not furnished by the barren soil on hach tiey grow; water is also absorbed and retamed by lose very little by evaporation compared with other plants, On the other hand, how very small is the quantity of mineral substances which they withdraw from the soil during their almost constant growth in one year, in comequal weight receives in three months
Here we have almost as many errors as sentences. There is not a shadow of evidence that what we call evergreens plants; or if there be, it is in farer different from ordinary plarger amount of carbon in the soil than other plants a witness all those races of evergreens that flourish only in peat. In the next place, to say that Mosses receive no carbon from the soil which sustains them, is an asserplants thriving on white and pure sand but the sur face of the ground, in bogs, on housetops, and other places where carbon must necessarily abound, and other indeed by the dark colour of the soil that beers them. Then Ferns, we are told, retain water by their cors them. Then with great force. which is true of their coriaceous leaves On the contrary, are (as is well known) po exist only in very damp situations. What oleaginons plant exist only in very damp situations. What oleaginous plants may be we do not know. As to cereal plants (Ceralia, withdraw a large quantity of mineral moatter from the soy on which they quantity of mineral matter from the soil that circumstance ; but we cannot comprehend why respiration are at all different from that their functions of respiration are at all different from those of other plants. We shall take an early opportunity of calling attention to the remarkable change of opinion in chemico physiological matters which Professor Liebig has undergone within
the last two years, espectally in diminishing his estimate the last two years, especially in diminishing his estimate of phosphates and sulphates. For the the importance of phosphates and suiphates. For the present, we can of the vivid "Is it possiule, after so many deithor into the origin of the so many decisive investigations the use of the alkalies of lime animals and vegetables, doubt can exist as to the weine and he posphates, any Agriculture depends? Can the art of Agriculture be based brium? Can it be imagined that of a disturbed equilibrium? Can it be imagined that any country, however
centuries exports its produce in the shape of grain and does not which have tore, in some form of manure, those elements be replaced be replaced by the atmosphere? Must not the same fat once prolifio able to grow its former staple productions-w wheat and tobacco?

As usual，a host of fetters has arrived too Iate for answers this week．

\section*{NEWS OF THE WEEK。}

IAccounts from Ireland have reached town this morn－ ing，announcing that bills of indictment liave been sent before the Grand Jury of the City of Dublin，against Mr． O＇Connell and his colleagues．Mr．Justice Burton delivered his charge to the Grand Jury on Thursday， and there was no doubt that the Jury would return true bills．It is said to be impossible that the trials can com－ mence before the end of the month－probably between the 22 nd and 27 th．－In the meantime，the Repeal Associ－ ation continues to command fresh support from the higher classes of Society，and the titular Archbishop of Cashel has this week announced his adresion to the movement， on grounds similar to those assigned by Mr．Smith \(\mathrm{O}^{\prime 3}\) Brien． The Repeal rentalso continues to increase，and the amount announced on Monday was upwards of 30001．received from Saturday to Saturday．－The trials＇of thel Welch rioters by the Special Commission have terminated in a verdict of Guilty against the only prisoner who went to trial ；while all the others pleaded guilty，in the hope hat their contrition might be accepted in mitigation of punishment．In the latter cases the Attorney－General， on behalf of the Crown，abstained from prosecuting，and the Judges by the leniency of their sentences showed that they were ansious only to vindicate the authority of In France the contest between the Clergy and the Uni－ ersity has assumed so hostile a character，that the Ministry，it is said，have referred the letter of one of the Bishops to the Council of State，and intend to bring the whole affair before the Chambers during the ensuing Ses－ sion．－In Spain the Government have presented to the two Cbambers an act demanding that the Queen should be declared of age．The Commissioners for examining this declaration have also been appointed，and as they are all adberents of the present Ministry there is no doubt that the Queen＇s majority will be forthwith declared．－ From Greece we learn that an attempt has been made by Gen．Colocotroni，one of the King＇s Aides－de－camp，to get up a counter－revolution at \(\Delta\) thens．The attempt com－ pletely failed，and the King immediately assembled the Council of State，together with the principal authorities， disavowel all participation in the design，and declared his determination to abide by the constitutional system established by the recent revolution．

\section*{}

Court．－Her Majesty and Prince Albert arrived in town on Saturday afternoon from Wimpole Hall，the seat
of the Earl of Hardwicke，whom they had honoured with a a visit on leaving the University of Cambridge．On reach－ ing the Paddington terminus of the Great Western Railm ay， the Queen and Prince proceeded by a special train to Windsor，and arrived at the Castle shortly before five
o＇clock．On Sunday，Her Majesty and the Court attended divine service in one of the private apartments of the
Castle．On Monday，her Majesty did not leave the Castle
in consequence of the unfavourable state of the weather. Prince Albert rode into the Park for the purpose of enjoy. ing a few hours' shooting, but after a few shots he found the covers too wet to continue the sport, and returned Russia
Castle. In the evening the Grand Duke Michel of Castie. In the evening the Gajand on Tuesday Prince Albert accompanied his Imperial Highness to Eton College, where they inspected the library, schools, chapel, \&c., and in the afternoon the Grand Duke took leave of the Queen and returned to town. On Wednesday morning her Majesty and the Prince afterwards went out shooting in the Royal Preserves in the Great Park. In the afternoon Prince Alesander of the Netherlands, who returned to town on Aaturday from Drayton Manor, the seat of Sir R. Peel, arrived at the Castle Royal Highness hunted with the Prince's. His Royal Highness will take his departure for the Hague in a few days, after a sojourn of nearly three months in this country, The visitors to her Majesty this week, in ada tion to the Princes menti. Ministers, Baroness Gersdorf, Russian, and Nors Sir J. Graham, the Ean onel Buckley has succeeded the Mr. E. Stanley. Colonel Buckley has succeeded the Hon. Col. Grey as Equerry in Waiting on her Majesty.
Colonel Wylde has succeeded Colonel Bouverie as Equerry Colonel Wylde has succeeded Colonel Bouverie as Equerry Mr. Ormaby Gore as Groom in Waiting on her Majesty, and the Hon. Misses Murray and Lister have succeede the Hon. Misses Hamilton and Stanley as Maids of Honour in Waiting on her Majesty. The Duchess of ohe Langenbourg, arrived at Frogmore last evening from Witley Court, w
Queen Dowager.

The Grand Duke Michapl. - After his return from he North, his Imperial Highness visited several of the exhibitions and public establishments in the metropolis; among others may be mentioned St. Paul's, the Colosseum, the Diorama, the United Service Club, the Glaciarium, the Chinese Collection, the establishment of Messrs. Mortimer and Hunt the silversmiths, the Model Prison, the cavalry barracks in Albany-street, and the office for regulating the clothing of the Army. His Imperial Highness also visited the stables of the principal dealers, and made selections from their different studs. On Thursday morning hoolwich, under the usual salutes from the batteries, and proceeded to Rotterdam, on his return to Russia.
The Duke de Bordeaux visited the Duke of Hamilton last week at Hamilton Palace. On Friday, H.R., H, visited Archibald Campbell, of Succoth. After visiting various places of interest in the city, H.R.H. returned to Hamilton Palace. The Prince is expected to arrivenour the Earl Shrewsbury with a visit at Alton Towers, where M. Berryer, the celebrated orator and member of the Cham-
ber of Deputies, and other distinguished royalists, have arrived to meet his Royal Highness.
The Colonies.-Intelligence has been received at the Colonial Office of the death of the Governor and Com-mander-in-Chief of the Gamaia, Seagrum, R.N., on the 26 th August, in the prime of Mr Seagrum, rector of Allbourne, Wilts, and had just assumed the government of that settlement.
The Church.-An impression prevails that Archdeacon Lonsdale, Principal of King's College, London, is to succeed to the see of Lichfield. Nome confirmation is given. Peel, with a pressing communication to the Archdeacon arrived at the Savoy Chapel on Sunday afternoon, while he Rev. Gentleman was in the pulpit.-An-Order in Counci, Wertinster ine presented the following clergymen to benefices in the Church o MacGregor to the church of Ione or Icolmaill Argyll i MacGregor to the Rer Dongld M.Vean; Rev. Alez Mackeller to the churches of Bailechulish and Corran o Ardgour, Argyll, in the room of the Rev. J. M'Millan Rev. Angus Martin to the church and parish of Snizort in the 1sle of Skye, in the room of the Rever M'Leod. Her Majesty has also appointed the Rev. J . Campbell to the caur Rer. A. Mackenzie to the church the transiation of the.

Pensions.-We copy from the Athencaum the following letter from Sir R. Peel to Lady Bell, widow of Sir Charles Bell, the eminent surgeon:-"Madam,-I have had great pleasure in recommending to her Majesty that, in consideration of the high attainments or youranted husband and the services rendered by him to the cause of science, a pension of one hundred pounds per annum for your life shall be granted to you, from that very limited fund which Parliament has placed at the disposal of the Crown for the reward and encouragement of scientific labours. This pension, small in amount as it necessarily ledgment, on the part of the Crown, of the distinguished merit of Sir Charles Bell.-I have the honour to be, Madam, your faithful and obedient servant, Robert Peel. -Whitehall, Sept. 2.
fforeign. France. -The Paris papers, with few exceptions,
comment upon the reaistance which the clergy are oppos-
ing to the privileges of the University ; and the contention is deriving some importance from the great displeasure expressed by the Government organs, tho violent language of the Liberal prints, alld the understanding which seems to exist between most of the prelates of France. Bishop of Langres has just joined the Archbishop of
Lyons and the Bishops of Belley, Chartres, and Chalons in disputing the exclusive rights of the University, and asserting those of the clergy to a participation in public instruction. This rising opposition on the part of the
French Church is the more remarkable, as 12 of the 15 rench Church is the more remarkahe, as France bav been raised to their sees by the Government of the presen king-On Sunday, the Cabinet of which Marshal Soul and M. Guizot are the heads completed the third year of he duration of the Administrations that preceded The king marked his sense of its services by promoting most of the ministers to the bighest rank it the Legio is the day fixed for the meeting of the Chambers, an that the ordnance of convocation will be published on the 15th inst. A rumour had been current that Admira Cabinet, and resigned it some months ago, in conse quence of ill health, died last week at Montpellier, but the report appears to be altogether without foundaCharles \(X\) and one of the signers of the ordinances of July, 1830, died in that city on the 25th ult. - The Government have concluded a treaty of navigation and commerce with the Government of the Wallis etermine on, and there is some talk of an intention to seize one of the ports of St. Domingo.-The Commerce announces that the superior committee of the fortifications of Paris, in concert with the War-office, is at this moment preparing a stateme effective of the troops which to compose the garrison, and likewise of the which are to cospry for the detached forts of the canital armament necesst be true it appegrs that the Parisian If this statement by in time of peace an army of 24800 men, which, united with the garrison of the military establishments of the continuous wall, as well as those of the interior of Paris, will form an effective of more than 60,000 men to guard the city of Paris, and will be armed with 1,262 cannon, composed cheir projectiles into the mortars, capable of throwing their proicres of troos demanded by the fortifications of Paris, it is also said to be ind by he fortillery and engineer Prce mention the return to Paris of the young Duke de Montpensier whom indisposition has prevented from attending the artillery exercises, for which he had repaired to Metz Some of the papers discuss the probable marriage of the
Duke d'Aumale to a Princess of Naples, for which purpose his Royal Highness is said to be now journeying through Italy. The Duke and Duchess de Nemours intend to leave Paris this week for Eugland, on a visit
Queen.-Le Journal des Chemins de Fer announces tha the directors of the Rouen and Havre Railroad Company have concluded with Messrs. Mackenzie and Brassey the most important contract ever made in principal works on the Havre Railroad are the bridge o Rouen, seven tunuels of an extent of 6,500 yards, and viaduct of 27 arches in the valley of Barentin, being 33 yards in height from the arch to the centre. These work be entirely completed in May, 1846. The embankmen and the tunnels are contracted for at a discount of 20 pe cent. on the prices paid the same contractors for the paria ad Rouen Rallroad. The cubic yard of embank of tun nelling 889f. (nearly 36l. British)." who had been commissioned by the King to execute picture representing the capture of the Smala or Abd-el Kader by the Duke d Aumale, returned soetched the site on which that exploit was achieved.
Spain.-We have accounts from Madrid to the 26th il. The Senate sat on the 20th, when the public and diplomatic galleries were crowded, in the expectation tha M. Campuzano would put questions to the Cabinet respecting the insurrections of Barcelona and Saragossa, and the circumstances that have led to them. The discussion took place, and M. Loper, President of the Council, entered into a long vindication of the Government's conduct towards the two rebellious cities. He Spain only nine -Burgos, Salamanca, Toledo, Palencia, Girona, Lerida, Castellon Barcelona and Saragossa, had demanded à Central Junta, and that four of these provinces had de manded it previous, and five subsequently to the promulmanded pre lecree for the convocation of the Cortes M. Leper the will of nine provinces could M. Lopez then urged erail over that of the 40 others, and he expatiated on the disastrous consequences which the convocation of a Central Junta would have entailed. The passage wherein he referred to the dismissal of his Cabing because it and the because it alludes to chent "I avail myself of this opporpulsion of the ex-Regent. mity (said M. J. 1 ) was at the time propagated in the Saragossa Administrawas alleged that Espartero had tion or the mont or May hed contrary to the welfare of measures whic This fuite false. There wig but one question, that of the dismissal of that favourite so
much flattered; and the Administration dissolved on tha he por constituted on the 26th, on which day the Government presented to the two Chambers an act demanding that the Queen should be declared of age. It was remitted at once to the committee for nominating commisioners. On the the Queen's majority, all of whom were adherents of the present Government.-From the provinces we learn that the troops continued to fire upon Girona on the 28th the town of St. John had been destroyed, and the battery ity haing throm into Gracia number of projectile by which several persons were killed, the Captain-General caused 1000 cannon-balls and grenades to be fired, on the 20th, against the points occupied by the insurgents. The greatest disorder prevailed at Barclona; the Junta tinued to force open and plunder coppersmiths.-A letter iron Ba, pree then Gen Concha cannonaded Saracossa on the 23d and 24th; that on the 24th the munici pality came out and proceded to Concha's head-quarters o arrange, if possible, the conditions of surrender. The terms which the Saragossans demand are, that there be no disbolution of the provincial deputation, the maid poldi, or the National Guar ; and in wanished Ge. who joined the movement be in tha Government for Concha las sent these terms up mentions of hans that 4 A.M. ou that day, , rremon burst there, which had done great damage. Seren large vessels had been sunk, some of them with cargoes on board, besides several smaller ones; the bodies of four persons drowned had been taken out. The water-spout burst against the barracks where the galley-slaves were extremely solid one, great part of the root was carwere torn in the Alameda, and some doors and timbers gave way.-From Cadiz we learn that Messrs. Abbinett and Sons, the divers of Gosport, have been licensed by the Government to recover the treasures of certain plateships, amongst which were the galleons sunk by part of that port. The impossibility of ascertaining the precise spot where the wrecks were lying, either from documents in the Admiralty of London, or from the archives of bevy much time and labour, the traditional indications of very ignorant fishermen and pilots presenting a tissue of ficions after a lapse of near two centuries. However, guided a galleon wreck, consisting of beavy brass ordnance, in rope, sent up, brought on sloore, lodging them safely in he custon this the great surprise of the natives, meedily from the appraised value, probably equally surprised as the Spanish public,-this being the first bonus the Crown of Spin

Messrs. Abbinett, subsequently found a galleon fully of the season, they have hought it best to defer further onerations till the spring. Portugal.-We learn from Lisbon that the attempts of the Opposition to get up a revolution during the absence of the Queen and her leading Ministers in Alemof Erod ent Etyora had unexpectedy addrssed Majer to dismiss presence or Nenho ceived from Dr. Kalley, dated 7th Oct., it appears he was till in gaol, afters imprisonment. He gives some account of the attempts made to prevent the circulation of the Scriptures. Bail, it would appear, was stil denied him. Some of Dr, Kalley's frends in Madeir deem it almost providential that he is in gaol, as othe Gise attempts mig havo been made Wion of Germany.-We learn by letters from Wiesbaden a the 16 th ult., that the Duke of Nassau escaped, about week before, from great danger. He was himself steering his boat from Rudesheim to Bingen, when the wind and upset it. The Prince was in the water, when sout boatmen succeeded in saving him. On the 20th wh two steam-boats on the Rhine, the Konig, going to Thal and the Leopold, yoing to Berg, cawe. dark, and the Leopold instantly sunk. No lives were lord though there were between 70 and 80 passengers on boan a the Leopold; but all the luggage and cargo, inciudiug travelling carriage, were lost.-The Frankfort Jourciption that the King of Bavaria had auvoracd subef tions to be made throughout his kingam for Greece.Frome Germans who had been expelled from Greece, of Aust Berin we learn that the Archauke Albe King Prussia. His bers of the high nobility had been invited to the palace at Potsdam, to witness the performance of Shakspeare Midsummer Night's Dream, which was not alone eminently successful, but created the utmost sensation. was announced for three succeeding nights-an unexam. pled event, and for all the three every place was imment diately taken. The Qedipus Coloneus was to be broug to Mendelssohn and Bartholdy

THE GARDENERS CHRONICLE.
the Council of Lucerne. The latter, though at present Hughes, as alderman of Bread-street ward. Dr. Buckthe Vorort, or Federal Executive, has, in concert with five other Catholic cantons, Uri, Schwytz, Underweld,
Zug, and Fribourg, declared that the Federal compact is violated by the permission to Argau to abolish its con vents, and that it is determined to take measures to counof Berne have announced their intention to resist the pre tensions of Lucerne, and it is expected that an extraor-Russia.-Letters from St. Petersburgh of the 17th ult, state that the emperor arrived in his capital on that to investigate the notorious attempt upon the life of the emperor have returned to Berlin without making any discoveries whatever, and there is not the slightest doubt imperial carriages. It is computed that the expenses of the investigation of this affair will amount to upwards of 10,000 dollars,-On the 28 th ships of the line, of from 120 to 80 guns, one frigate, one Odessa, coming from Sebustopol It destination is no known, coming from Nebastopol. Its destration is no Uralsk, in the government of Orenburg, suffered severely on the 9th ult. by two fires which broke out on the same day. 105 houses, some of stone, some or wood, were re duced to ashes; the loss is estimated at 103,000 roubles.
Grexce.-By accounts from Athens to the 16th ult. we learn that the apparent tranquillity of that capital had been disturbed by the discovery of an intended attempt at counter-revolution by General Colocotroni, one of the
Aides-de-Camp \({ }_{4}^{+}\)of King Otho, but that his Majesty in order to remove all suspicion of his own participation in the design, assembled his Council of State, together with the chief civil and military authorities, on the 14th, and assured them of his determination to abide by the Sir E. Lonal system estabished by the national will. a steam Lyons, the British Minister, had despatched rocordato, who had arrived and was expected assume the office of Minister for Foreiga Affairs, as it was considered that Metaxas and his colleagues could not maintain themselves in office. All the British agents throughout Greece had acknowledged the new Eavernment, and the commander of the British frigate in be, station Constitution, to which all the Liberal party were invited. The Ministers had refused to accept any salary under existing circumstances. The resian agency is met by the announcement that the Empero having at Moscow received full and detailed accounts of the insurrection at Athens dismissal of M. Katakasi, the Russian Minister at the Court of Athens..-English travellers in Grece will rearet to learn the death of Mr. Henry Robinson, H.M.'s ViceConsul at Patras, who had been connected with Greece and the Ionian Islands for nearly a quarter of a century. 25 have of Good Hope.-Advices from the Cape to Aug. 25 have been received this week, which are more encouthe as as respects the condition and prospects of Natal, ing held Ats from whence state that the Boers, at a mee proclamation, and acknowledged the supremacy of the Queen. Advices from Simon's Town notice the arrivel of Por Majesty's ship Thunderbolt on the 22d Aug. from anchors and having during a heavy gale parted from her mander and several of the officers and crew
Unitiod Stateg and Canada The Great arrived at Liverpool on Wednesdoy with Great Western New York to the 19th wit. The news is chiefl from domestic and commercial nature. The is chiefly of a are unexpectedly favourable to the Whig party, giving sident, in which case it is believed that Mr Weted Prebe Vice-President.-The Park Theatre is. Webster will Mr. Macready. He retains all his popularity to see making a great deal of money- as much it is ty, and is 400 l , a week for four nights' performance.- , papers give the speech of the Governor-General on opening great Provincial Parliament, which appears to have given to the loan rais. His Excellency reers in this documen Parliament raised in this country under the sanction of Preat morks for the service of the colony. He states that Wheat works by the assistance of that fund are in progress, and develope the are calcula of that country and develope the resources of that country, and increase of A public revenue and individual weath. In the House to Assembly Mr. Baldwin had given notice of his intention to introduce a bill for the purpose of declaring Orange and gration secret societies iliegal. Another immense conflagration had occurred at Quebec. It was not got under
until 60 houses had been destroyed, together with numerous outbuildings in the vicinity of the New Market place. 500 chaldrons of coals and 1000 cords of wood, the property of Government, were consumed. No cause
has been assigned for the breaking out of this disastrous fire.

Ftetropolis anì íts Yícinftn. Court of Aldermen.-On Tuesday a Court was held for
the purpose of swearing into office Mr. W. Hughes

Hughes, as alderman of Bread-street wardo Dr. Buck-
land introduced Mr. Hughes, who was sworn in by the town-clerk with the usual formalities.
The New Royal Exchange.-The last stone of the Tuesday, and bull thing was set by the contractor on tower will be the supports of the vane to be added to the which will be the same grasshopper (the crest of \(S\) Thomas Gresham) which for a long time adorned the old Exchange, and escaped the fire almost uninjured. It has been determined that the chimes shall be restored upon an improved plan, the Gresham Committee, on the recommendation of Professor Taylor, having directed that the peal of notes be increased from eight to fifteen. The first stated that it will be finished and open for the use of the merchants by the middle of next summer.
Darkness of the Metropolis Roads.-On Tuesday evening a numerous meeting of the ratepayers of Hammersmith was held for the purpose of considering the expediency of Church the Grat Western-road winin that parisho The Churg tha Grat heen called to the Mill at Brentford, whose pipes were already laid down along the road, to ascertain at what price they would reinstate the lamps, and continue to light, repair, cleanse, and put ap the lamps; to which they had rephed that they would all other expenses except the removal of lamp-posts, \&c, which would cost about 15 s , each. It was therefore pro posed that the same number of lamps formerly lighted along the portion of the road named by the Commissioner of the Metropolis Roads, viz. 56 , should be continued, the expense of which would be covered by a rate of \(6 d\). in the pound, which would realise about 300. The motion was seconded by Mr. Daley, and carried.
Victoria Park.-Although the Act of Parliament for the formation of this park passed on the 21st June, 1841 and an Act for conferriog additional powers on the com 1842 , taken the only real steps to its commencement have jus form place. The chief part of the land required for the mane of the park was in the possession of numerous possession of the viously received twelve months' notice. The stock and growing produce has, for the purpose of possession, been valued by two brokers on the part of the Crown, and two day, by actio tenants. The whole was sold on Thursand the awards of the valuers will be paid by the commissioners on behalf of the Crown.
Rental of Middleses.-The total rental of this county, as given at the recent Westminster Sessions, is 7,574,330l., being an increase over that of last year of 1,581,922l. In the following parishes there has been an nerease :-st. George's, Hanover-square, \(600,797 \mathrm{l}\), 'being an increase over the preceding year of \(108,0002\). ; Pad 217,5931., increase \(7,734 \%\); St. Leonard's, Shoreditch, 178,692l., increase \(5,702 l\). ; St. John's, Hackney,
137,442l.,
increase \(2,411 l\); 109,628l, increase \(2,685 l\). \(;\) Kensington, 141,392l., increas 5,732l. ; Ealing, 31,1032., increase 1,773l. ; Norwood \(8,872 l\)., increase, 1,1402 , \&c. In the following parishe the decrease has been as follows:-St.Martin's, 240,066\%, decrease 1,884l.; St. James's, 239,059l., decrease, 5644 . \(816,572 l\)., decrease 9,9632
Scoltish Hospital.-In consequence of the removal of the Rev. Dr. Brown to Scotland, the honorary chaplaincy of the Scottish Hospital becomes vacant. For many year it has been the pructice of the governors to elect to this office a clergyman of the Established Church of Scotland who has been longest resident in London. The Free Church party, however, have avowed their determand upon Free Church principles. Mr. Crosby, a solicitor, applied to the Lord Mayor on the part of Mr. Rock and other parishioners of St Stephen, Walbrook, for a summons against Alderman Gibbs churchwarden of the parish refusing to allow inspection of the accounts to Mr. Rock, he being a proper person to look at the same.-The Lord Mayor asked upon what act of Parliament the application was grounded aroshy said the 17 th Geo. II. c. 38, sec. I, an stated that they had tendered the amount therein specified book the alderman refused to give was not satisfactory to the parishioners.-The Lord Mayor then said that Alderman Gibbs had been with him that morning, and he had signed his accounts for the last 18 years, which he had verified on oath to b correct. If the applicant now went and demanded a copy the accounts, would grant a summons. He muse now stand or fall by Lord Mayor added, he blamed him very much for no producing them.
Five in a Steamer.-On Sunday morning a fire broke out on board the Ailsa Craig steam-ship, moored off the
Leith and Berwick wharf at the Tower. The steamer, which was about 300 tons burden, arrived from Yarmouth on Saturday afternoon, with a heavy cargo of four, mustard, wool, cotton, and other goods. During her passage she encountered the gale of whind which prevailed on
Friday night, and the sea is supposed to have got in amoong the cotton rags stowed with the cargo in the after-part of the vessel, which ultimately ignited spontaneously Prompt assistance was at hand, and the brigade floating
engines poured water into the hold until all the cargo was
flooded. The damage amounts to about 1000l., and the vessel is so injured that she must go into dock to repair. held inents and Inquests.-On Tuesday an inquest was comin the Hampstead Road, on Mr. C. Orpwood, who Orpwood suicide on Saturday. His brother, Mr. W with him had been an invalid and under medical treatment during the last 16 years. He was of no profession, and had lived with witness since he was 12 years of age. On Saturday last witness went to Richmond to visit a cousin, who is a chemist, residing there. On leaving home his brother requested him to bring from his cousin's three drachms of prussic acid. As witness was aware that deceased was in the habit of making up his own medicines they frequations of his medical attendants, and that sented to do so. When he gave it to hima on his return sented to do so. When he gave deceased recuested witness to hand down a box from the shelf to put the bottle in, and while in the act of doing so, deceased drank the poison. Witness instantly ran off for a surgeon, who employed the stomach pump, but death had ensued almost instantaneously. He admitted that he his brother incautiously in procuring the prussic acid, but his brother was so religiously inclined, and was so much suspicion he would destroy himsel? He beliered that suspicion he would destroy a He believed that deceased, labouring under pain and Hos did took the by accident by accident. Other eviaence havis boon which ceturned the following was deceased 8 own act, the jury stroyed the following verdict- That deceased de stroyed himself by taking prussic acia, but in what state Mortality of the Metropolis.-The number of death registered in the week ending Saturday, October 21, was as follows :-West Districts, 144; North Districts, 187 ; Central Districts, 215 ; East Districts, 263 ; Soutb DirWeekly average for the last five years, 903 ( 461 males, 442 Weekly average for the last five years, 903 (461
females); and for the last five autumns 908 .

\section*{租robímíal Néns.}

The late Storm.-The provincial papers are generally filled with details of injury done by the gale of Friday night; and Lloyd's Shipping List contains a long list of call, at least, sea, the mere enumeration of which would belong chiefly to the smaller class, and many lives have been lost. Several vessels were seen to founder off the coast, and all hands of course perished. At Liverpool, vious day, and were caught in the storm before the preclear the Channel. The sea at high water they could portions of the quays; and the steamers from the opposite ferries had some difficulty in landing their passengers, many of whom, both male and female, from farms in the neighbourhood, it being market day, did not venture to Bearstead. - We learn from the Maidstone Journal that Tuesday last, having been the rent-day of the sllothent holders of this parish, every sum which was due from them was paid with the atmost cheerfulness and punctuality. The number of industrious men holding portions of land in Bearstead is upwards of 40 -their portions varying from 30 perches to half an acre, according to their means or ability to cultivate them. The rent is 40 s . per acre, whilst the land being of fair average quality, it enables the holders to use it with advantage to themselves and satisfaction to the proprietors. The best cultivated allotment, so far as manual labour was concerned, was one whose occupier could not obtain employment during the greater part of last spring. His spare time was devoted to the better cultivation of his allotment, which amply repaid his exertions by an abundant and excellent crop. The committee of management were much gratified in their various inspections in observing a decided improvement in the allotments compared with former years; and the cottagers begin to feel that by a careful collection and application of manure applied in a liquid form the greatest benefits ensue. Birmingham-A singular charge of robbery was brought against a Mr. L8zarus, a respectable member of the Jewish persuasion, at the police-office of this town in August last, which excited some interest from the circumstances attending it. Mr. Lazarus was travelling from London to Birmingham in a secoud-class carriage in which were several sailors, one of whom, of the name or Cuingham, contrived to steal his companis par asleep, and on the loss beigg Lazarus with having committed the robbery, and, in fact, gave evidence that he had seon bim take money. By a singular accident, after Mr. Lu much annoyance, the ran Cunningham ultimately confessed that he committed the robbery, and falsely charged an innocent man with the offence. He was accordingly committed, and brought to trial at the recent sessions, and the jury having found him guilty, he was sentenced to be transported for ten years. Carmarthen. Te proceedings of comenssion of Inquiry, the opening of which was announced in our last, have excited very general interest in the Principality. The opening addres Mr. Trankland Lewis, the Chief Comnissioner, is regarded as a somonate statemeat, abounding in kiady expressions, and displaying the utmost ansiety on the part of the commissioners to enteinto the fulest possabe inquiry as to every grievance which has been alleged as a cause of the late disturbances. The manner in which Mr. Lewis invited the whole people, rievances before the commissioners is thon, to lay their be productive of the most beneficial effects in allaying the present unhappy state of the Principality. The right hon.
gentleman said, "In reading her Majesty's commission, you must be struck with the wording as to the definition of its objects, for although her Majesty's Government, meet with the strong arm of the law all attempts at dis. turbance, and to do everything to suppress and put down outrages by the persevering exercise of power on their desirous to ascertain whether there be any real causes of grievance existing, in order that by the powers of the
Executive Government, or of Parliament, or hoth combined, a legislative remedy may be effected, for which purpose it of turnpike roads as one of the alleged grierances, and said that the commissioners would zealously inquire into hold ourselves species of information from persons acquainted with the country, come from whom or where it may, in causes of the disturbances that have taken place in this country. Be that information what it may, our eyes and ears sball be open to receive it, and it will be subject to a be found. If the complaints be reasonable, rational, and well-founded, they may be capable of redress ; but l canbelieve that there are other circumstances which we can not hope to remedy, because I have been told from authojudging and ill-informed, not knowing the basis upon Which society is founded or property secured, who have interfered with individuals in the management and due control of their own property. Let no person shut his Creator- 'Thou shalt not steal.' By this command a right of property was recognised by the Deity, and that Saviour Christ from his own mouth. If men are not steal, it is clear that there must be something belonging to another that is not to be taken. Thus, even the Creator foundation on which society is built, the object of all Government being to secure to every individual a free and undisturbed control and enjoyment of that property which by his labour and industry-his honesty industry-he may
be justly entitled to. If deluded men fancy they can interfere with property without doing injury, not to its possessor merely but to society itself, they will soon find property that does not recoil on society itself as well as upon the individuals. It is in the nature of things that the products required for the consumption of our fellow. creatures cannot be obtained if he who sows is not secure tlemen, society itself is so constituted, that the industrious, thrifty, prudent, and carefol people, are hy the will of hand, improvidence, violence, wastefulness, and acts of outrage as certainly bring distress and misery, with all the persons consequences that follow in their train, on those persons who are unwise enough to perpatrate them. I
say, then, looking to the causes of the recent disturbances which may come before us, if in any case we are led to believe that there has been an infringement on property, property must be sustained by the promileat : the rights of great truths, and those persons must be taught that of their acts can tend to nothing but mischief both to those who commit them and to those who suffer them. But even to wrongdoers I will say that this inquiry will be conducted with Hereford - Two interesting curiosities hs anl.
Hereford.-Two interesting curiosities have lately been One is an Affghan sword, found on the person of Prince Hyder Khan, son of Dost Mahomed, and brother of Ackbar Khan, on being made prisoner. He was governor
of Ghuznee, which was surrendered to the British arms in of Ghuznee, which was surrendered to the British arms in The other is the monumental stone of Sextus Valerius bas-relief in armour on horseback, and trampling on a
Briton, whom he is in the act of piercing with his lance. Briton, whom he is in the act of piercing with his lance.
This interesting piece of antiquity was found in Watermore, about a mile from Cirencester, in 1836.
Leeds.-On Monday, Mr. Thomas Walker, attorney-at-law, residing at Dewsbury, near Wakefield, was brought before the magistrates of this town, charged with having twice forged the signature of Mr. M. B. Bere, Commissioner in the District-Court of Bankruptcy. From the evidence of Mr. Geo. Newsome, of Battley-bar, clothier,
it appeared that he employed the prisoner in August last to get him through the Court of Bankruptey for 15 l. The prisoner got part of this money at the time the agreement was made, and the remainder was to be paid by order purporting to be signed by the Commissioner, and afterwards gave him a similarly signed ducument extending the protection to the 29 th Nov. Mr. Bere deposed that the signatures were forgeries, and the Deputy-Registrar of the Court proved that no petition had been filed in to say anything in his defence, and he was held to bail. himself in \(100 l_{\text {. and }}\) a surety in \(100 l\)., to appear at the next assizes to take his trial.
Leicester.-Messrg. Mitchell, Clarke, Phillips, and last week at the Birmingham Bankruptey Court for their final examination. It appeared from the balance-sheet that the probable amount of assets wherewilh to pay a
dividend, after making all deductions, was \(308,849 \mathrm{l} .4 \mathrm{~s} .8 \mathrm{~d}\)., would be realised by the creditors. The assignees produced various articles of jewellery belonging to the wives of the respective partners, which in the case of Mrs. Mitchell were represented as exceeding \(1000 l\). in value,
but the creditors unanimously resolved that the whole should be returned.
Merthyr. - On Friday the 20th nit,, a fire broke ont at Dowlais-house, the residence of Sir J. J. Guest, Bart The prompt assistance rendered by the neighbours and police succeeded in subduing the flames in about two aturated with water. The fire originated in that portion of the house recently erected, in which large fires were constantly kept for the purpose of drying it. A spark
having flown from the grate among some shavings incauhaving fown from the grate among some shavings incaufire communicating with some deal boards, the flames spread with great rapidity, and excited apprehensions fo
the safety of the whole building. The damage done is the safety of the whole
said to be inconsiderable.
Newcastle.-On Saturday week, according to pre vious announcement, a meeting of the miners of Northabout four miles from this town. Long before the hour appointed, an immense concourse had assembled-Black Fell presenting the appearance of one moving mass. Difference of opinion exists as to the numbers at the meeting the computation varging from 35,000 to 45,000 ; but the most probable amount was 40,000 . The chair was taken by a miner of South Hetton colliery. An address to Mr. T, Duncombe was then adopted, expressive of certain before Parliament. The address was founded on the following resolutions :-" 1 . That in the opinion of this meeting it is the duty as well as the interest of this association to adhere to the restriction system, as it is tion to keep all our members equally employed in the opinion of this meeting a petition should be for warded to Parliament, praying for a repeal of the expor duty on coal. 3. That in the opinion of this meeting a established, by sinking a greater number of shafts, and those shafts to be more equally placed; and that we opinion of this meeting the present machines for weighing fore compelling the masters of collieries to have machineare the beam-and-scale principle." Mr. Duncombe rose amid eathusiastic cheering, and proceeded to assure them believed that so past for himself, he could not have assembled; and he was led to conclude that the cause must be very important and serious to bring them together in such numbers. He promised to bring their grievances \(\mathrm{O}^{\prime}\) Connor then addressed the meeting, which continued for about three hours, after which they quietly dispersed
Reading.-The New Public Hall, the foundation-stone of which was laid last June by Miss Mitford, the author of "Our Village," was opened last week by Mr. Blandy, the mayor, assisted by Serjeant Talfourd, Mr. Russell,
M.P., Mr. Palmer, M.P., Mr. Walter, of Bearwood, and about 400 of the resident gentry of the town and county. The uses to which the building is to be appropriated will be varied, since it will combine the purposes of a mechanics institution, with museums, class-rooms, reading and news-rooms, with apartments suitable for the assembling of the various benevolent and general associations of the
town. The hall, on the occasion of the inaugural dinner was decorated with paintings, floricultural and other devices Oxford.-In the case of Macaullen v. the Regius Professor of Divinity, a protest has been lodged against the admissibility of an appeal on the part of Dr. Hampden, adainst the decision of the Court below, in favour of the tor protests against the admissibility of the appeal, in consequence of its being addressed "To the Delegates in Congregation," instead of "To the House in Congregation," which he contends was the proper form. The Court after some discussion, appointed the 15 th inst. for hearing Counsel on the point, which will have the effect of
protracting the proceedings. Preston.-The local papers state that Father Mathew commence his labours in this town, and afterwards proceed to fulfil his numerous engagements in other parts the country.
Railuays.-The following are the returns for the past week:-Birmingham and Derby, 1,453l.; Birmingham Edinburgh and Glasgow, 2,338l.; Great Western, 15,046l.; 1,268l. Gunction, 8,487l. ; Glasgow, Puisley, and Ayr, Selby, \(945 l\). ; London and Birmingham, 17,565l.; London and South Western, 7,000l.; London and Blackwall, Brighton, 4,394l.; London and Croydon, 249l.; Liver5,040l.; Midland Counties, \(\mathbf{3}\); 04 M Manchester and Leeds, mingham, \(3,054 l\). ; Northern and Eastern, \(1,832 l\). ; North Midland, 4,734l.; Newcastle and Carlisle, 1,454l. cliester, 575l. : York aud North Sistand and ManThe railway from the Northern and Eastern line to Ware and Hertford nas onened on Tuesday, the line having been officially reported to the Board of Trade as perfectly
consolidated and in a fit state for working, by General Pasley, the Government Inspector, who, in company with
Mr. Marshall, M.P., Mr. Ward, M.P., the directors, and several of the shareholders, took an experimental trip and several of the shareholders, took an experimental trip
along the line on Thursday week. The first train on Tuesday started from the Shoreditch station at eight Toclock, and reached Hertford, a distance of 26 miles, in about an hou

\section*{IRELAND}

Dublen.- A report was current during the latter part of ast week, that Government intended to abandon the stat rumour was unfounded, and that the trials are that the place on as early a day as the Crown can wave fixed before a special Jury of the City of Dublin lave fixed, said that Mr. Steele, who intends to defend himself without counsel, as he did before, has given iustructions to his solicitor to wait upon the late Irish Chancellor, Lor Plunkett, to ask his Lordship when it would be convenien o receive a subpœena, as, in case the trials sho goo, his principal witness. Mr. Steele holds thet Lipl a his principal witness. Mr. Steele holds that Lord Planket s well as ment that the union would be a nullity by reason of the ment that the union would be a nulity by reason of the R. Peel, Mr. Bond Hughes, the Government repe are, Sir R. Peel, Mr. Bond Hughes, the Government reporter, the Guke of Wellington, Lord Lyndhurst, and Sir James Graham. A rumour, having its origin in Roman Catholic circles in Dublin, is circulation to the effect that D Higgins, titular Bishop of Ardagh, has been summoned o Rome to answer before the Sovereign Pontiff for the expressions used by him in reference to England at one or the earliest of the Repeal meetings. Mr. J. L. Arabin has een rean fre commission of the peace for the county of Dublin, for having attended the repeal meeting at Muliaghmast, and Mr. M. Sweetman, a Roman Catholic magistrate, has resigned his commission for the same county. One thousand military pensioners have been elected in Dublin, and have received orders to be in readiness for embodiment and service, and numerous bodies of troops have arrived from England during the week. Mr. H. Grattan, M.P. for Meath, has published an address to his constituents, from which it appears that he is rather annoyed at being passed over in the recen State prosecutions, and evidently considers himself aggrieved by the omission. The letter, which bears date Paris, October 18, commences by referring to the late proceedings against the Repeal agitation, which he pledges himself to bring under the notice of Parliament, where he hopes to see the Minister arraigned for this maladministration of Ireland, and turned out of office, mous complaint of an indignant people." He concludes by stating that he has "directed \(5 l\). to be paid to the Repeal gain, \({ }^{\prime}\). Slatesary, it shall be doubled again and has also written a letter to Mr. O'Connell, stating that he has hitherto abstained from politics, but "the events of the last few weeks have determined him to adopt a dif ferent course, and publicly to identify himself with those friends of Ireland who are endeavouring to obtain the restoration of her Parliament by the repeal of the legislative union." He inclosed a donation of \(3 l\)., and requested to be enrolled as a member of the Repeal Association. A meeting of the law-clerks was held last week in the Corn Exchange, for the purpose of petitioning Par confidencer a repeal of the union, and expressing the sent himself and spoke to The weekly meeting of the la on Monday, Mr. Molony of Cral Association took place peace, in the chair of \(100 \%\) from \(u\) ebec and the adhesion of Diation to their cause Quec, amd the adnesion of Dí. Slatery bishops case. They thad alch Michael of Cashel beside John of Tuam. He then alluded hiche of the Tarl of Doners in ander the presidency He was disposed to give the prent ho tenure of and. He was disposed to give the present Government its due fould would be derived from it, that landlords would see tha R Peel ond tenure was about to be inquired into. sil R. Peel and Lord Staniey had declared there must be some wise to thrownt tenure, and he thought it would be unHise soners. Mr. O Connell then said, that he now came to the immediate business of the day, and the first matter to the den would draw the attention of the association was the denia, from an important source, of one of the ca-
lumnies contained in the letters of "Philalethes." Mr. Trevelyan in one of these letters said that the north was ready to pour in military array on the south, and that all Ulster was alarmed at the ggitation. Now, he would read for them a letter which appeared in the Banner of Ulstes of Friday last, written by the Rev. J. Godkin, a Presby terian minister, denying the truth of the statements of Philalethes" regarding the country, and adducing evidence to show that he was ludicrously misinformed. Haping done so, the hon. gentleman proceeded to read an address to the association from Mr. Sturge, who said that the peaceable demeanour of the Irish people was making an impression on the English mind, and that they had a great deal of English sympathy. Mr. O'Connell, on this point said he would ask, had any of the great towns in England, save Birmingham and Preston, made any demonstration for them? Had London done so? Had Manchester, or Liverpool, or Leeds done so? Let not Mr. Sturge blame the people of Ireland because they judged of Englishmen only by their acts, because they could not place confidence
in them. He believed the English people acted more from ignorance than design ; but it was his complaint that st the real take the trouble of being righty informed no other topic to urge in peopour of Repeall, the fact would no other lopic to urge in favour of kepeai, the fact would be sufficient, that the governing people were radically Agnorant and careless of the state of the country governed As to separation he repudiated h, bul he wished topreven the possibility of it by getting repeal. There should be no rebelion in Ireland, no civil war, or, what was worse, a
servile war-a war from cottage to cottage, from town to servile war-a war from cottage to cottage, from lenth to
town. The hon. gentleman proceeded at great long to town. The hon. gentleman proceeded at great length to
neeet the objections of Mr . Sturge in regard to a separameet the objections of Mr. Sturge in regard to a separa-
tion. He spoke of Arnerica, and the offer of reconciliation made when too late by the British Government to the insurgents in that country, as a warning to Government, and advised Mr. Sturge to remember it. He thought it would be politic in English statesmen to ask Ireland what she wanted, and he would answer, that she merely wanted the management of her own affairs, and did not desire to take anything from the Crown prerogatives. Ireland was big enough for them. She was all they required. They would take nothing less. As to war, if Mr. Sturge thought they might wish not to go to war when England didthat was a royal prerogative, and the only thing they could do was to vote against the supplies; he for one would be glad of it, as it diminished the chances of unjust war, and if there were just cause of war there was no fear of the Irish people being backward in supporting it. The hon. gentleman referred to Portugal and other countries friendly to Ireland, which it would be wise policy in Ireland to refuse going to war with on the sole ground that England wished it. Again, making peace was no imperial question-it was an act of the monarch. They wanted a protective, not an invasive parliament. As to the army and navy, that would be a mere question of length of purse. The number of men paid by England should purse. The number of men paid by England shonld Ireland's. Thus treaties, dependencies, colonies, the making of war and peace, the army and navy, could not be considered imperial questions. The hon. gentleman then ridiculed the Federalist party as not knowing what they meant and derided the support likely to be had from the morth or Ulster men, which he said, wonld be but small indeed for on form substantiality about themer occasions there had been no there was no Chere was no fear of difference. In regard to Roman Caholic toleration, if any fear were harboured oflit, he a restriction alrear a restriction already existing on the American Legislature -namely, that it should be incompetent to them to place any restrictience. right or to interfere with any one's conscience. Mr. O Connell then contrasted the treat. would not give up one particle of Irish interest, but he would maintain the Crown prerogatives. After a lengthened address the hon. gentleman concluded, amid loud applause, by moving the adoption of the following resoluthe Union consists in the Parliament of Ireland having the entire legislative control of affairs of the Irish nation. 2. That the basis of the Repeal of the Union consiste, and shall consist, in the perpetual connexion with Great Britain, through the medium of their common Sovereign, Queen Victoria, and her heirs and successors. 3. That
another basis of the Repeal of the Union shall be perfect another basis of the Repeal of the Union shall be perfect
equatity of civil rights and franchises of every description equality of civil rights and franchises of every description
between all Christian sects and persuasions whatsoever, and that no ported or intrusted to the Irish Parliament to make any law derogatory to the civil rights or franchises of any individual or class by reason of his or their creed or religious persuasion. 4. That the foregoing resolutions be transmitted to Mr. Joseph Sturge, in reply to his communication, and that he be requested to specify what the questions 'involving the interest of the United Kingdom exclusively' are, other than those which come within the range of the royal prerogative." In af wer to some onservations of Mr. Gordon, a ate member of the Conservative body, who advocated the rights of the Roman Catholic clergy to glebe-houses and Lands, Mr . O'Connell expressed his disapprobation of State establishments, for at the present day the efforts of every State Church sitect to sulpress true religions feeling in the ing glebes for the Catholic clergy, to whom a perpetual right might easily be given by a slight alteration in the existing laws. But these glebes must be purchased by Catholics themselves, and in no other way. Mr. O'Connell then announced the Repeal rent to be 1142 l . 19 s., making upwards of 3000 received from Saturday to Saturday Tipperay. -The Leinster Express, in reference to the mysterious signal fires on the night of the 19 th ult., makes mysterious signal fires on the night of the 19th ult., makes fires burst furth in a simultaneous blaze of the 19th large fres burst forth in a simultaneous blaze upon all the hills Banagher, and thence to Parsonstown, and along the range Banagher, and thence to Parsonstown, and along the range of hills towards Borrisokane. Large bodies of the peathrou were assembled patrolled through the country, carrying torch-lights, filling with fear and terror the well-disposed and peaceable by their
savage yells and shouts of exultation. In several Savage yells and shouts of exultation. In several places
the people thought that a 'general rising' had taken the people thought that a 'general rising' had taken
place, and sought refuge in the fieds and ditches ; place, and sought refuge in the fields and ditches; others
betook themselves for protection to the adjoining towns. There is no use in concealing the fact that the general body of the peasantry are ripe for revolt, and that both priests and Mr. O'Connell will find it a diffcult task to restrain them from deeds of turbuleace. The lower
orders of the Repealers seem, now that they cannot have their monster meetings, to have adopted the mode of tele-
graphing their feelings and sentiments through the medium which 'bale' or 'signal' fires. These simultaneous fires, the places above mentioned, but along the hills and mountains of Cork, Limerick, Kerry, Clare, and Tipperary, require the earliest attention of the Government, more especially as they have been, each and all, altended by masses of the peasantry, carrying with them torch-lights, and halloing and yelling like fiends." The same journal contains a long list of outrages of a very serious nature, King's County and Tipperary. Other papers speculate on the cause of the fires, and give the most contradictory versions of it. One states that the fires originated in a supposition on the part of the people that, to use thei own words, Governen - made by the Government with respect to the fortifications having been abandoned in certain localities. It is also said that a rumour had been circulated very generally among the people that large concessions were about to be Parliament was to be given to Ireland. Another explains them by stating the belief of the peasantry that "M \(\mathrm{O}^{\prime}\) Consell had a great triunaph over the \(I_{\text {Lord-Lieutenant for }}\) daring to issue the recent proclamation; in fact, that he
had his Excellency fined to the amount of 30,000 l. This was regarded by the peasantry as a proof that 'monster meetings could not be suppressed with impunity; and that, however Government might be opposed to \(\mathrm{Mr}^{\text {r }}\) O'Comnell and Repeal, the Queen was on his side.

\section*{SCOTLAND.}

Glasgow.-The Assembly on Monday week took up the Dalkeith case, in which a call has been given by the Free Church congregation there to a licentiate of the Irish most important case, ss it involved the whole question of the admission of ministers belonging to other bodies. The Assembly was also of opinion, that it would not be treating respectfully the bodies to which these ministers belonged, to receive them into communion with the Free Church without corresponding with their respective churches on the subject. On the motion of Dr. Candlish, the following motion was unanimously agreed to :-"To delay the cases of application for admission from Ministers of other denominations, and remit the whole subject to a committee for consideration, instructing them to confer with the other churches interested. The Rev Dr. Sym gave in the report of the colonial committee suggested the propriety of the committee being instructed to keep in view the case of Dr. Kalley, of Madeira, which Was agreed to. Dr. Candlish then made an oral report on Jewish missionaries and agents-some of them converted ews-had adbered to the free church, that the money amounted to \(3,400 \mathrm{l}\). ; that at the disruption they left \(3,500 l\). in the hands of the establishment. The report was approved of. Dr. Duncan, who is on his way home Hebrew in the College, was appointed convener of the committee till the return of Dr. Keith, the present con vener, who is at present on the Continent. In the evening a committee was appointed to consider the relation
of the Church in Canada with the Free Church, and to report to next Assembly. Mr. Hamilton read the report of the Building Committee, from
which it appears that about seven hundred churches are either built or building, or about to be commenced. On Wednesday some other business having been disposed of, Mr. Dunlon moved that the next meeting of Assembly should be held in Edinburgh, on Thursday the 16 th May next. After some remarks on the character of their the present temper of their ministers was gratifying in the extreme, and that the content with which they received the intimation of the simall allowance from the sustentation fund, and with which they must retire to their homes, must have excited the admiration and touched the feelings of them all. He trusted that they the elders and members of the Free Church would feel it their duty to make their sacrifices as disinterestedly and as nobly as they had made theirs; and he hoped that they would soon be able to show that they were worthy to have them for pastors by providing adequate sustenance, and in some had made. He concluded by moving that the Assembly should meet at Edinburgh on Thursday, the 16 th May 1844. The motion having been seconded, was unanimously agreed to. The Moderator, Dr. Brown, then proceeded to deliver his closing address, which was listened assemblage that crowded the hall. The Assembly was then declared to be dissolved.

Covent-Garden.-On Monday night the third season of entertainments, in which it would be difficult to say The manarer, finding he could not work with his English The manager, finding he could not Fork with his English sing, act, and dance. The audience were dissatisfied with this, no less than with the other
which has ever been witnessed in a metropolitan theatre The first piece, a new comedietta, called Quits, or War the French children in a dance which followed, seemed to
strike the audieuce as an exhibition altogether unsuitable to a national theatre. The storm, however, did not come until the production of a ballet pantomime, in which \(M\). Lanrençon was the principal performer ; and after this completely condemned, a vaudeville in the Frencl language piece ซ'as speedily stopped, wlen Mr. Wallack came forward and made use of language which was ill-judged ard offensive, and the uproar increased tenfoid. At length the audience, as if to show that no part of their wrath was intended for the poor children, suffered them to proceed with their parts, with scarcely a moment's interruption, to the end. The ballet of La Fille Mal Gardée contained some pretty dancing by this infantile corps de ballet, which Pas de Devx, the house to good humour; and a pretty Pas de Denx, between Mdie. Leontine and M. Victor, was applated as generour Mr. W allack has had addressed a ganised oppositiof was got up on Monday night by rival and interested parties, who, by signals and other preconcerted means, gave a determined opposition to every part of the performances. Mr. Wallack, however, in giving this explanation, brings charges of conspiracy against that the French compruy "has not come up to the point of excellence which he was assured it possessed, and also that the public is not so favourable to that nature of performance as he liad hoped."

 condition in which this and several counties of the Principality had been for some time, trendered it imperatively necessary that
at the earliest moment the law stould take effect, and the justice of the country be evindicated. Since offences werc ncreasing
numbers and enormity, it was necessary that the law siould
check them. Having stated the reason, then, why they were thus summoned, it next became his daty, to state that the clarge
akainst the prisoner was founded upur an Acto Parliament, ceachnt to pull down a house, cliwelling-house, or office of any
clescription, should be guilts of a felony. In this instance the

 with Capt. Napier, and in that confict was wounded as you see.
A shnt was fred by the mob, which was returnect ioy a volley on
the part of the ponlice. There was much confusion, and partlies
 prudier-llasks, a shot-boit, withi shot it it st, sume coppser capt, an come with your armour and covering, and assist me on Wedues
day next, or else you shall not,kave more or further notice s" an
 tected by every rifght and prrvilege wh.ch the people possess,
tend I shall go along with my learned friend in any course to pro
and duce that result. The case is one of great importance, and my
jearned frictul needed no aynlogy for the course he had taken
 which the prisoner is incicted was committed, and when you have it shown berore you yat to say whetther he took any part
in his hands, it will be for you to
in that riotous assembly. If you find any just ground on which this prisoner is entitied to acquittal, it needs no suggestion o mine to say that 3 ou will give him the benefit of tit on the othe
hand, 1 am convinced, if you find circumstances proved which implicate the prisoner, there can be no doult but you wrill dis-
charge your duty to the country and find him guilty, Capt.
Napier and other witnesses were then examined, who deposed to the various facts stated by the Attorney-- eneral, most of whic
were noticed in this Pajer at the time of their occurrence.On Saturday morning Barun Gurney, in summing up the evidence,
observed that it was no small consolation that they had been called the recent uffences havit been committed, and where the minds of were thus enabled coolly and dispassionately to consider all the
facts that were laid before them. After recapitulating the charges aganst the prisoner as described in the indictment, aud referring for whinh hie was arralignct, and which had characterised the con-
anct of tlic rotutus assemblage of which the evxience left not a Ieathn yonint sin the evournce of the witnesses, stating that it
 upon bexng interrupted while engaged in it by the police coming
up. His Lordship referred briefiy to the evidence on this point,
and then observed that the femaining questron for the Jury to consider was, whether the prisonet was one of those who were aiding and assisting in the acts of demolltion, cotntenancing and augmenting the force of the mob, and concurring in its was the law on the different parts of the case, reminded the \$ury that the facts of the case were what they had maturely to welgh1
and considers 8hould they believe the prisoner, after that solemu and considers 8 hould they believe the prisoner, after that solema
consideration of the evidence laid before them, to be innocent of consideration of the evidence laid before them, to be innocent of that charge; but if, on the othet land, they believed him to be guity, they would, find a verdict accordinigiy, The sury then retired, and, after little more than half an hour \({ }^{\prime} \mathrm{s}\) absence, re-
turned with a verdict of Guilty, recommendigg the prisoner to mercy on account of hits previous good character, The Court
then adjourned until Monday. On that day, David Jones and Sohn Hugh were indicted for taking part in the same offence. sation between their counsel and attormey, ther withdrew thetr plea, and pleaded guilty. The Attorney-General then said, the prisoners having pieancd guity, He Mill said that their Lordships
liarl heard the prisishmersent. Mr. trial which had occupied tile court on friday and saturday advised in pleading guilty. Their Lordships would rever consider manded a triat. In so during, he only demanded his right. The demand for a trial was no new offence, गor any aggravation of the
former one. But when prisoners, on mature cousideration, and not acling without the advice of their friends and elatives, thought at
right to submit themselves to the law without such a trial, uring to call their Lordships' attention to this fact, as showing their contrite spirit, and doing ali that lies in their power to
atone fur the offence of wish they had been guilty. The prinipal motive weighing ou the minds of those men was one which It was their clesire to be of such service as they could be to their and in reppect to that unhappy person, he might be allowed to call their Lordships' attention to the character he had recelved,
as showing the station and respectability from which he thad
sin fallen. The same remark applied to those who now stond at the required it. They all belonged to respectable familici- Afcw
months ago they might hold up their heads with the proadest in montand, because they were innocent-men acting according to What was right, and walking within the
From that state their tordscinips saw into what an abyes they had fallen. They were now felons-stigmatised by the name the
most reproachful known to the law; their property was forfeited, and more than that, with regard to two of them, they had
received already severe punishment in the shape of gun-shot wounds, which it was not to be presumed would be without its
weight with the Court, for from that no human power bad the means of relieving them. Their Lordships wour, he wainsire towards which was at that monent working in their minds, and therefore he made no apology for laying these facts before them.
John Hughes, who was convicted on Saturday, having beell laced witil the other prisoners at the bar, - Mr. Baron Gurney of a felon \(y\)-and a felony of a very aggravated descriphtur,
They had banded and associated themselves with others - they they had armed themsclves with deadly weapous, and had
proved that they were not indisposed to use them, This rre-
pared, they hau proceeded to the demolition of a trapikc-gate, and sueh numbers as to overwheim all resistance on the part. of terrupted in their purpose by magistrates and peace-oficers, nang
then they made use rif the fire-arms with which they had equipyed
themselves-thus setting the law at defiance, and disturbing the peace of the country, all these circumstances, he said, were
icry arcat aggravation. Until of late, sueh, crimes were of
and very unfrequent occurrence in this country. The interruption
they had reeeived would, perhaps, prevent the repetition of the crime in this county; but it was impossible for the Court to be
ignorant that in neighbourng counties the pcrpetration of such crimes continued to this day, It was alisolutely necessary that
the law should be enforced-that the peace of thee conntry should
be preserved--that good order should be restored. Ia the course that had been taken by the Crown undoubtedly everything had
been done to give to justice its fullest effect. The prisoners had
teen

\section*{Hughes Ganly, and the pusoritis Davia Jones and Soln H1urlh} and the learned Counsel, in his addrese to the Court, had
very properly mpressed upon it the contrition which Jumes nad them insome measure to the mercy of the court. Thin crecomprhey, from toterectability which they had formeriy main taned, and the rank of life wbich they occupted, were persons
of whom it was particularly necessary that an example should be made to detcr otheis from a repeltion of thesis crime. They their lives; but considermg all that had been stated with respect to David Jones and John Hugh, the Court was of omnion that it about to pronounce, which was, that each of them should be ransported for the term of seven years. With respect to John
Hughes, the Court could not entertain the same view of nis case. He appeared to be ore in a station or sion ret proved to be a lea ter, if not the leader of this law jess mutntude. demunstrated, at least, that he was a lcader-that he was active in collecting athercuts and associates, and that shmething hike in jounisg his illegal churses. He had been recommended by the
Jury to the mercy of the Court. The Court felt extreme dificulty in any degrce lessening the punishment which the law awarded for life, and, giving all consideration to the recommendation of the Jury, and to all the circumstances which had been so ably
stated by the Learned Counsel for the prisoner, the Court was of opmon that he be transpored leyond the seas fir the term of mons must xecommend thenselves to the grace andinerey on the
Crown; but that mery could not be expectel if offences of this hind were repeated, and the peace of the country were not fully
restored. He had now discharged a most painful duty, and he and trust that the mercy of the Crown, as well as the pumsul all who might be disposed to associate themselves together for the purpose of committug offences against the law.-In the case of the other prisoners, the Attorney-General said he would not
proced against Lewis Davies, Duvid Lrwis, and the Morgan procecd against hewis
famely, althought, as three of the latter hat ressisted the Iaw, their
offence must be marked by some sentence to mark the displeasure of the Court. Mr. Baron Gurney tien, addesshug the prisunerb, said that they had been convicted, on their own conession, of
having assauited a constable in the execution of his duty. It was
most important that onticens in the exccution of ther duty
should reccise the protcetron of the Ci urt, and the resitanee of them and assault upon them undcr such circumatances was a and he had no doubt thed, the life of the officer was in danger, defence, discharged a pistol, his life would have heen sacrificed, and that all the prisoners would have had to answer for the death. He ouscerved that the Atherney- (icneral had forborne to hress aganst them for any undictment chargine them withe the must be made, particululy when entorncy ficucral, an exaniple
 be imprisc,ied for six momthe, and Rees and Jolln Morgan for
tweive months. The learned Judge further observed that the Court had received information respecting the goodness of thei reason why he had not considered it, necessary to sentence them to hard labour also.

SATURDAY, NOVEMBER 11, 1843.

\section*{ \\ Tueday, Nove 7 , intanitial}

There is not a few good people in this world who cannot discover that they form part of a husy restless
crowd, sometimes advancing, sometimes receding, but in general rushing onwards with a force that actually leaves many old landmarks behind it and threatens. in this age of discovery, to vanish altogether from the view of the ancient columns and monuments of learnstream of travellers-dreaming by the wayside, they eventually fall into the rear, and, when they awaken from their slumbers, are surprised to find themselves alone

Garleners possess no exemption from this general lot of humanity. How many of them do we see sinking into neglect, and ending their days in poverty; comlamenting the pood old times, and wondering how it comes to pass that they, who once were shining lights to their craft, are no longer thought of or esteemed. they cannot discover that they have been standing although their light is as bright as ever, objects are too far distant for it to illuminate them

Some recent circumstances have brought these reflections painfully to mind. Take, for instance, the Pine-grower. He was thought something of thirty
years ago who could make his Queens average 2 lbs., years ago who could make his Queens average 2 lbs ,
and a \(2 \frac{1}{3} \mathrm{lb}\). fruit was a prodigy. And all those men who continue to follow the same routine of cultivation, and obtain the same result, still fondly believe that they continue at the head of this branch of their profession. Then when they see in the rewspapers that heavier Pines are procured in this place and that, some of them the statements, while some cry out at the injury they occasion them. "Where are these Gardens of Bicton," says one, "in which Queens average above 5 ll l bs ?" He which would have told him that they are near Honiton, and belong to Lady Rolle; but he demands to know another, with the high-sounding signature of "Dunelmensis," "t that statements of this kind are calculated to do serious injury to gardeners, whose employers upon reading them become dissatisfied with only seeing fruit of between 2lbs. and 3lbs. weight, the usual size in the best-managed gardens here, and I believe in most Pine-growers years ago I visited some of the best many hundreds of Queens I then saw, found only one of 4 lbs, , very few above 3 lbs ., and \(I\) should say the proached for having allowed ourselves, as is alleged, to be hoaxed by certain statements made in 1841 regard ing huge Enville Pines at Thornfield, which "Dunelmensis" was assured-by whom?-by the people at Thornfield? not at all, but-by some fruiterer in Covent Garden, "was all moonshine, as there "wa
resuch a production in any part of the world.
These are the persons who lag behind, and are so the stream of discovery. Instead of endeavouring to equal those who are more successful themselves, they reproach us public journalists with not suppressing the instances of higher cultivation. They would have us do injustice to therising gardener for the sake of him Who is in the wane. Or at least, they say, we ought in dilsuch cases to run down to the places wheresuch prodigies of cultivation are said to exist, before we make the word to the public; as if we were bound to doubt or are known to us, for the sake of obliging those
whose capacity is not equal to the comprehension of the means by which great reaults are accomplishen. should strive to imitate it
Buld strive to imitate it.
But to the facts, which so many old fashioned Pinegrowers are pleased to doubt. The statements concerning Thornfield and Bicton rest on the authority of our correspondents: we have not seen them. It is of heavy Pines, or to go to France and appeal to the 12 lb . Cayennes of Versailles ; we have evidence as great as can be desired. We will just beg "Dunelmensis" and all doubters to refer to page 738, where
he will find that on the 17 th (1ct., 1843, a Queen Pine weighing six pounds four ounces avoirdupois, was exhibited before the Horticultural Society of London, by Mr. Murray, gardener to the Marquess of Bath, and to the proceedings of that same Society of day last, where two Queen Pines were again supplied from Lord Bath's Gardens, one of which weighed five pounds four ounces, and the latter five pounds nine ounces, And these were no long-staiked lealy with a forest of gills, and a crown, like the leaves of an
Artichoke, but clean, well-grown, beautiflly swelled fruit, with only two or three withered leaves at the base, as much stalk as was just sufficient to hold them by, and as small a crown as such fruit well could have The fact is that the old way of Pine-growing was wrong, as we have more than once asserted, and men vating that fruit, as we hope one day to show.
No subject in Vegetable Physiology is more interesting, both for theoretical and pracly reasons, than the power which seeds undoubtring their vitality for an apparently indefinite period. It is doubtless true that many of the statements on this subject, to be found in books, are apocryphal ; but certainly some are founded in fact, such as the famous case of the Raspberry-seed taken along with the coins of the Emperor Hadrian from an ancient barrow in Dorsel shire, the offspring of which is now to be seen in the Gardens of the Horticultural Society. None among the so-called instances of this excessive longevity have excited more doubt and discussion than called Mummy-Wheat; that is to say, Corn taken which has grown when sown. Every year produces cases of this sort about the harvest season, and even this season at least 20 specimens have been sent us of Wheat-ears, purporting to have had a mummial or pardon the word-a mummial origin; and strange to say, they have all proved to belong to the Esyptian to say, they hlé or de. Miracle, called by Botanists Tritinompore compore never, however, succeeded in satisfying ourselves that the Corn from which such \(W\) heat is said to have been produced was really taken from mummy-cases. There is always some defect in the evidence; as was the case with the Tynningham Wheat, mentioned in the Mark Lane Express of Oct. 9, 1842, which had been raised from seed said to have been produced in Egypt, from plants said to have grown from grains said to have been taken from a mummy-case. Now all such statements taken frotrue but there is no proof that they are so; may be true, but there is no proor taken from similar and when we are told that Onions tak impossible, we receptacles have also grown, which decisive evidence before we accord our belief in those prodigies. Nevertheless they may be true; because we have before us an instance, in the evidence concerning which werna no law whatever. We have had it onder to satisfy the months, and produce made about such things.
The history of this Wheat was given by Mr. Martin
Farquhar Tupper, a most exact and conscientious man in the Times of September, 1840 ; and to that gentle man we are indebted for the additional facts which we are now able to communicate.
Sir GardinerWilkinson,when in the Thebaid, opened ancient tomb (which had probably remained unvisited by man during the greater part of 3000 years), and from some alabaster sepulchral vases therein took with his own hands a quantity of Wheat and
Barley that had been there preserved. Portions of this grain Sir G. Wilkinson had given to Mr.' Petti grew, who presented Mr. Tupper with 12 grains of the venerable harvest. In 1840 Mr . Tupper sowed these 12 grains, and to show the care with which he pre served their identity we shall quote his own account of his proceedings thereupon. "I ordered," he says, "four gardenpots of well-sifted loam, and, not content with my gardener's care in sifting, I emptied each pot successively into an open newspaper and put the earth back again, morsel by morsel, with my own fingers. It is next to impossible that any other seed should have been there. I then (onithe 7th of March, 1840), planted my grains, three in each pot, at the angles of an equilateral triangle, so as to be sure of the spots where the sprouts would probably come up,
unseen lurking in the soil. Of the 12 one only germinated, the blade first becoming visible on April 22; the remaining 11, after long patience, I picked out again; and found in every instance that they were rotting in the earth, being eaten away by a number of minute white worms. My interesting plant of Wheat remained in the atmosphere of my usual sittingroom until change of place and air seemed necessary for its health, when I had it carefully transplanted to the open flower-bed, where it has prospered ever since. The first ear began to be developed on the 5 th of July; a second ear made its appearance, and both assumed a character somewhat different from all our known varieties. Their small size and weakness may, in one light, be regarded as collateral evidence of so great an age, for assuredly the energies of life would be but sluggish after having slept so long; however the season of the sowing-spring instead of autumn-will furnish another sufficient cause. The autu an 3 inches long, the former being much blighted, and the stalk about 3 feet in height.
"If, and I see no reason to disbelieve it," says Mr. Tupper, in conclusion, "if this plant of Wheat be indeed the product of a grain preserved since the time of the Pharaohs, we moderns may, within a little year, eat bread made of Corn which Joseph might have reasonably thought to store in his granaries, and almost literally snatch a meal from the kneadingtroughs of departing Israel."
Here we have no link lost in the chain of evidence. Sir Gardiner Wilkinson himself opened the tomb, and with his own hands emptied the alabaster vase; of its contents he gase a portion to Mr . Pettigrew, who gave it to Mr. Tupper, who himself sowed it, watched it, and reared it. What better proof can we require? Uriless it be alleged that the grains, after all, may have been changed somewhere on the road between the Thebaid and Mr. Tupper's garden. But, upon this point, Mr. Tupper expressly says, in a passage that we have not quoted, he sowed were brown and shrunk; which is a just description of some that we too have seen from Sir Gardiner Wilkinson, but which would not apply to any modern Wheat. They looked, indeed, as if they had been scorched

But there are other proofs, less direct, but equally conclusive, as to the antiquity of the seed sown by Mr. Tupper. Out of twelve grains one only grew; that one produced but two ears-small, blighted at the base, and yielding altogether only 27 grains. Mr. Tupper has favoured us with a draw ing of one of them. But in 1841, the second year, when the Wheat was recovering its constitutional vigour, the ears were perfect, and the renovation being complete, some the renovation being complete, some of the ears measure Mr. Tupper ob-
length. This, as Mr serves corobates the idea of a reawakening from so long a sleep, as if the Wheat had been gradually returning to its pristine vigour. One of these ears of 1812 is now before us , and is so like a good sample of Colonel Le Couteur's Bellevue Talavera, that even the experienced eye of that gentleman is unable to detect a ; difference. It proved a most abundant bearer: 18 grains in Mr . Mitchell's Nursery Garden, Brighton. having produced 625 ears, which Mr. Hallett of Brighton considers to have contained on an average 55 have contanne this (685, multiplied by 55, divided by 18) gives a productiveness equal to
and ninety-three the quality of this Wheat we do not wish to concern ourselves just now. The important question is, what were the circumstances which preserved Wil growing power from the days of the Ph For if that can be ascertained, a light will necessarily be thrown upon the very important art of preserving seeds artificially. To us it appears Mummy-Wheat in that we must ascribe the result the first year of its entirely to the DRYNEsS of the air we believe that drymes will have been the true cause of similar results in we long since arrived. ("Theory of Horticulture," pp. 79 and 189). Daily experience confirms our opinion; and reasoning, in the absence of experience, would almost have led to it. Decomposition, which in seeds is the cause of death, can only occur in a damp atmosphere; therefore to keep off a damp atmosphere is to
prevent decomposition, and consequently to arrest the \(\mid\) circulation. A rejection of the ordinary mode of repeated approach of death. Aud yet how little is this shifts is here decisive of the applicability of small growth regarded by persons interested in such matrers. In a damp countiy like England no precaution should be neglected to ventilate, at least seed-rooms, if not seeds themselves. And yet what is the practice? The seedsmen pack them in large sacks or huge casks, in close ill-ventilated granaries; and gardeners place them in drawers or bags in the damp and miserable sheds with which some masters so thoughtlessly provide them ; farmers in damp larns or outhouses. What can possibly happen with such management except the speedy destruction of vitality, especially when we know how badly our home-grown seeds are in almost all seasons ripened, und how much free moisture they necessarily contain. What wonder that French seeds, ripened in a dry climate and preserved in dry buildings, should often be found so much better than English seed? Our climate offers so many impediments to the preservation of seeds that we cannot Mr. Tupper's Pharaonic Wheat will have the effect of Murning those whom these observations may concern turning those whom these
to wiser and better ways.

A COMMENTARY ON CERTAIN PASSAGES IN THE PHYSIOLOGICAL WRITINGS OF THE LATE ANDREW THOMAS KNIGHT.

\section*{BY W. WOOD.}

Transactions, vol. iv.
Remarks.-This paper bespeaks an advance in the principles of cultivation, and tends to illustrate the firs principles of Horticulture. There is the application of higher agencies, which, in some measure, may be regarded as a new power, subservient to the highest possible effects
in celtivation; and, in the "chopped green turf, is given in celtivation; and, in the "chopped green turf, is given a texture and mechanical arrangement, adapted
power of the agency applied, and the attainment considered a full ill of moisture." This paper may also be considered a full illustration of the following opinion given at p. 112 of Paxton's Magazine, viz.:- Atmosplieric power of rbsorption to which plants are exposed, \&c." There are also valuable inferences to be drawn from the use of chopped turf, as a "substratum" or drainage ; perhaps a perfect system of cultivation will include the complete subserviency of the mechanical to the assimito.
tive process in the economy of vegetation. The safe "removal of plants from one pot to another, without loss of roots." appears to be a dim recognition of that "Prin ciple of Horticulture" by which an accumulative system of cultivation must either stand or fall, viz., that "for the maintenance of a plant in health, it is indispensable that uninterrupted " (Principles, 32). Here it may be observed that untilit can be proved that the removal of plants from, one pot to another does, in no wise, affect them injuriously under the same circumstances, the principle now quoted must for ever decide the question of expediency. The removal of plants without loss of roots is certainly desirable; but the question again recurs-Can they be removed at all without sustaining a loss of that functional power, by the continued uniform reciprocal action of which the "suppry of fuid by the roots" can alone "be continuous and uninterrupted ? ?s Every hour's experience denies the possibility of this.
No. V.-On the Cultivation of the Cociscomb. object in view. A single flower-stapple, laving a similar requisite, the protrusion of which should be retarded as long as possible, consistently with the rapid growth of the plants. Compost, nutritive as possible, and stimulatory of unfermented horse-dung, fresh, burnt turf, decayed leaves. Two parts green turf, the latter being in lumps for escape of water (uniform circulation) and the air to enter. Plants put very young (small) into pots 4 inches enter. Plants put very young (small) into pots 4 inches
diameter and 3 inches deep; as soon as the roots had diameter and 3 inches deep; as soon as the roots had ferred to pots of a foot in diameter and 9 inches deep. Particular attention paid to the roots, having reason to
think that the compression of them in the pot has think that the compression of them in the pot has under all circumstances, a tendency to accelerate the and strong before they manifested a disposition to blossom. Plants placed within a few inches of the glass, and subject to similar heat as the Pine-apple plants." -Hort.

\section*{FORCING THE NEAPOLITAN VIOLET} The subject will divide itself under the following he - Propagation of Plants; Cultivation or Preparation of Management.
1.-Propagation of Plants.-Some cultivators obtain their forcing-plants from the old forced plants of the previous season; this is not the best plan, as the plants have jointed runners. My plan is this apt to produce longpit or frame for forcing, I plant the remainder which are runners for the succeeding year. In the end to providing old tan is riddled through them. middle of May, the runners have so luxuriated that they are fit for removing to prepared beds, to undergo the culrequisite in an open and warm part of the kitchen-garden ; the beds receive a good dressing of equal parts heathblended with the bed. 0 , the process, as my object is to obtain an early, stout, and firm plant, but not a gross one. The plants are set out kept apart each way, and throughout the summer are kept free of weeds and runaers, and freely watered through August I suffer them to become rather dry, which induce sort of rest, and enables the plant to concentrate it energies for the production of blosson; this temporary importance, as the flants lusuriance I find of considerable well to the as the plants by this time, if they have taken a to the soin, are generally somewhat rampant, and, as ang-jointed runners; now there is no great harm, so far if their pride be timely arrested.
for the cultivation above described be systematically pursued, the plants will be fit to remove to their winte quarters by the middle of September
The grand desideratum now is pit or frame with Most Most cultivators think they have done ample justice to this lovely winter-flower when they have planted them on the remains of an old Melon-bed, afterwards depending in my opinion, is mistaking in hot linings; this, however, capacities of the plant. The plant it is well known, is impatient of confined damps, and would rather be on an old hedge-back than in the finest pit extant; now, if the plants are grown late, and the ladies require them in attempt at forcing them, which I most strenuously repudiate. 1 merely contend that by an early application of conjunction with ghe part of september and October, in little necessity for hot linings, or, in fact, for any renerpal of artificial beat ; the only remaining points being to keep out the frost-give air most freely-and shut up warm en when sunshine occurs. However, to the point bottom-heat ; and I have no doubts whatever on my ming that we are not merely on the eve of a revolution in these things, but actually at the day-spring itself. The bottom heat I advise is 70 to 80 degs, as near as may be and this can be ensured steadily, or rather slowily declining for a month or six weeks, all is right.
aches apart each way, and sin the pit, or bed, about nine balls of earth. My plan of planting is this :- After securing the necessary bottom-heat, I place a layer of ald rotten hotbed-manure, three inches thick, on the fermenting matter ; the surface of this last is brought to within early pes of the lights back and front, and of course manure, and filled up as the planter proceeds, with the following compost, pressed firmly around the plants:-

\section*{Strong maidi
Old leaf- soil
Rotten horse \\ Rotten horse aric}

Immediately they are finished I give them three or four in fact, all wings with tepid water, in rapid successionabout the middle of October; after which period they never receive a drop until the beginning of February they The aubsequent management now proceeds entirely on the habits of the plant, viz, impatience of frost and hmidity of atmosphere, to which I might add an equal although I am of opinion that a small hot-water pipes, the pit would be of advantage occasionally if the fire were worked with much catition and with a continual
The routine of business plant.
up well at night with mats, and in severer is to cover and straw besides, and to be equally particular to get a
circulation of dry air on every little occasion, never letting an opportunity slip
The plant is naturally fond of a soil somewhat rich and for this reason I place the balls immediately in as I suppose, rather absorbent of atmospheric moisture, I use a considerable portion of heath-soil in the frame mixture, and I find that theory and practice perfectly it keeps dry, and I believe acts also in some degree as an antiseptic
Violets are generally much annoyed with slugs, which deface the flowers. When such is the case I sprinkle the dry state, and when the plants are perfectly dry : this is with me an infalible preventive. I love grown Viole!s room for improvement winter I can find some slight follow the principles here laid dowever, who strictly Violets from the end of October to the end of A pril. Violets from the end of October to the end of A pril.-
Robert Errington, Oulton Park.

\section*{ON THE ATMOSPHERE OF HOTHOUSES.}

Axthough I may have incidentally verged into the subject of bottom-heat, I may be excused, inasmuch as it is intimately blended with my general topic, in the tank aystem, for that process is made to affect both soil and variosphere at once. It would be endless to notice the to settle the chaims of contending parties for originality of conception and superiority of detail. Two lessons from the great school of nature will suffice to guicle us in the tlicir proper application. First, the temperature of the formity, except at the chmates, varies little in unisecond, the atmospberic temperature varies considerably being colder by night than it is by day. If we wish there fore to follow nature, which is undoubtediy our truest should be separately under our full control. There can be no doubt that this difference of soil and atmospheric emperature may to a certain extent be effected in tif or dinary tank system, by confining a portion of the sun' enat by day; but in order to possess full power over the ary. For this anpose, another arrangement is necessary. For this pmpose, instead of using a simple boiler
nith one fow and ouc betwone, it is made conpound or double, with two pipes ot cach sort.* One set of these or double, wines of tach sort.* One set of these seannected with the tanks in the ordinary way, for boltomheat; white the other is united with water-phpes to give the bpiseric temperature. Bolh flow-pipes, atter leaving he boiter, are furnished with throttle valves, by which water-pipes mench tank and this means a can be permitted or withheld at pleasure; by this meth the can be regulated to the nicety of a degree. This is probably the most complete apparatus for heating a hothouse equiring bottom-heat which can be employed.
Light.-Under this head I shall be very brief. When one considers the intense flow of light many of our tender plants must receive in their native regions, and that the ghvo covering of our hothouses always, under the most reachinge circumstances, throws off a portion of the light as ling its surface, the necessity for constructing these as lightsome as possible must be apparent. MM. Bouguer, nearert, and olhers, determined by experiment that the nearer the perpendicular ight falls on the surface of thas positiore hat light passes tarough. The sun alters its position least in the same time when on the meridian, or rather about it, that is, about noon. Moreover plants require most light when in the igour of their growth These three facts combined will lead us to the proper slope of a house for plants we are cultivating, giving it an inchation at right angles to the suns rays at noon at that season of the year we wish for mo
formula will, for this angle, be-
The latitude of the place \(=\begin{aligned} & \text { sun's declination of same namc. } \\ & \text { sun's declination of different name }\end{aligned}\)
Thus, if we take London as an examople, whose latitude is \(51^{\circ} 31 \mathrm{~N}\). ; and if a slope is required for the greatest ligh \(23^{\circ} 29^{\prime}\) N., which is subtructed from the at that time is \(23^{\circ} 2 \mathrm{~N}^{\prime}\)., which is subtracted from the latitude \(51^{\circ} 31^{\prime} \mathrm{N}\),
both being of one name North, and leaves \(28^{\circ} 2^{\prime}\) bs the angle or slope of the roof with the horizontal, for a midsummer house at the latitude of London. This is rather ifht roof I acknowledge, and not so easily kept properly executed, as I hat \(30^{\circ}\) will do very well when of my own. In steeper slopes than the above there are two periods in the year when the greatest amount of light is admitted by them. If we take a slope of \(450-\) whin's is, in fact, a very common one for Vineries--the
sund equally and with greatest freedom about the 7th of April and 7th of September, periods which may be taken advantage of accordingly. Curvilineal roofs have been constructed for the purpose of opposing at all times and and at the same time, being of iron, to present as listle opaque surface as possible. For conservatories these are umpur of bath fogance of appance, and a regular supply of light at all seasons of the year; but it is evident can do, at a give so full a flood of light as straight roofs and o, articular season, when that may be desirable; and in they mil ever supersede Having said thus much on the south slope proper for the * I perceive I am anticipated in Burbidge and Healy's plan, if
date \(21 s t\) October. See advertisement in Chronicle.
admission of the greatest amount of light, another fact must be attended to in the construction of plant-houses, and that is the familiar one of plants always growing towards the strongest light. If the light, theretore, isly admitted only in one direction, the plants whin in of
shoot out in that direction, and it is ouly by a process of continual turning and tging that they can be kept erect. In steep-roofed greenhouses this is particularly the case, but in those more flat it is much less so, for most light being admitted through the glass perpendicularly, the plants advance to meet it perpendicular to the glass. To obviate as much as possible this tendency, ther light ought to be admitted from all aspects of the sky. The foregoing remarks all apply to houses for plants which naturally grow exposed to the full influence of the sun: for such as delight in the

\section*{(To be continued.)}

AMATEUR'S GARDEN.-No. XLV
A FRW weeks back, when pointing out some of the greatest defects in garden scenery, I enumerated borders
deficient in soil as one of them, and I would now add deficient in soil as one of them, and I would now ada
another defect, viz, indiscriminate mixture of shrubs, another defect, viz, indiscriminate mixture of she least
trees, and herbaceous plants. There is not the le objection to allowing the Aconite, the Snowdrop, or Crocus to peep from beneath the branches of slarubs, so long as they appear to have sprung up naturally, but there is great objection to surrounding a noble shrub wance. In
ground, so as to impart to it an artificial appearance. the scenery of a pleasure garden the object of the culti Vator should be to have everything as well grown as possible, and to allow each plant to assume its most hatural form. To attain this the plant must se preas and therefore it is not only wrong but posilively injurious to shrubs or trees to allow them to be crowded with herbaceous plants. For the first two or three years after among them for the sake of covering the ground ; but afte the shrubs have attained any size, a very different course should be pursued. Then the ground should be turfed up close to the shrubs, and beds for the cultivation of flowering plants be formed in such places along the I offer these is most suitable for heir com the convictio that the Amateur more frequently fails in the cultivation of his pet plants from this indiscriminate mixture than from any other cause, because the roots of the shrubs rob the other plants of their nutrineent, and therefore it is earnestly imat they can flourish. I woula, ecessity of thinning out the trees and shrubs where they are at all single specimen, allow each plant to become an to the shrubs and cultivate his herbaceous plants in beds by themselves. In this manner he can give both classes of plants the treatment most suitable to them, which it is impossible to do when they are mixed in the same bed. Shrubs and trees are also much injured by annuaily digremarks next week.
With greenhouse plants and plants in pits or frames, the principal care for the next two months will be to keep suffering for the want of water. Nothing is more injurious to plants at this season than to allow them to be infested dormantsts or decaying leaves, because, as they are in a blood of the plant, and therefore must be attended with injury. Every decayed leaf should be removed directly it perceived, as should also every speck of mildew or moss scriptions will now require very little water, but they cannot have too much air in fine weather.
The bloom of Rhododendrons and Azaleas is likely to be a failure in many places next spring, and therefore where it is desired to remove large plants, this will be a good season to do so, as they will not sustain so severe a Erooklands.

\section*{HIOME CORRESPONDENCE}

Large Pines.-Observing at page 773 a correspondent signing himself "Doumhuil," and another, doubting the Queprecy of my statement respecting the weights of four regret having omitted sending the dimevsions, \&\&c. of each fruit. I now beg to forward it, and at the same time to
 hidin anonymous correspondents will come out of their I will endeavour to answer their questions and remove their doubts ; but I decline altogether replying to anonymous doubters. I have myself been in practice under country and in the north. have visited many Pine in this establishments, and have read much concerting Pine culture, but the method here practised is altogether different "Gardener's Magazine" before seen or heard of. The there to be published very soon, and I suspect it will cause more consternation among the Pine cultivators,
through its simplicity"and certain success, than the weight Bicton Gardens, 6th Nov., 1843.
Rosa Havdii, I should be glad to know the real hisRosa frais ing or phe if in thation of the ance of hybrid plants. In certain tribes the male type is very strongly developed in the progeny, but there are others on which I have been able to form no decided opinions. As soon as I saw the notice of Rosa Hardii in Paxton, for October, 1 became very desirous to know are of the history of a hybrid in which the the the parents was so remarkably predominant ; the berifolia and R. involucrata, was about as unsatisfactory and indefinite as could well be imagined. In the first place, it took no notice of the relative sexes of the reputed parents; and, in the second, it does not present
the smallest resemblance to R. involucrata. I accordinghy searched further, and in "Gore"s Rose Fanciers" Manval," 1838, I found "Rosa Hardii berberifolia obtained this year, by the accidental impregnation of that remarkable plant, the Rosa simplicifina, or R. monophylia (Lowea berberifolia, Lindl.), by R. microphylia growing near it. Now this was a much more probable pedigree for the plant if the leaves only were to be
considered, but when I observe that the flower is of considered, but when I observe that the flower iq ostion arises, how can this be-how can a mixture of a pink Rose with a yellow one produce another yellow without a trace of pink in it? Besides, there is another difficula in the way; berberifolia is a single Rose, microphyolen produced by the hundreds of anthers of the fiower produc ing the seed, should have failed to effect that which is
reputed to have been done by the scanty pollen of the reputed to have been done by the scanty pollen of
other? Persons who pay attention to the raising of hybrids well know the great care required to prevent any portion of the pollen of the femate pant from touching the stigma, because they have found by experience that general the contact of the smallest portion of the prope pollen renders all their attempts abortive. All that ap pears certain about the plant in quest an clined from seed of R. berberifolia; at all, but merely seminal variety; at the same time, I should like to kno if there is any other account of it than those I have men tioned, because, bybrid or not, it is doubtless a very re-
markable plant-J. C.B. [We have always understood that one of its parents was R. clinophylla.
Protection for Plants.-I had raised since the middle of last July, in the open air, on Mr. Catleuga's plan, several hundred Pelargoniums, which were exposed in pots Octob severe frosty nights occurring in the miadface of the earth in every pot, were stiffly frozen, and in the hollow of many of the leaves were thick globules of ice. The whole were left unshaded from the sunssine which succeeded, and syringing with cold water was not resorted on many of the plants severai or he leaves peri. Had the cuttings been struck and reared under glass, probably about a dozen only would, under the above circumstances, have survived. This leads to the notice of an excellent article in "Paxton's Magazine of Botany," for the present monti, on "Economy in Floriculture," recommending external coverings for greenhouses, during severe frost, in preference to fire- heat. Nevertheless, so nometer shall retain from \(30^{\circ}\) nearly to zero, the ready hights in the open air, from which fire-heat affords will be commonly employed. Coverings can only retain heat they cannot supply it; hence the universal adoption of some means affording a source of warme source found at a fee feem the of the earth, could be successfully taken advantage of for the preservation of vegetable life, by means of a platiorm made to slide up and down in a pit, under a glass frame kept thickly covered in severe nights. The day, and seeffected by proximity to the glass during the day, and security from
Blackberry Jelly.-- In the receipt for Blackberry Jelly I ought to have said to every pint of juice add 1 lb . o loat-sugar. The stewed fruit, after the juice is drained off, is to be thrown away; and in ickshire
reduced to jelly.-G. Warw.,
Asclepias curassavica.-This plant is now in flower in my garden. It was put out early in the summer, and my place is one of the most exposed in the island. and entirel destroyed a magnificent Gourd plant, grown from seed sent by Colonel Stoddart from Bokhara. I write this, in consequence of reading in a late Number of the Chronicle that it is thought the plant cannot grow elsewhere than in a stove. The Mahernia incisa and Gesneria elegan have both flowered in the open ground ing some young plants from usualy seed of the Tacsonia pinnatistipula, apparently hybridised by the P. Buonapariii; no fruit save those impregnated matured the
Forest Pruning.-"Quercus," in your Chronicle now before me, states, "My only fear is, and my only reason for writing this, is to caution planters against carrying the practice too far by continuing it after it should be entirely hid ar for there is a mistaken tendency that way far to continuing uninterruptedly since 1814 by Dr. Thackeray,
or depith what sticcess? Come and examine for yoursel or depute some one on whom you can rely, who wil report to you the condition of his woods, and 1 have no doubt confirm the report of your two correspondents, "Humphreys" and "R. S. L.o" (Scott Russel of Edin burgh) a man well known in the scientific world. Yo are also aware that the Doctor managed, from the yea 1804, Mr. Wilson Jones's pluntations in the same manner till that gentleman came of age. Dr. T. is pursuing the same system at this moment, and will have a number of hands so engaged the greater part or the winter-that is , in pruning hedgerow trees, and in thinning and prubing his plantations. Can Quercus point out single acre of wood thus treated, in any part of the king dom during a period of 20 years, failure? Recollect this land ony cost the Doctor one pound per acre, and by the falling of the reaves there is a tolerable heruage in many places, and the mountains an around afford only a miserable pasture to the Welch sheep, -Cymro. (Nemo sibi vivat). [If we did not know from the best private authority that Dr. Thackeray plantations are all that they are described to be, we should believe it, when we have the assertions of so many respectable correspondents in confirmation of 1. . But we do not attrioute their state to the pruning so muab the care otherwise bestowed on the trees, and to Dr. T.'s general skxiu. We do not meanto say taat nifo genle pruning has done any harm; probably it has done good moderate pruning by prudent and skiful persons is usetul but it is because foresters are so often nether the one nor the other that we have urged a discontinuance of the knife and axe. However this matter cannot be discussed in a corner ; we shall very soon return to it formally.]
Pruning.-I have observed in several of your late Numbers articles on the old controverted subject of pruning forest-trees. Throughout them all is the erro neous notion that to reduce the head of a tree proportion ately augments its stem; and it is this general mistake or error I have endeavoured to combat ever siace I look of the subject. The first article I allude to is an outline of "G. Cree's" system of pruning, based on physiologica principles, given at p. 69\%. I cannot enter on a physiologitradictory as it is argued \({ }^{66}\) that when the lateral branches are shortened, \&c., the sap has less surface to cover the when allowed to extend to an improper length and thickness." Against this I beg to quote th length and thickness."gainst this I beg to quote the orlowing statem roots should be continued that the supply of terrupted. 2 d . The rootlest laf at a branch of a lufty tre must assist in setting in action the absorbing power of the roots, at whatever aisence from the other organs thes roots ict if mot maintaine rothont in the the without inte plant will suffe during the perlo of vegetation, the plant will suff consider to consider to be sounder Physiology than M. Cree s. have argued for kainterupted redp \({ }^{6}\) to protrgct or sus pruning forest-trees certainly tends to protra in proporpend the reciprocal action "(Wood.) Mr. Cree in a tion inpairs theis vital energy. ( \(I\) mistake not, recommended mended, and sain sure no such practice could onest tier of brinciples, if the object sow in accelerated growth of timber. I object sought was a statements of your correspondent
"Pro Bono Publico" and beg to assure him that I am Pro Bono Publico, and beg to ast as either himself, H. Humphreys, or Dr. Thackeray, and that too H. Humphreys, or Dr. Nackeray, and the ornament of for the good But I contend that these objects, howcountry. in themselves, will never be promoted patriotic in themselves, will never be promoted any system on the majority of those who lant, plant for posterity; but posterity will have but little reason to thank the pruner for his operations where these have been carricd to any extent. "Pro Bono Publico" calls on me to point out plantations of the same age, extent, and elevation as iquite believe all that las necessary to the arge and elevation; and been reported of their correspondent in his concluding quite agree with your annot concur in the opinion sentence. At the sat in that the bealth and bear of ing, but to other causes. I butable to any system of prumg objection to a little knife have before said trees are quite younte pruning, judiciously ap, will in exact proportion in but to cariy it funtrate the design it is which it is applied, certalisy fustratuvian times no one intended to promote. Since anteda continued system of lives long enough lo see fit atain the stature of siants: but prusing thil the subju for tree ever at attined al i ventare to say size, or had its growth of stem accelos curtaiment of its branches, was effected. As Po Bo to plantations of cer with those at Nerquis, extent of plantation, great or anb, at any elevation-40 or 50 years old, that has been sabe pruning, that would ther thine are unobjectionable able without it? Ifeating. -I n the "Calendar" of last week, Mr. Beaton after describing Mr. Haycroft's mode of combining flueheat and water-pipes from the same fire in the Doncraile Pinery, proceeds to quote a passage from one of Mr . Ainger's papers condemning that sort of arrangement.
Mr . B. then concludes that Mr. Ainger's theory is refuted by Mr. Haycroft's experiment, and he draws some genera inferences in disparagement of science as opposed to prac tice, I do not quite understand the nature of Mr. Beaton' had disapproved, the latter must of necessity be wrong Mr. Beaton gives both parties an exceedingly high charac ter, one most justly for science, and the other for skill. I am of opinion that the science which is not good in prac tice is worth very little; and, on the other hand, I have little faith in the first report of experiments which seem to contradict fairly-deduced principles. We have had too many instances of wonderful rumours to place much reliance upon a first, or even a fiftieth, report. About three years ago it will be recollected that Mr. Penn's system of stated in was makin a great sensation, and was positively results : numerous quarters to have produced unheard-of that your while that fever was at its and yourself, and, 1 think, Mr. Ainger also, denounced it oblivion. the use of small pipes, which were at that time generall recommended on account of their becoming quickly heated. Now, instead of small pipes we have tanks-tons of water instead of ounces. Lastly, I think that Mr Ainger advocated a greater attention to soil-heating; and this seems to be the direction which practice is taking. more to be appears to me that general principles are how...i this may be, I regret to see science and ;-but er ce opposed to each other in an unfriendly manner.- \(X\). subject. He war correspondent for calling attention to this intention to resume the subject of heating, with reference to some of the modern propositions.] object of ens been an autumn months it is visited almost daily the summer and various localities, and scarcely any strangers from from tance, who may have occasion to come within an ordinary the finny inhabitants of this aquatic priso of visiting description of it, I presume, may be interesting to many
basin, hewn out of the solid rock, 30 ft . deep by 160 ft . in bottom; it contains a depth of 10 feet of water the the fide, and communicates with the sea by one of those precipitous natural tunnels so common on this bold and escape of the fish. The rock around the basin is surmounted by a substantial stone wall, for the better shelte vated in 1800 -the object of it was to have a supply of the finest fisl on the shortest possible notice, and at any stat wind or tide, when no boat dared to venture on the ior quity to those fished frogulary fed, are of a supe to the pond is a neat gothic cottage for the accommodafinn of the fisherman, who supplies the proprietor with the pond with those that may be little injured in their tracted verbation from a note under the article Logan in the "Topographi"From the inner or back door of the Iodge a winding tair-way conducts you to the usual halting-place-a large flat stone projecting into the water, and commanding a of every part of the aquatic prison. When the tide is out this stone is left completely dry; and here a stranger perceives with surprise a hundred mouths simultaneously
opened to greet his arrival. Fish, in fact, hear as well see; and the moment the fisherman crosses the threshane pond is agitated by the action of some hundred ins, and other confusion and anarchy. Darting from this, that, and the other mon centre-elevatuan move, as it were, to a comjostle one another with such violenca, that, on tails--and they actually seem to be mencince, that, on a first view, fisherman, instead of the creel-full of limpets he carries Mromy of the fish are so tame that they will feed greedily you are foolish and bite your fingers into the bargain, if be the prevailing species of fish in this pond, but there are also blochin or glassin, haddocks, flounders, and various other k
shire.

Fuchsia.-The large Fuchsia in the flower-garden here, of which a report appeared in the Chronicle of Aug. 12, is of the Macrostemon species, this being then omitted.-G
Williamson, Logan IIouse, Wigtonshire.

strikes readhy from cuttings. The prome strikes rcaday from cuttings. The plant appears to be buennial.
It produccd an uprignt stem, scarcely branched for about a foot
und a halt but which terminate in a large, much-branched panicle two or three feet high. The branches, as well as the stem, are rounded. The sliaped. The petals are long and stender, with usualty and lancebracteas or small leaves below the calyx, and it has gracefully
droopung fowers, two or three inches long. The corolla of a deep purphish blue black, and is funnel.shaped, dilated a little
upwards. The segments are about half the lenth and almost The segments are about half the length of the corolla, a little below the middle of the tubc, and the filament are inserted and rather Iunger than the tube.-Curtes's Butanical Magazaine.

\section*{MISCELLANEOUS}

McNab Testimonial. - At a meeting, held in July last, of gentlemen interested in the promotion of botany William culure, it was unanimously agreed, that to Mr. William M'Nab, the distinguished curator of the Edinburgh Royal Botanic Garden, this country is especially indebted for the exano progres which it has made in the science and practice of gardening. It was therefore proposed that a fund should be raised, by general suba testimonal of gratitude for respect for his very estimable valuable services, and of cheer himself in his declinng years, and excite others to pursue the same honourable path which he has trod. We say, that if there is any man to whom such ; but we must should be paid, Mr. M'Nab is that person. We see by the circulars that about \(250 \%\). are already subscribed, and among the names we find those of Sir George Mackenzie, Profrs. Traill, Dunbar, Graham, Lindley, Christison, BaIfour, Forbes, Jameson, and Fleming; Dr, Nell, Sir Jas. Libson-Craig, Sir W. Hooker, Mrs. Lawrence, and the of gardeners and journeymen.

Popular Cycloperdia.of Natural Science. Animal Physiology. Parts I. and II. By Dr. Carpenter. 12 mo . We recommend this treatise to general notice, as forming an excellent popular introduction to a very important and interesting brancls of science. The subject is one in which Dr. Carpenter has distinguished himserf in ar armal his clevertinc way, and thercher is pecuitics may say that his clever and popular style of writing. Critics may say that there is in adding another to the numerous works already existing on Animal Physiology; but in our view the pubexisting on Animal Physiology, ination nation. The important question for the gencral reader conraine answered is, whether her wist whe work question is correct, and user be answered in the affirmative. The conquestion may be answered in the affirmative. The cononerations of anime are perfor anis are performed; a general view of the animal kingdom : of digenation of the nature and so blood and its circulationgestion and absen, then, and of the siogular phenomena respiration. Then is described the manaer in which the bodies of animals are gradually formed, the sources and nature of tem, sensation, motion, voice, instinct, intelligence, and rem, sensation, motion, voice, instinct, inteligence, and
reproduction. The pages are amply illustrated with good wood-cuts.
By
rep indicating the way in which Dr. Carpenter
By way of indicating the way in which Dr. Carpenter
has treated his subject, let us take two passages, one from has treated his subject, let us take two passages, one from of beginning of the first part, the
"The general characters of living beings, and their chief distinction from inert matter, have been elsewhere explained ; and it will not be requiste, herefore, to do \(P_{\text {me }}\) man recapitulate them here. Living beings, whether panter or AnxMals, are distinguided form the inert kingd which is commonly said to form the Manerai Kingdom, by their peculiarities of sirucure and of action. we find two or more distinct parts or organs, adapted for different purposes ; thus, in the simple cel we have entire plant of Red Snow, or the Yeast Fungus, we have a containing noembrane which absorbs liquids and
gases from the surrounding elements,-a contained fluid of peculiar characters, formed out of these materials,and number of minute granulea hich in mineral matter germs of new cells. On the other hand, in miereral matter, the same structure and the same properties coay preval through a mass of any size. Hence the structure of living beings is said to be organised; Whilst that or iner mineral matter is said to be unong distinguished by their actions. Continual change seems an essential part of their oharg. Con the and character; aud the alterations they adergo are not the result of accidental circumstances, but the consequence oe heir own peculiar propertien, and the simple plant regularity. Thus if the life of one of the simple plants just mentioned be attentively watched, a sel of act ol will be observed, which may be enumerated briefiy as fol lows. The germ consists of a minute granule, in whic no distinction of parts can be observed; but this, by im bibing water and other materials, soon eniarges ; and distinction between the containing and contained parts, the cell-wall and the cavity of the cell, is speedily observed. The enlargement continues, until the full size of the individual is arrived at; and the fluid the cell contains is then observed to have a number of minute granules diffused through jt, which resemble the original germ. These granules are at last set free by the bursting of the parent cell, which now ceases to exist, or dies; and it progeny commence life for themselves, and go through the same series of actions as those performed by the parent These actions are termed funotions; and their number and variety correspond with the number of different organs existing in the structure. Thus in the simple beings thus adverted to, we can only distinguish two sets of opera-tions,- those by which the growth of the parent cen wa effected, and those by which the germs of a new generation were produced and set free. The former are termed functions of uutvition; and the latter, functions of eproduction.
- But it has been shown that, in the higher plants, a large number of distinct 'parts or organs may be ob served,-such as the root, stem, leaves, \&c.; and tha these parts have distinct uses in the economy of the plant. Thus the roots, besides fixing the plant in its position, absorb or suck up liquid from the soil around; and thi liquid usually contains, dissolved in it, some of the solid particles which the plant requires as the materials of it growth. The stem has for irs office to convey this liquid upwards to the leaves and flowers, where it may be ex posed to the air and light. One important function of the leaves is to get rid of a large quantity of this super fluous fluid, by the process termed exhalation ; whils these organs have also the power of absorbing adaitional fluid, if needed by the plant. Another function of the leaves, is that of taking in aa additional most importan element, carbon, from the air, by decomposing the carbonic acid it contains; and this being combined in the interior of their cells with part of the water taken in by the roots, forms the materials by which the tissues of the plant are nourished, and their growth provided for, and whence their peculiar products are supplied. Ye even these most important functions are performed, in the lighest plant, as in the lowest, by simple cells : for the leaf is but an assemblage of such cells, with a ramework or skeleton of harder tissue ; and the action of each cell is the same as that performed by the rest. Moreover when certain products,-sucli as oil, resin, starch, \&c.are separated from the juices that have been elaborated by the cells of the leaves, and are stored up in particular receptacles, these receptacles are themselves cells, the walls of which have the peculiar property of selecting from the juices the materials they are destined to contain.
"s Now all these actions in the plant are classed under the head of functions of oryanic life, being entirely concerned with the nutrition of the individual. But we have in animals another series of actions, by which that individual is connected in a peculiar manner wian worla around. All animals possess, in howeyer slight a degree a consciousness of what is going on around them;-that is, they are sensible to the impressions of external objects. And they all possess, though often to an almost imperceptible amount, the power of acting on objects around them, by spontaneous motion. These two fuactions, sensibility and the power of spontaneous motion,-being peculiar to animals, are called the functions of animal life; and they are sometimes called functions of relation from the peculiar connection they establish between the individual and the world around.
" It is scarcely possible to point to any actions better fitted to give an idea of the nature of instinct, laan those which are performed by various insects, when they deposit their eggs. These animuls will never behold their progeay ; and cannot acquire any notion from experience, therefore, of that which their eggs will produce; never theless they have the remarkable habit of placing, in the neighbourhood of each of these bodies, a supply of alimen filted for the nourishment of the larva that is to proceed from it; and this they do, even when they are theraselves living on food of an entirely different nature, such as would not be adapted for the larva. They cannot be guided in such actions by anything like reason; for the data on which alone they could reason correctly are wanting to them; so that they would be led to conclusions altogether erroneous if they were not prompted, by an unerring instinct, to adopt the means best adapted for the attainment of the required end.
"Of this kind of instinct, the Necrophorus, a kind of Beetie wot uncommon in our fields, offers a good example. When the female is about to lay her eggs, she seeks guadruped ; and having found one, she excavates beneath
it a hole of sufficient dimensions to contain the body, eggs in thradual case, so that the larve, when they come forth, find themselves in the midst of a supply of carrion, on which they feed, like their parents. This in.
stinct is still more remarkable, when an insect, whose diet is exble, prepares for its larva a supply Such is theod. with the Pornpi. lus, an insect al lied to the Wasp. In its perfect state it lives en juices on the but thers bat he larve are the morns; and we woter prorisur requiste sapply require, by placing nest by the side of the eggs, the body of apillar ha terpillar, she had previ ously killed by means of her
sting. The \(\bar{x} y-\) penter-Bee, has

Fig. 260.-Xylocopa.

Fig. 261.-Nest of Xylocopa. very analogous habits; the female makes long burrows in wood, palings, \&c., in which she excavates a series of cells ; and in every one of these she deposits an egg, with a supply of pollen-paste.
he helpless offinct of support and protection to the young and helpless offispring, is seen in all animals in which it is needed; and it is particularly observable in birds. The nests which they construct are destined much more for the reception of their eggs, and for the protection of the young, than for their own residence; for there are few
birds which nass much time in their nests, except at night,

Fig. 262, - Nest of Goldfinch
and during the period of incubation. It is impossible to watch the process of their construction, without admiring the perseverance for their erection together the wat they are arranged. The form and aud the among the individuals of the same species; but there is necessarily certain la-
titude in retitude in rematerials of which they are com-
posed, since the same could not be everywhers procured. different different

both

Fis to 263 ,-Nest of the Baya
struclure,
and materials ; and these are admirably adapted to the par-
ticular circumstances in which the young families are re-
spectively destined to live. Sometimes these babitations spectively destined to live. Sometimes these babitations
are constructed of earth, the particles of which are are constructed of earth, the particles of which are
united by the viscid saliva of the bird, into a tenacious mortar; and they are then commonly buitt against the sides of a rock or wall. But, in general, they are composed of sticks, straws, and other vegetable substances; and are placed either on the ground, or among the branches of trees. The greater number of them have a somewhat hemispherical form, resembling a little round basket; and their interior is lined with moss and down (Fig. 262).
"But sometimes the errangement is much more
complicated, in order that some particular danger may be avoided, or some special purpose answered. Thus the
nest of the Baya, a little Indian hird allied to our Bulfinch has the form of a bottle; and it slenderness and flexibility, that neither Monkeys, Serpents, or Squirrels can reach it (Fig. 263). That it may be still more secure against the attacks of its numerous enemies, the bird forms the entrance of the nest on its under side, so that it can itself only reach it by the aid of its wings. This curious habitation is constructed of long grass; and seveof which one serves for the female to sit on her eggs, whilst another is his companion with his song, whilst she is occupied in maternal cares. Another curious nest is that of the Syluia sutoria, or Tailor-bird, a Linnet; which, by the aid of filaments, of cotton drawn from the
 Cotton-plant, sews leaves together manner as to conceal the nest which they inclose from

The XVIth Number of Stephens' Book of the Farm is executed with all the talent evinced in previous Numbers. Turnip-drill, grazing cattle, hofses at grass, sheep-washing and sheep-shearing. We are sure Mr. Stephens will excuse our pointing out to him an error at p. 781 , in
quoting the Gardeners'Gawelle instead of the Gardeners Chronicle. We are particularly desirous not to be confounded with such a publication as the former
CALENDAR OF OPERATIONS for the enswing week, Ing with heavy rains and winds, is no bad representation of a battle-field, for in it, too, have we to recount the loss of a noble
race, which filled up the flower-beds that are all grone, and their resolved into old Chass again ; and their elements fixed by caustic
applications from the hand of science, are ready to be applied applications from the hand of science, are ready to be applied
to the use of their descendants and successors next year. The field of desolation now presents a confused scene of cheerless, make one almost wish the present style of flower-gardening
had never been thought of. Thave known1 gentlemen go so far
as to desire their gardeners to turf over their naked flower-beds on the lawn, during winter, to preserve the uniformity of the Grass. But this is an expensive and unnecessary process, which,
if carried out, would do away with spring flowers, the finest
feature of the garden. Here we partake of the eneral aversion feature of the garden. Here we partake of the general aversion
to seeing the naked soil of our empty flower-beds, nd the manner un which we chothe them in wuter is worthy of imita-
tion. If ouly fcr the simplicity and cheapness of the thing; and if
united to Mr. Ayres' plan for the same oblyect, leaves nothing to wish for. As sonn as the frost destroys the appearance of a bed
the plants are pulled up and the ground smoothed over wilh a the plants are puled up and the ground smoothed over wilh a rake; it is then planted with branches of the different evergreen
trees and shrubs, trimmed up to the shape of little shrubs, and
from nne to tiree feet high, with stems long chnught to be firml/" from one to thre fcet high, with stems loug cnough to be firmhly on purpnse. Branches of the Laurestinus will fower all the wintcr in this way, as well as if eit onl the paremt intin on, watso
these and others of variegated Hollies, with the berres
pieces of Arbutus and of different Cratregus \&ec., with the fruat onl, one might make a gay bed opposite a sitting-room window
all the winter. Pincturns might thus be formed in miniature, and all the wimer. Pineturns might thus be formed in miniakre, and
this is a good way to try the eficts of planting the diferent
kinds of evergreens in a shrubbery or in a winter garden, \&sc. \&c. Early-flowering shrubs may be planted aiong with these, and also spring bulbs, and the sheller of the green bought will murse
these things from the cold. Every one of our veds are thus treated in winter, and have been seen by huridreds of people,
all of whom liked the idea; but this announcement will prevent us in future from surprising our friends with the immeuse quan-
tity of young shrubs we keep on hand. "Where, in the name of goodness, do you keep all these pot plants in summer," asked a
goung scion of a noble Irish family, about this time last, year, and when I pulled up one of the "pot plants," he exclaimed in a manner I shall rather let you guess at than describe; and having
large gardens of his own, he said his journey from reland was well paid ins learning this children's 1 llay kind of winter-gardening.
I.-KITCHEN-GARDEN AND ORCHARD. Pinkry.-The writer of the Calendar will be recording about this time next year the wonders of Rendle's tank system for grow-
ing Pines, as, from information in my possession, I find a great
numjer of growers are preparing to begin them this way, and numior of growers are preparing to begin them this way, and
out of pots, too, next spring; but 1 cannot well comply with for want of experience: meantime, let us go on in the old way,
and see that we are safe enough as to bottom-heat to serve us throughout the winter; safe and if we are right on that score we
can easily manage as to surface termperare Vinery.-A A correspondent has furnished me with a similar
case to that I lately described as having taken place many since. "Circumstances havinge rendered it necessary that
should have ripe Grapes early last March Nov.) last year, two monhs earlier, than usual, by which we
made a great sacrifice in the crop, but we gained our point.
Although the lights were off all the summer they began to swell
their eses early in Sentember, and by the end of the month I
was obliged to put on the lights, and now \(I\) have appearances of Was obiged to put on the lights, and now i have appearances of
a very excellent crop, which sliould be ripe next February, as
they all promise to set well before the very dull weather comes on, and my late ones will carry me through to that time
Foncing PITs.-If you are forcing Aspara Foncing Piss,-If you are forcing Asparapus, Seakale, and slow, stcady heat, the best way you can; linings are very slow, stcady heat, the best way you can; linings are very
troublesome after this time, and should have wooden covers made of "weather-elged "boards sloping over them.
It has been so wet lately that little or no
to any advantage here, except, perhaps, planting some trees and to any advantage here, except, perhaps, planting some trees and
bushes where the soil is light; the fruit-roun and the store
places for Onions, Carrots, aud other roots must be well looked after in such weather.
Crops. - The only things I can think of under this lacad are to Crops. - The only things I can think of under this head are to
see that all the young Lettuces, Cantiffowers, Endives, \&ec, are
"well provided for" against the winter; and anything else which "well provided forself, either do it or see that it is properis done
for your. to your ORCHARD AND WALLS.-Nevcr lose an hour after this time in
which nailing can be done, and never think of Keeping men at this
work in cold weather. I hnve known peove in my younger days work in cold weather. I hnve known peaple in my younger days
so tender-heart that they would not allow you to shoot a sparrow, and set would keep men against bare exposed walls in
bitter cold weather till they were nearly perished ; besides the
cruelty of the thing, this was very bad management.
II.-FLOW IRR-GARDEN AND SHRUBBERY.

Srove, -I am indebted to a botanical correspondent for the
following memoranstum respecting the new Ashantee plant, following memorandurn resperting the new Ashantee plant,
Spathodea campanulata, of which I spoke lately, and about which
I had several queries. of it 18 a tree or slurub, with pointed alter-
 nate leaves; nine oblong lancolate leatets, tapering to both ends;
the flowers are racemose and terminal, with a large, campanulate
 brit I cannot find access to a copy." (Petisot de Beurvois Flore
d'Oware et de Benin.) We have several accounts of the usefil
plants of these pestilential regions, but of the merely ornamental plants of these pestilential regions, but of the merely ornamental
our knowledge is limited, and hikely to remain so for a long time. GREENHOUSE. This has been a critical time for greenhouse
plants just as they were housed the weather turncd so wet that the top sashes could not be let down, and in some places fires
have been lighted, to dry the leaves of soft-wooded plants, in have been ighted, to dry the leaves of soft-wooded plants, in
the middle while the whole front sashes and doors
were left open. In such a state of thomgs there was little use for the watering-pot. To show how little water is neededed for such
plants in dull weather like this, you liave only to cut down some plans in plant and let-the top remain in a oneenhouse or cold pit,
useless phe
and it will keep green and look just as if it were on its own roots and it will keep green and look just as if it were on its own roots
for scyeral weeks. If there are Vines in the greenhouse prune Them at once, even should their leaves not be quite ripe, and so,
also, in any of the Vineries, the leaves of decituous plants are
of little use now, and they may do harm. of little use now, and they may do harm.
Consmrvarory. -This is, of all the subjects in the Calentlar, the
part about which I have had most correspondence, and I find that a
 nulums. "The first wet day in october," says a correspondernt,
"I lift some of my best specimens of scarlet Pelargoniums, scarlet Salvias, and, indeed, any plant which I think, from its
appearance, is likely to flower in the house," \&c. Another
correspond correspondent says, "The lifted scarlet Pelargoniums are all
in a blaze in the conservatory." Another asks where "can
secds in seeds of the fringed white and purple Clinese Primrose, which
come in so uscful at this time, be had true?" Nowhere, to be
depended depended on. Whert yon get fringed, very large. fowered, or
very deep-coloured varieties of these, you must perpetuate them
by cuttings; they will not come true from seeds. Again- 88 our by cuttings; they will not come true from seeds. Again- riour Our we have retatned the flue through the centre of the haiding
Our fine specimens of Acacia are grand ornaments in Tebruary
and March. I have Acacia pubescens now 30 feet high, und feathered down to the ground, with its beautitul foliage showing
myriads of flower-buds, them, equally fine." Acain-"The object here is to have an
abundance of flowers at this season, and up to March. We are now prety gay with large specimens of Pelargoniums, whith I
kept the whole summer from flowering, and they now, do well for this dull season."
Prss AND Franks.-Whis is trying weather for plants in cold PiTs AND FRAMES,- Whis is trying weather for plants in cold
frames, all that can be done for them is to let in a current of nir
from front to back, by "tilting" the front and lack of the lights, and taking them off altogether on firie days, and to pick up every
decayed leaf as soon as it appears. This sort of weather reminds one more than crer of the great advantages of cold turf pits,
when properly made with ample drainage at the botom ; in sucla pits here, and out of pots, we have now thousands of plants
which lonk better than those to which more indulgence is given. clear all up till the leaves are all downs. Planting and trans-
planting trees and shrubs, making and altering walks, and all kinds of alterations and improvements, will now, and for a long
while occupy the time that used to be devoted to flowers in this gardens but, amidst all this bustle, do not nerlect to make the best use of anch of other refinse as you can gather together,
garden, and as much the rougher materials of prunings, okd stakes, \&c. burn the
and the
first fine frosty morning, and use all these, as has been often first fine frosty morning, and use all these, as has been often
pointed out in the Chronicle.-D. Beaton, Shrubland Park Gar.

REPORT ON COVENT.GARDEN MARKET,
The wet weather during the week has rendered the market rather dull; but the supply has nevertheless been pretty well kept up, and, generally speaking, the prices have not altered
much. Pines are more plentiful, and are of better guality than those of last week. Grapes are good, and quite sufficient to meet the demand. Imperatrice Plims are selling at from \(1 s\). to \(2 s\).
per punnet.
the per punnet. A few Damsons are still to be met with in
the market, but the season for these is now nearly over.
Among Apules we noticed a few Among Apples we notned of the Blenheim Orange. These meet with a ready sale but there is not much demand for those of in-
ferior quality. Pears for table are chiedy Gansels' BergaMflone are still supplied aty arc scarce and of bad quality. Vegetubles of almost every kind are grod and alumdant. Cabbagcs, Turnips, and Broccoli
especially. Cafrots are likewise good and plentiful, and Leeks and Onions are sufficient to meet the demand. Celery, Lettuce, lar is grood, and in general quite free from the effects of the maggot. Cut Flowers are chiefly composed of Erica ventricosa azureus, Neapolitan Violets, Gardenia radicans, Double Primulas, Chrysanthemum
Perpetual Roses

and

\section*{NEWS OF THE WEEK}

The Grand Jury of Dublin after several days deliberation have found a true bill against Mr. O'Connell and his fellow-traversers, all of whom appeared upon their recognizances on Wednesday and answered to their names. The trials will commence in a few days, but there is no chance of their being concluded for some weeks
The Overland Mail from India which left Bombay on the \(2 d\) ult. arrived in town on Monday. The news it brings is of great importance. An insurrection has broken out at Lahore, which first manifested itself in the murder of the Sovereign of the Punjaub, the Maharajah Shere Singh, with his two sons. The chief conspirator, Dhyan Singh, the Prime Minister, and the Sirdar Ajeet Singh, his accomplice, were themselves assassiuated shortly afterwards, and a wholesale sacrifice of the wives and children years of age ajai took place at pace. A child ten a victim in his turn. This dreadful tragedy is considered to have given the finishing blow to the great empire founded by Runjeet Singh; and it is generally believed that the fertile territory of the Punjaub, with its immense revenues and population, will eventually be annexed to British India. Lord Ellenborough had already, as if in anticipation of the event, concentrated an imposing force probably be necessary to suppress the anarchy which now prevails. The rest of India continues tranquil, and Dost Mahomed, who maintains his authority at Cabul, with the British flag has been insulted in the city of Mexico by the President, Santa Anna, at ball given by him in that capital. Mr. Doyle, the British Charge
d'Affaires, has suspended all intercourse with the Mexican \(^{2}\) authorities until he hears from his own Government, and has demanded an immediate apology for this intentional and deliberate insult to our flag. - From Greece we earn that the King has declared his determination to bide by the will of the people as expressed at the late revolution, and to adopt the representative systens which
formed the basis of the movement.-In Egypt the Pacha has a fresh cause of trouble in the revolt of Achmet himself indenendent. Great preparations, however, ar making to resist any act of aggression, and the next arrival ill probably put us in possession of further details. From Spain we learn that both Chambers have agreed to the necessity of declaring the Queen of age as the only
means of pacifying that country, and a change of Ministry is said to be contingent on the declaration of majority.

\section*{弱ome Nems.}

Court.- Her Majesty and Prince Albert, the Prince of re quite well On Saturdat Prince Aindsor Castle, and by the Great Western Railway, and proceeded to the office of the Duchy of Cornwall and Buckingham Palace. His Royal Highness inspected the Summer Temple in the other trophies from China, which are placed in the library
of the Palace. The Prince then visite the Polytechnic
Institution, and afterwards returned to Windsor by railInstitution, and afterwards returned to Windsor by rail-
way. On Sunday morning her Majesty, Pr'mce Albert the Prince and Princess of Hohenlohe Langenbourg, and the whole Court, attended divine service within the Castle. On Monday the Queen and Prince Albert took equestrian exercise in the riding-school, and the Duke of Cambridge arrived on a visit to her Majesty. On Tuesday the Queen and Prince and the visitors to her Majesty took an excursion in the Park. In the afternoon a powerful hydro\(30,000,000\) microscopes, magaifying objects upwards of her Mr. Paine before her Majesty, Prince Albert, the Duchess of Glou-
cester, and the visitors to her Majesty. On Wednesday, the Queen and Prince Albert took thei usual walking exercise in the vicinity of the Castle in the morning and afternoon. In the course of the morning Prince Albert, accompanied by the Duke of Cambridge and his Serene Highness the Prince d'Oettingen Wallenstein, shot over the royal preserves. The Duke of Cambridge afterwards returned to town. On Thursday the Gurta-day of the Prince of Wales was celebrated at the Castle and in London with the usual honours. Her Majesty gave a banquet in the evening, followed by an evening party. In the morning the lst Reg. of Life Guards and the third battalion of Grenadier Guards marched from their barracks to the Home-park, with their respective bands, and at \(120^{\circ}\) clock fired a feu-de-joie. and in the evening her Majesty's tradesmen illuminated their houses. The Duke and Duchess de Nemours are expected to arrive this day from Paris, on a visit to her Majesty. Lord Byron has succeeded the Earl of Warwick as the Lord in Waiting, and Colonel Drummond bas sucMajesty Sir F. Stovin as the Groom in Waiting on her have been the Duchess to her Majesty this week Cambridge, his Serene Highness the Prince d'Oettingen Wallenstein, the Marquess and Marchioness of Normanby, Viscount Combermere, the Earl of Aberdeen, the Bavarian Minister, and Mr. Patrick Fraser Tytler, the historian of Scotland.-It is rumoured that her Majesty intends to have a marine villa erected at Cowes in the Isle of Wight, as an occasional residence during the summer and autumnal months, and that the Woods and Forests have sent an agent to survey some estates at East Cowes, prior to the selection of the site.
The Queen Dowager. - Sir Robert and Lady Peel aron a nithey Court on Monday, from Drayton Manor, in the ento Queen Dowager. Her Majesty continues Countess of Brownlow has succeeded Lady Barrington as Lady in Waiting, and the Hon. Miss Boyle has suc ceeded Miss Hudson as Maid of Honour to Her Majesty.
The Duc de Bordeaux.-His Royal Highness arrived Saturday. His Royal Highness was of Shrewsbury, on light, and with the highess was received by torchwas assembled to witness the honours. A great crowa was areeted from the Castle wilh the air Vive Hec, wh The Prince Robecq de Montmorency the poung D. de Guiche, and the ciebrated orato M Bers Duke previouls arrived at Alton Tomers, Hio Roylt hal previously arrived at Alton Towers. His Royal High-
ness bad intended to visit London about the 15 th inst., but has deferred his journey for some weeks in consequence of the expected arrival of the Duke and Duchess de Nemours. His Royal Highness will take advantage of this circumstance to visit some of our manufacturing towns, making excursions from Alton Towers, Which will, for the present, continue his head-quarters of his way to Alton Towers, from Drumlanrig, the sea and Derno whe here the buildings in the tom, the dock the \(A\) ealie Gre Wuesto On Satudey morning his Royal Hishness inspurge. rail saturday ore reyal hy diref, of the compr for wish belf Edge-lane Hall, with F. Heywood, Esq., who acted as cicerone to the Prince during his sojourn in Liverpool
Parliamentary Movements.-The Queen held a Court and Privy Council yesterday, at which Parliament was ordered to be further prorogued from Tuesday next to the 19th December.-The Election for Kendal terminated on? Wednesday in the return of Mr. Warburton, by a majority of 63 . The numbers were-for Mr. Warburton, 182; for Mr. Bentinck, 119.
Prince Alexander of the Netherlands.-On Saturday vening his Royal Highness gave a dinner at Mivart's Hotel to Prince Edward of Saxe Weimar, the Netherlands Minister, \&sc. On Sunday his Royal Highness left town for Blackwall, and there embarked for Rotterdam, on his more than three months, which his Royal Highness chiefly passed in Scotland.
The Church.-The Queen has nominated Archdeacon Lonsdale, of King's College, London, to the vacant bishopric of Lichnield. Some valuable preferment is Paul's will fall to the treasury of the Ecclesiastical Com. Pissioners, his Archdeaconry to the Bishop of London, missioners, his Archaeaconry to the Bishop of London, and the Presidency or Arggs College to the Archbishop on the Reverend John Sinclair, Secretary of therred tionl Sopiety. The Garette of Tuesday ontional Society. The Gazelle of Iuesday contained an Commissioners, for vesting the patronage Ecclesiastical Commissioners, for vesting the patronage of Barnton Bishop of Chester; of Colne Christ Church, in the Vicar
of Whalley; of Leighton S. Peter, in the Bishop of Chester; of shirley St. James, in the Rector of Solihull all for the time being. The Gazette also contained an Order in Council, constituting an Archdeaconry of Manchester, and authorizing the Bishop of Chester to appoint the Archdeacon; and another Order, sep
Deanery from the Archdeaconry of Llandaff.
Royal Academy.-On Monday a general assembly of academicians was held at the Royal Academy, in Trafalgarsquare, when Mr.
elected associates. War-Office circular and warrant for establishing and regulating regimental savings banks has just been issued, with forms showing the manner in which the deposit books are to be lept, and of a certincate
signed by the officer commanding, the officer second in signed by the ond the adjutant, and transmitted quarterly to the Secretary-at-War.
National Society.-The special fund in aid of the National Society now amounts to more than \(125,000 \mathrm{~F}\) The Archbishop of Canterbury, as President, has apto be Secretary of the Society, in the room of the Rev. J. Sinclair.

\section*{fforeign.}

France.-The Paris papers are principally filled with a speech delivered by the Procureur-General of the court, M. Dupin, at the opening of the sittings of the Court of Cassation. The speech would at any time be remarkable sions which it makes to the great dispute now existing between the clergy and the University of Paris, on the subject of education, have invested it with more than usual interest. It was previously known that M. Dupin would speak upon this occasion, and a crowded audience ansembled Samuel Rogers.-It is stated that at a recent meeting of the French council of ministers, the King insisted upon the fulfilment of the promise formerly made by the Ministry, that they would present to the Chambers his quality of future Regent of the kingdom. There appears to have been some hesitation on the part of Ministers, which led Court and M. Thiers, who is said to have promised to
vote in favour of the measure.-The editor of La France has been cited before the Court of Assizes for an article instituting a comparison between the circumstances under which the Duc de Bordeaux and the Duc de Nemours bave come to England. The article is said to be from the pen of \(\mathbf{M}\). Chateanbriand, but the approaching trial excites little interest.- The dispute between the clergy
and the University appears to bedrawing to a crisis. The bishops do not now content themselves with a simple
threat of withdrawing the chaplains from the universities -they have actually put their threat into execution. A provincial paper published at Nancy announces that the
chaplain of the college of that city has received orders to quit the college, and that he has consequently taken up his quarters in the Episcopal Palace. This step has of course
been taken by order of the bishop, but in the meantime and provisionally, the chaplain will continue to exercise his ministerial functions in the proscribed college. The Journal des. Débats says that thes first act of excommunication was resorted to in consequence of a refuasa, on the part of the rector, to allow the Abbe Lacordaire, engaged
in re-establishing the Dominicans in France, to preach in re-establishing the Dominicans in France, to preach
within the college. The dispute is very complicated, and within the college. The dispute is very compubtio, and tion, and it is impossible to prevent its being one of the most prominent subjects of diacussion in the ensuing
session of the Chambers. It appears that it was on the session of the Chambers. It appears that it was on the 30 th ult. that the Bishop of Chalons' letter was referred
to the Council of State, and Viscount d'Haubersaert is to the Council of State, and Viscount d'Haubersaert is
ordered to make a report upon the affair.-.The excitement regarding the fortifications of Paris has extended to the provinces. Several petitions from the large towns have been presented to Government on the subject, and a strong and numerously-signed remonstrance has been sent by the City of Lyons.-The Paris papers announce on the authority or letters from Pondicherry, that islands of Amsterdam and St. Paul, and left garrisons in them.We lately noticed the manufactory of spurious wine discovered at Rouen. It is now stated that on Friday 103 hogsheads of adulterated wine were brought out from the "Immediately after this operation," says an eyewitness, "the surface of the river was covered to the distance of poisoned by the deleterious liquor." -The floods of the Risone and Durance have already been very destructive, and threaten to be still more so. The following despatch has been addressed by telegraph to the Minister of Public
Works, from the Prefect of the Bouches du Rhone, dated Marseilles, Nov. 4 :- "The Rhone broke its banks last night, at a distance of half a league from Arles. It i canal of Arles will be renewed. The day before yeaterday, the Durance carried away five bridges, viz., those of Mees, Manosque, Mirabean, Perthuis, and Rognonas. It is feared that the waters will break through by Millaune and Gravezon to the plains of Arles," The inundations have also threatened have accounts from Mamities.
Spatn.- They contain M. Martinez de la Rosa's the 31st the Chamber of Deputien, in the name of the committee
upon the Government communication, relative to the declaration of the Queen's majority. This document, the reading of which is stated in substance, that the declamarks of approbation, says, in substance,
ration of the Queen's majority is the only issue to the ration of the Queen's majority il destroy the unfounded present situation of affai who has presumed to dispute the pretensions of a prince who has presumed to dispute he sceptre; it will cut by the root the hopes that may be entertained in a foreign land by him who provisionalow exercised the supreme power, and whor or defend hinsself either to conduct himself with wisdom or defend hinself
with diguity; in short, it will be the means of stifing the clamour of unlawful parties and of re-entering the legal path pointed out by the Constitution.
adds that the means proposed by the Government has been resorted to by all nations and in all times to avoid but a few years ago it was adopted, in similar circum but a few years ago it was adopted, in similar circum-
stances and with success in two monarchies, and that without going beyond Spain there are not wanting nume rous instances of princes who have assumed the reins of the state with the consent of the Cortes, before they had
attained the age fixed by law. The committee conclude with the proposal that the Cortes declare "Her Majesty Queen I sabella II. of age." Owing to its being All Saints Day, the Cortes were not to sit on the 1st of November, but they were to assemble next day, when the debate upon the declaration of the Queen's majority was expected to commence. into with Don J. Salemanca, M. Figueras brought up the report of the committee upon the bill for declaring the Queen of age. This document, which is signed also by forming the majority of the committee, is favourable to the Government proposal ; on its being read, M. Campuzano rose and proposed that the Queen be Groclamed of age in the following terms: Quee Isabella II. shall exercise the Royal authority with the assistance of the Council of State, which shall cease on the day on which the Constitutron actnowledges her two supplementary members, who shall be appointed by the Cortes in the very act proclaiming the Queen' majority. The powers of that Council shall be limited to giving advice in writing to the Queen in all cases where her Majesty shall have to exercise the rights which the Constitution confers on the King by its , arthe. Both this proposal and the coramitte adjourned after M. Mureo had given notice of his intention to ask*'MinisM. Mureo wher they were disposed to issue a complete amnesty on the declaration of the Queen's majority? It is rumoured that as soon as the majority is declared the Prime Minister. The Government had received intelligence of Vigo having pronounced in favour of the Central Junta, and that nearly 600 troops there and in the neighwhich contained about 100 troops, still held out for the Government. Brigadier Cotoner, who was at Corunna, was expected to procited against vigo; aut the movement. The capitulation of Saragossa was arranged on the 28th city. From Barcelons we learn that the force under Gen. Sanz, recently strengthened by the accession of nearly 1,000 men from Tarragona, amounts to 3,000 men, independently of the troops in the forts discord was increasing among the insurgents. The Junta's soldiers were indulging in every species of excess, and pillaging the
shops and houses. The Junta had ineffectually attempted shops and houses. Thile duta had ine cectualles, who acted foremost in these depredations. On the 24th ult., Gene ral Sanz threw into the city 824 solid shot, and
grenades and shell. In this terrible bombardment he threw more projectiles into the city in a single day than were fired at it during the whole period of Espartero and Van Halen's siege. The firing continued at Gerona throughout the 1 st of November. Marteli made another sortie from Figueras on the 31st ult., at the head of 400 men; but, on bearing of the approach of the troops stationed by Prim at Bascara, his column dispersed, throwing their arms away, and their commander was glad to find his way back to the fort of Figueras.
GERMANY.-The German papers continue to make the affairs of Greece almost their exclusive topic. The Augs burgh Gazette announces the arrival of Colocotroni at Munich, where he is treated with great distinction. He has apartments in the palace, and goes out in the roya carriages. According to reports in well-in. The Cologn Gazette of the 2nd is about to visit Athens, in order to judge personaily of he state of affairs in Greece.-Several or the German perande societies. The King of Bavaria has published a decree, by which all the municipal magistrates are peffince society, and at the same time they are called upon to engage their fellow-citizens to the same. Letters that city in aid of the Irish Repeal Association, and that in the course of one week one florin and thirty kreutzers (one shilling and sixpence sterling,) have been collected. The Frankfort Gaselte announces that the states of Bohemia, to whom the Austrian Government had applied for a num of money for the use of the military academy at

Neustadt, had granted the sum applied for only as a gift, and denying at the same
Iracy.-It is announced that the Austrian troops which were said to have entered the Papal territory did not cross the Frontier, but merely assembled at the request of the Duke of Modena, to join his own and the troops of Parma during the late military manoeuvres, and have since returned to their garrisons. Several of the ringleaders in the recent disturbances have sought refuge in Corsics Alan bertini, Melara, and Tenara, Count Biancoli, Doctor Muratori, and his brother, and five other persons, belonging to good families of Bologna. The Court of Rome is stated to have claimed them as being comenon offenders, but it is probable them to guit Corsica. The confine itsel to ordered by the Pope. The Duc d'Aumale arrived at Genoa on the 22d ult., whence he was to proceed to Florence, Rome, and subsequently to Naples. We learn from Palermo that or lish his right to it, and has sent thither some persons who are charged with its colonisation. There is also to be a garrison and 24 men. This island was occupied by a Maltese family, who acted as if it were their own property. GREECE,-Accounts from Athens to the 21 st ult. give cotroni to fect a the failure of his scheme, he decided on embarking in the Austrian pars scheme, he decia Trieste, packet, which was on the poin so sasperated against him, that on his arriving at the piren tacked the carriage, and would have probably sacrificed him on the spot, had not the coachman lashed hish a gallop, and at full speed returned to the capital. Once more he attempted to reach the harbour with a strong and a cavairy, but the populace won Finally, he an, ceededually forced them back again. Finally, he succeeded in getting on board the Greek Governmend raved Syra. prevented M. Rballi, the late obnoxious Minister of Justice, from embarking on board the Austrian steamer. On this occasion the military succeeded in dispersing the crowd, without causing bloodshea, and M. Rhall was saved from popular vengeance by the French Minister, who conveyed him in his own carriage to the harbour, and which conveyed hith to Andros, On the 14 th the King summoned to the Palace the Council of Ministers, Synod, and the chief officers Athens, in whose presence the made the folluwing declaration:-"After having adopted those representative institutions which I consider to be useful and necessary for the prosperity of our cherished Greece, 1 ardenly and order. I therefore call upon you, Gentlemen, to communicate this desire of your Sovereign to your subordinates and to all around you, to the end that no oue mily be ignorant of my Royal will, nor controvert, in word or deed, this new order of things." This declaration is con sidered likely to produce a beneficial effect on the King's previous declarations. The ministers have published it with two circular letters to the judges, magis trates, and clergy recommending prompt application of the laws in all matters, both civil and criminal, and a firm hut moderate use of all preventive measures. Perfect tranquillity prevails in the proviaces. The elections for deputies There Russia lution \({ }^{2}\) has fi in io han han of his thinge, be submitted to a court of inquiry
EGinge, be submitted to a court of inquiry. Weave accounts from Alexandria of the revolt of Achmet Pacha, Governor of Sennaar, against the authority of Mehemet All. This event may again embroil the politics of the country, and lead to serious results. It is stated that Mehemet Ali had received a despatch from Constantinople, officially notifying to him that the Sultan had been pleased to take into consideration his advanced age and the necessity of relieving him of a portion of the cares of so extended an enpie, uernment of the Belledferred upon Achmet Pacha hae governmen othe Belled el-soudan. It is said the Pacha was try wrom whed the despatch reached him, and at a despach of a steam-yach, wise the order and the the suitan. He afterwaras modicd yacht was sent, but without the sultan cypher in brat liants and other accessories, val 30,000 . the best and fittings, in the state in which it was sent, being estimated a simar sum. In the meantime, the councm sits daily in Cairo, and Gallice Bey has been sent for from Alexandria to give his opinion as to mat stores and mot rials th were better to send with the expl. P , wion consist of 11,000 men, of which ibrahim Pacha bas sented to take the personal command, accompanied by Suliman Pacha. The excitement of this Sennaar affair and the Ramazan appear to have induced a forgetfuness of the Suez railroad. When the Pacha went to Cairo a month ago, he told Mr. Galloway his first care on arriving there should be to send him his final and definite instructions ; bat since then nothing further has been done. from Bombay on the 2nd ulto reached Marseilles in the
afternoon of the 2nd inst. We have Bombay papers to
the date of the departure of the mail ; advices from cutta to the 19 th Sept., and from China to the \(3 d\) August The latter, however, add nothing to the news brought direct from However, add nothing to the news brought last month. The principal item of intelligence fiom India Is an insurrection at Lahore, and the murder of Shere
Singh, his son, and all their families, on the 15 th September. The Sirdar Ajeet Singh is the perpetrator of this ber. The Sirdar Ajeet Singh is the perpetrator of this
bloody tragedy. The event took place at the north gate of Lahore, about a mile and a half from the palace, at halfpast nine o'clock, on the morning of the 15th. The conspiracy was formed by Fakeer Azeez-ood-deen and Dhyan Singh, and it fell to the lot of Sirdar Ajeet Singh to exe-
cute it; Sirdars Golab Siagh, Lena Singh, and Soochet cute it; Sirdars Golab Singh, Lena Singh, and Soochet
Singh were also concerned. Dhyan made the arrangement by proposing to the Maharajah to inspect Ajeet's troops,
which the Maharajah aaid he would do the following morning, and orders were accordingly issued. On the Maharajah's arrival at the parade ground he found fault with the appearance and condition of some horsemen pursaucy, words ran high, and drawing a pistol from his bosom, Ajeet shot Shere Singh through the head, the ball having entered his right temple. Geueral Ventura and powerful body of troopss, were defeated. Ajeet cut up the Rajah's body, placed his head on a spear, and on entering was immediately attacked, and the prince killed. Which palace was taken, the treasury thrown open, and the troops paid their arrears of pay; every child and all the wives of Shere Singh and Prince Purtaub were then brougit out and murdered, amongst the rest one of Shere Singh's sons guard all the grevious evening. Troops were sent off to Gen. Ventura, who escaped) were made prisoners. Ajee after having killed Shere Singh was returning to the fort and met Dhyan ; he told hion he had done the deed, and asked him to return ; he got into Dhyan's carriage, and When they got near the gate of the fort, Ajeet stabbed surrounded the his body to his brother and his son, who inside continued plundering all nishs, while the people (16th) Heera Singh having entered the fort, seized Ajeet, Lena, and others, and having avenged the murder of his
father by putting them the plain putting them to death, exposed their heads in Singh, an alleged son of Kurruck, 10 years of age, is on the throne, and Heera Sing has been appointed Prime Minister; but the greatest possible anarchy prevails, and perhaps the lives of those now in power are not worth much. The revolution is thought likely to lead to British annexation of that fertile country with \(4,000,000\) inhabi tauts, and a revenue of upwards of \(2,000,0000\). sterling empire founded with The tragical event proves that the eve of dislocation. Runjeet died in June, 1839; his son Kurruck succeeded. He died, and was followed by Nao Shere Singh succeeded killed at his father's funeral child placed in his room, to become a victim in billed, and a As if in anticipation of the events of Lahore, in his turn. had been ordered by Lord Ellenborough to prge army assemble on the banks of the Jumua. Orders were also issued to bave a body of Bengal troops sent to occupy scinde, from whence the Bombay troops were to be with movement, as all the Bengal force will be requisility of that the frontiers against the Sikhs. There are to to protect now in Scinde. Sir C. Napier is at Kurrachee ; the troons in Scinde are generally healthy, except the newly-arrived Mahes at Sukkur that have come from Bengal. Shere Dost Mahommed, who rules at Cabul, near Candahar. being Mahommed, who rules at Cabul, seems desirous of is thought he will attempt now to retake Gevnment. the Sikhs, and be may therefore come into collisur from the British Government, who are come into collision with Singh's descendants. In the interior of India tranquillity prevails. Gwalior appears quiet for the moment the Suas great alarm created there when the intention of the Supreme Government to collect troops became known. Bundelkund is also at rest. In the Nizam's territory a change has taken place by the removal of the old Prime Minister Chimdoo Lall, who has been succeeded by relative. The trial of two of the principals and eight of the confederates of the Bunder gang, who have for years been robbing, plundering, snuggling, and, as it is surdering in posed, murdering in the harbour of Bombay, had attracted existed interest. The detection of this gang, after it had existed 20 years, is looked upon with great satisfaction by the friends of Indian civilization. Lord Ellenborough ceed soon to the north-western provinces. abused by a part of the Indian Press, but another is still Supports his policy as tending to produce good results, The mong Gough has taken the command of the army. The monsoon has been eminently favourable to the agricultural products of the country.
Steamer Severnastived South America.-The mailfrom Tampico, 29th Sept. ; Vera Cruz, 1st, 9 th, Nassau 13th, and Bermuda, 22d Oct. She brings important news of the British flag having been insulted in Mexico by the President Santa Anna, at a ball given by him in that city. It appears that a grand ball wase given battle fought at Tampico between the Mexicans and the

Spanish expedition headed by General Barradas in 1829, memoration of their independence. At this ball our were of Texan and other flags, which wecorated with a number Ge war taken from the enemy, and among them a St. George's ensign was also exlibited. Mr. Doyle inmed ately recognised it as a British emblem, pointed it out to be rempeved for foreign Affairs, and requested it might wish be satisfieduce ariy disturbance in the company, Le would to supper. The Mexican Minister replied that it must have been put up by some mistake of the room decorator and that he would speak to the President about it. Sant moved Upr, on being applied to, refused the Mexican Minister, he said he must now consider it as an intentional and deliberate insult offered to the flag, and immediately withdrew frow the room, followed by all the English gentlemen present. Mr. Doyle next day wrote an official letter to the Minister upon the subject, which remained unanswered for a week, and the reply, when did reach his hands, merely stated, that the Mexicaz Chargé d'Affaires in London would be instructed to communicate with the British Government concerning it ; and as if to demonstrate their determination to insult, the flag was kept up and again displayed on the 27 th of the same the entrance of the army into the city of Mesico after the battle. Mr. Doyle, therefore, has suspended all official intercourse with them until he hears from his own GovernSamaica we learn matter rests for the present.- From amaica we learn that the island had been visited with ing appearen a dione generally bore a thriving appearance. A slight shock of an earthquake was tunately it on the morning of the 5th October, but, forthe colo, it was attended with no damage. The health of he colony was good, a few casual instances of fever only neration of losses sustained by the late claims for remucourse of presentation to the late fire were in the destroyed pre total of \(100,000 \mathrm{l}\). The "Puseyite" some ofther claims, a on with great acrimony in the journals. Agriculture increases in interest, and commands more than ever the general attention, as does also the application of machinery to tillage and manufacture. A new manure has been discovered in a cave at Dry Harbour, consisting of the exdepth a very extensive surface. It has been analyzed, and is nikely to prove from the chemical nature of its ingre dients a valuable commodity. A trial is about to be mad with it, and it is also supposed that other caves, the From Peru we have intelliyence that similar deposits.called the Vitula, has been seized for stealing avisho the rocks on the coast. We learn also that a treaty has been concluded between the Peruvian Government and certain individuals at Lima for the supply of guano, the partiinto in Lima by various mercantile houses there with the Peruvian Government, to whom a very large sum was ad vanced for the exclusive privilege of exporting the guano for five years by the contractors, who, in conjunction with Londovernment, consign it for sale to their agents in signed in March, 1812 , was published at length in all was Lima newspapers, and particulaly in the official \(G\) a a cell and became a matter of notoriety accoidingly. The quantity of guano to be shipped was limited to 120,000 The maximum nominal value of the guano is calculatet. the contract at 30 dollars, or, about \(6 l\). per ton Sun posing this price to be realised, the contractors are all Supto set off one-half against the advance to the Government and at the end of each year's operations the remaining half is to be paid into the Lima trcasury in bonds, a moiety in those of the external, and another in those of nominternal debt of Peru, at their representative or nominalivalue. Thus, were 6 l. per ton realised on 120,000 stock of Peru would have 1800 . of the nominal foreign y yearly proportions. Since the contract was made per ton; and it is of guano have been sold at above \(10 l\). becoming known, that at least 20,000 tons will be rele are for the supply of next year's demand, particularly quantities are shipping for our West India colonies. The committee of Spanish American bondholders in London have held a meeting on the subject, and have resolved on endeavouring to prevent the Peruvian Government from buying up their bonds with money that should be applied the Brazils to the 13th Serde inere.- by advices from of the Emperor with the Princess Thereza of the nuptials solemnized on the 4th of that month, the Princess having arrived at Rio the day previous. There were great rejoicings on the auspicious event, and the imperial bride sands of their subjects from all parts of the empire. In the evening a splendid illumination took place, with a grand display of fireworks, amidst the salutes of the A great number of new titles and decorations of the war. A great number of new titlees
ferent orders were conferred.

ATetropolis ano its Wícinity.
Destitution in the Metropolis.- We lately noticed the shelter of houseless poor who resor to the parks for make preparations for passing the winter in had begun to and hollows beneatly the bauks. Since the gravel-pits ment of the fact first appeared in the daily papers severacontributions have been recelved for the ry papers several people, and a society is in progress of formation for the purpose of establishing a House of Refuge. The police numerous accounts of destitution recently contained women who work for the slopsellers and outfiteeds women who work for the slopsellers and outfiters at
the east end of London. In many of these cases the women were charged with having pawned the goods eritrusted to them by the contractors emploged by the slopseller to mahe up his materials into shirts at
a contract price per dozen. These midelewrone a contract price per dozen. These middlewomen again
employed the workwomen to make the shirts. According to the evidence \(1 d\). a shirt was the profit of the contractor. bigher than ordinary viz called "fine work, it was paid part of the ordinary, viz., \(6 d\). per shirt per diem, it being part of the agreement that one shirt was to be finished in
the day. Three shillings a week which the Theed shillings a week was thus the sum total which the needlewomen were to earn, by wor king 18 or 19 hours per diem, while for an ordinary shirt the contract on learning these facts not pnly dismissed the magistrates assisteding these facts not only dismissed the charge, but assisted the prisoners with small donations from the poor-
box. Public tress. Pubicic attention has now been directed to the disfrom a letts industrious class, and the following extract merous communicassed to the Times is ony one of nuthe recent disclotions which have been called forth by known that the proprietors of several establisherally athe eastern part of the metropolis, who employ needlewomen to make up slop-work, compel them to attend at four and five o'clock in the morning to to ceive the materials which are afterwards made up into trousers, waistcoats, and shirts; and that many of these poor creatures are employed at their needle is and 19 hours a-day. It is not an unusual circumstance for girls to employ themselves from 6 o'clock in the morning until 120 clock at night, then snatch a few hours' sleep, and work 'attend shop,' as it is termed, to obtain more very. The earnings of the shirt and trousers-makers are a precarious, alld \(6 s\). is cunsidered by many of them honsed week.' A few who do the fine work for respectable constantly employed for 18 ; but great numbers who are more than \(4 s\). a -week. The squalid women in Shadwell, Stepney, and St. George's-in-the East is remarkable. Sometimes as many as five or six young girls occupy one small room, in which they work and sleep and take their meals in common, plying their re co frour horning to night. Pulmonary complainte this unhealthy occupation in confined application to duces premature old age. The slopworkers are frectury compelled, by want or sickness, to pawn the n atequals in trusted to their care; but their employers seldom Iose anything by this, as they invariably obtain security to the amount of 3l. or 5l., the value of the cotton or linen given out to be converted into shirts. A case was recently heard Ratcliffe-highway was the prosecutor. He stated that in badd 153 needlewomen in his employ, of alom the turned out defaulters, and their secarities in 28 had stances had made good the loss. He also stated thy ingave his work out at 4 o'clock in the morning that he the greatest distress prevailed among the women who were compelled to make up slop-work. but so areat were competition in the trade, that he found great was the give so much as he wished to the and so much as he wishea to the persons he employed of his property he seldom or ever prosecuted and lisea came property he seldom or ever prosecuted, and he only pliance with the express directions of the master pliance with the express directions of the magistrate, in by thence of an unfounded atack on his character made tioned prisoner on a previous examination. He menlioned one case of great distress :-A poor widow who had with 32 shirts to to a chill, and whom he had intrusted the purnose of to make during pose of ob taining nourdshent for herself and infant during her confinement; and if she had not done so, he believed she must have perished from want. He waited on the pawnoroker, and remonstrated with him on the mpropriety or ascertained that the shirts wrom needlewomen. He ascertained that the shirts were pawned for
\(35 s\)., and offered to pay \(10 s\). to redeem them if the 35s., and offered to pay \(10 s\). to redeems them if the pawn broker would bear the remainder of the loss, which he
consented to do. He could mention oner consented to do. He could mentiou other cases of an equally distressing character, and said the low prices given
for slop-work, and the facility offered by paw or slop-work, and the facility offered by pawnbrokers for
the disposal of the materials, caused person to the disposal of the materials, caused persons to violate the
law by illegally pawning the articles intrute law by illegally pawning the articles intrusted to their care. The shirtmakers, in fact, finding they cannot obtain a subsistence by the wages allowed them, make away with the property, and, being unable to redeem it, are either driven upon the streets, or else become confirmed thieves, Lord Mayor's Day.-The new Lord Mayor al prison." nay, entered upon his office on Thursday with Mage state and ceremony belonging to this, the great festival of the City. The usual procession took place in the morning and the inauguration dinner was given at Guildhall,

THE GARDENERS' CHRONICLE.
would have been much better protected from domestic
said to be the intention of the new proprietor to render the Colosseum one of the
ment in the metropolis.
The Wood Paving in Cheapside.-It will be remembered that the Commissioners of Sewers recently stopped the further progress of wood paving in Cheapside, on account of an injunction obtained from Company against the London Wood Paving Company, as the proprietors of Perring's system, on the ground that it was an infringement of the patent of the former company. Since that occurrence it appears that an amicabie arrangement been effected between the companies, and the injunction is ordered to be forthwith dissolved. The whed and the whole of Cheapside completed, from Bow-church to St. Paul's, with Perring's patent.
St. Slephen's, Walbrook.-A meeting of the vestry,
adjourned from the 26 th ult., was held on Wednesday. Mr. Rock was called to the chair, and informed the vestry that he had entered a bill on the file of Chancery on saturday, and that Alderman Gibbs would be legally bound give a decisive answer in a month atfurthest. m "garbled recounts" furnished by Ald. Gibbs, Mr. Horner dersanded his authority for stating that those accounts were garbled. He was a friend of the Alderman, and ward course; but he could assure the meeting that the select vestry was now busily and industriously looking over the accounts of the lase accounts would be furnished to the parish in a printed form in a week or so. The world would then see that Alderman Gibbs was untarnished, and that he had acted throughout the whole time of his stgewardat gentle-
satisfactory and honest manner. He begged that men who had made that room an arena for the purpose of showing of their talents would dispose themselves to silence. It was then resolved to adjourn for a making good his promis
Kensinglon. -The magistrates for this division of Middiesex assembled in special sessions on Monday, to take license for the Royal Kent Theatre in High-street. A recommendation was read signed by the churchwardens, overseers, and a number of the inhabitants of the town and neighbourhood, that the theatre sious being granted together with a petition against the minations resident in the parish, and by a number of the leading and most influential inhabitants. After a long magistrates decided on refumber of death Mortality of the Metropolis.-The number 28, was follows:-West Districts, 159 ; North Districts, 174 ; Central Districts, 223; East Districts, 269; South DisWeekly average for the last five years, 903 ( 461 males, 442 females); and for the last five autumns 908.

Birmingham.-Mr. Attwood, formerly M.P. for this town, has published an aldress to the inhabitants, in which be seems to recommend a sort of returning to a paper currency. The following gives some intimation bis view of the present state of affairs :- " Yhave been exceedingly reluctant to interfere again in political amars, For a long time I have watched, without hope, the has come sufferings of the people. But a great change has come over the prospects of the colterations in the corn and provision laws have given a prodigious accession of the owners to the public cause ; they have at last brought the owners of land nearly into a community of suffering and oat alterawith the unnappy produced the disturbances in Wales,
tions and the Repeal proceedings in Ireland, and they are at this moment rendering the payment of the reander our present taxation and our present monetary laws. Either the taxation must give way, or the rent of land must give way, or the monetary laws, which strangle the burdens must give way. \(m\) must be cut down a level with the means, or the means must be lifted up to a level with the burdens. I think, therefore, that a great opportunity has now ansen in which all classes to relieve the common suffering and avert the common danger. If not, I much fear that the doom of our country is written above, and not to be arrested by human meaus. - "In my humble judgment, founded wean long reflection, and the experience of history, all Governments, of whatever kind, or however composed, whether republican, despotic, or limited, have a tendency to use the power of accumulated wealm hisprestrincipl proceeds the decline and fall of nations. The ancient Republics made innumerable efforts to counteract this fatal tendency of things. Such men as Solon and Lycurgus occasionally succeeded, and for a time arrested ted wealth prevailed, and dogged those glorious republics to untimely prevail", Mr. Attwood says that no man has done more graves. he has to put the navy of England in fighting order, and he adds :-"Yet I cannot conceal from \(m y\) minu the truth, that if the English Government had no navy to truth, that if the English Governmand the English people
protect them from foreiga agression,
oppression. We should never have heard the odious and delusive words 'over-trading, over-population, and best governed country in Europe:-" The Government of Prussia is a despotism; but Prussia is probably the best governed nation in Europe. Surrounded by more powerful rival nations, and under the constant apprenension of either French, or Austrian, or Russian aggression, the Government of that country places money in every man's pocket, education in every man's head, apressed." every man's hand! Such a people canniotbe oppresed, on e resignation of the present Chancellor, the Duke of Northumberland, is to be Chancellor of the University. the nenerally known to what crecumstance throughout the University. The Rev. Dr. Hodgson, Master of St. Peter s College, has been elected Vice-Chancellor for the ensuing year. On resigning his office the late Vice-Chancellor, the Rev. Professor Whewell, delivered a Latin oration in , congratulatory of the auspiciogs eneral conduct of the Academic body on the occasion of the Royal visit. The degree of D.D. has been conferred on Archdeacon Lonsdale of King's College, London, now Bishop of Lichfield, by Royal mandate.
carrent that another special commission for the trial of the Carmarthenshire priappears to bave arisen from the fact of the county gaol appears cite full of Rebecca prisoners, and from one of the Treasury solicitor's clerks being in the town arranging the evidence araingt the prisoners, In many parts of the che the tate verdict agaiust the Rebecca prisoner Hughes at Cardiff, has excited intense animosity against the from the more disturbed districts have affected even to be incredulous that such a verdict was ever returned by a Welch jury. So far as an opinion can be formed at present, however, the severity of the sentence appears to have had a siersal commiseration for the culprit. The excited una have issued an adilress calling on priseners the others to take arn fall into their condemnation. They curse bere thily, say, We are guily, lat them and every one take care not to be deluded again to attack public or private property o be deluded gan for form and resist the po and bring them down to destruction. We are only banished as rogues, to be slaves to strangers in a strange land. We must 0 in the prime of life from our dear omes to live and labour with the worst of villains, looked upon as thieves. Friends, neighbours, all, but especially young dread the terrors of the Judge. Thiak of what we must, and you may suffer, before you dare to do as we have done. If you win be peaceable and you
again like honest men, by the blessing of God you may expect to prosper, and we-porery of the Crown -for on no other terms than your good conduct will any pity be shown to us or others, who may fall into our almost hopeless situation." The western part of Radnorslire is at present in an excited state, ayed. The rioters bars in that county have been destroyed. twelve fires took place in one night last week in the neighbourhood of Ruthin. The Royal commission has been daily occupied since the 25 th ult. All its meetings have been conducted in privacy, as far as relates to the press. The following is a succinct account of its proceedings:A strict and methodical inquiry into the accounts of the princis trusts in Carmarthenshire has hitho been toyment al object of the commissionerg, but this employ plain has been almost daily varied by applications or plaints from incivicuals, or parochial deputations relating generil ation from all parties who could elucidate the causes of the recent outbreak, or who laboured under any grievance which called for redress, they have given audince to persons of all stations, including county magistrates, trustees of tolls, clergy, farmers, guardians of the poor, and others. The same topics have been adverten to by many different parties, as constituting the principal sources of complaint. Among these anc-1st. The tura pike system-the number anc expensiveness of the gates and bars-the inconvenience caused by the contiguity or several trusts crossing each other and competing for toll, to the great inconvenience of those who reside on the roads near the point of contact. 2. The working of the medical pricularly with tefernce to the saris. The latter objections were urged by a deputation from the parish of Llanarthney, consisting of the Rev. H. Williams and some of the principal parishioners, who had a conference with the commissioners on Tuesday week. An absolute recurrence to the principles of the old system did not appear willing to adopt all the conditions of the former practice. They thought that the justices had then too much power, but that guardians had now too little. The increase of the burden of tithes by the working of the Commutation Act is another subject on which several representations had been made to the commissioners, who them. The undue expenditure of the county rate and the
den Theatre, have been employed by the purclaser to produce a pictorial exhibition to succeed the great picture of London, which will occupy Mr. Stanfield's attention for nearly twelve months.
Swiss Cottage are to undergo an entire change; and it is
exorbitant charges of magistrates' clerks have been likt'
wise urged as forming a part of the list of grievances, and into these subjects the commissioners have expressed the intention of instituting a careful inquiry. Some other matters upon which they have been appealed to seem to
partake too much of a personal and peculiar character to be classed among the "causes of disturbance" which they are charged to investigate. Such, for instance, are the rating to the lighting and paving-rates and borough-rates that town, and therefore deriving no benetit fiom of application of such rates-or the recent enforcement of a penal statute which had been for some time practically obsolete, regulating the use of particular casks for packing tion of such intervals the commissioners, with the excepdescribed, has been employed in the examination of the accounts of the several trusts. The commissioners have expressed their complete satisfaction so far as their inquiry has hitherto gone with the readiness shown by all parties Whom they have examined to afford the fullest informa Chiches!er.-The interior of the cathedral of this city
is now undergoing restoration. The ancient tombs and their effigies, and the mutilated Purbeck marble columns, which have so many years been suffered to rernain in a

by which the boarding and rof eded on Saturday morning, ing, but no further damage was done, and no one injured. Andeerpool.-A correspondent ("Facile") informs us that with the Preston Guild and annt of wose connection already noticed in this Paper, has attempted to bribe the keepers who were taking him by railway to London preparties has called upon the \(L\) a penal colony. One of the parties has called upon the Licerpool Mercury, and stated \(100 l\). to the keeper- \(700 l\). \(600 l\). to the contractor and 100l. to the keeper-7002. in all. This took place at
Birmingham. After be saw that there was no hope be offered the same party \(250 \%\). and \(700 \%\). to the contractor, and at last he wished a sum to be named, as hundreds train ready to give the money. There was a party in the made. The person states that he has no doubt that 5000 l . or \(6000 l\). would have been given for Anderson's liberation. of a charge our last Number there appeared an account Thomas Walker, attorney previous Monday against Mr. the name of Mr. Bere, a Commissioner in the Leeds District Conrt of Bankruptcy, to a spurious interim order of protection, and a renewal thereof, to an insolvent. The admitted to bail to take, his trial at the next assizes. It admitted to bail, to take, his trial at the next assizes. It
having been discovered that there were other charges of a morning and taken before the Leeds borouded on Friday morning and taken before the Leeds borough magistrates, Ine other Commissioner at the Leeds Court of Bankruptcy. Burnley, of Bat had been employed by a man named Burnley, of Batley, to get him through the Court as an Thsolvent. He gave Burnley an interim order on the 18 th Thly, which extended until the Gth October, on which day Bothve the order and the renewal were produced and show. The resest, who stated that the signatures were forgeries. The registrar proved that no petition of an insolvent of the name of Burnley had been filed in the Court, and no fees no defence, and was committed to York Castle for trial Leicester.- We lately mentioned that Mr. Messenger, the farmer charged with the murder of his servant, had that on Sunday he invited his sureties and other frientates a feust to celebrate his release on bail, when they drank Rotherby, died in consequence.
Llandaff:-The Rev. Knight Bruce, Chancellor of tions for the restoration of the calhedral for subscripdiocese. The building is in several parts in a dil of the condition, and many of its principal beauties have been entirely destroyed. The Dean and Chapter have been
scribed \(1,000 l\). and the Queen Dowager has sent a donation of 100 guineas. Manchester:--A requisition, numerously 100 guineas. calling upon by the merchants and traders of Manchester, day in the week by other to make the sacrifice of half a o'clock on Saturdays, in order to afford time for the at one tion and intellectual improvement of their assistants. The measure has the assent and support of some of the leading \(N_{\text {ottingham }}\) men the town.
dence of the Rev. Robert Meek, rector of St. Michael's, frocks, with thion, was entered by five men in smock, Stole therefrom several valuable withicles. The burglars effected an entrance by braking open the front door with a rurv-bar. Mr. Meclr was awakened by the hoise; he
looked out of the window, and although the nimt dark and of the window, and although the ment wals
house ; the vant's room, and requested him to get up, as he suspecterhowever, got ontravouring to enter the Louse. 'The inan, the top of the house, and remained there until the robbers
had disappeared. Mr. Meek then discovered that the
thieves had already effected an entrance. He slipped down a flight of back stairs, and went out at a back door 120 yards from the house, he was attageked by when about who struck him on the head with attacked by two men, three severe and dangerous wounds,and then dragged bim to the house. The rufferous wounds,and then dragged him to the bedroom door, which Mrs. Meek had locked when her husband went off for assistance; they held a crow-bar orer the lady as she lay in bed, and demanded the money of an iron been received that day for rent, and also the key and the thieves commenced a regular gave them the key, open the drawers and ransacking every drawer, but the could not succeed in finding the object of their search which was in a desk concealed from sight. They remained together. The police, however, succeeded in went off clue to the robbers, and three men residing in the village have been apprehended on suspicion.-The local papers state that the workmen employed in pulling down an old bate copy of the will of a man named Burrows, who proresided there many years ago, and owned the property I was found stuck between two walls in the staircase. This property has been long held by Earl Howe, in consequence of the inability of the parties to make any title to the a pedigree being produced, and the title of the heir-at-law established, readily relinquish the possession.
Oxford.-Dr. Kenyon, Fellow of All Souls, has been
appointed Vinerian Professor Oxford Choonicle states that of Common Law. The addressed a letter to the President of Magdalen College, intimating lis return to the English establishment, and soliciting re-election to his fellowship.-The Bisliop of Oxford has written a letter to Dr. Pusey, entirely exonerating Mr. Newman from the charge of having broken his faith with his Lordship, by suffering a re-publication of Tract 90. The Bishop says, "I lose no time in stating, that when I requested the Tracts for The Times might cease, however I might have regretted the original publication of Tract 90 , it formed no part of my injunction or request (from well-considered reasons at the time) that there should be no re-publication of that tract. People to feel themselves at liberty to express their opinions as editions of that or propriety of having published more having done so, contrary to promise, is unfounded and unjust. No one, however, who has the slightest knowledge of Mr. Newman will give a moment's credit to such unnecessary for me to state to Mr. Newman or yourself the remotest which I have said or written can have given Portsmouth. - The following is an extion.
Mr. Brooke's letters received by the overt from one of nouncing the safety of her Majesty's ship Sand mail, an ated Sarawak, August 13 :-"I am happy to add that the Samarang is
own was held on Friday meeting of the inhabitants of this consitieration a proposition made purpose of taking into consideration a proposition made by the Earl of Lincoln, contribute the sum of \(8,000 l_{\text {., being a moiety of the esti- }}\) mated expenses for draining the castle and town estiWindsor. After the Mayor, who was in the chair, had posed a resolution that the ingabitants decline bearing any share of the expenses, observing that in the event of any passing of a contemplated Act to compel the inhabitant to improve the drainage of the town, it might be effectival done for less than \(3,000 \mathrm{l}\). Mr. Bedborough moved as an amerdment that the sum of \(5,000 \%\), be contributed toward the expenses, and raised by the disfranchisement of the Corporation property, which was negatived, and after considerable discussion the following proposition of Mr. Adam whs carried:-"That considering the vast extent of Crown
property within this borough, in no way contributing to the parochial rates, and the extensive defalcation in the warious latings arising from the destruction of property vinced of the inability of the borough to meet any materia feels itself compelled to decline to contribute towards expenses of executing the extensive and extravards the proposed by the Commissioners of her Majesty's Wpan ad Forests, with a view to the drainage of the Castle and confined almost entirely to the service of the appear to be that a very considerable proportion of the town and its suburbs are wholly excluded from any contemplated benefit Ro be derived therefrom."
week:-Birmingham and Derby the returns for the past and Gloucester, 1,816l. ; Eastern Counties, Edinburgh and Glasgow, 2,337l.; Great Western, \(14,212 l\).; 1,359l. ; Great North of England, 1,538l. ; Hull Ayr, Selby, 1,014l.; London and Birmingham, \(16,542 l\).; London and South-Western, 6,207l. ; I.ondon and BlackBrighton, \(4,120 l\). ; London and Croydon, 2281 . pool and Manchester, 4,007l. ; Manchester and Leeds, Birmingham, 2,845l.; Northern and Eastern North Midland, \(4,384 l\). ; Newcastle and Carlisle, \(1,473 l\); chester, \(445 l\). : York and North ; Sheffield and Manpublic meeting was held at Salisbury Iast week, to further
the project of a railway communication between that city South-Western at Bishopstoke. Anch line, to join the Mr. Locke fixed the cost of the line at less than prepared by whereas a former estinate, when a simila than \(250,000 l_{\text {., }}\) contemplation, was given at \(400,000 \mathrm{l}\). It one-half of the rauired capital Sarreys engage to raise jected line are already in a forward state, and the neces sary measures will be taken in order that and the necesliament may be obtained in the ensuing sessions.

\section*{IRELAND.}

Dublin.-The bills of indictment against Mr. O'Connell grand jury on Friders were sent up to the city of Dublin extent, covering not less than ninety-five formous in ment. The indictment was accompanied by an parchsome contents, prepared by the Crown counsel; but some members of the grand jury having objected to the the indictmen abstract, when they were sworn to consider cone throuent itself, the voluminous document had to be mane through, count by count. The deepest interest was ing the proy the crowds in and about the courts respecting the progress of the prosecutions. During the day a in attend witnesses for the Crown-36 it is stated-were which the police aprortments near the grand jury room, to Which the police prevented access; but at four D'clock, on slightest slightest chance of their coming to any decision on that day, the witnesses were directed to go home. On Satur. day the deepest interest again prevailed in the courts respecting the prosecutions, and much anxiety was exhibited in all quarters to learn what progress had been made with the iadictment. In the afternoon the foreman stated grand jury and other jurors came into court and fourth cout there appeared to be a clerical error in the two persons the indictment, in which the nanies of James Tier were included-Thomas Tierney and Peter Peter James Tyrrell. Some of the jury should have been that as this was a clericame of the jury appeared to think Tyrrell should be substituted for Peter James Tierney A desultory discussion ensued, which terminated in the Chief Justice declaring that all the members of the court were of opinion that the alteration could be the as the document was not properly a bill of indictment in that state. The alteration was then made by the lerk of the crown, and the bill returned to the rand jury. When they adjourned, shortly before five oclock, they had examined but one witness, namely, Mr. ernon, the Registrar of the Stamp-office, whose deposiFins were merely technical, respecting the registry of the proprietors of the Pilot, Freeman's Journal, and the
Nation.-Mr. Bond Hughes, the Government repor and several other witnesses, were subsequently reporter and on Wednesuay afternoon the Grand Jury came into court with a true bill. Mr. O'Gorman, one of the Jury however, declared that he dissented from that finding. The Attorney-General moved that the traversers be now called apon their recognizances. The Clerk of the Crown then called upon Dapiel O'Connell, Esq., John O'Connell, Esq., Thomas Steele, Esq., M. T. Ray, Esq., John Gray, Esq., Charles G. Duffy, Esq., and the Rev. Messrs, Tyrrell and Tierney, all of whom appeared. The Attorsers. General then said that he had next to call upon the Court to put a rule upon the parties that they should plead within four days. Mr. Stecle objected to be prosecuted by the Attorney-General. The several parties then applied by their Council for copies of the indictment the Attorney-General said that copies should be furnished them within an hour. A discussion of some length arose as to enlarging the time for pleading; but the Court said go by itute was peremptory, and they were bound to court to hear the event considerable number about the tranquil.-On Monday Mr. M'Donough applied for mandamus, calling on the Magistrates of College Street Police-office to receive \(\mathbf{M r}_{\text {r }}\). Barrett's informations charg ing Mr. Bond Hughes with verjury. The application was opposed by the Attorney-General, and the Lord Chief Justice held that if the grand jury were to receive evi dence against the Crown, that would be trying the case which it was not their province to do. Now, that being he rule, which was as old as the law itself, he asked, how would it be possible, without infringing on that rule, to permit bills of indictment to be sent up against Mr. Iughes until the existing bills were disposel of? When prefer birr prefer bills of indictment against Mr. Hughes or any other witness; but the court, in the present stage of the proceedbecome witnesses in their own case. of the Reveal Association was held on Monday A fly meeting of the Repeal Association washeld on Monday. After a resoIation had been passed pledging the Association to use every Compensation Fund for 1843 , which is fized for O'Connell Compensation Fund for 1843, which is fixed for Sunday the Mon inst., Mr. O'Connell handed in 1002 . as Proclamation to the from the law clems and and Repeal agite of Ireland, pointing out the objects of the Repeal agitation, showing that they do not desire separation from England or Catholic ascendancy, but freedom of conscience, education, and the press. This address was adopted, together with the draft of another to the Queen, to be presented by each parish in Ireland. Mr. O'Connell said "it might be objected that the address to the people reiterated matter that had been spoken of be-
topics until they were fully impressed upon the public mind．He wond move that the committee be any crime warn they come to the great crisis of their great experi－ ment－an experiment to demonstrate that by peaceable ment－an experiment to demonstrate that by peaceabie tions could be obtained．If they adhered to perfectly peaceable means，be saw the certainty of carrying the Repeal．The Government might incarcerate him and others within four walls，but there were others to stand in their places． person of him in the county of Limerick，that if to wish given the liberty of Ireland was a conspiracy，he was a con－ spirator．＂At the close of the meeting the rent for the week was announced to be last week published an improbable story resperting a letter said to have been adrdressed
by the Duke of Wellington to the Earl of Glengall by the Duke of Wellington to the Earl of Glengail，
conveying imformation respecting the army and conveying imformation respecting the army and Briish army，certainly every regiment which could be spared in Ireland；that ramps will be formed in differen parts of the country，and particularly in the neighbous hood of cities and towns，dc．；and that supplies of arms ammunition，and subsistence of every description，woun be sent into the country from Eingland，for the use of th army，so as to make it independent of，＂Thas statemen han gone the round of the Irish papers，but Lord Glenga has published a denial that any such letter was received． Cork．－A fatal affray took phace at in this city on Saturday night，in which Dr．Quarry ne of the proprietors，was killed．It appears that the other partner，Mr．Wilson，had withheld pussession of par of the building from Dr．Quarry，who called at the mins， and was in the act of going up－stairs，when he was mos near the top by a workman，Thomas Carron，Carroll calle out to his brother Denis to bring a hiunderbuss，which he presented at Dr．Quarry，but it missed fire；he then caught it by the butt－end，and be was knocked down th flight of stairs．Then Donoghue，one of the assistants of the Doctor，came up，but got a blow from a sharp instru ment which knocked him down，and iendered him for a ing Dr．Quarry on the head with a＂saw－buckle． rest of the party seeing the Doctor thus used，made an attempt to go up，when Carroll fired down on them，but office and brought up a large pistol，which he discharged office and brought up a large pistol，which he discharged quickly returned，but fortunately without effect ；and Ryan，the lyitug dow bation for Mr．Wilson，kick the Doctor several times in the most brutal mamner．Dr． Quarry lingered until Sunday evening when be expired， and the Coroner＇s Jury have returned a verdict of Murder against all the parties concerned． paccessory before the fact

\section*{SCOTLAND}

The Hebrides．－On Tuesday week two islande，named Rasay and Bona，situated in the Hebrides，were sold by auction at the Auction Mart，London．They were for many years the property of the M＇Leods，of Rasay，and com including the mines and the timber，was about 73,000 l． There were 52 farms，the rent arising from which was about 1200 l ．They were capable of improvement，in con－ sequence of the facilities of communication from them to the metropolis，the journey now being completed in less
than 36 hours．The estate was put up at 20,000 guineas， than 36 hours．The estate was put up at 20,000
and eventually knocked down at 35,000 guineas．

\section*{THEATRICALS．}

Covent Garden．－As might have been anticipate from the recent proceedings at this theatre，the establiah－ ment is now closed．The actors were assembled on Saturday morning on the stage of the theatre，preparatory to a rehearsal of the pieces announced for Mr．Wallack the man Monday，whould be no performance，or，in other words，that the theatre would not open again．The French juvenile performers have since appeared at the St． company have left town on a provincial to

Vick－Ceancblior＇s Cotrt．－（Before the Vice－Chancelint of
 －As to the circumstances of this litigation，our readers wht not unusual，contracts with the conpuny to complete the
works in a limited time，under pain of forfeiture of his plant and works in a limited tıme，under pain of forfeiture of his plant and
machinery，and of a reserved portion of the price which was not to be paid till the works were completed ；and that the Company being dissatisfied with the slow progress of the works， Ranger had filed this hill for relief against the forfeiture，and for an account，alleging that Mr．Brunel had fraudulently given him had not made himsuch payments as he was entitled to ：and that lis suit was bronght to a licaring under a committee of Many Ranger＇s creditors，who iotiked to his claims agas ast the Company
forliquutation of their rebts．His Honour now gave judgment and deculed that there must be a decree for an accoun， take place as to tow far the phaintiff had heen sufficiently pad
nnder the superintendence of a courtor Equity．As to the prayers under the superintentence of a Court of Eiguity．As to the prayers
of the bill，his Honour observed that no pioof of fraud had been given in respect of the strata through whinch the turunels and
cuttings were to be made．The charge of fraud seemed an after－ cuttings were to be made．The charge of frand seemed an anary
thought；and his Honour upheld the extent of the discretion im． powers siven to Mr．Brunel．It was，he said，of the utmost im． constructed，and the public can have no sccurity that they aife
well construeted without the judgment of some eminent screntific man．The Great Western Rallway Act recognises this priciple fir fin The objection that
must be of more value to him than any interest he could have as Brunel. But what quantity of work has been done, what payment ought to have been made for it, and whether the measure-
ments and caculations of Brunel are right, must be tried in this Court. He should, therefore, refer it to the Master to inquire into, in accurately define the nature of the three sorts of wore, to be paid for. Various petty grievances were held cither too trivial
to require inquiry or matter for an action at law. The plaintif 8th of continually asking favours of the Company up to the any injury until in his letter to Saunders, of the 25th May, 1838. Ho case made on the bill was a mere after-thought, and his respect of it. There appeared to be evidence of the delay of the work in the hands of the plaintiff, and a want of arrangement sufficient to warrant the Company in taking possession of the
works and everything on them. The plaintift talked of the oppressive" character of the contracts. His own conduct refuted after having entered into the first, he made a second, and then a third, each after the expiration of some months, and so great was His Honour expressed regret at the unnecessary imputation of fraud on the Company, and also the improper suggestion of incapacity on the part of Messrs. Freer and Babbage, and said that the result was, that except as to the account, including the incase consisted of 812 folios, and the amended bill of 1,157 folios. The first supplemental suit bill contained 341 folios, and the second supplemental 525 folios. The first answer, 1,299 folios; the
second, 132 folnos; and the third, 212 folios. The plaintift's evidence occuppict 1,865 folins, and the defendant's cyrdence, 405 dence occupted 1,865 folins, and the defendant's cvidence, 405
folios. Short-hand notes on collateral angiments, 2,200 tolios; observations, 39 briets. The total hrief, embracing these copes for counsel, would occupy abnut 960 bricf sheets. Fees to comsel
alone, It appears, amounted to about \(2,000 \%\), and the short-hand
 Writers' bill neariy 400., The suit me plaintifp pays the majority of these costs.]
five years. The
(Before Vice-Chancellor Wigram.) The Corporation of Glou(Before Vice-Chancellor Wigram.)-The Corporation of Glou-
cester v. Wood.-His Honour delivered judgruent in this case. original bill against the three surviving executors of James Wood, claiming payment of two legacies out of the estate, one of \(140,000 \mathrm{l}\). and another of \(60,000 \mathrm{l}\), mentioned in a codicil to his codicil to iny will I gave to the corporation of Ginucester 140,000l. ; in this I wish my executors would give 60,0001 . more to them for the same purposes as I have before named." This codicil referred to a former one which was not forthcoming, nor
was its absence in any way accounted for in the bill, simply claimed upon the construction of the languag in this testator ever gave any such legacies as the plainuiffs claimed, the purposes for which they were given were not, and could int,
be ascertained, and that the same were wholly void. The answer be ascertained, and that the same were wholly vold. The answer
of the other executors, Jacob Osburn and John Surman Surman, was to the effect that the codicil was void from uncertainty,
His Honour was bound on the pleadings to assume that nothing Was known to affect his construction of the papers before him, The uneertainty must, therefore, prevail; the probabilities of the
case were excluded; and though morally he scarcely doubted the money was given to the corporation for charitable uses, or
for their absolute benefit, nevertheless with great regret he had come to the conclusion that the claim of the corporation could not be sustained, and that the bill must be dismissed, but without
costs.

\section*{SATURDAY, NOVEMBER 18, 1843.}

The approaching winter will put to the test the real capabilities of hot-water gutters or tanks, as a well-authenticated results. In the meanwhile a few observations as to what is certainly known of their efficiency will not be unseasonable.

As a means of conveying bottom-heat, for which they are best suited, we regard the tanks or gutters formed of bricks and cement as being perfect. It is indispensable that any contrivance for that purpose
should permit a small quantity of moisture, and only a small quantity, to pass through the sides. When steam pipes, hot-water iron pipes, or metal apparatus and there is no remedy for that except by watering over-head. To do so may be unobjectionable where such a material as tan is employed to form a bed in which pots are to be plunged, but it is inadmissible when soil rests on the apparatus, and pides of dry metallic troughs will destroy all roots which touch them, and unless the greatest care is taken, a large portion of the other roots will be injuriously affected by the fluctuating humidity of the soil. That cannot occur with cemented brickwork, through which an itself in the soil, and maintaining an equal humidity itself in the soil, and maintaming an equal humidity weeks since in the Garden of the Horticultural Society when it became necessary to pull down part of a pit which had been fitted up in the spring, experiment ally, with hot-water gutters. When this pit was
filled with mould, the spaces between the gutters filled with mould, the spaces between the gutters
were filled, and they were themselves covered, with sticks and trimmings of Vines and White Mulberries, upon which the earth rested. Upon removing these cuttings they were found to have been forming No evidence could be more conclusive as to the genial moisture emitted by the gutters when filled with hot-water, so that the roots of the most tender plants may be safely trusted in contact with them. We regard, then, the fitness of closed brick gutters for communicating bottom-heat to soil to be established satisfactorily ; whether they are the best of all contrivances, or whether the arches and voussoirs proposed by Mr: Ainger in our volume for 1841, or some similar contrivance, may not be better is a separate question.

It may, however, and probably will, turn out that some peculiar management is necessary where pits thus warmed are employed for preserving plants in winter; for that transpiration of moisture which is so grateful to growing plants, especially in summer, may not suit torpid plants in winter; and we anticipate many complaints of plants damping off in winter in pits heated with hot-water gutters passing through soil, tan, cinders, or other materials. But this is an inconvenience common to them and the old hotbeds which they are destined to displace, and similar precautions will be wanted in consequence.

The fitness of hot-water brick gutters for giving airheat in winter is much more open to doubt, in cases where, as in all greenhouses, a dry atmosphere is required. We have never recommended them exceptfor special purposes. Moisture in the form of vapour will certainly pass through their tops, and the quantity will, we presume, be in proportion to the heat employed; so that the hotter a brick-tank-warmed greenhouse may be kept, the damper it will become. It is, however, probable that abundant ventilation will diminish this inconvenience; or if not, that it may be found possible to coat the tanks with some paint-like substance, which will temporarily arrest the emission of vapour. This difficulty, if it should prove one, will not, however, be felt in forcing-houses; where, on the contrary, it will be a positive advantage. We believe that linseed-oil, applied when the tanks are hot, will obstruct the passage of vapour to a very considerable extent.
We mention these things thus early in order to put gardeners on their guard, so that they may not fall
houses whose air is warmed with brick-gutters can be prudently managed in the same way as if iron-pipes or smoke-flues were employed.
Now that the subject of Pine-growing has been brought forward, we have many letters attesting the truth of the statements that have been published regarding the excellence of cultivation at Bicton and elsewhere. For ourselves we require those who rence, but for the purpose of satisfying those who rean unconvinced, notwithstanding the Longleat Pines unconvinced, noty and the details furnished last week by Mr. Dawson, we publish in another column the particulars of some Queens, grown at Bowood by Mr. spencer, Lord Lansdowne's gardener, Saul, Lord Foradd the testimony of Mr. Amail. He states thattescue's gardener at Castle-hill. He states that-
"Having lately paid a visit to Bicton, he was much struck by the extraordinary fine Queen Pines, produced there by Mr. Barnes. He had not, indeed, an opportunity of seeing any of the fruit weighed, but judging of them by other fruit of the same variety, which he had bimself weighed, he has no hesitation in affirming that they must have been quite as ." "If ," has been represe "Doumhuil' would take the trouble of going to see the plants, I think he would no longer doubt the possibility of their producing fruit of the weight stated. Let him picture to himself a Queen Pine-plant standiny about \(6 f t\). high, with leaves 3 ins. or
4 ins. broad, and the stem in every way proportionate, and then say whether he does not think it possible for such a plant to produce a fruit of 5 lbs or 6 lbs . weight. I have seen a great many well-grown Pine plants, but hever any at all equal to those at Bicton."
We purposely refrained last week from bringing forward evidence of great weights, formerly obtained by a few select gardeners, because we regarded them either as doubtful, or as exceptions to the general rule, or accid
A correspondent, "A. C.," reminds us that nearly 40 years ago, Mr. Griffin, a most respectable gardener of that day, effected at Kelham nearly as much as Mr. Barnes at Bicton and Mr. Murray, at Longleat he having, in 1802 , cut 20 Queen Pines, which
weighed 87 lbs .7 oz , and in 1803 one which weighed 5 lbs .3 oz . again, in 1805,22 of the same sort, which together weighed 118 lbs .3 oz. ; "giving an average not far behind the Little Queens of Bicton of the present day."

Now we do not in any way question the accuracy of this statement; but as we have heard of such a instead of weight being used for Pine whel large instea. gills and heavy crowns, and have occasionally been add to the weight of Pines, it strikes us that modern instances, which are easy to verify, are more satisfactory than evidence half a entury old.
How these large modern Pines have been obtained, we hope in due time to relate.
COMMENTARY ON CERTAIN PASSAGES IN THE PHYSIOLOGICAL WRITINGS

\section*{GY W. WOOD.}

No. V1.-On The Culitivation of the Pine-Apple, -"If the bark-bed could be made to give a steady heat (temperature of about 10 degrees below that of the day temperature of the air in the stove, than in a colder; for the temperature of the day being about \(90^{\circ}\) or \(95^{\circ}\), and that of the night \(70^{\circ}\), the mould in the pots will necessarily acquire nearly the intermediate temperature of \(80^{\circ}\). It is true that two disturbing causes are in action-the evaporation from the modh and porous surface of the pots, and the radiant heat of the sun; bat these causes operate in oppositeration or influence of probably, nearly negative the operaperature of the mould
each other, as far as respects the temper in the pots.
pots.
have never yet seen plants of the same age equally strong, nor any

But I have never" taken off nor shortened a root, nor taken any other measure to retard the period of fructification, with the prospect of obtaining larger fruit; and my old, though propagated from small and young suckers and crowns.

The compost as before given for Cockscombs is the most stimulative of growth. Pine-plants will, however I have found that they have succeeded best when the materials have been fresh, and retaining their organic form particularly if the pots be large relatively to the size of the plants, which I think they aiways ought to be, for the mode cultivation recommended. I have used with advantage the I found that the plants succeeded best in the warmest part of the house, where the flue first enters, and where the temperature is very high, varying from about \(85^{\circ}\) to \(105^{\circ}\), and When the whule of the suckers are re-
moved at an early period, one or more very strong suckers usually spring out below the level of the soil, and from these, suffering only one to remain attached to the parent stem, and preserving the roots as entire as possible, 1 hav propagated with much advas age molip which shewed fruit strongy \(h\) appere like \(h\) the period at whicll the suckrof the " Hol head of "Asparagus. at
Trans., vol, iv, p. 543 .

Remarks.-The foregoing statement appears to involve, and to a great extent, to illustrate, the principles wpon which a progressive and accume coliun tion depends ; while speaking of that is most desirable, and of the oppotg age the absorption by the mould and surface pots, \(b\), with the radiant heat of the sun, 1 think that barce "negative influence of these causes 788 ) where embodied in a former paragraph (p. 788, ) where it is stated that a due exposure (or plants) and solar agency is requisite; that sentence alluding to
a balance of the power of absorption,
The superior growth of the plants and the excellence of the fruit, compared with the age of the plants, is a sufficient proof of the superiority of an accumulative growth over an opposite treatment ; and this instance, commected Mr. another cited at the conclusion of the paper, wherein Mr. Kaight refers to suckers showing frut at seven moaths, may be adduced as an anticipation in practice of what I have advanced in theory (by the light of practice, relative to the highest test of cultivation; namely, "that which attains the greatest constitutional vigour within a limited period." The very young state in which the suckers were removed further confirms the remark a force, in proportion as the primary development of their parts is prematurely hardened or matured, whether by deficiency or excess of the elements which sustain them ; and arain 734 so it is the elementary condition of an organised being which favours the ultimate development

\section*{of its parts."}

Mr. Knight admits not having "taken off, shortened," or otherwise disturbed the roots in the process of cultureIrincipl may cite this as fully bearng we law or con ditionple have laid down (p. perfect accuaulative grow th namely, that "the accumulative vigour of all plants is exactly in proportion to the progressive agency of the cause to which they are first subjected," \&c. \&c. Inceed, the whole of this instance of cultivation ap place, we have harmony with first priuciples. In the and qualities, their proportions of compost, so as to prevent impeded circulation-a method which ion of several parts, end, and implies a principle of unity with progression, or, in other words, progressive transition witant \(\begin{aligned} & \text { continuity. This definition is, I conceive, strictly applica- }\end{aligned}\) ble to a system of cultivation which produces a progressive and accumulative effect, and strich which affirm that the first principles of thont in health it is indispensa "For the mainteuance uid the roots should be continued ble that the supply ", The oly meane by which this and unimerruple. continued and uninterrupted supply of materials, of obtained will be poportions, textures, qualities, arrange-
their relative prom ments, and exposure to certain agencies, as will be equal to maintuin exposular progression of the functions of life, from the firs is the only law by which a comparatively perfect system of cultivation can be established. Every other process than that which involves unity of parts with progression of growth may be invariably conducive chemical affinuties but the laws which govern organic aud chenich amnaties will never allow it to be productive of the highest possible effects. A disorganization on power which no process attended with a losablish . "A fex days after the annexed paper was read, I had the pleasure of observing (being on a visic Apple plants \&c.) the condition and appearance of tue Ras aplats described by him. The plants, which were then expecting to be shewing fruit in the next month, though ong, were remarkable for their vigour and strengti. Whey were grown in pots of much larger size than nearly in contact raised so as to bring the upper lealy rooted and leaves of peculiar breadth, \&c."-Horl. Trans., vol. iv. Note by peculiar seoretary.

Remarks.-The above remarks afford additional Rence in favour of an accumulative system of cultivation, and though it is not stated that the plants were removed or transferred to such large pots in their youngest state, yet it is a close approsinaion to it , and may be considered illustrative of a paragraph at page 709, viz. - "The leading feature of the former (accumulative) is found in its adaptation to attain a maturity of growth, part from the aid of intermediate shitts, by removing plants in their youngest state to pots commensurate size with their ultimate vigoureme at page 734, that "The intensity of atmospheric and solar agency haw in proportion to the amount of material used in the process of potting, \&c.

\section*{ON THE ATMOSPHERE OF HOTHOUSES.}

Moisture.-It is of especial importance in the manage ment of plants that the atmosphere surrounding them be in a proper hygrometric condition: if too moist, they are
apt to damp off and perish; and if too dry, their growth of red spider and other insects. Where high temperatures are maintained, either by hot-water pipes or common flues, the latter condition is much more liable to occurmon than the former; and if no other means are used than the ordinary watering of the plants to supply the air with moisture, it depends on a property of air, of extensive appliance in the economy of nature, by which its capability of dissolving water increases in a much higher ratio than its tempewature. Thus, if we take a certain portion of air at the
rater rature. Thus, if we take a certain portion of air at the
temperature of \(50^{\circ}\), and beat it a fifth part more, thus raising it to \(60^{\circ}\), and if we saturate it with moisture in both instances, it will be found to contain much more
than a fifth part additional water at \(60 \circ\) than it did at \(50^{\circ}\), than a fifth part additional water at \(60 \circ\) than it did at \(50^{\circ}\);
or, if we take two equal portions of air at \(50^{\circ}\) and \(60^{\circ}\), both or, if we take two equal portions of air at \(50^{\circ}\) and \(60^{\circ}\), both and mix them, an instantaneons deposition of moisture occurs, for the resulting mean temperature of \(55^{\circ}\) renders
the air unfit to hold the whole in solution. If it were not the air unfit to hold the whole in solution, If it were not
for this simple property of air, we could neither have fogs nor rains. One accustomed to the management of hothouses will be able by his feelings to tell whether the house he enters be moist or dry, particularly if he gets a
glance at the thermometer. A moist air always feels glance at the thermometer. A moist air always feels Warmer than a dry air at the same temperature, because in
the latter case a freer exhalation of vapour takes place from the latter case a freer exhalation of vapour takes place from
the surface of the body, keeping down its temperature. But the surface of the body, keeping down its temperature. But thlture or other operations ; Mason's hygrometer should, culture or other operations; Mason's hygrometer should,
therefore, be provided. This is neither more nor less than a couple of thermometers, the bulb of one of them being covered with a bit of rag kept always moist The dry
bulb thermometer measures the temperature of the atmor bulb thermometer measures the temperature of the atmosphere of the house, and the wet bulb one the intensity
of evaporation, or its capability of dissolving moisture hence its dryness. When plants are in active growth the Wet thermometer should not be above two or three degrees below its neighbour, and may be often equal with it; but when they are at rest the difference may and ought to
be greater. The wet buib instrument not the dryness The wet bulb instrument not only indicates another important hint; it tellk him the temp gardener the soil in his pots, at least, if these are duly supplied with water. The same cause, evaporation, which sinks the mercury in his moistened glass, is at work with his
pots, cooling them down in like degree ; so thet ins the fostering influence of bottom-hest, so that, instead of antithesis of bottom-cold. A dry atmosphere is thus not only hurtful directly, by its aridity, but indirectly, by its frigorific influence on the roots of plants, unless the pots are exposed to the direct radiation of heat from the The means of keeping up a moist atmos deficit.
Where steam is employed as the heating medium necessary quantity permitted to escape will readily, the this object ; where warm water is the waterin readily effect of its surface exposed, proportioned to the heat and saize of the house, will be effective. And where only close pipes, tanks, or flues exist, a number of earthenware trays, or basins, filled with water and placed on them, will yield the requisite supply; or, as formerly hinted, a few inches the same end. -J. \(L\)., Newburgh. (To be continued.)

\section*{ROSES IN POTS, No. III- FORCING.}

Roses required for forcing, in as far as regards soil, manner as those intended to be grown in pots in the same air. They should be pruned early in November, and it is well if they can be allowed to make their growth, and bloom out of doors, the first season after removal. That plants taken from out of the ground and potted early in autumn will bear forcing and bloom tolerably well the
succeeding spring, we know from experience direct observationg, it is evident that, having been a year in pots, they become better established, having been a year quantity of flowers, and form more compact plants. The first week in January is a very good time for conveying
the plants into the forcing-h gentle heat, say \(40^{\circ}\) to \(50^{\circ}\). Very soon the buds will become excited, when the temperature may be gradually day, and the plants lightitly syringed morning and evening. Great care is required in the admission of air. Duning January, February, and in most seasons March, very little mild weather. I have found only from the top in stifl milfer fromern the admission of cold air, even on sure liable to suffer from the admission of cold air, even on sunny days,
than from a temperature of \(100^{\circ}\). Whilst they appear to suffer from the latter high temperature, the not free admission of air early in the season will cause the young leaves to curl up, and eventrally drop of in
numbers. The plants slould be kept as near the glass as possible, and if leaves or tan can be procured readily to plunge them in, to secure a gentle bottom-heat, Ieass firetrouble. It is difficult to lay down any precise the extra Watering; this the judgment must direct: the plants be carried into the house yoist, and the water should use, both in watering and some time before required for of a milder temperature, The descrintion may become prefer, are for the most part the dese worked on plants I moved; and as most of these spring from ail suckers reI bave found that by clasping the tops firmly between the thumb and finger when in a young state, and pulling
them steadily, they may be drawn out from the base, thus
effectually removing them as they appear, without dis effectualiy removin
turbing the roots.
The grub which attacks Roses so generally out of doors, frequently finds its way into the forcing-house, and should be carefully, sought after and removed by hand. The green-fly, though more under our command here, is not
less troublesome; as soon as any are seen, the house slould be fumigated with tobacco are seen, the house this continually repeated through to destroy them, and appear. The red spider and mildew will sometimes infest the plants, for which sulphur is the generally acknow-
ledged remedy. Dusting it on the leaves after is an easy method of applying it. From the ras anider, however, in a house with a moist atmosphere, there is no inclined to mildew-which some varieties are more than others-as soon as the first spots are seen.
About the middle of March the fion
colour; syringing should then cease, and buds will show of water be given. Should worms work inberal supply they may be occasionally watered with lime-water ; pors large flowers be sought after in preference to number, the small backward flower-buds should be removed. A few plants may now be carried to a colder house, which will give the remaining ones more room, and by selecting them of different degrees of forwardness, a continual supply of howers may be obtained; and further, the temperature being diminished, the flower-buds will have more time to expand, and produce larger flowers approaching nearer to eir natural colour. It is the custom with some, as soon a buds show colour, gradually to lower the temperature of the house; by this method a greater display is lost, and the whole retarded. When the foom fowers to expand, it will be found necessary to fow begin shading to screen them from the mid-day sums a light geason a thin canvass will be found sufficient. But to see. Roses in perfection in the forcing-house, we should visit them at the same time as we would Roses in the open air -with the rising sun, just as the buds are unfolding, and while they are wet with the dews of morn. Thus have we arrived at the season when the flowers appear, which by their beauty and fragrance redouble the pleasure we of the classes Hybrid Peir progress. Among forcing Roses not which may ful class has thais the precedence. The former beautiproved and increased ancly, and has recently imthe exclusion of many of a rapia rate as to tareaten flowers are for the many of the Damask Perpetuals. The is a similarity in appearance, purple or crimson. They Damask Perpetuais, and are free growers, with fine foliage white white, yellow, and rose. They may be considered as a fregrance, fragrance, and whether for forcing or out-door pot plants, also admirable forcing Roses, of erect growth fons are shaped coloct heads when worked: the flowers are finely The Chinese Roses , is something striking and handsome in their habit of flowering peculiar to themselves; among them are also some of the most brilliant crimson Roses. The Damask Perpetuals are very sweet, and are probably best warked on the Dog-rose when grown in pots. They appear to derive an additional vigour from this "e ezalter of the Rose Some and being compact growers, form very neat objects. tion to the hybrids of Clinese also force well. what they are when produced in the ouen quire equal to respect I believe there is a greater difference in the lightcoloured than the dark varieties. Many of the sorts above enumerated, though of first merit as forcing Roses, of doors. of thes expand their nowers when grown out Prince Aibert, and T. Princesse. Helene du Luxembourg. whe colours which may appear wanting in the above list As soon as given in the preceding one.
the soil should be removed to the bloom the surface of or an inch, if practicable withe depth of half an inch, the space supplied with, witaout injuring the roots, and plants which bloom with well-pulverised manure. The ally hardened off which should be when the house will admit more plants, with regard to what are usually fermed Autumnal Roses,
these may be treated so as to produce a good supply of flowers a second time by the middle of May. The weak shoots should be entirely cut out, and the stronger ones shortened back to within two, or at most, three eyes, taking care, however, not to deprive the plants of more leaves than is absolutely necessary in the operation. If, were sometimes the case, the shoots in antumn-pruning forth, these may be cut cuite at the top have ony sho base will be excited, and fine flower bolue the from. As the season advances, less fire heat will be necessary. Towards April, a fire lighted of an evening and kept in for a few hours will (unless the weather be unusually cold) be found to impart sufficient warmth; and after the buds show colour, even this will not be requisite. The plants having bloomed a second time, air may be gradually admitted for a few days, when they may be taken out and plunged in the open air, there to remain till required for forcing the following year.
autumn they should be furned in succession; but every portion of the old soil shook away and fresh supplied. Some few will probably require larger pots of which must judge by the condition of the plant and roots. \(-W\) Paul, Nurseries, Cheshunt, Herts.
STOPS FOR HOT-WATER CIRCULATION. whany modes of stopping the circulation of hot-water genious workman. The following, which is employed in regulating the hot-water currents in one of Stephenson's iron tanks, is employed successfully by Mr . Beck, of Isleworth. A single tank, D EF G, is applied to a small greenhouse, divided into two compartments by the partition, B C, which nearly corresponds with the separation of the housea. When the left-hand house is to be heated, the slides B C are inserted in the cross partition, and the slide \(A\) is removed; a current is then established from \(E\) to A and from A to D ; but if both divisions are to be heated, the slide A is inserted, while those at B and C are removed, when the current passes from \(E\) to \(G\), from \(G\) to F , and from F to D ; and thus both compartments will becone healed. The wooden slices, which are apt to warp being driven into the bottom ed a piece of iron hooping

\section*{LISIANTHUS RUSSELIANUS.}

Tre above plant was introduced to this country about 8 years ago, and is allowed by all who have seen it well introduction-yet stran with well grown, even at the Metropolitan Horticultural exhibitions. This, some the Metropolitan Horticultural exhibitions. This, some attribute to its being a plant tha I beg to offer a cultivate; but not having found it such, should be sown in March in on its culture. The seed shoud be sown March, in seed-pans filled with soi composed of three parts of light losm, two parts of wellcare that the drain, and one part of silver sand, taking should te dre Cuculd

The frame ( direct rays of the sun, and the shading should not be removed until the young plants have expanded their third or fourth leaf; by this time thave expanded their thir root in to the soil, and will be aby will have struck deep the sun. By the middle or end of June the plants will be fit to pot off ; they may be potted in 60 -sized pots, nthe same kind of soil as that recommended for the seed, days and an a feek or ten days, and at the end of that time they will be able to stand full exposure to light. They may remain in the frame till the end of September-care being taken to admit advances. After a time they will become hardened, and may be removed a time they will become hardened, and Where they may remoin warm dry shelf in the greenhouse, While in the greemain until the first week of February. as will keep them from flagging, but no more-no plant is more susceptible of injury from wet at this season of the year than this is. About the first week of February they may be removed into a Vinery where forcing has commenced, or into the Pine-stove or Cucumber-frame, and with increased heat receive an increase of water. When they have been growing in heat for a week, if you turn one of the plants out of its pot, the roots which were produced in autumn (that have remained comparatively dormant all winter) will be found breaking out into an abundance of young lateral ibres; if this is the case the plants may be shifted, either on the progressive or "one-shift" system. I have grown them successfully both ways: if the latter system be adopted, a 16 -sized,'or, at the largest, a 12 -sized pot
will be large enough ; the soil should be the same as that recommended for the first potting, with this difference, that it ought to contain more of the fibry or turfy parts of
the loam-this should especially be attended to if the "one-shift" is adopted; the drainage in each case should be perfect. The plants naay now be placed in a frame devoted to themselves, and have a temperature, derived either from dung or hot water, of \(75^{\circ}\); the pots should be n antiseptic, is preferable in this situation. It will be found sufficient to water them twice a week until May, when they will require it every second day: they may be A bout the bith rain-water and liquid-manure alternately be removed to the stove, the conservatory, the greenhouse, or even the drawing-room: but the stove suits them best at this stage-in it alone does this plant expand its blooms with that cup-shape so essential to its beauty, and if kept in the contrary, seeds that have been saved from plants that have bloomed in a greenhouse rarely vegetate, and may be known by their being less plump, and of a lighter colour, than those saved from plants in the stove.
By the above method I have grown the Lisianthus successfully for five years. In 1839 I had a plant with above 300 blooms expanded at one time, and during this
season I have grown more than two dozen plants without a single failure, some of them, between the beginning of July and the end of September, producing from 400 to 600 blooms.-Wm. Thomson, Wrotham Park, Barnet.

\section*{ENTOMOLOGY.-No. L.}

Aspidiotus Ostreeformis (the Pear-tree Oyster-cale).-I lately received sume bark of a Pear-tree which was literally covered with scurfy scales that I had never
before noticed. Like the Mussel.scales, before noticed. Like the Mussel-scales, they were so exactly the colour and texture of the bark that they were
not perceptible at a short distance, The scales themselves were mostly orbicular, but a few were oval; they were of a dark ashy-grey, a little convex, slightly wrinkled, and the margin membranous and whitish, and between it and the centre was a raised semi-transparent spot, of an ochreous or rusty colour (Fig. 2): when the scale is
removed, a whitish or greyish spot is apparent upon the bark-on this spot the female rests : the inside of the scale is hollow like a shallow cup, at the top of which the ellowish horny spot is very distinct, -the outer margin the scale is broad, whitish, and formed of the membrane which attaches it to the bark (Fig. 3). It is not known how these scales are formed, but they are undoubtedly produced by the animal; I can, however, distinctly clothe the bark of green particles upon these scales as as the animals have no power, like many Caterpillars, of detaching the substance with their mandibles, and uniting with their habitations.
The female is somewhat orbicular-heart-shaped, fleshy, fat, shining and yellowish white, with a few short hairs scattered over the sides (Fig. 4) ; the tail is distinct and
quite yellow, with a suture beneath. quite yellow, with a suture beneath; neither legs nor antennæ were discoverable, but on the underside-between from which issued the rostrum, of considerable length (Fig. 5), by which it is generally firmly attached to the tree, so that when the scale is removed the animal remains suspended by it, and does not fall down.

Under one of the oval scales I found a brown dead pupa, fied from the partially developed members I feel satisare pretty little creatures, of a bright ochreous, -these the head is small, with a black eye on each side, kidneyare aped, and approximating apparently beneath; the antennæ 8-jointed, the long as the animal, hairy, rather stout and the collar distinct, and between the wings is a black ovate, the collar distinct, and between the wings is a black transthe abdomen is shorter than the thorax, somewhat ovate, style ; the suix lenly narrowed, and produces a loug, horny hairy; the six legs are not very short, and but slightly and terminated by minute claws; the two wings are very are whitish rest horizontally on the back in repose,- they nervure, which and rounded, with a distinct submarginal the middle, which has a long branch forming a fork towards posed side at the base of the scutellum, they are come. short of two minute oval joints-the second producing a
minute figures by the side of the magnified ones exhibit the natural size of the objects, and Fig. 1 represents a the bark. As I cannot find this scale described by any author, I have called it Aspidiotus Ostreaformis, from its great similitude to the common Oyster-shell.
After a careful search I could not discover a single egg, or young scale moving about, and most of the females eemed to have died, forming rust-coloured flattened like little seeds; whether they had not been fecundated, like little seeds; whether they had not been fecundated, later period, I am unable to determine. Two or three of the males were certainly hovering about, and there were a few very small, shining ferruginous scales scattered over the
branches, -these were attached to the larger ones, but they might form a portion of the antumnal brood
might form a portion of the autumnal brood.
If it be difficult to get rid of the Apple-tree Mussel scale, it will be still more so to extirpate the Pear-tree Oyster-scale; for they lie so close to the tree, that it appears almost impossible to scrape them of without
injuring the bark very materially. If, however, a stiff injuring the bark very materially. If, however, a stiff
scrubbing-brush were used with soft soap, whilst the scrubbing-brush were used with soft soap, whilst the water is tolerably warm, it would I think have a benenapplied when the young make their appearance; for even the scales are at first tender, and consequently of little protection to their inhabitants, and this powerful and the breeding of multitudes of the females, and certainly destroy all the delicate males that might be about.
I shall now leave this subject for a time, but should Gardeners think it sufficiently interesting to be farther pursued, if they will favour me with such species of scales as have not been illustrated and described, I shall have much pleasure in the future investigation of them, and be happy to communicate the results through the medium of this Journal. - Ruricola.

\section*{AMATEUR'S GARDEN.-No. XLVI.}

Among the absurdities which have been transmilted from one generation of gardeners to another, and followed p like many more old practices, just beaase we have injury of them, is that of annualiy digging among, and of a necessity destroying, all the best roots of old trees and shrubs. Within an hour's ride of the metropolis I could point out scores of gardens where this practice has been which have been planted a quarter of a century might be turned out of the soil with little more ball of earth adhering to them than would be necessary to fill a number of foursized pots; and yet the roots of these very plants, if allowed to progress properly, woould have extended over from 10 to 30 square yards of ground. If you interrogate the gardeners, you will find it has been the annual custom to rake all leaves and rubbish from the borders and then to elfg them over, the consequence of which is, the plaats has provided for them, but they are still further robbed by has provided for them, but they are still further robbed by
preventing their roots from extending themselves in search of food.
Now the result of such treatment is, the miserably decrepid specimens of trees and shrubs which are to be met with in most pleasure-grounds-plants producing a few stunted branches, and which either cast their leaves or look wretchedly bad ader the first week of ary summer weather; and how could be otherwise : unmess the loots were left unmolested, and the ground allowed some little mutriment. The leaves which fall from the huge Oak of the forest are not cast to the wild winds of hearen as
things that are useless ; they contain the very elements of vegetable existence, and are intended, when decomposition has rendered thern soluble, as nutriment for those very trees which gave them being,
On! but I shall be told, how bad the borders will look in spring if they are not dug ; and so they will if you
expose the naked soil, but this is not necessary, as the expose the naked soil, but this is not necessary, as the
front part of the borders should either be turfed or front part of the borders should either be turfed or
planted up, and the back parts hidden from public gaze. At Claremont the undergrowths consist principally of common Laurel, so thickly bedded together by thick planting and pegging down, that it would be impossible to dig among them. At that place it is a rare occurrence to see a bit of dug ground in the pleasure-grounds, and yet it has never been found fault with on that account. But the undergrowths at Claremont do not consist of Laurels only, but also of dense masses of Rhododendrons and other American plants, which bloom profusely, and in the season have a magnificent effect
At Dullingham House, near Newmarket, the wild Ivy has covered the ground under the trees in the pleasuregrounds; and in spring, when the Aconite, Snowdrop, Crocus, Primrose, and Daffodil stud it with their gay simple flowers it has a delightful appearance.
At this place I intend, as far as possible, to layer the Laurel, And to fill up all vacant spaces with common plants of Berberis aquifclium and repens, blue and white Periwinkle, common und Irish Ivy, or any other dwarf hardy evergreen slirub or trailing plant that may offer itself to notice. These, mixed with Crocuses, Snowdrops, Prim place gay in spring, and appear considerably better tha it would do under the old system of dug ground and a smooth raw surface. - W. P. Ayres, Brooklands.

HOME CORIRESPONDENCE.
Winter Fowering-Plants.-Mr. Errington having

Winter Flowering-plants, I beg to state that Brachycome
iberidifolia, Lophospermum scandens, and Kaulfussia amelloides, are of that number, and have been produced by means of a cold frame only. The first, B. iberidifolia was sown in March, kept dry during the sumperidifolia, placed under a north wall. In September it was put in placed under a north wall. In September it was put in come, be in full now, and will probably for some time to come, be in full flower. The second, L. scandens, was a very small cutting, planted in April ; at fifteen inches The bottom ones were pinched off, and out lateral shoots. he bottom ones were pinched off, and three nearest the top were allowed to grow about a foot long. Three very sort pieces of lath were then insertea in the pot, and a sort of trellis formed with green worsted; to this the branches were trained, and although the whole plant is but twenty-five inches high, it has flowered beautifully, and has ten buds still unexpanded. The third, \(K_{\text {. amel- }}\) bides, I sowed in August, one of its beautiful blue flowers has expanded, and it is covered with buds. I have also a Cineraria in full flower, and a purple Verbena. I have sent the above in order that persons like myself, unprovided with artificial heat, may know what can be done in such a case.
Pelargonium,

Queen Victoria."-This elegant plant may justly be considered to stand at the head of its kind in the class of those frncy varieties, which, although their briliancy of colour or size of blossoms will not satisfy the forists, are nevertbeless of great interest for their unrivalled delicacy and symmetry. Queen Victoria is distinguished by its dwarf and compact growth, with intermebeing bright pinks of a white ground, the upper petals main bright pink margined with white. The flowers rethe pkant until their footstalks decay beneath pecimen rendering its beauty of long continuance. A last was from diameter, uniformly covered with nearly 500 blossoms. It was produced by the skill of Mr . Robert Catleugh, and admitted to be one of the most uniform and perfect specimens of cultivation ever produced. - From a Corre. spondent.
Spathoded.-I see that some person corresponding with Mr. Beaton asserts the Spathodea campanulata to have nime oblong lanceolate leaflets, and that the segments of the corolla are bordered with yellow. May I ask if this is the true plant, or that of the Niger? I have been so different as to see some few of this noble tree growing in always nine in number but sometimes nearly double that and at other times blow it, and this not only on the tree, but on the same branch. Again, the yellow bordering was absent in all that I have seen. If growing with an unbrauching stem or truak to the height of 20 or 30 feet before forming a head constitutes a shrub, this plant is one. I cannot but think that a mistake in the species has been made, as in this plant the inflorescence is terminal, somewhat panicled; white the inflorescence of Mr . figured in the st Flore d'O John Ansell. [This plant is represent the fore doware, ace, and there it is Beaton'ted with fors and leaves mentioned by Mr. and the plant is described as a middle-sized tree, having a soft wood smelling like Garlic.]
Tropacolum tuberosum.-A correspondent states that 759 plant of Tropseolum tuberosum, mentioned at p. 759 of last year's Chronicle, reached nearly the same front as it did in 1841, when it flowered nailed to the ront of Holme-house. He complains that last year not plant in four flowered, although under very favourable treatment, and that this yen one although in every respect treated like the plant that fowered. They were planted on the same day, and the spondents will favour him with some information on this sponden
subject.

Mummy Wheat.-May I take the liberty of asking whether this be beyond controversy? I am quite aware of Mr. Pettigrew's accuracy, and no suspicion can attach to Sir G. Wilkinson ; but these plaguyArabs will do any English the world for Bachshish, especially with an Englishman. I believe that, at all events, Mummies have been searched by them, and afterwards so well re-arranged as to be sold for Virgin Mummies. I know, as an additional proof of the vitality of some seeds, that when, earl in this century, some parts of Romney Marsh were converted into arable land, some of the ditches were deepened and new ones made; the earth laid at the sides of the ditches, out of ground that had never been disturbed, so far as man knew, was covered with fampat crops of wha they called there Wild Mustard.-Este. [We think Mr Tupper's case beyond question. Amost all others appear to us at least apocryphal, as, indeed, we have already mentioned.]
To Keep Mice from Peas.-Having tried a number of plans for preventing Mice from destroying winter-sown Steep the Peas a short time in Salad oil, and then dust them all over with rosin ground to a fine powder, then sow them immedistely afterwards.-Aliquis.
Schinanthus retusus.-Some years ago I observed that Nurseryran near me lost his plants just as Mr. Wood describes ; but when I got plants from hind, and planted them in a dry sloping border of poor soil on a rocky sub soil, they did not die, but flowered, and produced abund ance of seed. A lady who had observed this procured plants from the same Nurseryman, and planted them in ber highly-manured Flower-garden (on a limestone-rock), and, as she said, she was greatly disappointed, for they T'ame l'ish.-In a gentleman's garden in this neigh.
bourhood the Perch in a large pond come to the side for food as soon as the water is struck with the hand.- \(O\). Guano.-It is suggested in the "Illustrated London News" of last Saturday, that the use of guano is the cause of epidemic among cattle in the north of England I myself am not able to confute it. Will one of your correspondents take up the matter, as it might be an Derby.

The Clover Dodder.-I can complete the chain of evidence as to the introduction of the Dodder, which is making so much noise just now. The seed your Northumberland correspondent bougbt at a bazaar, which was held here las year for the benefit of two of our local Societies, was given
by me to one of the fair traders on that occasion, and I obtained it from the India-bouse through the kindness o Dr. Royle. I gave many of my Agricultural friends por tions of it, but have not had an opportunity of inquiring
whether the Dodder has appeared in their fields. Most whether the Dodder has appeared in their fields. Most probably it will have done so, since on looking at some of Dodder amongst it.-G. Wailes, Newcastle.
Weeds in Ponds.-If the weed in "H. S. ' \(s\) " pond i what is called the Pond-weed, (Potamogeton natans, ) beg to state that I bave no doubt a few geese would most completely remove it, as they appear to be so fond of as to eat in in preference to grass. A pis plant a few week ago by means of these birds. They were allowed abund them clear the weed from the pond.-M. Saul.
\(P_{\text {ine-Apples. -In order to convince those who will not }}\) believe that Queen Pine-apples have been grown to the weight of \(5 \frac{1}{2}\) libs. or 6 lbs ., as stated in the Chronicte, and to show that such a thing is by no means a rare occurapples that have been cut at different times since the Ist apples that, have been cut at aifferent times since the
of August, out of a pit at Bowood Gardens, viz. :-

Of these, No. 1 was exhibited at the meeting of the Horticaltural Society on the 1gt of August : see Gardeners
Chronicle, p. 543 . Nos. 2 and 3 were sent to the office of the said Paper, and are noticed at p. 608. I have arranged the weights in the order in which the fruit
ripened. If any correspondent should wish to know the ripened. If any correspondent should wish to know the
reason why none of the others were exhibited, by lookreason why none of the others were exhibited, by look
ing at the weights he will see that No. 2 was the heavies fruit : the others, having ripened since that time, and none of them exceeding it in weight, Mr. Spencer did not think them worth sending.-M. Saul.
Rats.-Some of your readers would perhaps rather get as "Devonian" recommends. I think that they will, after all his scheming, be able to get inside, for 1 have known them when very hungry to bore down under the mention them to. effect an entrance over the tops of walls, where trees were growing against them, at of opinio as easy as at the bottom; and he cannot make a well there without sinking the shore all the way through his garden. I would therefore recommend him or any other person that is troubled with rats to try the following method, which 1 have tried in three places with perfect success. Take some potatoes; boil and mix them with into little balls about balf the size of a pigeon's egg. Where the rats most frequent, place portions of these pretty near one another-the quantity depends on the number of rats that you have to destroy; but wherever they seem to have been, there put two or three of the the morning look where the rats have eaten; if they have missed some places put less there on the next evening, and where they have taken it all put more; but renew the successively; then miss one, for the rats may have hid some of it , or have got something else beside, and will not be hungry. On the fifth evening, mix with the potatoes and
meal, sugar and arsenic, and lay it down in the same way as before, wher arsenic, and lay it down in the same way evening. On the following horning on the preceding ake up any of the poison that is left, for there is no use in leaving it there any longer, and put it into one of their holes and stop the hole up. Any one that is troubled with these vermin had better try this method now, for as
there is not much at this time of the year for them to eat, there cannot be a better time for their destruction There is one thing that I would mention, namely, if the night on which the poison is to be laid is likely to be wet, derfi the poison until the next night, and feed anser in gentleman's house, where rats have plenty to eat, and where they are equally troublesome; the plan, therefore, to effectually destroy them there, is to rub the inside of the holes with treacle mixed with arsenic, and when the rat goes in or out he rubs against the treacle; and as there is no animal cleaner than a rat, he licks the treacle off his hair, and by so doing falls a victim to the poison.The Knave of Spades.
Rat-traps.- Your correspondent "Devoniensis" will, Ifear, find himself disappointed in his drain traps, for preventing rats from having further ingress. There are
side of the house to a cesspool outside, exacty on "he same niensis" that representin however (being nearly hal amphibious, ) were not to be debarred by a little water and mud, from trying what was to be found inside of a dwell ing-house, and when once they got in they were not easily sept out again. Believing this drain to be the only com munication whereby an entrance was obtained, I had lead gratings made, and put at the bottom of each trap; by this means I hove at length got clear of them, being the frst time for a number of years. I think your corre pondent will do well to use the same preventive.- \(J\). W Ibe that og may be kept free from fleas." I beg to state that thi may be effected liso seen a very bad case of mange cured with this very also seen a very bad case of mang
Flens.-The following is a good method for extirpatin fleas from dogs :-"To four ounces of Fox-glove leave (Digitalis) ponr two quarts of boiling water, and with his, when it has become cold, wash the dog. For pe dogs this operation may be repeated twice in the season, and I wonld also recommend that there should be in the box or crib in which the favourite sleeps a quantity Cedar saw-dust, (clean from the This will clear away the insects effectively, and, if the dandy-brush is used now and then, it
clean, as well as remove fleas. \(-T\). \(T\).
Great Productiveness. - Charles Barber, Esq., Wilmslow, sowed four ounces of Onion-seen this yea using guano as manure, and has had the extroordinary quancity of 7 cwt . of Onions from that small quantity o from the garden of Mr. Johnston, at Saunder's Bush, in the parish of Arthuret, of the following enormous dimen-sions:-circumference, \(15 \frac{1}{2}\) feet ; diameter, \(5 \frac{1}{2}\) feet ; and weight, \(4 \frac{1}{2}\) stones. - Liverpool Mercury.
the farme clatoes.-The following have lately been got on eyes, weighed respectively 2 lbs, 6 oz :-two, called Pink and a blue one, a sort recently introduced, weighed 2 lbs 1 oz. On a rod or fall of seven yards the Blnes produce 18 score 1 lb ., or \(1 \frac{1}{2}\) load. It may be remarked that all these Potatoes were planted in drills. This kind generally goes by the name of the Liverpool Blues; it is a very pro ductive sort, much cultivated, and is said to be much used by bakers, on account of its being remarkably white whe boiled; but it is not a favourite for the table: the akin is a fine blue, and I am informed that it was raised in the neighburhood of Iiverpol a few years ago.-Facile.
Large Eel.- On Monday last a young man caughtupon Milnthorpe Sands, after the ebbing of the tide, a large ee, which measured nearly ..ve feet in length, and 20 inche in circumference, and weighed 32 los. It was exhibited to the public in the King's Arms \({ }^{8}\) yard in the evening, and -Facile
Peas.- I tried a quart of Farnes' Peas against a quar of Early Frame Peas : the Farnes \({ }^{\prime}\) were a week later. Th soil was strong and wet. Itried almost every kind of Pe last year, and I found the Auvergne and Kright's Dwar Marrow the best bearers and by far the best favoured The Pois sans parchemin is not a good bearer ; and as the pod wanted the hara skin sinide, to the attacks of the Jays and Tom-tits.-- Totity.
Tropaolum pentuphyllum.-In Loudon's "Hort. Brit.," "Paxton's Botanical Dictionary, and in the Chronicle, p. 633 , this plant is accounted tender, but her proved itself quite hardy. Several tubers, of were planted in two rustic vases, which bave stood exposed The plants in both prosection for heen in flower since August are now in fruit, and still continne unibjured, although the frost on the 17th ult, was so severe as not only to destroy the more tender flower-garden ornaments, such as Heliotropes, Dahlias, Pelargoniums, \&cc., but also the hardier sorts, such as Fuchias, Sal ies, and the like, and to bring the leaves from the hardy deciduous trees in myriads. On reference to my meteorological memorands for the lest two winters, I found the registering ther momer indiceted several times 16 dea of frost and as mometer diseter the vases in which the plant grow the mean diameter of the vases in which the plants grow is only 2 f . outide thre m I 1 in dihough. I conoler pentaphlum beyond a question A. Brander, Dalrey Gardens. On Training Gooseberry and Currant Bushes.-As have not seen any remarks in the Chronicle upon the training of Gooseberry and Currant Bushes, I beg to offer the following:-My present situation (Swinton Park, Masham, Yorkshire, being within a short distance of the moors, is high and bleak, and we consequently suffer from winds, more especially during the equinoctial gales. Many, or indeed mont of my Gooseberry and Currant bushes were rendered useless or unsightly from this cause, and to remedy the evil, I procured some stakes, 4 feet in length, and 3 or \(3 \frac{1}{2}\) inches in circumference. To these, whi were disposed after this manner
trained the trees in the fan methoa, and tied the shoots to the stakes with matting. After a fair trial, I have no hesitation in saying thal the expernas has been aucosaful. Independent of being secure from the wind, there are other advantages to be gained by this mode of training; the space taken up is less, the pruning is more easily performed, and the whole surface is regularly exposed to the action of the sun and air. The wood is also equally and properly ripened, and better crops of well-Lavoured fruit ensured. By this means the late kinds are likewise
much more easily and more securely protected from the depredations of birds and wasps, and from injury by fros or wet. A single mat thrown over the bushes is sufficien o preserve the fruit until Christmas, or later. And moreover, by this system the trees, in matting up, are no disigured or crushed; the wet is more effectually kept off, at does not fall on the mat and soak through to the ruit; but, from no flat surface being presented, the rain uns ofi the mat, as it falls; the fruit is kept perfectly ary and there is little or no injury done to the mat. The stakes never want renewing, as the bushes, when once in regular shape, support themselves. They have a neat and pretty appearance at all times, aud especially when in rure the gindness of the proprietor onen to this public nd during the last sesson here been visited by a grea umbr perticula reat nombor about 120 yards trained in the above style, and heir observations induced me to send this account of it.James Snow, Swinton Gardens.
Conducting Powers of Water.-I thank "C." for setting me right on this head. What he says is perfectly rue, to affect the question. I put the case in a strong light on purpose to meet objections which reached me against hol But is " C ." more to the point when he says, "We have only to turn our attention to the great Ocean when the noon-day sun is shining upon it, to be convinced of the fact \(?^{\prime \prime}\) I beg to say that I have often turned my attention to the Ocean without becoming acquainted with these facts. But, after all, what are these effects but what we see daily in our own circulation of heated water, only on so much a larger scale? The sea is heated at the equato to a great depth, and it is true enough that a circuation from hence is effected; (hat its infuence is felt aimost either pole is also true, and as a naturainiference we mus suppose an under-current towards the equator to equally true; but there do not seem to be racts here prove anything for practice, fact her tha perhaps tbat deep pool-like tanks might do well enoug without central divisions to divide the currents, and bave no doubt this would answer, were it not for the folly of having deep tanks to try the experiment; and here we bave an expianation of a great natural phenomenon, viz the disposal of the vast quantity of water which flow into the Mediterranean through the Straits of Gibralta The idea of an under-current cut through the Straits oniy of a comparatively recent date; the daily loss by evaporation being thought sufficient formerly to balanc the influx, although the drainage of the "rivers and foun tains of water \({ }^{\%}\) carried down by the Po itself migh be supposed to be equivalent to the loss by evaporationto say nothing of the Danube, the Nile, and lesser st
Weeds. - I beg to state, that however useful the ammo niacal liquor of the gas works may be as a manure, administered under certain known modifications, yet applied in its crude state, fresh, just as itcomes from the retort, it foud destrucion to the vegetable principle is this If severalin Docks, or any of these common pests of our gardens, get the scythe and mow them off, and having a common watering-pot full of the liquor by me, pour it on while the mass is not only dead, but rotten. I would advise agriculturists to treat the Dodder with a dose of this, after cutting off the tor. As works are now so general there can be no diffculty in obtaining the liquor, and common garden-potfull would in most cases be sufficien The managers, I should think, would give such a tritie this, and if not, a penny or twopence a gallon is no great object, and it would not be more

\section*{know the result.-J.}

Drainage of Pots.-I have observed very good effects from adopting the following method of draining pot Rib-bones (or mutton) are crushed wich a heavy hamw into pieces, varying from half an wis to two iaches length. The action of the hammer loosens and weaken without entirely destroying, the fibrous texture of bones. A layer of these is placed at the bottom of the pot, and over that another is laid crossways ; and so ot height of about an inch, and the earth is then pass . These layers of crushed bone form a reticuated which does not get clogged up, but on the contrary seme to become more porous as the soft gelatinous or and the particles in the substance of the bones decay; anroug them, and derive much nourishment from the substratul of bones.-J. \(H\)

Achimenes pedunculata.-The scaly tubers which forn so numerously upon the stems of Achimenes pedunculata seem to possess 'a certain degree of sensitiveness. Som days since I gathered a considerable number of these into a 1 g 1 abor with her her more ment my hand, a hors wher secol a displacin second or ter hem fll followed the shaking of the pan without touching the tubers, therefore the irritability was not induced

New Heating Apparatus.-In the' Aberdeen Herald lately was the following notice of a " \({ }_{6}\) New Heating \(A P^{-}\) paratus:"-"We have been favoured with a sight of New Heating Apparatus, on an entirely new prizip this invented by Mr. Reid, of Queen-street. The plan of this invention is simple, and its ;effects are obvious ath are
attached three cylinders of strong sheet-iron, within each other; the second one of which forms the flue of the stove, and receives the fire and smoke, which pass in a
rotatory direction round the other two. Of each of the latter, one end is open, and receives the atmospheric air which, after being rarefied by the heat within the cylinders, is carried by the draft thus created into a larger cylinder, called the hot-air chamber, from whence it is From the construction of the apparatus, perfect command is given over the regulation both of fire and heat; and of quantity of fuel required for generating a sufficiency small, not a spark being lost to the purpose of the appa small, not a spark being lost to the purpose of to appa-
ratus. It is in every way as safe as a cormonon stove, and even more so; the flue is confined within the outer passage for the hot air, and both are built round with brick, so that no combustible material can possibly come in contact with it by any means short of absolute design. The apparatus which we lave seen was intended for a new
church, and we have no hesitation in saying that the excellence of the inven

country, or from whince it was orignally obtained, we liave not
cot of the Continental collections. In respect to culture, jt will rank withe \(\mathbb{S}\). ateininata as a tectider herbaceous plant, requiring mank
care to presite its care to preserve its evergrech foliage from prinacicalianiness
throughout the winter. It sliould be grown in a jorous and very
 Vegetation, may be addcd. It it a mistake to put much cand in in the soil ased for such plants as the present, for fine sandi, insteand
of keepmg soil very porous and friable, aclually heleps to consolidate it, as cvery cuttivator may readily determine. Fragments employed freely. A dry and airy position in a greenhouse will suit this plant extremely well. It will also thrive well in a pit, winter, to keep it from damping off. To bring it to any high degree of perfection, it must thave a algrer pot than usuat, with good. It may be incrensed by division, or by cuttings.- Paxton \({ }^{4}\) Achimenes atis
Gesseracees. Didynamia Hairy Achimenes. (strove Perennitit. another acceptable addition to the charming gentus Achimenes, and will probably become almost as great a favourite as any of Lata, and like that beautiful species is disposed to bear littule bulbs
in the axits of its leaves and branches. The history of its intro-
diuctimn is an instructive lesson to importers of plants, Mow iuction is an instructive lcsson to importers of pante, How,
often do we find gardeners throwing away the moss, and mould,
and and framents that remain affer every foreign case of plants is
examined, and the principal part of the contents removed; and how often perhaps do they tlius reject the most interesting spe cies, for if accident is the fertle mother of new inventions, so
she also of new introductions. Canna iridiflora was obtaine from seeds accidentally found in an old herbarium; several Orchidaceous plants have been picker off dried specimens; and this
Achimenes adds another to the list. It was hidden among a mass Achimenes adds another to the tist from Guatemala, and sold by anction a few months ago; Mr. Henderson, of the Pine Apple
Place Nursery, accidentaly detected it; and thus a plant, which must have been often sent home wilh fruitiess care on former nccasions, was brought to our gardens without any attention what-
ever. As has been already stated, this species has the habit of A. pedunculata, but is nevertheless a very different species. The
leaves larger, 1 I.bt at all striped, but have a deep rose-coloured horier
whose lobes are notched. Those who are fond of hybridizing have been attemptirg to obtain crossses between A. longillora and some of the red species; but the result has been, we understand,
a dingy purple, as was to be expected. We would sugrest that this would mix readily with A. peduriculata, and that the result would be the improvement of the size of the latter, and of the
colour of this, whose rose is hardly bright enough to satisfy the
eve fastidious in colour.-Botanical Register. eye fastidious in colour.- Botanical Register.

\section*{MISCELLANEOUS}

The Poisonous Nature of the Yew.-Alchough doubts have been expressed by several writers respecting the poisonous action of the Yew, yet a case of poisoning which occurred recently sufficiently proves the contrary. Alaced his three horses in the neighbourbood of a Yew tree: two of these horser, which had eaten of the young shoots, died, one in a quarter of an hour, the other on it return home ; the third, which had been placed so that it On examination, distinct traces of poisoning were percep-tible.-Archiv. der Pharm., as quoted in the Chemical
The Bay Lily.-Under the name of Lilium isabellinnm Professor Kunze has published a description of a Lily which he has growing in the Botanical Garden of Leipzig, and which he regards as quite a new species, unless indeed thould be a hybrid between L. candidum, and L. Martagon. He says its origin is unknown; that the flowers Inside they are of a reddish bay-colour (isabellino-rabella) marked with some red lines and tubercles; externally they are pale. This should seem worth procuring for our gardens.

Gardeners' Associations.-We learn with pheasure that an association of the gardeners, at Stamford Hill, Clapinstruction, the president being R. Hanbury, Esq., and the secretary our intelligent correspondent, Mr. Wm. Sherwood. The yearly subscription is two shillings and sixpence. The meetings are to be held on the evening of
Monday, once every fortnight; if between Michaelinas Monday, once every fortnight; if between Michaelinas
and Lady Day, to commence at seven o'clock, and at eight o'clock between Lady Day and Michaelmas, and never to be rontinued alter ten o clock.
Climate of the Urited states, compared with that of England.-The American Horticulturist needs for his guide American works on gardening. Very many errors in practice have been adopted by us in consequence of
following instructions derived from English authorities. following instructions derived from English authorities.
Their mode of cultivation may, indeed, often be successTheir mode of cultivation may, indeed, often be successproductive only of failure and disappointment. This is owing to the difference of climate. The climate of England, as compared with that of the United States, is one of extreme hunsidity. The frequent and long-continued obscuration of the sun by clouds and fogs there, retards the ripening of fruits and seeds and the elaboration of wood, and often chills the air to that degree, even in the month of July, as to render it incongenial to the growth of the tender products of the garden. It is a very common practice in England to cover Cucumbers and some other plants, even in midsummer, by 3 or 4 o clock, P.M. in \(\mathrm{F}_{\mathrm{n}}\) Cobett boasted that he could ripen wes on remarkable sunshine for England; and he did succeed in maturing a small, early kind of Indian Corn. But was The recom we believe he did notice of removing aver greens in the summer, just as they are forming a new English gardeners. Alchough it may sometimes succeed here, it will not generally, unless the season or the soil happen to be of uncommon moisture. Spring is the ail propriate season for transplanting evergreens. An excel lent Horticulturist (the late Judge Buel) recommended their removal during the summer; but his success may be ccounted for by the peculiarity of his soll suit us, when we contrast our bright skies with their vapory climate. Their summers afford too little sunlight, and abound too much in moisture, to ripen some of the finer fruits. But our summers, on the other hand, are often so dry as to require extensive artificial irrigaare oftend our droughts occasionally destroy the grass of
tion the field and some of the trees of the forest. Many European trees and shrubs, like the English Hawthorns so beautiful there, will blast when introduced here, and become unsightiy. Our native Crataegi are universally preferable to theirs; and we know trees which flourish as well in our climate as our own. The English Elm is a beautiful tree, but does not flourisb here as well as our native kinds. The great clearness of our atmosphere, and the intense heat of our summer sun require a different aspect and slope for our greenhouses,
from what prevails in England. It is neither needful nor
desirable with us, as it is with chem, that we should construct our greenl. onses so as to derive the greatest pnssible
influence from the lieat of the sun's says.-Horry's Mayazine of Morticullure
The Ailanthus.-The beauty of the Ailanthus, when loaded with the seed, which some varieties of it are even upon quite small trees, cannot be judged of by those commonly seen in New York, which are remarkable for seldom producing any seed. These trees, in this city, which are large enough to flower, have been obtained mostly from suckers, and are of one variety. The matured Wond of the Ailanthus is aaid to be useful, having a fine
colour, and susceptible of a polish.-Hovey's Magazine of Horticullure.

Mammoth Pine--On Tuesday, we had exhibited at our office a Pine cut from the Providence plant, weighing \(10 \frac{1}{2} 16 s\) avoirdupois, \(22 \frac{1}{4}\) inches round the thickest part, \(12 \frac{1}{2}\) inches long, with about 10 inches of stalk, and cultivated by Mr. Smith, gr. to H. Marsland, Esq., of Wond Bank. A short time ago, we saw one cut from one of the \({ }_{23}{ }^{\text {pits }}\) of F. A. Philips, Eaq., of Thornfield, which measured \(23 \frac{3}{4}\) inches round it, and was \(13 \frac{1}{2}\) inches long, with scarcely any stalk, weighing lllbs.-Stockport Advertiser.

Enumeratio Plantarum omnium hucusque cognilarum secundum Familias Noturales disposita. Auctore In this new volume of a highly important work on systematic botany, which, beginning at the otber end of the chain, will in time meet the Prodromus of De Candolle, we have as many things of interest in Horticulture as can well be anticipated in a work which is entirely technical. We ought, perhaps, to mention that Prof. Kunth's "Enumeratio "is a Latin classification of plants according to
their natural orders, with technical charscters of their genera and species, an enumeration of their synonyms, and short memoranda assisting in their distinctions.
It is because this volume containe a complere account Horticultural thant we think it right to introduce the worls into our colvin the changes are in botanical nomenclature which Prof. Kunth has either adopted from others or himself proposed to
introduce. The and the The genus Helonias atered through yarious genera; as H. dioica, which is a Chamelirium, and H. asphodeloides, and tenax, which stand in Xerophyllum. Schoenocuulon, cnutrary to the opinion of Dr. Asa Gray The old Streptopus roseus is placed in the genus Hekobetter to expunge than revive. Nineteen true species of \(T \mathrm{Tv}\) lipa are recognised, although several bave been suppressed. The Crown Imperial is removed from Fritillaria, and receives the old Linnæan name of Petsium imperiale. Meyer, to be found wild in the province of Lenkoran, in Caspian Persia. Hyacinthus corymbosus, and Scilla breviColia, form a new genus called Periboca. Bellevalia, inis sem made the while the Starch Hyacinth is removed from Muscari and forms a new genus, called Botryanthus. Our wild Harebell is placed in Seilla. Ornithogalum nutans is made a Myogalum; 179 species of Allium are admitted, after separating A. striatum and some others, under the name of Nothoscordum. Brodiæa congesta orms the new genus Dichelostemma, and Tritileia laxa is called Seubertia. On the orated from Aloe (of which there are 171 species) under the names of Apicra, Haworthia, Bowiea, Pachidendron, Rhipidodendron, and Gasteria, are reduced to that genus. The genus Tritoma is named Kniphofia. Reichenbach s Asphindeline is adopled for Asphodelus lateas, thuricas, wegia of Nees is recognised. Of course we cilis pretend, in a hasty notice of this sort, to chise succh changes, the value of which will have to be determined by long and careful examination. an important step in advance.
The Meteorological Ephemeris for 1844, by Henry Dozat, is one of those attempts to foretell the weather in which tells us that be knows little or nothing of astronomy, chemistry, or mathematics, but he is convinced in his own mind that the method of calculation employed will ulltmately lead method of We wish his conviction may prove at the end of 1844 to have been well founded. At all events Mr. Dosat is no quack, and that is something now-a-days.

\section*{GARDEN MEMORANDA}

Juchison's Nurserg,
Heathis are cultervaten to great pertection. These, from the fine

 permit, ti.e plants are turned cult of flocrs and \(\rho\) laced in a dry airy situation, where ti.ey trman unth late in autunn, when
they are agann taken into the Healh house, By this treatment, in favourable seasons, the young wood gets thoroughly ripened, them less liabie to disease. Frona the lenge continuance of autum weather, many of the late fowering species were already in bloom; these made the Heath.house unusually gay at thig
season of the year. Among those in fiower we particulatly
 with large light pink, flowers, and quite distinct from the of
E. tricolor. There was also in bloom a good plant of Metulzfora, with dark pink flowers, having a curious bluish shade, and
a well-grown plant of Jacksonil, with long fleshe-coloured blos-
soms. This plant has been in bloom ever since the month of soms. This plant has been in bloom ever since the month of
July. In the same collection were also good plants of tenella, arbuscula, and triceps, the latter covered with delicate sma.
white flowers, having stamens with dark brown anthers, which,
protruding, make a fine contrast with the white coroll were likewise blooming freely E. exsurgens coccinea, with beautiful dark red blossoms; matabiliz, remarkable for the lengeth of
time it contimics to dis, ay its fine purple flowers; and a variety time it contimucs to display its fine purple flowers; and a variety
of princers, with tight pink ecorclla; also rupestris, with grcen-
ishowhte bloshrins and long brown stamens; this speece is

 long stamene, with oiange contoured anthers, We niso paiticu-
larly noticed a plant of Litterer geminiflora, with fine, licalthy, dark-green tolage. This plant was said to have bcen lately
coverer, with scale, which was effectually cured by mixing some
strong loam with water, to the consistency of thick panit; with strong loam with water, to the consistency of thick palit;
this the folage was covered completely over. Ihe plant w
then exposed to the sin, and when the paint became dry,
came oft in cakes, and brought the scal o came off in cakes, and brought the scale off along wiih it. After
this the plant got a good syringing, and has kept quite clean ever
since. In the east house was ar handsome plant of Altigia since. In the east house was an handsome plant of Altingia
excelsa, about 8 fect high, and having elyht whols of fine dark-
green branches. This plant was potted no peat and loam, and
 trellis. It harh somewhat the apperance of a parasisl, and hex
rather an interesting effect. There were bivewse plants of Epacris, and a fine young stock of Pherenocoma prolifera io
comine into bloom. This phant is very apt to become naked the bottom, but this may be easily obviated by pinching off the
tops of the shoots, so as to muluce laterals when ine plants are
young. In a house near the Heath house was a remarkably young. In a house near the Heath-house was a remarkably
well-grown specimen of Crowea saligna, quite covered with
beautiful light pink flowers. Tiris plant should be kept constontly in doors, as, when it is exposed to the full action of the weather, and impede the claboration of the sap, and consecquently the
plant gets discased, and beonves unsightly. Here was also
Lechenaultia formosn, with its good plant of Statice mucronata, which is well worthy of cultiva-
tion, on account of the length of time it cont inucs in b.orim. In the Orchidaceous-lonse were in flower, Vanda terctifolia, a
species of Catogyne from India, Oncithunch chatum, and Odonto-
glossum clatum, the latter having a fine spilhe of tlowers, with deltcate hilac fabelium, and curnusly-spotted upper petals,
There were also Oncidum, pumulume with pretty small yellow
fowers, Dendrobium densiforum, and Brassavolo yene flowers, Dendrobium densiflorum, and Brassavola venosa, with
cream-colourcd blossoms; also a variety of the beautifullyspotted Stanhopea oculata, and two well-grown plants of Cypri-
pedium insignc. In the same collection werc likerviso Skinneri, just coming into bloom, and a variety of Tpilendrum
ciliare, with greenish-white flowers. This blooms freely, and is ciliare, with gremmh-white flowers. This blooms freely, and is although very ilificult to manage, was growing freely, which,
alt had
been tumed cut of a pot, and was hangug from the roof of the house, with a hittle miss tird round is 100 . Aspidum coria-
ceum was also grinumg frecly, freated nit this way. In a spart-
 very superior to that apecics in habit. Thicse were net in flower
but judgng frome the appearance of the plante, these is no doubt
it will be an acquasition. In what is called the north house, was a beautiful specimen of Erica refolgens, with scarlet and orange blossoms, measuring nearly 4 feet in diameter and aboat 5 feet not in bloom, was remarkable for its size. Along with these Were many pretty little plants of E. graciis, with small purple
blossoms, which made a fine display, and gave the house, in
this, the dull month of November, the gay livety appearance this, the dull month of November, the gay livefy appearance Heaths, Azaleas, and Pinus, were in pood condition principally of houses bean, anding to Mr. Jackson, detached from the Home
Nursery, were excellent large specimen Azaleas; some of them measured 4 feet across and 5 feet high. They consist of scarlet, when in bloom.
Dropmore, Noo. 14,-Many improvements are going on at this place, in planting out different species of Pinus, which, in time, has produced a cone this ycar, and Mr. Frost lias raised four young plants from the seed. Abies Douglasit is now exactly 40 cones; already from last year's cones nine promising plants are growing. A great change for the better has taken place in some more than fo

THE NATURALIST'S CORNER.-NO. XVII. 62. "Behold it is very good!" is the dclaration of God himself, over everything animate or inanimate within the whole bounds of the creation. Weeds overrun the
garden, and choke those urtificial plants which man has garden, and choke those artificial plants which man has
sown or planted for his use; but they speak to the sluggard in language more forcible than all the laws which ever were enacted by human legislation; and impress
upon man that, if he is to profis by the bounty of the upon man that, if he is to profil by the bounty of the
earth, he must be diligent in performing those labours which are necessary for the security of this bounty. Insects of various kinds, and in different stages of their kind, both withince, are particularly annoying to manwith voices louder than all the heralds upon earth, the necessity of cleanliness and care. In this manner we may go over the whole catalogue both of vegetable and of animal pests, as they are often called, and show that they are stowed upon them at the first.
63. Depredations of the Tipula prevented. - We are keeping widm limited bounds the depredations of the Tipula, valanly called Tommy Longlegs rooks word /consume \(3,847 \mathrm{grubs}\) in a day; supposing
the consumption to be continued throughout the year, it would amount to \(1,404,155\); and supposing a grub to
destroy as many Wheat or other plants as might grow on a space of ground equal to nine inches square, a family of rooks would preserve from destruction more than two acres of corn. If we extend our ideas further, and suppose all these grubs to live and propagate their species, it appears more than probable that, if this one species of would be nearly, if not altogether, in vain
64. "When we contemplate the wonderful works of Nature, and walking about at leisure gaze upon this ample theatre of the world, considering the stately beauty, constant order, and sumptuous furniture thereof; the ghe pleasant fertility of the earm mation of the heavens fragrant sweetness of plants; the exquisite frame of animals; and allother amazing miracles of Nature, wherein the glorious attributes of God, especially his transcendent goodness, are more conspicuously displayed; so that by hem not only large acknowledgments, but even gratulatory mouths of Aristotle, Pliny, have been ext such like the never suspected guilty of an excessive devotion; then should our hearts be affected with thankful sense, and our lips break forth in praise."-Barrow.
65. There is not, perhaps, a more striking phenomenon Natural History than the fact of plants teeming with other vegetable can withstand the burning temperature. In the deserts of the East, in Arabia, and those extensive plains where nothing save sand is seen on the ground passing cloud, which from the earth dissipates the freshing moisture on a more as, as fore, to shed its reever rises from a spring, or falls from on high, and where the burning soil is intolerable to the foot even of the came, - the Water-Melon attains the size of a foot and in its cold and copious juice, a draught to the traveller, which has often saved him from a lingering and painful deat. In a similar, though less efficion maner, the and the formidableshes the wild herds of the Pampas the powerful kick prickles are not a sure guard against mode of getting at its interior, but who is often perma. nently lamed in this extraordinary contest
CALENDAR OF OPERATIONS for the ensuing week. flue along with the gutters and tank, han a similar plan his experience ard success in hotliouse building and heating;
and Mr. Markham, like Mr. Haycroft-all three, by the wat strangers to me-stands deservedly at the head of his calling, opinion in respect to the incapacity of boilers to zypre of my the heat generated under them; a fact also well knowri to every gardener who has used a hot-water apparatus; but it does not
follow that we are "opposed to science in an unfriendly manner," as stated by an anonymous writer last week. Nothing was more distant from my mind than what this writer assumes. He cannot with pipes, all over the country, and the introduction of gutters
and tanks is daily adding to the number. This increase will go on whtich so much of perhaps chance, discovers that desideratum expended, viz., an apparatus so adjusted as to lose no heat np
the chimney. But allow me to return to the Pine pit at Hewell n order to correct an error I had fallen into when recommending of proper depth for tanks, It will be recollected that for a be
on feet in length, 1 said two inches deep of water wonld b
necessary, and to incrase the depth as the size of the be diminished, but at Ifewell it has been proved that little more
than one inch will suffice for a hed 40 feet long. The water used in the two troughs there, suppooing they were brimful, would b according to Mr, Rendie's system, which, by the way, wonk
have been a better arrangement if slate covernges were used and ultimately more economicul, althouryh nove, perinaps, so cheap
in the first instance; lut for a bed covered with wood, as at Ifewell, open gutters may, perhaps, sult better, because there will be chance of the soil finding its way to the gutters and boiler ; but those who are not afraid of too much moisture from below in
this way, and who use open boilers, Mr, Rende's plan is cer-
tainly the better of the two. I,-KITCHEN-GARDEN AND ORCHARD.

Pinery.- Preserve a steady bottom-heat for all your Pines,
and more especially for the younger ones in frames wrought by and more especialy for the younger ones in frames wrought by older ones. Little or no watering is now necessary, except to those Pine is Jeast injured by flue heat; this will answer several queries
Pine the this week, and regarding wooden covers I shall say something and when under the management of good garcleners, I think this is as good as any other covering.
Vinery. - \(A\) friend of mine about this time last year began o force a Vinery, which used to be forced not sooner than the long since against the practice of beginning to force out of season, or much sooner than usual. Allother gardener says,
"Reluctantly I undertook last year to have ripe Grapes on the began on the 1 st of December, and was minly ten days behind my time, but it was up-hill work." I want as many letters on this subject as my friends can send me, every day proves that we all like the Vime, you may begin forcing and pruning the same week; but it is not at all a good plan to "let them flower and set, and then prune, retaining what you want for an average
crop," the chances being that you would have little to choose from by such managemerit. True enough, the thing "has been
done on open walls," but that is a different case altogether from trees forced in the dead of winter.
Out-door Denartment
All trees or bushes that are to be planted or removed here on
this side of February should now be finished oft hand, without this side of February should now be finished off hand, without
delay, as, after the begimning of next month, we shall be in danger of rough or frosty weather, unfavourable for planting. Get the quarters dug or trenched, also, before the winter sets in
too hard, if the ground is at all in a fit state; and the more heavy
work of making new borders, walks, \&cc, may be left for the
dead of winter. I have often seen fruit-tree borders partially dead of winter. I have often seen fruit-tree borders partially
improved by merely changing part of the surface-soil for some out of the best quarters in the garden; and with a little fresh soil from the fields this may do some good for a time.
Pras and brans.- From this time to the end of the month convenience for forcing the early crops of tirm in the spring. and Caulifowers.-This has been a fine autamn for late Broccol longer in the open air, as, if a sudden hard frost comes, it will put an end to them.
JERUSALEM ARTXChorks.- I have oftea heard it said that of people planting their spare tubers of them in the outsides of plantations. I intend this winter to send some of them to the gamekeepers, in order to ascertain the truth of this statement. through the winter, and especially eariy in spring, and put down this way
STores
STokianousta, -Onions, Carrots, Parsnips, Stccory, and even
potatocs, will require looking over occasionally, and also Dahlia roots, before they are finally put by for the winter. All these roots lave been housed in tather a green state this mild autumn, and ORCHAD ANI) Fryirs. atention in keeping.
kept constantly at work at the nailing every fine day bith use mars, then Plums and Cherries. Apples and Pears for spring from bad weather, be packed in hampers, boxes or driven in-doors -dried fern, or kiln-dried straw, and if they are now in a good sound state they will thus keep better than on the
shelves of the generality of fruit-rooms.

\section*{II.-FLOWER-GARDEN AND SHRUBBERX}

Srove.-I never knew the Combretum purpureum to flower so
long as it has done this season it long as it has done this season; it has scarcely been a day out to all appearance. Everyone allmires the beautiful markings of the Gesnera zebrina, one of the easicst to manage of our winter this late season. Then there is the oy no means to be despised at the best of all the blue flowering winter speciosa is a blaze of purple. Aphelandra cristata and Justicia name in sa are two distinct winter flowers, although under one stoves than in their being now too cool
est end estend of this house, unless there is a compartment for them
among the frames and pits. Except these, almost all the greenhouse plants require constant air, and the house kept in a Sweensmrvator diy state.
themums have been brought in thons of the fine new Chrysanmaking memoranda of their habits, earliness, and lateness, fec. There are a few inferior varieties among them yet, but they are all beautiful, and fill up a blank between summer and forced
flower's. See that your Luculia does not get too much water-it is very delicate in that respect; it must go into comparative rest as soon as the flowers are gone. What a pity this most
lovely plant should be so scarce \({ }^{\text {I }}\) Keep up a genial heat of \(45^{\circ}\) Forcing Pits, crammed with all sorts of plants to flower in the conservatory and drawing-room, are now the most critical parts of our garden establishments; forced flowers are coming
more and more into use every year, and a new branch of trade more and more into use every year, and a new branch of trade
is fast rising in London in these, which will soon spread into the change in forced sady botto heat from tanks will effect a great ture on this more difficult branch will now be able to do so with certainty.

report on covent-garden market,
For the Week ending Nov. 17, 1843.
Scancrly any difference has occurred in the prices of most arti cles since our last report, and trade still continues dull. There ha week. Pines are very grood, and quite sufficient to meet the demand. Grapes are also good, and plentiful, especially the Black Hamburgh. Plums are now almost over for this season, g few may still be seen in the market, but are not wortli quoting.
Some excellent Ribstone prpmas have made their appearance during the week, and Apples in general secm to have improved in quality. Among Pears we noticed the Beurre Diel, Brown Chaumontel. Spanish Melons continue to be brount Guernsey market in considerable quantities, and there is also a fow to the ones, but these are of inferior quality. Cucumbers bring nearly the same prices as last week. Vegetables are, generally speaking, of excellent quality. Cabbages, Turnips, Carrots, and Broccoli, the demand. Thereare also good supplies of Celery, Endive, and other salading. Among Cat Flowers were Erica ventricosa superba, gracilis, and triceps, Neapolitan Violets, Gardenia radimosa, Double Primulas, Chrysanthemums, Camellias,
niums, Fuchsias, Verbeass, China and Perpetual Roses,

\section*{NEWS OF THE WEEK}

The State prosecutions in Ireland are making but slow and tedious progress. During the last ten days the Court has been occupied with prolonged arguments on technical points for the most part uninteresting to the public. On Tuesday, Mr. O'Connell and the other traversers appeared at the bar and put in a plea of abatement, declaring that the accused were not guilty of the offences charged, and that the indictment ought to be quashed, as the evidence was found on the examination of witnesses who were not sworn in open Court according to law. The Attorney-General objected to the admission of this plea, but after two days' argument the Judges decided on receiving it. The Attorney-General then demurred on behalf of the Crown, and required the traversers to join issue at once; but the Judges on this point also decided in favour of the traversers, and ordered that there should be the usual four days' notice; so that the demurrer will not be argued until next week. If the Court decide in favour of the validity of the plea, the indictment will be quashed as a matter of course. If, on the other hand, the decision be against the plea, it is clear from the time consumed in the settlement of preliminary questions, that the trials cannot come on before nest Session. A rumour, however, is current that Government intend to abandon the prosecutions altogether, on the ground that the defeats already sustained by the AttorneyGeneral on minor points afford but little chance of an ultimate conviction.
From France we learn that the Council of State have found the Bishop of Chalons guilty of an abuse in his letter against the Universities. A royal ordinance has been issued announcing this judgment, but leaving it to work its own influence as a public censure without pointing out any mode of punishment. The trial of the royalist journal for an article drawing a contrast between the simultaneous visits of the Duc de Nemours and the Duc de Bordeaux to England, has terminated in its acquittal on all the counts of the indictment. It appears not only from this trial, but from various other circumstances, that the reception which the Duc de Bordeaux has met with in this country has given much alarm to the French Court, and the reports of his proceedings are evidently read with ansious interest on the other side of the Channel. -In Spain, the majority of Queen Isabella II. has been declared, and her Majesty has taken the oaths in the presence of both Chambers. An attempt was made to assassinate General Narvaez while the discussion on the Queen's majority was pending. Seven shots were fired by the conspirators, who escaped undetected in the darkness of the night, General Narvaez was unhurt, but his aide-
de-camp was mortally wounded. The object of this
attempt was to excite a counter-revolution by the death of attempt was to excite a counter-revolution by the death of majority.-From Italy, the accounts received through the French and German papers are extremely contradictory. It appears that no political disturbance of any moment has taken place during the past month, and that the official inquiry into the late events is still in progress, preparatory to the appointment of a Military Commission. It is said ference at Rome, to consult on the best modes of remedying the evils with which the Papal States are now afflicted. -From the United States we learn that the Texan and Oregon questions are assuming additional importance, and
that their discussion will produce a stormy session in December. In Canada, the removal of the seat of Government still excites great animosity on the part of the British colonists. Advices from Mexico had reached New York, from which we learn that no reconciliation had
been effected between the President Santa Anna and the British Minister.

\section*{}

Court.-On Saturday the Queen and Prince Albert took their customary morning walk, after which the Prince shot over the Royal Preserves. In the afternoon the Majesty. On Sunday the Queen and Prince Albert Majesty. On Sunday the divine service in the private chapel of the Castle, and the Duc and Duchess de Nemours attended divine nervice in the Roman Catholic chapel at Clewer. In the afternoon her Majesty and Prince Albert, accompanied by Frogmore and visited the Duchess of Kent. On Monday her Majesty, accompanied by the Princess of Hoheslohe Langenbourg, took an early walk in the precincts of the Castle. After breakfast Prince Albert, accompanied by
the Duc de Nemourg, shot over the Royal Preserves. On Tuesday the Queen and Prince Albert took their usual walk in the grounds about the Castle. Her Majesty and the Prince also took equestrian exercise in the riding-school. The Duc and Duchess de Nemours left the Castle for Buckingham Palace, where they held a levee for
the reception of the foreign diplomatic corps. In the afternoon their Royal Highnesses pair a visit to
the Duchess of Gloucester and the Duke of Cambridge, and afterwards honoured the French Ambassador with their company at dimner. Their Royal Highnesses slept
at Buckingham Palace, and returned to Windsor Castle ot Buckingham Palace, and returned to Windsor Castle and the Duc de Nemonre shot over the Royal Preserves in the Great Park. Her Majesty, the Duchess de Ne
mours and the Princess of Hohenlohe, took a carriage miring in the Park in the afternoon. On Thursday, the Prince and Princess of Hohenlohe took their departure for Brussels, on a visit to the King and Queen of the Belgians. Prince Albert and the Duce de Nemours afterwards hunted with his harriers. It is expected that her de Nemours, will visit the Duke of Devonshire at Chats worth, on the 25 th or 27 th inst., and afterwards visit the Duke of Sutherland at Trentham, Sir R. Peel at Drayton Manor, and the Queen Dowager at Witley.-The Duchess of Gloucester has been indisposed, and is attended by Sir H. Halford.-A report has been current this week that the bealth of the Prince of Wales requires a removal to Brighton, for the benefit of the sea air; but the statement has been contradicted on autatifying fact that Hi Royal Highness is in the enjoyment of perfect health. The visitors to Her Majesty this week have been the Duke of Wrench Ambassador, and the Countess de S Aulaire, Sir R. Peel, the Dukes of Sutberland and Devon shire, Major-Gen. Sir George Scovell, and Admiral Casy of the Freach Navy
of the French Navy. Royal Highness and suite attended high mass in the private chapel of Alton Towerg. Monday, the 6th, being requiem and a dirge were celebrated, at the request of his Royal Highness, by the Right Rev. Dr. Wiseman. On Tuesday the Prince, accompanied by the countess of Shrewsbury, and a number of the distinguished guesta, drove to Chatsworth, the seat of the Duke of Devonshire.
His Royal Highness expressed great admiration of the sculpture gallery, the conservatory, and other splendid objects for which Chatsworth is so celebrated. On Wednesday morning his Royal Highness, at the request of the Earl of Shrewsbury, attended by the whole of the guests, and a concourse of respectable persons, planted five young
Oaks on different parts of the lawn in front of the mansion: Oaks on different parts of the lawn in front of the mansion; at the planting of each a cannon was fired from the terrace battery, over which floats the ancient banner of the House
of Talbot. After this ceremony his Royal Highness drove to Cheadle to see the catholic church now erecting by the Earl of Shrewsbury, and afterwards visited Trentham, the seat of the Duke of Sutherland. On Thursday manufactures, drove to the Potteries, accompanied by the Countess of Shrewsbury and a large party, and inspected the establishment of Mesars. Minton and Co. On Friday his Royal Highness went to Manchester to visit some of the principal manufactories in that diatrict. His Royal Highness and suite dined and slept at Sir T. De Trafford's of Trafford Parlk, and on Saturday returned to Alton Towern. The village of Farley, near Alton, through which
the Prince had to pass on his return from Manchester, was illuminated by the inhabitants, and every honour was shown to his Royal Highness at the difterent stages
of his route. On Sunday his Royal Highness attended divine service in the chapel of the mansion, where high mass was celebrated by the Reverend Doctor Winter.
At the conclusion of dinner in the evening Lord At the conclusion of dinner in the evening Lord
Shrewsbury in a short speech in French gave the health of his illustrious guest, the band playing " Quatre." His Royal Highness then rose, and in most feeling terms thanked the Earl and Countess for the splendid manner in which they had received him, and fo the magnificent hospitality with which they continued to entertain him, assuring them that their kindness would never the erased from his memory: he concluded by drinking their bealths, the band playing "God save th Queen." When the Earl of Shrewsbury was about to Royal Highness, said "Nous allons boire à la santé de Monseigneur avec du vin de Bordeaux; to which he im mediately replied, in the most touching and naive manner, "Et moi, milady, je boirai aux vôtres avec du vin de Constance." On Monday his Royal Highness left Alton of that town, and where he visited the manufactories the other great manufacturing districts of the North, on his way to Burton Constable, the seat of Sir Clifford Constable, where he arrived yesterday. From Burton Constable his Royal Highness proceeds to Hornby Castle, the seat of the Duke of Leeds, and from thence on a visit to the Duke of Northumberland at Alnwick Castle. M. Berryer returned to London in the middle of the Catholic che celebration of a service a being the anniversary of the death of his wife. The celebrated orator left London yesterday for Burton Constable, near Hull, to rejoin the Duc de Bordeaux. M. Berryer's stay in England will be prolonged until his Royal Highness's distinguished Deputy have been Sir R. Peel, Sir J. Gra-
 the 20 th inst., to join the Duc de Bordeaux in London. Parliamentary Movements.-On Tuesday Parliament was prorogued by commission in the usual manner, to the Lord Chancellor, Earl Aberdeen, and Lord Wharncliffe. The Church.-It is said that the Rev. Dr. Mill, chaplain to the Archbishop of Canterbury, and Christian President of King's College, Londor, in the Bishop Lonsdale, and that Archdeacon Manning, the Rev Bishop Lonsdale, and that Archdeacon Manning, the Rev
James Anderson, the Rev. J. Randall, Rector of Binfield and the Rev. W. Harness, Minister of Regent-squar Chapel, St. Pancras, have announced their intention of offering themselves as candidates for the Preachership of incoln's-inn whenever the vacancy is declared.
Church of Scotland.-The following appointments hav taken place in the Church of Scotland, in consequence of
the late secession:--Rev. R. Waugh to the church of No:th Ronaldshay, Orkney, in the room of the Rev. A White; Rev. J. Boe to the church of Dunblane, Perth,
in the room of the Rev. R. J. Jolsnstone; Rev. R. Stobie to the church of Keiss, Caithness, in the room of the Rev T. Gunn. The Queen has also been pleased to appoint the Rev. J. Robertson, minister of Ellon, Aberdeen, to be in the room of Dr. David Welsh, who has vacated tha office by joining the Free Church. The appointment of the Rev. J. Campbell to the church of Reay, Caithness, in the room of the Rev. Finlay Cook, has been cancelled and the Rev. J. Marray appointed in his stead.
Order of the Bath.-The Queen has been pleased to appoint Arthur Aston, Esq., late her Majesty's Ministe in Spain, to be a Knight Grand Cross of the Bath.
Diplomatic Movements.-The Queen has been pleased to appoint Richard Pakenham, Esq., now her Majesty's Minister to the Mexican Republic, to be Minister Plenipotentiary to the United Satates, Henry Li at Paris, to be Minister Plenipotentiary to the Queen of Spain ; and Lord William Hervey, formerly Secretary of Legation at Madrid, to be Secretary of Embassy at Paris.

Pensions.-The Government have granted a pension of 200 l . a year to Sir William Hamilton, Astronomer Royal in Ireland.

The New Sheriff.-The Lords of the Privy Council had a meeting on Monday, in the Exchequer Chamber, to Chancellor of the Exchequer the ensuing the following Chancellor of the Exchequer presided, and the following gentlemen were nominated by the Judges for the respective Couuties :-Beds.-J. Lee, of Sharnbrooke, Esq. ; G.J. Esq. Berks.-E. M. Atkins, of Kingstone Lisle, Esq. Coley Park, Esq. Bucks. -J. Barnes, of Chorley Wood, Esq. ; E. F. F. Rodd, of Trebartha-Hall, Esq.

\section*{fforelgn}

France. The Council of State has decided that in the letter of the Bishop of Chalons, respecting the system of aducation in the Uuiversities, there was abase, with the meaning of the law, and a roying the judsment of the the Moniteur of Thursday, declaring the judgment of the Councll of State in that respect. The ordiance dechat the following to have been the grounds of this judgment -" 1. That the Bishop of Chalons, acting in that capa city, bad thought proper to make allegations injurious to the University of France and the members of the educa tional body.-2. That the said bishop threatens, event ually, to refuse the holy pacraments to chidren educated at the establishments connected with and under the con trol of the University.-3. That these facts constitute in themselves an injury and an attack upon the honour of the University and the whole body of instructors, and are of a nature unnecessarily to aharm the consciences of the children brought up in the establishments, and their families." It is thereupon found that these facts come within the meaning of the law, as respects cases of abuse; and his Majesty, with the advice of his Council of State, finds that there is "abuse" in the declarations issued by the bishop. The Minister of Justice and Public Worahip is then ordered to put the ordinance into execution. It will be observed that no mode of punishment is pointed out in this ordinance, and it is understood, in fact, that no further step is to be taken in the matter. A judgmen thus given by the Council of State, and published to all Europe in a state document from the Sovereign, is of itself no small punishment, and is feltas a severe censure, not only on the Bishon of Chalons, but on all those members of the olerical bay who used such threats to obtain an extension of their power. Another bishop has come forward as a champion for the cause of the clergy against the University The Bishop of Perpignan has addressed thetter on the question of ef en his brethren of Lyons Chalons, and Langres, has chosen to brethren of Lyons, Chalons, and Langres, has chout abating any of the proper bishops, absence expresses himsel with so much mildness disarmed his opponent. They still hope that the declaration
of the Council of State in regard to the letter of the
Bishop of Chalons will not be without its effect; and as Bishop of Chalons will not be without its effect; and as
the Bision of Perpignan's letter was published before the the Bishop of Perpignan's letter was published before the Writer could have known of that declaration, they further
hope that the good sense of the clergy will induce them not to continue the contest. - The editor of La France appeared before the Paris Court of Assizes on Thursday, to take his trial on the charge founded upon an article respecting the simultaneous journey of the Duc de Bor-
deaux and the Duc de Nemours to London. The prose. cution was conducted by the Avocat-Général, and the defence by M. Fontaine. The editor was acquitted on all the counts of the indictment. In the course of the trial,
the Crown-counsel assured the Jury that the Duc de the Crown-counsel assured the Jury that the Duc de triffing occurrence. It would seem, however, from a leading article of the Ministerial Journal des Débats, that it is viewed in o different light at St. Cloud. Although the ment it serves is too humane, too wise, too sure of its rights and strength to envy the Duc de Bordeaux the cises hospitality too generously to dispute its neighbour's right to exercising it towards an unfortunate Prince, the friendly reception his Royal eighness has melven offence This the reader will probably perceive in the Débats reference to the festivities at Alton Towers:-"The
French Government knows too well that all the efforts o parties to give a political character to the movements of the Duc de Bordeaux will be frustrated by the honesty and firmness of the English Government. It has, in short than in Germany. This is the exact truth. There remain than in Gesle end furs-de-lis of Lord John Talbot. the old castle and fleurs-de-tisis we can assure the Opposition prints. An ardent Catholic and dach any Jacobites could still exist in England, Lord Shrewsbary
must naturally warmly sympathise with the French premust naturally warmly sympathise with the French pre-
tender ; but, on the other hand, Lord Shrewsbury, notwithstanding his birth, name, and fortune, exercises not the slightest influence in his country," The wrath of the Berryer. That eminent orator, whose attachment to the fallen branch of the Bourbons is known throughou France, whose constituents entertain the same political opinions, is almost charged with treason for having visited the Duc de Bordeaux at Alton Towers, because, as a
Member of the Chamber of Deputies, he has made oath of fidelity to King Louis Philippe and of obedience to the charter.-The Courrier Francais gives a report that the Ministry had abandoned the intention of proposing, in
the ensuing session of the Chambers, a bill of dotation of the ensuing session of the Chambers, a bill of dotation of
the Duc de Nemours as future Regent of the kingdom, and states that the Prince de Joinville is to sail from Toulon with a squadron in January, on a long voyage. Another print mentions the rumour that LieutenantGeneral Dode, who has superintended the erection of the Paris fortifications, is to be rewarded with the staff of a Marshal, and that there is speedily to be a new creation of peers, of whom M. Victor Hugo is to be one.-The Journal des Chemins de Fer publishes the report of Mr. Cubitt, the engineer, on his survey of a projected line of very favourably of the project, both as regards economy and facility of execution.-Despatches have been received from Algiers to the 30th October, which state that the French had made a successful incursion into the tertitory of the Djaffras, and had taken 400 prisoners, 300 head of cattle, and 1,000 sheep, besides a large number of horses. A second incursion was made into the same country by the Hararas, a tribe attached to the French, in which
2,000 sheep, 100 camels, and a number of horses and asses have been seized. How many women and children are included in the booty is not mentioned.
Spain.-The news from Madrid is of great importance. It announces the declaration of the Queen's majority, an attempt on the life of General Narvaez, and the occupa-
tion of Gerona by the Government troops. tion of Gerona by the Government troops. The debate on the Queen's majority was resumed and closed in the
Cortes on the 7 th inst. In the Senate, the Duke de Frias, General Narvaez, M. Campuzano, M. Garelli, and Frias, General Narvaez, M. Campuzano, M. Garelli, snd M. Marco, successively spoke. The speech of General Narvaez excited deep interest, owing to his recent escape from assassination. He dwelt on his services to his Sovereign and freedom, and urged that the only institution in
Spain that had resisted the shock of parties was the Throne, and that the rendering it strong and powerful was now the only means of saving the country from anarchy. In the Chamber of Deputies, the debate derived more interest still from a long and eloquent speech in which Martinez de la Rosa expatiated on the advantages of the monarchical principle, as a remedy to domestic dissensions, especially when a country was so distracted
by them as Sain. This oration is stated to have made a by them as Spain. This oration is stated to have made a deep impression, and almost every sentence of it elicited cheers. The two chambers assembled next day in the hall of the Deputies, the Ministers Lopez, Caballero, Frias, Serrano, and Ayllon being present, and the priblic and diplomatic galleries being thronged to excess. The
Chambers were called over, when 76 Senators and 133 Chambers were called over, when 76 Senators and 133
Deputies were found present. On dividing, 193 to 16 Deputies were found present. On dividing, 193 to 16
voted in favour of the declaration of the Queen's majority. The sitting was then closed amidst cries of "Viva the Queen! Viva the Constitution! General Narvaez!' This last cry is said to have ber an immense crowd outside cheered the General, who excited fresh acclamations by a short address
again in order to appoint a deputation to convey their congratuations to the Quee. Anties should join the depuThat sll the Senators and Deputies should join the depu-
tation, after which the President, Olozaga, exclaimed :" From this day the constitutional system must begin to be a reality in Spain. Ministers shall be informed of what has just been accomplished, in order that they may take ber Majesty's commands. The Chambers wore then adjourned amidst great apparent satisfaction. On the two Queen Isabella II. took her oath in presence onthe Her
Chambers assembled in the hall of the Senate. Her Chambers assembled in the hall of the Senate. Ker
Majesty was received everywhere with the utmost enthuMajesty was received everywhere with the utmost entiu-
siasm. In the evening all the public edifices and a great number of private houses were illuminated. The bands of the different regiments of the garrison, preceded by torch-bearers, and followed by an immense concourse of people, traversed the city, and serenaded the Queen, the bis balcony, was loudly cheered. The attempt on his life was made on the evening of the 6 th , at about 110 clock. The Queen was in the Circus theatre, and the General was proceeding thither when on his carriage passing the Portaceli church seven shots were fired at it by men who were concealed behind the pillars of the church, awaiting its approach. None of the shots, which were simultaneously Mactio Castro, a young man distinguished in literature, who achis hanied the Captain-General, also receall the troops o the garrison were immediately summoned to arms, and measures were adopted to prevent any disturbance. None of the assassins were apprehended. Narvaez proceeded ance in the box of the Queen, who seemed deeply agitated when informed of the occurrence. In Catalonia, Prim and A mettler had an interview on the 3d, in the castle of Monjuich, at which terms of a new convention were agree
to. The conditions, stipulating for the surrender of Gerona, Figueras, and Hostalrich, were to be submitted to the approbation of Captain-General Sanz. They were more advantageorgente. Prim entered Gerona on the 9 th. At Barinsurgents. Prim entered Valencia was tranquil, but the interruption of the trade with Barcelona was the cause of much misery, and of many robberies in the city. Conspiracies are said Conch was about to return to Madrid to resume the organization of the army, and General Roncali was to succeed to him in the command of Aragon.
Belgium.-The Belgian Chambers were opened on the 14th by a speech from the throne, in which King Leopold alluded to the recent visit of her Majestium. He took a general review of the state of the country, and stated that he will be able to establish, with due regard to the public interests, a perfect equilibrium between the wants or he state and of expenses and by some financial improvements.

Germany.-Letters from Vienna of the 29th vit state that Prince Gustavus Wasa, son of the late King of Sweden, Gustavus Adolphus IV. (dethroned in 1809), and who is now a Field Marshal in the Austrian service, has instituted proceedings for a divorce from his consort,
Princess Amelia Stephanie of Baden. The reason which has induced the Prince to adopt this step, after having been married 13 years, is not known; but the rumour is afloat that for some time past, the Prince has experienced frequent fits of mental derangement, a disease which is here ditary in his family. As the Prince and Princess are both Lutherans, it is the Consistory Court of Augsburg application.-A marriage is said to be arranged between the Archduke Stephen, eldest son of the Archduke Charles of Austria, and the Grand Duchess Oiga, second daughter of the Emperor of Russia. This is said to be the first matrimonial alliance ever concluded between the reigning dynasties of Austria and Russia.- The opening of the railroad from Antwerp to Cologne has induced the inhabitants of the latter to conceive the plan of having a market for sea-fish, which arrive quite fresh by means of Directors of the Railway from Berlin to Potsdana che brated, by a grand entertainment, the day on which it was opened to the public five years ago. Since that time two in 21,000 journeys, and only two persons have received slight injuries, a proof of the prudence and order with which the service is conducted.-The Senate of Hamburgh is at present deliberating upon a law authorising marriages exists which probibits mixed marriages, it is easily evaded by the parties getting united in another country. This generally takes place at Hull, between which town and Hamburgh there are no less than three lines of steamers. Norway. - By the Norwegian law Jews have been hitherto forbidden to enter that kingdom. The interdiction has recently been suspended in favour of such Israelite naturalists as mistiana during the next summer, and it is supposed that this is an indication of a reform favourable to religious freedom.

Italy.-A long account has appeared in the French papers of the proceedings, of the military commission at Bologna, stating among other things that the evidence received against the prisoners was written, not oral, that no cross examination of witnesses was therefore possible,
that no tentimony for the defence was admitted, that the
prisoners were silenced when they attempted to protest against the illegality of the proceedings, and that the Court passed judgment without hesitation, condemning five of the accused to death, and the remainder of those tried to imprisonment for 20 years. There is reason, however, to believe that these statements are greatly exaggerated, if not altogether untrue. Letters from Bologna of the 4th inst. state that with the exception of a few pistol shots fired near the public gardens, where some pasquinades against the authorities were posted, nothing particular has happened since the 8th of October. It is true that in several places, especially at Pieve and Galliera, some excesses have been committea by bodies of the people, but they are mere banditti, and have no political
character. The examining magistrates are busily occupied in drawing processes, which will be laid without delay before up processes, mission. In the meantinue the arrests continue to increase. There are already about 100 prisoners in the prisons of Bologna, without counting the tro have been sent to Pesaro. Two examining magistrates have been sent to Pesaro, 1 cos relative to the late number for carrying on the prose indirnit political events. The people are very indignant with the Bologna, one of the 16 individuals arrested at the suggestion of the Papal Government. The Banguinary disputes among the soldiers of the garrisoa of Ancona have been repeated at Imola, at Forti, and at Pesaro. It is said that the Pope is about to add 6,000 men to bis armay, There is a report that a sor of collo place at Rome between the representatives of the great powers, to consult as to the mode of remedying the that with which the country is amicted bof is said ot Cardinal Lambruschini, the secre afo sion. - Prince Borghese is on the eve of departing for Paris, for the purpose of forming a matrimonial connexion with a member of the house of Rochefoucauld. Prince Borghese is a widower, his first wife, the Lady Catherine Gwendoline Talbot, daughter of the Larl and Countess of Shrewsbury, having died about two years since. A subscription has been raised among the English nobility and others resorting to the Italian States, which already amounts to near \(3000 L_{\text {, }}\), with which it is intended to erect an academy at Rome, to which all English students will be enabled to proceed with their studies throughout the year, and not be compelled to remain inactive The establishment is to contain all that is necessary for their use, large collection of casts from the antique, the chief works of the most celebrated modern sculptors, and an extensive fibrary.-Letters from Naples of the 1st inst, state that an alarming fire broke out in the British Consular residence, at the Palazzo Calabritta, on Sunday night, the dest alt, which for some time threatened the total destruction of that vast building. The origin of suspicion of its having been the wilful act of one of the inferio domestics. The damage done to the building is considerable, not only in the dwelling of the British Consul, but also in the apartment above inhabited by the French Consul whe family had a very narrow escape from being burnt ineir beds ; the flooring of the room having fallen in a fem minutes after they escaped from it. Fortunately no lives were lost.-From Sicily we learn that the troops in garrisoo at Palan particularlidis had their muskets secretly with ball cartrides and sviled themselves of the darkness of bur e night to get then officers are mentioned as having oficers. No ess the their men, but it is believed that the full truth will never come to light.
the full truth will never \(Z\) arich papers state that the Govern of Soleure has given notice to the Govern Gents Berne and Zurich, that it has protested agains the resolution taken by the Grand Council of Lucerne in the affair of the convents, of which it takes quite a different view. The Ultra-Catholic party of Lucerne acaid别 The British Minister has also addressed a communication to Lucerne testifying to the Prsiden or much England is grieved to see impruaduillity of the tions, compromising the domestic which the powers of Eountry, in the maintere were so much interested.
Gঞeeor.-Letters from Athens of the 21st ult. state that the pretended recal of M. Katakasi, the lase Russian Minister to the Court of Athens, was a farce, and that, being a Greek, he has entered the service of King Otho If this account prove to be correct, it certainly forms very important addition to the mysteries in which the veftairs of Grec a pear to be invoived. The same letters amate that the English and French Ministers, Sir E.L. Lyon and M. Piscatory, have had an interview with the King of and, at which they declared, on the part of their Greece, Government, as settled by the revolution of September Proper persons were employed in drawing up a form o constitution, and copies of the Encland the United States, and Belgium, have been laid England, the for the purpose of enabling them to their decision. The Belgian constitution is considered the most complete, and will form the foundation of the Grecian constitution. In the island of Euboea the people had set fire to the woods to revenge themselves on the German foresters
Malta a pastoral letter published by the Roman Catholic Bishop,
fulminating his censures and excommunication against the Masonic fraternity. The papers state that this is an in general, for amongst the Maltese Protestants and Freemasons are almost synonymous terms. - The wreck of the American steam-frigate Missouri, which was burnt a few weeks since, still remains submerged in Gibraltar Bay, but since the arrival of Mr. Abbinett, of Gosport, the operations have been carried on with great activity. The whole of her guns, chains, anchors, one store-room of provisions, and other things of great weight have been provisions, and other things of great weight have been is on her passage to New York. The magazine hatch has also been cleared, and the whole of the magazine has been got up, consisting of about 60 costly coppe
the powder was damaged with the salt water.
TURKEY.-The German papers state that the Turkish population at Urania, to the south of Nissa, have risen against the Christians. The Turks pillaged the churches and
committed other excesses. The Russian ambassador has demanded satisfaction from the Ottoman Porte. The demanded satisfaction from the Ottoman Porte. The
Frankfort papers give a letter from Constantinople, of the 25 th ult., which states that there was every probability of a change in the Turkish Ministry, in consequence of the jealousies existing between Reschid Pacha and Hafiz Pacha.
Hafis is said to be very intolerant, and it was said to be by his advice that the unfortunate Armenian was executed. The Divan has given no answer yet to the note of M. de
Bourqueney on this subject, nor have the English and Bourqueney on this subject, nor have the English and
Prussian ambassadors taken any steps regarding it. It is Prussian ambassadors taken any steps regarding it. It is son of Mehemet Ali and the sister of the Sultan.
similar negotiation was on foot last year, but failed. similar negotiation was on foot last year, but failed.
United States and Canada.-The mail steam-ship Hibernia arrived at Liverpool on Tuesday. She sailed from
Boston on the 1st and from Halifax on the \(3 d\) inst., and has made the passage in about 12 days and a half. The New York papers are from the 22d to the 31st ult, and from Boston to the 1 st inst. The news is not particularly
interesting. That from Mexico leaves matters in the interesting. That from Mexico leaves matters in the same position as did the intelligence which came more
direct by the last West India steamer. No reconciliation appears to have been effected between Santa Anna and the British Minister. The United States papers are principally filled with elecheering maters. Mis. WebWhig interest. At New Orleans the yellow fever still prevailed, as it did also at Mobile; but the epidemic was deaths is stated to be on the increase. General Bertrand, so devotedly attached to Napoleon, had arrived at New York, and had received from the citizens and the corporation the liveliest marks of respect and attention. Mr. has made a speech to his constit uents at Dedhan statesmen, chusetts, in which he opposes the annexation of Teras and the institution of slavery with even more than his wonted power and eloquence. He stated that it would be a leading topic in the next session of Congress, and that he would oppose it with all the vigour that God had given him. What between Texas and the Oregon territory, a stormy session is looked for in December. With reference
to the latter subject, a Tyler meeting has been held to the latter subject, a Tyler meeting has been held
at Cincinnati, in which, after resolving that the whole morth-west coast, from latitude 42 degrees to 54 degrees, belongs of light to the United States, the following resolation was put and carried unanimously: -
"Resolved, that twe approve of the policy of President "Resolved, "that we approve of the policy of President
Tyler in relation to the just claim of the United States Tyler in relation to the just claim of the United States
apon the Oregon territory, and we hereby pledge ourselves, if it shall become necessary, to maintain our right With the blood dad. treasure of the nation." Mr. Fox, the Britisk minister at Washington, has been dangerously
ill of bilious fever. His health is now improving. Professor Dright, of Yale College, had been recently killed by a student named Fassit. The cause was a
sudden quarrel, and the student wearing arms. - The sudden quarrel, and the student wearing arms. - The
Canadian news is uninteresting. The debates in both houses were upon minor subjects. After a long discussion
in the House of Assembly, the bonding of foreign cattle clause in the Agricultural Protection Bill had been adopted. Meetings were still held throughout the province respecting the removal of the seat of Government ; and the correspordent of the Quebec Gazette mentions that it was an open question. Some attributed the
sodden change to the receipt of despatches from England, sudden change to the receipt of despatches from England,
and others to a wish on the part of the Governor-General to have the question considered open. A despatch had been received from Lord Stanley, announcing the insystem of postage into Canada, to charge letters by weight, as in England, to establish penny district posts, and to authorise the reduction of the internal rates on the
correspondence of British North America with England correspondence of British North America with England charge being progressive with the weight. The last state that so strong was the ship, that only her rudder and stern had fallen away, although she had been on the rocks more than two months, and exposed to all the Great Westerne weather. A trial of speed between the Princeton is minutely described in the United States papers. The result was a decided victory by the Princethan on any former occasion.
Brazils.-Letters from Rio state that the Prince of Aquila, brother of the new Empress of Brazil and of the King of Naples, has formully demanded in marriage the hand of the Princess Januaria, elder sister of the Emperor
and of the Princess de Joinville.

Money Market, Friday.

\section*{Retropolis amo its Zírínitu.}

St. Stephen's, Walbrook. - Another meeting, of a in the vestry-roomal Mr. Cunliffe in the chair. Dr. Croly made a long statement respecting Mr. Horner's assertion at the last meeting concerning his custody of the key of he had no key which gave him any personal stated that the contents of the safe. Mr. Rock said, as the question of these accounts was now in Chancery, it would be usealready appeared to a suite of his, and he should therefore move "That this vestry did cordially approve of the conduct of the Rev. Dr. Croly during the unfortunate present engaged;" and that having been agreed was at should then move that the restry be adjourned until Wednesday, the 3d January. Both these resolutions were subsequently carried, and the vestry adjourned, after a long indulgence in personalities, during which the chairman had to threaten to leave the chair or eject some of the parties concerned, if something like regularity were Croly, that Alderman Gibbs from the states of Dr that, on the contrary, the parish is indebted to him, and there are not coals enough to warm the church on Sunday

The Polish Ball at Guildhall.-On Thursday the annual ball for the benefit of the Polish refugees took place in Guildhall, which was fitted up for this occasion. The attendance was very numerous, the visitors filling in a superior style, and appeared to give great satisfaction to the guests. The company did not comprise so many fashionables as usual, but there was a plentiful supply
of the middling classes and of the citizens of London
Explosion at King's College.-An exaggerated report has appeared of an explosion in the Theatre of King's College the Bude light, and oxygen gas had been sent to the theatre for the purpose of The lecture, which was to be delivered by Professor Daniel. duty it was to attend to the departme there the wase prepared, and on applying the pipe to the bag costas preparea, and on applying the pipe to the bag containing that the large windows of the theatre, containing nearly 80 panes of glass, were smashed, and the frames broken to pieces; that| some pieces of wood that lay on the floor were driven into the ceiling, together with the furnace and chemical apparatus, which was all destroyed; and that Prof. Daniel wilh his assistants were in the theatre at the timre, been killed on recovering from the shock. Professor Daniel, however, has given a complete contradiction to this part of the story, stating that the explosion was very slight. Infant Orphan Asylum.-On Saturday, Mrs. Isabella
Bryant, an elegantly-dressed woman, who had up to the previous Monday filled the situation of matron at the Infant Orphan Asylum recently erected on the borders of Epping Forest, was committed for trial at the Central Criminal Court, but allowed to put in bail, on a charge of
stealing some linen and articles of apparel belonging to stealing some linen and articles of apparel belonging to
the institution or some of its servants, and which were the institution or some of its servants, and which were found in her trunks when she was about to take her departure. The prisoner did not deny that the linen belonged to the institution; indeed, the table-cloths and towels were marked with the initials of the institution. In reply to a question from her legal adviser, whether she did not obtain the situation in preference to 150 others, from the superiority of her testimonials, the Chaplain said that she had not been appointed from those alone, with the situstion selection rested. The prisoner, on taking one son, 17 years of age, but it is understood that she has a daughter much younger, and the whole affair is about to undergo investigation by the authorities at the asylum. The late Duel.-It is stated by the Brighton Gazelle that it is the intention of Lieut. Munro to surrender and take his trial forthwith, and that Mr. Thesiger is retained for his defence.
Metropolitan Improvements.-According to a writer in the Builder, the Government intend to place the statue of George IV., by Chantrey, on the eastern pedestal of Trafalgar-square, facing St. Martin's Church, and to
remove the statue of George III., by Wyatt, from its remove the statue of George III, by Wyatt, from its
present position in Cockspur-street to the western pedestal, present position in Cockspur-street to the western pedestal,
opposite the College of Physicians. The same writer states that St. Margaret's Church, Westminster, is to be removed from its present locality to a more eligible site, that the funds and the site have been provided, and that the work will be commenced during the present year.
Thames Tunnel.-Notwithstanding the bad weather, about 25,000 persons passed through the Tunnel last
week, making the total number upwards of \(1,640,000\) since it has been opened day and night as a thorouglifare.

Wood Pavement-A new system of wood paving is The pring down opposite St. James's Church, in Piccadilly. The principle is that of Cassel's patent, in which the blocks
of wood are cemented with an asphaltic composition. The wood payement of the New Road from King's Cross to St. Pancras Church is proceeding rapidly., 1

Grand Union Canal. - The half-yearly meeting of this company took place last week, Mr. Twining in the chair. The report showed that the tonnage receipts during the past half-year had amounted to \(2,900 l\), , being a decrease of 2381 ., which was attributed to the depression in the coal trade; and although the unusual cheapness of sea-borne coal acted powerfully on the inland coal market, still it was necessary that further reductions on tonnage should be made in the lower canalg, to which the committee would turn their attention. The total receipts for the six months, including a balance of \(3,455 l\)., amounted to 6,7882 , leaving a balance, after payment of expenses, of 3,2916 , out of which a dividend was declared at the rate of 108 . per share. The works of the canal and the plies of water abundant.
Marylebone Workhouse.-On Saturday a meeting of the directors and guardians of Marylebone took place at staterkouse, for the purpose of considering certain the conts recently published in the daily papers as to Model Prison end awarded to the inmates of the New According to these statements the paupers had complained the their gruel was so thin that they were forced to use the greater portion of the ten ounces of bread allowed Timothy each day for their breakfast, and that Mr showing that this complaintians, had made a long speech statements were denied, and Mr. Timothy admitted 'that the speech had not been wholly delivered, but had been supplied by him to the reporter. After a long discussion Mr. Anderson moved, and Mr. Nisbet seconded, the following resolution-"The attention of the board having been directed to a report which appeared in the morning papers of Saturday last, in reference to the dietary of the regret \({ }^{2}\) the hork morning papers of Studay la morning papers ha urday last, such speech never having terms the rop made on the mind then nat the pauper sence of Mr. Timothy, Ehis resolution, in the presence \(\mathrm{Mr}^{\mathrm{Mr}}\).

Liverpool. - The leading topic of conversation in Liver pool during the past week bas been the intention of the commissioners of Birkenhead to construct a dock on the Cheshire side of the Mersey. At their meeting on Friday they announced that they had obtained the consent of the Ammaty to their inclosing Wallasey Pool, from the botthan 340 acres, with tunel co seacombe, an area of Bot less head and Chester Railway, and that all the arrangements would be carried out on the most magnificent scale. The cost of the work was estimated at near \(300,000 \mathrm{l}\). All the pecuniary advantages to be derived from the dock are to be ppropriated to the measure itself, untii the dock could be
 the election to Parliament are to be immediately given.-At of the firm of Sands, Turner, and Co., the only candidate for the office, requested an investigation into certain charges brought against his house by the receiver of the town dues, for having for a period of years called bales duty. Mr. Sands denied the imputation evade the higher an inquiry before he was elected. A committee of the most eminent merchants in the town was accordingly appointed, and on Saturday they agreed to the following nation into the charge preferred against Messrs. Sands, Turner, and Co., in the letter addressed to the Mayor on was resolved unanimously,-That in the opinion of this meeting, there is not the slighest ground to justify the imputation which is altempted to be cast upon those gentlemen." The election of Mayor took place on MonMr. Lawrence, who had been brought forward to 16 over him. Mr. Sands was accordingly declared duly elected and took the oaths and bis seat as Mayor for the ensuing com. Mr. Bushell gave notice of a motion for a special made against the house of Sands, Turner, and \(\mathrm{C}_{0}\). ; and
eventually the council adjourned to Monday next, to take the motion into consideration.
seat of the The magnificent mansion of Luton Hoo, the by fire the Marquess of Bute, was almost totally destroyed were aroused then discovered that the roof immediately over the grand hall was on fire. Exertions were immediately made to quell the flames, and a messenger was sent to Luton for the town engines, which shortly arrived, but in cone quence of the smallness of the engines, and the difficulty of obtaining water, which was about a ouarter of a mit distant from the house, they were of little use, and the flames continued to extend in every direction, spreadie rapidly through the grand hall and the right wing \(70^{\prime}\) 'clock the Hitchin engines arrived; but in spite of all exertions the fire continued to rage with extraordinary fring by was only prevented from extending to the left centre of the building. From the reof the wirg and the to the grand hall, and thence to the library and thended wing, including the chat ond by 10 ' parts of the building had follen prey to During the progress of the assisted-by the townspeople of Laton, were activels en, gaged in removing the furniture, books, paintings, \&c. from the buildings ; and so great were their efforts, that nearly everything was saved. The paintings, of which The house contained a large collection, were all saved. been ire extremely valuable, and their loss would have by Rapbael, Titian, Rubens the Cral by Rapbael, Titian, Rubens, the Caracci, Correggio, and a fine collection of bistorical portraits. The gons have been have been saved, and a number of wagof destruct employed in carrying them from the scene friends in the neithe residence of one of Lord Bute's friends in the neighbourhood. The stock of the great botanical work of the first Earl of Bute was in jeopardy, but ints fortunately been saved. Some valuable manu-
 by wind, but they have all been coilected and prestion of the bedsteads has been all saved, with the excepThere was not time to take these down, and they have consequently been lost these down, and they have saved. The amount of property saved under the peculiar circumstances of the fire, extending as it did through the corridors of the mansion with frightful rapidity, is perrectly extraordinary. Mr. Collindon, the steward who fire occurred. To the , was absent in London when the of Mrs. Partridge, the honsekeeper, phesence of mind other domestics, slept in the mansion must be ontributed the salvage of nearly the whole collection of pictures, Whounting in number to about three hundred subjects. While the flames were raging fiercely in the northern and eastern wings, and before any attempt had been made to stay the progress of the flames, the engines not having at that time arrived, Mrs. Partridge and the gardener, assisted by the other domestics, at imminent risk, passed into the picture gallery, and while one cat the strings by which the paintings were suspended, the others hastily conveyed them through the southern portico to the lawn. In this way it may be readily supposed many of the subjects The chapel which was majority were safely preserved. Smirke. It contained an exceedingly fine Gothic wainscot enriched with carving, intermingled with Latin sentences of Scripture, in ancient characters, which was first put up at Tyttenhanger, by Sir Thomas Pope, the founder of perfect College, Oxon, and was removed to Luton in perfect preservation by the family of Napier, to whom which had been drawn and engraved by Mr. Shaw as un example to modern architects-is, we regret to say, atterly destroyed, with the rest of the right wing. The bers of the fire has been attrouted to some plumhall on Wednesday. These men, however, assert that it was impossible any spark conld have communicated with the rafters from the fire they employed. It does not appear that any of the stoves communicating with the fues had been lighted for some days, so that this fruitful present of similar disasters was not the cause in the present instance. The housekeeper says that she never quite ca fire in any of the upperapartments, and as it is tion is, that a spark from the plumbers' fire fell the copper a spark from the plumbers fire fell through from Wednesday until Friday morning, at length bug from Wednesday until Friday morning, at length burst out. According to the report of the Fire offices, the bulk Exchange Offices. The insurane flected is-Ho Royal offices inge Offices. The ind offices in the Sun for 10,0006 . Household goods in the Sun for \(10,000 \%\), and in the Phoenix for \(10,000 l\). Pictures and prints in the Sun for 16,500 o, and in the Royal China and glass in the Royal Exchange for 1,000 2,000l. insurance in the Sun, 38,500l.; Phoousx, \(10,000 l\). and Royal Exchange, \(10,450 l\).; muking the total insurance mount to \(58,950 \%\). Since the destraction of the Armoury by the lafe fire in the Tower of London, no building of equal extent has met a similar fate. Luton Hoo owed its magnificence to John, third Ebrl of Bute, who in 1762 parchased the unfinished mansion of Sir Robert Napier, which the genius of Adam should have fuand addition, in less of expense. The model adopted by the architect was the Palace of Dioclesian, at Spalatro, and it is admitted that his design was worked out in a very masterly manner.

Manchester.-Another meeting of the shareholders in the Bank of Manchester was held last week, at which it appeared that the estate of the Hitons, or more disastrous way than was anticipated at the last annual meeting. The bank was stated to be involved in these two concerns to the amount of nearly 200,000 . As far as can at present be ascertained, Mr. Burdekin decamped with \(100,000 l\). A call of \(2 l\). per share was deemed essential to bring the affairs of the bank to a close, and which, if paid, will amount to near 100,0001 . This call, with that previously paid last year, will make the totul loss more than one make ang shareholders is expected to be very great, and the number of defaulters will also be considerable. The liabilities are now reduced to the comparativel small sum of 400,0007 . - An extraordinary case came be fore the magistrates for investigation on Friday, in whic the accused M. a board her Majesty's steam. ship Penelope, who gave hi Hardman, an operative cotton-spinner, who charged the lad with having caused the late incendiary fires in Den bighshire. Both the accused and accuser were placed in the dock-the latter having been detained from a belie that the serious charge he had made would turn out to b unfounded, and that his motive was the prospect incendiary. After a long examination, both prisoners were remanded for a week. - A meeting of the merchant manufacturers, trades, and others was held in the Cown iding the future operations of the Anti Corn-law League Upwards of 250 persons were present, among whom were Manchester and the neighbourhood. Mr. R. H. Grege路 by Alderioan Callender, a resolution was unanimously adopted in favour of free trade. A subscription was before the close of the meeting, to no less than \(12,6061.6\) s.
Nottingham.-Nine prisoners who had been apprehended on suspicion of being concerned in the late burglary at Sutton Bonnington, noticed in our last, were brought before the magistrates last week, together with have been implicated in the transaction. The magistrates remarked that, although there was strong suspicion that two if not more, of the parties were present when the two, if not more, of he parties were present when the in the absence of corroborative evidence, to dismiss them with the others , but he wished chem distinctly to understand that this dismissal did not exonerate them from suspicion, nor secure them from any future proceedings. The Rev. R. Meek, although still labouring under the effects of the ill-treatment he received, was present, and said that, though he felt convinced one or more of the prisoners were guilty, yet, from the agitating ast which the robbers were disguised, he could not help feeling some doubt as to their identity, and be would give them the benefit of that doubt. The prisoners were then discharged.-On Tuesday week, a burglary was codborough, in this count Mr. W. Duke, farmer, near by five men, who the 3 in the morn They broke into the bouse between 2 and 3 , he morn ing, and secured a servant man and two boys, who were W. Duke hearing a noise, got up and went down stairs where he met the men, by whom he was knocked down and treated in the same manner as his serv. Geo. Duke, bersther of the master of the house, and beat him us is lay in bed in such a manner that for some days he was precarious state. The thieves ransacked house, and took away some money and other property. Nine men were apprehended the same day on suspicion, and after and the other five remanded.
Oxford.-On Wednesday the delegates of appeals in congregation met by adjournment to hear counsel on th objections by Mr. Macmullen's proctor, who protested against the appeal on the ground of informality; but on entering the court he stated that he should not rouble the court with any argument, as he would withdraw his protest. It was then agreed that the next meeting shoul.
Plymouth.-On Thursday, the 9th inst., the last stone of the Lighthouse Tower, erected on the western extremity of the breakwater, was sym, Superintendent of the Dockyard. The lantern is the only thing now necessary to complete it for service, and it is expected that the lighthouse will be ready to be brought into use early next year, when it will supersede the old light vessel, which has been moored in the Sound since 18]3.
Portsmouth.-Lient. Hutchinson, R.E., with a party of 14 Sappers and Miners, returned to Woolwich last week, from spithead, having, in consequence of the severity of George for the season. Notwithstanding the exertions of the divers, about 20 guns are still embedded in the mud. The wreck has, however, been pronounced clear, and its site fit for anchorage; it is, therefore, probable that no further attempts will be made to obtain the missing furthe
Wakpfield. -Mr.W. H. Leatham, of Wakefield, banker, and his wife, resigned their connexion with the Society of Friends on Monday last, at the monthly meeting in this
likely to join, but as they have recently attended Kirkthorpe Church, it is supposed they will join the Establishment. Windsor.-The Windsor Express states that the Commissioners of Woods and Forests are so diggusted with the abrupt and uncourteous manner in which their proposition to drain the town in conjunction with the Castle, the subject, that they have abandoned their proposed plan as regards the drainage of the town. Notice of application to Parliament for a bill "for better cleansing, improving, draining, and sewering the town and parish of
New Windsor, and Clewer, and the extra-parochial precincts of the Castle, and for this purpose to make use of Bedborough. It appears that this gentleman, who is the proprietor of Upton-park, is about to erect a series of terraces and firad through a fine avenue of trees from the railway station to Windsor Castle. By this means the long line of streets suspension-bridge will be raised ove the Thames.
Wisbeach.-The Nene estuary embankment, the conact for which was taken in August 1842 , by Mr. H. Sharp, for 60,000 ., is rapidly progressing towaras comengineer. This extensive undertaking was designed for land, amounting to about 4000 acres, which will, when inclosed, be principally the property of the commissioners of the Nene outfall, under whose auspices the works are Sir Jo leogth, and for some distance averages 28 feet in height leogth, and for the line there is a depth ac high water of 14 feet ; about one mile and three quarters, or one-half of the whole work, is already completed, and from this portion of the work, as a specimen, it is judged by experienced persons that to the the land, as a maiden soil, is estimated, will vary in value from 50l. to \(80 l\). per acre. The Nene outfall commission bas already effected great improvements in part of the fens in Cambridgeshire and Lincolnshire, by procuring a natural dainge lieu of the inefficient and expensive sytem the by windmills and other mechanical mean, at the same time improving the navigation of the beach to such an exth, or 80 tons could with dificuity reach inat port; wbereas, now, vessels of 400 or 500 tons can, withou phe of a pilot, owing to the straightness of the channel, get up to Wisbeach with ease. This navigation, as an artificial tidul channel, is said to be the finest work of that description in the country. It was designed and executed by the late Mr. Telford, and Sir John Rennie; and so important Wisbeen the resuit of these works, thas heen trebled and amounted last year to 140,000 tons of shipping, although the shipping trade throughout the country was many years pas

York.-Three massive doors have just been completed in Newcastle for York Minster. They are of the decorated style, and designed by Mr. Syaney simise, drawi airection the restoration sure sixteen feet in height, and six and a half feet in breadth. The upper part is full of tracery, supported by columns, embellished with Gothic leaves. The tops of the capitals are ornamented with figure-heads, out of which Gothic finiouldings spring, In the centre of the arche ure three trefoils, with shields, on which coats of arms may be put. The lower part of the door is divided into with are corved pinnacles, springing from the heads of the colume. They have been executed by Mr. James Walace, builder, and Mr. R. S. Scott, carver, of Newcastle.
Railways.-The following are the returns for the pas week :-Birmiagham and Derby, 1, ,30.ies, 2,443l. ; Edinburgh and Glasgow, 2,2466 . ; Great Western, 13,0616 . Grand Junctiou, 7,861l.; Glasgow, Paisley, and Ayr
\(1,203 l\). G Great North of Englund, 1,495l.; Hull and 1,2036. ; Great Norn and Birmingham, 16,068l. ; SouthWestern, 5,4401 ; Blackwall, \(613 l\). ; Greenwich, \(603 l\). ; Brighton, 3.880l.; Croydon, 204l.; Liverpool and Man chester, 3,760l. ; Manchester and Leeds, 4, 2 .2..; Mid land Counties, 2,680 . Dublin.-On Wednesday the 8th the Attorney-General解 the Court of Queen's Beach that he inended, on Thursday, to send up fresh indictments against four of the traversers already charged. the deepest the nature of those new bills. By some it was supposed that the object of the Crown was, by a supplemp found in megard to the informations of Mr . Bond Hughes. There were various other rumours, and among to be chared that Mr. O Connell and three otber with high treason. The Evening irwis " the Con heat statement helped to give importance to Vry of high treason. On Thursday therefore Mis migtamp-office, was in atwithstanding the positive anmat be required ; but, not Geral bills were sent up and the orand aury adiourned early. The jury repeated their attendince on Friday, with the same resula; and the bills, which were said to contain a charge of treason and to be directed against hee exstonce for the Repeal Association, were stated to be alandin London as present. Both Whig and Tory jouch severity on this proceeding, and on certain infirmities of temper shown by the Attorney-General towards some of the traversers. They condemn his apparent want of decision and the want of discretion, which could have induced him to make at such a crisis as this, and under such circumstances, the declaration of an intention which he was not prepared to carry out. The Court of Queen's Bench have been occupied with long and tedious arguments on technical An application on the part of Mr. Duffy, praying for a list appte witnesses to be produced in support of the in dietment was argued at some length, but unanimously dictued the Court An application was then made on relialf of the Rev. Mr. Tyrrell, for a copy of the "writ of at the ground that Ahe caption formed no part of the indictment. Aiter three days' argument, the Lord Chief Justice, Mr. Justice Burton and Mr. Justice Crumpton were of opinion that he application ought not to be complied with, while Mr. Justice Perrin was in favour of the application. The majority These tedious arguments indicate a prolongation oh the atate presur masters. it is expectations o'Connell intends to summon 60,000 witnesses, and that all the Roman Catholic Bishops are to be examined. It is stated that the Lieutenunt-General commandiug in ireland sir E. Bake the polico commissioner Colonel Browne, aries are also to bequen of an announcement made by Mr. Moore, Q. C. in the Queen's Bench, that the traversers were determined to 8 ubmit a metion on
for the bill of particulars of the clarges in the indictment, cor her particulas the the argents to the of that document were form. The bill of particulars enumerates almost every number of the Pilob, Freeman's Journal and Nation published since March last, also the various repeal meetings held sil that day, all the speeches delivered by … . Connell the various country meetings and at the Repeal Assoct of tion during the same perrod. In fact, the thil is a since the 22 d of March; and it is notified that all those newspapers, speeches, \&c. \&c. are to be produced at the printed in support of the charges in the indictment. 10 sized in the ordinary fashion the bill would muke a gooad and octavo volume, requiring some hours to be read charges of crime ; and the first count alleges forty-four separate overt acts. On Tuesday, being the labt day pleading, Mr. O'Connell and the other traversers appear of at the bar, and put in their pleas. They were pleaity of the offences charged, they also stated that the indictment ought to be quashed as the evidence was found on examination of witnesses who were not sworn in oct of court, in accordance with the provisions of the a pleas George 10. The Attorney-General objecteed being received. In did not conceive a plea of abatement would be received. He trusted, howe the court would not receive those pleas till he had the opportunity of looking into this pleas tiater her fully A discussion ensued upon this point, matter more fully. A discoef Justice ordered the question and The argument was resumed on Wednesday, and after a most persevering opposition by the Attorney-General, plea of abatement was received, and placed on the files of
the Court of Queen＇s Bench．The Attorney－General was also defeated on another point．After the Court decided upon receiving the plea，the Crown demurred，and required ment，the Court decided，in favour of the traversers，that there should be four days＇notice，and consequently the demurrer，or，in other words，the validity of the plea will not be argued until Monday．Some of the ablest men at
the bar consider the plea to be a good one．Should the Cour consider the plea to be a good one．Should the
Court rule it to be so，the indictment will be quashed． Court rule it to be so，the indictment will be quashed．
Should the Court，on the contrary，determine with the Attorney－General，the traversers will plead．But in any case it is considered impossible that the trials \({ }^{\circ}\) could com－
mence before the next term．Probably owing to these mence before the next term．Probably owing to these be abandoned，and that Government wrosecutions take no further proceedings at common law，but wait until the re－assem－ ling of Parliament，to apply for a coercion law．Another rumour is，that fresh bills of indictment are to be sent up； but Grand Jury were specially summoned on Wednesday，
but bills were sent before them．The impression，how ever，appears general that the prosecutions are to be aban－ doned．－The weekly meeting of the Repeal Association took place on Monday．A letter was read from Mr．John O＇Brien，M．P．for Limerick，inclosing 5b，and requesting to be admitted a member，which was carried on the
motion of Mr．O＇Connell by acclamation．Mr．O＇Connell then read an address to the people of Ireland，requesting them to be peaceable during the approaching trials．The following are extract：：－＂Fellow Countrymen，－I never felt half the anxiety which \(I\) do at present to be distinctly understood in the advice \(I\) give，and to have that advice implicitly obeyed．The reason of this anxiety is，that if ment will assurediy be obtained，and obtained in a manner the most honourable to the religious and peaceable people tranquillity，until all the mose perfect quiet，peace and What the event of the prosecutions may be，I am thoroughly convinced that in any event they will tend to facilitate the obtainiug of Repeal ；provided only that the during preserve the condition of the most perfect quietude after those trials shall，as they to preserve tranquillity successfully for the unjustly accused，or however they may terminate．Nothing could possibly injure our cause before tumult， anybody gives you advice contrary to mine，believe me that he is an enemy of mine and of yours．Arrest every conclude without once again adjuring police．I cannot where not to be irritated，excited，or the people every－ event whatsoever，or of whatever nature that event may be；but to continue calm，peaceable，tranquil，and loyay and if this advice be followed，I anticipate，and I think il tiently useful to the Repeal cause．But－attend to me－ if there be，during the trials，the slightest outbreak of abandon the Repeal cause，and to forsake a pely to who，at such a critical period to forsake a people nut follow the advice I so carnestly give them． obeyed．I no fears that my counsel will be dis－ bjure my cause and the cause of Ireland by disregardin toyal．Vio．Be therefore calm，quiet，tranquil，peaceful， the law of God．You mill－obey with devout reverence your enemies．You will thus mortify and disappoint yon to some ere Those enemies speculate upon provoking tify them by the of turbulence．Disappoint them－mor－ thess，of peay the infexible observance of quiet，of calm－ and you thceable and legal conduct．Follow hy ni your devoted friend，Daniel O＇Connell．＇＂Mr．O＇Con－ tion toid be wished to draw the attention of the Associa－ that Jo a topic of importance．It was in their recollection hat Joseph Sturge，one of the heroes of the chivalry of people anity，wrote to them some time ago，stating that the Unople of England were indisposed to the Repeal of the despotism two reasons；firstly，lest it might tend to result in a religious aly，because they feared it would swered that letter and stated that Repeal，instead of cending to a separation，would render the connection more power to and that the Irish Parliament would bave no wished the arrangement should be of a federal nature．In our letter，said Mr．O＇Connell，we endeavoured to showr liament there would be no necessity for a federal Par－ he called，is the questions to which he referred，and which culling the Cruwn．Mr．Sturge bad written him a letter， is to advise the advocates of Repeal to clearly define who prerogative．This letter was in the exercise of the Royal report upon it at the nest meeting．Mr．J．O＇Connell financial inded with his motion，demonstrative of the posing the injustice of the Union，and concluded by pro－
betpe ＂ 1 ．The Great Britain and Ireland，after the Repeal ：－ revenues of Ireland be spent at home．2．That the firs
charge seart．upon her revenues be her debt，as it atands at pre－ expenditure that her contribution to the imperial active ability，as shown now，according to the full measure of her taxes in both countria comparison of the products of equal rison as may countries，or such other elements of compa－
proportion agreed upon． 4 ．That a revision of proportions of contribution of either country respectively
do take place at such periods as may be agreed upon；the first to be within five years after the Repeal． 5 ．That if
it be deemed expedient at the time of the Repeal that Ireland should be charged with any debt beyond what appears charged to her in the public accounts，such deb be transferred from the English to the Irish funds． 6 That the various items of imperial expenditure be appor－ obviate all necessity for countries in such manner as to spent in the other．7．That the control and management of the revenues of Ireland，subject to the foregoing rules， be with the Parliament of Ireland ；and that nothing stitutional right of that Parliament to stop or limit the supplies on constitutional cause arising．＂Mr．O＇Connell annourced the Repeal rent for the week to be 1070 l .19 s ． 5 d ． Cork．－The mysterious signal－fires again prevail in the Corlc Constilution，the hills were again in a blaze．In Kerry the same signal was seen on every eminence，and Waterford，Tipperary，Limerick，and Clare，were equally Lumlay＇s Well（Cork），and the yelling was heard for miles round．
Derry．－Dr．Ponsonby the Bishop of Derry and Raphoe，and 130 of his clergy have put forward a protes Raphoe，heads the list of the clergy who have signed of address to the bishop．A protest against that address and the proceedings of the Anti－Puseyite majority has been published．It is signed by the Rev．C．Boyton，
vicar－general of Raphoe，the Rev．W．Archer Butler fessor of Moral Philosophy in the University of Dublin， and five other clergymen of the diocese．
Tipperary．－In the following letter，addressed by the Marquess of Waterford＂to the Gentlemen of the County
of Tipperary，＂he states his reasons for withdrawing from that county．＂Curraghmore，Nov．8，1843．Geritlemen， －I have deferred writing to you until some final arrange－ Millett bas undertaken that office ；and I now meg to Mr． you for the kind attention and support you have shown me during the period I resided amongst you．I think it right to state the causes which induced me to resign．You are aware that in December，1841，my hounds were poi－ 1843，they wated the matter with contempt．In January， and forgave him ；but I stated publicly that if a similar outrage was ggain committed I should give up hunting the prompt in 1843 my stables were burnt；and but for the would have been consumed．From the threatening potice I had received，and from the sworn evidence of persons on the spot when the fire commenced，the magistrates immediately determined to the burning was maicious． such a system of annoyance more than counterbalanced the pleasures of fox bunting，for which alone I proposed to reside at Lakefield．I have the honour to be your obe－
dient servant，Watcrrord．＂－The Evening Post the following account of another frightful outrage in Tip－ perary，Which surpasses all that has lately occurred even of a most desperate outrage baving been perpetrated in the neighbourhood of Borrisokane，in the county of Tipperary． It appears from a letter we have seen that Thomas Waller cisq．，of Finnoe－house，a magistrate of the county，and his when eight or nine armed men entered the dining－room and attacked them all．The gentlemen of the party promptly assisted by the ladies，seized the carving and ruffian levelled a pistol at Mr．Waller，which was struck down by Mr．Vereker，who was present，andafter such a scene as it is impossible to describe the assailants were beaten injured．Mr．Waller＇s arm of the house were severely received a bad injury in the was broken，and he also Miss Vereker is not expected to survive．The assailants themselves must have fared badly，as the ear of one was left behind，with other relics of the determined nature of the defence．The police were out in search of the delin quents，but nolaing more specific has yet reached town apon the subject．＂

\section*{SCOTLAND．}

Edinburgh．－It is announced that Lord Meadowbank has resigned his office as one of the senators of the Col－ lege of Justice，the duties of which he has discharged for the long period of twenty－four years，having been ap ship in the Second Division，and it is understood the David Mure，Esq，advocate，will be the nem ood tha depute in room of Adam Urquhart，Esq．，appointed to depute in room of Adam Urquhart，Esq．，appointed to Lord Advocate is likely to be nominated as ared that the culty．－On Thursday，Thomas Patterson，who was con－ victed in the High Court of Justiciary，on Wednesday of selling，or exposing for sale，a number of blasphemous publications at various periods during the present year in a shop in West Register－street，Edinburgh，was placed at the bar，and sentenced by the Lord Chief Justice Clerk to fifteen months imprisonment．On the same day Henry Robinson was placed at the bar，cbarged with pub－ of a blasphemous and obscene tendency．The prisoner was found Guilty，and his Lerdship concluded prisoner tencing Robinson to imprisonment for concluded by sea－ months．It is said that the jury which convicted Pat erson of blasphemy were all but unanimous in their verdict，there being only a single juryman who dissented
from the verdict which the other fourteen retarned．Both day son and Robinson were removed to gaol on Thurs－ day evening，and in the course of Friday they were sub－ shaved and the prison dress put on their heads being they were sent to the occupation of breaking stones．It will be remembered that Patterson became notorious some months back for similar conduct in Holywell－street，
Aberdeen．－Lord Francis Egerton has been unani－ mously re－elected Lord Warden of Aberdeen University．

\section*{亚和。}

ARGBES CoUrT．The Office of the Judge promoted by Titmarsh
T．The Rev．W．H．Chapman．- Sir H．Jenner Fust gave his opinion on the validity of the protest offered last court day by the Rev Mr．Chapman．It is a proceeding brought by letters of requesi
from the diocese of Ely against defendart，for having refused to bury the corpse of a child，first，on the 1fth February，1840，and secondly，on the 26 th May， 1841 ，after due notice hat been given． provides that，after two years liave elapsed from tise commission of and the counsel for the Rev．Mr．Chapman argued that as but one
offence had been oftence had been committed in refrusing to oury the same child
twice，the first refusal being in February，1840，the two years had elassed，und the court was prayed to sustains the protest，thas
ending the suit．The Rer parishof Bassingbourne，in the county of Cambridge．－Sir H．J． Fust，afier briefy referring to the leading facts，said he had looked into all the cases cited on both sides \(m \mathrm{~m}\) the argument
heard on the plotest，and he thought therc was nothing in them to induce the court to stop the proceedings in imine．He would
very shortly state the grounds upon which he had come to such
a conclusion． a conclusion．The first occasion the defendant had refused to
bury the child was on the 17 th of February，1840，and thid
was an offence according Was an offence according to the true intent of the Church question raised was，if the second refusal was not，a fresh
offence，and the court was so clearly of opinion thet it was，
that it could nut that it could not stop the proceedings．The cases cited wert
princibally of a private nature，but here a public offence had been committed，as from all that appeared to the contrary 1．enalty similar case to that of Mostinght conjecture that this was mucir attention some time since．＇I here was a public scandal to the second refusal，and the charge to be proceeded with was the refusal to bury the child on 26 th May， 1841 ．This was withn the answer．The court was bound to overrule the protest，and assiga
the Rev．Mr．Chapman to alpear absolaty

\section*{}

Ligut is an agent perfectly indispensable to plants in a growing state, and they generally thrive in prostimulus which puts in of it they receive. It is the and important vital forces. Hence it is a principle in modern gardening to provide houses used for cultivation with the most transparent substance that can be procured for their roofs, and to employ means of diminishing the quantity of light at those seasons when, under the artificial circumstances to which plants are exposed in hothouses, it becomes necessary to do so. For this end glass is universally employed, and it is ot likely to be superseded.
But some plants never require bright light; Cucumbers for example. Others need it only during the again, can dispense with it at the early period of their growth, though it is indispensable to them afterwards In all such instances any substance which is cheap, waterproof, and not brittle, although not more transparent than horn, would be invaluable to gardeners; and accordingly various attempts have been made to reasy or resinous preparation which shall rome We camnot say that the attempts have been hitherto very successful. In some cases the application of the substance to be employed has been difficult; in others its preparation has proved an obstacle; and sometimes
At last the proposed end seems to have been
attained by Mr. George Whitney, of Shrewsbury if we are to Mr. George Whitney, of Shrewsbury, if made to us, and by the specimens that we have seen There is now before us a piece of cotion linen, and another of muslin, which are certainly all that can be wished for on the score of transparency and texture both prepared by some waterproofing substance which r. Whitney has contrived
his attention to the subiect in temnan was led to turn his attention to the subject in consequence of having years consecutively. Early last spring he covered his when the common calico coated with the composition, when the blossoms were found to expand fully, and a was the result. He did not take the coverings off by day, except to thin the fruit, till the latter end of May. month earlier not only abundant and very fine, but a naturally induced bim to try a thinner material (muslin) for Cucumbers and Melons, and the fruit grown under them is represented to have been of good uairy.
No doubt can be entertained of the plan being sucAmsful for many purposes, and we recommend our Amateur friends to put it in practice--on a small scale, however, at first, until they have ascertained the best means of proceeding.
W \({ }^{\text {E }}\) regret to find it still necessary to repeat the destruction formerly (p. 587,1842 ) gave, as to the with then of perennial weeds. Everybody is troubled looking ; all wish to remove them : but many stand the misch helplessly, as if there were no remedy for Ferns and Thistles and Docks; Iawns swarm with Rib-grass and Dandelion; and gardens are overrun very fewch-grass in all parts of the country, except a imaple, And yet the means of destruction are thaple, the result certain, and the expense no more wear of a few common tools What we formerly toils.
is physically impossible for any repeat, viz: that consequence are perpetually destroyed. It is of no What circumstances it what the plant is, or under constant loss of its foliage. For the reasons why this is so, we can only refer to the place above quoted.

For the proof, we shall call the first person who has steadily set about cutting off the crowns of the Dande-
lion in his grass-plots. A year ago, some gardenlion in his grass-plots. A year ago, some garden-
groundwas infested with Gout-weed (ELgpodium podagraria), a very troublesome plant to eradicate; and in the instance in question circumstances rendered it inconvenient to take up the Ferns and other herbaceous plants which occupied the ground infested with the Gout-weed, which had insinuated itself among them and intermingled its roots in all directions with the plants it was desirable to preserve. A little girl was taught to watch the Goutweed as it
sprang up in the spring, and to pinch off its leaves whenever they were four or five inches long. The first pinching produced no effect, the second very little, and the experiment was pronounced a failure. Patience, however, came in aid of the operation, and after the third destruction of the leaves, which was by Midsummer, the Goutweed was evidently much enfeebled. And now the previous perseverance began to tell : the leaves were thin and pale, and grew but slowly. The merciless pinching was continued, and by the end of September leaves ceased to appear.
Upon examining the ground the other day, the subterUpon examining the ground the other day, the subterranean stems
wholly dead.
Now what was true in that case would be equally true in all others-a fact which cannot be too well remembered, for the losses occasioned by weeds, on a large scale, no one can count. In the last Number of are mentioned by Mr. Boyd, of Innerleithen, which deserve to be mentioned in connexion with this subject

An extensive bog on the farm of Gemscleuch, on the estate of Thirlstane, the property of Lord Napier, was surface-drained some years ago at a very considerable expense, and, no doubt, in the confident expectation that it would be rendered highly productive in consequence; but, in place of this being ment of Mr. Laidlaw, the tenant, it produced, the first year, a most extensive crop of Thistles-so extensive, indeed, that the tenant at once and for all
abandoned the idea of eradicating them. It is, however, consistent with my knowledge, from a recent experiment, conducted upon a scale of considerable extent, that cutting Thistles two consecutive years will destroy them.
LIere we have the destruction of leaves carried on with much less zeal than might have been employed, and the consequence was the loss of two years in the they shot up, they would have disappeared in one year. The other case is that of the common Brake, one of the most difficult of all plants to get rid of without irrigation :-
"From time immemorial, the inhabitants of Innerleithen have been accustomed to collect Ferns annually from the adjoining mountains for the purpose of pitting, or securing their Potatoes during the winter months. For a number of years past, also, many of hem have been in the habit of keeping pigs, and, from their having the command of no other material for litter than the Fern, the competition in collecting it has, in consequence, become of late years so very great, that many of the pig-feeders, (unwittingly for
themselves,) in place of allowing the Ferns to come to maturity, as usual, before cutting, have mown down large quantities of them while young and succulent. This has had completely the effect of eradicating them from the soil. On some patches, however, a few sickly plants are still left to point out the ground where, five or six years ago, Ferns were produced in the greatest abundance. As an additional proof that epeated cuttings of the Ferns while young and succuleat wili eradicate them from sheep pasture, 1 may mention that in the of Holylee, engaged two experienced mowers, for five weeks, to cut the Ferns on Blackcleuch and Brakenhope, both of which are farms of great extent, many of the patches of Ferns covering five or six acres of land. Although the plants, after a second and third years' cutting, became extremely feeble and sickly necessary to be repeated in the month of July for five consecutive years before the Ferns were totally extirpated; and in many places, where they were rank, it was the third year after the first cutting before the surface was completely covered with a variety of
Grasses and White Clover. Although the extent of ground subjected to the experiment has not been actually measured, it is the opinion of those conversant with measurements, as also of those who have a practical knowledge of the ordinary quantity of Ferns that a mower will cut in a day, that the whole extent of ground from which the Ferns have been extirpated cannot, at the most moderate computation, be less than 100 acres, which are at this moment the richest and most productive portions of sheep pasture on the estate of Holylee. The whole expense of extermina-
tion mounted only to the comparatively trifling outlay of \(25 l\). sterling, being at the rate of \(5 s\), an acre.?
To this we need only add, that more frequent cuttings would also have accelerated the destruction of the Ferns as well as of the Thistles.

OMMENTARY ON CERTAIN PASSAGES IN THE PHYSIOLOGICAL WRITINGS OF THE LATE ANDREW THOMAS KNIGHT.

No. Vil.- On the transplantatron of Plants WITLI SPINDLE-SHAPED Roots.- It is a generally reshaped roots cannot be advantageously cultivated by trans. plantation, and it cannot be questioned that the most perfect crops of plants of this habit, both in quantity and quality, will be obtained by permitting them to retain their first situation and position. Fibrous-rooted plants, also, I aw inclined to infer, from the grounds above stated, will be found to succeed well under the same mode of creatsuperficial roots." -Hort. Trans., vol. vi., p. 370, (1826.) The above evidence affords still further and cleares proofs, that a Progressive and Accumulative system of cultivation is the ultimate result of cultivation; sams, in which intermediate shifts were dispensed with, it did not occur to me at that period that such a system could ever be applied to the culture of plants of slow growth, yet a conviction that such a priuciple does really exist in nature, and would be ultimately successful in the treatment of plants penerally, was my decided opinion from that period up to the present; and each successive instance of an approach to it has only served to contirm my expectations that had the ominent experimentalist whose papers bave done so mech to illustrate and confirm all subsequent valuable laburs valuable labours, I have no doubt but ere this, a clear onviction and practical insight into the ultimate effectio cerely believe would lave led him to affrm what suticulture, that, physiologically considered, shifting is but a substitute for a worse evil. No. VIII. - Onorse bur.
No. Viif.- On the Cultivation of the PineApple -- Concluded a long course of experiments upon effects of excess of drought aud of moisture, and of very high and of very low temperature, I have of course sacria ficed many plants in experiments, which I weither foutid ments, \&c., much valuable information was gained, \&cc. \&c. \&c." Mort. Trans, vol. vii., p. 409 (1828.)
Remarks.-Such is the honourable testimony borne to the valuable results of philosophical research and inquiry, and it would be well if those who are attempting to apply the highest principles of Horticulture to practice, with but a very slender knowledge of the requisite means, would
remember that the success of the latter must esseutially depend upon the former.

Very high temperature, if accompanied with a sufficiently humd state of the atmosphere, I found beueficial at all seasons of the year under a curvilinear iron house, for his admitted as much ligat in the mian of winter as he Pine-Apple plants appeared to require.

The effects of the excess of humidity in the air of the house were, as might have been anticipated, diametricully opposite to those which had resulted from drought, and the planis grew so rapidly as to become soon too large for the year a disposition to show fruit."
Remarks.-The above statement appears to imply a difference of treatment in the cultivation of plants which to a certaia extent admit of a progressive maturity of growth, as in many of those with a branching habit, and those whose maturity must depend upon a single accuma Iative development, as the Pine-Apple, Cockscomb, \&tc., -the former not admitting of those artificial processes which render the current of sap subservient to fertility, by diverting its exuberant or perpendicular fow to the formation and support of every developed bud.
"I do not entertain the slightest doubt that as large and larger, and even still larger Pine-Apples may be raised without, than with, a hot-bed of any kind. A requisito degree of temperature and humidity of atmosphere may be maintained by intense solar agency, \&c. \&c. \&c."
